Russia’s Northern Caucasus is turning into one of the most volatile, lawless regions in the world and a hotbed for international terrorist activity in spite of decades of Russian military operations and repeated assurances from the Russian GOVERNMENT that peace has been achieved. As Russia continues to lose control of the region, it is becoming a significant base for Islamist terrorist organizations and organized crime and may ignite an even greater terrorist campaign inside Russia and beyond. Islamist terrorists from the self-proclaimed Caucasus Emirate have already attacked energy infrastructure, trains, planes, theaters, and HOSPITALS. They are increasingly involved in terrorist activities in Western Europe and Central Asia, including Afghanistan. North Caucasus Islamist insurgency is part of the global radical Islamist movement, which is deeply and implacably inimical to the West and the United States. Russian counterinsurgency programs have partially failed, marred by excessive use of force and repeated HUMAN RIGHTS VIOLATIONS. The Russian civilian and military leadership tends to overemphasize counterterrorist operations, while largely ignoring the broader counterinsurgency perspective.[1] To alleviate the hostilities, the Russian government has implemented many economic and developmental programs and provided billions of dollars in aid to the North Caucasus in the past few years. Russian officials have invested to curb the appeal of radical Islam among the youth, but the area’s overall economic and social prospects remain grim due to the ongoing SECURITY crisis caused by heavy-handed security policy and the pervasive corruption and mismanagement of the Russian government. Thus, Russia’s entire counterinsurgency strategy is in question. Its primary goal is “to make the local population less afraid of the law enforcement than the insurgents,”[2] but the overly violent Russian approach has often produced the polar opposite. Since the dissolution of the Soviet Union in 1991, the North Caucasus has experienced two major wars and numerous skirmishes, resulting in hundreds of thousands of casualties and internally displaced persons, while the fear of terrorism has spread throughout Russia. Spreading ungovernability in the Northern Caucasus facilitates the emergence of Islamist SAFE havens, complete with terrorist training facilities, religious indoctrination centers, and hubs of organized crime. This should be a cause for concern for the United States.

Internet Prompts up Terrorist Attacks against Russia

Cross 13 (Dr. Sharyl Cross was appointed Director of the Kozmetsky Center at St. Edward’s University beginning in September 2013. From 2005-2013, Dr. Cross was Professor in the COLLEGE of International & SECURITY Studies at the George C. Marshall European Center for Security Studies in Garmisch-Partenkirchen Germany. Prior to the Marshall Center, Dr. Cross was at the United States Air Force Academy where she had been appointed

Distinguished Professor of Political Science. Dr. Cross earned a Ph.D. in Political Science from the University of California, Los Angeles, and was resident fellowship scholar and consultant at the RAND Corporation completing programs in Russian area and policy studies. “RUSSIA AND COUNTERING VIOLENT EXTREMISM IN THE INTERNET AND SOCIAL MEDIA: EXPLORING PROSPECTS FOR U.S.-RUSSIA COOPERATION BEYOND THE “RE-SET”

Russia’s central priority with the terrorist challenge has tended to concentrate on the threat emanating from Chechnya and the surrounding regions of the North Caucasus. **Violence emanating from the Makhachkala region within Dagestan territory has been a priority concern in Russia’s counter terrorist efforts.** While there has been no single assault in **Russia** resulting in the loss of thousands of lives, such as the September eleven attacks in the United States, the nation **has suffered a series of terrorist incidents** over the past several years. Bombings of apartment buildings, theaters, subways, airlines, the school hostage incident in Beslan in 2004, and the more **recent attack** at the Domodedovo airport in January 2011 perhaps captured the most international attention and **demonstrated Russia’s vulnerability to the terrorist threat.** The violent extremist threat in Russia spans the gamut from Islamist extremists to militant ultranationalists. There are no official statistics on the number of Muslims in Russia. Figures range of three million to thirty million, with most sources estimating between eighteen and twenty million geographically concentrated in the large cities of the Volga-Ural and North Caucasus regions. Demographic trends indicating declining birth rates among Orthodox ethnic Russians compared with the relative growth among Russia’s Muslim population suggests the potential for shifting political and social influence in the future. While the bulk of Muslims in Russia, primarily of the Sunni, Hanafist, and Sufi traditions, simply seek to practice their faith in peace, adherents of the anti-Sufi New Islamic Movement and radical Shahidists and Salafists share the objective of imposing a fundamentalist Islamic state under sharia law. Sharia courts operate today on Russia’s territory in Dagestan, Ingushetia, and Chechnya. While some observers consider the influence of Wahhabism and Salafism a more recent phenomenon in the North Caucasus, the writings of Dagestini scholar Yaseen (Makhach) Rasulov and leader of the Sharia Jamaat group who was killed in 2006 traces the origins of to the anti-Russian resistance movements of the 18th century.³⁰ **Socio-economic problems, unemployment, lack of opportunity, and corruption provide a fertile ground for recruiting** followers in the region. Concerns with maintaining the territorial integrity of the Russian Federation have generated speculation about a potential contagion effect ³⁰ Andrei Smirnov, of the Arab revolutions that might inspire young people who have become disenchanted with traditional Islam in the North Caucasus, Tatarstan, and Bashkortostan. Russia includes the Muslim Brotherhood among **terrorist** organizations, and a number of Islamist or Salafist publications have been banned in the country. Prosecutors in Birsik in Russia’s Republic of Bashkortostan shut down a website during Summer 2012 for publishing a news portal entitled “Wake Up Tatar!” which was described as containing extremist ethnic and religious content.³¹ Islamist groups that do not purport the use of violence such as Hizb-ut-Tahrir have also been targeted and banned.³² At the same time, the Russian government maintains constructive relations with the mainstream Islamic community in the country and abroad. Russian officials have engaged the Islamic community to combat extremism. Over the past several years, the office of the Russian President has held conferences involving the participation of foreign policy officials with Islamic religious clerics and leaders of other faiths in combating terrorism and extremism.³³ Russia holds observer status in the Organization of Islamic Cooperation (OIC), and does not include Hamas and Hezbollah as terrorist organizations as does the United States and other Western countries. At times, the Russian foreign policy community has suggested that Moscow could serve as a “bridge” between the Islamic and Western worlds emphasizing the importance of avoiding any “clash of civilizations” or religions in addressing the contemporary global terrorist challenge. ³⁴ Extreme nationalist groups have become more widespread in Russia over the past two decades and are a source of greater concern.³⁵ Riots in Manezhnaya square in December 2010 highlighted the problem when some 5,000 sports fans and nationalists groups went to the street in response to the death of a Spartak Moscow supporter who was killed in ethnic clashes with migrants of the North Caucasus. Vladimir Putin offered the observation that extremists used soccer fans as “cannon fodder” urging the necessity for “cracking down on all extremist organizations.”³⁶ Putin noted: “...A person from the Caucasus should not be afraid to go out in the streets of Moscow, and our ethnic Slavic citizens should not be afraid to live in the North Caucasus republics...”³⁷ In responding to the riots, Deputy Prosecutor General Alexander Buksman emphasized that Fascism has also grown in recent years in terms of those affiliated with groups such as “Blood and Honor” (the Russian branch of the international neoNazi organization), “Russisky Kulak” (Russian Fist), “Nationalist Socialist Group 88,” “Skinlegion,” and others. Russia’s President Vladimir Putin acknowledges the problem noting that “...Even in our country that did so much to vanquish Fascism we see, unfortunately, manifestations that are cause for shame.”⁴¹ **These groups have become increasingly technologically competent developing websites to aid their recruitment efforts, and engaging in hacking to promote their objectives.** Demushkin’s “Slavyansky Soyuz” boasts an “information warfare department” pledging to close down websites of their so-called “enemies.”⁴² Russia’s political parties throughout the spectrum promote the importance of Russian values, culture, tradition—or the “Russian” as opposed to the “Western” model as the path most suited for their country. Pro-Kremlin groups for example champion themes characterizing the “West” as the “Other” and “Russia” as “Nashi” (Ours), whereas ultra- nationalist right wing groups trumpet references to “Great Russia” and racial superiority. As such, mainstream messages of patriotic national identity can at times become blurred with extreme ultra-nationalism. Russia’s authorities have

consistently spoken out against terrorism, extremism, xenophobia, and racism. However, Emil Pain makes the important point that Russian law enforcement authorities have been much more willing to employ force against Chechen nationalists and Islamist fundamentalists in the Republics of the North Caucasus, than to use coercive action in responding to extreme ultra-nationalist elements of the native populations.⁴³ **Russia's most recent National Security Strategy (to 2020) specifically identifies the threat of terrorism and extremism and vulnerabilities created by the "global information struggle."** The document states: "The global information struggle will intensify, threats will increase to the stability of industrialized and developing countries, their socio-economic development and democratic institutions. Nationalist sentiments, xenophobia, separatism and violent extremism will grow, including under the banner of religious radicalism."⁴⁴ Member of Russia's Security Council Nikolai Patrushev has called for the creation of a "global watchdog" to monitor violent extremism and terrorism in the Internet.⁴⁵ In an interview published in *Kraznaya Zvezda* following the 2012 Presidential elections, Patrushev offered the following observation on the relationship between terrorism, extremism, and information security: "At the threshold of the 21st century the primary threats to international peace and security have "shifted" to the information sphere. **The intensive development of information and telecommunication technologies** (IKT), the globalization of the information infrastructure and the information space along with its positive component also have the opposite side. In present-day conditions, the hostile use of IKT **for criminal and terrorist purposes is becoming a real threat to international security.**"⁴⁶ Patrushev continues underscoring the importance of international cooperation in information security: "...in modern conditions effectively providing national and international security and stability is impossible without strengthening security in the informational sphere, or as they are now saying, international information security..."⁴⁷ The Moscow Patriarchate of the Russian Orthodox Church has expressed concern about the frequency of attacks made on religious leaders who resist extremism. Following a recent car bombing incident resulting in seriously injuring Mufti Ildus Faizov, Chief of the Synodal Information Department of the Russian Orthodox Church Vladimir Legoyda expressed concerns regarding increasing attacks against those "who resist extremism and preach the rejection of violence, and peaceful and balanced ways of dealing with problems..."⁴⁸ He continued emphasizing that "...Fighting religious extremism is an acute problem facing the public in Russia..."⁴⁹ Archpriest Vsevolod Chaplin has suggested that Russia and European countries should "adopt a law banning expansion of religious extremism, which results in deaths..."⁵⁰ He suggested that international organizations (Council of Europe and others) should equate the ban on religious extremism to the ban on Nazism, and noted that while "...Western ideologists believe a ban on spreading ideas is impossible. I am sure there is a need to restrict the expansion of such ideas as they justify the killing of civilians..."⁵¹

Terrorist would acquire Weapons of Mass Destruction in Russia

Saradzhyan 03 (Simon Saradzhyan is a research fellow at Belfer Center for Science and International Affairs at Harvard University.^[1] Prior to joining the Belfer Center, Saradzhyan worked as a researcher for East West Institute and as a consultant for the United Nations and World Bank. "Russia's Reality of Nuclear Terrorism"
<http://belfercenter.hks.harvard.edu/files/russia-grasping-reality-nuclear-terror-eng.pdf>)

The likelihood of a catastrophic terrorist attack against Russia is growing, as radical separatist in trouble Chechnya increasingly become more desperate, and security at many of Russia's civil nuclear facilities remains insufficient. They have already demonstrated their capability and willingness to inflict massive indiscriminate casualties by organizing an apartment bombing in the southern Russian city of Buena's. They have acquire radioactive materials, threatened to attack Russia's nuclear facilities, plotted to hijack a nuclear submarine, and have attempted to put pressure on the Russian leadership by planting a container with radioactive materials in Moscow and threaten to detonate it. The disintegration of the Soviet Union left 40000 nuclear weapons, more than 1000 metric tons of nuclear material vast quantities of chemical weapons and biological material, and thousands of missiles scattered across several independent states. The largest portion of this deadly arsenal were concentrated in Russia, Ukraine, and Kazakhstan, which faced the biggest challenges to secure these material. Frantic effort by the Russian and US government coupled with the good will of the other former Soviet states have brought most of the arsenal to Russia for storage and disposal. **However, the decentralized and weak country was initially unprepared to safeguard the stockpiles** accumulated by the totalitarian Soviet regime. The Soviet Union took pains to maintain a strong second line of defense against proliferation of NBC materials by making its border impenetrable from within and without. But post-communist

democratic Russia can ill afford to build a strong Iron Curtain. Instead Russian authorities have focused on strengthening the first line of defense. Security perimeters at nuclear facilities. **Considerable improvement in security have been made** during the past decade at the Defense Ministry's nuclear facilities, as Russian authorities view the threat of terrorism and proliferation more seriously. Acknowledging the scope of this danger, Russian policymakers have defined terrorism as one major threat to the country in both by Russia's nation security Concept and military. **Nevertheless, the possibility that terrorist could acquire nuclear materials or even seize a Russian military nuclear facility still exist.** "We are facing a growth threaten the use of nuclear material by terrorist," deputy head of the 12th Main Directorate of the Defense Ministry General Alexander Frolove told a US newspaper in July 2002. "They may even go so far as capturing nuclear facilities. Among the matter of concern are lack of personnel regulation and the diminishment of military personnel from nuclear facilities. Former workers of our nuclear complex may be the focus of attention for terrorist groups."

Link—Scenario #2

Sudden Liberalization of the Internet Increases Threat of Terror

Cross 13 (Dr. Sharyl Cross was appointed Director of the Kozmetsky Center at St. Edward's University beginning in September 2013. From 2005-2013, Dr. Cross was Professor in the COLLEGE of International & SECURITY Studies at the George C. Marshall European Center for Security Studies in Garmisch-Partenkirchen Germany. Prior to the Marshall Center, Dr. Cross was at the United States Air Force Academy where she had been appointed Distinguished Professor of Political Science. Dr. Cross earned a Ph.D. in Political Science from the University of California, Los Angeles, and was resident fellowship scholar and consultant at the RAND Corporation completing programs in Russian area and policy studies. "RUSSIA AND COUNTERING VIOLENT EXTREMISM IN THE INTERNET AND SOCIAL MEDIA: EXPLORING PROSPECTS FOR U.S.-RUSSIA COOPERATION BEYOND THE "RE-SET"

Russia has an estimated 61.5 million Internet users in 2012, ranking number seven among nations in the world in terms of Internet usage. **4 Russian officials estimate that the number of Internet users in Russia could reach 90 million users by 2013.**⁵ In 2011 .ru moved from 6th to 5th place ranking of the * Dr. Sharyl Cross is Professor of International Security and Politics at the George C. Marshall European Center for Security Studies in Garmisch-Partenkirchen Germany. The views expressed in this article are those of the author and do not reflect the official policy or position of the George C. Marshall European Center for Security Studies, the U.S. European Command, the Department of Defense, or the U.S. Government. **The enormous growth of the Internet and social media networks** in recent years **has precipitated** one of the most serious security threats that nations face today, **the utilization of the Internet by violent extremists** as a way **to advance their agendas**. Countering violent extremism is a critical security issue for both the United States and Russia, but establishing a common ground for cooperation between the two has proven challenging. There are, however, areas where building U.S.-Russian collaboration on countering violent extremism is possible, and efforts to do so could contribute to a long-term agenda for U.S. Russian security cooperation post "re-set."² largest domains in the world.⁶ The second Russian national domain .RF also ranks among the top twenty among European nations in terms of usage.⁷ Among Russian Internet users, the most popular resources are available on Yandex.ru, Rambler.ru, and Wikipedia.ru. Social media and social networking has also grown exponentially. The number of Facebook users exceeded 800 million by 2012.⁸ Social networking and blogging communities popular in Russia include Vkontakte, Facebook,

Odnoklassniki, LinkedIn, My Space, Google, Twitter, Ushahidi, and more. Mikhail Yakushev has observed that “Only a couple of years ago the number of users of Internet blogs or social networks was just a fraction of what it is now. Five years ago, these services were virtually unknown.”⁹ Russia’s former President and Prime Minister, Dmitry Medvedev, started his own blog in 2008 engaging with the public on the popular LiveJournal. Nations have not been able to keep pace with preparing and responding to the security challenges accompanying the enormous growth of the Internet and social media networks. **The threat of cyber war, cyber crime, and cyber terror have become very real and potentially devastating security challenges** for nations of the twenty first century international community. **Recent conflicts in Estonia and Georgia demonstrated the potential employment of cyber attacks in both state-to-state and non-state warfare.** The Russian security and academic communities point to the cyber attack on Iranian nuclear facilities with the STUXNET virus as representing a critical turning point revealing the vulnerability of nation-states to cyber attacks. The world community is plagued today by threats of electronic identity theft, use of cyberspace by sexual predators, and many other types of criminal activity utilizing the Internet. One of the most serious threats we face is violent extremists’ harnessing of the Internet and social media to advance their agendas. The world community must not only confront terrorists/violent extremists in our public venues and in the physical war zones, but equally or potentially even more important are the presence of those perpetrating ideologies of violence in the social networking sites to advance their agendas and interests. Moreover, all trends would only point toward the Internet/ social media venues continuing to grow in the future, and we must anticipate that **extremists purporting violence will continue to attempt to make full use of these mediums of communication.** For Russia, and other nations of the world, 90% of Internet users are under the age of 35. **The plethora of extremist video sites available** at YouTube, Google Video, and other venues featuring highly creative and illustrative **images are widely accessed, particularly among the youth.** The policy community is sorely in need of innovative and creative approaches capable of fully grasping the dimensions of such a threat in an increasingly globalized world where information can be exchanged instantaneously and freely from any point on the earth. **Al Qaeda and its affiliates and other violent extremist groups** have recognized the importance of images and perceptions, and widely utilize the traditional media and online platforms to disseminate their 3 messages. Terrorist **groups have skillfully employed the Internet / social media to recruit and indoctrinate followers, disseminate literature, instantaneously broadcast beheadings and other outrageous acts of violence, and to finance and coordinate attacks.** The Task Force on the Future of Terrorism formed by the United States Homeland Security’s Advisory Council (HSAC) in 2007 offered the conclusion that **the “Internet has become a major facilitator of terrorist activities, especially the spread of jihadist ideology.”**¹⁰ Russian terrorism expert Ekaterina Stepanova observes that **the Internet, offering a means of real time exchange of information, provides the perfect mechanism for disproportionate magnification of acts of violence.**¹¹ Philip Seib and Dana M. Janbek have documented the development of use of the Internet by contemporary terrorist groups. Azzam.com, originally established in 1996, eventually came to feature reporting on the Chechen and Afghan mujahedeen and offered a forum for exchanging teachings among the AQ affiliated network throughout the world.¹² Sites such as Al Neda, Global Islamic Media Front, Laskar Jihad and others have served the full range of objectives for these groups including facilitating the transfer of ideological convictions.¹³ **For Russia, extremist websites** such as Kavkazcenter.com **promoting the establishment of an Islamist state in the Caucasus have posed a direct challenge to the existing government.** The site is banned in Russia and appears on the world terror list for the United States, but Kavkazcenter.com continues to operate in several languages on the Internet. Observers have noted that the appeal of these sites stems from the fact that they are anonymous, cheap, provide global reach, and prove difficult to monitor or control. **The Internet / social media arenas offer a gathering point or virtual forum for like-minded individuals with shared views, grievances, and perhaps some basis for common identity.** As Sajjan Gohel notes “**the virtual world is fast becoming the most important meeting place for terrorists** ... after consolidating relationships over the Internet, the recruits can then **plot and plan mass casualty attacks** while remaining in contact with their handlers over the world wide web.”¹⁴ Johnny Ryan has observed that participation in

chat rooms and websites which advance conspiratorial or religio-identity messages and symbolism may fulfill a deep psychological need for community or identity in an otherwise existence devoid of a social network. As Ryan states: "To be a part of an elite network, particularly a conspiratorial one, might be a large part of a person's existence," which "allows a connection to an amorphous community to discuss matters regarded by the wider society as subversive, to find mentors, seek out justification."¹⁵ "It allows individuals who are isolated and alienated, both physically and psychologically, to feel that they are linked, empowered and members of an international movement."¹⁶ Extremist groups can tailor their images for specific audiences and they target specific groups of society including adolescents, women, or children. In 2011, Russia's Interior Minister Rashid Nurgaliyev reported that approximately 7,500 websites with extremist content were active in the Russian segment of the Internet.¹⁷ The problem of terrorism in 4 social networks is included on the agenda of the Russian Security Council. In April 2011, then President Dmitry Medvedev held a meeting with representatives of the Internet community acknowledging the range of security challenges associated with the "explosive growth of the Internet / blogosphere including manifestations of extremism, terrorism, crime, and threats to personal data information."¹⁸ Medvedev emphasized the difficulties these new mediums pose for managing the "creative commons" or issues of copyright.¹⁹ He also stressed that it was important for the President to make the right decisions with respect to all social relations including the Internet.²⁰ The Arab Spring, combined with the widespread protest activity that took place in Russia during the Presidential election period in Spring 2012, brought the issues of the appropriate role of social media and regulation of these sources to center stage in Russia. Reflecting on concerns about the role of social media in revolutions, Oleg Demidov notes that "A harmless technology designed to help people socialize... is being portrayed as something of a weapon of mass destruction which poses a threat to the stability and security of individual nations and the international community as a whole."²¹ In July 2011, Demidov had organized a major conference entitled "Social Networking Services in the Contexts of National and International Security" bringing together officials of the secretariat of the Russian government, Russian Ministry of Communication, U.S. Embassy in Moscow, Russian Foreign Ministry's MGIMO, and other representatives of the security of social media communities to discuss Internet security and social media.²² One of the main questions explored was whether social networking services could represent a national security threat. While the state controls much of the television and news media in Russia, citizens in contemporary Russian society have been able to rely on the Internet as a source of information and communication with few restrictions. Many in society are quite anxious today about the potential for increasing government regulation and monitoring of the Internet / social media. The United States will have to work together with partners throughout the world in finding the proper balance between protecting freedom of information and expression and security in managing the threat from violent extremists. At what point do nations undermine the basis for a democratic society in attempting to manage violent extremism in the Internet / social media arenas? How far can nations go in regulating websites, for example, in instances when those sites are used to recruit terrorists and organize violent attacks? Should we be concerned that nations might exploit the threat of extremism to thwart democratic freedom and development? The new media venues will continue to present challenges for democratic societies in considering imposition of various levels of regulation when the technology is manipulated for purposes of fostering violence and harm to society.

Impact #2

Terrorism causes extinction---hard-line responses are key

Nathan **Myhrvold '13**, Phd in theoretical and mathematical physics from Princeton, and founded Intellectual Ventures after retiring as chief strategist and chief technology officer of Microsoft Corporation, July 2013, "Strategic Terrorism: A Call to Action," The Lawfare Research Paper Series No.2, <http://www.lawfareblog.com/wp-content/uploads/2013/07/Strategic-Terrorism-Myhrvold-7-3-2013.pdf>

Several powerful trends have aligned to profoundly change the way that the world works. Technology now allows stateless groups to organize, recruit, and fund themselves in an unprecedented fashion. That, coupled with the extreme difficulty of finding and punishing a stateless group, means that stateless groups are positioned to be lead players on the world stage. They may act on their own, or they may act as proxies for nation-states that wish to duck responsibility. Either way, stateless groups are forces to be reckoned with. At the same time, a different set of technology trends means that small numbers of people can obtain incredibly lethal power. Now, for the first time in human history, a small group can be as lethal as the largest superpower. Such a group could execute an attack that could kill millions of people. It is technically feasible for such a group to kill billions of people, to end modern civilization—perhaps even to drive the human race to extinction. Our defense establishment was shaped over decades to address what was, for a long time, the only strategic threat our nation faced: Soviet or Chinese missiles. More recently, it has started retooling to address tactical terror attacks like those launched on the morning of 9/11, but the reform process is incomplete and inconsistent. A real defense will require rebuilding our military and intelligence capabilities from the ground up. Yet, so far, strategic terrorism has received relatively little attention in defense agencies, and the efforts that have been launched to combat this existential threat seem fragmented. History suggests what will happen. The only thing that shakes America out of complacency is a direct threat from a determined adversary that confronts us with our shortcomings by repeatedly attacking us or hectoring us for decades.

Uniqueness

Overview

Scenario #1: Russian internet censorship has played a key role in suppressing dissent and creating support for Putin's regime. The country's internet control blocks any voice that critiques Putin's Regime. The only voice the people hear is Putin's. This method has fostered strong public support in favor of the regime—that's Pfeifer 15

Scenario #2: The threat of terrorism is high in Russia because the lawless land of the Northern Caucasus have become a hotbed for terrorism. It has become to increase the number of terrorist attacks.

Scenario #2:

Uniqueness Wall—Scenario #1

Putin Regime Needs Censorship to Silence Opposition

Orttung 14 (Robert W. Orttung, after working at the Open Media Research Institute, EastWest Institute, Transnational Crime and Corruption Center, and the Jefferson Institute. Orttung works as the assistant director of the Institute for European, Russian, and Eurasian Studies. In correlation with his work at GW

The repressive “bloggers law” signed by President Vladimir V. Putin on May 6 says a good deal about the troubling decline of free expression in Russia. This measure comes on the heels of a series of

other laws that have recently been put in place to restrict television, books, films, and certain public performances, further **curtailing Russia's** already besieged **media space**. But at a time when Putin's governance system is mutating from a venal, kleptocratic regime into a belligerent, revanchist power, what the Russian authorities do at home has important effects on the media environment in countries on Russia's borders, and beyond. **During** the decade and a half **of Putin's rule, media freedom in Russia has gradually eroded**. As we write in a recent issue of the *Journal of Democracy*, the Kremlin is finding alarmingly effective ways to manipulate and control media, despite the proliferation of new communication technologies and methods of news distribution. With Putin as paramount leader, Russia's most important media have more become instruments of the state, at least when it comes to information about politics. **The authorities have sidelined virtually all mass media outlets** that are capable of offering an independent point of view. The effort to marginalize alternative voices **and** to create a state media system has been in the works since Boris Yeltsin handed Putin the presidency at the end of 1999. Putin began by reasserting control over the national television stations, for example NTV, a private network that during the Yeltsin years had provided critical coverage of important issues, such as the war in Chechnya. By controlling such stations, Putin **achieved dominance over the messages that reach the vast majority of Russian citizens**, most of whom (over 80 percent) still get their information primarily from television. Putin's censorship campaign marches on. Since the start of 2014, the Russian authorities have taken aim at the remaining pockets of independent thought, including TV Rain, Ekho Moskvy, and websites such as *Lenta.ru*. **The Diffusion of Kremlin Media Values** Putin's revanchism brings with it some distressing byproducts, one of which is the projection of illiberal Kremlin media values beyond Russia's borders. Crimea is a case in point. In the short period since its annexation, the peninsula's media have been subdued and integrated into the repressive Russian information space. The relative media pluralism Crimeans had enjoyed until recently is gone, replaced by a Russian standard that effectively limits alternative viewpoints. The dismantling of Crimea's media was achieved swiftly. Days in advance of the rigged March 16 referendum on annexation, Ukrainian television broadcasts were silenced and replaced by programming from Moscow. The first order of business for Russian-backed forces in Crimea was to **cut off sources of information beyond the control of the Kremlin**. **The crackdown on mass media was accompanied by fierce repression of local activists, bloggers, and others who voiced opinions contrary to the Kremlin line**, according to a report written by Ivan Šimonović, the UN assistant secretary general for human rights. In the end, officials in Crimea reported that 97 percent of referendum voters supported secession from Ukraine and annexation by Russia. In the aftermath of Russia's takeover, most Crimeans now get their news from Russian television and the government-run local broadcaster. These stations tend to follow Moscow's version of events in Ukraine, describing the government in Kyiv as illegitimate, warning of instability across the country, and generally seeking to discredit any Kremlin opponents. The same type of propaganda invasion that coincided with the physical invasion of Crimea has been on view in eastern Ukraine. As pro-Russian forces extend their hold, **Kremlin media values take root there, too**, with coercive tactics used on independent journalists and dissidents in ways that are common in Russia, but had been rare in Ukraine. Just this week, separatists in several eastern cities have disrupted local rebroadcasts of Voice of America and Radio Free Europe/Radio Liberty, in some cases replacing them with Russian or pro-Russian content. Reporters from various outlets have been threatened, attacked, or arbitrarily detained. In addition to Ukraine, Russia's state television influences other neighboring states with significant Russian-speaking populations. As the Kremlin's ability to project media power has strengthened over time, the authorities in countries on Russia's periphery have been forced to contend with increasingly provocative and destabilizing messaging. **Moscow's well-funded media complex** simply outguns local Russophone alternatives in places like Moldova, Kyrgyzstan, and the Baltic states. Moscow's propaganda effort in these countries is nothing new; it has been a staple of Putin's rule, calibrated to suit Russian authorities' needs at any given time. What is different now is its intensity, **the sheer brazenness of the falsehoods** disseminated by Kremlin-controlled media, and the fact that its disruptive and provocative elements are being escalated as part of Russia's new revanchist push. The Kremlin's claims that it wants stability on its borders ring hollow in the face of its own utterly destabilizing propaganda. The authorities in **Moscow understand very well that propaganda is most effective when accompanied by stringent censorship**, so that half-truths and outright lies cannot be challenged by independent voices. This explains a good part of Putin's rationale for seizing firm control of television in Russia. With this objective achieved, the coupling of propaganda with censorship is increasingly visible online as well. Even as the Kremlin and its surrogates saturate social networks and the internet in general with **comments from Kremlin-friendly trolls and provocateurs**, more elaborate measures to censor online expression are being put in place. The "bloggers law," for instance, requires bloggers with significant audiences to register with the authorities and obliges both domestic and international hosting services to record and turn over user data. Additional evidence that the walls are closing in on Russia's online world is abundant. Pavel Durov, the founder of Russia's largest social-networking website, fled Russia on April 22, a day after he said he was forced out as the company's chief executive for refusing to share users' personal data with Russian law enforcement agencies. At a forum in St. Petersburg on April 24, **Putin called the internet a "CIA project" that needed to be controlled**, giving a strong signal that further restrictions are in the offing. Putin has effectively "weaponized" Russia's media. The most visible dimension of Russia's "Special War" with neighboring countries is its withering and divisive propaganda effort. For all of the outlandishness of so much Kremlin messaging, Russia's state media have been able to draw outsiders into a debate on its terms. The Russian propaganda machinery's repeated depiction of the new Kyiv government as "neo-Nazis" and "fascists" has the effect of muddying the waters, making it difficult to have a coherent conversation

about Ukraine's leaders. The relentless dissemination of false accusations also undermines the possibility of a clear-headed examination of the rampantly corrupt and repressive record of the ousted Yanukovich administration, whose abysmal governance drove Ukrainians into the streets. And many foreign media outlets instinctively steer a "balanced" course between Kremlin propaganda and Kyiv's rebuttals, for example by discussing the farcical separatist referendums in a cautious, credulous tone. Despite its effectiveness, the Kremlin's massive investment in propaganda and censorship betrays the Russian leadership's anxiety about its own grasp on power. Indeed, the overall effort to destabilize Ukraine and its critical May 25 elections reflects the deep insecurities stemming from the Putin regime's own lack of democratic legitimacy. The latest mutation of Russia's media began with the mass antigovernment protests in Moscow and other cities in 2011–12, and gathered pace with the rise of popular protests in Kyiv. Both protest movements were a public response to deeply corrupt, unresponsive, and increasingly repressive systems. The common features of these two popular movements—and their implications—were not lost on the Kremlin. The elaborate media weaponry deployed by Russia and the venomous messaging it projects cannot be wished away. There is little doubt that its success to date will encourage the authorities to rely even more on media manipulation and subterfuge. Given this likelihood, understanding the two connected challenges presented by the Russia's illiberal media system is essential. One arises from censorship, the other from propaganda. **Russia's deepening censorship means that ordinary Russians are increasingly cut off from independent information about the actions of their own government and the wider world.** It suggests that outside efforts to enable the flow of such information into Russia will need to be enhanced. Meanwhile, the ever more sophisticated propaganda disseminated by the Kremlin, which is grounded in anti-Westernism and anti-Americanism, requires a more effective answer from democracies, which have been caught flat-footed by the Russian media onslaught. **Putin's regime** and other corrupt, repressive governments **need a first-rate propaganda capacity and an ability to silence alternative voices.** After all, what the authoritarians actually offer by way of a governing vision demonstrably lacks mass appeal. Russia's leaders undoubtedly understand this all too well, and therefore invest as much as possible in media arsenals that can distract the public from the grim reality they have created.

Russian Censorship is increasing

Kemp 14 (Cheryl Kemp is the Content Director for the WHIR and HostingCon. "Russian Lockdown on the Internet Continues with Strict Data Storage Regulations")

<http://www.thewhir.com/web-hosting-news/russian-lockdown-internet-continues-strict-data-storage-regulations>)

On Wednesday the **Russian** lower chamber of **parliament passed a bill that requires internet companies to** comply with a new law regarding personal data **storage** much sooner than anticipated, ACCORDING to the Wall Street Journal. In July, Russia passed a law that **all online personal data collected from Russians** must by law be stored **in Russia**. The law was to take effect Sept. 1 2016. The deadline has been moved to January 1, 2015, just 3 months away. Under the new law, **non-Russian companies will also be banned from sending a Russian citizen's personal data out of the country** unless they can MEET RUSSIAN GOVERNMENT-imposed storage conditions. Earlier this year, the Russian parliament passed many new restrictions on the internet and blogging. "Today, the Internet is the last island of free expression in Russia and these draconian regulations are clearly aimed at putting it under GOVERNMENT control," Hugh Williamson, Europe and Central Asia director at Human Rights Watch, told the Wall Street Journal. "**The ADOPTION of the law will become a yet another step in increasing government control over the Internet in Russia,** which will negatively impact the development of the industry," a spokesman for Yandex, Russia's biggest search engine, said. Laws put in place over this year will have an effect on any CLOUD or hosting company attempting to do business with Russia. **Legislation is becoming so restrictive it** may even cut out the rest of the tech world and possibly the entire Internet. Earlier this month, the Guardian reported that the Kremlin **is** "**considering radical plans to unplug Russia from the global Internet in the event of a serious military confrontation or anti-government protest** at home." Up to this point, even though the Russian print media is mostly under control of THE GOVERNMENT, the internet has been a place where relatively open discussion could take place. "Before, such ideas were mostly to do

with so-called government communications (how to make them independent from western technologies),” wrote Andrei Soldatov, an expert on Russia’s spy agencies, in an email to the Guardian. “Now they want to expand this crazy idea to the entire internet of the country. The latest law to keep data in Russia has been postured by the government as PROTECTION against spying, hacking and threats from the Ukraine crisis. However, as a country with state controlled media, new restrictions on internet and blogging and a **new law coming** to limit foreign companies interest in Russian media firms to 20 percent, it **seems** to some **like an even greater effort to censor and cut Russia off from the rest of the world**. It’s obvious that foreign companies don’t have nearly enough time to build data centers in Russia before this law goes into effect. “But if a company wants to operate on the territory of the Russian FEDERATION, there are a wide range of rental opportunities,” Alexander Yushchenko, a Communist Party deputy in the Duma and co-author of **the bill**, said this month. Yushchenko said foreign Internet firms could rent storage from Russian companies such as state-controlled telecom provider OAO Rostelecom. One might suspect the offer to rent **is yet just another way Russia can attempt to control data and continue moving towards greater censorship**.

Non-unique-Russia Economic Recession Spurred Dissent and Protest

Stratfor 15 (Stratfor Global Intelligence “Amid an Economic Criss, Russia Contains Dissent?”

<https://www.stratfor.com/analysis/amid-economic-crisis-russia-contains-dissent>

With **Russia entering its second recession in six years, the country's economic and financial hardships are starting to weigh on the Russian people and regional governments. In times of severe economic crisis,** such as those in 1905 and 1998, **the Russian populace** and regional authorities traditionally **react against federal authority, fragmenting the country. Those in power in Moscow understand this and are taking measures** to ensure that they counter and **prevent any social or regional backlash and dissent.** The Russian economy has been in steep decline for more than a year and is slipping into another recession. A constellation of factors is causing the decline, including lower oil prices, the West's sanctions and sour Western investment attitudes because of **the Ukraine crisis.** This **has led to massive capital flight of \$160 billion in 2014 and an estimated \$80 billion in 2015, a volatile ruble that lost 40 percent of its value in late 2014, and a likely federal budget deficit of approximately \$45 billion in 2015. The Russian people are starting to feel the pain.** In March, inflation skyrocketed from just under 7 percent the previous month to nearly 17 percent. According to a Levada poll, **Russians see inflation as the most acute problem facing Russian society. Food price inflation has risen even faster** because of Russia's ban on importing food from the European Union and the United States. According to the Agriculture Ministry, during the past six months **the cost of cabbage in Russia has risen 66 percent.** onions rose 40 percent, potatoes 36 percent, carrots 32 percent, and beef 10 percent. At the end of February, most Russian supermarkets announced a two-month price freeze on more than 20 socially important items, including meat, fish, milk, sugar, salt, potatoes, cabbage and apples. Some regional grocery chains, such as the ones in the Norilsk region that are run by Russia's largest mining firm Norilsk Nickel, are taking losses to subsidize food prices. Another area of dissatisfaction among the Russian people is the closure of medical facilities in some regions, such as Moscow, Novosibirsk and Vladivostok. In Moscow, nearly a quarter of inpatient medical facilities have been closed since November, sparking minor protests in the capital. In addition, **the economic pressure is affecting the country's job market.** Russia's Labor Ministry estimated that some 154,800 jobs were cut in 2014, and **approximately 127,000 jobs were cut** in the first two months of 2015. According to Deputy Labor Minister Sergei Velmyaikin, the majority of these layoffs were at large Russian firms, such as Rosneft, Rostelecom, Avtovaz

and Mechel, which are run by the state or oligarchs. There are also reports that in the Murmansk and Zabaikalsk regions, salaries for teachers have not been paid in three months. The teachers in Murmansk are petitioning their governor to ask Russian President Vladimir Putin for increased financial subsidies. The teachers in Zabaikalsk have held three minor street protests. The federal government has allocated \$300 million for employment subsidies for some Russian regional governments, such as Tatarstan, Altai Krai, Samara and Tver. These subsidies are aimed at maintaining employment at regional companies such as KAMAZ, Avtovaz, AltaiVagon and Tver Carriage Works. **Sporadic minor protests have also taken place across Russia during the past month.** Communist Party members in Stavropol got in coffins to protest their regional government's low pension payouts. **In Novosibirsk, farmers dumped manure in front of state-run Sberbank with signs saying, "Bankers are enemies of the people," and, "Down with credit slavery."** Besides financial assistance programs, the Kremlin is also setting up ways to crack down on the regional leaders should there be dissent or should they not be able to control their respective regions. On March 30, a Kremlin-linked think tank, the Civil Society Development Foundation, released a rating of the best and worst regional heads. The study was mostly rated on improvements in the regions' socioeconomic conditions. The foundation also said it would be releasing this ranking every quarter, as if the Kremlin will now have a quarterly check on the regional leaders' competency. Putin has never been shy about **reshuffling regional heads**. Since the start of the year, he has appointed new or acting leaders in six regions: Tatarstan, Amur, Sakhalin, Yamal-Nenets, Khanty-Mansiysk and the Jewish Autonomous Oblast. Now it looks like Putin is ensuring that all the governors and regional heads can see where they stand and has created a system to drum up public sentiment against those governors that do not comply with Putin's policies. Putin tightening his grip on power may not be controversial among the Russian people. In the 1998 financial crisis, some 71 percent of Russians believed that keeping order in the country was more important than democracy, according to a Levada poll. Interestingly, Levada released a poll on March 31 that indicated 45 percent of Russians think the crackdowns that Soviet leader Josef Stalin conducted during economic hardships were justified — a sharp rise from just 25 percent in 2013. Consequently, Russians could be increasingly in favor of crackdowns and a tighter Kremlin hold, as long as the country remains stable.

Russia Opposition found Way to Circumvent Censorship—Won't Suppress Online Dissent

Global Voice Advocacy 14 (Global Voice Advocacy. "How Russian are Outsmarting Internet Censorship" <https://advocacy.globalvoicesonline.org/2014/03/25/how-russians-are-outsmarting-internet-censorship/>)

Mere days after several opposition websites were blocked [Global Voices report] by Russia's mass communications regulatory agency, Roskomnadzor, free speech proponents have created a unique system for circumventing censorship — and imposing counter-attacks. This approach could create problems both for censors and pro-Kremlin websites. Indeed, it seems that Russian Internet activists have taken the adage “the best defense is a good offence” to heart. **The system gained popularity when blogger Ruslan Leviev [ru] implemented the approach in order to access opposition leader Alexey Navalny's blog, which was blacklisted and blocked last year.** A programmer identified as alexkbs, who first developed the system, explained in a blog post [ru] that he wanted to create a way for average users to access blocked material — a method for those who might not have the technological aptiturrnde to use specialized services like Tor, i2p, VPN and proxy servers [ru]. This is why his approach is centered on allowing users to access blocked sites through plain old World Wide Web. The method consists of a network of mirrors, or exact copies, of the blocked site, combined with an “active defense” mechanism. Because Roskomnadzor requires ISPs to constantly check if a resource is trying to circumvent a ban by changing its IP address, blocked resources can introduce code that redirects some of these IP queries to a different website. Eventually, goes the theory, ISPs will pick up on this redirect and block the secondary website as well. So if a blocked site is savvy enough to redirect to a government site, say Kremlin.ru, ISPs will ultimately block Kremlin.ru, a block that obviously can't stay in place for long. This idea was put to the test on March 17, **when the popular pro-government website LifeNews was banned by many ISPs [ru] through this redirection trick.** The website responsible for the block was one of the mirrors of Navalny's blog. **LifeNews later appealed the block to Roskomnadzor, and the mirror was unblocked as a result, proving the exploit successful at actively forcing a reversal of censorship.**

Putin Popularity is Declining and Opposition is Strengthening

Sakwa, Galeotti, and Balzer 15 (Richard Sakwa, Mark Galeotti, and Harley Balze are senior research working for the Center on Global Interest. “Putin’s Third Term—Assessment Amid Crisis” http://globalinterests.org/wp-content/uploads/2015/03/Putins-Third-Term_CGI.pdf

Although Putin delivered unprecedented prosperity and opportunities to the citizenry during his first years in power, Russia was suffering from serious governance problems, including corruption, elite kleptocracy, weakly defended property rights and the lack of an independent judiciary. A symptom of this political crisis was the longterm erosion of the Putinite majority: well before the announcement of his return in September 2011, there had been signs of crumbling support. Russia is not immune to the laws of political gravity, and even Putin’s remarkably long period of sustained high public opinion ratings would one day have to come down to earth. Although the fall in Putin’s popular support is often exaggerated, there was a real decline from the heights enjoyed in his second term and during his time as prime minister. The “Putin majority” had dissolved, and Putin was forced back onto his core electorate, which tended to be more traditionalist and susceptible to anti-Western and conservative rhetoric. 6 The methods of rule that had worked so well for Putin in his first two terms as president between 2000 and 2008 were not as well-suited for his third term. There was less political capital to be made from condemning the smutnoe vremya of the 1990s, since Putin now had to take responsibility for the conditions in the country that he had largely created. The legitimacy derived from the recuperative agenda had to be supplemented by performance. A period of unprecedented economic growth and rising living standards had expanded and transformed what Russian commentators like to call the “middle class,” otherwise dubbed the “creative class.” A large group of urban, educated and professionally confident people now demanded their full citizenship rights, above all the right to free and fair elections. Moreover, the country now expected to see policy innovation and good governance, above all through lifting the burden of corruption, raiding and bureaucratic interference, and in general by imbuing the economy with a new dynamism and the country as a whole with a sense of renewal and positive purpose. Instead, Putin’s return became associated with a return to the past and to more politics as usual, which proved a dreary prospect for many of Russia’s best and brightest.

There will be no major Protest even if there Economic Hardship

Koshkin 15 (“Pavel Koshkin is Deputy Editor-in-Chief of Russia Direct and a contributing writer to Russia Beyond The Headlines (RBTH). He also contributed to a number of Russian and foreign media outlets, including Russia Profile, Kommersant and the Moscow bureau of the BBC. Will There be Social Protest in Face Economic Hardship” <http://www.russia-direct.org/analysis/here%E2%80%99s-why-russia%E2%80%99s-economic-problems-won%E2%80%99t-lead-social-protests>)

Although most Russians support the Kremlin and its policies, there is still no certainty that it will be a long-lasting trend if Russia’s economic challenges persist in 2015. This might threaten one of the country’s most important advantages – its social capital, which has been defined as the “investment in social relations with expected returns in the marketplace” by prominent scholar Nan Lin, professor at Duke University. However, the experts and sociologists who came together at the 2015 Gaidar Economic Forum, organized by the Russian Presidential Academy

(RANEPA), seem to be hesitant about making any predictions about the future of Russia's social capital during a period of economic volatility and unpredictability. Although social protests look like major risks, experts argue that in the short-term they don't threaten Russia; however, in the long RUN, there is no certainty. IF THE CRISIS IS PERENNIAL, IT WILL ERODE LIVING STANDARDS OF PEOPLE AND THREATEN PROSPERITY. IN THIS CASE, PEOPLE MIGHT TAKE TO THE STREETS. Prof. Robin J. Lewis, director of the Master of Global Public Policy Program (MGPP) at RANEPA, argues that, at present, there is no reason to worry about the revival of the protest movement in Russia as long as THE CURRENT economic difficulties come to an end. But if the **crisis is perennial, it will erode living standards of people and threaten prosperity**. In this case, people might take to the streets, Lewis cautiously assumes. So far, the majority of the Russian population has been loyal and grateful to the Kremlin because Russians have been able to enjoy two key social amenities offered by the Russian GOVERNMENT – comparably high living standards and high consumption opportunities. But it may be not the case in the future, **after the Ukrainian crisis, the sanctions wars and the headlong drop in oil prices**. “At the beginning of the new century, Russia's citizens finally began to enjoy the fruits of their post-Soviet freedoms when another long bout of low oil prices prompted President Vladimir Putin's first GOVERNMENT to dramatically improve Russia's macro-economic policies. As a direct result, personal incomes, pension levels, savings and investment soared annually,” said Bernard Sucher, a member of the board of directors at Aton Group. In contrast, in 2014 Russia was “locked into a downward economic trajectory.” Oddly enough, the Russian authorities feel relatively optimistic, even though the upcoming poor economic performance might dissatisfy the Russian population. The Kremlin believes that it is able to use all the economic and political challenges in its favor. As implied from Russian Prime Minister Dmitry Medvedev's speech at the 2015 Gaidar Economic Forum, the Kremlin brought people together by using the so-called “besieged fortress” mentality to mobilize Russian society against sanctions. HISTORY SUGGESTS THAT ONE SHOULD NOT UNDERESTIMATE THE CAPACITY OF THE RUSSIAN PEOPLE TO ENDURE THE UNENDURABLE “Even in its current inefficient form, **Russia's economy is sustainable as long as the citizenry is willing to live with hardship and lost OPPORTUNITY**,” Sucher points out. “History suggests that one should not underestimate the capacity of the Russian people to endure the unendurable.” **Russians' presumed endurance, combined with their capability to put up with hard times and losses, are among the reasons why some experts don't believe that social protests will happen in the foreseeable future**. However, the problem appears to be more complicated than it does at first glance. Even though Russians might have stamina to deal with economic hardships, will they trust the authorities in the future? Trust in the government and the president remains crucial for maintaining a country's social capital, as Ngaire Woods, dean at Oxford University's Blavatnik School of Public Diplomacy, and her counterpart from China's Tsinghua University, Xue Lan, agreed during the Gaidar Forum. So far, Russian President Vladimir Putin approval ratings are robust. But it remains to be seen if that will be the case in two to three years. If one accepts the logic of Irvin Studin, the editor-in-chief and publisher of Global Brief Magazine and a participant of the Gaidar Forum, who views social capital as a matter of mentality, the situation becomes more complex. **RUSSIANS ARE EXPERIENCING A DEEP INFERIORITY COMPLEX AND A SORT OF PSYCHOLOGICAL TRAUMA AFTER THE COLLAPSE OF THE SOVIET UNION, ALL OF WHICH MAKES THEM EASIER TO MANIPULATE** After all, some of Russia's prominent sociologists and historians believe that the Kremlin manipulates the mentality of Russians to legitimize its regime. For example, Lev Gudkov, director of Russia's Levada Center for public opinion polling, points out that Russians are experiencing a deep inferiority

complex and a sort of psychological trauma after the collapse of the Soviet Union, all of which makes them easier to manipulate. Likewise, Victoria Zhuravleva, professor of American History and International Relations and director of the American Studies Program at the Russian State University for the Humanities (RSUH), argues that the Kremlin uses the “besieged fortress” mentality to spur anti-American sentiment in Russia. So, the Kremlin seems to use its implied social contract with its citizens as a way to counter the impact of sanctions and slumping energy prices. **THE CHALLENGE FOR THE RUSSIAN LEADERSHIP IS NOT ONLY IMPROVING ITS ECONOMIC OUTLOOK OVER THE NEXT 24 TO 36 MONTHS, BUT ALSO NURTURING THE TALENTS AND POTENTIAL OF A NEW GENERATION** Yet, Marcos Troyjo, adjunct professor of International and Public Affairs at Columbia University, is more optimistic about the nature and future of Russia’s social capital. Despite the serious implications of declining oil prices, **the Russian political leadership looks very skillful in bringing people together**, he argues. ACCORDING to him, the challenge for the Russian leadership is not only improving its economic outlook over the next 24 to 36 months, but also nurturing the talents and potential of a new generation. **“Russia has to use its expertise and its comparative advantage in mineral resources in ORDER to build the knowledge economy, a tech-intensive society for the future.”** he said. That is the big challenge: Building a bridge from the world of comparative advantages [in mineral resources] to the world of competitive advantage [in knowledge]. That’s the secret for Russia.”

Russian Protest fails—Weak Opposition and Increasing Government Crackdowns

Bennett 14 (Marc Bennett is a British journalist based in Moscow, where he has lived for the past fifteen years. He has reported from Russia, Iran, and North Korea for the *Guardian*. “Could Protesters overthrow Putin?” <http://www.telegraph.co.uk/news/worldnews/vladimir-putin/10669786/Russia-Could-these-protests-topple-Putin.html>)

It was a little over 48 hours since enraged protesters based at Kiev’s Maidan opposition camp had driven Ukrainian president Viktor Yanukovich from power, but the shockwaves were already being felt on the glitzy streets of central Moscow. “If there is no freedom in Russia, there will be a Maidan!” shouted a middle-aged man, as **some 1,500 protesters, angry at jail sentences handed down to fellow opposition activists, defied a police ban to gather opposite the Kremlin** on Monday evening. Jittery riot police – nicknamed “cosmonauts” by Russian activists for their bulbous, visor-equipped helmets – pounced instantly, wrestling the protester to the ground, before dragging him away to a police TRUCK. Before the evening was out, hundreds of people – including members of the Pussy Riot guerrilla art collective and Alexei Navalny, the popular anti-corruption activist who is the nearest thing Russia’s beleaguered opposition movement has to a leader – would likewise find themselves in police custody. Opposition activist Alexei Navalny On Friday, a Moscow court placed Navalny under house arrest without access to THE INTERNET or telephone for at least two months before his impending trial on fraud charges, widely seen as revenge for his political activities. His supporters were rallying again in central Moscow yesterday. Related Articles Ukraine crisis: sanctions won’t worry Vladimir Putin 04 Mar 2014 People diary: Stony silence over Tony Blair statue 02 Mar 2014 Ukraine accuses Russia of 'invasion' 28 Feb 2014 Ukraine revolution: 150,000 Russian troops on alert 26 Feb 2014 We're letting Putin win in the Ukraine 20 Feb 2014 “Things can’t go on like this forever,” **sighed Olga**, a rosy-cheeked young woman SPORTING ear muffs and the white ribbon that is the symbol of discontent with “national leader” Vladimir Putin’s long rule, as police snatched

another activist from the crowd. “The people of Kiev rose up to kick out Yanukovich, and we’ll do the same to Putin one day.” The chanting of “Maidan!” was not the only indication that Russia’s 21st-century dissidents have been inspired by recent events in Ukraine. As opposition activists in Kiev burnt car tyres and erected barricades in the weeks and months before their final bloody showdown with state SECURITY forces, Russian anti-government protesters could only watch with a mixture of admiration and envy. Now, that admiration has turned to mimicry. Following an online call by a well-known opposition journalist, some activists hauled tyres to this week’s demonstration in Moscow, where they were promptly nabbed by police. Other copycat tactics were also in evidence, such as the singing of the national anthem and the unfurling of the Russian FLAG, both clear nods to the rousing displays of patriotism by Kiev’s tenacious protesters. It will take much more, however, than simply ADOPTING the symbols and rallying cries of the Maidan protesters to topple Putin, the ex-KGB officer who has ruled Russia since the dawn of the century. The scores of arrests at Monday’s demonstration were just the latest stage of an ongoing crackdown against Russia’s protest movement, a loose and increasingly strained alliance of Western-style democrats, Leftists, and self-proclaimed “Russian nationalists”. Marginalised and mocked for years as Russia grew fat on oil dollars and apathy reigned, the protest movement’s ranks swelled in late 2011, when a new breed of political activist such as Navalny and the shaven-headed Leftist Sergei Udaltsov seized on discontent among Russia’s growing middle class to lead mass protests against Putin. For a brief period, as young and energetic demonstrators filled THE SQUARES and boulevards of central Moscow, it seemed as if they might change Russia forever. But Putin not only faced down this challenge, he also lashed out, unleashing his hard-line allies in the FBI-style Investigative Committee on the protest leaders and their most vocal supporters. A swathe of politically motivated criminal charges brought the white-ribbon movement to its knees. “The Kremlin hasn’t broken the protest movement, but its pressure is being very keenly felt,” said Alexei Sakhnin, a member of Udaltsov’s Left Front movement recently GRANTED political asylum in Sweden. “Its leaders have been neutralised.” Although Pussy Riot are the best known faces of the opposition to Putin in the West, the group’s influence within Russia is marginal, at best. Loathed by many Russians for their “blasphemous” protest in Moscow’s main cathedral, the ART collective’s stunts have allowed the authorities to portray the entire opposition as anti-religion, a potent message in a country where hundreds of thousands were executed for their faith by the officially atheist Soviet authorities. For many in the protest movement, however, the Kremlin’s current crackdown is simply a temporary setback ahead of what they believe is Putin’s inevitable downfall. “History demonstrates that all authoritarian regimes, be they in Ukraine, Libya, Tunisia or Russia, eventually share the same fate,” insisted Dmitry Gudkov, a snappily DRESSED thirtysomething who is one of just a handful of MPs openly to side with the anti-Putin movement. “If the people are denied the chance to change their leaders democratically, they will find other means.” Russia’s protesters have, however, so far proven largely unwilling to demonstrate the kind of spectacular commitment to change exhibited by their counterparts in Kiev. Brief attempts by more radical members of the opposition to establish a permanent protest camp in Moscow after Putin’s controversial 2012 election victory were met with alarm and bewilderment by mainly middle-class protesters. If a sustained attempt to dislodge Putin is to materialise, then its “muscle”, as in Ukraine, is likely to be supplied by the far-Right. “For Russia to get its own Maidan, we need the PARTICIPATION of at least 7,000 nationalist activists and 150,000 ordinary citizens, hipsters and the like,” said Dmitry Dyomushkin, the ex-head of the outlawed ultra-Right Slavic Union movement. “In this case, we’d see an escalation, victims and open confrontation, and so on,” Dyomushkin added. “But so far the protests have all been hijacked by liberal protest leaders.” There are also

formidable logistic obstacles to sustained street protest in Moscow, the stronghold of the anti-Putin movement. Unlike in Ukraine, where western regions seethed with anti-government sentiment, **organised dissent has failed to take hold in Russia's provinces. Discontent may be growing in Russia's poorer regions, but there is also deep distrust of the** figures **DRIVING** **the Moscow-based opposition to Putin**. In Ukraine, the Maidan camp was supplied by activists making daily runs from opposition-held cities such as Lviv and Ivano-Frankivsk. In Russia, any protest camp in Moscow would be likely to be targeted by Putin loyalists shipped in from the conservative heartland. "Anger at Putin hasn't boiled over yet in Russia," said Dmitry Oreshkin, an independent political analyst with ties to the opposition. "**For most Russians,** especially outside of Moscow, **Putin remains a legitimate president**. Yanukovich was on much shakier ground." Equally significant in Ukraine was the existence of genuine opposition parties with the organisational skills to support the months-long protests in Kiev. In Russia, Putin has tamed parliament, filling it with fake opposition parties that provide the masses with the illusion of **DEMOCRACY**. **Genuine opposition is impoverished, low on resources, and has nowhere to go but the street**. Although Putin might appear to hold all the cards, the insurrection in Ukraine is certain to have sent a chill through the Kremlin's corridors. "Putin will be extremely worried by events in Ukraine," said Marat Guelman, a former Kremlin **SPIN** doctor who now openly supports the opposition. "The Kremlin has spent a long time convincing Russians that our troubled history – the Soviet era, all the revolutions we've seen, and so on – is why living standards here are so much lower than in, say, England or France. But if Ukrainians, who share a common past with Russia, can now build a successful country, then this will prove a real problem for Putin." Both the Kremlin and the anti-Putin protest movement have, of course, been here before. When Ukraine's largely peaceful 2004 Orange Revolution swept a pro-Western **GOVERNMENT** into power, **Putin turned the screws on dissent at home**, while his mysterious grey cardinal – the chain-smoking, half-Chechen Vladislav Surkov – put the final touches to Russia's system of "sovereign" or "managed" democracy. This time around, events in Ukraine, where independent TV channels aired uncensored broadcasts from Maidan until the final days of fighting, have led to a further clampdown on Russia's already tightly controlled national media. The opposition-friendly channel, TV Dozhd, has effectively been barred from the airwaves, while the relatively objective state news agency RIA Novosti has been handed over to an anti-Western, pro-Putin TV presenter named Dmitry Kiselyov. "Putin is extremely conscious of the power of **TELEVISION**," said Guelman, the one-time Kremlin spin doctor. "And now, after the events in Ukraine, he is likely to move on print media, as well." In the run-up to Putin's decision yesterday to deploy Russian troops to Ukraine, state-run media had portrayed the uprising in Kiev as the work of "radicals and fascists" backed by Western powers. Images of dead bodies in **THE STREETS** in Kiev and the possibility of the violent break-up of Ukraine were held up as the inevitable and terrifying consequences of revolt. In an opinion survey published by the state-controlled VTSiOM pollster on Friday, 29 per cent of Russians described events in Ukraine as "anarchy, lawlessness, and banditism". A mere 8 per cent sympathised with the protest leaders who deposed Yanukovich. For now, then, Putin appears **SECURE**. But Russia is nothing if not unpredictable, and it is far from certain **that Russians will continue to protest quite so passively in the future**. Events in Ukraine have both set a precedent and raised the stakes. "When the time comes, and it may well come, when I will ask you to take part in unsanctioned demonstrations, to overturn vehicles and **LIGHT** flares, I will tell you straight out," Navalny said last summer at an opposition rally to sustained applause. On Friday, as news broke that the protest leader had been placed under house arrest, a supporter posted an inflammatory tweet. "Am I the only one who thinks that the time has come?"

Scenario #2

Russia Causes Their Own Terrorist Problems

Zarkia 11 (Fareed Zarkia, is an Indian-born American journalist and author. He is the host of CNN's *Fareed Zakaria GPS* and writes a weekly column for *The Washington Post*. He has been a columnist for *Newsweek*, editor of *Newsweek International*, and an editor-at-large of *Time*. He is the author of five books, three of them international bestsellers, and the co-editor of one. "How Russia created its Own Islamic Terror Problem)

The terrorist attack at the Moscow airport on Jan. 24 was horrific, murdering dozens of innocent civilians. It is probably linked to Chechnya or the surrounding areas in the Caucasus, from which so many such attacks have emanated. **Russia has been the site of the largest number of serious terrorist attacks over the past decade** (excluding Afghanistan, PAKISTAN and Iraq, which are really war zones). Why? **The answer to this question sheds a sorry light on Russia's counterterrorism strategy.** In fact it is a case study in how not to fight Islamic terrorism. It's now conventional wisdom that **Moscow faces a brutal Islamic terrorist movement**, bent on jihad, unwilling to compromise and determined to inflict pain on Russians almost as an end in itself. That's the view presented by Russian officials and accepted by Western leaders. Over the past decade, George W. Bush and Tony Blair reacted to terrorist incidents in Russia by quickly condemning them and describing them as instances of Islamic terrorism, tied to al-Qaeda and its fanatical vision. This **unthinking acceptance of the Russian narrative allowed Moscow to respond with brutal violence, often against innocent civilians and without prompting international criticism.** A little history provides a different perspective. **Chechnya's struggle against Russia, at root, has nothing to do with Islam.** About 200 years ago, the Russian empire began a war of colonial expansion in the tiny area called Chechnya. After resisting for several bloody decades, the Chechens were forcibly incorporated into the empire in 1859. As soon as the Czar's rule ended in Moscow, the Chechens began clamoring for independence, which they were GRANTED in 1918. By 1920, Lenin had invaded the region and brutally suppressed the independence movement and all subsequent revolts. But the problem did not go away, so Lenin's successor, Josef Stalin, APPLIED an even more brutal solution. In 1944 he deported most of the Chechen population — nearly half a million people — to central Asia and burned their villages to the ground. Still, the Chechens retained their identity and national desires, so in the 1950s, Nikita Khrushchev allowed them to return to their homeland. In 1990, as the Soviet Union was collapsing, a national convention of all **Chechen political groups** united in a **call for immediate independence from Moscow. In response, the Russian government invaded Chechnya.** Over the course of the past two decades, **it has** fought two ferocious wars, **killed tens of thousands of Chechen civilians and razed large parts of the republic**, flattening its capital, Grozny. Moscow finally subdued Chechnya and INSTALLED as President a pliable local warlord, Ramzan Kadyrov, whose regime has managed to make Freedom House's Worst of the Worst list of the most repressive governments on the planet. As Russia's brave human-rights organization Memorial concludes in a 2009 report, "in Chechnya there has formed a totalitarian regime based on violence ... and fear." As the once secular **secessionist movement in Chechnya** **CONTINUED to be brutally suppressed, it became more extreme**, taking help anywhere it could find it, including from Islamic extremists. Chechen groups, always fractious, fragmented and became uncontrollable. **As Russia destroyed Chechnya's civil society**, the place became a wasteland characterized by anarchy and gang warfare. **And as tales of Russian brutality spread, Muslim warriors who were searching for jihad traveled to the Caucasus to do battle with the unbelievers.** Muslim fundamentalists from Saudi Arabia and other countries have provided funds to some of

these groups. Even today, despite the surface calm in Chechnya, Russia maintains a brutal reign of terror there and in its surrounding regions. Any signs of religious behavior are viewed with hostility. "Retribution is inevitable" was Russian Prime Minister Vladimir Putin's comment on the Moscow airport attack, setting up the next stage in this cycle of violence and extremism. Had Russia approached the Chechnya problem with less brutality, tried political outreach or OFFERED greater autonomy, the opposition to its rule might have turned out to be vigorous but still manageable. Now, given the nature and ferocity of the terrorists it faces, Russia might not have a choice. At this point, it is fair to describe the Chechen rebellion as dominated and defined by Islamic extremism. But it did not start out as such, and it didn't have to turn out that way. Outside the Af-Pak region and Iraq, Islamic terrorism has not been able to strike with great force in recent years. Except in Russia. In fact, one could argue that the Russian GOVERNMENT, far more than Osama bin Laden, has managed through its actions over the past two decades to create the largest and most active new center of Islamic terrorism in the world today.

4 Reasons-- the Threat of Terror is in decline

RFERL 14 "Why is the Death Toll Tumbling in The Northern Caucasus"

<http://www.rferl.org/content/insurgency-north-caucasus-terrorism-isis/26840778.html>

In 2014, the total number of people killed and wounded in the North Caucasus in clashes between the Islamic insurgency and police and SECURITY forces declined for the fourth consecutive year. The death and casualty toll fell last year by 46.9 percent, to 525, down from 986 in 2013. Expert opinions differ, however, on the reasons for that decline and whether it is likely to be sustained in 2015. Since 2010, the overall death toll has fallen by more than half, from 754 to 341 in 2014. Those figures are misleading, however, given diverging trends in the number of fatalities among insurgents, on the one hand, and police and SECURITY personnel, on the other. The number of insurgents killed in 2014 (249) was just one fewer than in 2010; the figures for 2011 and 2012 were 384 and 404 respectively. By contrast, despite a slight increase in 2011-12, the number of police and security personnel killed has fallen dramatically, from 225 in 2010 to 55 in 2014. Thus the ratio of militants to siloviki killed has changed from close to 1:1 in 2010 (250 and 225 respectively) to approximately 2:1 in 2011, 2012, and 2013, and almost 5:1 in 2014. The overall downward trend was observed in every republic bar one. The exception was Chechnya, where according to official statistics 14 police and a dozen insurgents were killed in large-scale attacks on Grozny on December 4. As a result, the overall death and casualty toll rose by 15 percent compared with 2013, from 101 to 117. Several factors, SINGLY or in combination, are likely to have contributed to the overall decline in casualties and the variations between individual republics. First is the death of individual insurgency commanders. The insurgents' most prominent losses in recent years were the Chechen brothers Khusayn and Muslim Gakayev, both skilled veteran fighters, who were killed in January 2013. But the deaths of Tengiz Guketlov in Kabardino-Balkaria in March 2014 and of Artur Gatagazhev in Ingushetia in late May were also followed by a lull in insurgent ACTIVITY. In Ingushetia, overall casualties were down 60.6 percent in 2014 compared with 2013, and the number of fighters killed fell from 24 (in 2013) to 15. Second, and possibly related to the first, is what Colonel General Sergei Chenchik, head of the Interior Ministry Main Directorate for the North Caucasus FEDERAL District, termed a steady decline in the NUMBER of times insurgents have opened fire or planted bombs (down 50

percent during the first 10 months of 2014). Third is an increase over the past year, particularly in Daghestan and Kabardino-Balkaria, in the number of "counterterror operations" in which premises where one or more fighters have taken temporary refuge are surrounded and, if the fighters refuse to surrender, destroyed by artillery fire. Fourth is the systematic targeting by federal forces of the support personnel on whom the insurgents rely heavily for supplies of food and medications. Russian Deputy Prosecutor-General Ivan Sydoruk told the daily Kommersant two years ago that the siloviki in other North Caucasus republics had begun following Chechnya's example and systematically rounding up support personnel. Sydoruk said the number of support personnel apprehended in the North Caucasus had increased from "just a handful" a few years previously to over 300 in 2012. That targeted erosion of the insurgency's support base could prove damaging in the medium term. U.S. counterinsurgency expert Robert Schaefer made the point in his recent book on the North Caucasus insurgency that the OPTIMUM ratio of support personnel to fighters in rural areas is 4:1. Some Russian analysts have attributed the decline in violence in 2014 to the ongoing exodus of fighters from the North Caucasus to SWELL the ranks of the militant group Islamic State (IS) in Syria. That assumption may hold true for Daghestan but not necessarily for other republics. Daghestan REGISTERED the steepest decline (54.3 percent) in the overall NUMBER of casualties, even though the number of fighters killed fell by just 4.7 percent. In that context, it is worth NOTING that of the total 208 killed and 85 wounded in Daghestan in the course of the year, only 40 and four respectively died during the last quarter, which is when Daghestan insurgent Amir Abu-Muhammad (Rustam Aselderov) announced that he and a large number of his fighters had sworn allegiance to Islamic State leader Abu-Bakr al-Baghdadi. If the exodus of fighters to swell the ranks of IS and thus hone their combat skills continues, then the level of fighting in the North Caucasus is likely to fall even further. And as Russian journalist Orkhan Djemal has pointed out, it is likely to be several years before the bulk of those who are currently fighting in Syria return. Whether or the legislative amendments SUBMITTED by the Chechen parliament to the Russian State Duma that would reinstate the death penalty for insurgents' relatives will impel more fighters to leave the North Caucasus remains to be seen.

The plan drastically cuts all FBI programs- that drastically reduces domestic counter-terrorism

Baer '09 (Robert Baer, Counterterrorism: A Role for the FBI, Not the CIA, Time Magazine, <http://content.time.com/time/nation/article/0,8599,1902335,00.html>, AZ)

As CIA Director Leon Panetta journeys to Capitol Hill to testify this week, there is reportedly a movement afoot in the Obama Administration that could diminish the agency's role in counterterrorism. Dubbed the "global justice" initiative, the new law-enforcement approach would give the FBI and the Department of Justice a more prominent part in collecting evidence against and questioning terrorists and bringing more cases to a civilian criminal trial, according to the Los Angeles Times. The CIA will still collect intelligence on counterterrorism. And no one right now is talking about putting a ban on CIA interrogations of terrorism suspects. But given the right political climate, that is where this initiative could be heading. And that, despite what some CIA loyalists might reflexively think, would be great news for the agency. In fact, if I were Panetta, I would neatly gift wrap counterterrorism, put a bow on the top, and hand it over to FBI Director Robert Mueller. It can't be any clearer that renditions, harsh interrogations (if not torture) and secret prisons have been a catastrophe for the CIA, promising to tie it up legally for years to come, not to mention completely overshadow its successes. With the torture scandal sucking up all the oxygen, who today remembers that it was the CIA in the months before 9/11 that was jumping up and down on the table warning that bin Laden was about to attack us? (Read "The CIA's Silent War in Pakistan.") None of this is to say the FBI can't do a good job at counterterrorism. On the contrary, the FBI investigated the 1998 African bombings, breaking open our understanding of al-Qaeda. Special agents in the FBI's New York office came to know al-Qaeda as well as anyone in the government. However, the FBI was forced to take a backseat when the CIA resorted to abusive interrogations, depriving us of expertise we so badly needed. There's an old piece of wisdom inside the Beltway, one that carries a lot more truth than most: the FBI catches bank robbers, and the CIA robs banks. I suppose you have to swim in this sea to really understand what this means. But to give you an idea, the other day I was on the phone with an FBI agent about a wanted terrorist. I'd heard he was holed up in some city in the Middle East. The FBI agent asked how I knew this. A rumor, I answered, adding I had no idea whether there was any truth to it. I'm certain the FBI agent took notes, but only to file them away. An FBI agent needs solid, actionable information — solid enough to arrest people, convict them in a court of law and put them behind bars. In this case, the FBI needed an address, a phone number, a license plate — anything to act on. On the other hand, the CIA is conditioned to steal anything that looks like a secret, even a suspect one, letting analysts in Washington sort out the truth from fiction. The FBI and CIA cultures couldn't be more different. The biggest mistake the Bush Administration made was not criminalizing 9/11 and making the FBI the lead investigator. This would not have stood in the way of Pakistan arresting 9/11 mastermind Khalid Sheikh Mohammed (K.S.M.). In a war of ideas, we would have been well served as a country to have put K.S.M. on public trial, confronting him with damning evidence and exposing the bloody insanity of a man who has caused the death of more Muslims than anyone in modern history. But now, thanks to waterboarding and other interrogation abuses, this option may be closed off to us. (Read "Why the CIA Turned Down Dick Cheney.")

Inc T

Definition Surveillance must be defined as both directed and intrusive

Philip **Gounev et al.** (Tihomir Bezlov, Anton Kojouharov, Miriana Ilcheva, Mois Faion, Maurits Beltgens, Center for the Study of Democracy, European Commission) **2015** “Part 3: Legal and Investigative Tools” http://ec.europa.eu/dgs/home-affairs/e-library/docs/20150312_1_amoc_report_020315_0_220_part_2_en.pdf

7.7.1. Definition There is no universal definition of surveillance. The various definitions for surveillance generally depend on whether it is used as an umbrella term or it is more narrowly defined. Advances in technology appear to be a factor in defining what surveillance is, as they hold the potential to periodically enable previously unavailable methods, techniques and tools for conducting surveillance operations (i.e. geolocation/tracking, electronic surveillance, cloud technologies, storage capacities). Analysis of information in the questionnaires indicates that MS use different approaches in defining surveillance in their legislation. Some MS differentiate between simple observation conducted without technical means and surveillance utilizing technical tools (AT, BE, FI, FR DE, LU). In other MS legislation distinguishes short-term and long-term surveillance, wherein the defined periods may vary from state to state (AT, DE, BE). The significance of making a distinction in the periods for which surveillance is authorised is that most often short-term surveillance is regulated more loosely and/or does not require a judicial oversight. Some MS definitions isolate surveillance conducted on the premises of private homes as a special circumstance, whereby it requires additional judicial authorisation and oversight (AT, CZ, LU, UK). Overall, MS definitions may be grouped into two main categories:¹²⁰ General / broad definitions. In these instances surveillance is more broadly defined as a special investigative tool that may be executed through the utilisation of various technical and other means (BG, EE, HU, LT, SI, FI, SK, SE). Specific examples include: - The method of intelligence data gathering, when information collected identifying, recognizing and (or) watching an object (LT). - Covert surveillance of persons, things or areas, covert collection of comparative samples and conduct of initial examinations and covert examination or replacement of things... the information collected shall be, if necessary, video recorded, photographed or copied or recorded in another way (EE). - Secret observations made of a person with the purpose of retrieving information (FI). Technically specific definitions. Some MS have opted for a more detailed and specific approach to defining surveillance in their legislations. In such instances, legal provisions often define surveillance along the logic of the types of technical means and/or outcome from surveillance activities (BE, AT, FR, DE, LU, PT, SK, SE). In general, the different types of surveillance methods, such as video surveillance, photographic imaging, bugging, audio surveillance and geo-tracking may be separately detailed in the definition of surveillance. For example, in France geolocation/tracking and video-surveillance are regulated separately (FR). This is because different types of surveillance are deemed to have potentially varied levels of intrusion and may be regulated with differentiated criteria, e.g. period for surveillance, authorisation procedure, crime threshold (FR, SI). Surveillance conducted using technical means is difficult to define as it covers a wide array of activities and capabilities, as well as methods and techniques. A breakdown of some the most used methods may help illustrate what is contained in the term.

Violation:

The most Islamophobic fbi policies are in education- the plan is extra-topical

Weinsten '11 (Adam Weinstein, September 15th, 2011, Mother Jones, [That Islamophobic FBI Training Is Just the Tip of the Iceberg](http://www.motherjones.com/mojo/2011/09/islamophobic-fbi-training-military), <http://www.motherjones.com/mojo/2011/09/islamophobic-fbi-training-military>, AZ)

Agents at the FBI's Quantico, Virginia, **training grounds are taught that all mainstream American Muslims are terrorist sympathizers** in a cult that likes to donate money to killers. That's according to a scoop by Wired's Spencer Ackerman, who has exposed a series of amazingly clueless Powerpoint slides and documents from the federales' training on Islam. If you haven't read his story yet, do so now. Ackerman's report brings new light to an alarming problem that's been well-documented since 9/11: **American police officers, airport screeners, and soldiers have no freaking clue how to deal with the distinction between the vast majority of Muslims and the minisule minority that actively seek to do us harm.** My MoJo colleague Adam Serwer points out that local cops around the country have been getting training that's even worse than the FBI's. He refers to an excellent March Washington Monthly story detailing how **Islamophobic trainers are collecting homeland security dollars while spewing complete nonsense.** For example: "When you have a **Muslim that wears a headband**, regardless of color or insignia, basically what **that is telling you is 'I am willing to be a martyr.'**" one trainer blathers. But it goes way beyond that. Our Islamophobia-beat reporter, Tim Murphy, has detailed on this site how Rep. **Allen West (R-Fla)** is **championing a skewed, conspiratorial vision of Islam to convince Americans that we're under attack.** I've written about the meager cultural **training** offered to service members and contractors headed for Iraq and Afghanistan. The **materials would be humorous if they weren't so disturbing: In them Arab men look suspiciously like Lego figures; they're described as "illogical or irrational," paranoid, and prone to extremes, "perhaps due to the harsh, desert environment that Arabs have lived in for thousands of years."** And that's just Iraqi Arabs—just wait 'til you read what they say about those dirty Kurds. All of which is to say that, 10 years after the US government got really preoccupied with Muslims of all stripes, from Iraqi Kurds, Sunnis, and Shiites to Afghan Pashtuns, Tajiks, Uzbeks, Hazaras, and a couple hundred other ethnic and tribal identities (not to mention Muslim-Americans)—our civil servants are still taking a reductive, unfair, and ultimately dangerous attitude toward them. Which may explain why we let foreign governments lock them up and torture them, even if they're American citizens. And perhaps it's why the FBI relies blindly on terrorism informants who walk the fine between tracking potential terrorists and making them. **If we continue to miseducate the well-intending agents and soldiers who serve at the tip of the spear, we shouldn't be surprised when that spear misses its target.**

C) that's a voter, 2 reasons

1 De-justifies the Resolution – something more is needed to solve, proving the resolution insufficient

2. Ground- the topic is written to provide negative ground isolated from the affirmative – extra T allows the affirmative to co-opt neg ground that doesn't include surveillance, even solvency arguments radically disrupt the balance of ground

Obama will use his PC to fight the plan- Recent meeting proves he supports surveillance of Muslims

Blumenthal 14 (Max Blumenthal: Writer for Altnet- Syndication service and online community of the alternative press, featuring news stories from alternative newsweeklies, magazines and web publications, “Obama Humiliates Muslim Guests at White House Ramadan Event, Endorses Israel’s Gaza Assault and NSA Surveillance,” 7/17/14, <http://www.altnet.org/world/obama-humiliates-muslim-white-house-guests-endorsing-israels-gaza-assault-defending-nsa>, Accessed: 7/17/15, RRR)

At the annual White House Iftar dinner commemorating the Muslim holiday of Ramadan, President Barack **Obama** endorsed Israel’s ongoing assault on the Gaza Strip and **defended government spying on Muslim-Americans**. Alongside dozens of Muslim-American community activists and Muslim diplomats, **the White House welcomed Israeli Ambassador** to the US Ron Dermer, **an outspoken advocate of Israel’s settlement enterprise who has claimed Muslim and Arab culture is endemically violent**. In the past, the annual Iftar dinner passed without much notice. Last year, President Barack Obama delivered a boilerplate speech to the assembled crowd of Muslim-American community activists and Middle Eastern ambassadors about his efforts to spur entrepreneurship. But this time, amidst a one-sided Israeli assault on the Gaza Strip that was about to claim its 200th death in just a week, and which the US had backed to the hilt, the heat was on. While Obama prepared his remarks, calls rang out with unprecedented intensity for invitees to boycott the July 14 ceremony. Among those who urged a boycott in protest of the Gaza assault and ongoing government spying on Muslim-Americans was the Arab-American Anti-Discrimination Committee (ADC), an established presence in Washington representing the country’s largest Arab-American advocacy group. Joining the boycott call was Mariam Abu-Ali, the sister of Ahmed Abu Ali, a US citizen renditioned to Saudi Arabia for torture before being sentenced to life in prison on dubious charges of threatening to kill George W. Bush. **“The White House Iftar is a slap in the face to those in the Muslim community who have been victims of U.S. civil-rights and human-rights abuses.”** Abu Ali wrote. **“It is an attempt by administration after administration to whitewash the crimes of the U.S. government against Muslims by painting a less-than-accurate picture of their relationship with the American Muslim community.”** As established Muslim-American leaders like Laila Al-Marayati lined up to boycott (Al-Marayati rejected an invitation to the State Department’s Iftar), others defended their presence at the ceremony. Most vocal among them was Rep. Keith Ellison (D-MN), one of the two Muslim members of Congress. “I disagree with the tactic,” Ellison remarked in a statement released by his office. “It will not close Guantanamo Bay, guarantee a cease-fire between Israel and Palestine or undo the NSA’s targeting of Muslims.” The Muslim Public Affairs Council (MPAC) echoed Ellison, insisting that the event would “allow [them] to engage with senior White House officials for a decent amount of time on substantive issues.” While Muslim-American civil rights groups like the Council on American Islamic Relations have assumed a more confrontational posture towards the White House and boycotted a prayer breakfast with former New York City Mayor Michael Bloomberg in protest of his support for NYPD surveillance of Muslims, MPAC has taken an altogether different tack. Its role as a paid consultant on the cable TV series, “Tyrant,” was perhaps the best example of its accommodationist stance. Produced by Howard Gordon, the creator of “24” and “Homeland,” the show starred a white actor playing a pathological Arab dictator who ruled over the deeply dysfunctional fictional nation of Abuddin. Even mainstream TV critics derided the series as unbearably Orientalist, with the Washington Post’s Hank Stuever describing it as a “stultifyingly acted TV drama stocked with tired and terribly broad notions of Muslim culture in a make-believe nation on the brink.” Leading up to the White House Iftar, a leader of a major Muslim advocacy organization told me on background that MPAC was bleeding support, especially from younger activists. At the Iftar dinner, Obama launched into a defense of Israel’s assault on the Gaza Strip, declaring, “I will say very clearly, no country can accept rockets fired indiscriminately at citizens. And so, we’ve been very clear that Israel has the right to defend itself against what I consider to be inexcusable attacks from Hamas.” He went on to claim against all evidence that his administration had “worked long and hard to alleviate” the humanitarian crisis in Gaza, and that it had “emphasized the need to protect civilians, regardless of who they are or where they live.” Ali Kurnaz, the central regional director for the Florida-based Emerge USA, was in the audience. He told me that **Obama’s remarks provoked deep discomfort, with attendees exchanging disturbed looks and rolling their eyes in astonishment**. No one walked out in protest, however. “After the dinner, I overheard at least three different exchanges attendees pointing out that Palestinians should have a right to defend themselves too,” Kurnaz recalled. Like many others who joined the dinner, Kurnaz was not aware that Israeli Ambassador Ron Dermer had been invited. Dermer was a longtime confidant of Israeli Prime Minister Benjamin Netanyahu and the son of the Republican former Mayor of Miami Beach. This year, Dermer broke diplomatic protocol by appearing at a fundraiser for the Republican Jewish Committee, helping to raise money for a partisan organization dedicated to undermining Obama’s agenda. **Perhaps the most startling aspect of Dermer’s presence at the Iftar dinner was his stated belief that “a cultural tendency towards belligerency” is “deeply embedded in the culture of the Arab world and its foremost religion.”** According to Kurnaz, Dermer spent the evening isolated in the White House’s Green Room adjacent to the main reception area, where he milled around mostly without company. None of the activists invited to the

dinner approached him.¶ When dinner began, Kurnaz said Obama was unusually candid with those seated at his table. They confronted him on the issue of domestic spying, an issue that took on renewed immediacy after revelations by the Intercept that the NSA and FBI has spied on leading Muslim-American civil rights activists. Obama attempted to remind them that the spying had begun under his predecessor, Bush, but defended the practice nonetheless, denying that the NSA had violated any laws.

Obama will fight the plan- It undermines administration's counterterrorism efforts

Ackerman 14 (Spencer Ackerman: National security editor for Guardian, "White House Iftar dinner guests press Obama on surveillance of Muslims", The Guardian, 7/16/2014, <http://www.theguardian.com/world/2014/jul/16/white-house-iftar-obama-surveillance-muslims>, Accessed: 7/17/14, RRR)

Attendees of a White House dinner this week celebrating a Muslim holiday attempted to leverage their direct interaction with Barack Obama into a presidential commitment to discuss widespread and controversial surveillance of their communities.¶ They left feeling they had Obama's interest, but not much more.¶ Less than a week after the Intercept, based on documents leaked by Edward Snowden, showed US Muslim activists and attorneys had been targeted for surveillance, Obama gathered legislators, diplomats and US Muslim community leaders to the White House on Monday night for an Iftar dinner, the sunset meal during Ramadan. In remarks released by the White House, Obama stressed the value of pluralism, sidestepping the surveillance controversy.¶ Not everyone was satisfied with the omission.¶ Some of the people who attended were signatories of a letter sent to the White House in the wake of the Intercept story urgently requesting a meeting with Obama. Without that commitment yet in hand, took the opportunity to raise the issue with Obama personally at the Monday dinner.¶ "I specifically asked the president if he would meet with us to discuss NSA spying on the American Muslim community. The president seemed to perk up and proceeded to discuss the issue, saying that he takes it very seriously," said Junaid Sulahry, the outreach manager for Muslim Advocates, a legal and civil rights group.¶ Obama was non-committal, Sulahry said, but displayed "a clear willingness to discuss the issue."¶ Hoda Elshishtawy, the national policy analyst for the Muslim Public Affairs Council, said that she brought it up as part of a "table-wide discussion" on post-9/11 surveillance of US Muslims.¶ "Our communities can't be seen as suspects and partners at the same time," Elshishtawy said.¶ That tension has plagued the Obama administration's domestic counterterrorism – or, as it prefers, "countering violent extremism" – for its entire tenure. The departments of justice and homeland security lead outreach efforts in Muslim and other local communities, stressing vigilance against radicalizing influences and dialogue with law enforcement.¶ Yet Muslim communities labor under widespread suspicion of incubating terrorism. Surveillance from law enforcement and US intelligence is robust, from the harvesting of digital communications to the recruitment of informants inside mosques. The Federal Bureau of Investigation compiles maps of Muslim businesses and religious institutions, without suspicion of specific crimes.¶ The mixed message comes amidst the freight of a foreign policy featuring drone strikes in Muslim countries, a reluctance to foreclose on indefinite detention that functionally is only aimed at Muslims, and difficulty concluding the war in Afghanistan – all of which have strained relations with American-Muslim communities.¶ Some of those community leaders have already come under fire for attending the White House dinner. The American-Arab Anti-Discrimination Committee urged a boycott over the surveillance and administration support for Israel during the current Gaza offensive, rejecting what it called "normalization of the continuous breach of our fundamental rights."¶ Representatives of organizations that rejected the boycott argued that they can exercise greater influence through access than through rejection.¶ "Our strategy is to work through the system," said Farhana Khera, Muslim Advocates' executive director.¶ The White House declined comment on what it called "private conversations at a closed press event."

Conservatives are hardliners on Muslims- the plan would isolate their base
Dean Obeidallah, reporter for daily beast , "For Republicans, Muslims Will Be the Gays of 2016," Daily Beast, <http://www.thedailybeast.com/articles/2015/01/21/for-republicans-muslims-will-be-the-gays-of-2016.html>//GV

Bobby Jindal isn't stupid enough to believe in Muslim no-go zones. He's working the base, which is more than willing to be worked. Now that Republicans realize that the fight over gay marriage is over, they're pivoting back to the old reliable: Muslims. It's true that Muslim-bashing among Republicans is hardly new, but I think that as 2016 approaches we're going to see even more of it as candidates try to outflank one another. The latest example was Louisiana Governor's Bobby Jindal's speech on Monday in London. Jindal told the audience that there are "no-go zones" in Europe where Muslims have in essence carved out Islamic "autonomous" zones that are ruled by Koranic law and where non-Muslims fear to tread. His point, of course, was to warn Americans that Muslims could try the same thing in the United States. Now if that concept sounds familiar it's because last week Fox News served up this same rancid red meat to its viewers. Some Fox News anchors claimed these so-called "no-go

zones” existed in parts of France. And Fox News’ terrorism “expert” Steve Emerson even went as far as to say that Birmingham, England, the nation’s second biggest city with more than one million people, was a “totally Muslim city where non-Muslims don’t go in.” The backlash to these comments was swift. Even British Prime Minister David Cameron responded, “When I heard this, frankly, I choked on my porridge and I thought it must be April Fools Day. This guy is clearly a complete idiot.” **Fox News stirring up fear of Muslims is nothing new.** In fact, in my view it’s part of Fox’s business model since its viewers hold the most negative views of Muslims of any cable news audience. Fox is simply giving their viewers what they want to see. But a few days ago, Fox did something truly shocking. They apologized for making the claims about Muslim-controlled “no-go zones” in Europe. In fact, they apologized not once, but four times, and admitted unequivocally that these “no-go zones” don’t even exist. Yet even though the Fox retractions occurred days before Jindal delivered his speech, that didn’t stop him from asserting the same baseless claims. After his speech, Jindal was asked by a CNN reporter for specifics on where exactly these “no-go zones” are located. Jindal, in what looked almost like a sketch from Saturday Night Live, hemmed and hawed, finally responding: “I think your viewers know.” **So what do you do if you are a Republican candidate seeking conservative votes? Simple. Bash Muslims.** We are truly an easy target. For those unfamiliar with Jindal, he’s no Louie Gohmert. He’s an Ivy League graduate and a Rhodes scholar. Jindal’s remarks were not a mistake, but rather part **of a calculated strategy to garner support from more conservative Republicans** for an expected 2016 presidential run. Now, **in the past, candidates trying to garner support from these right wing voters could use opposition to gay marriage to curry favor.** As conservative James Kirchick noted in an article he penned for The Wall Street Journal in 2008, the Republican Party has a long history of its candidates using not just opposition to gay marriage, but also anti-gay rhetoric to attract support from the GOP Base. Kirchick went on to urge Republicans to “kiss gay-bashing goodbye.” But we still saw this bigotry in the 2012 race. For example, Rick Perry ran a campaign commercial that said you know “there’s something wrong with this country when gays can openly serve in the military.” Polls, however, now show a majority of Americans support gay marriage. And even the Mike Huckabees of the GOP would have to admit that after the Supreme Court announced Friday that it is considering the constitutionality of same-sex marriage this term, gay marriage will likely soon be the law of the land. Bottom line: **gay marriage will probably be dead as an issue capable of rallying conservative voters.** So what do you do if you are a Republican candidate seeking conservative votes? Simple. Bash Muslims. We are truly an easy target. First, **Muslims are a small percentage of our nation’s population at approximately 1 to 2 percent.** Second, there are horrible **Muslims who do commit terror in the name of our faith, which does offer cover for anti-Muslim bigotry.** Third, we still don’t have **many allies outside of our community that stand with us.** Sure, we have some interfaith supporters. But when anti-gay comments are made, like in the case of “Duck Dynasty’s” Phil Robertson in 2013, the response by the left was swift and united. But with anti-Muslim bigotry, we don’t see that. We see silence from many on the left, including from most Democratic elected officials. And worse, we see some outright anti-Muslim fear mongering by so-called liberals like Bill Maher. If I’m right, what can we expect to see as the 2016 presidential race heats up? More speeches like Jindal’s designed to stir up fear with no factual support. His remarks were applauded by conservative ++Larry Kudlow in The National Review. Even more comments like the ones recently made by **Oklahoma State Representative John Bennett that Muslims are a “cancer” that must be cut of our country and that Muslim-Americans are not loyal to the United States but to the “constitution of Islam.”** **Bennett received a standing ovation from the conservative audience** that heard these remarks, and the Oklahoma GOP Chair even backed him up. And possibly even more comments like the one made by newly sworn in member of Congress Jody Hice who stated that Islam is not a religion and doesn’t deserve First Amendment protection. Was there any backlash from GOP leaders to this remarks? Nope, in fact people Red States’ Erick Erickson even spoke at one of his fundraisers and wrote he was “proud to support” Hice. This is a far cry from the 2008 presidential race when John McCain countered anti-Muslim remarks made by a supporter at one of his campaign rallies. My hope is that I’m wrong. But after seeing close to a thousand people over the weekend protesting a Muslim-American event in Texas that was ironically organized to counter extremism, I’m not so optimistic. The more conservative parts of the GOP base tend to vote in higher numbers in the primaries. So **don’t be surprised when you see Republican candidates trying to get their attention with this cut of red meat.**

Inc case ev

Islamophobia is inherent in civil society- the aff distracts from social movements, which is key to solve

Collins 15 (Kathryn Collins, March 6th, 2015, The Rising Trend of Islamophobia, Distraction Magazine, <http://www.distractionmagazine.com/2015/03/06/the-rising-trend-of-islamophobia/>, AZ) United States citizens are hard to recognize; accents, skin tones, backgrounds, genetics are all meaningless. Whether by birth or via test, an American citizen is identifiable primarily by his or her commitment to ideals set forth more than two centuries ago. Any 7th grader can provide the gist of the guarantees set forth by the Founding Fathers; that citizens ought to

be free from government involvement in religious worship, free speech, peaceful assembly and petition, and harassment; but imagine a scenario where the people who created this credo to protect themselves – and their descendants – chose to marginalize and mistreat groups with different appearances or beliefs. It isn't that hard, is it? Native Americans, African Americans, Jews, Irish Americans, Asian Americans, Hispanics, Homosexuals – the list goes on. **At prestigious, private institutions of higher education, it may be easy to ask, offer a genuinely sympathetic head shake, and remark on how unenlightened previous generations were,** while marveling at how people could be so cruel and downright ignorant. A large Muslim population is asking that very question right now. **There has been a recent wave of anti-Muslim sentiments on the international scale.** It is leaving many followers of Islam feeling slighted and frightened for their safety. **On February 10th of this year, three college students** (Deah Shaddy Barakat, Yusor Mohammad Abu-Salha, and Razan Mohammad Abu-Salha) **were fatally shot in their home in Chapel Hill, North Carolina.** The neighbor who allegedly shot them has been arrested. There is widespread speculation that this was a hate crime, based on the content of his social media accounts and one of the victims telling a relative she believed the man resented them for their religion and heritage. The killings occurred after President Obama asked congressional approval for authorization to use military force to fight the Islamic State in Syria and Iraq. Not to mention the murder of 17 people in France by Islamist terrorists last month. Could it be a coincidence? That this was truly a horrible incident, a squabble over parking blown unbelievably out of proportion? That absolutely could be the case. However, in the time since the death of the three students, **there have been in increase in similar incidents. Some examples can be seen below: 2/13/2015: A fire broke out at an Islamic community and education center in southeast Houston; hours later arson police discovered accelerant was used.** The assistant imam said the night before someone had driven by screaming mocking chants. 2/17: **The entrance of the Islamic School of Rhode Island in West Warwick was tagged with orange graffiti reading “Now this is a hate crime”, “pigs”, and offensive references to Muhammad.** The school's board of trustees, Hilmy Bakri, said the school had never before been the subject of vandalism. 2/17/2015: “Muslims get out” emblazoned across the outside of Skyview Junior High School in Bothell, Washington. 2/17/2015: **Many mosques in Ohio received threatening phone calls – with exceptionally graphic and disturbing language** – from the same individual. 2/17/2015: A man threatening to bomb a restaurant specializing in Middle Eastern food and an Islamic center in Austin, TX was arrested. 2/19/2015: **An Arab-American man was speaking to his children in Arabic while grocery shopping** at a Kroger in Dearborn, Michigan when he was assaulted by two white men who were enraged upon overhearing him. **A witness said she heard “‘ISIS,’ I hear ‘terrorist,’ I hear ‘go back to your country’ and ‘raghead’...”** This sort of thing is not new. In December, Abdisamad Sheikh-Hussein, 15, was run over by an SUV outside a Somali community center in Kansas City. The same center that called the police after earlier witnessing a lingering SUV bearing the painted phrase “Islam is worse than Ebola”. What's more worrying than the fact that this isn't new, is the fact that this might not be 'newsworthy'. The coverage of the attacks in France lasted significantly longer than the coverage of the three students deaths. In order to form a more perfect union, has this nation enabled Islamophobia? Hate crimes are generally not reported, and the percentage of hate crimes not reported by Muslims is even higher, as FBI reports show they are among the most profiled and targeted groups in the United States, especially since 9-11. To try and ascribe one cause to Islamophobia would be to try and justify prejudice. The logical mind rejects and the determined mind refuses to accept or seek out knowledge that would threaten or discredit their ingrained “understanding”. The news has been permeated by the ascendance of a new terror group who has seized headlines and world attention primarily by beheading Western aid workers and journalists. **A Brookings Institution poll published in January revealed that 14% of Americans believe the Islamic State has the support of a majority of Muslims worldwide.** In comparison to the world, Americans might argue that Muslims don't have it so bad! It's not like Belgium or France with bans on veils or headscarves. However, at the very least, there is an awareness of the community and a very verbal discourse about rights. **Uncomfortable subjects need discussion and power actors to advocate on their behalf before American Muslims – before any optimistic, tolerant Americans – can anticipate any real change.**

The plan doesn't solve islamophobic foreign drone strikes

MBD '13 (July 20th, 2013, Political Blindspot, A List of Muslim Children Killed by US Drone Strikes, <http://politicalblindspot.com/a-list-of-muslim-children-killed-by-us-drone-strikes/>, AZ)

A recent Marine Times article ran the alarming headline “Some Afghan kids aren't bystanders” on December 3, reporting on the death of **three Muslim children** in Afghanistan. They **were**

apparently targeted by a U.S. military drone because they appeared to be digging a hole in a road. Army Lt. Col. Marion Carrington, quoted in the article, said that “It kind of opens our aperture” that children are being used in the conflict. “In addition to looking for military-age males, it’s looking for children with potential hostile intent.” Why specify that these are “Muslim” children? Because to the Muslim world, these attacks look like what they are increasingly looking like to activists in the West: a Crusade. **The targeting of Muslim children is not incidental. There are no examples of Christian, Jewish, or even Buddhist children being the sole victims of any US war in recent history.** The fact that conflict after conflict, war after war, in recent decades, the targets are Muslim – and when they are, there seems to be no focus on reducing the civilian (child) death toll – is anything but incidental to the Muslim world. Proponents of the Drone Wars, including President Barack Obama, claim that drone strikes are precise and only target terrorists. A study, however, from Columbia Law School’s Human Rights Institute finds that the number of Pakistani civilians killed in drone strikes “significantly and consistently underestimated” and that as many as 98% of those killed by drone strikes are civilians. While it is ultimately impossible to get exact numbers, this means that for every “terrorist” killed by a drone strike, anywhere between 10 and 50 civilians are killed. Obama has authorized 193 drone strikes in Pakistan – four times the amount authorized by George W. Bush. According to Global Research, over the past 4 years Obama has authorized attacks in Pakistan which have killed more than 800 innocent civilians and just 22 Al-Qaeda officers. That constitutes at least 36 civilians per target.

Capitalism is the root cause of racism

McLaren and Torres 99 (Peter McLaren, professor of education at U of California, and Rudolfo Torres, Professor of Planning, Policy, and Design, Chicano/Latino Studies, and Political Science, “Racism and Multicultural Education: Rethinking ‘Race’ and ‘Whiteness’ in Late Capitalism”, Chapter 2 of “Critical Multiculturalism: Rethinking Multicultural and Antiracist Education”, edited by Stephen May, p.49-50, Questia)

According to Alex Callinicos (1993), racial differences are invented. Racism occurs when the characteristics which justify discrimination are held to be inherent in the oppressed group. This form of oppression is peculiar to capitalist societies; it arises in the circumstances surrounding industrial capitalism and the attempt to acquire a large labour force. Callinicos points out three main conditions for the existence of racism as outlined by Marx: economic competition between workers; the appeal of racist ideology to white workers; and efforts of the capitalist class to establish and maintain racial divisions among workers. Capital’s constantly changing demands for different kinds of labour can only be met through immigration. Callinicos remarks that ‘racism offers for workers of the oppressing “race” the imaginary compensation for the exploitation they suffer of belonging to the “ruling nation”’ (1993, p. 39). Callinicos notes the way in which Marx grasped how ‘racial’ divisions between ‘native’ and ‘immigrant’ workers could weaken the working-class. United States’ politicians like Pat Buchanan, Jesse Helms and Pete Wilson, to name but a few, take advantage of this division which the capitalist class understands and manipulates only too well-using racism effectively to divide the working-class. At this point you might be asking yourselves: Doesn't racism pre-date capitalism? Here we agree with Callinicos that the heterophobia associated with precapitalist societies was not the same as modern racism. Pre-capitalist slave and feudal societies of classical Greece and Rome did not rely on racism to justify the use of slaves. The Greeks and Romans did not have

theories of white superiority. If they did, that must have been unsettling news to Septimus Severus, Roman Emperor from Ad 193 to 211, who was, many historians claim, a black man. Racism emerged during the seventeenth and eighteenth centuries from a key development of capitalism-colonial plantations in the New World where slave labour stolen from Africa was used to produce tobacco, sugar, and cotton for the global consumer market (Callinicos, 1993).

Callinicos cites Eric Williams who remarks: Slavery was not born of racism: rather, racism was the consequence of slavery (cited in Callinicos, 1993, p. 24). In effect, racism emerged as the ideology of the plantocracy. It began with the class of sugar-planters and slave merchants that dominated England's Caribbean colonies. Racism developed out of the 'systemic slavery' of the New World. The 'natural inferiority' of Africans was a way that Whites justified enslaving them. According to Callinicos: Racism offers white workers the comfort of believing themselves part of the dominant group; it also provides, in times of crisis, a ready-made scapegoat, in the shape of the oppressed group. Racism thus gives white workers a particular identity, and one which unites them with white capitalists. We have here, then, a case of the kind of 'imagined community' discussed by Benedict Anderson in his influential analysis of nationalism. (1993, p. 38) In short, to abolish racism in any substantive sense, we need to abolish global capitalism.

Their ethics for the other is a tool of capitalist manipulation used to justify the worst types of racism- the plan turns itself

Žižek, 1997 (Slavoj, a philosopher and psychoanalyst, also a senior researcher at the Institute for Advanced Study in the Humanities, in Essen, Germany, "Multiculturalism, Or, the Cultural Logic of Multinational Capitalism" New Left Review I/225, September-October, < <http://newleftreview.org/?view=1919>>)

What one should do is thus reassert the old Marxist critique of 'reification': today, emphasizing the depoliticized 'objective' economic logic against the allegedly 'outdated' forms of ideological passions is the predominant ideological form, since ideology is always self-referential, that is, it always defines itself through a distance towards an Other dismissed and denounced as 'ideological. [11] Jacques Rancière gave a poignant expression to the 'bad surprise' which awaits today's postmodern ideologues of the 'end of politics': it is as if we are witnessing the ultimate confirmation of Freud's thesis, from Civilization and its Discontents, on how, after every assertion of Eros, Thanatos reasserts itself with a vengeance. At the very moment when, according to the official ideology, we are finally leaving behind the 'immature' political passions (the regime of the 'political' – class struggle and other 'out-dated' divisive antagonisms) for the 'mature' post-ideological pragmatic universe of rational administration and negotiated consensus, for the universe, free of utopian impulses, in which the dispassionate administration of social affairs goes hand in hand with aestheticized hedonism (the pluralism of 'ways of life') – at this very moment, the foreclosed political is celebrating a triumphant comeback in its most archaic form: of pure, undistilled racist hatred of the Other which renders the rational toler-ant attitude utterly impotent. [12] In this precise sense, contemporary 'postmodern' racism is the symptom of multiculturalist late capitalism, bringing to light the inherent contradiction of the liberal-democratic ideological project. Liberal 'tolerance' condones the folklorist Other deprived of its substance – like the multitude of 'ethnic cuisines' in a contemporary megalopolis; however, any 'real' Other is instantly denounced for its 'fundamentalism', since the kernel of Otherness resides in the regulation of its jouissance: the 'real Other' is by definition 'patriarchal', 'violent', never the Other of ethereal wisdom and charming

customs. One is tempted to reactualize here the old Marcusean notion of ‘repressive tolerance’, reconceiving it as the tolerance of the Other in its aseptic, benign form, which forecloses the dimension of the Real of the Other’s jouissance. [13]

Fusion centers’ local nature makes regulation impossible- the plan does nothing

O’Neil ‘8 political science graduate student at the University of California Los Angeles (UCLA) Previously, iobhan served as the analyst for domestic security and intelligence at the Congressional Research Service (CRS). She spent five years working in homeland security serving as the deputy chief of the Intelligence Bureau of the New Jersey Office of Homeland Security and Preparedness (OHSP) (April 2008, Siobhan, Homeland Security Affairs, “The Relationship between the Private Sector and Fusion Centers: Potential Causes for Concern and Realities”, <https://www.hsaj.org/articles/134>)

Given that **fusion centers are entities established by states and localities to serve their own law enforcement**, emergency response, and homeland security needs, and **compounded by the sensitivities associated with federalism, the federal government is in a difficult position of balancing its interests and respecting the local nature of fusion centers**. As such, **the federal government has been understandably hesitant to place requirements on fusion centers**. Instead, federal **agencies have produced guidelines, which have not been compulsory**, to include the National Strategy for Information Sharing and Fusion Center Guidelines. **8** While **these documents** address some of the tactical and operational concerns related to fusion centers, they **are often vague to a fault and fail to provide the comprehensive vision for fusion centers as part of the nation’s homeland security posture**. **Failure to create a consensus on the role, structural requirements, and responsibilities for fusion centers is apt to increase the potential for ineffectiveness**, which threatens the viability of fusion centers. If fusion centers fail to demonstrate their worth and strengthen and augment our nation’s homeland security efforts, political support and external agency engagement with these centers is likely to decline. Moreover, potential civil liberties abuses could damage fusion centers’ credibility and undermine their public support. It has rightfully been warned that even rumors of impropriety and civil liberties abuses associated with a single fusion center can cause irreparable damage to the reputation of all fusion centers nationwide. This would be unfortunate given the potential for fusion centers to provide public safety and homeland security benefits to both local communities and the nation.

Businesses sharing citizens’ information with the government is a new privacy threat

Fang 15

Lee Fang, a journalist with a longstanding interest in how public policy is influenced by organized interest groups and money, 04/01/15, "How Big Business Is Helping Expand NSA Surveillance, Snowden Be Damned," Intercept, <https://firstlook.org/theintercept/2015/04/01/nsa-corporate-america-push-broad-cyber-surveillance-legislation//SRawal>

For all its appeal to corporations, **CISA represents a major new privacy threat to individual citizens. It lays the groundwork for corporations to feed massive amounts of communications to private consortiums and the federal government**, a scale of cooperation even greater than that revealed by Snowden. **The law also breaks new ground in suppressing pushback against privacy invasions**; in exchange for channeling data to the government, businesses are granted broad legal immunity from privacy lawsuits — potentially leaving consumers without protection if companies break privacy promises that would otherwise keep information out of the hands of authorities. **Ostensibly, CISA is supposed to help businesses guard against cyberattacks by sharing information on threats with one another and with the government. Attempts must be made to filter personal information out of the pool of data that is shared.** But **the legislation** — at least as marked up by the Senate

Intelligence Committee — **provides an expansive definition of what can be construed as a cybersecurity threat, including any information for responding to or mitigating “an imminent threat of death, serious bodily harm, or serious economic harm,” or information that is potentially related to threats relating to weapons of mass destruction, threats to minors, identity theft, espionage, protection of trade secrets, and other possible offenses. Asked at a hearing in February how quickly such information could be shared with the FBI, CIA, or NSA.** Deputy Undersecretary for Cybersecurity Phyllis Schneck replied, “fractions of a second.” Questions persist on how to more narrowly define a cybersecurity threat, what type of personal data is shared, and which government agencies would retain and store this data. Sen. Ron Wyden, D-Ore., who cast the lone dissenting vote against CISA on the Senate Intelligence Committee, declared the legislation “a surveillance bill by another name.” Privacy advocates agree. **“The lack of use limitations creates yet another loophole for law enforcement to conduct backdoor searches on Americans.”** argues a letter sent by a coalition of privacy organizations, including Free Press Action Fund and New America’s Open Technology Institute. Critics also argue that CISA would not have prevented the recent spate of high-profile hacking incidents. As the Electronic Frontier Foundation’s Mark Jaycox noted in a blog post, the JPMorgan hack occurred because of an “un-updated server” and prevailing evidence about the Sony breach is “increasingly pointing to an inside job.” But **the intelligence community and corporate America have this year unified behind the bill.** For a look into the breadth of the corporate advocacy campaign to pass CISA, see this letter cosigned by many of the most powerful corporate interests in America and sent to legislators earlier this year. Or **another letter**, reported in the Wall Street Journal, **signed by “general counsels of more than 30 different firms, including 3M and Lockheed Martin Corp.”**

Link to immigration is a joke lynch et al ev is talking about all undocumented immigrants, not just muslims- the plan doing that would be not T, also therefore none of their ev say immigration is racist

(meh)FBI tactics are not indicative of greater society- islamophobia is actually very low in the squo

Spencer 14 (December 17, 2014, Robert spencer, New FBI hate crime stats show yet again that claims about “Islamophobia” are false, <http://www.jihadwatch.org/2014/12/new-fbi-hate-crime-stats-show-yet-again-that-claims-about-islamophobia-are-false>, AZ)

New FBI hate crime stats show yet again that claims about “Islamophobia” are false DECEMBER 17, 2014 2:34 PM BY ROBERT SPENCER No violence or hatred directed at an innocent Muslim or non-Muslim is ever justified. The fact is that there is far less of it than Islamic supremacist groups and the mainstream media would have you believe. We heard it yet again not just after, but during the Sydney jihad hostage crisis: there would be a “backlash” against Muslims, a wave of Islamophobic hate crimes. There has not been, of course. Leftists and Islamic supremacists use the specter of “Islamophobic hate crime” to shut down honest discussion of how jihadists use the texts and teachings of Islam to justify violence and supremacism, and intimidate people into thinking that there is something wrong with resisting jihad terror. The FBI’s newly released hate crime statistics for 2013 offer a fresh example of how reality refuses to conform to the dubious narrative of widespread Muslim victimization at the hands of American bigots. As in previous years, most hate crimes were not religiously motivated, most religiously motivated hate crimes were anti-Jewish, and Muslims suffered fewer total incidents than many groups and fewer per capita than gays or Jews. Anti-Islamic crimes did not involve greater violence than others and have not become more frequent. A glance at the details: Of the 5,928 incidents of hate crime tabulated in 2013, 135 (2.3 percent) were anti-Islamic, an increase of five over the prior year but still slightly below the annual average of 139 from 2002 to 2011. The small rise in recorded anti-Islamic incidents could be attributable to improved data collection rather than a true uptick. Reports submitted by law enforcement agencies covered a population of 295 million Americans in 2013, 18.6 percent higher than in 2012. There were 1,031 incidents inspired by religion last year, 625 (60.6 percent) of which were anti-Jewish. Anti-Islamic ones constituted just 13.1 percent. Anti-Islamic incidents were also

outnumbered by those targeting blacks (1,856), whites (653), gay men (750), lesbians (160), LGBTs in general (277), Hispanics (331), and people of other ethnicities (324). Anti-Asian incidents (135) equaled anti-Islamic ones. Based on a 2013 estimate of 2.95 million Muslims derived from Pew's 2011 figure and typical growth of 100,000 per year, there were 4.6 anti-Islamic incidents per 100,000 Muslims in 2013, the same as 2012's rate and lower than the average of 6.0 per 100,000 for 2002–11. The 2013 rate for Muslims was less than half that for Jews (9.6 per 100,000 for a population of roughly 6.5 million) and homosexuals/bisexuals (11.0 per 100,000, assuming that they comprise 3.5 percent of the U.S. population). The rate for blacks was similar to that of Muslims (4.5 per 100,000 for a population of 41.6 million). Anti-Islamic hate crimes were no more violent than others in 2013. Of the 6,933 offenses spanning all hate crimes, 734 (10.6 percent) were aggravated assaults and 1,720 (24.8 percent) were simple assaults. The 165 anti-Islamic offenses mirrored this breakdown: 17 (10.3 percent) were aggravated assaults and 41 (24.8 percent) were simple assaults. Further, none of the five deaths in 2013 resulted from anti-Islamic hate crimes.

...

Racist drone strikes are the root cause of terrorist attacks

Gerges '13 (Fawaz Gerges, June 21, 2013, CNN, Why drone strikes are real enemy in 'war on terror', <http://www.cnn.com/2013/06/21/opinion/terrorism-gerges/>, AZ)

Obama's drone calculus ignores the CIA's warning about the continuing "possibilities of blowback." Officials in Washington ignore the high-cost ways in which the U.S. "war on terror" and the use of tactics such as drone strikes fuel the fires of home-grown radicalization in Western societies. This is a rising phenomenon that has not been seriously debated, despite a string of high-profile attacks. While trials have yet to take place, the Woolwich attack in London and the Boston Marathon bombings are suspected to be the latest cases in point. In case after case over the past few years, attackers and would-be attackers have cited the war on terror, first in Iraq and now in Afghanistan, Pakistan, Yemen, Somalia and elsewhere **as proof that the West is at war with Islam.** The presence of Western boots in Muslim lands and the continuing use of drone strikes have triggered a backlash among scores of deluded young Muslims who live in America and Europe, and who come from different educational and class background, including high achievers. What is surprising is that these attackers are not unified by a core set of ideological beliefs, or a belonging to a particular terrorist group, **but by a core set of grievances,** real or imagined.

Us foreign policy causes terrorism, is what allows fbi domestic islamophobia to exist in first place
Hennelly '15 (Bob Hennelly, February 26th, 2015, THE ISIS TRUTH WE HIDE FROM, <http://whowhatwhy.org/2015/02/26/americas-awful-truth-thats-hard-hear/>, AZ)

After several decades of self-proclaimed "nation building" and "exporting democracy" in the Middle East and its environs, the results are all too clear. There are shattered nations in Iraq and Afghanistan, failed states in Yemen, Libya and Syria, and more than a dozen African nations that the U.S. State Department concedes are under constant threat of attack by well-armed and organized terrorists. Is it possible that what the U.S. has actually been doing in these hot spots is "terrorism building" and "exporting chaos"? Is this the awful truth the United States cannot bring itself to admit? Massaging History It would seem so, since instead of changing course, the U.S. is in the process of doubling down on its mistakes. How else to explain that the new GOP presidential hopeful, Jeb Bush, nonchalantly told the Chicago Council on Global Affairs that "mistakes were made" in Iraq. He then proceeded to lay out his own plan for becoming the new global sheriff in town. Here's a jaw-dropping statement from that speech: There were mistakes made in Iraq, for sure. Using the intelligence capability that everybody embraced about weapons of mass destruction was

not—turns out not to be accurate. Watching his brother's back, Jeb wove out of thin air a phony consensus that "everybody" signed on for the rationale for the Iraq war. That's despite a vote in Congress in which 23 U.S. Senators and 133 House members opposed it. You see, if "everybody" was wrong, then nobody was right. It should come as no surprise that Jeb's team of policy wise men includes many Bush II veterans, among them the unrepentant Iraq war architect Paul Wolfowitz. His Own Man, With an Old Plan As much as Jeb Bush insists he is his own man, the audience in Chicago could hear echoes of his brother George's cowboy-like approach. When Jeb was asked about how he would handle IS, he said he would develop a "global strategy" that would "tighten the noose" so he and the posse could "take them out." During Bush's remarks, he took aim at the Obama administration for being too quick to disengage from the world and Iraq. He blamed Obama for creating a power vacuum that set the stage for the rise of IS and Iranian influence. Yet an examination of President Obama's new National Security Strategy, his proposed military budget and his request for his own War Powers re-authorization all indicate an administration that is prosecuting a global war on terror with unfettered latitude as to where and whom it targets. Could it be that this "global war on terror," whether it be the Bush 1.0 or Obama 2.0 version, may actually be what is proliferating the very thing it was aimed to eradicate? One policy expert who dares to look deeper is Graham Fuller, a career CIA agent and analyst who was vice-chairman of the CIA's National Intelligence Council. Fuller says it was the U.S. invasion of Iraq in 2003 that set the stage for IS. By creating an endemically corrupt central government in Baghdad, notes Fuller, the American occupation provided a focal point to unite disparate opposition groups. As for the high-profile effort to train a new Iraqi army, that "security" force collapsed the moment its U.S. handlers left. (In an odd twist to an already bizarre security meta-narrative, Fuller's former son-in-law is the uncle of accused Boston Marathon Bombers Tamerlan and Dzhokhar Tsarnaev.) *** In linking Washington's Middle Eastern policies to the rise of terrorist groups in the region, MIT professor Noam Chomsky takes it even further back. He says the roots start with the U.S. support of Iraq in its brutal war with Iran in the 1980s, and include the draconian economic sanctions that followed Saddam Hussein's 1990 invasion of Kuwait. In Chomsky's view, these sanctions punished Iraqi civilians while reinforcing Saddam's dictatorial control. In his 2006 book Devil's Game: How the U.S. Helped Unleash Fundamentalist Islam, longtime Nation correspondent Robert Dreyfuss documents how the U.S., as early as the 1950s, backed the Muslim Brotherhood in exchange for help fighting communism. Peace's Deadliest Year One way to justify failed policies is to pretend that they have worked as advertised. Nowhere was this disconnect between rhetoric and reality more on display than in President Obama's updating this month of his National Security Strategy. In presenting this new security game-plan, the president exhibited excessive confidence in declaring that the United States was heading "home" and "moving beyond" ground wars in Iraq and Afghanistan. In his mini-version of Bush's infamous 'Mission Accomplished' statement, he asserted that "the threat of catastrophic attacks" against the U.S. had "diminished." But even as the president describes a winding-down of combat operations, anything but peace is taking hold in those places. The sectarian violence has resulted in record numbers of civilian deaths and injuries. The UN reported last month that more than 12,000 civilians were killed in Iraq in 2014, the deadliest year for noncombatants since 2008. In Afghanistan, the UN Assistance Mission counted close to 3,200 civilians killed and more than 6,400 wounded, the deadliest year since America's longest war started.

The most Islamophobic fbi policies are in education- the plan is extra-topical

Or

The root of islamophobia in the fbi is rooted in ignorance- the aff fails to address the root cause **Weinsten '11** (Adam Weinstein, September 15th, 2011, Mother Jones, That Islamophobic FBI Training Is Just the Tip of the Iceberg, http://www.motherjones.com/mojo/2011/09/islamophobic-fbi-training-military_AZ)

Agents at the FBI's Quantico, Virginia, training grounds are taught that all mainstream American Muslims are terrorist sympathizers in a cult that likes to donate money to killers. That's according to a scoop by Wired's Spencer Ackerman, who has exposed a series of amazingly clueless Powerpoint slides and documents from the federales' training on Islam. If you haven't read his story yet, do so now. Ackerman's report brings new light to an alarming problem that's been well-documented since 9/11: American police officers, airport screeners, and soldiers have no freaking clue how to deal with the distinction between the vast majority of Muslims and the minisule minority that actively seek to do us harm. My MoJo colleague Adam Serwer points out that local cops around the country have been getting training that's even worse that the FBI's. He refers to

an excellent March Washington Monthly story detailing how Islamophobic trainers are collecting homeland security dollars while spewing complete nonsense. For example: "When you have a Muslim that wears a headband, regardless of color or insignia, basically what that is telling you is 'I am willing to be a martyr.'" one trainer blathers. But it goes way beyond that. Our Islamophobia-beat reporter, Tim Murphy, has detailed on this site how Rep. Allen West (R-Fla) is championing a skewed, conspiratorial vision of Islam to convince Americans that we're under attack. I've written about the meager cultural training offered to service members and contractors headed for Iraq and Afghanistan. The materials would be humorous if they weren't so disturbing: In them Arab men look suspiciously like Lego figures; they're described as "illogical or irrational," paranoid, and prone to extremes, "perhaps due to the harsh, desert environment that Arabs have lived in for thousands of years." And that's just Iraqi Arabs—just wait 'til you read what they say about those dirty Kurds. All of which is to say that, 10 years after the US government got really preoccupied with Muslims of all stripes, from Iraqi Kurds, Sunnis, and Shiites to Afghan Pashtuns, Tajiks, Uzbeks, Hazaras, and a couple hundred other ethnic and tribal identities (not to mention Muslim-Americans)—our civil servants are still taking a reductive, unfair, and ultimately dangerous attitude toward them. Which may explain why we let foreign governments lock them up and torture them, even if they're American citizens. And perhaps it's why the FBI relies blindly on terrorism informants who walk the fine between tracking potential terrorists and making them. **If we continue to miseducate the well-intending agents and soldiers who serve at the tip of the spear, we shouldn't be surprised when that spear misses its target.**

2nc neolib = racism cards

Capitalism is the root cause of racism

McLaren and Torres 99 (Peter McLaren, professor of education at U of California, and Rudolfo Torres, Professor of Planning, Policy, and Design, Chicano/Latino Studies, and Political Science, "Racism and Multicultural Education: Rethinking 'Race' and 'Whiteness' in Late Capitalism", Chapter 2 of "Critical Multiculturalism: Rethinking Multicultural and Antiracist Education", edited by Stephen May, p.49-50, Questia)

According to Alex Callinicos (1993), racial differences are invented. Racism occurs when the characteristics which justify discrimination are held to be inherent in the oppressed group. This form of oppression is peculiar to capitalist societies; it arises in the circumstances surrounding industrial capitalism and the attempt to acquire a large labour force. Callinicos points out three main conditions for the existence of racism as outlined by Marx: economic competition between workers; the appeal of racist ideology to white workers; and efforts of the capitalist class to establish and maintain racial divisions among workers. Capital's constantly changing demands for different kinds of labour can

only be met through immigration. Callinicos remarks that 'racism offers for workers of the oppressing "race" the imaginary compensation for the exploitation they suffer of belonging to the "ruling nation"' (1993, p. 39). Callinicos notes the way in which Marx grasped how 'racial' divisions between 'native' and 'immigrant' workers could weaken the working-class. United States' politicians like Pat Buchanan, Jesse Helms and Pete Wilson, to name but a few, take advantage of this division which the capitalist class understands and manipulates only too well-using racism effectively to divide the working-class. At this point you might be asking yourselves: Doesn't racism pre-date capitalism? Here we agree with Callinicos that the heterophobia associated with precapitalist societies was not the same as modern racism. Pre-capitalist slave and feudal societies of classical Greece and Rome did not rely on racism to justify the use of slaves. The Greeks and Romans did not have theories of white superiority. If they did, that must have been unsettling news to Septimus Severus, Roman Emperor from Ad 193 to 211, who was, many historians claim, a black man. **Racism emerged during the seventeenth and eighteenth centuries from a key development of capitalism-colonial plantations** in the New World where slave labour stolen from Africa was used to produce tobacco, sugar, and cotton for the global consumer market (Callinicos, 1993). Callinicos cites Eric Williams who remarks: **Slavery was not born of racism: rather, racism was the consequence of slavery** (cited in Callinicos, 1993, p. 24). In effect, racism emerged as the ideology of the plantocracy. It began with the class of sugar-planters and slave merchants that dominated England's Caribbean colonies. Racism developed out of the 'systemic slavery' of the New World. **The 'natural inferiority' of Africans was a way that Whites justified enslaving them.** According to Callinicos: Racism offers white workers the comfort of believing themselves part of the dominant group; it also provides, in times of crisis, a ready-made scapegoat, in the shape of the oppressed group. **Racism** thus gives white workers a particular identity, and one which unites them with white capitalists. We have here, then, a case of the kind of 'imagined community' discussed by Benedict Anderson in his influential analysis of nationalism. (1993, p. 38) In short, **to abolish racism in any substantive sense, we need to abolish global capitalism.**

Class is the driver of all social and existential conditions. Only emancipation from the status quo modes of production can enact any form of human freedom
Ebert and Zavarzadeh 08(Teresa L., English, State University of New York, Albany, Mas'ud, prolific writer and expert on class ideology, "Class in Culture", p.ix-xii)

Class is everywhere and nowhere. It **is the most decisive condition of social life: it shapes the economic and** consequently, **the social and cultural resources of people.** It determines their birth, healthcare, clothing, schooling, eating, love, labor, sleep, aging, and death. Yet **it remains invisible in the every day and in practical consciousness because,** for the most part, **it is dispersed through popular culture, absorbed in cultural difference, obscured by formal equality before the law or explained away by philosophical arguments.** Class in Culture attempts to trace class in different cultural situations and practices to make its routes and effects visible. However, the strategies obscuring class are cunning, complex, and subtle, and are at work in unexpected sites of culture. Consequently, this is not a linear book: it surprises class in the segments, folds, vicinities, points, and divides of culture. It moves, for example, from Abu Ghraib to the post-deconstructive proclamations of Antonio Negri, from stem cell research to labor history, from theoretical debates on binaries to diets. It is also written in a variety of registers and lengths: in the vocabularies of theory, the idioms of description and explanation, as well as in the language of polemics, and in long, short, and shorter chapters. Regardless of the language, the plane of argument, the length of the text, and the immediate subject of our critiques, our purpose has been to tease out from these incongruous moments the critical elements of a basic grammar of class-one that might be useful in reading class in other social sites. Our text on eating, for example, unpacks two diets that, we argue, reproduce class binaries in the zone of desire. The point here is not only when one eats, one eats class, but also class works in the most unexpected comers of culture, Eating as a sensuous, even sensual corporeality, is seen as the arena of desire which is represented in the cultural imaginary as autonomous from social relations. **Desire is thought to be**

exemplary of the singularity of the individual and her freedom from material conditions. One desires what one desires. Desire is the absolute lack: it is the **unrepresentable**. We argue, however, that **one desires what one can desire; one's desire is always and ultimately determined before one desires it, and it is determined by one's material (class) conditions**. Our point is not that **individuality and singularity** are myths but that they **are myths in class societies**. **Individuality and singularity become reality**-not stories that culture tells to divert people from their anonymity in a culture of commodities-**only when one is free from necessity beyond which "begins that development of human energy which is an end in itself"** (Marx, *Capital*/III, 958-59). **Class is the negation of human freedom. A theory of class** (such as the one we articulate) **argues that class is the material logic of social life and therefore it determines how people live and think**. But this is too austere for many contemporary critics. ("Determinism" is a dirty totalizing word in contemporary social critique.) Most writers who still use the concept of class prefer to talk about it in the more subtle and shaded **languages of overdetermination, lifestyle, taste, prestige, and preferences, or** in the **stratification** terms of income, occupation, and even status. **These are all significant** aspects of social life, **but they are effects of class and not class**. This brings us to the "simple" question: What is class? We skip the usual review of theories of class because they never lead to an answer to this question. The genre of review requires, in the name of fairness, "on the one hand, on the other hand" arguments that balance each perspective with its opposite. The purpose of *Class in Culture* is not review but critique not a pluralism that covers up an uncommitted wandering in texts but an argument in relation to which the reader can take a position leading to change and not simply be more informed. This is not a book of information; it is a book of critique. To answer the question (what is class?), we argue-and here lies the austerity of our theory-**class is essentially a relation of property, of owning**. Class, in short, is **a relation to labor because property is the congealed alienated labor of the other**. By owning we obviously do not mean owning just anything. Owning a home or a car or fine clothes does not by itself put a person in one or another class. What does, is **owning the labor power of others in exchange for wages**. Unlike a home or a car, labor (or to be more precise "**labor power**") **is a commodity that produces value when it is consumed**. Structures like homes or machines like cars or products such as clothes do not produce value. Labor does. **Under capitalism, the producers of value do not own what they produce**. The capitalist who has purchased the labor power of the direct producers owns what they produce. Class is this relation of labor-owning. This means wages are symptoms of estranged labor, of the unfreedom of humans, namely the exploitation of humans by humans-which is another way to begin explaining class. **To know class, one has to learn about the labor relations that construct class differences**, that enable the subjugation of the many by the few. **Under capitalism labor is unfree**, it is forced wage-labor that produces "surplus value"-an objectification of a person's labor as commodities that are appropriated by the capitalist for profit. **The labor of the worker, therefore, becomes "an object" that "exits outside him**, independently, as **something alien to him, and it becomes a power on its own confronting him" which, among other things, "means that the life which he has conferred on the object confronts him as something hostile and alien"** (Marx, *Economic and Philosophic Manuscripts of 1844*, 272). The direct producers' own labor, in other words, negates their freedom because it is used, in part, to produce commodities not for need but for exchange. **One, therefore, is made "to exist, first, as a worker; and, second as a physical subject**. The height of this servitude is that it is only as a worker that he can maintain himself as a physical subject, and that it is only as a physical subject that he is a worker" (273). Under wage labor, **workers, consequently, relate to their own activities as "an alien activity not belonging to [them]"** (275). **The estranged relation** of people to the object of their labor **is not a local matter but includes all spheres of social life**. In other words, it is "at the same time the relation to the sensuous external world, to the objects of nature, as an alien world inimically opposed to [them]" (275). **The scope of estrangement in a class society**, of human unfreedom caused by wage labor, is not limited to the alienation of the worker from her products. It includes the productive activity itself because what is produced is a "summary of the activity, of production," and therefore it is "manifested not only in the result but in the act of production, within the

producing activity itself' (274). **The worker, in the act of production, alienates herself from herself because production activity is "active alienation, the alienation of activity, the activity of alienation"** (274)-an activity which does not belong to her. This is another way of saying that the activity of labor-life activity-is turned against the worker and "here we have self-estrangement" (275). In his theory of alienated labor, Marx distinguishes between the "natural life" of eating, drinking, and procreating which humans share with other animals and the "species life" which separates humans from animal. This distinction has significant implications for an emancipatory theory of classless society. "Species life" is the life marked by consciousness, developed senses, and a human understanding himself in history as a historical being because "his own life is an object for him" (276)--humans, as "species beings," are self-reflexive. To be more clear, "conscious life activity distinguishes man immediately from animal life activity" (276). The object of man's labor is the actualization, the "objectification of man's species-life" (277). Alienated labor, however, "in tearing away from man the object of his production, therefore, ... tears from him his species-life" (277). Consequently, "it changes for him the life of the species into a means of individual life ... it makes individual life in its abstract form the purpose of life of the species, likewise in the abstract and estranged form" (276). This is another way of saying that **the larger questions that enable humans to build their world consciously are marginalized, and sheer biological living** ("individual life in the abstract") **becomes the goal of life in class society structured by wage labor. "Life itself appears only as a means to life"** (276). **Class turns "species life" into "natural life."** Since society is an extension of the sensuous activities of humans in nature (labor), **the alienation of humans from the products of their labor, from the very process of labor, which is their life activity, and from their species-being, leads to the estrangement of humans from humans** (277)-**the alienation in class societies that is experienced on the individual level as loneliness.** In confronting oneself, one confronts others; which is another way of saying that one's **alienation from the product of one's labor**, from productive activity, and from "species life" **is** at the same time **alienation from other people, their labor, and the objects of their labor.** In class societies, **work**, therefore, **becomes the negation of the worker:** he "only feels himself outside his work, and in his work feels outside himself" (274). **Ending class structures is a re-obtaining of human freedom.** Freedom here is not simply the freedom of individuals as symbolized, for instance, in bourgeois "freedom of speech" but is a world-historical **"freedom from necessity"** (Marx, Critique of the Gotha Programme). **Class struggle is the struggle for human emancipation by putting an end to alienated labor** (as class relations). Alienated labor is the bondage of humans to production: it is an effect of wage labor (which turns labor into a means of living) and private property (which is congealed labor). **Emancipation from alienated labor is, therefore, the emancipation of humans from this bondage because "all relations of servitude," such as class relations, "are but modifications and consequences" of the relation of labor to production** (Marx, Economic and Philosophic Manuscripts of 1844,280). **Class**, in short, **is the effect of property relations that are themselves manifestations of the alienation of labor as wage labor. Wage labor alienates one from one's own product, from oneself, from other humans, and, as Marx put it, "estranges the species from man"** (276).

Identity-based struggles can never come to grips with the Real of Capital because today's global capitalism relentlessly fragments identities to ensure that capital's homogenizing force will prevail.

Slavoj Žižek, Professor of Sociology at the Institute for Sociology, Ljubljana University, **2k**, The Fragile Absolute, p. 11-15

So where are we, today, with regard to ghosts? The first paradox that strikes us, of course, is that this very process of global reflexivization that mercilessly derides and chases the ghosts of the past generates not only its own immediacy but also its own ghosts, its own spectrality. The most famous ghost, which has been roaming around for the last 150 years, was not a ghost of the past, but the spectre of the (revolutionary) future – the spectre, of course, from the first sentence of The Communist Manifesto. The automatic reaction to The Manifesto of today's enlightened liberal reader is: isn't the text simply wrong on so many empirical accounts – with regard to its picture of the social situation, as well as the revolutionary perspective it sustains and propagates? Was there ever a political manifesto that was more clearly falsified by subsequent historical reality? Is not The Manifesto, at its best, the exaggerated extrapolation of certain tendencies discernible in the nineteenth century? So let us approach The Manifesto from the opposite end: where do we live today, in our global 'post . . .' (postmodern, post-industrial) society? The slogan that is imposing itself more and more is 'globalization': the brutal imposition of the unified world market that threatens all local ethnic traditions, including the very form of the nation-state. And in view of this situation, is not the description of the social impact of the bourgeoisie in The Manifesto more relevant than ever? The bourgeoisie cannot exist without constantly revolutionizing the instruments of production, and thereby the relations of production, and with them the whole relations of society. Conservation of the old modes of production in unaltered form was, on the contrary, the first condition of existence for all earlier industrial classes. Constant revolutionizing of production, uninterrupted disturbance of all social conditions, everlasting uncertainty and agitation distinguish the bourgeois epoch from all earlier ones. All fixed, fast-frozen relations, with their train of ancient and venerable prejudices and opinions, are swept away, all new-formed ones become antiquated before they can ossify. All that is solid melts into air, all that is holy is profaned, and man is at last compelled to face with sober senses his real condition in life, and his relations with his kind. The need of a constantly expanding market for its products chases the bourgeoisie over the whole surface of the globe. It must nestle everywhere, settle everywhere, establish connexions everywhere. The bourgeoisie has through its exploitation of the world market given a cosmopolitan character to production and consumption in every country. To the great chagrin of Reactionists, it has drawn from under the feet of industry the national ground on which it stood. All old-established national industries have been destroyed or are daily being destroyed. They are dislodged by new industries, whose introduction becomes a life and death question for all civilized nations, by industries that no longer work up indigenous raw material, but raw material drawn from the remotest zones; industries whose products are consumed, not only at home, but in every quarter of the globe. In place of the old wants, satisfied by the productions of the country, we find new wants, requiring for their satisfaction the products of distant lands and climes. In place of the old local and national seclusion and self-sufficiency, we have intercourse in every direction, universal inter-dependence of nations. And as in material, so also in intellectual production. The intellectual creations of individual nations become common property. National one-sidedness and narrowmindedness becomes more and more impossible, and from the numerous national and local literatures, there arises a world literature.⁶ Is this not, more than ever, our reality today? Ericsson phones are no longer Swedish, Toyota cars are manufactured 60 per cent in the USA, Hollywood culture pervades the remotest parts of the globe. . . . Furthermore, does not the same go also for all forms of ethnic and sexual identities? Should we not supplement Marx's description in this sense, adding also that sexual 'onesidedness and narrowmindedness become more and more impossible'; that concerning sexual practices also, 'all that is solid melts into air, all that is holy is profaned', so that capitalism tends to replace standard normative heterosexuality with a proliferation of unstable shifting identities and/or orientations? From time to time Marx himself underestimates this ability of the capitalist universe to incorporate the transgressive urge that seemed to threaten it; in his analysis of the ongoing American Civil War, for example, he claimed that since the English textile industry, the backbone of the industrial system, could not survive without the supply of cheap cotton from the American South rendered possible only by slave labour, England would be forced to intervene directly to prevent the abolition of slavery. So yes, this global dynamism described by Marx, which causes all things solid to melt into air, is our reality – on condition that we do not forget to supplement this image from The Manifesto with its inherent dialectical opposite, the 'spiritualization' of the very material process of production. While capitalism does suspend the power of the old ghosts of tradition, it generates its own monstrous ghosts. That is to say: on the one hand, capitalism entails the radical secularization of social life – it mercilessly tears apart any aura of authentic nobility, sacredness, honour, and so on: It has drowned the

most heavenly ecstasies of religious fervour, of chivalrous enthusiasm, of philistine sentimentalism, in the icy water of egotistical calculation. It has resolved personal worth into exchange value, and in place of the numberless infeasible chartered freedoms, has set up that single, unconscionable freedom — Free Trade. In one word, for exploitation, veiled by religious and political illusions, it has substituted naked, shameless, direct, brutal exploitation.⁷ However, the fundamental lesson of the 'critique of political economy' elaborated by the mature Marx in the years after *The Manifesto* is that this reduction of all heavenly chimeras to brutal economic reality generates a spectrality of its own. When Marx describes the mad selfenhancing circulation of Capital, whose solipsistic path of self-fecundation reaches its apogee in today's meta-reflexive speculations on futures, it is far too simplistic to claim that the spectre of this self-engendering monster that pursues its path regardless of any human or environmental concern is an ideological abstraction, and that one should never forget that behind this abstraction there are real people and natural objects on whose productive capacities and resources Capital's circulation is based, and on which it feeds like a gigantic parasite. The problem is that this 'abstraction' does not exist only in our (financial speculator's) misperception of social reality; it is 'real' in the precise sense of determining the very structure of material social processes: the fate of whole strata of populations, and sometimes of whole countries, can be decided by the 'solipsistic' speculative dance of Capital, which pursues its goal of profitability with a blessed indifference to the way its movement will affect social reality. That is the fundamental systemic violence of capitalism, which is much more uncanny than direct precapitalist socio-ideological violence: this violence is no longer attributable to concrete individuals and their 'evil' intentions; it is purely 'objective', systemic, anonymous.

Socioeconomic inequalities are assumed to be natural because of their inherent place in the capitalist system — constancy makes them invisible to statistical analysis

Richard **York and Brett Clark, 2010**, Professor of Environmental Sociology and Statistics at the University of Oregon, Assistant Professor of Sociology and Sustainability, 2010, "Nothing New Under the Sun? The Old False Promise of New Technology", Review (Fernand Braudel Center), VOL 33, pp. 203-224, online: <http://www.jstor.org/stable/23346882>

The concept of historicity within the Marxist tradition emphasizes that social "laws," unlike natural laws, vary across different historical periods. However, during any specific historical context on the second tier of time, such as the respective extended periods of feudalism or capitalism in Europe, particular social structures (e.g., economic systems) emerge that exert a strong influence on the overall organization of society and the everyday happenings in people's lives. Given the persistence of these social structures over long stretches of time, they serve as background conditions that generate a form of "social gravity" that interacts with and influences all social relations (York & Clark, 2006; 2007). The pervasive and constant power of this social gravity often goes unnoticed or is simply assumed to be immutable. For example, the structure of the capitalist economy generates social inequalities, which are then assumed to be a natural and inevitable part of the human condition, when they are in fact simply the product of a particular economic system. Given how constant the influence is at most points in time, it may be invisible to typical statistical analyses, since statistical analyses focus on explaining variation, not constancy. These background conditions can have dramatic, if often unrecognized, effects on social processes. Nonetheless, unlike many of the forces on the third tier, these particular forces of the second tier are typically social in origin and can be altered through changes in social structure.

A thorough analysis of capitalism in relation to its concealed structural violence and environmental issues is key – solutions formed without specific recognition of root cause fail

Richard **York and Brett Clark, 2010**, Professor of Environmental Sociology and Statistics at the University of Oregon, Assistant Professor of Sociology and Sustainability, 2010, "Nothing New Under the Sun? The Old False Promise of New Technology", Review (Fernand Braudel Center), VOL 33, pp. 203-224, online: <http://www.jstor.org/stable/23346882>

¶ While these structural arrangements produce various contradictions, given the social inequalities and ecological degradation that the system inevitably creates, it also provides a degree of structural stability when measured on a limited timescale, such as decades or centuries. Thus, the "laws" of capitalism, due to their relative constancy over the past centuries, can appear to be laws of nature that cannot be transcended. But, as historicity suggests, what appears to be a universal law in a particular context may be shown to be invalid in other contexts. Thus, a thorough analysis must account for background conditions that act as social gravity, that are creating specific problems. These background conditions may also restrict the range of debate, assumptions about the social world, and the potential suggestions for change. Too often, proposed solutions, whose focus is on the particularities of the first tier of time, fail to assess how background conditions contribute to particular problems, such as the current crises over food, energy, and the environment. As a result, a series of so-called solutions are generated throughout time, without actually addressing the roots of the problem. Once this is understood, it is possible to comprehend how contemporary environmental problems are similar to those in previous decades and centuries. At the same time, given the persistence of the social gravity stemming from the structure of the world-system, contemporary environmental problems are more pressing than they have been in the past due to their extraordinary scale, and threaten to transgress the planetary boundaries that maintain the earth system in a state that supports human civilization. All of this stresses the importance of properly assessing the forces driving ecological problems, as well as the proposed solutions.

Fusion centers, No Regulations

Fusion centers do what they want, the FBI

German and Stanley '7, German is on the Policy Counsel for National Security, ACLU Washington Legislative Office; Stanley is the Public Education Director, ACLU Technology and Liberty Program (December 2007, Michael German and Jay Stanley, American Civil Liberties Union, "WHAT'S WRONG WITH FUSION CENTERS?,"

https://www.aclu.org/files/pdfs/privacy/fusioncenter_20071212.pdf

Ambiguous Lines of Authority. The **participation of agencies from multiple jurisdictions in fusion centers allows the authorities to manipulate differences in federal, state and local laws to maximize information collection while evading accountability and oversight through the practice of "policy shopping."**

Private Sector Participation . **Fusion centers are incorporating private-sector corporations** into the intelligence process, breaking down the arm's length relationship that protects the privacy of innocent Americans who are employees or customers of these companies, and increasing the risk of a data breach.

Military Participation . **Fusion centers are involving military personnel** in law enforcement activities in troubling ways.

Data Fusion = Data Mining . Federal fusion center guidelines encourage whole sale data collection and manipulation processes that threaten privacy.

Excessive Secrecy . **Fusion centers are hobbled by excessive secrecy, which limits public oversight**, impairs their ability to acquire essential information and impedes their ability to fulfill their stated mission, bringing their ultimate value into doubt.

Fusion centers guarantee profiling will continue post-plan

Constitution Project '12 The Constitution Project (8/15/12, The Constitution Project, "RECOMMENDATIONS FOR FUSION CENTERS",

<http://www.constitutionproject.org/pdf/fusioncenterreport.pdf>

2. Reports of Political, Racial and Religious Profiling

Despite these constitutional principles, there have been numerous anecdotal reports of incidents in which fusion centers have targeted individuals in the United States for surveillance and investigation based solely on beliefs and characteristics that are protected by the First and Fourteenth Amendments. Although federal guidance to fusion centers cautions against profiling, these incidents demonstrate that significant additional guidance, training and oversight are crucial to ensure that fusion centers and other law enforcement agencies do not engage in racial, religious and political profiling.⁴¹

Recent **reports from across the country bear testament to the potential for problematic profiling at fusion centers, particularly regarding bulletins and intelligence reports circulated by fusion centers.** These are a few examples:

- **The February 2009 "Prevention Awareness Bulletin," circulated by a Texas fusion center, described Muslim lobbying groups as "providing an environment for terrorist organizations to flourish"** and warned that "the threats to Texas are significant."

The bulletin called on law enforcement officers to report activities such as Muslim "hip hop fashion boutiques, hip hop bands, use of online social networks, video sharing networks, chat forums and blogs."⁴²

- A Missouri-based fusion center issued a February 2009 report describing support for the presidential campaigns of Ron Paul or third party candidates, possession of the iconic "Don't Tread on Me" flag and anti-abortion activism as signs of membership in domestic terrorist groups.⁴³

- **The Tennessee Fusion Center listed a letter from the American Civil Liberties Union (ACLU) to public schools on its online map of “Terrorism Events and Other Suspicious Activity.” The letter had advised schools that holiday celebrations focused exclusively on Christmas were an unconstitutional government endorsement of religion.**⁴⁴
- **The Virginia Fusion Center’s 2009 Terrorism Risk Assessment Report described student groups at Virginia’s historically black colleges as potential breeding grounds for terrorism and characterized the “diversity” surrounding a military base as a possible threat.**⁴⁵

Fusion centers aren’t under federal jurisdiction—localities won’t enforce rules

Price ’13, Michael Price serves as counsel for the Brennan Center’s Liberty and National Security Program (12/10/13, Michael Price, Brennan Center for Justice, “National Security and Local Police”, <https://www.brennancenter.org/publication/national-security-local-police>)

The Brennan Center has identified three major reasons the system is ineffective: Information sharing among agencies is governed by inconsistent rules and procedures that encourage gathering useless or inaccurate information. This poorly organized system wastes resources and also risks masking crucial intelligence.

As an increasing number of agencies collect and share personal data on federal networks, inaccurate or useless information travels more widely. Independent oversight of fusion centers is virtually non-existent, compounding these risks.

Oversight has not kept pace, increasing the likelihood that intelligence operations violate civil liberties and harm critical police-community relations.

According to a report by the Government Accountability Office, 95 percent of suspicious activity reports are not even investigated by FBI. This is unsurprising. In the past, police departments shared information only when there was ‘reasonable suspicion’ of criminal activity. This time-tested standard ensured that police were focused on real threats and not acting on their own biases or preconceptions. But with this crucial filter removed after the attacks of 9/11, almost any behavior — from photographing a landmark, to stretching in the park, to attending a mosque — can be viewed as potentially suspicious, reported, and shared with thousands of other government agencies. It is impractical to sift through and follow up on every report, so important information can easily fall through the cracks. In some instances, the practice has also undermined community trust in the police, which is an essential element of domestic counterterrorism.

Efforts by the federal government to address this oversight gap have been half-hearted. The system is not under federal government control. Federal funds simply flow to state legislatures, which then allocate them as they see fit — no questions asked. State and local governments have rarely stepped into the breach, allowing intelligence activities to go unchecked and unsupervised.

Fusion centers monitor lawful religious activity

Patel and Price ’12 Faiza Patel serves as co-director of the Brennan Center’s Liberty and National Security Program; Michael Price serves as counsel for the Brennan Center’s Liberty and National Security Program (10/18/12, Faiza Patel, Michael Price, Brennan Center for Justice, “Fusion Centers Need More Rules, Oversight”, <https://www.brennancenter.org/analysis/fusion-centers-need-more-rules-oversight>)

Instead of looking for terrorist threats, **fusion centers were monitoring lawful political and religious activity.** That year, **the Virginia Fusion Center described a Muslim get-out-the-vote**

campaign as “subversive.” In 2009, the North Central Texas Fusion Center identified lobbying by Muslim groups as a possible threat.

The DHS dismissed these as isolated episodes, but the two-year Senate investigation found that such tactics were hardly rare. It concluded that **fusion centers routinely produce “irrelevant, useless or inappropriate” intelligence that endangers civil liberties.**

None of their information has disrupted a single terrorist plot. These revelations call into question the value of fusion centers as currently structured. At a minimum, they underscore the need for greater oversight and clearer rules on what information fusion centers collect and disseminate. Of course, effective information sharing is critical to national security. But as the Senate investigation demonstrates, there is little value in distributing information if it is shoddy, biased or simply irrelevant. When fusion centers feed such information into the echo chamber of federal databases, they only compound mistakes and clog the system.

The DHS has failed to create effective mechanisms or incentives for quality control. Instead, **fusion centers collect and share information according to their individual standards, which vary considerably.**

These rules often **permit information to flow to federal agencies that has no connection to criminal activity** — let alone terrorism. This creates the risk that intelligence networks will become saturated with poor or irrelevant information as well as lend undue credibility to inaccurate data. The Senate report showed that these risks are not just theoretical.

Fusion centers need explicit and consistent rules. The DHS should ensure that the information the centers collect and distribute is relevant, useful and constitutional by requiring them to show some reasonable suspicion that criminal activity is afoot.

This is not a particularly high bar to clear. The reasonable suspicion standard is familiar to every police officer. The requirement would serve as an important bulwark against privacy and civil rights violations, but it would also keep meaningless information out of the system.

Without such well-defined and familiar standards, as the Senate report demonstrates, fusion centers are left rudderless.

In addition, fusion centers must have active, independent oversight. While Congressional inquiries are important for exposing problems, the Senate should not have been the first governmental body to take a critical look at fusion centers.

At the state and local level, **there is often no mechanism to ensure that fusion centers are generating useful information or complying with the law.** At the federal level, the DHS is responsible for verifying that the data shared by fusion centers meet certain minimum standards. But **the DHS has delegated this responsibility to the centers themselves and has not conducted independent audits.**

DHS oversight has been so poor that the department could not even say how much money it has spent on fusion centers, estimating the cost at somewhere from \$289 million to \$1.4 billion.

Their inherently local nature makes regulation impossible- the plan does nothing

O’Neil ‘8 political science graduate student at the University of California Los Angeles (UCLA) Previously, iobhan served as the analyst for domestic security and intelligence at the Congressional Research Service (CRS). She spent five years working in homeland security serving as the deputy chief of the Intelligence Bureau of the New Jersey Office of Homeland Security and Preparedness (OHSP) (April 2008, Siobhan, Homeland Security Affairs, “The Relationship between the Private Sector and Fusion Centers: Potential Causes for Concern and Realities”, <https://www.hsaj.org/articles/134>)

Given that **fusion centers are entities established by states and localities to serve their own law enforcement,** emergency response, and homeland security needs, and **compounded by the**

sensitivities associated with federalism, the federal government is in a difficult position of balancing its interests and respecting the local nature of fusion centers. As such, **the federal government has been understandably hesitant to place requirements on fusion centers.**

Instead, federal **agencies have produced guidelines, which have not been compulsory**, to include the National Strategy for Information Sharing and Fusion Center Guidelines. ⁸ While **these documents** address some of the tactical and operational concerns related to fusion centers, they **are often vague to a fault and fail to provide the comprehensive vision for fusion centers as part of the nation's homeland security posture.**

Failure to create a consensus on the role, structural requirements, and responsibilities for fusion centers is apt to increase the potential for ineffectiveness, which threatens the viability of fusion centers. If fusion centers fail to demonstrate their worth and strengthen and augment our nation's homeland security efforts, political support and external agency engagement with these centers is likely to decline. Moreover, potential civil liberties abuses could damage fusion centers' credibility and undermine their public support. It has rightfully been warned that even rumors of impropriety and civil liberties abuses associated with a single fusion center can cause irreparable damage to the reputation of all fusion centers nationwide. This would be unfortunate given the potential for fusion centers to provide public safety and homeland security benefits to both local communities and the nation.

Local surveillance circumetns

General Local surveillance can break the law without consequence – they can they can cover it up with non disclosure agreements

Fenton 15 (Justin Fenton, who joined The Sun in 2005, has covered the Baltimore Police Department since 2008. His work includes an investigation into Cal Ripken Jr.'s minor league baseball stadium deal with his hometown of Aberdeen and a three-part series chronicling a ruthless con woman, "Baltimore Police used secret technology to track cellphones in thousands of cases", April 9, 2015, <http://www.baltimoresun.com/news/maryland/baltimore-city/bs-md-ci-stingray-case-20150408-story.html#page=1> -JD)

The Baltimore Police Department has used an invasive and controversial cellphone tracking device thousands of times in recent years while following instructions from the FBI to withhold information about it from prosecutors and judges, a detective revealed in court testimony Wednesday.¶The testimony shows for the first time how frequently city police are using a cell site simulator, more commonly known as a "stingray," a technology that authorities have gone to great lengths to avoid disclosing.¶The device mimics a cellphone tower to force phones within its range to connect. Police use it to track down stolen phones or find people.¶Until recently, the technology was largely unknown to the public. Privacy advocates nationwide have raised questions whether there has been proper oversight of its use.¶Baltimore has emerged in recent months as a battleground for the debate. In one case last fall, a city detective said a nondisclosure agreement with federal authorities prevented him from answering questions about the device. The judge threatened to hold him in contempt if he didn't provide information, and prosecutors withdrew the evidence.¶The nondisclosure agreement, presented for the first time in court Wednesday, explicitly instructs prosecutors to drop cases if pressed on the technology, and tells them to contact the FBI if legislators or judges are asking questions.¶Detective Emmanuel Cabreja, a member of the Police Department's Advanced Technical Team, testified that police own a Hailstorm cell site simulator — the latest version of the stingray — and have used the technology 4,300 times since 2007.¶Cabreja said he had used it 600 to 800 times in less than two years as a member of the unit.¶Nate Wessler, an attorney with the American Civil Liberties

Union, said 4,300 uses is "huge number." He noted that most agencies have not released data.¶ The Florida Department of Law Enforcement says its officers have used the device about 1,800 times. Police in Tallahassee say they have used it more than 250 times; police in Tacoma, Wash., 170 times.¶ Former U.S. Judge Brian L. Owsley, a law professor at Indiana Tech, said he was "blown away" by the Baltimore figure and the terms of the nondisclosure agreement. "That's a significant amount of control," he said.¶ Agencies have invoked the nondisclosure agreement to keep information secret. At a hearing last year, a Maryland State Police commander told state lawmakers that "Homeland Security" prevented him from discussing the technology.¶ Wessler said the secrecy is upending the system of checks and balances built into the criminal justice system.¶ "In Baltimore, they've been using this since 2007, and it's only been in the last several months that defense attorneys have learned enough to start asking questions," he said. "Our entire judicial system and constitution is set up to avoid a 'just trust us' system where the use of invasive surveillance gear is secret."¶

Can't stop government data collection on companies – subpoena power can bypass the fourth amendment and violate the rights of Americans

KRAVETS 15 (David Kravets is a WIRED senior staff writer and founder of the fake news site TheYellowDailyNews.com. He's a dad of two boys and has been a reporter since the manual typewriter days, "We Don't Need No Stinking Warrant: The Disturbing, Unchecked Rise of the Administrative Subpoena", 08.28.12, <http://www.wired.com/2012/08/administrative-subpoenas/> - JD)

But by law, utilities must hand over customer records — which include any billing and payment information, phone numbers and power consumption data — to the DEA without court warrants if drug agents believe the data is "relevant" to an investigation. So the utility eventually complied, after losing a legal fight earlier this month.¶ Meet the administrative subpoena (.pdf): With a federal official's signature, banks, hospitals, bookstores, telecommunications companies and even utilities and internet service providers — virtually all businesses — are required to hand over sensitive data on individuals or corporations, as long as a government agent declares the information is relevant to an investigation. Via a wide range of laws, Congress has authorized the government to bypass the Fourth Amendment — the constitutional guard against unreasonable searches and seizures that requires a probable-cause warrant signed by a judge.¶ In fact, there are roughly 335 federal statutes on the books (.pdf) passed by Congress giving dozens upon dozens of federal agencies the power of the administrative subpoena, according to interviews and government reports. (.pdf)¶ "I think this is out of control. What has happened is, unfortunately, these statutes have been on the books for many, many years and the courts have acquiesced," said Joe Evans, the utility's attorney.¶ Anecdotal evidence suggests that federal officials from a broad spectrum of government agencies issue them hundreds of thousands of times annually. But none of the agencies are required to disclose fully how often they utilize them — meaning there is little, if any, oversight of this tactic that's increasingly used in the war on drugs, the war on terror and, seemingly, the war on Americans' constitutional rights to be free from unreasonable government trespass into their lives.¶ That's despite proof that FBI agents given such powers under the Patriot Act quickly began to abuse them and illegally collected Americans' communications records, including those of reporters. Two scathing reports from the Justice Department's Inspector General uncovered routine and pervasive illegal use of administrative subpoenas by FBI anti-terrorism agents given nearly carte blanche authority to demand records about Americans' communications with no supervision.¶ When the 9th U.S. Circuit Court of Appeals, perhaps the nation's most liberal appeals court based in San Francisco, ordered Golden Valley to fork over the data earlier this month, the court said the case was "easily" decided because the records were "relevant" to a government drug investigation.¶ With the data the Alaska utility handed over, the DEA may then use further administrative subpoenas

to acquire the suspected indoor-dope growers' phone records, stored e-mails, and perhaps credit-card purchasing histories — all to build a case to acquire a probable-cause warrant to physically search their homes and businesses.¶ But the administrative subpoena doesn't just apply to utility records and drug cases. Congress has spread the authority across a huge swath of the U.S.

government, for investigating everything from hazardous waste disposal, the environment, atomic energy, child exploitation, food stamp fraud, medical insurance fraud, terrorism, securities violations, satellites, seals, student loans, and for breaches of dozens of laws pertaining to fruits, vegetables, livestock and crops.¶ Not one of the government agencies with some of the broadest administrative subpoena powers Wired contacted, including the departments of Commerce, Energy, Agriculture, the Drug Enforcement Administration and the FBI, would voluntarily hand over data detailing how often they issued administrative subpoenas.¶ The Drug Enforcement Administration obtained the power under the Comprehensive Drug Abuse Prevention and Control Act of 1970 and is believed to be among the biggest issuers of administrative subpoenas.¶ “It’s a tool in the toolbox we have to build a drug investigation. Obviously, a much, much lower threshold than a search warrant,” said Lawrence Payne, a DEA spokesman, referring to the administrative subpoena generically. Payne declined to discuss individual cases.¶ Payne said in a telephone interview that no database was kept on the number of administrative subpoenas the DEA issued.¶ But in 2006, Ava Cooper Davis, the DEA’s deputy assistant administrator, told a congressional hearing, “The administrative subpoena must have a DEA case file number, be signed by the investigator’s supervisor, and be given a sequential number for recording in a log book or computer database so that a particular field office can track and account for any administrative subpoenas issued by that office.”¶ After being shown Davis’ statement, Payne then told Wired to send in a Freedom of Information Act request, as did some of the local DEA offices we contacted, if they got back to us at all. “Would suggest a FOIA request to see whether you can get a number of administrative subpoenas. Our databases have changed over the years as far as how things are tracked and we don’t have access to those in public affairs unfortunately,” Payne said in an e-mail.¶ He said the agency has “never” been asked how many times it issued administrative subpoenas.¶ Amy Baggio, a Portland, Oregon federal public defender representing drug defendants for a decade, said DEA agents “use these like a doctor’s prescription pad on their desk.” Sometimes, she said, they issue “hundreds upon hundreds of them” for a single prosecution — often targeting mobile phone records.¶ They are using them exponentially more in all types of federal criminal investigations. I’m seeing them in every drug case now.” Baggio said. Nobody is watching what they are doing. I perceive a complete lack of oversight because there isn’t any required.”

Nypd alt cause

Local Surveillance like the NYPD is Islamophobic

Kane 13 (Alex Kane is an assistant editor for the news website Mondoweiss, which covers the Israel–Palestine conflict, and the World section editor at AlterNet. His work has also appeared in Salon, The Daily Beast’s “Open Zion” blog, Vice, BBC Persian, +972 magazine, the Electronic Intifada, Extra!, and Common Dreams, Kane is citing the book “Enemies Within” by Matt Apuzzo and Adam Goldman, “Alex Kane on Enemies Within : Inside the NYPD’s Secret Spying Unit and bin Laden’s Final Plot Against America”, October 24th, 2013, <http://lareviewofbooks.org/review/raking-the-coals-islamophobia-surveillance-targeting-and-the-nypds-secret-spying-unit>)

Like the NYPD, the FBI has used its own power to pressure Muslims into becoming informants in exchange for help. According to the American Civil Liberties Union, the FBI has told Muslim-Americans trapped abroad because of their inclusion on a no-fly list that they could get off easily — by spying on their own communities back home in the US. For all the oversight of the FBI — something the NYPD doesn’t have to contend with — parts of the federal agency still view Muslims as targets for spying rather than partners in the fight against terrorism. Far from an aberration in America’s post-9/11 landscape, the NYPD is merely the most extreme example of a law enforcement apparatus running roughshod over the rights of Muslim Americans.¶ What’s also missing from Apuzzo and Goldman’s otherwise excellent exposé of the NYPD is the larger political context in which the spying took place. The NYPD’s logic is Islamophobic at its core: all Muslims are deemed potential terrorists until they’re proven not to be, an inversion of how law enforcement is supposed to work. Yet there’s little exploration of how Islamophobic discourse from the media and elected officials contribute to the implementation and acceptance of spying targeting Muslims.¶ In the same year that Apuzzo and Goldman began reporting on the NYPD’s Intelligence Division, New York Republican Peter King set up House hearings to probe “radicalization” among Muslim-Americans — a transparent

attempt to cast aspersions on one particular community. In 2010, anti-Muslim blogger Pamela Geller worked the national media into a frenzy over what was inaccurately labeled the “Ground Zero mosque.” **King, Geller and other prominent figures who demonized Muslims directly after 9/11 opened up space for institutions with even more power, like the police, to move a discourse of bigotry into policies of bigotry. In an atmosphere where anti-Muslim sentiment largely went unchallenged, it's no surprise that hardly an eye was batted when the NYPD hired CIA officials to implement an intelligence collection program aimed at law-abiding citizens.** The book presents an undeniably damning portrait of the NYPD's surveillance operation. Now, it's up to the courts and lawmakers to decide whether these operations are legal or prudent. Three federal lawsuits are being pursued in reaction to Apuzzo's and Goldman's groundbreaking investigations. The next New York City mayor will have to grapple with the question of continuing or halting the spy operations. Judges and elected officials will have a documented record on which to look back to decide these weighty questions in the coming months: Enemies Within.¶

Surveillance is heavily biased– It is assumed that Muslims are terrorists

Khalek 14 (Rania Khalek is an independent journalist reporting on the underclass and marginalized communities, “How NSA Spying Impacts Muslim Communities and Cultivates Islamophobia”, January 26, 2014, <http://raniakhalek.com/2014/01/26/how-nsa-spying-impacts-muslim-communities-and-cultivates-islamophobia/> -JD)

RANIA KHALEK: That's a really good point that you make and I actually want you to touch on that a little bit more about how **the vilification and demonization of Muslims inside the United States and foreign has really been used to justify this type of mass surveillance and in some cases it seems to have worked. All you have to do is say terrorist, Islamic terrorism and people are like, oh okay.**

Could you talk a little bit about that?¶ ABBAS: I agree wholeheartedly that **the fear of Islam, the fear of Muslims, is a notion I think has been cultivated by policy choices at the federal level. The use of airport screenings, that inevitably cultivates and reflects the bias that people have against Muslims, has I think created space for an anti-Muslim movement to take root.** Right after September 11, you didn't

have your Act for America's, your David Yerushalmi's, your Center for Security Policy's—**this well-organized, well-financed movement dedicated towards marginalizing Muslims and that gave rise to essentially an engine of generating anti-Muslim sentiment that creates this terrible and despicable cycle**

where now you have the overt argument being made that Muslims are here in the United States to abrogate the US constitution, to overthrow the US government and replace it with Sharia law, which couldn't be further from the truth.¶ As the facts would have it, the American Muslim community is a well-educated, well-integrated and looking to continue to do so in the world. You can't identify an American Muslim radical voice in the United States, whereas if you go to Europe, you can find people that have a platform that say despicable objectionable things. In the US, that's just not the case.¶ But we still have in the US, which is really exporting anti-Muslim sentiment to other parts of the world especially Europe, we still have this fear of Islam that absolutely does give rise to justify these surveillance policies.¶ GOSZTOLA: So for people who are hearing this debate and they maybe think it's kind of abstract, we've been hearing people talk about collection of the information and then we've been hearing about how the information is stored. And right now when we're talking about the program under the Patriot Act, the Section 215 program, which is the bulk records collection of the phone records, it's all about who's going to hold it, who's going to store it, and it's kind of like we're not talking about the collection. I'd like you to talk about why the collection would be really bad and I think a thing you could address is how the collection of people's information in Muslim communities in New York is a huge deal for them and collecting that information is the beginning of the injustice.¶ ABBAS: Absolutely. What we know a lot about now regarding the NSA's surveillance programs is what is collected,

some of the searching mechanisms that can be utilized to sift through the collected information. But what **we really get to see in more granular detail with the NYPD's specifically designed Muslim surveillance program is how indiscriminately collected information gets utilized and what people in positions of authority that can collect such information think is an appropriate use of taxpayer dollars.** And what we find is that **the NYPD thought it was absolutely worth taxpayer money to send their agents on camping trips of 19 and 20-year-old college students. They thought it was absolutely critical for them to map the Muslim community in Newark, New Jersey, and beyond, identifying every halal grocery store, every halal restaurant.** These things

are laughable when we see them up close and in granular detail and just like the PCLOB board has determined itself, a board that was authorized by Congress years ago, that the sifting through everybody's information on an ongoing basis actually is not only

objectionable in itself but it's not productive by any criteria.¶ So you have for instance James Clapper arguing that there's the 'piece of mind' quotients that is part of the benefit of their surveillance program because we're monitoring everything. At the very least we know that nothing is happening. But this mentality that gave rise to the NSA program is really the objectionable thing that needs to end because it gives rise to not only indiscriminate collection of information automatically through these telecommunications companies, but it's also given rise to a network of 15,000 FBI informants that have saturated the Muslim community across the country, that are sent to mosques without any type of criminal predicate just to collect information because there's a sense that that's where the problem. And that's the inevitable result of indiscriminate collection. It's always going to be the case that indiscriminate collection—in addition to not being productive—will lead to despicable consequences.¶ And I'll end my answer here.¶ The saddest thing I've ever heard as a CAIR staff attorney, and I hear lots of sad things, was when **a young guy told me that when he goes to the mosque to pray, his mom warns him to be careful. And the mom warns him to be careful because there's an understanding based on experience that the mosque is likely filled with informants and infiltrators that are not there to make us any safer but there to extract information from innocent Americans by any means necessary.**¶

Undercommons (Pain K)

Research centered at the subjugation of the oppressed increases colonization. Identity is reduced to a people's who identity is centered in lacking wholeness

Tuck and Yang '14 – A. Prof of Educational Foundations @ State U. of New York at New Paltz and A. Prof in Ethnic Studies @ U.C. San Diego (Eve and K. Wayne, “ R-Words: Refusing Research”, Humanizing Research, p.226-231//JC)

Similarly, at the center of the analysis in this chapter is a concern with the **fixation** social science research has exhibited **in eliciting pain stories from communities that are not White, not wealthy, and not straight**. **Academe's demonstrated fascination with telling and retelling narratives of pain is troubling, both for its voyeurism and for its consumptive implacability**. **Imagining “itself to be a voice, and in some disciplinary iterations, the voice of the colonised”** (Simpson, 2007, p. 67, emphasis in the original) is not just a rare historical occurrence in anthropology and related fields. We observe that much of **the work of the academy is to reproduce stories of oppression in its own voice**. At first, this may read as an intolerant condemnation of the academy, one that refuses to forgive past blunders and see how things have changed in recent decades. However, it is our view that while many individual scholars have chosen to pursue other lines of inquiry than the pain narratives typical of their disciplines, **novice researchers emerge from doctoral programs eager to launch pain-based inquiry projects because they believe that such approaches embody what it means to do social science**. **The collection of pain narratives and the theories of change that champion the value of such narratives are so prevalent in the social sciences that one might surmise that they are indeed what the academy is about**. In her examination of the symbolic violence of the academy, bell hooks (1990) portrays the core message from the academy to those on the margins as thus: **No need to hear your voice when I can talk about you better than you can speak about yourself**. No need to hear your voice. Only tell me about your pain. I want to know your story. And then I will tell it back to you in a new way. Tell it back to you in such a way that it has become mine, my own. Re-writing you I write myself anew. **I am still author, authority. I am still colonizer the speaking subject and you are now at the center of my talk**. (p. 343) Hooks's words resonate with our observation of how much of social science **research is concerned with providing recognition to the presumed voiceless**, a recognition that **is enamored with knowing through pain**. Further, this passage describes the ways in which the researcher's voice is constituted by, legitimated by, animated by the voices on the margins. **The researcher-self is made anew by telling back the story of the marginalized/subaltern subject**. Hooks works to untangle the almost imperceptible differences between forces that silence and forces that seemingly liberate

by inviting those on the margins to speak, to tell their stories. Yet the forces that invite those on the margins to speak also say, “Do not speak in a voice of resistance. Only speak from that space in the margin that is a sign of deprivation, a wound, an unfulfilled longing. Only speak your pain” (hooks, 1990, p. 343).

This legitimizes and reinscribes existing power structures, props-up and reproduces state violence, and devalues existence to a question of ‘pain’

Tuck and Yang ’14 – A. Prof of Educational Foundations @ State U. of New York at New Paltz and A. Prof in Ethnic Studies @ U.C. San Diego (Eve and K. Wayne, “ R-Words: Refusing Research”, Humanizing Research, p.226-231//JC)

The costs of a politics of recognition that is rooted in naming pain have been critiqued by recent decolonizing and feminist scholars (Hartman, 1997, 2007; Tuck, 2009). In *Scenes of Subjection*, Sadiya Hartman (1997) discusses how recognizing the personhood of slaves enhanced the power of the Southern slave-owning class. Supplicating narratives of former slaves were deployed effectively by abolitionists, mainly White, well-to-do, Northern women, to generate portraits of abuse that ergo recognize slaves as human (Hartman, 2007). In response, new laws afforded minimal standards of existence, “making personhood coterminous with injury” (Hartman, 1997, p. 93), while simultaneously authorizing necessary violence to suppress slave agency. The slave emerges as a legal person only when seen as criminal or “a violated body in need of limited forms of protection” (p. 55). Recognition “humanizes” the slave, but is predicated upon her or his abjection. You are in pain, therefore you are. “[T]he recognition of humanity require[s] the event of excessive violence, cruelty beyond the limits of the socially tolerable, in order to acknowledge and protect the slave’s person” (p. 55). Furthermore, Hartman describes how slave-as-victim as human accordingly establishes slave-as-agent as criminal. Applying Hartman’s analysis, we note how the agency of Margaret Gamer or Nat Turner can only be viewed as outsider violence that humane society must reject while simultaneously upholding the legitimated violence of the state to punish such outsider violence. Hartman asks, “Is it possible that such recognition effectively forecloses agency as the object of punishment... Or is this limited conferral of humanity merely a reinscription of subjugation and pained existence?” (p. 55).

We must reject the affirmative as an example of Pain-centered research. The alternative of desire-based research solves the case and avoids the pitfall of pain-centered research

Tuck and Yang ’14 – A. Prof of Educational Foundations @ State U. of New York at New Paltz and A. Prof in Ethnic Studies @ U.C. San Diego (Eve and K. Wayne, “ R-Words: Refusing Research”, Humanizing Research, p.226-231//JC)

Craig Gingrich-Philbrook (2005) articulates a related critique of autoethnography, positioning himself as a “narrator who appreciates autoethnography, at least as compared to its positivist alternatives, but one who simultaneously distrusts autoethnography’s pursuit of legitimacy in the form of the patriarch’s blessing and family values” (p. 298). Gingrich-Philbrook locates his concern in what autoethnography/ers are willing to do to secure academic legitimacy (p. 300): “My fears come down to the

consequences of how badly autoethno-graphy wants Daddy's approval" (p. 310). By this Gingrich-Philbrook means that much of autoethnography has fixated on "attempting to justify the presence of the self in writing to the patriarchal council of self-satisfied social scientists" (p. 311). Though Gingrich-Philbrook does not go into detail about how precisely the "presence of the self" is justified via the performativity of subjugated knowledges (what we are calling **pain narratives**), he insists that autoethnography **is distracted by trying to satisfy Daddy's penchant for accounts of oppression**. In my own autobiographical performance projects, I identify this chiasmatic shift in the possibility that all those **performances** I did **about getting bashed only provided knowledge of subjugation, serving almost as an advertisement for power**: "Don't let this happen to you. Stay in the closet." In large part motivated by Elizabeth Bell's writings about performance and pleasure, I decided to write more about the gratifications of same-sex relationships, to depict intimacy and desire, the kinds of subjugated knowledges we don't get to see on the after school specials and movies of the week that parade queer bruises and broken bones but shy away from the queer kiss. (p. 312) Participatory action research and other **research approaches that involve participants** in constructing the design and collection of voice (as data) **are not immune** to the fetish for pain narratives. It is a misconception that by simply **building participation into a project**—by increasing the number of people who collaborate in collecting data—**ethical issues of representation, voice, consumption, and voyeurism are resolved**. There are countless examples of research in which community or youth participants have made their own stories of loss and pain the objects of their inquiry (see also Tuck & Guishard, forthcoming). Alongside analyses of pain and damage-centered research, Eve (Tuck 2009, 2010) has theorized **desire-based research as not the antonym but rather the antidote for damage-focused narratives. Pain narratives are always incomplete**. They bemoan the food deserts, but forget to see the food innovations; **they lament the concrete jungles and miss the roses and the tobacco from concrete. Desire-centered research does not deny the experience of tragedy, trauma, and pain, but positions the knowing derived from such experiences as wise. This is not about seeing the bright side of hard times, or even believing that everything happens for a reason. Utilizing a desire-based framework is about working inside a more complex and dynamic understanding of what one, or a community, comes to know in (a) lived life. Logics of pain focus on events, sometimes hiding structure, always adhering to a teleological trajectory of pain, brokenness, repair, or irreparability—from unbroken, to broken, and then to unbroken again. Logics of pain require time to be organized as linear and rigid, in which the pained body (or community or people) is set back or delayed on some kind of path of humanization, and now must catch up (but never can) to the settler/unpained/abled body (or community or people or society or philosophy or knowledge system). In this way, the logics of pain has superseded the now outmoded racism of an explicit racial hierarchy with a much more politically tolerable racism of a developmental hierarchy.**² Under a developmental hierarchy, in which some were undeterred by pain and oppression, and others were waylaid by their victimry and subalternity, **damage-centered research reifies a settler temporality and helps suppress other understandings of time. Desire-based frameworks, by contrast, look to the past and the future to situate analyses. Desire is about longing, about a present that is enriched by both the past and the future; it is integral to our humanness. It is not only the painful elements of social and psychic realities, but also the textured acumen and hope.** (Tuck, 2010, p. 644) In this way, **desire is time-warping. The logics of desire is asynchronous just as it is distemporal, living in the gaps between the ticking**

machinery of disciplinary institutions. To be clear, again, we are not making an argument against the existence of pain, or for the erasure of memory, experience, and wisdom that comes with suffering. Rather, we see the collecting of narratives of pain by social scientists to already be a **double erasure, whereby pain is documented in order to be erased**, often **by** eradicating the communities that are supposedly injured and supplanting them with **hopeful stories of progress** into a better, Whiter, world. Vizenor talks about such “the consumer notion of a ‘hopeful book,’” and we would add hopeful or feel-good research, as “a denial of tragic wisdom” bent on imagining “a social science paradise of tribal victims” (1993, p. 14). Desire interrupts this metanarrative of damaged communities and White progress.

1NC short Shell

Our interpretation is that an affirmative should defend curtailing federal government surveillance as the endpoint of their advocacy. This does not mandate roleplaying, immediate fiat or any particular means of impact calculus.

Surveillance can only be understood in relation to the agent doing the surveying – understanding federal government surveillance as unique is key or the topic becomes abstract and unlimited

Cetina 14

(DANIEL K. CETINA, BALANCING SECURITY AND PRIVACY IN 21ST CENTURY AMERICA: A FRAMEWORK FOR FISA COURT REFORM, 47 J. Marshall L. Rev. 1453 2013-2014, Hein)

Any legitimate attempt to discuss and critique United States surveillance tactics necessarily demands defining exactly what surveillance is and what it entails.

Although discourse surrounding governments' intelligence and law enforcement techniques transcends any specific epoch or state,¹¹ modern communication technologies "have revolutionized our daily lives [and] have also created minutely detailed recordings of those lives,"¹² thereby making governmental surveillance simple, potentially ubiquitous, and susceptible to abuse.¹³ Of course, recent surveillance programs were implemented for the noble purpose of conducting the War on Terrorism;¹⁴ but the danger is that pursuing this purpose unchecked can undermine the central principles that both provide the Republic's foundation and differentiate it from the very enemies it combats.¹⁵

While the prospect of governmental surveillance seems to implicitly suggest a quasi-Orwellian dystopia,¹⁶ fantastical science fiction mythologies,¹⁷ abstruse philosophical concepts,¹⁸ or documented repressive regimes,¹⁹ the reality is both less foreboding and more nuanced. Although American society, ostensibly, is looking increasingly akin to such fiction, theory, and totalitarianism, surveillance as applied is not so disturbing. Surveillance involves and encompasses many topics and practices, both abstract and practical,²⁰ but it primarily involves power relationships. ²¹ Specifically, surveillance is "the focused, systematic and routine attention to personal details for purposes of influence.

management, protection or direction."²² Surveillance can target a modern society's numerous communications networks, ²⁸ which exist to send and receive information. ²⁴ The communications include both envelope information and content information, distinct categories that draw varying degrees of interest from the surveillance authority. ²⁵

But surveillance is not strictly the province of the federal government. ²⁶ Indeed, state and local governments have their own surveillance practices, as do private corporations, which routinely use surveillance data to determine purchasing trends and calibrate advertising, especially through such social media sites as Facebook.²⁸ Surveillance, therefore, transcends the boundary between the private sector and the public sector. ²⁹

The focus here, however, is on federal governmental surveillance. It is therefore critical to understand from where the federal government derives its authority to monitor and analyze communications networks.

The Aff undermines the ability to have a limited and stable number of Affirmatives to prepare against. The link magnitude is high. Their affirmative prevents arguments about the political popularity of the plan, and alternate governmental agents that can do the plan.

This is a reason to vote negative.

Our first standard is competition – every affirmative argument needs to be filtered through “how does this function in a competitive venue of debate where there must be a win or a loss assigned to each team.

Second is substantive side bias

Not defending the clear actor and mechanism of the resolution produces a substantive side bias.

They have the ability to recontextualize link arguments to make non-absolutist disagreements irrelevant.

The first impact to Aff sides bias is absolutism – their interp creates bad debates where negatives are forced into the absolutist positions like cap and Baudrillard to ensure links. This is bad for education -- forcing us to the academic margins, makes us less effective scholars. Trains us only for leftist infighting, rather than social change.

Second, it undermines research – Aff has an incentive to constantly break new affs , making any real attempt at engagement irrelevant. The Aff is conversely incentivized to pick a body of literature with very little negative literature and advocacies based on created phrases. academic disagreements are easily wished away by perms or Aff changes.

And we have an external impact – Sufficient research-based preparation and debates focused on detailed points of disagreement are key to political effectiveness

Gutting 13 (professor of philosophy at the University of Notre Dame)

(Gary, Feb 19, A Great Debate, <http://opinionator.blogs.nytimes.com/2013/02/19/a-great-debate/?emc=eta1>)

This is the year of what should be a decisive debate on our country's spending and debt. But our political "debates" seldom deserve the name. For the most part representatives of the rival parties exchange one-liners: "The rich can afford to pay more" is met by "Tax increases kill jobs." Slightly more sophisticated discussions may cite historical precedents: "There were higher tax rates during the post-war boom" versus "Reagan's tax cuts increased revenues."

Such volleys still don't even amount to arguments: they don't put forward generally accepted premises that support a conclusion. Full-scale speeches by politicians are seldom much more than collections of such slogans and factoids, hung on a string of platitudes. Despite the name, candidates' pre-election debates are exercises in looking authoritative, imposing their talking points on the questions, avoiding gaffes, and embarrassing their opponents with "zingers" (the historic paradigm: "There you go again.").

There is a high level of political discussion in the editorials and op-eds of national newspapers and magazines as well as on a number of blogs, with positions often carefully formulated and supported with argument and evidence. But even here we seldom see a direct and sustained confrontation of rival positions through the dialectic of assertion, critique, response and counter-critique.

Such exchanges occur frequently in our law courts (for example, oral arguments before the Supreme Court) and in discussions of scientific papers. But they are not a significant part of our deliberations about public policy. As a result, partisans typically remain safe in their ideological worlds, convincing themselves that they hold to obvious truths, while their opponents must be either knaves or fools — ****with no need to think through the strengths of their rivals' positions or the weaknesses of their own.

Is there any way to make genuine debates — sustained back-and-forth exchanges, meeting high intellectual standards but still widely accessible — part of our political culture? (I leave to historians the question of whether there are historical precedents— like the Webster-Hayne or Lincoln-Douglas debates.) Can we put our politicians in a situation where they cannot ignore challenges, where they must genuinely engage with one another in responsible discussion and not just repeat talking points?

A first condition is that the debates be focused on specific points of major disagreement. Not, "How can we improve our economy?" but "Will tax cuts for the wealthy or stimulus spending on infrastructure do more to improve our economy?" ****This will prevent vague statements of principle that don't address the real issues at stake.

Another issue is the medium of the debate. Written discussions, in print or online could be easily arranged, but personal encounters are more vivid and will better engage public attention. They should not, however, be merely extemporaneous events, where too much will depend on quick-thinking and an engaging manner. We want remarks to be carefully prepared and open to considered responses.

**This guts any educational potential of the aff – failure to engage with the legal detail of surveillance policy prevents translating their argument into action.

Cohen 15 (professor of law at Georgetown University Law Center)

(Julie, 2015, Studying Law Studying Surveillance, Studying Law Studying Surveillance. Surveillance & Society 13(1): 91-101)

Relative to legal scholarship, work in **Surveillance Studies** is more likely to build from a solid foundation in contemporary social theory. Even so, such work **often reflects** both **an insufficient grasp of the complexity of the legal system in action** and lack of interest in the ways that legal and regulatory actors understand, conduct, and contest surveillance. By this I don't mean to suggest that Surveillance Studies scholars need law degrees, but only to point out what ought to be obvious but often isn't: legal processes are social processes, too, and in overlooking these processes, **Surveillance Studies scholars also engage in a form of ***black-boxing that treats law as monolithic and surveillance and government as interchangeable.** **Legal actors engage in a variety of discursive and normative strategies** by which institutions and resources are mobilized around surveillance, **and understanding those strategies is essential** to the development of an archaeology of surveillance practices. **Work in Surveillance Studies** also favors a type of theoretical jargon that can seem impenetrable and, more importantly, unrewarding to those in law and policy communities. As I've written elsewhere (Cohen 2012a: 29), "[t]oo many such works find power everywhere and hope nowhere, and seem to offer well-meaning policy makers little more than a prescription for despair."

Acknowledgment of pervasive social shaping by networked surveillance need not preclude legal protection for socially-shaped subjects, but that project requires attention to detail.

Engagement with legal scholarship on information privacy would inform the project of understanding surveillance as social ordering

surveillance theorists will need to do more than simply read legal sources. Work in Surveillance Studies so far has not been particularly well-adapted to helping policymakers figure out what, if anything, to do about evolving practices of commercial surveillance. Once again, **if it is to be useful to policymakers, the view from Surveillance Studies requires translation into a form that might furnish a framework for action.**

surveillance theorists will need to do more than simply read legal sources. Work in Surveillance Studies so far has not been particularly well-adapted to helping policymakers figure out what, if anything, to do about evolving practices of commercial surveillance. Once again, **if it is to be useful to policymakers, the view from Surveillance Studies requires translation into a form that might furnish a framework for action.**

Bridging the gaps requires, first and foremost, efforts by emissaries from both traditions to foster a more tolerant and curious dialogue directed toward improved understanding and, ultimately, toward methodological hybridization. Within one's own academic community, it can become too easy to mistake consensus on methodological conventions for epistemological rigor, and to forget that methodological strength also derives from refusal to be hemmed in by disciplinary boundaries.

From the standpoint of theory, a more sustained dialogue between **law and Surveillance Studies** would count as a success if it produced a mode of inquiry about surveillance that **melded** the theoretical sophistication of Surveillance Studies **with lawyerly attention to the details, mechanisms, and interests that constitute surveillance practices as legal practices, and to the kinds of framing that mobilize legal and policy communities.** To do Surveillance Studies better, legal scholars need to challenge their own preference for putting

problems in categories that fit neatly within the liberal model of human nature and behavior, and Surveillance Studies scholars can help by calling attention to the social and cultural processes within which surveillance practices are embedded. Surveillance Studies scholars need to do more to resist their own penchant for totalizing dystopian narratives, and should delve more deeply into the legal and regulatory realpolitik that surrounds the administration of surveillance systems; legal scholars can help by demystifying legal and regulatory processes.

From a legal scholar's perspective, however, theory achieves its highest value when it becomes a tool for forcing productive confrontations about how to respond to real problems. And so I think it would count as an even bigger success if dialogue between law and Surveillance Studies generated not only a hybridized theoretical discourse of law-and-Surveillance-Studies but also the beginnings of a more accessible policy discourse about surveillance and privacy, along with reform proposals designed to put the animating concepts behind such a discourse into practice. Here the goal would be a hybridization between law's ingrained pragmatism and Surveillance Studies' attentiveness to the social and cultural processes through which surveillance is experienced and assimilated. Working together, legal scholars and Surveillance Studies scholars might advance the project of formulating working definitions of privacy interests and harms, and might develop more sophisticated projections of the likely effects of different policy levers that could be brought to bear on systems of surveillance.

Next is Mechanism Education

The Aff's failure to identify a mechanism makes cost-benefits analysis impossible. It makes link comparisons vacuous and means that detailed PICs about substance are all but impossible.

And this turns the Aff – debates over mechanisms for change are crucial to solve material violence on a large scale

Capulong 9 (Assistant Professor of Law, University of Montana)

(Eduardo R.C., CLIENT ACTIVISM IN PROGRESSIVE LAWYERING THEORY, CLINICAL LAW REVIEW, 16 Clinical L. Rev. 109, Fall, 2009)

Motivating client activism under dynamic social conditions requires the development and constant assessment and reassessment of a political perspective that measures that resistance and its possibilities. That task in turn requires the development of specific activist goals within the context of such analyses, and perhaps broader, national and international strategy--what some call the political "next step." This is particularly true today, when the economic crisis plaguing capitalism, the "war on terror" and climate change undeniably have world-wide dimensions. ****Instances of failure, too, need to be part of that analysis, because they teach us much about why otherwise promising activist efforts do not become sustained mass movements of the sort to which we all aspire.

Thus, the theoretical need is two-fold: to construct a broader organizing perspective from a political standpoint, and to consider activism writ large. Without reading the pulse of prevailing social conditions, it is easy to miscalculate what that next step ought to be. We will not build a mass movement though sheer perseverance--a linear, idealist conception of change at odds with dynamic social conditions. By the same token, we may underestimate the potential of

such mass activism if we focus simply on the local dimensions of our work.

The dialectic between a dynamic social context and political consciousness and action requires a constant organizational and political calibration and modulation often missing from theoretical scholarship.

Without such a working perspective, we are apt to be either ultra-left or overly conservative. As Jim Pope put it recently in the context of new forms of labor organizing: "If we limit our vision of the future to include only approaches that work within the prevailing legal regime and balance of forces, then we are likely to be irrelevant when and if the opportunity for a paradigm shift arises." n449 The cyclical nature of labor organizing, he argues, mirrors politics generally:

American political life as a whole has likewise alternated between periods characterized by public action, idealism, and reform on the [*189] one hand, and periods of private interest, materialism, and retrenchment on the other. A prolonged private period spawns orgies of corruption and extremes of wealth and poverty that, sooner or later, ignite passionate movements for reform. n450

C. 'Activism': Towards a Broader, Deeper, Systematic Framework
In progressive lawyering theory, grassroots activism is frequently equated with "community organizing" and "movement" or "mobilization" politics. n451 Indeed, these methods have come to predominate activist lawyering in much the same way as "public interest law" has come for many to encompass all forms of progressive practice. "Activism" is, of course, broader still. Even on its own terms, the history of community organizing and social movements in the United States includes two vitally important traditions frequently given short shrift in this realm: industrial union organizing and alternative political party-building. n452 In this section, my aim is not to catalogue the myriad ways in which lawyers and clients can and do become active (methodically or institutionally)—which, given human creativity and progress, in any event may be impossible to do—but rather to problematize three assumptions: first, the tendency to define grassroots activity narrowly; second, the notion that certain groups—for example "the poor" or the "subordinated"—are the definitive agents of social change; and finally, the conviction that mass mobilization or movement-building, by itself, is key to social transformation.

1. Grassroots Activism

There are countless ways in which people become socially or politically active. Yet even the more expansive and sophisticated considerations of activism in progressive lawyering theory tend to unnecessarily circumscribe activism. For example, Cummings and Eagly argue that we need to "unpack" the term "organizing." n453 Contrasting two strategies of the welfare rights movement in the 1960s, these authors distinguish between "mobilization as short-term community action and organizing as an effort to build long-term institutional power." n454 In the same breath, however, they define organizing "as shorthand for a range of community-based practices," n455 even though at least some activism, for example union organizing or, say, [*190] fasting, might not be best characterized as "community-based."

What is required is a larger framework that takes into account the sum total of activist initiatives. Lucie White argues that we need to "map out the internal microdynamics of progressive grassroots initiatives ... observe the multiple impacts of different kinds of initiatives on wide spheres of social and political life ... and devise typologies, or models, or theories that map out a range of opportunities for collaboration." n456 This map would be inadequate—and therefore inaccurate—if we include certain activist initiatives and not others. But that is precisely what the progressive lawyering literature has done by failing to regularly consider, for example, union organizing or alternative political party-building.

2. Agents of Social Change: Identity, Class and Political Ideology

As with our definition of activism, here, too, the problem is a lack of clarity, breadth or scope, which leads to misorientation.

Have we defined, with theoretical precision, the social-change agents to whom we are orienting—e.g., the "people," the "poor," the "subordinated," "low-income communities" or "communities of color"? And if so, are these groupings, so defined, the primary agents of social change? By attempting to harmonize three interrelated (yet divergent) approaches to client activism—organizing on the bases of geography and identity, class and the workplace, and political ideology—modern community organizing simultaneously blurs and balkanizes the social-change agents to whom we need to orient. What, after all, is "community"?

In geographic terms, local efforts alone cannot address social problems with global dimensions. n457 As Pope observed of workers' centers: "the tension between the local and particularistic focus of community unionism and the global scope of trendsetting corporations like Wal-Mart makes it highly unlikely that community unionism will displace industrial unionism as 'the' next paradigm of worker organization." n458 On the other hand, members of cross-class, identity-based "communities" may not necessarily share the same interests. In the "Asian American community," Ancheta explains: using the word "community" in its singular form is often a misnomer, because Asian Pacific Americans comprise many communities, each with its own history, culture and language: Filipino, Chinese, Japanese, Korean, Vietnamese, Thai, Cambodian, Lao, Lao-Mien, [*191] Hmong, Indian, Indonesian, Malaysian, Samoan, Tongan, Guamanian, Native Hawaiian, and more. The legal problems facing individuals from different communities defy simple categorization. The problems of a fourth-generation Japanese American victim of job discrimination, a monolingual refugee from Laos seeking shelter from domestic violence, an elderly immigrant from the Philippines trying to keep a job, and a newcomer from Western Samoa trying to reunite with relatives living abroad all present unique challenges. Add in factors such as gender, sexual orientation, age, and disability, and the problems become even more complex. n459

Angela Harris echoes this observation by pointing out how some feminist legal theory assumes "a unitary, 'essential' women's experience [that] can be isolated and described independently of race, class, sexual orientation, and other realities of experience." n460 The same might be said of the "people," which, like the "working class," may be too broad.

Other categorizations—such as "low-income workers," "immigrants," and the "poor," for example—may be too narrow to have the social weight to fundamentally transform society. In practice, progressive lawyers orient to the politically advanced among these various "communities." In so doing, then, we need to acknowledge that we are organizing on the basis of political ideology, and not simply geography, identity or class. Building the strongest possible mass movement, therefore, requires an orientation not only towards certain "subordinated" communities, but to the politically advanced generally. Otherwise, we may be undermining activism writ large. This is not to denigrate autonomous community efforts. As I have mentioned, subordinated communities of course have the right to self-determination, i.e. to organize separately. But the point is not simply to organize groups of people who experience a particular oppression, but rather to identify those who have the social power to transform society. Arguing that these agents are the collective, multi-racial working class, Smith explains: The Marxist definition of the working class has little in common with those of sociologists. Neither income level nor self-definition are [sic] what determine social class. Although income levels obviously bear some relationship to class, some workers earn the same or higher salaries than some people who fall into the category of middle class. And many people who consider themselves "middle [*192] class" are in fact workers. Nor is class defined by categories such as white and blue collar. For Marx the working class is defined by its relationship to the means of production. Broadly speaking, those who do not control the means of production and are forced to sell their labor power to capitalists are workers. n461

The practical consequence of this very well may be that we redefine who we represent as clients and consider activism or potential activism outside subordinated communities, for example union activity and alternative political-party building, as part of our work.

3. From Movementism to Political Organization

Dogged as our work is in the activist realm, any effort at fundamental social transformation is doomed without effective political leadership.

Such leadership, in turn, requires work not often associated with "activism," such as, for example, theoretical study. n462 "Movementism," n463 by which I mean the conviction that building a mass movement is the answer to oppression and exploitation, has its limitations. Even though activism itself is perhaps the best school for political education, we have an enormous amount to learn from our predecessors. In the final analysis,

fundamental social transformation will only come about if there are political organizations clear enough, motivated enough, experienced enough, large enough, embedded enough and agile enough to *respond to the twists and turns endemic in any struggle for power.**

"The problem," as Bellow astutely observed, "is not our analytic weaknesses, but the opportunistic, strategic, and political character of our subject."

n464 Such opportunities typically occur when there is a confluence of three factors: a social crisis; a socio-economic elite that finds

itself divided over how to overcome it; and a powerful mass movement from below. As I understand the nature of social change,

successful social transformations occur when there is a fourth element: political organization.

Conclusion

Client activism is not a monolithic, mechanical object. Most of the time, it is neither the gathering mass movement many of us wish for, nor the inert, atomized few in need of external, professional motivation. Rather, activism is a phenomenon in constant ebb and flow, a [*193] mercurial, fluid complex shaped by an unremitting diversity of factors. The key through the maze of lawyering advice and precaution is therefore to take a hard, sober look at the overarching state of activism. Are our clients in fact active or are they not? How many are and who are they? What is the nature of this period? Economically? Politically? Culturally? What are the defining issues? What political and organizing trends can be discerned? With which organizations are our clients active, if any? What demands are they articulating, and how are they articulating them?

This is a complex evaluation, one requiring the formulation, development and constant assessment and reassessment of an overarching political perspective.

My aim

in this Article is to begin to theorize the various approaches to this evaluation. In essence, I am arguing for the elaboration of a systematic macropolitical analysis in progressive lawyering theory.

Here, my purpose is not to present a comprehensive set of political considerations, but rather to develop a framework for, and to investigate the limitations of, present considerations in three areas: strategic aims; prevailing social conditions; and methods of activism. Consciously or not, admittedly or not, informed and systematic or not, progressive lawyers undertake their work with certain assumptions, perspectives and biases. Progressive lawyering theory would be a much more effective and concrete guide to action—to defining the lawyer's role in fostering activism—if it would elaborate on these considerations and transform implicit and perhaps delimited assumptions and approaches into explicit and hopefully broader choices.

Over the past four decades, there has been remarkable continuity and consistency in progressive lawyers' use of litigation, legislation, direct services, education and organizing to stimulate and support client activism. The theoretical "breaks" to which Buchanan has referred n465 have not been so much about the practice of lawyering itself, but rather about unarticulated shifts in ultimate goals, societal analyses, and activist priorities, each necessitated by changes in the social, economic, and political context. That simply is another way of stating the obvious: that progressive lawyers change their practices to adapt to changing circumstances. The recurrent problem in progressive lawyering theory is that many commentators have tended to generalize these practice changes to apply across social circumstances. In so doing, they displace and often replace more fundamental differences over strategic goals, interpretation of social contexts, and organizing priorities with debates over the mechanics of lawyering practice.

The argument is turned on its head: we often assume or tend to [*194] assume agreement over the meanings and underlying conceptual frameworks relating to "fundamental social change,"

current political analysis, and "community organizing," and debate lawyering strategy and tactics; but instead we should be elaborating and clarifying these threshold political considerations as a prerequisite to using what we ultimately agree to be a broad and flexible set of lawyering tools. In effect, the various approaches to lawyering have become the currency by which scholars have debated politics and activism. The irony is that our disagreements are less about lawyering approaches per se. I believe, than they are about our ultimate political objectives, our analyses of contemporary opportunities, and our views of the optimal paths from the latter to the former. The myriad lawyering descriptions and prescriptions progressive lawyering theory offers are of limited use unless they are anchored in these primary considerations. How do we decide if we should subscribe to "rebellious" and not traditional "public interest" lawyering, for example, or "collaborative" over "critical" lawyering, if we do not interrogate these questions and instead rush too quickly into practical questions? The differences among these approaches matter precisely because they have

different political goals, are based on different political analyses, and employ different political activist strategies. Activist lawyers already engage in these analyses--necessarily so. To foster client activism, they must read prevailing social conditions and strategize with their clients about the political next step, often with an eye toward a long-term goal. But I don't think we necessarily engage in these analyses as consciously, or with as full a picture of the history and dynamics involved or options available, as we could. Often this is because there simply isn't time to engage these questions. Or perhaps not wanting to dominate our clients, we squelch our own political analysis and agenda to allow for organic, indigenous leadership from below. But if we are truly collaborative--and when we feel strongly enough about certain political issues--we engage on issues and argue them out. In either event, we undertake an unsystematic engagement of these fundamental issues at our peril.

If we adhere to the belief that only organized, politicized masses of people can alter or replace exploitative and oppressive institutions and bring about lasting fundamental social change, then, as progressive lawyers, we need to be clear about which legal tactics can bring about such a sustained effort in each historical moment. Without concrete and comprehensive diagnoses of ultimate political goals, social and economic contexts, and organizing priorities, progressive legal practice will fail to live up to its potential.

Now the State debate

We do not need to win that the state is good, rather just that the value of the state is something that should be debated about. This is the screen you should adopt for the Aff's ev – it can't just say that the state is bad or ineffective, their ev has to say that the state should not even be discussed. General indictments of the state can be done on the neg, while still preserving limited and effective debate and research.

First, engaging with the law is inevitable and can be effective

Capulong 9 (Assistant Professor of Law, University of Montana)
(Eduardo R.C., CLIENT ACTIVISM IN PROGRESSIVE LAWYERING THEORY, CLINICAL LAW REVIEW, 16 Clinical L. Rev. 109, Fall, 2009)

Nevertheless, in contrast to what Steve Bachmann has called the [*116] "a-legal" or "crude Marxist" approach, n19 progressive activists recognize that the legal arena remains a forum for social struggle. n20 This is so for three reasons: First, activists often do not have a choice but to work within the legal system. ****as when they are arrested or otherwise prevented from engaging in activism by state authorities. Second, because law is relatively autonomous from economic and political interests, n21 campaigns for legal reform can win substantial gains and are frequently the only vehicles through which more far-reaching change takes shape; struggles for reform, in other words, beget more radical possibilities and aspirations. n22 And third, law is constitutive of the social order. Law--or, more accurately, the concept of it--is not (again as some crude analysts would argue) simply a tool of one ruling class or other, but rather an essential component of a just society. n23 Commentators observe that lawyers who base their practice on these three premises are "hungry for theory," n24 for theory checks the "occupational hazards [of] reformism or cynicism." n25 The theoretical project is thus a dialectic: while law reform alone cannot "disturb the basic political and economic organization of modern American society," n26 [*117] law and lawyering are a complex, contradictory, and open-textured setting that provides opportunities to challenge the status quo."

Second, debate about arcane legal details are, it is crucial to empower even the most revolutionary of movements.

Arkles et al 10

(Gabriel Arkles, Pooja Gehi and Elana Redfield, The Role of Lawyers in Trans Liberation: Building a Transformative Movement for Social Change, Seattle Journal for Social Justice, 8 Seattle J. Soc. Just. 579, Spring / Summer, 2010, LN)

While agenda-setting by lawyers can lead to the replication of patterns of elitism and the reinforcement of systems of oppression, we do believe that legal work is a necessary and critical way to support movements for social justice. We must recognize the limitations of the legal system and learn to use that to the advantage of the oppressed.

If lawyers are going to support work that dismantles oppressive structures, we must radically rethink the roles we can play in building and supporting these movements and acknowledge that our own individual interests or even livelihood may conflict with doing radical and transformative work. n162 A. Community Organizing for Social Justice When we use the term community organizing or organizing, we refer to the activities of organizations engaging in base-building and leadership development of communities directly impacted by one or more social [*612] problems and conducting direct action issue campaigns intended to make positive change related to the problem(s). In this article, we discuss community organizing in the context of progressive social change, but community-organizing strategies can also be used for conservative ends. Community organizing is a powerful means to make social change. A basic premise of organizing is that inappropriate imbalances of power in society are a central component of social injustice. In order to have social justice, power relationships must shift. In Organizing for Social Change: Midwest Academy Manual for Activists (hereinafter, "the Manual"), n163 the authors list three principles of community organizing: n164 (1) winning real, immediate, concrete improvements in people's lives; (2) giving people a sense of their own power; and (3) altering the relations of power. n165 Before any of these principles can be achieved it is necessary to have leadership by the people impacted by social problems. n166 As Rinku Sen points out: [E]ven allies working in solidarity with affected groups cannot rival the clarity and power of the people who have the most to gain and the least to lose . . . organizations composed of people whose lives will change when a new policy is instituted tend to set goals that are harder to reach, to compromise less, and to stick out a fight longer. n167 She also notes that, "[I]f we are to make policy proposals that are grounded in reality and would make a difference either in peoples' lives or in the debate, then we have to be in touch with the people who are at the center of such policies. n168 We believe community organizing has the potential to make fundamental social change that law reform strategies or "movements" led by lawyers cannot achieve on their own. However, community organizing is not always just and effective. Community-organizing groups are not immune to any number of problems that can impact other organizations, including internal oppressive dynamics. In fact, some strains of white, male-dominated [*613] community organizing have been widely criticized as perpetuating racism and sexism. n169 Nonetheless, models of community organizing, particularly as revised by women of color and other leaders from marginalized groups, have much greater potential to address fundamental imbalances of power than law reform strategies. They also have a remarkable record of successes. Tools from community organizers can help show where other strategies can fit into a framework for social change. The authors of the Manual, for example, describe various strategies for addressing social issues and illustrate how each of them may, at least to some extent, be effective. n170 They then plot out various forms of making social change on a continuum in terms of their positioning with regard to existing social power relationships. n171 They place direct services at the end of the spectrum that is most accepting of existing power relationships and community organizing at the end of the spectrum that most challenges existing power relationships. n172 Advocacy organizations are listed in the middle, closer to community organizing than direct services. n173 The Four Pillars of Social Justice Infrastructure model, a tool of the Miami Workers Center, is somewhat more nuanced than the Manual. n174 According to this model, four "pillars" are the key to transformative social justice. n175 They are (1) the pillar of service, which addresses community needs and stabilizes community members' lives; (2) the pillar of policy, which changes policies and institutions and achieves concrete gains with benchmarks for progress; (3) the pillar of consciousness, which alters public opinion and shifts political parameters through media advocacy and popular education; and (4) the pillar of power, which achieves autonomous community power through base-building and leadership development. n176 According to the Miami Workers Center, all of these pillars are essential in making social change, but the pillar of power is most crucial in the struggle to win true liberation for all oppressed communities. n177 [*614] In their estimation, our movements suffer when the pillar of power is forgotten and/or not supported by the other pillars, or when the pillars are seen as separate and independent, rather than as interconnected, indispensable aspects of the whole infrastructure that is necessary to build a just society. n178 Organizations with whom we work are generally dedicated solely to providing services, changing policies, or providing public education. Unfortunately, each of these endeavors exists separate from one another and perhaps most notably, separate from community organizing. In SRLP's vision of change, this separation is part of maintaining structural capitalism that seeks to maintain imbalances of power in our society. Without incorporating the pillar of power, service provision, policy change, and public education can never move towards real social justice. n179 B. Lawyering for Empowerment In the past few decades, a number of alternative theories have emerged that help lawyers find a place in social movements that do not replicate oppression. n180 Some of the most well-known iterations of this theme are "empowerment lawyering," "rebellious lawyering," and "community lawyering." n181 These perspectives share skepticism of the efficacy of impact litigation and traditional direct services for improving the conditions faced by poor clients and communities of color, because they do not and cannot effectively address the roots of these forms of oppression. n182 Rather, these alternative visions of lawyering center on the empowerment of community members and organizations, the elimination of the potential for dependency on lawyers and the legal system, and the collaboration between lawyers and directly impacted communities in priority setting. n183 Of the many models of alternative lawyering with the goal of social justice, we will focus on the idea of "lawyering for empowerment," generally. The goal of empowerment lawyering is to enable a group of people to gain control of the forces that affect their lives. n184 Therefore, the goal of empowerment lawyering for low-income transgender people of [*615] color is to support these communities in confronting the economic and social policies that limit their life chances.

Rather than merely representing poor people in court and increasing access to services, the role of the community or empowerment lawyer involves:

organizing, community education, media outreach, petition drives, public demonstrations, lobbying, and shaming campaigns . . . [I]ndividuals and members of community-based organizations actively work alongside organizers and lawyers in the day-to-day strategic planning of their case or campaign. Proposed solutions--litigation or non-litigation based--are informed by the clients' knowledge and experience of the issue. n185

A classic example of the complex role of empowerment within the legal agenda setting is the question of whether to take cases that have low chances of success. The traditional approach would suggest not taking the case, or settling for limited outcomes that may not meet the client's expectations. However, when our goals shift to empowerment, our strategies change as well. If we understand that the legal system is incapable of providing a truly favorable outcome for low-income transgender clients and transgender clients of color, then winning and losing cases takes on different meanings.

For example, a transgender client may choose to bring a lawsuit against prison staff who sexually assaulted her, despite limited chance of success because of the "blue wall of silence," her perceived limited credibility as a prisoner, barriers to recovery from the Prison Litigation Reform Act, and restrictions on supervisory liability in § 1983 cases. Even realizing the litigation outcome will probably be unfavorable to her, she may still develop leadership skills by rallying a broader community of people impacted by similar issues. Additionally, she may use the knowledge and energy gained through the lawsuit to change policy. If our goal is to familiarize our client with the law, to provide an opportunity for the client [*616] and/or community organizers to educate the public about the issues, to help our client assess the limitations of the legal system on their own, or to play a role in a larger organizing strategy, then taking cases with little chance of achieving a legal remedy can be a useful strategy.

Lawyering for empowerment means not relying solely on legal expertise for

decisionmaking. It means recognizing the limitations of the legal system, and using our knowledge and expertise to help disenfranchised communities take leadership. If community organizing is the path to social justice and "organizing is about people taking a role in determining their own future and improving the quality of life not only for themselves but for everyone," then "the primary goal [of empowerment lawyering] is building up the community." n186

C. Sharing Information and Building Leadership

A key to meaningful participation in social justice movements is access to information. Lawyers are in an especially good position to help transfer knowledge, skills, and information to disenfranchised communities--the legal system is maintained by and predicated on arcane knowledge that lacks relevance in most contexts but takes on supreme significance in courts, politics, and regulatory agencies. It is a system ~~****~~ intentionally obscure to the uninitiated; therefore the lawyer has the opportunity to expose the workings of the system to those who seek to destroy it, dismantle it, reconfigure it, and re-envision it.

As Quigley points out, the ignorance of the client enriches the lawyer's power position, and thus the transfer of the power from the lawyer to the client necessitates a sharing of information. n187 Rather than simply performing the tasks that laws require, a lawyer has the option to teach and to collaborate with clients so that they can bring power and voice back to their communities and perhaps fight against the system, become politicized, and take leadership. This demands that the lawyer undo the secret wrappings of the legal system and share the essence of legal advocacy--doing so lessens the mystical power of the lawyer, and, in practice, enriches the advocate in the sharing and developing of rightful power." n188

Lawyers have many opportunities to share knowledge and skills as a form of leadership development. This sharing can be accomplished, for example, through highly collaborative legal representation, through community clinics, through skill-shares, or through policy or campaign meetings where the lawyer explains what they know about the existing structures and fills in gaps and questions raised by activists about the workings of legal systems.

D. Helping to Meet Survival Needs

SRLP sees our work as building legal services and policy change that directly supports the pillar of power. n189 Maintaining an awareness of the limitations and pitfalls of traditional legal services, we strive to provide services in a larger context and with an approach that can help support liberatory work. n190 For this reason we provide direct legal services but also work toward leadership development in our communities and a deep level of support for our community-organizing allies. Our approach in this regard is to make sure our community members access and obtain all of the benefits to which they are entitled under the law, and to protect our community members as much as possible from the criminalization, discrimination, and harassment they face when attempting to live their lives. While we do not believe that the root causes keeping our clients in poverty and poor health can be addressed in this way, we also believe that our clients experience the most

severe impact from state policies and practices and need and that they deserve support to survive them. n191 Until our communities are truly empowered and our systems are fundamentally changed to increase life chances and health for transgender people who are low-income and people of color, ~~****~~ our communities are going to continue to have to navigate government agencies and organizations to survive.

Monolithic rejections of the law are wrong – cooption is more likely in non-state activism.

Concrete mechanisms for success should be your metric for evaluation.

Lobel 7 (Assistant Professor of Law, University of San Diego)

(Orly, THE PARADOX OF EXTRALEGAL ACTIVISM: CRITICAL LEGAL CONSCIOUSNESS AND TRANSFORMATIVE POLITICS, 120 Harv. L. Rev. 937, February, 2007, LN)

In the following sections, I argue that the extralegal model has suffered from the same drawbacks associated with legal cooptation. I show that as an effort to avoid the risk of legal cooptation, the current wave of suggested alternatives has effects that ironically mirror those of cooptation itself. Three central types of difficulties exist with contemporary extralegal scholarship. First, in the contexts of the labor and civil rights movements, arguments about legal cooptation often developed in response to a perceived gap between the conceptual ideal toward

which a social reform group struggled and its actual accomplishments. But, ironically, the contemporary message of opting out of traditional legal reform avenues may only accentuate this problem. As the rise of informalization (moving to nonlegal strategies), civil society (moving to extralegal spheres), and pluralism (the proliferation of norm-generating actors) has been effected and appropriated by supporters from a wide range of political commitments, these concepts have had unintended implications that conflict with the very social reform ideals from which they stem. Second, the idea of opting out of the legal arena becomes self-defeating as it discounts the ongoing importance of law and the possibilities of legal reform in seemingly unregulated spheres. A model encompassing exit and rigid sphere distinctions further fails to recognize a reality of increasing interpenetration and the blurring of boundaries between private and public spheres, profit and nonprofit sectors, and formal and informal institutions. It therefore loses the critical insight that law operates in the background of seemingly unregulated relationships. Again paradoxically, the extralegal view of decentralized activism and the division of society into different spheres in fact have worked to subvert rather than support the progressive agenda. Finally, ***since extralegal actors view their actions with romantic idealism, they fail to develop tools for evaluating their success. If the critique of legal cooptation has involved the argument that legal reform, even when viewed as a victory, is never radically transformative, we must ask: what are the criteria for assessing the achievements of the suggested alternatives? As I illustrate in the following sections, much of the current scholarship obscures the lines between the descriptive and the prescriptive in its formulation of social activism. If current suggestions present themselves as alternatives to formal legal struggles, we must question whether the new extralegal politics that are proposed and celebrated are capable of producing a constructive theory and meaningful channels for reform, rather than passive status quo politics.

A. Practical Failures: When Extralegal Alternatives Are Vehicles for Conservative Agendas

We don't want the 1950s back. What we want is to edit them. We want to keep the safe streets, the friendly grocers, and the milk and cookies, while blotting out the political bosses, the tyrannical headmasters, the inflexible rules, and the lectures on 100 percent Americanism and the sinfulness of dissent. n163

A basic structure of cooptation arguments as developed in relation to the labor and civil rights movements has been to show how, in the move from theory to practice, the ideal that was promoted by a social group takes on unintended content, and the group thus fails to realize the original vision. This risk is particularly high when ideals are framed in broad terms that are open to multiple interpretations. Moreover, the pitfalls of the potential risks presented under the umbrella of cooptation are in fact accentuated in current proposals. Paradoxically, as the extralegal movement is framed by way of opposition to formal legal reform paths, without sufficiently defining its goals, it runs the very risks it sought to avoid by working outside the legal system.

Extralegal paths are depicted mostly in negative terms and as resorting to new alternative forms of action rather than established models. Accordingly, because the ideas of social organizing, civil society, and legal pluralism are framed in open-ended contrarian terms, they do not translate into specific visions of social justice reform. The idea of civil society, which has been embraced by people from a broad array of often conflicting ideological commitments, is particularly demonstrative. Critics argue that "some ideas fail because they never make the light of day. The idea of civil society ... failed because it [*972] became too popular." n164 Such a broadly conceived ideal as civil society sows the seeds of its own destruction.

In former eras, the claims about the legal cooptation of the transformative visions of workplace justice and racial equality suggested that through legal strategies the visions became stripped of their initial depth and fragmented and framed in ways that were narrow and often merely symbolic. This observation seems accurate in the contemporary political arena; the idea of civil society revivalism evoked by progressive activists has been reduced to symbolic acts with very little substance. On the left, progressive advocates envision decentralized activism in a third, nongovernmental sphere as a way of reviving democratic participation and rebuilding the state from the bottom up. By contrast, the idea of civil society has been embraced by conservative politicians as a means for replacing government-funded programs and steering away from state intervention. As a result, recent political uses of civil society have subverted the ideals of progressive social reform and replaced them with conservative agendas that reject egalitarian views of social provision.

In particular, recent calls to strengthen civil society have been advanced by politicians interested in dismantling the modern welfare system. Conservative civil society revivalism often equates the idea of self-help through extralegal means with traditional family structures, and blames the breakdown of those structures (for example, the rise of the single parent family) for the increase in reliance and dependency on government aid. n165 This recent depiction of the third sphere of civic life works against legal reform precisely because state intervention may support newer, nontraditional social structures. For conservative thinkers, legal reform also risks increasing dependency on social services by groups who have traditionally been marginalized, including disproportionate reliance on public funds by people of color and single mothers. Indeed, the end of welfare as we knew it, n166 as well as the [*973] transformation of work as we knew it, n167 is closely related to the quest of thinkers from all sides of the political spectrum for a third space that could replace the traditional functions of work and welfare. Strikingly, a range of liberal and conservative visions have thus converged into the same agenda, such as the recent welfare-to-work reforms, which rely on myriad non-governmental institutions and activities to support them. n168

When analyzed from the perspective of the unbundled cooptation critique, it becomes evident that there are multiple limits to the contemporary extralegal current. First, there have been significant problems with resources and zero-sum energies in the recent campaigns promoting community development and welfare. For example, the initial vision of welfare-to-work supported by liberal reformers was a multifaceted, dynamic system that would reshape the roles and responsibilities of the welfare bureaucracy. The Personal Responsibility and Work Opportunity Reconciliation Act of 1996 n169 (PRWORA), supported by President Clinton, was designed to convert various welfare programs, including Aid to Families with Dependent Children, into a single block grant program. The aim was to transform passive cash assistance into a more active welfare system, in which individuals would be better assisted, by both the government and the community, to return to the labor force and find opportunities to support themselves. Yet from the broad vision to actual implementation, the program quickly became limited in focus and in resources. Indeed, PRWORA placed new limits on welfare provision by eliminating eligibility categories and by placing rigid time limits on the provision of benefits. n170

Moreover, the need to frame questions relating to work, welfare, and poverty in institutional arrangements and professional jargon and to comply with various funding block grants has made some issues, such as the statistical reduction of welfare recipients, more salient, whereas other issues, such as the quality of jobs offered, have been largely eliminated from policymakers' consideration. Despite aspects of the reform that were hailed as empowering for those groups they were designed to help, such as individual private training vouchers, serious questions have been raised about the adequacy of the particular [*974] policy design because resources and institutional support have been found lacking. n171 The reforms require individual choices and rely on the ability of private recipients to mine

through a vast range of information. As in the areas of child care, health care, and educational vouchers, critics worry that the most disadvantaged workers in the new market will not be able to take advantage of the reforms. n172 Under such conditions, the goal of eliminating poverty may be eroded and replaced by other goals, such as reducing public expenses. Thus, recalling the earlier cooptation critique, once reforms are envisioned, even when they need not be framed in legalistic terms, they in some ways become reduced to a handful of issues, while fragmenting, neglecting, and ultimately neutralizing other possibilities.

At this point, the paradox of extralegal activism unfolds. While public interest thinkers increasingly embrace an axiomatic rejection of law as the primary form of progress, their preferred form of activism presents the very risks they seek to avoid. The rejected "myth of the law" is replaced by a "myth of activism" or a "myth of exit," romanticizing a distinct sphere that can better solve social conflict.

Yet these myths, like other myths, come complete with their own perpetual perils. The myth of exit exemplifies the myriad concerns of cooptation. For feminist agendas, for example, the separation of the world into distinct spheres of action has been a continuous impediment to meaningful reform. Efforts to create better possibilities for women to balance work and family responsibilities, including relaxing home work rules and supporting stay-at-home parents through federal child care legislation, have been couched in terms of support for individual choice and private decisionmaking. n173 Indeed, recent initiatives in federal child care legislation to support stay-at-home parents have been clouded by preconceptions of the separation of spheres and the need to make one-or-the-other life choices. Most importantly, the emergence of a sphere-oriented discourse abandons a critical perspective that distinguishes between valuing traditional gender-based characteristics and celebrating feminine difference in a universalist and essentialist manner. n174 [*975] Not surprisingly then, some feminist writers have responded to civil society revivalism with great skepticism, arguing that efforts to align feminine values and agendas with classic republican theory of civil society activism should be understood, at least in part, as a way of legitimizing historical social structures that subordinated women.

The feminist lesson on the law/exit pendulum reveals a broader pattern. In a classic example of cooptation, activists should be concerned about the infusion (or indeed confusion) of nonlegal strategies with conservative privatization agendas. Indeed, in significant social policy contexts, legal scholarship oriented toward the exploration of extralegal paths reinforces the exact narrative that it originally resisted - that the state cannot and should not be accountable for sustaining and improving the lifeworld of individuals in the twenty-first-century economy and that we must seek alternative ways to bring about social reform. Whether using the terminology of a path-dependent process, an inevitable downward spiral, a transnational prisoner's dilemma, or a global race to the bottom, current analyses often suggest a lack of control over the forces of new economic realities. Rather than countering the story of lack of control, pointing to the ongoing role of government and showing the contradictions between that which is being kept regulated and that which is privatized, alternative extralegal scholarship accepts these developments as natural and inevitable. Similar to the arguments developed in relation to the labor movement - in which focusing on a limited right to collective bargaining demobilized workers and stripped them of their voice, participation, and decisionmaking power - contemporary extralegal agendas are limited to very narrow and patterned sets of reforms.

A striking example has been the focus on welfare reform as the single frontier of economic redistribution without a connection being made between these reforms and social services in which the middle class has a strong interest, such as Social Security and Medicare. Similarly, on the legal pluralism frontier, when activists call for more corporate social responsibility, the initial expressions are those of broad demands for sustainable development and overall industry obligations for the social and environmental consequences of their activities. n176 The discourse, however, quickly becomes coopted by a shift to a narrow focus on charitable donations and corporate philanthropy or [*976] private reporting absent an institutionalized compliance structure. n177 Moreover, because of institutional limitations and crowding out effects possible in any type of reform agenda, the focus shifts to the benefits of corporate social responsibility to businesses, as marketing, recruit-ment, public relations, and "greenwashing" strategies. n178 Critics therefore become deeply cynical about the industry's real commitments to ethical conduct.

A similar process can be described with regard to the literature on globalization. Globalization scholarship often attempts to produce a unifying narrative and an image of unitary struggle when in fact such unity does not exist. Embodied in the aforementioned irony of a "global anti-globalization" movement, social reform activism that resides under the umbrella of global movements is greatly diverse, some of it highly conservative. An "anti-globalization" movement can be a defensive nationalist movement infused with xenophobia and protective ideologies. n179 In fact, during central instances of collective action, such as those in Seattle, Quebec, Puerto Alegre, and Genoa, competing and conflicting claims were frequently encompassed in the same protest. n180 Nevertheless, there is a tendency to celebrate and idealize these protests as united and world-altering.

Similarly, at the local level, grassroots politics often lack a clear agenda and are particularly ripe for cooptation resulting in far lesser achievements than what may have been expected by the groups involved. In a critical introduction to the law and organizing model, Professor Scott Cummings and Ingrid Eagly describe the ways in which new community-based approaches to progressive lawyering privilege grassroots activism over legal reform efforts and the facilitation of community mobilization over conventional lawyering. n181 After carefully unpacking the ways in which community lawyers embrace [*977] law and organizing, Professor Cummings and Eagly rightfully warn against "exaggerating the ineffectiveness of traditional legal interventions" and "closing off potential avenues for redress." n182 Significantly, the strategies embraced by new public interest lawyers have not been shown to produce effective change in communities, and certainly there has been no assurance that these strategies fare comparatively better than legal reform. Moreover, what are meant to be progressive projects of community action and community economic development frequently can have a hidden effect of excluding worse-off groups, such as migrant workers, because of the geographical scope and zoning restrictions of the project. n183 In the same way that the labor and corporate social responsibility movements have failed because of their embrace of a legal framework, the community economic development movement - so diverse in its ideological appeal yet so prominent since the early 1990s as a major approach to poverty relief - may bring about its own destruction by fracture and diffusion. n184

In all of these cases, it is the act of engagement, not law, that holds the risks of cooptation and the politics of compromise. It is not the particularities of lawyers as a professional group that create dependency. Rather, it is the dynamics between skilled, networked, and resourced components and those who need them that may submerge goals and create reliance.

It is not the particularities of the structural limitations of the judiciary that threaten to limit the progressive vision of social movements. Rather, it is the essential difficulties of implementing theory into practice. Life is simply messier than abstract ideals. Cooptation analysis exposes the broad, general risk of assuming ownership over a rhetorical and conceptual framework of a movement for change. Subsequently, when, in practice, other factions in the political debate embrace the language and frame their projects in similar terms, groups experience a sense of loss of control or possession of "their" vision. In sum, in the contemporary context, in the absence of a more programmatic and concrete vision of what alternative models of social reform activism need to achieve, the conclusions and rhetoric of the contemporary critical legal consciousness**** are appropriated by advocates representing a wide range of political commitments.

Understood [*978] from this perspective, cooptation is not the result of the turn to a particular reform strategy. Rather, cooptation occurs when imagined ideals are left unchecked and seemingly progressive rhetoric is reproduced by a conservative agenda. Dominant interpretations such as privatization and market competitiveness come out ahead, whereas other values, such as group

empowerment and redistributive justice, receive only symbolic recognition, and in turn serve to facilitate and stabilize the process. n185

1NC Long Shell

Our interpretation is that an affirmative should defend curtailing federal government surveillance as the endpoint of their advocacy. This does not mandate roleplaying, immediate fiat or any particular means of impact calculus.

Surveillance can only be understood in relation to the agent doing the surveying – understanding federal government surveillance as unique is key or the topic becomes abstract and unlimited

Cetina 14

(DANIEL K. CETINA, BALANCING SECURITY AND PRIVACY IN 21ST CENTURY AMERICA: A FRAMEWORK FOR FISA COURT REFORM, 47 J. Marshall L. Rev. 1453 2013-2014, Hein)

Any legitimate attempt to discuss and critique United States surveillance tactics necessarily demands defining exactly what surveillance is and what it entails.

Although discourse surrounding governments' intelligence and law enforcement techniques transcends any specific epoch or state,¹¹ modern communication technologies "have revolutionized our daily lives [and] have also created minutely detailed recordings of those lives,"¹² thereby making governmental surveillance simple, potentially ubiquitous, and susceptible to abuse.¹³ Of course, recent surveillance programs were implemented for the noble purpose of conducting the War on Terrorism;¹⁴ but the danger is that pursuing this purpose unchecked can undermine the central principles that both provide the Republic's foundation and differentiate it from the very enemies it combats.¹⁵

While the prospect of governmental surveillance seems to implicitly suggest a quasi-Orwellian dystopia,¹⁶ fantastical science fiction mythologies,¹⁷ abstruse philosophical concepts,¹⁸ or documented repressive regimes,¹⁹ the reality is both less foreboding and more nuanced. Although American society, ostensibly, is looking increasingly akin to such fiction, theory, and totalitarianism, surveillance as applied is not so disturbing. Surveillance involves and encompasses many topics and practices, both abstract and practical,²⁰ but it primarily involves power relationships.²¹ Specifically, surveillance is "the focused, systematic and routine attention to personal details for purposes of influence, management, protection or direction."²² Surveillance can target a modern society's numerous communications networks,²⁸ which exist to send and receive information.²⁴ The communications include both envelope information and content information, distinct categories that draw varying degrees of interest from the surveillance authority.²⁵

But surveillance is not strictly the province of the federal government.²⁶ Indeed, state and local governments have their own surveillance practices, as do private corporations, which routinely use surveillance data to determine purchasing trends and calibrate advertising, especially through such social media sites as Facebook.²⁸ Surveillance, therefore, transcends the boundary between the private sector and the public sector.²⁹

The focus here, however, is on federal governmental surveillance. It is therefore critical to understand from where the federal government derives its authority to monitor and analyze communications networks.

The Aff undermines the ability to have a limited and stable number of Affirmatives to prepare against. The link magnitude is high. Their affirmative prevents arguments about the political popularity of the plan, and alternate governmental agents that can do the plan.

This is a reason to vote negative.

Our first standard is competition – every affirmative argument needs to be filtered through the question of “how does this function in a competitive venue of debate where there must be a win or a loss assigned to each team. All their evidence will assume non-competitive academic environment rather than one where a forced choice will inevitably take place with every ballot.

Second is substantive side bias

Not defending the clear actor and mechanism of the resolution produces a substantive side bias.

They have the ability to recontextualize link arguments, shift focus to different proscriptive claims of the 1AC while using traditional competition standards like perms to make non-absolutist disagreements irrelevant.

The first impact to Aff sides bias is absolutism – their interp creates bad debates where negatives are forced into the absolutist positions like cap and Baudrillard to ensure links and have generic positions that can apply to everything. This is bad for education -- forcing us to the academic margins, makes us less effective scholars and less literate in current events. Trains us only for leftist infighting, rather than social change.

Second, it undermines research – Aff has an incentive to constantly break new affs at every tournament making any real attempt at engagement irrelevant and decreasing the quality of all debates. They don't spur engagement and exploration cause there are so many teams reading so many Affs, the only way to respond it with generics. The Aff is conversely incentivized to pick a body of literature with very little negative literature and a prolif of aff advocacies based on single articles or created phrases. There is no incentive to produce detailed strategies because academic disagreements in the literature are minute and easily wished away by perms or Aff changes.

And we have an external impact – Sufficient research-based preparation and debates focused on detailed points of disagreement are key to political effectiveness

Gutting 13 (professor of philosophy at the University of Notre Dame)

(Gary, Feb 19, A Great Debate, <http://opinionator.blogs.nytimes.com/2013/02/19/a-great-debate/?emc=eta1>)

This is the year of what should be a decisive debate on our country's spending and debt. But our political “debates” seldom deserve the name. For the most part representatives of the rival

parties exchange one-liners: “The rich can afford to pay more” is met by “Tax increases kill jobs.” Slightly more sophisticated discussions may cite historical precedents: “There were higher tax rates during the post-war boom” versus “Reagan’s tax cuts increased revenues.”

Such volleys still don’t even amount to arguments: they don’t put forward generally accepted premises that support a conclusion. Full-scale speeches by politicians are seldom much more than collections of such slogans and factoids, hung on a string of platitudes. Despite the name, candidates’ pre-election debates are exercises in looking authoritative, imposing their talking points on the questions, avoiding gaffes, and embarrassing their opponents with “zingers” (the historic paradigm: “There you go again.”).

There is a high level of political discussion in the editorials and op-eds of national newspapers and magazines as well as on a number of blogs, with positions often carefully formulated and supported with argument and evidence. But even here we seldom see a direct and sustained confrontation of rival positions through the dialectic of assertion, critique, response and counter-critique.

Such exchanges occur frequently in our law courts (for example, oral arguments before the Supreme Court) and in discussions of scientific papers. But they are not a significant part of our deliberations about public policy. As a result, partisans typically remain safe in their ideological worlds, convincing themselves that they hold to obvious truths, while their opponents must be either knaves or fools — ****with no need to think through the strengths of their rivals’ positions or the weaknesses of their own.

Is there any way to make genuine debates — sustained back-and-forth exchanges, meeting high intellectual standards but still widely accessible — part of our political culture? (I leave to historians the question of whether there are historical precedents— like the Webster-Hayne or Lincoln-Douglas debates.) Can we put our politicians in a situation where they cannot ignore challenges, where they must genuinely engage with one another in responsible discussion and not just repeat talking points?

A first condition is that the debates be focused on specific points of major disagreement. Not, “How can we improve our economy?” but “Will tax cuts for the wealthy or stimulus spending on infrastructure do more to improve our economy?” ****This will prevent vague statements of principle that don’t address the real issues at stake.

Another issue is the medium of the debate. Written discussions, in print or online could be easily arranged, but personal encounters are more vivid and will better engage public attention. They should not, however, be merely extemporaneous events, where too much will depend on quick-thinking and an engaging manner. We want remarks to be carefully prepared and open to considered responses.

**This guts any educational potential of the aff – failure to engage with the legal detail of surveillance policy prevents translating their argument into action.

Cohen 15 (professor of law at Georgetown University Law Center)

(Julie, 2015, Studying Law Studying Surveillance, Studying Law Studying Surveillance. Surveillance & Society 13(1): 91-101)

Relative to legal scholarship, work in Surveillance Studies is more likely to build from a solid foundation in contemporary social theory. Even so, such work often reflects both an insufficient grasp of the complexity of the legal system in action and lack of interest in the ways that legal and regulatory actors understand, conduct, and contest surveillance. By this I don’t mean to suggest that Surveillance Studies scholars need law degrees, but only to point out what ought to be obvious but often isn’t: legal processes are social processes, too, and in overlooking these processes, Surveillance Studies scholars also engage in a form of

*****black-boxing that treats law as monolithic and surveillance and government as interchangeable.** Legal actors engage in a variety of discursive and normative strategies by which institutions and resources are mobilized around surveillance, and understanding those strategies is essential to the development of an archaeology of surveillance practices. Work in Surveillance Studies also favors a type of theoretical jargon that can seem impenetrable and, more importantly, unrewarding to those in law and policy communities. As I've written elsewhere (Cohen 2012a: 29), "[t]oo many such works find power everywhere and hope nowhere, and seem to offer well-meaning policy makers little more than a prescription for despair."

Acknowledgment of pervasive social shaping by networked surveillance need not preclude legal protection for socially-shaped subjects, but that project requires attention to detail.

Engagement with legal scholarship on information privacy would inform the project of understanding surveillance as social ordering

surveillance theorists will need to do more than simply read legal sources. Work in Surveillance Studies so far has not been particularly well-adapted to helping policymakers figure out what, if anything, to do about evolving practices of commercial surveillance. Once again, **if it is to be useful to policymakers, the view from Surveillance Studies requires translation into a form that might furnish a framework for action.**

Bridging the gaps requires, first and foremost, efforts by emissaries from both traditions to foster a more tolerant and curious dialogue directed toward improved understanding and, ultimately, toward methodological hybridization. Within one's own academic community, it can become too easy to mistake consensus on methodological conventions for epistemological rigor, and to forget that methodological strength also derives from refusal to be hemmed in by disciplinary boundaries.

From the standpoint of theory, a more sustained dialogue between **law and Surveillance Studies would count as a success if it produced a mode of inquiry about surveillance that melded the theoretical sophistication of Surveillance Studies with lawyerly attention to the details, mechanisms, and interests that constitute surveillance practices as legal practices, and to the kinds of framing that mobilize legal and policy communities.** To do Surveillance Studies better, legal scholars need to challenge their own preference for putting problems in categories that fit neatly within the liberal model of human nature and behavior, and Surveillance Studies scholars can help by calling attention to the social and cultural processes within which surveillance practices are embedded. **Surveillance Studies scholars need to do more to resist their own penchant for totalizing dystopian narratives, and should delve more deeply into the legal and regulatory realpolitik that surrounds the administration of surveillance systems;** legal scholars can help by **demystifying legal and regulatory processes.**

From a legal scholar's perspective, however, theory achieves its highest value when it becomes a

tool for forcing productive confrontations about how to respond to real problems. And so I think it would count as an even bigger success if dialogue between law and Surveillance Studies generated not only a hybridized theoretical discourse of law-and-Surveillance-Studies but also the beginnings of a more accessible policy discourse about surveillance and privacy, along with reform proposals designed to put the animating concepts behind such a discourse into practice. Here the goal would be a hybridization between law's ingrained pragmatism and Surveillance Studies' attentiveness to the social and cultural processes through which surveillance is experienced and assimilated. Working together, legal scholars and Surveillance Studies scholars might advance the project of formulating working definitions of privacy interests and harms, and might develop more sophisticated projections of the likely effects of different policy levers that could be brought to bear on systems of surveillance.

Next is Mechanism Education

The Aff's failure to identify an agent and mechanism makes cost-benefits analysis impossible, meaning debates take place in an academic vacuum where tradeoffs are irrelevant. It makes link comparisons vacuous and means that detailed PICs about substance are all but impossible.

And this turns the Aff – debates over mechanisms for change are crucial to solve material violence on a large scale

Capulong 9 (Assistant Professor of Law, University of Montana)
(Eduardo R.C., CLIENT ACTIVISM IN PROGRESSIVE LAWYERING THEORY, CLINICAL LAW REVIEW, 16 Clinical L. Rev. 109, Fall, 2009)

Motivating client activism under dynamic social conditions requires the development and constant assessment and reassessment of a political perspective that measures that resistance and its possibilities. That task in turn requires the development of specific activist goals within the context of such analyses, and perhaps broader, national and international strategy--what some call the political "next step." This is particularly true today, when the economic crisis plaguing capitalism, the "war on terror" and climate change undeniably have world-wide dimensions. Instances of failure, too, need to be part of that analysis, because they teach us much about why otherwise promising activist efforts do not become sustained mass movements of the sort to which we all aspire.

Thus, the theoretical need is two-fold: to construct a broader organizing perspective from a political standpoint, and to consider activism writ large. Without reading the pulse of prevailing social conditions, it is easy to miscalculate what that next step ought to be. We will not build a mass movement though sheer perseverance--a linear, idealist conception of change at odds with dynamic social conditions. By the same token, we may underestimate the potential of such mass activism if we focus simply on the local dimensions of our work.

The dialectic between a dynamic social context and political consciousness and action requires a constant organizational and political calibration and modulation often missing from theoretical scholarship.

Without such a working perspective, we are apt to be either ultra-left or overly conservative. As Jim Pope put it recently in the context of new forms of labor organizing: "If we limit our vision of the future to include only approaches that work within the prevailing legal regime and balance of forces, then we are likely to be irrelevant when and if the opportunity for a paradigm shift arises." n449 The cyclical nature of labor organizing, he argues, mirrors politics generally: American political life as a whole has likewise alternated between periods characterized by public action, idealism, and reform on the [189] one hand, and periods of private interest, materialism, and retrenchment on the other. A prolonged private period spawns orgies of corruption and extremes of wealth and poverty that, sooner or later, ignite passionate movements for reform. n450 C. 'Activism': Towards a Broader, Deeper, Systematic Framework
In progressive lawyering theory, grassroots activism is frequently equated with "community organizing" and "movement" or "mobilization" politics. n451 Indeed, these methods have come to predominate activist lawyering in much the same way as "public interest law" has come for many to encompass all forms of progressive practice. "Activism" is, of course, broader still. Even on

its own terms, the history of community organizing and social movements in the United States includes two vitally important traditions frequently given short shrift in this realm: industrial union organizing and alternative political party-building. n452 In this section, my aim is not to catalogue the myriad ways in which lawyers and clients can and do become active (methodically or institutionally)—which, given human creativity and progress, in any event may be impossible to do—but rather to problematize three assumptions: first, the tendency to define grassroots activity narrowly; second, the notion that certain groups—for example “the poor” or the “subordinated”—are the definitive agents of social change; and finally, the conviction that mass mobilization or movement-building, by itself, is key to social transformation.

1. Grassroots Activism

There are countless ways in which people become socially or politically active. Yet even the more expansive and sophisticated considerations of activism in progressive lawyering theory tend to unnecessarily circumscribe activism. For example, Cummings and Eagly argue that we need to “unpack” the term “organizing.” n453 Contrasting two strategies of the welfare rights movement in the 1960s, these authors distinguish between “mobilization as short-term community action and organizing as an effort to build long-term institutional power.” n454 In the same breath, however, they define organizing “as shorthand for a range of community-based practices,” n455 even though at least some activism, for example union organizing or, say, [*190] fasting, might not be best characterized as “community-based.”

What is required is a larger framework that takes into account the sum total of activist initiatives. Lucie White argues that we need to “map out the internal microdynamics of progressive grassroots initiatives ... observe the multiple impacts of different kinds of initiatives on wide spheres of social and political life ... and devise typologies, or models, or theories that map out a range of opportunities for collaboration.” n456 This map would be inadequate—and therefore inaccurate—if we include certain activist initiatives and not others. But that is precisely what the progressive lawyering literature has done by failing to regularly consider, for example, union organizing or alternative political party-building.

2. Agents of Social Change: Identity, Class and Political Ideology As with our definition of activism, here, too, the problem is a lack of clarity, breadth or scope, which leads to misorientation. Have we defined, with theoretical precision, the social-change agents to whom we are orienting—e.g., the “people,” the “poor,” the “subordinated,” “low-income communities” or “communities of color”? And if so, are these groupings, so defined, the primary agents of social change? By attempting to harmonize three interrelated (yet divergent) approaches to client activism—organizing on the bases of geography and identity, class and the workplace, and political ideology—modern community organizing simultaneously blurs and balkanizes the social-change agents to whom we need to orient. What, after all, is “community”? In geographic terms, local efforts alone cannot address social problems with global dimensions. n457 As Pope observed of workers’ centers: “the tension between the local and particularistic focus of community unionism and the global scope of trendsetting corporations like Wal-Mart makes it highly unlikely that community unionism will displace industrial unionism as ‘the’ next paradigm of worker organization.” n458 On the other hand, members of cross-class, identity-based “communities” may not necessarily share the same interests. In the “Asian American community,” Anchetta explains: using the word “community” in its singular form is often a misnomer, because Asian Pacific Americans comprise many communities, each with its own history, culture and language: Filipino, Chinese, Japanese, Korean, Vietnamese, Thai, Cambodian, Lao, Lao-Mien, [*191] Hmong, Indian, Indonesian, Malaysian, Samoan, Tongan, Guamanian, Native Hawaiian, and more. The legal problems facing individuals from different communities defy simple categorization. The problems of a fourth-generation Japanese American victim of job discrimination, a monolingual refugee from Laos seeking shelter from domestic violence, an elderly immigrant from the Philippines trying to keep a job, and a newcomer from Western Samoa trying to reunite with relatives living abroad all present unique challenges. Add in factors such as gender, sexual orientation, age, and disability, and the problems become even more complex. n459 Angela Harris echoes this observation by pointing out how some feminist legal theory assumes “a unitary, ‘essential’ women’s experience [that] can be isolated and described independently of race, class, sexual orientation, and other realities of experience.” n460 The same might be said of the “people,” which, like the “working class,” may be too broad. Other categorizations—such as “low-income workers,” “immigrants,” and the “poor,” for example—may be too narrow to have the social weight to fundamentally transform society. In practice, progressive lawyers orient to the politically advanced among these various “communities.” In so doing, then, we need to acknowledge that we are organizing on the basis of political ideology, and not simply geography, identity or class. Building the strongest possible mass movement, therefore, requires an orientation not only towards certain “subordinated” communities, but to the politically advanced generally. Otherwise, we may be undermining activism writ large. This is not to denigrate autonomous community efforts. As I have mentioned, subordinated communities of course have the right to self-determination, i.e. to organize separately. But the point is not simply to organize groups of people who experience a particular oppression, but rather to identify those who have the social power to transform society. Arguing that these agents are the collective, multi-racial working class, Smith explains: The Marxist definition of the working class has little in common with those of sociologists. Neither income level nor self-definition are [sic] what determine social class. Although income levels obviously bear some relationship to class, some workers earn the same or higher salaries than some people who fall into the category of middle class. And many people who consider themselves “middle” [*192] class are in fact workers. Nor is class defined by categories such as white and blue collar. For Marx the working class is defined by its relationship to the means of production. Broadly speaking, those who do not control the means of production and are forced to sell their labor power to capitalists are workers. n461 The practical consequence of this very well may be that we redefine who we represent as clients and consider activism or potential activism outside subordinated communities, for example union activity and alternative political-party building, as part of our work.

3. From Movementism to Political Organization

Dogged as our work is in the activist realm, any effort at fundamental social transformation is doomed without effective political leadership. Such leadership, in turn, requires work not often associated with “activism,” such as, for example, theoretical study. n462 “Movementism,” n463 by which I mean the conviction that building a mass movement is the answer to oppression and exploitation, has its limitations. Even though activism itself is perhaps the best school for political education, we have an enormous amount to learn from our predecessors. In the final analysis,

fundamental social transformation will only come about if there are political organizations clear enough, motivated enough, experienced enough, large enough, embedded enough and agile enough to **respond to the twists and turns endemic in any struggle for power. “The problem,” as Bellow astutely observed, “is not our analytic weaknesses, but the opportunistic, strategic, and political character of our subject.”** n464 Such opportunities typically occur when there is a confluence of three factors: a social crisis; a socio-economic elite that finds

itself divided over how to overcome it; and a powerful mass movement from below. As I understand the nature of social change, **successful social transformations occur when there is a fourth element: political organization.**

Conclusion

Client activism is not a monolithic, mechanical object. Most of the time, it is neither the gathering mass movement many of us wish for, nor the inert, atomized few in need of external, professional motivation. Rather, activism is a phenomenon in constant ebb and flow, a [*193] mercurial, fluid complex shaped by an unremitting diversity of factors. The key through the maze of lawyering advice and precaution is therefore to take a hard, sober look at the overarching state of activism. Are our clients in fact active or are they not? How many are and who are they? What is the nature of this period? Economically? Politically? Culturally? What are the defining issues? What political and organizing trends can be discerned? With which organizations are our clients active, if any? What demands are they articulating, and how are they articulating them?

This is a complex evaluation, one requiring the formulation, development and constant assessment and reassessment of an overarching political perspective. My aim

in this Article is to begin to theorize the various approaches to this evaluation. In essence, I am arguing for the elaboration of a systematic macropolitical analysis in progressive lawyering theory. Here, my purpose is not to present a comprehensive set of political considerations, but rather to develop a framework for, and to investigate the limitations of, present considerations in three areas: strategic aims; prevailing social conditions; and methods of activism. Consciously or not, admittedly or not, informed and systematic or not, progressive lawyers undertake their work with certain assumptions, perspectives and biases. Progressive lawyering theory would be a much more effective and concrete guide to action—to defining the lawyer’s role in fostering activism—if it would elaborate on these considerations and transform implicit and perhaps delimited assumptions and approaches into explicit and hopefully broader choices.

Over the past four decades, there has been remarkable continuity and consistency in progressive lawyers’ use of litigation, legislation, direct services, education and organizing to stimulate and support client activism. The theoretical “breaks” to which Buchanan has referred n465 have not been so much about the practice of lawyering itself, but rather about unarticulated shifts in ultimate goals, societal analyses, and activist priorities, each necessitated by changes in the social, economic, and political context. That simply is another way of stating the obvious: that progressive lawyers change their practices to adapt to changing circumstances. The recurrent problem in progressive lawyering theory is that many commentators have tended to generalize these practice changes to apply across social circumstances. In so doing, they displace and often replace more fundamental differences over strategic goals, interpretation of social contexts, and organizing priorities with debates over the mechanics of lawyering practice.

The argument is turned on its head: we often assume or tend to [*194] assume agreement over the meanings and underlying conceptual frameworks relating to “fundamental social change,” current political analysis, and “community organizing,” and debate lawyering strategy and tactics; but instead we should be elaborating and clarifying these threshold political considerations as a prerequisite to using what we ultimately agree to be a broad and flexible set of lawyering tools. In effect, the various approaches to lawyering have become the currency by which scholars have debated politics and activism. The irony is that our disagreements are less about lawyering approaches per se, I believe, than they are about our ultimate political objectives, our analyses of contemporary opportunities, and our views of the optimal paths from the latter to the former. The myriad lawyering descriptions and prescriptions progressive lawyering theory offers are of limited use unless they are anchored in these primary considerations. How do we decide if we should subscribe to “rebellious” and not traditional “public interest” lawyering, for example, or “collaborative” over “critical” lawyering, if we do not interrogate these questions and instead rush too quickly into practical questions? The differences among these approaches matter precisely because they have different political goals, are based on different political analyses, and employ different political activist strategies.

Activist lawyers already engage in these analyses—necessarily so. To foster client activism, they must read prevailing social conditions and strategize with their clients about the political next step, often with an eye toward a long-term goal. But I don’t think we necessarily engage in these analyses as consciously, or with as full a picture of the history and dynamics involved or options available, as we could. Often this is because there simply isn’t time to engage these questions. Or perhaps not wanting to dominate our clients, we squelch our own political analysis and agenda to allow for organic, indigenous leadership from below. But if we are truly collaborative—and when we feel strongly enough about certain political issues—we engage on issues and argue them out. In either event, we undertake an unsystematic engagement of these fundamental issues at our peril.

If we adhere to the belief that **only organized, politicized masses of people can alter or replace exploitative and oppressive institutions and bring about lasting fundamental social change,** then, as progressive lawyers, **we need to be clear about which legal tactics can bring about such a sustained effort in each historical moment.**

Without concrete and comprehensive diagnoses of ultimate political goals, social and economic contexts, and organizing priorities, progressive legal practice will fail to live up to its potential.

Now the State debate

We do not need to win that the state is good, rather just that the value of the state is something that should be debated about. This is the screen you should adopt for the Aff's ev – it can't just say that the state is bad or ineffective, their ev has to say that the state should not even be discussed. General indictments of the state can be done on the neg. while still preserving limited and effective debate and research.

First, engaging with the law is inevitable and can be effective

Capulong 9 (Assistant Professor of Law, University of Montana)

(Eduardo R.C., CLIENT ACTIVISM IN PROGRESSIVE LAWYERING THEORY, CLINICAL LAW REVIEW, 16 Clinical L. Rev. 109, Fall, 2009)

Nevertheless, in contrast to what Steve Bachmann has called the [*116] "a-legal" or "crude Marxist" approach, n19 progressive activists recognize that the legal arena remains a forum for social struggle. n20 This is so for three reasons: First, activists often do not have a choice but to work within the legal system. ****as when they are arrested or otherwise prevented from engaging in activism by state authorities. Second, because law is relatively autonomous from economic and political interests, n21 campaigns for legal reform can win substantial gains and are frequently the only vehicles through which more far-reaching change takes shape; struggles for reform, in other words, beget more radical possibilities and aspirations. n22 And third, law is constitutive of the social order. Law--or, more accurately, the concept of it--is not (again as some crude analysts would argue) simply a tool of one ruling class or other, but rather an essential component of a just society. n23

Commentators observe that lawyers who base their practice on these three premises are "hungry for theory," n24 for theory checks the "occupational hazards [of] reformism or cynicism." n25 The theoretical project is thus a dialectic: while law reform alone cannot "disturb the basic political and economic organization of modern American society," n26 [*117] law and lawyering are "a complex, contradictory, and open-textured setting that provides opportunities to challenge the status quo."

Second, debate about arcane legal details are crucial to the short-term survival of oppressed populations. Outside of the law being good or bad, legal education is crucial to empower even the most revolutionary of movements.

Arkles et al 10

(Gabriel Arkles, Pooja Gehi and Elana Redfield, The Role of Lawyers in Trans Liberation: Building a Transformative Movement for Social Change, Seattle Journal for Social Justice, 8 Seattle J. Soc. Just. 579, Spring / Summer, 2010, LN)

While agenda-setting by lawyers can lead to the replication of patterns of elitism and the reinforcement of systems of oppression, we do believe that legal work is a necessary and critical way to support movements for social justice. We must recognize the

limitations of the legal system and learn to use that to the advantage of the oppressed.

If lawyers are going to support work that dismantles oppressive structures, we must radically rethink the roles we can play in building and supporting these movements and acknowledge that our own individual interests or even livelihood may conflict with doing radical and transformative work. n162 A. Community Organizing for Social Justice When we use the term community organizing or organizing, we refer to the activities of organizations engaging in base-building and leadership development of communities directly impacted by one or more social [*612] problems and conducting direct action issue campaigns intended to make positive change related to the problem(s). In this article, we discuss community organizing in the context of progressive social change, but community-organizing strategies can also be used for conservative ends. Community organizing is a powerful means to make social change. A basic premise of organizing is that inappropriate imbalances of power in society are a central component of social injustice. In order to have social justice, power relationships must shift. In *Organizing for Social Change: Midwest Academy Manual for Activists* (hereinafter, "the Manual"), n163 the authors list three principles of community organizing: n164 (1) winning real, immediate, concrete improvements in people's lives; (2) giving people a sense of their own power; and (3) altering the relations of power. n165 Before any of these principles can be achieved it is necessary to have leadership by the people impacted by social problems. n166 As Rinku Sen points out: [E]ven allies working in solidarity with affected groups cannot rival the clarity and power of the people who have the most to gain and the least to lose . . . organizations composed of people whose lives will change when a new policy is instituted tend to set goals that are harder to reach, to compromise less, and to stick out a fight longer. n167 She also notes that, "[I]f we are to make policy proposals that are grounded in reality and would make a difference either in peoples' lives or in the debate, then we have to be in touch with the people who are at the center of such policies. n168 We believe community organizing has the potential to make fundamental social change that law reform strategies or "movements" led by lawyers cannot achieve on their own. However, community organizing is not always just and effective. Community-organizing groups are not immune to any number of problems that can impact other organizations, including internal oppressive dynamics. In fact, some strains of white, male-dominated [*613] community organizing have been widely criticized as perpetuating racism and sexism. n169 Nonetheless, models of community organizing, particularly as revised by women of color and other leaders from marginalized groups, have much greater potential to address fundamental imbalances of power than law reform strategies. They also have a remarkable record of successes. Tools from community organizers can help show where other strategies can fit into a framework for social change. The authors of the Manual, for example, describe various strategies for addressing social issues and illustrate how each of them may, at least to some extent, be effective. n170 They then plot out various forms of making social change on a continuum in terms of their positioning with regard to existing social power relationships. n171 They place direct services at the end of the spectrum that is most accepting of existing power relationships and community organizing at the end of the spectrum that most challenges existing power relationships. n172 Advocacy organizations are listed in the middle, closer to community organizing than direct services. n173 The Four Pillars of Social Justice Infrastructure model, a tool of the Miami Workers Center, is somewhat more nuanced than the Manual. n174 According to this model, four "pillars" are the key to transformative social justice. n175 They are (1) the pillar of service, which addresses community needs and stabilizes community members' lives; (2) the pillar of policy, which changes policies and institutions and achieves concrete gains with benchmarks for progress; (3) the pillar of consciousness, which alters public opinion and shifts political parameters through media advocacy and popular education; and (4) the pillar of power, which achieves autonomous community power through base-building and leadership development. n176 According to the Miami Workers Center, all of these pillars are essential in making social change, but the pillar of power is most crucial in the struggle to win true liberation for all oppressed communities. n177 [*614] In their estimation, our movements suffer when the pillar of power is forgotten and/or not supported by the other pillars, or when the pillars are seen as separate and independent, rather than as interconnected, indispensable aspects of the whole infrastructure that is necessary to build a just society. n178 Organizations with whom we work are generally dedicated solely to providing services, changing policies, or providing public education. Unfortunately, each of these endeavors exists separate from one another and perhaps most notably, separate from community organizing. In SRLP's vision of change, this separation is part of maintaining structural capitalism that seeks to maintain imbalances of power in our society. Without incorporating the pillar of power, service provision, policy change, and public education can never move towards real social justice. n179 B. Lawyering for Empowerment In the past few decades, a number of alternative theories have emerged that help lawyers find a place in social movements that do not replicate oppression. n180 Some of the most well-known iterations of this theme are "empowerment lawyering," "rebellious lawyering," and "community lawyering." n181 These perspectives share skepticism of the efficacy of impact litigation and traditional direct services for improving the conditions faced by poor clients and communities of color, because they do not and cannot effectively address the roots of these forms of oppression. n182 Rather, these alternative visions of lawyering center on the empowerment of community members and organizations, the elimination of the potential for dependency on lawyers and the legal system, and the collaboration between lawyers and directly impacted communities in priority setting. n183 Of the many models of alternative lawyering with the goal of social justice, we will focus on the idea of "lawyering for empowerment," generally. The goal of empowerment lawyering is to enable a group of people to

gain control of the forces that affect their lives. n184 Therefore, **the goal of empowerment lawyering for low-income transgender people of [*615] color is to support these communities in confronting the economic and social policies that limit their life chances.**

Rather than merely representing poor people in court and increasing access to services, the role of the community or empowerment lawyer involves:

organizing, community education, media outreach, petition drives, public demonstrations, lobbying, and shaming campaigns . . . [I]ndividuals and members of community-based organizations actively work alongside organizers and lawyers in the day-to-day strategic planning of their case or campaign. Proposed solutions--litigation or non-litigation based--are informed by the clients' knowledge and experience of the issue. n185

A classic example of the complex role of empowerment within the legal agenda setting is the question of whether to take cases that have low chances of success. The traditional approach would suggest not taking the case, or settling for limited outcomes that may not meet the client's expectations. However, when our goals shift to empowerment, our strategies change as well. If we understand that the legal system is incapable of providing a truly favorable outcome for low-income transgender clients and transgender clients of color, then winning and losing cases takes on different meanings.

For example, a transgender client may choose to bring a lawsuit against prison staff who sexually assaulted her, despite limited chance of success because of the "blue wall of silence," her perceived limited credibility as a prisoner, barriers to recovery from the Prison Litigation Reform Act, and restrictions on supervisory liability in § 1983 cases. Even realizing the litigation outcome will probably be unfavorable to her, she may still develop leadership skills by rallying a broader community of people impacted by similar issues. Additionally, she may use the knowledge and energy gained through the lawsuit to change policy. If our goal is to familiarize our client with the law, to provide an opportunity for the client [*616] and/or community organizers to educate the public about the issues, to help our client assess the limitations of the legal system on their own, or to play a role in a larger organizing strategy, then taking cases with little chance of achieving a legal remedy can be a useful strategy.

Lawyering for empowerment means not relying solely on legal expertise for decisionmaking. It means recognizing the limitations of the legal system, and **using our knowledge and expertise to help disenfranchised communities take leadership.** If community organizing is the path to social justice and "organizing is about people taking a role in determining their own future and improving the quality of life not only for themselves but for everyone," then "the primary goal [of empowerment lawyering] is building up the community." n186

C. Sharing Information and Building Leadership

A key to meaningful participation in social justice movements is access to information. Lawyers are in an especially good position to help transfer knowledge, skills, and information to disenfranchised communities--the legal system is maintained by and predicated on arcane knowledge that lacks relevance in most contexts but takes on supreme significance in courts, politics, and regulatory agencies. It is a system ****intentionally obscure to the uninitiated; therefore the lawyer has the opportunity to expose the workings of the system to those who seek to destroy it, dismantle it, reconfigure it, and re-envision it.

As Quigley points out, the ignorance of the client enriches the lawyer's power position, and thus the transfer of the power from the lawyer to the client necessitates a sharing of information. n187 Rather than simply performing the tasks that laws require, a lawyer has the option to teach and to collaborate with clients so that they can bring power and voice back to their communities and perhaps fight against the system, become politicized, and take leadership. "This demands that the lawyer undo the secret wrappings of the legal system and share the essence of legal advocacy--doing so lessens the mystical power of the lawyer, and, in practice, enriches the advocate in the sharing and developing of rightful power." n188

Lawyers have many opportunities to share knowledge and skills as a form of leadership development. This sharing can be accomplished, for example, through highly collaborative legal representation, through community clinics, through skill-shares, or through policy or campaign meetings where the lawyer explains what they know about the existing structures and fills in gaps and questions raised by activists about the workings of legal systems.

D. Helping to Meet Survival Needs

SRLP sees our work as building legal services and policy change that directly supports the pillar of power. n189 Maintaining an awareness of the limitations and pitfalls of traditional legal services, we strive to provide services in a larger context and with an approach that can help support libratory work. n190 For this reason we provide direct legal services but also work toward leadership development in our communities and a deep level of support for our community-organizing allies. Our approach in this regard is to make sure our community members access and obtain all of the benefits to which they are entitled under the law, and to protect our community members as much as possible from the criminalization, discrimination, and harassment they face when attempting to live their lives. While we do not believe that the root causes keeping our clients in poverty and poor health can be addressed in this way, we also believe that our clients experience the most

severe impact from state policies and practices and need and that they deserve support to survive them. n191 Until our communities are truly empowered and our systems are fundamentally changed to increase life chances and health for transgender people who are low-income and people of color, ****our communities are going to continue to have to navigate government agencies and organizations to survive.

Monolithic rejections of the law are wrong – cooption is more likely in non-state activism and fails to compare to alternative mechanisms for change. Concrete mechanisms for success should be your metric for evaluation.

Lobel 7 (Assistant Professor of Law, University of San Diego)

(Orly, THE PARADOX OF EXTRALEGAL ACTIVISM: CRITICAL LEGAL CONSCIOUSNESS AND TRANSFORMATIVE POLITICS, 120 Harv. L. Rev. 937, February, 2007, LN)

In the following sections, I argue that the extralegal model has suffered from the same drawbacks associated with legal cooptation. I show that as an effort to avoid the risk of legal cooptation, the current wave of suggested alternatives has effects that ironically mirror those of cooptation itself. Three central types of difficulties exist with contemporary extralegal scholarship. First, in the contexts of the labor and civil rights movements, arguments about legal cooptation often developed in response to a perceived gap between the conceptual ideal toward which a social reform group struggled and its actual accomplishments. But, ironically, the contemporary message of opting out of traditional legal reform avenues may only accentuate this problem. As the rise of informalization (moving to nonlegal strategies), civil society (moving to extralegal spheres), and pluralism (the proliferation of norm-generating actors) has been effected and appropriated by supporters from a wide range of political commitments, these concepts have had unintended implications that conflict with the very social reform ideals

from which they stem. Second, the idea of opting out of the legal arena becomes self-defeating as it discounts the ongoing importance of law and the possibilities of legal reform in seemingly unregulated spheres. A model encompassing exit and rigid sphere distinctions further fails to recognize a reality of increasing interpenetration and the blurring of boundaries between private and public spheres, profit and nonprofit sectors, and formal and informal institutions. It therefore loses the critical insight that law operates in the background of seemingly unregulated relationships. Again paradoxically, the extralegal view of decentralized activism and the division of society into different spheres in fact have worked to subvert rather than support the progressive agenda. Finally, ***since extralegal actors view their actions with romantic idealism, they fail to develop tools for evaluating their success. If the critique of legal cooptation has involved the argument that legal reform, even when viewed as a victory, is never radically transformative, we must ask: what are the criteria for assessing the achievements of the suggested alternatives? As I illustrate in the following sections, much of the current scholarship obscures the lines between the descriptive and the prescriptive in its formulation of social activism. If current suggestions present themselves as alternatives to formal legal struggles, we must question whether the new extralegal politics that are proposed and celebrated are capable of producing a constructive theory and meaningful channels for reform, rather than passive status quo politics.

A. Practical Failures: When Extralegal Alternatives Are Vehicles for Conservative Agendas

We don't want the 1950s back. What we want is to edit them. We want to keep the safe streets, the friendly grocers, and the milk and cookies, while blotting out the political bosses, the tyrannical headmasters, the inflexible rules, and the lectures on 100 percent Americanism and the sinfulness of dissent. n163

A basic structure of cooptation arguments as developed in relation to the labor and civil rights movements has been to show how, in the move from theory to practice, the ideal that was promoted by a social group takes on unintended content, and the group thus fails to realize the original vision. This risk is particularly high when ideals are framed in broad terms that are open to multiple interpretations. Moreover, the pitfalls of the potential risks presented under the umbrella of cooptation are in fact accentuated in current proposals. Paradoxically, as the extralegal movement is framed by way of opposition to formal legal reform paths, without sufficiently defining its goals, it runs the very risks it sought to avoid by working outside the legal system.

Extralegal paths are depicted mostly in negative terms and as resorting to new alternative forms of action rather than established models. Accordingly, because the ideas of social organizing, civil society, and legal pluralism are framed in open-ended contrarian terms, they do not translate into specific visions of social justice reform. The idea of civil society, which has been embraced by people from a broad array of often conflicting ideological commitments, is particularly demonstrative. Critics argue that "some ideas fail because they never make the light of day. The idea of civil society ... failed because it [*972] became too popular." n164 Such a broadly conceived ideal as civil society sows the seeds of its own destruction.

In former eras, the claims about the legal cooptation of the transformative visions of workplace justice and racial equality suggested that through legal strategies the visions became stripped of their initial depth and fragmented and framed in ways that were narrow and often merely symbolic. This observation seems accurate in the contemporary political arena; the idea of civil society revivalism evoked by progressive activists has been reduced to symbolic acts with very little substance.

On the left, progressive advocates envision decentralized activism in a third, nongovernmental sphere as a way of reviving democratic participation and rebuilding the state from the bottom up. By contrast, the idea of civil society has been embraced by conservative politicians as a means for replacing government-funded programs and steering away from state intervention. As a result, recent political uses of civil society have subverted the ideals of progressive social reform and replaced them with conservative agendas that reject egalitarian views of social provision.

In particular, recent calls to strengthen civil society have been advanced by politicians interested in dismantling the modern welfare system. Conservative civil society revivalism often equates the idea of self-help through extralegal means with traditional family structures, and blames the breakdown of those structures (for example, the rise of the single parent family) for the increase in reliance and dependency on government aid. n165 This recent depiction of the third sphere of civic life works against legal reform precisely because state intervention may support newer, nontraditional social structures. For conservative thinkers, legal reform also risks increasing dependency on social services by groups who have traditionally been marginalized, including disproportionate reliance on public funds by people of color and single mothers. Indeed, the end of welfare as we knew it, n166 as well as the [*973] transformation of work as we knew it, n167 is closely related to the quest of thinkers from all sides of the political spectrum for a third space that could replace the traditional functions of work and welfare. Strikingly, a range of liberal and conservative visions have thus converged into the same agenda, such as the recent welfare-to-work reforms, which rely on myriad non-governmental institutions and activities to support them. n168

When analyzed from the perspective of the unbundled cooptation critique, it becomes evident that there are multiple limits to the contemporary extralegal current. First, there have been significant problems with resources and zero-sum energies in the recent campaigns promoting community development and welfare. For example, the initial vision of welfare-to-work supported by liberal reformers was a multifaceted, dynamic system that would reshape the roles and responsibilities of the welfare bureaucracy. The Personal Responsibility and Work Opportunity Reconciliation Act of 1996 n169 (PRWORA), supported by President Clinton, was designed to convert various welfare programs, including Aid to Families with Dependent Children, into a single block grant program. The aim was to transform passive cash assistance into a more active welfare system, in which individuals would be better assisted, by both the government and the community, to return to the labor force and find opportunities to support themselves. Yet from the broad vision to actual implementation, the program quickly became limited in focus and in resources. Indeed, PRWORA placed new limits on welfare provision by eliminating eligibility categories and by placing rigid time limits on the provision of benefits. n170

Moreover, the need to frame questions relating to work, welfare, and poverty in institutional arrangements and professional jargon and to comply with various funding block grants has made some issues, such as the statistical reduction of welfare recipients, more salient, whereas other issues, such as the quality of jobs offered, have been largely eliminated from policymakers' consideration. Despite aspects of the reform that were hailed as empowering for those groups they were designed to help, such as individual private training vouchers, serious questions have been raised about the adequacy of the particular [*974] policy design because resources and institutional support have been found lacking. n171 The reforms require individual choices and rely on the ability of private recipients to mine through a vast range of information. As in the areas of child care, health care, and educational vouchers, critics worry that the most disadvantaged workers in the new market will not be able to take advantage of the reforms. n172 Under such conditions, the goal of eliminating poverty may be eroded and replaced by other goals, such as reducing public expenses. Thus, recalling the earlier cooptation critique, once reforms are envisioned, even when they need not be framed in legalistic terms, they in some ways become reduced to a handful of issues, while fragmenting, neglecting, and ultimately neutralizing other possibilities.

At this point, the paradox of extralegal activism unfolds. While public interest thinkers increasingly embrace an axiomatic rejection of law as the primary form of progress, their preferred form of activism presents the very risks they seek to avoid. The rejected "myth

of the law" is replaced by a "myth of activism" or a "myth of exit," romanticizing a distinct sphere that can better solve social conflict.

Yet these myths, like other myths, come complete with their own perpetual perils. The myth of exit exemplifies the myriad concerns of cooptation. For feminist agendas, for example, the separation of the world into distinct spheres of action has been a continuous impediment to meaningful reform. Efforts to create better possibilities for women to balance work and family responsibilities, including relaxing home work rules and supporting stay-at-home parents through federal child care legislation, have been couched in terms of support for individual choice and private decisionmaking. n173 Indeed, recent initiatives in federal child care legislation to support stay-at-home parents have been clouded by preconceptions of the separation of spheres and the need to make one-or-the-other life choices. Most importantly, the emergence of a sphere-oriented discourse abandons a critical perspective that distinguishes between valuing traditional gender-based characteristics and celebrating feminine difference in a universalist and essentialist manner. n174 [*975] Not surprisingly then, some feminist writers have responded to civil society revivalism with great skepticism, arguing that efforts to align feminine values and agendas with classic republican theory of civil society activism should be understood, at least in part, as a way of legitimizing historical social structures that subordinated women.

The feminist lesson on the law/exit pendulum reveals a broader pattern. In a classic example of cooptation, activists should be concerned about the infusion (or indeed confusion) of nonlegal strategies with conservative privatization agendas. Indeed, in significant social policy contexts, legal scholarship oriented toward the exploration of extralegal paths reinforces the exact narrative that it originally resisted - that the state cannot and should not be accountable for sustaining and improving the lifeworld of individuals in the twenty-first-century economy and that we must seek alternative ways to bring about social reform. Whether using the terminology of a path-dependent process, an inevitable downward spiral, a transnational prisoner's dilemma, or a global race to the bottom, current analyses often suggest a lack of control over the forces of new economic realities. Rather than countering the story of lack of control, pointing to the ongoing role of government and showing the contradictions between that which is being kept regulated and that which is privatized, alternative extralegal scholarship accepts these developments as natural and inevitable. Similar to the arguments developed in relation to the labor movement - in which focusing on a limited right to collective bargaining demobilized workers and stripped them of their voice, participation, and decisionmaking power - contemporary extralegal agendas are limited to very narrow and patterned sets of reforms.

A striking example has been the focus on welfare reform as the single frontier of economic redistribution without a connection being made between these reforms and social services in which the middle class has a strong interest, such as Social Security and Medicare. Similarly, on the legal pluralism frontier, when activists call for more corporate social responsibility, the initial expressions are those of broad demands for sustainable development and overall industry obligations for the social and environmental consequences of their activities. n176 The discourse, however, quickly becomes coopted by a shift to a narrow focus on charitable donations and corporate philanthropy or [*976] private reporting absent an institutionalized compliance structure. n177 Moreover, because of institutional limitations and crowding out effects possible in any type of reform agenda, the focus shifts to the benefits of corporate social responsibility to businesses, as marketing, recruit-ment, public relations, and "greenwashing" strategies. n178 Critics therefore become deeply cynical about the industry's real commitments to ethical conduct.

A similar process can be described with regard to the literature on globalization. Globalization scholarship often attempts to produce a unifying narrative and an image of unitary struggle when in fact such unity does not exist. Embodied in the aforementioned irony of a "global anti-globalization" movement, social reform activism that resides under the umbrella of global movements is greatly diverse, some of it highly conservative. An "anti-globalization" movement can be a defensive nationalist movement infused with xenophobia and protective ideologies. n179 In fact, during central instances of collective action, such as those in Seattle, Quebec, Puerto Alegre, and Genoa, competing and conflicting claims were frequently encompassed in the same protest. n180 Nevertheless, there is a tendency to celebrate and idealize these protests as united and world-altering.

Similarly, at the local level, grassroots politics often lack a clear agenda and are particularly ripe for cooptation resulting in far lesser achievements than what may have been expected by the groups involved. In a critical introduction to the law and organizing model, Professor Scott Cummings and Ingrid Eagly describe the ways in which new community-based approaches to progressive lawyering privilege grassroots activism over legal reform efforts and the facilitation of community mobilization over conventional lawyering. n181 After carefully unpacking the ways in which community lawyers embrace [*977] law and organizing, Professor Cummings and Eagly rightfully warn against "exaggerating the ineffectiveness of traditional legal interventions" and "closing off potential avenues for redress." n182 Significantly, the strategies embraced by new public interest lawyers have not been shown to produce effective change in communities, and certainly there has been no assurance that these strategies fare comparatively better than legal reform. Moreover, what are meant to be progressive projects of community action and community economic development frequently can have a hidden effect of excluding worse-off groups, such as migrant workers, because of the geographical scope and zoning restrictions of the project. n183 In the same way that the labor and corporate social responsibility movements have failed because of their embrace of a legal framework, the community economic development movement - so diverse in its ideological appeal yet so prominent since the early 1990s as a major approach to poverty relief - may bring about its own destruction by fracture and diffusion. n184

In all of these cases, **it is the act of engagement, not law, that holds the risks of cooptation** and the politics of compromise. It is not the particularities of lawyers as a professional group that create dependency. Rather, it is the dynamics between skilled, networked, and resourced components and those who need them that may submerge goals and create reliance.

It is not the particularities of the structural limitations of the judiciary that threaten to limit the progressive vision of social movements. Rather, it is the essential difficulties of implementing theory into practice. Life is simply messier than abstract ideals.

Cooptation analysis exposes the broad, general risk of assuming ownership over a rhetorical and conceptual framework of a movement for change. Subsequently, when, in practice, other factions in the political debate embrace the language and frame their projects in similar terms, groups experience a sense of loss of control or possession of "their" vision. In sum, in the contemporary context, **in the absence of a more programmatic and concrete vision of what alternative models of social reform activism need to achieve, the conclusions and rhetoric of the contemporary critical legal consciousness**** are appropriated by advocates representing a wide range of political commitments.**

Understood [*978] from this perspective, cooptation is not the result of the turn to a particular reform strategy. Rather, cooptation occurs when imagined ideals are left unchecked and seemingly progressive rhetoric is reproduced by a conservative agenda. Dominant interpretations such as privatization and market competitiveness come out ahead, whereas other values, such as group empowerment and redistributive justice, receive only symbolic recognition, and in turn serve to facilitate and stabilize the process. n185

Case

Surveillance doesn't fit the panoptic model- it fails to exert normalizing power

Yar 3 (Majid Yar, Professor of Applied Social Science at Lancaster University, Surveillance and Society, "Panoptic Power and the Pathologisation of Vision: Critical Reflections on the Foucauldian Thesis," full date not given, 2003, <http://www.surveillance-and-society.org/articles1%283%29/pathologisation.pdf/>)

A number of writers have pointed out that simply lifting the panoptic model of disciplinary power from the institutional frame of confinement in which Foucault theorised it may limit its straightforward applicability to surveillance in the wider social arena. Thus Norris and Armstrong (1999: 92) and McCahill (2001) point out that while Foucault's model depends upon an individual's state of permanent visibility, the visual surveillance effected via CCTV systems in public space does not allow such continuous monitoring. It also depends on an ability to identify and classify individuals, something that is much more difficult to do in respect of populations in an open setting (1999: 93 - 4) (much has been made of the linking of face recognition software to CCTV surveillance systems, but the evidence appears to suggest that it is chronically ineffective as an identification tool – see Meek, 2002; Huber, 2002; ACLU, 2002). Moreover, Norris and Armstrong note that in Foucault's schema the effectiveness of the Panopticon is linked to a whole host of disciplinary interventions, including drills that train the body, regimes that closely regulate schedules of activity, and swift interventions that punish deviations from the prescribed norm (1999: 92). Such a panoply of regulatory, instructive and corrective techniques of "normalisation" are simply not present in the surveillance and management of free populations in extra - carceral settings. Consequently, they suggest, those who draw "dystopian visions of CCTV" based upon the Foucauldian model of discipline may be somewhat overstating the case (1998: 7). Instead of engendering "conformity through internalised self control", CCTV may in fact pursue social control in a manner largely unconnected to "the Old Penology with its concerns on the diagnosis, intervention and treatment of the individual offender" (ibid). Thus, for example, they mention the conception of "actuarial justice" developed by Feeley and Simon (1994) that eschews corrective aspirations, takes crime and deviance for granted, and seeks technical means and measures to manage the threat they represent.

Counter-gazing can't be used to solve islamophobia- their solvency ev is in the context of African americans, this is bad for a few reasons.

Analysis that does not center black existence, including that which lists it on a chain of equivalents, is doomed to undermine politics of opposition.

Sexton 07 (Jared, Racial Profiling and the Societies of Control from "Warfare in the American Homeland: Policing and Prison in a Penal Democracy" edited by Joy James, Duke University Press, p. 212. Sexton is an associate professor of African American Studies and an associate professor of Film and Media Studies at the University of California, Irvine. They have a Ph.D from the University of California, Berkeley in Ethnic Studies /).

The good news, if it can be called that, is that this effort to repress a sustained examination of black positionality - "the position of the unthought" - will only undermine multiracial coalition as politics of opposition. Every analysis that attempts to account for the vicissitudes of racial

rule and the machinations of the racial state without centering black existence within its framework, which does not mean simply listing it among a chain of equivalents-is doomed, to miss what is essential about the situation, because what happens to blacks indicates the truth (rather than the totality) of the system, its social symptom, and all other positions can (only) be understood from this angle of vision.⁵ ! More important for present purposes, **every attempt to defend the rights and liberties of the latest victims of racial profiling will inevitably fail to make substantial gains insofar as it forfeits or sidelines the fate of blacks, the prototypical targets of this nefarious police practice and the juridical infrastructure built up around it. Without blacks on board, the only viable option** the only effective defense against the crossfire **will entail forging greater alliances with an antiblack civil society and capitulating further to the magnification of state power-a bid that carries its own indelible costs**, its own pains and pleasures.

Racial profiling cannot be understood free from its historical context on the plantation, with the oppression of African Americans. The aff fails because they render this concrete situation metaphorical.

Sexton 07 (Jared, Racial Profiling and the Societies of Control from "Warfare in the American Homeland: Policing and Prison in a Penal Democracy" edited by Joy James, Duke University Press, p. 200-02. Sexton is an associate professor of African American Studies and an associate professor of Film and Media Studies at the University of California, Irvine. They have a Ph.D from the University of California, Berkeley in Ethnic Studies // EMS).

In theory, everyone in the United States (and many outside its boundaries) is subject to these rules of engagement. Yet, as Ira Glasser, former director of the America Civil Liberties Union (ACLU), recently noted, **while the police could, say, randomly raid apartment buildings on the Upper West Side of Manhattan, and yield fruitful results, they clearly do not.** As he puts it, "They don't do it because most of the folks who live in those apartment buildings are white. They don't do it because if they tried to do it, the outrage would become so big, so fast that it would become politically impossible to sustain."¹² We might wonder who would be outraged at such operations and whose outrage would make a difference? At any rate, the verdict of his analysis is clear: On our highways, on our streets, in our airports, and at our customs checkpoints, skin color once again, irrespective of class, and without distinctions based on education or economic status, skin color once again is being used as a cause for USDICION, and a sufficient reason to violate people's rights. For blacks in particular the situation is acute. The most recent attack on Fourth Amendment protections followed immediately the Warren Court's "due process revolution," as inaugurated by its decisions in the Mapp (1961) and Miranda (1966) cases. This shift in judicial opinion in favor of criminal suspects and defendants, disproportionately black and characteristically depicted as such, was supposed by some to be the criminal-law equivalent to or extension of then recent civil law reforms. **The motion toward constitutional protections for blacks was,** then, taken to be a byproduct of the limited success of the Civil Rights Movement, but its broader implications were **rapidly conflated with the perceived threat of the radicalization of struggle dubbed "Black Power," which for the mainstream presented ominous criminal tendencies,** among other things. The idea that blacks could or should have both civil and criminal rights thus entered the furor of an emergent "law and order" political culture whose executive, legislative, and judicial wings all feverishly and collaboratively retrenched. **The legal history from Richard Nixon to Ronald Reagan to George W Bush from "war on crime" to "war on drugs" to "war on terror" -is alarmingly short.** **The liberal civil-rights legislation and judiciary review enjoyed a very brief and largely ineffective life. But the "revolution" in criminal rights never even got off the ground;** it never actually happened except in the collective paranoid fantasy of "white America." There is, finally, no golden age for blacks before the criminal law. Therefore, in our discussions of a so-called creeping fascism or nascent authoritarianism or rise of the police state, particularly in the wake of the Homeland Security and PATRIOT acts, **we might do better than trace its genealogy to the general warrant (or even the Executive Order), whose specter forever haunts the democratic experiment of postrevolutionary civil society. Instead, the proper object of investigation is the antebellum slave code and its antecedents in colonial statute, not because the trajectory of this legal**

history, threatens to undo the rights of all, but precisely because the prevailing libertarian impulse in the United States has so resourcefully and rendered the concrete situation in metaphoric terms. Under the force of this blacks, who were clearly in the but definitively not of it, were not only available to arbitrary search and seizure-the bane of the general warrant-but were, in the main, always already searched and seized. More to the point, they had, in the famous phrase, "no rights that a white man bound to respect," including the right to life. **The ethos of slavery-** in other words, the lasting ideological and affective matrix of the white supremacist project- **admits no legitimate black self-defense, recognizes no legitimate assertions of black self-possession, privacy, or autonomy.** A permanent state of theft, seizure, and abduction orders the affairs of the captive community and its progeny. **Structural vulnerability to appropriation, perpetual and involuntary openness, including all the wanton uses of the body** so finely detailed by scholars like Saidiya Hartman and Hortense Spillers, **should be understood as the paradigmatic conditions of black existence in the Americas, the defining characteristics of New World antiblackness.**¹⁴ In short, **the black, whether slave or "free," lives under the commandment of whites.** Is Policing blacks in the colonial and antebellum periods was, we recall, the prerogative of every white (they could assume the role or not) and was only later professionalized as the modern prison system emerged out of the ashes of Reconstruction.¹⁶ Without glossing the interceding history, suffice it to say that such policing was organized across the twentieth century at higher orders of magnitude by the political, economic, and social shifts attending the transition from welfare to warfare state. **"Racial profiling," then, is a young term, but the practice is centuries-old. In other words, the policing of blacks-whose repression has always been state sanctioned, even as it was rendered a private affair of "property management" - remains a central issue today; it has not recently emerged.** Amnesty International's public hearings on racial profiling, the stalled federal legislation termed "HR 1443," the ACLU'S "Driving while Black" campaign, and the problematic reworking of the issue of racial profiling after September 11 all unfold against the backdrop of this long history of "policing black people." **The effects of crude political pragmatism, legalistic single-mindedness, or historical myopia enable us to identify the unleashing of the police with the advent of the war on drugs, or the xenophobic panic around the New Immigration or the emergence of Homeland Security against the threat of terrorism.**

Surveillance doesn't generate panoptic power because the subjects do not evaluate their surveillance in their decision making

Yar 3 (Majid Yar, Professor of Applied Social Science at Lancaster University, Surveillance and Society, "Panoptic Power and the Pathologisation of Vision: Critical Reflections on the Foucauldian Thesis," full date not given, 2003, <http://www-surveillance-and-society.org/articles1%283%29/pathologisation.pdf/>)

The relationship between the visibility of surveillance (seeing that one is seen) and normalising - disciplining effects has not gone unremarked in surveillance studies. Indeed, the apparent lack of awareness on the part of the populace that an area is subject to CCTV surveillance has been mobilised as an explanatory resource to account for the lack of efficacy of CCTV schemes in initiatives aimed at reducing crime and/or other forms of undesirable ("anti - social") public behaviour. Thus, for example, Ditton (1999) (in a study of CCTV systems in Glasgow) claims that: "For CCTV cameras to reduce crime through deterrence people must, of course, be aware of them". He goes on to note that survey questionnaires in the CCTV area revealed that "only 33% of people questioned in the city centre three months after camera installation were aware that CCTV cameras were in place. This figure increased slightly to 41% 15 months after installation". There are two implications here: (1) that low levels of public awareness about the presence of

CCTV cameras accounted in part for the negligible deterrence effect, as revealed through the recorded crime figures, and that (2) conversely, if awareness were increased, the desired deterrence effect might become manifest. However, such a construction of the relationship between awareness of being surveilled and behavioural self - regulation rests on a misapprehension, insofar as “awareness” (of being seen, of one’s visibility to the cameras) is understood in too abstract and de - contextualised a sense. “Awareness” here is taken to be a piece of cognitive content, a knowing, that one either does or does not have. “Are you aware that this area is subject to CCTV surveillance?” is taken to be a question of the same kind as “are you aware that smoking causes cancer and heart disease?” or “are you aware that use of the motor car contributes to global warming?”. The latter two examples of awareness, which are now socially widespread, are notable for their profound lack of consequence in terms of people’s behaviour. The problem here is that “awareness of CCTV cameras” is understood as an empirical or cognitive matter – “seeing the cameras” is taken to be of a kind with “how many fingers am I holding up”. What this misses is that seeing, in terms of what is behaviourally meaningful, is in fact a social process, one in which we selectively attend to specific features of our environment in the course of managing our practical activities. What is rendered visible and invisible (what we “see” or “don’t see”, what we are “aware of” or “unaware of”, what we “take note of” or “ignore”) is part - and - parcel of the business of negotiating our way around the world of routine activities and mundane exigencies that comprise everyday life. This fundamental point can be briefly explicated through the reflections of Schutz and Garfinkel on the construction of everyday experience and activity, which together comprise what passes for us as “the real world”. Schutz’s phenomenological theory is based upon the idea that our stock of knowledge about the world comprises much more than “abstract” facts, it crucially includes the beliefs, expectations and rules we have immediately available for interpretation and action. Our knowledge of the world (what we take to be “real” and noteworthy) is based upon a socially shared system of typifications and relevances – whether or not an object is relevant (made “visible” for practical purposes) depends upon what kind of shared social practice individuals happen to be engaged in (Bernstein, 1979: 146 - 148). This insight is further developed in Garfinkel’s ethnomethodology. He shows that everyday activities proceed through repertoires that selectively attend to features of the world, such that what is visible amounts to the “visible - rational - and - reportable - for all - practical - purposes” (Garfinkel, 1984, vii) 4 . What, then, might be our “practical purposes” when we step out of the door into public settings? We habitually organise our selective structures of attention according to the mundane activities that make it possible for us to function as competent participants in everyday life – crossing the street, not colliding with other pedestrians, managing the interactional repertoires that enable us to fit - in (civility, politeness, maintaining a conversation, asking and answering questions) and successfully completing a range of seemingly unremarkable tasks (buying a loaf of bread, catching a bus, ordering a drink, getting from a - to - b). Consequently, what is visible for us, for the most part and most of the time, are the features of our environment that we are required to attend to as part of these routine activities. The presence of surveillance systems such as CCTV may well go unattended, comprising “seen but unnoticed” (for - practical - purposes) “expected background features” of social reality. Far from being in a state of “permanent and conscious visibility” vis - à - vis such surveillance apparatuses, we may take little note of them in terms of managing our activities (in ethnomethodological parlance, they do not typically constitute features of our world that are incorporated into the “reflexive monitoring of action” 5). Indeed, to put it bluntly, the social actor who spent all his time noticing and taking - notice - of cameras on rooftops, poles and elevated platforms would be well - nigh incapable of “doing” social life i.e. attending to and responding to all the immediately and

practically relevant human and material features of the environment. The individual who did conduct himself in such a manner might well find himself dismissed as the unfortunate victim of delusional paranoia. In other words, it is quite likely that while we may be “aware” of the presence of CCTV cameras in the first (empirical, cognitive sense), we often tend to take no practical cognisance of them as we go about our activities. If the logic of panoptic power is conditional upon the subjective awareness and sense-making activity of the individuals “subjected” to it, then it is by and large liable to have only limited impact in terms of the “normalisation” of their actions. 6

ANSWERS TO COUNTERGAZING

Islamophobia going down

Jacoby '10 (Jeff Jacoby, December 8th, boston.com, The ‘Islamophobia’ myth, http://www.boston.com/bostonglobe/editorial_opinion/oped/articles/2010/12/08/the_islamophobia_myth/, AZ)

Yet the story conceded frankly that “there’s no sign that violence against Muslims is on the rise” and that “Islamophobia in the US doesn’t approach levels seen in other countries.” In fact, as Time pointed out, while there may be the occasional confrontation over a Muslim construction project, “there are now 1,900 mosques in the US, up from about 1,200 in 2001.” Even after 9/11, in other words, and even as radical Islamists continue to target Americans, places of worship for Muslims in the United States have proliferated. And whenever naked anti-Islamic bigotry has appeared, “it has been denounced by many Christian, Jewish, and secular groups.” America is many things, but “Islamophobic” plainly isn’t one of them. As Time itself acknowledged: “Polls have shown that most Muslims feel safer and freer in the US than anywhere else in the Western world.” That sentiment is powerfully buttressed by the FBI’s newly released statistics on hate crimes in the United States. In 2009, according to data gathered from more than 14,000 law enforcement agencies nationwide, there were 1,376 hate crimes motivated by religious bias. Of those, just 9.3 percent — fewer than 1 in 10 — were committed against Muslims. By contrast, 70.1 percent were committed against Jews, 6.9 percent were aimed at Catholics or Protestants, and 8.6 percent targeted other religions. Hate crimes driven by anti-Muslim bigotry were outnumbered nearly 8 to 1 by anti-Semitic crimes. Year after year, American Jews are far more likely to be the victims of religious hate crime than members of any other group. That was true even in 2001, by far the worst year for anti-Muslim incidents, when 481 were reported — less than half of the 1,042 anti-Jewish crimes tabulated by the FBI the same year. Does all this mean that America is in reality a hotbed of anti-Semitism? Would Time’s cover have been closer to the mark if it had asked: “Is America Judeophobic?” Of course not. Even one hate crime is one too many, but in a nation of 300 million, all of the religious-based hate crimes added together amount to less than a drop in the bucket. This is not to minimize the 964 hate crimes perpetrated against Jews last year, or those carried out against Muslims (128), Catholics (55), or Protestants (40). Some of those attacks were especially shocking or destructive; all of them should be punished. But surely the most obvious takeaway from the FBI’s statistics is not that anti-religious hate crimes are so frequent in America. It is that they are so rare. In a column a few years back, I wrote that America has been for the Jews “a safe harbor virtually without parallel.” It has proved much the same for Muslims. Of course there is tension and

hostility sometimes. How could there not be, when America is at war with violent jihadists who have done so much harm in the name of Islam? But for American Muslims as for American Jews, the tension and hostility are the exception. America's exemplary tolerance is the rule.

Statistics show islamophobia is actually very low in the squo

Spencer 14 (December 17, 2014, Robert spencer, New FBI hate crime stats show yet again that claims about "Islamophobia" are false, <http://www.jihadwatch.org/2014/12/new-fbi-hate-crime-stats-show-yet-again-that-claims-about-islamophobia-are-false>, AZ)

New FBI hate crime stats show yet again that claims about "Islamophobia" are false DECEMBER 17, 2014 2:34 PM BY ROBERT SPENCER No violence or hatred directed at an innocent Muslim or non-Muslim is ever justified. The fact is that there is far less of it than Islamic supremacist groups and the mainstream media would have you believe. We heard it yet again not just after, but during the Sydney jihad hostage crisis: there would be a "backlash" against Muslims, a wave of Islamophobic hate crimes. There has not been, of course. Leftists and Islamic supremacists use the specter of "Islamophobic hate crime" to shut down honest discussion of how jihadists use the texts and teachings of Islam to justify violence and supremacism, and intimidate people into thinking that there is something wrong with resisting jihad terror. The FBI's newly released hate crime statistics for 2013 offer a fresh example of how reality refuses to conform to the dubious narrative of widespread Muslim victimization at the hands of American bigots. As in previous years, most hate crimes were not religiously motivated, most religiously motivated hate crimes were anti-Jewish, and Muslims suffered fewer total incidents than many groups and fewer per capita than gays or Jews. Anti-Islamic crimes did not involve greater violence than others and have not become more frequent. A glance at the details: Of the 5,928 incidents of hate crime tabulated in 2013, 135 (2.3 percent) were anti-Islamic, an increase of five over the prior year but still slightly below the annual average of 139 from 2002 to 2011. The small rise in recorded anti-Islamic incidents could be attributable to improved data collection rather than a true uptick. Reports submitted by law enforcement agencies covered a population of 295 million Americans in 2013, 18.6 percent higher than in 2012. There were 1,031 incidents inspired by religion last year, 625 (60.6 percent) of which were anti-Jewish. Anti-Islamic ones constituted just 13.1 percent. Anti-Islamic incidents were also outnumbered by those targeting blacks (1,856), whites (653), gay men (750), lesbians (160), LGBTs in general (277), Hispanics (331), and people of other ethnicities (324). Anti-Asian incidents (135) equaled anti-Islamic ones. Based on a 2013 estimate of 2.95 million Muslims derived from Pew's 2011 figure and typical growth of 100,000 per year, there were 4.6 anti-Islamic incidents per 100,000 Muslims in 2013, the same as 2012's rate and lower than the average of 6.0 per 100,000 for 2002-11. The 2013 rate for Muslims was less than half that for Jews (9.6 per 100,000 for a population of roughly 6.5 million) and homosexuals/bisexuals (11.0 per 100,000, assuming that they comprise 3.5 percent of the U.S. population). The rate for blacks was similar to that of Muslims (4.5 per 100,000 for a population of 41.6 million). Anti-Islamic hate crimes were no more violent than others in 2013. Of the 6,933 offenses spanning all hate crimes, 734 (10.6 percent) were aggravated assaults and 1,720 (24.8 percent) were simple assaults. The 165 anti-Islamic offenses mirrored this breakdown: 17 (10.3 percent) were aggravated assaults and 41 (24.8 percent) were simple assaults. Further, none of the five deaths in 2013 resulted from anti-Islamic hate crimes.

no islamophobia 2nc

Talks of islamophobia are just political rhetoric

Goldberg' 10 (August 24th, 2010, Jonah Goldberg, Loss Angeles Times,

Islamophobia? Not really, <http://articles.latimes.com/2010/aug/24/opinion/la-oe-0824-goldberg-islamophobia-20100824>, AZ)

In 2001, there were twice as many anti-Jewish incidents as there were anti-Muslim, again according to the FBI. In 2002 and pretty much every year since, anti-Jewish incidents have outstripped anti-Muslim ones by at least 6 to 1. Why aren't we talking about the anti-Jewish climate in America? Because there isn't one. And there isn't an anti-Muslim climate either. Yes, there's a lot of heated rhetoric on the Internet. Absolutely, some Americans don't like Muslims. But if you watch TV or movies or read, say, the op-ed page of the New York Times — never mind left-wing blogs — you'll hear much more open bigotry toward evangelical Christians (in blogspeak, the "Taliban wing of the Republican Party") than you will toward Muslims. No doubt some American Muslims — particularly young Muslim men with ties to the Middle East and South Asia — have been scrutinized at airports more than elderly women of Norwegian extraction, but does that really amount to Islamophobia, given the dangers and complexities of the war on terror? For 10 years we've been subjected to news stories about the Muslim backlash that's always around the corner. It didn't start with President Obama or with the "ground zero mosque." President George W. Bush was his most condescending when he explained, in the cadences of a guest reader at kindergarten story time, that "Islam is peace." But he was right to emphasize America's tolerance and to draw a sharp line between Muslim terrorists and their law-abiding co-religionists. Meanwhile, to listen to Obama — say in his famous Cairo address — you'd think America has been at war with Islam for 30 years and only now, thanks to him, can we heal the rift. It's an odd argument given that Americans have shed a lot of blood for Muslims over the last three decades: to end the slaughter of Muslims in the Balkans, to feed Somalis and to liberate Kuwaitis, Iraqis and Afghans. Millions of Muslims around the world would desperately like to move to the U.S., this supposed land of intolerance.

Islamophobia is low in the squo- the affs refusal to acknowledge terrorism fuels groups like ISIS and leaves people unable to act

Tobin '14 (Jonathan S. Tobin, September 11th, 2014, Contentions Defining Islam and the Islamophobia Myth, Commentary Magazine,

<https://www.commentarymagazine.com/2014/09/11/defining-islam-and-the-islamophobia-myth-isis/>, AZ)

President Obama was going down a well-worn path last night when in his speech about stopping ISIS, he claimed the terrorist group was "not Islamic." Like his predecessor George W. Bush, the

president feels impelled to define America's Islamist terrorist foes as somehow unrelated to the Muslim religion. The motives for this effort are utilitarian as well as idealistic but it comes with a cost, both in terms of our ability to wage an effective war against this enemy and the way these statements help fuel myths about American attitudes toward Muslims. As our Michael Rubin noted earlier today, it is not any president's job to define who is and who is not affiliated with a particular religion. ISIS may practice a form of Islam that we find repellent but to pretend that it has nothing to do with the Muslim religion or that its roots are not very much part of the Islamic tradition isn't a serious statement. Islam, like Christianity and Judaism, has many variations. But unfortunately, the violent and intolerant brand of Islamism that is championed by ISIS is not only not as much of an outlier as many Americans would like to pretend; in some ways its views are not dissimilar to other more mainstream sects such as the Wahhabi sect that dominates America's Saudi Arabian ally. The difference between the two lies mainly in Wahhabi clerics' loyalty to the House of Saud and the radicals' belief in overthrowing most Muslim regimes, not in any innate contrasts between their views of the non-Muslim world. In order to understand the strength of ISIS and its ability to rally the support or at least the sympathy of so many Muslims, it is necessary to understand its ability to appeal to those who believe Islam should dominate the world, just as it tried to in its heyday when Christian Europe was holding on for its life against a resurgent Muslim military tide. The intolerance it foments has its origins in a worldview that holds that the world must bow to Muslim sensibilities, even to the point of censoring Western expression about their faith. If it is to be defeated, it will have to be understood in the context of the history of the region and not by treating it as an alien outburst. Nevertheless, it is necessary for American leaders to be at pains to demonstrate that the U.S. has never and will never be at war with Islam, a faith that commands the allegiance of a billion people, most of whom are not interested in war with the West. It is also important for Americans not to consider the millions of loyal American Muslims as being somehow responsible for the behavior of ISIS, al-Qaeda, or any other Islamist terror group. But though both Bush and Obama have bent over backwards to avoid portraying the war against Islamist terror as having anything fundamental to do with Islam, their willingness to do so has given credence to those who have claimed that the opposite is true. The notion of a post-9/11 backlash against Muslims in America is a myth that has been repeatedly debunked, yet it continues to thrive and grow. For example, in today's Daily Beast, Dean Obeidallah claims "13 years after 9/11, anti-Muslim bigotry is worse than ever." What proof does he offer for this? Not much. There is a poll sponsored by the Arab-American Institute that shows that less than half of those surveyed have positive views of American Muslims and 42 percent support the use of profiling by law-enforcement agencies that would focus on Arabs and Muslims. These numbers may seem troubling. But the disconnect here is between what the poll rightly diagnoses as worries about homegrown terrorism committed by Muslims and in some cases supported by radical clerics and any actual evidence of discrimination or hate directed at Arabs or adherents of Islam. As I have repeatedly noted here, FBI hate-crime statistics for every year since 9/11 have repeatedly demonstrated the emptiness of claims of a backlash against Muslims. In each of the last 12 years, hate crimes against Jews have outnumbered those directed at Muslims. And despite the poll Obeidallah cites, there has never been a single credible study that was able to establish a consistent pattern of discrimination or systematic violence against Muslims. Even more incredibly, Obeidallah claims American popular culture has furthered the worst image of Muslims and refused to portray them positively. As anyone who has watched television or the movies in the last 13 years can attest, this is nonsense. Hollywood has gone out of its way in much the same way Bush and Obama have done to avoid stereotyping Arabs and Muslims. To the contrary, although some Muslims have been at war against the United States

during these years, popular films that portray Arabs and Muslims as typical enemies are few and far between. This avoidance is virtually unprecedented in the history of warfare and culture. Nor, despite Obeidallah's attempt to portray a few stray politicians who are worried about the spread of sharia law as mainstream, has there ever been any attempt by the U.S. government to harass Muslims. Though in an era during which al-Qaeda and now ISIS are doing their best to strike Western targets it is simply common sense to pay more attention to Muslims of Middle Eastern origin, police departments around the country have eschewed profiling. The same is true of the Transportation Security Agency, whose airport personnel go out of their way to scrutinize elderly grandmothers so as to avoid the impression that they are keeping an eye on the same group that produced the 9/11 hijackers. In the same spirit, law enforcement personnel have often been more interested in establishing good relations with radical clerics than in monitoring their activities. Discrimination against Muslims and Arabs is wrong. But those seeking to keep the myth of a backlash against them after 9/11 alive are pursuing an agenda that is not so much anti-bias as it is anti-awareness of the dangers of radical Islam. Pretending ISIS isn't Muslim won't help us defeat them. But by acting as if Americans are barbarians who would resort to violence if they knew the truth about ISIS, the president is playing along with the same false narrative that seeks to establish American Muslims as the true victims of 9/11. That sort of thinking is not only offensive; it breeds a mindset that has often undermined our ability to act decisively against those advocating violent Islam and led some young American Muslims to join ISIS and other terror groups. So long as we keep ourselves in ignorance about both ISIS and its sympathizers we will not only never defeat them, we will also be fomenting a terrible lie about American society.

2nc no panopticon

Even if we perceive surveillance, its panoptic power is as short lived as our consciousness of it

Yar 3 (Majid Yar, Professor of Applied Social Science at Lancaster University, Surveillance and Society, "Panoptic Power and the Pathologisation of Vision: Critical Reflections on the Foucauldian Thesis," full date not given, 2003, <http://www-surveillance-and-society.org/articles1%283%29/pathologisation.pdf>)/AG

There are (at least) two other possible responses to CCTV surveillance. (1) We momentarily take note of the cameras and become self-conscious about our behaviour under scrutiny, but then forget about its presence for all practical purposes as we immerse ourselves in more immediate exigencies. An example of this would be the conduct of participants in "reality TV" programmes of the "Big Brother" variety – despite being "aware" of a constant and unrelenting surveillance apparatus, what is remarkable about the participants' behaviour is that they quickly lapse into thoroughly mundane and regularised social activities (eating, sleeping, using the bathroom, scratching, yawning, aimlessly chatting, etc.). (2) That the presence of CCTV surveillance systems impinges upon our consciousness only if/when they do become practically relevant i.e. after the normal order of routine activity and interaction in public settings breaks down. In other words, the cameras might be visible - for - all - practical - purposes in specific interactional contexts and social scenarios where attention to them is required. Both these limited spheres of cognisance would, however, be local exceptions to a generalised invisibility.

T

A. *Substantially requires at least a 2% reduction --- this is the smallest percentage we could find*

Word and Phrases 1960

"Substantial" means "of real worth and importance; of considerable value; valuable." Bequest to charitable institution, **making 1/48 of expenditures in state**, held exempt from taxation; **such expenditures constituting "substantial" part of its activities.** Tax Commission of Ohio v. American Humane Education Soc., 181 N.E. 557, 42 Ohio App.

B. *Plan violates*

American Muslim Population is only .8%

Walen 14 (Andrew Walen, "Muslim Population in US: New Poll Shows None of Us Have Any Idea", iDigital Times, 11/3/14, <http://www.idigitaltimes.com/muslim-population-us-new-poll-shows-none-us-have-any-idea-392930>, 7/31/15 AV)

According to the new poll, US citizens guessed the Muslim population of the US to be about 15 percent when asked "Out of every 100 people, how many do you think are Muslim?" This would mean that the US has 47.4 million Muslims. The reality is quite different, with current research putting **the percentage of Muslims in the United States at about .8 percent of the population**, with an estimated 2.6 million Muslims in the US as of 2010. Even higher estimates find that there are between five and eight million Muslims in the entire country.

C. *THE AFFIRMATIVE INTERPRETATION IS BAD FOR DEBATE*

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. Permitting minor changes like the plan permits a huge number of cases.

D. *T IS A VOTER because the opportunity to prepare promotes better debating, education and fairness.*

K

Democracy is inherently tied to capitalist expansion. Those stuck within this thought process are called "democratic fundamentalists" and creates a false binary of either being a fundamentalist or democratic that is premised on the continued expansion and support of this system

Jodi **Dean 2004**, political theorist, author of several books including "Democracy and Other Liberal Fantasies" (2009), gives lectures throughout various countries including the US, Denmark, England, China, and Canada, "Zizek Against Democracy"//MMWang

In this article, I take up Slavoj Zizek's critical interrogation of democracy. I specify and defend Zizek's position as an alternative left politics, indeed, as that position most attuned to the loss of the political today. Whereas liberal and pragmatic approaches to politics and political theory accept the diminishment of political aspirations as realistic accommodation to the complexities of late capitalist societies as well as preferable to the dangers of totalitarianism accompanying Marxist and revolutionary theories, Zizek's psychoanalytic philosophy confronts directly the trap involved in acquiescence to a diminished political field, that is to say, to a political field constituted through the exclusion of the economy: within the ideological matrix of liberal democracy, any move against nationalism, fundamentalist, or ethnic violence ends up reinforcing Capital and guaranteeing democracy's failure. Arguing that formal democracy is irrevocably and necessarily "stained" by a particular content that conditions and limits its universalizability, he challenges his readers to relinquish our attachment to democracy: if we know that the procedures and institutions of constitutional democracies privilege the wealthy and exclude the poor, if we know that efforts toward inclusion remain tied to national boundaries, thereby disenfranchising yet again those impacted by certain national decisions and policies, and if we know that the expansion and

intensification of networked communications that was supposed to enhance democratic participation serves primarily to integrate and consolidate communicative capitalism, why do we present our political hopes as aspirations to democracy, rather than something else? Why in the face of democracy's obvious inability to represent justice in the social field that has emerged in the incompatibility between the globalized economy and welfare states to displace the political, do critical left political and cultural theorists continue to emphasize a set of arrangements that can be filled in, substantiated, by fundamentalisms, nationalisms, populisms, and conservatism diametrically opposed to progressive visions of social and economic equality? The answer is that **democracy is the form our attachment to Capital takes.** Faithful to democracy, **we eschew the demanding task of politicizing the economy and envisioning a different political order.** R-r-really R-r-radical Some theorists construe Zizek as an intellectual bad boy trying to out-radicalize those he dismisses as deconstructionists, multiculturalists, Spinozans, and Leftist scoundrels and dwarves. Ernesto Laclau, in the dialogue with Zizek and Judith Butler, refers scornfully to the "naïve self-complacency" of one of Zizek's "r-r-revolutionary" passages: "Zizek had told us that he wanted to overthrow capitalism; now we are served notice that he also wants to do away with liberal democratic regimes." Although Laclau implies that Zizek's anti-democratic stance is something new, skepticism toward democracy has actually long been a crucial component of Zizek's project. It is not, therefore, simply a radical gesture. In a number of his early books published in English, Zizek voices a sense of betrayal at the bait and switch occurring in Eastern Europe when they "went for" democracy and got capitalism and nationalism instead. For example, in *For They Know Not What They Do*, his first book written after the collapse of "actually existing socialism," Zizek wonders if the Left is "condemned to pledge all its forces to the victory of democracy?" He notes that in the initial days of communism's disintegration in Eastern Europe, the democratic project breathed with new life. **Democracy held out promises of hope and freedom, of arrangements that would enable people to determine collectively the rules and practices through which they would live their lives.** But instead of collective governance in the common interest, **people in the new democracies got rule by capital. Their political choices became constrained within and determined by the neoliberal market logics of globalized capitalism** already dominating Western Europe, Great Britain, and the United States. What emerged after the communists were gone was the combination of neoliberal capitalism and nationalist fundamentalism, a "scoundrel time" when capitalism appears as democracy and democracy as and through capitalism. Is this what the Left is doomed to defend? That **skepticism toward democracy is not a recent radical gesture but a central element in Zizek's thinking is also clear in the fact that one of his most fundamental theoretical insights concerns the constitutive non-universalizability of liberal democracy.** Thus, in *The Sublime Object of Ideology*, written before the collapse of communism, Zizek refers to the universal notion of democracy as a "necessary fiction." Adopting Hegel's insight that the Universal "can realize itself only in impure, deformed, corrupted forms," he emphasizes the impossibility of grasping the Universal as an intact purity. In all his work thereafter, Zizek struggles with the relation between democracy and universality, concerned with the way that contemporary adherence to democracy prevents the universalizing move proper to politics. Finally, in his recent work, **Zizek names the limit to current thinking "democratic fundamentalism."** One should read the term in two ways. First, **democratic fundamentalism refers to the connection between liberal democracy and ethnic/religious fundamentalism.** Rather than two opposing forces in an ideological battle (as presented in mainstream U.S. media and politics), **liberal democracy and fundamentalism are two components of the current ideological formation.** Fundamentalism is not the preservation of authentic traditions against forces of modernization. Rather, it **is the postmodern appropriation of cultural forms in the context of global capital.** Likewise, **liberal democracy is not an alternative to fundamentalism; indeed, it is laced through with fundamentalisms.** **The choice liberal democracy sets up—fundamentalism or democracy—is thus false; not only is it premised on the hegemony of democracy but it disavows its own relationship to fundamentalism.** Indeed, the false choice is one of the ways that liberal democracy attempts to ensure that "nothing will really happen in politics," that everything (global capital) will go as before.

Human rights are tied to neoliberalism – they require the use of economic resources based on democracy, economic welfare, and trade. The history of capitalism to neoliberalism cannot be separated from that of human rights

Samuel **Moyn** 2014, professor of law and history at Harvard University, "A Powerless Companion: Human Rights in the Age of Neoliberalism," pgs 147-149/MMWang

It is increasingly common to claim that international **human rights law is a neoliberal phenomenon**. And certainly the common timing is right: **the human rights revolution and the victory of market fundamentalism have been simultaneous**. In an important new essay, Marxist international lawyer Susan Marks compares Naomi Klein's *The Shock Doctrine* with my own recent history of international human rights, which emphasizes the 1970s as the moment of breakthrough for their ascent. Both histories, Marks observes, ascribe the newfound visibility of human rights to their promise to transcend formerly attractive political options east and west that seemed inadequate or even dangerous.¹ "For her too," Marks acknowledges of Klein's treatment, **"the human rights movement as we know it today took shape during the 1970s. And for her too, a defining characteristic of the new movement was its non-political creed."**² But for Marks, **Klein succeeds by unveiling the neoliberal circumstances of human rights that have permanently defined their trajectory**: [S]he considers that a rather important aspect of the context for the movement's emergence is one Moyn omits to mention: **the rise in that period of the neo-liberal version of 'private' capitalism, with its now familiar policy prescription of privatisation, deregulation and state retreat from social provision**. To its influential enthusiasts then and now, that is the last utopia. . . . From Klein's perspective, **then, the history of human rights cannot be told in isolation from developments in the history of capitalism**.³ (At this point Marks notes that Milton Friedman won the Nobel prize for economics in 1976, the year before Amnesty International was given the Nobel peace prize.)⁴ Friedrich Hayek, the guru of neoliberalism, was as impressed a witness of the human rights revolution of the 1970s as anyone else. But it is interesting that, although occasionally an advocate of the constitutionalization of basic liberties like freedom of speech and press, he was in fact an acerbic critic of that revolution. In an interview, he described the spike in talk around human rights associated with Jimmy Carter's election to the American presidency as a strange fad, which (like all fashions) risked excess: "I'm not sure whether it's an invention of the present administration or whether it's of an older date, but I suppose if you told an eighteen year old that human rights is a new discovery he wouldn't believe it. He would have thought the United States for 200 years has been committed to human rights, which of course would be absurd. The United States discovered human rights two years ago or five years ago. Suddenly it's the main object and leads to a degree of interference with the policy of other countries which, even if I sympathized with the general aim, I don't think it's in the least justified. . . . But it's a dominating belief in the United States now."⁴ All the same, since that moment of modish popularity, **the staying power of human rights has led to many more positive visions of the essential harmony—if not identity—of economic liberalism and international human rights**. The Marxist left, indeed, is hardly the only source of claims concerning the synergetic relationship between the advancement of market freedoms and human rights.⁵ If anything, **it is much more common to promote neoliberalism as an agent of the advancement of human rights rather than to link them as malign accomplices**. Perhaps most notably, Ernst-Ulrich Petersmann argues that, although human rights law may exact some costs to efficiency, **the general relationship between economic liberty and human rights is productive and strong, so much so that promoting the former and latter are not very different enterprises**.⁶ He writes: **"[E]njoyment of human rights require[s] the use of dispersed information and economic resources that can be supplied most efficiently, and most democratically, through the division of labour among free citizens and through liberal trade promoting economic welfare, the freedom of choice and the free flow of scarce goods, services, and information across frontiers in response to supply and demand by citizens."**⁷ There is, accordingly, little daylight between economic liberalization and the promotion of international human rights. And though Petersmann's optimism about near identity has certainly drawn their fire, **mainstream international human rights lawyers generally envision a large zone of compatibility between their norms and standard market arrangements**; they merely insist that the values of international human rights need to be kept separate so as to provide critical purchase on "globalization" if and when it goes wrong.⁸ In the mainstream vision, international human rights can offer a toolbox of legal and other standards to guide, tame, and "civilize" an era of transnational market liberalization that has generally improved the human condition.

Neoliberalism is producing accelerating inequality, environmental destruction, and conflict in the squo – statistics showing the world is getting better only illustrate the positive impact of Latin American and Chinese resistance to the neoliberal model

Milne 15

(Seumus Milne, Guardian columnist and associate editor, "The Davos oligarchs are right to fear the world they've made," 22 January 2015, <http://www.theguardian.com/commentisfree/2015/jan/22/davos-oligarchs-fear-inequality-global-elite-resist>)

The scale of the crisis has been laid out for them by the charity Oxfam. **Just 80 individuals** now **have the same net wealth as** 3.5 billion people – **half the** entire **global population**. Last year, the best-off 1% owned 48% of the world's wealth, up from 44% five years ago. **On current trends, the richest 1% will have pocketed more than the other 99% put together next year**. The 0.1% have been doing even better, quadrupling their share of US income since the 1980s.¶ This is a wealth grab on a grotesque scale. **For 30 years, under** the rule of what Mark Carney, the Bank of England governor, calls **“market fundamentalism”, inequality in income and wealth has ballooned both between and within the large majority of countries**. **In Africa, the absolute number living on less than \$2 a day has doubled** since 1981 as the rollcall of billionaires has swelled.¶ In most of the world, **labour's share of national income has fallen continuously and wages have stagnated under this regime of privatisation, deregulation and low taxes on the rich**. At the same time **finance has sucked wealth from the public realm into the hands of a small minority**, even as it has laid waste the rest of the economy. Now the **evidence has piled up that** not only is **such appropriation of wealth** a moral and social outrage, but it **is fuelling social and climate conflict, wars, mass migration and political corruption, stunting health and life chances, increasing poverty, and widening gender and ethnic divides**.¶ **Escalating inequality has also been a crucial factor in the economic crisis** of the past seven years, squeezing demand and fuelling the credit boom. We don't just know that from the research of the French economist Thomas Piketty or the British authors of the social study *The Spirit Level*. After years of promoting Washington orthodoxy, even the western-dominated OECD and IMF argue that the **widening income and wealth gap has been key to the slow growth** of the past two neoliberal decades. **The British economy would have been almost 10% larger if inequality hadn't mushroomed**. Now **the richest are using austerity to help themselves to an even larger share** of the cake.¶ **The big exception** to the tide of inequality in recent years **has been Latin America**. **Progressive governments across the region turned their back on a disastrous economic model, took back resources from corporate control and slashed inequality**. **The numbers living on less than \$2 a day have fallen from 108 million to 53 million** in little over a decade. **China**, which also rejected much of the neoliberal catechism, **has seen sharply rising inequality at home but also lifted more people out of poverty than the rest of the world combined, offsetting the growing global income gap**.¶ **These two cases underline that increasing inequality and poverty are very far from inevitable. They're the result of political and economic decisions**. The thinking person's Davos oligarch realises that allowing things to carry on as they are is dangerous. So some want a more “inclusive capitalism” – including more progressive taxes – to save the system from itself.¶ But it certainly won't come about as a result of Swiss mountain musings or anxious Guildhall lunches. Whatever the feelings of some corporate barons, **vested corporate and elite interests** – including the organisations they run and the political structures they have colonised – **have shown they will fight even modest reforms tooth and nail**. To get the idea, you only have to listen to the squeals of protest, including from some in his own party, at Ed Miliband's plans to tax homes worth over £2m to fund the health service, or the demand from the one-time reformist Fabian Society that the Labour leader be more pro-business (for which read pro-corporate), or the wall of congressional resistance to Barack Obama's mild redistributive taxation proposals.¶ **Perhaps a section of the worried elite might be prepared to pay a bit more tax. What they won't accept is any change in the balance of social power** – which is why, in one country after another, they resist any attempt to strengthen trade unions, even though weaker unions have been a crucial factor in the rise of inequality in the industrialised world.¶ **It's only through a challenge to the entrenched interests that have dined off a dysfunctional economic order that the tide of inequality will be reversed**. **The anti-austerity Syriza party**, favourite to win the Greek elections this weekend, **is attempting to do just that – as the Latin American left has succeeded in doing over the past decade and a half. Even to get to that point demands stronger social and political movements to break down** or bypass **the blockage in a colonised political mainstream**. Crocodile tears about inequality are a symptom of a fearful elite. **But change will only come from unrelenting social pressure and political challenge**.

The impact is extinction – neoliberal social organization ensures extinction from resource wars, climate change, and structural violence – only accelerating beyond neoliberalism can resolve its impacts

Williams & Srnicek 13

(Alex, PhD student at the University of East London, presently at work on a thesis entitled 'Hegemony and Complexity', Nick, PhD candidate in International Relations at the London School of Economics, Co-authors of the forthcoming Folk Politics, 14 May 2013, <http://criticallegalthinking.com/2013/05/14/accelerate-manifesto-for-an-accelerationist-politics/>)

At the begin-ning of the second dec-ade of the Twenty-First Cen-tury, **global civilization faces a new breed of cataclysm**. These com-ing apo-ca-lypses ridicule the norms and organ-isa-tional struc-tures of the polit-ics which were forged in the birth of the nation-state, the rise of cap-it-al-ism, and a Twen-ti-eth Cen-tury of unpre-ced-en-ted wars. 2. **Most significant is the break-down of the planetary climatic system**. In time, **this threatens the continued existence of the** present global **human population**. Though this is the most crit-ical of the threats which face human-ity, **a series of** lesser but **potentially equally destabilising problems exist along-side** and inter-sect with **it**. **Terminal resource depletion, especially in water and energy reserves, offers the prospect of mass starvation, collapsing economic paradigms, and new hot and cold wars**. **Continued financial crisis has led governments to embrace the** para-lyz-ing **death spiral policies of austerity, privatisation of social welfare services, mass unemployment, and stagnating wages**. **Increasing automation in production processes** includ-ing 'intel-ec-tual labour' **is evidence of the secular crisis of capitalism, soon to render it incapable of maintaining current standards of living** for even the former middle classes of the global north. 3. In con-trast to these ever-accelerating cata-strophes, **today's politics is beset by an inability to generate the** new ideas and **modes of organisation necessary to transform our societies to confront** and resolve the **coming annihilations**. While crisis gath-ers force and speed, polit-ics with-ers and retreats. In this para-lysis of the polit-ical ima-gin-ary, the future has been cancelled. 4. Since 1979, **the hegemonic global political ideology has been neoliberalism**, found in some vari-ant through-out the lead-ing eco-nomic powers. In spite of the deep struc-tural chal-lenges the new global prob-lems present to it, most imme-di-ately the credit, fin-an-cial, and fiscal crises **since 2007 – 8, neoliberal programmes have** only **evolved** in the sense of deep-en-ing. **This continuation** of the neo-lib-eral pro-ject, or neo-lib-er-al-ism 2.0, **has begun to apply another round of structural adjustments**, most sig-ni-fic-antly in the form of encour-aging new and aggres-sive incur-sions by the private sec-tor into what remains of social demo-cratic insti-tu-tions and ser-vices. **This is in spite of the immediately negative** eco-nomic and social **effects of such policies**, and the longer term fun-da-mental bar-ri-ers posed by the new global crises.

The alternative articulates a “counter-conduct” – voting neg pushes towards a cooperative conduct that organizes individuals around a collectively shared commons – affirming this conduct creates a new heuristic that de-couples government from the demand for competition and production

Dardot & Laval 13

(Pierre Dardot, philosopher and specialist in Hegel and Marx, Christian Laval, professor of sociology at the Universite Paris Ouest Nanterre La Defense, *The New Way of the World: On Neoliberal Society*, pgs. 318-321)

This indicates to what extent we must take on board in our own way the main lesson of neo-liberalism: **the subject is always to be constructed**. **The whole question is then how to articulate subjectivation with resistance to power**. Now, precisely this issue is at the heart of all of Foucault's thought. However, as Jeffrey T. Nealon has recently shown, part of the North American secondary literature has, on the contrary, stressed the alleged break between Foucault's research on power and that of his last period on the history of subjectivity.⁵⁵ According to the 'Foucault consensus', as Nealon aptly dubs it, the successive impasses of the initial neo-structuralism, and then of the totalizing analysis of panoptical power, led the 'last Foucault' to set aside the issue of power and concern himself exclusively with the aesthetic invention of a style of existence bereft of any political dimension. Furthermore, if we follow this de-politicizing reading of Foucault, the aestheticization of ethics anticipated the neo-liberal mutation precisely by making self-invention a new norm. In reality, far from being oblivious of one another, the issues of power and the subject were always closely articulated, even in the last work on modes of subjectivation. If one concept played a decisive role in this respect, it was 'counter-conduct', as developed in the lecture of 1 March 1978.⁵⁶ This lecture was largely focused on the crisis of the pastorate. It involved identifying the specificity of the 'revolts' or **'forms of resistance of conduct'** that are the correlate of the pastoral mode of power. If such forms of resistance are said to be 'of conduct', it is because they are forms of resistance to power as conduct and, as such, **are themselves forms of conduct opposed to this 'power-conduct'**. **The term 'conduct' in fact admits of two meanings: an activity that consists in conducting others, or 'conduction'; and the way one conducts oneself under the influence of this activity of conduction.**⁵⁷ **The idea of 'counter-conduct' therefore has the advantage of directly signifying a 'struggle against the procedures implemented for conducting others', unlike the term 'misconduct', which only refers to the passive sense of the word.**⁵⁸ **Through 'counter-conduct', people seek both to escape conduction by others and to define a way of conducting themselves towards others.**⁵⁹ **What relevance might this observation have for a reflection on resistance to neo-liberal governmentality?** It will be said that the concept is introduced in the context of an analysis of the pastorate, not government. **Governmentality**, at least **in its** specifically **neo-liberal form**, precisely **makes conducting others through their conduct towards themselves its real goal**. **The peculiarity of this conduct towards oneself, conducting oneself as a personal enterprise, is that it immediately and directly induces a certain conduct towards others: competition with others**, regarded as so many personal enterprises. Consequently, counter-conduct as a form of resistance to this governmentality must correspond to a conduct that is indivisibly a conduct towards oneself and a conduct towards others. One cannot struggle against such an indirect mode of conduction by appealing for rebellion against an authority that supposedly operates through compulsion external to individuals. If 'politics is nothing more and nothing less than that which is born with resistance to governmentality, the first revolt, the first confrontation',⁵⁹ it means that ethics and politics are absolutely inseparable.⁶⁰ To the subjectivation-subjection represented by ultra-subjection, we must oppose a subjectivation by forms of counter-conduct. **To neo-liberal governmentality as a specific way of conducting the conduct of others, we must therefore oppose a no less specific double refusal: a refusal to conduct oneself towards oneself as a personal enterprise and a refusal to conduct oneself towards others in accordance with the norm of competition**. As such, the double refusal is not 'passive disobedience'.⁶⁰ For, **if it is true that the personal enterprise's relationship to the self immediately and directly determines a certain kind of relationship to others – generalized competition – conversely, the refusal to function as a personal enterprise, which is self-distance and a refusal to line up in the race for performance, can only practically occur on condition of establishing cooperative relations with others, sharing and pooling**. In fact, **where would be the sense in a self-distance severed from any cooperative practice?** At worst, a cynicism tinged with contempt for those who are dupes. At best, simulation or double dealing, possibly dictated by a wholly justified concern for self-preservation, but ultimately exhausting for the subject. Certainly not a counter-conduct. All the more so in that **such a game could lead the subject, for want of anything better, to take refuge in a compensatory identity**, which at least has the advantage of some stability by contrast with the imperative of indefinite self-transcendence. **Far from threatening the neo-liberal order, fixation with identity, whatever its nature, looks like a fall-back position for subjects weary of themselves**, for all those who have abandoned the race or been excluded from it from the outset. **Worse, it recreates the logic of competition at the**

level of relations between 'little communities'. Far from being valuable in itself, independently of any articulation with politics, **individual subjectivation is bound up at its very core with collective subjectivation**. In this sense, sheer aestheticization of ethics is a pure and simple abandonment of a genuinely ethical attitude. **The invention of new forms of existence can only be a collective act, attributable to the multiplication and intensification of cooperative counter-conduct**. A collective refusal to 'work more', if only local, is a good example of an attitude that can pave the way for such forms of counter-conduct. In effect, it breaks what André Gorz quite rightly called the 'structural complicity' that binds the worker to capital, in as much as 'earning money', ever more money, is the decisive goal for both. It makes an initial breach in the 'immanent constraint of the "ever more", "ever more rapidly"'.⁶¹ **The genealogy of neo-liberalism attempted in this book teaches us that the new global rationality is in no wise an inevitable fate shackling humanity**. Unlike Hegelian Reason, it is not the reason of human history. **It is itself wholly historical** – that is, **relative to strictly singular conditions that cannot legitimately be regarded as untranscendable**. The main thing is to understand that nothing can release us from the task of promoting a different rationality. That is why the belief that the financial crisis by itself sounds the death-knell of neo-liberal capitalism is the worst of beliefs. It is possibly a source of pleasure to those who think they are witnessing reality running ahead of their desires, without them having to move their little finger. It certainly comforts those for whom it is an opportunity to celebrate their own past 'clairvoyance'. At bottom, it is the least acceptable form of intellectual and political abdication. Neo-liberalism is not falling like a 'ripe fruit' on account of its internal contradictions; and traders will not be its undreamed-of 'gravediggers' despite themselves. Marx had already made the point powerfully: 'History does nothing'.⁶² **There are only human beings who act in given conditions and seek through their action to open up a future for themselves. It is up to us to enable a new sense of possibility** to blaze a trail. The **government** of human beings **can be aligned with horizons other than those of maximizing performance, unlimited production and generalized control. It can sustain itself with self-government that opens onto different relations with others than that of competition between 'self-enterprising actors'**. The **practices of 'communization' of knowledge, mutual aid and cooperative work can delineate the features of a different world reason. Such an alternative reason cannot be better designated than by the term reason of the commons**.

MOSQUES EXCLUDED FROM SURVEILLANCE

John Careccia 13, Islamic Mosques: Excluded From Surveillance By Feds, 6-17-2013, Western Journalism, <http://www.westernjournalism.com/islamic-mosques-excluded-from-surveillance-by-feds/>

Since October 2011, mosques have been off-limits to FBI agents. Surveillance or undercover sting operations are not allowed without high-level approval from a special oversight body at the Justice Department dubbed the Sensitive Operations Review Committee (SORC). Who makes up this body, and under what methodology do they review requests – nobody knows. The names of the chairman, members and staff are kept secret. Why is it necessary to keep the names and titles of the people who decide whether or not to protect the rest of the country from radical Muslims, secret? **We do know the panel was set up under pressure from Islamist groups who complained about FBI stings at mosques. Just months before the panel's formation, the Council on American-Islamic Relations (CAIR) teamed up with the ACLU to sue the FBI for allegedly violating the civil rights of Muslims in Los Angeles by hiring an undercover agent to infiltrate and monitor mosques in America's second largest city.**

Another defeat for the politically correct imbeciles in our government. Before mosques were excluded from the otherwise wide domestic spy net the administration has cast, the FBI launched dozens of successful sting operations against homegrown radicals inside mosques, and disrupted dozens of plots against innocent American citizens across the United States.

No NYPD surveillance – society is making progressive steps

CBS 14 (CBS New York, “End of NYPD Muslim Surveillance Program Applauded”, CBS New York, April 16, 2014, <http://newyork.cbslocal.com/2014/04/16/end-of-nypd-muslim-surveillance-program-applauded/>, 7/30/15 AV)

NEW YORK (CBSNewYork/AP) — **Muslim groups and civil liberties advocates applauded the decision by NYPD officials to disband a controversial unit that tracked the daily lives of Muslims** as part of efforts to detect terrorism threats, but they said there were concerns about whether other problematic practices remained in place. **The NYPD said Tuesday it had disbanded the surveillance program and that detectives assigned to the unit had been transferred to other duties within the division.** An ongoing review of the Demographics Unit by Police Commissioner Bill Bratton found that the same information collected by the unit could be better collected through direct contact with community groups, officials said. **This reform is a critical step forward in easing tensions between the police and the communities they serve, so that our cops and our citizens can help one another go after the real bad guys,** Mayor Bill de Blasio said in a statement. The Demographics Unit was created 18 months after the 9/11 terror attacks. The program, conceived with the help of a CIA agent working with the NYPD, assembled databases on where Muslims lived, shopped, worked and prayed. Plainclothes officers infiltrated Muslim student groups, put informants in mosques, monitored sermons and cataloged Muslims in New York who adopted new, Americanized surnames. Linda Sarsour, the executive director of the Arab American Association of New York, applauded the decision but said there’s still concern about the police use of informants to infiltrate mosques without specific evidence of crime. “This was definitely a part of the big puzzle that we’re trying to get dismantled,” Sarsour said. But, she added, “This doesn’t necessarily prove to us yet that these very problematic practices are going to end.” Others also voiced concerns and said they want more assurances that the NYPD is ending the practice. “It’s a good step, but I think what we need to do now is build bridges between the NYPD and law enforcement authorities in general,” Ibrahim Hooper, spokesman for the Council on American-Islamic Relations. “We’re, of course, concerned that some of the functions might just be carried out by different parts of the NYPD,” said Glenn Katon, legal director for Muslim Advocates. New York Civil Liberties Union Executive Director Donna Lieberman said police-community relations took a blow from the NYPD unit’s broad surveillance of all Muslims, not just people suspected of wrongdoing. “The NYPD’s disbanding of a unit that targeted New York Muslims and mapped their everyday institutions and activities is a welcome first step for which we commend Commissioner Bratton,” said Lieberman. “We hope that the Demographics Unit’s discriminatory activities will not be carried out by other parts of the NYPD.” Former Police Commissioner Ray Kelly defended the surveillance tactics, saying officers observed legal guidelines while attempting to create an early warning system for terrorism. But in a deposition made public in 2012, an NYPD chief testified that the unit’s work had never generated a lead or triggered a terrorism investigation in the previous six years. In Washington, 34 members of Congress had demanded a federal investigation into the NYPD’s actions. Attorney General Eric Holder said he was disturbed by reports about the operations and the Department of Justice said it was reviewing complaints received from Muslims and their supporters. **While campaigning for office last fall, de Blasio said he would end broad spying on Muslims. He said on his watch, NYPD surveillance tactics would only be authorized to follow up on specific leads and that the police force would be under the supervision of a new inspector general.** Former federal prosecutor Philip Eure was named to the inspector general position last month. Bratton also met last week with Muslim community leaders to work on improved relations.

Islamophobia

Alt causes to Islamophobia – affirmative’s plan can’t solve

Eve Loren **Goldstein 15**, Psychiatrist, AllAboutCounseling, <http://www.allaboutcounseling.com/library/islamophobia/>

The leading cause for Islamophobia is usually misinformation or total lack of information based on the religion. Unfortunately, Islamophobic people are not likely to be willing to educate themselves about their fears or spend time around any Islamic people. This feeling is somewhat understandable, as they do claim to be physically afraid of the Islamic people, but **this attitude will likely lead to a worsening of their fear and not provide any situation for positive change.**

Islamophobia can not only hold you back in your life, it can also hold back others around you. This condition **is not only an extreme or irrational fear of people following the Islamic beliefs, it is usually coupled with a hatred of their religion**. As a result, it leads to an unfair demeanor towards someone's right for a personal choice. **This phobia is generally construed as a form of prejudice towards other religions and has recently become a relatively significant issue in our society**. Making the effort for change will make a huge difference in your personal life, usually resulting in a more calm and collected composure in previously perceived stressful situations. If you are ready to make this positive change, on both a personal and social level, do some preliminary Internet research to find the best treatment options available locally to you.

The aff's own Srinagar 12 card states "Muslims are represented in the media, though primarily in political cartoons, irreverent statements" – this proves alternate causes to Islamophobia that the aff cannot counteract within society – curtailing religious surveillance does not stop the media or political cartoons

No online islamophobia solvency

Spence 14 (Duncan Spence, "Why online Islamophobia is difficult to stop", CBC News, 11/1/14, Duncan Spence is an author for CBC News, <http://www.cbc.ca/news/why-online-islamophobia-is-difficult-to-stop-1.2810242>, 7/31/15 AV)

Islamophobia has been an ongoing concern in the west since 9/11, but a number of recent incidents in Britain have given rise to a new wave of hatred that experts say is finding a breeding ground online. Part of the problem, researchers say, is that **right-wing groups can post anti-Islamic comments online without fear of legal prosecution**. "If they were to say, 'Black people are evil, Jamaicans are evil,' they could be prosecuted," says Fiyaz Mughal, founder of Islamophobia reporting web site TellMamaUK.org. **But because religious hatred isn't covered legally in the same way that racism is**, Mughal says "the extreme right are frankly getting away with really toxic stuff." **Researchers believe the rise of the Islamic State in Iraq and Syria (ISIS) and incidents such as the murder of British soldier Lee Rigby and the recent sexual exploitation scandal in the town of Rotherham have contributed to a spike in online anti-Muslim sentiment** in the UK. Imran Awan, deputy director of the Centre for Applied Criminology at Birmingham City University, noticed the trend when he was working on a paper regarding Islamophobia and Twitter following Rigby's death. Rigby was killed in the street in southeast London in 2013 by two Islamic extremists who have since been convicted. Awan says the anonymity of social media platforms makes them a popular venue for hate speech, and that the results of his report were "shocking, to say the least." **Of the 500 tweets from 100 Twitter users Awan examined, 75 per cent were Islamophobic** in nature. He cites posts such as "'Let's go out and blow up a mosque' and 'Let's get together and kill the Muslims,'" and says most of these were linked to far-right groups. Awan's findings echo those of Tell MAMA UK, which has compiled data on anti-Muslim attacks for three years. (MAMA stands for "Measuring Anti-Muslim Attacks.") Tell MAMA's Mughal says anti-Muslim bigotry is "felt significantly," and adds that "in our figures, we have seen a year-by-year increase." Researchers believe far-right advocates are partly responsible for a spike in online hate speech. "There's been a real increase in the far right, and in some of the material I looked at online, there were quite a lot of people with links to the English Defence League and another group called Britain First," says Awan. Both Mughal and Awan believe that right-wing groups such as Britain First and the EDL become mobilized each time there is an incident in the Muslim community. The Twitter profile of the EDL reads: "#WorkingClass

movement who take to the streets against the spread of #islamism & #sharia #Nosurrender #GSTQ.” Below it is a link to their Facebook page, which has over 170, 000 likes. Below that page, a caption reads, “Leading the Counter-Jihad fight. Peacefully protesting against militant Islam.” EDL spokesperson Simon North dismisses accusations that his group is spreading hate, emphasizing that Muslims are often the first victims of attacks carried out by Islamic extremists. “We address things that are in the news the same way newspapers do,” says North. Experts in far-right groups, however, say their tendency to spread hateful messages around high-profile cases is well established. North allows that some Islamophobic messages might emanate from the group’s regional divisions. But they do not reflect the group’s overall thinking, he says. “There are various nuances that get expressed by these organizations,” North says. “Our driving line is set out very clearly in our mission statement.” According to EDL’s web site, their mission statement is to promote human rights while giving a balanced picture of Islam. Awan argues online Islamophobia should be taken seriously and says police and legislators need to make more successful prosecutions of this kind of hate speech and be more “techno-savvy when it comes to online abuse.” Prosecuting online Islamophobia, however, is rare in the UK, says Vidhya Ramalingam of the European Free Initiative, which researches far-right groups. That’s because groups like Britain First, which have over 400,000 Facebook likes, have a fragmented membership and do not have the traditional top-down leadership that groups have had in the past. Online Islamophobia is also flourishing in Canada. The National Council of Canadian Muslims (NCCM) is receiving a growing number of reports. But there are now fewer means for prosecuting online hate speech in Canada. Section 13 of the Canadian Human Rights Act protected against the wilful promotion of hate online, but it was repealed by Bill C-304 in 2012. “It’s kind of hard to say what the impact is, because even when it existed, there weren’t a lot of complaints brought under it,” says Cara Zwibel of the Canadian Civil Liberties Association. **Though there is a criminal code provision that protects against online hate speech, it requires the attorney general’s approval in order to lay charges — and that rarely occurs.** says Zwibel. Section 319 of the Criminal Code of Canada forbids the incitement of hatred against “any section of the public distinguished by colour, race, religion, ethnic origin or sexual orientation.” A judge can order online material removed from a public forum such as social media if it is severe enough, but if it is housed on a server outside of the country, this can be difficult. Ihsaan Gardee, executive director of NCCM, says without changes, anti-Muslim hate speech will continue to go unpunished online, which he says especially concerns moderate Muslims. “They worry about people perceiving them as sharing the same values these militants and these Islamic extremists are espousing.”

Democracy

Democratic peace theory leads to conflict – “liberal peace” relies on accounting errors that ignore massive structural violence and ensure self-fulfilling prophecy – solutions predicated on it cause error replication

Kiely 5

[Ray Kiely, Professor of International Politics @ University of London Queen Mary] [Empire in the Age of Globalisation US Hegemony and Neoliberal Disorder] (<http://tinyurl.com/qgmv49l>) (accessed 7-16-15) //MC

Liberal notions of democratic peace should therefore be seen in this light. It is true that liberal democracies in the advanced capitalist countries are less likely to go to war with each other today than in the past. But this **so-called ‘liberal peace’ is itself a product of a history of bloody conflict, and the idea that such peace can be simply imposed** on ‘pre-modern states’ **ignores the ways in which the advanced powers have generated bloody conflict** in those parts of the world. It also **ignores ongoing processes of state formation and territorial conflict in relatively new states**. Cooper’s division of the world into post-modern, modern and pre-modern states has a simplistic appeal, but it is purely descriptive, and tells us nothing about the (violent) histories of state formation

that have led to such a division. **It also betrays a simplistic linearity in which the virtues of the advanced can quickly be imposed upon the backward.** This is a version of modernisation theory, in which **countries are said to be poor simply because they are insufficiently globalised** (see Chapter 5). **Quick-fix solutions** such as the illiberal imposition of liberal democracy are thus likely to **exacerbate such problems, no matter how well intentioned** they may be – and we would do well to remember that past interventions have been justified by recourse to support for freedom and democracy. Indeed, these have often been based on the idea that intervention in the past was ill-intentioned or misguided, but that we have got it right ‘this time’. **These points** are not made to support a blanket anti-interventionist position, but they do **warn against easy solutions, liberal follies and messianic rhetoric.** Moreover, **no US administration has really been committed to genuinely democratic principles** of multilateral global governance. **All post-war US governments** have **upheld** the belief in **the desirability of US hegemony**, even if some have regarded multilateral negotiation as more important than others. It could of course be argued that because the US is a liberal democracy it has a greater right than others to exercise world leadership. But **if democracy is to be valued, then it cannot be selective:** it must apply to states not only in relation to their domestic populations, but also in relation to the international system of nation-states.¹⁰ In this international system, **the US has a poor record in terms of democratic principles**, as we have seen. Singer usefully makes the point:^a Advocates of democracy should see something wrong with the idea of **a nation fewer than 300 million people dominating a planet with more than six billion inhabitants.** That’s **less than 5 per cent of the population ruling over the remainder** – more than 95 per cent – without their consent. (Singer 2004: 191)^a It may of course be utopian to espouse the cause of global democracy, even if, as cosmopolitan democrats point out, a similar argument was used in the past to argue against democracy within nation-states. But surely **it is wishful thinking to expect the world’s population to acquiesce passively to** such **a patently undemocratic international system.** This is not to romanticise much of the ‘anti-imperialist’ resistance to current US global domination, much of which is reactionary. Terrorism should be condemned, and indeed efforts should be made to counter terrorist attacks. But it is absurd to dismiss all resistance to the US as the actions of terrorist minorities, whose actions are completely beyond explanation. Only **the most ardent wishful thinking about ‘US destiny’ and** the most **dangerous amnesia about history** – such as that shared by George Bush and Tony Blair – **can reduce global politics to simplistic struggles between good and evil.**¹¹ This is hardly surprising, as it **reflects a long tradition of liberal thought justifying illiberal measures against illiberal people.** John Stuart Mill argued that ‘despotism is a legitimate mode of government in dealing with barbarians, provided the end be their improvement and the means justified by actually effecting that end’ (Mill 1974: 69). In the ‘war on terror’, **terrorism has been reduced to a totally inexplicable, polymorphous mass.** As a result, ‘[w]ithout defined shape or determinate roots, its mantle can be cast over any form of resistance to sovereign power’ (Gregory 2004: 140)

Democracy and human rights claims are used as false pretense for war

Chojnacki 6 (Sven, Professor @ Berlin Freie, Democratic Wars, pg. 35)

Moreover, **an active policy of democratization might not only accelerate violent processes but the norms of democracy and human rights may also be a pretext for pursuing power interests by military means** (ct. Shannon, 2000; Schjelset, 2001). **Taking into account the -growth in military intervention capabilities, unilateral options for action on the part of powerful states, and the existing power asymmetries in the international system on the one hand, and the relevance of violent intrastate and substate conflicts for international politics in an era of interdependence on the other, there is little reason to assume that the number of military interventions will decrease in the future.** A final risk to democratic peace arises through norm- and value-based demarcation processes and war-promoting patterns of argumentation vis-a-vis non-democratic systems. **The more democratic states identify themselves in contrast to potential adversaries and the less the cost-benefit argument** comes to hear in the face of technological superiority, the

more the risk of war increases (d. Muller, 2002a, p. 58). At the same time, it should be noted that superior military capabilities, normative orientations and global liberalization pressures could be regarded as potential threats to non-democratic states and regions. This could result in the emergence of new images of what an enemy is and a 'democracy-specific security dilemma' vis-a-vis the rest of the world (MULLER, 2002a, pp. 59-60). The 'clash of civilizations' envisaged by Samuel Huntington could thus evolve as a self-fulfilling prophecy as it begins to inhabit the security policies of Western democracies. A policy of democratic interventionism would not only confront democracies with incalculable security risks but might also undermine their own nonnative claims.

Democracy destroys the environment – several reasons.

Li and Reuveny 7

Li, Prof of poli sci at Penn State, and Reuveny, prof of public and environmental affairs @ Indiana U, Quan and Rafael, "The Effects of Liberalism on the Terrestrial Environment" <http://cmp.sagepub.com/cgi/content/abstract/24/3/219>

According to the *policy inaction argument*, facing environmental degradation, democracy can often exhibit policy inaction for several reasons (Midlarsky, 1998: 159). First, democracy seeks to please competing interest groups. As such, it may be reluctant to alleviate environmental degradation because some groups are expected to benefit (or lose) from environmental policies more than others. Second, "corporation and environmental groups can fight each other to a standstill, leaving a decision making vacuum instead of a direct impact of democracy on the environment." Third, when budgets are tight democracies may ignore environmental problems, perceiving economic issues to be more pressing.

Democracy re-entrenches inequality – five reasons – turns the human rights impact

McElwee 14 (Five Reasons Why Democracy Hasn't Fixed Inequality,

http://www.huffingtonpost.com/sean-mcelwee/five-reasons-why-democrac_b_5858160.html//A.V.

One of the most longstanding hopes (on the left) and fears (on the right) about democratic politics is that voters of modest means will use their electoral weight to level the economic playing field.

In a market economy, the median voter's income will invariably be below the national average creating an apparently compelling opportunity for a politics of redistribution. This makes the sustained increase in income inequality in the United States and other developed countries a bit of a puzzle. One common suggestion, offered recently by Eduardo Porter in The New York Times, is ignorance. Voters "don't grasp how deep inequality is." But while Americans' understanding of economic trends is certainly imperfect, the data suggest that the broad trends are known to the population. Nathan Kelly and Peter Enns, for instance, find that when asked to compare the ratio of the highest paid occupation and the lowest, Americans at the bottom of the income distribution do believe inequality is high and rising. In 1987, Americans as reported that the highest-paid occupation took home 20 times what the lowest paid occupation did - by 2000, they thought the gap had grown to 74 times. A recent Pew survey finds that 65% of adults agree that the gap between the rich and everyone else has increased in the past 10 years, only 8% say it has decreased. A Gallup poll from earlier this year suggests that 67% of Americans report that they are either "somewhat" or "very" dissatisfied with the income and wealth distribution in the U.S. If ignorance doesn't explain inaction, what does? These five factors are the most important culprits: 1) Upward mobility According to research from Carina Engelhardt and Andreas Wagner, around the world people overestimate the level of upward mobility in their society. They find that redistribution is lower than when actual social mobility is but also lower where perceived mobility is higher. Even if voters perceive the level of inequality correctly, their tendency to overstate the level of mobility can undermine support for redistribution. In another study

Alberto Alesina and Eliana La Ferrara find that, Americans who believe that American society offers equal opportunity (a mythology) are more likely to oppose redistribution. Using data from 33 democracies, Elvire Guillaud finds that those who believe they have experienced downward mobility in the past decade are 32% more likely to support redistribution. A relatively strong literature now supports this thesis. **2) Inequality undermines solidarity** Enns and Kelly find, rather counterintuitively, that when "inequality in America rises, the public responds with increased conservative sentiment." That is, **higher inequality leads to less demand for redistribution. This is perhaps because as society becomes less equal, its members have less in common** and find it less congenial to act in solidarity. Bo Rothstein and Eric Uslaner argue that, "the best policy response to growing inequality is to enact universalistic social welfare programs. However, the social strains stemming from increased inequality make it almost impossible to enact such policies." As inequality increases, the winner-take-all economy leads voters try to look out for their own children. The period during which overall inequality has risen has seen a massive increase in **more affluent families' spending on enrichment for their own children.** Chris Dillow points to research by Klaus Abbink, David Masclet and Daniel Mirza who find in social science experiments that disadvantaged groups are more likely to sacrifice their wealth to reduce the wealth of the advantaged group when inequality was lower than when it was higher. Kris-Stella Trump finds that rising inequality perpetuates itself, noting that, "Public ideas of what constitutes fair income inequality are influenced by actual inequality: when inequality changes, opinions regarding what is acceptable change in the same direction." **3) Political misrepresentation** Ideological factors can't tell the whole story. Many Americans support redistributive programs like the minimum wage and support for the idea that hard work leads to success has plummeted in the last decade. A further important reason for the lack of political response to inequality relates to the structure of American political institutions, which fail to translate the desires of less-advantaged Americans for more redistribution into actual policy change. Support for this thesis comes from many corners of the political science field, including Martin Gilens, Dorian Warren, Jacob Hacker, Paul Pierson, and Kay Lehman Schlozman. Research by five political scientists finds that status quo bias of America's often-gridlocked congress serves to entrench inequality. More simply, lower-income Americans tend to vote at a lower rate. William Franko, Nathan Kelly and Christopher Witko find that states with lower turnout inequality also have lower income inequality. Elsewhere, Franko finds that states with wider turnout gaps between the rich and poor are less likely to pass minimum-wage increases, have weaker anti-predatory-lending policies and have less generous health insurance programs for children in low-income families. Kim Hill, Jan Leighley and Angela Hilton-Andersson find, "an enduring relationship between the degree of mobilization of lower-class voters and the generosity of welfare benefits." Worryingly, Frederick Solt finds that, **"citizens of states with greater income inequality are less likely to vote and that income inequality increases income bias in the electorate."** That is, as inequality increases, the poor are less likely to turn out, further exacerbating inequality. **4) Interest-group politics** The decline of labor unions has decreased the political importance of poor voters, because unions were an important "get-out-the-vote" machine. A recent study by Jan Leighley and Jonathan Nagler finds that the decline in union strength has reduced low-income and middle-income turnout. But labor's influence (or lack thereof) is also important when the voting is done. Research finds that policy outcomes in the United States are heavily mediated by lobbying between interest groups, so organization matters. Martin Gilens writes, "Given the fact that most Americans have little independent influence on policy outcomes, interest groups like unions may be the only way to forward their economic interests and preference." His research indicates that unions regularly lobby in favor of policies broadly supported by Americans across the income spectrum, in contrast to business groups, which lobby in favor of policies only supported by the wealthy. It's no surprise then that numerous studies have linked the decline in union membership and influence with rising inequality. **5) Racial conflict** A recent study by Maureen A. Craig and Jennifer A. Richeson finds that **when white Americans are reminded that the nation is becoming more diverse, they become more conservative.** Dog-whistle phrases like "welfare queens" have long driven whites to oppose social safety net programs they disproportionately benefit from. Research from Donald Kinder and Cindy Kam indicates that racial bias among white voters is strongly correlated with hostility toward means-tested social assistance programs. Another study by Steven Beckman and Buhong Zhen finds that blacks are more likely to support redistribution even if their incomes are far above average and that poor whites are more likely to

oppose redistribution. In other words, a massive public education campaign about the extent of income inequality is neither necessary nor sufficient to achieve the kind of redistributive policies liberals favor. **The real obstacles to policy action on inequality are more deeply ingrained in the structure of American politics, demographics, and interest group coalitions.** Insofar as there is a role for better information to play, it likely relates not to inequality but to social mobility which remains widely misperceived and is a potent driver of feelings about the justice of economic policy. As John Steinbeck noted, "Socialism never took root in America because the poor see themselves not as an exploited proletariat but as temporarily embarrassed millionaires." Stronger unions, more lower income voter turnout and policies to reduce the corrupting influence of money on the political process would all work to reduce inequality. It will take political mobilization, not simply voter education to achieve change. The winks have interpreted the world; the point, however, is to change it.

Democracy does not affect whether or not a state represses.

Timmerman '12 (Ashley M; B.A University of Central Florida; "WHEN LEADERS REPRESS: A STUDY OF AFRICAN STATES"; http://etd.fcla.edu/CF/CFE0005428/Masters_thesis_final.pdf)

Some studies (Davenport and Inman, 2012) present evidence that contradicts this, saying that while regime type is important, it is "not universally applicable across all concepts." Davenport and Armstrong (2004) argue that the previous studies showing negative linear relationships between democracy and levels of repression are flawed. According to them, **there is a negative linear relationship, but only above a particular threshold, that varies due to the measure in question.** In their study, the measures include international war, civil war, and military control, among others. **However, below this threshold, democracy does not affect the levels of repression.** Beer and Mitchell (2006) also present evidence that suggest **democracy is 5 not the deciding factor in whether or not a state will repress.** Using the case of India as an example, Beer and Mitchell (2006) suggest **ethnic and religious factors for the high levels of repression** within a democratic state. The study accurately accounts for the **election of specific political parties and the electoral participation as factors for repression, within this democratic state.** This contradicts most of the previous research that suggests democracies will not repress.

*Anti blackness

1NC Link

The 1ac start from positioning an analogy to the position of blackness that erases its historical specificity and undermines coalitions around challenging anti blackness. Their coalitional politics posits a chain of equivalencies that gets coopted by alliances with civil society.

Sexton 2010

[Jared, associate professor of African American studies and film and media studies at the University of California, Irvine, "People-of-Color-Blindness", Social Text 2010 Volume 28, Number 2 103: 31-56, AX]

*we don't endorse ableist language

If the oppression of nonblack people of color in, and perhaps beyond, the United States seems conditional to the historic instance and functions at a more restricted empirical scope, antiblackness seems invariant and limitless (which does not mean that the former is somehow negligible and short-lived or that the latter is exhaustive and unchanging). If pursued with some consistency, the sort of comparative analysis outlined above would likely impact the formulation of political strategy and modify the demeanor of our political culture. In fact, it might denature the comparative instinct altogether in favor of a relational analysis more adequate to the task. Yet all of this is obviated by the silencing mechanism par excellence in Left political and intellectual circles today: "Don't play Oppression Olympics!" The Oppression Olympics dogma levels a charge amounting to little more than a leftist version of "playing the race card." To fuss with details of comparative (or relational) analysis is to play into the hands of divide-and-conquer tactics and to promote a callous immorality. 72 However, as in its conservative complement, one notes in this catchphrase the unwarranted translation of an inquiring position of comparison into an insidious posture of competition, the translation of ethical critique into unethical attack. This point allows us to understand better the intimate relationship between the censure of black inquiry and the recurrent analogizing to black suffering mentioned above: they bear a common refusal to admit to significant differences of structural position born of discrepant histories between blacks and their political allies, actual or potential. We might, finally, name this refusal people-of-color-blindness, a form of colorblindness inherent to the concept of "people of color" to the precise extent that it misunderstands the specificity of antiblackness and presumes or insists upon the monolithic character of victimization under white supremacy 73 —thinking (the afterlife of) slavery as a form of exploitation or colonization or a species of racial oppression among others. 74 The upshot of this predicament is that obscuring the structural position of the category of blackness will inevitably undermine multiracial coalition building as a politics of radical opposition and, to that extent, force the question of black liberation back to the center of discussion. Every analysis that attempts to understand the complexities of racial rule and the machinations of the racial state without accounting for black existence within its framework—which does not mean simply listing it among a chain of equivalents or returning to it as an afterthought—is doomed to miss what is essential about the situation. Black existence does not represent the total reality of the racial formation—it is not the beginning and the end of the story—but it does relate to the totality: it indicates the (repressed) truth of the political and economic system. That is to say, the whole range of positions within the racial formation is most fully understood from this vantage point, not unlike the way in which the range of gender and sexual variance under patriarchal and heteronormative regimes is most fully understood through lenses that are feminist and queer. 75 What is lost for the study of black

existence in the proposal for a decentered, “postblack” paradigm is a proper analysis of the true scale and nature of black suffering and of the struggles—political, aesthetic, intellectual, and so on—that have sought to transform and undo it. What is lost for the study of nonblack nonwhite existence is a proper analysis of the true scale and nature of its material and symbolic power relative to the category of blackness.⁷⁶ This is why **every attempt to defend the rights and liberties of the latest victims of state repression will fail to make substantial gains** insofar as it forfeits or sidelines the fate of blacks, the prototypical targets of the panoply of police practices and the juridical infrastructure built up around them. **Without blacks on board, the only viable political option and the only effective defense against the intensifying cross fire will involve greater alliance with an antiblack civil society and further capitulation to the magnification of state power.** At the apex of the midcentury social movements, Kwame Ture and Charles Hamilton wrote in their 1968 classic, *Black Power: The Politics of Liberation*, that **black freedom entails “the necessarily total revamping of the society.”**⁷⁷ For Hartman, thinking of the entanglements of the African diaspora in this context, **the necessarily total revamping of the society is more appropriately envisioned as the creation of an entirely new world:** I knew that no matter how far from home I traveled, I would never be able to leave my past behind. I would never be able to imagine being the kind of person who had not been made and marked by slavery. I was black and a history of terror had produced that identity. **Terror was “captivity without the possibility of flight,” inescapable violence, precarious life. There was no going back to a time or place before slavery, and going beyond it no doubt would entail nothing less momentous than yet another revolution.**

2nc link: No History

Racial profiling cannot be understood free from its historical context on the plantation. Other approaches fail because they render this concrete situation metaphorical.

Sexton 07 (Jared, *Racial Profiling and the Societies of Control* from “Warfare in the American Homeland: Policing and Prison in a Penal Democracy” edited by Joy James, Duke University Press, p. 200-02. Sexton is an associate professor of African American Studies and an associate professor of Film and Media Studies at the University of California, Irvine. They have a Ph.D from the University of California, Berkeley in Ethnic Studies // EMS).

In theory, everyone in the United States (and many outside its boundaries) is subject to these rules of engagement. Yet, as Ira Glasser, former director of the American Civil Liberties Union (ACLU), recently noted, **while the police could, say, randomly raid apartment buildings on the Upper West Side of Manhattan and yield fruitful results, they clearly do not.** As he puts it, “They don’t do it **because most of the folks who live in those apartment buildings are white. They don’t do it because if they tried to do it, the outrage would become so big, so fast that it would become politically impossible to sustain.**”¹² We might wonder who would be outraged at such operations and whose outrage would make a difference? At any rate, the verdict of his analysis is clear: On our highways, on our streets, in our airports, and at our customs checkpoints, skin color once again, irrespective of class, and without distinctions based on education or economic status, skin color once again is being used as a cause for **USDICION**, and a sufficient reason to violate people’s rights. For blacks in particular the situation is acute. The most recent attack on Fourth Amendment protections followed immediately the Warren Court’s “due process revolution,” as inaugurated by its decisions in the *Mapp* (1961) and *Miranda* (1966) cases. This shift in judicial opinion in favor of criminal suspects and defendants, disproportionately black and characteristically depicted as such, was supposed by some to be the criminal-law equivalent to or extension of then recent civil law reforms. **The motion toward constitutional protections for blacks was,** then, taken to be a byproduct of the limited success of the Civil Rights Movement, but its broader implications were **rapidly conflated with the perceived threat of the radicalization of struggle dubbed “Black Power,” which for the mainstream presented ominous criminal tendencies,** among other things. The idea that blacks could or should have both civil and criminal rights thus entered the furor of an emergent “law and order” political culture whose executive, legislative, and judicial wings

all feverishly and collaboratively retrenched. **The legal history from Richard Nixon to Ronald Reagan to George W Bush from "war on crime" to "war on drugs" to "war on terror" -is alarmingly short. The liberal civil-rights legislation and judiciary review enjoyed a very brief and largely ineffective life. But the "revolution" in criminal rights never even got off the ground;** it never actually happened except in the collective paranoid fantasy of "white America." There is, finally, no golden age for blacks before the criminal law. Therefore, in our discussions of a so-called creeping fascism or nascent authoritarianism or rise of the police state, particularly in the wake of the Homeland Security and PATRIOT acts, **we might do better than trace its genealogy to the general warrant (or even the Executive Order), whose specter forever haunts the democratic experiment of postrevolutionary civil society. Instead, the proper object of investigation is the antebellum slave code and its antecedents in colonial statute, not because the trajectory of this legal history threatens to undo the rights of all, but precisely because the prevailing libertarian impulse in the United States has so resourcefully and rendered the concrete situation in metaphoric terms.** Under the force of this blacks, who were clearly in the but definitively not of it, were not only available to arbitrary search and seizure-the bane of the general warrant-but were, in the main, always already searched and seized. More to the point, they had, in the famous phrase, "no rights that a white man bound to respect," including the right to life. **The ethos of slavery-** in other words, the lasting ideological and affective matrix of the white supremacist project-**admits no legitimate black self-defense, recognizes no legitimate assertions of black self-possession, privacy, or autonomy.** A permanent state of theft, seizure, and abduction orders the affairs of the captive community and its progeny. **Structural vulnerability to appropriation, perpetual and involuntary openness, including all the wanton uses of the body** so finely detailed by scholars like Saidiya Hartman and Hortense Spillers, **should be understood as the paradigmatic conditions of black existence in the Americas, the defining characteristics of New World antiblackness.**¹⁴ In short, **the black, whether slave or "free," lives under the commandment of whites.** Is Policing blacks in the colonial and antebellum periods was, we recall, the prerogative of every white (they could assume the role or not) and was only later professionalized as the modern prison system emerged out of the ashes of Reconstruction.¹⁶ Without glossing the interceding history, suffice it to say that such policing was organized across the twentieth century at higher orders of magnitude by the political, economic, and social shifts attending the transition from welfare to warfare state. **"Racial profiling," then, is a young term, but the practice is centuries-old. In other words, the policing of blacks-whose repression has always been state sanctioned, even as it was rendered a private affair of "property management" remains a central issue today; it has not recently emerged.** Amnesty International's public hearings on racial profiling, the stalled federal legislation termed "HR 1443," the ACLU'S "Driving while Black" campaign, and the problematic reworking of the issue of racial profiling after September 11 all unfold against the backdrop of this long history of "policing black people." **The effects of crude political pragmatism, legalistic single-mindedness, or historical myopia enable us to identify the unleashing of the police with the advent of the war on drugs or the xenophobic panic around the New Immigration or the emergence of Homeland Security against the threat of terrorism.**

A2 Coalitions

Islamophobia is only a manifestation of racialization—the fact that Middle Easterners are deemed white by law means they could never include other minorities in their struggle against law

Love 09 (Erik Love, an ISPU Fellow and an Assistant Professor of Sociology at Dickinson College in Pennsylvania, received his MA and Ph.D. in sociology from the University of California at Santa Barbara.) (Confronting Islamophobia in the United States: framing civil rights activism among Middle Eastern Americans, 23 Sep 2009. Patterns of Prejudice, Vol. 43, Nos 3-4, 401-425, DOI: 10.1080/00313220903109367)

Approaching Islamophobia as a product of racial dynamics in the United States brings certain analytical advantages. First, this approach draws on a wealth of knowledge about

race and ethnicity to explain how Islamophobia does not always target Islam and Muslims per se, but instead takes on the familiar pattern of racial scapegoating: fear and hatred, prejudice and discrimination directed towards groups crudely demarcated primarily by physical appearance.⁵ Race clearly plays a role when Sikh American and African American Muslim children are harassed in similar ways in classrooms, when Syrian Americans along with Pakistani Americans have to present themselves to immigration authorities for 'special registration', when Lebanese American and Iranian American workers lose their jobs for the same discriminatory reasons, and when Chaldean churches and Sunni mosques alike are vandalized and receive the same kinds of hate mail. These kinds of incidents, which impact on a large range of communities in spite of their diversity, occur primarily **as a result of the racial lens through which Americans understand the world.** The ideology of race is understood as a flexible social construct, subject to modification through the work of actors who target the state as they seek recognition and redress.⁶ The process of racialization profoundly affects all individuals in the United States, because each person is perceived to belong to socially constructed racial categories. The categories themselves change over time, as do the criteria for membership in any particular category; people recognized as belonging to the Irish race, for example, later became 'white' due to changes in the predominant racial ideology. These identity categories take on meaning and have material consequences via state policy and resource provision, through representations in cultural space and through the organization of institutions in civil society. The prevailing 'racial order' at any point in history indicates the schema or hierarchy of recognized racial identity categories, created through a 'compromise between racial movements and the state'.⁷ From the latter part of the twentieth century to the present day (the so-called 'post-civil rights era'), the 'racial pentagon' of black, white, Latino, Asian and Native American has been described as the prevailing list of recognized racial identity categories in the United States.⁸ Where do individuals and groups affected by racialized Islamophobia 'fit'? According to the United States Census, people from the broadly defined Middle Eastern region legally count as racially white. This creates a paradox, as described by John Tehranian: On one hand, [Middle Eastern Americans] suffer from the types of discrimination that face minority groups. On the other hand, formally speaking, Middle Easterners are deemed white by law. This dualistic and contested ontology of the Middle Eastern racial condition creates an unusual paradox. Reified as the other, Americans of Middle Eastern descent do not enjoy the benefits of white privilege. Yet, as white under the law, they are denied the fruits of remedial action.⁹ The unclear position caused by this racial paradox*/in terms of citizenship, rights and identity*/of migrants and their descendants who came to the United States from North Africa and western and southern Asia, a large region now vaguely defined as the Middle East, dates back to the eighteenth century if not earlier. The groups under the Middle Eastern racial umbrella often have little in common with one another except that, in the United States, Islamophobia lumps them together and makes them targets of discrimination and racism. In other words, 'Islamophobia' is the latest term for a centuries-long history of American state policy, cultural discourses and discriminatory practices that enforce racial boundaries around Middle Easterners in America.

*Cede the Political K

1nc

Individual interrogation is always the wrong starting point for politics- governments obey institutional logics that exist independently of individuals and constrain decisionmaking – the only way to concretely change society is by engaging institutional politics

Wight – Professor of IR @ University of Sydney – 6

(Colin, Agents, Structures and International Relations: Politics as Ontology, pgs. 48-50)

One important aspect of this relational ontology is that these relations constitute our identity as social actors. According to this relational model of societies, one is what one is, by virtue of the relations within which one is embedded. A worker is only a worker by virtue of his/her relationship to his/her employer and vice versa. 'Our social being is constituted by relations and our social acts presuppose them.' At any particular moment in time an individual may be implicated in all manner of relations, each exerting its own peculiar causal effects. This 'lattice-work' of relations constitutes the structure of particular societies and endures despite changes in the individuals occupying them. Thus, the relations, the structures, are ontologically distinct from the individuals who enter into them. At a minimum, the social sciences are concerned with two distinct, although mutually interdependent, strata. There is an ontological difference between people and structures: people are not relations, societies are not conscious agents'. Any attempt to explain one in terms of the other should be rejected. If there is an ontological difference between society and people, however, we need to elaborate on the relationship between them. Bhaskar argues that we need a system of mediating concepts, encompassing both aspects of the duality of praxis into which active subjects must fit in order to reproduce it: that is, a system of concepts designating the 'point of contact' between human agency and social structures. This is known as a 'positioned practice' system. In many respects, the idea of 'positioned practice' is very similar to Pierre Bourdieu's notion of *habitus*. Bourdieu is primarily concerned with what individuals do in their daily lives. He is keen to refute the idea that social activity can be understood solely in terms of individual decision-making, or as determined by surpa-individual objective structures. Bourdieu's notion of the *habitus* can be viewed as a bridge-building exercise across the explanatory gap between two extremes. Importantly, the notion of a habitus can only be understood in relation to the concept of a 'social field'. According to Bourdieu, a social field is 'a network, or a configuration, of objective relations between positions objectively defined'. A social field, then, refers to a structured system of social positions occupied by individuals and/or institutions – the nature of which defines the situation for their occupants. This is a social field whose form is constituted in terms of the relations which define it as a field of a certain type. A *habitus* (positioned practices) is a mediating link between individuals' subjective worlds and the socio-cultural world into which they are born and which they share with others. The power of the habitus derives from the thoughtlessness of habit and habituation, rather than consciously learned rules. The habitus is imprinted and encoded in a socializing process that commences during early childhood. It is inculcated more by experience than by explicit teaching. Socially competent performances are produced as a matter of routine, without explicit reference to a body of codified knowledge, and without the actors necessarily knowing what they are doing (in the sense of being able adequately to explain what they are doing). As such, the *habitus* can be seen as the site of 'internalization of reality and the externalization of internality.' Thus social practices are produced in, and by, the encounter between: (1) the *habitus* and its dispositions; (2) the constraints and demands of the socio-cultural field to which the habitus is appropriate or within; and (3) the dispositions of the individual agents located within both the socio-cultural field and the *habitus*. When placed within Bhaskar's stratified complex social ontology the model we have is as depicted in Figure 1. The explanation of practices will require all three levels. Society, as field of relations, exists prior to, and is independent of, individual and collective understandings at any particular moment in time; that is, social action requires the conditions for action. Likewise,

given that behavior is seemingly recurrent, patterned, ordered, institutionalised, and displays a degree of stability over time, there must be sets of relations and rules that govern it. Contrary to individualist theory, these relations, rules and roles are not dependent upon either knowledge of them by particular individuals, or the existence of actions by particular individuals; that is, their explanation cannot be reduced to consciousness or to the attributes of individuals. These emergent social forms must possess emergent powers. This leads on to arguments for the reality of society based on a causal criterion. Society, as opposed to the individuals that constitute it, is, as Foucault has put it, 'a complex and independent reality that has its own laws and mechanisms of reaction, its regulations as well as its possibility of disturbance. This new reality is society... It becomes necessary to reflect upon it, upon its specific characteristics, its constants and its variables'.

The distinction between pragmatism and radicalism is falsely constructed and the affirmative holds the two in creative tension—legalization strategies enable us to take advantage of current conditions without sacrificing political vision

Berger 13 [2013, Dan Berger is an Assistant Professor at the University of Washington Bothell, "Social Movements and Mass Incarceration: What is To Be Done?", *Souls: A Critical Journal of Black Politics, Culture, and Society*, Volume 15, Issue 1-2, 2013, pages 3-18]

The strategy of **decarceration combines radical critique, direct action, and tangible goals for reducing the reach of the carceral state. It is a coalitional strategy that works to shrink the prison system through a combination of pragmatic demands and far-reaching, open-ended critique. It is reform in pursuit of abolition.** Indeed, **decarceration allows a strategic launch pad for the politics of abolition, providing what has been an exciting but abstract framework with a course of action.** ³² **Rather than juxtapose pragmatism and radicalism** as has so often happened in the realm of radical activism, **the strategy of decarceration seeks to hold them in creative tension. It is a strategy in the best tradition of the black freedom struggle. It is a strategy that seeks to take advantage of political conditions without sacrificing its political vision.** Today we are in a moment where it is possible, in the words of an organizer whose work successfully closed Illinois's infamous supermax prison Tamms in January 2013, to confront prisons as both an economic and a moral necessity. ³³ Prisons bring together diverse forms of oppression across race, class, gender, sexuality, citizenship status, HIV status and beyond. The movements against them, therefore, will need to bring together diverse communities of resistance. They will need to unite people across a range of issues, identities, and sectors. That is the coalition underlying groups such as Californians United for a Responsible Budget (CURB), the Nation Inside initiative, and Decarcerate PA. The fight against prisons is both a targeted campaign and a broad-based struggle for social justice. These movements must include the leadership by those directly affected while at the same work to understand that prisons affect us all. This message is the legacy of prison rebellions from Attica in 1971 to Pelican Bay in 2012. The challenge is to maintain the aspirational elements of that message while at the same time translating it into a political program. Decarceration, therefore, works not only to shrink the prison system but to expand community cohesion and maximize what can only be called freedom. Political repression and mass incarceration are joined at the hip. The struggles against austerity, carcerality, and social oppression, the struggles for restorative and transformative justice, for grassroots empowerment and social justice must be equally interconnected. For it is only when the movement against prisons is as interwoven in the social fabric of popular resistance as the expansion of prisons has been stitched into the wider framework of society that we might hope to supplant the carceral state. There are many obstacles on the path toward decarceration; the existence of a strategy hardly guarantees its success. Until now, I have focused largely on the challenges internal to the movement, but there are even taller hurdles to jump in encountering (much less transforming) the deeply entrenched carceral state. Perhaps the biggest challenge, paradoxically, comes from the growing consensus, rooted in the collective fiscal troubles of individual states, that there is a need for prison reform. In that context, a range of politicians, think tanks, and nonprofit organizations—from Right on Crime to the Council on State Governments and the Pew

Charitable Trusts—have offered a spate of neoliberal reforms that trumpet free market solutions, privatization, or shifting the emphasis away from prisons but still within the power of the carceral state. Examples include the “Justice Reinvestment” processes utilized by states such as Texas and Pennsylvania that have called for greater funding to police and conservative victim’s rights advocates while leaving untouched some of the worst elements of excessive punishment. These neoliberal reforms can also be found in the sudden burst of attention paid to “reentry services” that are not community-led and may be operated by private, conservative entities. ³⁴ Perhaps the grandest example can be found in California, where a Supreme Court ruling that overcrowding in the state’s prisons constituted cruel and unusual punishment has been met with a proposal for “realignment,” that shifts the burden from state prisons to county jails. ³⁵ A combination of institutional intransigence and ideological commitment to punish makes the road ahead steep. Even as many states move to shrink their prison populations, they have done so in ways that have left in place the deepest markings of the carceral state, such as the use of life sentences and solitary confinement, and the criminalization of immigrants. Social movements will need to confront the underlying ideologies that hold that there is an “acceptable” level of widespread imprisonment, that there is a specter of villainy out there—be they “illegal immigrants,” “cop killers,” “sex criminals”—waiting in the wings to destroy the American way of life. ³⁶ **There is a risk, inherent in the sordid history of prison reform, that the current reform impulse will be bifurcated along poorly defined notions of “deservingness” that will continue to uphold the carceral logic that separates “good people” from “bad people” and which decides that no fate is too harsh for those deemed unworthy of social inclusion. This, then, is a movement that needs to make nuanced yet straightforward arguments that take seriously questions of accountability while showing that more cops and more (whether bigger or smaller) cages only takes us further from that goal.** ³⁷ At stake is the kind of world we want to live in, and the terms could not be more clear: the choice, to paraphrase Martin Luther King, is either carceral chaos or liberatory community. The framework of community—as expressed Decarcerate PA slogan “build communities not prisons” and the CURB “budget for humanity” campaign—allows for a robust imagination of the institutions and mechanisms that foster community versus those that weaken it. It focuses our attention on activities, slogans, programs, and demands that maximize communities. In short, it allows for unity. **If the state wants to crush dissent through isolation, our movements must rely on togetherness to win. Solidarity is the difference between life and death. State repression expands in the absence of solidarity. Solidarity is a lifeline against the logic of criminalization and its devastating consequences. For the most successful challenges to imprisonment come from intergenerational movements: movements where people raise each other’s consciousness and raise each other’s children, movements that fight for the future because they know their history.** Here, **in this pragmatic but militant radicalism, is a chance to end mass incarceration and begin the process of shrinking the carceral state out of existence.**

Legal strategies are comparatively the best – we can build long term movements

Spade 11 (lawyer, prominent trans activist, and Associate Professor of Law at Seattle University School of Law. He founded the Sylvia Rivera Law Project which provides free legal services to transgender individuals who are low-income and/or people of color)

(Dean, Normal Life: Administrative Violence, Critical Trans Politics and the Limits of Law, pg. 186-7)

Developing law and policy reform targets as campaign issues. Because administrative systems cause enormous harm [Q transpeople every day, issues related to how these systems operate tend to be deeply felt and broadly applicable to our constituencies. For that reason, law and policy reform targets can sometimes be a good place to direct our organizing. This organizing can provide opportunities to reframe an issue, bring directly impacted people who have not previously been part of political organizing into leadership, build shared political analysis about important forms of systemic harm, and establish and advance relationships within and between constituencies. When these law/policy reform campaigns are chosen, they can build momentum and membership in a movement organization. Winning certain reforms

may even provide some relief to members experiencing harm. The limited effect of law and policy reform victories can also often build shared analysis among organizers about how empty legal equality can be, and can generate enhanced demands for transformation as organizing continues. Taking up law and policy targets can make sense when deployed as a tactic in service of a larger strategy of mass mobilization. If law and policy changes are won solely through the work of a few white lawyers meeting with bureaucrats or elected officials behind closed doors, this does not achieve the mobilization goals that require building a demand (and momentum behind that demand) across a broad spectrum of directly impacted people and winning it through collective efforts of a large group. The goals of this work should not be merely about changing what laws and policies say. Instead, the work should build the capacity of directly impacted people to work together and push for change that will significantly improve their lives. Ideally, those who are propelled into political action by involvement in a campaign stay with the work, continue to develop skills and analysis, and bring others to organizing. Together, people can construct increasingly broad imaginations of transformative change. Even after small victories enormous harms must still be addressed as newly won policies are often not followed or implemented, and important lessons are learned about sustained struggle and the effectiveness of collective action.

Radical politics must engage the state – the alt is right wing take over Mouffe 10

(What is Radical Politics Today?, Edited by Jonathan Pugh, pg. 235)

It is clear that, once we envisage social reality in terms of ‘hegemonic and ‘counter-hegemonic’ practices, radical politics is not about withdrawing completely from existing institutions. Rather, we have no other choice but to engage with hegemonic practices, in order to challenge them. This is crucial’ otherwise we will be faced with a chaotic situation. Moreover, if we do not engage with and challenge the existing order, if we instead choose to simply escape the state completely, we leave the door open for others to take control of systems of authority and regulation. Indeed there are many historical (and not so historical) examples of this. When the Left shows little interest, Right-wing and authoritarian groups are only too happy to take over the state.

The alternative is to ENGAGE institutional politics- we must move beyond their abstraction in favor of discussing the tough choices and trade-offs that a non-institutional analysis wishes away – institutions are inevitable and learning to pragmatically engage them best facilitates change

Themba-Nixon 2K [Makani Themba-Nixon, “Changing the Rules: What Public Policy Means for Organizing,” Colorlines. Oakland: Jul 31, 2000. Vol. 3, Iss. 2; pg. 12, AX]

In essence, policies are the codification of power relationships and resource allocation. Policies are the rules of the world we live in. Changing the world means changing the rules. So, if organizing is about changing the rules and building power, how can organizing be separated from policies? Can we really speak truth to power, fight the right, stop corporate abuses, or win racial justice without contesting the rules and the rulers, the policies and the policymakers? The answer is no-and double **no** for people of color. Today, racism subtly dominates nearly every aspect of policymaking. From ballot propositions to city funding priorities, policy is increasingly about the control, de-funding, and disfranchisement of communities of color. What Do We Stand For? Take the public conversation about welfare reform, for example. Most of us know it isn't really about putting people to work. The right's message was framed around racial stereotypes of lazy, cheating "welfare queens" whose poverty was "cultural." But the new welfare policy was

about moving billions of dollars in individual cash payments and direct services from welfare recipients to other, more powerful, social actors. **Many** of us **were too busy to tune into the welfare policy** drama in Washington, **only to find it** washed up right **on our doorsteps**. Our members are suffering from workfare policies, new regulations, and cutoffs. Families who were barely getting by under the old rules are being pushed over the edge by the new policies. **Policy doesn't get more relevant than this**. And so **we got involved in policy-as defense**. Yet **we have to do more than block their punches**. We have to **start the fight with initiatives of our own**. Those who do are finding offense a bit more fun than defense alone. **Living wage ordinances, youth development** initiatives, even gun control and alcohol and tobacco policies **are finding their way onto the public agenda, thanks to focused community organizing that leverages power for community-driven initiatives**. - Over 600 local policies have been passed to regulate the tobacco industry. Local coalitions have taken the lead by writing ordinances that address local problems and organizing broad support for them. - Nearly 100 gun control and violence prevention policies have been enacted since 1991. - Milwaukee, Boston, and Oakland are among the cities that have passed living wage ordinances: local laws that guarantee higher than minimum wages for workers, usually set as the minimum needed to keep a family of four above poverty. **These are just a few of the examples that demonstrate how organizing for local policy** advocacy has **made inroads in areas where positive national policy** had been **stalled** by conservatives. Increasingly, the local policy arena is where the action is and where activists are finding success. Of course, corporate interests-which are usually the target of these policies-are gearing up in defense. Tactics include front groups, economic pressure, and the tried and true: cold, hard cash. **Despite these barriers, grassroots organizing can be very effective** at the smaller scale of local politics. At the local level, we have greater access to elected officials and officials have a greater reliance on their constituents for reelection. For example, **getting 400 people to show up at city hall in just about any city in the U.S. is quite impressive**. On the other hand, 400 people at the state house or the Congress would have a less significant impact. Add to that the fact that all 400 people at city hall are usually constituents, and the impact is even greater. Recent trends in government underscore the importance of local policy. Congress has enacted a series of measures devolving significant power to state and local government. **Welfare, health care, and the regulation of food and drinking water safety are among the areas where states and localities now have greater rule**. Devolution has some negative consequences to be sure. History has taught us that, for social services and civil rights in particular, the lack of clear federal standards and mechanisms for accountability lead to uneven enforcement and even discriminatory implementation of policies. Still, there are real opportunities for advancing progressive initiatives in this more localized environment. Greater local control can mean greater community power to shape and implement important social policies that were heretofore out of reach. **To do so will require careful attention to the mechanics of local policymaking and a clear blueprint** of what we stand for. Getting It in Writing Much of the work of framing what we stand for takes place in the shaping of demands. **By getting into the policy arena in a proactive manner, we can take our demands to the next level**. Our **demands can become law, with real consequences if the agreement is broken**. After all the organizing, press work, and effort, a group should leave a decisionmaker with more than a handshake and his or her word. Of course, **this work requires** a certain amount of **interaction with** "the suits," as well as struggles with **the bureaucracy**, the **technical language**, and the all-too-common resistance by decisionmakers. Still, if it's worth demanding, it's worth having in writing-whether as law, regulation, or internal policy. From ballot initiatives on rent control to laws requiring worker protections, organizers are leveraging their power into written policies that are making a real difference in their communities. Of course, **policy work is just one tool** in our

organizing arsenal, but it is a tool we simply can't afford to ignore. Making policy work an integral part of organizing will require a certain amount of retrofitting. We will need to develop the capacity to translate our information, data, and experience into stories that are designed to affect the public conversation. Perhaps most important, we will need to move beyond fighting problems and on to framing solutions that bring us closer to our vision of how things should be. And then we must be committed to making it so.

2NC Link ext.

Individual focus trades off with collective action frames. This makes debates competitions of dueling oratories rather than political strategies that include "Mobilizing Ideas" that explain a plan of action for collectivity, organization, and continuity.

Oakes et al 2k6 [Jeannie Oakes, John Rogers, Gary Blasi, & Martin Lipton .UCLA Law Students. "Grassroots Organizing, Social Movements, and the Right to High-Quality Education" paper prepared for the Rethinking Rodriguez Symposium. The Warren Institute UC Berkeley, School of Law April 27-28, 2006 https://www.law.berkeley.edu/files/oakes-rogers-biasi_paper.pdf, Accessed 7/25/15, AX]

Framing As we discussed earlier, social movements challenge society's collective sense making in ways that conventional reform strategies do not. This comes about through a struggle over beliefs and ideas as well as over concrete conditions—i.e., disrupting the cultural logics of scarcity, merit and deficit with countervailing logics. Instead of these logics, Americans could presume that the nation's great wealth can make opportunities abundant, not scarce. They could adopt as common sense that high quality and equitable education is a right for all students, not something that students should have to compete for. They could take as given that social priorities and not social wealth determine whether society can afford to educate all children well and provide them with decent housing, healthcare, and economic stability. They could believe that schools are absolutely capable of providing high-quality education to low-income children and children of color if there is enough public will to provide the necessary opportunities to schools in all communities.

Under what conditions can the current networks of grassroots organizations, coalitions, and interest groups—and those that might join them—actually become a social movement? For insights, we again turn to the social science scholarship on social movements. Scholars in the field define social movements as "collectivities acting with some degree of organization and continuity outside of institutional and organizational channels for the purpose of challenging or defending extant authority..."³⁶ They identify three requisites to a social movement: "collectivity," "organization," and "continuity."

Most scholars agree that acting together to sustain a coherent challenge to existing authority requires (a) a processes through which sufficient numbers of people come to see their grievances and their possible re mediation in shared and compelling terms (commonly referred to as "framing"); (b) organizational and leadership resources sufficient to move from shared understanding to concerted action; and (c) sufficient allies and resources to sustain concerted action over time and in the face of significant resistance. In this section we examine these three conditions, generally, and as they may exist at the present time in California.

In the language of many social movement scholars, such alternative logics must take the form of "mobilizing ideas" that, not only change thinking, but compel action by a variety of audiences and participants—from grassroots "actors" to middle class and elite observers and reactors. The phenomenon whereby these "mobilizing ideas" take shape is commonly known as "framing." Framing is not simply finding the right "turn of phrase" to motivate individuals; rather it poses a new conception of an existing social problem that moves it from being seen as regrettable and inevitable to being

considered an injustice that can and should be remedied. Scholars of framing see this process as being a deliberate effort of social movement actors to assign meanings to events and conditions that will mobilize supporters and allies. Such meanings are generally referred to as “collective action frames.”³⁷

David Snow and his colleagues argued, for example, in 1986 that “frame alignment processes” were crucial to social movement organizations.³⁸ Fourteen years later two of the authors wrote of the “almost meteoric increase” in research on “the framing/movement link.”³⁹ In this literature, the essential collective action frame reflects a shared understanding of some problematic condition or situation they define as in need of change, make attributions regarding who or what is to blame, articulate an alternative set of arrangements, and urge others to act in concert to affect change.⁴⁰ Snow and others also argue that frames are linked with the development and maintenance of collective identity—the strong sense of being a member of a group—particularly as social movement coalitions become heterogeneous.⁴¹ In turn, collective identity is thought to be a primary motivation for individuals’ in movements—such as feminism, environmentalism, and civil rights—from which they don’t expect benefit to one’s own class or material interests.⁴²

However, not all frames are alike. Theorists differentiate (a) diagnostic framing, which defines important causes of the problem; (b) prognostic framing, the articulation of possible solutions or a plan of attack; and (c) motivational framing, which helps construct the vocabularies of motive and a rationale for action.⁴³

In the case of educational justice, there are contending and to some extent incompatible frames, some more likely than others to define problems and solutions in ways that develop a sense of injustice and a collective identity among a wide array of activists required to generate broad-based public support. None of the frames is wholly satisfactory, and much framing work remains. Two of the prevailing frames, inequality (lack of fundamental fairness or justice) and quality (lack of adequacy or excellence) have both strengths and deficits. An inequality frame, shaped in the more general struggles for civil rights and social equality, diagnoses the problem as one of unequal access to educational opportunity, and calls for redistribution and leveling, accepted in Serrano⁴⁴ but rejected in Rodriguez.⁴⁵ The inequality frame draws motivational force from the still powerful images and themes of the civil rights movement. At the same time, the inequality frame is self-limiting in its reach. Appealing to those who have the least, along with their allies driven by justice concerns, it has the potential to frame potential allies as competitors. To the degree that it fails to challenge the logic of scarcity, it seems to call for redistribution within a “zero sum” arena of high-quality education.

The affirmative must identify a coherent connection between their advocacy and its potential for tangible political change---absent a metric to test its efficacy, it replicates idealist theoretical approaches they critique

Catherine **Lu 13**, Associate Professor of Political Science, McGill University, July 2013, “Activist political theory and the challenge of global justice,” *Ethics & Global Politics*, Vol. 6, No. 2, <http://www.ethicsandglobalpolitics.net/index.php/egp/article/view/21627/28587>

Which of these various international, state, corporate and civil society responses and proposals should we support? What political institutional changes are required to halt these repeated scenes of human wreckage produced by grave injustices such as the Rana Plaza building collapse? Is progress in breaking the vicious pattern of workplace catastrophes in the global apparel industry possible? What can political theorists contribute to these ongoing debates about global justice and responsibility?

The main objective of Lea Ypi’s first book, *Global Justice and Avant-Garde Political Agency*, is precisely to provide an account of the role of political theory and political theorists in the struggles of contemporary political agents for global justice. For Ypi, the purpose of normative political theory in its ‘activist mode’ is to identify and assist contemporary

'avant-garde political agents' to realise progressive political change by formulating coherent and plausible normative views about the function and purpose of our social practices and institutions. This is accomplished by employing a historically informed and forward-looking dialectical method of learning from the trials, failures, and successes of past political struggles with a view to evaluating the adequacy of different interpretations of the function and purposes of social institutions and practices, and distinguishing between more regressive or status quo, and more progressive interpretations of the relevant normative principles.²⁰

The criteria for adjudicating between different normative interpretations of the function and purpose of political institutions involve meeting three tasks. First, an interpretation (or family of interpretations) is better than its rivals if it is able to diagnose the causes of persistent and profound patterns of social conflict

at an appropriate level of analysis, accounting for the empirical evidence better than its competitors. Second, an interpretation is superior if it is able, after identifying inadequacies in old normative categories, to innovate from them and 'formulate principles that preserve all the normative benefits of its predecessors whilst avoiding their failures'. Third, a normative interpretation can outperform its rivals if it displays 'heuristic potential,' providing new ways to conceive of the purposes or functions of social institutions and practices, in light of theoretical innovations that anticipate new, unforeseen questions and challenges. A dialectical approach thus helps to make progress under contemporary conditions possible by providing a way to judge which theories (or families of theories) spawned by social and political conflicts and crises are 'better able to combine principles and agency in a fundamentally appropriate but also politically effective and motivationally sustainable way'. In light of the novel political and moral challenges wrought by new agents and circumstances of politics, normative political theory should aim to revise or refine interpretations of the normative principles underlying our social practices and institutions, in ways that improve their functionality and responsiveness to the concerns and commitments of the agents subjected to them.²¹

The normative theorist who is engaged in this activist mode works in tandem with the 'avant-garde political agents' who struggle for progressive political transformations: both are likened to 'creative scientists or artists who put existing knowledge and techniques at the service of fresh experiments, developing new perspectives, asking unprecedented questions, and paving the way for the development of alternative paradigms'.²² Drawing on the history of the women's movement, the anti-slavery movement, workers' movements, anti-colonial movements, and human rights movements, Ypi observes that the most effectual avant-garde political agents were those who tried 'to subvert specific interpretive patterns from within, while continuing to act as their critical voice'.²³ In terms of theories of global justice, Ypi finds Kant's own political theory exemplary for combining a cosmopolitan account of normative principles with a statist conception of political agency, and she interprets Kant's 'moral politician' to be similar to a cosmopolitan avant-garde political agent who makes it her 'duty to act within the state in conformity with cosmopolitan principles of justice'.²⁴

An adequate activist political theory should be able to give an account of the moral desirability of principles, as well their political feasibility and motivational sustainability. Doing so requires confronting issues of principle and issues of political agency, and combining them in ways that make possible progressive political change. Ypi observes, however, that normative political theorists have tended to ignore the normative relevance of political agency to the task of formulating normative principles for politics.

This ignorance or disconnect between normative principles and political agency is apparent in the two dominant approaches—ideal and non-ideal—to normative political theory. Ideal theory approaches are truth-seeking enterprises that ‘try to identify and establish a fundamentally appropriate analysis of first-order normative principles, regardless of whether these principles can meaningfully guide action in the real world’.²⁵ While constructing principles based on idealised agents, structures, and conditions may have some critical force in that they provide a basis for evaluating the justness of existing principles, practices, and social conditions, Ypi argues that ideal theoretical approaches tend to generate principles that are indeterminate, irrelevant, or distorting, given their disconnection from issues of political agency.²⁶ Non-ideal approaches, in contrast, ‘aim to develop principles able to guide agency in empirically contingent circumstances’, and typically take the current circumstances conditioning social and political agency to ‘play a constitutive role’ in formulating the relevant normative principles.²⁷ Ypi is concerned, however, that non-ideal theoretical approaches are vulnerable to a status quo bias, compromising the critical task of normative theory by taking too much of existing agents, practices, institutions, and conditions as they are.

Ypi admits that these are stylised reconstructions, and that most contemporary political theories of global justice exhibit elements of both ideal and non-ideal theoretical approaches so understood. Indeed, it should be noted that Ypi’s interpretation of the function of ideal and non-ideal theories reveals a certain dissatisfaction with a standard way of thinking about their distinction.²⁸ In the seminal account by John Rawls, ideal theories are the primary task of the political theorist, and have as their aim the identification of the correct first-order normative principles to guide the major social and political institutions of a society. Ideal theory accomplishes this task by abstracting from historically contingent circumstances, and idealising agents, structures or conditions in certain counterfactual and favourable ways.²⁹ Non-ideal theory is distinguished by its aim to identify transitional normative principles in response to unfavourable contexts where agents are either wilfully acting against the normative principles identified in ideal theory, or are involuntarily incapable of acting according to those principles. For example, in Rawls’s Law of Peoples, the duty of assistance is a principle of non-ideal theory to deal with the problematic existence of burdened societies that lack the capacity to develop domestically decent or just political and social institutions.³⁰ Non-ideal principles thus serve a transitional aim of helping agents to progress towards an ideal account of justice.

Ypi’s formulation of the distinction between ideal and non-ideal approaches to political theory serves a different purpose than this Rawlsian account. Her interpretation of the distinction operates to highlight the relationship between normative principles and political agency, and how problematic relationships between these—too distant and too close—can undermine either the critical value or the efficacy of any normative theory. From an activist theoretical perspective, ideal theoretical approaches may avoid a status quo bias, but they typically fail to contribute to solving problems confronted by agents currently suffering from inadequate political and social institutions and arrangements, whereas non-ideal theoretical approaches tend to generate myopic views of problem solving that typically lack critical force or emancipatory potential.

With her account of ‘activist political theory’ and the ‘dialectical approach’, Ypi is able to expose unconstructive aspects of the contemporary global justice debate among the two main rivals, cosmopolitans and statist. Ypi is not against cosmopolitanism, but she criticises a tendency of cosmopolitan theorists to dismiss the normative relevance of the state and state-based associations for realising cosmopolitan egalitarian conceptions of global justice. This dismissal, most salient in cosmopolitan arguments about the moral arbitrariness and insignificance of political associations or relational ties, is unconstructive and detrimental to the cause of advancing cosmopolitan normative principles because it fails to recognise the importance of political agency for the realisation of cosmopolitan aims. According to Ypi, the cosmopolitan disavowal of political membership and associative relations is both unnecessary and unwarranted ... Rejecting the normative standing of political communities hardly supports the defence of global distributive principles; it merely draws attention away from some relevant conceptual tools necessary to analyse global political transformation. Being disconnected from how political agency takes shape in the world, and failing to provide principled guidance on how agents committed to cosmopolitan normative principles should aim to reform particular institutions and practices, deprives cosmopolitan theories of their transformative potential and relevance to contemporary political struggles for global justice.³¹ A critical and constructive theory of global justice should not only provide normative

principles that are fundamentally appropriate, but also **address issues of political agency that render such principles politically effective and motivationally sustainable.**

2NC Solves Race

Racial progress has occurred though legal change and more is still possible---reject nonstate action because it ignores specific reforms that achieved lasting reductions in racial inequality

Michael Omi 13, and Howard Winant, Resistance is futile?: a response to Feagin and Elias, Ethnic and Racial Studies Volume 36, Issue 6, p. 961-973, 2013 Special Issue: Symposium - Rethinking Racial Formation Theory, AX

In Feagin and Elias's account, **white racist rule in the USA appears unalterable and permanent.** There is little sense that the 'white racial frame' evoked by systemic racism theory changes in significant ways over historical time. **They dismiss important rearrangements and reforms as merely 'a distraction from more ingrained structural oppressions** and deep lying inequalities **that** continue to **define US society?** (Feagin and Elias 2012, p. 21). Feagin and Elias use a concept they call 'surface flexibility' to argue that white elites frame racial realities in ways that suggest change, but are merely engineered to reinforce the underlying structure of racial oppression. Feagin and Elias say the phrase 'racial democracy' is an oxymoron – a word defined in the dictionary as a figure of speech that combines contradictory terms. If they mean the USA is a contradictory and incomplete democracy in respect to race and racism issues, we agree. If they mean that people of colour have no democratic rights or political power in the USA, **we disagree. The USA** is a racially despotic country in many ways, but in our view it **is** also **in many respects a racial democracy, capable of being influenced towards more or less inclusive** and redistributive economic **policies,** social policies, or for that matter, imperial policies. What is distinctive about our own epoch in the USA (post-Second World War to the present) with respect to race and racism? ¶ Over the past decades there has been a steady drumbeat of efforts to contain and neutralize civil rights, to restrict racial democracy, and to maintain or even increase racial inequality. Racial disparities in different institutional sites – employment, health, education – persist and in many cases have increased. Indeed, the post-2008 period has seen a dramatic increase in racial inequality. The subprime home mortgage crisis, for example, was a major racial event. Black and brown people were disproportionately affected by predatory lending practices; many lost their homes as a result; race-based wealth disparities widened tremendously. **It would be easy to conclude,** as Feagin and Elias do, **that white racial dominance has been continuous and unchanging throughout US history.** But such a perspective **misses the dramatic twists and turns in racial politics that have occurred since the Second World War and the civil rights era.** ¶ Feagin and Elias **claim that we overly inflate the significance of the changes wrought by the civil rights movement, and that we overlook the serious reversals of racial justice and persistence of huge racial inequalities?** (Feagin and Elias 2012, p. 21) that followed in its wake. **We do not.** In Racial Formation we wrote about 'racial reaction' in a chapter of that name, and elsewhere in the book as well. Feagin and Elias devote little attention to our arguments there; perhaps because they are in substantial agreement with us. **While** we argue that **the right wing was able to 'rearticulate' race and racism issues to roll back some of the gains of the civil rights movement,** we also believe that **there are limits to what the right could achieve in the post-civil rights political landscape.** ¶ So we agree that **the present prospects for racial justice are demoralizing at best. But we do not think that is the whole story. US racial conditions have changed** over the post-Second World War period, in ways that Feagin and Elias tend to downplay or neglect. **Some of the major reforms of the 1960s have proved irreversible; they have set powerful democratic forces in motion.** These racial (trans)formations were the results of unprecedented political mobilizations, led by the black movement, but not confined to blacks alone. Consider the **desegregation of the armed forces,** as well as key civil rights movement victories of the 1960s: **the Voting Rights Act, the Immigration and Naturalization Act** (Hart- Celler), as well as important court decisions like **Loving v. Virginia that declared anti-miscegenation laws unconstitutional.** While we have the greatest respect for the late Derrick Bell, we do not believe that his 'interest convergence hypothesis' effectively explains all these developments. How does Lyndon Johnson's famous (and possibly apocryphal) lament upon signing the Civil Rights Act on 2 July 1964 – 'We have lost the South for a generation' – count as 'convergence'? ¶ **The US racial regime has been transformed in significant ways.** As Antonio Gramsci argues, hegemony proceeds through the incorporation of opposition (Gramsci 1971, p. 182). The civil rights reforms can be seen as a classic example of this process; here the US racial regime – under movement pressure – was exercising its hegemony. But Gramsci insists that such reforms – which he calls 'passive revolutions' – cannot be merely symbolic if they are to be effective: oppositions must win real gains in the process. Once again, we are in the realm of politics, not absolute rule. ¶ So yes, we think there were **important if partial victories** that **shifted the racial state** and transformed the significance of race in everyday life. **And** yes, we think that

further victories can take place both on the broad terrain of the state and on the more immediate level of social interaction: in daily interaction, in the human psyche and across civil society. Indeed we have argued that in many ways the most important accomplishment of the anti-racist movement of the 1960s in the USA was the politicization of the social. In the USA and indeed around the globe, face-based movements demanded not only the inclusion of racially defined 'others' and the democratization of structurally racist societies, but also the recognition and validation by both the state and civil society of racially-defined experience and identity. These demands broadened and deepened democracy itself. They facilitated not only the democratic gains made in the USA by the black movement and its allies, but also the political advances towards equality, social justice and inclusion accomplished by other 'new social movements': second-wave feminism, gay liberation, and the environmentalist and anti-war movements among others.¶ **By no means do we think that the post-war movement upsurge was an unmitigated success.** Far from it: all the new social movements were subject to the same 'rearticulation' (Laclau and Mouffe 2001, p. xii) that produced the racial ideology of 'colourblindness' and its variants; indeed all these movements confronted their mirror images in the mobilizations that arose from the political right to counter them. Yet even their incorporation and containment, even their confrontations with the various 'backlash' phenomena of the past few decades, even the need to develop the highly contradictory ideology of 'colourblindness', reveal the transformative character of the 'politicization of the social'. While it is not possible here to explore so extensive a subject, it is worth noting that it was the long-delayed eruption of racial subjectivity and self-awareness into the mainstream political arena that set off this transformation, shaping both the democratic and anti-democratic social movements that are evident in US politics today.¶ What are the political implications of contemporary racial trends?¶ Feagin and Elias's use of racial categories can be imprecise. This is not their problem alone; anyone writing about race and racism needs to frame terms with care and precision, and we undoubtedly get fuzzy too from time to time. The absence of a careful approach leads to 'racial lumping' and essentialisms of various kinds. **This imprecision is heightened in polemic. In the** Feagin and Elias essay the term 'whites' at times refers to all whites, white elites, 'dominant white actors' and very exceptionally, anti-racist whites, a category in which we presume they would place themselves. Although the terms 'black', 'African American' and 'Latino' appear, the term 'people of colour' is emphasized, often in direct substitution for black reference points.¶ In the USA today **it is important not to frame race in a bipolar manner. The black/white paradigm made more sense in the past than it does in the twenty-first century. The racial make-up of the nation has now changed dramatically.** Since the passage of the Immigration Reform Act of 1965, the USA has become more 'coloured'. A 'majority-minority' national demographic shift is well underway. Predicted to arrive by the mid-twenty-first century, the numerical eclipse of the white population is already in evidence locally and regionally. In California, for example, non-Hispanic whites constitute only 39.7 per cent of the state's population. While the decline in the white population cannot be correlated with any decline of white racial dominance, the dawning and deepening of racial multipolarity calls into question a sometimes implicit and sometimes explicit black/white racial framework that is evident in Feagin and Elias's essay. Shifting racial demographics and identities also raise general questions of race and racism in new ways that the 'systemic racism' approach is not prepared to explain.3¶ Class questions and issues of panethnicizing trends, for example, call into question what we mean by race, racial identity and race consciousness. No racially defined group is even remotely uniform; groups that we so glibly refer to as Asian American or Latino are particularly heterogeneous. Some have achieved or exceeded socio-economic parity with whites, while others are subject to what we might call 'engineered poverty' in sweatshops, dirty and dangerous labour settings, or prisons. Tensions within panethnicized racial groups are notably present, and conflicts between racially defined groups ('black/brown' conflict, for example) are evident in both urban and rural settings. A substantial current of social scientific analysis now argues that Asians and Latinos are the 'new white ethnics', able to 'work toward whiteness'⁴ at least in part, and that the black/white bipolarity retains its distinct and foundational qualities as the mainstay of US racism (Alba and Nee 2005; Perlmann 2005; Portes and Rumbaut 2006; Waters, Ueda and Marrow 2007).¶ We question that argument in light of the massive demographic shifts taking place in the USA. Globalization, climate change and above all neoliberalism on a global scale, all drive migration. The country's economic capacity to absorb enormous numbers of immigrants, low-wage workers and their families (including a new, globally based and very female, servant class) without generating the sort of established subaltern groups we associate with the terms race and racism, may be more limited than it was when the 'whitening' of Europeans took place in the nineteenth and twentieth centuries. In other words this argument's key precedent, the absorption of white immigrants 'of a different color' (Jacobson 1998), may no longer apply. Indeed, we might think of the assimilationist model itself as a general theory of immigrant incorporation that was based on a historically specific case study – one that might not hold for, or be replicated by, subsequent big waves of immigration. Feagin and Elias's systemic racism model, while offering numerous important insights, does not inform concrete analysis of these issues.¶ It is important going forward to understand how groups are differentially racialized and relatively positioned in the US racial hierarchy: once again racism must be seen as a shifting racial project. This has important consequences, not only with respect to emerging patterns of inequality, but also in regard to the degree of power available to different racial actors to define, shape or contest the existing racial landscape. Attention to such matters is largely absent in Feagin and Elias's account. In their view racially identified groups are located in strict reference to the dominant 'white racial frame', hammered into place, so to speak. As a consequence, they fail to examine how racially subordinate groups interact and influence each others' boundaries, conditions and practices. Because they offer so little specific analysis of Asian American, Latino or Native American racial issues, the reader finds her/himself once again in the land (real or imaginary, depending on your racial politics) of bipolar US racial dynamics, in which whites and blacks play the leading roles, and other racially identified groups – as well as those ambiguously identified, such as Middle Eastern and South Asian Americans (MEASA) – play at best supporting roles, and are sometimes cast as extras or left out of the picture entirely.¶ **We still want to acknowledge that blacks have been catching hell and have borne the brunt of the racist reaction of the past several decades. For example, we agree with** Feagin and Elias's critique of the reactionary politics of incarceration in the USA. The 'new Jim Crow' (Alexander 2012) or even the 'new slavery' that the present system practises is something that was just in its beginning stages when we were writing Racial Formation. It is now recognized as a national and indeed global scandal. **How is it to be understood?** Of course there are substantial

debates on this topic, notably about the nature of the 'prison-industrial complex' (Davis 2003, p. 3) and the social and cultural effects of mass incarceration along racial lines. But **beyond** Feagin and Elias's **denunciation of the ferocious white racism that is operating here, deeper political implications are worth considering**. As Alexander (2012), Mauer (2006), Manza and Uggen (2008) and movement groups like Critical Resistance and the Ella Baker Center argue, **the upsurge over recent decades in incarceration rates** for black (and brown) men expresses the fear-based, law-and-order appeals that have shaped US racial politics since the rise of Nixonland (Perlstein 2008) and the 'Southern strategy'. Perhaps even more central, racial repression **aims at restricting the increasing impact of voters of colour in a demographically shifting electorate**.¶ There is a lot more to say about this, but for the present two key points stand out: first, it is not an area where Feagin and Elias and we have any sharp disagreement, and second, **for all the horrors and injustices that the 'new Jim Crow' represents, incarceration, profiling and similar practices remain political issues. These practices and policies are not ineluctable and unalterable dimensions of the US racial regime. There have been previous waves of reform in these areas. They can be transformed again** by mass mobilization, electoral shifts and so on. **In other words, resistance is not futile**.¶ Speaking of electoral shifts and the formal political arena, how should President Barack Obama be politically situated in this discussion? How do Feagin and Elias explain Obama? Quite amazingly, his name does not appear in their essay. Is he a mere token, an 'oreo', a shill for Wall Street? Or does Obama represent a new development in US politics, a black leader of a mass, multiracial party that for sheer demographic reasons alone might eventually triumph over the white people's party, the Republicans? If the President is neither the white man's token nor Neo, the One,⁵ then once again we are in the world of politics: neither the near-total white despotism depicted by Feagin and Elias, nor a racially inclusive democracy.¶ President Obama continues to enjoy widespread black support, although it is clear that he has not protected blacks against their greatest cumulative loss of wealth in history. He has not explicitly criticized the glaring racial bias in the US carceral system. He has not intervened in conflicts over workers' rights – particularly in the public sector where many blacks and other people of colour are concentrated. He has not intervened to halt or slow foreclosures, except in ways that were largely symbolic. Workers and lower-middle-class people were the hardest hit by the great recession and the subprime home mortgage crisis, with black families faring worst, and Latinos close behind (Rugh and Massey 2010); Obama has not defended them. Many writers have explained Obama's centrism and unwillingness to raise the issue of race as functions of white racism (Sugrue 2010).¶ The black community – and other communities of colour as well – remains politically divided. While black folk have taken the hardest blows from the reactionary and racist regime that has mostly dominated US politics since Reagan (if not since Nixon), no united black movement has succeeded the deaths of Malcolm and Martin. Although there is always important political activity underway, a relatively large and fairly conservative black middle class, a 'black bourgeoisie' in Frazier's (1957) terms, has generally maintained its position since the end of the civil rights era. Largely based in the public sector, and including a generally centrist business class as well, this stratum has continued to play the role that Frazier – and before him, Charles S. Johnson. William Lloyd Warner, Alison Davis and other scholars – identified: vacillation between the white elite and the black masses. Roughly similar patterns operate in Latino communities as well, where the 'working towards whiteness' framework coexists with a substantial amount of exclusion and super-exploitation.¶ Alongside class issues in communities of colour, there are significant gender issues. The disappearance of blue-collar work, combined with the assault by the criminal justice system – chiefly profiling by the police ('stop and frisk') and imprisonment, have both unduly targeted and victimized black and brown men, especially youth. Women of colour are also targeted, especially by violence, discrimination and assaults on their reproductive rights (Harris-Perry 2011); profiling is everywhere (Glover 2009).¶ Here again we are in the realm of racial politics. Debate proceeds in the black community on Obama's credibility, with Cornel West and Tavis Smiley leading the critics. But it seems safe to say that in North Philly, Inglewood or Atlanta's Lakewood section, the president remains highly popular. Latino support for Obama remains high as well. Feagin and Elias need to clarify their views on black and brown political judgement. Is it attuned to political realities or has it been captured by the white racial frame? Is Obama's election of no importance?¶ ***¶ In conclusion, do Feagin and Elias really believe that white power is so complete, so extensive, so 'sutured' (as Laclau and Mouffe might say) as they suggest here? Do they mean to suggest, in Borg-fashion, that 'resistance is futile'? This seems to be the underlying political logic of the 'systemic racism' approach, perhaps unintentionally so. Is white racism so ubiquitous that no meaningful political challenge can be mounted against it? Are black and brown folk (yellow and red people, and also others unclassifiable under the always-absurd colour categories) utterly supine, duped, abject, unable to exert any political pressure? Is such a view of race and racism even recognizable in the USA of 2012? And is that a responsible political position to be advocating? Is this what we want to teach our students of colour? Or our white students for that matter?¶ We suspect that if pressed, Feagin and Elias would concur with our judgement that **racial conflict, both within (and against) the state and in everyday life, is a fundamentally political process**. We think that they would also accept our claim that **the ongoing political realities of race provide extensive evidence that people of colour in the USA are not so powerless, and that whites are not so omnipotent**, as Feagin and Elias's analysis suggests them to be.¶ Racial formation theory allows us to see that there are contradictions in racial oppression. The racial formation approach reveals that white racism is unstable and constantly challenged, from the national and indeed global level down to the personal and intra-psychic conflicts that we all experience, no matter what our racial identity might be. While racism – largely white – continues to flourish, it is not monolithic. Yes, **there have been enormous increases in racial inequality in recent years. But movement-based anti-racist opposition continues, and sometimes scores victories. Challenges to white racism continue both within the state and in civil society**. Although largely and properly led by people of colour, anti-racist movements also incorporate whites such as Feagin and Elias themselves. **Movements may experience setbacks, the reforms for which they fought may be revealed as inadequate**, and indeed their leaders may be co-opted or even eliminated, **but racial subjectivity** and self-awareness, unresolved and conflictual **both within the individual psyche and the body politic, abides**. **Resistance is not futile.**

2NC impact- political crisis

We need sites of public contestation and solidarity in order to solve political crises- otherwise we risk catastrophic impacts and never create concrete change

Milstein 2014 [Brian, College d'études mondiales, "Thinking politically about crisis: A pragmatist perspective", European Journal of Political Theory, 0(0) 1-20, Accessed at Sage Journals 12/12/2014, pg. 1-3, AX]

"Crisis" is a prominent feature of our social and political reality. However, the term "crisis," pervasive as it is in discussions about politics, society, and history, is rarely defined or grappled with explicitly. As the conceptual historian Reinhart Koselleck once observed, "From the nineteenth century on, there has been an enormous quantitative expansion in the variety of meanings attached to the concept of crisis, but few corresponding gains in either clarity or precision."¹ Nearly a half-century after Koselleck made this statement, very little has changed. We talk of particular crises; we talk of things that are alleged to be "in crisis," but there is comparatively little discussion about "crisis" as such. This is especially the case in political theory, where the bulk of normative energies tend to be expended on questions relating to ideal conditions in an otherwise stable society. Yet however else we might think to characterize crisis—be it as a time of radical disruption, a moment of epochal transition, the detonation of systemic societal contradictions, or a state of emergency, and be it of the state, the economy, the environment, or the international sphere—a crisis is always in the last instance a political phenomenon. My purpose here is to rethink the concept of crisis as a concept of political theory. More specifically, I am interested in how the "grammar" of crisis might inform the way we think about political action and social change. In doing so, I seek to broach a number of foundational questions about the nature of the concept of crisis and the place it occupies in our political repertoire: What are we doing when we say there is a crisis? What function does the concept serve? What assumptions are we putting into play when we use the term crisis? Since the beginning of the modern age, crisis experiences have played a key role in calibrating the aims of politics and the central questions of political theory. The primary point of reference for modern political thought—the sovereign state—was forged out of the manifold political crises of the seventeenth and eighteenth centuries. Jon Elster observes that "new constitutions almost always are written in the wake of a crisis or exceptional circumstance of some sort."² Many of our social welfare institutions came into being in the wake of recurrent economic crises, and it is also out of these same experiences that the idea of socioeconomic justice has found its way into the mainstream of contemporary political thought. Many of our most important international institutions, as well as the bulk of international humanitarian law, were forged out of experiences of international and humanitarian crisis, and so, too, have our current debates about human rights and inter-national or global justice. At the same time, crises are not exactly phenomena we welcome. They wreak havoc on society, destroying lives and livelihoods, and they are just as likely to leave society in a worse state instead of a better one. Moreover, crises harbor political dangers as well as opportunities, and the opportunities they do present may just as well be opportunities for exploitation by elites as for emancipatory movement by the masses. It is no surprise that much of the recent literature dealing with crises, particularly in the realm of legal and constitutional scholarship after 9/11, has put its emphasis on precisely this potential for exploitation.³ But, as I will argue in what follows, even this potential for elites or rulers to manipulate crises is parasitic on a more fundamental set of functions that the concept of crisis fulfills in the modern social imaginary. Philosophies of history, especially those influenced by the Hegelian and Marxist traditions, often identify crisis not only with disruption and cataclysm but with opportunities for transformation or even transcendence: crises can be indicative of deeper pathologies in the structure of society, and they can bring into the open power relations or conflicts that remained otherwise hidden.⁴ To be sure, over-simplified associations of crisis with revolutionary praxis have been rightly criticized on both philosophical and empirical grounds as flawed, naive, and even dangerous.⁵ But this need not rule out the possibility of a more subtle, methodical, and pragmatic investigation into the relation of crisis experiences to the creation of historical meaning, transformations of solidarity, and consciousness of justice and injustice. Even if we can no longer abide a simple identification of crisis with emancipation, this does not negate the possibility that crises can be occasions for contesting social structures, transforming solidarities, and pursuing political change. In this article I will offer a "pragmatist" approach to thinking about crisis. My argument is, if we want to think about crisis as a political concept, we need to think through how the concept is used in modern societies—that is, by thinking and speaking actors who experience and act upon crises. Pragmatists from C.S. Peirce to Wittgenstein to Jurgen Habermas and Robert Brandom have argued that, in order to grasp a concept, we need first to examine how it serves the practice of reasoning, how it helps us make inferences about the world, what prior understandings and judgments it presupposes, how it fits in with other related concepts, and how it informs our repertoires of

action. In what follows, I will show that the concept of crisis indeed rests on some powerful assumptions. Crisis belies the traditional distinctions between empirical science and normative philosophy: it is an objective event, but it is one whose urgency demands a normative commitment on the part of those involved in it. It is an inherently reflexive concept, one that blurs the usual dichotomies between fact and value, observer and participant, and theory and practice, and it presupposes our ability to critically observe and take responsibility for our social world. As such, the modern concept of crisis is an essentially participatory concept, whose very invocation calls not just for observation and critical judgment but action. I will begin with a look back at how the concept of crisis has emerged and developed as a central concept in modernity, a reflexive concept participants use to make sense of their increasingly complex relationship to their social world. In the following section, I will show how the modern concept of crisis rests on certain pragmatic assumptions, which will allow us to see how crises can be understood as a function of the publicly discursive production of “crisis consciousness.” As we will see in the “The politics of the crisis community” section, it is the public way in which actors speak about, act upon, and contest each other’s consciousness of crisis that makes crisis into a thoroughly political phenomenon, susceptible to contestation, struggle, and even resistance. I will conclude by arguing that it is precisely this discursive and contested aspect of the crisis concept that can make it appear fuzzy, diluted, or subject to abuse, but this is all the more reason to strive to make the concept explicit in political theory.

2NC impact- warming

Their politics of resistance to institutions and protest weakens institutional and collective change because those decentralized actions can’t bring together diverse communities and abandons institutions-particularly that prevents solutions to global climate change.

Heath and Potter 2005 [Joseph Heath and Andrew Potter. Joseph Heath is an associate professor in the department of philosophy at the University of Toronto. Andrew Potter is an assistant professor in the department of philosophy at Trent University. *Nation of Rebels: Why Counterculture Became Consumer Culture*. “Spaceship Earth.” HarperCollins Publishers. Pg. 329-330, AX]

The fact of the matter is that the antiglobalisation movement has a conception of democratic politics that is fundamentally hostile toward national and international representative institutions. It is convenient to attribute this hostility to a healthy scepticism (“Governments sold us out!”), but really it is as old as the counterculture from which the antiglobalisation movement sprang. Klein claims that her goal is to help build a form of ‘deep’ and decentralised democracy. Yet the politics that she has in mind is essentially the ’60s ideal of ‘participatory democracy’ or ‘grassroots democracy’. Its countercultural pedigree can be seen in the profound dislike of hierarchy, bureaucracy and expertise that this model of democracy entails. The main goal of this sort of politics is to eliminate the institutional barriers and vested interests that stand between citizens and action. It looks to shift from representation to deliberation, by inverting the basic political structure from the top-down structure of representative democracy to a grassroots, bottom-up process for decision-making. This requires a radically decentralised politics, with power downloaded to local communities or municipalities. This is just the political form of the environmentalist ‘Think globally, act locally’ agenda, with a similar faith in its virtues. Underlying it all is a faith in the powers of spontaneous harmony, an assumption that as long as each local community looks after its own interests, the interests of the whole will automatically be met. Furthermore, in shrinking the scope of citizens’ political responsibility and concern, participatory democracy hopes to achieve a substantial reduction in conflict and complexity, and thereby to evade the problems that arise from living in a pluralistic society. The more local the politics, the smaller the population one needs to take into consideration, and thus the less the chances are of having to compromise or accommodate those with different values. Supporters of participatory democracy have even started advocating something called ‘local foreign policy’. Small organisations, from universities to churches to municipalities, pass regulations that the governments at the provincial, state and federal levels are unwilling to consider. Berkeley, California, was (naturally) one of the first to ban companies with investments in Burma from selling their goods or services to municipal agencies. Others have followed suit, targeting companies with investments in places like Indonesia and Nigeria, while still others have enacted ‘living wage’ laws, so that in order to win a municipal contract, a company must pay its employees a suitably high wage and offer a certain package of benefits. Fundamentally, this

is the same form of utopianism that one finds in Callenbach's *Recolonia*. If this sort of deep, decentralised democracy were able to solve our problems, then we wouldn't need governments at all. But the most serious political challenges we face are essentially collective action problems, and decentralised local democracy can't be the solution to these problems, since more often than not it is the cause. Global warming is a good example. No individual corporation has any interest in reducing its output of greenhouse gases, because the costs of global warming are spread across every person on the planet. At the same time, no individual country has any incentive to regulate its own energy industries in the absence of any guarantee that other countries will do likewise. Global warming can be solved only by a general agreement that is binding on every producer of greenhouse gases on earth. What we need is not a local foreign policy, but a global domestic policy on greenhouse gas emissions. At some point, the stance of the antiglobalisation movement begins to generate a vicious circle. The whole problem with globalisation, say its opponents, is that it has weakened governments to the point where they are now irrelevant. We cannot possibly expect our national governments to bring peace, order and justice to the planet, since it is the very impotence of these governments that makes the retreat into local politics necessary in the first place. But then these activists turn around and refuse to participate in national politics, and deny the legitimacy of their own elected officials. This retreat from democratic politics weakens these governments further and robs them of legitimacy with certain crucial segments of the population. In so doing, the antiglobalisation movement weakens the only instrument that can be used to correct the very problems that it diagnoses. We can break the circle only by putting to bed the myth of powerless governments. Governments, especially those in the West, are not shrinking, they are not the stooges of multinational corporations and there has not been a race to the bottom' in taxation, corporate regulation and environmental protection. In fact, just the opposite is true. Average government tax revenues as a percentage of GDP are higher than they have ever been, and the trend is upward, not down. In the wake of the Enron, WorldCom and Parmalat corporate scandals, there is a movement toward significant tightening of international regulations on corporate governance. Finally, there is no evidence that environmental regulations are being weakened by pressures emanating from global competition.

A2: Reformism Bad

Progressive change is possible and effective – the alt fails and leads to authoritarianism
Connolly 11

(William E., *A World of Becoming*, Duke University Press)

Is it not obligatory to expose and resist the system as such rather than taking cumulative actions to move it? Don't such actions necessarily fold back in on themselves, feeding the dosed system they seek to move? Some theorists on the Left say such things, but they themselves have too dosed a view of the systems they criticize. No system in a world of becoming composed of multiple, interacting systems of different types, with different capacities of self-organization, is entirely dosed. It is both more vulnerable to the outside than the carriers of hubris imagine and periodically susceptible to creative movement from within and without simultaneously. Moreover, pure negativity on the Left does not sustain either critique or militancy for long, but rather, it tends eventually to lapse into resignation or to slide toward the authoritarian practices of the Right that already express with glee the moods of negativity, hubris, or existential revenge. We have witnessed numerous examples of such

disappointing transitions in the last several decades, when a negative or authoritarian mood is retained while the creed in which it was set is changed dramatically. We must therefore work on mood, belief; desire, and action together. As we do so we also amplify positive attachment to existence itself amidst the specific political resentments that help to spur us on. To ignore the existential dimension of politics is to increase the risks of converting a noble movement into an authoritarian one and to amplify the power of bellicose movements that mobilize destructive potential. To focus on the negative dimension alone is to abjure the responsibilities of political action during a dangerous time.

To review, none of the role interventions listed above nor all in concert could suffice to break such a global resonance machine. Luck and pregnant points of contact with salutary changes in state actions, other cross-state citizen movements, the policies of international organizations, creative market innovations, and religious organization are needed. But those larger constellations may not themselves move far in a positive direction unless they meet multiple constituencies primed to join them and geared to press them whenever they lapse into inertia, if a world resonance machine of revenge and counter-revenge stretches, twists, and constrains the classical image of sovereign units, regionally anchored creeds, uneven capitalist exchange, and international organizations, while drawing selective sustenance from all of them, a new counter-machine must do so too.

Reform is key –crucial to the movement and refusing short term work ignores the real bodies in the system now

Meiners 7 (Ph.D. in Education, Simon Fraser University, Canada; teaches, writes and organizes in Chicago. Erica R., Right to BeHostile: SCHOOLS. PRISONS, AND THE MAKING OF PUBLIC ENEMIES, pg. 169-70)

Working toward a horizon of abolition forces me to continue learning and considering the depth of how prisons and incarceration are natural- ized in our communities. However, this multifaceted goal of prison abolition does not mean not doing reform work. The horizon of abolition does not preclude working for reforms and changes. Reform work and service providing are required because there are real bodies who need immediate assistance. As longtime feminist prison activist and scholar Karlene Faith writes:¶ Every reform raises the question of whether, in Gramsci's tenus, it is a revolutionary reform, one that has liberatory potential to chal- lenge the status quo, or a reform reform, which may ease the problem temporarily or superficially, but reinforces the status quo by validating the system through the process of improving it. We do liberal reform work because real women in real crises occupy the prisons, and they can't be ignored. Revolutionary reform work is educative: it raises questions of human rights (and thereby validates prisoners as human beings) and demonstrates that the state apparatus, which is mandated to uphold human rights, is one of the worst rights abusers. (Faith, 2000,164-165)¶ Faith reminds me of the necessity of doing the "both/and" where everyday local work may involve service providing or working for reforms, but it is also useful to place, understand, and connect this labor to a larger movement. For example, I cofacilitated domestic violence workshops at the Cook County Jail because there are real women in prisons and jails with real needs. We distributed information about the resources available to women including housing and advocacy services. Yet, despite offering information to women who generally were not informed about these resources, this service-providing was also problematic if analyzed through a wider framework. Our work was free and removed responsibility from the jail to provide these services. Our program made the jail "look good because a group of university academics volunteered their time and pro- vided services and did nothing to challenge the existence of the jail, in fact our work potentially strengthened the jail's legitimacy. This creates a clear contradiction, as how do we challenge the legitimacy of the jail, yet recognize that there are women who require immediate resources? There are significant tensions between these frameworks, reform or service-providing and abolition, and I don't think that these tensions are necessarily a negative. For me, these tensions about how and where to work, and the conflicts surrounding short- and long-term strategies for change, can make

both the "direct service" and "abolition" work stronger. I specifically use the term the horizon of prison abolition because this is a goal that shifts yet simultaneously frames all of my work. Abolition is also a concept that is grounded in histories of successful struggles for racial and economic (and gender) justice, and invoking these histories is useful.

Must consider each use of sovereignty as unique – cannot universalize our opposition to the state or we will create the same problems of universal sovereignty and give ourselves over to multiple other forms of oppression

Derrida 3

(Jacques, THE "WORLD" OF THE ENLIGHTENMENT TO COME (EXCEPTION, CALCULATION, SOVEREIGNTY), Research in Phenomenology. Pittsburgh: 2003. Vol. 33 pg. 9, 44 pgs)

And yet, in the second place, it would be imprudent and hasty, in truth hardly reasonable, to oppose unconditionally, that is, head on, a sovereignty that is itself unconditional and indivisible. One cannot combat, head on, all sovereignty, sovereignty in general, without threatening at the same time, beyond the nation-state figure of sovereignty, the classical principles of freedom and self-determination. Like the classical tradition of law (and the force that it presupposes), these classical principles remain inseparable from a sovereignty at once indivisible and yet able to be shared. Nation-state sovereignty can even itself, in certain conditions, become an indispensable bulwark against certain international powers, certain ideological, religious, or capitalist, indeed linguistic, hegemonies, which, under the cover of liberalism or universalism, would still represent, in a world that would be little more than a market, a rationalization in the service of particular interests. Yet again, in a context that is each time singular, where the respectful attention paid to singularity is not relativist but universalizable and rational, responsibility would consist in orienting ourselves without any determinative knowledge of the rule. To be responsible, to keep within reason [garder raison], would be to invent maxims of transaction for deciding between two just as rational and universal but contradictory exigencies of reason as well as its enlightenment.

2NC Right Takeover DA

The left is failing because of a suspicion of the nation state – we might fight the right at all levels in order to be effective

Grayson and Little 11

(Deborah Grayson and Ben Little 4 August 2011, The far right are the masters of network politics, not the 'internationalist' left, <http://www.opendemocracy.net/ourkingdom/deborah-grayson-and-ben-little/far-right-are-masters-of-network-politics-not-international>)

While Norway mourns and attends to matters of justice, across Europe the left would be wise to pause and reflect upon the mixed responses to the worst case of child murder in northern Europe since the Second World War. We can only hope that Anders Breivik is a lone operator and that we will not see this kind of politically motivated mass murder repeated in the UK or anywhere else, but in showing how right wing ideology is formed and disseminated through increasingly international networks, the Utoya massacre has lessons for us all.

Although globally oriented 'lefties' may like to think this is a contradiction in terms, it is the far right who are pioneering the way towards a new form of

internationalism. This is not to say that they have lost their attachment to the nation – for all that vigilantes like Breivik may think in civilisational or European terms, “small state” nationalism remains the bedrock of their politics. Those that see the blurring of boundaries between European and national perspectives as a sign of incoherence which will diminish the power of these ideological beliefs are mistaken. In an age of network politics it's a strength, and one that the left needs to understand if we are to reverse the electoral successes of the centre-right and the populist rise of the far-right across Europe. So far, the left has struggled to match the way far-right networks have learned to scale seamlessly from the local to the civilisational through the conceptual space of the national. The English Defence League, for example, explain local opposition to their marches as stemming from the malign influence of the SWP's campaign, Unite Against Fascism; cite the welfare state as evidence of leftist domination in national politics; and see in the European Court of Human Rights the imposition of socialist, multicultural values across the entire continent. This sense of multiple scales allows the EDL to create a language that reflects their politics at every level, and to communicate their message across local and national boundaries. They create a unified rhetoric that the left, with their suspicion of the national, cannot replicate.

The strategy of the 1AC results in Anti-politics that makes political corruption and right wing dominance inevitable

Boggs 97 CARL BOGGS, National University, Los Angeles, “The Great Retreat: Decline Of The Public Sphere In Late Twentieth-Century America” 1997 *Theory and Society* 26., AX

Both mall culture and mass media symbolize the prevailing mood of anti-politics: they reproduce to a deeply-atomized, commodified social life-world which corresponds to the mode of consciousness described by Richard Sennett in *The Fall of Public Man*, where citizen involvement in a republic is effaced “by the belief that social meanings are generated by the feelings of individual human beings,” so that the common terrain of power relations and social space is obliterated.¹⁵ Sheldon Wolin refers to this development as a “crisis of citizenship,” reflected in the carving up of the public sphere by local, privatized interests.¹⁶ The point has been reached where most Americans can no longer imagine a system truly open to citizen participation, where the ordinary person might have influence. Viewed in this way, modernity is two-sided: it coincides with the spread of technology, knowledge, and expertise but also reinforces widespread feelings of alienation and powerlessness. Individuals feel engulfed by forces beyond their control ^ bureaucracy, government, huge corporations, the global economy. Under these conditions psychological retreat from the public sphere may seem normal enough. The problem, however, is that such firmly entrenched bastions of power will not vanish simply because they are denigrated or ignored; on the contrary, their hegemony will simply go unchallenged. After California anti-tax crusaders launched the Proposition 13 campaign in 1978, an upsurge of movements on the right fed into a rapidly-growing anti-statist current that transformed the whole terrain of American electoral politics. Winning millions of adherents, these movements took many forms: libertarians, Christian fundamentalists, anti-abortion campaigns, groups, the National Rifle Association, local militias, and so forth. While usually ambivalent toward the public sphere, they nonetheless entered it and often used it to great advantage. Yet popular hostility toward government was never just a right-wing phenomenon; it had already resonated within the new left, the counter-culture, some progressive movements, and a nascent neo-liberalism. As a general mood, anti-politics can be seen as a response to the mounting crisis of the public sector at a time when competitive pressures within the global market began to intensify. It can also be understood as a growing reaction against bureaucracy in any form. Anti-statism was further reinforced by the crisis and then eclipse of Communism around the world ^ a development interpreted by many as validation of free-market capitalism and privatized consumption styles fetishized in the leading industrial nations. When the decline of

European social democracy is taken into account, the waning of the entire socialist tradition becomes a watershed event for justifying the most extreme (and utopian) forms of anti-statism. In this milieu the "death of socialism" and with it **the discrediting of any government planning or regulation of the economy is widely interpreted as a sign that state power is fundamentally corrupt and inefficient at all times and all places.** American society in the 1990s has seen the resurgence of a fiercely anti-government right-wing populism comprising not only free-marketeters and anti-tax partisans but also a bizarre variety of cults, militias, and enclave groups, mostly but not entirely drawn from the ranks of the familiar "angry white male." Many see themselves caught up in an all-out war against an evil and oppressive federal government that taxes and regulates citizens beyond reason. Others see the national state apparatus as some kind of agency of international conspiracies, some-times involving the United Nations. Inevitably, violent confrontations of one sort or another have taken place at the Waco standoff; and conflagration at the Branch Davidian compound, the Oklahoma City bombing, the protracted holdout of the Montana Freeman, the Amtrak train derailment, and numerous others. In hundreds of lesser episodes, federal agents and employees around the country have been victims of threats, intimidation, and various hostile acts. A Gallop Poll taken in May 1995 revealed that no less than 39 percent of Americans believe the federal government constitutes an enemy of human rights. In the first ten days following the Oklahoma City events a number of federal agencies received a total of 140 bomb threats. Twice in 1994 and 1995 disgruntled citizens took employees hostage, in San Francisco and Puerto Rico, to protest shoddy treatment at the hands of government agents. Public officials at all levels are frequently the target of verbal assaults. Such manifestations of popular outrage cannot be dismissed as the irrational acts of marginals and crazies, though this element does enter the picture; far more common is the lashing out of working people who feel powerless and believe, quite rightly, that most government officials and politicians care little about their problems. Whether this revolt against politics can have any strategic value in a period of global interdependence and worsening social crisis raises yet another set of issues. In fact, the historical meaning of contemporary anti-statism is far from clear. Here it is necessary to mention that the 752 **neo-conservative and right-wing attack on big government** has been, and **continues to be, highly selective insofar as these groups would actually hope to strengthen the most oppressive and authoritarian features of the state (the military, police, prison system, controls over personal life) while tearing down** those **social programs** that account for no more than three percent of the total federal budget. Nor is there the slightest inclination to disturb the most gargantuan and powerful institutions of all the multinational corporations, huge financial networks, and their global extensions in the World Bank and IMF. Somehow these huge fortresses of power and wealth escape the conservative attack on "bigness," waste, and lack of accountability. The reality is that the modern state and corporations are thoroughly interwoven, and both are integrated into the permanent war economy. In Theodore Roszak's words: "When we talk about 'big government' in America, this ought to be the meat of the discussion. It is big war that created and sanctioned the big corporations. It is the big corporations that undergird big government. Big government is quite simply the American economy as our local extension of global industrialism."¹⁷ **Anti-politics** thus **represents an abstract, ultimately duplicitous rejection of state power; retreat from the public sphere does not suggest popular mobilization against big government as such but rather an assault on just the redistributive and welfare functions of the state. Put more simply: the idea of dismantling the welfare state is really a code for lowered taxes, deep cuts in social programs, deregulation, and freeing of more resources for private consumption.** The values associated with citizen participation, much less a recovery of the public sphere, **have no place on this agenda.** Thus the Reagan presidency, galvanized and legitimated by its strong opposition to entrenched governmental power, actually contributed to the expansion of that power year by year. Resources were poured into the military; the space program, intelligence, and law enforcement rose to record levels; taxes were increased; administrative corruption spread; and bureaucracy showed no signs of dissolving. Reagan also concocted his famous Star Wars scheme, which, if enacted, would have been the most expensive government program in history. Still, Republicans persisted in their libertarian blather about the evils of state power, always invoking "free-market" values that, in fact, have no relevance to the United States or any capitalist economy. The reality is that the much-celebrated shift back to an autonomous market, family values, local neighborhood, and individual consumption could never occur without eroding the very foundations of state-integrated corporate capitalism.

A2: Cooption/State Link

And despite threats of cooption, being able to forge ties with those in power is necessary to the success of movements

Yeo (Assistant Professor of Politics at the Catholic University of America) **11**
 (Andrew, Activists, Alliances, and Anti-U.S. Base Protests, Cambridge University Press, pg 196-7)

In the previous section, I covered several policy implications and prescriptions for U.S. overseas basing strategy. What insights and lessons can be drawn for anti-base movements? I offer four sets of

recommendations for activists regarding anti-base movement strategy and advocacy. The first suggestion stems directly from the security consensus framework: when possible, activists should form ties with political elites. As discussed in the introductory chapter, U.S. base policies are ultimately decided by government officials. Therefore, anti-base movements gain greater leverage and influence on basing policy outcomes when they form ties with key elites. This was certainly the case with successful anti-base movements such as the Anti-Treaty Movement in the Philippines and No Bases Coalition in Ecuador. Although not included in this volume, ties between Puerto Rican anti-base activists and several U.S. congressional representatives helped activists shut down Roosevelt Roads Naval Station in Vieques, P.R. The support of several prominent U.S. political figures such as Hillary Clinton and Jesse Jackson, and the direct involvement of U.S. representatives such as Nydia M. Velasquez and Luis V. Gutierrez, increased publicity and political leverage for the Vieques movement.⁵⁷ Encouraging anti-base movements to form ties with sympathetic elites seems self-evident. Yet, one might find surprising the level of resistance to this suggestion by some activists. Ties to political elites raise the specter of co-optation. The lack of trust in politicians, the political establishment, or more generally formal politics often stems from activists' own experience and interaction with government officials over the course of several movement episodes. This attitude was expressed by several anti-base activists in South Korea, Japan, and even the Philippines. Activists in Vieques also faced heated discussions over strategy: Should they maintain support for radical left parties? At the local level, should movement leaders move from informal to more formal avenues of politics? Although the wariness of movements in engaging formal political actors is understandable, research across several anti-base movement episodes suggests that movements that form alliances with political elites and engage base politics through both formal and informal channels tend to have a greater impact on basing policy outcomes.

***Framework**

Notes

You can take literally any of the 8 islamophobia affs and read as the t version

Take shell from the generic file- also a ton of the “state good” and “institutions key” stuff are found above in the “Cede the Political K” portion of the file

Topical Versions of the aff

Strict Scrutiny

Strict scrutiny standards are historically tough for governments to meet- extending the standards to include religion solves extensive Islamophobic actions.

Parvaresh 2014 [ROMTIN, J.D., University of Southern California; B.A., B.S., University of California, Berkeley, “PRAYER FOR RELIEF: ANTI-MUSLIM DISCRIMINATION AS RACIAL DISCRIMINATION”, SOUTHERN CALIFORNIA LAW REVIEW, 2014, <http://lawreview.usc.edu/wp-content/uploads/Parvaresh-Final-PDF.pdf>, Accessed 7/16/15, AX]

In late 2011, the New York City Police Department (“NYPD”) made national and international headlines when its secret surveillance of Muslims across the New York City area was discovered. 2 Under the guise of counterterrorism, the NYPD monitored the daily lives of thousands of Muslims for about a decade, 3 using techniques such as taking photographs, collecting license plate numbers at mosques, and utilizing informants known as “mosque crawlers” to infiltrate Muslim organizations. 4 From recording sermons to monitoring businesses and grade schools, the NYPD targeted individuals not because of a reasonable suspicion that they specifically were linked to terrorism, but rather because of one common characteristic: they were or were believed to be Muslim. As one might expect, the police surveillance program has come under fire, as it chills religious participation and casts innocent Muslims as potential terror suspects. 5 In mid-2012, a group of Muslim plaintiffs filed suit in federal court challenging the NYPD’s program. 6 Though their complaint alleged First Amendment violations, including violations of the Free Exercise and Establishment Clauses, their likelihood for success may be hampered: Recent findings indicate that Muslim plaintiffs as a class are less likely to succeed on First Amendment challenges relative to other religious groups. 7 Indeed, in early 2014, the case was dismissed on standing and pleading grounds, 8 and it was under appeal in the Third Circuit as of August 2014. Of greater interest, however, is the plaintiffs’ additional claim for violation of the Equal Protection Clause of the Fourteenth Amendment. This claim, too, faces a doctrinal obstacle—religion is not a suspect classification and is thus not subject to strict scrutiny. Only classifications based on race and national origin are suspect and thus warrant strict scrutiny; 9 by contrast, religion, more so than race or national origin, appears to be the primary, if not sole, basis for the NYPD’s surveillance. This Note, however, does not look to resolve the constitutionality of the NYPD surveillance program. Rather, it explores an idea impliedly raised by the case: the intersection of race and religion in post-9/11 America. For instance, one way the NYPD lawsuit plaintiffs might have bolstered their case would have been to frame the alleged equal protection violations in the context of race, and thus have the NYPD’s actions analyzed under strict scrutiny—a historically tough burden for the government to meet. 10 The question then becomes whether anti-Muslim discrimination could be interpreted as a form of racial discrimination. This Note therefore seeks to place anti-Muslim discrimination into current legal understandings of race. It argues that, in some instances, anti-Muslim discrimination should be treated as racial discrimination. 11 In short, because Muslims, along with Middle Easterners and South Asians, have increasingly become racialized in both the immediate and prolonged aftermath of 9/11, they now warrant additional legal protection

given the various forms of discrimination they experience in both private and public contexts. Opening racial discrimination claims to them would be one way to provide such relief.

The strict scrutiny standard solves-it requires the government to demonstrate a legitimate, non-targeted justification for surveillance- policies restricting the expression of Islamic ideas fail to meet

Figueroa 12 [Tiffani, (associate @ Morrison Foerster's Litigation Department), "'ALL MUSLIMS ARE LIKE THAT': HOW ISLAMOPHOBIA IS DIMINISHING AMERICANS' RIGHT TO RECEIVE INFORMATION", Hofstra Law Review, Winter 2012, <http://scholarlycommons.law.hofstra.edu/cgi/viewcontent.cgi?article=2699&context=hlr>, Accessed 7/16/15, AX]

As in the case of Islamophobia, it is easy to target a specific group because some Americans automatically associated the 9/11 hijackers with all Muslims and those perceived as Muslim. 31 Similarly, in the interest of national security, the government at times partook in practices that people may view as discriminatory. The government failed to protect the free speech rights of Muslims as a targeted group, and these actions subsequently harmed the right to receive information for Americans. Although the government's purpose in enforcing the laws discussed in this Note was not to close off Muslim ideas, the effects may show otherwise.352 Justice Antonin Scalia stated, "[t]he vice of content based legislation-**what renders it deserving of the high standard of strict scrutiny-is not that it is always used for invidious, thought-control purposes, but that it lends itself to use for those purposes.**" 353 "Unavoidable targeting" stemming from a government regulation is included within this "vice of content-based legislation." This phenomenon may shine light on what has occurred following the 9/11 attacks. By employing an effects test in the First Amendment analysis, courts will more efficiently investigate whether there is viewpoint discrimination affecting the right to receive information since the courts must first establish if a government action falls disproportionately on a specific group.354

The strict scrutiny standard would immediately declare the most invasive and abusive Islamophobic policies un-Constitutional and reduce the executional ability of these agencies

Love 2012 [Erik, (Assistant Professor of Sociology @ Dickinson College), "NYPD: Whose side are you on?", Institute for Social Policy and Understanding, <http://www.ispu.org/GetArticles/48/2461/Publications.aspx>, Accessed 7/16/15, AX]

Despite the recent outpouring of support of these discriminatory programmes, a federal investigation of the NYPD's practices is sorely needed. It's likely that if the NYPD's crudely constructed policies of religious and racial profiling were brought into the courts, the judicial principle of strict scrutiny would definitely show that the NYPD had grossly violated the constitutional right to equal protection under the law. Strict scrutiny is the standard applied by the courts to determine whether the government can move beyond constitutional limits due to extraordinary circumstances. It's called "strict" because the government must rise to a tripartite standard: first, it must prove that it has a compelling interest; second, that the policy is narrowly tailored to achieve that interest; and, finally, the policy must use the least restrictive means to achieve that interest. Preventing terrorism is, undoubtedly, a compelling state interest. But spying on anyone who happens to be in a mosque or restaurant cannot possibly be "narrowly tailored". Similarly, a programme so paranoid that it spied on its own anti-terrorism partners and kept track of any Muslim who changed their name clearly isn't the "least restrictive means" towards achieving the goal of anti-terrorism. [The case for proving that the NYPD has violated the constitution appears easy to prove in a court. The inability of Muslim American and civil liberties advocates to get these programmes into the courts, so far, is another sign of political oppression. What might be even worse than the flagrant violation of civil rights, however, is that the NYPD programme is likely to make New York and the rest of the country less safe from terrorism. The best scholarship on

terrorism suggests that devout Muslims are very unlikely to join up with terrorists. A February 2012 report from the Triangle Center on Terrorism and Homeland Security concluded that terrorism from Muslim Americans was a "miniscule threat to public safety". An earlier report from the same centre found that Muslim American "practices" effectively "prevent radicalisation".

SPOT

The questioning of Muslim people creates a prevailing atmosphere of Islamophobia

Bilici 10 (Mucahit Bilici, Assistant Sociology Professor at John Jay College; "Islamophobia / Islamophilia, Beyond the Politics of Enemy and Friend," "Muslim Ethnic Comedy: Inversions of Islamophobia," 2010, pg. 198-199)

This routine provides a perfect illustration of the Muslim airport experience, where the negative charisma of being Muslim assumes full transparency. At the airport, those who have so far (in the city, at the ticket counter, and so on) been treated equally suddenly become suspect. At the internal borders of the nation, they suddenly feel their protected status begin to evaporate. Even those Muslims who do not consider themselves particularly profiled or discriminated against in everyday life suddenly begin to feel uneasy. Strip search and other security rites of passage through the border show them the hard edge of the nation. Here Muslim otherness is revealed in the most conspicuous way. Despite official efforts to present searches at the airports as random, comedians like Dean Obeidallah skeptically ask their Muslim audiences: "Are you selected for random search even when you are dropping a friend at the airport?" The fear a Muslim inspires is associated with the unpredictability of his behavior. What if he is a terrorist? What if he hijacks the plane? What if he is only pretending to be normal? All these questions that airport authorities ask citizens to consider transform the Muslim passenger in the eyes of his fellow travelers into a source of unpredictability and danger. When a Muslim like Azhar Usman gets onto the plane, faces fall. Danger is imminent. The anxiety ends only when the plane lands. People are almost thankful to the Muslim passenger for not doing what they feared he might. Flying-while-Muslim thus becomes an extremely public event. A crucial point here is that the airport is where Muslim experience and American mainstream experience meet. Jokes about aviation thus have a remarkable degree of transparency and universality. Muslims and non-Muslims alike can understand and laugh at airport and airplane jokes. They are at once ethnic and national, particular and universal. These jokes represent the comic surface where Muslim and American perspectives intersect most "dangerously" and with full intelligibility. Jokes about the airport experience thus constitute a significant portion of the repertoire of Muslim comedians today.

This surveillance creates conditions for psychological and physical violence against brown people

Huus 11 (Kari Huus, Fulbright Scholar Taiwan, "Muslim Travelers Say They're Still Saddled with 9/11 Baggage", www.today.com/id/44334738/ns/today-today_news/t/muslim-travelers-say-theyre-still-saddled-baggage/#.VafqhnTWKF4, 9/13/2011, sr)

Imagine it is 5 a.m. and you've landed in New York after a 12-hour overseas flight. Standing in the line for U.S. citizens, you wait as a border agent asks passengers ahead a few cursory questions, then waves them through. Your family is instead ushered into a separate room for more than an hour of searching and questioning. This was the welcome that Hassan Shibly, traveling with his wife and infant son, said they received in August 2010, when they returned to the United States from Jordan, after traveling to Mecca. "Are you part of any Islamic tribe? Have you ever studied Islam full time? How many gods do you believe in?" "How many prophets do you believe in?" the agent at New York's JFK Airport asked, according to Shibly, 24, a Syrian-born Muslim American. He said the agent searched his luggage, pulling out his Quran and a hand-held digital prayer counter. "At the end — I guess (the agent) was trying to be nice — he said, 'Sorry, I hope you understand we just have to make sure nothing gets blown up.'" said Shibly, a law school graduate who grew up in Buffalo. A decade after Islamic extremists used airplanes to attack the

World Trade Center and the Pentagon, Muslim American travelers say they are still paying the price for terror attacks carried out in the name of their religion. At airports, ports and land crossings, many contend, they are repeatedly singled out for special screening and intrusive questioning about their religious beliefs. Others say they have been marooned overseas, barred from flights to the United States. ‘Stories come pouring out’ **“Whenever a group of Muslims sit together ... stories come pouring out,”** said real estate agent Jeff Siddique, a Pakistan-born U.S. citizen who has lived in Seattle for 35 years. “It’s story after story after story.” That is supported by a survey released in August by the Pew Research Center, in which 36 percent of Muslim Americans who traveled by air in the last year said they had been singled out for special screening. According to a spokesman for the TSA, some people are chosen randomly for secondary search, while others merit secondary screening if their luggage contains things that raise questions. The TSA is now adding a program called SPOT — Screening Passengers by Observation Technique. “We have behavior detection officers who are all over the airport, looking for people exhibiting behaviors that are considered anomalous ... doing things that suggest they’re trying to hide something,” said TSA spokesman Nick Kimball. “They are observing the queue. When that person gets up to the front, they would be referred to the side.” The TSA website calls the program “a positive step that does not require ethnic profiling but looks to the pattern of behavior. ... These are tools that would allow us to be more precise, but without getting into racial profiling, which is a bad thing.” One of the most chilling cases surrounding the no-fly list is that of Gulet Mohamed, a 19-year-old American citizen of Somali heritage. Mohamed had been visiting family in Yemen and Somalia — two countries with active Islamist terrorist groups. When he went to the Kuwait airport to extend his visa in December, he was arrested and taken to a detention facility, where he was blindfolded, questioned and beaten by unknown agents, according to his lawyer, Gadeir Abbas. The questioners were especially interested in information about Anwar al-Awlaki, a dual U.S. and Yemeni citizen turned Islamic extremist in Yemen, Abbas said. Mohamed insisted he had no information and, after a week, Kuwait ordered his deportation. But when he tried to board a flight to the United States, he was told he was on the no-fly list. Only after Abbas filed a lawsuit on his behalf in January was Mohamed allowed to return home to Virginia. Mohamed is pursuing a claim for damages and to be removed from the list. The federal government wants the case thrown out on the grounds that it is irrelevant now that he is back in the U.S. Meantime, it will not confirm if he is on the no-fly list. The lawsuit is pending, after a judge moved it to a circuit court on jurisdictional grounds. “It’s this very Kafkaesque world where no one has charged (people on the list) with any crime ... but they can see its effects,” said Abbas, an attorney with CAIR. “... His case is the most heinous example of what the no-fly list can do.” Other pending court cases allege that Muslim American travelers have encountered similar violations of their rights, including some who were forced to take thousand-mile circuitous land routes to get back into the U.S. or were stuck overseas for weeks or months until lawyers here took up their cases. The ACLU, which argues that the watch list system is unconstitutional, has filed a lawsuit against the Justice Department, the FBI and the Terrorist Screening Center naming 20 people — 18 U.S. citizens and two permanent residents — who allegedly have been prevented from boarding airline flights to or from the U.S. The plaintiffs say they were told by security or airline staff that their names were on the no-fly list. “Thousands of people have been barred altogether from commercial air travel without any opportunity to confront or rebut the basis for their inclusion, or apparent inclusion” on the no-fly list,” the lawsuits says. “The result is a vast and growing list of individuals whom, on the basis of error or innuendo, the government deems too dangerous to fly, but too harmless to arrest.” In response, the government objected on jurisdictional grounds and argued that the policy

does not violate the constitutional rights of the travelers because “they have not been denied the right to re-enter and reside in the United States, nor have they been denied the ability to travel.” But critics of the list note that in cases like that of the lead plaintiff, **Ayman Latif, a 33-year-old U.S. citizen and disabled Marine Corps veteran, that would have meant weeks of travel from the Middle East to the United States by sea and land, at considerable additional expense.** The U.S. District Court in Portland, Ore., dismissed the case on jurisdictional grounds, ruling that it should go instead to an appeals court. The ACLU is appealing that decision.

SPOT’s ambiguous nature is what allows racial profiling- only removing the program solves

AAI 2013 (AAI Arab American Institute (AAI) “TSA SPOT PROGRAM”; Arab American Institute; AAI ISSUE BRIEF - TSA SPOT PROGRAM; <https://d3n8a8pro7vnm.cloudfront.net/aa/pages/7665/attachments/original/1431630938/SPOT%2525202015.pdf?1431630938>- No date in article but last date cited in past tense is November 2013)

In 2007, TSA introduced a program called Screening Passengers by Observation Techniques (SPOT) based on the subjective, discriminatory screening process first used by the Israeli government. the program uses Behavior Detection Officers (BDOs) to identify passengers who behave “suspiciously” in some manner, then ask them more questions or subject them to increased physical security checks. In 2012, more than 3,000 BDOs were deployed to 176 U.S. airports to look for preselected facial expressions, body language, and appearances that the program lists as suspicious. The Problem Any program that increases the scrutiny of American citizens runs the risk of selecting individuals discriminatorily, especially in a program like SPOT, where the officer who makes the initial inspection also decides who will be inspected. This problem is exacerbated when the class singled out is not designated by any real objective criteria. There is no closed list of sensitive behaviors that officers can look for without using their personal prejudices. Furthermore, there have been a number of reports of profiling or discrimination by BDOs and other TSA officers. Regardless of exactly how often this happens, it’s easy to understand how a program like SPOT could encourage arbitrary enforcement and ethnic and/or religious profiling against Arab or Muslim travelers, or other groups deemed suspicious. Whether or not these problems would be tolerable in a program that actually made Americans safer is a difficult question, but that difficulty disappears if the program isn’t actually effective. And here, the facts leave no room for doubt: SPOT, which has cost American taxpayers about \$1 billion dollars over the last few years, has not been shown to be an effective tool in fighting terrorism. Over and over again, independent reports from the DHS Inspector General and the Government Accountability Office (GAO) have come to the same conclusion. In a strongly critical November 2013 report, the GAO bluntly said that “available evidence does not support whether behavioral indicators [like those used in SPOT] can be used to identify persons who may pose a risk to aviation security.” The report indicated that the techniques officers use to identify suspicious passengers weren’t scientifically sound in any real way. At a Congressional hearing in the aftermath of the report, TSA Administrator John Pistole defended SPOT, but even its supporters on the Transportation Subcommittee of the House Committee on Homeland Security seemed to acknowledge that there were no real results TSA could point to. Perhaps most obviously, there has not been a single instance of a traveler flagged by a BDO who actually turned out to be a threat to aviation security. Rep. Mark Sanford (R-SC) made the point that however helpful behavioral detection might be in other law enforcement fields, it simply hasn’t translated into success in aviation security. Rep. Sanford also agreed with Reps. Sheila Jackson-Lee (D-TX), Steven Horsford (D-NV), and Donald Payne (D-NJ) that SPOT’s guidelines defining “suspicious” behavior were too vague to prevent discriminatory enforcement.

We should engage policy institutions to change the counter-terrorism paradigm.

Jackson 9 (Richard Jackson, Deputy Director at the National Centre for Peace and Conflict Studies, PhD from the University of Canterbury, "Critical Terrorism Studies: An Explanation, a Defence and a Way Forward," p.8-9, 12-15-2009,

If a critically-informed research praxis is distinguished by its explicit commitment to human emancipation, an important component of CTS research is to try to influence policy; not being concerned with policy relevance is not an option for scholars committed to human emancipation (Gunning, 2007b; Toros and Gunning, 2009). However, this does not mean that one should limit oneself to being relevant to state elites. **Critical scholars should engage both policy-makers and policy-takers, if their primary commitment is to humanity rather than the state. Engaging policy-takers furthermore, serves to lessen the risk of co-option by the status quo**, particularly if those thus engaged include members of communities labelled „suspect“ by the state, those designated „terrorists“, and so on. **However, to be effective, and to work towards realising the potential for immanent change within the status quo, critical scholars must simultaneously strive to engage those who are embedded in the state, members of the „counter-terrorist“ forces, the political elite, and so on. This is an area where critical scholars have arguably been weak in the past. I would argue that a commitment to emancipation in turn implies, among other things: a commitment to praxis as organic intellectuals to help bring about concrete utopias out of the fissures and contradictions of existing structures** (see Herring, 2008; Toros and Gunning, 2009); **a continuous process of „immanent critique“ of existing power structures and practices in society; the moral and intellectual questioning of the instrumental rationality paradigm of political violence**, whether it be terrorist or counter-terrorist violence, state or non-state violence (see Burke, 2008); **the prioritising of human security over national security and working towards minimising all forms of physical, structural, and cultural violence** (Toros and Gunning, 2009); and the serious scholarly and practical exploration of non-violence, conflict transformation, and reconciliation as practical alternatives to terrorist and counter-terrorist violence. From this perspective, I believe that CTS is at heart an anti-hegemonic project, a kind of „outsider theorising“ which seeks to go „beyond problem-solving within the status quo and instead... to help engage through critical theory with the problem of the status quo“ (Booth, 2007). Of course, the adoption of an anti-hegemonic, „critical“ standpoint requires a certain amount of intellectual and moral courage because it invariably engenders vigorous opposition from interests vested in the status quo – as a number of CTS scholars, including ourselves, have experienced (see Breen Smyth, 2009; Herring, 2008). CTS scholars must therefore adopt a prior commitment to refusing to give in to intimidation, abandoning research that is controversial, or to self-censorship. **In the current political environment engendered by the war on terrorism, CTS scholars must be prepared to say the unsayable, whether it is to governments, the wider society, particular communities, or terrorists**; in a very real sense, we must accept that „blasphemy is our business“ (Booth, 2008: 68).

Case- Impact Framing

Extinction 1st

Extinction 1st – pre-requisite to formation of value

Wapner 2003

Paul, Associate professor and director of the Global Environmental Policy Program at American University, DISSENT, Winter, <http://www.dissentmagazine.org/minutes/articles/wi03/wapner.htm>

The third response to eco-criticism would require critics to acknowledge the ways in which they themselves silence nature and then to respect the sheer otherness of the nonhuman world. Postmodernism prides itself on criticizing the urge toward mastery that characterizes modernity. But isn't mastery exactly what postmodernism is exerting as it captures the nonhuman world within its own conceptual domain? Doesn't postmodern cultural criticism deepen the modernist urge toward mastery by eliminating the ontological weight of the nonhuman world? What else could it mean to assert that there is no such thing as nature? I have already suggested the postmodernist response: yes, recognizing the social construction of "nature" does deny the self-expression of the nonhuman world, but how would we know what such self-expression means? Indeed, nature doesn't speak; rather, some person always speaks on nature's behalf, and whatever that person says is, as we all know, a social construction. All attempts to listen to nature are social constructions—except one. Even the most radical postmodernist must acknowledge the distinction between physical existence and non-existence. As I have said, postmodernists accept that there is a physical substratum to the phenomenal world even if they argue about the different meanings we ascribe to it. This acknowledgment of physical existence is crucial. We can't ascribe meaning to that which doesn't appear. What doesn't exist can manifest no character. Put differently, yes, the postmodernist should rightly worry about interpreting nature's expressions. And all of us should be wary of those who claim to speak on nature's behalf (including environmentalists who do that). But we need not doubt the simple idea that a prerequisite of expression is existence. This in turn suggests that preserving the nonhuman world—in all its diverse embodiments—must be seen by eco-critics as a fundamental good. Eco-critics must be supporters, in some fashion, of environmental preservation.

Elevating Human extinction to a real possibility encourages a new social ethic to solve conflicts and create meaning to life.

Epstein and Zhao 9 [Richard J. Epstein and Y. Zhao, Laboratory of Computational Oncology, Department of Medicine, University of Hong Kong, Professorial Block, Queen Mary Hospital, Hong Kong. "The Threat That Dare Not Speak Its Name: Human Extinction". Perspectives in Biology and Medicine, volume 52, number 1 (winter 2009): 116–25. Project Muse.-

Final ends for all species are the same, but the journeys will be different. If we cannot influence the end of our species, can we influence the journey? To do so—even in a small way—would be a crowning achievement for human evolution and give new meaning to the term civilization. Only by elevating the topic of human extinction to the level of serious professional discourse can we begin to prepare ourselves for the challenges that lie ahead. The difficulty of the required transition should not be underestimated. This is depicted in Table 3 as a painful multistep progression from the 20th-century philosophical norm of Ego-Think—defined therein as a short-term state of mind valuing individual material self-interest above all other considerations—to Eco-Think, in which humans come to adopt a broader Gaia-like outlook on themselves as but one part of an infinitely larger reality. Making this change must involve communicating the non-sensationalist message to all global citizens that "things are serious" and "we are in this together"—or, in blunter language, that the road to extinction and its related agonies does indeed lie ahead. Consistent with this prospect, the risks of human extinction—and the cost-benefit of attempting to reduce these risks—have been quantified in a recent sobering analysis (Matheny 2007). Once complacency has been shaken off and a sense of collective purpose created, the battle against self-seeking anthropocentric human instincts will have only just begun. It is often said that human beings suffer from the ability to appreciate their own mortality—an existential agony that has given rise to the

great religions— but in the present age of religious decline, we must begin to bear the added burden of anticipating the demise of our species. Indeed, as argued here, there are compelling reasons for encouraging this collective mind-shift. For in the best of all possible worlds, the realization that our species has long-term survival criteria distinct from our short-term tribal priorities could spark a new social ethic to upgrade what we now all too often dismiss as “human nature” (Tudge 1989).

Case- CTS Answers

1NC

Critical terrorist approaches are never contextual- even if terror studies in flawed in most instances the contextual situation requires political action.

Michel and Richards 9 (Torsten Michel and Anthony Richards, May 19th 2009, False dawns or new horizons? Further issues and challenges for Critical Terrorism Studies, Critical Studies on Terrorism Vol. 2, No. 3, December 2009, pp. 404-405, accessed 7/17/15) CH

This background conception as to what it means to engage in critical scholarship is hardly present in CTS publications so far. This is not to say that CTS scholars must develop an elaborate account of the 'critique of reason', but what is unsatisfactory is that thus far it seems that this dimension is not even implicitly assumed. First, CTS scholarship right now focuses on one core problem that should be subjected to critique – the predominance of a specific 'orthodox' take on terrorism. What is, however, actually critiqued is a social reality that has emerged out of a specific application of reason (instrumental reason to be precise). An account of this social reality needs to feature in CTS as Critical scholarship is never particular but is in its conception holistic. The critique is never simply projected against this or that situation or discourse but always aims for a wider questioning of the prescriptions of reason that underlie these discursive structures. The second main example where so far only rudimentary reflection can be witnessed concerns the notions of relativism and truth. As we have seen, CTS commits itself to a historicist notion of truth which recognizes the contextual and historically contingent nature of our knowledge. Such a position, if not substantiated, leaves itself open to a relativistic reading that could basically end up in arguing that knowledge claims essentially cannot be evaluated against a common basis. With respect to the study of terrorism then this could easily lead to the exoneration and legitimization of specific violent practices by claiming their rootedness in a specific historical environment that cannot be judged by standards outside itself. Critical Theory in general (and CTS as well, we presume), however, is eager to avoid such a plunge into relativism which would also threaten the potential for a truly emancipatory agenda. If this is the case, it seems necessary to elaborate more substantially on the nature of knowledge and the possibility of truth in such accounts. Again, we find quite an extensive treatment of these matters among Critical Theorists but hardly anything in CTS publications so far. Admittedly, Toros and Gunning try to circumvent the complete plunge into an epistemological relativism by maintaining, much in line with Critical Theory in general, a commitment to a 'minimalist foundationalism' which self-critically allows for the emergence of contextually contingent 'concepts' or 'evidence': 'rather than collapsing the ontological distinction between object and subject, it maintains it, while acknowledging that the two shape each other in a dialectical, never-ceasing dynamic' (Toros and Gunning 2009, p. 92). Such commitment to an ontological dualism between subject and object (albeit in a minimalistic fashion), however, creates its own problems. Do these 'concepts' that they admit can only be delineated within a specific historical and social context refer to real states of affairs in the world? Is the Welsh School committed to a form of critical realism that maintains that we can find what has been called 'intransitive' mind-independent objects that vary in their social meaning according to hegemonic epistemological discourses (Wight 2006, p. 12)? If so, is it committed to a philosophical realism and how would it conceptualize the bridging of the subject-object gap? It can hardly maintain that human beings can grasp these 'objects' for what they 'really' are, as this would be tantamount to maintaining a standard beyond historical and social contingencies. But if it, on the other hand, maintains a nominalism that places these concepts at the mercy of intersubjective, and therefore eventually, mind-dependent processes, how does it escape from relativist commitment? All these issues appear to be unresolved and yet they are by no means trivial as they pertain to the conditions of the possibility of FSCT in general.

Critical terror studies are garbage- most counterterror policies are necessary- criticisms rely on utopian thinking

Jones and Smith 9 – * University of Queensland, Queensland, Australia AND ** King's College, University of London, London, UK (David and M.L.R., "We're All Terrorists Now: Critical—or Hypocritical—Studies "on" Terrorism?," Studies in Conflict & Terrorism, Volume 32, Issue 4 April 2009 , pages 292 – 302, Taylor and Francis)

The journal, in other words, is not intended, as one might assume, to evaluate critically those state or non-state actors that might have recourse to terrorism as a strategy. Instead, the journal's ambition is to deconstruct what it views as the ambiguity of the word "terror," its manipulation by ostensibly liberal democratic state actors, and the complicity of "orthodox" terrorism studies in this authoritarian enterprise. Exposing the deficiencies in any field of study is, of course, a legitimate scholarly exercise, but what the symposium introducing the new volume announces questions both the research agenda and academic integrity of journals like *Studies in Conflict and Terrorism* and those who contribute to them. Do these claims, one might wonder, have any substance?¶ Significantly, the original proposal circulated by the publisher Routledge and one of the editors, Richard **Jackson, suggested** some uncertainty concerning the preferred title of the journal. *Critical Studies on Terrorism* appeared last on a list where the first choice was *Review of Terror Studies*. Evidently, the concision of a review fails to capture the critical perspective the journal promotes. Criticism, then, is central to the new journal's philosophy and the adjective connotes a distinct ideological and, as shall be seen, far from pluralist and inclusive purpose. So, one might ask, what exactly does a critical approach to terrorism involve?¶ What it Means to be Critical¶ The editors and contributors explore what it means to be "critical" in detail, repetition, and opacity, along with an excessive fondness for italics, in the editorial symposium that introduces the first issue, and in a number of subsequent articles. The editors inform us that the study of terrorism is "a growth industry," observing with a mixture of envy and disapproval that "literally thousands of new books and articles on terrorism are published every year" (pp. 1-2). In adding to this literature the editors premise the need for yet another journal on their resistance to what currently constitutes scholarship in the field of terrorism study and its allegedly uncritical acceptance of the Western democratic state's security perspective.¶ Indeed, to be critical requires a radical reversal of what the journal assumes to be the typical perception of terrorism and the methodology of terrorism research. To focus on the strategies practiced by non-state actors that feature under the conventional denotation "terror" is, for the critical theorist, misplaced. As the symposium explains, "acts of clandestine non-state terrorism are committed by a tiny number of individuals and result in between a few hundred and a few thousand casualties per year over the entire world" (original italics) (p. 1). The United States's and its allies' preoccupation with terrorism is, therefore, out of proportion to its effects.¹ At the same time, the more pervasive and repressive terror practiced by the state has been "silenced from public and ... academic discourse" (p. 1).¶ **The complicity of terrorism studies with the increasingly authoritarian demands of Western, liberal state and media practice, together with the moral and political blindness of established terrorism analysts to this relationship forms the journal's overriding assumption** and one that its core contributors repeat ad nauseam. Thus, Michael Stohl, in his contribution "Old Myths, New Fantasies and the Enduring Realities of Terrorism" (pp. 5-16), not only discovers ten "myths" informing the understanding of terrorism, but also finds that these myths reflect a "state centric security focus," where analysts rarely consider "the violence perpetrated by the state" (p. 5). He complains that the press have become too close to government over the matter. Somewhat contradictorily Stohl subsequently asserts that media reporting is "central to terrorism and counter-terrorism as political action," that media reportage provides the oxygen of terrorism, and that politicians consider journalists to be "the terrorist's best friend" (p. 7).¶ Stohl further compounds this incoherence, claiming that "the media are far more likely to focus on the destructive actions, rather than on ... grievances or the social conditions that breed [terrorism]—to present episodic rather than thematic stories" (p. 7). He argues that terror attacks between 1968 and 1980 were scarcely reported in the United States, and that reporters do not delve deeply into the sources of conflict (p. 8). All of this is quite contentious, with no direct evidence produced to support such statements. The "media" is after all a very broad term, and to assume that it is monolithic is to replace criticism with conspiracy theory. Moreover, even if it were true that the media always serves as a government propaganda agency, then by Stohl's own logic, terrorism as a method of political communication is clearly futile as no rational actor would engage in a campaign doomed to be endlessly misreported.¶ Nevertheless, the notion that an inherent pro-state bias vitiates terrorism studies pervades the critical position. Anthony Burke, in "The End of Terrorism Studies" (pp. 37-49), asserts that established analysts like Bruce Hoffman "specifically exclude states as possible perpetrators" of terror. Consequently, the emergence of "critical terrorism studies" "may signal the end of a particular kind of traditionally state-focused and directed 'problem-solving' terrorism studies—at least in terms of its ability to assume that its categories and commitments are immune from challenge and correspond to a stable picture of reality" (p. 42).¶ Elsewhere, Adrian Guelke, in "Great Whites, Paedophiles and Terrorists: The Need for Critical Thinking in a New Era of Terror" (pp. 17-25), considers British government-induced media "scare-mongering" to have legitimated an "authoritarian approach" to the purported new era of terror (pp. 22-23). Meanwhile, Joseba Zulaika and William A. Douglass, in "The Terrorist Subject: Terrorist Studies and the Absent Subjectivity" (pp. 27-36), find the War on Terror constitutes "*the single*," all embracing paradigm of analysis where the critical voice is "not allowed to ask: what is the reality itself?" (original italics) (pp. 28-29). The construction of this condition, they further reveal, if somewhat abstrusely, reflects an abstract "desire" that demands terror as "an ever-present threat" (p. 31). In order to sustain this fabrication: "Terrorism experts and commentators" function as "realist policemen"; and not very smart ones at that, who while "gazing at the evidence" are "unable to read the paradoxical logic of the desire that fuels it, whereby *lack* turns to *excess*" (original italics) (p. 32). Finally, Ken **Booth**, in "The Human Faces of Terror: Reflections in a Cracked Looking Glass" (pp. 65-79), reiterates Richard Jackson's contention that state terrorism "is a much more serious problem than non-state terrorism" (p. 76).¶ **Yet, one searches in vain in these articles for evidence to support the ubiquitous assertion of state bias: assuming this bias in conventional terrorism analysis as a fact seemingly does not require a corresponding concern with evidence of this fact, merely its continual reiteration by conceptual fiat. A critical perspective dispenses**

not only **with terrorism studies** but also with the norms of accepted scholarship. Asserting what needs to be demonstrated commits, of course, the elementary logical fallacy *petitio principii*. But critical theory apparently emancipates (to use its favorite verb) its practitioners from the confines of logic, reason, and the usual standards of academic inquiry.¶ Alleging a constitutive weakness in established scholarship without the necessity of providing proof to support it, therefore, appears to define the critical posture. **The unproved “state centrism” of terrorism studies serves as a platform for further unsubstantiated accusations** about the state of the discipline. Jackson and his fellow editors, along with later claims by Zulaika and Douglass, and Booth, again assert that “orthodox” analysts rarely bother “to interview or engage with those involved in ‘terrorist’ activity” (p. 2) or spend any time “on the ground in the areas most affected by conflict” (p. 74). Given that Booth and Jackson spend most of their time on the ground in Aberystwyth, Ceredigion, not a notably terror rich environment if we discount the operations of *Meibion Glyndwr* who would as a matter of principle avoid *pob sais* like Jackson and Booth, this seems a bit like the pot calling the kettle black. It also overlooks the fact that *Studies in Conflict and Terrorism* first advertised the problem of “talking to terrorists” in 2001 and has gone to great lengths to rectify this lacuna, if it is one, regularly publishing articles by analysts with first-hand experience of groups like the Taliban, Al Qaeda and *Jemaah Islamiyah*.¶ A consequence of avoiding primary research, it is further alleged, leads conventional analysts uncritically to apply psychological and problem-solving approaches to their object of study. This propensity, Booth maintains, occasions another unrecognized weakness in traditional terrorism research, namely, an inability to engage with “the particular dynamics of the political world” (p. 70). Analogously, Stohl claims that “the US and English [sic] media” exhibit a tendency to psychologize terrorist acts, which reduces “structural and political problems” into issues of individual pathology (p. 7). Preoccupied with this problem-solving, psychopathologizing methodology, terrorism analysts have lost the capacity to reflect on both their practice and their research ethics.¶ By contrast, the critical approach is not only self-reflective, but also and, for good measure, self-reflexive. In fact, the editors and a number of the journal's contributors use these terms interchangeably, treating a reflection and a reflex as synonyms (p. 2). A cursory encounter with the *Shorter Oxford Dictionary* would reveal that they are not. Despite this linguistically challenged misidentification, “reflexivity” is made to do a lot of work in the critical idiom. Reflexivity, the editors inform us, requires a capacity “to challenge dominant knowledge and understandings, is sensitive to the politics of labelling ... is transparent about its own values and political standpoints, adheres to a set of responsible research ethics, and is committed to a broadly defined notion of emancipation” (p. 2). This covers a range of not very obviously related but critically approved virtues. Let us examine what reflexivity involves as Stohl, Guelke, Zulaika and Douglass, Burke, and Booth explore, somewhat repetitively, its implications.¶ Reflexive or Defective? ¶ Firstly, **to challenge dominant knowledge and understanding** and retain sensitivity to labels **leads inevitably to a fixation with language, discourse, the ambiguity of the noun, terror, and its political use and abuse.** Terrorism, Booth enlightens the reader unremarkably, is “a politically loaded term” (p. 72). Meanwhile, Zulaika and Douglass consider terror “the dominant tropic [sic] space in contemporary political and journalistic discourse” (p. 30). Faced with the “serious challenge” (Booth p. 72) and pejorative connotation that the noun conveys, critical terrorologists turn to deconstruction and bring the full force of postmodern obscurantism to bear on its use. Thus the editors proclaim that terrorism is “one of the most powerful signifiers in contemporary discourse.” There is, moreover, a “yawning gap between the ‘terrorism’ signifier and the actual acts signified” (p. 1). “[V]irtually all of this activity,” the editors pronounce *ex cathedra*, “refers to the *response* to acts of political violence not the violence itself” (original italics) (p. 1). Here again they offer no evidence for this curious assertion and assume, it would seem, all conventional terrorism studies address issues of homeland security.¶ In keeping with this critical orthodoxy that he has done much to define, Anthony Burke also asserts the “instability (and thoroughly politicized nature) of the unifying master-terms of our field: ‘terror’ and ‘terrorism’” (p. 38). To address this he contends that a critical stance requires us to “keep this radical instability and inherent politicization of the concept of terrorism at the forefront of its analysis.” Indeed, “without a conscious reflexivity about the most basic definition of the object, our discourse will not be critical at all” (p. 38). More particularly, drawing on a jargon-infused amalgam of Michel Foucault's identification of a relationship between power and knowledge, the neo-Marxist Frankfurt School's critique of democratic false consciousness, mixed with the existentialism of the Third Reich's favorite philosopher, Martin Heidegger, Burke “*questions the question.*” This intellectual *potpourri* apparently enables the critical theorist to “question the ontological status of a ‘problem’ before any attempt to map out, study or resolve it” (p. 38).¶ Interestingly, Burke, Booth, and the symposistahood deny that there might be objective data about violence or that a properly focused strategic study of terrorism would not include any prescriptive goodness or rightness of action. While a strategic theorist or a skeptical social scientist might claim to consider only the complex relational situation that involves as well as the actions, the attitude of human beings to them, the critical theorist's radical questioning of language denies this possibility.¶ **The critical approach to language and its deconstruction of an otherwise useful, if imperfect, political vocabulary has been the source of much confusion and inconsequentiality in the practice of the social sciences.** It dates from the relativist pall that French radical post structural philosophers like Gilles Deleuze and Felix Guattari, Foucault, and Jacques Derrida, cast over the social and historical sciences in order to demonstrate that social and political knowledge depended on and underpinned power relations that permeated the landscape of the social and reinforced the liberal democratic state. **This radical assault on the possibility of either neutral fact or value ultimately functions unfalsifiably, and as a substitute for philosophy, social science, and a real theory of language.**¶ The problem with the critical approach is that, as the Australian philosopher John Anderson demonstrated, to achieve a genuine study one must either investigate the facts that are talked about or the fact that they

are talked about in a certain way. More precisely, as J.L. Mackie explains, “if we concentrate on the uses of language we fall between these two stools, and we are in danger of taking our discoveries about manners of speaking as answers to questions about what is there.”² Indeed, in so far as an account of the use of language spills over into ontology it is liable to be a confused mixture of what should be two distinct investigations: the study of the facts about which the language is used, and the study of the linguistic phenomena themselves.¶ It is precisely, however, this confused mixture of fact and discourse that critical thinking seeks to impose on the study of terrorism and infuses the practice of critical theory more generally. From this confused seed no coherent method grows.¶ What is To Be Done?¶ This ontological confusion notwithstanding, Ken Booth sees critical theory not only exposing the dubious links between power and knowledge in established terrorism studies, but also offering an ideological agenda that transforms the face of global politics. “[C]ritical knowledge,” Booth declares, “involves understandings of the social world that attempt to stand outside prevailing structures, processes, ideologies and orthodoxies while recognizing that all conceptualizations within the ambit of sociality derive from particular social/historical conditions” (original italics) (p. 78). Helpfully, Booth, assuming the manner of an Old Testament prophet, provides his critical disciples with “big-picture navigation aids” (original italics) (p. 66) to achieve this higher knowledge. Booth promulgates fifteen commandments (as Clemenceau remarked of Woodrow Wilson’s nineteen points, in a somewhat different context, “God Almighty only gave us ten”). When not stating the staggeringly obvious, the Ken Commandments are hopelessly contradictory. Critical theorists thus should “avoid exceptionalizing the study of terrorism,” “recognize that states can be agents of terrorism,” and “keep the long term in sight.” Unexceptional advice to be sure and long recognized by more traditional students of terrorism. The critical student, if not fully conversant with critical doublethink, however, might find the fact that she or he lives within “Powerful theories” that are “constitutive of political, social, and economic life” (6th Commandment, p. 71), sits uneasily with Booth’s concluding injunction to “stand outside” prevailing ideologies (p. 78).¶ In his preferred imperative idiom, Booth further contends that terrorism is best studied in the context of an “academic international relations” whose role “is not only to interpret the world but to change it” (pp. 67-68). Significantly, academic—or more precisely, critical—international relations, holds no place for a realist appreciation of the status quo but approves instead a Marxist ideology of praxis. It is within this transformative praxis that critical theory situates terrorism and terrorists.¶ The political goals of those non-state entities that choose to practice the tactics of terrorism invariably seek a similar transformative praxis and this leads “critical global theorizing” into a curiously confused empathy with the motives of those engaged in such acts, as well as a disturbing relativism. Thus, Booth again decrees that the gap between “those who hate terrorism and those who carry it out, those who seek to delegitimize the acts of terrorists and those who incite them, and those who abjure terror and those who glorify it—is not as great as is implied or asserted by orthodox terrorism experts, the discourse of governments, or the popular press” (p. 66). The gap “between us/them is a slippery slope, not an unbridgeable political and ethical chasm” (p. 66). So, while “terrorist actions are always—without exception—wrong, they nevertheless might be contingently excusable” (p. 66). From this ultimately relativist perspective gang raping a defenseless woman, an act of terror on any critical or uncritical scale of evaluation, is, it would seem, wrong but potentially excusable.¶ On the basis of this worrying relativism a further Ken Commandment requires the abolition of the discourse of evil on the somewhat questionable grounds that evil releases agents from responsibility (pp. 74-75). This not only reveals a profound ignorance of theology, it also underestimates what Eric Voeglin identified as a central feature of the appeal of modern political religions from the Third Reich to Al Qaeda. As Voeglin observed in 1938, the Nazis represented an “attractive force.” To understand that force requires not the abolition of evil [so necessary to the relativist] but comprehending its attractiveness. Significantly, as Barry Cooper argues, “its attractiveness, [like that of al Qaeda] cannot fully be understood apart from its evilness.”⁴¶ The line of relativist inquiry that critical theorists like Booth evince toward terrorism leads in fact not to moral clarity but an inspissated moral confusion. This is paradoxical given that the editors make much in the journal’s introductory symposium of their “responsible research ethics.” The paradox is resolved when one realizes that critical moralizing demands the “ethics of responsibility to the terrorist other.” For Ken Booth it involves, it appears, empathizing “with the ethic of responsibility” faced by those who, “in extremis” “have some explosives” (p. 76). Anthony Burke contends that a critically self-conscious normativism requires the analyst, not only to “critique” the “strategic languages” of the West, but also to “take in” the “side of the Other” or more particularly “engage” “with the highly developed forms of thinking” that provides groups like Al Qaeda “with legitimizing foundations and a world view of some profundity” (p. 44). This additionally demands a capacity not only to empathize with the “other,” but also to recognize that both Osama bin Laden in his *Messages to the West* and Sayyid Qutb in his Muslim Brotherhood manifesto *Milestones* not only offer “well observed” criticisms of Western decadence, but also “converges with elements of critical theory” (p. 45). This is not surprising given that both Islamist and critical theorists share an analogous contempt for Western democracy, the market, and the international order these structures inhabit and have done much to shape.¶ Historically Speaking¶ Critical theory, then, embraces relativism not only toward language but also toward social action. Relativism and the bizarre ethicism it engenders in its attempt to empathize with the terrorist other are, moreover, histrionic. As Leo Strauss classically inquired of this relativist tendency in the social sciences, “is such an understanding dependent upon our own commitment or independent of it?” Strauss explains, if it is independent, I am committed as an actor and I am uncommitted in another compartment of myself in my capacity as a social scientist. “In that latter capacity I am completely empty and therefore completely open to the perception and appreciation of all commitments or value systems.” I go through the process of empathetic understanding in order to reach clarity about my commitment for only a part of me is engaged in my empathetic understanding. This means, however, that “such

understanding is not serious or genuine but histrionic.”⁵ It is also profoundly dependent on Western liberalism. For it is only in an open society that questions the values it promotes that the issue of empathy with the non-Western other could arise. The critical theorist's explicit loathing of the openness that affords her histrionic posturing obscures this constituting fact.¶ On the basis of this histrionic empathy with the “other,” critical theory concludes that democratic states “do not always abjure acts of terror whether to advance their foreign policy objectives ... or to buttress order at home” (p. 73). Consequently, Ken Booth asserts: “If terror can be part of the menu of choice for the relatively strong, it is hardly surprising it becomes a weapon of the relatively weak” (p. 73). Zulaika and Douglass similarly assert that terrorism is “always” a weapon of the weak (p. 33).¶ **At the core of this critical, ethicist, relativism therefore lies a syllogism that holds all violence is terror: Western states use violence, therefore, Western states are terrorist.** Further, the greater terrorist uses the greater violence: **Western governments exercise the greater violence. Therefore, it is the liberal democracies rather than Al Qaeda that are the greater terrorists.**¶ In its desire to empathize with the transformative ends, if not the means of terrorism generally and Islamist terror in particular, critical theory reveals itself as a form of Marxist unmasking. Thus, for Booth “terror has multiple forms” (original italics) and the real terror is economic, the product it would seem of “global capitalism” (p. 75). Only the *engagee* intellectual academic finding in deconstructive criticism the philosophical weapons that reveal the illiberal neo-conservative purpose informing the conventional study of terrorism and the democratic state's prosecution of counterterrorism can identify the real terror lurking behind the “manipulation of the politics of fear” (p. 75).¶ Moreover, the resolution of this condition of escalating violence requires not any strategic solution that creates security as the basis for development whether in London or Kabul. Instead, **Booth, Burke, and the editors contend that the only solution to “the world-historical crisis that is facing human society globally” (p. 76) is universal human “emancipation.”** This, according to Burke, is “the normative end” that critical theory pursues. Following Jurgen Habermas, the godfather of critical theory, terrorism is really a form of distorted communication. The solution to this problem of failed communication resides not only in the improvement of living conditions, and “the political taming of unbounded capitalism,” but also in “the telos of mutual understanding.” Only through this telos with its “strong normative bias towards non violence” (p. 43) can a universal condition of peace and justice transform the globe. **In other words, the only ethical solution to terrorism is conversation: sitting around an un-coerced table presided over by Kofi Annan, along with Ken Booth, Osama bin Laden, President Obama, and some European Union pacifist sandalista, a transcendental communicative reason will emerge to promulgate norms of transformative justice.** As Burke enunciates, the panacea of un-coerced communication would establish “a secularism that might create an enduring architecture of basic shared values” (p. 46).¶ In the end, **un-coerced norm projection is not concerned with the world as it is, but how it ought to be. This not only compounds the logical errors that permeate critical theory, it advances an ultimately utopian agenda** under the guise of *soi-disant* cosmopolitanism where one somewhat vaguely recognizes the “human interconnection and mutual vulnerability to nature, the cosmos and each other” (p. 47) **and no doubt bursts into spontaneous chanting of Kumbaya.**¶ In analogous visionary terms, Booth defines real security as emancipation in a way that denies any definitional rigor to either term. The struggle against terrorism is, then, a struggle for emancipation from the oppression of political violence everywhere. Consequently, in this Manichean struggle for global emancipation against the real terror of Western democracy, **Booth further maintains that universities have a crucial role to play. This also is something of a concern for those who do not share the critical vision, as university international relations departments are not now, it would seem, in business to pursue dispassionate analysis but instead are to serve as cheerleaders for this critically inspired vision.**¶ Overall, the journal's fallacious commitment to emancipation undermines any ostensible claim to pluralism and diversity. **Over determined by this transformative approach to world politics, it necessarily denies the possibility of a realist or prudential appreciation of politics and the promotion not of universal solutions but pragmatic ones** that accept the best that may be achieved in the circumstances. Ultimately, **to present the world how it ought to be rather than as it is conceals a deep intolerance notable in the contempt with which many of the contributors to the journal appear to hold Western politicians and the Western media.**⁶¶ **It is the exploitation of this oughtistic style of thinking that leads the critic into a Humpty Dumpty world where words mean exactly what the critical theorist “chooses them to mean—neither more nor less.”** However, **in order to justify their disciplinary niche they have to insist on the failure of established modes of terrorism study.** Having identified a source of government grants and academic perquisites, critical studies in fact does not deal with the notion of terrorism as such, but instead the manner in which the Western liberal democratic state has supposedly manipulated the use of violence by non-state actors in order to “other” minority communities and create a politics of fear.¶ Critical Studies and Strategic Theory—A Missed Opportunity¶ Of course, the doubtful contribution of critical theory by no means implies that all is well with what one might call

conventional terrorism studies. The subject area has in the past produced superficial assessments that have done little to contribute to an informed understanding of conflict. This is a point readily conceded by John Horgan and Michael Boyle who put “A Case Against ‘Critical Terrorism Studies’” (pp. 51-74). Although they do not seek to challenge the agenda, assumptions, and contradictions inherent in the critical approach, their contribution to the new journal distinguishes itself by actually having a well-organized and well-supported argument. The authors’ willingness to acknowledge deficiencies in some terrorism research shows that **critical self-reflection is already present in existing terrorism studies**. It is ironic, in fact, that the most clearly reflective, original, and *critical* contribution in the first edition should come from established terrorism researchers who critique the critical position.¶ Interestingly, the specter haunting both conventional and critical terrorism studies is that both assume that terrorism is an existential phenomenon, and thus has causes and solutions. Burke makes this explicit: “The inauguration of this journal,” he declares, “indeed suggests broad agreement that there is a phenomenon called terrorism” (p. 39). Yet this is not the only way of looking at terrorism. For a strategic theorist the notion of terrorism does not exist as an independent phenomenon. It is an abstract noun. More precisely, it is merely a tactic—the creation of fear for political ends—that can be employed by any social actor, be it state or non-state, in any context, without any necessary moral value being involved.¶ Ironically, then, strategic theory offers a far more “critical perspective on terrorism” than do the perspectives advanced in this journal. Guelke, for example, propounds a curiously orthodox standpoint when he asserts: “to describe an act as one of terrorism, without the qualification of quotation marks to indicate the author’s distance from such a judgement, is to condemn it as absolutely illegitimate” (p. 19). If you are a strategic theorist this is an invalid claim. Terrorism is simply a method to achieve an end. Any moral judgment on the act is entirely separate. To fuse the two is a category mistake. In strategic theory, which Guelke ignores, terrorism does not, ipso facto, denote “absolutely illegitimate violence.”¶ Intriguingly, Stohl, Booth, and Burke also imply that a strategic understanding forms part of their critical viewpoint. Booth, for instance, argues in one of his commandments that terrorism should be seen as a conscious human choice. Few strategic theorists would disagree. Similarly, Burke feels that there does “appear to be a consensus” that terrorism is a “form of instrumental political violence” (p. 38). The problem for the contributors to this volume is that they cannot emancipate themselves from the very orthodox assumption that the word terrorism is pejorative. That may be the popular understanding of the term, but inherently terrorism conveys no necessary connotation of moral condemnation. “Is terrorism a form of warfare, insurgency, struggle, resistance, coercion, atrocity, or great political crime,” Burke asks rhetorically. But once more he misses the point. All violence is instrumental. Grading it according to whether it is insurgency, resistance, or atrocity is irrelevant. Any strategic actor may practice forms of warfare. For this reason Burke’s further claim that existing definitions of terrorism have “specifically excluded states as possible perpetrators and privilege them as targets,” is wholly inaccurate (p. 38). Strategic theory has never excluded state-directed terrorism as an object of study, and neither for that matter, as Horgan and Boyle point out, have more conventional studies of terrorism.¶ Yet, Burke offers—as a critical revelation—that “the strategic intent behind the US bombing of North Vietnam and Cambodia, Israel’s bombing of Lebanon, or the sanctions against Iraq is also terrorist.” He continues: “My point is not to remind us that states practise terror, but to show how mainstream *strategic doctrines* are terrorist in these terms and undermine any prospect of achieving the normative consensus if such terrorism is to be reduced and eventually eliminated” (original italics) (p. 41). This is not merely confused, it displays remarkable nescience on the part of one engaged in teaching the next generation of graduates from the Australian Defence Force Academy. Strategic theory conventionally recognizes that actions on the part of state or non-state actors that aim to create fear (such as the allied aerial bombing of Germany in World War II or the nuclear deterrent posture of Mutually Assured Destruction) can be terroristic in nature.⁷ The problem for critical analysts like Burke is that they impute their own moral valuations to the term terror. Strategic theorists do not. Moreover, the statement that this undermines any prospect that terrorism can be eliminated is illogical: you can never eliminate an abstract noun.¶ Consequently, those interested in a truly “critical” approach to the subject should perhaps turn to strategic theory for some relief from the strictures that have traditionally governed the study of terrorism, not to self-proclaimed critical theorists who only replicate the flawed understandings of those whom they criticize. Horgan and Boyle conclude their thoughtful article by claiming that critical terrorism studies has more in common with traditional terrorism research than critical theorists would possibly like to admit. These reviewers agree: they are two sides of the same coin.¶ Conclusion¶ In the looking glass world of critical terror studies the conventional analysis of terrorism is ontologically challenged, lacks self-reflexivity, and is policy oriented. By contrast, critical theory’s ethicist, yet relativist, and deconstructive gaze reveals that we are all terrorists now and must empathize with those sub-state actors who have recourse to violence for whatever motive. Despite their intolerable othering by media and governments, terrorists are really no different from us. In fact, there is terror as the weapon of the weak and the far worse economic and coercive terror of the liberal state. Terrorists therefore deserve empathy and they must be discursively engaged.¶ At the core of this understanding sits a radical pacifism and an idealism that requires not the status quo but communication and “human emancipation.” Until this radical post-national utopia arrives both force and the discourse of evil must be abandoned and instead therapy and un-coerced conversation must be practiced. In the popular ABC drama Boston Legal Judge Brown perennially referred to the vague, irrelevant, jargon-ridden statements of lawyers as “jibber jabber.” The Aberystwyth-based school of critical internationalist utopianism that increasingly dominates the study of international relations in Britain

and Australia has refined a higher order incoherence that may be termed Aber jabber. The pages of the journal of *Critical Studies on Terrorism* are its natural home.

AT: Alternatives

Alternatives to counterterror measures are utopian – we can't emancipate ourselves from the problem of terrorism

Michel and Richards 9 (Torsten Michel and Anthony Richards, May 19th 2009, False dawns or new horizons? Further issues and challenges for Critical Terrorism Studies, *Critical Studies on Terrorism* Vol. 2, No. 3, December 2009, pp. 406-407, accessed 7/17/15) CH

The following will raise some concerns as to how the role of emancipation is conceptualized in current examples of Frankfurt School-inspired approaches to CTS. To begin with, in addition to the critique of positivism which is inherent in various critical projects within and outside the field of International Relations, CTS clearly articulates that one of its main aims – and certainly its main normative aim – is to provide a space for emancipatory rationality (Blakeley 2007, p. 234; also Jackson 2007, pp. 249–250). Emancipation is directed at all those groups and individuals, mainly located in the global South, that suffer from the so far rigid and hegemonic discourse that characterises terrorism research. The close intertwinement with state interests has, in their view, a purely instrumental dimension that aims at reifying and cementing the dominance of Western political and institutional structures on a global and regional scale (Blakeley 2007, p. 231). From these initial observations certain problematic issues follow for the conception of emancipation so far exhibited in CTS. To begin with, on a more practical level, CTS makes the premature and optimistic assumption not only that universalising a specific set of values (i.e. Western) is a good thing but that every community will ultimately, when it comes to its senses, pursue a path of emancipation which will lead to a universalistic conception of a just society and a harmonization of norms and values (McDonald 2009, p. 121). The assumption is made that everybody wants to be 'emancipated' or that if they do not want to they should want to.

One is left with the impression that, rather than reflecting the heterogeneity of human existence, CTS represents an elite body of thought derived in the West that is underpinned by the utopian aspiration that everybody wants to, or should want to, to live by a specific set of values which are seen as universally valid as they are derived from an allegedly universal application of reason. And so, rather than being liberating or emancipatory, for the vast bulk of the global population, CTS risks being narrow and itself engaged in a hegemonic project. In order to realise emancipation in this sense it is therefore necessary, presumably, to universalise a specific set of values through a continuous application of self-reflexive emancipatory reason. How emancipatory, however, is it to quash all other forms of ideology and governance that do not conform to our own? It is argued that the politics of emancipation aims to transcend 'oppressive' social divisions. What about those cultures (and indeed people's securities) that revolve around social divisions? Here again we encounter a strange lack of self-reflexivity in FSCT-inspired approaches to terrorism. Although scholars engaged in promoting this normative agenda stress the need for a continuous critical engagement, it remains unclear 'from where' their own normative agenda comes and what exactly makes it legitimate. A simple statement of conviction along the lines of 'we aim to free people from oppression' is certainly not enough to legitimise desired practices. Empirically, it may be abhorrent to us to see that the role of women in many environments apparently renders them 'insecure' from a CTS perspective, but what if this is a cultural imperative? Are we also to attempt to address the 'insecurity' of lower caste tribes and groups in relation to higher castes? Do women in developing countries and members of lower castes feel insecure or is that a state of mind that has been bestowed upon them by relativist observers who deem that they must be insecure according to the latter's own conceptions as to what must define security? As Ayoob argues, such a definition of emancipation 'refuses to acknowledge that a society or group can be emancipated without being secure and vice versa. . . . Such semantic acrobatics tend to impose a model of contemporary Western polities . . . that are far removed from Third World realities' (Ayoob 1997, pp. 126–127)

Responding to terrorism can't be reduced to discursive choices. Problematizing conventional approaches isn't sufficient.

Michel and Richards 9 (Torsten Michel and Anthony Richards, May 19th 2009, False dawns or new horizons? Further issues and challenges for Critical Terrorism Studies, Critical Studies on Terrorism Vol. 2, No. 3, December 2009, pp. 409-410, accessed 7/17/15) CH

One example as to where CTS tends to overstate the case for its novelty relates to the perpetual problem of defining terrorism. Ruth Blakeley maintains that one of the main problems with 'orthodox' terrorism studies is that in its conceptions 'the "terrorist label" is used as a political tool to de-legitimize certain groups, rather than as an analytical category' (Blakeley 2007, p. 230). This politicization of the term terrorism leads to a specific narrative, she argues, in which the Northern democratic states are continuously portrayed as victims under constant threat from extremist non-state actors mostly originating in the global South. Therefore, Blakeley suggests that 'critically oriented scholars need to reclaim the term "terrorism" and use it as an analytical tool, rather than political tool in the service of the elite power' (p. 233). The critical edge in this new take on terrorism studies should thereby bring deliverance from the dominant discourse in which terrorism studies serves as a legitimizing tool for oppressive actions conducted by hegemonic states. There are, however, some flaws in this argument. Firstly, Blakeley seems to suggest a bifurcation between a political use embedded in a specific set of structures that empower few, silence many and blame specific non-state actors, and an analytical view that would allow a 'fairer' approach to the analysis of terrorism. She says for instance: 'This means that rather than taking a literal approach to the study of terrorism and then seek instances of the phenomenon to try and determine causes and remedies' (p. 230), we end up with utilizing the terrorism label to further specific state-centric interests and shape security discourses in an advantageous way for the powerful. An analytical rather than political use, she argues, promises a more even – one might even say neutral – basis from which all instances that fit into a 'reasonable' definition of terrorism can be equally addressed (p. 229). Apart from the obvious question of whether and how such an analytical use based on a 'reasonable' definition is achievable, it will certainly not fit well into a critical approach, even when broadly conceptualized. This is because Critical Theory has generally understood itself as a counter-movement to the abstract systematizations of German idealism in its various forms and has objected most strongly against a practical (political, social) and theoretical (abstract analytical) split of human existence. Intuitively, then, Blakeley's call for an analytical use of the term 'terrorism' seems hard to combine with the overall critical outlook that CTS is proposing. Apart from these potential compatibility problems, Blakeley contradicts herself in her pursuit of this analytical use. Only one paragraph after proposing the necessity for critical scholars to reclaim terrorism and use it as an analytical tool within a Critical Theory oriented approach, she states that such an endeavour should be pursued 'with the specific, normative aim of offering suggestions for the emancipation of people in the South from the oppressive practices of Northern powers' (p. 234). Emancipating oppressed people in the South, as laudable as it sounds, is of course a political aim in itself. If CTS takes this as a central concern, however, and the emphasis on emancipation in almost all instances of T. Michel and A. Richards scholarship in this young field suggests it does, then we encounter here a politicization of the terrorism label yet again, this time projected against the global hegemonic North, but nevertheless political. So, we are left somewhat puzzled as to how reclaiming terrorism analytically and thereby overcoming its political abuse can be meaningfully combined with a clear and overt political agenda exhibited in CTS scholarship itself. It seems fair to suggest that given the way that terrorism is used in various language-games in the international arena, a political use is unavoidable in one form or another (Jackson 2007, p. 247). But why then veil this political proclivity in a scholarly jargon that suggests a de-politicization and analytical revival of the term 'terrorism'? On the definition itself, terrorism is surely a method that has been used by a wide variety of actors. There is nothing new in Jackson's (2007, p. 248) proclamation that we need an actor-free definition of terrorism. Such definitions have been put forward by so-called 'orthodox' terrorism scholars for many years (Schmid and Longman 1998). Of course, the terrorism perpetrated by states should not be excluded from any definition (nor should terrorism carried out by any actor) but this is not a new or contemporary revelation. A perpetrator based definition is indeed not only unhelpful but it is also misses the key point that terrorism is first and foremost a method and as such no perpetrator is excluded, be they states, social movements, guerrilla groups, terrorist groups and so on. As Weinberg rightly observed the notion of 'one man's terrorist is another man's freedom fighter' is confusing the goal with the activity (Weinberg 2005, p. 2). An actor-free definition that strives for neutrality might look something like the following: terrorism is a particular method of force or violence and/or the threat of force or violence that has been carried out by a wide range of actors (both

state and non-state), that often targets civilians, is usually for a political purpose and is usually designed to have a psychological impact beyond the immediate victims. Such a definition is not the product of some new-found momentum towards bringing the 'state back into terrorism studies' but reflects what has always been the case (at least in modern times): that terrorism is a method that has been used by a variety of actors.

They have no criteria for making epistemological and ontological choices about terrorism.

Michel and Richards 9 (Torsten Michel and Anthony Richards, May 19th 2009, False dawns or new horizons? Further issues and challenges for Critical Terrorism Studies, Critical Studies on Terrorism Vol. 2, No. 3, December 2009, pp. 407-408, accessed 7/17/15) CH

Smith suggests that 'emancipation seems to be particularly helpful in thinking about September 11 because it forces us to think through the reasons for those undertaking the attacks as well as the complex question of how to respond' (Smith 2005, p. 43). A clear link is made between 9/11, emancipation and human insecurity (which entails the lack of the provision of 'food, shelter, education, health care etc.') (Smith 2005, p. 54). While anyone could reasonably argue that there is a link between economic underdevelopment and human insecurity, to take this further and suggest a link between human insecurity and terrorism is certainly more contentious. The literature on this issue has failed to establish such a link (and indeed, in general, argues against it) (Schmid 2004, pp. 65–66; also Krueger and Maleckova 2003). Terrorism has not, in the main, been the weapon of those in poverty (for example) but of those who aim to fulfil particular political and religious ideologies. Smith therefore makes something of a quantum leap: the apparent 'degree of support' from those in less developed countries who suffer from 'human insecurity' is suddenly and speculatively propelled as a 'possible cause of terrorism' (Smith 2005, pp. 54–55). While the lack of empirical research in terrorism studies has rightly been criticised, critical security studies and CTS are arguably even more culpable in this regard when such claims are made based upon little empirical evidence. On a more abstract level it also seems unclear what the commitment to emancipation in CTS actually signifies. The term is used without any substantial clarification as to its conceptual and practical content. This seems especially troubling as Critical Theory itself is characterised by a variety of conceptualisations regarding not only the content of emancipation but also the differing views as to the possibility of achieving and pursuing in a practical way an emancipatory agenda. In CTS such reflections, however, seem not to be of any particular concern. Rather, the emancipatory potential of human reflection and action is silently assumed to be not only possible but realisable. This is connected to an underlying commitment to a specific form of rationality (Renger 1998, pp. 82–83) that allows for deducing the problem-laden structure of contemporary academic discourse in the area of terrorism studies and a subsequent prescription for a normative-practical agenda in which the 'emancipation' of mainly the 'global Downloaded by [University of California, Berkeley] at 08:23 15 July 2015 408 T. Michel and A. Richards South' takes a prime spot. Even a quick glance over the main contributions to Critical Theory over the last decades will reveal, however, that both the actual content of emancipation as well as the potential for its realisation are hotly debated. The range of propositions we can find in this respect span from an 'engaged withdrawal' in Adorno and Horkheimer, through to the pragmatist infused communicative action within existing liberal institutionalist structures in Habermas, to the emphasis on recognition as a precondition for 'healthy citizenship' in Axel Honneth (Chambers 2004, pp. 220–239).² Each of these (and to be clear these are only three specific, through prominent, examples of Critical scholarship) presents a completely distinct representation of the content, aim and potential for the pursuit of emancipation. CTS scholars, for better or worse, cannot simply take 'emancipation' out of these contestations and either claim a deceptive transparency of meaning manifested in 'liberating people from all kinds of violence' or retreat into an anti-foundationalist stand in which 'the concrete content of emancipation cannot and need not be determined in the beginning'. With respect to the first option the questions of the supremacy of their critical ontology as well as the authority of their epistemology remain unresolved, and with respect to the second option, the question arises as to how an emancipatory agenda can be argued for and pursued without any preconception of its substance – thus, how do the self appointed emancipators know that they are in fact emancipating? It turns out that a normative aim (in this case liberating or emancipating or simply helping the oppressed of the world) is not a viable ground on which scholarship or action for that matter can be based. As we can learn from the large trajectory of Critical Theory, such a commitment comes with its shortcomings and flaws and any possibility of following Marx's dictum to change the world must first and foremost start with a self-reflective and critical stand towards one's own theoretical and

practical commitments. A simple desire to better the world and to unmask the abuse of power (as implicitly portrayed in current instances of terrorism scholarship) is not just an external exercise of ‘speaking truth to power’ but relies in its very possibility on a constant commitment to internal critique and a continuous perpetuation of the ‘hermeneutics of suspicion’, all of which right now seem dangerously absent in CTS scholarship. In this respect, we can recall Nick Rengger’s recent citation of T. S. Elliot: ‘The last temptation is the greatest treason: to do the right deed for the wrong reason’ (Rengger 2008, p. 961; originally in Eliot 1938, p. 44.1)

Terror policy key

We shouldn’t discard problem-solving approaches to terrorism.

Horgan & Boyle 2008 [John & Michael J, A case against ‘Critical Terrorism Studies’, *Critical Studies on Terrorism*, 1:1, 52-53, <http://dx.doi.org/10.1080/17539150701848225>]

Another critique of terrorism studies derives from the general critique of the influence of ‘problem-solving’ theory in terrorism studies (Gunning 2007b). The argument here, and deriving from Cox, is that terrorism studies tends to take the world as it is, rather than challenging its foundations of social and political order, and forsakes efforts to find ways of applying scholarly knowledge to relieving the burdens of those oppressed by unjust social and political structures (Cox 1981, p. 129). In other words, the charge is that the study of terrorism has a predominant status quo bias, which leads it to focus on how to solve problems for those in power, at the expense of ‘emancipation’. The ‘mode’ of thinking of terrorism studies is thus dominated by instrumental rationality, to the detriment of reflective approaches and interdisciplinary research. We believe this is overstating the case. Like much of political science, the study of terrorism has been influenced by the logic of ‘problem-solving’ theory and includes a strong dose of instrumental rationality. But to imply that all those working within an empirical tradition of research in terrorism studies do not challenge the status quo, or suggest uncomfortable truths to those in power, is misleading. Many of the serious scholars who work in this field are sympathetic to the normative goals that CTS scholars espouse, and are unafraid to speak truth to power when needed. For example, many terrorism scholars do not hesitate to tell governments bluntly that unpopular certain foreign policy choices (such as the US invasion of Iraq or the Israeli occupation of the West Bank and Gaza) generate terrorism, and that addressing pervasive economic and social inequalities is an essential part of counter-terrorism. In fact, in a 2004 ‘Open Letter to the American People’, over 700 security studies scholars in the USA and elsewhere signed their names to a case which included the following: We judge that the current American policy centered around the war in Iraq is the most misguided one since the Vietnam period, one which harms the cause of the struggle against extreme Islamist terrorists. One result has been a great distortion in the terms of public debate on foreign and national security policy—an emphasis on speculation instead of facts. (Security Scholars for a Sensible Foreign Policy (2004)⁵ The list included such well-known terrorism experts as Jessica Stern, David Rapoport (Co-editor of *Terrorism and Political Violence*), and Mia Bloom. If terrorism scholars, including these, were solely interested in telling comforting lies to those in power, they would shy away from these uncomfortable facts and would certainly not publicly identify themselves with such an openly critical stance.

Case- Alt causes

Other programs result in racial profiling

Leadership Conference 11

The Leadership Conference, coalition charged by its diverse membership of more than 200 national organizations to promote and protect the civil and human rights of all persons in the United States, "The Reality of Racial Profiling", <http://www.civilrights.org/publications/reports/racial-profiling2011/the-reality-of-racial.html?referrer=https://www.google.com/>, 2011//SRawal

- Operation front line
- Lower standard from probable cause to reasonable suspicion
- Terrorists screening center

Another example of a federal program that involves racial profiling is Operation Front Line (OFL). The stated purpose of OFL,⁴⁷ which was instituted just prior to the November 2004 presidential election, is to "detect, deter, and disrupt

terror operations."⁴⁸ **OFL is a covert program, the existence of which was discovered through a Freedom of Information Act lawsuit filed by the American-Arab Anti-Discrimination**

Committee and the Yale Law School National Litigation Project.⁴⁹ According to the 2009 ACLU/Rights Working Group report, data regarding OFL obtained from the Department of Homeland Security show that: **an astounding seventy-nine percent of the targets**

investigated were immigrants from Muslim majority countries. Moreover, foreign nationals from Muslim-majority countries were 1,280 times more likely to be targeted than similarly situated individuals from other countries. Incredibly, not even one terrorism-related conviction resulted from the interviews conducted under this program. What did result, however, was an intense chilling effect on the free speech and association rights of the Muslim, Arab and South Asian communities targeted in advance of an already contentious presidential election.⁵⁰ Lists of

individuals who registered under NSEERS were apparently used to select candidates for investigation in OFL.⁵¹ **Inasmuch as the overwhelming majority of those selected were Muslims, OFL is a clear example of a federal program that involves racial profiling.** Moreover, because OFL has resulted in no terror-related convictions, the program is also a clear example of how racial profiling uses up valuable law enforcement resources yet fails to make our nation safer.⁵² Although Arabs and Muslims, and **those presumed to be Arabs or Muslims based on their appearance, have since 9/11 been targeted by law enforcement authorities in their homes, at work, and while driving or walking,**⁵³ **airports and border crossings have become especially daunting.** One reason for this is a

wide-ranging and intrusive Customs and Border Patrol (CBP) guidance issued in July 2008 that states, **in the course of a border search, and absent individualized suspicion, officers can review and analyze the information transported by any individual attempting to enter ... the United States.**" (Emphasis added)⁵⁴ In addition,

the standard to copy documents belonging to a person seeking to enter **the U.S. was lowered from a "probable cause" to a "reasonable suspicion" standard.**⁵⁵ **Operating under such a broad and subjective**

guidance, border agents frequently stop Muslims, Arabs, and South Asians for extensive questioning about their families, faith, political opinions, and other private matters, and subject them to intrusive searches. Often, their cell phones, laptops, personal papers and books are taken and reviewed. **The**

FBI's Terrorist Screening Center (TSC) maintains a list of every person who, according to the U.S. government, has "any nexus" to terrorism.⁵⁶ Because of misidentification (i.e., mistaking non-listed persons

for listed persons) and over-classification (i.e., assigning listed persons a classification that makes them appear dangerous when they are not), **this defective "watch-list" causes many problems for Muslims, Arabs, and South Asians seeking to enter the United States, including those who are U.S. citizens.**

Alt cause — local policies enforce racist surveillance, plan can't reform these

AP 12 — Samantha Henry, Matt Appuzzo, Wayne Perry, reporters for the Associated Press, American multinational nonprofit news agency, 2012 ("New Jersey Muslims Angry Over NYPD Surveillance Findings," *The Huffington Post*, May 25, Available online at http://www.huffingtonpost.com/2012/05/25/new-jersey-muslims-cangry-nypd-surveillance_n_1545319.html, Accessed on 6/14/15)

TRENTON, N.J. -- Muslim leaders in New Jersey say they are angry but uncertain what their next step will be after the state's attorney general found that New York City police did not violate any laws in its surveillance of Muslim businesses, mosques and student groups in New Jersey. Several mosque leaders who attended a meeting Thursday with Attorney General Jeffrey S. Chiesa said they were shocked he found no violation of state criminal or civil laws by the NYPD in operations that many Muslims considered unjustified surveillance based solely on religion. "This is a big violation of our civil rights, and we need to go to our communities and explain it?" Imam Mohammad Qatanani, the spiritual leader of the Islamic Center of Passaic County said Thursday as he left the meeting. Qatanani said he would not tell his congregants to stop collaborating with law enforcement, but added, "We need from them to show us the same seriousness and honesty in building bridges with the Muslim community." Chiesa had been asked by Gov. Chris Christie, who appointed him, to look into operations in New Jersey that were part of a widespread NYPD program to collect intelligence on Muslim communities both inside New York and beyond. Undercover officers and informants eavesdropped in Muslim cafes and monitored sermons, even when there was no evidence of a crime. They infiltrated Muslim student groups, videotaped mosque-goers or collected their license plate numbers as they prayed. The result was that many innocent business owners, students and others were cataloged in police files. The interstate surveillance efforts, revealed by The Associated Press earlier this year, angered many Muslims and New Jersey officials. Some, like Newark Mayor Cory Booker and the state's top FBI official, criticized the tactics. Others, like Christie, focused more on the fact that the NYPD didn't tell New Jersey exactly what it was up to. In response, Chiesa launched what he described as a fact-finding review. Further, authorities found that New Jersey has no laws barring outside law enforcement agencies from secretly conducting operations in the state, representatives of the attorney general's office told the AP. However, New York police have agreed to meet with New Jersey law enforcement regularly to discuss counterterrorism intelligence and operations, the attorney general said.

Alt cause—FBI's terror list

Bilici, 1AC Author, 10 (Mucahit Bilici, Assistant Sociology Professor at John Jay College; ""Islamophobia / Islamophilia, Beyond the Politics of Enemy and Friend," "Muslim Ethnic Comedy: Inversions of Islamophobia," 2010, pg. 198-199//rck)

Ahmed Ahmed is an Egyptian American who also had an acting career in Hollywood. Dissatisfied with the parts available to Middle Eastern actors, he decided to become a stand-up comedian after 9/11. Ahmed's routine typically revolves around the absurdities of the security check at the airport. He claims that his name matches one of the FBI's most wanted terrorists. So each time he goes to the airport, he has to go through extra security checks.

SPOT doesn't do anything—there are only officers at 0.8% of US Airports

Forbes 14 (Steve, Chairman and Editor-in-Chief of Forbes Media, editorials for each issue of Forbes under the heading of "Fact and Comment," January 6, "Spot-on Mistake at TSA; Duped by Obama," <http://www.forbes.com/sites/othercomments/2014/01/06/spot-on-mistake-at-tsa-duped-by-obama/>, //rck)

Consider SPOT's results last year: Behavior detection officers chose nearly 36,000 travelers for extra screening, then referred about 2,100 of them to law enforcement. Of those, a tiny fraction were denied boarding, and 183 were arrested on a range of charges, from fraudulent documents to suspected drugs. None for terrorism. The agency points to the arrests as proof of SPOT's success. But consider that the TSA had to pick out 196 travelers, on average, for each one who ultimately merited arrest. Not exactly a big payoff for the effort and expense of keeping 3,131 officers at 122 airports. Nor is the TSA supposed to be in the business of detaining drunks or catching common criminals, unless they mean to blow up a plane. Airport security and airline personnel can handle the routine stuff. The Government Accountability Office reported that flagging travelers based on behavior is only slightly better than picking them out by random chance. Although a 2011 study by TSA's parent agency concluded the program is effective, the GAO found that the study's data were unreliable and its method flawed.

Case- Circumvention

1NC

The FBI will circumvent – whistleblowers are punished

ACLU 13 [American Civil Liberties Union, September 2013, “UNLEASHED AND UNACCOUNTABLE; The FBI’s Unchecked Abuse of Authority,” <https://www.aclu.org/sites/default/files/assets/unleashed-and-unaccountable-fbi-report.pdf>]/dickies

The FBI has a notorious record of retaliating against FBI employees who report misconduct or abuse in the FBI and has used aggressive leak investigations to suppress other government whistleblowers. Congress exempted the FBI from the requirements of the Whistleblower Protection Act of 1989 and instead required the Justice Department to establish an internal system to protect FBI employees who report waste, fraud, abuse, and illegality. Still, FBI Director Robert Mueller repeatedly vowed to protect Bureau whistleblowers: I issued a memorandum on November 7th [2001] reaffirming the protections that are afforded to whistleblowers in which I indicated I will not tolerate reprisals or intimidation by any Bureau employee against those who make protected disclosures, nor will I tolerate attempts to prevent employees from making such disclosures.¹⁸⁰ Yet court cases and investigations by the Justice Department Office of Professional Responsibility and Inspector General have repeatedly found that FBI officials continue to retaliate against FBI employees who publicly report internal misconduct, including Michael German,¹⁸¹ Sibel Edmonds,¹⁸² Jane Turner,¹⁸³ Robert Wright,¹⁸⁴ John Roberts,¹⁸⁵ and Bassem Youssef.¹⁸⁶ Other FBI whistleblowers choose to suffer retaliation in silence. Special Agent Chad Joy courageously blew the whistle on a senior FBI agent’s serious misconduct during the investigation and prosecution of Alaska Sen. Ted Stevens, which resulted in the trial judge overturning the conviction against him, but only after the senator had lost re-election.¹⁸⁷ Special Agent Joy was publicly criticized by his then-retired supervisor, subjected to a retaliatory investigation, and then taken off criminal cases.¹⁸⁸ Joy resigned and no longer works at the FBI, while the FBI agent responsible for the misconduct in the Stevens’ case continues to be assigned high-profile investigations—a clear sign that the FBI culture continues to protect agents involved in misconduct more than those who report it.¹⁸⁹ These high-profile cases of whistleblower retaliation discourage other FBI personnel from coming forward. A 2009 Inspector General report found that 28 percent of non-supervisory FBI employees and 22 percent of FBI supervisors at the GS-14 and GS-15 levels “never” report misconduct they see or hear about on the job.¹⁹⁰ That such a high percentage of officials in the government’s premiere law enforcement agency refuse to report internal misconduct is shocking and dangerous and perpetuates the risk that Americans like Sen. Stevens will continue to be victimized by overzealous investigations and prosecutions. The FBI has also been involved in suppressing other government whistleblowers through inappropriately aggressive leak investigations. For example, when the U.S. media reported in 2005 that the National Security Agency (NSA) was spying on Americans’ communications without warrants in violation of the Foreign Intelligence Surveillance Act, the FBI didn’t launch an investigation to enforce the law’s criminal provisions. It instead went after the whistleblowers, treating leaks to the American public about government malfeasance as espionage.¹⁹¹ After more than a year of aggressive investigation and interviews, armed FBI agents conducted coordinated raids on the homes of four former NSA and Justice Department officials and a House Intelligence Committee staffer, treating them as if they were dangerous Mafiosi instead of dedicated federal employees who held the government’s highest security clearances. William Binney, who served more than 30 years in the NSA, described an FBI agent pointing a gun at his head as he stepped naked from the shower.¹⁹²

Curtailing surveillance in specific areas will just cause agencies to literally surveil areas outside/around it- mosque surveillance tactics prove

Goldman et. al, 12

(Adam and Matt are editors for the Associated Press. “NYPD Defends Tactics Over Mosque Spying; Records Reveal New Details On Muslim Surveillance.” http://www.huffingtonpost.com/2012/02/24/nypd-defends-tactics-over_n_1298997.html. Date Accessed- 7/13/15. Anshul Nanda)

NEW YORK -- The New York Police Department targeted Muslim mosques with tactics normally reserved for criminal organizations, according to newly obtained police documents that showed police collecting the **license plates of worshippers, monitoring them on surveillance cameras and cataloging sermons** through a network of informants.¶ The documents, obtained by The Associated Press, have come to light as the **NYPD fends off criticism of its monitoring of Muslim student groups and its cataloging of mosques and Muslim businesses in nearby Newark, N.J.** The NYPD's spokesman, Paul Browne, forcefully defended the legality of those efforts Thursday, telling reporters that its officers may go wherever the public goes and collect intelligence, even outside city limits.¶ The new documents, prepared for Police Commissioner Raymond Kelly, show how the NYPD's roster of **paid informants monitored conversations and sermons inside mosques. The records offer the first glimpse of what those informants, known informally as "mosque crawlers," gleaned from inside the houses of** worship.¶ For instance, when a Danish newspaper published inflammatory cartoons of Prophet Muhammad in September 2005, **Muslim communities around the world erupted in outrage. Violent mobs took to the streets in the Middle East.** A Somali man even broke into the cartoonist's house in Denmark with an ax.¶ In New York, thousands of miles away, it was a different story. Muslim leaders preached peace and urged people to protest lawfully. Write letters to politicians, they said. Some **advocated boycotting Danish products, burning flags and holding rallies.**¶ All of that was permissible under law and protected by the First Amendment to the Constitution. All was reported to the **NYPD by its mosque crawlers and made its way into police files for Kelly.**¶ Imam Shamsi **Ali brought up the topic of the cartoon, condemning them.** He announced a rally that was to take place on Sunday (02/05/06) near the United Nations. He asked that everyone to attend if possible and reminded everyone to keep their poise if they can make it," one report read.¶ At the Muslim Center of New York in Queens, the report said, "Mohammad Tariq Sherwani led the prayer service and urged those in attendance to participate in a demonstration at the United Nations on Sunday."¶ **When one Muslim leader suggested planning a demonstration**, one of the people involved in the discussion about how to get a permit was, in fact, working for the NYPD.¶ **"It seems horrible to me that the NYPD is treating an entire religious community as potential terrorists,"** said civil rights lawyer Jethro Eisenstein, who reviewed some of the documents and is involved in a decades-old class-action lawsuit against the police department for spying on protesters and political dissidents.¶ The **lawsuit is known as the Handschu case, and a court order in that case governs how the NYPD may collect intelligence.**¶ Eisenstein said the documents prove the NYPD has violated those rules.¶ "This is a flat-out violation," Eisenstein said. "This is a smoking gun."¶ Browne, the NYPD spokesman, did not discuss specific investigations Thursday but told reporters that, because of the Handschu case, the NYPD operates under stricter rules than any other department in the country. He said police do not violate those rules.¶ His statements were intended to calm a controversy over a 2007 operation in which the NYPD mapped and photographed all of Newark's mosques and eavesdropped on Muslim businesses. Newark Mayor Cory Booker said he was never told about the surveillance, which he said offended him.¶ Booker and his police director accused the NYPD of misleading them by not revealing exactly what they were doing. Had they known, they said it never would have been permitted. But Browne said Newark police were told before and after the operation and knew exactly what it entailed.¶ Kelly, **the police commissioner, and Mayor Michael Bloomberg have been emphatic that police only follow legitimate leads of criminal activity and do not conduct preventive surveillance in ethnic communities.**¶ Former and current law enforcement officials either involved in or with direct knowledge of these programs say they did not follow leads. The officials spoke on condition of anonymity because they were not authorized to discuss the secret programs. But the documents support their claims.¶ The effort highlights one of the most difficult aspects of policing in the age of terrorism. Solving crimes isn't enough; police are expected to identify would-be terrorists and move in before they can attack.¶ There are no universally agreed upon warning signs for terrorism. Terrorists have used Internet cafes, stayed in hostels, worked out at gyms, visited travel agencies, attended student groups and prayed at mosques. So the NYPD monitored those areas. In doing so, they monitored many innocent people as they went about their daily lives.¶ Using plainclothes officers from the squad known as the Demographics Unit, police swept Muslim neighborhoods and catalogued the location of mosques. The ethnic makeup of each congregation was logged as police fanned out across the city and outside their jurisdiction, into suburban Long Island and areas of New Jersey.¶ "African American, Arab, Pakistani," police wrote beneath the photo of one mosque in Newark.¶ Investigators looked at mosques as the center of Muslim life. All their connections had to be known.¶ David Cohen, the **NYPD's top intelligence officer, wanted a source inside every mosque within a 250-mile radius of New York,** current and former officials said. **Though the officials said they never managed to reach that goal, documents show the NYPD successfully placed informants or undercovers - sometimes both - into mosques from Westchester County, N.Y.,** to New Jersey.¶ The NYPD used these sources to get a sense of the sentiment of worshippers whenever an event generated headlines. The goal, former officials said, was **to alert police to potential problems before they bubbled up.**¶ Even when it was clear there were no links to terrorism, **the mosque informants gave the NYPD the ability to "take the**

pulse" of the community, as Cohen and other managers put it.¶ When New York Yankees pitcher Cory Lidle and his flight instructor were killed on Oct. 11, 2006, when their small plane crashed into a Manhattan high-rise apartment, fighter planes were scrambled. Within hours the FBI and Homeland Security Department said it was an accident. Terrorism was ruled out.¶ Yet for days after the event, the NYPD's mosque crawlers reported to police about what they heard at sermons and among worshippers.¶ (View the PDF documents on Danish cartoons, mosque targeting and summaries of plane crash.)¶ At the Brooklyn Islamic Center, a confidential informant "noted chatter among the regulars expressing relief and thanks to God that the crash was only an accident and not an act of terrorism," one report reads.¶ "The worshippers made remarks to the effect that `it better be an accident; we don't need any more heat,'" an undercover officer reported from the Al-Tawheed Islamic Center in Jersey City, N.J.¶ In some instances, the **NYPD put cameras on light poles and trained them on mosques, documents show. Because the cameras were in public space, police didn't need a warrant to conduct the surveillance.**¶ Police also **wrote down the license plates of cars in mosque parking lots, documents show. In some instances, police in unmarked cars outfitted with electronic license plate readers would drive down the street and record the plates of everyone parked near the mosque,** former officials recalled.¶ "They're viewing Muslims like they're crazy.

New regulations only legitimize government surveillance by creating an illusion of constraint

Glennon 14 [Michael, Professor of International Law at Tufts, 2014, "National Security and Double Government", <http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf>] //dickies

National security policy in the United States has remained largely constant from the Bush Administration to the Obama Administration. This continuity can be explained by the "double government" theory of 19th-century scholar of the English Constitution Walter Bagehot. As applied to the United States, Bagehot's theory suggests that U.S. national security policy is defined by the network of executive officials who manage the departments and agencies responsible for protecting U.S. national security and who, responding to structural incentives embedded in the U.S. political system, operate largely removed from public view and from constitutional constraints. The public believes that the constitutionally-established institutions control national security policy, but that view is mistaken. Judicial review is negligible; congressional oversight is dysfunctional; and presidential control is nominal. Absent a more informed and engaged electorate, little possibility exists for restoring accountability in the formulation and execution of national security policy.

The institution of national security agencies determines policy – new constraints create an illusion of control that only legitimizes surveillance

Glennon 14 [Michael, Professor of International Law at Tufts, 2014, "National Security and Double Government", <http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf>] //dickies

U.S. national security policy has scarcely changed from the Bush to the Obama Administration. The theory of Walter Bagehot explains why. Bagehot described the emergence in 19th-century Britain of a "disguised republic" consisting of officials who actually exercised governmental power but remained unnoticed by the public, which continued to believe that visible, formal institutions exercised legal authority.⁶⁰¹ Dual institutions of governance, one public and the other concealed, were referred to by Bagehot as "double government."⁶⁰² A similar process of bifurcated institutional evolution has occurred in the United States, but in reverse: a network has emerged within the federal government that exercises predominant power with respect to national security matters. It has evolved in response to structural incentives rather than invidious intent, and it consists of the several hundred executive officials who manage the military, intelligence, diplomatic, and law enforcement agencies responsible for protecting the nation's security. These officials are as little disposed to stake out new policies as they are to abandon old ones. They define security more in military and intelligence terms rather than in political or diplomatic ones. Enough examples exist to persuade the public that the network is subject to judicial, legislative, and executive constraints. This appearance is

important to its operation, for the network derives legitimacy from the ostensible authority of the public, constitutional branches of the government. The appearance of accountability is, however, largely an illusion fostered by those institutions' pedigree, ritual, intelligibility, mystery, and superficial harmony with the network's ambitions. The courts, Congress, and even the presidency in reality impose little constraint. Judicial review is negligible; congressional oversight dysfunctional; and presidential control nominal. Past efforts to revive these institutions have thus fallen flat. Future reform efforts are no more likely to succeed, relying as they must upon those same institutions to restore power to themselves by exercising the very power that they lack. External constraints—public opinion and the press—are insufficient to check it. Both are manipulable, and their vitality depends heavily upon the vigor of constitutionally established institutions, which would not have withered had those external constraints had real force. Nor is it likely that any such constraints can be restored through governmental efforts to inculcate greater civic virtue, which would ultimately concentrate power even further. Institutional restoration can come only from an energized body politic. The prevailing incentive structure, however, encourages the public to become less, not more, informed and engaged.

The national security team actually determines policy – court and the president create the illusion of curtailment

Glennon 14 [Michael, Professor of International Law at Tufts, 2014, “National Security and Double Government”, <http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf>] //dickies

Bagehot's theory may have overstated the naiveté of Britain's citizenry. When he wrote, probably few Britons believed that Queen Victoria actually governed. Nor is it likely that Prime Minister Lord Palmerston, let alone 658 members of the House of Commons, could or did consciously and intentionally conceal from the British public that it was really they who governed. Big groups keep big secrets poorly. Nonetheless, Bagehot's enduring insight—that dual institutions of governance, one public and the other concealed, evolve side-by-side to maximize both legitimacy and efficiency—is worth pondering as one possible explanation of why the Obama and Bush national security policies have been essentially the same. There is no reason in principle why the institutions of Britain's juridical offspring, the United States, ought to be immune from the broader bifurcating forces that have driven British institutional evolution. As it did in the early days of Britain's monarchy, power in the United States lay initially in one set of institutions—the President, Congress, and the courts. These are America's “dignified” institutions. Later, however, a second institution emerged to safeguard the nation's security. This, America's “efficient” institution (actually, as will be seen, more a network than an institution) consists of the several hundred executive officials who sit atop the military, intelligence, diplomatic, and law enforcement departments and agencies that have as their mission the protection of America's international and internal security. Large segments of the public continue to believe that America's constitutionally established, dignified institutions are the locus of governmental power; by promoting that impression, both sets of institutions maintain public support. But when it comes to defining and protecting national security, the public's impression is mistaken. America's efficient institution makes most of the key decisions concerning national security, removed from public view and from the constitutional restrictions that check America's dignified institutions. The United States has, in short, moved beyond a mere imperial presidency to a bifurcated system—a structure of double government—in which even the President now exercises little substantive control over the overall direction of U.S. national security policy. Whereas Britain's dual institutions evolved towards a concealed republic, America's have evolved in the opposite direction, toward greater centralization, less accountability, and emergent autocracy.

2NC

Secrecy and diffusion of blame means any curtailment will be circumvented

Glennon 14 [Michael, Professor of International Law at Tufts, 2014, “National Security and Double Government”, <http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf>] //dickies

What has held the Trumanites together during this era is what Bagehot believed held Britain's efficient institutions together: loyalty, collective responsibility, and—most importantly—secrecy.¹⁶⁵ “Secrecy, once accepted, becomes an addiction,” Edward Teller said.¹⁶⁶ The Trumanite network is not alone in accepting the need for secrecy in national security matters—the Madisonian institutions do as well—but in breadth and depth, the Trumanites' opaqueness is striking. Trumanites can have no real discussions with family or friends about work because nearly all of their work is classified. They hold multiple compartmented clearances. Their offices are located in the buildings' expensive real estate—the Pentagon's E-Ring, the CIA's Seventh Floor, the State Department's Seventh Floor. Key pads lock their doors. Next to their desks are a safe and two computers, one unclassified and the other classified. Down the hall is a SCIF¹⁶⁷ where the most sensitive briefings take place. They speak in acronyms and code words that the public has never heard and, God (and the FBI) willing, never will hear. The experts they consult are their colleagues. Outside expertise, when needed, is difficult to tap. The Trumanites sign non-disclosure agreements under which they promise to submit for prepublication review anything they write on the subject of their work. Outside experts have signed nothing; normally they do not even hold a security clearance. Outside experts can thus provide insights but are not in the flow of intelligence and have little sense of the internal, organizational decisionmaking context in which issues arise. Nor have they any particular loyalty to the group, not being a part of it. The Trumanites have additional incentives to keep information to themselves. Knowing that information in Washington is power, they are, in the words of Jack Balkin, both information gluttons and information misers.¹⁶⁸ They are information gluttons in that they “grab as much information as possible”; they are information misers in that they try to keep it from the public. Potential critics, power competitors, and adversaries are starved for information concerning the Trumanite network while it feasts on information concerning them. The secrecy of Trumanite activities thus grows as the privacy of the general public diminishes and the Trumanites' shared “secret[s] of convenience”¹⁶⁹ bind them more tightly together. The Trumanites' ability to mask the identity of “the decider” is another factor that accounts for the network's durability and resilience. Efforts by the press and congressional oversight committees to pinpoint exactly who is responsible for a given policy are easily deflected by the shield of secrecy provided by the network structure. Because everyone—the entire “national security team”—is accountable, no one is accountable.¹⁷⁰ The network's success in evading questions concerning the continuation of military assistance to Egypt—despite a clear statutory prohibition against the continuation of such aid following a military coup¹⁷¹—is illustrative. Below is an excerpt from the State Department spokeswoman, Jen Psaki, answering questions from the press on July 26, 2013: QUESTION: And who ultimately made the decision not to make a determination? MS. PSAKI: Well, obviously, there's a factor as it relates to the legal component, which our legal office here played a significant role in, and certainly this was discussed and agreed to through the interagency process. QUESTION: But who decided? I mean, the buck stops somewhere. As Harry Truman said, it stopped with him. Does the buck stop with the President in this case, or with the Secretary, or with the acting legal advisor of the State Department, or who? Who made the decision? MS. PSAKI: Well, I'm not going to read out who was where on what and all the players involved in this. QUESTION: I'm not asking that. I'm asking who made the decision. MS. PSAKI: This was agreed to by the national security team. Beyond that, I'm not going to – I don't have anything. QUESTION: Why are you afraid to say who made the decision? MS. PSAKI: I'm not afraid of anything, Arshad. I'm just not—I'm not getting into more specifics than that for you.¹⁷² Its cohesion notwithstanding, the Trumanite network is curiously amorphous. It has no leader. It is not monolithic. It has no formal structure.¹⁷³ Its actual membership blurs at the margins. Its ranks reflect the same organizational, philosophical, and personal rivalries and fissures common to all bureaucracies. Blame avoidance ranks high among its priorities.¹⁷⁴ But while Trumanites' view of the world differs at the margins, it does not differ at the core. It has been said that there is no such thing as a military mind,¹⁷⁵ but this is not true. Mills captured the military mindset; in the military, he wrote, there is an “intensified desire, too deeply rooted to examine, to conform to type, to be indistinguishable, not to reveal loss of composure to inferiors, and above all, not to presume the right to upset the arrangements of the chain of command.”¹⁷⁶ Operating as it does under the long shadow of the military, the range of internal disagreement within the Trumanite network is tiny, like differences over appropriate necktie width. The conformist mentality percolates upward. Bob Woodward reported on the response to President Obama's question as he sat down with eighteen top advisers for the second meeting of the Afghanistan-Pakistan strategy review. “‘Is there anybody who thinks we ought to leave Afghanistan,’ the President asked? Everyone in the room was quiet. They looked at him. No one said anything.”¹⁷⁷ The incident was unexceptional. “The dirty little secret here,” a former associate counsel in the Bush White House, Brad Berenson, explained, “is that the United States government has enduring institutional interests that carry over from administration to administration and almost always dictate the position the government takes.”¹⁷⁸

Plan fails – national security experts have a personal incentive to reinscribe the status quo

Glennon 14 [Michael, Professor of International Law at Tufts, 2014, “National Security and Double Government”, <http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf>] //dickies

The Trumanite network is as little inclined to stake out new policies as it is to abandon old ones. The Trumanites’ grundnorm is stability, and their ultimate objective is preservation of the status quo. The status quo embraces not only American power but the Trumanites’ own careers, which are steadily elevated by the conveyor belt on which they sit. Preoccupied as they are with cascading crises, swamped with memos and email and overwhelmed with meetings, Trumanites have no time to re-examine the cosmological premises on which policy is based.¹⁷⁹ Their business is reacting, day and night. Working weekends and evenings is routine; theirs are 24/7 jobs¹⁸⁰ that leave no time for pondering big pictures. They are caught up in tactics;¹⁸¹ larger ends are for memoirs. Reflecting on the “fail[ure] to take an orderly, rational approach” to Vietnam decisionmaking, Robert McNamara wrote that “we faced a blizzard of problems, there were only twenty-four hours a day, and we often did not have time to think straight.”¹⁸² His successors encountered an equally frenetic environment.¹⁸³ With the anger, frustration, emotion, and the mental and physical exhaustion induced in working long hours under crisis conditions, a pernicious but existing policy gradually comes to be seen as the least bad choice. The status quo is preserved by minimizing risks, which means no bold departure from the settled long-term policy trajectory. “Men who have participated in a decision,” as James Thomson succinctly put it, “develop a stake in that decision.”¹⁸⁴ Slow is therefore best. The risk of embarrassment is lower in continuing a policy someone else initiated than in sponsoring one’s own new one. If the policy fails, the embarrassment is someone else’s. Trumanites are therefore, above all, team players. They are disinclined to disagree openly. “The further up you go,” one prominent organization theorist put it, “the less you can afford to stick out in any one place.”¹⁸⁵ As one seasoned adviser said, because “there is a real team concept and where money disputes are not usually the core, radically different views of the direction to be taken by an administration can cause serious trouble.”¹⁸⁶ He advises that a “new president should take care that his key officials in foreign policy all have a roughly similar outlook on the world and America’s place in it.”¹⁸⁷ Accordingly, once a policy is final, Trumanites rally readily round it, however much they might once have disagreed. Dissent shades into disloyalty and risks marginalization, particularly in a policy group with high esprit de corps. As Kissinger put it, “[s]erving the machine becomes a more absorbing occupation than defining its purpose.”¹⁸⁸ Little credit is gained by advocating for an option that has earlier been rejected. Likelier than not, one’s superior, or his superior, was present at the creation of the policy and takes pride in its authorship. “In government it is always easier to go forward with a program that does not work,” David Halberstam wrote, “than to stop it altogether and admit failure.”¹⁸⁹ Even those immersed in the policy-making process are often bewildered by its outcome. The Army chief of staff, Harold Johnson, could think of “no logical rationale” to explain the military’s continuing recommendations for incremental escalation of the U.S. war effort in Vietnam—even though the military had difficulty devising any persuasive strategy to produce victory.¹⁹⁰

Fusion Center Module – No Regulations

Fusion centers monitor lawful religious activity

Patel and Price '12 Faiza Patel serves as co-director of the Brennan Center's Liberty and National Security Program; Michael Price serves as counsel for the Brennan Center's Liberty and National Security Program (10/18/12, Faiza Patel, Michael Price, Brennan Center for Justice, "Fusion Centers Need More Rules, Oversight", <https://www.brennancenter.org/analysis/fusion-centers-need-more-rules-oversight>)

Instead of looking for terrorist threats, **fusion centers were monitoring lawful political and religious activity**. That year, **the Virginia Fusion Center described a Muslim get-out-the-vote campaign as "subversive."** **In 2009, the North Central Texas Fusion Center identified lobbying by Muslim groups as a possible threat.**

The DHS dismissed these as isolated episodes, but the two-year Senate investigation found that such tactics were hardly rare. It concluded that **fusion centers routinely produce "irrelevant, useless or inappropriate" intelligence that endangers civil liberties.**

None of their information has disrupted a single terrorist plot. These revelations call into question the value of fusion centers as currently structured. At a minimum, they underscore the need for greater oversight and clearer rules on what information fusion centers collect and disseminate.

Of course, effective information sharing is critical to national security. But as the Senate investigation demonstrates, there is little value in distributing information if it is shoddy, biased or simply irrelevant. When fusion centers feed such information into the echo chamber of federal databases, they only compound mistakes and clog the system.

The DHS has failed to create effective mechanisms or incentives for quality control. Instead, **fusion centers collect and share information according to their individual standards, which vary considerably.**

These rules often **permit information to flow to federal agencies that has no connection to criminal activity** — let alone terrorism. This creates the risk that intelligence networks will become saturated with poor or irrelevant information as well as lend undue credibility to inaccurate data. The Senate report showed that these risks are not just theoretical.

Fusion centers need explicit and consistent rules. The DHS should ensure that the information the centers collect and distribute is relevant, useful and constitutional by requiring them to show some reasonable suspicion that criminal activity is afoot.

This is not a particularly high bar to clear. The reasonable suspicion standard is familiar to every police officer. The requirement would serve as an important bulwark against privacy and civil rights violations, but it would also keep meaningless information out of the system.

Without such well-defined and familiar standards, as the Senate report demonstrates, fusion centers are left rudderless.

In addition, fusion centers must have active, independent oversight. While Congressional inquiries are important for exposing problems, the Senate should not have been the first governmental body to take a critical look at fusion centers.

At the state and local level, **there is often no mechanism to ensure that fusion centers are generating useful information or complying with the law.** At the federal level, the DHS is responsible for verifying that the data shared by fusion centers meet certain minimum standards. But **the DHS has delegated this responsibility to the centers themselves and has not conducted independent audits.**

DHS oversight has been so poor that the department could not even say how much money it has spent on fusion centers, estimating the cost at somewhere from \$289 million to \$1.4 billion.

Fusion centers guarantee profiling will continue post-plan

Constitution Project '12 The Constitution Project (8/15/12, The Constitution Project, "RECOMMENDATIONS FOR FUSION CENTERS", <http://www.constitutionproject.org/pdf/fusioncenterreport.pdf>)

2. Reports of Political, Racial and Religious Profiling

Despite these constitutional principles, there have been numerous anecdotal reports of incidents in which fusion centers have targeted individuals in the United States for surveillance and investigation based solely on beliefs and characteristics that are protected by the First and Fourteenth Amendments. Although federal guidance to fusion centers cautions against profiling, these incidents demonstrate that significant additional guidance, training and oversight are crucial to ensure that fusion centers and other law enforcement agencies do not engage in racial, religious and political profiling.⁴¹

Recent **reports from across the country bear testament to the potential for problematic profiling at fusion centers, particularly regarding bulletins and intelligence reports circulated by fusion centers.** These are a few examples:

- **The February 2009 "Prevention Awareness Bulletin," circulated by a Texas fusion center, described Muslim lobbying groups as "providing an environment for terrorist organizations to flourish"** and warned that "the threats to Texas are significant."

The bulletin called on law enforcement officers to report activities such as Muslim "hip hop fashion boutiques, hip hop bands, use of online social networks, video sharing networks, chat forums and blogs."⁴²

- A Missouri-based fusion center issued a February 2009 report describing support for the presidential campaigns of Ron Paul or third party candidates, possession of the iconic "Don't Tread on Me" flag and anti-abortion activism as signs of membership in domestic terrorist groups.⁴³

- **The Tennessee Fusion Center listed a letter from the American Civil Liberties Union (ACLU) to public schools on its online map of "Terrorism Events and Other Suspicious Activity."** The letter had advised schools that **holiday celebrations focused exclusively on Christmas were an unconstitutional government endorsement of religion.**⁴⁴

• **The Virginia Fusion Center's 2009 Terrorism Risk Assessment Report described student groups at Virginia's historically black colleges as potential breeding grounds for terrorism and characterized the "diversity" surrounding a military base as a possible threat.**⁴⁵

Fusion centers rely on racial profiling

Cyril '15 Staff writer for The Progressive (April 2015, Malkia Amala Cyril, The Progressive, "Black America's State of Surveillance", <http://www.progressive.org/news/2015/03/188074/black-americas-state-surveillance>)

They will use **fusion centers**. Originally designed to increase interagency collaboration for the purposes of counterterrorism, these **have instead become the local arm of the intelligence community**. According to Electronic Frontier Foundation, there are currently seventy-eight on record. **They are the clearinghouse for increasingly used "suspicious activity reports"**—described as "official documentation of observed behavior reasonably indicative of pre-operational planning related to terrorism or other criminal activity." These reports and other collected data are often stored in massive databases like e-Verify and Prism. As anybody who's ever dealt with gang databases knows, **it's almost impossible to get off a federal or state database, even when the data collected is incorrect or no longer true.**

Predictive policing doesn't just lead to racial and religious profiling—it relies on it. Just as stop and frisk legitimized an initial, unwarranted contact between police and people of color, almost 90 percent of whom turn out to be innocent of any crime, **suspicious activities reporting and the dragnet approach of fusion centers target communities of color.** One review of such reports collected in Los Angeles shows approximately 75 percent were of people of color.

This is the future of policing in America, and it should terrify you as much as it terrifies me. Unfortunately, it probably doesn't, because my life is at far greater risk than the lives of white Americans, especially those reporting on the issue in the media or advocating in the halls of power.

One of the most terrifying aspects of high-tech surveillance is the invisibility of those it disproportionately impacts.

Fusion centers guarantee profiling will continue post-plan

- A Missouri-based fusion center issued a February 2009 report describing support for the presidential campaigns of Ron Paul or third party candidates, possession of the iconic “Don’t Tread on Me” flag and anti-abortion activism as signs of membership in domestic terrorist groups.⁴³

- **The Tennessee Fusion Center listed a letter from the American Civil Liberties Union (ACLU) to public schools on its online map of “Terrorism Events and Other Suspicious Activity.” The letter had advised schools that holiday celebrations focused exclusively on Christmas were an unconstitutional government endorsement of religion.**⁴⁴

- **The Virginia Fusion Center’s 2009 Terrorism Risk Assessment Report described student groups at Virginia’s historically black colleges as potential breeding grounds for terrorism and characterized the “diversity” surrounding a military base as a possible threat.**⁴⁵

Fusion centers do what they want

German and Stanley ‘7, German is on the Policy Counsel for National Security, ACLU Washington Legislative Office; Stanley is the Public Education Director, ACLU Technology and Liberty Program (December 2007, Michael German and Jay Stanley, American Civil Liberties Union, “WHAT’S WRONG WITH FUSION CENTERS?,” https://www.aclu.org/files/pdfs/privacy/fusioncenter_20071212.pdf)

Ambiguous Lines of Authority. The **participation of agencies from multiple jurisdictions in fusion centers allows the authorities to manipulate differences in federal, state and local laws to maximize information collection while evading accountability and oversight through the practice of “policy shopping.”**

Private Sector Participation . **Fusion centers are incorporating private-sector corporations** into the intelligence process, breaking down the arm’s length relationship that protects the privacy of innocent Americans who are employees or customers of these companies, and increasing the risk of a data breach.

Military Participation . **Fusion centers are involving military personnel** in law enforcement activities in troubling ways.

Data Fusion = Data Mining . Federal fusion center guidelines encourage whole sale data collection and manipulation processes that threaten privacy.

Excessive Secrecy . **Fusion centers are hobbled by excessive secrecy, which limits public oversight**, impairs their ability to acquire essential information and impedes their ability to fulfill their stated mission, bringing their ultimate value into doubt.

Their inherently local nature makes regulation impossible

O’Neil ‘8 political science graduate student at the University of California Los Angeles (UCLA) Previously, iobhan served as the analyst for domestic security and intelligence at the Congressional Research Service (CRS). She spent five years working in homeland security serving as the deputy chief of the Intelligence Bureau of the New Jersey Office of Homeland Security and Preparedness (OHSP) (April 2008, Siobhan, Homeland Security Affairs, “The Relationship between the Private Sector and Fusion Centers: Potential Causes for Concern and Realities”, <https://www.hsaj.org/articles/134>)

Given that **fusion centers are entities established by states and localities to serve their own law enforcement**, emergency response, and homeland security needs, and **compounded by the sensitivities associated with federalism, the federal government is in a difficult position of balancing its interests and respecting the local nature of fusion centers**. As such, **the federal government has been understandably hesitant to place requirements on fusion centers**. Instead, federal **agencies have produced guidelines, which have not been compulsory**, to include the National Strategy for Information Sharing and Fusion Center Guidelines. **8** While **these documents** address some of the tactical and operational concerns related to fusion centers, they **are often vague to a fault and fail to provide the comprehensive vision for fusion centers as part of the nation’s homeland security posture**.

Failure to create a consensus on the role, structural requirements, and responsibilities for fusion centers is apt to increase the potential for ineffectiveness, which threatens the viability of fusion centers. If fusion centers fail to demonstrate their worth and strengthen and augment our nation’s homeland security efforts, political support and external agency engagement with these centers is likely to decline. Moreover, potential civil liberties abuses could damage fusion centers’ credibility and undermine their public support. It has rightfully been warned that even rumors of impropriety and civil liberties abuses associated with a single fusion center can cause irreparable damage to the reputation of all fusion centers nationwide. This would be unfortunate given the potential for fusion centers to provide public safety and homeland security benefits to both local communities and the nation.

Fusion centers aren’t under federal jurisdiction—localities won’t enforce rules

Price ‘13, Michael Price serves as counsel for the Brennan Center’s Liberty and National Security Program (12/10/13, Michael Price, Brennan Center for Justice, “National Security and Local Police”, <https://www.brennancenter.org/publication/national-security-local-police>)

The Brennan Center has identified three major reasons the system is ineffective:

Information sharing among agencies is governed by inconsistent rules and procedures that encourage gathering useless or inaccurate information. This poorly organized system wastes resources and also risks masking crucial intelligence.

As an increasing number of agencies collect and share personal data on federal networks, inaccurate or useless information travels more widely. Independent oversight of fusion centers is virtually non-existent, compounding these risks.

Oversight has not kept pace, increasing the likelihood that intelligence operations violate civil liberties and harm critical police-community relations.

According to a report by the Government Accountability Office, 95 percent of suspicious activity reports are not even investigated by FBI. This is unsurprising. In the past, police departments shared information only when there was ‘reasonable suspicion’ of criminal activity. This time-tested standard ensured that police were focused on real threats and not acting on their own biases or preconceptions. But with this crucial filter removed after the attacks of 9/11, almost any behavior — from photographing a landmark, to stretching in the park, to attending a mosque — can be viewed as potentially suspicious, reported, and shared with thousands of other government agencies. It is impractical to sift through and follow up on every report, so important information can easily fall through the cracks. In some instances, the practice has also undermined community trust in the police, which is an essential element of domestic counterterrorism.

Efforts by the federal government to address this oversight gap have been half-hearted. The system is not under federal government control. Federal funds simply flow to state legislatures, which then allocate them as they see fit — no questions asked. State and local governments have rarely stepped into the breach, allowing intelligence activities to go unchecked and unsupervised.

FBI NSLs Module

The FBI can circumvent via national security letters

Sanchez 15

(Julian Don't (Just) Let the Sun Go Down on Patriot Powers, May 29, 2015,
<http://motherboard.vice.com/read/dont-just-let-the-sun-go-down-on-patriot-powers>)

Also permanent are National Security Letters or NSLs, which allow the FBI to obtain a more limited range of telecommunications and financial records without even needing to seek judicial approval. Unsurprisingly, the government loves these streamlined tools, and used them so promiscuously that the FBI didn't even bother using 215 for more than a year after the passage of the Patriot Act. Inspector General reports have also made clear that the FBI is happy to substitute NSLs for 215 orders when even the highly accommodating FISC manages a rare display of backbone. In at least one case, when the secret court refused an application for journalists' records on First Amendment grounds,

the Bureau turned around and **obtained the same data** using National Security Letters.

Case- Legal Reform Fails

One step reforms such as curtailing bulk data collection are just drops in the bucket- Islamophobia is a persistent ideology infecting American politics, which requires changes that predate any policies

Kundnani 2014 [Arun, (Professor of Terror Studies and Media @ NYU), "No NSA reform can fix the American Islamophobic surveillance complex," The Guardian, <http://www.theguardian.com/commentisfree/2014/mar/28/nsa-reform-american-islamophobic-surveillance-complex>, Accessed 7/13/15, AX]

Better oversight of the sprawling American national security apparatus may finally be coming: President Obama and the House Intelligence Committee unveiled plans this week to reduce bulk collection of telephone records. The debate opened up by Edward Snowden's whistle-blowing is about to get even more legalistic than all the parsing of hops and stores and metadata. These reforms may be reassuring, if sketchy. But for those living in so-called "suspect communities" – Muslim Americans, left-wing campaigners, "radical" journalists – the days of living on the receiving end of excessive spying won't end there. How come when we talk about spying we don't talk about the lives of ordinary people being spied upon? While we have been rightly outraged at the government's warehousing of troves of data, we have been less interested in the consequences of mass surveillance for those most affected by it – such as Muslim Americans. In writing my book on Islamophobia and the War on Terror, I spoke to dozens of Muslims, from Michigan to Texas and Minnesota to Virginia. Some told me about becoming aware their mosque was under surveillance only after discovering an FBI informant had joined the congregation. Others spoke about federal agents turning up at colleges to question every student who happened to be Muslim. All of them said they felt unsure whether their telephone calls to relatives abroad were wiretapped or whether their emails were being read by government officials. There were the young Somali Americans in Minnesota who described how they and their friends were questioned by FBI agents for no reason other than their ethnic background. Some had been placed under surveillance by a local police department, which disguised its spying as a youth mentoring program and then passed the FBI intelligence on Somali-American political opinions. There were the Muslim students at the City University of New York who discovered that fellow students they had befriended had been informants all along, working for the New York Police Department's Intelligence Division and tasked with surveilling them. **There was no reasonable suspicion of any crime; it was enough that the targeted students were active in the Muslim Students Association**. And then there was Luqman Abdullah, a Detroit-based African-American imam, whose mosque was infiltrated by the FBI, leading to a 2009 raid in which he was shot and killed by federal agents. **The government had no evidence of any terrorist plot; the sole pretext was that Abdullah had strongly critical views of the US government**. These are the types of people whom the National Security Agency can suspect of being two "hops" away from targets. These are the types of "bad guys" referred to by outgoing NSA director Keith Alexander. Ten years ago, around 100,000 Arabs and Muslims in America had some sort of national security file compiled on them. Today, that number is likely to be even higher. A study published last year by the Muslim American Civil Liberties Coalition documented the effects of this kind of mass surveillance. In targeted communities, a culture of enforced self-censorship takes hold and relationships of trust start to break down. As one interviewee said: "You look at your closest friends and ask: are they informants?" This is what real fear of surveillance looks like: not knowing whom to trust, choosing your words with care when talking politics in public, the unpredictability of state power. Snowden has rightly drawn our attention to the power of what intelligence agencies call "signals intelligence" – the surveillance of our digital communications – but equally important is "human intelligence", the result of informants and undercover agents operating within communities. **Underpinning all the surveillance of Muslim Americans is an**

assumption that Islamic ideology is linked to terrorism. Yet, over the last 20 years, far **more people** have been killed in acts of violence by right-wing extremists than by Muslim American citizens or permanent residents. The huge numbers being spied upon are not would-be terrorists but **law-abiding people**, some of whom have "radical" political opinions that still ought to be protected by the First Amendment to the constitution. Just the same, there are plenty of other minority Americans who are not would-be "home-grown" terrorists – but they still live in fear that they might be mistaken as one. So **let's reform the NSA and its countless collections. But let's not forget the FBI's reported 10,000 intelligence analysts working on counter-terrorism and the 15,000 paid informants helping them do it. Let's not forget the New York Police Department's intelligence and counter-terrorism division with its 1,000 officers, \$100m budget and vast program of surveillance. Let's not forget the especially subtle psychological terror of being Muslim in America, where, sure, maybe your phone calls won't be stored for much longer, but there's a multitude of other ways you're always being watched.**

Aff can't solve — Anti-Arab sentiment is entrenched in mainstream media and history which is why any legal reform will fail

Salaita 6 — Steven George Salaita, scholar, author and public speaker, received his B.A. in political science from Radford University in 1997, his M.A. in English from Radford in 1999, and completed his Ph.D. at the University of Oklahoma in Native American studies with a literature emphasis, became an assistant professor of English at University of Wisconsin in Whitewater, where he taught American and ethnic American literature until 2006, associate professor of English at Virginia Tech, won a 2007 Gustavus Myers Outstanding Book Award for writing the book *Anti-Arab Racism in the USA: Where It Comes from and What it Means for Politics Today*, 2006 ("9/11, Anti-Arab Racism, and the Mythos of National Pride," *Beyond Orientalism and Islamophobia*, Fall, Available online at https://muse.jhu.edu/journals/new_centennial_review/v006/6.2salaita.pdf)

My second observation that **anti-Arab racism is not confined to the political right** also is worth analysis. **Racism**, as writers from Elizabeth Cook-Lynn to bell hooks have illustrated, **is never limited to particular social or discursive movements, nor is it ever rooted in consistent sites of cultural or linguistic production. Any comprehensive survey of popular opinion in the United States over the past decade** (a time frame that purposely straddles 9/11) **will demonstrate that the blatant anti-Arab racism of the political right is**, using a vocabulary appropriate to specific political agendas, **reinscribed continually in the discourse, or at least the ethos, of mainstream and progressive media**. For instance, **leftist liberal publications** such as Dissent, Tikkun, and MoveOn.org **have been guilty of expressing racist attitudes** either in the form of support for Palestinian dispossession or by totalizing all Arabs and Muslims as potential terrorists; or the racism arrives subtly by precluding Arabs from speaking on their own behalf. **A similar guilt is shared by mainstream (supposedly liberal) publications** such as the New York Times, Newsweek, Los Angeles Times, and Slate.com, **which, given their corporate obligations, cannot realistically be expected to attack anti-Arab racism when it is so fundamental to the interests of American capitalism** (and to the survival of the publications). Of major concern to this essay is the recognition that, in keeping with the seminal work of Louis Althusser and Terry Eagleton, **we cannot seriously interrogate racism by attributing it solely to one political ideology without analyzing how the racism is interpolated through a multitude of discourses at the benefit of various ideologies**. Beyond this intercultural observation, we can say that **anti-Arab racism has specific historical dimensions that render it unique even as it has been an inheritor of countless tensions and anxieties**. Some of those dimensions—travel narratology, Orientalist scholarship, imperialism—have been discussed by others in some detail; **the dimension I invariably find most interesting is the relationship of anti-**

Arab racism with settler colonization, both in the New World and Holy Land. This relationship indicates that a centuries-old Holy Land mania in the United States not only facilitated what Cook-Lynn (2001) calls “anti-Indianism,” but has allowed the antiIndianism to evolve into support for a new Messianic conquest that positions today’s Arabs in a fascinating theological continuum. If Natives were the first victims of racism in North America, then **Arabs, the new schematic evildoers, are merely the latest to be the first.**

Case- Internal Link Defense

1NC

The aff is woefully inadequate to address the deep-rooted anti-Muslim bias rooted in the US psyche, discourse, and policy—question the effectiveness of the affirmative's method

Ali 12 [Yaser, Managing Attorney at Yaser Ali Law and J.D at University of California, Berkeley - School of Law, "Shariah and Citizenship—How Islamophobia Is Creating a Second-Class Citizenry in America", 8-1-2012, <http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=4176&context=californialawreview>]

One would assume that anti-Muslim sentiment reached its high water mark after 9/11. To the contrary, however, it has increased dramatically in the third phase of Islamophobia, which began during President Obama's 2008 campaign. If Volpp's contentions about Muslims' being relegated to second-class citizenship were true in 2002, then today that distinction has crystallized even further.¹³⁶ Whereas a vast majority of the incursions in the second phase occurred under the umbrella of national security, Islamophobia has now **evolved beyond simply encouraging profiling and other surveillance techniques aimed at Muslims under the professed interests of national security.** An institutionalized version of Islamophobia in this third phase now focuses on the "creeping threat of Shariah" and, in the process, more explicitly threatens the foundational conceptions of citizenship described by Professor Bosniak. Further, while citizens enjoy some fundamental level of respect for their individual beliefs and practices, this is no longer the case with regard to Muslims, both in journalism and politics today. Whereas it is widely recognized as socially unacceptable to be openly disparaging toward minority groups, the privilege reflected in that norm is **increasingly denied to Muslims.** In this **third phase of Islamophobia,** mainstream discourse now explicitly challenges the notion that American Muslims deserve the same liberal notions of rights that other citizens enjoy. One might surmise that since the contours of this phase cannot easily be demarcated, the third phase is in fact a difference in degree rather than in kind. It is true that unlike the transition from the first to the second phase, there is no single demonstrable event or tipping point that represents the transition from the second to third period; however, there was **a gradual progression that increased in intensity since the presidential campaign of 2008 when the term "Muslim" was actually converted into a slur,** as political opponents "accused" then-Senator Obama of secretly being a Muslim. The suggestion that a Muslim citizen would be less suited for office represents the **deep-seated fear and mistrust of Muslims in the American consciousness.** President Obama's opponents recognized this fact and knew that it would be a powerful tool for discrediting him. Yet what was perhaps most striking about the "allegations" was not the partisan claims themselves, but the responses that President Obama and other government leaders offered. Obama felt compelled to reject the "accusations," doing his best to distance himself from the Muslim community and choosing not to make any campaign stops in mosques or meet with any Muslim organizations during the campaign (despite making numerous stops at churches and synagogues). President Obama did not state, that although he was not a Muslim, there was nothing wrong with Muslims per se. Instead, **he reiterated the bias by referring to the accusations on his website as a "smear."** Further, during one campaign rally, his aides asked two young Muslim women dressed in headscarves to exit the stage area where he would be speaking. Arguably, the pervasiveness of such insidious discourse from the President helped **normalize the notion to the public that American Muslims are not "citizens," but indeed "others."**

No federal modeling internal link—local law enforcement models regional agencies—our ev is comparative

Burruss et al 12 [George W. Burruss has a Ph.D. in Criminology & Criminal Justice at Southern Illinois University Carbondale, Joseph A. Schafer has a Ph.D from Michigan State in Social Science (Criminal Justice), Matthew J. Giblin, an associate professor and undergraduate program director in the Department of Criminology and Criminal Justice at Southern Illinois University Carbondale, Melissa R. Haynes, Member of the Department of Criminology and Criminal Justice, "Homeland Security in Small Law Enforcement Jurisdictions: Preparedness, Efficacy, and Proximity to Big-City Peers", September 2012, <https://www.ncjrs.gov/pdffiles1/nij/grants/239466.pdf>]

Respondents were asked a range of questions designed to assess the extent to which institutional pressures influenced their approaches to homeland security. The **measures address factors that are independent of any one person in the organization; that is, they focus on the influence of other agencies, professional associations, and publications without addressing who within the organization was specifically affected by these factors.**¹⁰ Table 8 reports the results of a number of questions measuring whether agency practices were influenced by the actions of their peers. In evaluating their own homeland security performance, 25.8 percent of respondents indicated they paid **significant attention to other agencies like their own.** An additional 59.8 percent of agencies paid some attention to similar agencies. Less than one percent of responding agencies reported that they paid no attention to similar agencies in evaluating their homeland security performance. Participating agencies were asked to what extent their agency modeled homeland security policies and practices after other agencies that they viewed as successful. The majority of agencies indicated they did engage in such modeling often (35.3 percent) or occasionally (54.9 percent). Other sources of institutional pressure are professional associations and relevant publications. In defining homeland security practices and approaches agencies might be influenced by the resources offered by these other entities. Respondents were asked to rate the influence of four sources of influence on a three-point scale from not at all influential (0.0) to very influential (2.0). **Peer agencies were reported to be the most influential.** Strong influence was also indicated for professional associations and government publications. Journal articles and books were the least influential, with an average rating between somewhat influential and not at all influential. Grant programs and other funding opportunities were generally less influential. In relative terms, federal and state grant funding for equipment and training were most influential. Private or community funding sources were least influential in formulating homeland security approaches and practices.

Case- Squo Solves

Squo solves, Federal gov't already expanding rules, but local law enforcement is not

Apuzzo 14, Matt Apuzzo("U.S. to Expand Rules Limiting Use of Profiling by Federal Agents", January 16, http://www.nytimes.com/2014/01/16/us/politics/us-to-expand-rules-limiting-use-of-profiling-by-federal-agents.html?_r=0, Accessed 6/21/15)

The Justice Department will significantly expand its definition of racial profiling to prohibit federal agents from considering religion, national origin, gender and sexual orientation in their investigations, a government official said Wednesday. The move addresses a decade of criticism from civil rights groups that say federal authorities have in particular singled out Muslims in counterterrorism investigations and Latinos for immigration investigations. The Bush administration banned profiling in 2003, but with two caveats: It did not apply to national security cases, and it covered only race, not religion, ancestry or other factors. Since taking office, Attorney General Eric H. Holder Jr. has been under pressure from Democrats in Congress to eliminate those provisions. "These exceptions are a license to profile American Muslims and Hispanic-Americans," Senator Richard J. Durbin, Democrat of Illinois, said in 2012. President George W. Bush said in 2001 that racial profiling was wrong and promised "to end it in America." But that was before the terrorist attacks of Sept. 11. After those attacks, federal agents arrested and detained dozens of Muslim men who had no ties to terrorism. The government also began a program known as special registration, which required tens of thousands of Arab and Muslim men to register with the authorities because of their nationalities. "Putting an end to this practice not only comports with the Constitution, it would put real teeth to the F.B.I.'s claims that it wants better relationships with religious minorities," said Hina Shamsi, a national security lawyer with the American Civil Liberties Union. It is not clear whether Mr. Holder also intends to make the rules apply to national security investigations, which would further respond to complaints from Muslim groups. "Adding religion and national origin is huge," said Linda Sarsour, advocacy director for the National Network for Arab American Communities. "But if they don't close the national security loophole, then it's really irrelevant." Ms. Sarsour said she also hoped that Mr. Holder would declare that surveillance, not just traffic stops and arrests, was prohibited based on religion. The Justice Department has been reviewing the rules for several years and has not publicly signaled how it might change them. Mr. Holder disclosed his plans in a meeting on Wednesday with Mayor Bill de Blasio of New York, according to an official briefed on the meeting who spoke on the condition of anonymity because the conversation was private. Mr. de Blasio was elected in November after running a campaign in which he heavily criticized the Police Department's stop-and-frisk tactic, which overwhelmingly targets minorities and which a federal judge declared unconstitutional. The mayor and attorney general did not discuss when the rule change would be announced, the official said. A senior Democratic congressional aide, however, said the Obama administration had indicated an announcement was "imminent." The Justice Department would not confirm the new rules on Wednesday night but released a short statement saying that the mayor and the attorney general discussed "preventing crime while protecting civil rights and civil liberties." In the past, Mr. Holder has spoken out forcefully against profiling. "Racial profiling is wrong," he said in a 2010 speech. "It can leave a lasting scar on communities and individuals. And it is, quite simply, bad policing — whatever city, whatever state." Officials in the Bush administration made similar statements, however, which is why civil rights groups have eagerly waited to hear not just Mr. Holder's opinion, but also the rules he plans to enact. As written, the Justice Department's rules prohibit federal agents from using race as a factor in their investigations unless there is specific, credible information that makes race relevant to a case. For example, narcotics investigators may not increase traffic stops in minority neighborhoods on the belief that some minorities are more likely to sell drugs. They can, however, rely on information from witnesses who use race in their descriptions of suspects. The rules cover federal law enforcement agencies such as the F.B.I. They do not cover local or state police departments. That is significant because Muslim groups have sued the New York Police Department over surveillance programs that mapped Muslim neighborhoods, photographed their businesses and built files on where they eat, shop and pray. Mr. Holder's comments about the new racial profiling rules came up in a conversation about that topic, the official said. William J. Bratton,

the city's new police commissioner, has said he will review those practices. While the rules directly control only federal law enforcement activities, their indirect effect is much broader, said Fahd Ahmed, the legal director of the Queens-based South Asian immigrant advocacy group Desis Rising Up and Moving. For instance, he said, immigration bills in Congress have copied the Justice Department profiling language. And civil rights groups can use the rules to pressure state and local agencies to change their policies. "Federal guidelines definitely have an impact," Mr. Ahmed said. "Local organizers can say, 'These policies are not in line with what's coming from the federal level.'"

Case- State Good vs no plan

1NC Anti-Statism Bad

Results matters – failure to have a course of action for mobilizing populations dooms the alt. EVEN if they win their ethics claims, you have to evaluate the question of alt solvency first.

Day 9

(Christopher, The Historical Failure of Anarchism: Implications for the Future of the Revolutionary Project,

http://mikeely.files.wordpress.com/2009/07/historical_failure_of_aanarchism_chris_day_kasama.pdf)

The strength of anarchism is its moral insistence on the primacy of human freedom over political expediency. But human freedom exists in a political context. It is not sufficient, however, to simply take the most uncompromising position in defense of freedom. It is necessary to actually win freedom. Anti-capitalism doesn't do the victims of capitalism any good if you don't actually destroy capitalism. Anti-statism doesn't do the victims of the state any good if you don't actually smash the state. Anarchism has been very good at putting forth visions of a free society and that is for the good. But it is worthless if we don't develop an actual strategy for realizing those visions. It is not enough to be right, we must also win.

Continues...

Finally revolutionaries have a responsibility to have a plausible plan for making revolution. Obviously there are not enough revolutionaries to make a revolution at this moment. We can reasonably anticipate that the future will bring upsurges in popular opposition to the existing system. Without being any more specific about where those upsurges might occur it seems clear that it is from the ranks of such upsurges that the numbers of the revolutionary movement will be increased, eventually leading to a revolutionary situation (which is distinguished from the normal crises of the current order only by the existence of a revolutionary movement ready to push things further). People who are fed up with the existing system and who are willing to commit themselves to its overthrow will look around for likeminded people who have an idea of what to do. If we don't have a plausible plan for making revolution we can be sure that there will be somebody else there who will. There is no guarantee that revolutionary-minded people will be spontaneously drawn to anti-authoritarian politics. The plan doesn't have to be an exact blueprint. It shouldn't be treated as something sacred. It should be subject to constant revision in light of experience and debate. But at the very least it needs to be able to answer questions that have been posed concretely in the past. We know that we will never confront the exact same circumstances as previous revolutions. But we should also know that certain problems are persistent ones and that if we can't say what we would have done in the past we should not expect people to think much of our ability to face the future.

The 1AC's approach to criticizing Western governments only re-creates the problem it attempts to solve

Berger 14 (Lars Berger, Associate Professor in International Security with a PhD in Political Science from the Friedrich-Schiller University of Jena in Germany, "The Muslims Are Coming! Islamophobia, Extremism and the Domestic War on Terror, by Arun Kundnani", March 27 2014, <https://www.timeshighereducation.co.uk/books/the-muslims-are-coming-islamophobia-extremism-and-the-domestic-war-on-terror-by-arun-kundnani/2012227.article>) //mL

One of the central themes in Arun Kundnani's critique of what he describes as the domestic "war on terror" in the UK and the US is the apparent neglect of, or even taboo against, discussing the role played by the foreign policies of Western governments in bringing about the horrific acts of violence witnessed on the streets of London in July 2005 and May 2013. Kundnani, a US-based scholar of terrorism, is adamant that "what governments call extremism is to a large degree a product of their own wars". However, there are a number of theoretical and methodological problems with his account. Kundnani is right to highlight methodological concerns about existing studies of Islamist radicalisation, many of which rely on a small number of cases and fail to include control groups of people who share radical ideologies but nevertheless choose not to engage in political violence. But this is not a new insight. Indeed, researchers across Europe have already published plenty of insightful critiques of the theoretical assumptions and methodological approaches of the radicalisation literature. Worse, Kundnani commits the same mistakes when he presents no theoretical justification for his choice of case studies, and fails to explain why the vast majority of Muslims who disagree with the Western foreign policies he sees as potential root causes have not become engaged in political violence. If we look at public opinion polls from across the Muslim world, including Muslim communities in the West, support for violence against Western civilians stands, on average, at between 5 and 10 per cent. But if Kundnani's assertions are correct, this number should be much higher, given that in some Muslim countries, overwhelming majorities of up to 90 per cent criticise the policies of the US and the West. In fact, it is not perceptions of US foreign policies with respect to Israel or Middle Eastern petroleum resources that shape approval of terrorist violence against US civilians, but the rejection of US culture and some of its most prominent manifestations, such as freedom of expression. This finding may go against the conventional wisdom that Kundnani seems to wish to repackage here as his own insights, but it is quite comprehensible in light of the groundbreaking analysis of anti-Americanisms by scholars Peter Katzenstein and Robert Keohane, in which they differentiate between a view that assesses US foreign policies on their own terms and a view that regards those same policies as reflecting the fundamentally evil nature of US society. But there is a danger that Western governments, in an attempt to address the cacophony of voices typical of the decentralised, pluralistic religious discourses in many (Sunni) Muslim communities around the world, can end up telling Muslims what the "correct" interpretation of Islam is. But once again, these are issues that have also already received considerable academic attention, with plenty of excellent analysis ranging from peer-reviewed publications to countless undergraduate essays. In short, Kundnani's critique of hostility towards Muslims by some Western media and politicians and of Western governments' interaction with their Muslim communities is convincing, although not wholly original. His highly ideological insistence on the link between Western foreign policies and Islamist terrorism is neither.

1NC Consequentialism

Moral absolutism creates tunnel vision and error replication – focus on consequences is a prerequisite to ethical decisionmaking

Isaac '2

(Jeffrey C. Isaac, professor of political science at Indiana-Bloomington, director of the Center for the Study of Democracy and Public Life, PhD from Yale, Spring 2002, Dissent Magazine, Vol. 49, Iss. 2, "Ends, Means, and Politics," p. Proquest

As writers such as Niccolo Machiavelli, Max Weber, Reinhold Niebuhr, and Hannah Arendt have taught, an unyielding concern with moral goodness undercuts political responsibility. The concern may be morally laudable, reflecting a kind of personal integrity, but it suffers from three fatal flaws: (1) It fails to see that the purity of one's intention does not ensure the achievement of what one intends. Abjuring violence or refusing to make common cause with morally compromised parties may seem like the right thing; but if such tactics entail impotence, then it is hard to view them as serving any moral good beyond the clean conscience of their supporters; (2) it fails to see that in a world of real violence and injustice, moral purity is not simply a form of powerlessness; it is often a form of complicity in injustice. This is why, from the standpoint of politics--as opposed to religion--pacifism is always a potentially immoral stand. In categorically repudiating violence, it refuses in principle to oppose certain violent injustices with any effect; and (3) it fails to see that politics is as much about unintended consequences as it is about intentions; it is the effects of action, rather than the motives of action, that is most significant. Just as the alignment with "good" may engender impotence, it is often the pursuit of "good" that generates evil. This is the lesson of communism in the twentieth century: it is not enough that one's goals be sincere or idealistic; it is equally important, always, to ask about the effects of pursuing these goals and to judge these effects in pragmatic and historically contextualized ways. Moral absolutism inhibits this judgment. It alienates those who are not true believers. It promotes arrogance. And it undermines political effectiveness.

*MECHANISM DEFENSE SPECIFIC

Notes

Nothing on the “embrace Terror” version- it’s..... embracing terrorism

Mosques stuff is covered by the FBI circumvention module

Strict Scrutiny

1NC

Their Love evidence indicates Muslims do not have the political power in the status quo to file suits – no reason why having a more strict standard will mean they will be able to suddenly file lawsuits

Strict scrutiny won’t solve – courts will affirm government actions in the name of national security

Meyler 08 (Bernadette Meyler, scholar of British and American constitutional law and of law and the humanities, Leah Kaplan Visiting Professor in Human Rights, “Religious Expression in the Balance: A Response to Murad Hussain’s Defending the Faithful”, The Yale Law Journal, 3/21/08, <http://www.yalelawjournal.org/forum/religious-expression-in-the-balance-a-response-to-murad-hussains-defending-the-faithful>, al)

Courts have, however, in the aftermath of September 11, **been notoriously willing to affirm government actions taken in the name of national security even when they deploy a strict scrutiny standard.** The district and circuit court opinions in *Tabbaa v. Chertoff*—a case Hussain discusses that involved American citizens re-entering the United States from a Muslim conference in Canada—provide striking examples of this tendency. The district court, in a move that the Second Circuit affirmed, did, in fact, apply strict scrutiny in evaluating the plaintiffs’ claims under RFRA—but still ruled in favor of the government. Granting substantial deference to the government with regard to its role in policing the country’s boundaries, the district court maintained that “the IDSO [Intelligence Driven Special Operation] inspections were the least restrictive means of furthering the government’s [compelling] interest in protecting its borders.” Similarly, according to the Second Circuit’s opinion, “given the intelligence the government received, subjecting . . . [c]onference attendees to enhanced processing at the border—including fingerprinting and photographing—was a narrowly tailored means of achieving the government’s compelling interest in protecting against terrorism.”⁴ If strict scrutiny itself does not entail more rigorous examination of the explanations that the government provides for its actions in this and similar situations, **the prospect of outcomes favoring civil liberties appears rather bleak. National security, guarding against terrorism, and the protection of the borders may be construed as compelling state interests** even if plaintiffs construct hybrid claims, and tailoring that is narrow in name alone may be accepted by the courts. Let us not forget that **one of the most reviled results in Supreme Court jurisprudence—that in *Korematsu v. United States*—emerged out of an application of strict scrutiny.**

1. Right wing judges means strict scrutiny will be circumvented Greenwald, 2014

(Glenn is a constitutional Lawyer and an author of a best selling book on politics and Law called No Place to Hide. “ Congress is Irrelevant on Mass surveillance. Here is what matters instead.”. <https://firstlook.org/theintercept/2014/11/19/irrelevance-u-s-congress-stopping-nsas-mass-surveillance/>. Date Accessed- 7/15/15. Anshul Nanda)

U.S. court proceedings. A U.S. federal judge already ruled that the NSA’s domestic bulk collection program likely violates the 4th Amendment, and in doing so, obliterated many of the government’s underlying justifications. Multiple cases are now on appeal, almost certainly headed to the Supreme Court. None of this was

possible in the absence of Snowden disclosures.¶ For a variety of reasons, when it comes to placing real limits on the NSA, I place almost as little faith in the judiciary as I do in the Congress and executive branch. To begin with, the Supreme Court is dominated by five right-wing justices on whom the Obama Justice Department has repeatedly relied to endorse their most extreme civil-liberties-destroying theories. For another, of all the U.S. institutions that have completely abdicated their role in the post-9/11 era, the federal judiciary has probably been the worst, the most consistently subservient to the National Security State. Courts have no power over agencies

2NC

Their only solvency evidence specific to strict scrutiny concludes that “preventing terrorism is a compelling state interest” and thus still passes strict scrutiny – only the most overt forms of islamophobia will end but covert islamophobia will continue because there is no proof of intent that can be taken to court.

Extend that the courts will circumvent strict scrutiny – that’s Meyler – after 9/11 courts have been willing to affirm actions in the name of security even with strict scrutiny – empirically proven with cases such as Korematsu v. United States

Strict scrutiny fails – racial profiling that has a compelling state interest passes it

Johnson 4 [Kevin Johnson, is the Dean of the UC Davis School of Law. Before becoming a professor, he was a student at Harvard Law School where he served as an editor of the Harvard Law Review, Spring 2004, “Racial Profiling after September 11: the Department of Justice’s 2003 Guidelines”, Loyola Law Review, <http://academic.udayton.edu/race/06hrights/waronterrorism/racial06.htm>] //dickies

The Justice Department guidelines are remarkably sparse about the proper consideration of race in the case of national security and border integrity. They state that: [I]n investigating or preventing threats to national security or other catastrophic events (including the performance of duties related to air transportation security), or in enforcing laws protecting the integrity of the Nation’s borders, Federal law enforcement officers may not consider race or ethnicity except to the extent permitted by the Constitution and laws of the United States. The guidelines further suggest that airport screeners and other law enforcement authorities may rely on race because a compelling state interest (national security) justifies the racial classification and thus survives strict scrutiny. The guidelines recognize that the Supreme Court requires that all racial classifications be subject to strict scrutiny.

AT: Civil suits solve

Love indicates that Muslims don’t have the polical power to file suits – no reason why setting a new standard solves

Civil suits are empirically ineffective against federal officers

Mike Wagner, 2009 [Mike Wagner, AB, Villanova University; JD, The George Washington University. Mike Wagner is an associate in the Washington office of Covington & Burling LLP, where he counsels government contractors on issues arising at all phases of the public procurement process and handles complex white collar investigations involving allegations of fraud and corruption. Prior to joining Covington, he served as a law clerk on the U.S. Court of Appeals for the Third Circuit and the U.S. District Court for the District of Maryland. A graduate of GW Law, he was an Articles Editor on the George Washington Law Review and

received the 2010 Scribes Law Review Writing Award for best student-written article. November 2009, "Warrantless Wiretapping, Retroactive Immunity, and the Fifth Amendment". The George Washington Law Review, 78 Geo. Wash. L. Rev. 204. JC]

Carr v. United States, ⁿ¹⁰³ another case rejecting a due process challenge to a law immunizing a defendant from tort liability, is likewise unpersuasive because it too involved a case in which the prospective elimination of a cause of action. The plaintiff in Carr, **a federal employee**, was injured in a car accident due to the driving of his colleague, also a federal employee, in 1965. ⁿ¹⁰⁴ The plaintiff **initiated a civil suit against his co-worker, but the Federal Drivers' Act of 1961 abrogated any civil suits against federal employees acting within the scope of their employment and substituted the United States in their place.** ⁿ¹⁰⁵

The plaintiff challenged the abrogation of his cause of action as a violation of the Fifth Amendment's Due Process Clause, but the Fourth Circuit rejected this argument: "The accident occurred over four years after the enactment of the Drivers Act. Therefore, ... [the plaintiff] had no interest entitled to constitutional protection." ⁿ¹⁰⁶ Just as in Ducharme, due process concerns were not implicated because the plaintiff's cause of action, which accrued after the adoption of the immunity provision, was abrogated prospectively by statute. This distinction is crucial to understanding why the laws were upheld in Ducharme and Carr but not in Ettor or Richmond Screw. **In light of this precedent, the importance of determining**

whether FISAA acts retroactively or prospectively is plain. If the causes of action eliminated by FISAA had accrued prior to its passage, then FISAA would operate retroactively and the plaintiffs' property would be eligible for due process protections.

Because tort actions generally accrue at the time of injury, ⁿ¹⁰⁷ the cause of action in the suits abrogated by FISAA accrued when the NSA, with the help of AT&T and other telecommunications firms, began improperly monitoring the plaintiffs' telephone and Internet lines soon after the September 11 [*220] attacks. ⁿ¹⁰⁸ Thus, as Professor Anthony Sebok explains, by the time Congress passed FISAA several years later, the plaintiffs' claims had already vested.

MORE CARDS

Doesn't solve- empirics prove 1/3 of the attempts fail

Winkler 2006 [Adam (Professor @ UCLA School of Law), "Fatal in Theory and Strict in Fact: An Empirical Analysis of Strict Scrutiny in the Federal Courts," Vanderbilt Law Review, <http://search.proquest.com/docview/198950724/fulltextPDF/E2E5ED94185E4CE5PQ/1?accountid=10422>, ProQuest, AX]

This Article contributes to this debate by offering a systematic empirical study of strict scrutiny in the federal courts. Reporting the results of a census of every strict scrutiny decision published by the district, circuit, and Supreme courts between 1990 and 2003, this study shows that strict scrutiny is far from the inevitably deadly test imagined by the Gunther myth and more closely resembles the context-sensitive tool described by O'Connor. Courts routinely uphold laws when applying strict scrutiny, and they do in every major arena of law in which they use the test. Overall, 30 percent of all applications of strict scrutiny—nearly one in three—result in the challenged law being upheld. Rather than "fatal in fact", strict scrutiny is survivable in fact.

End Racial Profiling

1NC

The "End Racial Profiling Act" is unnecessary and too broad.

FOP nodate, world's largest organization of sworn law enforcement officers, "S. 989/H.R. 2074, the "End Racial Profiling Act"," Fraternal Order of Police, <http://www.fop.net/legislative/endrpackt.shtml>, fwang

The legislation unnecessarily defines and bans so-called "racial profiling." The United States Supreme Court has already made it very clear that "the Constitution prohibits selective enforcement of the law based on considerations such as race," and that "the constitutional basis for objecting to intentionally discriminatory application of the laws is the Equal Protection Clause." **Whren v. United States**, 517 U.S. 806, 813 (1996). Further, as one Court of Appeals has explained, "citizens are entitled to equal protection of the laws at all times. If law enforcement adopts a policy, employs a practice, or in a given situation, takes steps to initiate an investigation of a citizen based solely upon that citizen's race, without more, then a violation of the Equal Protection Clause has occurred." **United States v. Avery**, 137 F.3d 343, 355 (6th Circuit 1997). The United States Constitution itself prohibits "racial profiling," making Federal legislation defining or prohibiting such activity unnecessary. The legislation's definition of "racial profiling" is far too broad. The bill prohibits the use of race "to any degree" in selecting individuals to be subject to even the most routine investigatory action, excepting only those situations in which race is used "in combination with other identifying factors" when the law enforcement agent is seeking to apprehend a specific suspect whose race, ethnicity or national origin is part of the description of the suspect." (emphasis added). This means that, absent an eyewitness or other description of a specific suspect's race or ethnicity, law enforcement officers can never use race as a factor even if it would help them to identify a suspect. The proposed legislation would therefore ban a whole range of activities beyond the already unconstitutional, purely race-based activity. The legislation would also apply to Customs and immigration-related enforcement activities, as well as criminal law enforcement efforts.

Judicial Action Fails

Courts misunderstand how police surveillance is conducted and can't act effectively without future legislation

Rushin, 13 --- Visiting Assistant Professor, University of Illinois College of Law (Fall 2013, Stephen, Brooklyn Law Review, "The Legislative Response to Mass Police Surveillance," 79 Brooklyn L. Rev. 1, Lexis,)

[*24] II. THE LAW OF POLICE SURVEILLANCE Traditionally, courts have shied away from regulating police surveillance in public spaces. This is because the courts have operated under a set of jurisprudential assumptions of police surveillance. These jurisprudential assumptions were reasonable in the past because of the limited technological efficiency of previous surveillance technologies. In Jones, the Supreme Court had the opportunity to confront these jurisprudential assumptions in light of modern technology. A majority of the justices indicated that these jurisprudential assumptions were increasingly unsupportable in today's digitally efficient world of policing. n118 But the Court did not alter these doctrinal assumptions in any way, nor did they offer much indication on how they may alter these assumptions in the future. Thus, after the Jones decision, the law of police surveillance today is as incoherent as ever. I have previously argued that the digitally efficient investigative state does not run afoul of the Fourth Amendment, based on the presence of these jurisprudential assumptions, n119 but dicta in the concurrences of the Jones case imply that these jurisprudential assumptions may not exist for much longer. Even so, there is no clear indication how the Court could establish a default rule that both narrowly limits some uses of digitally efficient technologies without adversely affecting other non-invasive, legitimate uses. In this section, I evaluate the doctrinal basis for the traditional jurisprudential assumptions about police surveillance. I then spend considerable time analyzing the dicta in the Jones case to predict how the Court may respond to these technologies in the future. I conclude that, while the Court

will likely make some effort to rein in the digitally efficient investigative state in the future, any regulation will be limited in capacity. The regulation will almost certainly rely upon an often-ineffective enforcement tool like the exclusionary rule. Thus, **even if the judiciary is institutionally capable of controlling the digitally efficient investigative state, the legislature must also take a proactive role in any future regulation.**

Judicial oversight fails --- non enforceable, extremely high standards, and executive privilege

Dalal 14 --- JD Yale Law School, BS University of Pennsylvania (Anjali S, Michigan State Law Review, "SHADOW ADMINISTRATIVE CONSTITUTIONALISM AND THE CREATION OF SURVEILLANCE CULTURE", 2014 Mich. St. L. Rev. 59, Lexis)

1. Judicial Intervention

The Church Committee, reflecting on the Keith decision, emphasized the importance of judicial intervention in the national security arena when it reminded the public that warrantless wiretapping "had been permitted by successive presidents for more than a quarter of a century without 'guidance from the Congress or a definitive decision of the Courts.'" n308 Unfortunately, there are three barriers to judicial intervention that facilitate shadow administrative constitutionalism in the national security arena: the lack of judicially enforceable rights, the standing hurdle, and the growth of executive privilege.

a. Judicially Enforceable Rights

By the time the Civiletti Guidelines were issued in 1980, the DOJ made eminently clear that the Attorney General Guidelines were "solely for the purpose of internal Department of Justice guidance" n309 and would otherwise be legally binding. Specifically, the Guidelines made clear that "[t]hey are not intended to, do not, and may not be relied upon to create any rights, substantive or procedural, enforceable at law by any party in any manner, civil or criminal." n310 Such rights-limiting language prevents any injured party from using the governing document of the FBI to enforce the self-imposed limitations on the Bureau's power.

[*129] b. The Standing Hurdle

The lack of judicially enforceable rights is not, however, the only problem. Those who might bring a First Amendment claim based on the surveillance authorized by the Attorney General Guidelines face immense difficulty simply getting into court. n311 One of the primary problems with surveillance is that it has the power to coerce people into self-censorship--or chilled speech. This makes surveillance, fundamentally, a First Amendment issue and a prime subject for constitutional litigation. As our communications are increasingly subject to the prying eyes of the government, our ability to speak freely is directly curtailed. However, after the Supreme Court's decision in Laird v. Tatum, litigants suing under the First Amendment theory of chilled speech are subject to a high standing bar that, more often than not, prevents them from having their case heard at all.

The first mention of the term "chill" in Supreme Court jurisprudence occurred in 1952 in *Wieman v. Updegraff*, a case overturning an Oklahoma law that required all state employees to take a loyalty oath denying all affiliation, direct and indirect, with "any foreign political agency, party, organization or Government, or with any agency, party, organization, association, or group

whatever which has been officially determined by the United States Attorney General or other authorized agency of the United States to be a communist front or subversive organization." n312 In an important concurrence, Justice Frankfurter argued that the loyalty oath had "an unmistakable tendency to chill that free play of the spirit which all teachers ought especially to cultivate and practice." n313 From that time to when the term "chilling effect" was first used in *Dombrowski v. Pfister* n314 thirteen years later, Professor Frederick Schauer argues that [*130] the term evolved from an "emotive argument into a major substantive component of first amendment [sic] adjudication." n315

However, after *Laird v. Tatum*, litigating on the basis of chilling effects has become difficult. *Tatum* requires litigants to first prove that the surveillance in question led to a cognizable harm before they will be granted standing and further held that "the mere existence . . . of a governmental investigative and data-gathering activity that is alleged to be broader in scope than is reasonably necessary for the accomplishment of a valid governmental purpose" was simply not a cognizable harm. n316

As a result of *Tatum*, before an individual can bring a First Amendment claim against FBI based on the authorizations of the Attorney General Guidelines, she must first prove that she has been harmed by the often-secret surveillance. n317 Because of the difficulty of first affirmatively identifying that one is the subject of government surveillance in order to allege a cognizable harm under the law, such litigation has been made increasingly unlikely under *Tatum*.

For example, in 2005, *The New York Times* exposed the President's Surveillance Program (PSP), a program developed after 9/11 that secretly authorized the NSA to intercept "the international telephone calls and international e-mail messages of hundreds, perhaps thousands, of people inside the United States without warrants over the past three years in an effort to track possible 'dirty numbers' linked to Al Qaeda." n318 "Additionally, the NSA told Congress that privileged communications, such as those between an attorney and her client, would not be 'categorically excluded' from interception." n319

This discovery led prominent civil rights organizations, including the American Civil Liberties Union (ACLU), to file [*131] lawsuits against the government arguing that their speech was chilled because their communications were likely targets of the surveillance program. n320 The ACLU filed on behalf of itself and a group of journalists, scholars, and other organizations that regularly communicate with likely targets of the PSP. n321 Importantly, none of the plaintiffs had evidence that they were in fact the subject of NSA surveillance. n322 This was a fact that only the government knew and would not disclose. The Supreme Court held that, without this information, the plaintiffs lacked standing to pursue their case. n323

The standing barrier created by *Tatum* is especially problematic given the nature of surveillance today. Surveillance today no longer presents viable Fourth Amendment claims because so much of our most personal information is mediated through third parties, and the third-party doctrine limits the extent of Fourth Amendment protections. n324 While Justice Sotomayor's concurrence in *United States v. Jones* provides some indication that this doctrine may be up [*132] for reconsideration by the Supreme Court, n325 until that time, the Fourth Amendment no longer provides a powerful source of legal recourse against the growth of surveillance authority. As a result, now, more than ever, the chilling effects doctrine must be revived in order to provide a First Amendment backstop to the growing problem of government surveillance.

c. Executive Privilege

As Professor Heidi Kitrosser describes, "A claim of executive privilege is generally a claim by the President of a constitutional right to withhold information." n326 It is a claim whose authority lies not in the text of the Constitution or of any specific law, but rather in the "notion that some information requests effectively infringe on the President's Article II powers, threatening his ability to receive candid advice or to protect national security." n327

Executive privilege as a means of obfuscation facilitates shadow administrative constitutionalism by preventing judicial oversight. Professor Jack Balkin first made this claim nearly ten years ago when he argued that, increasingly we exclude more and more executive action from judicial review on the twin grounds of secrecy and efficiency. . . . [A]n independent judiciary plays an important role in making sure that zealous officials do not overreach. If the executive seeks greater efficiency, this requires a corresponding duty of greater disclosure before the fact and reporting after the fact to determine whether its surveillance programs are targeting the right people or are being abused. n328

The courts have not taken heed to his warning.

In the wake of the disclosure of the PSP, there was one case that survived the extremely high standing bar set in Tatum. In *Al-Haramain Islamic Foundation v. Bush*, an Islamic charity based in Oregon discovered that the government inadvertently sent them classified documents demonstrating that their communications were [*133] subject to warrantless surveillance. n329 With proof that they were in fact subject to surveillance, Al-Haramain proceeded to court. However, the government argued that the state-secrets privilege prevented the introduction of the classified documents and permitted the government to avoid acknowledging the existence of the surveillance program. n330 Despite the fact that the classified information had already been disclosed (and in seemingly direct conflict with the government's otherwise settled third-party doctrine), the Ninth Circuit agreed with the government's position. n331

The doctrinal barriers that prevent judicial intervention are significantly harder to overcome than the failures that stymie intrabranched checks and balances. This is in no small part due to the doctrine of stare decisis and the value of having binding precedent. Even judges who recognize the problems with the current system and wish to reassert their role in determining both small-"c" and ultimately large-"C" constitutional meaning cannot. Judge Colleen McMahon expressed her frustration with the state-secrets privilege in a court opinion, saying, "I can find no way around the thicket of laws and precedents that effectively allow the Executive Branch of our Government to proclaim as perfectly lawful certain actions that seem on their face incompatible with our Constitution and laws, while keeping the reasons for its conclusion a secret." n332 As a result, without a major shift in the doctrine, the judiciary will be limited in its ability to provide useful oversight.

Rushin admits that judicial action alone won't solve

Rushin, 11 --- PhD student at the University of California, Berkeley, Jurisprudence and Social Policy Program (Fall 2011, Stephen, University of Illinois Journal of Law, Technology & Policy, "THE JUDICIAL RESPONSE TO MASS POLICE SURVEILLANCE," 2011 U. Ill. J.L. Tech. & Pol'y 281, Lexis,)

VI. Conclusion Neither judicial responses nor "legislative rulemaking is ...a panacea." n376 Even if the judiciary successfully recognizes a remedy similar to that discussed in this Article, the legislatures must play a critical role in developing more nuanced and specific enactments to implement this constitutional floor. The potential harms of the digitally efficient investigative state are real. There is legitimate concern that the broad and integrated use of these technologies can create a mass surveillance state. Central to this debate is the proper role of the judiciary in regulating policy activity. Courts have previously relied upon an often fragile dichotomy between technologies that merely improve police efficiency and those that offer officers a new, extrasensory ability. For the first time, the judiciary may be forced to limit the efficiency of law enforcement technologies. Implicit in this action will be the recognition that sometimes improvements in efficiency can be, quite simply, so efficient as to be unconstitutionally harmful. Unregulated efficiency can facilitate police wrongdoing, discrimination, and calumniate political dissenters. Unregulated efficiency in policing technology undermines central protections and tenants of a democratic state. The relationship between efficiency of criminal investigations and privacy rights will be a new frontier for the courts in the coming decades. The courts should forcefully, but prudently, protect against the unregulated efficiency of emerging investigative and surveillance technologies. The judicial response offered in this Article would be but one more example of the courts exercising their proper role as a limited but effective policymakers.

SPOT (TSA Airports)

CX Questions

1AC Berry evidence:

When a Muslim like Azhar Usman gets onto the plane, faces fall. Danger is imminent. The anxiety ends only when the plane lands. People are almost thankful to the Muslim passenger for not doing what they feared he might. Flying-while-Muslim thus becomes an extremely public event

What does eliminating the SPOT program do about that instance of Islamophobia?

1AC Huus evidence:

Thousands of people have been barred altogether from commercial air travel without any opportunity to confront or rebut the basis for their inclusion, or apparent inclusion” on the no-fly list

What does the plan do to eliminate the no fly list?

How does the plan create a coalition between Muslims, blacks, and other races? So you're telling me that getting rid of SPOT will suddenly mean that Muslims go and talk to black and Latino/a people and try to solve racism?

Your Kumar card says that Islamophobia shapes US foreign policy—how does eliminating SPOT stop the US from invading countries in the Middle East?

1AC Dickerson evidence:

If we consider what behavioral science tells us (or can't tell us), it looks like we really need a new method for airport security checks.

If the 1AC gets rid of the SPOT system, what airport security is left?

(If they say we still have scanners—prove that patdowns from scanners are also Islamophobic)

Agencies will use Racial Profiling

TSA still racially profiles outside the SPOT program—patdowns and scanners

Bahrampour 10

(Tara, 12/23/10, Washington Post, "TSA scanners, pat-downs particularly vexing for Muslims, other religious groups," <http://www.washingtonpost.com/wp-dyn/content/article/2010/12/22/AR2010122202919.html?sid=ST2010122202299>, 7/30/15, SM)

Ever since the terrorist attacks of Sept. 11, 2001, a trip to the airport has been fraught for Muslims, who sometimes feel they are being profiled as potential terrorists because of their religion. The addition of full-body scanners, which many say violate Islam's requirements of modesty, has increased the discomfort.

Muslims aren't alone in their antipathy toward the new security measures. Followers of other religions, including Sikhs and some Orthodox Jews and evangelical Christians, also say the scanners and pat-downs make them uncomfortable or breach the tenets of their faiths. But Muslim women have been particularly reluctant to subject themselves to the scanners, which reveal the contours of the human body in glaring detail.

In Islam, "a woman's body and a man's body are both pretty much private," said Ikramullah, 29, who wears a head scarf. "I choose to cover myself and dress in loose-fitting clothing so the shape of my body is not revealed to everyone in the street." The other choice, an "enhanced" pat-down in which security agents touch intimate body parts, was hardly more appealing, said the College Park resident. In recent years, Ikramullah said, she has been pulled aside for a milder version of the pat-downs almost every time she flies. The reason, she believes, is her head scarf.

"It can be humiliating when you're standing there and people are walking by, seeing you get the pat-down," she said. You just feel like you have a target on your head. About 440 advanced imaging technology machines are in use in the United States, and there are plans to increase that number to 1,000 - in roughly half the nation's security checkpoint lanes - by the end of 2011.

Opponents and civil libertarians have likened the scanning to a virtual strip search, and it has caused some to rethink their holiday travel. "I've had a lot of Muslims, and particularly Muslim women, say they're going to put off travel plans as much as is humanly possible because they just can't take the humiliation of it all," said Ibrahim Hooper, a spokesman for the Council on American-Islamic Relations (CAIR). "They're tired of being singled out for their attire. We have reports of Muslim women in tears." Earlier this year, the Fiqh Council of North America, a body of Muslim jurists who interpret Islamic law for Muslims in North America, issued a ruling calling the full-body scanners "a violation of clear Islamic teachings" that men and women not be seen naked, adding that the Koran requires believers to "cover their private parts." But the alternative - the enhanced pat-down - has also posed problems for some, including Sikhs, who wear turbans as part of their religious observance. Since 2007, people with "bulky" clothing, including Muslim women in head scarves and Sikh men in turbans, have been required to undergo secondary screenings involving pat-downs. Whether they are willing to go through the new scanners makes no difference, according to the Transportation Security Administration. "Removal of all head wear is recommended, but the rules accommodate those with religious, medical or other reasons for which the passenger wishes not to remove the item," said Greg Soule, a TSA spokesman. If an officer cannot "reasonably determine that the clothing or head covering is free of a threat item," passengers are referred for additional screening, he said. People interviewed for this article emphasized that they understand the importance of security for air travel, but some said the determination of what constitutes "bulky clothing" is made subjectively, with a bias against religious headgear. Somebody could pass through with a pair of loose pants that is definitely more bulky than a head covering, but the head covering gets secondary screenings, said Ameena Mirza Qazi, deputy executive director and staff attorney for CAIR in Los Angeles, adding that she has urged the TSA to revisit its policies. "The issue is whether it is being treated differently than other items of clothing and why it is being treated differently," she said.

Alt cause for Islamophobia—TSA performs “random searches” during security—targets Muslims
Khan 13

(Azeem, 5/19/13, Huffington Post, “Airport Profiling: A Familiar Story for Muslims,”
http://www.huffingtonpost.com/azeem-khan/racial-profiling-muslim_b_3303582.html, 7/30/15, SM)

I went to Puerto Rico last weekend to celebrate a bachelor party for a friend of mine. On my way to the airport I joked with my friend that I was going to be picked for a random search because that's what happens to you when you have a Muslim name like I do. As I went through security, making sure to take all of the items out of my pocket to go through the scanner, I decided I had gotten it all into those ugly plastic bins. The official running the bags through the machine commented on my Yankees hat because he is a fan himself. I was feeling like maybe I was going to get lucky today, and not be searched just because I'm brown. After he told me to have a nice day I walked through the metal detector. It began to beep. I started to think to myself "here we go again." So **I asked the TSA official in front of me if my glasses had set off the machine. He replied, "No, this is a random search."** What happened next was that I was brought over to an area in front of everyone. I was told that my bag would be checked. They proceeded to open my bag, and go through everything in it while asking me what each item was. It was hard not to give snarky responses when asked each question because it was just a duffel bag filled with a bag of dirty clothes and damp board shorts. I knew there was nothing in there they would find of interest, but it's not like voicing that to them would have been helpful at all. If anything, it would have just brought me to a back room where I would get interrogated and probed further just because I decided to stand up for myself. I have a huge issue with what happened that day. **And what happens to me every single time I go to an airport. This was supposedly a random search. But it wasn't a random search at all. It was a "you're a Muslim" search. I'm tired of being told that it's a random search every single time.** I have fewer rights when I walk into an airport because I'm brown. I always have to feel on edge because I know I'm being looked at suspiciously, and not being I've done anything wrong, but because I'm one of the two million Muslims living in this country in a post 9/11 era. I get it. **My name is Azeem Khan. It's not James Williams. That's why I got picked. It wasn't random.** I understand that. So does the person telling me it's random.

TSA conducts full body pat-downs and physical inspection of baggage for all passengers from 14 “terrorism-prone” countries

Allen 10

(Mike, 1/3/10, Politico, “US tightens international air security,”
<http://www.politico.com/news/stories/0110/31122.html>, 7/30/15, SM)

All travelers flying into the U.S. from foreign countries will receive tightened random screening, and **100 percent of passengers from 14 terrorism-prone countries will be patted down and have their carry-ons searched,** the Obama administration notified airlines on Sunday. **The** more stringent Transportation Security Administration **rules,** to take effect at midnight, **follow the attempted Christmas Day bombing of a U.S. airliner headed into Detroit from Amsterdam.** “These are changes that weren’t widely in place for all carriers or countries on 12/24,” a senior administration official told POLITICO. “These are sustainable measures that are a significant enhancement of our security posture. TSA will continuously review these measures with our global aviation partners to ensure the highest levels of security.” **All passengers from countries on the State Department’s “State Sponsors of Terrorism” list — plus all passengers from other "countries of interest" such as Nigeria, Pakistan and Yemen — will receive “full body pat-down and physical inspection of property.”** the official said. The countries on the State Department list are Cuba, Iran, Sudan and Syria. Other countries covered by the TSA directive are Afghanistan, Algeria, Iraq, Lebanon, Libya, Saudi Arabia and Somalia. A much higher percentage of all travelers from foreign countries will receive such screening than is currently the case, the official said. “The screening “could also include explosive detection technology or advanced imaging technology where it’s available,” the official said. Kristin Lee of the TSA, which is part of the Department of Homeland Security, announced: “Today the Transportation Security Administration issued new security directives to all United States and international air carriers with inbound flights to the U.S. effective January 4, 2010. The new directive includes long-term, sustainable security measures developed in consultation with law enforcement officials and our domestic and international partners.” In other words, there will be a new normal

for international travel into the U.S. The “enhanced security measures” apply to “all international flights to U.S. locations, including both U.S. and international carriers,” the official said. “All international passengers will be screened and the majority of passengers will be screened using threat-based or random measures,” the official said. “These are designed to be sustainable measures that are a significant increase in our security posture.” The measures apply to all “passengers with passports from or itineraries through State Sponsors of Terrorism and ‘countries of interest.’” “This goes beyond simply looking at passports and now looks at itineraries from and through countries of interest,” the official said. “This is a significant step forward.” Lee said in her statement: “Because effective aviation security must begin beyond our borders, and as a result of extraordinary cooperation from our global aviation partners, TSA is mandating that every individual flying into the U.S. from anywhere in the world traveling from or through nations that are State sponsors of terrorism or countries of interest will be required to go through enhanced screening. The directive also increases the use of enhanced screening technologies and mandates threat-based and random screening for passengers on U.S. bound international flights.”

The TSA has a no fly and a selectee list that targets Muslims—their evidence

Huus 11

(Kari, 9/13/11, Today, "Muslim Travelers Say They're Still Saddled with 9/11 Baggage", www.today.com/id/44334738/ns/today-today_news/t/muslim-travelers-say-theyre-still-saddled-baggage/#.VafqhnTWKF4, 7/31/15, SM)

The TSA is also required to conduct secondary screening according to two lists — the “no-fly” list and the “selectee” list, which are provided by the Terrorism Screening Center, a division of the FBI. The screening center says there are 16,000 individuals — including about 500 U.S. citizens — on the no-fly list, which bars the individuals on it from flying to, from or within the United States. Another 16,000 are on the selectee list, which triggers secondary screening. Both are subsets of a consolidated watch list called the Terrorism Screening Database of “known or appropriately suspected terrorists.” The number of names in the database fluctuates, but at present it names 420,000 individuals, about 2 percent of them Americans, the screening center says. The FBI distributes relevant subsets of the database to different frontline agencies such as TSA, CBP, financial watchdogs and law enforcers. Even people stopped for traffic violations can be quickly checked against the list. Each agency “must comply with the law, as well as its own policies and procedures to protect privacy rights and civil liberties,” the screening center said. The effectiveness of the lists came into question after an attempted bombing of an airliner on Christmas Day 2009, when Nigerian Umar Farouk Abdulmutallab, who was not on either watch list, tried to detonate plastic explosives on a flight from Amsterdam to Detroit. Ultimately he hurt only himself, but the scare prompted the screening center to expand the criteria it uses to populate the no-fly list. By design, none of the criteria that land an individual in the database or on the watch lists is made public. “People are put on the watch list based on a series of criteria,” said Sheldon Jacobson, a security expert and computer science professor at University of Illinois at Urbana-Champaign. “Nobody really knows them. They are very secret and they keep evolving. In many ways (the government) has to keep it private because if they give it out, people will game the system.” That secrecy presents a conundrum for many people who believe they are on a list and do not belong there. Some of the cases involve mistaken identity because a traveler possesses a common name like Mohammad — the Arabic equivalent of Smith. As a result, some civil rights lawyers believe that the lists affect two to three times as many fliers as are legitimately on them. Marooned One of the most chilling cases surrounding the no-fly list is that of Gulet Mohamed, a 19-year-old American citizen of Somali heritage. Mohamed had been visiting family in Yemen and Somalia — two countries with active Islamist terrorist groups. When he went to the Kuwait airport to extend his visa in December, he was arrested and taken to a detention facility, where he was blindfolded, questioned and beaten by unknown agents, according to his lawyer, Gadeir Abbas. The questioners were especially interested in information about Anwar al-Awlaki, a dual U.S. and Yemeni citizen turned Islamic extremist in Yemen, Abbas said. Mohamed insisted he had no information and, after a week, Kuwait ordered his deportation. But when he tried to board a flight to the United States, he was told he was on the no-fly list. Only after Abbas filed a lawsuit on his behalf in January was Mohamed allowed to return home to Virginia. Mohamed is pursuing a claim for damages and to be removed from the list. The federal government wants the case thrown out on the grounds that it is irrelevant now that he is back in the U.S. Meantime, it will not confirm if he is on the no-fly list. The lawsuit is pending, after a judge moved it to a circuit court on jurisdictional grounds. “It’s this very Kafkaesque world where no one has charged (people on the list) with any crime ... but they can see its effects,” said Abbas, an attorney with CAIR. “... His case is the most heinous example of what the no-fly list can do.” Other pending court cases allege that Muslim American travelers have encountered similar violations of their rights, including some who were forced to take thousand-mile circuitous land routes to get back into the U.S. or were stuck overseas for weeks or months until lawyers here took up their cases.

The aff does nothing –The CBP, TSA, and ICE will still be allowed to use racial profiling-

Horwitz 14

Sari Horwitz, covers the Justice Department and criminal justice issues nationwide for The Washington Post, where she has been a reporter for 30 years, 12-5-2014, "Racial profiling will still be allowed at airports, along border despite new policy," *Washington Post*,

http://www.washingtonpost.com/politics/racial-profiling-will-still-be-allowed-at-airports-along-border-despite-new-policy/2014/12/05/a4cda2f2-7ccc-11e4-84d4-7c896b90abdc_story.html//SRawal

In recent months, **DHS officials pushed** the White House and Justice Department **to allow major exclusions for prominent DHS agencies such as the TSA, Immigration and Customs Enforcement, and Customs and Border Protection, officials said. CBP, for instance, will still be allowed to use racial profiling when conducting inspections at the country’s “ports of entry” and interdictions of travelers at the border, officials said. Some DHS officials also questioned the Justice Department’s authority to set policies for a separate federal agency.** DHS **Secretary Jeh Johnson made the case in a series of high-level meetings, arguing that while his department did not condone profiling, immigration and customs agents and airport screeners needed to consider a variety of factors to keep the nation safe, according to officials familiar with his personal efforts. TSA officials,** meanwhile, **argued that they should not be covered by the new limits on the grounds that the TSA is not a law enforcement agency.** **“We tend to have a very specific clientele** that we look for,” said one federal official involved in immigration enforcement, who spoke on the condition of anonymity to discuss internal deliberations. “If you look at numbers, the vast majority of people we deal with are Hispanic. Is that profiling, or just the fact that most of the people who come into the country happen to be Hispanic?”

Racial profiling in these agencies is still legally allowed- Muslims will be targeted

Rhodan 14

Maya Rhodan, Web Reporter at Time Magazine, 12-8-2014, "New Federal Racial Profiling Guidelines Worry Civil Rights Groups," *TIME*, <http://time.com/3623851/justice-department-racial-profiling-muslims-sikhs-aclu//SRawal>

But some **carve-outs—such as screenings and inspections by the Transportation Security Administration and U.S. Customs and Border Protection—have raised eyebrows among groups including the American Civil Liberties Union, Muslim Advocates and the Sikh Coalition.** **It’s baffling that even as the government recognizes that bias-based policing is patently unacceptable, it gives a green light for the FBI, TSA, and CBP to profile racial, religious and other minorities at or in the vicinity of the border and in certain national security contexts,** and does not apply the Guidance to most state and local law enforcement,” said Laura Murphy, the director of ACLU’s Washington legislative office. **Muslim Advocates,** a faith-based legal and educational advocacy organization, **echoed those sentiments.** **“While these changes are welcome,”** a statement reads, **“it is difficult to see how the guidance will improve the lives of law-abiding American Muslims who are singled out and targeted based on their faith,** not evidence of wrongdoing, **by the FBI, Customs and Border Protection, and other law enforcement agencies.”** **The Department of Justice guidelines do not apply to activities conducted by military, intelligence or diplomatic personnel.** Border screening activities are also not covered, which has been of particular concern to civil rights groups. After 9/11, sweeping counterterrorism efforts were imposed that led Arab and Muslim Americans—and some perceived to be Muslim or Arabic such as South Asians and Sikhs—to feel singled out and profiled by the federal government. A 2009 ACLU and Rights Working Group report found that **Arabs, Muslims and South Asians “have been disproportionately victimized through various government initiatives” including FBI surveillance, questioning, airline profiling and no-fly lists.**

No Enforcement

TSA regulation enforcement is ineffective- Sikh turbans are still invasively searched despite better regulation

Leadership Conference 11

The Leadership Conference, coalition charged by its diverse membership of more than 200 national organizations to promote and protect the civil and human rights of all persons in the United States, “The Reality of Racial Profiling”, <http://www.civilrights.org/publications/reports/racial-profiling2011/the-reality-of-racial.html?referrer=https://www.google.com/>, 2011//SRawal

Individuals wearing Sikh turbans or Muslim head coverings are also profiled for higher scrutiny at airports. In response to criticism from Sikh organizations, the Transportation Security Administration (TSA) recently revised its operating procedure for screening head coverings at airports. **The current procedure provides that: All members of the traveling public are permitted to wear head coverings (whether religious or not) through the security checkpoints.** The new standard procedures subject all persons wearing head coverings to the possibility of additional security screening, which may include a patdown search of the head covering. **Individuals may be referred for additional screening if the security officer cannot reasonably determine that the head area is free of a detectable threat item. If the issue cannot be resolved through a pat-down search, the individual will be offered the opportunity to remove the head covering in a private screening area.**⁶³ Despite this new procedure, and TSA's assurance that in implementing it "TSA does not conduct ethnic or religious profiling, and employs multiple checks and balances to ensure profiling does not happen,"⁶⁴ **Sikh travelers report that they continue to be profiled and subject to abuse at airports.**⁶⁵ Amardeep Singh, director of programs for the Sikh Coalition and a second-generation American, recounted the following experience in his June 2010 testimony before the Subcommittee on the Constitution, Civil Rights, and Civil Liberties of the House Judiciary Committee: Two months ago, my family and I were coming back to the United States from a family vacation in Playa Del Carmen, Mexico. At Fort Lauderdale Airport, **not only was I subjected to extra screening, but so was [my 18 month-old son Azaad].** I was sadly forced to take my son, Azaad, into the infamous glass box so that he could [be] patted down. He cried while I held him. He did not know who that stranger was who was patting him down. His bag was also thoroughly searched. His Elmo book number one was searched. His Elmo book number two was searched. His minimail truck was searched. **The time spent waiting for me to grab him was wasted time. The time spent going through his baby books was wasted time.** I am not sure what I am going to tell him when he is old enough and asks why his father and grandfather and soon him—**Americans all three**—are **constantly stopped by the TSA 100% of the time at some airports.**

Program Not Racist, TSA Officers Are

The program is not inherently racist, the TSA officers are—that means that even if the plan passes, racist behavior will still continue

Rockler 12

(Harmen, 8/20/12, Daily Orange, “Report of TSA behavior shows racist tendencies,”
<http://dailyorange.com/2012/08/report-of-tsa-behavior-shows-racist-tendencies/>, 8/1/15, SM)

The Transportation Security Administration’s attempt to observe airline passengers’ behaviors while going through airport security was revealed to be a cause for racial profiling this week. TSA officers at Logan Airport in Boston told the New York Times the program has increasingly targeted minorities to search instead of actual passengers who pose a threat. Racial profiling is not a solution to the security threat the United States faces. A security officer at the airport told the Times, “They just pull aside anyone who they don’t like the way they look — if they are black and have expensive clothes or jewelry, or if they are Hispanic.”

This is not what the intended goal of the program was. The program was launched in 2011 as a trial, though behavior detection has been used at Logan since 2003. **TSA officers were supposed to have a “casual conversation” with passengers after providing a boarding pass and ID,** according to TSA spokesman Greg Soule in the Times article. At the start of the program, Soule said, **“Officers are specifically trained to keep questions purposeful and related to detecting a passenger’s intent. This program is in no way related to passengers’ race or ethnicity.”** What was found at Logan suggests the program has not been about passengers’ behavior but their race. Some think we need to profile. Supporters of racial profiling proclaim we shouldn’t sacrifice our security for political correctness. Because the 9/11 hijackers looked Middle Eastern, we need to heavily screen those who look similar. Law enforcement officers’ instincts should be pursued so we can be safer. Not all terrorists who attack the United States have been Muslim or even look Middle Eastern. White and nonwhite individuals have committed acts of terrorism on U.S. soil. All individuals should be equally, fairly scrutinized at airport security because anyone could pose a threat — no matter his or her race. Trying to more heavily screen people who look Arabic is not only a poor response to the actual threat posed, but it may do further damage to the ability of law enforcement to protect us from actual threats. We risk alienating the people we need to help us. There is already a culture of suspicion of Middle Easterners and Muslims caused by the way law enforcement behaves. Earlier this year, the New York Police Department was found to be spying on Muslim student associations in U.S. colleges (including Syracuse University) and cataloging mosques in New Jersey. This is one part of the law enforcement system that may not be treating all citizens as equals. Accounting for other individual characteristics like age may make more sense than racial profiling. A passenger’s age could be more useful than race. The elderly and young children are less likely to pose a threat than others. We should not have to resort to racial profiling at airports to make us safe. **The behavior detection program at Logan is one among more than 100 airports that now use the program. Officers should be trained to ensure race and behavior are not confused.** Classifying certain races as more prone to attacking the U.S. is not an answer to the threat we face.

The behavioral signs that TSA officers look for are not inherently racist—the TSA officers are the ones who are racist

Cohen 15

(Kelly, 3/27/15, Washington Examiner, “TSA: Ordinary passenger behavior a sign of terrorism,”
<http://www.washingtonexaminer.com/tsa-ordinary-passenger-behavior-a-sign-of-terrorism/article/2562165/section/elizabeth-warren>, 8/1/15, SM)

Regular people who call themselves “terrible travelers” may want to be careful. Many run-of-the-mill flyers may be raising red flags without knowing, according to the Transportation Security Administration’s controversial Screening of Passengers by Observation Techniques (SPOT) program. Under the program, which is designed to pick out travelers who could be potential terrorists, specially trained TSA officers are deployed to watch and interact with passengers going through security screening at airports, working off of a checklist of signs provided by the SPOT program. The checklist, which isn’t classified but strongly protected by the agency, was obtained by the Intercept — and the behavioral clues are, interesting. Signs You Might Be a Terrorist: Exaggerated yawning, Excessive complaints about the screening process, Excessive throat clearing, Widely open staring eyes, Wearing improper attire for location, Whistling as the individual approaches the screening process, Gazing down, Exaggerated or repetitive grooming gestures, Face pale from recent shaving of beard, Rubbing or wringing of hands

Topicality Specific

T- Curtail vs Strict Scrutiny

A. CURTAIL REQUIRES THAT THE PLAN, ON FACE, REDUCES SURVEILLANCE

Webster's 10 Webster's New World College Dictionary Copyright © 2010 by Wiley Publishing, Inc., Cleveland, Ohio. Used by arrangement with John Wiley & Sons, Inc. <http://www.yourdictionary.com/curtail#websters>

Curtail transitive verb
to cut short; reduce; abridge

B. THE PLAN DOES NOT CURTAIL ON FACE

"Restrictions" are direct governmental limitations

Viterbo 12 (Annamaria, Assistant Professor in International Law – University of Torino, PhD in International Economic Law – Bocconi University and Jean Monnet Fellow – European University Institute, International Economic Law and Monetary Measures: Limitations to States' Sovereignty and Dispute, p. 166, AX)

In order **to distinguish** an exchange **restriction** from a trade measure, the **Fund chose not to give relevance to the** purposes or the **effects** of the measure **and to adopt, instead, a technical criterion that focuses on the method** followed to design said measure. An interpretation that considered the economic effects and purposes of the measures (taking into account the fact that the measure was introduced for balance of payments reasons or to preserve foreign currency reserves) would have inevitably extended the Fund's jurisdiction to trade restrictions, blurring the boundaries between the IMF and the GATT. The result of such a choice would have been that a quantitative restriction on imports imposed for balance of payments reasons would have fallen within the competence of the Fund. After lengthy discussions, in 1960 the IMF Executive Board adopted Decision No. 1034-(60/27).⁴⁶ This Decision clarified that **the distinctive feature of a restriction** on payments and transfers for current international transactions **is "whether it involves a direct governmental limitation on** the availability or use of **exchange** as such*.⁴⁷ **This is a limitation imposed directly** on the use of currency in itself, for all purposes.

The plan does not curtail - Strict Scrutiny Standards may curtail surveillance AFTER judicial ruling but it does not have a direct effect of curtailing or restricting surveillance

C. THE AFFIRMATIVE INTERPRETATION IS BAD FOR DEBATE

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. Permitting reduction by effect is unlimiting. All sorts of things affect surveillance. For example, the economy affects government spending and budgeting for surveillance, and just about everything affects the economy.

D. T IS A VOTER because the opportunity to prepare promotes better debating

T- Surveillance vs SPOT

A. Domestic surveillance is intelligence gathering on US persons

Small 8 MATTHEW L. SMALL. United States Air Force Academy 2008 Center for the Study of the Presidency and Congress, Presidential Fellows Program paper "His Eyes are

Watching You: Domestic Surveillance, Civil Liberties and Executive Power during Times of National Crisis" <http://cspc.nonprofitsoapbox.com/storage/documents/Fellows2008/Small.pdf>

Before one can make any sort of assessment of domestic surveillance policies, it is first necessary to narrow the scope of the term "domestic surveillance." **Domestic surveillance is a subset of intelligence gathering.** Intelligence, as it is to be understood in this context, is "information that meets the stated or understood needs of policy makers and has been collected, processed and narrowed to meet those needs" (Lowenthal 2006, 2). In essence, domestic surveillance is a means to an end; the end being intelligence. **The intelligence community best understands domestic surveillance as the acquisition of nonpublic information concerning United States persons** (Executive Order 12333 (3.4) (i)). With this definition domestic surveillance remains an overly broad concept. This paper's analysis, in terms of President Bush's policies, focuses on electronic surveillance; specifically, wiretapping phone lines and obtaining caller information from phone companies. Section f of the USA Patriot Act of 2001 defines electronic surveillance as:
[T]he acquisition by an electronic, mechanical, or other surveillance device of the contents of any wire or radio communication sent by or intended to be received by a particular, known United States person who is in the United States, if the contents are acquired by intentionally targeting that United States person, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes;

B. The SPOT program takes people out of line to interrogate them; that is reactive, not proactive intelligence gathering, so it's not surveillance

C. THE AFFIRMATIVE INTERPRETATION IS BAD FOR DEBATE

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. Including reactive profiling measures justifies every day police activity being topical and expands the topic too much

D. T IS A VOTER because the opportunity to prepare promotes better debating

T- Curtail vs Countergaze

A. CURTAIL REQUIRES THAT THE PLAN, ON FACE, REDUCES SURVEILLANCE

Webster's 10 Webster's New World College Dictionary Copyright © 2010 by Wiley Publishing, Inc., Cleveland, Ohio. Used by arrangement with John Wiley & Sons, Inc. <http://www.yourdictionary.com/curtail#websters>

Curtail transitive verb
to cut short; reduce; abridge

B. THE PLAN DOES NOT CURTAIL ON FACE

Countergaze increases surveillance- no scenario in which this aff results in decrease or curtailment of domestic surveillance

C. THE AFFIRMATIVE INTERPRETATION IS BAD FOR DEBATE

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. Allowing any aff that discusses surveillance, even tangentially, is unlimiting because it justifies affs that are the opposite direction of the topic verb.

D. T IS A VOTER because the opportunity to prepare promotes better debating

T-Its vs no plan

1NC

T – Its

A. USFG is the government established in the constitution

US Legal 13 "Legal Terms, Definitions, and Dictionary"

<http://definitions.uslegal.com/u/united-states-federal-government/>

The United States Federal Government is established by the US Constitution. The Federal Government shares sovereignty over the United States with the individual governments of the States of US. The Federal government has three branches: i) the legislature, which is the US Congress, ii) Executive, comprised of the President and Vice president of the US and iii) Judiciary. The US Constitution prescribes a system of separation of powers and 'checks and balances' for the smooth functioning of all the three branches of the Federal Government. The US Constitution limits the powers of the Federal Government to the powers assigned to it; all powers not expressly assigned to the Federal Government are reserved to the States or to the people.

Its means belonging to

Oxford English Dictionary, 2013

<http://www.oed.com/view/Entry/100354?redirectedFrom=its#eid>

its, adj. and pron. Pronunciation: /its/

A. adj. As genitive of the pronoun, now possessive adjective.

Of or belonging to it, or that thing (Latin ejus); also refl., Of or belonging to itself, its own (Latin suus). The reflexive is often more fully its own, for which in earlier times the own, it own, were used: see own adj. and pron.

B. pron. As possessive pronoun.

[Compare his pron.2] The absolute form of prec., used when no n. follows: Its one, its ones. rare.

B. Plan violates- not a criticism of USFG's surveillance

C. The affirmative interpretation is bad for debate

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. There are literally infinite actors of surveillance – state governments, foreign governments, schoolteachers, and security guards. They don't have to defend USFG action, but limiting critique to USFG surveillance is a necessary check on topic explosion.

D. T IS A VOTER because the opportunity to prepare promotes better debating

T- Substantial vs Mosque Outreach

A. Substantially refers to a full class or a broad range over different classes

O'Connor 2 Justice O'Connor delivered the opinion of the Court. SUPREME COURT OF THE UNITED STATES No. 00—1089 TOYOTA MOTOR MANUFACTURING, KENTUCKY, INC., PETITIONER v. ELLA WILLIAMS ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SIXTH CIRCUIT [January 8, 2002] <http://www.law.cornell.edu/supct/html/00-1089.ZO.html>

The Court of Appeals relied on our opinion in *Sutton v. United Air Lines, Inc.*, for the idea that a “class” of manual activities must be implicated for an impairment to substantially limit the major life activity of performing manual tasks. 224 F.3d, at 843. But *Sutton* said only that “[w]hen the major life activity under consideration is that of working, the statutory phrase ‘substantially limits’ requires ... that plaintiffs allege that they are unable to work in a broad class of jobs.” 527 U.S., at 491 (emphasis added). Because of the conceptual difficulties inherent in the argument that working could be a major life activity, we have been hesitant to hold as much, and we need not decide this difficult question today. In *Sutton*, we noted that even assuming that working is a major life activity, a claimant would be required to show an inability to work in a “broad range of jobs,” rather than a specific job. *Id.*, at 492. But *Sutton* did not suggest that a class-based analysis should be applied to any major life activity other than working. Nor do the EEOC regulations. In defining “substantially limits,” the EEOC regulations only mention the “class” concept in the context of the major life activity of working. 29 CFR § 1630.2(j)(3) (2001) (“With respect to the major life activity of working[,] [t]he term substantially limits means significantly restricted in the ability to perform either a class of jobs or a broad range of jobs in various classes as compared to the average person having comparable training, skills and abilities”). Nothing in the text of the Act, our previous opinions, or the regulations suggests that a class-based framework should apply outside the context of the major life activity of working.

B. Mosque outreach program violates- only cutting one small subset of a very large range of Anti-Muslim FBI practices is not substantial

http://www.huffingtonpost.com/2012/02/24/nypd-defends-tactics-over_n_1298997.html. Date Accessed- 7/13/15. Anshul Nanda)

NEW YORK -- The New York Police Department targeted Muslim mosques with tactics normally reserved for criminal organizations, according to newly obtained police documents that showed police collecting the **license plates of worshippers, monitoring them on surveillance cameras and cataloging sermons** through a network of informants.¶ The documents, obtained by The Associated Press, have come to light as the **NYPD fends off criticism of its monitoring of Muslim student groups and its cataloging of mosques and Muslim businesses in nearby Newark, N.J.**The NYPD's spokesman, Paul Browne, forcefully defended the legality of those efforts Thursday, telling reporters that its officers may go wherever the public goes and collect intelligence, even outside city limits.¶ The new documents, prepared for Police Commissioner Raymond Kelly, show how the NYPD's roster of **paid informants monitored conversations and sermons inside mosques. The records offer the first glimpse of what those informants, known informally as "mosque crawlers," gleaned from inside the houses of** worship.¶ For instance, when a Danish newspaper published inflammatory cartoons of Prophet Muhammad in September 2005, **Muslim communities around the world erupted in outrage. Violent mobs took to the streets in the Middle East.** A Somali man even broke into the cartoonist's house in Denmark with an ax.¶ In New York, thousands of miles away, it was a different story. Muslim leaders preached peace and urged people to protest lawfully. Write letters to politicians, they said. Some **advocated boycotting Danish products, burning flags and holding rallies.**¶ All of that was permissible under law and protected by the First Amendment to the Constitution. All was reported to the **NYPD by its mosque crawlers and made its way into police files for Kelly.**¶ Imam Shamsi **Ali brought up the topic of the cartoon, condemning them.** He announced a rally that was to take place on Sunday (02/05/06) near the United Nations. He asked that everyone to attend if possible and reminded everyone to keep their poise if they can make it," one report read.¶ At the Muslim Center of New York in Queens, the report said, "Mohammad Tariq Sherwani led the prayer service and urged those in attendance to participate in a demonstration at the United Nations on Sunday."¶ **When one Muslim leader suggested planning a demonstration**, one of the people involved in the discussion about how to get a permit was, in fact, working for the NYPD.¶ **It seems horrible to me that the NYPD is treating an entire religious community as potential terrorists.**" said civil rights lawyer Jethro Eisenstein, who reviewed some of the documents and is involved in a decades-old class-action lawsuit against the police department for spying on protesters and political dissidents.¶ The **lawsuit is known as the Handschu case, and a court order in that case governs how the NYPD may collect intelligence.**¶ Eisenstein said the documents prove the NYPD has violated those rules.¶ "This is a flat-out violation," Eisenstein said. "This is a smoking gun."¶ Browne, the NYPD spokesman, did not discuss specific investigations Thursday but told reporters that, because of the Handschu case, the NYPD operates under stricter rules than any other department in the country. He said police do not violate those rules.¶ His statements were intended to calm a controversy over a 2007 operation in which the NYPD mapped and photographed all of Newark's mosques and eavesdropped on Muslim businesses. Newark Mayor Cory Booker said he was never told about the surveillance, which he said offended him.¶ Booker and his police director accused the NYPD of misleading them by not revealing exactly what they were doing. Had they known, they said it never would have been permitted. But Browne said Newark police were told before and after the operation and knew exactly what it entailed.¶ Kelly, **the police commissioner, and Mayor Michael Bloomberg have been emphatic that police only follow legitimate leads of criminal activity and do not conduct preventive surveillance in ethnic communities.**¶ Former and current law enforcement officials either involved in or with direct knowledge of these programs say they did not follow leads. The officials spoke on condition of anonymity because they were not authorized to discuss the secret programs. But the documents support their claims.¶ The effort highlights one of the most difficult aspects of policing in the age of terrorism. Solving crimes isn't enough; police are expected to identify would-be terrorists and move in before they can attack.¶ There are no universally agreed upon warning signs for terrorism. Terrorists have used Internet cafes, stayed in hostels, worked out at gyms, visited travel agencies, attended student groups and prayed at mosques. So the NYPD monitored those areas. In doing so, they monitored many innocent people as they went about their daily lives.¶ Using plainclothes officers from the squad known as the Demographics Unit, police swept Muslim neighborhoods and catalogued the location of mosques. The ethnic makeup of each congregation was logged as police fanned out across the city and outside their jurisdiction, into suburban Long Island and areas of New Jersey.¶ "African American, Arab, Pakistani," police wrote beneath the photo of one mosque in Newark.¶ Investigators looked at mosques as the center of Muslim life. All their connections had to be known.¶ David Cohen, the **NYPD's top intelligence officer, wanted a source inside every mosque within a 250-mile radius of New York,** current and former officials said. **Though the officials said they never managed to reach that goal, documents show the NYPD successfully placed informants or undercover** - sometimes both - **into mosques from Westchester County, N.Y.,** to New

Jersey.¶ The NYPD used these sources to get a sense of the sentiment of worshippers whenever an event generated headlines. The goal, former officials said, was **to alert police to potential problems before they bubbled up.**¶ Even when it was clear there were no links to terrorism, **the mosque informants gave the NYPD the ability to "take the pulse" of the community,** as Cohen and other managers put it.¶ When New York Yankees pitcher Cory Lidle and his flight instructor were killed on Oct. 11, 2006, when their small plane crashed into a Manhattan high-rise apartment, fighter planes were scrambled. Within hours the FBI and Homeland Security Department said it was an accident. Terrorism was ruled out.¶ Yet for days after the event, the NYPD's mosque crawlers reported to police about what they heard at sermons and among worshippers.¶ (View the PDF documents on Danish cartoons, mosque targeting and summaries of plane crash.)¶ At the Brooklyn Islamic Center, a confidential informant "noted chatter among the regulars expressing relief and thanks to God that the crash was only an accident and not an act of terrorism," one report reads.¶ "The worshippers made remarks to the effect that `it better be an accident; we don't need any more heat," an undercover officer reported from the Al-Tawheed Islamic Center in Jersey City, N.J.¶ In some instances, the **NYPD put cameras on light poles and trained them on mosques, documents show.** Because the **cameras were in public space, police didn't need a warrant to conduct the surveillance.**¶ **Police also wrote down the license plates of cars in mosque parking lots,** documents show. In some instances, **police in unmarked cars outfitted with electronic license plate readers would drive down the street and record the plates of everyone parked near the mosque,** former officials recalled.¶ "They're viewing Muslims like they're crazy.

C. The affirmative interpretation is bad for debate

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. There are literally infinite actors and programs of surveillance – state governments, foreign governments, schoolteachers, and security guards. Only creating minimal change in one subset of surveillance creates an infinite number of mechanisms to prepare for

D. T IS A VOTER because the opportunity to prepare promotes better debating

--Losing arguments

*Capitalization PIC.....(okay Richard)

1NC

Text: The United States federal government should _____

Counterplan competes- it doesn't capitalize the term "federal government"

Capitalizing the term "federal government" creates tacit acceptance of state power

Lock 02

[Neil, "State Your Terms!"]

In English, **capital letters are not normally used for nouns**, except for proper names and for the first word of a sentence. **However, it is conventional to use capital letters for the names of establishment institutions** and personages. **Examples of such** words **are government**, king, parliament, president, **state**, church, pope. **To dignify these words with capital letters** – Government, President, State, Church, for example – **gives to the reader** an almost **subliminal message of power**, respect, **and** even **reverence**. But, as historians and lovers of freedom know, many of **these organisations** and individuals **have shown**, by their actions, **that they are not worthy of** any **such** respect or reverence.

And capitalization empowers state bureaucracy

Parkinson 03

[Rob Parkinson has 35 years of experience in management communications — gained as a consultant, an instructor, a manager, an editor and a writer in both government and the private sector. He has specialized in briefings for senior executives for 15 years, including six years as the editor for the Deputy Minister of Natural Resources, Government of Canada. In that capacity, he designed departmental standards for executive documents that brought about dramatic improvements in the quality of briefing material prepared for the Minister and the Deputy Minister. M.B.A from the University of Ottawa. "Writing for Results"]

We often overuse capitals — sometimes out of fear of offending important people, sometimes to show that a certain word is important to us. However, overuse of capitals, particularly when addressing outside readers, can convey the image of a bureaucracy that is overawed by its own concepts and processes.

Strong state bureaucracy makes genocide and war inevitable

Martin 90

[Brian Martin, associate professor in Science, Technology and Society at the University of Wollongong, UPROOTING THE WAR SYSTEM,, <http://www.uow.edu.au/arts/sts/bmartin/pubs/90uw/uw07.html>]

Is the state system really so bad? War is the most obvious indictment of the system, and this alone should be enough to justify questioning the state. As wars have become more destructive, there is no sign that any steps to re-examine or transform the state system are being taken by state elites. This should not be surprising. **War is not simply a by-product of the state system, to be moderated and regulated when it becomes too dangerous to populations. Rather, war is part and parcel of the state system, so the destructiveness of war makes little difference. State elites** (and many others) **see the world as a state-structured world, and all action is premised on this perspective. War is the external manifestation of state violence. Political repression is its internal form. Political freedoms are not only at a premium under military dictatorships and state socialism, but are also precarious in the representative democracies, especially in relation to 'national security.'** One of the most telling indictments **of the state system** is found in Leo Kuper's book *Genocide*. Kuper **documents the most horrific exterminations in this century, including the killing of the Jews by the Nazis, the massacre of the Bangladeshis by the Pakistan army** in 1971 **and the extermination in Cambodia** beginning in 1975. What is damning of the state system is **the reluctance of governments** (and of that assemblage of state actors, the United Nations) **to intervene against** even the most well documented **genocidal killing. The reason** for this reluctance **is** the concern for the autonomy of the state. In short, **maintaining the 'integrity' of the state system is more important for state elites than intervening against genocide. There are many other social problems caused, sustained or aggravated by the state, including suppression of dissent, state support for corporate elites,** and the activities of spy agencies and secret police. **These problems stem essentially from the system of unequal power and privilege which the state both is part of and sustains. The state** is not the only way to embody and sustain unequal power and privilege: it **is a particular way involving bureaucracies for administration and military forces for defending against external and internal enemies.**

Sidhu, Associate Professor of Law, B.A. 2000 from University of Pennsylvania, M.A. 2003 from Johns Hopkins University, J.D. 2004 from The George Washington University, Member of the Maryland Bar, served as a fellow at the Supreme Court of the United States, received a Distinguished Service Award, taught at the Georgetown University Law Center and University of Baltimore School of Law, held visiting research posts at the Oxford University Faculty of Law and Georgetown University Law Center, held fellowships at Harvard University and Stanford University research centers, presented at various law schools, including the University of Pennsylvania Law School and Stanford Law School, participated in programs at leading think tanks, such as the Aspen Institute and Council on Foreign Relations, served as a legal observer of the military commissions at Guantanamo, cited by the Solicitor General of the United States and U.S. Department of Justice, cited in briefs submitted to the Supreme Court of the United States, 2007 ("The Chilling Effect of Government Surveillance Programs on the Use of the Internet by Muslim-Americans," *7 U. Md. L.J. Race, Religion, Gender & Class*, Available online at <http://heinonline.org/HOL/Page?handle=hein.journals/margin7&collection=journals&page=375>, Accessed on 6/21/15)

Identity: Of the 311 respondents, all identified themselves as Muslims.⁸³

General Internet Usage: A vast majority of respondents (80.1%) used the Internet prior to 9/11, while the rest did not. **After 9/11, the Internet usage of the respondents increased 7.7%**, with 87.8% stating that they have used the Internet after the terrorist attacks, while only 11.9% reporting that they have not. The trend towards greater Internet usage continued, as 90.4% of respondents note that they "currently use" the Internet, and only 9.3% state that they do not.

Views Regarding Government Surveillance: 71.7% of respondents believe (48.9% strongly, 22.8% somewhat) that the government is currently monitoring the activities of Muslims in the United States. By contrast, only 4.2% (1.6% somewhat and 2.6% strongly) disbelieve that such monitoring is taking place. Similarly, 70.7% of respondents believe (45.0% strongly, 25.7% somewhat) that the government is currently monitoring the Internet activities of

Muslims in the United States. Only 4.8% disbelieve (2.9% somewhat, 1.9% strongly) that such monitoring is taking place.

Alterations in Behavior--Generally: **86.8% of respondents said they have not changed at all their general activities after 9/11 due to a concern that the government may be monitoring their activities**. Only 11.6% of respondents changed their general activities (6.1% made slight changes, 2.3% made moderate changes, 1.6% made many changes, 1.6% made significant changes) due to this concern.

65.9% of respondents stated that they were not personally aware of any other Muslims in the United States who changed, in any way, their general activities after 9/11, because of a concern that the government may be monitoring their activities. 25.4% of respondents stated they were personally aware of any other Muslims in the United States who changed, in any way, their general activities after 9/11, because of a concern that the government may be monitoring their activities.

Alterations in Behavior-Internet Usage: **89.1% of respondents said they have not changed their Internet usage at all-the sites they visit or the amount of time they spend on the Internet-after 9/11 due to a concern that the government may be monitoring their activities.** Only 8.4% of respondents changed their Internet usage (3.9% made slight changes, 1.6% made moderate changes, 1.9% made many changes, 1.0% made significant changes) due to this concern. Of those who stated that they have made changes in their Internet usage, 57.6% noted that they did not visit websites after 9/11, because of a concern that the government may be monitoring their online activities.

77.2% of respondents stated that they were not personally aware of any other Muslims in the United States who changed, in any way, their Internet usage after 9/11, because of a concern that the government may be monitoring their activities. 11.9% of respondents stated they were personally aware of any other Muslims in the United States who changed, in any way, their Internet usage after 9/11, because of a concern that the government may be monitoring their activities. Of these respondents, 45.6% stated that they are personally aware of other Muslim-Americans who have not visited certain web sites after 9/11, because of a concern that the government may be monitoring their online activities.

McMillen 06 [Lucas McMillen, University of St. Thomas, "Eye on Islam: Judicial Scrutiny Along the Religious Profiling/Suspect Description Reliance Spectrum", [\[http://ir.stthomas.edu/cgi/viewcontent.cgi?article=1107&context=ustlj\]](http://ir.stthomas.edu/cgi/viewcontent.cgi?article=1107&context=ustlj)]VIGNESH

Immediately after the September 11th terrorist attacks, Attorney General John Ashcroft converted the Federal Bureau of Investigation into a counterterrorism agency: "That day, in those early hours," said Ashcroft in a 2002 press conference announcing the Bureau's reorientation, "the prevention of terrorist acts became the central goal of the law enforcement and national security mission of the FBI."¹ But, while Ashcroft may have properly redirected the FBI toward confronting the primary threat to United States safety and security, his identification of our enemy was not as particular as it could have been. In 2004, the 9/11 Commission aimed for further clarity: [T]he enemy is not just "terrorism," some generic evil. This vagueness blurs the strategy. The catastrophic threat at this moment in history is more specific. It is the threat posed by **Islamist terrorism**-especially the al Qaeda network, its affiliates, and its ideology. ² Indeed, no characteristic unites the perpetrators of recent terrorist acts so much as their Muslim identity. Middle Eastern nationality may be thought to provide the link, but this trait proves to be underinclusive: to name just a few examples, Richard Reid, the "shoe bomber," is a Muslim who was born and educated in the United Kingdom,³ as were the four July 7th London Underground bombers.⁴ Zacarias Moussaoui, the only person to be charged and convicted by United States courts in connection with the September 11th terrorist attacks, is a French Muslim.⁵

Earnest James Ujaama, an indicted al-Qaeda associate, is a Muslim convert who was born in Denver and raised in Seattle.⁶ Furthermore, of the twenty-six terrorists currently on the FBI's Most Wanted List, three are from the Philippines; two are from Kenya; one, Abdul Rahman Yasin, is from Indiana—all are Muslims.⁷ Nor does Arab ethnicity serve as a reliably accurate terrorist-identifying characteristic: on December 5th, 2005, a white woman who was raised as a Catholic in Belgium became the first European Muslim suicide bomber when she detonated herself in Baquba.⁸ Indeed, the use of stereotype-defying terrorist operatives is entirely consistent with al-Qaeda's expressed intent to employ deceptive tactics in carrying out its attacks.⁹ Of course, the one characteristic that Islamist radicals cannot obscure by selective conscription is Islamic identity. Accordingly, Muslim identity should be considered the attribute that correlates most positively with terrorist involvement; or, in the words of Abdel Rahman al-Rashed, the general manager of Al-Arabiya, a top pan-Arab television station in the Middle East,¹⁰ "It is a certain fact that not all Muslims are terrorists. but it is equally certain, and exceptionally painful, that almost all terrorists are Muslims."¹¹ Our question then becomes, what is the proper role for Muslim identity in our law-enforcement officials' preventive counterterrorism efforts? It is a question that calls for a survey of our Constitution as well as our conscience, as the answer may compel us to contemplate taking permissible but regrettable measures against a particular religious group. In 1785, James Madison wrote: "[A just government] will be best supported by protecting every citizen in the enjoyment of his Religion with the same equal hand which protects his person and his property."¹² But what shall be done when those two ideals are incompatible, when protecting persons and their property requires the government to take action that may infringe on others' religious enjoyment? We are faced with bad (ostracizing Muslims) and worse (suffering another terrorist attack) choices, a predicament expressed in the dour words of the reliably relevant Winston Churchill, who, speaking in a different context, said, "We seem to be very near the bleak choice between War and Shame. My feeling is that we shall choose Shame, and then have War thrown in a little later on even more adverse terms than at present."¹³ To assist legal and law enforcement authorities in avoiding both Shame and War, this Article will aim to provide a legal framework allowing law enforcement officials greater flexibility in targeting religious groups. In doing so, it will focus exclusively on religious-group targeting and will not address the related issues of racial and ethnic profiling, which have been adequately covered by other commentators. I will begin by discussing the difference between acts of religious profiling and acts of suspect description reliance, and then discuss how most acts of religious-group targeting can be plausibly characterized as either. Finally, I will recommend that courts adopt a view toward religious-group targeting that allows law-enforcement officials greater flexibility in countering the Islamist terrorist threat.

Solvency is impossible—Muslims will always be unsure of whether they are being surveyed and any policy will be circumvented

Kundani 14 [Arun Kundani, The Guardian, March 28, 2014, "No NSA Reform can fix the American Islamophobic Surveillance Complex", <http://www.theguardian.com/commentisfree/2014/mar/28/nsa-reform-american-islamophobic-surveillance-complex>] JMOV

Friday 28 March 2014 11.02 EDT Last modified on Friday 3 October 2014 09.03 EDT ¶ Share on Facebook ¶ Share on Twitter ¶ Share via Email ¶ Share on LinkedIn ¶ Share on Google+ ¶ Shares ¶ 1,972 ¶ Better oversight of the sprawling American national security apparatus may finally be coming: President Obama and the House Intelligence Committee unveiled plans this week to reduce bulk collection of

telephone records. The debate opened up by Edward Snowden's whistle-blowing is about to get even more legalistic than all the parsing of hops and stores and metadata.¶ These reforms may be reassuring, if sketchy. But for those living in so-called "suspect communities" – Muslim Americans, left-wing campaigners, "radical" journalists – the days of living on the receiving end of excessive spying won't end there.¶ How come when we talk about spying we don't talk about the lives of ordinary people being spied upon? While we have been rightly outraged at the government's warehousing of troves of data, we have been less interested in the consequences of mass surveillance for those most affected by it – such as Muslim Americans.¶ In writing my book on Islamophobia and the War on Terror, I spoke to dozens of Muslims, from Michigan to Texas and Minnesota to Virginia. Some told me about becoming aware their mosque was under surveillance only after discovering an FBI informant had joined the congregation. Others spoke about federal agents turning up at colleges to question every student who happened to be Muslim. All of them said they felt unsure whether their telephone calls to relatives abroad were wiretapped or whether their emails were being read by government officials.¶ There were the young Somali Americans in Minnesota who described how they and their friends were questioned by FBI agents for no reason other than their ethnic background. Some had been placed under surveillance by a local police department, which disguised its spying as a youth mentoring program and then passed the FBI intelligence on Somali-American political opinions.¶ There were the Muslim students at the City University of New York who discovered that fellow students they had befriended had been informants all along, working for the New York Police Department's Intelligence Division and tasked with surveilling them. There was no reasonable suspicion of any crime; it was enough that the targeted students were active in the Muslim Students Association.¶ And then there was Luqman Abdullah, a Detroit-based African-American imam, whose mosque was infiltrated by the FBI, leading to a 2009 raid in which he was shot and killed by federal agents. The government had no evidence of any terrorist plot; the sole pretext was that Abdullah had strongly critical views of the US government.¶ These are the types of people whom the National Security Agency can suspect of being two "hops" away from targets. These are the types of "bad guys" referred to by outgoing NSA director Keith Alexander. Ten years ago, around 100,000 Arabs and Muslims in America had some sort of national security file compiled on them. Today, that number is likely to be even higher.¶ A study published last year by the Muslim American Civil Liberties Coalition documented the effects of this kind of mass surveillance. In targeted communities, a culture of enforced self-censorship takes hold and relationships of trust start to break down. As one interviewee said: "You look at your closest friends and ask: are they informants?"¶ This is what real fear of surveillance looks like: not knowing whom to trust, choosing your words with care when talking politics in public, the unpredictability of state power. Snowden has rightly drawn our attention to the power of what intelligence agencies call "signals intelligence" – the surveillance of our digital communications – but equally important is "human intelligence", the result of informants and undercover agents operating within communities.¶ Underpinning all the surveillance of Muslim Americans is an assumption that Islamic ideology is linked to terrorism. Yet, over the last 20 years, far more people have been killed in acts of violence by right-wing extremists than by Muslim American citizens or permanent residents. The huge numbers being spied upon are not would-be terrorists but law-abiding people, some of whom have "radical" political opinions that still ought to be protected by the First Amendment to the constitution. Just the same, there are plenty of other minority Americans who are not would-be "home-grown" terrorists – but they still live in fear that they might be mistaken as one.¶ So let's reform the NSA and its countless collections. But let's not forget the FBI's reported 10,000 intelligence analysts working on counter-terrorism and the 15,000 paid informants helping them do it. Let's not forget the New York Police Department's intelligence and counter-terrorism division with its 1,000 officers, \$100m budget and vast program of surveillance. Let's not forget the especially subtle psychological terror of being Muslim in America, where, sure, maybe your phone calls won't be stored for much longer, but there's a multitude of other ways you're always being watched.¶

Alt cause — local policies enforce racist surveillance, plan can't reform these

AP 12 — Samantha Henry, Matt Appuzzo, Wayne Perry, reporters for the Associated Press, American multinational nonprofit news agency, 2012 (“New Jersey Muslims Angry Over NYPD Surveillance Findings,” *The Huffington Post*, May 25, Available online at http://www.huffingtonpost.com/2012/05/25/new-jersey-muslims-cangry-nypd-surveillance_n_1545319.html, Accessed on 6/14/15)

TRENTON, N.J. -- Muslim leaders in New Jersey say they are angry but uncertain what their next step will be after the state's attorney general found that New York City police did not violate any laws in its surveillance of Muslim businesses, mosques and student groups in New Jersey. Several mosque leaders who attended a meeting Thursday with Attorney General Jeffrey S. Chiesa said they were shocked he found no violation of state criminal or civil laws by the NYPD in operations that many Muslims considered unjustified surveillance based solely on religion. "This is a big violation of our civil rights, and we need to go to our communities and explain it?" Imam Mohammad Qatanani, the spiritual leader of the Islamic Center of Passaic County said Thursday as he left the meeting. Qatanani said he would not tell his congregants to stop collaborating with law enforcement, but added, "We need from them to show us the same seriousness and honesty in building bridges with the Muslim community." Chiesa had been asked by Gov. Chris Christie, who appointed him, to look into operations in New Jersey that were part of a widespread NYPD program to collect intelligence on Muslim communities both inside New York and beyond. Undercover officers and informants eavesdropped in Muslim cafes and monitored sermons, even when there was no evidence of a crime. They infiltrated Muslim student groups, videotaped mosque-goers or collected their license plate numbers as they prayed. The result was that many innocent business owners, students and others were cataloged in police files. The interstate surveillance efforts, revealed by The Associated Press earlier this year, angered many Muslims and New Jersey officials. Some, like Newark Mayor Cory Booker and the state's top FBI official, criticized the tactics. Others, like Christie, focused more on the fact that the NYPD didn't tell New Jersey exactly what it was up to. In response, Chiesa launched what he described as a fact-finding review. Further, authorities found that New Jersey has no laws barring outside law enforcement agencies from secretly conducting operations in the state, representatives of the attorney general's office told the AP. However, New York police have agreed to meet with New Jersey law enforcement regularly to discuss counterterrorism intelligence and operations, the attorney general said.

NSA reforms can't solve racist targeting — too deeply ingrained to change

Kundnani 14 — Arun Kundnani, an Adjunct Professor of Media, Culture, and Communication at New York University, teaches terrorism studies at John Jay College, has been a Visiting Fellow at Leiden University, Netherlands, an Open Society Fellow, and the Editor of the journal *Race and Class*, author of *The End of Tolerance: Racism in 21st Century Britain*, 2014 (“No NSA reform can fix the American Islamophobic surveillance complex,” *The Guardian*, March 28, Available online at <http://www.theguardian.com/commentisfree/2014/mar/28/nsa-reform-american-islamophobic-surveillance-complex>, Accessed on 6/20/15)

In writing my book on Islamophobia and the War on Terror, I spoke to dozens of Muslims, from Michigan to Texas and Minnesota to Virginia. The huge numbers being spied upon are not would-be terrorists but law-abiding people, some of whom have "radical" political opinions that still ought to be protected by the First Amendment to the constitution. Just the same, there are plenty of other minority Americans who are not would-be "home-grown" terrorists – but they still live in fear that they might be mistaken as one. So let's reform the NSA and its countless collections. But let's not forget the FBI's reported 10,000 intelligence analysts working on counter-terrorism and the 15,000 paid informants helping them do it. Let's not forget the New York Police Department's intelligence and counter-terrorism division with its 1,000 officers, \$100m budget and vast program of surveillance. Let's not forget the especially subtle psychological terror of being Muslim in America, where, sure, maybe your phone calls won't be stored for much longer, but there's a multitude of other ways you're always being watched.

Aff can't solve — Anti-Arab sentiment is entrenched in mainstream media and history

Salaita 6 — Steven George Salaita, scholar, author and public speaker, received his B.A. in political science from Radford University in 1997, his M.A. in English from Radford in 1999, and completed his Ph.D. at the University of Oklahoma in Native American studies with a literature emphasis, became an assistant professor of English at University of Wisconsin in Whitewater, where he taught American and ethnic American literature until 2006, associate professor of English at Virginia Tech, won a 2007 Gustavus Myers Outstanding Book Award for writing the book *Anti-Arab Racism in the USA: Where It Comes from and What it Means for Politics Today*, 2006 ("9/11, Anti-Arab Racism, and the Mythos of National Pride,"

Beyond Orientalism and Islamophobia, Fall, Available online at https://muse.jhu.edu/journals/new_centennial_review/v006/6.2salaita.pdf, Accessed on 6/23/15)

My second observation that anti-Arab racism is not confined to the political right also is worth analysis. Racism, as writers from Elizabeth Cook-Lynn to bell hooks have illustrated, is never limited to particular social or discursive movements, nor is it ever rooted in consistent sites of cultural or linguistic production. Any comprehensive survey of popular opinion in the United States over the past decade (a time frame that purposely straddles 9/11) will demonstrate that the blatant anti-Arab racism of the political right is, using a vocabulary appropriate to specific political agendas, **reinscribed continually in the discourse, or at least the ethos, of mainstream and progressive media.** For instance, leftist liberal publications such as Dissent, Tikkun, and MoveOn.org have been guilty of expressing racist attitudes either in the form of support for Palestinian dispossession or by totalizing all Arabs and Muslims as potential terrorists; or the racism arrives subtly by precluding Arabs from speaking on their own behalf. A similar guilt is shared by mainstream (supposedly liberal) publications such as the New York Times, Newsweek, Los Angeles Times, and Slate.com, which, given their corporate obligations, cannot realistically be expected to attack anti-Arab racism when it is so fundamental to the interests of American capitalism (and to the survival of the publications). Of major concern to this essay is the recognition that, in keeping with the seminal work of Louis Althusser and Terry Eagleton, we cannot seriously interrogate racism by attributing it solely to one political ideology without analyzing how the racism is interpolated through a multitude of discourses at the benefit of various ideologies. Beyond this intercultural observation, we can say that anti-Arab racism has specific historical dimensions that render it unique even as it has been an inheritor of countless tensions and anxieties. Some of those dimensions—travel narratology, Orientalist scholarship, imperialism—have been discussed by others in some detail; the dimension I invariably find most interesting is the relationship of anti-Arab racism with settler colonization, both in the New World and Holy Land. This relationship indicates that a centuries-old Holy Land mania in the United States not only facilitated what Cook-Lynn (2001) calls “anti-Indianism,” but has allowed the anti-Indianism to evolve into support for a new Messianic conquest that positions today’s Arabs in a fascinating theological continuum. If Natives were the first victims of racism in North America, then **Arabs, the new schematic evildoers, are merely the latest to be the first.**

Security Good

Security endorsement is necessary to explore human becoming and open space for life possibilities

Booth 2005 (Ken – visiting researcher – US Naval War College, Critical Security Studies and World Politics, p. 22)

The best starting point for conceptualizing security lies in the real conditions of insecurity suffered by people and collectivities. Look around. What is immediately striking is that **some degree of insecurity**, as a life-determining condition, **is universal.**

To the extent an individual or group **is insecure, to the extent their life choices and changes are taken away**; this **is because of the resources and energy they need to invest in seeking safety from domineering threats**—whether these are the lack of food for one’s children, or organizing to resist a foreign aggressor. **The corollary of the relationship between insecurity and a determined life is that a degree of security creates life possibilities.** Security might therefore be conceived **as synonymous with opening up space in people’s lives. This allows for individual and collective human becoming**—the capacity to have some choice about living differently—**consistent with the same but different search by others.** Two interrelated conclusion follow from this. First, security can be understood as an instrumental value; it frees its possessors to a greater or lesser extent from life-determining constraints and so allows different life possibilities to be explored. Second, **security is not synonymous simply with survival.** One can survive without being secure (the experience of refugees in long-term camps in war-torn parts of the world, for example). **Security is therefore more than mere animal survival** (basic animal existence). **It is survival-plus, the plus being the possibility to explore human becoming. As an instrumental value, security is sought because it free people(s) to some degree to do other than deal with threats to their human being. The achievement** of a level **of security**—and security is always relative — **gives to individuals and groups some time, energy, and scope to choose to be** or become, **other than merely surviving** as human biological organisms. **Security is an important dimension of the process by which the human species can reinvent itself** beyond the merely biological.

Realism

Realism and securitization are inevitable

Thayer 2004 – Thayer has been a Fellow at the Belfer Center for Science and International Affairs at the Kennedy School of Government at Harvard University and has taught at Dartmouth College and the University of Minnesota (*Darwin and International Relations: On the Evolutionary Origins of War and Ethnic Conflict*, University of Kentucky Press, 2004, pg. 75-76)

The central issue here is what causes states to behave as offensive realists predict. Mearsheimer advances a powerful argument that anarchy is the fundamental cause of such behavior. **The fact that there is no world government compels the leaders of states to take steps to ensure their security, such as striving to have a powerful military, aggressing when forced to do so, and forging and maintaining alliances.** This is what neorealists call a self-help system: leaders of states are forced to take these steps because nothing else can guarantee their security in the anarchic world of international relations. I argue that **evolutionary theory also offers a fundamental cause for offensive realist behavior. Evolutionary theory explains why individuals are motivated to act as offensive realism expects**, whether an individual is a captain of industry or a conquistador. My argument is that anarchy is even more important than most scholars of international relations recognize. **The human environment of evolutionary adaptation was anarchic**; our ancestors lived in a state of nature in **which resources were poor and dangers from other humans and the environment were great**—so great that it is truly remarkable that a mammal standing three feet high—without claws or strong teeth, not particularly strong or swift—survived and evolved to become what we consider human. Humans endured because natural selection gave them the right behaviors to last in those conditions. **This environment produced the behaviors examined here: egoism, domination, and the in-group/out-group distinction. These specific traits are sufficient to explain why leaders will behave, in the proper circumstances, as offensive realists expect them to behave. That is, even if they must hurt other humans or risk injury to themselves, they will strive to maximize their power**, defined as either control over others (for example, through wealth or leadership) or control over ecological circumstances (such as meeting their own and their family’s or tribes need for food, shelter, or other resources).

AT: Threatcon -> War

Construction of threats does not cause wars

Kaufman 09 (Stuart J. Prof Poli Sci and IR – U Delaware, "Narratives and Symbols in Violent Mobilization: The Palestinian-Israeli Case," *Security Studies* 18:3, 400 – 434)

Even when hostile narratives, group fears, and opportunity are strongly present, war occurs only if these factors are harnessed. Ethnic narratives and fears must combine to create significant ethnic hostility among mass publics. Politicians must also seize the opportunity to manipulate that hostility, evoking hostile narratives and symbols to gain or hold power by riding a wave of chauvinist mobilization. Such mobilization is often spurred by prominent events (for example, episodes of violence) that increase feelings of hostility and make chauvinist appeals seem timely. If the other group also mobilizes and if each side's felt security needs threaten the security of the other side, the result is a security dilemma spiral of rising fear, hostility, and mutual threat that results in violence. A virtue of this symbolist theory is that symbolist logic explains why ethnic peace is more common than ethnonationalist war. Even if hostile narratives, fears, and opportunity exist, severe violence usually can still be avoided if ethnic elites skillfully define group needs in moderate ways and collaborate across group lines to prevent violence: this is consociationalism. ¹⁷ War is likely only if hostile narratives, fears, and opportunity spur hostile attitudes, chauvinist mobilization, and a security dilemma.

Terror Apoc good

Critical terror studies are garbage

Jones and Smith 9 – * University of Queensland, Queensland, Australia AND ** King's College, University of London, London, UK (David and M.L.R., "We're All Terrorists Now: Critical—or Hypocritical—Studies "on" Terrorism?," *Studies in Conflict & Terrorism*, Volume 32, Issue 4 April 2009 , pages 292 – 302, Taylor and Francis)

The journal, in other words, is not intended, as one might assume, to evaluate critically those state or non-state actors that might have recourse to terrorism as a strategy. Instead, the journal's ambition is to deconstruct what it views as the ambiguity of the word "terror," its manipulation by ostensibly liberal democratic state actors, and the complicity of "orthodox" terrorism studies in this authoritarian enterprise. Exposing the deficiencies in any field of study is, of course, a legitimate scholarly exercise, but what the symposium introducing the new volume announces questions both the research agenda and academic integrity of journals like *Studies in Conflict and Terrorism* and those who contribute to them. Do these claims, one might wonder, have any substance?¶ Significantly, the original proposal circulated by the publisher Routledge and one of the editors, Richard **Jackson, suggested** some uncertainty concerning the preferred title of the journal. *Critical Studies on Terrorism* appeared last on a list where the first choice was *Review of Terror Studies*. Evidently, the concision of a review fails to capture the critical perspective the journal promotes. Criticism, then, is central to the new journal's philosophy and the adjective connotes a distinct ideological and, as shall be seen, far from pluralist and inclusive purpose. So, one might ask, what exactly does a critical approach to terrorism involve?¶ What it Means to be Critical¶ The editors and contributors explore what it means to be "critical" in detail, repetition, and opacity, along with an excessive fondness for italics, in the editorial symposium that introduces the first issue, and in a number of subsequent articles. The editors inform us that the study of terrorism is "a growth industry," observing with a mixture of envy and disapproval that "literally thousands of new books and articles on terrorism are published every year" (pp. 1-2). In adding to this literature the editors premise the need for yet another journal on their resistance to what currently constitutes scholarship in the field of terrorism study and its allegedly uncritical acceptance of the Western democratic state's security perspective.¶ Indeed, to be critical requires a radical reversal of what the journal assumes to be the typical perception of terrorism and the methodology of terrorism research. To focus on the strategies practiced by non-state actors that feature under the conventional denotation "terror" is, for the critical theorist, misplaced. As the symposium explains, "acts of clandestine non-state terrorism are committed by a tiny number of individuals and result in between a few hundred and

a few thousand casualties per year over the entire world (original italics) (p. 1). The United States's and its allies' preoccupation with terrorism is, therefore, out of proportion to its effects.¹ At the same time, the more pervasive and repressive terror practiced by the state has been "silenced from public and ... academic discourse" (p. 1).¶ **The complicity of terrorism studies with the increasingly authoritarian demands of Western, liberal state and media practice, together with the moral and political blindness of established terrorism analysts to this relationship forms the journal's overriding assumption** and one that its core contributors repeat ad nauseam. Thus, Michael Stohl, in his contribution "Old Myths, New Fantasies and the Enduring Realities of Terrorism" (pp. 5-16), not only discovers ten "myths" informing the understanding of terrorism, but also finds that these myths reflect a "state centric security focus," where analysts rarely consider "the violence perpetrated by the state" (p. 5). He complains that the press have become too close to government over the matter. Somewhat contradictorily Stohl subsequently asserts that media reporting is "central to terrorism and counter-terrorism as political action," that media reportage provides the oxygen of terrorism, and that politicians consider journalists to be "the terrorist's best friend" (p. 7).¶ Stohl further compounds this incoherence, claiming that "the media are far more likely to focus on the destructive actions, rather than on ... grievances or the social conditions that breed [terrorism]—to present episodic rather than thematic stories" (p. 7). He argues that terror attacks between 1968 and 1980 were scarcely reported in the United States, and that reporters do not delve deeply into the sources of conflict (p. 8). All of this is quite contentious, with no direct evidence produced to support such statements. The "media" is after all a very broad term, and to assume that it is monolithic is to replace criticism with conspiracy theory. Moreover, even if it were true that the media always serves as a government propaganda agency, then by Stohl's own logic, terrorism as a method of political communication is clearly futile as no rational actor would engage in a campaign doomed to be endlessly misrepresented.¶ Nevertheless, the notion that an inherent pro-state bias vitiates terrorism studies pervades the critical position. Anthony Burke, in "The End of Terrorism Studies" (pp. 37-49), asserts that established analysts like Bruce Hoffman "specifically exclude states as possible perpetrators" of terror. Consequently, the emergence of "critical terrorism studies" "may signal the end of a particular kind of traditionally state-focused and directed 'problem-solving' terrorism studies—at least in terms of its ability to assume that its categories and commitments are immune from challenge and correspond to a stable picture of reality" (p. 42).¶ Elsewhere, Adrian Guelke, in "Great Whites, Paedophiles and Terrorists: The Need for Critical Thinking in a New Era of Terror" (pp. 17-25), considers British government-induced media "scare-mongering" to have legitimated an "authoritarian approach" to the purported new era of terror (pp. 22-23). Meanwhile, Joseba Zulaika and William A. Douglass, in "The Terrorist Subject: Terrorist Studies and the Absent Subjectivity" (pp. 27-36), find the War on Terror constitutes "*the single*," all embracing paradigm of analysis where the critical voice is "not allowed to ask: what is the reality itself?" (original italics) (pp. 28-29). The construction of this condition, they further reveal, if somewhat abstrusely, reflects an abstract "desire" that demands terror as "an ever-present threat" (p. 31). In order to sustain this fabrication: "Terrorism experts and commentators" function as "realist policemen"; and not very smart ones at that, who while "gazing at the evidence" are "unable to read the paradoxical logic of the desire that fuels it, whereby *lack turns to excess*" (original italics) (p. 32). Finally, Ken Booth, in "The Human Faces of Terror: Reflections in a Cracked Looking Glass" (pp. 65-79), reiterates Richard Jackson's contention that state terrorism "is a much more serious problem than non-state terrorism" (p. 76).¶ **Yet, one searches in vain in these articles for evidence to support the ubiquitous assertion of state bias: assuming this bias in conventional terrorism analysis as a fact seemingly does not require a corresponding concern with evidence of this fact, merely its continual reiteration by conceptual fiat. A critical perspective dispenses not only with terrorism studies but also with the norms of accepted scholarship.** Asserting what needs to be demonstrated commits, of course, the elementary logical fallacy *petitio principii*. But critical theory apparently emancipates (to use its favorite verb) its practitioners from the confines of logic, reason, and the usual standards of academic inquiry.¶ Alleging a constitutive weakness in established scholarship without the necessity of providing proof to support it, therefore, appears to define the critical posture. **The unproved "state centrality" of terrorism studies serves as a platform for further unsubstantiated accusations about the state of the discipline. Jackson and his fellow editors**, along with later claims by Zulaika and Douglass, and Booth, again assert that "orthodox" analysts rarely bother "to interview or engage with those involved in 'terrorist' activity" (p. 2) or spend any time "on the ground in the areas most affected by conflict" (p. 74). Given that Booth and Jackson spend most of their time on the ground in Aberystwyth, Ceredigion, not a notably terror rich environment if we discount the operations of *Meibion Glyndwr* who would as a matter of principle avoid *pob sais* like Jackson and Booth, this seems a bit like the pot calling the kettle black. It also overlooks the fact that *Studies in Conflict and Terrorism* first advertised the problem of "talking to terrorists" in 2001 and has gone to great lengths to rectify this lacuna, if it is one, regularly publishing articles by analysts with first-hand experience of groups like the Taliban, Al Qaeda and *Jemaah Islamiyah*.¶ A consequence of avoiding primary research, it is further alleged, leads conventional analysts uncritically to apply psychological and problem-solving approaches to their object of study. This propensity, Booth maintains, occasions another unrecognized weakness in traditional terrorism research, namely, an inability to engage with "the particular dynamics of the political world" (p. 70). Analogously, Stohl claims that "the US and English [sic] media" exhibit a tendency to psychologize terrorist acts, which reduces "structural and political problems" into issues of individual pathology (p. 7). Preoccupied with this problem-solving, psychopathologizing methodology, terrorism analysts have lost the capacity to reflect on both their practice and their research ethics.¶ By contrast, the critical approach is not only self-reflective, but

also and, for good measure, self-reflexive. In fact, the editors and a number of the journal's contributors use these terms interchangeably, treating a reflection and a reflex as synonyms (p. 2). A cursory encounter with the *Shorter Oxford Dictionary* would reveal that they are not. Despite this linguistically challenged misidentification, "reflexivity" is made to do a lot of work in the critical idiom. Reflexivity, the editors inform us, requires a capacity "to challenge dominant knowledge and understandings, is sensitive to the politics of labelling ... is transparent about its own values and political standpoints, adheres to a set of responsible research ethics, and is committed to a broadly defined notion of emancipation" (p. 2). This covers a range of not very obviously related but critically approved virtues. Let us examine what reflexivity involves as Stohl, Guelke, Zulaika and Douglass, Burke, and Booth explore, somewhat repetitively, its implications.¶ Reflexive or Defective? ¶ Firstly, to challenge dominant knowledge and understanding and retain sensitivity to labels leads inevitably to a fixation with language, discourse, the ambiguity of the noun, terror, and its political use and abuse. Terrorism, Booth enlightens the reader unremarkably, is "a politically loaded term" (p. 72). Meanwhile, Zulaika and Douglass consider terror "the dominant tropic [sic] space in contemporary political and journalistic discourse" (p. 30). Faced with the "serious challenge" (Booth p. 72) and pejorative connotation that the noun conveys, critical terrorologists turn to deconstruction and bring the full force of postmodern obscurantism to bear on its use. Thus the editors proclaim that terrorism is "one of the most powerful signifiers in contemporary discourse." There is, moreover, a "yawning gap between the 'terrorism' signifier and the actual acts signified" (p. 1). "[V]irtually all of this activity," the editors pronounce *ex cathedra*, "refers to the response to acts of political violence not the violence itself" (original italics) (p. 1). Here again they offer no evidence for this curious assertion and assume, it would seem, all conventional terrorism studies address issues of homeland security.¶ In keeping with this critical orthodoxy that he has done much to define, Anthony Burke also asserts the "instability (and thoroughly politicized nature) of the unifying master-terms of our field: 'terror' and 'terrorism'" (p. 38). To address this he contends that a critical stance requires us to "keep this radical instability and inherent politicization of the concept of terrorism at the forefront of its analysis." Indeed, "without a conscious reflexivity about the most basic definition of the object, our discourse will not be critical at all" (p. 38). More particularly, drawing on a jargon-infused amalgam of Michel Foucault's identification of a relationship between power and knowledge, the neo-Marxist Frankfurt School's critique of democratic false consciousness, mixed with the existentialism of the Third Reich's favorite philosopher, Martin Heidegger, Burke "*questions the question.*" This intellectual *potpourri* apparently enables the critical theorist to "question the ontological status of a 'problem' before any attempt to map out, study or resolve it" (p. 38).¶ Interestingly, Burke, Booth, and the symposistahood deny that there might be objective data about violence or that a properly focused strategic study of terrorism would not include any prescriptive goodness or rightness of action. While a strategic theorist or a skeptical social scientist might claim to consider only the complex relational situation that involves as well as the actions, the attitude of human beings to them, the critical theorist's radical questioning of language denies this possibility.¶ The critical approach to language and its deconstruction of an otherwise useful, if imperfect, political vocabulary has been the source of much confusion and inconsequentiality in the practice of the social sciences. It dates from the relativist pall that French radical post structural philosophers like Gilles Deleuze and Felix Guattari, Foucault, and Jacques Derrida, cast over the social and historical sciences in order to demonstrate that social and political knowledge depended on and underpinned power relations that permeated the landscape of the social and reinforced the liberal democratic state. This radical assault on the possibility of either neutral fact or value ultimately functions unfalsifiably, and as a substitute for philosophy, social science, and a real theory of language.¶ The problem with the critical approach is that, as the Australian philosopher John Anderson demonstrated, to achieve a genuine study one must either investigate the facts that are talked about or the fact that they are talked about in a certain way. More precisely, as J.L. Mackie explains, "if we concentrate on the uses of language we fall between these two stools, and we are in danger of taking our discoveries about manners of speaking as answers to questions about what is there."² Indeed, in so far as an account of the use of language spills over into ontology it is liable to be a confused mixture of what should be two distinct investigations: the study of the facts about which the language is used, and the study of the linguistic phenomena themselves.¶ It is precisely, however, this confused mixture of fact and discourse that critical thinking seeks to impose on the study of terrorism and infuses the practice of critical theory more generally. From this confused seed no coherent method grows.¶ What is To Be Done?¶ This ontological confusion notwithstanding, Ken Booth sees critical theory not only exposing the dubious links between power and knowledge in established terrorism studies, but also offering an ideological agenda that transforms the face of global politics. "[C]ritical knowledge," Booth declares, "*involves understandings of the social world that attempt to stand outside prevailing structures, processes, ideologies and orthodoxies while recognizing that all conceptualizations within the ambit of sociality derive from particular social/historical conditions*" (original italics) (p. 78). Helpfully, Booth, assuming the manner of an Old Testament prophet, provides his critical disciples with "*big-picture navigation aids*" (original italics) (p. 66) to achieve this higher knowledge. Booth promulgates fifteen commandments (as Clemenceau remarked of Woodrow Wilson's nineteen points, in a somewhat different context, "God Almighty only gave us ten"). When not stating the staggeringly obvious, the Ken Commandments are hopelessly contradictory. Critical theorists thus should "avoid exceptionalizing the study of terrorism," "recognize that states can be agents of terrorism," and "keep the long term in sight." Unexceptional advice to be sure and long recognized by more traditional students of terrorism.

The critical student, if not fully conversant with critical doublethink, however, might find the fact that she or he lives within “Powerful theories” that are “constitutive of political, social, and economic life” (6th Commandment, p. 71), sits uneasily with Booth's concluding injunction to “stand outside” prevailing ideologies (p. 78).¶ In his preferred imperative idiom, Booth further contends that terrorism is best studied in the context of an “academic international relations” whose role “is not only to interpret the world but to change it” (pp. 67-68). Significantly, academic—or more precisely, critical—international relations, holds no place for a realist appreciation of the status quo but approves instead a Marxist ideology of praxis. It is within this transformative praxis that critical theory situates terrorism and terrorists.¶ The political goals of those non-state entities that choose to practice the tactics of terrorism invariably seek a similar transformative praxis and this leads “critical global theorizing” into a curiously confused empathy with the motives of those engaged in such acts, as well as a disturbing relativism. Thus, Booth again decrees that the gap between “those who hate terrorism and those who carry it out, those who seek to delegitimize the acts of terrorists and those who incite them, and those who abjure terror and those who glorify it—is not as great as is implied or asserted by orthodox terrorism experts, the discourse of governments, or the popular press” (p. 66). The gap “between us/them is a slippery slope, not an unbridgeable political and ethical chasm” (p. 66). So, while “terrorist actions are always—without exception—wrong, they nevertheless might be contingently excusable” (p. 66). From this ultimately relativist perspective gang raping a defenseless woman, an act of terror on any critical or uncritical scale of evaluation, is, it would seem, wrong but potentially excusable.¶ On the basis of this worrying relativism a further Ken Commandment requires the abolition of the discourse of evil on the somewhat questionable grounds that evil releases agents from responsibility (pp. 74-75). This not only reveals a profound ignorance of theology, it also underestimates what Eric Voeglin identified as a central feature of the appeal of modern political religions from the Third Reich to Al Qaeda. As Voeglin observed in 1938, the Nazis represented an “attractive force.” To understand that force requires not the abolition of evil [so necessary to the relativist] but comprehending its attractiveness. Significantly, as Barry Cooper argues, “its attractiveness, [like that of al Qaeda] cannot fully be understood apart from its evilness.”¶ The line of relativist inquiry that critical theorists like Booth evince toward terrorism leads in fact not to moral clarity but an insipid moral confusion. This is paradoxical given that the editors make much in the journal's introductory symposium of their “responsible research ethics.” The paradox is resolved when one realizes that critical moralizing demands the “ethics of responsibility to the terrorist other.” For Ken Booth it involves, it appears, empathizing “with the ethic of responsibility” faced by those who, “in extremis” “have some explosives” (p. 76). Anthony Burke contends that a critically self-conscious normativism requires the analyst, not only to “critique” the “strategic languages” of the West, but also to “take in” the “side of the Other” or more particularly “engage” “with the highly developed forms of thinking” that provides groups like Al Qaeda “with legitimizing foundations and a world view of some profundity” (p. 44). This additionally demands a capacity not only to empathize with the “other,” but also to recognize that both Osama bin Laden in his *Messages to the West* and Sayyid Qutb in his Muslim Brotherhood manifesto *Milestones* not only offer “well observed” criticisms of Western decadence, but also “converges with elements of critical theory” (p. 45). This is not surprising given that both Islamist and critical theorists share an analogous contempt for Western democracy, the market, and the international order these structures inhabit and have done much to shape.¶ Histrionically Speaking¶ Critical theory, then, embraces relativism not only toward language but also toward social action. Relativism and the bizarre ethicism it engenders in its attempt to empathize with the terrorist other are, moreover, histrionic. As Leo Strauss classically inquired of this relativist tendency in the social sciences, “is such an understanding dependent upon our own commitment or independent of it?” Strauss explains, if it is independent, I am committed as an actor and I am uncommitted in another compartment of myself in my capacity as a social scientist. “In that latter capacity I am completely empty and therefore completely open to the perception and appreciation of all commitments or value systems.” I go through the process of empathetic understanding in order to reach clarity about my commitment for only a part of me is engaged in my empathetic understanding. This means, however, that “such understanding is not serious or genuine but histrionic.”¶ It is also profoundly dependent on Western liberalism. For it is only in an open society that questions the values it promotes that the issue of empathy with the non-Western other could arise. The critical theorist's explicit loathing of the openness that affords her histrionic posturing obscures this constituting fact.¶ On the basis of this histrionic empathy with the “other,” critical theory concludes that democratic states “do not always abjure acts of terror whether to advance their foreign policy objectives ... or to buttress order at home” (p. 73). Consequently, Ken Booth asserts: “If terror can be part of the menu of choice for the relatively strong, it is hardly surprising it becomes a weapon of the relatively weak” (p. 73). Zulaika and Douglass similarly assert that terrorism is “always” a weapon of the weak (p. 33).¶ At the core of this critical, ethicist, relativism therefore lies a syllogism that holds all violence is terror: Western states use violence, therefore, Western states are terrorist. Further, the greater terrorist uses the greater violence: Western governments exercise the greater violence. Therefore, it is the liberal democracies rather than Al Qaeda that are the greater terrorists.¶ In its desire to empathize with the transformative ends, if not the means of terrorism generally and Islamist terror in particular, critical theory reveals itself as a form of Marxist unmasking. Thus, for Booth “*terror has multiple forms*” (original italics) and the real terror is economic, the product it would seem of “global capitalism” (p. 75). Only the *engagee* intellectual academic finding in deconstructive criticism the philosophical weapons that reveal the illiberal neo-conservative purpose informing the conventional study of terrorism and the democratic state's prosecution of counterterrorism can identify the real terror lurking behind the “manipulation of the politics of fear” (p. 75).¶ Moreover, the resolution of this condition of escalating violence requires not any strategic solution that creates security as the basis for development whether in London or Kabul. Instead, Booth, Burke, and the editors contend that the only solution to “the world-historical crisis that is facing human society globally” (p. 76) is universal human “emancipation.” This, according to Burke, is “the normative end” that critical theory pursues. Following Jurgen Habermas, the godfather of critical theory, terrorism is really a form of distorted communication. The solution to this problem of failed communication resides not only in the improvement of living

conditions, and “the political taming of unbounded capitalism,” but also in “the telos of mutual understanding.” Only through this telos with its “strong normative bias towards non violence” (p. 43) can a universal condition of peace and justice transform the globe. In other words, the only ethical solution to terrorism is conversation: sitting around an un-coerced table presided over by Kofi Annan, along with Ken Booth, Osama bin Laden, President Obama, and some European Union pacifist sandalista, a transcendental communicative reason will emerge to promulgate norms of transformative justice. As Burke enunciates, the panacea of un-coerced communication would establish “a secularism that might create an enduring architecture of basic shared values” (p. 46).¶ In the end, un-coerced norm projection is not concerned with the world as it is, but how it ought to be. This not only compounds the logical errors that permeate critical theory, it advances an ultimately utopian agenda under the guise of *soi-disant* cosmopolitanism where one somewhat vaguely recognizes the “human interconnection and mutual vulnerability to nature, the cosmos and each other” (p. 47) and no doubt bursts into spontaneous chanting of Kumbaya.¶ In analogous visionary terms, Booth defines real security as emancipation in a way that denies any definitional rigor to either term. The struggle against terrorism is, then, a struggle for emancipation from the oppression of political violence everywhere. Consequently, in this Manichean struggle for global emancipation against the real terror of Western democracy, Booth further maintains that universities have a crucial role to play. This also is something of a concern for those who do not share the critical vision, as university international relations departments are not now, it would seem, in business to pursue dispassionate analysis but instead are to serve as cheerleaders for this critically inspired vision.¶ Overall, the journal’s fallacious commitment to emancipation undermines any ostensible claim to pluralism and diversity. Over determined by this transformative approach to world politics, it necessarily denies the possibility of a realist or prudential appreciation of politics and the promotion not of universal solutions but pragmatic ones that accept the best that may be achieved in the circumstances. Ultimately, to present the world how it ought to be rather than as it is conceals a deep intolerance notable in the contempt with which many of the contributors to the journal appear to hold Western politicians and the Western media.¶ It is the exploitation of this oughtistic style of thinking that leads the critic into a Humpty Dumpty world where words mean exactly what the critical theorist “chooses them to mean—neither more nor less.” However, in order to justify their disciplinary niche they have to insist on the failure of established modes of terrorism study. Having identified a source of government grants and academic perquisites, critical studies in fact does not deal with the notion of terrorism as such, but instead the manner in which the Western liberal democratic state has supposedly manipulated the use of violence by non-state actors in order to “other” minority communities and create a politics of fear.¶ Critical Studies and Strategic Theory—A Missed Opportunity¶ Of course, the doubtful contribution of critical theory by no means implies that all is well with what one might call conventional terrorism studies. The subject area has in the past produced superficial assessments that have done little to contribute to an informed understanding of conflict. This is a point readily conceded by John Horgan and Michael Boyle who put “A Case Against ‘Critical Terrorism Studies’” (pp. 51-74). Although they do not seek to challenge the agenda, assumptions, and contradictions inherent in the critical approach, their contribution to the new journal distinguishes itself by actually having a well-organized and well-supported argument. The authors’ willingness to acknowledge deficiencies in some terrorism research shows that critical self-reflection is already present in existing terrorism studies. It is ironic, in fact, that the most clearly reflective, original, and *critical* contribution in the first edition should come from established terrorism researchers who critique the critical position.¶ Interestingly, the specter haunting both conventional and critical terrorism studies is that both assume that terrorism is an existential phenomenon, and thus has causes and solutions. Burke makes this explicit: “The inauguration of this journal,” he declares, “indeed suggests broad agreement that there is a phenomenon called terrorism” (p. 39). Yet this is not the only way of looking at terrorism. For a strategic theorist the notion of terrorism does not exist as an independent phenomenon. It is an abstract noun. More precisely, it is merely a tactic—the creation of fear for political ends—that can be employed by any social actor, be it state or non-state, in any context, without any necessary moral value being involved.¶ Ironically, then, strategic theory offers a far more “critical perspective on terrorism” than do the perspectives advanced in this journal. Guelke, for example, propounds a curiously orthodox standpoint when he asserts: “to describe an act as one of terrorism, without the qualification of quotation marks to indicate the author’s distance from such a judgement, is to condemn it as absolutely illegitimate” (p. 19). If you are a strategic theorist this is an invalid claim. Terrorism is simply a method to achieve an end. Any moral judgment on the act is entirely separate. To fuse the two is a category mistake. In strategic theory, which Guelke ignores, terrorism does not, ipso facto, denote “absolutely illegitimate violence.”¶ Intriguingly, Stohl, Booth, and Burke also imply that a strategic understanding forms part of their critical viewpoint. Booth, for instance, argues in one of his commandments that terrorism should be seen as a conscious human choice. Few strategic theorists would disagree. Similarly, Burke feels that there does “appear to be a consensus” that terrorism is a “form of instrumental political violence” (p. 38). The problem for

the contributors to this volume is that they cannot emancipate themselves from the very orthodox assumption that the word terrorism is pejorative. That may be the popular understanding of the term, but inherently terrorism conveys no necessary connotation of moral condemnation. “Is terrorism a form of warfare, insurgency, struggle, resistance, coercion, atrocity, or great political crime,” Burke asks rhetorically. But once more he misses the point. All violence is instrumental. Grading it according to whether it is insurgency, resistance, or atrocity is irrelevant. Any strategic actor may practice forms of warfare. For this reason Burke's further claim that existing definitions of terrorism have “specifically excluded states as possible perpetrators and privilege them as targets,” is wholly inaccurate (p. 38). Strategic theory has never excluded state-directed terrorism as an object of study, and neither for that matter, as Horgan and Boyle point out, have more conventional studies of terrorism.¶ Yet, Burke offers—as a critical revelation—that “the strategic intent behind the US bombing of North Vietnam and Cambodia, Israel's bombing of Lebanon, or the sanctions against Iraq is also terrorist.” He continues: “My point is not to remind us that states practise terror, but to show how mainstream *strategic doctrines* are terrorist in these terms and undermine any prospect of achieving the normative consensus if such terrorism is to be reduced and eventually eliminated” (original italics) (p. 41). This is not merely confused, it displays remarkable nescience on the part of one engaged in teaching the next generation of graduates from the Australian Defence Force Academy. Strategic theory conventionally recognizes that actions on the part of state or non-state actors that aim to create fear (such as the allied aerial bombing of Germany in World War II or the nuclear deterrent posture of Mutually Assured Destruction) can be terroristic in nature.⁷ The problem for critical analysts like Burke is that they impute their own moral valuations to the term terror. Strategic theorists do not. Moreover, the statement that this undermines any prospect that terrorism can be eliminated is illogical: you can never eliminate an abstract noun.¶ Consequently, those interested in a truly “critical” approach to the subject should perhaps turn to strategic theory for some relief from the strictures that have traditionally governed the study of terrorism, not to self-proclaimed critical theorists who only replicate the flawed understandings of those whom they criticize. Horgan and Boyle conclude their thoughtful article by claiming that critical terrorism studies has more in common with traditional terrorism research than critical theorists would possibly like to admit. These reviewers agree: they are two sides of the same coin.¶ Conclusion¶ In the looking glass world of critical terror studies the conventional analysis of terrorism is ontologically challenged, lacks self-reflexivity, and is policy oriented. By contrast, critical theory's ethicist, yet relativist, and deconstructive gaze reveals that we are all terrorists now and must empathize with those sub-state actors who have recourse to violence for whatever motive. Despite their intolerable othering by media and governments, terrorists are really no different from us. In fact, there is terror as the weapon of the weak and the far worse economic and coercive terror of the liberal state. Terrorists therefore deserve empathy and they must be discursively engaged.¶ At the core of this understanding sits a radical pacifism and an idealism that requires not the status quo but communication and “human emancipation.” Until this radical post-national utopia arrives both force and the discourse of evil must be abandoned and instead therapy and un-coerced conversation must be practiced. In the popular ABC drama *Boston Legal* Judge Brown perennially referred to the vague, irrelevant, jargon-ridden statements of lawyers as “jibber jabber.” The Aberystwyth-based school of critical internationalist utopianism that increasingly dominates the study of international relations in Britain and Australia has refined a higher order incoherence that may be termed Aber jabber. The pages of the journal of *Critical Studies on Terrorism* are its natural home.

Internal Link Defense

The aff is woefully inadequate the deep-rooted anti-Muslim bias is rooted in american psyche, discourse, and alternate policy—question the effectiveness of the affirmatives method
 Ali 12 [Yaser, Managing Attorney at Yaser Ali Law and J.D at University of California, Berkeley - School of Law, “Shariah and Citizenship—How Islamophobia Is Creating a Second-Class Citizenry in America”, CALIFORNIA LAW REVIEW, 8-1-2012, <http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=4176&context=californialawreview>] alla

One would assume that anti-Muslim sentiment reached its high water mark after 9/11. **To the contrary, however, it has increased dramatically in the third phase of Islamophobia, which began during President Obama's 2008 campaign.** If Volpp's contentions about Muslims' being relegated to second-class citizenship were true in 2002, then today that distinction has crystallized even further.¹³⁶ Whereas a vast majority of the incursions in the second phase occurred under the umbrella of national security, Islamophobia has now **evolved beyond** simply encouraging profiling and other surveillance techniques aimed at Muslims under the professed interests of national security. An institutionalized version of Islamophobia in this third phase now focuses on the "creeping threat of Shariah" and, in the process, more explicitly threatens the foundational conceptions of citizenship described by Professor Bosniak. Further, while citizens enjoy some fundamental level of respect for their individual beliefs and practices, this is no longer the case **with regard to Muslims, both in journalism and politics today.** Whereas it is widely recognized as socially unacceptable to be openly disparaging toward minority groups, the privilege reflected in that norm is **increasingly denied to Muslims.** In this **third phase of Islamophobia,** mainstream discourse now explicitly challenges the notion that American Muslims deserve the same liberal notions of rights that other citizens enjoy. One might surmise that since the contours of this phase cannot easily be demarcated, the third phase is in fact a difference in degree rather than in kind. It is true that unlike the transition from the first to the second phase, there is no single demonstrable event or tipping point that represents the transition from the second to third period; however, there was a **gradual progression that increased in intensity since the presidential campaign of 2008 when the term "Muslim" was actually converted into a slur,** as political opponents "accused" then-Senator Obama of secretly being a Muslim. The suggestion that a Muslim citizen would be less suited for office represents the **deep-seated fear and mistrust of Muslims in the American consciousness.** President Obama's opponents recognized this fact and knew that it would be a powerful tool for discrediting him. Yet what was perhaps most striking about the "allegations" was not the partisan claims themselves, but the responses that President Obama and other government leaders offered. Obama felt compelled to reject the "accusations," doing his best to distance himself from the Muslim community and choosing not to make any campaign stops in mosques or meet with any Muslim organizations during the campaign (despite making numerous stops at churches and synagogues). President Obama did not state, that although he was not a Muslim, there was nothing wrong with Muslims per se. Instead, **he reiterated the bias by referring to the accusations on his website as a "smear."** Further, during one campaign rally, his aides asked two young Muslim women dressed in headscarves to exit the stage area where he would be speaking. Arguably, the pervasiveness of such insidious discourse from the President helped **normalize the notion to the public that American Muslims are not "citizens," but indeed "others."**

Strict Scrutiny Standard Defense

Strict Scrutiny is arbitrary which undercuts solvency—status quo legal standards are better

Riccucci 7 [Norma Riccucci, Rutgers University, June 2007, "Moving Away From a Strict Scrutiny Standard for Affirmative Action Implications for Public Management", <http://arp.sagepub.com/content/37/2/123.short>] JMOV

This article addresses the concept of strict scrutiny, the burden of persuasion test used by the courts to determine the constitutionality of affirmative action. Through a systematic

analysis of U.S. Supreme Court decisions, it illustrates that strict scrutiny has been applied in an inconsistent, arbitrary manner and, therefore, **should not serve as the basis for judicial review of affirmative action programs.** It shows that the rule of law established under the Civil Rights Act provides an equally if not more compelling basis for judging the legality of affirmative action programs. Relying on the legal standards advanced by the courts under civil rights statutes provides managers with greater flexibility in developing and implementing affirmative action programs. In effect, the ability of governments to promote diversity of their workforces is greatly enhanced.

Seriously it sucks

Riccucci 7 [Norma Riccucci, Rutgers University, June 2007, “Moving Away From a Strict Scrutiny Standard for Affirmative Action Implications for Public Management”, <http://arp.sagepub.com/content/37/2/123.short>] JMOV

The constitutional litmus test for judging affirmative action is a failure—it gets an unequivocal “F.” It lacks reliability, validity, and hence legitimacy, characteristics that even the most basic civil service tests are required to demonstrate. More over, it becomes almost impossible for policymakers in educational or employment settings to develop affirmative action policies that will meet some rule of law, when those rules are hollow and inconstant. It must be questioned at this point in the history of affirmative action: why does the Court continue to wrestle with appropriate standards of review, when it will ultimately disregard those standards on a whim or apply them in an erratic, illogical manner? Perhaps strict scrutiny is simply one area where the Court will expressly continue to “legislate from the bench.” As argued here, the framework advanced under Title VII is much less cryptic, arcane, and mercurial, and therefore, could be applied more broadly to all questions of law concerning affirmative action programs and policies. This will greatly facilitate the work of managers and policymakers who are striving to create culturally diverse environments for public employees and students in public universities. As the composition of the Supreme Court has changed since the 2003 Grutter ruling, it becomes imperative for public administrators and policymakers to engage in a dialogue around the irrelevance of strict scrutiny.

Strict scrutiny fails—specifically in the context of Muslim Surveillance

Figueroa 12 (Tiffani B. Figueroa, associate in Morrison Foerster’s Litigation Department, J.D. magna cum laude from Hofstra University School of Law, “ALL MUSLIMS ARE LIKE THAT”: HOW ISLAMOPHOBIA IS DIMINISHING AMERICANS’ RIGHT TO RECEIVE INFORMATION, Hofstra Law Review, Winter 2012, SM)

As discussed above, the fear of Muslims or those perceived as Muslim has resulted in the government's failure to protect Americans' First Amendment right to receive information.
n332 The strict scrutiny test [*499] that courts normally employ when assessing the content-neutrality of a regulation on speech has not been effective in light of the increased development of Islamophobia. n333 Following the 9/11 attacks, Islamophobia has impacted the free speech rights of Muslims and the mobility of foreign scholars, as well as the right to receive information for all Americans. n334 "In an age of official insecurity and anxiety, the most difficult constitutional problem may not be

controlling arbitrariness in permitting, but **compensating for a chronic tendency to overestimate the likelihood of any damage to public security** from public exercises of freedom of speech." n335 **Given the current state of events and the vulnerability of the right to receive information, a new standard to deal with the right to receive information** in times of political controversy **is required**. In order to resolve this issue of dealing with national security and the right to receive information, **courts should adopt a specific test under First Amendment speech analysis where: (1) there is a political conflict and (2) there is a clear group that society and the government targets** because of the conflict. As discussed earlier, **the government may restrict the content of speech in certain situations; however, it cannot favor one viewpoint over another**. n336 The test will essentially focus on the effects of a regulation on speech when a specific group is targeted by the government action. n337 **Once the court determines there is a disparate impact on a certain group, the court will then resolve the issue as to whether the government has curtailed the right to receive information through this disproportionate treatment of the specified group**. By first looking at the effects of a government action, courts will provide a framework for which they can work through their First Amendment analysis. n338 **When dealing with political conflicts, such as [*500] the war on terror, there are often certain groups that are discriminated against through practices that seem constitutional. Such discrimination is not only overlooked, but it has a subsequent effect on all Americans who are willing to explore different ideas other than those the government makes readily available**. n339 The government's actions discussed above, such as **dealing with speech at a protest**, n340 **forcing a woman to remove her hijab** in prison, n341 **and revoking the visas of foreign scholars** n342 **serve as examples. These actions appear to be neutral; however, the effects of the actions unevenly target one particular group: Muslims and those perceived as Muslim**. n343 **It is important that the courts look beyond the language of the laws or government actions in order to gauge whether the government is in fact practicing viewpoint discrimination and violating the First Amendment right to receive information for Americans**. n344 When looking at the effects of government actions: **A law [may] not discriminate against a particular viewpoint on its face, and there [may be] no evidence of an improper legislative purpose in enacting the law**. Within that framework of facial neutrality, however, **we must examine restrictions on speech with particular care when their effects fall unevenly on different viewpoints and groups in society**. n345 Looking at the effects of regulation on speech is something that the Supreme Court itself has taken into consideration when **looking at the right to receive information**. n346 As determined in *Martin v. Struthers*, n347 the Court explained that, **"in considering legislation which thus limits the dissemination of knowledge, we must "be astute to examine the effect of the challenged legislation' and must "weigh the circumstances and appraise the substantiality of the reasons advanced in support of the regulation."** n348 Courts have taken a similar stance in other cases. n349 The [*501] bottom line is: **courts must look at the effects of government regulations because laws that have a disparate impact on one viewpoint run the risk of being viewpoint-based**. n350 **As in the case of Islamophobia, it is easy to target a specific group because some Americans automatically associated the 9/11 hijackers with all Muslims and those perceived as Muslim**. n351 Similarly, **in the interest of national security, the government at times partook in practices that people may view as discriminatory. The government failed to protect the free speech rights of Muslims** as a targeted group, **and these actions subsequently harmed the right to receive information for Americans. Although the government's purpose in enforcing the laws** discussed in this Note **was not to close off Muslim ideas, the effects may show otherwise**. n352 Justice Antonin Scalia stated, "the vice of content-based legislation - **what renders it deserving of the high**

standard of strict scrutiny - is not that it is always used for invidious, thought-control purposes, but that it lends itself to use for those purposes." n353 "Unavoidable targeting" stemming from a government regulation is included within this "vice of content-based legislation." This phenomenon may shine light on what has occurred following the 9/11 attacks. By employing an effects test in the First Amendment analysis, courts will more efficiently investigate whether there is viewpoint discrimination affecting the right to receive information since the courts must first establish if a government action falls disproportionately on a specific group. n354 [*502] VI. Conclusion Surely, the government has a highly supported interest in protecting the United States at all times. However, protection should not ensue at the expense of severely limiting civil liberties and substantially restricting the marketplace of ideas. In times of political strife, such as facing terrorism today, the courts' current approach to dealing with First Amendment violations of the right to receive information fails to protect civil liberties. By looking at the discriminatory effects of regulations on speech, the court can protect a thriving marketplace of ideas.

Lack of specificity makes it harder for social justice—turns solvency

Bunker et al. 11 [MD Bunker, Clay Calvert, William C. Nevin, "Strict in Theory, But Feeble in Fact? First Amendment Strict Scrutiny and The Protection of Speech", <http://www.tandfonline.com/doi/abs/10.1080/10811680.2011.603624#.VZV-0-1Vikp>] JMOV

Professor Gerald Gunther famously declared strict scrutiny to be "strict' in theory and fatal in fact" in 1972. Although Professor Gunther's pithy and influential slogan may have been a reasonably accurate characterization at that time, strict scrutiny in the realm of the First Amendment is now much less fatal to government regulation of expression. This article explores the beginnings of the strict scrutiny test and the underpinnings of its subsequent dilution. The article examines the multiple ways courts can avoid applying strict scrutiny and argues that compelling state interests are proliferating in a manner that is harmful to robust speech protection. It also critiques the lack of precision in narrow tailoring analysis. The article concludes that First Amendment strict scrutiny has serious weaknesses that threaten to undermine vigorous protection for expression and offers suggestions for increasing the rigor and precision of the doctrine.

Profiling is distinct from description reliance—they conflate the two—its constitutional and logical to investigate suspects based on description

McMillen 06 [Lucas McMillen, University of St. Thomas, "Eye on Islam: Judicial Scrutiny Along the Religious Profiling/Suspect Description Reliance Spectrum", [\[http://ir.stthomas.edu/cgi/viewcontent.cgi?article=1107&context=ustlj\]](http://ir.stthomas.edu/cgi/viewcontent.cgi?article=1107&context=ustlj)] VIGNESH

"Religious profiling," in this Article, will be understood as the situation in which law-enforcement authorities act on the inference that a particular adherent of a certain religion is more likely to engage in criminal or terrorist behavior than any particular adherent of another religion.¹⁴ Put an-other way, acts of religious profiling stem from an unfair prejudice towards members of a religious group, a prejudice that attributes criminal or terroristic propensities to all members of the group. But discriminatory bias will not

account for all counterterrorist action based on the trait of Muslim identity. Muslim identity can simply be a part of a suspect description, and be as legitimate a trait for the police to rely upon in targeting potential suspects as height, weight, gender, or skin color. This Article's next section will discuss the **difference between religious profiling and suspect description reliance**, a difference that becomes crucial when determining the degree of judicial scrutiny to give police action that targets Muslims. A. Suspect Description Reliance, Religious Profiling, and the Question of Discrimination Profiling-understood as presuming a person's criminal propensity from their membership in a particular group-is located at the unconstitutional end of the investigative-technique gamut. The other end of this spectrum is maintained by the permissible and wholly logical law-enforcement technique of relying on suspect descriptions. Whether a court will consider law-enforcement targeting of Muslims to be unconstitutional will largely turn on which end of the suspect description reliance/religious profiling spectrum that the court locates the targeting, as religious profiling will trigger the nearly insurmountable strict scrutiny, while suspect description reliance triggers the deferential rational basis scrutiny. Suspect description reliance is the rather simple concept that police officers, in choosing whom to investigate, may take into account certain characteristics-e.g., race, gender, physical markings, visible religious manifestations-because those characteristics match the physical description of the suspect provided by a victim or witness. 15 Such a technique is neither invidious nor unconstitutional; it is, simply put, "police work." For example, if a white robbery suspect is seen running into a bar where only three of the bar's patrons are white, the sole fact that the three men are white undoubtedly provides the police with the reasonable suspicion needed to justify detaining those men (or even probable cause justifying their arrest).¹⁶ While this police action involves targeting persons based on race, it is not "profiling" -presuming criminality from group membership; it is seeking and arresting individuals who match the suspect's description, which in this case happens to be based on race.

Difference between strict scrutiny and rational basis—and explanation by Justice Kennedy

McMillen 06 [Lucas McMillen, University of St. Thomas, "Eye on Islam: Judicial Scrutiny Along the Religious Profiling/Suspect Description Reliance Spectrum", <http://ir.stthomas.edu/cgi/viewcontent.cgi?article=1107&context=ustlj>] VIGNESH

For the issue of religious-group targeting, of course, one must address an issue that Oneonta did not. While Oneonta's issue of racial profiling is a Fourteenth Amendment question exclusively, the issue of religious-group targeting-involving a potentially discriminatory infringement of religious exercise-represents a point of convergence for the protections of the First and Fourteenth Amendments.²⁵ When these two constitutional claims are collapsed, a court's analysis of them collapses as well, such that a court will use the Fourteenth Amendment's analytical framework to evaluate the state's imposition on First Amendment free exercise rights. Put another way, in reviewing a potentially unconstitutional state infringement on free exercise, a court will evaluate the infringement with one of two levels of scrutiny²⁶: it will determine whether the infringement is either (1) rationally related to a legitimate government purpose ("rational basis scrutiny"),²⁷ or (2) whether it is necessary to achieve a compelling government purpose ("**strict scrutiny**").²⁸ The question of which level of scrutiny will be applied is, of course, the crux of the matter, as rational basis scrutiny is enormously deferential, while strict scrutiny has generally proven to be, to quote Professor Gunther, "**strict in theory and fatal in fact.**"²⁹ 1. Level of Scrutiny

In *Church of the Lukumi Babalu Aye, Inc. v. City of Hialeah*,³⁰ the Court employed the converged First-and-Fourteenth-Amendment analysis and established that its critical question of scrutiny turns on whether government officials, in imposing upon religious exercise, have done so with intent to suppress the targeted religion-discriminatory intent. At issue in *Lukumi* was the constitutionality of the City of Hialeah's animal sacrifice prohibition, a prohibition contained in a series of ordinances that the city's Santeria practitioners challenged as being a thinly veiled effort to curtail their religious activities.³¹ Justice Kennedy, writing for the *Lukumi* majority, began describing the mechanics of the Court's merged First-and-Fourteenth-Amendment analysis by discussing *Employment Division v. Smith*.³² the case in which the Court gave a rational basis review to an Oregon peyote prohibition that frustrated Native American religious practice.³³ According to Kennedy, *Smith* establishes the first direction that a court can take in the merged analysis: when it finds that conditions similar to those in *Smith* are present-Le., when the state's action is neutrally postured towards religion-a court should review that action with light scrutiny. To this effect, Kennedy wrote, "A law that is neutral and of general applicability need not be justified by a compelling governmental interest even if the law has the incidental effect of burdening a particular religious practice."³⁴ Kennedy then continued, moving on to describe the second direction of the merged analysis, which he deemed to be the proper direction to take in *Lukumi*: when a court finds that the conditions of *Smith* are not met, such that **discriminatory intent is the state action's raison d'etre, the state's action will be subjected to strict scrutiny.** Kennedy worded the second direction this way: "If the object of a law is to infringe upon or restrict practices because of their religious motivation, the law is not neutral; and it is invalid unless it is justified by a compelling interest and is narrowly tailored to advance that interest."³⁵ Ultimately, the Court determined that discriminatory intent lay behind *Lukumi*'s animal sacrifice prohibition-that it "had as [its] object the suppression of religion"-and struck it down as unconstitutional.

Strict scrutiny is not applied on prisons and prisoners religious practices

Nelson 09 [James D. Nelson, graduated from the University of Virginia School of Law, where he was Editor-in-Chief of the Virginia Law Review and received the Roger and Madeleine Traynor Prize and the Robert E. Goldsten Award for distinction in the classroom. After graduating, he clerked for Judge Jerry E. Smith of the U.S. Court of Appeals for the Fifth Circuit. Nelson then served as a trial attorney in the Civil Division of the U.S. Department of Justice, before joining Columbia Law School as an Associate in Law and Lecturer in 2012. He is also the Editor-at-Large of Columbia Law School's Blog on Corporations and the Capital Markets,

December 11, 2009, "INCARCERATION, ACCOMMODATION, AND STRICT SCRUTINY", <http://www.virginialawreview.org/sites/virginialawreview.org/files/2053.pdf>

VIGNESH

More specifically, **federal courts have divided over the question of how to apply strict scrutiny** under RLUIPA. According to the statute, government policies imposing a substantial burden on a prisoner's religious exercise must be justified as the least restrictive means of achieving a compelling state interest. But courts have not agreed on how this standard of review should be applied in the prison context. Some courts apply a deferential model of review, finding most religious burdens to be insubstantial and relying on the

judgment of prison administrators regarding the weight of state interests. Other courts, however, are applying a “hard look” model of review that takes more seriously claims that **prison policies burden religion** and requires prison officials to demonstrate the need for such policies. The rise of a hard look model under RLUIPA is surprising. First, in reviewing claims for religious accommodation outside the prison context, courts have often **applied strict scrutiny with far less stringency than the standard traditionally requires.** Courts have held that burdens on religious practice had to be unbearable in order to count as “substantial,” while accepting “less than compelling” government interests to satisfy the standard.⁶ Second, commentators predicted that courts would be even more deferential in the prison context. Of those who might bring claims for religious exemptions, incarcerated persons would be among the least likely to benefit from judicial review of governmental action.⁷ There are a number of reasons for such skepticism. First, courts may **doubt that prisoners are sincere** in the religious beliefs they claim and hold suspicion that such beliefs are feigned in an effort to obtain special treatment.⁸ Second, courts may generally lack sympathy for those convicted of criminal offenses.⁹ Finally, courts may doubt their own institutional competence to review decisions regarding the administration of a prison.¹⁰ In light of these considerations, few expected to see a change in the level of deference accorded to prison officials.

No Solvency/ Squo Solves

Some Profiled Surveillance has to be justified- the Aff is incredibly bias and the method is problematic--We cite 4 examples that their aff tries to spin as offense

Spencer 14 [Robert Spencer, July 13, 2014, “4 Muslims Who Deserve to Be Under Surveillance”, <http://pjmedia.com/blog/4-muslims-who-deserve-to-be-under-surveillance/5/>] JMOV

Leftists and Islamic supremacists are enraged this week over the revelation that the FBI and NSA, despite their officially politically correct See-No-Islam Hear-No-Islam Speak No-Islam stance, have had four prominent Muslim leaders in the U.S. under surveillance. They have appealed to Barack Obama to stop this surveillance and all related monitoring of Muslims immediately, which he almost certainly will, and have mounted a Twitter campaign based around the bitterly ironic hashtag #IAmATarget, which applies more to infidels in the line of jihad attacks than it ever will to Muslim leaders in the United States.¹¹ **The only problem with all the righteous indignation that Leftists and Islamic supremacist leaders have summoned about this surveillance is that it is entirely justified.** The uproar began with an exposé titled “Under Surveillance: Meet the Muslim-American Leaders the FBI and NSA Have Been Spying On,” written by none other than Glenn Greenwald, along with another far-Left journalist, Murtaza Hussain. Greenwald and Hussain purport to demonstrate that five Muslim leaders whom the NSA and FBI have been watching are undeserving of such scrutiny, as they’re honest, patriotic Americans whose

only misdeed is to oppose administration policies. ¶ **This is, of course, absurd.** Opposing U.S. government policies from the Left won't get you placed under surveillance; it'll get you media adulation, foundation grants, and awards from philanthropic groups. Obama's IRS persecutes conservative groups, not Leftists, and several military presentations in recent years have claimed that "right-wing extremists" are a terror threat, with nary a word about genuinely violent Left-wing extremist groups such as the Occupy movement and others. ¶ **Bizarrely, and perhaps because they couldn't find enough Muslims to fit their victim paradigm, Greenwald and Hussain include in their list of persecuted Muslims Hooshang Amirahmadi, an Iranian-American professor at Rutgers, who is a professing atheist; for the actual Muslims on their list, they gloss over the genuine reasons why the FBI and NSA have placed these men under surveillance.** ¶ **4. Faisal Gill** ¶ Faisal Gill is "a longtime Republican Party operative and one-time candidate for public office who held a top-secret security clearance and served in the Department of Homeland Security under President George W. Bush." Greenwald and Hussain note that he "worked as a consultant for the American Muslim Council, which was founded by the political activist Abdul Rahman al-Amoudi to encourage participation by American Muslims in the political process." Later he joined the Department of Homeland Security. ¶ **Gill's problems began, according to Greenwald and Hussain, in 2003, when "al-Amoudi was arrested for participating in a Libyan plot to assassinate Saudi Crown Prince Abdullah and for illegal financial transactions with the Libyan government, crimes for which he eventually pleaded guilty."** Gill was investigated, disclaimed any close relationship with Alamoudi, and returned to work at the DHS. But he was, we now learn, kept under surveillance. ¶ **They're outraged over this surveillance, but Greenwald and Hussain don't mention that, according to Discover the Networks, the plot to assassinate Abdullah involved "two U.K.-based al Qaeda operatives," and that he "ultimately pled guilty to, and was convicted of, being a senior al Qaeda financier who had funneled at least \$1 million into the coffers of that terrorist organization."** ¶ Faisal Gill worked as a consultant for Alamoudi's group – that is, a group founded and headed by a confessed senior al Qaeda financier. Would Greenwald and Hussain be this outraged that he was under surveillance if he had worked as a consultant for a group headed by a senior Ku Klux Klan financier? Somehow I doubt it. ¶ **3. Asim Ghafoor** ¶ Asim Ghafoor is "a prominent attorney who has represented clients in terrorism-related cases." He had some controversial clients, including the Al Haramain Islamic Foundation, which has been linked to Osama bin Laden, and Mohammed Jamal Khalifa, bin Laden's brother-in-law. But **everyone is entitled to representation, and representation does not require that an attorney endorse his client's actions.** ¶ However, here again Greenwald and Hussain leave out salient details. Discover the Networks reports that, ¶ **Asim Ghafoor was a political consultant, spokesman, and public relations director for the Global Relief Foundation (GRF), which the U.S. government shut down in December 2001 because of the organization's ties to terrorism....GRF is not the only organization with ties to terrorism with which Ghafoor has been involved.** While he was with GRF, **Ghafoor was also the spokesman for Care International.** The

December 6, 2002 *Wall Street Journal* reports: ‘Records indicate close ties between [Care International] and the Boston branch of Al Kifah Refugee Center, the Brooklyn branch of which was named by prosecutors as the locus of the 1993 conspiracy to bomb the World Trade Center.’ Reason enough to put Ghafoor under surveillance? How could it not be? 2.

Agha Saeed Agha Saeed is “a former political science professor at California State University who champions Muslim civil liberties and Palestinian rights” – including, say Greenwald and Hussain, “the right of Palestinians to armed resistance against occupation if peaceful means fail—a right affirmed in a series of resolutions by the United Nations General Assembly.” The fact that the corrupt and morally compromised UN endorsed the “Palestinian” jihad is hardly a ringing affirmation of its moral rectitude, and in any case, the groups that pursue “armed resistance against occupation” are jihad terror groups such as Hamas, Hizballah, and Islamic Jihad. Saeed supports this “armed resistance,” so he may be in contact with some of the leaders or members of such groups, and surveillance could reveal something that could be used to stop their jihad terror attacks against civilians. So here again, surveillance is warranted. 1. Nihad Awad Nihad Awad is “the executive director of the Council on American-Islamic Relations (CAIR), the largest Muslim civil rights organization in the country.” (Greenwald, the article fastidiously notes, “has given paid speeches before CAIR’s regional affiliates.”) “Despite its political moderation and relationship to federal law enforcement agencies,” say Greenwald and Hussain, “CAIR became a primary target of hardline neoconservatives after 9/11.” This apparently resulted in the fact that “in 2007, the Justice Department named the group as one of more than 300 ‘unindicted co-conspirators’ in its controversial prosecution of the Holy Land Foundation, then the largest Muslim charity in the U.S., which was eventually convicted of providing material support to Hamas.” Greenwald and Hussain notes that “in 1994, Awad voiced public support for Hamas—before the group’s campaign of suicide attacks against civilians and subsequent placement on the State Department’s terrorist list in 1997.”

But it adds: “I do not support Hamas,” Awad says today, pointing out that the group was not involved in terrorist activities at the time he made the statement. “It was not on the list of organizations that sponsor or conduct terrorism by the State Department. And when the organization took those acts, CAIR has condemned it, repeatedly.” ... So we are to understand that Awad supported Hamas in 1994, but in 1997, when it was placed on the State Department’s terrorist list, he stopped supporting it. Here is part of the old Hamas website’s “Glory Record” of attacks against Israelis – the terrorist organization’s own record of its murderous actions. On a page that remained on its website well after 9/11, it celebrated the pre-1994 murders of Israeli civilian Ya’coub Berey; civilians on a bus to Tel Aviv attacked by Hamas jihadi Ahmed Hussein Shukry; civilians in a crowd in Jaffa who were murdered by another Hamas jihadi in 1992; and a civilian at Beit Lahya who was murdered by a member of Hamas’s al Qassam Brigades. The site also celebrated the stabbings by Hamas members of an Israeli bus driver, a group of Israelis at a bus station in

Keryat Youval, a group of Israeli citrus packers, and a group of Israelis who were run down by jihadist cab driver Jameel Ismail al-Baz. All these acts were committed and publicly celebrated before 1994, when Awad professed his support for Hamas. That they give Awad a platform for his dissembling is typical of the dishonesty of the entire Greenwald/Hussain piece. **But it will accomplish its purpose: the ending of surveillance of these and other Muslim leaders and the further weakening of counter-terror operations in general. And Americans will be in even greater danger than they were before.**

Indiscriminate Surveillance inevitable and harms are only felt after surveillance activity is reported

Serwer 14 [Adam Serwer, Reporter at MSNBC, Feb 20, 2014, "Judge throws out lawsuit challenging NYPD's spying on Muslims", <http://www.msnbc.com/msnbc/nypd-allowed-spy-muslim-americans>] JMOV

Religious profiling is okay, as long as you have a really good reason. That's the logic behind a decision reached by federal judge William Martini Thursday, in dismissing a lawsuit against New York Police Department over the NYPD's surveillance of Muslim American communities in the region. **"The police could not have monitored New Jersey for Muslim terrorist activities without monitoring the Muslim community itself."** Martini wrote. "The motive for the program was not solely to discriminate against Muslims, but rather to find Muslim terrorists hiding among ordinary, law-abiding Muslims." **Any harm suffered by Muslims who were spied on, was not the fault of the NYPD, but of the Associated Press reporters who first revealed the existence of the surveillance effort.** MELISSA HARRIS-PERRY, 1/19/14, 1:09 PM ET The downside to living in an electronic age "Nowhere in the Complaint do Plaintiffs allege that they suffered harm prior to the unauthorized release of the documents by the Associated Press. This confirms that Plaintiffs' alleged injuries flow from the Associated Press's unauthorized disclosure of the documents," Martini wrote. **"The harms are not 'fairly traceable' to any act of surveillance."** The Associated Press declined to comment on the ruling.

National Data collection and Local Police reform are uniquely key to preventing oppression toward minorities

Natarajan 14 Ranjana Natarajan ("Racial profiling has destroyed public trust in police. Cops are exploiting our weak laws against it", December 15, <http://www.washingtonpost.com/posteverything/wp/2014/12/15/racial-profiling-has-destroyed-public-trust-in-police-cops-are-exploiting-our-weak-laws-against-it/>, Accessed 6/21/15)

The #BlackLivesMatter movement has sparked nationwide protests and has raised awareness worldwide about the unequal treatment of black people by police in the United States. Listening to the voices from the movement — and learning from the death of Eric Garner and the series of other deaths of unarmed black men — **it's clear that two issues need to be addressed: racial profiling and police use of excessive force** Both run afoul of the U.S. Constitution, but remain common practices in law

enforcement, too often with tragic results. In Garner's case, for example, police targeted him for the petty crime of selling loose cigarettes — the types of crimes black people are targeted for at higher rates — and then attempted to arrest him with a chokehold, banned by the department. Whatever else we have learned from the recent tragedies of police violence, it is clear that we need comprehensive federal, state and local policies that outlaw racial profiling and rein in police excessive force. Racial profiling — as well as profiling based on religion, ethnicity and national origin — continues to plague our nation despite the constitutional guarantee of equal treatment under the law. In a 2011 report, the Leadership Conference on Civil Rights found evidence of widespread racial profiling, showing that African Americans and Hispanics are disproportionately likely to be stopped and searched by police, even though they're less likely to be found possessing contraband or committing a criminal act. In Illinois, for example, black and Hispanic drivers were twice as likely to be searched after a traffic stop compared to white drivers, but white drivers were twice as likely to have contraband. The NYPD's controversial stop-and-frisk program shows similar evidence of racial profiling, with police targeting blacks and Latinos about 85 percent of the time. In nearly nine out of 10 searches, police find nothing. Likewise, excessive force by police persists despite the Constitution's prohibition on unreasonable searches and seizures. In lawsuits and investigations, the U.S. Department of Justice has concluded that a number of major police departments have engaged in a pattern or practice of excessive force. The Cleveland Police Department was most recently found to be an offender, but it follows a long line of other wayward law enforcement agencies: Seattle, New Orleans, Portland, Newark and Albuquerque among them. Clearly, cases like Eric Garner's are not isolated — police use of excessive force is a systemic, national problem. The DOJ has recommended revising and clarifying local policies regarding appropriate uses of force, improving officer training and supervision, and implementing rigorous internal accountability systems, among other things. But recommendations are not enough. Conquering this systemic issue demands a national mandate. Profiling undermines public safety and strains police-community trust. When law enforcement officers target residents based on race, religion or national origin rather than behavior, crime-fighting is less effective and community distrust of police grows. A study of the Los Angeles Police Department showed that minority communities that had been unfairly targeted in the past continue to experience greater mistrust and fear of police officers. To root out this ineffective tactic that undermines public confidence, we need stronger policies against racial profiling at all levels — from local to federal — as well as more effective training and oversight of police officers, and systems of accountability. Twenty states have no laws prohibiting racial profiling by law enforcement, according to an NAACP report released in September. Among states that do, the policies vary widely in implementation and effectiveness. Only 17 of those states require data collection on all police stops and searches, and only 15 require analysis and publication of other racial profiling data. Limited and inconsistent data collection makes it impossible to devise effective remedies for racial profiling. Last week, the U.S. Department of Justice unveiled a newly revised guide on use of profiling by law enforcement, distinguishing between legitimate uses (such as using race and other characteristics in a suspect description) and illegitimate uses (such as criminal stereotypes). Among other things, the guide explains that uses of race and other characteristics should be based on particularized and trustworthy information relevant to the specific investigation, rather than generalized stereotypes. The policy also provides general provisions on training, data collection and accountability, and it was expanded to include national origin, religion, gender, sexual orientation and gender identity. Civil rights groups have been calling for this updated guide for years. However, the Department of Justice did not address all concerns. Civil rights advocates had also called for the elimination of loopholes for national security and border enforcement, which the DOJ did not adopt. The document states: This Guidance does not apply to Federal non-law enforcement personnel, including U.S. military, intelligence, or diplomatic personnel, and their activities. In addition, this Guidance does not apply to interdiction activities in the vicinity of the border, or to protective, inspection, or screening activities. The DOJ policy, however, is far clearer and stronger than policies held by many states and localities. As the NAACP found, some states and localities ban the use of

pretextual traffic stops, others explicitly prohibit racial profiling, and still others require mandatory data collection — but few contain all of the elements of an effective racial profiling ban, and many states lack profiling laws altogether. Since Americans encounter local police in far greater numbers than any federal law enforcement officers, the adoption of state and local laws and policies banning profiling is critical. Excessive force and racial profiling are two destructive modes of police misconduct that require concerted, vigilant action to reduce and eliminate. While racial profiling can end in tragic police killings of unarmed individuals, such as with Eric Garner or Michael Brown, it also results in many unnecessary stops and searches, harassment and intimidation, and even confiscation of property without due process. The steps to curb this are clear: At all levels of government, we need definitive anti-profiling laws and policies, training of officers on the elimination of explicit and implicit bias, data collection on traffic stops and other police-community contacts, and development of internal and external accountability systems. With these efforts, police departments across the country can rebuild public trust and ensure that policing methods reinforce rather than undermine our democratic values.

Squo solves, Federal gov't already expanding rules, but local law enforcement is not

Apuzzo 14, Matt Apuzzo("U.S. to Expand Rules Limiting Use of Profiling by Federal Agents", January 16, http://www.nytimes.com/2014/01/16/us/politics/us-to-expand-rules-limiting-use-of-profiling-by-federal-agents.html?_r=0, Accessed 6/21/15)

The Justice Department will significantly expand its definition of racial profiling to prohibit federal agents from considering religion, national origin, gender and sexual orientation in their investigations, a government official said Wednesday. The move addresses a decade of criticism from civil rights groups that say federal authorities have in particular singled out Muslims in counterterrorism investigations and Latinos for immigration investigations. The Bush administration banned profiling in 2003, but with two caveats: It did not apply to national security cases, and it covered only race, not religion, ancestry or other factors. Since taking office, Attorney General Eric H. Holder Jr. has been under pressure from Democrats in Congress to eliminate those provisions. "These exceptions are a license to profile American Muslims and Hispanic-Americans," Senator Richard J. Durbin, Democrat of Illinois, said in 2012. President George W. Bush said in 2001 that racial profiling was wrong and promised "to end it in America." But that was before the terrorist attacks of Sept. 11. After those attacks, federal agents arrested and detained dozens of Muslim men who had no ties to terrorism. The government also began a program known as special registration, which required tens of thousands of Arab and Muslim men to register with the authorities because of their nationalities. "Putting an end to this practice not only comports with the Constitution, it would put real teeth to the F.B.I.'s claims that it wants better relationships with religious minorities," said Hina Shamsi, a national security lawyer with the American Civil Liberties Union. It is not clear whether Mr. Holder also intends to make the rules apply to national security investigations, which would further respond to complaints from Muslim groups. "Adding religion and national origin is huge," said Linda Sarsour, advocacy director for the National Network for Arab American Communities. "But if they don't close the national security loophole, then it's really irrelevant." Ms. Sarsour said she also hoped that Mr. Holder would declare that surveillance, not just traffic stops and arrests, was prohibited based on religion. The Justice Department has been reviewing the rules for several years and has not publicly signaled how it might change them. Mr. Holder disclosed his plans in a meeting on Wednesday with Mayor Bill de Blasio of New York, according to an official briefed on the meeting who spoke on the condition of anonymity because the conversation was private. Mr. de Blasio was elected in November after running a campaign in which he heavily criticized the Police Department's stop-and-frisk tactic, which overwhelmingly targets minorities and which a federal judge declared unconstitutional. The mayor and attorney general did not discuss when the rule change would be announced, the official said. A senior Democratic congressional aide, however, said the Obama administration had indicated an announcement was "imminent." The Justice Department would not confirm the new rules on Wednesday night but released a

short statement saying that the mayor and the attorney general discussed “preventing crime while protecting civil rights and civil liberties.” In the past, Mr. Holder has spoken out forcefully against profiling. “Racial profiling is wrong,” he said in a 2010 speech. “It can leave a lasting scar on communities and individuals. And it is, quite simply, bad policing — whatever city, whatever state.” Officials in the Bush administration made similar statements, however, which is why civil rights groups have eagerly waited to hear not just Mr. Holder’s opinion, but also the rules he plans to enact. As written, the Justice Department’s rules prohibit federal agents from using race as a factor in their investigations unless there is specific, credible information that makes race relevant to a case. For example, narcotics investigators may not increase traffic stops in minority neighborhoods on the belief that some minorities are more likely to sell drugs. They can, however, rely on information from witnesses who use race in their descriptions of suspects. The rules cover federal law enforcement agencies such as the F.B.I. They do not cover local or state police departments. That is significant because Muslim groups have sued the New York Police Department over surveillance programs that mapped Muslim neighborhoods, photographed their businesses and built files on where they eat, shop and pray. Mr. Holder’s comments about the new racial profiling rules came up in a conversation about that topic, the official said. William J. Bratton, the city’s new police commissioner, has said he will review those practices. While the rules directly control only federal law enforcement activities, their indirect effect is much broader, said Fahd Ahmed, the legal director of the Queens-based South Asian immigrant advocacy group Desis Rising Up and Moving. For instance, he said, immigration bills in Congress have copied the Justice Department profiling language. And civil rights groups can use the rules to pressure state and local agencies to change their policies. “Federal guidelines definitely have an impact,” Mr. Ahmed said. “Local organizers can say, ‘These policies are not in line with what’s coming from the federal level.’”

Status quo solves – Sensitive Operations Review Committee checks discrimination practices
Bullard ’13 (Ben Bullard; June 14, 2013; Personal Liberty; “The FBI Can Pull Back Your Curtain, But Mosques Are Off-Limits”; <http://personalliberty.com/the-fbi-can-pull-back-your-curtain-but-mosques-are-off-limits/>)/CC

Ever since Islamic groups cried out against the FBI’s semi-successful surveillance into terrorist plots that emanated from mosques, the agency has been forced to turn its attention elsewhere in the ongoing campaign to uncover domestic terrorism. In February 2011, the American Civil Liberties Union (ACLU) joined the Council for American-Islamic Relations of Greater Los Angeles in filing a Federal class-action lawsuit against the FBI for infiltrating mosques in Southern California and allegedly gathering general information without probable cause. Regardless of the merits of that suit, the backlash over the Southern California case had a subversive effect on Federal domestic surveillance policy. Later that same year, the Administration of President Barack Obama established a review panel within the Department of Justice called the Sensitive Operations Review Committee, effectively carving out special treatment for the religious, political, journalistic and academic spheres: A sensitive investigative matter (SIM) is defined as an investigative matter involving the activities of a domestic public official or domestic political candidate (involving corruption or a threat to the national security), a religious or domestic political organization or individual prominent in such an organization, or the news media; an investigative matter having an academic nexus; or any other matter which, in the judgment of the official authorizing the investigation, should be brought to the attention of FBI Headquarters (FBIHQ) and other DOJ officials. (Attorney General’s Guidelines for Domestic FBI Operations

(AGG-I Dom), Part VILN.) As a matter of FBI policy, “judgment” means that the decision of the authorizing official is discretionary. Whether the FBI should be indiscriminately watching any individual or affiliated group is a matter for a separate article (indeed, we’ve written several of them), and recent scandals showing that the Nation’s vast enforcement empire is doing just that are both loathsome and alarming. But if Obama is going to watch most of us, it’s only fair (and makes a fair amount of sense) that he watch all of us.

The aff doesn’t solve racist local police tactics like stop and frisk, fusion centers, biometric scanning—comparatively more invasive

Cyril 15 [Malkia Amala, founder and executive director of the Center for Media Justice (CMJ) and co-founder of the Media Action Grassroots Network, a national network of 175 organizations working to ensure media access, rights, and representation for marginalized communities, March 30, 2015, “Black America's State of Surveillance”, <http://www.progressive.org/news/2015/03/188074/black-americas-state-surveillance>] alla

This model is deceptive, however, because it presumes data inputs to be neutral. They aren’t. In a racially discriminatory criminal justice system, surveillance technologies reproduce injustice. Instead of reducing discrimination, predictive policing is a face of what author Michelle Alexander calls the “New Jim Crow”—a de facto system of separate and unequal application of laws, police practices, conviction rates, sentencing terms, and conditions of confinement that operate more as a system of social control by racial hierarchy than as crime prevention or punishment. In **New York City, the predictive policing approach in use is “Broken Windows.” This approach to policing places an undue focus on quality of life crimes—like selling loose cigarettes, the kind of offense for which Eric Garner was choked to death.** Without oversight, accountability, transparency, or rights, predictive policing is just high-tech racial profiling—**indiscriminate data collection that drives discriminatory policing practices. As local law enforcement agencies increasingly adopt surveillance technologies, they use them in three primary ways: to listen in on specific conversations on and offline; to observe daily movements of individuals and groups; and to observe data trends.** Police departments like Bratton’s aim to use sophisticated technologies to do all three. They will use **technologies like license plate readers**, which the Electronic Frontier Foundation found to be **disproportionately used in communities of color and communities in the process of being gentrified.** They will use **facial recognition, biometric scanning software**, which the FBI has now rolled out as a national system, **to be adopted by local police departments for any criminal justice purpose.** They intend to use body and dashboard cameras, which have been touted as an effective step toward accountability based on the results of one study, yet storage and archiving procedures, among many other issues, remain unclear. They will use Stingray cellphone interceptors. According to the ACLU, Stingray technology is an invasive cellphone surveillance device that mimics cellphone towers and sends out signals to trick cellphones in the area into transmitting their locations and identifying information. When used to track a suspect’s cellphone, they also gather information about the phones of countless bystanders who happen to be nearby. The same is true of domestic drones, which are in increasing use by U.S. law enforcement to conduct routine aerial surveillance. While drones are currently unarmed, drone manufacturers are considering arming these remote-controlled aircraft with weapons like rubber bullets, tasers, and tear gas. **They will use fusion centers.** Originally **designed to increase interagency collaboration for the purposes of counterterrorism, these have instead become the local arm of the intelligence community.** According to Electronic Frontier Foundation, there are currently seventy-eight on record. They are the clearinghouse for increasingly used “suspicious activity reports”—described as “official documentation of

observed behavior reasonably indicative of pre-operational planning related to terrorism or other criminal activity.” These reports and other collected data are often stored in massive databases like e-Verify and Prism. As anybody who’s ever dealt with gang databases knows, it’s almost impossible to get off a federal or state database, even when the data collected is incorrect or no longer true. Predictive policing doesn’t just lead to racial and religious profiling—it relies on it. Just as stop and frisk legitimized an initial, unwarranted contact between police and people of color, almost 90 percent of whom turn out to be innocent of any crime, suspicious activities reporting and the dragnet approach of fusion centers target communities of color. One review of such reports collected in Los Angeles shows approximately 75 percent were of people of color.

Fusions centers are the only way that Federal and Local law enforcement data is shared—those fail—means federal changes don’t affect local communities

PSI 12 [PERMANENT SUBCOMMITTEE ON INVESTIGATIONS, the oldest subcommittee of the U.S. Senate Committee on Homeland Security and Governmental Affairs, “FEDERAL SUPPORT FOR AND INVOLVEMENT IN STATE AND LOCAL FUSION CENTERS”, October 3, 2012, https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=2&cad=rja&uact=8&ved=0CCYQFjAB&url=http%3A%2F%2Fwww.hsgac.senate.gov%2Fdownload%2Freport_federal-support-for-and-involvement-in-state-and-local-fusions-centers&ei=jqeFVa_FE8Te-QHf2oLIDg&usg=AFQjCNEY5sKmzFYKts_5F0R5KDR-3QwwZg&sig2=VTn5HU2_sLH1AfWAJEsjBg&bvm=bv.96339352,d.cWw] alla

Sharing terrorism-related information between state, local and Federal officials is crucial to protecting the United States from another terrorist attack. Achieving this objective was the motivation for Congress and the White House to invest hundreds of millions of taxpayer dollars over the last nine years in support of dozens of state and local fusion centers across the United States. 1 Congress directed the Department of Homeland Security (DHS) to lead this initiative. A bipartisan investigation by the Permanent Subcommittee on Investigations has found, however, that DHS’s work with those state and local fusion centers has not produced useful intelligence to support Federal counterterrorism efforts. **The Subcommittee investigation found that DHS-assigned detailees to the fusion centers forwarded “intelligence” of uneven quality – oftentimes shoddy, rarely timely, sometimes endangering citizens’ civil liberties and Privacy Act protections, occasionally taken from already-published public sources, and more often than not unrelated to terrorism.** The Subcommittee investigation also found that DHS officials’ public claims about fusion centers were not always accurate. For instance, DHS officials asserted that some fusion centers existed when they did not. At times, DHS officials overstated fusion centers’ “success stories.” At other times, DHS officials failed to disclose or acknowledge non-public evaluations highlighting a host of problems at fusion centers and in DHS’s own operations.

Modeling args are wrong—no correlation between grants and modeling—only our studies include the broader law enforcement environment—other things are more important than federal influence

Burruss et al 12 [George W. Burruss has a Ph.D. in Criminology & Criminal Justice at Southern Illinois University Carbondale, Joseph A. Schafer has a Ph.D from Michigan State in Social Science (Criminal Justice), Matthew J. Giblin, an associate professor and undergraduate program director in the Department of Criminology and Criminal Justice at Southern Illinois University Carbondale, Melissa R. Haynes, Member of the Department of Criminology and Criminal Justice, “Homeland Security in Small Law Enforcement Jurisdictions: Preparedness, Efficacy, and Proximity to Big-City Peers”, September 2012, <https://www.ncjrs.gov/pdffiles1/nij/grants/239466.pdf>] alla

Second, much of the literature implicitly or explicitly assumes that homeland security preparedness can be improved through funding allocations (e.g., grants), particularly from state and local governments (Davis et al., 2006; Gerber et al., 2005). Alternatively, other writings have assumed that preparedness is simply a byproduct of, or rational response to, the potential for a terrorist attack in a jurisdiction (Davis, 2004; Henry, 2002). What **these studies tend to ignore is the larger environment**. The efficacy of efforts to enhance homeland security may not be just a function of perceived/actual risk or funding, but both of those forces and others. For example, enhanced preparedness and innovative practices may also flow from written products such as books and journals, as well as conferences, training, and other professional networks and channels. These sources, as shown in a study of Illinois law enforcement agencies, play a significant role in determining preparedness levels, independent of risk and resource allocation (Burruss, Giblin, & Schafer, 2010). To date, however, **researchers have largely ignored these sources** (termed institutional pressures) as determinants of homeland security practices. Moreover, if these channels are salient, **the proximity of small agencies to big-city peers might be irrelevant as learning and modeling is indirect rather than direct. This omission is glaring** considering that research verifying the significance of these factors could be used to shape the diffusion of a range of innovations across the law enforcement industry.

No federal modeling internal link—local law enforcement models regional agencies—our ev is comparative

Burruss et al 12 [George W. Burruss has a Ph.D. in Criminology & Criminal Justice at Southern Illinois University Carbondale, Joseph A. Schafer has a Ph.D from Michigan State in Social Science (Criminal Justice), Matthew J. Giblin, an associate professor and undergraduate program director in the Department of Criminology and Criminal Justice at Southern Illinois University Carbondale, Melissa R. Haynes, Member of the Department of Criminology and Criminal Justice, “Homeland Security in Small Law Enforcement Jurisdictions: Preparedness, Efficacy, and Proximity to Big-City Peers”, September 2012, <https://www.ncjrs.gov/pdffiles1/nij/grants/239466.pdf>] alla

Respondents were asked a range of questions designed to assess the extent to which institutional pressures influenced their approaches to homeland security. The **measures address factors that are independent of any one person in the organization; that is, they focus on the influence of other agencies, professional associations, and publications without addressing who within the organization was specifically**

affected by these factors.¹⁰ Table 8 reports **the results of a number of questions measuring whether agency practices were influenced by the actions of their peers. In evaluating their own homeland security performance, 25.8 percent of respondents indicated they paid significant attention to other agencies like their own.** An additional 59.8 percent of agencies paid some attention to similar agencies. Less than one percent of responding agencies reported that they paid no attention to similar agencies in evaluating their homeland security performance. Participating agencies were asked to what extent their agency modeled homeland security policies and practices after other agencies that they viewed as successful. The majority of agencies indicated they did engage in such modeling often (35.3 percent) or occasionally (54.9 percent). Other sources of institutional pressure are professional associations and relevant publications. In **defining homeland security practices and approaches agencies might be influenced by the resources offered by these other entities. Respondents were asked to rate the influence of four sources of influence on a three-point scale from not at all influential (0.0) to very influential (2.0). Peer agencies were reported to be the most influential.** Strong influence was also indicated for professional associations and government publications. Journal articles and books were the least influential, with an average rating between somewhat influential and not at all influential. Grant programs and other funding opportunities were generally less influential. In relative terms, federal and state grant funding for equipment and training were most influential. Private or community funding sources were least influential in formulating homeland security approaches and practices.

Massive alt cause—local police bigotry and racism disproportionately impacts black people—(exposure to local police is more common and direct than exposure to federal law enforcement--so the alt cause outweighs the aff's internal link)

Lee 14 [Jaeah, Jaeah reports, writes, codes, and charts at Mother Jones. Her writings have appeared in The Atlantic, the Guardian, Wired, Christian Science Monitor, Global Post, Huffington Post, Talking Points Memo, and Grist, "Exactly How Often Do Police Shoot Unarmed Black Men?", Aug. 15, 2014, <http://www.motherjones.com/politics/2014/08/police-shootings-michael-brown-ferguson-black-men>] alla

The **killings of Michael Brown by police in Ferguson, Missouri, was no anomaly**: As we reported yesterday, **Brown is one of at least four unarmed black men who died at the hands of police in the last month alone.** There are many more cases from years past. As Jeffrey Mittman, executive director of the American Civil Liberties Union's Missouri chapter put it in a statement of condolence to Brown's family, "**Unarmed African-American men are shot and killed by police at an alarming rate. This pattern must stop.**" But quantifying that pattern is difficult. **Federal databases that track police use of force or arrest-related deaths paint only a partial picture. Police department data is scattered and fragmented. No agency appears to track the number of police shootings or killings of unarmed victims in a systematic, comprehensive way.** Here's some of what we do know: **Previous attempts to analyze racial bias in police shootings have arrived at similar conclusions. In 2007, ColorLines and the Chicago Reporter investigated fatal police shootings in 10 major cities, and found that there were a disproportionately high number of African Americans among police shooting victims in every one,** particularly in New York, San Diego, and Las Vegas. "We need not look for individual racists to say that we have a culture of policing that is really rubbing salt into longstanding racial wounds," NAACP president Cornell Williams Brooks told Mother Jones. It's a culture in which people suspected of minor crimes are met with "overwhelmingly major, often lethal, use of force," he says. In Oakland, California, **the NAACP reported that out of 45 officer-involved shootings in the city between 2004 and 2008, 37 of those shot were black. None were white.** One-third of the shootings resulted in fatalities. Although weapons were not found in 40 percent of cases, the NAACP found, no officers were charged. (These numbers don't include 22-year-old Oscar Grant, who was shot and killed by a transit authority officer at the Fruitvale BART station on New Year's Day of 2009.) **The New York City Police Department has reported similar trends in its firearms discharge report, which shows that more black people have been shot by NYPD**

officers between 2000 and 2011 than have Hispanics or whites. When you look at the racial breakdown of New Yorkers, black people are disproportionately represented among those targeted as criminal shooting suspects, firearms arrestees, and those fired upon or struck by police gunfire. Often, the police officers do not get convicted or sentenced. Delores Jones-Brown, a law professor and director of the Center on Race, Crime, and Statistics at the John Jay College of Criminal Justice in New York City, has identified dozens of black men and women who have died at the hands of police going back as far as 1994. She notes that while these incidents happen regularly, it often takes a high-profile case, such as Brown's, to bring other recent incidents to national attention. "Unfortunately, the patterns that we've been seeing recently are consistent: The police don't show as much care when they are handling incidents that involve young black men and women, and so they do shoot and kill," says Jones-Brown, a former assistant prosecutor in Monmouth County, New Jersey. "And then for whatever reason, juries and prosecutor's offices are much less likely to indict or convict." Between 2003 and 2009, the DOJ reported that 4,813 people died while in the process of arrest or in the custody of law enforcement. These include people who died before an officer physically placed him or her under custody or arrest. This data, known as arrest-related deaths, doesn't reveal a significant discrepancy between whites, blacks, or hispanics. It also doesn't specify how many victims were unarmed. According to the FBI, which has tracked justifiable homicides up to 2012, 410 felons died at the hands of a law enforcement officer in the line of duty.* But black people are more likely than whites or Hispanics to experience a police officer's threat or use of force, according to the Department of Justice's Police Public Contact Survey in 2008, the latest year for which data is available. Of those who felt that police had used or threatened them with force that year, about 74 percent felt those actions were excessive. In another DOJ survey of police behavior during traffic and street stops in 2011, blacks and Hispanics were less likely than whites to believe that the reason for the stop was legitimate. The Justice Department has investigated possible systemic abuse of power by police in at least 16 cities. Police shootings of unarmed black people aren't limited to poor or predominantly black communities. Jones-Brown points to examples where police officers have shot unarmed black men and women in Hollywood, Riverside (California), and Prince Georges County—a Maryland suburb known as the most affluent US county with an African-American majority. "Part of the problem is that black people realize that you don't have to be poor, you don't have to be in your own community...and this can happen to you." she says. These killings occur against black people of varying socioeconomic backgrounds: "Actors, professional football players, college students, high school grads. They happen to black cops, too." Yet, the lack of comprehensive data means that we can't know if there's been an upsurge in such cases, says Samuel Walker, a criminal justice scholar at the University of Nebraska in Omaha and author of *The Color of Justice: Race, Ethnicity, and Crime in America*. "It's impossible to make any definitive statement on whether there were more incidents in the last 5 to 10 years than in the past," he says. "We just don't have that kind of data." But what is certain, Walker says, is that the fatal shooting in Ferguson "was just the tip of the iceberg."

Local-federal police data distribution fails—it's too unorganized—local law enforcement cellphone data collection is another alt cause

Ackerman 13 [Spencer, national security editor for Guardian US and won the 2012 National Magazine Award for Digital Reporting, "Data-sharing among US law agencies amounts to 'organised chaos' – report", December 10, 2013, <http://www.theguardian.com/world/2013/dec/10/data-sharing-law-enforcement-organised-chaos>] alla

The sharing of crucial intelligence about counter-terrorism between the FBI, the Department of Homeland Security and local police departments takes place through a patchwork process that amounts to "organized chaos", according to a new report. The report, released Tuesday by the Brennan Center for Justice, a public-policy institute at New York University law school that has a track record of being skeptical of government surveillance, found inconsistent rules, inadequate oversight, apparent

wastefulness and insufficient regard for civil liberties nationwide. “This poorly organized system not only wastes time and resources; it also risks masking reliable intelligence that could be crucial to an investigation,” the report says, warning that a “din of data” is overwhelming law enforcement. “There’s a lot of irrelevant information being collected,” said Michael Price, a counsel with the Brennan Center and the author of the report. “As a result of that, it seems pretty easy for information to slip through the cracks.” A Department of Homeland Security spokesman took vigorous exception to the report’s factual presentation and its conclusions, saying that much of the responsibility for the patchwork rules should properly be attributed to discrepancies in laws across the 50 states and arguing that the fusion centers contribute strongly to national security while protecting civil liberties. Scrutiny of the wide-reaching intelligence apparatus in federal, state and local law enforcement since 9/11 has largely taken a backseat during the past six months’ worth of revelations from whistleblower Edward Snowden about the National Security Agency’s surveillance activities. But this week, several reports pointed to an enormous amount of data collected by police departments – particularly from cellular towers. The Brennan Center report examined 16 major police departments across the US, along with 19 affiliated “fusion centers” – controversial data-sharing pools between federal, state and local agencies – and 14 of the FBI’s joint terrorism task force partnerships with police. It found, among other problems, inconsistent quality control, which permitted a flood of local tips – some as innocuous as “ordering food at a restaurant and leav[ing] before the food arrives” (an example from California, according to a Fusion Center training document obtained by the report’s authors) – into fusion centers. Data like that does not meet the legal standard for “reasonable suspicion” normally required to pursue surveillance, let alone the requirements of probable cause. Yet it can be stored within fusion centers and accessed by a variety of law enforcement and homeland security agencies for up to a year, the report said. Despite efforts by the Department of Homeland Security, most of the fusion centers operate with “minimal oversight, or no oversight whatsoever”, the report found. Out of 19 centers reviewed, only five require independent audits of retained data. “We’re calling for clear, consistent processes and stronger standards for collecting and sharing information to reduce some of the noise coming from this din of data,” Price said. A Department of Homeland Security spokesman contended Tuesday that the report misrepresented the complexities of data-sharing across local, state and federal agencies, and strongly defended the relevance and performance of fusion centers. “This report fundamentally misunderstands the role of fusion centers within our national security structure and their value to state and local law enforcement,” said DHS press secretary Peter Boogaard. “As pointed out by congressional leaders and major law enforcement organizations across the country, fusion centers greatly improve information sharing and co-ordination between federal, state and local law enforcement. By receiving classified and unclassified information from the federal government and assessing its local implications, fusion centers help law enforcement on the front lines better protect their communities from all threats, whether it is terrorism or other criminal activities.” The FBI did not respond to a request for comment made after a media embargo on the Brennan Center report lifted. Fusion centers have been the subject of criticism from both civil libertarians and powerful elected officials. A 2012 investigation by the bipartisan Senate permanent subcommittee on investigations of more than 80,000 fusion center documents could not find any contribution the centers had made to “disrupt[ing] an active terrorist plot”. DHS disputes the results of that investigation, as do several legislators on committees overseeing the department. Senator Tom Coburn, an Oklahoman who serves as the top Republican on the Senate government reform and homeland security committee, has emerged as a leading legislative critic of fusion centers and joint terrorism task forces, for many of the same reasons detailed in the Brennan Center report. After a government inquiry indicated many federal data-sharing efforts were duplicative, Coburn issued a statement in April calling them “a vital component of national security”, but adding, “that is not an excuse to waste taxpayer funds”. The Brennan Center’s report comes as police departments’ widespread use of cellphone data is attracting new scrutiny. On Monday, the Washington Post revealed that police departments around the country relied 9,000 times last year on so-called “tower dumps”, or data collected from cellphone signals that went to a given cellphone tower during a certain period of time. That data necessarily includes call information from cellphone subscribers who are never

suspected of any crime. “There are **serious questions about how law enforcement handles the information of innocent people swept up in these digital dragnets.**” congressman Ed Markey, a Massachusetts Democrat who plans to introduce legislation limiting tower dumps, told the Post. Also on Monday, USA Today reported that approximately a quarter of police departments in the US have employed tower dumps, and at least 25 departments around the country employ a portable piece of spoofing hardware, called a Stingray, that tricks cellphones into thinking it is a cell tower, allowing it siphon data and send it directly to police. And all that information is on top of the fruits of the NSA’s vast data collection efforts, which are not entirely off limits to federal law enforcement. The controversial bulk collection of Americans’ phone data has been repeatedly described by the NSA as a tool to aid the FBI in detecting domestic terrorism activity. NSA deputy director John C Inglis recently stated that the FBI cannot search directly through the NSA’s data troves, but the agency shares telephone metadata with the bureau following searches through its databases based on “reasonable articulable suspicion” of connections to specific terrorist organizations. The Brennan Center report did not specifically analyze law enforcement tower dumps, but Price called the reports of them alarming. “This is another indication of the vast trove of information that state and local police are collecting about law abiding Americans,” Price said. “To date, that information does not appear to be particularly useful in preventing terror attacks.”

Fusion centers fail—local law enforcement doesn’t have oversight

Price 13 [Michael, serves as counsel for the Brennan Center’s Liberty and National Security Program, “NATIONAL SECURITY AND LOCAL POLICE, December 10, 2013, https://www.brennancenter.org/sites/default/files/publications/NationalSecurity_LocalPolice_web.pdf] alla

Since the attacks of September 11, 2001, many state and local law enforcement agencies have assumed a critical but unfamiliar role at the front lines of the domestic fight against terrorism. The federal government has encouraged their participation, viewing them as a tremendous “force multiplier”² with approximately 800,000 officers nationwide.³ Indeed, by collecting and sharing information about the communities they serve, police departments have been able to significantly increase the data accessible to members of the federal intelligence community.⁴ At the same time, **however, the headlong rush into counterterrorism intelligence has created risks for state and local agencies, with too little attention paid to how to manage them.** Although prevention of terrorist attacks is often described as a new, post-9/11 paradigm for law enforcement, the prevention of all crime has been a central tenet of modern policing since its debut nearly 200 years ago.⁵ Intelligence activities, including the use of surveillance, undercover officers, and informants, have helped fulfill this mandate. But due to the potential for abuse that came to light during the 1960s and 70s, many courts and legislatures placed checks on police intelligence operations. Most importantly, they required officers engaged in intelligence activities to have reasonable suspicion that a person or group is involved in criminal activity before collecting, maintaining, or sharing information about them. Of course, this rule does not apply to most other police activities. Officers responding to an emergency, for example, may record a victim’s statement or document an eyewitness account without suspecting either individual of wrongdoing. But for many police departments, reasonable suspicion became a prerequisite for creating intelligence files.⁶ Since 9/11, some police departments have established counterterrorism programs to collect and share intelligence information about the everyday activities of law-abiding Americans, even in the absence of reasonable suspicion.⁷ This information is fed into an array of federal information sharing networks, creating mountains of data.⁸ Whether these practices have made us safer is debatable.⁹ What is clear is that they raise issues of accountability and oversight in ways that have not been given sufficient attention. The centerpiece of this new counterterrorism architecture is a national information sharing network connecting police departments and federal agencies, known as the Information Sharing Environment (ISE). **But there is little consistency regarding the types of information that local law enforcement agencies collect and share with their federal counterparts. The policies and procedures governing such activities are often opaque or unavailable to the public, while a deliberately decentralized system produces rules that vary considerably across the country. Inconsistent rules jeopardize the quality of shared intelligence and raise serious civil liberties concerns.** In some jurisdictions, for example, police have

used aggressive information gathering tactics to target American Muslim communities without any suspicion of wrongdoing. Such practices have not generated investigative leads or proven especially useful in preventing potential terrorist attacks.¹⁰ But they have strained community relations with law enforcement, thereby jeopardizing the very terrorism prevention mission they are intended to accomplish.¹¹ Many state and local intelligence programs lack adequate oversight. While federal agencies operate under the watch of independent inspectors general, there is often no equivalent for state and local information sharing ventures. Very few local governments have built the kind of oversight structures that should accompany such a significant expansion of police functions.

Multitude of barriers to data-sharing—localized law enforcement cannot effectively model/cooperate with federal agencies

AFCEA International 7 [The Armed Forces Communications and Electronics Association (AFCEA) established in 1946, is a non-profit membership association serving the military, government, industry, and academia as an ethical forum for advancing professional knowledge and relationships in the fields of communications, information technology, intelligence, and security, “The Need to Share: The U.S. Intelligence Community and Law Enforcement”, April 2007, [The committee believes certain steps can help the intelligence and law enforcement communities move forward in their ability to share information and intelligence better. Communicate and Reinforce the Need for Sharing: People have a natural tendency to resist change. For this reason, leaders throughout the intelligence and law enforcement communities must consistently and repeatedly deliver the message of change and ensure that everyone understands the importance of sharing information. Analysts who have been told for years that releasing certain types of information violates the law must now be strongly encouraged to exchange the information with others. The new Director of National Intelligence, Mike McConnell, has made a strong statement to all intelligence professionals with his direction that it is not enough to share intelligence: There is a responsibility to provide it. Earn Public Trust: Abuses of the past have made the public skeptical about the government’s role in personal lives. Yet, the public wants and deserves a collaborative intelligence and law enforcement community effectively working together to prevent another terrorist attack. A Markle Foundation task force⁷ noted, “For information sharing to succeed, there must be trust.... Building trust requires strong leadership, clear laws and guidelines, and advanced technologies to ensure that information sharing serves important purposes and operates consistently with American values.” The communities must ensure compliance with the law and make the commitment visible to the public. Manage Risk: The intelligence and law enforcement communities have been risk averse in the past regarding sharing information—often for good reasons. Today’s environment calls for a different approach. The risk of sharing information must be balanced against the risk of not “connecting the dots.” What is the true value of having important information—even if it comes from a tenuous source in some cases—if the information is never shared with others who may need it and who may add value to the information? As a first step, local law enforcement should have a formal role and presence within the NCTC. This would give law enforcement officials early warning about terrorist tactics used overseas before the terrorists try to apply them in the United States, and it would help law enforcement plan and train better. Create Clear, Understandable, and Consistent Guidelines: Many current guidelines and policies are complex, confusing, inconsistent, and make sharing information difficult to achieve. This complexity causes delays in sharing data and undermines its utility. People are more apt to give up if the rules are too hard to follow. Eliminate the Construct of “Data Ownership:” The “owners” do not](https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=1&cad=rja&uact=8&ved=0CB4QFjAA&url=http%3A%2F%2Fwww.afcea.org%2Fmission%2Fintel%2Fdocuments%2FSpringIntel07whitepaper_000.pdf&ei=5LSEVarfJeq1sATX0YGQAQ&usg=AFQjCNFXOVotodHFFBsKU6WKdjvU_u5slw&sig2=KthG2NXEpzngYQ_75f9lLQ&bvm=bv.96339352,d.cWc] alla</p></div><div data-bbox=)

always appreciate why information they control could be significant to others. For sharing to be effective, those who have a broader picture may be the best advocates regarding what needs to be shared. For example, local and state law enforcement, fire, and public health organizations can make a critical contribution in terms of detection, prevention, and response. The federal intelligence or law enforcement communities may not be taking full advantage of these capabilities and skills because they do not have a clear understanding of what they can contribute. These individuals on the “front lines” may hold key pieces of the puzzle. The fact that some of their information comes from an unclassified source does not automatically mean it is not useful or important. Use Technology in a Meaningful Way: Most of the obstacles to meaningful change in this arena are cultural, but technology still can play an important role. Most, if not all, of the technological impediments to protecting sources and methods while enabling effective information sharing have been solved. Technology should be embraced as a key in easing the administrative burdens of sharing information. Emphasize Training: Effective and focused training can improve the confidence of community members and the public’s perception that information is being handled appropriately. The right training, coupled with intelligence policies, will better enable sharing and ultimately will help change the cultures. Share Good Ideas and Lessons Learned: The District of Columbia, among others, has taken first and useful steps. It has initiated discussions in the law enforcement and intelligence communities to broaden understanding of what types of information are needed and why. Once state or local law enforcement organizations articulate and justify specific needs, and it becomes clear the contribution they can make to mission success, the willingness to share information will improve significantly. Other steps are possible. In the early 1980s the Drug Enforcement Agency (DEA) partnered with local law enforcement to educate U.S. police officers on the trends, tactics, and patterns of the South American drug cartels. As a result, local law enforcement officers knew what behavior, precursor chemicals, and modes of transportation were associated with major trafficking and violent crimes of the international cartels. Such partnerships work. Leaders in both communities should look to the partnership model within the Joint Terrorism Task Force as an approach to enabling information sharing. The Director of National Intelligence has recently created an Information Sharing Steering Committee (ISSC) and declared the ISSC will “move the Intelligence Community beyond the ‘need to share’ philosophy and more to a ‘responsibility to provide.’”⁸ This commitment can steer the federal, state, and local communities closer to the goal of a shared information environment. Conclusion Since September 11, 2001, the intelligence and law enforcement communities have struggled to adapt to new challenges and to refocus and reorder priorities. **Nonetheless, the seam between federal, state, and local communities has inhibited the United States’ ability to fight terrorism. Although Congress has removed many of the existing barriers to cooperation, and limited examples of progress exist, implementation is lagging. The key to change is strong leadership in both communities. Leaders must understand and nurture cultural change that emphasizes a responsibility for providing information—not just for sharing it.** They must also communicate to their subordinates a willingness to accept risk in sharing data and must deemphasize data ownership. These steps, along with clear guidelines, inter-community training, the exchange of lessons learned, and the effective use of technology, can open doors of cooperation that have been closed for too long.

Alt Causes

Local Police Departments are oppressive – federal data and Maple Heights proves

Dewan 14, Shaila Dewan, Reporter for the New York Times, 2014 (Mostly White Forces in Mostly Black Towns: Police Struggle for Racial Diversity, New York Times, September 9,

<http://www.nytimes.com/2014/09/10/us/for-small-police-departments-increasing-diversity-is-a-struggle.html>, Accessed on 6/20/15)

Maple Heights police officers with a driver stopped for a traffic violation. The department has only two black officers out of 35. Credit Michael F. McElroy for The New York Times MAPLE HEIGHTS, Ohio — The population of this working-class Cleveland suburb has gone from nearly all white to two-thirds black since its mayor declared more than 35 years ago that he did not know “what a minority is.” But its police and fire departments have not kept pace: The Maple Heights police force today still has only two black officers out of 35; the fire department is 100 percent white. Maple Heights is far from unique. Across the country, police departments still struggle to hire and retain minority candidates — in some cases despite great efforts, in others because of a lack of initiative. But now, the problem has taken on new relevance since the fatal shooting of a young black man last month in Ferguson, Mo., where just four of the 53 police officers are black, according to the police chief.

Nationwide, the total number of minority police officers has risen, but they remain heavily concentrated in larger cities, with the numbers falling off sharply in smaller ones, like Ferguson and Maple Heights. In 1977, Maple Heights agreed to increase minorities in its police and fire departments. But officials did not follow through. Credit Michael F. McElroy for The New York Times Data from a federal survey of police departments in 2007, analyzed for The New York Times by Andrew A. Beveridge, a sociologist at Queens College, found that nearly 400 departments, most with fewer than a hundred officers, were substantially whiter than the populations they served. In these departments, the share of white officers was greater than the share of white residents by more than 50 percentage points. Ferguson and Maple Heights are about the same size, just over 20,000 people, and in both, the black population has surged in recent decades. Both cities have white mayors and largely white political leaderships. And both police departments have fallen far short of reflecting the communities they serve — even as some of Maple Heights’s neighboring police departments have achieved much higher levels of diversity. Critics point to the lack of racial balance in police departments as evidence of systemic racism. But experts say the experiences of the two towns illustrate the obstacles to achieving diversity in law enforcement, even for departments that have made it a priority. “I see all these pundits come on the Sunday talk shows and say: ‘Of course you can hire more black people. Of course they’re not trying.’” said Nelson Lim, a senior sociologist at the RAND Corporation’s Center on Quality Policing who has consulted with departments in Los Angeles and San Diego. “But it’s very, very, very difficult.” There is little hard evidence that diversity correlates with better performance, in part because it is difficult to control for complex variables and to know which outcomes, from crime rates to brutality cases, to measure. In fact, one study of a Florida police department found that black officers were more likely than white to use force against black suspects. A review of court cases going back to the early 1990s revealed only a handful of civil rights or excessive-force cases against the Maple Heights police, two of which involved a white officer who is no longer with the department, and none that involved a fatality like the shooting in Ferguson. Still, it is an accepted tenet of community policing that when departments reflect the communities they serve, they have an easier time building trust and defusing, rather than escalating, tense situations.

In Maple Heights, some residents said they would like to see more black officers, while others said that it was the attitude, experience and training of the officer, not race, that mattered. Chris Turney, a home renovator who lives with his wife and two daughters, said it was more important for officers to live in the city. All but one do not. “The police come here, they do their jobs, they don’t try to get to know anybody,” said Mr. Turney, who is black. “The police don’t wave.” Hundreds of police departments across the nation have forces with a white percentage that is more than 30 percentage points higher than the communities they serve. Other residents drew a contrast between police attitudes in Maple Heights and neighboring Bedford Heights, where three-quarters of the residents, and nine of 28 police officers, are black. “Bedford’s not going to do you like Maple,” said Carlos Walker, 41, who is black. “You have to do something real stupid for Bedford. Maple, soon as they get behind you, you sweating.” In her 11 years as an officer in Bedford Heights, Detective Ericka Payne, who is black, has often provided backup on calls in Maple Heights. There are definitely differences in the ways the departments interact with the outside community,” Detective Payne said. “We try to be a little bit more community oriented. Because we are a little bit more diverse, we understand those dynamics and maybe have a little bit more ease dealing with that.” Several Maple Heights officials said the diversity of the police and fire departments had never been a major issue. It is hard to find qualified candidates of any race, said John C. Popielarczyk, who has been with the Maple Heights Police Department since 1990 and the acting police chief since May. Maple Heights, devastated by the foreclosure crisis, has fallen on hard times, and the police force has shrunk. And with most officers staying on the job for 25 years, Chief Popielarczyk said, the opportunity to hire is scarce. Of eight recent hires, two were black. One, the chief said, was fired for cause before his probationary period ended. The department has advertised in minority newspapers and changed the private company that administers its Civil Service exam in hopes that more minority candidates would pass, he said. But he added: “The real goal of the department is to provide qualified officers who are competent and can provide quality service regardless of race. I don’t think people really care about the color of the officer that responds; they care

that the officer responds quickly, is effective, treats them well and is respectful.” The acting fire chief, James Castelucci, said much the same, adding that one promising black candidate withdrew when his current employer offered him more money. The obstacles to diversity are many, Dr. Lim, the sociologist, said. Candidates usually must pass written tests, physical agility tests, psychological tests, polygraphs and background checks, some of which can have a disparate impact on minority candidates. Qualified black candidates are sought after not just by competing police departments, but also by employers in other industries. And some police chiefs have cited a negative attitude toward law enforcement among blacks that hinders recruiting. Police departments have tried all kinds of remedies, from personal trainers to help with physical fitness tests to tailored recruiting. (A RAND survey found that women were attracted to the good salaries in policing, blacks to the profession’s prestige and Asians to the excitement of the job.) But many small departments lack the resources, or the will, to conduct an exhaustive review of their hiring practices. In Maple Heights, job candidates are ranked by how well they score on the written exam, earning bonus points for factors like previous training, military experience and city residency. For each opening, the candidates are considered one by one, in order of their score. Frank Ross said he did not accept the city’s explanations for having few minority police officers. Credit Michael F. McElroy for The New York Times Some nearby suburbs like Bedford Heights and Cleveland Heights — where about 40 percent of the residents and 22 of 102 officers are black — do things differently. The chiefs of both departments said officials were allowed to consider the top 10 candidates on the list, which helps them hire more minority candidates. Both chiefs said their cities took an aggressive approach to diversity as early as the 1970s. Cleveland Heights has two types of officer positions, one that requires a Civil Service exam and a college degree, and a lower tier, called basic patrol, that does not. Once a basic patrol officer is hired, the city will reimburse tuition costs, and many eventually earn a degree and work their way to the upper tier. The diversity of neighboring police departments poses a challenge to cities like Maple Heights, Dr. Lim said: “If the leadership, if the police chief, is dedicated to getting more diversity in the work force, how hard is it to figure out how the other department is doing such a good job?” Asked why Maple Heights considered only one candidate at a time, Chief Popielarczyk said: “We’ve always done it that way. My understanding is that that’s how we’re supposed to do it.” Some Maple Heights residents have tried to persuade the city to hire more blacks, forming a committee called the Maple Heights Citizens for Change. In 2012, Elaine Stone, a committee member who runs a blog called the Maple Heights African American Gazette, was digging around and discovered a long-forgotten affirmative action agreement, signed by the mayor, a citizens’ committee and a representative from the federal Justice Department in 1977. In that deal, Maple Heights, at the time about 96 percent white, agreed that within three years minorities would make up at least 4 percent of its police and fire departments. But it soon became clear that the city was less than fully committed to this goal. “I figure we’re all minorities,” the mayor at the time, Emil J. Lisy Jr., told reporters when he was criticized for failing to live up to the agreement. “The first thing is to find out what a minority is, and I haven’t figured that out.” Federal officials threatened to withhold \$500,000 in funds, but backed down after the mayor submitted a 65-page response. When Ms. Stone learned about the agreement, she contacted Frank Ross, the only surviving signer of the document. Mr. Ross was a teacher in his 20s when he came to Maple Heights, at a time when real estate brokers steered black customers to a part of town called Presidential Row. He now lives 12 miles away, but agreed to go to meetings of the committee, where he suggested that the group call the Community Relations Service of the Justice Department, the same office that helped broker the earlier deal. Though new discussions were opened between the city and the service, which provides mediation and training to governments, residents feel the talks have stalled. Neither the mayor nor the Maple Heights legal director returned calls for comment for this article, and the service does not publicly discuss its work. Participation by local governments is strictly voluntary. Ms. Stone said economics, not overt racism, had kept the police and fire departments largely white. “There was white flight, but people were trying to hold on to their jobs,” she said. “I can understand you don’t want to give up that job.” Mr. ROSS said apathy among black voters was partly to blame for the situation. But he does not accept the city’s excuses. “They’re telling me in 40 years they can’t find any African-American policemen?” he said. “Forty years later — it’s very emotional for me. Forty years later, I’m still dealing with the same thing.”

Alt cause – Local police is the problem—community oriented policing is failing

Jrank Law Library, No Date, (No Date,<http://law.jrank.org/pages/2228/Urban-Police-Policing-minority-citizens.html>, Accessed 6/19/2015)

Historically, cooperation and communication between police and minorities has been troubled. Williams and Murphy described a history of policing shaped by the enforcement of laws that have discriminated against minority groups, particularly African Americans. Slavery, segregation, and discrimination are historical realities that shaped the current distrustful, strained, and often hostile relationship between police and minority citizens. This poor relationship reached its pinnacle during the police-citizen crisis of the 1960s. The civil rights movement had gained momentum and become more militant. Protesters gathered to demonstrate against race discrimination and injustice within the criminal justice system. Police officers responded to protesters with physical brutality, which increased the tension between minorities and the police. This tension exploded in the form of riots and civil disobedience, often sparked by incidents involving the police (Walker, 1999). As a result of several crime commission reports and research findings questioning the effectiveness of "professional" police organizations, police organizational strategies evolved to focus on strengthening relationships and creating partnerships between the police and citizens. Police departments attempted to improve community relations through the creation of police-community relations units, race relations training for officers, and the hiring of more minorities and women. Some of these techniques were relatively successful. As reported by Walker (1999), African American officers represented a majority of the force in departments such as Detroit, Washington, and Atlanta in 1993. In addition, African Americans were selected as police chiefs in several large departments, including New York City, Los Angeles, Atlanta, Chicago, Houston, and others. Furthermore, by the mid-1990s, women represented 13 percent of all officers in large police departments. Despite these advances, police still struggle with minority community relations. In 1993, the acquittal of four officers accused of beating Rodney King, an African American motorist in Los Angeles, sparked race riots across the country. Other major cases of police abuse of force in the 1990s (e.g., the Louima and Diallo cases in New York City) further increased tension between the police and minorities. In 1996, 26 percent of African American citizens surveyed reported they had very little or no confidence in the police, compared to only 9 percent of white respondents (Bureau of Justice Statistics, 1996). Furthermore, when asked about attitudes toward use of force, 60 percent of whites had favorable attitudes compared to 33 percent of African Americans and 42 percent of Hispanics (Huang and Vaughn). Serious questions regarding police discrimination remain. Studies routinely show that minorities are overrepresented as suspects who have force used against them, and who are shot and killed by officers. Worden's analysis of 1977 data showed that police were more likely to use both reasonable and unreasonable force against black male suspects. This is also true of the use of deadly force. However, changes in police departments' administrative policies led to decreases in the use of deadly force by officers. In a study of the New York City Police Department, Fyfe found that changes in the department's formal policies governing police shootings in 1972 reduced the average numbers of shots fired by officers by 30 percent. The total number of uses of deadly force decreased by nearly 50 percent from 1970 to 1984. In that same time period, the ratio of African Americans to whites who had deadly force used against them decreased from six-to-one to three-to-one (Walker, 1999). Reductions in police use of deadly force toward minorities were also noted after the fleeing-felon standard guiding police use of deadly force was ruled unconstitutional by the Supreme Court in *Tennessee v. Garner*, 105 S. Ct. 1694 (1985). African Americans are also disproportionately arrested more often than whites. It is unclear whether these disparities in arrest statistics represent actual discrimination (i.e., disparity based on extra legal factors, such as race). When other factors are taken into consideration (e.g., seriousness of the offense, the evidence available, demeanor of the suspect, etc.), it appears that arrest decisions are influenced more by situational and legal factors than strictly race (Riksheim and Chermak). However, police are more likely to police inner-city neighborhoods, which are predominantly minority areas. In this sense, police may be showing a form of contextual discrimination by heavily policing particular neighborhoods or particular types of crimes. A concern is that police officers are profiling citizens based on race and ethnicity. The term DWB or driving while black is a vivid descriptor of this phenomenon. Minority groups claim that police are more likely to pull over motorists simply because of their race. In fact, studies of New Jersey State Police have shown that minorities are pulled over disproportionately. This same argument is made in urban areas, where minorities believe they have become the targets of police harassment through tactics of aggressive enforcement of minor crimes. Studies of police have shown that African Americans and Hispanics are disproportionately stopped, questioned, and frisked by police (Browning et al.). Surveys of citizens also indicated that African Americans and Hispanics are more likely to be stopped and interrogated by police (One survey

of African American high school students revealed that 80 percent had been stopped by police and 62 percent of those stopped said the police treated them disrespectfully (Walker, Spohn, and DeLone).

At the same time, however, minority citizens complain that police are not responding to their needs in these areas. Citizens allege that police are not providing adequate protection or attention in their neighborhoods.

According to Walker, this apparent contradiction can be explained by "the diversity within racial and ethnic minority communities Complaints about police harassment generally come from young males who have a high level of contact with the police. Most members of racial minority communities, however, are law-abiding adults with jobs and families. Like their white counterparts, they want more not less police protection" (1999, p. 222). In the 1980s, new strategies of community oriented policing have encouraged the partnership between citizens and the police. Research has shown, however, that strategies of community policing tend to have the strongest impact on neighborhoods where they are least needed. Satisfaction with community policing techniques is highest in homogeneous, higher socioeconomic status communities, and lowest in heterogeneous, lower socioeconomic status communities (Bayley, 1988). It is clear that new approaches to improve police-minority relations are needed.

Alt Cause—Underrepresentation of local minorities in the police force is a larger problem

Badger, Keating, and Elliot 14 Emily Badger, Dan Keating, and Kennedy Elliot, ("Where minority communities still have overwhelmingly white police", August 14, <http://www.washingtonpost.com/blogs/wonkblog/wp/2014/08/14/where-minority-communities-still-have-overwhelmingly-white-police/>, Accessed on 6/21/15)

There is something unsettling about the scenes this week out of Ferguson, Mo., that goes beyond the rare sight of military equipment on city streets or the disproportionate deployment of it. In so many of these images, the unarmed residents are black. But almost all of the officers facing them are white. The fatal police shooting Saturday of an unarmed black teen that set off these confrontations in a St. Louis suburb has raised questions not just about the conduct of one officer, but the makeup of an entire police force. How could a community that's two-thirds black have a police force that's almost entirely white? How could such divisions ubiquitous in the 1960s persist in 2014? Across the country, this racial imbalance is not rare. Fifty years after the Civil Rights movement called attention to the underrepresentation of minorities in police departments, the pattern is still widespread. More than three quarters of cities on which the Census Bureau has collected data have a police presence that's disproportionately white relative to the local population. Meanwhile, in more than 40 percent of cities, blacks are under-represented among police officers, a Washington Post analysis of Census data revealed. While the pattern is widespread, broad variations exist. The charts below show which cities have the greatest and smallest disparities between population and police. These numbers are more encompassing than a mere count of officers in a municipal police department. From the point of view of residents in each community, they reflect the larger police presence one might encounter. The center line in each chart represents equality — or how we might expect a police force to look if it perfectly reflected the demographics of the city it serves. Non-Hispanic white representation in most cities is above this line; in other words, the share of white police officers in Memphis or Charlotte is higher than the share of whites living in those cities. If we count cities within five percentage points of that line as having relative equality, just one in 10 cities and towns in America meets that standard. If we look at the data from the perspective of black officers, about 45 percent of cities and towns meet this definition of equality. That number, though, is largely driven by cities with few or no black officers but also very small black populations. Remove cities where less than 5 percent of the population is black, and 72 percent of all such places — 446 in total — have police forces where blacks are under-represented. In the 609 communities where Hispanics make up at least 5 percent of the population, they are under-represented among police as well in 66 percent of places. Even the best intentions by police departments won't automatically create perfect equality because city demographics shift over time — in some

places more rapidly than others. The Department of Justice, which has filed hundreds of lawsuits against discriminatory local agencies since the 1970s, has historically looked at demographic data like this, along with hiring and recruiting practices. It is striking on the above charts, however, that many of America's biggest cities are hovering more closely around equality than others. These are the same cities where fierce battles were fought and federal lawsuits waged over unequal hiring practices after 1972, when amendments to the Civil Rights Act extended protection from discrimination to state and local government employers. "Politicians realized that they couldn't have an all-white police force in a city with a substantial minority population," says Richard Ugelow, who worked on such lawsuits in the Civil Rights Division of the DOJ for 29 years. "That changed the culture of the police departments and the willingness of law enforcement, police and fire departments to become more diverse. You see that in Chicago, New York, Atlanta, in these large cities. They want to have a diverse workforce. You don't have those same pressures in these smaller communities." The public outcry and federal pressure that made such inequality so visible in Chicago — prompting dramatic change there — hasn't historically extended to places like Ferguson, a suburb of 21,000 with 53 commissioned police officers. "It's hard for the government to bring a lawsuit," Ugelow says, "against a police force of 100 people." The above charts show many places with either all-white or no-black police forces. Many of them are smaller cities, such as Niagara Falls, N.Y., where 20 percent of the population is black but all 250 police are white, according to the data. In Florissant, Mo., a quarter of the population is black, but none of the 25 police are. Some seemingly unequal communities have also experienced demographic shifts that have exacerbated the imbalance between the police presence and the population. Ferguson is an example of such a place: In 1990, the city was almost three-quarters white. By 2010, it was two-thirds black. Its police force today may in some ways be a legacy of the makeup and policies of an earlier moment of time. Ugelow doubts that the picture above is the result of intentional discrimination today — "blacks need not apply." But some of the same historic practices and applicant tests that effectively excluded minorities may still exist in departments that never updated their policies. During the recession, small-town police agencies that have had to cut resources may have trimmed the HR staffs and recruitment programs that address this issue. Ugelow also worries that, since the Bush Administration, the DOJ has eased up on its civil rights litigation. Historically, the issue of inequality in police departments has focused on the relationship between blacks and whites. But as the country's Hispanic population continues to grow, communities have to take into account demographic patterns that encompass more than white and black. In San Antonio, for instance, blacks and whites only account for one-third of the local population, and a slightly higher proportion of the police; Hispanics make up 63 percent of the population, and 58 percent of the police. As a note, the data above draws from a special 2010 Census count of workers in 755 cities and towns, including every place with a population of at least 50,000 at that time. Once a decade, the Census creates this employment file for federal agencies that monitor employment practices and enforce civil rights laws. The data include the number and demographics of police officers — counting police and sheriff's patrol officers, and transit and railroad police — working in each city. The data do not include detectives, security guards or parking enforcement officers.

MASSIVE alt cause—they can't solve racial profiling by local law enforcement agencies—comparatively more exposure to them than federal law enforcement

Harris 99 [David A., Distinguished Faculty Scholar and Professor of Law at University of Pittsburgh, "DRIVING WHILE BLACK: RACIAL PROFILING ON OUR NATION'S HIGHWAYS", June 1999, <https://www.aclu.org/report/driving-while-black-racial-profiling-our-nations-highways>] alla

On a hot summer afternoon in August 1998, 37-year-old U.S. Army Sergeant First Class Rossano V. Gerald and his young son Gregory drove across the Oklahoma border into a nightmare. A career soldier and a highly decorated veteran of Desert Storm and Operation

United Shield in Somalia, SFC Gerald, a black man of Panamanian descent, found that he could not travel more than 30 minutes through the state without being stopped twice: **first by the Roland City Police Department, and then by the Oklahoma Highway Patrol.**

During the second stop, which lasted two-and-half hours, the troopers terrorized SFC Gerald's 12-year-old son with a police dog, placed both father and son in a closed car with the air conditioning off and fans blowing hot air, and warned that the dog would attack if they attempted to escape. Halfway through the episode – perhaps realizing the extent of their lawlessness – the troopers shut off the patrol car's video evidence camera. Perhaps, too, the officers understood the power of an image to stir people to action. SFC Gerald was only an infant in 1963 when a stunned nation watched on television as Birmingham Police Commissioner "Bull" Connor used powerful fire hoses and vicious police attack dogs against nonviolent black civil rights protesters. That incident, and Martin Luther King, Jr.'s stirring I Have a Dream speech at the historic march on Washington in August of that year, were the low and high points, respectively, of the great era of civil rights legislation: the 1964 Civil Rights Act and the 1965 Voting Rights Act. How did it come to be, then, that 35 years later SFC Gerald found himself standing on the side of a dusty road next to a barking police dog, listening to his son weep while officers rummaged through his belongings simply because he was black? I feel like I'm a guy who's pretty much walked the straight line and that's respecting people and everything. We just constantly get harassed. So we just feel like we can't go anywhere without being bothered... I'm not trying to bother anybody. But yet a cop pulls me over and says I'm weaving in the road. And I just came from a friend's house, no alcohol, nothing. It just makes you wonder – was it just because I'm black?" – James, 28, advertising account executive Rossano and Gregory Gerald were victims of discriminatory racial profiling by police. There is nothing new about this problem. Police abuse against people of color is a legacy of African American enslavement, repression, and legal inequality. Indeed, during hearings of the National Advisory Commission on Civil Disorders ("The Kerner Commission") in the fall of 1967 where more than 130 witnesses testified about the events leading up to the urban riots that had taken place in 150 cities the previous summer, one of the complaints that came up repeatedly was "the stopping of Negroes on foot or in cars without obvious basis." Significant blame for this rampant abuse of power also can be laid at the feet of the government's "war on drugs," a fundamentally misguided crusade enthusiastically embraced by lawmakers and administrations of both parties at every level of government. From the outset, the war on drugs has in fact been a war on people and their constitutional rights, with African Americans, Latinos and other minorities bearing the brunt of the damage. It is a war that has, among other depredations, spawned racist profiles of supposed drug couriers. On our nation's highways today, police ostensibly looking for drug criminals routinely stop drivers based on the color of their skin. This practice is so common that the minority community has given it the derisive term, "driving while black or brown" – a play on the real offense of "driving while intoxicated." One of the core principles of the Fourth Amendment is that the police cannot stop and detain an individual without some reason – probable cause, or at least reasonable suspicion – to believe that he or she is involved in criminal activity. But recent Supreme Court decisions allow the police to use traffic stops as a pretext in order to "fish" for evidence. Both anecdotal and quantitative data show that nationwide, the police exercise this discretionary power primarily against African Americans and Latinos. No person of color is safe from this treatment anywhere, regardless of their obedience to the law, their age, the type of car they drive, or their station in life. In short, skin color has become evidence of the propensity to commit crime, and police use this "evidence" against minority drivers on the road all the time.

NYPD is an example of local, racist policies that the plan can't reform

AP 12 — Samantha Henry, Matt Appuzzo, Wayne Perry, reporters for the Associated Press, American multinational nonprofit news agency, 2012 ("New Jersey Muslims Angry Over NYPD Surveillance Findings," *The Huffington Post*, May 25, Available online at http://www.huffingtonpost.com/2012/05/25/new-jersey-muslims-cangry-nypd-surveillance_n_1545319.html, Accessed on 6/15/15)

Muslim leaders said they were told that every instance of NYPD activity in New Jersey had been justified by a lead, but that the attorney general would not provide any details on the nature of any of those leads, saying the fact-finding was ongoing. Imam Mustafa El-Amin of the Newark-based Masjid Ibrahim said he was concerned that Chiesa refused to explain what leads had been received. With the NYPD compiling a map of every mosque in Newark – including his – he said he wanted to know about any problems or potential dangers in his mosque he might be unaware of. "We understand the need for surveillance and security," said El-Amin, "We just don't appreciate how this was done. **We as Muslims feel we were violated, simply because we are Muslims.**" Several Muslim leaders at Thursday's meeting said that they did not find the assertion that the NYPD had leads for all their operations in New Jersey credible, adding that efforts to maintain communication between the community and law enforcement would be hurt by the findings that the NYPD had done nothing wrong – and could keep doing what they have been doing. "It was basically an, 'FYI, good Thursday afternoon, let it die in the media before the Memorial Day weekend,'" said Mohamed El-Filali, executive director of the Islamic Center of Passaic County, across the Hudson River from New York. If the surveillance of every mosque, burger joint and barbershop targeted was justified, he asked, why were no arrests made? Aref Assaf of the American Arab Forum said the attorney general made them feel like second-class citizens. "I said to him **it's not only insulting, it's offensive to our sense of justice**, that you bring us to Trenton to tell us that you accept as legal and valid the actions of the NYPD, and I will not be surprised if you're issuing an order informing your law enforcement officials that they too can spy on American Muslims because if it's legal for NYPD, than it must be legal for NJ to do the same." The Muslim leaders said they would consider all legal options, including renewed appeals for action by the U.S. Justice Department. A federal civil rights lawsuit has also been considered.

Local police surveillance targeted at Muslims is unchangeable

Friedersdorf 13 — Conor Friedersdorf, staff writer at The Atlantic, where he focuses on politics and national affairs, has a Masters degree in Journalism from New York University and a BA in Politics, Philosophy, and Economics from Pomona college, 2013 ("The Horrifying Effects of NYPD Ethnic Profiling on Innocent Muslim Americans," *The Atlantic*, March 28, Available online at <http://www.theatlantic.com/politics/archive/2013/03/the-horrifying-effects-of-nypd-ethnic-profiling-on-innocent-muslim-americans/274434/>, Accessed on 6/16/15)

The Associated Press brought the NYPD's clandestine spying on Muslims to the public's attention in a series of vital stories. Starting shortly after the September 11 terrorist attacks, officers infiltrated Muslim communities and spied on hundreds or perhaps thousands of totally innocent Americans at mosques, colleges, and elsewhere. These officers "put American citizens under surveillance and scrutinized where they ate, prayed and worked, not because of charges of wrongdoing but because of their ethnicity," the news agency reported, citing NYPD documents. Informants were paid to bait Muslims into making inflammatory statements. The NYPD even conducted surveillance on Muslim Americans outside its jurisdiction, drawing a

rebuke from an FBI field office, where a top official charged that "the department's surveillance of Muslims in the state has **hindered** investigations and created 'additional risks' in counterterrorism." NYPD brass and Mayor Michael Bloomberg defend these policies as counterterrorism efforts that are necessary to keep New Yorkers safe. As you ponder the specific costs of these policies, as evocatively described below, keep in mind one thing about the ostensible benefits: "In more than six years of spying on Muslim neighborhoods, eavesdropping on conversations and cataloguing mosques," the Associated Press reported, **"the New York Police Department's secret Demographics Unit never generated a lead or triggered a terrorism investigation."** They acknowledged, in court testimony, having generated zero leads.

Muslim surveillance is key to stop terrorism – France proves

Kamisar 1/7 (Ben; January 7, 2015; *The Hill*; “GOP rep: French attack shows need for more Muslim surveillance”; [//CC">http://thehill.com/blogs/blog-briefing-room/news/228756-gop-rep-french-attack-shows-need-for-muslim-surveillance\)//CC](http://thehill.com/blogs/blog-briefing-room/news/228756-gop-rep-french-attack-shows-need-for-muslim-surveillance)

Rep. Pete King (R-N.Y.) said Wednesday that the terrorist attack on a French satirical newspaper underscores the need for increased surveillance in Muslim communities. “We should put political correctness aside and realize that it is important to have police in the communities, using sources, using informants,” he said on Fox News’s “America’s Newsroom.” “Let’s face it: The threat is coming for the most part out of the Muslim community. It’s a small percentage, but that’s where it’s coming from,” King said. King added that that it’s not clear that increased surveillance “would have stopped the attack” but said the French attack “shows the absolute necessity of having” those programs. He’s called for these policies after previous terrorist attacks and defended of the now-defunct New York Police Department program that assigned undercover officers to Muslim communities. King noted that police similarly targeted the Italian community while working to stamp out mob organizations, among other examples. The New York Republican also said Wednesday’s attack in France should serve as a “wake-up call” for Congress to iron out differences on Department of Homeland Security (DHS) funding. King warned that Congress’s fight over immigration and DHS funding shouldn’t also jeopardize the nation’s counterterrorism programs. “We have not funded the Department of Homeland Security, and that’s because of this [fight] over immigration,” he said. “Whatever we do on that as far as immigration cannot in any way be allowed to interfere with our counterterrorism methods.” As retribution for President Obama’s recent executive order that granted work permits and deferred deportation for millions of immigrants living in the U.S. illegally, Republicans led a charge to only authorize DHS funding until the end of February. That way, GOP leaders will be able to negotiate the agency’s funding with more leverage, since the party now controls both houses of Congress. But King said that negotiators should not put U.S. security at risk and also keep optics in mind. “The juxtaposition would be terrible: a terrorist slaughter in Paris and the U.S. cuts back on Homeland Security funding,” he said. “We cannot in any way allow the funding or the programs that stop terrorism in this country to be impeded in any way whatsoever.”

The US is experiencing a spike in Islamic terrorist strikes – surveillance is necessary to prevent attacks

Inserra 6/25 (David - a Research Associate for Homeland Security and Cyber Security in the Douglas and Sarah Allison Center for Foreign and National Security Policy; June 25, 2015; The Heritage Foundation; "Terrorist Plot No. 71: Rise in Terrorism Calls for Increased Vigilance"; <http://www.heritage.org/research/reports/2015/06/terrorist-plot-no-71-rise-in-terrorism-calls-for-increased-vigilance>)/CC

On Monday, the FBI charged Justin Sullivan with attempting to provide material support to a terrorist group as well as two weapons charges. Sullivan was planning to attack a public venue, such as a bar or a concert, with a rifle in support of the Islamic State (ISIS). This is the 71st Islamist terrorist plot or attack against the U.S. homeland since 9/11 according to publicly available information. It is the third plot foiled this month alone and part of an ongoing spike in terrorist activity within the U.S. The U.S. must recognize that terrorists have not stopped trying to strike us and, indeed, have only grown bolder in the past few months. While the U.S. should not give in to fearmongering, it cannot naively ignore the threat that confronts it. The U.S. must use all the tools of its national power to prevent terrorists from striking. In April 2015, Sullivan's father called 9-1-1 after Sullivan began to destroy various household items, particularly religious items, seemingly in support of ISIS. Sullivan's father said that they were "scared to leave the house." Following this incident, the FBI assigned an undercover agent (UC) to communicate with Sullivan. Sullivan praised ISIS and swore his allegiance to it, describing himself as a "mujahid," a guerilla fighter engaging in violent jihad. Sullivan told the UC that the two of them should remain in the U.S. to support ISIS since they would likely be captured if they tried to travel. Instead, Sullivan had settled on attacking a U.S. target with a gun, saying that "[yo]u only need 600 dollars... for the gun and bullets." [1] Sullivan said that he would be purchasing an AR-15 rifle "in about two weeks" at a nearby gun show, promising that "I'll kill people this month." Sullivan estimated that he and the UC could kill 1,000 people with AR-15s. [2] Sullivan then began to talk about firearm silencers and poisons that could be used on the bullets or in a bomb. He asked if the UC could make the silencers for use in June or possibly July. In addition to seeking out a silencer and poisons, Sullivan also sought 100-round drum magazines for the AR-15 as well. [3] After gaining as much information as possible from Sullivan, the FBI then provided him with a silencer that Sullivan believed was homemade on June 19. The FBI then raided the Sullivans' house, finding the silencer and arresting Sullivan. Sullivan admitted that he was planning to use the silencer during an attack on a bar or a concert between June 21 and June 23. He intended to buy a rifle from a gun show on June 20. [4] This 71st plot is the ninth Islamist terrorist plot in this calendar year and the third in June alone. As was the case with all the other plots this year, Sullivan was inspired by ISIS. Sullivan's was also the 60th plot or attack involving a homegrown terrorist, meaning one who was radicalized here in the U.S. In targeting a bar or a concert, Sullivan was also going after the third most common terrorist target: different types of mass gatherings (plots against the U.S. military and New York City are the most and second most common targets, respectively). Together with the recent release of State Department research showing a spike in global terrorism in 2014, the U.S. must come to grips with the true nature of the terrorist threat, both at home and abroad. [5] To combat the real and growing threat of terrorism, Congress should: Ensure that the FBI shares information more readily and regularly with state and local law enforcement and treats state and local partners as critical actors in the fight against terrorism. In this case, a local 9-1-1 call seems to have triggered FBI involvement. While using state and local partners as important sources of information is half the battle, local partners must also receive timely information from the FBI. The Department of Homeland Security (DHS) should play a role in supporting these partners' efforts by acting as a source or conduit for information and coordinating information sharing between the FBI and its partners. Designate an office in DHS to coordinate countering violent extremism (CVE) efforts. CVE efforts are spread across all levels of government and society. DHS is uniquely situated to lead the federal government's efforts to empower local partners. Currently, DHS's CVE working group coordinates efforts across DHS components, but a more substantial office will be necessary to manage this broader task. Support state, local, and civil society partners. Congress and the Administration should not lose sight of the fact that all of the federal government's efforts must be focused on empowering local partners. The federal government is not the tip of the spear for CVE efforts; it exists to support local partners who are in the best position to recognize and counter radicalization in their own communities. Maintain essential counterterrorism tools. Support for important investigative tools is essential to maintaining the security of the U.S. and combating terrorist threats. Legitimate government surveillance programs are also a vital component of U.S. national security and should be allowed to continue. The need for effective counterterrorism operations, however, does not relieve the government of its obligation to follow the law and respect individual privacy and liberty. In the American system, the government must do both equally well. As the U.S. experiences the highest level of terrorist activity since 9/11, Congress must remember that this is not a short-term skirmish but a long war. Failure to

recognize the nature of this conflict, our enemy, or the reality of the threat will leave the U.S. unprepared. Instead, the U.S. must remain vigilant and provide U.S. counterterrorism officials with additional legal tools to confront the growing threat.

Targeted surveillance is necessary – Boston bombing proves

Careccia '13 (John; June 17, 2013; Western Journalism; "Islamic Mosques: Excluded From Surveillance By Feds"; <http://www.westernjournalism.com/islamic-mosques-excluded-from-surveillance-by-feds/>)/CC

Homeland Insecurity: The White House assures us that tracking our every phone call and keystroke is necessary to stop terrorists, and yet it won't snoop in mosques, where the terrorists emanate from. Fact – Many of the terrorists have been radicalized in Mosques and Muslim agencies right here in America. According to the NSA the government's sweeping surveillance of our most private communications excludes Mosques and Muslim affiliated facilities. Supposedly this is done to protect the sensibilities of innocent Muslims who worship in Mosques. Since October 2011, mosques have been off-limits to FBI agents. Surveillance or undercover sting operations are not allowed without high-level approval from a special oversight body at the Justice Department dubbed the Sensitive Operations Review Committee (SORC). Who makes up this body, and under what methodology do they review requests – nobody knows. The names of the chairman, members and staff are kept secret. Why is it necessary to keep the names and titles of the people who decide whether or not to protect the rest of the country from radical Muslims, secret? We do know the panel was set up under pressure from Islamist groups who complained about FBI stings at mosques. Just months before the panel's formation, the Council on American-Islamic Relations (CAIR) teamed up with the ACLU to sue the FBI for allegedly violating the civil rights of Muslims in Los Angeles by hiring an undercover agent to infiltrate and monitor mosques in America's second largest city. Another defeat for the politically correct imbeciles in our government. Before mosques were excluded from the otherwise wide domestic spy net the administration has cast, the FBI launched dozens of successful sting operations against homegrown radicals inside mosques, and disrupted dozens of plots against innocent American citizens across the United States. If only they were allowed to continue, perhaps the many innocent victims of the Boston Marathon bombings would not have lost their lives and limbs. The FBI never canvassed Boston mosques until four days after the April 15 attacks, and it did not check out the radical Boston mosque where the Muslim bombers worshiped even though they were supposedly on the government's watch list. The bureau didn't even contact mosque leaders for help in identifying their images after those images were captured on closed-circuit TV cameras and cellphones. As I have repeatedly pointed out, the Politically Correct attitude of the Obama administration is dangerous to the well being of the average hard working American citizen. There are many religious communities in the United States. How can the government attack one of the oldest and most established religions in the United States and choose to defend the actions of another belief system that espouses violence and murder of Westerners who they classify as infidels. Even though the FBI was tipped by Russia more than a year before about the leanings of the two Boston bombers, they apparently chose to ignore it. Now after the fact we learn that one of the Muslim bombers made extremist outbursts during worship, yet

because the mosque wasn't monitored, red flags didn't go off inside the FBI about his increasing radicalization before the attacks.

Arab Americans won't give up their radicals – surveillance is key

Careccia '13 (John; June 17, 2013; Western Journalism; "Islamic Mosques: Excluded From Surveillance By Feds"; <http://www.westernjournalism.com/islamic-mosques-excluded-from-surveillance-by-feds/>)/CC

Why didn't the Imam contact the FBI? Why don't these people of peace speak up when they hear people in their congregation espousing hate of the country they have adopted. Maybe it's because they see us as an opportunity to expand their Caliphate and don't really care what happens to the infidels in their way who don't deserve to live. This is particularly disturbing in light of recent independent surveys of American mosques, which reveal some 80% of them preach violent jihad and distribute violent literature to worshipers. Even though Islam is not a religion in the strict sense (it is more of a socio-economic way of life), if Church doors are open to anyone or anything then Mosques should be too. If Muslims have nothing to hide then they should not object to being treated the same or equal to other religious organizations. If our Federal agencies are going to protect us from attack, they have to adopt strong measures to root out these radicals and a plan to counter those who would commit atrocities against citizens of the the United States.

Muslim Surveillance is essential to stop terrorism

Moore and Lemire '12 (Tina and Jonathon; March 3, 2012; Daily News; "Ray Kelly defends spying on students, calling it an essential safety strategy for city"; <http://www.nydailynews.com/news/crime/raymond-kelly-defends-spying-calling-essential-safety-strategy-city-article-1.1032607/>)/CC

Police Commissioner Raymond Kelly gave an impassioned defense of the NYPD's controversial Muslim surveillance program Saturday — declaring it essential for the city's safety. The tactics, which allegedly include spying on mosques, cafes and shops, have come under fire from Muslim and civil rights groups, but Kelly said the Police Department's strategy has been "misrepresented." "For some, the very act of intelligence gathering seems illegitimate when applied to the crime of terrorism," Kelly said in his most wide-ranging remarks to date on the hot-button topic. "In fact, the Police Department uses many of the same methods to find and stop terrorists that we use to arrest drug dealers, human traffickers and gang leaders," the commissioner told a Fordham Law School alumni group. Even as more than 100 protesters demonstrated outside his speech, Kelly did not back down, declaring that the surveillance program was not just legal, but a vital part of the successful takedowns of more than a dozen terror plots since Sept. 11, 2001. "A broad base of knowledge is critically important to our ability to investigate terrorism," said Kelly, who suggested that the NYPD did not do enough after the first World Trade Center attack. "It was precisely our failure to understand the context in 1993 that left us vulnerable in 2001," he

said. "We won't make that mistake again — on Mayor Bloomberg's watch or mine." Claiming reconnaissance was necessary to gather intelligence needed to penetrate dangerous groups, Kelly defended the NYPD's focus on Muslim neighborhoods and student groups. "We know that while the vast majority of Muslim student associations and their members are law-abiding," Kelly said, "we have seen too many cases in which such groups were exploited."

Terror Rollback

French Attacks prove rollback—Numerous foreign governments strengthen surveillance too—that's devastating for the aff

Business Insider 1/11/15 [Business Insider, January 11, 2015, "**The Paris Attacks Could Be Used As Justification For Tighter Borders And More Internet Surveillance**", <http://www.businessinsider.com/afp-internet-and-border-monitoring-needed-to-thwart-further-attacks-2015-1#ixzz3dv0f3114>] JMOV

Paris (AFP) - **Increased Internet surveillance and tighter border checks are "urgently" needed to foil jihadist attacks of the sort that rocked Paris this week, European, US and Canadian security ministers agreed** Sunday.¶ The gathering of interior and justice ministers at the French interior ministry was held before a massive anti-terror march in Paris that included dozens of foreign leaders.¶ A joint statement by the ministers -- representing 11 EU nations including France, Britain, Germany, Sweden and Poland, as well as the European commissioner for migration and home affairs, and **US Attorney General Eric Holder -- emphasized** their "**determination to fight together against terrorism**".¶ They said it was "essential" that major Internet providers **cooperate with governments** in closely monitoring and, if necessary, removing online content "that aims to incite hatred and terror".¶ **They also want to "step up the detection and screening of travel movements of European nationals"** leaving or entering the EU's external borders, and modify Europe's internal Schengen freedom-of-movement rules to widen information sharing and subject suspect passengers to greater checks. ¶ They saw a "crucial and urgent need" to establish an EU-wide database of passenger information for travel inside Europe and for flights leaving or entering the 28-nation bloc.¶ The proposed measures are to be discussed further at a February 12 EU summit focused on reinforcing security.¶ Holder announced a broader February 18 summit in Washington to be hosted by US President Barack Obama.¶ The steps were unveiled after three days of carnage in Paris by three gunmen who claimed allegiance to Al-Qaeda in Yemen and the rival Islamic State group.¶ The violence began with a bloody attack on the satirical newspaper Charlie Hebdo on Wednesday, when two of the gunmen killed 12 people.¶ Twin assaults by French commandos on the gunmen holed up in two separate locations -- in a town outside Paris and in a Jewish supermarket in the capital -- ended with the Islamists' deaths on Friday.¶¶ **Civil liberty concerns**
REUTERS¶ **Holder said Sunday that the announced US summit would "discuss ways in which we can counteract this violent extremism that exists around the world".**¶ **"Only if we work together, through sharing of information, by pooling our resources, will we ultimately be able to defeat those who are in a struggle with us about our fundamental values,"** he told reporters.¶ The interior and justice ministers stressed in their joint statement that the enhanced monitoring of the Internet should be done with respect to it remaining "a forum for free expression".¶ **But there are fears by some civil liberty groups that such state pressure on private Internet companies could erode citizens'**

rights and freedom of expression online, especially in the wake of the scandal over electronic snooping by the United States' NSA.¶ The increased checks on travel by Europeans was also of concern. ¶ The European parliament and others want to ensure limits are imposed on the sharing of passenger data with the US to prevent Europeans being exposed to unwarranted prying.¶ Undermining Schengen freedoms that have opened up most of the EU's internal borders are also seen as a slapdown of one of the bloc's most cherished principles.¶ European-born jihadists ¶Interior Minister Bernard Cazeneuve speaks to the press at the offices of the French satirical newspaper Charlie Hebdo on January 7, 2015 in Paris, France.¶ In the wake of the Paris attacks, though, voices demanding reinforced domestic security against jihadists were louder than those championing personal freedoms.¶ The EU commissioner for migration and home affairs, Dimitris Avramopoulos, said authorities are "determined to move ahead in coordinating our efforts within Europe and with our international friends in order to give an end to this drama and this phenomenon".¶ French Interior Minister Bernard Cazeneuve emphasised the problem of "foreign jihadist fighters in Syria and Iraq" many of whom come from EU countries -- particularly those with sizeable Muslim populations such as France, Britain and Germany.¶ Information on them and on "terrorist networks" must be shared between the allied countries, he said.¶ **We are resolved to fight against terrorism.**" Cazeneuve told a news conference.¶

Politics

Plan links to politics the house and the senate don't like Islamic sensitivity bills

CAIR '13 (Council on American Islamic Relations Chicago; March 19, 2013; "THE INFLUENCE OF ISLAMOPHOBIA IN CONGRESSIONAL POLITICS"; <http://www.cairchicago.org/blog/2013/03/the-influence-of-islamophobic-propagandists-in-congressional-politics/>) //CC

A select group of expert propagandists wield considerable influence in congressional politics. These so-called scholars and activists compile misinformation that is widely discredited and peddle it to sympathetic right-leaning politicians who regurgitate its resulting hateful rhetoric on the national stage. The most odious of these "misinformation experts" include Brigitte Gabriel, Frank Gaffney, Daniel Pipes, Walid Phares, Zuhdi Jasser and David Yerushalmi, just to name a few. Their rhetoric is bigoted and incorrect, yet insidiously shapes our national discourse through their political allies who hold influential positions in House Committees. The most influential political allies include: Rep. Peter King, Rep. Allen West, Rep. Sue Myrick, Rep. Michele Bauchman, and Rep. Paul Broun among others. Through their various think tanks and advocacy organizations, misinformation experts fear-monger and propagate baseless and inflammatory rhetoric that shapes state and national discourse and policy.

Detention CP

Detention CP

Text: The United States federal government should end Islamophobic indefinite detention policies.

Counterplan solves Islamophobic detention policies shape the War on Terror

Ralph 6 (Diana Ralph, PhD in Psychology and a Master of Social Work. She is an Associate Professor of Social Work at Carleton University, "ISLAMOPHOBIA AND THE "WAR ON TERROR": THE CONTINUING PRETEXT FOR U.S. IMPERIAL CONQUEST", The Hidden History of 9-11-2001 Research in Political Economy, Volume 23, Emerald Group Publishing Limited, pp.261-298, 911blogger.com/node/16381)

Standing with Muslims against the "War on Terror" In this chapter, I have demonstrated that: The overriding motive for Bush's "war on terror" is to secure control over the Middle East and Central Asia for U.S. oil, military, and corporate interests. Bush's handlers have been planning imperial conquest of the world since the Soviet Union collapsed in 1989. From the evidence here and elsewhere, it is difficult to draw another conclusion than that Bush's associates organized the 9-11 attacks to kick start popular support for this war. They have continued to justify the "war on terror" by claiming that Muslim terrorists pose an imminent danger to Americans. In fact, however, terrorism actually poses minimal risk to Americans. The "war on terror" is a concept modeled on Israel's assaults on Palestinians to provide a cover for campaigns of territorial conquest. Far from being "under attack," America has pre-emptively attacked and conquered two sovereign states, and is threatening military domination of the entire world. In other words, Bush's "war on terror" is a massive con job, perpetrated by a few oil and military elites, at the expense of Muslims particularly, but threatening the security and well-being of virtually everyone on the planet. An immensely wealthy and powerful republic has been hijacked by a small cabal of individuals...The American people have...been deliberately lied to, their interests cynically misrepresented and misreported, the real aims and intentions of this private war of Bush the son and his junta concealed with complete arrogance." (Said, 2003) Thomas Donnelly, author of the RAD blueprint for Bush's "war on terror," recently reaffirmed the neo-conservative commitment, not to protect Americans from "terrorism," but to conquer the world. This war, properly understood, is a struggle to build a [new] ... order throughout the "greater Middle East," that giant swath of the planet that extends from West Africa to Southeast Asia. ...Operation Iraqi Freedom represented the first step in a generational commitment to Iraq, but also the commitment of many generations to transforming the greater Middle East....The vision of the Bush Doctrine is hugely ambitious; in embracing this great vision, the United States must obligate the resources and create the institutions necessary to realize it." (Donnelly, 2004, pp. ix, 111)

4.1. "Either you are with us, or you are with the Terrorists" Fear and hatred of a scapegoated "enemy" are powerful tools by which despots confuse people into believing that their oppressors are their salvation. Just as anti-Semitism served to divide and silence progressive German movements in the early Nazi era, Islamophobia is dividing and silencing us now. No one wants to associate with "terrorists", much less be labelled and persecuted as one. Many progressive Western people fear and despise "fundamentalist" Muslims, and thereby fall into the trap of allying themselves with, or at least not opposing, Islamophobic laws and practices in the name of opposing "terrorism". They thereby collude in undercutting the fabric of rights, due process, and equality on which they too depend. The Bush Doctrine rhetoric has succeeded in convincing most white Americans that "terrorists" pose a serious threat to their personal safety, and that the "war on terror" is necessary to protect them. Islamophobic language and values have seeped into the fiber of our daily lives. Bookstores now have "terrorism" sections, displaying some of the 5,036 mostly new books on the topic.¹⁵ Several U.S. colleges and universities now offer degrees in "homeland security." Media images of "Arab extremists" have become routine. Most Americans now believe that "terrorism" is such a big problem, that they should pay with their taxes, their freedoms, their decimated public services, and their children's lives. In the summer of 2005, polls found that 79 percent of Americans believed that "the threat of terrorism against the U.S." has increased or stayed about the same (Polling Report.com, 2005). Seventy-six percent thought "Osama bin Laden himself is currently planning a significant terrorist attack against the United States," and 64 percent supported the Patriot Act. Sixty-four percent would be "willing to give up some of [their] personal freedom in order to reduce the threat of terrorism" (PollingReport.com, 2005). Almost half of all Americans "believe the U.S. government should restrict the civil liberties of Muslim-Americans" (Dean, 2005). In the wake of Hurricane Katrina and shocking revelations of torture at Abu Ghraib prison, however, popular support for the "war on terror" plummeted. In November, 2005, 55 percent of Americans disapproved of the way Bush is "dealing with the war on terrorism"

(PollingReport.com, 2005). 4.2. **Which Side are you on?** Before 9-11, the anti-globalization movement had been rapidly gaining influence and unity worldwide. Opposition to U.S.-dominated institutions like the World Bank, the International Monetary Fund, the G-8, NATO and APEC, had succeeded in disrupting and exposing several of their gatherings. And in their place, the World Social Forum and other progressive people's movements were demonstrating that indeed there are excellent alternatives to globalization and corporate rule. The 9-11 "attacks" and **the "war on terror" derailed these hopeful movements and imposed crippling constraints on dissent, democracy, and national sovereignty. Under cover of Islamophobic targeting of Muslims, the U.S. is waging war on all movements for social justice** both domestically and internationally, **using its new post 9-11 legislative powers and bloated military and policing budgets.** Domestically, the Bush administration is attacking democracy, abortion rights, the judiciary, environmental protections, social security, public education, women's rights, union rights, and civil rights (Dorhn, 2003). Internationally, it pressures other nations to enact similar "anti-terror" laws and policies, as well as demanding that they open their economies to full U.S. corporate rule. As Bernadette Dorhn points out: **"The result is a chilling effect.** That is to say, people around the targets back away, get silent, don't stand up when they see the cost of simply expressing your opinion or even making a joke, let alone publicly objecting to what's going on" (2003). Many progressive groups oppose Islamophobia and support Muslim victims of U.S. and Israeli assaults. These include civil liberties associations, Amnesty International, Human Rights Watch, anti-Zionist Jewish and Christian groups, unions, peace groups, and student organizations like the Canadian Federation of Students. Secular, Jewish, and Christian groups have formed alliances with Palestinians and Iraqis in opposition to the Israeli occupation of the West Bank. **In the U.S. the Center for Constitutional Rights works to end arbitrary detention of Muslim detainees in Guantanamo Bay and elsewhere.** In Canada, the Campaign to Stop Secret Trials in **Canada has mobilized broad support for Muslim detainees and their rights. However, even these groups have not dared to challenge the Islamophobic base of the "anti-terror" legislation, for fear of being called pro-terrorist. They are** thereby left arguing that the particular individuals for whom they advocate aren't terrorists, while **implicitly condoning the myth that "real" terrorists are lurking** in the shadows. But under the Bush Doctrine, all Muslims are presumed to be either current or potential terrorists, and their civil liberties have been sacrificed in the name of "national security". **To defeat the Bush plot for world control, we will need to challenge Islamophobic fear of "terrorists", to assert clearly that there is little substantive terrorist threat.** What terrorism there is could better be addressed through criminal justice systems and international law. More importantly we need to insist that the U.S. desist from both overt preemptive wars and covert state-financed terrorism. **The actual security of both Americans and all other people will be best served by ending the occupations** of the West Bank, Iraq, and Afghanistan, **and recognizing the right of all nations to self-determination** (including oil policies). **We need to stand in solidarity with all Muslims,** regardless of their religious beliefs. At this juncture, **Islamophobia is the key barrier to effective mobilization** against the Bush regime.

2NC

No aff can "solve" islamophobia but the counterplans challenge to indefinite detention policies is sufficient to challenge islamophobia.

Butler 06 (Judith Butler, Professor at UC Berkeley, "Precarious Life: The Powers of Mourning and Violence" Ch. 3: Indefinite Detention, p. 50, 2006)

If a person is simply deemed dangerous, then it is no longer a matter of deciding whether criminal acts occurred. Indeed, "deeming" someone dangerous is an unsubstantiated judgment that in these cases works to preempt determinations for which evidence is required. **The license to brand and categorize and detain on the basis of suspicion alone,** expressed in this operation of "deeming," **is potentially enormous. We have already seen it at work in racial profiling, in the detention of thousands of Arab residents or Arab-American citizens, sometimes on the basis of last names alone; the harassment** of any number of US and non-US citizens **at the immigration borders** because some official "perceives" a potential difficulty; **the attacks on individuals of Middle Eastern descent on US streets, and the targeting of Arab-American professors on campuses.** When Rumsfeld has sent the US into periodic panics or "alerts," he has not told the

population what to look out for, but only to have a heightened awareness of suspicious activity. **This objectless panic translates too quickly into suspicion of all dark-skinned peoples, especially those who are Arab, or appear to look so to a population not always well versed in making visual distinctions**, say, **between Sikhs and Muslims or, indeed, Sephardic or Arab Jews and Pakistani-Americans.** Although **"deeming" someone dangerous** is considered a state prerogative in these discussions, **it is also a potential license for prejudicial perception and a virtual mandate to heighten racialized ways of looking and judging in the name of national security.** A population of **Islamic peoples, or those taken to be Islamic, has become targeted by this government mandate to be on heightened alert,** with the effect that the Arab population in the US becomes visually rounded up, stared down, watched, hounded and monitored by a group of citizens who understand themselves as **foot soldiers in the war against terrorism.** What kind of public culture is being created when a certain "indefinite containment" takes place outside the prison walls, on the subway, in the airports, on the street, in the workplace? A falafel restaurant run by Lebanese Christians that does not exhibit the American flag becomes immediately suspect, as if the failure to fly the flag in the months following September 11, were a sign of sympathy with al-Qaeda, a deduction that has no justification, but which nevertheless ruled public culture-and business interests, at that time. If it is the person, or the people, who are deemed dangerous, and no dangerous acts need to be proven to establish this as true, then **the state constitutes the detained population unilaterally, taking them out of the jurisdiction of the law, depriving them of the legal protections to which subjects under national and international law are entitled. These are surely populations that are not regarded as subjects,** humans who are not conceptualized within the frame of a political culture in which human lives are underwritten by legal entitlements, law, and so humans who are not humans. We saw evidence for this derealization of the human in the photos of the shackled bodies in Guantanamo released by the Department of Defense. The DOD did not hide these photos, but published them openly. My speculation is that they published these photographs to make known that a certain vanquishing had taken place, the reversal of national humiliation, a sign of a successful vindication. These were not photographs leaked to the press by some human rights agency or concerned media enterprise. So the international response was no doubt disconcerting, since instead of moral triumph, many people, British parliamentarians and European human rights activists among them, saw serious moral failure. Instead of vindication, many saw instead revenge, cruelty, and a nationalist and self-satisfied flouting of international convention. So that several countries asked that their citizens be returned home for trial. But **there is something more in this degradation that calls to be read. There is a reduction of these human beings to animal status, where the animal is** figured as out of control, **in need of total restraint.** It is important to remember that **the bestialization of the human in this way has little, if anything, to do with actual animals, since it is a figure of the animal against which the human is defined.** Even if, as seems most probable, some or all of these people have violent intentions, have been engaged in violent acts, and murderous ones, there are ways to deal with murderers under both criminal and international law. **The language with which they are described by the US, however, suggests that these individuals are exceptional,** that **they may not be individuals at all, that they must be constrained in order not to kill, that they are effectively reducible to a desire to kill, and that regular criminal and international codes cannot apply to beings such as these.** **The treatment of these prisoners is considered as an extension of war itself, not as a postwar question of appropriate trial and punishment. Their detention stops the killing. If they were not detained, and forcibly so when any movement is required, they would apparently start killing on the spot; they are beings who are in a permanent and perpetual war.** It may be that al-Qaeda representatives speak this way-some clearly do-but that does not mean that every individual detained embodies that position, or that those detained are centrally concerned with the continuation of war. Indeed, recent reports, even from the investigative team in Guantanamo, suggest that some of the detainees were only tangentially or transiently involved in the war effort." Other reports in the spring of 2003 made clear that some detainees are minors, ranging from ages thirteen to sixteen. Even General Dunlavey, who admitted that not all the detainees were killers, still claimed that the risk is too high to release such detainees. Rumsfeld cited in support of forcible detention the prison uprisings in Afghanistan in which prisoners managed to get hold of weapons and stage a battle inside the prison. **In this sense, the war is not, and cannot be, over:** there is a chance of battle in the prison, and there is a warrant for physical restraint, such that **the postwar prison becomes the continuing site of war.** It would seem that **the rules that govern combat are in place, but not the rules that govern the proper treatment of prisoners separated from the war itself.** When General Counsel Haynes was asked, "So you could in fact hold these people for years without charging them, simply to

keep them off the street, even if you don't charge them?" he replied, "We are within our rights, and I don't think anyone disputes it that we may hold enemy combatants for the duration of the conflict. And the conflict is still going and we don't see an end in sight right now" (my emphasis). | 1 If the war is against terrorism, and the definition of terrorism expands to include every questionable instance of global difficulty, how can the war end? Is it, by definition, a war without end, given the lability of the terms "terrorism" and "war"? Although the pictures were published as a sign of US triumph, and so apparently indicating a conclusion to the war effort, it was clear at the time that bombing and armed conflict were continuing in Afghanistan, the war was not over, and even the photographs, the degradation, and the indefinite detention were continuing acts of war. Indeed, war seems to have established a more or less permanent condition of national emergency, and the sovereign right to self-protection outflanks any and all recourse to law.

Chow K

1NC

The aff is engaged in a war of words when in reality they do nothing for the Muslims being surveilled by the NSA- the starting point for advocacy should be to confront our own privilege

Chow '93. Rey Chow, Professor of English and Comp Lit, *Writing Diaspora: tactics of intervention in contemporary cultural studies*, pg. 17

While the struggle for hegemony remains necessary for many reasons – especially in cases where underprivileged groups seek privilege – I remain skeptical of the validity of hegemony over time, especially if it is hegemony formed through intellectual power. The question for me is not how intellectuals can obtain hegemony (a question that positions them in an oppositional light against dominant power and neglects their share of that power through literacy, through the culture of words), but how they can resist, as Michel Foucault said, the forms of power that transform them into its objects and instrument in the sphere of knowledge, truth, consciousness and discourse. Putting it another way, how do intellectuals struggle against a hegemony which already includes them and which can no longer be divided into the state and civil society in Gramsci's terms, nor be clearly demarcated into national and transnational space? Because borders have so clearly meandered into so many intellectual issues that the more stable and conventional relation between borders and the field no longer holds, intervention cannot simply be thought as the creation of new fields. Instead, it is necessary to think primarily in terms of borders – of borders, that is, as para-sites that never take over a field in its entirety but erode it slowly and tactically. The work of Michel de Certeau is helpful for the formulation of this parasitical intervention. De Certeau distinguished between strategy and another practice – tactic – in the following terms. A strategy has the ability to transform the uncertainties of history into readable spaces. Strategy therefore belongs to an economy of the proper place and to those who are committed to the building, growth, and fortification of a field. A text, for instance, would become in this economy? a cultural weapon, a private hunting preserve, or? a means of social stratification? in the order of the Great Wall of China (de Certeau, p. 171). A tactic, by contrast, is a calculated action determined by the absence of a proper locus (de Certeau, p. 37). Betting on time instead of space, a tactic concerns an operational logic whose models may go as far back as the age-old rules of fishes and insects that disguise or transform themselves in order to survive, and which has in any case been concealed by the form of rationality currently dominant in Western culture (de Certeau, p. xi). Why are tactics useful at this moment? As discussions about multiculturalism, interdisciplinarity, the third world intellectual, and other companion issues develop in the American academy and society today, and as rhetorical claims to political change and difference are being put forth, many deep-rooted, politically reactionary forces return to haunt us. Essentialist notions of culture and history; conservative notions of territorial and linguistic propriety, and the otherness

ensuring from them; unattested claims of oppression and victimization that are used merely to guilt-trip and to control; sexist and racist reaffirmations of sexual and racial diversities that are made merely in the name of righteousness – all these forces creates new solidarities whose ideological premises remain unquestioned. These new solidarities are often informed by a strategic attitude which repeats what they seek to overthrow. The weight of old ideologies being reinforced over and over again is immense. We need to remember as intellectuals that the battles we fight are battles of words. Those who argue the oppositional standpoint are not doing anything different from their enemies and are most certainly not directly changing the downtrodden lives of those who seek their survival in metropolitan and nonmetropolitan space alike. What academic intellectuals must confront is thus not their victimization by society at large (or their victimization-in-solidarity-with-the-oppressed), but the power, wealth, and privilege that ironically accumulate from their oppositional viewpoint and the widening gap between the professed contents of their words and the upward mobility they gain from such words. (When Foucault said intellectuals need to struggle against becoming the object and instrument of power, he spoke precisely to this kind of situation.) The predicament we face in the West, where intellectual freedom shares a history with economic enterprise, is that if a professor wishes to denounce aspects of big business, . . . he will be wise to locate in a school whose trustees are big businessmen.²⁸ Why should we believe in those who continue to speak a language of alterity-as-lack while their salaries and honoraria keep rising? How do we resist the turning-into-propriety of oppositional discourses, when the intention of such discourses has been that of displacing and disowning the proper? How do we prevent what begin as tactics – that which is without any base where it could stockpile its winnings? (deCerteau, p.37)–from turning into a solidly fenced-off field, in the military no less than in the academic sense?

The aff's victimization of Arab Americans projects more surveillance onto these communities
Spivak and Barlow '04. GayatriChakravortySpivak, Avalon Foundation Professor in the Human- ities and Director of the Center for Comparative Literature and Society at Columbia University, Tani E. Barlow, T.T. and W.F. Chao Professor of History and director of the Chao Center for Asian Studies at Rice University, “Not Really a Properly Intellectual Response: An Interview with GayatriSpivak,” positions: east asia cultures critique, Volume 12, Number 1, Spring 2004, pg. 140

GayatriChakravortySpivak: My problem is that I am unable to give a general response. It is a pity in all of this postnational talk that this cruel nationalism—taking pleasure in the death of others—begins with the shock of the death of one's own. It is a cause for great sorrow that this event brings out the worst kind of “herd mentality”—to quote Nietzsche—in human beings, and it falls under nationalism. Bush's spin doctors have told him to say that Islam is a wonderful religion and the hijackers hijacked it. There- fore one must now endlessly be nice to Arab Americans even as there is relentless racial profiling and

undercover incarceration. Feminism is showing its problems too. Why are members of the Revolutionary Association of Women of Afghanistan suddenly taken to be prophets? We don't know much about their values. They are a good group. They haven't appeared all of a sudden, but they have only now been picked up because the Taliban hate their women. But people know little about their specific problems. They also cannot give them real informed sympathy because they are taken as a kind of fetish that will justify support for the war, although they themselves oppose it. On the other side, you have the picture that CNN showed of U.S. women on aircraft carriers who are actually chief programmers, wielding sextants and so on. And the guy even said that there can be no more sexist jokes about women drivers. There is this wonderful blond girl. Midwestern-looking, freckled cheeks, saying, "If I can drive an aircraft carrier, I can drive a truck." These are issues I wrote about in "Can the Subaltern Speak?" twenty years ago. Who could question that these are terrible things? You would be foolish to say there was any justification for burning widows or stoning adulteresses. On the other hand, this sudden exposure of visible violence by people, justifying war, killing Afghans, does nothing to guarantee that the subaltern women's epistemic production will be one iota altered. I am interested not only in the fact that men do harm to women, but the fact that when it comes to the subaltern woman, nobody is interested in the patience that is required, in order to make her not acquiesce when they arrive at the point of visible violence.

The aff acts as the maoist – criticizing civil society while also benefiting from their own privilege

Chow '93. Rey, Andrew W. Mellon Professor of the Humanities at Brown Writing Diaspora: Tactics of Intervention in Contemporary Cultural Studies, pg. 10-11

The Orientalist has a special sibling whom I will, in order to highlight her significance as a kind of representational agency, call the Maoist. ArifDirlik, who has written extensively on the history of political movements in twentieth-century China, sums up the interpretation of Mao Zedong commonly found in Western Marxist analyses in terms of a "Third Worldist fantasy"—"a fantasy of Mao as a Chinese reincarnation of Marx who fulfilled the Marxist premise that had been betrayed in the West."¹⁶ The Maoist was the phoenix which arose from the ashes of the great disillusionment with Western culture in the 1960s and which found hope in the Chinese Communist Revolution.¹⁷ In the 1970s, when it became possible for Westerners to visit China as guided and pampered guests of the Beijing establishment, Maoists came back with reports of Chinese society's absolute, positive difference from Western society and of the Cultural Revolution as "the most important and innovative example of Mao's concern with the pursuit of egalitarian, populist, and communitarian ideals in the course of economic modernization" (Harding, p. 939). At that time, even poverty in China was regarded as "spiritually ennobling, since it meant that [the] Chinese were not possessed by the wasteful and acquisitive consumerism of the United States" (Harding, p. 941). Although the excessive admiration of the 1970s has since been replaced by an oftentimes equally excessive denigration of China, the Maoist is very much alive among us, and her significance goes far beyond the China and East Asian fields. Typically, the Maoist is a cultural critic who lives in a capitalist society but who is fed up with capitalism—a cultural critic, in other words, who wants a social order opposed to the one that is supporting her own undertaking. The Maoist is thus a supreme example of the way desire works: What she wants is always located in the other, resulting in an identification with and valorization of that which she is not/does not have. Since what is valorized is often the other's deprivation—"having" poverty or "having" nothing—the Maoist's strategy becomes in the main a rhetorical renunciation of the material power that enables her rhetoric. In terms of intellectual lineage, one of the Maoist's most important

ancestors is Charlotte Bronte's Jane Eyre. Like Jane, the Maoist's means to moral power is a specific representational position—the position of powerlessness. In their reading of *Jane Eyre*, Nancy Armstrong and Leonard Tennenhouse argue that the novel exemplifies the paradigm of violence that expresses its dominance through a representation of the self as powerless: Until the very end of the novel, Jane is always excluded from every available form of social power. Her survival seems to depend on renouncing what power might come to her as a teacher, mistress, cousin, heiress, or missionary's wife. She repeatedly flees from such forms of inclusion in the field of power, as if her status as an exemplary subject, like her authority as narrator, depends entirely on her claim to a kind of truth which can only be made from a position of powerlessness. By creating such an unlovely heroine and subjecting her to one form of harassment after another, Bronte demonstrates the power of words alone. This reading of *Jane Eyre* highlights her not simply as the female underdog who is often identified by feminist and Marxist critics, but as the intellectual who acquires power through a moral rectitude that was to become the flip side of Western imperialism's ruthlessness. Lying at the core of Anglo-American liberalism, this moral rectitude would accompany many territorial and economic conquests overseas with a firm sense of social mission. When *Jane Eyre* went to the colonies in the nineteenth century, she turned into the Christian missionary. It is this understanding—that Bronte's depiction of a socially marginalized English woman is, in terms of ideological production, fully complicit with England's empire building ambition rather than opposed to it—that prompted Gayatri Spivak to read *Jane Eyre* as a text in the service of imperialism. Referring to Bronte's treatment of the "madwoman," Bertha Mason, the white Jamaican Creole character, Spivak charges *Jane Eyre* for, precisely, its humanism, in which the "native subject" is not created as an animal but as the object of what might be termed the terrorism of the categorical imperative. This kind of creation is imperialism's use/travesty of the Kantian metaphysical demand to "make the heathen into a human so that he can be treated as an end himself." In the twentieth century, as Europe's former colonies became independent, *Jane Eyre* became the Maoist. Michel de Certeau describes the affinity between her two major reincarnations, one religious and the other political, this way: The place that was formerly occupied by the Church or Churches vis-à-vis established powers remains recognizable, over the past two centuries, in the functioning of the opposition known as leftist... There is a vis-à-vis the established order, a relationship between the Churches that defended an other world and the parties of the left, which since the nineteenth century, have promoted a different future. In both cases, similar functional characteristics can be discerned. The Maoist retains many of Jane's awesome features, chief of which are a protestant passion to turn powerlessness into "truth" and an idealist intolerance of those who may think differently from her. Whereas the great Orientalist blames the living "third world" natives for the loss of the ancient non-Western civilization, his loved object, the Maoist applauds the same natives for personifying and fulfilling her ideals. For the Maoist in the 1970s, the mainland Chinese were, in spite of their "backwardness," a puritanical alternative to the West in human form—a dream come true.

Their project amounts to a politics of self-subalternization, where the judge is encouraged to find solidarity with the other of the 1ac - their rhetorical strategy amounts to nothing more than a sham renunciation authorized by the same structures of power that produce alterity in the first place

Spivak '88. Gayatri Chakravorty Spivak, Avalon Foundation Professor in the Humanities and Director of the Center for Comparative Literature and Society at Columbia University, "Can the Subaltern Speak?" in *Marxism and the Interpretation of Culture*, edited by Carl Nelson and Lawrence Grossberg, pg. 24-25

SOME OF THE most radical criticism coming out of the West today is the result of an interested desire to conserve the subject of the West, or the West as Subject. The theory of pluralized 'subject-effects' gives an illusion of undermining subjective sovereignty while often providing a cover for this ' subject of knowledge. Although the history of Europe as Subject is narrativized by the law, political economy, and ideology of the West, this concealed Subject pretends it has 'no geo—political determinations. The much publicized critique of the sovereign subject thus actually inaugurates a Subject.... This S/subject curiously sewn together into a transparency by denegations, belongs to the exploiters' side of the international division of labor. 5 It is impossible for contemporary French intellectuals to imagine the kind ' of Power and Desire that would inhabit the unnamed subject of the Other of Europe. It is not only that everything they read, critical or uncritical, is caught within the debate of the production of that Other, supporting or critiquing the constitution of the Subject as Europe. It is also that, in the constitution of that Other of Europe, great care was taken to obliterate the textual ingredients with which such a subject could cathect, could ' occupy (invest?) its itinerary - not only by ideological and scientific production, but also by the institution of the law. . . . In the face of the possibility that the intellectual is complicit in the persistent constitution of Other as the Self's shadow, a possibility of political practice for the intellectual would be to put the economic 'under erasure,' to see the economic ' factor as irreducible as it reinscribes the social text, even as it is erased, however imperfectly, when it claims to be the final determinant or the transcendental signified. The clearest available example of such epistemic violence is the remotely orchestrated, far-flung, and heterogeneous project to constitute the colonial subject as Other. This project is also the asymmetrical obliteration of the trace of that Other in its precarious Subjectivity. It is well known that Foucault locates epistemic violence, a complete overhaul of the episteme, in the redefinition of sanity at the end of the European eighteenth century. But what if that particular redefinition was only a part of the narrative of history in Europe as well as in the colonies? What if the two projects of epistemic overhaul worked as dislocated and unacknowledged parts of a vast two-handed engine? Perhaps it is no more than to ask that the subtext of the palimpsestic narrative of imperialism be recognized as 'subjugated knowledge,' 'a whole set of "knowledges that have been disqualified as inadequate to their task or insufficiently elaborated: naive knowledges, located low down on the hierarchy, beneath the required level of cognition or scientificity' (Foucault 1980: 82). This is not to describe 'the way things really were' or to privilege the narrative of history as imperialism as the best version of history. It is, rather, to offer an account of how an explanation and narrative of reality' - was established as the normative one. . . . Let us now move to consider the margins (one can just as well say the silent, silenced center) of the circuit marked out by this epistemic violence, men and women among the illiterate peasantry, the tribals, the lowest strata of the urban subproletariat. According to Foucault and Deleuze (in the First World, under the standardization and tegimentation of socialized capital, though they do not seem to recognize this) the oppressed, if given the chance (the problem of representation cannot be bypassed here), and on the way to solidarity through alliance politics (a Marxist thematic is at work here) can speak and know their conditions. We must now confront the following question: On the other side of the international division of labor from socialized capital, inside and outside the circuit of the epistemic violence of imperialist law and education supplementing an earlier economic text, can the subaltern speak? . . .

Close your eyes to the 1ac—any knowledge or political productivity they can generate will be redeployed to destroy the very subjects they hope to help.

Spanos '00. **William V. Spanos**, distinguished professor of English and comparative literature at Binghamton University, Binghamton, New York; he is a founder and editor of the critical journal *boundary 2*, PhD, 1964, University of Wisconsin, Madison: *Literary theory, literature and philosophy, "America's Shadow: An Anatomy of Empire"* 2000. p. 48-50

To restore a region from its present barbarism to its former classical greatness; to instruct (for its own benefit) the Orient in the ways of the modern West; to subordinate or underplay military power in order to aggrandize the project of glorious knowledge acquired in the process of political domination of the Orient; to formulate the Orient, to give it shape, identity, definition with full recognition of its place in memory, its importance to imperial strategy, and its "natural" role as an appendage to Europe; to dignify all the knowledge collected during colonial occupation with the title "contribution to modern learning" when the natives had neither been consulted nor treated as anything except as pre-texts for a text whose usefulness was not to the natives; to feel oneself as a European in command, almost at will, of Oriental history, time, and geography; to institute new areas of specialization; to establish new disciplines; to divide, deploy, schematize, tabulate, index, and record everything in sight (and out of sight); to make out of every observable detail a generalization and out of every generalization an immutable law about the Oriental nature temperament, mentality, custom, or type; and, above all, to transmute living reality into the stuff of texts, to possess (or think one possesses) actuality mainly because nothing in the Orient seems to resist one's powers: these are the features of Orientalist projection entirely realized in the *Description de l'Égypte*, itself enabled and reinforced by Napoleon's wholly Orientalist engulfment of Egypt by the instruments of Western knowledge and power.⁸⁹ Nor, finally, is it an accident that the emergent Linnaean system of classification — of identifying, naming, and classifying the flora and fauna of nature — inaugurated the global taxonomic projects, most notably that of his student Anders Sparrman,⁹⁰ that became the essential European means of producing a modern or neocolonialist discourse, a discourse that, in the name of the truth of empirical science, invents or constructs the Other in the image of the First World. I am referring to what Mary Louise Pratt, in her Foucauldian study of the relationship between scientific travel writing and colonialism in South Africa and Latin America, has called the "anti-conquest narrative." This is the narrative "in which the naturalist naturalizes the bourgeois European's own global presence and authority" to differentiate its "benign" truth-producing motive from an earlier, overtly violent imperial narrative. In a way that recalls Foucault's and Said's differentiation of the visible and "inefficient" deployment of power in the ancien régime from the more invisible and materially and politically economical version of the Enlightenment, Pratt observes: Natural history asserted an urban, lettered, male authority over the whole of the planet; it elaborated a rationalizing, extractive, dissociative understanding which overlaid functional, experiential relations among people, plants, and animals. In these respects, it figures a certain kind of global hegemony, notably one based on possession of land and resources rather than control over routes. At the same time, in and of itself, the system of nature as a descriptive paradigm was an utterly benign and abstract appropriation of the planet. Claiming no transformative potential whatsoever, it differed sharply from overly imperial articulations of conquest, conversion, territorial appropriation, and enslavement. The system created... a Utopian, innocent vision of European global authority, which I refer to as an anti-conquest. The term is intended to emphasize the relational meaning of natural history, the extent to which it became meaningful specifically in contrast with an earlier imperial, and prebourgeois, European expansionist presence.⁹¹ The difference between an earlier, pre-Enlightenment, and a later, post-Enlightenment, configuration of the internal space of the imperial circle is, of course, crucial to any understanding of the essence of imperial practice. But my purpose in thus invoking Foucault's analysis of the complicity of the classificatory table of the Enlightenment with

the domination of the Other in the disciplinary society, and Said's and Pratt's extension of Foucault's genealogical insight to include the modern European imperial project, is not to bring a story about the development of the technology of European colonialism to its fulfillment and narrative closure, one that renders prior technologies of power anachronistic. It is, rather, to retrieve a fundamental dimension of this story that has been obliterated from memory even as it resonates unthought in the very contemporary language these postcolonial critics use to indict the truth discourse of the West as "imperial." I want to suggest that the classificatory table, as microcosm of a larger spatial totality and as the model for wider "imperial" practices (the mass production process, the pan-optic penal system, the medical and psychiatric hospital, the family, the classroom, the nation-state, the colonial administration, and so on), is grounded in and enabled by the metaphysical principle of principles or, as Enrique Dussel puts it, "the ideology of ideologies":⁹² that Identity is the condition for the possibility of difference and not the other way around. Unlike its predecessor in the ancien regime, metaphysical inquiry at this advanced Enlightenment stage does not obliterate the contradictory, amorphous, unimproved, and "ahistorical" Other from the vantage point of a visible "center elsewhere." It "acknowledges" this Other's claims as contributive to (the knowledge of) the larger self-identical Whole. In other words, it "classifies" the amorphous Others from the vantage point of an invisible "center elsewhere." It differentiates these Others into discrete phenomena — attributes distinguishing identities to them — within and in behalf of a prior encompassing self-present total Identity. This individuation of the amorphous Other conveys a sense of the sovereign integrity of the differentiated entities, but it obscures the fact that their uniqueness is entirely dependent on a dominant synchronic Totality, the always present and determining center of which is always out of sight. To acquire validity the differentiated entity must accommodate its differential partiality to the prior Totality, must, that is, objectify and subordinate itself to — take its proper place within — the gridded structure of the dominant Identity. To become a subject it must heed the call — the hailing — of the Subject. As his invocation of the ontological metaphors of the center and the circle should suggest, what the Lacanian Marxist Louis Althusser says about "the interpellation of the individual as subject" — the (subjected) subject invented by the bourgeois capitalist Enlightenment — applies by extension to the spatial economy of the (neo)imperial project as such:

Islam Link

The 1AC victims of discrimination based on their "Islamic" nature and defining the West based on its Islamophobia recreates the violent categorical differences — only the alternative can solve the case by charting a course between America and Islam

Spivak and Barlow '04. Gayatri Chakravorty Spivak, Avalon Foundation Professor in the Humanities and Director of the Center for Comparative Literature and Society at Columbia University, Tani E. Barlow, T.T. and W.F. Chao Professor of History and director of the Chao Center for Asian Studies at Rice University, "Not Really a Properly Intellectual Response: An Interview with Gayatri Spivak," positions: east asia cultures critique, Volume 12, Number 1, Spring 2004, pg 160

GCS: Yes, we do not tend to notice that Euro-U.S. globality, which is tacitly offered as the unmarked global as such, with endless invocations of the transnational subject and satellite dishes in Nepalese villages, is the one that conjures with nation-state alliances. It is in that other globality called "Islamic" that archaic and residual, moving, globalizing frontiers are in conflict with the idea of the nation-states. As in the case of the Gulf War, it is the case of people one way, the state another. We must complicate the global in order to get a grip upon this fast-evolving situation. In the last quarter of the nineteenth century, Amir Abd-ur-Rahman of Afghanistan tried to think through such explanations between the provisional

globality of something called “Islam” and the urgent need for the emergence of a practical nation- state. I do not have access to his autobiography in Farsi, but I have carefully studied its English translation, attempting to read as much as possible between its lines. Not all of it is by his hand of course; one is not gullible about the evidentiary strength of autobiography, just as one is aware of the lineaments of the autobiographical in the most “objective organization of facts.” **This characteristic of devising and charting a course between the existing solidarity of “Islam” and the consolidation of the frontiers and boundaries of the nation-states**, loosely established as Afghanistan by Ahmad Shah Durani in 1747, **is so pervasive in this text that it is hard to isolate a quotation.** In 1876 he drew up agreements to create peace between all of the various groups in that area: Hindus, Muslims, tribals, gypsies, you name it. There were over two hundred Firmans of this sort in existence in Farsi. It could have consolidated a nation-state negotiating between “Islam” and the commonality of religions and ways of life, interchangeable at this time, accessing the larger dimensions of this other word, haq, which is translated into English rather misleadingly as “right,” and so on. So again, an unmarked centrality was not allowed to emerge in Afghanistan, and no one knows anything about this now as they are talking and talking about what’s going on.

Alt Solves

Alternative solves—results in individual methods of revolt against violence such as Islamophobia like self-immolation—creates a better method of resolving problems

Spivak '11 GayatriChakravortySpivak, Avalon Foundation Professor in the Humanities and Director of the Center for Comparative Literature and Society at Columbia University, “Can the Subaltern Speak?” *Frontier* Vol. 43, No. 25, May 22-28, 2011, <http://www.frontierweekly.com/pdf-files/vol-43-45/subaltern-43-45.pdf>

The subaltern is a position without identity. If you think you can claim to be specifically a subaltern, the only thing to do with it is to lead in the name of the subaltern, a grounding error in the same category as tracing Bach, **only reversed, from above, not from below.**⁷ Jonathan Chauveau, a French journalist (like many politically correct folk in that part of the world, anxious to have me endorse a speaking subaltern), e-mailed me as follows : the popular revolts in Africa and their political consequences were neither anticipated nor envisaged by the countries concerned and even less by international diplomacy. Can one explain this blindness by the fact that leadership came from young people and women not belonging to recognized circles of the “official opposition.” It would thus be their subaltern position—a population not recognized as a “classically” constituted political force— which would explain that no one anticipated these events definitively, because no one had, at their disposal, the means for hearing them, listening to them, or yet understanding them. Do you agree with this analysis? Is it not a case of the subaltern grabbing the right to speak? ...Given that these popular uprisings seem identical. Can one envisage a regional political alliance in future? I replied : **I am of course tremendously impressed by what's happening in North Africa, but it's not necessarily "the subaltern speaking."** **It is** rather the awe-inspiring spectacle of **citizens claiming citizenship.** It is possible that the urban subproletariat mingled with the largely metropolitan, class-mixed, gender-mixed crowd we saw in Tahrir Square. There was also a phenomenon of “prendre la parole” by the private sector, by civil

society, by the citizen. Unfortunately, if the term "subaltern" has to remain useful, it cannot be identified with varieties of national liberation movements. It must, however, be said, that the young man who burnt himself to death in despair in Tunisia might be thought of as a subaltern bringing himself to crisis, "speaking," and there being an infrastructure of political will, created, paradoxically, by the predatory state, able to "hear" him and complete his speech act.⁸

AT: Framework

Rather than attempting to know the Truth of Islamophobia, we should refuse attempts to locate our politics in the reality of the present and FIRST AND FOREMOST seek to interrogate our subject positions in academia to allow others to speak for themselves.

Owen '97. David Owen, professor of social sciences at Southampton University, 1997, "Maturity and Modernity: Nietzsche, Weber, Foucault and the ambivalence of reason," Routledge publishers, published July 22, 1997

In our reflections on Foucault's methodology, it was noted that, like Nietzsche and Weber, he commits himself to a stance of value-freedom as an engaged refusal to legislate for others. Foucault's critical activity is oriented to human autonomy yet his formal account of the idea of autonomy as the activity of self-transformation entails that the content of this activity is specific to the struggles of particular groups and individuals. Thus, while the struggle against humanist forms of power/knowledge relations denotes the formal architectonic interest of genealogy as critique, the determination of the 'main danger' which denotes the 'filling in' of this interest is contingent upon the dominant systems of constraint confronted by specific groups and individuals. For example, the constitution of women as 'hysterical,' of blacks as 'criminal,' of homosexuals as 'perverted' all operate through humanist forms of power/knowledge relations, yet the specificity of the social practices and discourses engaged in producing these 'identities' entails that while these struggles share a general formal interest in resisting the biopolitics of humanism, their substantive interests are distinct. It is against this context that Foucault's stance of value-freedom can be read as embodying a respect for alterity. The implications of this stance for intellectual practice became apparent in Foucault's distinction between the figures of the 'universal' and 'specific' intellectual. Consider the following comments: In a general way, I think that intellectuals-if this category exists, which is not certain or perhaps even desirable- are abandoning their old prophetic function. And by that I don't mean only their claim to predict what will happen, but also the legislative function that they so long aspired for: 'See what must be done, see what is good, follow me. In the turmoil that engulfs you all, here is the pivotal point, here is where I am.' The greek wise man, the jewish prophet, the roman legislators are still models that haunt those who, today, practice the profession of speaking and writing. The universal intellectual, on Foucault's account, is that figure who maintains a commitment to critique as a legislative activity in which the pivotal positing of universal norms (or universal procedures for generating norms) grounds politics in the 'truth; of our being (e.g. our 'real' interests). The problematic form of this type of intellectual practice is a central concern of Foucault's critique of humanist politics in so far as humanism

simultaneously asserts and undermines autonomy. *If*, however, this is the case, what alternative conceptions of the role of the intellectual and the activity of critique can Foucault present to us? Foucault's elaboration of the figure of the 'specific' intellectual provides the beginnings of an answer to this question: I dream of the intellectual who destroys evidence and generalities, the one who, in the inertias and constraints of the present time, locates and marks the weak points, the openings, the lines of force, who is incessantly on the move, doesn't know exactly where he is heading nor what he will think tomorrow for he is too attentive to the present. The historicity of thought, the impossibility of locating an Archimedean point outside of time, leads Foucault to locate intellectual activity as an ongoing attentiveness to the present in terms of what is singular and arbitrary in what we take to be universal and necessary. Following from this, the intellectual does not seek to offer grand theories but specific analyses, not global but local criticism. We should be clear on the latter point for it is necessary to acknowledge that Foucault's position does not entail the impossibility of 'acceding to a point of view that could give us access to any complete and definitive knowledge of what may constitute our historical limits' and, consequently, 'we are always in the position of beginning again' (FR p. 47). The upshot of this recognition of the partial character of criticism is not, however, to produce an ethos of fatal resignation but, in far as it involves a recognition that everything is dangerous, 'a hyper-and pessimistic activism' (FR p. 343). In other words, it is the very historicity and partiality of criticism which bestows on the activity of critique its dignity and urgency. What of this activity then? We can sketch the Foucault account of the activity of critique by coming to grips with the opposition he draws between 'ideal' critique and 'real' transformation. Foucault suggests that the activity of critique 'is not a matter of saying that things are not right as they are' but rather 'of pointing out what kinds of assumptions, what kinds of familiar, unchallenged, uncontested modes of thought and practices we accept rest' (PPC p. 154). This distinction is perhaps slightly disingenuous, yet Foucault's point is unintelligible if we recognize his concern to disclose the epistemological grammar which informs our social practices as the starting point of critique. This emerges in his recognition that 'criticism (and radical criticism) is absolutely indispensable for any transformation': A transformation that remains within the same mode of thought, a transformation that is only a way of adjusting the same thought more closely to the reality of things can merely be a superficial transformation. (PPC p. 155) The genealogical thrust of this critical activity is 'to show that things are not as self-evident as one believed, to see that what is accepted as self-evident is no longer accepted as such' for 'as soon as one can no longer think things as one formerly thought them, transformation becomes both very urgent, very difficult, and quite possible' (PPC p. 155). The urgency of transformation derives from the contestation of thought (and the social practices in which it is embedded) as the form of our autonomy, although this urgency is given its specific character for modern culture by the recognition that the humanist grammar of this thought ties us into the technical matrix of biopolitics. The 'specificity' of intellectual practice and this account of the activity of critique come together in the refusal to legislate a universal determination of 'what is right' in favour of the perpetual problematisation of the present. It is not a question, for Foucault, of invoking a determination of who we are as a basis for critique but of locating what we are now as the basis for a reposing of the question. "who are we?" the role of the intellectual is thus not to speak on behalf of others (the dispossessed, the downtrodden) but to create the space within which their struggles become visible such that these others can speak for

themselves. The question remains, however, as to the capacity of Foucault's work to perform this critical activity through an entrenchment of the ethics of creativity as the structures of recognition through which we recognize our autonomy in the contestation of determinations of who we are.

Our framework accesses the best internal link to intellectual activism—start this argument because it's the only thing that makes this debate matter outside of the ballot

Constable '95 (Elizabeth L. Constable, professor of philosophy at the University of California, Irvine, Review of: Rey Chow, *Writing Diaspora: Tactics of Intervention in Contemporary Cultural Studies*, *South Central Review*, Vol. 12, No. 1 (Spring, 1995), pg. 74, jstor)

Rey Chow's collection of eight essays provides a vigorous, insightful analysis of the political, pedagogic, and institutional challenges facing intellectuals in a world where, for Chow, diasporic consciousness defines "the reality of being intellectual" (15). At a time when cultural studies has become increasingly accepted in educational institutions, the field has also inevitably become, not only critical, but in its turn, constitutive of our institutions. Chow's sharp observations and energetic inquiries intend to restore the critical, self-questioning edge to intellectuals' work in cultural studies. As the title indicates, her interest lies in "tactics of intervention," finding ways to resist the "turning-into-propriety of oppositional discourses" (17).

AT: Perm

The perm is a standard imperialist strategy that marginalizes and interprets criticism rather than listening to it.

Briggs and Sharp '04 John Briggs and Joanne Sharp, professors at the Department of Geography and Geomatics University of Glasgow, "Indigenous knowledges and development: a postcolonial caution," *Third World Quarterly*, 25 (4). pg. 661-676

Yet to receive much critical attention in development theory and practice is the nature of the inclusion of indigenous knowledges in development thinking. A central tenet of postcolonial theory is its concern with the ontological and epistemological status of the voices of subaltern peoples in Western knowledge systems, and a postcolonial interrogation of the inclusion of indigenous knowledges in development suggests caution. Indeed, Spivak (1988) has questioned whether "the subaltern" can ever speak; even when apparently expressing her own views, the subaltern is not able to express her true self. Writing about attempts to recover the voices and experiences of the subaltern in South Asian historiography, Spivak has argued that the subaltern cannot speak, so imbued must she be with the words, phrases and cadences of Western thought in order for her to be heard. In order to be taken seriously – to be seen as offering knowledge and not opinion or folklore – the lifeworld of the subaltern has to be translated into the language of science,

development or philosophy, dominated by Western concepts and Western languages. For Spivak (1988), the implications of this “epistemic violence” mean that the ways of knowing the world and knowing the self in non-Western culture are trivialised and invalidated by Western scientists and experts. Hence, the subaltern must always be caught in translation, never truly expressing herself, but always already interpreted. Furthermore, postcolonial theorists (for example, Spivak 1988; hooks 1990; Goss 1996) have questioned the degree to which academics and experts in the West really want to engage with people elsewhere, an engagement which requires a de-centring of themselves as experts. Some postcolonial theorists have already bemoaned the lack of true engagement with the knowledges and voices of the West’s “others”, and, despite claims to be interested in others, suggest that the West is only interested in hearing its own voice (hooks 1990; Spivak 1988; Mohanty 1988). Hooks’ (1990) autobiographical approach tells a similar tale to Spivak in her attempt to be heard from the margins. For her, the margins are a site of “radical possibility” which reject the politics of inside and outside, because “to be on the margins is to be part of the whole but outside the main body” (hooks 1990:341). It is a hybridised indigenous knowledge which she believes offers a unique and important perspective which is not distorted by the power and prejudices of the centre. However, hooks has felt silenced by those who seek the experience, but not the wisdom, of the other. She argues that “I was made ‘other’ there in that space...they did not meet me there in that space. They met me at the center” (hooks 1990:342). The experiences of the marginalised are used in the West, but without opening up the process to their knowledges, theories and explanations. When there is a meeting, it is at the metropolitan centre, in the (predominantly) Western institutions of power/knowledge (aid agencies, universities, the pages of journals) and in the languages of the west (science, philosophy, social science and so on, expressed in English, French, Spanish and so on). So by approaching the institutions of knowledge, she has been forced to the centre, a location both metaphorical in its control of authority and geographical in its physical presence. For local knowledge and narratives to be heard at all, they have to move to this central terrain, where they may be “accepted” and subsequently appropriated. She claims to have met a reluctance to abandon the mark of authority, experiencing instead only a desire for material from which explanations can be made. Western researchers want to know about her experiences, but not her own explanations.

T

1NC

“Curtail” means to restrict

Webster’s 15 – Webster's New World College Dictionary, 4th Ed., “curtail”,
<http://www.yourdictionary.com/curtail>

verb

To curtail is defined as to restrict something, stop something or deprive of something.

An example of curtail is when a town wants to stop drunk driving.

Violation - “Restrictions” are direct governmental limitations –

Viterbo 12 (Annamaria, Assistant Professor in International Law – University of Torino, PhD in International Economic Law – Bocconi University and Jean Monnet Fellow – European University Institute, International Economic Law and Monetary Measures: Limitations to States' Sovereignty and Dispute, p. 166)

In order **to distinguish** an exchange **restriction from a trade measure, the Fund chose not to give relevance to the** purposes or the **effects of the measure and to adopt, instead, a technical criterion that focuses on the method** followed to design said measure.

An interpretation that considered the economic effects and purposes of the measures (taking into account the fact that the measure was introduced for balance of payments reasons or to preserve foreign currency reserves) would have inevitably extended the Fund's jurisdiction to trade restrictions, blurring the boundaries between the IMF and the GATT. The result of such a choice would have been that a quantitative restriction on imports imposed for balance of payments reasons would have fallen within the competence of the Fund.

After lengthy discussions, in 1960 the IMF Executive Board adopted Decision No. 1034-(60/27).⁴⁶ This Decision clarified that **the distinctive feature of a restriction** on payments and transfers for current international transactions **is “whether it involves a direct governmental limitation on** the availability or use of **exchange** as such*.⁴⁷ **This is a limitation imposed directly** on the use of currency in itself, for all purposes.

The plan does not curtail - enacting Strict Scrutiny Standards may have an effect of possibly curtailing surveillance in the distant future, but it does not have a direct effect as of the 1ac plantext of curtailing surveillance much less restricting it.

Assess whether the means themselves are a limit---allowing actions that effect a reduction ruins precision

Randall 7 (Judge – Court of Appeals of the State of Minnesota, “Dee Marie Duckwall, Petitioner, Respondent, vs. Adam Andrew Duckwall, Appellant”, 3-13,
http://law.justia.com/cases/minnesota/court-of-appeals/2007/opa0606_95-0313.html#_ftnref2)

[2] When referring to parenting time, **the term “restriction[.]” is a term of art that is not the equivalent of “reduction”** of parenting time. **“A modification** of visitation **that results in a reduction** of total visitation time, **is not necessarily a restriction** of visitation.’ Danielson v.

Danielson, 393 N.W.2d 405, 407 (Minn. App. 1986). **When determining whether a reduction constitutes a restriction, the court should consider the reasons for the change as well as the amount of the reduction.**" Anderson v. Archer, 510 N.W.2d 1, 4 (Minn. App. 1993).

4. Voting issue---

a. Limits---allowing effectual reductions explodes the topic. Any action can potentially result in less surveillance. Limits are key to depth of preparation and clash. They get more ground to weigh as offense against counterplans or to link turn DAs like politics, at the expense of negative preparation, because it's impossible to research every single non-topical trick the aff could deploy. That crushes competitive equity which comes first because debate is a game. It's very unlikely that a direct effect of the plan is a curtailment of surveillance, hold them to a very high standard.

b. Ground---our interpretation is key to establish a stable mechanism of legal prohibition that guarantees core ground based on topic direction. They allow the Aff to defend completely different processes like "oversight" that dodge core DAs and rob the best counterplan ground. The aff must be a decrease in surveillance, not an increase in policies that might lead to a decrease in surveillance – we lose ground on generics like the terror disad or any surveillance bad argument or link – the aff can potentially spike out of any 1nc offense, creating an extreme amount of aff ground.

Islamophobia Michigan 7

Note

We* tried hard to make this neg file one that provides good options for both T/Framework crowd and detailed/specific arguments for various Ks. Our agenda isn't secret – we'd like to encourage substantive engagement with the thesis of the aff.

Learning to do this at camp is great, and may have equal or even greater utility than practicing a strategy like the Cap K you're already more familiar with. If you've ever thought "what do I do vs. a non-USFG K aff?" our goal was to make that answer as easy as possible to answer.

There are a few distinct strategies you could combine and they all work vs the non-USFG version of the aff:

- T/Framework
- Terror DA + Case
- Speaking for Others
- K of Islam (this isn't "Islam bad," but rather it's "Kundnani/Kumar (primary aff authors) treat all Ks of Islam as forms of islamophobia, that's messed up. It's also a net benefit to the Word PIC.)
- Word PIC out of "Islamophobia"
- Very good links to Foucault and Ks of anti-blackness – could be useful on the case even if you don't read the off-case positions

There is some tension between potential strategies that you should think through as you prepare your strategy. For example, both the Word PIC and Speaking for Others Ks have "discourse first" components that might not work with your framework arguments. This doesn't mean they both shouldn't be in the 1nc, but it may be wiser to choose *one* of those options + case in the block than to go for both.

*Thank you to Emily Chen from GBN, Henry Ferolie from Walter Payton, Riley Franklin from Dulles, Emily Hall from Interlake, Emily Merz from La Costa Canyon, Tamara Morrison from University Prep, Mitchell Pickard from Barstow, Hadar Regev from Johns Creek, Ashton Smith from Maine East and Janai Williams from Groves for all of their hard work in producing this file. Future waves to come.

Case

—Note—

Most of this is straight forward but two big picture notes quickly –

-- It's especially important to answer the case with K affs. Central to the 2ac response to *everything* else (T, DAs, other Ks, etc.) is the 1ac. So many teams just ignore it and it's dangerous to grant the aff 100% of the aff and only attack it marginally on solvency (i.e. saying USFG action would solve better on the T version without answering whether the aff solves)

-- It's not terribly difficult to assemble a case frontline vs. a K aff, esp one with a major author (this first wave leans heavily on Arun Kundnani, future waves will involve more Deepa Kumar, etc.)

If there's a common author it's not hard to go to your 2ac blocks and repurpose your K answers to deal with it.

That said, Kundnani is relatively new to the scene, so our approach was to research book reviews that challenged the thesis of his work. Em Chen went HAM here.

This stuff is some of the most irreplaceable stuff in the 1nc—make time for it. If you have to shorten your off case positions or, perhaps better, slice one, it's worth it.

Solvency F/L—1nc

note – the first card is also in the terror DA link under CT good

Kundnani's way off on root cause and the *thesis* of the aff is bankrupt – history proves **Rashi, 14**—freelance journalist and writer for the Huffington Post (Tanjil, 3/16/14, "'The Muslims are Coming!', by Arun Kundnani", Financial Times, www.ft.com/intl/cms/s/2/af5ef4c6-aa15-11e3-8bd6-00144feab7de.html)//twemchen

**edited for language

In truth, **counterterrorism policies targeting Muslims are a legitimate response to homegrown extremism**, from the murder of Fusilier Lee Rigby to the 366 (by one count) British citizens waging jihad in Syria. Furthermore, the victims of the 2005 London **bombings bear witness to the reality of radicalism**

bred at home. At best, Kundnani's argument is compelling in its dissection of governments' disproportional responses. He estimates the FBI has one counter-terrorism agent per 94 Muslims in the US, which approaches a Stasi-esque ratio of spies to citizens. He shows that authorities keep drawing spurious lists of suspected radicals; one in the UK included almost 300 children under 15. A commonplace at the core of Kundnani's critique is that radicalism is mainly the byproduct of western foreign policy. "Religion had nothing to do with this," according to Kundnani, citing a conspirator in the London bombings. This view is undermined by the existence of two generations of British Muslims predating the war on terror – men who fought in Afghanistan in the 1980s and in Bosnia in the 1990s. The diminution of religion's role in stoking radicalism is as inaccurate as UK Labour politicians' denial that wars in Iraq and Afghanistan acted even as recruiting sergeants. Kundnani scrutinises responses to terrorism better than outlining its causes. He probes the mutations of liberalism in the face of Islam, resulting in "war on terror liberals" for whom liberalism "became an ideology of total war", from the UK Labour party's interventionist foreign policy to Martin Amis's innumerate paranoia about Muslim birth rates. Liberals hold up the Enlightenment, conservatives "campaign to defend Judeo-Christian identity" – both banners explicitly excluding Muslims; both groups inclined, Kundnani writes, to see "terrorists motivated by fanaticism inherent to Islam". History offers correctives to these narratives, demonstrating varieties of Islam being as rooted in rationalism as the Enlightenment; the Enlightenment being as tied to terror as Islam (the word "terrorism" itself was first used during The Terror of the Enlightenment-inspired French revolution). The Muslims are Coming! lacks optimism but there is every reason to believe "Muslim" might one day be suffixed to "Judeo-Christian" when de-scribing the west's culture and values. Note how one prominent French intellectual writes about Europe's growing population of a certain religious minority: "All of them are born with raging fanaticism in their hearts." The author of these unenlightened remarks? Voltaire. His subject? The Jews.

The 1AC's approach to criticizing Western governments only re-creates the problem

Berger, 14—Associate Professor in International Security, PhD in Political Science (Lars, 3/27/14, "The Muslims Are Coming! Islamophobia, Extremism and the Domestic War on Terror, by Arun Kundnani", Times Higher Education: World University Rankings, [//twemchen](https://www.timeshighereducation.co.uk/books/the-muslims-are-coming-islamophobia-extremism-and-the-domestic-war-on-terror-by-arun-kundnani/2012227.article)

One of the central themes in Arun Kundnani's critique of what he describes as the domestic "war on terror" in the UK and the US is the apparent neglect of, or even taboo against, discussing the role played by the foreign policies of Western governments in bringing about the horrific acts of violence witnessed on the streets of London in July 2005 and May 2013. Kundnani, a US-based scholar of terrorism, is adamant that "what governments call extremism is to a large degree a product of their own wars". However, there are a number of theoretical and methodological problems with his account.

Kundnani is right to highlight methodological concerns about existing studies of Islamist radicalisation, many of which rely on a small number of cases and fail to include control groups of people who share radical ideologies but nevertheless choose not to engage in political violence. But this is not a new insight. Indeed, researchers across Europe have already published plenty of insightful critiques of the theoretical assumptions and methodological approaches of the radicalisation literature. Worse, Kundnani commits the same mistakes when he presents no theoretical justification for his choice of case studies, and fails to explain why the vast majority of Muslims who disagree with the Western foreign policies he sees as potential root causes have not become engaged in political violence. If we look at public opinion polls from across the Muslim world, including Muslim communities in the West, support for violence against Western civilians stands, on average, at between 5 and 10 per cent. But if Kundnani's assertions are correct, this number should be much higher, given that in some Muslim countries, overwhelming majorities of up to 90 per cent criticise the policies of the US and the West. THERE IS A DANGER THAT WESTERN GOVERNMENTS CAN END UP TELLING MUSLIMS WHAT THE 'CORRECT' INTERPRETATION OF ISLAM IS In fact, it is not perceptions of US foreign policies with respect to Israel or Middle Eastern petroleum resources that shape approval of terrorist violence against US civilians, but the rejection of US culture and some of its most prominent manifestations,

such as freedom of expression. This finding may go against the conventional wisdom that Kundnani seems to wish to repackage here as his own insights, but it is quite comprehensible in light of the groundbreaking analysis of anti-Americanisms by scholars Peter Katzenstein and Robert Keohane, in which they differentiate between a view that assesses US foreign policies on their own terms and a view that regards those same policies as reflecting the fundamentally evil nature of US society. When he criticises the Islamophobia peddled by right-wing US and UK media and politicians, Kundnani is more convincing, as is his argument that Western counterterrorism efforts, particularly in the US, should pay greater attention to the more widespread threat of right-wing violence. He is also right to highlight the inherently problematic nature of the attempts of various Western governments to meddle in the politics and discourses of Muslim communities in the name of fighting terrorism. It is important to not turn a blind eye towards radical discourses that can be used to justify political violence against civilians. But there is a danger that Western governments, in an attempt to address the cacophony of voices typical of the decentralised, pluralistic religious discourses in many (Sunni) Muslim communities around the world, can end up telling Muslims what the "correct" interpretation of Islam is. But once again, these are issues that have also already received considerable academic attention, with plenty of excellent analysis ranging from peer-reviewed publications to countless undergraduate essays. In short, Kundnani's critique of hostility towards Muslims by some Western media and politicians and of Western governments' interaction with their Muslim communities is convincing, although not wholly original. His highly ideological insistence on the link between Western foreign policies and Islamist terrorism is neither.

Proximate causes outweigh—their epistemology is reductionist and relies on faulty comparisons

Alibhai-Brown, 14—Ugandan-born British journalist and author, research fellow at the Institute for Public Policy Research, founder member of British Muslims for Secular Democracy (Yasmin, 3/7/14, "The Muslims are Coming! by Arun Kundnani, book review: Nothing to fear but Islam itself", The Independent, www.independent.co.uk/arts-entertainment/books/reviews/the-muslims-are-coming-by-arun-kundnani-book-review-nothing-to-fear-but-islam-itself-9174918.html)//twemchen

Arun Kundnani, now a professor at New York University, used to edit Race and Class, the quarterly house journal of the Institute of Race Relations (IRR). For over 40 years the IRR has archived black history, documented and protested against British racism, analysed politics, empire and globalisation. Many of us who became resolute egalitarians were awakened and inspired by the Institute's intellectual activist, A Sivanandan (Siva), now in his eighties. Kundnani, his young disciple, has taken up IRR causes with renewed vigour as they become ever more pressing and concomitantly deeply unpopular. In our times anti-racism (aka "political correctness gone mad") has been expelled from public discourse and critics of capitalism are considered mad, bad or dangerous. In *The End of Tolerance: Racism in the 21st Century* (2007) Kundnani broke these sanctions. His template was stridently post-colonial, his politics boldly left wing. It was a well evidenced, powerful study; a classic.

This one is equally well researched and written, but much less persuasive. The topic is vital; burning. Since 9/11, Muslims have had to pay over and over for crimes committed by fanatic Islamist militants. Our human rights have been snatched; we are watched, hundreds of thousands of our people tortured and murdered by western states or their Muslim stooges. In the "war on terror" anything

goes. Kundnani exposes official duplicities and authorised illegal practices including intimidation, the use of agent provocateurs and extra-judicial killings. He tells the stories of the unheard and unseen. Shamuir Rahman, 19, for example, was recruited by the NYPD to push young Muslims into making inflammatory anti-American statements, part of the force's 'create and capture' strategy; Imam Luqman, suspected of advocating insurrections was not tried but shot dead by FBI agents in Detroit. This is the new wild west, cowboy justice. The UK incarcerates Muslims without any legal process. They, the unnamed, are in a black hole, and don't know if or when they will be charged or released.

Facts and figures in the book scythe through presumptions and prejudices. I didn't know that murders in the last decade by the far right exceed those by Jihadis. Or that Republican congressman Peter King who summoned US Muslims to McCarthy-type hearings, was a keen and shouty fundraiser for the IRA in the 1980s. The author also scrutinises various anti-radicalisation government initiatives: some laughable, some Kafkaesque, others reminiscent of Maoist re-education programmes. With so many books written by liberals and Neocons on the "Muslim peril", it is a relief to have an intelligent counter-narrative: "One of the key arguments of this book is that to comprehend the causes of so-called jihadist terrorism, we need to pay as much attention to Western state violence and the identity politics that sustains it, as we do to Islamicist ideology. What governments call extremism is to a large degree a product of their own wars." However, although many of his arguments and details are incontrovertible, I can't go all the way with Kundnani's conclusions and rationales. Some claims are simply ideological chants or fixations and careless connections are made. The book shifts blithely between Britain and the US. They may be deep allies, but they have different histories and values. From the age of exploration, the UK has had contact with Muslims, for

better and worse. Americans, even now, are clueless about the Muslim nations, Islam and its adherents. Also problematic is Kundnani's post-colonial, anti-capitalist framework, which cannot fully explain the traumas of Muslims worldwide. (By the way, Prophet Mohammed worked for his merchant wife, a capitalist). Their aspirations and lives are shattered by "Islamophobia", occidental domination, aggression and interventions and also corrupt Muslim politicians, low education and technological attainments, rejection of modernity and Saudi Arabia and the Gulf states which systematically spread hardline, anti-female, Islamic Puritanism. Muslims are repressed by external and internal brute forces, turning some to rage and murder. Kundnani disregards inconvenient truths, is dismissive of psychological and social reasons for radicalisation, itself a "myth" in his eyes. He is good on the socio-economic history of Muslims in Britain: why they came, the jobs they took up, unemployment, racism, resistance and deep disillusionment. But doesn't explain why other minorities who have the same troubled history have not become brutal avengers. The murder of Stephen Lawrence is brought in for reasons that are not clear. So too, an attack in 2000 on two Asian brothers at a nightclub in Leeds. Two Leeds United footballers were accused, one convicted but not jailed. We know people of colour are subjected to racist attacks but can't be sure that religious hatred led to the assaults on the brothers. Is Kundnani saying Muslims face different or the same dangers as other black and Asian people in Britain? If Muslims face particular hatreds – which I believe many do – the author needed to focus on those and leave out the victimisation of non-Muslims or explain better than he does, how they fit into his analysis of "Islamophobia" which means the fear and loathing of Muslims. In my view then, this is a gripping exposition of how the west has made a post-communist enemy and, in some ways, ignited Islamicist terrorism. But Muslims are not simply put upon. They have agency and some spread evil. To complete the story you will have to read the feminist Egyptian writer Nawal el-Saadawi or Samir Kassir, friend of Robert Fisk, the Lebanese author of Being Arab. Kassir was blown up not by Western assassins but by Arab brothers for being honest.

note – next card is also part of the Islam K

The radicalization thesis is false—it's ignores the intricacies of the Muslim culture and fails to analyze extremism globally

Rashid, 14—a Research Associate in the Sociology Department at the University of Manchester, PhD in Sociology from the London School of Economics (Dr. Naaz, May 2014, "Book Review: The Muslims Are Coming! Islamophobia, Extremism, and the Domestic War on Terror by Arun Kundnani", The London School of Economics and Political Science, blogs.lse.ac.uk/lsereviewofbooks/2014/07/08/book-review-the-muslims-are-coming-islamophobia-extremism-and-the-domestic-war-on-terror-by-arun-kundnani/)/twemchen

The issue of terrorism continues to dominate the news whether in relation to the allegations of extremism in Birmingham schools or the long term repercussions of young British Muslims going to fight in Syria and Iraq. What links these two stories is the common sense understanding about how people come to commit acts of terrorist violence. In his new book, *The Muslims are Coming*, Arun Kundnani's primary focus is the 'radicalization thesis' which underpins the moral panics underlying both phenomena. That is, the idea that people become radicalised through exposure to 'extremist' ideologies which can then lead them to engage in acts of terrorism. Through his rigorously researched analysis of preventive counterterrorism measures in the UK and US, Kundnani skilfully and articulately deconstructs the central tenets of these dominant discourses regarding radicalisation and extremism. Kundnani's stated aims are to consider: firstly, how Islamic ideology has come to be regarded as the root cause of terrorism; and secondly, that acceptance of Muslims as citizens is predicated on them (us) distancing themselves from any particular set of ideological beliefs. He argues that "official and popular understandings of terrorism are more a matter of ideological projection and fantasy than of objective assessment." (p. 17). He suggests that the events in both Boston and Woolwich fit the "current war on terror paradigm of young Muslim men becoming radicalised through their exposure to Islamist ideology". This is despite the fact that in both instances, although not acting entirely alone, the perpetrators were amateurs with no connection to wider networks or terrorist cells. The transatlantic comparison allows Kundnani to showcase his detailed scholarship of policies, both in theory and in practice, weaving together the continuities and parallels between each country's experiences. Common to both countries is the underlying belief in 'the myth of radicalization'. As Kundnani writes, the term was little used prior to 2001, whereas by 2004 it "had acquired its new meaning of a psychological or theological process by which Muslims move toward extremist views"; so much so that by 2010 over 100 articles on the topic were being published in peer-reviewed academic journals each year (p 119). Despite this wealth of research, however, Kundnani argues that the underlying ideological assumptions mean that radicalization scholars systematically fail to address the reality of the political conflicts they claim to understand. Kundnani delineates the

divergent histories of the UK and US's respective Muslim populations in the context of very different, albeit occasionally intertwined, histories of (neo)imperialism, migration, and racial politics. He goes on to suggest, however, that 2005 represented a watershed year in which the 7/7 bombings in London brought the UK into close alignment with the US. As a result, the substantive historical, socio-political and demographic differences fell away and the UK and the US were united, not only in their ideologically inspired military encroachments, but also in their preventive counter terrorism measures against 'home grown' terrorism. This is perhaps where it could be argued that the book's weakness lies. Kundnani's scrupulous attention to detail that so enriches his critique of the common sense logic regarding the relationship between radicalization and terrorism is absent in this analysis. If, as he argues, the fundamental flaw with the radicalization thesis is its failure to take into account the wider socio- and geo-political context within which such political violence occurs, then equally, in order to assess the outcome of policies based on it, the localised differences between and within the US and UK surely warrant more nuanced analysis. At times he does address US-specific contexts such as the more overt tactics of create and capture used there, which almost amounts to the entrapment of potential terrorists. He also writes a coruscating indictment of Obama's term in office in which the militaristic jingoism of George Bush has become dangerously banal, bureaucratic, and routine, such that the practice and function of the anti-Muslim racism which has been fostered has rendered invisible "the violence of the US empire" (p 14). On balance, however, the differences between the two countries are flattened out and the differential country-specific impacts of such initiatives remain somewhat unexplored. In the British context for example, the Prevent agenda cannot be assessed in isolation from the community cohesion agenda which preceded it and broader debates on multiculturalism and Britishness which foreground it. An underexplored side effect of the Prevent agenda in the UK is its impact on 'inter community' relations given the particularities of the postcolonial British experience. Sikhs have not, for example, been widely 'misrecognised' as Muslims in the UK as they have in the US (where the 'Don't Freak I'm a Sikh' campaign emerged). Similarly, it is not clear whether Sikhs in the US have been drawn to far-right groups premised on an anti-Muslim platform as has occurred in the case of the BNP and the EDL in the UK. Given Kundnani's previous work for the anti-racist left organisation the Institute of Race Relations (IRR) as well as his earlier publications, such as *The End of Tolerance* and *Spooked!* – his analysis of such differences would undoubtedly have been astute. Furthermore, the book does not situate the radicalisation debate in relation to the wider cultural pathologisation of Muslims in both countries as well as across the globe, for example, in relation to Muslim women, and the way in which these discourses are so heavily gendered. Nonetheless, given the virulent tenacity with which the violent extremism/radicalisation/counterterrorism discourse matrix permeates the public policy imaginary, in spite of little evidence to support the conceptual framework which underlies it, the book is a very timely intervention. Kundnani draws on a wide range of material to support his case, ranging from the work of Arendt to the analysis of populist representations of terrorism in TV series such as *Homeland* and *South Park*. There is also a wealth of research into and analysis of particular cases of counter terrorist activity and interventions which can challenge the established orthodoxies prevailing on both sides of the Atlantic (although these in depth examples might have benefitted from a more conventional bibliography and index). *The Muslims are Coming* should be required reading for officials and Ministers in the Home Office, Department of Communities & Local Government, the Department of Education, and the Department for Homeland Security, as well as for political commentators everywhere. However, for those engaged in critical studies of the racialised (and gendered) politics of the war on terror, fewer examples and more critical, country-specific analysis of the impact of such measures would have been welcome.

Structural Violence F/L—1nc

Structural violence decreasing now

Goklany 9—Worked with federal and state governments, think tanks, and the private sector for over 35 years. Worked with IPCC before its inception as an author, delegate and reviewer. Negotiated UN Framework Convention on Climate Change. Managed the emissions trading program for the EPA. Julian Simon Fellow at the Property and Environment Research Center, visiting fellow at AEI, winner of the Julian Simon Prize and Award. PhD, MS, electrical engineering, MSU. B.Tech in electrical engineering, Indian Institute of Tech. (Indur, "Have increases in population, affluence and technology worsened human and environmental well-being?" 2009, http://www.ejsd.org/docs/HAVE_INCREASES_IN_POPULATION_AFFLUENCE_AND_TECHNOLOGY_WORSENEED_HUMAN_AND_ENVIRONMENTAL_WELL-BEING.pdf)

Although global population is no longer growing exponentially, it has quadrupled since 1900. Concurrently, affluence (or GDP per capita) has sextupled, global economic product (a measure of aggregate consumption) has increased 23-fold and carbon dioxide has increased over 15-fold (Maddison 2003; GGDC 2008; World Bank 2008a; Marland et al. 2007).⁴ But contrary to Neo-Malthusian fears, average human well-being, measured by any objective indicator, has never been higher. Food supplies, Malthus' original concern, are up worldwide. Global food supplies per capita increased from 2,254 Cals/day in 1961 to 2,810 in 2003 (FAOSTAT 2008). This helped reduce hunger and malnutrition worldwide. The proportion of the population in the developing world, suffering from chronic hunger declined from 37 percent to 17 percent between 1969–71 and 2001–2003 despite an 87 percent population increase (Goklany 2007a; FAO 2006). The reduction in hunger and malnutrition, along with improvements in basic hygiene, improved access to safer water and sanitation,

broad adoption of **vaccinations**, antibiotics, pasteurization **and** other public **health measures, helped** reduce mortality and **increase life expectancies**. These improvements first became evident in today's developed countries in the mid- to late-1800s and started to spread in earnest to developing countries from the 1950s. The infant mortality rate in developing countries was 180 per 1,000 live births in the early 1950s; today it is 57. Consequently, global **life expectancy**, perhaps the single most important measure of human well-being, **increased from 31** years in 1900 **to 47** years in the early 1950s to 67 years today (Goklany 2007a). Globally, average **annual per capita incomes tripled since 1950**. The proportion of the world's population outside of high-income OECD countries living in absolute **poverty** (average consumption of less than \$1 per day in 1985 International dollars adjusted for purchasing power parity), **fell from 84 percent** in 1820 **to 40** percent in 1981 to 20 percent in 2007 (Goklany 2007a; WRI 2008; World Bank 2007). Equally important, **the world is more literate and better educated**. Child labor in low income countries declined from 30 to 18 percent between 1960 and 2003. In most countries, **people are freer politically, economically and socially** to pursue their goals as they see fit. More people choose their own rulers, and have freedom of expression. They are more likely to live under rule of law, and less likely to be arbitrarily deprived of life, limb and property. Social and professional mobility has never been greater. It is easier to transcend the bonds of caste, place, gender, and other accidents of birth in the lottery of life. People work fewer hours, and have more money and better health to enjoy their leisure time (Goklany 2007a). Figure 3 summarizes the U.S. experience over the 20th century with respect to growth of population, affluence, material, fossil fuel energy and chemical consumption, and life expectancy. It indicates that population has multiplied 3.7-fold; income, 6.9-fold; carbon dioxide emissions, 8.5-fold; material use, 26.5-fold; and organic chemical use, 101-fold. Yet its life expectancy increased from 47 years to 77 years and infant mortality (not shown) declined from over 100 per 1,000 live births to 7 per 1,000. It is also important to note that not only are people living longer, they are healthier. The disability rate for seniors declined 28 percent between 1982 and 2004/2005 and, despite better diagnostic tools, major diseases (e.g., cancer, and heart and respiratory diseases) occur 8–11 years later now than a century ago (Fogel 2003; Manton et al. 2006). If similar figures could be constructed for other countries, most would indicate qualitatively similar trends, especially after 1950, except Sub-Saharan Africa and the erstwhile members of the Soviet Union. In the latter two cases, life expectancy, which had increased following World War II, declined after the late 1980s to the early 2000s, possibly due poor economic performance compounded, especially in Sub-Saharan Africa, by AIDS, resurgence of malaria, and tuberculosis due mainly to poor governance (breakdown of public health services) and other manmade causes (Goklany 2007a, pp.66–69, pp.178–181, and references therein). However, there are signs of a turnaround, perhaps related to increased economic growth since the early 2000s, although this could, of course, be a temporary blip (Goklany 2007a; World Bank 2008a). Notably, in most areas of the world, the health-adjusted life expectancy (HALE), that is, life expectancy adjusted downward for the severity and length of time spent by the average individual in a less-than-healthy condition, is greater now than the unadjusted life expectancy was 30 years ago. HALE for the China and India in 2002, for instance, were 64.1 and 53.5 years, which exceeded their unadjusted life expectancy of 63.2 and 50.7 years in 1970–1975 (WRI 2008). Figure 4, based on cross country data, indicates that contrary to Neo-Malthusian fears, both life expectancy and infant mortality improve with the level of affluence (economic development) and time, a surrogate for technological change (Goklany 2007a). Other indicators of human well-being that improve over time and as affluence rises are: access to safe water and sanitation (see below), literacy, level of education, food supplies per capita, and the prevalence of malnutrition (Goklany 2007a, 2007b).

Structural violence doesn't escalate

Robert **Hinde** and Lea Pulkkinen, Cambridge psychology professor and University of Jyväskylä psychology professor, **2000**, DRAFT Background Paper for Working Group 1: HUMAN AGGRESSIVENESS AND WAR, 50th Pugwash Conference On Science and World Affairs: "Eliminating the Causes of War" Queens' College, Cambridge, <http://www.pugwash.org/reports/pac/pac256/WG1draft1.htm>

People are capable of perpetrating the most terrible acts of violence on their fellows. From before recorded history humans have killed humans, and violence is potentially present in every society. There is no escaping the fact that the capacity to develop a propensity for violence is part of human nature. But that does not mean that aggression is inevitable: temporary **anger need not give rise to** persistent **hostility, and** hostility need not give rise to acts of **aggression**. And people also have the capacity to care for the needs of others, and are capable of acts of great altruism and self-sacrifice. A subsidiary aim of this workshop is to identify the factors that make aggressive tendencies predominate over the cooperative and compassionate ones. **Some** degree of **conflict** of interest **is often present** in relationships between individuals, in the relations **between groups** of individuals within states, and in the relations between states: **we are concerned with** the **factors that make** such **conflicts escalate** into violence. The answer to that question depends critically on the context. While there may be some factors in common, the **bases of individual aggressiveness are** very **different from** those involved in **mob violence, and** they differ yet again from the factors influencing the bomb-aimer **pressing the button in a large** scale international **war**. In considering whether acts which harm others are a consequence of the aggressive motivation of individuals, it is essential to recognise the diversity of such acts, which include interactions between individuals, violence between groups, and wars of the WW2 type. We shall see that, with increasing social complexity, individual aggressiveness becomes progressively less important, but other aspects of human nature come to contribute to group phenomena. Although research on human violence has focussed too often on the importance of one factor or another, it is essential to remember

that **violence always has multiple causes, and the** interactions between the **causal factors** **remain** largely **unexplored.**

Shocks to the system are the ONLY propensity for conflict—liberal norms have eradicated the escalation of warfare and structural violence—every field study proves

JOHN HORGAN 9 is Director of the Center for Science at Stevens Institute of Technology, former senior writer at Scientific American, B.A. from Columbia and an M.S. from Columbia "The End of the Age of War," Dec 7, <http://www.newsweek.com/id/225616/page/1>

The economic crisis was supposed to increase violence around the world. The truth is that **we are now living in one of the most peaceful periods**, since war first arose 10 or 12 millennia ago. **The** relative **calm of our era**, say scientists who study warfare in history and even prehistory, **belies the popular, pessimistic notion that war is** so **deeply rooted in our nature** that we can never abolish it. In fact, **war seems to be a** largely **cultural phenomenon, which culture is** now **helping us eradicate**. Some scholars now even cautiously speculate that the era of traditional war—fought by two uniformed, state-sponsored armies—might be drawing to a close. **"War could be on the verge of ceasing to exist** as a substantial phenomenon," says John Mueller, a political scientist at Ohio State University.¶ That might sound crazy, but consider: if war is defined as a conflict between two or more nations resulting in at least 1,000 deaths in a year, **there have been no wars since the** U.S. **invasion of Iraq** in 2003 **and no wars between major** industrialized **powers** since World War II. Civil wars have also declined from their peak in the early 1990s, when fighting tore apart Rwanda, the Balkans, and other regions. Most armed conflicts now consist of low-level guerrilla campaigns, insurgencies, and terrorism—what Mueller calls the "remnants of war."¶ These facts would provide little comfort if war's remnants were nonetheless killing millions of people—but they're not. **Recent studies reveal a clear downward trend**. In 2008, 25,600 combatants and civilians were killed as a direct result of armed conflicts, according to the University of Uppsala Conflict Data Program in Sweden. Two thirds of these deaths took place in just three trouble spots: Sri Lanka (8,400), Afghanistan (4,600), and Iraq (4,000).¶ Uppsala's figures exclude deaths from "one-sided conflict," in which combatants deliberately kill unarmed civilians, and "indirect" deaths from war-related disease and famine, but even when these casualties are included, annual **war-related deaths** from 2004 to 2007 are still low by historical standards. Acts of terrorism, like the 9/11 attacks or the 2004 bombing of Spanish trains, **account for less than 1 percent of fatalities**. In contrast, car accidents kill more than 1 million people a year.¶ **The contrast between our century and the previous** one **is striking**. In the second half of the 20th century, war killed as many as 40 million people, both directly and indirectly, or 800,000 people a year, according to Milton Leitenberg of the University of Maryland. He estimates that 190 million people, or 3.8 million a year, died as a result of wars and state--sponsored genocides during the cataclysmic first half of the century. Considered as a percentage of population, the body count of the 20th century is comparable to that of blood-soaked earlier cultures, such as the Aztecs, the Romans, and the Greeks.¶ By far the most warlike societies are those that preceded civilization. War killed as many as 25 percent of all pre-state people, a rate 10 times higher than that of the 20th century, estimates anthropologist Lawrence Keeley of the University of Illinois. Our ancestors were not always so bellicose, however: there is virtually no clear-cut evidence of lethal group aggression by humans prior to 12,000 years ago. Then, "warfare appeared in the evolutionary trajectory of an increasing number of societies around the world," says anthropologist Jonathan Haas of Chicago's Field Museum of Natural History. He attributes the emergence of warfare to several factors: growing population density, environmental stresses that diminished food sources, and the separation of people into culturally distinct groups. "It is only after the cultural foundations have been laid for distinguishing 'us' from 'them,' " he says, "that raiding, killing, and burning appear as a complex response to the external stress of environmental problems."¶ Early civilizations, such as those founded in Mesopotamia and Egypt 6,000 years ago, were extremely warlike. They assembled large armies and began inventing new techniques and technologies for killing, from horse-drawn chariots and catapults to bombs. But nation-states also developed laws and institutions for resolving disputes nonviolently, at least within their borders. These cultural innovations helped reduce the endless, tit-for-tat feuding that plagued pre-state societies.¶ A host of other **cultural factors** may **explain the** more recent **drop-off in** international **war** and other forms of social violence. **One is a surge in democratic** rather than totalitarian **governance**. Over the past two centuries **democracies**, such as the U.S. have **rarely if ever fought each other. Democracy is** also **associated with low** levels of **violence within nations**. Only 20 democratic nations existed at the end of World War II; the number has since more than quadrupled. Yale historian Bruce Russett contends that international institutions such as the United Nations and the European Union also contribute to this "democratic peace" phenomenon by fostering economic interdependence. Advances in civil rights for women may also be making us more peaceful. **As** women's education and **economic opportunities rise, birthrates fall, decreasing demands on** governmental and medical **services and depletion of** natural **resources, which can otherwise lead to social unrest**.¶ Better public health is another contributing

factor. Over the past century, **average life spans have** almost **doubled, which could make us less willing to risk our lives** by engaging in war and other forms of violence, proposes Harvard **psychologist(s)** Steven Pinker. At the same time, he **points out, globalization** and communications have **made us increasingly interdependent on, and empathetic toward, others** outside of our immediate "tribes." **Of course, the world remains a dangerous place vulnerable to disruptive, unpredictable events** like terrorist attacks. Other looming threats to peace include climate change, which could produce droughts and endanger our food supplies; overpopulation; and the spread of violent religious extremism, as embodied by Al Qaeda. A global financial meltdown or ecological catastrophe could plunge us back into the kind of violent, Hobbesian chaos that plagued many pre-state societies thousands of years ago. "War is not intrinsic to human nature, but neither is peace," warns the political scientist Nils Petter Gleditsch of the International Peace Research Institute in Oslo. **So far the trends are positive. If they continue** who knows? **World peace**—the dream of countless

Structural violence obscures analysis necessary to solve the impact.

Boulding, '77 Kenneth, Prof Univ. of Michigan and UC Boulder, Journal of Peace Research; 14; 75 p. Boulding p. 83-4

Finally, we come to the great Galtung metaphors of **'structural violence'** and 'positive peace'. They **are metaphors** rather than models, **and for that** very **reason** are suspect. Metaphors always imply models and metaphors have much more persuasive power than models do, for models tend to be the preserve of the specialist. But when a metaphor implies a bad model it **can be very dangerous, for it is both persuasive and wrong**. The metaphor of structural violence I would argue falls right into this category. The metaphor is that poverty, deprivation, ill health, low expectations of life, a condition in which more than half the human race lives, is 'like' a thug beating up the victim and taking his money away from him in the street, -or it is 'like' a conqueror stealing the land of the people and reducing them to slavery. The implication is that poverty and its associated ills are the fault of the thug or the conqueror and the solution is to do away with thugs and conquerors. While there is some truth in the metaphor, in the modern world at least there is not very much. Violence, whether of the streets and the home, or of the guerilla, of the police, or of the armed forces, is a very different phenomenon from poverty. The processes which create and sustain poverty are not at all like the processes which create and sustain violence, although like everything else in the world, everything is somewhat related to everything else. There is a very real problem of the structures which lead to violence, but unfortunately Galtung's **metaphor of structural violence** as he has used it **has diverted attention from the problem**. Violence in the behavioral sense, that is, somebody actually doing damage to somebody else and trying to make them worse off, is a 'threshold' phenomenon, rather like the boiling over of a pot. The temperature under a pot can rise for a long time without its boiling over, but at some threshold boiling over will take place. **The** study of the **structures which underlie violence** are a very important and much neglected part of peace research and indeed of social science in general. Threshold phenomena like violence are difficult to study because they represent 'breaks' in the system rather than uniformities. Violence, whether between persons or organizations, occurs when the 'strain' on a system is too great for its '~s~trength'. The metaphor here is that violence is like what happens when we break a piece of chalk. Strength and strain, however, especially in social systems, are so interwoven historically that it is very difficult to separate them. The diminution of violence involves two possible strategies, or a mixture of the two; one is the increase in the strength of the system, ~the other is the diminution of the strain. The strength of systems involves habit, culture, taboos, and sanctions, all these things, which enable a system to stand Increasing strain without breaking down into violence. The strains on the system **are largely dynamic in character**, such as arms races, mutually stimulated hostility, changes in relative economic position or political power, which are often hard to identify. Conflict of interest are only part of the strain on a system, and not always the most important part. It is very hard for people to know their interests, and misperceptions of interests take place mainly through the dynamic processes, not through the structural ones. It is only perceptions of interest which affect people's behavior, not the 'real' interests, whatever these may be, and the gap between perception and reality can be very large and resistant to change. However, what Galtung calls structural violence (which has been defined by one unkind commentator as anything that Galtung doesn't like) was originally defined as any unnecessarily low expectation of life, an that assumption that anybody who dies before the allotted span has been killed, however unintentionally and unknowingly, by somebody else. The concept has been expanded to include all the problems of poverty, destitution, deprivation, and misery. These are enormously real and are a very high priority for research and action, but they belong to systems which are only peripherally related to the structures which, produce violence. This is not to say that the cultures of violence and the cultures of poverty are not sometimes related, though not all poverty cultures are culture of violence, and certainly not all cultures of violence are poverty cultures. But the dynamics of poverty and **the success or failure to rise out of it are of a complexity far beyond anything which the metaphor of structural violence can offer**. While **the metaphor of structural violence** performed a 'service in calling attention to a problem, it **may have done a disservice in preventing us from finding the answer**.

Extinction outweighs structural violence

Bostrum 12 (Nick, Professor of Philosophy at Oxford, directs Oxford's Future of Humanity Institute and winner of the Gannon Award, Interview with Ross Andersen, correspondent at The Atlantic, 3/6, "We're Underestimating the Risk of Human Extinction", <http://www.theatlantic.com/technology/archive/2012/03/were-underestimating-the-risk-of-human-extinction/253821/>)

Bostrum, who directs Oxford's Future of Humanity Institute, has argued over the course of several papers that human **extinction risks are** poorly understood and, worse still, **severely underestimated by society**. Some of these existential risks are fairly well known, especially the natural ones. But others are obscure or even exotic. Most worrying to Bostrum is the subset of existential risks that arise from human technology, a subset that he expects to grow in number and potency over the next century. ¶ Despite his concerns about the risks posed to humans by technological progress, Bostrum is no luddite. In fact, he is a longtime advocate of transhumanism---the effort to improve the human condition, and even human nature itself, through technological means. In the long run he sees technology as a bridge, a bridge we humans must cross with great care, in order to reach new and better modes of being. In his work, Bostrum uses the tools of philosophy and mathematics, in particular probability theory, to try and determine how we as a species might achieve this safe passage. What follows is my conversation with Bostrum about some of the most interesting and worrying existential risks that humanity might encounter in the decades and centuries to come, and about what we can do to make sure we outlast them. ¶ Some have argued that we ought to be directing our resources toward humanity's existing problems, rather than future existential risks, because many of the latter are highly improbable. You have responded by suggesting that **existential risk mitigation may** in fact **be a dominant moral priority over** the **alleviation of present suffering**. Can you explain why? ¶ Bostrum: Well suppose you have a moral view that counts future people as being worth as much as present people. You might say that fundamentally it doesn't matter whether someone exists at the current time or at some future time, just as many people think that from a fundamental moral point of view, it doesn't matter where somebody is spatially---somebody isn't automatically worth less because you move them to the moon or to Africa or something. **A human life is a human life. If you have that** moral point of **view that future generations matter in proportion to their** population **numbers, then** you get this very stark implication that **existential risk mitigation has a much higher utility than** pretty much **anything else** that you could do. There are so many people that could come into existence in the future if humanity survives this critical period of time---**we might live for billions of years, our descendants might colonize billions of solar systems** and **there could be a billion** and billions **times more people** than exist currently. Therefore, **even a very small reduction in the probability of realizing this enormous good will** tend to **outweigh** even **immense benefits like eliminating poverty or curing malaria**, which would be tremendous und

Nuke war threat is real and o/w structural and invisible violence---their expansion of structural violence to an all-pervasive omnipresence makes preventing war impossible

Boulding 78 is professor of economics and director, Center for Research on Conflict Resolution, University of Michigan, "Future Directions in Conflict and Peace Studies," The Journal of Conflict Resolution, Vol. 22, No. 2 (Jun., 1978), pp. 342-354

Galtung is very legitimately **interested in** problems of world **poverty** and the failure of development of the really poor. He tried to amalga- mate this interest with the peace research interest in the more narrow sense. **Unfortunately, he did this by downgrading** the study of **inter- national peace, labeling it "negative peace"** (it should really have been labeled "negative war") **and then developing the concept of "structural violence,"** which initially meant all those social structures and histories which produced an expectation of life less than that of the richest and longest-lived societies. He argued by analogy that if people died before the age, say, of 70 from avoidable causes, that this was a death in "war" which could only be remedied by something called "positive peace." **Unfortunately, the concept** of structural violence **was broadened** in the word of one slightly unfriendly critic, **to include anything** that Galtung did not like. **Another factor** in this situation **was the feeling** certainly in the 1960s and early 1970s, **that** nuclear deterrence was actually succeeding as deterrence and that **the problem of nuclear war had receded** into the background. **This** it seems to me **is a most danger- ous illusion and diverted conflict** and peace research for ten years or more **away from problems of** disarmament and **stable peace toward a grand, vague study of world**

developments, for which most of the peace researchers are not particularly well qualified. To my mind, at least, the quality of the research has suffered severely as a result.' The complex nature of the split within the peace research community is reflected in two international peace research organizations. The official one, the International Peace Research Association (IPRA), tends to be dominated by Europeans somewhat to the political left, is rather, hostile to the United States and to the multinational corporations, sympathetic to the New International Economic Order and thinks of itself as being interested in justice rather than in peace. The Peace Science Society (International), which used to be called the Peace Research Society (International), is mainly the creation of Walter Isard of the University of Pennsylvania. It conducts meetings all around the world and represents a more peace-oriented, quantitative, science-based enterprise, without much interest in ideology. COPRED, while officially the North American representative of IPRA, has very little active connection with it and contains within itself the same ideological split which, divides the peace research community in general. It has, however, been able to hold together and at least promote a certain amount of interaction between the two points of view. Again representing the "scientific" rather than the "ideological" point of view, we have SIPRI, the Stockholm International Peace Research Institute, very generously (by the usual peace research standards) financed by the Swedish government, which has performed an enormously useful service in the collection and publishing of data on such things as the war industry, technological developments, armaments, and the arms trade. The Institute is very largely the creation of Alva Myrdal. In spite of the remarkable work which it has done, however, her last book on disarmament (1976) is almost a cry of despair over the folly and hypocrisy of international policies, the overwhelming power of the military, and the inability of mere information, however good, to change the course of events as we head toward ultimate catastrophe. I do not wholly share her pessimism, but it is hard not to be a little disappointed with the results of this first generation of the peace research movement. Myrdal called attention very dramatically to the appalling danger in which Europe stands, as the major battleground between Europe, the United States, and the Soviet Union if war ever should break out. It may perhaps be a subconscious recognition-and psychological denial-of the sword of Damocles hanging over Europe that has made the European peace research movement retreat from the realities of the international system into what I must unkindly describe as fantasies of justice. But the American peace research community, likewise, has retreated into a somewhat niggling scientism, with sophisticated methodologies and not very many new ideas. I must confess that when I first became involved with the peace research enterprise 25 years ago I had hopes that it might produce something like the Keynesian revolution in economics, which was the result of some rather simple ideas that had never really been thought out clearly before (though they had been anticipated by Malthus and others), coupled with a substantial improvement in the information system with the development of national income statistics which reinforced this new theoretical framework. As a result, we have had in a single generation a very massive change in what might be called the "conventional wisdom" of economic policy, and even though this conventional wisdom is not wholly wise, there is a world of difference between Herbert Hoover and his total failure to deal with the Great Depression, simply because of everybody's ignorance, and the moderately skillful handling of the depression which followed the change in oil prices in 1974, which, compared with the period 1929 to 1932, was little more than a bad cold compared with a galloping pneumonia. In **the international system**, however, there **has** been only glacial change in the conventional wisdom. There has been some improvement. Kissinger was an improvement on John Foster Dulles. We have had the beginnings of detente, and at least the possibility on the horizon of stable peace between the United States and the Soviet Union, indeed in the whole temperate zone-even though the tropics still remain uneasy and beset with **arms races, wars, and revolutions** which we cannot really afford. Nor can we pretend that peace around the temperate zone is stable enough so that we do not have to worry about it. **The** qualitative **arms race** goes on and **could easily take us over the cliff**. The record of **peace research** in the last generation, therefore, is one of very partial success. It has created a discipline and that is something of long-run consequence, most certainly for the good. It has made very little dent on the conventional wisdom of the policy makers anywhere in the world. It **has not been able to prevent an arms race** any more, I suppose we might say, than the Keynesian economics has been able to prevent inflation. But whereas inflation is an inconvenience, **the arms race may well be another catastrophe**. Where, then, do we go from here? Can we see new horizons for peace and conflict research to get it out of the doldrums in which it has been now for almost ten years? The challenge is surely great enough. **It still remains true that war, the breakdown of** Galtung's **"negative peace," remains the greatest** clear and present **danger to the human race, a danger to human survival far greater than poverty, or injustice, or oppression**, desirable and necessary as it is to eliminate these things. Up to the present generation, war has been a cost and an inconvenience to the human race, but it has rarely been fatal to the process of evolutionary development as a whole. It has probably not absorbed more than 5% of human time, effort, and resources. Even in the twentieth century, with its two world wars and innumerable smaller ones, it has probably not accounted for more than 5% of deaths, though of course a larger proportion of premature deaths. **Now, however, advancing technology is creating** a situation where in the first place we are developing a single world system that does not have the redundancy of the many isolated **systems** of the past and **in which** therefore **if anything goes wrong everything goes wrong**. The Mayan civilization could collapse in 900 A.D., and collapse almost irretrievably without Europe or China even being aware of the fact. When we had a number of isolated systems, the catastrophe in one was ultimately recoverable by migration from the surviving systems. The one-world system, therefore, which science, transportation, and communication are rapidly giving us, is inherently more precarious than the many-world system of the past. It is all the more important, therefore, to make it internally robust and capable only of recoverable catastrophes. The necessity for stable peace, therefore, increases with every improvement in technology, either of war or of peace.

Circumvention DA

**note – this card is great vs. the USFG version but shouldn't be read vs. the non-USFG version (you'd just be reading a DA to the T version of the aff, not to the aff itself)

State-centric curtailment will inevitably fail—circumvention, increase in suppression, and extension of power

Schriefer, 10—advocacy director at Freedom House and contributor to New York Times (Paula, 11/9/10, "The Wrong Way to Combat 'Islamophobia'", New York Times, [//twemchen](http://www.nytimes.com/2010/11/10/opinion/10iht-edschriefer.html?_r=0&module=ArrowsNav&contentCollection=Opinion&action=keypress®ion=FixedLeft&pgtype=article)

This week, member states of the United Nations will vote on what has become an annual resolution, "On Combating Defamation of Religions," put forward by the Organization of the Islamic Conference, a group of 57 states with large Islamic populations. The resolution condemns what it calls "defamation of religions" — a vague notion that can perhaps best be described as a form of expression that offends another's religious sensibilities — and urges countries to enact laws that prohibit such forms of expression. The resolutions are part of a larger and dangerous campaign to create a global blasphemy law to combat what Muslim leaders refer to as "Islamophobia." Such a campaign is deeply flawed from a human rights perspective, both in its equation of religious discrimination (a legitimate human rights violation) with the vague concept of defamation, as well as in the proposed remedy of imposing legal limits on freedom of expression. A recent Freedom House report looking at blasphemy laws in seven countries documents the negative impact of such laws on a range of fundamental human rights, while noting how such laws actually contribute to greater interfaith strife and conflict. Because no one can agree on what constitutes blasphemy, laws that attempt to ban it are themselves vague, highly prone to arbitrary enforcement and are used to stifle everything from political opposition to religious inquiry. Particularly when applied in countries with weak democratic safeguards — e.g., strong executives, subservient judiciaries, corrupt law enforcement — blasphemy laws do nothing to achieve their supposed goals of promoting religious tolerance and harmony and instead are disproportionately used to suppress the freedom of religious minorities or members of the majority religion that hold views considered unorthodox. In Pakistan, for example, Christians and Ahmadiyya (Muslims who do not believe Muhammad was the final prophet) make up only 2 percent of the population, but have been the target of nearly half of the more than 900 prosecutions for blasphemy in the past two decades. The remaining prosecutions have been made against Muslims themselves, often simply as an easy way to settle personal scores that have nothing to do with religion. Mere accusations of blasphemy have led to mob violence in which people have been maimed or killed and whole communities devastated. The governments of countries that already have such problematic laws on the books are precisely those countries leading the charge to create an international blasphemy law through the United Nations. The motivations of states like Egypt, Pakistan and Saudi Arabia — countries with appalling records on religious freedom and broader human rights — are unquestionably hypocritical and have more to do with their desire to score points with unhappy domestic populations and religious extremists than the desire to foster religious tolerance. Support for blasphemy laws is high among the general public in the Islamic world. Even the staunchest advocates of human rights in the Middle East, individuals who are openly critical of their corrupt and authoritarian leaders, balk at the idea that the publication of the Danish cartoons or the burning of a Koran should be protected forms of freedom of expression. In a part of the world where one's religion is as key to one's identity as nationality and race, most people simply view such forms of expression as a bigoted attack on their very existence. Such views are bolstered by the need to better address the real issues of discrimination and violence against individuals because of their religious beliefs, even in established democracies. It is a fact that political parties espousing xenophobic and anti-Islamic views in Europe have gained in both popularity and representation, and that legal policies have been enacted that most human rights organizations rightly see as restricting the fundamental rights of Muslims to practice their religious beliefs. It is also a fact that many of the same people who defended the Danish cartoons as an important form of free expression somehow feel perfectly justified in criticizing the plans to build an Islamic Center near the site of the World Trade Center because it offends them. Yet hypocrisy in Europe and the United States does not justify

attempts to bring **governmental oversight** into what constitutes offensive expression.
Even with the best intentions, which are often lacking, governments should **never be in the**
business of policing speech. The tools of defeating intolerance, including religious intolerance, start with a legislative environment that protects people's fundamental political rights and civil liberties, including freedom of expression. Blasphemy laws don't work in any context and U.N. member states should reject them unconditionally.

T/FW

—Note—

The T version of the aff and the advantage counterplan are more or less the same. It says the best way to address islamophobia is to tackle the material that is distributed to train law enforcement agents.

The aff has to execute a fine line between K-ing the USFG as a solution on framework when it answers the T version of the aff and reading a permutation to the K. Permutations obviously don't guarantee agreement, but it's difficult to say the aff is mutually incompatible with an approach (USFG action) on framework and that it is mutually compatible with the same approach if it is read as a CP.

The neg argument is essentially "you can't have your cake and eat it, too – you either get the perm and there's no DA to the topical version of the aff or you don't get the perm and we get to test the desirability of the topical version of the aff by reading it as a CP."

Too often, the T version of the aff is a central but underdiscussed portion of the debate. It is thrown out by the neg as a brief cursory vision, but its substance usually goes unexamined and the Neg misses out on the ability to get extra leverage. If you prove the CP solves the aff then it also likely disproves many broad critiques of the USFG they make on Framework.

That being said, critiques of the USFG and framework will also work against the CP, but the aff would've read those things anyways. The T version only solves your T offense – reading it as a CP solves both that and some of the aff's external offense.

1nc CP/T Version

The United States federal government should:

- Audit all federal law enforcement and intelligence gathering training and educational materials
- Implement a mandatory retraining program for all federal, state and local law enforcement officials
- Pursue disciplinary action against those agents and officials engaging in discriminatory conduct and responsible for these training materials
- Require federal agencies that provide law enforcement funding to state and local governments to condition such funding on carrying out the above.

We should get the option to read additional solvency evidence in the block to respond to the 2ac's position on the USFG – we should also get conditionality and new block arguments because we couldn't plan central parts of our neg strat without hearing the 2ac to topicality

2nc CP/T Version

The CP is a topical version that solves the aff and disproves their Ks of framework – it's student dissent so it solves their offense but it utilizes the USFG, which their Ks of framework prove they can't access or permute – if you allow them to read Ks of framework there needs to be a reciprocal move to allow negative CPs

Your 1AC solvency author agrees

Kundnani, 14—professor at New York University (Arun, 3/28/14, "No NSA reform can fix the American Islamophobic surveillance complex", The Guardian, www.theguardian.com/commentisfree/2014/mar/28/nsa-reform-american-islamophobic-surveillance-complex)//twemchen

Snowden has rightly drawn our attention to the power of what intelligence agencies call "signals intelligence" – the surveillance of our digital communications – but equally important is "human intelligence", the result of informants and undercover agents operating within communities. Underpinning all the surveillance of Muslim Americans is an assumption that Islamic ideology is linked to terrorism. Yet, over the last 20 years, far more people have been killed in acts of violence by right-wing extremists than by Muslim American citizens or permanent residents. The huge numbers being spied upon are not would-be terrorists but law-abiding people, some of whom have "radical" political opinions that still ought to be protected by the First Amendment to the constitution. Just the same, there are plenty of other minority Americans who are not would-be "home-grown" terrorists – but they still live in fear that they might be mistaken as one. So let's reform the NSA and its countless collections. But let's not forget the FBI's reported 10,000 intelligence analysts working on counter-terrorism and the 15,000 paid informants helping them do it. Let's not forget the New York Police Department's intelligence and counter-terrorism division with its 1,000 officers, \$100m budget and vast program of surveillance. Let's not forget the especially subtle psychological terror of being Muslim in America, where, sure, maybe your phone calls won't be stored for much longer, but there's a multitude of other ways you're always being watched.

The topical version is *more effective* – making specific demands on government is the only way to reverse institutional discrimination and Islamophobic *government* practices

Judicial Watch, 14—“Muslim Activists Demand Overhaul of All U.S. Law Enforcement Training,” <http://www.judicialwatch.org/blog/2014/08/muslim-activists-demand-overhaul-u-s-law-enforcement-training/> --BR

Islamic activists that strong-armed the FBI to purge anti-terrorism training material considered “offensive” to Muslims have made their next wave of demands, which include an overhaul in the way all law enforcement officers are trained in the United States. The coalition of influential and politically-connected Muslim rights groups is demanding that the Obama administration implement a mandatory retraining program for all federal, state and local law enforcement officials who may have been subjected to materials they deem “biased and discriminatory” against Muslims. There must also be an audit of all federal law enforcement and intelligence gathering training and educational materials to identify and remove information that could exhibit bias against any race, ethnicity, religion or national origin, the groups demand. Additionally, the administration must pursue disciplinary action against agents and officials who engage in discriminatory conduct as well as those responsible for the anti-Muslim training materials. Finally, the coalition insists that all federal funding to local and state law enforcement agencies be withheld unless they ban all training materials considered to be biased against race, ethnicity, religion or national origin. In short, these empowered Muslim activists want to dictate how our nation’s law enforcement agencies operate at every level. The outrageous demands were made this month in a letter to Lisa O. Monaco, the Assistant to the President for Homeland Security and Counterterrorism. Among the signatories is the terrorist front organization Council on American-Islamic Relations (CAIR), which has repeatedly proven that it wields tremendous power in the Obama administration. Founded in 1994 by three Middle Eastern extremists, CAIR got the FBI to purge anti-terrorism material determined to be offensive to Muslims. Judicial Watch uncovered that scandal last summer and obtained hundreds of pages of FBI documents with details of the arrangement. JW also published a special in-depth report on the subject in December. CAIR also got several police departments in President Obama’s home state of Illinois to cancel essential counterterrorism courses over accusations that the instructor was anti-Muslim. The course was called “Islamic Awareness as a Counter-Terrorist Strategy” and departments in Lombard, Elmhurst and Highland Park caved into CAIR’s demands. The group responded with a statement commending officials for their “swift action in addressing the Muslim community’s concerns.” CAIR has wielded its power in a number of other cases during the Obama presidency, including blocking an FBI probe involving the radicalization of young Somali men in the U.S. and pressuring the government to file discrimination lawsuits against employers who don’t accommodate Muslims in the workplace. Other signatories include the powerful open borders group Mexican American Legal Defense and Educational Fund (MALDEF), Muslim Advocates, the Sikh Coalition, Women in Islam Inc., the National Association for the Advancement of Colored People (NAACP) and the American Civil Liberties Union (ACLU), to name a few. The group’s claim that recent administration directives to promote multicultural and diversity sensitivity training in law enforcement aren’t enough because they don’t specifically address anti-Muslim materials. “Without executive branch actions, including those we recommend below, trainings that perpetuate gross stereotypes and false information about Islam and

Muslims will continue to proliferate at the state and local level,” the letter says. It continues: “The use of anti-Muslim trainers and materials is not only highly offensive, disparaging the faith of millions of Americans, but leads to biased policing that targets individuals and communities based on religion, not evidence of wrongdoing.” **This will foster fear and suspicion of Muslims** and will lead to an increase in discrimination, bullying, harassment **and anti-Muslim violence**, the letter asserts.

2nr CP/T Version

The topical version solves – only making demands on the government can reverse the institutionalized discriminatory surveillance practices the 1ac criticizes – even if the plan challenges the USFG, it won’t halt the distribution of islamophobic scholarship and material that guides the decisions that federal agents make.

We can rein in the NSA and the FBI – first is the mechanism – the CP audits all islamophobic training and educational materials and implements mandatory re-training. It also fires and arrests the people who created it and withholds all federal funding until local and state law enforcement agencies comply

Second is the process – our evidence cites several empirical examples of Muslim-American groups creating material political change and our CP represents the consensus of Muslim scholarship and activism

A2 Assimilation Bad

State integration of Muslim groups is effective- empirics from around the world prove **Rascoff 12** (Samuel J. Rascoff. Professor of Law at NYU. “Establishing Official Islam? The Law and Strategy of Counter-Radicalization.” 2012. <http://www.stanfordlawreview.org/print/article/establishing-official-islam>)/EMerz

In large measure, the politics of Islam on the Continent have been the politics of immigration and postcolonial displacement. Continental Europe’s engagement with Islam, therefore, has largely focused for over a generation on issues of identity politics and social integration.¹⁰⁴ Whether the topic has been the regulation of Islamic dress in France or Islamic architecture in Switzerland, government’s role has largely been to establish the contours of a religious identity reconcilable with thick conceptions of membership in national and European communities. More specifically, France and Germany have sought to “domesticate” Islam such that it can serve as an antidote to two powerful undercurrents: the pull of the transnational Ummah on the one hand and consulate-based “Em-assy Islam” on the other. **108 To achieve these goals, the state has “institutionaliz[ed] representative Islamic bodies . . . empower[ed] designated Muslim inter-locutors, and . . . facilitat[ed] the construction and maintenance of Islamic spaces.”**¹⁰⁹ For example, in 2002, France’s then-Interior Minister Nicolas Sarkozy established the French

Council for the Muslim Religion to create an official institutional voice for French Muslims, and simultaneously to diminish the extent of foreign involvement in the internal politics of French Islam.¹¹⁰ In Germany, officials appointed a moderate Muslim academic to train instructors of Islam within the public schools, which has raised criticisms from certain German Muslim organizations.

A2 But Surveillance Tho

Surveillance proves *why* political mobilization and participation is important – tons of Muslim and Arab communities prove this is the best method

O'Connor and Jahan 14 (Alexander J. O'Connor and Farhana Jahan. "Under Surveillance and Overwrought: American Muslims' Emotional and Behavioral Responses to Government Surveillance." 2014. Vol. 8 Issue 1.

<http://quod.lib.umich.edu/j/jmmh/10381607.0008.106?view=text;rgn=main>
//EMerz

It is important to note that while reports of anger were unrelated to reports of experience with surveillance, reports of anger were quite high.^[1] While not the focus of this research, **anger likely triggers unique behavioral consequences. For instance, work by political scientists suggests that the prospect of government surveillance leads to political mobilization and participation, particularly within the American Muslim and Arab communities** (Ayers & Hofstetter, 2008; Cho, Gimpel, & Wo, 2006). Best and Krueger (2011), who examined anger and anxiety in response to the presence and acknowledgement of government surveillance in a broad sample of Americans, found that anger, not anxiety, predicted political participation. Thus, anger, its regulation, and its behavioral correlates likely play a unique role in experiences with discrimination. But the persistent uncertainty associated with experiences of government surveillance may have an unique effect on anxiety, not anger.

A2 Discourse First

Political Leaders should use their power to fight Islamophobia- only in this way can we reshape our discourse

Gadzo 15. (Mersiha Gadzo. "For Islamophobia to stop, it needs to start from the top." February 27, 2015. <http://www.middleeasteye.net/columns/islamophobia-stop-it-needs-start-top-875950253#sthash.OGANFut8.dpuf>)//EMerz

To fight jihadism, Islamophobia needs to be curbed. **World leaders such as Barack Obama, Francois Hollande and Angela Merkel know this. They have all spoken publicly of the importance of unity and equality, denouncing the scapegoating of Muslims.** After the attacks on Charlie Hebdo, Merkel told the Bundestag that Germany's Muslims are a vital part of society. "There must be no ostracism of Muslims, no sweeping suspicions. As chancellor, I will come to the defence of Muslims in this country against that," she said. But here in Canada, Harper remained silent when mosques were vandalised across

Canada in a spike of anti-Muslim hate crimes after the death of the two Canadian soldiers. An imam in Toronto recently called for Ottawa to stop linking Islam and terrorism, referring to Harper's speech where he suggested mosques could serve as spaces for radicalisation. In the same speech he used the word "jihad" 15 times. These actions divide society, creates a "us" vs "them" ideology, a rhetoric shared by George Bush, Harper and the Islamic State. Politicians and the media have the power to influence public opinion; they should choose their words carefully. For Islamophobia to stop, it needs to start from the top. Harper has cried wolf in many cases in the past along with Israeli Prime Minister Benjamin Netanyahu. For years they alarmed the public about how Iran is the biggest threat to world peace and that it's developing nuclear weapons to destroy Israel. But the truth always surfaces in the end, and this week leaked cables show that Israel's secret service Mossad knew that Iran wasn't making a nuclear weapon. Harper and Netanyahu have been raising false alarms based on zero evidence.

A2 Don't Need Blueprints

Critical terror studies isolate elites in their movement while failing to put forth legitimate solutions

Hussain 13 (Salman Adil Hussain. "Cover Story: Review of Deepa Kumar's Islamophobia and the Politics of Empire." July 14,, 2013. <http://www.dawn.com/news/1024393>)
//EMerz

It is this imperial racism and the dehumanising Islamophobic rhetoric of the so-called 'war on terror' that Kumar brings into focus in this most valuable primer. "Drawing on my academic training as a cultural theorist," Kumar writes, "I situate the rhetoric of Islamophobia within the broader political, historical, legal, and social context from which it emerges to show that anti-Muslim racism has been primarily a tool of the elite in various societies." She demonstrates in elegant, accessible prose that Islamophobia is neither timeless nor expressed and acted upon in any uniform way. It is not an eternal, unchangeable Western hatred of Islam and Muslims, but is actively whipped up when it is politically expedient to do so. This point is crucial. To be able to see Islamophobia's making (and remaking) holds the key to its unmaking. In Kumar's telling, it is the age of modern European colonialism and its "systematic use of scholarly knowledge to serve the needs of empire" — what can be described as Orientalism — that Islamophobia acquires its full political potency from. The worldview produced by these Orientalist scholars was one, to quote Kumar, "in which the 'West' is seen as dynamic, complex, and ever-changing society which cannot be reduced to its key religion or any other single factor, while the 'Orient' or the 'world of Islam' is presented as unchanging, barbaric, misogynistic, uncivilised, and despotic." When by the middle of the 20th century, the US "took over the mantle of colonial overlord of the 'Muslim world,'" it too began to systematically study the Middle East as the European empires had done. This American scholarship reproduced the Orientalist dualism in the form of the "modernisation theory," a highly influential theory till the 1970s. Kumar notes that this theory categorised societies along the traditional-modern binary, roughly mapping on to the old East/West divide: "Traditional societies were agricultural and rural, slow to change, and politically authoritarian. Modern societies, on the other hand, were seen as industrial, quick to change, and politically democratic and egalitarian." The so-called

traditional societies could not change from within; they had to be changed from without by Western intervention. America's mission, conceived through such a dichotomous understanding of the world, is that of 'benevolent supremacy': "the notion that an American-dominated world would ensure liberty and democracy for all through the mechanisms of free-market capitalism." According to Kumar, such views are widely held. Even those that joined the massive anti-war liberal-left coalition against the Iraq invasion bought into the official line that the American occupation is necessary for democracy to bloom in Iraq. Kumar, an active member of the anti-war movement, writes that she "found almost unanimous agreement in the [antiwar] coalition that this was indeed the right thing to do." From academic justifications of imperialism, Kumar moves to an analysis of the American foreign policy thought, and finds that there is a consensus between the neoconservatives and "the realist/liberal camp" when it comes to "the right of the United States to assert its power around the world," and on American exceptionalism — the idea that America is unique among nations because of its liberal values. Kumar charts these two trajectories through time and notes that while "[a]fter Vietnam, Cold War liberals backed away from open confrontation and intervention," preferring, for instance in the Clinton era, coalition building and politically expedient, selective "humanitarian" interventionism, (if possible) with the endorsement of the United Nations, the neoconservatives remained committed to militarism. The difference, thus, is a matter of frankness about the use of violent means to the same imperial ends. The collapse of the Soviet Union, however, left America with no global foe against which the neocon militarist fantasies could be enacted. To address this void, even before 9/11, neocons like Daniel Pipes identified Islam as the new threat to the West just as communism had been during the Cold War. But the installation of the Islamic enemy as the supreme villain to the West had to wait till 9/11. Kumar notes that "capitalising on this opportunity [...] also meant orchestrating an elaborate public relations campaign designed to elicit public support and stifle criticism. Enter the War on Terror and the language of Islamophobia." Obama has hammered again and again that the US is not at war with Islam. It is not my purpose to argue that it is, but to point out how such statements serve to obfuscate the Islamophobia of American foreign and domestic policies. Liberal Islamophobia shuns the language of 'clash of civilisation' that one routinely came across in the immediate aftermath of 9/11. Instead, it prefers the nicer-sounding 'clash within' thesis that holds that there is a war going on "inside Islam" between moderate Muslims ('our friends') and the extremist ones ('our enemy'). Caught in the middle of a fight not of its own making, the United States, always both the innocent bystander and the reluctant, self-designated policeman of the world, needs to strengthen 'friend Muslims' through diplomacy, market initiatives, and of course, by visiting violence on the 'enemy Muslims'. Friend Muslims know that what's good for America is good for the world. Enemy Muslims, on the other hands, are united by a common ideology that fuels terrorism, which, in Obama's words, is "a belief by some extremists that Islam is in conflict with the United States and the West." Terrorism experts and various US state officials term this the 'Jihadi narrative': a stringing together of real or fictitious incidents of American aggression as evidence of America's/West's war on Islam. Ill-informed, irrational Muslims, so prone to conspiracy theories, get "brainwashed" and radicalised by this fabricated litany of anti-Muslim American violence, the theory goes. Radicalisation is conceived as a conveyor belt to suicide bombing and the person on this path, to quote from the aforementioned Obama speech, "is drifting towards violence." Even if he has not committed

any violence, it is deemed destined that he will — unless he is killed or captured. This counterterrorist narrative about the ‘Jihadi narrative’ distracts liberals from developing a vigorous critique of the ‘war on terror’ as they recover from their fleeting feelings of shame about the frequent “flying while Muslim” incidents with musings about how ‘those radical Muslims’ must love such stories about America falling short of its ideals. **Worse yet, this narrative becomes a way to silence any charges of Islamophobia and racism levelled at the United States’ global wars and Muslim critiques of American violence are dismissed with prejudice as ‘Osama-talk’.** This last charge was also hurled at me by a Pakistani liberal, who took anti-imperialist critiques of the US to be necessarily right-wing talking points stemming from knee-jerk “anti-Americanism.” Having thus completely abandoned anti-imperialism as a relevant, progressive cause, Pakistani liberals then self-righteously wonder why so many of Pakistan’s middle-class (sub)urban youth grow fond of jingoist, military-idolising talking heads like Zaid Hamid who posit a besieged Islam as a veritable damsel in distress and Pakistan military with its phallic armaments as the guardian of its honour. Much of the imperial rhetoric holds Islamism to be violent extremism — an Islamic problem, with, to quote the aforementioned Obama speech, “deep rooted problems like poverty and sectarian hatred” feeding it. In this narrative, these enabling factors have nothing to do with America, and are presumably inherent to Muslim society. In two stirring chapters, Kumar historicises the emergence of what is also referred to as political Islam. She reminds readers of the history of America’s arming and financing — as a bulwark against communism — what Obama referred to as “extremism, from North Africa to South Asia.” Kumar elucidates the “overarching conditions that enable Islamists to vie for hegemony” in the late 20th century, namely: the American role in the birth and propagation of violent global Jihad; the American-backed violence on secular nationalist political forces; the failure of the Left to step into the void created by the retreat of secular nationalist forces; neoliberalism’s relentless exacerbation of economic crises across the world that paved the way for the rise of right-wing religio-political movements across religions. Kumar argues that developing a robust understanding of political Islam requires that it not be considered a unified phenomenon. Instead, each Islamist movement must be placed in its local context. However, she also says that the role local conditions play is beyond the purview of her exploration. If that is the case, **Kumar’s claim to be looking at “the phenomenon of political Islam on its own terms” falls short, for however necessary the global conditions may be, they do not fully explain why this particular ideology (and not some other) came to be the political force that it is today. In other words, the question to ponder is: why did ordinary people partake in Islamism(s), and what about it/them captured their imagination and political energies? A similar issue lies in conceptualising Islamophobia as a tool of the political elites, mobilised in order to serve their interests. Again, this does not tell us much about what compels ordinary citizens to follow the lead of the political classes/elites. In other words, when it comes to Islamophobia, what brings the interests of both the elites and the masses in consonance? Drawing a sharp dichotomy between the interests of the elites and those of the common people has the unfortunate effect of taking away the latter’s agency, rendering them into mindless cattle which can be herded into lynch mobs. It is a politically and intellectually debilitating position to take.** On the one hand, Kumar believes that “it is from the ranks of ordinary people that activists emerge to challenge racism in all its forms. It is here that the hope for fighting and ending Islamophobia lies.” But when it comes to explaining why

ordinary people espouse Islamophobic ideas, she states that this is because “those who rule a society tend to set the terms of discussion,” even though “ordinary people can and do resist dominant ideas.” History teaches us that the elite are not always successful in securing consent, despite the mighty ideological apparatus. But the question still remains: how do (some) elite ideas, in this case imperial Islamophobia, become dominant at a given moment in time? Knowing how ‘the masses’ are also pivotal to the maintenance of violent ideologies and systems can help one see the mundane, everyday workings of power, and ordinary people’s complicity in the very systems of dominance that oppress them. That may constitute a valuable lesson for us ordinary people in how to resist, or at least how not to enlist in, predatory social systems

A2 Ethics First

Challenging the state is necessary to restore our responsibility to the other

Campbell 99 (David Campbell, professor of international politics at the University of Newcastle, 1999, *Moral Spaces*, p. 40-41.)//EMerz

Even though Levinas's limited reservations about the state are here restricted to the nature of (domestic) political order, the idea that "the state may have to be challenged in the name of our ethical responsibility to the other" at least allows for the possibility of extending political action in terms of the ethical relation beyond the bounds suggested by Levinas's previous reflections on the third party and the state. There is no doubt, however, that to fulfill the promise of Levinas's ethics with respect to international politics, this possibility for challenge has to be carried a good deal further. Moreover, I would argue, this possibility for challenge has to be pursued in order to maintain fidelity with Levinas's conviction that neither politics nor warfare can obliterate the relationship of the self to the other as a relation of responsibility. Indeed, this endeavor might be thought of in terms of making Levinas's thought more "Levinasian," for pursuing this possibility of challenge flows from the recognition that “injustice—not to mention racism, nationalism, and imperialism—begins when one loses sight of the transcendence of the Other and forgets that the State, with its institutions, is informed by the proximity of my relation to the other.

A2 Law Bad

The U.S. government uniquely has the capacity to fight Islamophobia- the legal system is ridden with anti-Muslim laws that only the state can fix

CAIR 13 (Council on American-Islam Relations. “Legislating Fear.” August 20, 2013. Page 133-136. <http://www.cair.com/images/islamophobia/Legislating-Fear.pdf>)//EMerz

Groups in the inner core should ostracized from mainstream public discourse in a manner similar to white supremacist, anti-Semitic or other groups, such as the Westboro Baptist church. Free speech is essential in an open society. People of conscience must be willing to defend speech that repulses their humanity. However, we at CAIR believe that bigoted speech should be relegated to where it belongs- the fringes of society and out of serious policy discussion. Inner core groups should not be offered legitimizing platforms by media

outlets or political groups. Challenge the culture of politically exploiting hate against Muslims, reject anti-Muslim laws Legislators must reject the introduction of anti-Muslim, anti-Sharia, and anti-foreign law legislation that seeks to marginalize American Muslims and keep them from having the same rights and access to the courts as Americans of other faiths. Rep. Peter King's five anti-Muslim hearings generated no appreciable response from Republican leadership. The response to Rep. Michele Bachmann's allegations of Muslim Brotherhood infiltration was encouraging. It was both bi-partisan and strong. When contenders for our nation's highest office call for loyalty oaths or smear an entire religious minority as a threat then they should face significant opposition. Protect the sanctity of places of worship America as a place that protects religious minorities is an ideal ingrained in our national character since the Pilgrims arrival. When a place of worship is damaged or vandalized the entire community, religious leaders of all faiths, elected officials and private citizens should rally to reject bias. Similarly, when routine zoning or land use issues are transformed into forums of hate speech or legal challenges as to the very nature of religion then strong voices for pluralism need to be present. CAIR's recently released "Best Practices for Mosque and Community Safety" brochure is an ideal starting place for facility leaders interested in improving the facility of their site. Contact info@cair.com using the subject line "mosque safety" for more information. Support of the End Racial Profiling Act and reform of DOJ racial profiling guidelines CAIR requests that Congress enact the End Racial Profiling Act and revise the U.S. Department of Justice (DOJ) Civil Rights Division's Guidance Regarding the Use of Race by Federal Law Enforcement Agencies. The U.S. Constitution requires that federal and state law enforcement agencies respect the rights and freedoms of "all persons," regardless of race, religion, ethnicity, or national origin. American citizens respect their law enforcement agencies and look to them to enshrine the rights that the Constitution affords in their institutions, policies and practices. Should our nation's law enforcement agencies overlook or disregard the Constitution by engaging in acts of discriminatory profiling, our citizens would be sent a message that engaging in profiling based on race, nationality, religion, etc., is acceptable and worth emulating. CAIR also believes that **racial and religious profiling is not effective law enforcement and narrowly focuses the nation's law enforcement resources away from following actual leads and preventing illegal and violent acts.** Profiling violates the basic constitutional protections of the First, Fourth and Fourteenth Amendments. Profiling also hinders counterterrorism efforts against antigovernment extremists. For example, Timothy McVeigh (Oklahoma City Bombing, 1995), James Von Brunn (Holocaust Museum Shooting, Washington, D.C. 2009) John Bedell (Pentagon Shooting, Washington, D.C. 2010), Joseph Stack (IRS Building Suicide Bombing, Austin, TX 2010) and Floyd Corking (Family Research Council Shooting, Washington D.C. 2012) would not have been identified by racial or religious profiling. Drop or modify the term Islamist Many Muslims who wish to serve the public good are influenced by the principles of their faith. Islam teaches Muslims to work for the welfare of humanity and to be honest and just. If this inspiration came from the Bible, such a person might well be called a Good Samaritan. But when the source is the Quran, the person is an "Islamist." Unfortunately, the term "Islamist" has become shorthand for "Muslims we don't like." It is currently used in an almost exclusively pejorative context and is often coupled with the term "extremist," giving it an even more negative slant. There are few, if any, positive references to "Islamist" in news articles. background to make him or her a subject matter expert. Congress and other Federal entities that oversee training grants

should ensure that federal grants to state law enforcement counterterrorism training programs do not go to anti-Muslim trainings or trainers. As noted by the author's of How We Train Our Cops to fear Islam, "State accreditation should be made mandatory for counterterrorism training courses—it often isn't—and the accreditation process itself must also be toughened." There should be subject-matter experts who evaluate courses, and they should sit in on classroom sessions anonymously. If such a system of state-based oversight worked properly, then bad trainers would have their state accreditation revoked, and they would no longer be allowed to teach in the state. If states agreed to share lists of bad trainers, then the trainer would effectively be banned nationwide. There are also no -- nor should there be -- references to "Christianists," "Judaists" or "Hinduists" for those who would similarly seek governments "in accord with the laws" of their respective faiths. No journalist would think of referring to the "Judaist government of Israel," the "Christianist leader Rick Santorum" or "Hinduist Indian politician Narendra Modi," while use of "Islamist" has become ubiquitous. It might be an interesting exercise to hold a contest, the winner of which would be the first to find a positive mainstream media reference to "Islamist." The frequent linkage of the term "Islamist" to violence and denial of religious and human rights is also strongly promoted by Islamophobic groups and individuals who seek to launch rhetorical attacks on Islam and Muslims, without the public censure that would normally accompany such bigoted attacks on any other faith. Islam-bashers routinely use the term to disingenuously claim they only hate "political" Islam, not the faith itself. Yet they fail to explain how a practicing Muslim can be active in the political arena without attracting the label "Islamist." By not dropping or modifying use of the term, the media are making a political and religious value judgment each time it is used. Remove anti-Muslim, discriminatory trainers and materials in U.S. military and law enforcement at all levels Where it has not already happened, Federal, state and local law enforcement agencies should review their counter terrorism materials and remove information that is biased or inaccurate. All should adhere to the Department of Homeland Security's Federal interagency guidelines on CVE curriculum standards, Countering Violent Extremism (CVE) Training: Guidance and Best Practices. Any trainer should have either the educational or operational background to make him or her a subject matter expert. **Congress and other Federal entities that oversee training grants should ensure that federal grants to state law enforcement counterterrorism training programs do not go to anti-Muslim trainings or trainers.** As noted by the author's of How We Train Our Cops to fear Islam, "State accreditation should be made mandatory for counterterrorism training courses—it often isn't—and the accreditation process itself must also be toughened. There should be subject-matter experts who evaluate courses, and they should sit in on classroom sessions anonymously. If such a system of state-based oversight worked properly, then bad trainers would have their state accreditation revoked, and they would no longer be allowed to teach in the state. If states agreed to share lists of bad trainers, then the trainer would effectively be banned nationwide.

The legal framework to repeal Islamophobic laws already exists- it's just a matter of striking down those laws

CAIR 13 (Council on American-Islam Relations. "Legislating Fear." August 20, 2013. Page 61-62. <http://www.cair.com/images/islamophobia/Legislating-Fear.pdf>)//EMerz

No national Muslim organization is calling for the implementation of foreign law in the United States. Many support the idea that individuals can make faith-based agreements that are in accordance with U.S. law which can subsequently be enforced by U.S. courts. A primary example of this is the Islamic mortgage industry. Corporations offer loans that are compliant with both Islamic rules against lending money with interest and with American law. These contracts can, if necessary, be enforced in a U.S. court of law. In 2011, the American Bar Association (ABA) passed a resolution opposing ALAC-type legislation noting that it is “duplicative of safeguards that are already enshrined in federal and state law,” and saying, “Initiatives that target an entire religion or stigmatize an entire religious community, such as those explicitly aimed at ‘Sharia law,’ are inconsistent with some of the core principles and ideals of American jurisprudence.” The ABA also stated the following: “Language in these Bills and Amendments dealing with ‘international law’ or ‘foreign and customary law’ is likely to have an unanticipated and widespread negative impact on business, adversely affecting commercial dealings and economic development in the states in which such a law is passed and in U.S. foreign commerce generally.” “Many of the Bills and Amendments would infringe federal constitutional rights, including the free exercise of religion and the freedom of contract, or would conflict with the Supremacy Clause and other clauses of the Constitution.” Regarding the notion of Islamic rules supplanting American law, the American Civil Liberties Union reached the following conclusion in a report released in May 2011: A new report by the ACLU, Nothing to Fear: Debunking the Mythical "Sharia Threat" to Our Judicial System, examines, in detail, the cases repeatedly cited by anti-Muslim groups as evidence of the alleged "Sharia threat" to our judicial system. The report concludes that these cases do not stand for the principles that anti-Muslim groups claim. Rather, these court cases deal with routine matters, such as religious freedom claims and contractual disputes. Courts treat these lawsuits in the same way that they deal with similar claims brought by people of other faiths. So instead of the harbingers of doom that anti-Muslim groups make them out to be, these cases illustrate that our judicial system is alive and well, and operating as it should. The Anti-Defamation League wrote of the 2012 anti-Islam bill in Florida that there “simply is no documentation of unconstitutional application of foreign law in our judicial system. Florida courts are already prohibited from applying or considering religious law in any way that would constitute government entanglement with religion due to the separation of church and state embodied in the Florida and federal constitutions.” 129 The Florida Bar’s Family Law Section made a similar argument.¹³⁰ As will be shown momentarily, the legislators who introduced anti-Islam bills also failed to produce evidence of an actual problem they felt would be addressed by such a law.

A2 No Political Agency

Muslims do have political agency and saying they don't overlooks a litany of examples of Muslim involvement in US civic life

Senzai 12 (Farid Senzai. “Engaging American Muslims: Political Trends and Attitudes.” 4/3/12. http://www.ispu.org/pdfs/ISPU_Report_Political_Participation.pdf Page 72).//EMerz

Recommendations: 1. Provide Resources to Further Mobilize the Community: The empirical evidence suggests that American Muslims are increasingly active and civically engaged

citizens. Although their level of political incorporation and mobilization has increased over the past decade, the community as a whole is still not as engaged as it could be. For example, some levels of involvement trail behind those of the general public, including the percentage that is active members of a political party or that contributes to political campaigns. Community organizers need to provide the information and resources needed to help motivate and mobilize the community further. 2. Tap into Active Segments of Community: Nationally, African American Muslims were found to be most active in almost all categories of political participation, compared to immigrant Muslims. In addition, state level data in Michigan showed high political engagement by women and young people. Community organizers and political strategists should tap into these highly active subgroups to lead their communities. 3. Engage with Mosque Communities: Evidence suggests that higher levels of religiosity and mosque attendance lead to higher levels of political participation. This can be seen in mosque participants' higher voting levels, increased awareness of the issues, writing to their representatives, engaging peacefully in political protest, and other indicators of political activity. Candidates, political leaders, and community organizers looking to reach out Muslim voters should reach out to the mosque leadership and active members. 4. Speak to the Issues that Concern American Muslims: The American Muslim community can be cultivated for either a Republican or a Democratic candidate, particularly in such swing states as Michigan, Ohio, Pennsylvania and Florida. This report highlights evidence that candidates can build better relations with the community by demonstrating awareness of those issues of most concern to community members.

A2 No Solve Local

The T version still solves state and local surveillance – it's driven by the FBI and federal standards

O'Connor and Jahan 14 (Alexander J. O'Connor and Farhana Jahan. "Under Surveillance and Overwrought: American Muslims' Emotional and Behavioral Responses to Government Surveillance." 2014. Vol. 8 Issue 1.

[//EMerz](http://quod.lib.umich.edu/j/jmmh/10381607.0008.106?view=text;rgn=main)

In early 2012, it was uncovered that the New York Police Department established an extensive program of surveillance and infiltration of Muslim student organizations in universities across the northeast (Ebadolahi, 2012). That this surveillance occurred both within and outside of New York City—in Connecticut and Pennsylvania, for instance—was early evidence of the extent and support of covert surveillance of American Muslims by United States law enforcement and intelligence agencies. Similar instances of widespread surveillance conducted by the Federal Bureau of Investigation (FBI) were later uncovered in other areas of the country (ACLU, 2012). Such reports of governmental surveillance, profiling, and monitoring—all which we consider in the present study—increased after September 11th, 2001 (Ibish, 2003). The USA PATRIOT Act (2001), signed in the months after 9/11, by reducing restrictions in law enforcement agencies' ability to conduct surveillance on anyone suspected of involvement in terrorism, provided the legal legitimacy for much of the subsequent surveillance (Council on American-Islamic Relations, 2004; Ibish, 2003). Revelations about the National Security Agency's surveillance program suggest that these methods have since expanded (Greenwald & MacAskill, 2013). Such surveillance, however, has targeted many people, Muslims in particular, with no connection to terrorism (Ibish, 2003). Alongside other forms of post-9/11

discrimination experienced by American Muslims, government surveillance is associated with psychological distress—including depression and subclinical forms of paranoia (Ahmed, Kia-Keating, & Tsai, 2011; Amer & Hovey, 2012; Rippy & Newman, 2006). Little is known, however, about (1) American Muslims' emotional reaction to being monitored by the government and (2) how they respond to, manage, and regulate these emotions alongside the prospect of continuing or future surveillance. The present work examined these two phenomena.

A2 Political Agency Fails

Political engagement with Muslim communities is the most effective at protecting the identity group and promoting security domestically

Rascoff 12 (Samuel J. Rascoff. Professor of Law at NYU. "Establishing Official Islam? The Law and Strategy of Counter-Radicalization." 2012. [//EMerz](http://www.stanfordlawreview.org/print/article/establishing-official-islam)

Domestic counter-radicalization efforts have increasingly been predicated on the idea that engagement—outreach to certain Muslim communities in order to make Official Islam a social reality—can play a crucial role in promoting domestic security. Deputy National Security Advisor Denis McDonough recently affirmed the Obama Administration's commitment to engagement with local Muslim communities: [E]quipped with this information, we've expanded our engagement with local communities that are being targeted by terrorist recruiters. The departments of Homeland Security and Justice have created new advisory groups, instituted regular outreach sessions, and held dozens of roundtables across the country. It's all been with the goal of listening to your communities, sharing information on how al Qaeda attempts to recruit and radicalize, and answering the question so many communities have asked us—what can we do to protect our young people?¹³¹The precise nature of outreach programs of this sort varies within agencies and from one agency to the next. The FBI, the Department of Homeland Security, the National Counterterrorism Center, the Department of Justice, and numerous state and local agencies have each engaged with members of the Muslim community inside the United States for the purpose of counter-radicalization. For example, the officials from the Department of Homeland Security and the National Counterterrorism Center recently participated in a community awareness briefing for Muslim leaders in Hartford, Connecticut, devoted to "Understanding Radicalization and De-Radicalization Strategies."¹³² Among the panel discussions was a session devoted to "Seeking a Counter-Reformation in Islam."¹³³ The U.S. Attorney in Oregon created his own "network of Muslim community leaders" motivated by the desire to "educate Muslim partners and give them resources and support so they can counter radicalization on their own."¹³⁴ And Ohio's counter-radicalization efforts have included the creation of an imam council.¹³⁵

A2 Privacy Laws Bad

Legal change can combat profiling – lack of privacy protections is the primary roadblock at government level

Mitsilegas 13. (Valsamis Mitsilegas, "The Value of Privacy in an Era of Security: Embedding Constitutional Limits on Preemptive Surveillance" Queen Mary University of London, International Political Sociology [PDI])

The intervention by the judiciary in the security--privacy constitutional struggle serves to highlight the importance of privacy as a legal principle capable of effectively addressing the reconfiguration of the relationship

between the individual and the state caused by preemptive surveillance. Privacy can be effective in this context in five key ways: in focusing on the impact of surveillance on the individual as a whole, rather than focusing on the protection of specific categories of personal data; in emphasizing the need to protect private life and personal data as fundamental rights, rather than attempting to provide a mere regulatory framework for the use and processing of personal data; in challenging the justification and practices of the collection of personal data by the state and the private sector per se, rather than merely setting limits on the processing, use and transfer of such data ex post, after it has been collected; in addressing the challenges of profiling individuals resulting from the maximization of the collection, and access to, personal data and the interlinking of databases; and last, but not least, in focusing on the reconfiguration of the relationship of trust between the citizen and the state which a permanent and generalized surveillance regime entails. Privacy can thus provide protection not only as a fundamental right in itself, but also by underpinning the exercise of other fundamental rights and, as such, act as a democratic and rule of law safeguard.

A2 Social Before Law

Laws increasing the power of Homeland Security to conduct surveillance on Muslims are at the core of Islamophobic attitudes nationwide

CAIR 13 (Council on American-Islam Relations. "Legislating Fear." August 20, 2013. Page 72-73. <http://www.cair.com/images/islamophobia/Legislating-Fear.pdf>)//EMerz

Two Department of Homeland Security Reauthorization Acts contained language that singled out American Muslims for additional scrutiny over the threat of violent extremism in the United States. Co-sponsored by Sen. Joseph Lieberman (I-Conn.) and Rep. Peter King (R-N.Y.), both bills (S.1546 and H.R.3116) sought to create a new coordinator position within the Department of Homeland Security (DHS) to direct efforts on "counter[ing] homegrown violent Islamist extremism" with particular focus on the "ideology of Al Qaeda and its affiliated groups" in the United States. In a letter to Senator Lieberman, DHS Secretary Janet Napolitano reaffirmed that, "DHS has made it a priority to counter all forms of domestic violent extremism, regardless of ideology," and that DHS has already established, "the Counterterrorism Advisory Board [led by a counterterrorism coordinator] to better coordinate the Department's ... efforts to prevent and protect against foreign and homegrown terrorist attacks." Section 213 of the Department of Homeland Security Reauthorization Act 2011 (S. 1546) stated, "The Secretary [of Homeland Security] shall designate an official of the Department [of Homeland Security] to coordinate efforts to counter violent extremism in the United States, particularly the ideology that gives rise to Islamist terrorism...." A DHS position focused on "Islamist extremism" plays well in the current political fear-of-Islam environment. However, **enacting such a position would send a clear message that the U.S. government views American Muslims collectively as a threat.** Such a position would be short sighted, as terrorism in America can arise from a number of ideologies. It also leaves wide open a door for the United States government to become involved in determining the "correct" or "acceptable" form of Islam.

A2 Structural Oppression

The USFG has passed hundreds of anti-Islam legislation that only it can revise- revision will minimize legal racism against Muslims

CAIR 13 (Council on American-Islam Relations. "Legislating Fear." August 20, 2013. Page 59-60. <http://www.cair.com/images/islamophobia/Legisating-Fear.pdf>)//EMerz

In 2011 and 2012, an apparent lack of confidence in the U.S. Constitution's strength led to a number of bills, and in some cases laws, which have at their heart the goal of subjecting Islam to government-sanctioned censure. The Congressional Research Service, a nonpartisan component of the Library of Congress that does research for members of Congress, determined that, "Any bill that would specifically ban sharia may be challenged as a disapproval of Islam in violation of the Establishment Clause or as an infringement on the ability of Muslims to freely exercise their beliefs under the Free Exercise Clause." 126 Similarly, Think Progress reported, "As the Supreme Court explained in Church of Lukumi Babalu Aye v. Hialeah, 'the protections of the Free Exercise Clause pertain if the law at issue discriminates against some or all religious beliefs or regulates or prohibits conduct because it is undertaken for religious reasons.'" 127 These legal protections are part of what makes America vibrant. **Opposing Islamophobic efforts to undermine them ensures that American democracy continues to work for everyone.** American Laws for American Courts and Its Derivatives In 2011 and 2012, 78 bills or amendments designed to vilify Islamic religious practices were introduced in the legislatures of 29 states and the U.S. Congress. Sixty-two of these bills contained language that was extracted from Islamophobe David Yerushalmi's American Laws for American Courts (ALAC) model legislation.v Party of bills' original sponsor(s): 73 bills were introduced by Republicans, 1 bill was introduced by a Democrat (Alabama), 3 were bi-partisan (Kansas, South Carolina, South Dakota), 1 was introduced by Republicans along with an Independent who caucuses with the Republicans (South Dakota) Number of bills that used language of Islamophobe David Yerushalmi, 62 were based on David Yerushalmi's American Law for American Courts, 16 were not Fate of Bills Bills were signed into law in Arizona, Kansas, South Dakota and Tennessee in 2011 and 2012. These joined previously passed bills in Oklahoma and Louisiana bringing the total to six states with an anti-Islam law on the books. What Is Sharia? Sharia literally means "path." It is a set of interpretations of the Quran and other Islamic sources; it is dynamic and intended to accommodate the time, place and laws—in America that means the U.S. Constitution—of a particular community.vi Sharia is interpreted differently based on its surroundings. Sharia mandates Muslims to respect the law of the land in which they live. Is Sharia Taking Over? According to the Public Religion Research Institute, as of September 2012, 61 percent of Americans reject the notion that American Muslims are seeking to establish Sharia as the law of the land. The number of Americans who feel that Muslims are working to subvert the Constitution rose from 23 percent in February 2012 to 30 percent in September 2012. 128 No religious code can replace American law. Article VI, Clause 2 of the U.S. Constitution clearly states, "This Constitution...shall be the supreme law of the land; and the judges in every state shall be bound thereby. ..." Additionally, the First Amendment prohibits Congress from making any law "respecting an establishment of religion. ..." vi See "Sharia and Diversity: Why Americans are Missing the Point" by Institute for Social Policy Understanding fellow Asifa Quraishi-Landes for a brief but excellent introduction to Sharia,

America has an already established tradition of allowing people of faith to make agreements and resolve disputes within the parameters of their religion, as long as any resulting contract complies with U.S. law. Catholic Canon law and Jewish Halacha are the most frequently cited examples in the context of the debate surrounding Islamic practices.

A2 T Version Doesn't S**

A perm can only benefit the neg – they can't win DAs to the USFG but we can win DAs to excluding it—a combination of the top-down and bottom-up approach is the most effective way to combating Islamophobia

Tutt, 13—Ph.D. in philosophy and Documentary Film Producer, fellow at the Institute of Social Policy (Daniel, "How Should We Combat Islamophobia?," Huffington Post, www.huffingtonpost.com/daniel-tutt/how-should-we-combat-islamophobia_b_3149768.html)/twemchen

While the dust has yet to settle on the horrific Boston bombings by the Tsarnaev brothers, Muslims have already felt the impact of their association with Islam. We have witnessed a rise in Islamophobic discourse in the popular media and blogosphere. As an activist who focuses on studying and combatting Islamophobia, I have wondered how we might effectively re-frame the narrative to prevent more Islamophobia. But at the same time, I have also realized that in our rush to write op-ed's and respond via the media, we should take a step back to consider the literature on Islamophobia and what it might teach us at this moment. After reading a diverse set of books and studies by different writers, including anthropologists, political scientists, sociologists and even activists who specifically address Islamophobia, I have identified two distinctive and quite different approaches to understanding how Islamophobia can be reduced in society. In one model, what I call the integrationist model, Islamophobia is understood as a "general fear of the other" that requires a relationship to repair. The other model, what I call the critical approach, Islamophobia is understood as a systemic problem, generated by cultural, governmental and civil discourses, and not as a subjective phenomena in need of a "cure." Both of these models not only present a different view on how to effectively treat or combat Islamophobia, each model also presents different theories of social change. While there are overlapping points of analysis regarding the causes of Islamophobia in both models, there are significant differences. These differences must not be overlooked because they inform the way in which programs and grassroots responses to Islamophobia occur. In the wake of the Boston bombing, these models can help us to think more carefully about whether the way in which we are combatting Islamophobia is contributing to the sorts of changes we want to see in the world, or whether they are re-enforcing some of the prejudices we are seeking to ameliorate. The first model, what I call the "critical" approach is articulated by writers such as Deepa Kumar in "Islamophobia and the Politics of Empire," Stephen Sheehi in "Islamophobia: The Ideological Campaign Against Muslims" and in Saba Mahmoud's work, in "Secularism, Hermeneutics, and Empire: The Politics of Islamic Reformation." In this model, Islamophobia is not understood as a fear cultural of otherness, but as a political campaign that is tied to American power and discursive processes that subject Muslims to the power of the state and other interests. In this model, Islamophobia is understood as a symptom of American power and imperial interests, particularly the wars in Afghanistan and Iraq since 9/11, and the bloated security state that followed from 9/11. Stephen Sheehi sees the origin of Islamophobia in the rise of neoconservative think tanks following the cold war, specifically propagated by public intellectuals such as Bernard Lewis and the media commentators, such as Fareed Zakaria, who espouse his views.

Islamophobia is not about Islam as an identity, rather it is a construct that cuts across party lines and is propagated by the global elite to maintain the agenda of global capitalism. In Sheehi's framework, Islamophobia began on the ashes of Orientalism, and found its sprouting and coming into being inside the Beltway think tanks. Similarly, we find in Deepa Kumar's text, "Islamophobia and the Politics of Empire," a situating of Islamophobia as a symptom of American imperial wars and engagement in Iraq and Afghanistan. The implication for both Sheehi and Kumar are that large international coalitions should be formed to advocate for international justice through solidarity with other marginalized groups, and issues such as poverty eradication, Occupy Wall Street, and so on. Kumar points out that since 9/11, more than 700,000 Muslims have been interviewed by the FBI, which means that nearly 50 percent of all Muslim households have been touched by the FBI's "investigations" into Muslims. Saba Mahmoud writes in "Secularism, Hermeneutics, and Empire: The Politics of Islamic Reformation" about how the RAND Corporation, a prominent Washington think tank, in their publication, "Civil Democratic Islam," helped to frame the cultural and media campaign the U.S. government would undergo in response to the war on terror. Then-President Bush's creation of the "World Muslim Outreach" center was built not exactly on combatting violent extremism, according to Mahmoud, but on identifying and creating a Muslim subject that can fit into the goals of American interests overseas. The report argues that the government, through a number of different agencies working in loose concert, must identify the right type of Muslims to partner with. The goal of these efforts must result in a new interpretation of Islam on behalf of Muslims. The Quran must remain at the level of symbols and of metaphor, of allegory, but not literal truth. This think tank report recognize that moderate Muslims don't actually see the Quran this way, and many are what the report calls "traditionalists," i.e., they hold a view of the Quran as the true word of God, and these are the Muslims that are poised as suspect to U.S. interests. It is the reformers and the secularists that are the ones to that the U.S. should connect with and build alliances with to support U.S. interests. The strategy for combatting Islamophobia according to this model is highly critical of any attempt to normalize Muslims into processes of power. They place critique of the systems that subject Muslims to surveillance as more significant than seeking to fit into a normative western society. By placing critique above integration, this model risks forever being the practice of academics and civil rights activists. In Sheehi's framework, any attempt to defend Islam as a peaceful religion will tend to further entrench the dichotomies of the "good Muslim" vs. the "bad Muslim" that

exists as a stereotypical construct. In short, this model is difficult for many Muslim American families and civic leaders that wish to integrate into American society, but it is extraordinary helpful in its diagnosis of the cause of Islamophobia. The Integrationist Model The second model I have identified in the literature on Islamophobia is what I refer to as the "integrationist approach". In this view, the primary cause of Islamophobia is a more general fear of otherness, tied to a lack of inter-personal relations and contact with Muslims in western societies. Key books and studies that support this view include Robert Putnam and David Campbell's "American Grace: How Religions Divides and Unites Us," Eboo Patel's "Sacred Ground: Pluralism, Prejudice, and the Promise of America" and many think tank publications from groups that research Islamophobia, including the Brookings Institute, as well as the State Department. In this model, strategies for combatting Islamophobia are centered on education about Islam and building personal relations with Muslims. They tend not to encourage civil disobedience, or to situate the cause of Islamophobia in the context of a larger critique of American power or foreign policy. Muslims in America are frequently compared to other ethnic minority communities that fought for a place at the table such as the Japanese, the Catholics or African Americans. But the question these books pose is the classic debate that many African American thinkers have posed after the civil rights movement: are we advocating an assimilation or an integration into American society? The integrationists promote the idea of building a relation with a Muslim as the cure to Islamophobia. This theory has some compelling proof in the social science literature where it is referred to as "contact theory." The idea here is that through personal contact with the other, in this case a Muslim, the prejudice or potential to be prejudicial also falls by the wayside. Robert Putnam, a Harvard sociologist, argues in "American Grace" that education about religion is less important for lessening prejudice than is fostering personal relationships. Robert Wright picked up Putnam's notion when he pointed that the best way to combat Islamophobia is to get more Americans to know a Muslim, which is how America become less phobic toward the LGBT community. Wright argues that by getting to know the other as a colleague and a family member, the practice of "coming out of the closet" steadily became more and more acceptable over time precisely because people got to know the other outside of their identity which was demonized in popular culture. This "bridging model," where the Other is seen as a normal, everyday person with the same hopes, desires and dreams as anyone else helps to make them more easily accepted as a human outside of the stereotyped identity. Wright goes on to point out that the challenge for Muslims in the west is one of numbers: they are low in population and thus it may not be possible to promote a wide adoption of acceptance of Muslims until more people actually come into contact with practicing Muslims. The Danger in the Integrationist Model Where the strategy for acceptance falls short is at the level of acceptance. It suggests that one must enter into some neutralized sphere that does not preserve or even celebrate the religious identity of the other. Once the other has been accepted in this neutral space, will the other, in this case, the Muslim, be permitted to more authentically express their religious identity in the future? This engagement with the other that is predicated on a refusal to engage their authentic identity points to a danger in the larger integrationist view. By stressing commonness not based on preserving and sharing one's religious identity, but based on first encountering the other outside of their identity, we deprive the free expression of Muslim identity and we force Muslims to be subject to the status of an enemy. The political philosopher Carl Schmitt defines the enemy as whoever is "in a specially intense way, existentially something different and alien, so that in the extreme case conflicts with him are possible." What many authors have pointed out in the critical model is that Muslim identity is seized and converted into an "in and an out" status in the public sphere. Muslims are either the enemy of the west, the Other, the non-Christian, the one religion or culture that can't fit into ours (Islamophobic side) or Muslims are the ones that are our friends (Islamophilic side). The integrationist model thus presents a danger at the level of the identity of Muslims, forcing them to accept a false construction of what it means to be Muslim. This is a process that unfolds in the self, the family, the community, the nation-state and the trans-regional diaspora. Muslims are forced to take into account the prejudices and expectations of an imagined, non-Muslim observer at all times when this dichotomy between the good Muslim vs. the bad Muslim. As a result, new distinctions between Self and Other are constantly woven into Muslim self-definitions. While the integrationist view of combatting Islamophobia usually results in higher levels of political influence and societal inclusion, it does come at a price. This price is what one scholar has referred to as "disciplinary inclusion." This idea of disciplinary inclusion was highlighted in an excellent Stanford law review article entitled "Establishing an Official Islam" by Samuel Rasooff. Rasooff points out how the Obama administration's unique approach to collaboration with the Muslim community under the banner of "countering violent extremism" a new euphemism for countering terrorism, is to establish a version of Islam that is normative to the values of the United States government. By recruiting so called "moderate Muslims" as agents of the United States diplomatic efforts abroad in Muslim countries and having government officials attend Islamic religious events and conferences, Rasooff argues that the government is promoting a threat to the establishment clause of the US Constitution and the First Amendment that preserves the right for private citizens to practice and define their religion without the incursion of any government agency. The ostensible efforts of the U.S. government here seem to be well intentioned. They want to strengthen moderate Islam and help to portray certain moderate

strands of Islam as the correct and acceptable version of Islam. But what ends up taking place is a form of Muslim identity that is regulated by the government, whereby the government goes to co-define what is normative within Islam, and what is not. While many Muslims in the U.S. and the west more broadly participate in these efforts to strengthen moderate Islam by collaborating with the government, it is at the same time, a mode of the philosopher Michel Foucault called governmentality that perpetuates a sense of religious insiders and outsiders. Muslim Americans, for example, have already shown time and again that they are often the first responders to radicalism and that their version of Islam is not in need of governmental collaboration in this hands on manner. The truth is that Muslims living in the west, and around the world for that matter, have the most to lose when it comes to combatting radicalism in the name of their religion. This is why the Muslim community in Toronto turned in the suspects in the recent planned terrorist attack. While public condemnations of terrorism in the name of Islam coming from Muslims are a good thing to hear, we have to understand that combatting Islamophobia is a much larger systemic challenge that requires a combination of both the integrationist personal engagement as well as the critical approach.

A2 USFG Inaccessible

Reject their caricatures of US policy and Islam – the aff cherry-pick policy failures and overlook huge areas of structural political progress

Duss 13 (Matthew Duss. “Islamophobia and the Politics of Empire.” 2013.

[//EMerz](http://www.aucegypt.edu/gapp/cairoreview/pages/articleDetails.aspx?aid=255)

Since the attacks of September 11, 2001, various analytical frameworks have been proposed to understand the American relationship with the Middle East. In *Islamophobia and the Politics of Empire*, scholar Deepa Kumar offers a look at the role of Islamophobia in the West and argues that it continues to inform U.S. foreign policy for both conservatives and liberals. By echoing and updating Edward Said’s critique, which holds that Orientalism continues to dominate much of Western academic study of the region, Kumar argues that, just as the creation of an exotic, irrational Muslim “other” facilitated European empires’ colonial subjugation of the Middle East, so too has a reductive, essentialist view of Islam been deployed to justify America’s military interventions since 9/11. Kumar makes the case well—it’s not hard to find evidence for this. After all, following 9/11 Americans were fed a steady diet of images featuring Muslim violence, interspersed with claims regarding the centrality of such violence to the faith. In addition, half-baked treatises like Bernard Lewis’ *What Went Wrong: The Clash between Islam and Modernity in the Middle East*—in which the vaunted historian pointed to Middle Easterners’ failure to embrace European classical music as evidence of... well, I’m still not sure—were hailed as very serious arguments by very serious people. And the idea that American intervention was required to vault Muslims into the future did eventually help put American troops in Iraq. Somewhat more provocative, and problematic, is the second half of Kumar’s argument: that Islamophobia in the U.S. continues to be a joint project between American conservatives and liberals. While the contours of conservative Islamophobia are familiar (Islam is intrinsically hostile to modernity, freedom, and the American way, etc.), its liberal variant is, in Kumar’s view, equally pernicious. “The key characteristics of liberal Islamophobia,” Kumar writes, “are the rejection of the ‘clash of civilizations’ thesis, the recognition that there are ‘good Muslims’ with whom diplomatic relations can be forged and a concomitant willingness to work with moderate Islamists.” While Kumar grants that “liberal Islamophobia may be rhetorically gentler” than the conservative version, she insists that it nonetheless “reserves the right of the U.S. to wage war against ‘Islamic terrorism’ around the world, with no respect for the right of self-determination by people in the countries it targets.” It is, Kumar concludes, “the ‘white man’s burden’ in sheep’s clothing.” To be fair, there is some evidence of liberals’ collaboration, or at least pandering to, Islamophobia when it suits their political needs. The

spectacle of Democrats attacking the Bush administration over the 2006 Dubai Ports World deal is one unfortunate example. To advance this argument further, however, Kumar resorts to stealing a few bases. Claiming that liberals went along with conservative efforts to spread fear about the Muslim background of candidate Barack Obama, Kumar cites a May 2008 New York Times Op-Ed by Edward Luttwak (identified as “a fellow at the realist/liberal imperialist think tank” Center for Strategic and International Studies) in which he wrote that, as Obama was born to a Muslim father, his conversion to Christianity is a crime “under Muslim law.” But citing Luttwak and CSIS as “liberals” is problematic. Luttwak is a conservative-realist, and CSIS is a firmly centrist organization (full disclosure: I was a CSIS research intern some years ago.) Kumar also neglects to mention that the piece was savaged by many in the media, including within the New York Times itself—Public Editor Clark Hoyt essentially apologized for the piece’s irresponsible assertions. Viewing the Obama administration’s surge strategy in Afghanistan through the darkest possible lens, Kumar writes, “One might speculate that a White House eager to prime public opinion for a troop surge of thirty thousand may have even encouraged a pliant media to devote attention to ‘homegrown terrorism.’” Indeed Kumar is left merely to speculate, in the absence of any proof of such a scheme. The idea that the Obama administration so trafficked in Islamophobia is somewhat outlandish given the criticism administration officials faced for refusing to specifically cite the Islamic faith as a cause of terrorism (memorably illustrated by Rep. Lamar Smith’s badgering of Attorney General Eric Holder in May 2010). The problem with defining Islamophobia as broadly as Kumar does is that it threatens to divest the term of meaning. It is possible to condemn terrorism committed by Muslims in the name of religion, or to have serious concerns over the development of pluralistic democracy under Islamist-controlled governments, without being anti-Islam. What defines Islamophobia is the belief that terrorist violence is somehow inherent to Islam, or that democracy is incompatible with correct Islamic practice. In uncovering Islamophobia here, there, and everywhere, Kumar unfortunately gives form to the straw man arguments of actual Islamophobes, who often cry that they are being silenced for voicing any criticism of Muslims. It’s quite true that **American political discourse continues to be shot through with ignorance of and hostility toward Islam, but it isn’t the full picture.** Take, for example, the recent controversy over Newsweek’s “Muslim Rage” cover story. The cover line and accompanying essay by controversial Islam critic Ayaan Hirsi Ali generated more discussion about the magazine’s Muslim baiting than about “Muslim rage” itself. While her promulgation of “liberal Islamophobia” is overwrought, Kumar valuably catalogues many of the ways in which American Muslims have been negatively affected by the “war on terror” discourse. She also takes aim at an important problem, if only in glancing: the failure of progressives to press the Obama administration on its civil liberties violations. Rather than locating the cause in deep-seated Islamophobia, however, we’d be just as likely to find it in political expediency. Even with its flaws though, this remains a valuable book. While Kumar’s framework doesn’t adequately capture the various levels and angles of U.S. engagement with the Middle East as a region, or with Islam as a faith, it does offer an important survey of the mistaken assumptions that continue to power some seriously flawed policies. As the U.S. develops better policies to engage with a transforming Middle East, and hopefully confronts the ongoing degradation of rights at home, the issues Kumar raises deserve to be taken seriously.

Speaking for Others K

1nc SFO K

The 1AC speaks from a privileged position of disinvestment with the stories of the Muslim Americans that they have chosen to tell—their universalization of Muslim subject positions isn't an act of speaking on behalf of others, it's an act of speaking for others and silencing the subaltern

Kapoor, 8—Professor of Critical Development Studies at the Faculty of Environmental Studies at York University (Ilan, Spring 2008, "Introduction: Islam and Cultural Politics", *Topia: Canadian Journal Of Cultural Studies*, pg. 3-5)//twemchen

The Postcolonial View: Islam as Open and Political But there is another perspective on culture—a postcolonial one. Calling it postcolonial may be a sleight of hand, given that it has multiple variants and relies on several sources (cultural anthropology, cultural marxism, discursive analysis, deconstruction). I would like to draw out two themes for the purposes of this introduction. First, rather than asking Huntington's "what is culture?" which gives way to the reification of culture, the postcolonial perspective asks "how is culture made?" emphasizing its more active and transformative role. Culture is seen as a semiotic practice (Geertz 1973) grounded in everyday life, through which shared signs and symbols are deployed to represent our world. Raymond Williams refers to it as "the signifying system through which necessarily ... a social order is communicated, reproduced, experienced, and explored" (Williams 1982: 13; cf. Hall 1977: 328). Rather than focusing on cultural identity, which fixes and unifies culture, the idea here is to see culture as signifying process: this means that culture is dynamic rather than static, slippery and unfixed rather than stable, plural and hybrid rather than whole, and "negotiated and constructed rather than a 'given'" (Clammer 2005: 103; cf. Williams 1979: 154; Bhabha 1994; Appadurai 1996: 12). The second theme of discursivity is what gives the postcolonial perspective its critical bent. The semiotic construction of culture involves a "will to power," wherein knowledge is systematized and disseminated (Said 1978: 12; 1983: 216). This process includes the deployment of discursive strategies such as the use of rhetoric or the construction, repetition and reification of powerful images and stereotypes (Bhabha 1994: 66ff.; Derrida 1982: 307ff.), such as the images of Islam and Muslims discussed above. This critique also takes into account the enactment of discourse in institutional practices, for instance the state or corporate media which fund and widely disseminate a favoured body of knowledge. A power politics is thus at play, entailing domination of and/or contestation between representational practices. This postcolonial perspective enables us to view culture not as something separate and beyond, whose outlines can be precisely and objectively determined from afar (as in Huntington's multiculturalism or Islamism), but rather as an immediate and inescapable shaping of experience. Its contours may well be shifting and imprecise, but we cannot view, interpret or make our world without it. Culture tints, filters, gives perspective; yet privileging one colour means excluding others; filtering in also means filtering out. Islam, in this view, is not a collection of clearly definable values or "customs," but rather a contested terrain of lived practices and contingent interpretations. Fixating on one set of meanings—a "real" Islam or the "true" Muslim woman—is an attempt to contain, control or hierarchize the Other. Many of the contributions in this issue aim at unsettling

the propagation of powerful stereotypes that reduce Islam or Muslim culture to a religious category, equate Muslims with terrorism or sexual perversion, or assume Islamic religious practice to be monolithic or static. Thus, Liz Philipose cautions against the feminist view that all “traditional” or Muslim law is necessarily oppressive to women. And Shahnaz Khan emphasizes that holding only local Afghan patriarchies to account for Afghan women’s “oppression” is linked to a desire to “rescue 8women,” and may well be used as an argument to rationalize foreign military intervention. This contested cultural terrain obliges us to be more self-reflexive about, and accountable to, our positioning as privileged intellectuals, Western(ized) elites, or women or men; otherwise we run the risk of universalizing our positions or speaking for others, thus silencing the subaltern (Spivak 1988). This is certainly the argument put forth by Burwell, Davis and Taylor, who problematize their own pedagogical practices in general, and the reading of Nafisi’s Reading Lolita in Tehran in particular, within the current context of neo-Orientalism and Islamophobia. In response, they offer an expressly qualified and personalized hermeneutical account of Nafisi’s text. For the postcolonial critic, accountable positioning often means having to chart a complex course. Jasmin Zine speaks, in this regard, of having to confront oppression “from within and without” her community, that is, in a way that agrees with neither mainstream media arguments about Muslim women nor Islamist ones, and that resists both outwardly “secular” explanations and straightforwardly “religious” ones. This complex positioning often implies having to occupy a borderline position, on the margins of any mainstream. Yet such positioning, such contestation from the margins, is precisely what enables a “cultural politics”: it shows that culture does not only mediate our lives, but is the very site of agency and change. This is evident in Zine’s study of Muslim girls who challenge the gender-segregated spaces within their schools and attempt to negotiate a position that accommodates the status of women in Islam. It is evident in the work of women’s groups in North America and Nigeria which Liz Philipose highlights, that try to claim women’s rights by reinterpreting Islam in a feminist light. It is manifest in the “queer Muslim punk” groups described by Ibrahim Abraham; they demonstrate the possibility of same-sex intimacy without conforming to either the mainstream bourgeois hetero-homo binary or the hidden homosexual practices within Muslim communities. And finally, agency and change are apparent in Sayed Kashua’s book, Dancing Arabs, which, as Catherine Rottenberg tells us, challenges Jewish readers to re-examine their assumptions about Israel as a Jewish and democratic state. All of this lays bare notions of the West as necessarily culturally hegemonic, of Islam as homogeneous and fixed, and of Muslims as victims in need of rescue. The postcolonial view thus underlines the importance of culture to the contested present. It alerts us to how **dominant contemporary discourses on Islam are constructed, and reveals their attempts to de-politicize, naturalize and mainstream their Orientalist depictions of Muslims.** It warns against dominant strategies to centre or privilege some discourses (the corporate media, the nation-state, Western “civilization,” social elites, religious patriarchs) and produce others (Islam, Muslims, women, queers, the Third World). And it sensitizes us to those cultural acts of resistance aimed at interrogating, deflecting or re-presenting domination. The articles that follow in this special issue of TOPIA bring much needed attention to these important postcolonial insights and preoccupations.

Speaking for others re-enforces violence, coercion, and oppression while silencing Muslim Americans—their stories are inevitably twisted and construed to fit the current hierarchy of power

Alcoff, 91—Associate Professor of Philosophy and Women's Studies and the Meredith Professor for Teaching Excellence at Syracuse University (Linda, Winter 1991, "The Problem of Speaking for Others," Cultural Critique, No. 20, p. 5-32)//twemchen

These examples demonstrate the range of current practices of speaking for others in our society. While the prerogative of speaking for others remains unquestioned in the citadels of colonial administration, among activists and in the academy it elicits a growing unease and, in some communities of discourse, it is being rejected. There is a strong, albeit contested, current within feminism which holds that speaking for others—even for other women—is arrogant, vain, unethical, and politically illegitimate. Feminist scholarship has a liberatory agenda which almost requires that women scholars speak on behalf of other women, and yet the **dangers of speaking across differences of race, culture, sexuality, and power are becoming increasingly clear to all.** In feminist magazines such as Sojourner, it is common to find articles and letters in which the author states that she can only speak for herself. In her important paper, "Dyke Methods," Joyce Trebilcock offers a philosophical articulation of this view. She renounces for herself the practice of speaking for others within a lesbian feminist community, arguing that she "will not try to get other wimmin to accept my beliefs in place of their own" on the grounds that to do so **would be to practice a kind of discursive coercion and even a violence.**³ Feminist discourse is not the only site in which the problem of speaking for others has been **acknowledged and addressed.** In anthropology there is similar discussion about whether it is possible to speak for others either adequately or justifiably. Trinh T. Minh-ha explains the grounds for skepticism when she says that anthropology is "mainly a conversation of 'us' with 'us' about 'them,' of the white man with the white man about the primitive-nature man...in which 'them' is silenced. 'Them' always stands on the other side of the hill, naked and speechless... 'them' is only admitted among 'us', the discussing subjects, when accompanied or introduced by an 'us'..."⁴ Given this analysis, even ethnographies written by progressive anthropologists are a priori regressive because of the structural features of anthropological discursive practice. The recognition that there is a problem in speaking for others has followed from the widespread acceptance of two claims. **First, there has been a growing awareness that where one speaks from affects both the meaning and truth of what one says, and thus that one cannot assume an ability to transcend her location.** In other words, **a speaker's location (which I take here to refer to her social location or social identity) has an epistemically significant impact on that speaker's claims, and can serve either to authorize or dis-authorize one's speech.** The creation of Women's Studies and African American Studies departments were founded on this very belief: that both the study of and the advocacy for the oppressed must come to be done principally by the oppressed themselves, and that we must finally acknowledge that systematic divergences in social location between speakers and those spoken for will have a significant effect on the content of what is said. The unspoken premise here is simply that a speaker's location is epistemically salient. I shall explore this issue further in the next section. **The second claim holds that not only is location epistemically salient, but certain privileged locations are discursively dangerous.**⁵ In particular, the **practice of privileged persons speaking for or on behalf of less privileged persons has actually resulted (in many cases) in increasing or reenforcing the oppression of the group spoken for.** This was part of the argument made against Anne Cameron's speaking for Native women: Cameron's intentions were never in question, but the effects of her writing were argued to be harmful to the needs of Native authors because it is Cameron rather than they who will be listened to and whose books will be bought by readers interested in Native women. **Persons from dominant groups who speak for others are often treated as authenticating presences that confer legitimacy and credibility on the demands of subjugated speakers; such speaking for others does nothing to disrupt the discursive hierarchies that operate in public spaces.** For this reason, the work of privileged authors who speak on behalf of the oppressed is becoming increasingly criticized by members of those oppressed groups themselves.⁶ As social theorists, we are authorized by virtue of our academic positions to develop theories that express and encompass the ideas, needs, and goals of others. However, we must begin to ask ourselves whether this is ever a legitimate authority, and if so, what are the criteria for legitimacy? In particular, is it ever valid to speak for others who are unlike me or who are less privileged than me? We might try to delimit this problem as only arising when a more privileged person speaks for a less privileged one. In this case, we might say that I should only speak for groups of which I am a member. But this does not tell us how groups themselves should be delimited. For example, can a white woman speak for all women simply by virtue of being a woman? If not, how narrowly should we draw the categories? The complexity and multiplicity of group identifications could result in "communities" composed of single individuals. Moreover, the concept of groups assumes specious notions about clear-cut boundaries and "pure" identities. I am a Panamanian-American and a person of mixed ethnicity and race: half white/Angla and half Panamanian mestiza. The criterion of group identity leaves many unanswered questions for a person such as myself, since I have membership in many conflicting groups but my membership in all of them is problematic. Group identities and boundaries are ambiguous and permeable, and decisions about demarcating identity are always partly arbitrary. Another problem concerns how specific an identity needs to be to confer epistemic authority. Reflection on such problems quickly reveals that no easy solution to the problem of speaking for others can be found by simply restricting the practice to speaking for groups of which one is a member. Adopting the position that one should only speak for oneself raises similarly difficult questions. If I don't speak for those less privileged than myself, am I abandoning my political responsibility to speak out against oppression, a responsibility incurred by the very fact of my privilege? If I should not speak for others, should I restrict myself to following their lead uncritically? Is my greatest contribution to move over and get out of the way? And if so, what is the best way to do this—to keep silent or to deconstruct my own discourse? The answers to these questions will certainly depend on who is asking them. While some of us may want to undermine, for example, the U.S. government's practice of speaking for the "Third world," we may not want to undermine someone such as Rigoberta Menchu's ability to speak for Guatemalan Indians.⁷ So the question arises about whether all instances of speaking for should be condemned and, if not, how we can justify a position which would repudiate some speakers while accepting others. In order to answer these questions we need to become clearer on the epistemological and metaphysical issues which are involved in the articulation of the problem of speaking for others, issues which most often remain implicit. I will attempt to make these issues clear before turning to discuss some of the possible responses to the problem and advancing a provisional, procedural solution of my own. But first I need to explain further my framing of the problem. In the examples used above, **there may appear to be a conflation between the issue of speaking for others and the issue of speaking about others.** This conflation was intentional on my part, because it is difficult to distinguish speaking about from speaking for in all cases. There is an ambiguity in the two phrases: when one is speaking for another one may be describing their situation and thus also speaking about them. In fact, it may be impossible to speak for another without simultaneously conferring information about them. Similarly, when one is speaking about another, or simply trying to describe their situation or some aspect of it, one may also be speaking in place of them, i.e. speaking for them. One may be speaking about another as an advocate or a messenger if the person cannot speak for herself. Thus I would maintain that if the practice of speaking for others is problematic, so too must be the practice of speaking about others.⁸ This is partly the case because of what has been called the "crisis of representation." For in both the practice of speaking for as well as the practice of speaking about others, I am engaging in the act of representing the other's needs, goals, situation, and in fact, who they are, based on my own situated interpretation. In post-structuralist terms, I am participating in the construction of their subject-positions rather than simply discovering their true selves. Once we pose it as a problem of representation, we see that, not only are speaking for and speaking about analytically close, so too are the practices of speaking for others and speaking for myself. For, in speaking for myself, I am also representing my self in a certain way, as occupying a specific subject-position, having certain characteristics and not others, and so on. In speaking for myself, I (momentarily) create my self—just as much as when I speak for others I create them as a public, discursive self, a self which is more unified than any subjective experience can support. And this public self will in most cases have an effect on the self experienced as interiority. The point here is that the problem of representation underlies all cases of speaking for, whether I am speaking for myself or for others. This is not to suggest that all representations are fictions: they have very real material effects, as well as material origins, but they are always mediated in complex ways by discourse, power, and location. However, the problem of speaking for others is more specific than the problem of representation generally, and requires

its own particular analysis. There is one final point I want to make before we can pursue this analysis. The way I have articulated this problem may imply that individuals make conscious choices about their discursive practice free of ideology and the constraints of material reality. This is not what I wish to imply. The problem of speaking for others is a social one, the options available to us are socially constructed, and the practices we engage in cannot be understood as simply the results of autonomous individual choice. Yet to replace both "I" and "we" with a passive voice that erases agency results in an erasure of responsibility and accountability for one's speech, an erasure I would strenuously argue against (there is too little responsibility-taking already in Western practice!). When we sit down to write, or get up to speak, we experience ourselves as making choices. We may experience hesitation from fear of being criticized or from fear of exacerbating a problem we would like to remedy, or we may experience a resolve to speak despite existing obstacles, but in many cases we experience having the possibility to speak or not to speak. On the one hand, a theory which explains this experience as involving autonomous choices free of material structures would be false and ideological, but on the other hand, if we do not acknowledge the activity of choice and the experience of individual doubt, we are denying a reality of our experiential lives. So I see the argument of this paper as addressing that small space of discursive agency we all experience, however multi-layered, fictional, and constrained it in fact is. Ultimately, the question of speaking for others bears crucially on the possibility of political effectivity. Both collective action and coalitions would seem to require the possibility of speaking for. Yet influential postmodernists such as Gilles Deleuze have characterized as "absolutely fundamental: the indignity of speaking for others"¹⁰ and important feminist theorists have renounced the practice as irremediably harmful. What is at stake in rejecting or validating speaking for others as a discursive practice? To answer this, we must become clearer on the epistemological and metaphysical claims which are implicit in the articulation of the problem. I. A plethora of sources have argued in this century that the neutrality of the theorizer can no longer, can never again, be sustained, even for a moment. Critical theory, discourses of empowerment, psychoanalytic theory, post-structuralism, feminist and anti-colonialist theories have all concurred on this point. Who is speaking to whom turns out to be as important for meaning and truth as what is said; in fact what is said turns out to change according to who is speaking and who is listening. Following Foucault, I will call these "rituals of speaking" to identify discursive practices of speaking or writing which involve not only the text or utterance but their position within a social space which includes the persons involved in, acting upon, and/or affected by the words. Two elements within these rituals will deserve our attention: the positionality or location of the speaker and the discursive context. We can take the latter to refer to the connections and relations of involvement between the utterance/text and other utterances and texts as well as the material practices in the relevant environment, which should not be confused with an environment spatially adjacent to the particular discursive event. Rituals of speaking are constitutive of meaning, the meaning of the words spoken as well as the meaning of the event. This claim requires us to shift the ontology of meaning from its location in a text or utterance to a larger space, a space which includes the text or utterance but which also includes the discursive context. And an important implication of this claim is that meaning must be understood as plural and shifting, since a single text can engender diverse meanings given diverse contexts. Not only what is emphasized, noticed, and how it is understood will be affected by the location of both speaker and hearer, but the truth-value or epistemic status will also be affected. For example, in many situations when a woman speaks the presumption is against her; when a man speaks he is usually taken seriously (unless his speech patterns mark him as socially inferior by dominant standards). When writers from oppressed races and nationalities have insisted that all writing is political the claim has been dismissed as foolish or grounded in resentment or it is simply ignored; when prestigious European philosophers say that all writing is political it is taken up as a new and original "truth" (Judith Wilson calls this "the intellectual equivalent of the 'cover record'.")¹¹ The rituals of speaking which involve the location of speaker and listeners affect whether a claim is taken as true, well-reasoned, a compelling argument, or a significant idea. Thus, how what is said gets heard depends on who says it, and who says it will affect the style and language in which it is stated. The discursive style in which some European post-structuralists have made the claim that all writing is political marks it as important and likely to be true for a certain (powerful) milieu; whereas the style in which African-American writers made the same claim marked their speech as dismissible in the eyes of the same milieu. This point might be conceded by those who admit to the political mutability of interpretation, but they might continue to maintain that truth is a different matter altogether. And they would be right that acknowledging the effect of location on meaning and even on whether something is taken as true within a particular discursive context does not entail that the "actual" truth of the claim is contingent upon its context. However, this objection presupposes a particular conception of truth, one in which the truth of a statement can be distinguished from its interpretation and its acceptance. Such a concept would require truth to be independent of the speakers' or listeners' embodied and perspectival location. Thus, the question of whether location bears simply on what is taken to be true or what is really true, and whether such a distinction can be upheld, involves the very difficult problem of the meaning of truth. In the history of Western philosophy, there have existed multiple, competing definitions and ontologies of truth: correspondence, idealist, pragmatist, coherentist, and consensual notions. The dominant modernist view has been that truth represents a relationship of correspondence between a proposition and an extra-discursive reality. On this view, truth is about a realm completely independent of human action and expresses things "as they are in themselves," that is, free of human interpretation. Arguably since Kant, more obviously since Hegel, it has been widely accepted that an understanding of truth which requires it to be free of human interpretation leads inexorably to skepticism, since it makes truth inaccessible by definition. This created an impetus to refigure the ontology of truth, from a locus outside human interpretation to one within it. Hegel, for example, understood truth as an "identity in difference" between subjective and objective elements. Thus, in the Hegelian aftermath, so-called subjective elements, or the historically specific conditions in which human knowledge occurs, are no longer rendered irrelevant or even obstacles to truth. On a coherentist account of truth, which is held by such philosophers as Rorty, Donald Davidson, Quine, and (I would argue) Gadamer and Foucault, truth is defined as an emergent property of converging discursive and non-discursive elements, when there exists a specific form of integration among these elements in a particular event. Such a view has no necessary relationship to idealism, but it allows us to understand how the social location of the speaker can be said to bear on truth. The speaker's location is one of the elements which converge to produce meaning and thus to determine epistemic validity.¹² Let me return now to the formulation of the problem of speaking for others. There are two premises implied by the articulation of the problem, and unpacking these should advance our understanding of the issues involved. Premise (1): The "ritual of speaking" (as defined above) in which an utterance is located always bears on meaning and truth such that there is no possibility of rendering positionality, location, or context irrelevant to content. The phrase "bears on" here should indicate some variable amount of influence short of determination or fixing. One important implication of this first premise is that we can no longer determine the validity of a given instance of speaking for others simply by asking whether or not the speaker has done sufficient research to justify her claims. Adequate research will be a necessary but insufficient criterion of evaluation. Now let us look at the second premise. Premise (2): All contexts

and locations are differentially related in complex ways to structures of oppression. **Given that truth is connected to politics, these political differences between locations will produce epistemic differences as well.** The claim here that

"truth is connected to politics" follows necessarily from Premise (1). **Rituals of speaking are politically constituted by power relations of domination, exploitation, and subordination. Who is speaking, who is spoken of, and who listens is a result, as well as an act, of political struggle.** Simply put, the discursive context is a political arena. To

the extent that **this context bears on meaning, and meaning is** in some sense **the object of truth, we cannot make an epistemic evaluation of the claim without simultaneously assessing the politics of the situation.** Although we cannot maintain a neutral voice, according to the first premise we may at least all claim the right and legitimacy to speak. But the second premise suggests

that **some voices may be dis-authorized on grounds which are simultaneously political and epistemic.** Any statement will invoke the structures of power allied with the social location of the speaker, aside from the speaker's intentions or attempts to avoid such invocations. The

conjunction of Premises (1) and (2) suggest that **the speaker loses some portion of control over the meaning and truth of her utterance.** Given that the context of hearers is partially determinant, the speaker is not the master or mistress of the situation. Speakers may seek to regain control here by taking into account the context of their speech, but they can never know everything about this context, and with written and electronic communication it is becoming increasingly difficult to know anything at all

about the context of reception. This loss of control may be taken by some speakers to mean that no speaker can be held accountable for her discursive actions. **The meaning of any discursive event will be shifting and plural, fragmented and even inconsistent. As it ranges over diverse spaces and transforms in the mind of its recipients according to their different horizons of interpretation, the effective control of the speaker over the meanings which she puts in motion may seem negligible.** However, a partial loss of control does not entail a complete loss of accountability. And moreover,

the better we understand the trajectories by which meanings proliferate, the more likely we can increase, though always only partially, our ability to direct the interpretations and transformations our speech undergoes. When I acknowledge that the listener's social location will affect the meaning of my words, I can more effectively generate the meaning I intend. Paradoxically, the view which holds the speaker or author of a speech act as solely responsible for its meanings ensures the speaker's least effective determinacy over the meanings that are produced. We do not need to posit the existence of fully conscious acts or containable, fixed meanings in order to hold that speakers can alter their discursive practices and be held accountable for at least some of the effects of these practices. It is a false dilemma to pose the choice here as one between no accountability or complete causal power. In the next section I shall consider some of the principal responses offered to the problem of speaking for others. II. First I want to consider the argument that the very formulation of the problem with speaking for others involves a retrograde, metaphysically insupportable essentialism that assumes one can read off the truth and meaning of what one says straight from the discursive context. Let's call this response the "Charge of Reductionism", because it argues that a sort of reductionist theory of justification (or evaluation) is entailed by premises (1) and (2). Such a reductionist theory might, for example, reduce evaluation to a political assessment of the speaker's location where that location is seen as an insurmountable essence that fixes one, as if one's feet are superglued to a spot on the sidewalk. For instance, after I vehemently defended Barbara Christian's article, "The Race for Theory," a male friend who had a different evaluation of the piece couldn't help raising the possibility of whether a sort of apologetics structured my response, motivated by a desire to valorize African American writing against all odds. His question in effect raised the issue of the reductionist/essentialist theory of justification I just described. I, too, would reject reductionist theories of justification and essentialist accounts of what it means to have a location. To say that location bears on meaning and truth is not the same as saying that location determines meaning and truth. And location is not a fixed essence absolutely authorizing one's speech in the way that God's favor absolutely authorized the speech of Moses. Location and positionality should not be conceived as one-dimensional or static, but as multiple and with varying degrees of mobility.¹³ What it means, then, to speak from or within a group and/or a location is immensely complex. To the extent that location is not a fixed essence, and to the extent that there is an uneasy, undetermined, and contested relationship between location on the one hand and meaning and truth on the other, we cannot reduce evaluation of meaning and truth to a simple identification of the speaker's location. Neither Premise (1) nor Premise (2) entail reductionism or essentialism. They argue for the relevance of location, not its singular power of determination, and they are non-committal on how to construe the metaphysics of location. While the "Charge of Reductionism" response has been popular among academic theorists, what I call the "Retreat" response has been popular among some sections of the U.S. feminist movement. This response is simply to retreat from all practices of speaking for; it asserts that one can only know one's own narrow individual experience and one's "own truth" and thus that one can never make claims beyond this. This response is motivated in part by the desire to recognize difference and different priorities, without organizing

these differences into hierarchies. Now, sometimes I think this is the proper response to the problem of speaking for others, depending on who is making it. We certainly want to encourage a more receptive listening on the part of the discursively privileged and to discourage presumptuous and oppressive practices of speaking for. And the desire to retreat sometimes results from the desire to engage in political work but without practicing what might be called discursive imperialism. But a retreat from speaking for will not result in an increase in receptive listening in all cases; it may result merely in a retreat into a narcissistic yuppie lifestyle in which a privileged person takes no responsibility for her society whatsoever. She may even feel justified in exploiting her privileged capacity for personal happiness at the expense of others on the grounds that she has no alternative. The major problem with such a retreat is that it significantly undercuts the possibility of political effectivity. There are numerous examples of the practice of speaking for others which have been politically efficacious in advancing the needs of those spoken for, from Rigoberta Menchu to Edward Said and Steven Biko. Menchu's efforts to speak for the 33 Indian communities facing genocide in Guatemala have helped to raise money for the revolution and bring pressure against the Guatemalan and U.S. governments who have committed the massacres in collusion. The point is not that for some speakers the danger of speaking for others does not arise, but that in some cases certain political effects can be garnered in no other way. Joyce Trebilcock's version of the retreat response, which I mentioned at the outset of this essay, raises other issues. She agrees that an absolute prohibition of speaking for would undermine political effectiveness, and therefore says that she will avoid speaking for others only within her lesbian feminist community. So it might be argued that the retreat from speaking for others can be maintained without sacrificing political effectivity if it is restricted to particular discursive spaces. Why might one advocate such a partial retreat? Given that interpretations and meanings are discursive constructions made by embodied speakers, Trebilcock worries that attempting to persuade or speak for another will cut off that person's ability or willingness to engage in the constructive act of developing meaning. Since no embodied speaker can produce more than a partial account, and since the process of producing meaning is necessarily collective, everyone's account within a specified

community needs to be encouraged. I agree with a great deal of Trebilcock's argument. I certainly agree that **in some instances speaking for others**

constitutes a violence and should be stopped But Trebilcock's position, as well as a more general retreat position, presumes an ontological configuration of the discursive context that simply does not obtain. In particular, it assumes that one can retreat into one's discrete location and make claims entirely and singularly within that location that do not range over others, and therefore that one can disentangle oneself from the implicating networks between one's discursive practices and others' locations, situations, and practices. In other words, the claim that I can speak only for myself assumes the autonomous conception of the self in Classical Liberal theory—that I am unconnected to others in my authentic self or that I can achieve an autonomy from others given certain conditions. But there is no neutral place to stand free and clear in which one's words do not prescriptively affect or mediate the experience of others, nor is there a way to demarcate decisively a boundary between one's location and all others. Even a complete retreat from speech is of course not neutral since it allows the continued dominance of current discourses and acts by omission to reinforce their dominance. As my practices are made possible by events spatially far away from my body so too my own practices make possible or impossible practices of others. The declaration that I "speak only for myself" has the sole effect of allowing me to avoid responsibility and accountability for my effects on others; it cannot literally erase those effects. Let me offer an illustration of this. The feminist movement in the U.S. has spawned many kinds of support groups for women with various needs: rape victims, incest survivors, battered wives, and so forth, and some of these groups have been structured around the view that each survivor must come to her own "truth" which ranges only over herself and has no bearing on others. Thus, one woman's experience of sexual assault, its effect on her and her interpretation of it, should not be taken as a universal generalization to which others must subsume or conform their experience. This view works only up to a point. To the extent it recognizes irreducible differences in the way people respond to various traumas and is sensitive to the genuinely variable way in which women can heal themselves, it represents real progress beyond the homogeneous, universalizing approach which sets out one road for all to follow. However, it is an illusion to think that, even in the safe space of a support group, a member of the group can, for example, trivialize brother-sister incest as "sex play" without profoundly harming someone else in the group who is trying to maintain her realistic assessment of her brother's sexual activities with her as a harmful assault against his adult rationalization that "well, for me it was just harmless fun." Even if the speaker offers a dozen caveats about her views as restricted to her location, she will still affect the other woman's ability to conceptualize and interpret her experience and her response to it. And this is simply because we cannot neatly separate off our mediating praxis which interprets and constructs our experiences from the praxis of others. We are collectively caught in an intricate, delicate web in which each action I take, discursive or otherwise, pulls on, breaks off, or maintains the tension in many strands of the web in which others find themselves moving also. When I speak for myself, I am constructing a possible self, a way to be in the world, and an offering that, whether I intend to or not, to others, as one possible way to be. Thus, the attempt to avoid the problematic of speaking for by retreating into an individualist realm is based on an illusion, well supported in the individualist ideology of the West, that a self is not constituted by multiple intersecting discourses but consists in a unified whole capable of autonomy from others. It is an illusion that I can separate from others to such an extent that I can avoid affecting them. This may be the intention of my speech, and even its meaning if we take that to be the formal entailments of the sentences, but it will not be the effect of the speech, and therefore cannot capture the speech in its reality as a discursive practice. When I "speak for myself" I am participating in the creation and reproduction of discourses through which my own and other selves are constituted. A further problem with the "Retreat" response is that it may be motivated by a desire to find a method or practice immune from criticism. If I speak only for myself it may appear that I am immune from criticism because I am not making any claims that describe others or prescribe actions for them. If I am only speaking for myself I have no responsibility for being true to your experience or needs. But surely it is both morally and politically objectionable to structure one's actions around the desire to avoid criticism, especially if this outweighs other questions of effectivity. In some cases, the motivation is perhaps not so much to avoid criticism as to avoid errors, and the person believes that the only way to avoid errors is to avoid all speaking for others. However, errors are unavoidable in theoretical inquiry as well as political struggle, and they usually make contributions. The pursuit of an absolute means to avoid making errors comes perhaps not from a desire to advance collective goals but a desire for personal mastery, to establish a privileged discursive position wherein one cannot be undermined or challenged and thus is master of the situation. From such a position one's own location and positionality would not require constant interrogation and critical reflection; one would not have to constantly engage in this

emotionally troublesome endeavor and would be immune from the interrogation of others. Such a desire for mastery and immunity must be resisted. **The final response to the problem of speaking for others** that I will consider occurs in Gayatri Chakravorty Spivak's rich essay "Can the Subaltern Speak?"¹⁴ Spivak rejects a total

retreat from speaking for others, and she criticizes the "self-abnegating intellectual" pose that Foucault and Deleuze adopt when they reject speaking for others on the grounds that **their position assumes the oppressed can transparently represent their own true interests**. According to Spivak, Foucault and Deleuze's self-abnegation serves only to conceal the actual authorizing power of the retreating intellectuals, who in their very retreat help to consolidate a particular conception of experience (as transparent and self-knowing). Thus, to promote "listening to" as opposed to speaking for essentializes the oppressed as non-ideologically constructed subjects. But Spivak is also critical of speaking for which engages in dangerous re-presentations. In the end Spivak prefers a "speaking to," in which the intellectual neither abnegates his or her discursive role nor presumes an authenticity of the oppressed, but still allows for the possibility that the oppressed will produce a "countersentence" that can then suggest a new historical narrative. Spivak's arguments show that a simple solution can not be found in for the oppressed or less privileged being able to speak for themselves, since their speech will not necessarily be either liberatory or reflective of their "true interests", if such exist. I agree with her on this point but I would emphasize also that ignoring the subaltern's or oppressed person's speech is, as she herself notes, "to continue the imperialist project."¹⁵ Even if the oppressed person's speech is not liberatory in its content, it remains the case that the very act of speaking itself constitutes a subject that challenges and subverts the opposition between the knowing agent and the object of knowledge, an opposition which has served as a key player in the reproduction of imperialist modes of discourse. Thus, the problem with speaking for others exists in the very structure of discursive practice, irrespective of its content, and subverting the hierarchical rituals of speaking will always have some liberatory effects. I agree, then, that we should strive to create wherever possible the conditions for dialogue and the practice of speaking with and to rather than speaking for others. Often the possibility of dialogue is left unexplored or inadequately pursued by more privileged persons. Spaces in which it may seem as if it is impossible to engage in dialogic encounters need to be transformed in order to do so, such as classrooms, hospitals, workplaces, welfare agencies, universities, institutions for international development and aid, and governments. It has long been noted that existing communication technologies have the potential to produce these kinds of interaction even though research and development teams have not found it advantageous under capitalism to do so. However, while there is much theoretical and practical work to be done to develop such alternatives, the practice of speaking for others remains the best option in some existing situations. An absolute retreat weakens political effectivity, is based on a metaphysical illusion, and often effects only an obscuring of the intellectual's power. There can be no complete or definitive solution to the problem of speaking for others, but there is a possibility that its dangers can be decreased. The remainder of this paper will try to contribute toward developing that possibility. III. In rejecting a general retreat from speaking for, I am not advocating a return to an unself-conscious appropriation of the other, but rather that anyone who speaks for others should only do so out of a concrete analysis of the particular power relations and discursive effects involved. I want to develop this point by elucidating four sets of interrogatory practices which are meant to help evaluate possible and actual instances of speaking for. In list form they may appear to resemble an algorithm, as if we could plug in an instance of speaking for and factor out an analysis and evaluation. However, they are meant only to suggest the questions that should be asked concerning any such discursive practice. These are by no means

original: they have been learned and practiced by many activists and theorists. (1) **The impetus to speak must be carefully analyzed and, in many cases (certainly for academics!), fought against.** This may seem an odd way to begin discussing how to speak for, but the point is that **the impetus to always be the speaker** and to speak in all situations **must be seen for what it is: a desire for mastery and domination** if one's immediate impulse is to teach rather than listen to a less-privileged speaker, one should resist that impulse long enough to interrogate it carefully. **Some of us have been taught that by right of having the dominant gender, class, race, letters after our name, or some other criterion, we are more likely to have the truth. Others have been taught the opposite and will speak haltingly, with apologies, if they speak at all.**¹⁶ At the same time, we have to acknowledge that the very decision to "move over" or retreat can occur only from a position of privilege. Those who are not in a position of speaking at all cannot retreat from an action they do not employ. Moreover, making the decision for oneself whether or not to retreat is

an extension or application of privilege, not an abdication of it. Still, it is sometimes called for. (2) **We must also interrogate the bearing of our location and context on what it is we are saying, and this should be an explicit part of every serious discursive practice we engage in.** Constructing hypotheses about the possible connections between our location and our words is one way to begin. This procedure would be most successful if engaged in collectively with others, by which aspects of our location less obvious to us might be revealed.¹⁷ One deformed way in which this is too often

carried out is **when speakers offer up in the spirit of "honesty" autobiographical information** about

themselves, usually at the beginning of their discourse as a kind of disclaimer. This is meant to acknowledge their own understanding that they are speaking from a specified, embodied location without pretense to a transcendental truth. But as Maria Lugones and others have forcefully argued, such an act serves no good end when it is used as a disclaimer against one's ignorance or errors and is made without critical interrogation of the bearing of such an autobiography on what is about to be said. It leaves for the listeners all the real work that needs to be done. For example, if a middle class white man were to begin a speech by sharing with us this autobiographical information and then using it as a kind of apologetics for any limitations of his speech, this would leave to those of us in the audience who do not share his social location all the work of translating his terms into our own, appraising the applicability of his analysis to our diverse situation, and determining the substantive relevance of his location on his claims. This is simply what less-privileged persons have always had to do for ourselves when reading the history of philosophy, literature, etc., which makes the task of appropriating these discourses more difficult and time-consuming (and alienation more likely to result). Simple unanalyzed disclaimers do not improve on this familiar situation and may even make it worse to the extent that by offering such information the speaker may feel even more authorized to speak and be accorded more authority by his peers. (3) Speaking should always carry with it an accountability and responsibility for what one says. To whom one is accountable is a political/epistemological choice contestable, contingent and, as Donna Haraway says, constructed through the process of discursive action. What this entails in practice is a serious commitment to remain open to criticism and to attempt actively, attentively, and sensitively to "hear" the criticism (understand it). A quick impulse to reject criticism must make one wary. (4) Here is my central point. In order to evaluate attempts to speak for others in particular instances, we need to analyze the probable or actual effects of the words on the discursive and material context. One cannot simply look at the location of the speaker or her credentials to speak; nor can one look merely at the propositional content of the speech; one must also look at where the speech goes and what it does there. Looking merely at the content of a set of claims without looking at their effects cannot produce an adequate or even meaningful evaluation of it, and this is partly because the notion of a content separate from effects does not hold up. The content of the claim, or its meaning, emerges in interaction between words and hearers within a very specific historical situation. Given this, we have to pay careful attention to the discursive arrangement in order to understand the full meaning of any given discursive event. For example, in a situation where a well-meaning First world person is speaking for a person or group in the Third world, the very discursive arrangement may reinscribe the "hierarchy of civilizations" view where the U. S. lands squarely at the top. This effect occurs because the speaker is positioned as authoritative and empowered, as the knowledgeable subject, while the group in the Third World is reduced, merely because of the structure of the speaking practice, to an object and victim that must be championed from afar. Though the speaker may be trying to materially improve the situation of some lesser-privileged group, one of the effects of her discourse is to reinforce racist, imperialist conceptions and perhaps also to further silence the lesser-privileged group's own ability to speak and be heard.¹⁸ This shows us why it is so important to reconceptualize discourse, as Foucault recommends, as an event, which includes speaker, words, hearers, location, language, and so on. All such evaluations produced in this way will be of necessity indexed. That is, they will obtain for a very specific location and cannot be taken as universal. This simply follows from the fact that the evaluations will be based on the specific elements of historical discursive context, location of speakers and hearers, and so forth. When any of these elements is changed, a new evaluation is called for. Our ability to assess the effects of a given discursive event is limited; our ability to predict these effects is even more difficult. When meaning is plural and deferred, we can never hope to know the totality of effects. Still, we can know some of the effects our speech generates: I can find out, for example, that the people I spoke for are angry that I did so or appreciative. By learning as much as possible about the context of reception I can increase my ability to discern at least some of the possible effects. This mandates incorporating a more dialogic approach to speaking, that would include learning from and about the domains of discourse my words will affect. I want to illustrate the implications of this fourth point by applying it to the examples I gave at the beginning. In the case of Anne Cameron, if the effects of her books are truly disempowering for Native women, they are counterproductive to Cameron's own stated intentions, and she should indeed "move over." In the case of the white male theorist who discussed architecture instead of the politics of postmodernism, the effect of his refusal was that he offered no contribution to an important issue and all of us there lost an opportunity to discuss and explore it. Now let me turn to the example of George Bush. When Bush claimed that Noriega is a corrupt dictator who stands in the way of democracy in Panama, he repeated a claim which has been made almost word for word by the Opposition movement in Panama. Yet the effects of the two statements are vastly different because the meaning of the claim changes radically depending on who states it. When the president of the United States stands before the world passing judgement on a Third World government, and criticizing it on the basis of corruption and a lack of democracy, the immediate effect of this statement, as opposed to the Opposition's, is to reinforce the prominent Anglo view that Latin American corruption is the primary cause of the region's poverty and lack of democracy, that the U.S. is on the side of democracy in the region, and that the U.S. opposes corruption and tyranny. Thus, the effect of a U.S. president's speaking for Latin America in this way is to re-consolidate U.S. imperialism by obscuring its true role in the region in torturing and murdering hundreds and thousands of people who have tried to bring democratic and progressive governments into existence. And this effect will continue until the U.S. government admits its history of international mass murder and radically alters its foreign policy. IV. Conclusion This issue is complicated by the variable way in which the importance of the source, or location of the author, can be understood, a topic alluded to earlier. On one view, the author of a text is its "owner" and "originator" credited with creating its ideas and with being their authoritative interpreter. On another view, the original speaker or writer is no more privileged than any other person who articulates these views, and in fact the "author" cannot be identified in a strict sense because the concept of author is an ideological construction many abstractions removed from the way in which ideas emerge and become material forces.¹⁹ Now, does this latter position mean that the source or locatedness of the author is irrelevant? It need not entail this conclusion, though it might in some formulations. We can de-privilege the "original" author and reconceptualize ideas as traversing (almost) freely in a discursive space, available from many locations, and without a clearly identifiable originary track, and yet retain our sense that source remains relevant to effect. Our meta-theory of authorship does not preclude the material reality that in discursive spaces there is a speaker or writer credited as the author of her utterances, or that for example the feminist appropriation of the concept "patriarchy" gets tied to Kate Millett, a white Anglo feminist, or that the term feminism itself has been and is associated with a Western origin. These associations have an effect, an effect of producing distrust on the part of some Third World nationalists, an effect of reinscribing semi-conscious imperialist attitudes on the part of some first world feminists. These are not the only possible effects, and some of the effects may not be pernicious, but all the effects must be taken into account when evaluating the discourse of "patriarchy." The emphasis on effects should not imply, therefore, that an examination of the speaker's location is any less crucial. This latter examination might be called a kind of genealogy. In this sense, a genealogy involves asking how a position or view is mediated and constituted through and within the conjunction and conflict of historical, cultural, economic, psychological, and sexual practices. But it seems to me that the importance of the source of a view, and the importance of doing a genealogy, should be subsumed within an overall analysis of effects, making the central question what the effects are of the view on material and discursive practices through which it traverses and the particular configuration of power relations emergent from these. Source is relevant only to the extent that it has an impact on effect. As Gayatri Spivak likes to say, the invention of the telephone by a European upper class male in no way preempts its being put to the use of an anti-imperialist revolution. In conclusion, I would stress that the practice of speaking for others is often born of a desire for mastery, to privilege oneself as the one who more correctly understands the truth about another's situation or as one who can champion a just cause and thus achieve glory and praise. And the effect of the practice of speaking for others is often, though not always, erasure and a reinscription of sexual, national, and other kinds of hierarchies. I hope that this analysis will contribute toward rather than diminish the important discussion going on today about how to develop strategies for a more equitable, just distribution of the ability to speak and be heard. But this development should not be taken as an absolute dis-authorization of all practices of speaking for. It is not always the case that when others unlike me speak for me I have ended up worse off, or that when we speak for others they end up worse off. Sometimes, as Loyce Stewart has argued, we do need a "messenger" to advocate for our needs. The source of a claim or discursive practice in suspect motives or maneuvers or in privileged social locations, I have argued, though it is always relevant, cannot be sufficient to repudiate it. We must ask further questions about its effects, questions which amount to the following: will it enable the empowerment of oppressed peoples?

Embrace a politics of listening—this allows everyone in this round to come to grips with their own privilege and meaningfully reform the racial matrix

Dreher, 9—professor at University of Technology, Sydney (Tanja, "Eavesdropping with Permission: the Politics of Listening for Safe Speaking Spaces", Borderlands E-Journal, Volume 8 Number 1, www.borderlands.net.au/vol8no1_2009/dreher_eavesdropping.pdf)//twemchen

This paper explores the possibilities and limits of a politics of 'listening' as a strategy for a privileged white woman to contribute to antiracism in the face of dominant discourses of gendered protectionism. Reflecting on my own role as a co-convenor of a series of workshops aimed at intervening in discourses and policies of 'protection' directed at Indigenous and Muslim women, I suggest that 'eavesdropping with permission' may in some cases contribute to the negotiation of safer speaking spaces. In contrast to 'dialogue' aimed at empathy or understanding, 'eavesdropping with permission' involves the possibility of shifting risk and redistributing discomfort in order to unsettle the privileges of a centralized speaking position. In this paper I reflect on my role in a series of small workshops focused on the politics of gendered protectionism faced by Indigenous and Muslim women in Australia. My involvement began with a challenge overheard at two events held on the first anniversary of the Cronulla riots, in early December 2006. In very different ways, two conferences held in Sydney at that time ended with some participants interested in creating safe spaces for potentially difficult conversations between Indigenous people and Muslims in Australian. Here I reflect on my experiences as a co-convenor of the resulting 'Gender, Violence, Protection'

workshop series in an attempt to analyse some of the possibilities for a white, middle-class woman like myself, influenced by feminisms, antiracism and critical race and whiteness studies, to contribute to developing safer spaces for speaking and listening across differences in the context of Indigenous sovereignty, and despite the persistence of colonial feminism and the privileges of whiteness. Drawing on recent work on the politics of speaking and listening, I suggest that a particular form of 'political listening' (Bickford 1996) or 'eavesdropping' (Raftcliffe 2005) may enable people, like myself, who are discursively privileged, to contribute to antiracism without dominating the space of conversation. This eavesdropping entails a shift to the margins and an ongoing negotiation of discomfort and permission. In my analysis I highlight the unease and uncertainty provoked by eavesdropping as a register of shifting hierarchies of safety and risk, and also the impossibility of simply 'transcending' networks of privilege and power. What's a middle class white feminist to do? Given these pitfalls, what is a middle class white woman to do? Is there any role for me in the work of creating safe spaces for new conversations? Scholarship which works across feminism, antiracism, postcolonial and critical race and whiteness studies offers many provocative suggestions. The tradition of transnational feminism tends to focus on strategies of alliances and intersectional politics, while scholars engaging with whiteness and Indigenous sovereignties emphasise the need to unlearn privilege and give up power. Aileen Moreton-Robinson concludes her analysis of whiteness and Australian feminisms by arguing that, 'the real challenge for white feminists is to theorise the relinquishment of power' (2000: 186). In her analysis of speaking positions, the role of academic research and violence against Indigenous women, Sonia Smallacombe argues that the central challenge is 'whether feminists and their institutions interrogate their own power base and whether they are willing to move aside to give space for Indigenous women's voices' (2004: 51). Fiona Nicoll (2004) reflects on her own experiences as a middle-class white woman teaching critical race and whiteness studies in Indigenous sovereignties and suggests that this teaching must challenge students to locate 'their own position within racialised networks of power' and should 'shift focus from the racialised oppression of Indigenous Australians to the white middle-class subject position that is a direct product of this oppression'. According to Nicoll, 'the task of non-Indigenous students and teachers becomes that of observing and beginning to denaturalize the everyday invasiveness of policies and practices underpinned by patriarchal white sovereignty' (2004: 6). These are compelling reminders that white women must do their own race work and focus attention on their own privileges and power (see also Raftcliffe 2005: 5-6). This can be difficult and uncomfortable work, in which good intentions are deeply suspect. Alison Jones (1999) contends that 'even good intentions by the dominant group are not always sufficient to enable their ears to 'hear', and therefore for the other to 'speak'. Many authors analyse the ways in which racism is perpetuated under the guise of 'good intentions' and Damien Riggs (2004: 9) highlights Jane Haggis' suggestion that Australian critical race and whiteness studies 'should not be about making non-Indigenous people 'comfortable', but should instead continue to destabilise the assumptions of privilege that inform non-Indigenous belonging'. My involvement in this project, and the writing of this paper, has been uncomfortable and uncertain. I have experienced levels of panic far greater than my usual nervousness before public speaking — and this anxiety has manifested bodily, in sleeplessness and loss of appetite and nausea and shivering. Mindful of Sara Ahmed's (2004) analyses of 'bad feeling', I reflect on these discomforts as a register of the violent colonial histories and ongoing racisms which form the possibilities for action and change, rather than as markers of an end to or an overcoming of racism. Rather than transcending 'bad feeling' the challenge is to work to redistribute risk and discomfort as a means to developing better possibilities for listening and speaking.

2nc Link Wall

Speaking about others is indistinguishable from speaking for others— they are representing the Other as they wish

Alcoff, 91—Associate Professor of Philosophy and Women's Studies and the Meredith Professor for Teaching Excellence at Syracuse University (Linda, Winter 1991, "The Problem of Speaking for Others," Cultural Critique, No. 20, p. 5-32)//twemchen

But first I need to explain further my framing of the problem. In the examples used above, there may appear to be a conflation between the issue of speaking for others and the issue of speaking about others.

This conflation was intentional on my part, **because it is difficult to distinguish speaking about from speaking for** in all cases. There is an ambiguity in the two phrases: when one is speaking for another one may be describing their situation and thus also speaking about them. In fact, it may be impossible to speak for another without simultaneously conferring information about them. Similarly, when one is speaking about another, or simply trying to describe their situation or some aspect of it, one may also be speaking in place of them, i.e. speaking for them. One may be speaking about another as an advocate or a messenger if the person cannot speak for herself. Thus I would maintain that if the practice of speaking for others is problematic, so too must be the practice of speaking about others.⁸ This is partly the case because of what has been called the "**crisis of representation.**" For in both the practice of speaking for as well as the practice of speaking about others, I am engaging in the act of representing the other's needs, goals, situation, and in fact, who they are, based on my own situated interpretation. In post-structuralist terms, I am participating in the construction of their subject-positions rather than simply discovering their true selves. Once we pose it as a problem of representation, we see that, not only are speaking for and speaking about analytically close, so too are the practices of speaking for others and speaking for myself. For, in speaking for myself, I am also representing my self in a certain way, as occupying a specific subject-position, having certain characteristics and not others, and so on. In speaking for myself, I (momentarily) create my self---just as much as when I speak for others I create them as a public, discursive self, a self which is more unified than any subjective experience can support. And this public self will in most cases have an effect on the self experienced as interiority. The point here is that **the problem of representation underlies all cases of speaking for**, whether I am speaking for myself or for others. **This is not to suggest that all representations are fictions: they have very real material effects, as well as material origins, but they are always mediated in complex ways by discourse, power, and location.** However, the problem of speaking for others is more specific than the problem of representation generally, and requires its own particular analysis. There is one final point I want to make before we can pursue this analysis. The way I have articulated this problem may imply that individuals make conscious choices about their discursive practice free of ideology and the constraints of material reality. This is not what I wish to imply. **The problem of speaking for others is a social one,** the options available to us are socially constructed, **and the practices we engage in cannot be understood as simply the results of autonomous individual choice.** Yet to replace both "I" and "we" with a passive voice that erases agency results in an erasure of responsibility and accountability for one's speech, an erasure I would strenuously argue against (there is too little responsibility-taking already in Western practice!). When we sit down to write, or get up to speak, we experience ourselves as making choices. We may experience hesitation from fear of being criticized or from fear of exacerbating a problem we would like to remedy, or we may experience a resolve to speak despite existing obstacles, but in many cases we experience having the possibility to speak or not to speak. On the one hand, a theory which explains this experience as involving autonomous choices free of material structures would be false and ideological, but on the other hand, if we do not acknowledge the activity of choice and the experience of individual doubt, we are denying a reality of our experiential lives.⁹ So I see the argument of this paper as addressing that small space of discursive agency we all experience, however multi-layered, fictional, and constrained it in fact is.

Even if the Other supposedly wants to be spoken for, it is still an act of representing the Other which ignores the imbalance of power and recreates violence

Alcoff, 91—Associate Professor of Philosophy and Women's Studies and the Meredith Professor for Teaching Excellence at Syracuse University (Linda, Winter 1991, "The Problem of Speaking for Others," Cultural Critique, No. 20, p. 5-32)//twemchen

There is another sense of representation that may seem also vitally connected here: political representation, as in, for example, electoral politics. Elected representatives have a special kind of authorization to speak for their constituents, and one might wonder whether such authorization dissolves the problems associated with speaking for others and therefore should perhaps serve as a model solution for the problem. I would answer both yes and no. Elected representatives do have a kind of authorization to speak for others, and we may even expand this to include less formal instances in which someone is authorized

by the person(s) spoken for to speak on their behalf. There are many examples of this sort of authorizing, such as when I asked my partner to speak on my behalf in the hospital delivery room, or when my student authorized me to speak on her behalf in a meeting with the chancellor. However, the procurement of such authorization does not render null and void all attendant problems with speaking for others. One is still interpreting the other's situation and wishes (unless perhaps one simply reads a written text they have supplied), and so one is still creating for them a self in the presence of others. Moreover, the power to confer such authorization, and to have power over the designated representative, is rarely present in the instances where one is being spoken for. Intellectual work has certainly not been guided by the mandate to get permission from those whom one is speaking for and about, and it is safe to say that most political representatives have not been strictly guided by the need to get such authorization either. The point here is that the model of political representation cannot be used in all instances of speaking for others, though it may prove instructive when we attempt to formulate responses to the problem.

A2 - Permutation

A historical and social analysis of the development and usages of language is a starting point to the 1AC—or else the AFF can never successfully combat Islamophobia and its effects on individuals

Marino, 5—philosophy professor at Macalester University (Lauren, 5/1/5, "Speaking for Others", Macalester Journal of Philosophy, Volume 14, Issue 1, Article 4, digitalcommons.macalester.edu/cgi/viewcontent.cgi?article=1016&context=philology)//twemchen

Speaker location is a recent yet important discussion in the philosophy of language. It was suggested by Linda Alcoff in her article "The Problem of Speaking for Others" that a speaker's location affects not only the meaning but also the truth of what is said.¹ With this in mind, there are two problems with speaking for other people that need to be resolved. The first is the relation of language to the self, and the access we have to the experience of others. The second is the political dimension that determines the effective and appropriate situations for speaking for others. I will argue that the self is constituted through language games and as such, when we speak for others we must be careful not to remove agency from the other, and force upon them our definition of who they are. I will argue that bell hooks' argument for the oppressed to create new language games through organic intellectuals is the best struggle in which the oppressed can engage. To determine the relationship between language and the self is to determine how language gains meaning. This is a strange endeavor to the nonphilosopher. Lay people don't need to question why others comprehend what they say. They are understood and understand others as well. To ask what they mean by their language is a superfluous investigation. Why? Because language hasn't failed yet. Words seem so organic that it is often difficult to step back and try to understand how they work. A theory of meaning is not necessary for words to work. Yet philosophy does ¹ Alcoff, Linda. "The Problem of Speaking for Others." Cultural Critique (Winter): 5-32. 1991 36 search for such a system. The danger is that philosophy will muddle a perfectly functional system. The initial understanding of language is implied in the philosophy of Descartes. Descartes views the mind as a private place. The mind has thoughts that it conveys to the world through language. I have a thought inside my private mind which I then translate into language. Words stand in for these private ideas, ideas to which only the speaker has access. The outside world cannot know my mind except through the language I use to describe it. Language therefore gains meaning directly from the Cartesian mind. Wittgenstein offers a different understanding of language and the self. He rejects the idea that language could gain meaning from a private objects in the mind of a speaker. He believes that language gains meaning through public use in a community of speakers. The classic example of this is Wittgenstein's king piece on a chessboard. To teach someone what a king is, we can point to a king and say, "This is a king," but she doesn't actually understand what the piece is until she understands the use of

the piece in the game. The game metaphor is extended to language. As in a game, the use of language must be rule guided. In order to communicate with each other, we need to understand the rules of communication. The rules of chess make the game and define a use for the term "king." When we understand the rules, we are initiated and can play chess ourselves. Language functions in the same way. There are multiple language games, each with their own context and rules of use. The rules of use are specific to each game. Like games, language games are created and die; they evolve until we have no use for them. There are multiple language games, each specific to their form. As a result, for Wittgenstein, there can be no private language that refers to objects accessible to the 37 speaker alone. In order to participate in a language game I have to be familiar with rules. I learn rules through socialization, because my community teaches me the rules. Just as I learned to play gin rummy by my family teaching the rules to me, my family also taught me how to use words in different language games. I was taught that the word believe in the sentence "I believe in God," was used differently than in the sentence "I believe you." I was initiated into the language games of religion and trust. But the rules I learned were contingent on my community. Correct usage was determined by the community's understanding of the rules. Understanding this correct usage is being initiated into the language game. As in regular games, I cannot play a language game when I do not know the rules. When I went to play gin rummy at a friend's house, I lost a hundred points for holding the queen of spades at the end of a hand. An alien rule to me, I was upset that I lost, and from my perspective unfairly. We were playing two different games, because the rules were different. Language works the same way. The sentence "I believe in God," means something different to a Catholic than to a Protestant. To understand the rules, we have to be initiated. Private language cannot determine meaning in the manner Wittgenstein describes and others cannot be initiated into a private language. The objects, the thoughts of a Cartesian mind, are in an exclusive space that others cannot enter. As such we have an epistemological privilege where our own minds are concerned. Whatever seems to be the case is the case. Because we individually determine the use of a private language, there is no way we can be wrong. If everything is in accordance with a rule, it is doubtful we have a rule at all. In fact, not only do we not have a rule but the language would be meaningless even for 38 the person whose language it is. Without a rule following, no public consensus can be reached. Without a rule, a word can have no regular use and hence no meaning. Language is used to make connections between individuals and this requires that we follow rules. Wittgenstein writes that "If language is to be a means of communication there must be agreement not only in definitions but also (queer as this may sound) in judgments."² To base a language game on something the individual has exclusive access to, is a failing language game. It cannot use language because, "the individual words of this language are to refer to what can only be known to the person speaking; to his immediate private sensations. So another person cannot understand the language."³ Meaning is lost. Private language cannot follow public rules and cannot produce meaning. The concept of a self within this framework shifts from Descartes self inside a private mind, to a self that is public, constituted within language games and the self becomes contingent. Each person is familiar with her own set of language games. While each person may have a unique combination of language games, none of the language games within the set is unique to that individual alone. There is no private self, within this understanding of language. Rather our experience is constituted through a public language. Therefore the self is not an isolated private mind, but rather the self is constituted by language games. Richard Rorty argues that a self constituted by language games is itself contingent, because if I change my languages games I change myself. This also means that selves cannot exist outside of language because ² Wittgenstein, Ludwig. *Philosophical Investigations*. Englewood, NJ: Prentice Hall. 1958 (#242) ³ *Ibid.* (#243) ³⁹ language comprises the self. In this interpretation, a private Cartesian self is nonsensical. The experience of oppression is usually perceived to be a private language. Only an individual knows how she is oppressed and how it affects her. The problem is that because no one else has access to my mind, whatever seems to be the case is the case.

Discourse comes first—Interrogation of metaphors challenges the root of oppressive policymaking discourses, and comes prior to creating social change

O'Brien, 9—associate professor at Southern Illinois University (Gerald V., Winter 2009, “Metaphors and the pejorative framing of marginalized groups: implications for social work education,” *Journal of Social Work Education*, 45.1, pg. 29-47, Gale Onefile)//twemchen

Rather than arguing about whether there are any bases in fact that undergird such presentations, we should consider such statements in their proper light, as propagandistic efforts to control the identity of a group of individuals for purposes of power augmentation by an opposition group and to foster their policymaking hegemony. Policy, as I attest in this article, begins with the attempt by stakeholders to control, manage, and wield words, images, and stories to present a desired means of imagining a social problem or community subgroup. Social workers who are unaware of this aspect of policy or who dismiss it as having minor importance put themselves at an extreme disadvantage in their efforts to have measurable positive impacts on the development of social policy within the context of a national landscape that increasingly favors style over substance. Although a number of social work and related writings have described the potential importance of metaphor analysis within the profession, few of these works touch on policy considerations. Normally, metaphor is discussed as a useful tool for micro- or mezzolevel intervention. Articles by Adams (1997) and Lyddon, Clay, and Sparks (2001), for example, provided examples of metaphors as a means of providing clients with increased awareness of their issues, as an unusual but potentially fruitful means of soliciting difficult information from clients, or, as Lyddon and his coauthors noted, for “introducing new frames of reference” (p. 269) from which clients can consider their issues or goals. Goldstein (1999) described root metaphors as basic truths about the world as social workers see it that informs their interactions with clients, and Duffy (2001) described various means of using metaphors as a form of group work. Educators in social policy should find ways to incorporate metaphor components within their syllabi and could even require students to include sections in policy papers on the perceptual images and media and stakeholder framings of specific client groups. Students need to understand that specific policies are developed with an image of the client or client group in mind. Different policies, even related to the same social problem, relate largely to differing images of the recipient class. As alluded to above, denigrating stereotypes often have an extremely long “shelf life” because the metaphors that are intrinsically related to those stereotypes become cultural images. Moreover, as noted above, these images are often transplanted from one out-group to another across time. As the importance and science of political rhetoric, including metaphors, have evolved, the image-making industry has boomed. This has, it should be mentioned, been pushed along by the vast expansion of new modes of information, especially over the Internet (e.g., blogs and Web sites such as YouTube). Because of the need to set forth the image that what they do is something other than manipulation of the public, these individuals normally present themselves in a more acceptable guise. A plethora of media consultants, legislative aides, think-tank staff, industrial and corporate public relations specialists, and other individuals spend a great deal of time and effort attempting to fashion and spread their preferred vision of the political landscape in ways that are both easily digestible for the general public and highly profitable for their employers or careers. Because policy analysis is impossible without considering important stakeholder groups, social work students need to see these individuals as strategic players in the political arena. It may do little good for social workers to become heavily involved further down the policy road (e.g., attempting to assist with the development, implementation, evaluation, and revision of policies) if the basic framing of issues and groups is left to others, because this framing forms the foundation onto which a policy structure is created.

Your first question should be the way that language is used – it’s the most concrete, immediate way to target and challenge oppression

Collins and Glover 2 (John Collins, Ass. Prof. of Global Studies at St. Lawrence, and Ross Glover, Visiting Professor of Sociology at St. Lawrence University, 2002, *Collateral Language*, p. 6-7, *The Real Effects of Language*)

As any university student knows, theories about the “social construction” and social effects of language have become a common feature of academic scholarship. Conservative critics often argue that those who use these theories of language (e.g., deconstruction) are “just” talking about language, as opposed to talking about the “real world.” The essays in this book, by contrast, begin from the premise that language matters in the most concrete, immediate way possible: its use, by political and military leaders, leads directly to violence in the form of war, mass murder (including genocide), the physical destruction of human communities, and the devastation of the natural environment. Indeed, if

the world ever witnesses a nuclear holocaust, it will probably be because leaders in more than one country have succeeded in convincing their people, through the use of political language, that the use of nuclear weapons and, if necessary, the destruction of the earth itself, is justifiable. From our perspective, then, every act of political violence—from the horrors perpetrated against Native Americans to the murder of political dissidents in the Soviet Union to the destruction of the World Trade Center, and now the bombing of Afghanistan—is intimately linked with the use of language. Partly what we are talking about here, of course, are the processes of “manufacturing consent” and shaping people’s perception of the world around them; people are more likely to support acts of violence committed in their name if the recipients of the violence have been defined as “terrorists” or if the violence is presented as a defense of “freedom.” Media analysts such as Noam Chomsky have written eloquently about the corrosive effects that this kind of process has on the political culture of supposedly democratic societies. At the risk of stating the obvious, however, the most fundamental effects of violence are those that are visited upon the objects of violence; the language that shapes public opinion is the same language that burns villages, besieges entire populations, kills and maims human bodies, and leaves the ground scarred with bomb craters and littered with land mines. As George Orwell so famously illustrated in his work, acts of violence can easily be made more palatable through the use of euphemisms such as “pacification” or, to use an example discussed in this book, “targets.” It is important to point out, however, that the need for such language derives from the simple fact that the violence itself is abhorrent. Were it not for the abstract language of “vital interests” and “surgical strikes” and the flattering language of “civilization” and “just” wars, we would be less likely to avert our mental gaze from the physical effects of violence.

A2 – Solvency Deficits

The alternative does not necessarily reject the elite’s ability to speak—rather, an analysis of our discourse can create organic intellectuals that creates a counter-language to bridge the oppressed and the oppressors

Marino, 5—philosophy professor at Macalester University (Lauren, 5/1/5, "Speaking for Others", Macalester Journal of Philosophy, Volume 14, Issue 1, Article 4, [//twemc hen](http://digitalcommons.macalester.edu/cgi/viewcontent.cgi?article=1016&context=philo)

The margin must produce organic intellectuals. It might be thought that these organic intellectuals should translate between language games. But as hooks points out, using “the oppressor’s language” is not adequate because it cannot articulate the experience of the oppressed. Yet, it is the only language game the oppressing can play. Organic intellectuals affect the center from the margins if they are able to incorporate multiple voices in the texts they create. The goal of the organic intellectual according to hooks is to “identify the spaces where we begin a process of revision” to create a counter-ideology. ⁸ Hooks relates this agency to language. “Language is also a place of struggle.”⁹ The counterculture can produce a counter-language, which is able to produce a new language to mediate between the margins and the center. Necessarily the new game must include portions of both old language games or no one will understand it. It must use old understandings to create Gramsci, Antonio. *The Prison Notebooks. The Intellectuals.* New York: International Publishers. 1971 p.3-23 ⁸ hooks, bell. “Choosing the Margin as a Space of Radical Openness.” *Yearning: Race, Gender and Cultural Politics. Between the Lines.* 1990. ⁹ *Ibid.* 45 new meanings. These counter-languages can function as the intermediary language games that the oppressed and the elites can be initiated simultaneously. A new language game must be created. A good example of this is Martin Luther King’s “I Have a Dream” speech. He used concepts of freedom and democracy familiar to the center to explain the experience of the oppressed within in the mainstream language game, as well

as created new metaphors and linguistic form, i.e. the preacher's sermon, to bring the voice of the oppressed and the oppressors into a realm of communication. (bell hooks uses the preachers sermon form in her refrain 'language is also a place of struggle'). 10 One famous metaphor is freedom as a bounced check to African Americans. This created a new understanding of the situation. It worked between the language of oppression understood by African Americans and the center's understanding of freedom and the promises of democracy. King was able to include multiple voices, building a bridge between the margin and the center. The conclusion of hooks is that the margin can be more than a place of oppression and alienation. It can be "a site of radical possibility, a space of resistance," that is not open to those in the center. It is the space to produce counter-hegemonic culture that the organic intellectual is looking for. The oppressed can retell their story, and if we accept Rorty's argument that the self is contingent, the oppressed create themselves in the process. To speak for the oppressed is to silence them. Moreover, in their absence of voice, we define them. We can define them in many ways, but they will always be a "they" and not an "us." They will be the other. We must have faith in the margins to produce new language games to communicate with us.

The alternative is to analyze and recognize the disparities that exist between the oppressed and the oppressors—only by allowing the oppressed to talk for themselves can we fully understand Islamophobia

Marino, 5—philosophy professor at Macalester University (Lauren, 5/1/5, "Speaking for Others", Macalester Journal of Philosophy, Volume 14, Issue 1, Article 4, [//twemc hen](http://digitalcommons.macalester.edu/cgi/viewcontent.cgi?article=1016&context=philo)

As far as my thoughts are concerned, my use of language to describe my internal feelings is the only language that can be used to describe them, and the distinction between correct and incorrect rule following collapses. This is not to say we should doubt a person when she says she feels oppressed. Rather, Wittgenstein believes this form of skepticism is embedded in a Cartesian understanding of the mind. When I speak, I play a language game that no one has been initiated into. I define meaning. This is suspect foundation for a language game, because language is not a private activity. We use language to make connections between individuals. The problem is that oppression takes the form of oppression of individuals. For example, torture is not a common experience within a community. The experience does not gain voice within a community because it is not an experience that others will share. Hence, no language can be developed to speak about it. However, there is hope within Wittgenstein's arguments if we apply a new political dimension with Rorty and Alcoff. These views of language implicate the philosophical relationship between language and the self. The Cartesian sense of self means that only I can accurately speak for myself, because my thoughts are in a private space no one else can enter. It is not created by speaking, but rather it simply exists as a stable entity. This extends to the problem of speaking for others, because only an oppressed group knows how they are oppressed and how it affects them. The problem is that 40 because no one else outside the group has access to their subjective state of oppression. The language they may use to express it functions as a private language to the rest of society. All specific language games functions this way. However, the language game the oppressed use to express their oppression is one that necessarily needs to transcend its community to spur change. But, no one but the oppressed can play it, and therefore no outside connection can be made. It cannot produce public meaning. However, if language gains meaning from use, then access to the private objects of the oppressed group's language game is not hopeless. There is no longer a private self but only the public self. We, including the oppressed, become our descriptions of ourselves. Groups can fall into dominant language games and descriptions, but in doing so we allow others to define who we are. We must determine what is true of and for ourselves. I conclude with Rorty that: It was Nietzsche who...suggested that we drop the idea of "knowing the truth."...He hope that once we realized that Plato's "true world" was just a fable, we would seek consolation...in being that peculiar sort of dying animal who, by describing himself in his own terms, had created himself. More exactly, he would have created the only part of himself that mattered by constructing his own mind. To create one's mind is to create one's own language. 4 There is no privileged truth but rather truth is relative to our adopted language games. Truth becomes not objective Truth, but something that is agreed upon; it is contingent. 4 Rorty, Richard. Contingency, Irony and Solidarity. Boston: Cambridge University Press. 1989 41 This brings us to the political issue. The intuitive response is to do everything possible to allow the oppressed to speak for themselves. This is not always possible. But, if language constitutes the self, then who can speak for the oppressed and how can she do so? Alcoff's understanding of speaking for others is

a good starting point. ⁵ Her general argument is that the location of the speaker affects the meaning and truth of what is said. Moreover, the location of the speaker affects the speech itself. Language is a creative activity and what we create is contingent on where we are located within society. Alcott's arguments can be added to Rorty's interpretation of the self. When we speak we are not only creating new truth relative to the language games we employ, but we create ourselves. Hooks uses this idea of selves to create a political program for oppressed groups. She extends the metaphor of language as a game. If language is a game then it has elements of competition and power, and even playfulness. These elements can be used to make a speech for others a speech to their advantage, but with a few caveats. The first is that we initially resist the urge to speak for others and listen to them. This ideally allows the speaker to share agency with the oppressed by including them in the creative process. Secondly, we must account for our location and context when we speak. President Bush's analysis of Iraq is very different from that of an Iraqi. Each should account for the way their location affects his speech. Third, the speaker must be responsible for her own speech. Speaking on behalf of someone else doesn't enable the speaker to speak without thought. Finally, the speaker must attempt to take account of the affects of the speech. Ultimately, we must recognize that speaking and silence are always a political decision. We must use our voice consciously. If the self is located within language games there is a commonality between those who share language games. This removes some of the barriers between selves and I do have access to the experience of those with whom I share language games. Sharing language games means sharing experience. I am able to speak for those who language games I play. There are some problems with this understanding. Alcott thinks membership in a group is not precise or determinate. It is unclear which groups I could belong to and which of those groups I should single out to affiliate myself. More importantly, membership in a group doesn't necessarily mean an authority to speak for the whole group. However, if we accept that the self is constituted within language, then those who share language games with me have direct access to my experience in away that no one can ever have access to a Cartesian mind. We do not need to ask for absolute identity, language and experience between speakers but just a commonality. Furthermore, Bernstein argues that we cannot speak without speaking for other people. ⁶ The speaker's location is necessarily a location in relation to other people. The relationship cannot be removed, and we cannot avoid it. Speaking at all makes speaking for others inevitable. We return to the intuitive response to the struggle of oppressed groups: have the group speak for itself. Speaking becomes a type of agency in which I construct myself because contrary to a Cartesian self, selves do not exist prior to or separate from language. To lose my speech is to lose myself. The oppressed have the ability to communicate with each other and through their language game they are able to discuss ⁶ Bernstein, Susan. ⁴³ their struggle with one another. Sharing languages games enables the oppressed to a specific, limited dimension of power. Their language game will always fail to communicate their struggle to those who have not been initiated into it. They have direct access to the experience of oppression and their agency, but they can only reach their own group. Those on the margin cannot reach those in the center. On the other hand, those in the center, the elites, share a language that can reach the majority of society. It is a language game they are familiar with and can use adeptly. However, they do not have the experience with or access to the language game of the oppressed. They have the power to use their language but nothing to say. The catch-22 is the choice between a group who embodies the agency and the dimensions of political struggle against oppression without a way to communicate it to the larger community, and a group with the language to reach society but is ignorant of the political struggle. There lies a need for a synergy between the experience of the oppressed on the margins and the language game of those in the center. The synergy requires a speaker who comes from the oppressed but has knowledge of the language game of the center. Such a person could incorporate the experience of the oppressed into a new language game that could be accessed by those in power. The concern is what is lost and sacrificed in translation.

A2 – Can't Speak

<read the block answer to “our speech act good”—they all apply>

The 1AC speech act is a tautological form of silencing—it stops the oppressed people to speak for themselves while speaking for them for personal goals

Alcoff, 91—Associate Professor of Philosophy and Women's Studies and the Meredith Professor for Teaching Excellence at Syracuse University (Linda, Winter 1991, “The Problem of Speaking for Others,” Cultural Critique, No. 20, p. 5-32)//twemchen

So it might be argued that the retreat from speaking for others can be maintained without sacrificing political effectivity if it is restricted to particular discursive spaces. Neither Premise (1) nor Premise (2) entail reductionism or essentialism. They argue for the relevance of location, not its singular power of determination, and they are non-committal on how to construe the metaphysics of location. While the “Charge of Reductionism” response has been popular among academic theorists, what I call the “Retreat” response has been popular among some sections of the U.S. feminist movement. This response is simply to retreat from all practices of speaking for; it asserts that one can only know one's own narrow individual experience and one's "own truth" and thus that one can never make claims beyond this. This response is motivated in part by the desire to recognize difference and different priorities, without organizing these differences into hierarchies. Now, sometimes I think this is the proper response to the problem of speaking for others, depending on who is making it. We certainly want to encourage a more receptive listening on the part of the discursively privileged and to discourage presumptuous and oppressive practices of speaking for. And the desire to retreat sometimes results from the desire to engage in political work but without practicing what might be called discursive imperialism. But a retreat from speaking for will not result in an increase in receptive listening in all cases; it may result merely in a retreat into a narcissistic yuppie lifestyle in which a privileged person takes no responsibility for her society whatsoever. She may even feel justified in exploiting her privileged capacity for personal happiness at the expense of others on the grounds that she has no alternative. The major problem with such a retreat is that it significantly undercuts the possibility of political effectivity. There are numerous examples of the practice of speaking for others which have been politically efficacious in advancing the needs of those spoken for, from Rigoberta Menchu to Edward Said and Steven Biko. Menchu's efforts to speak for the 33 Indian communities facing genocide in Guatemala have helped to raise money for the revolution and bring pressure against the Guatemalan and U.S. governments who have committed the massacres in collusion. The point is not that for some speakers the danger of speaking for others does not arise, but that in some cases certain political effects can be garnered in no other way. Joyce Trebilcot's version of the retreat response, which I mentioned at the outset of this essay, raises other issues. She agrees that an absolute prohibition of speaking for would undermine political effectiveness, and therefore says that she will avoid speaking for others only within her lesbian feminist community. So it might be argued that the retreat from speaking for others can be maintained without sacrificing political effectivity if it is restricted to particular discursive spaces. Why might one advocate such a partial retreat? Given that interpretations and meanings are discursive constructions made by embodied speakers, Trebilcot worries that attempting to persuade or speak for another will cut off that person's ability or willingness to engage in the constructive act of developing meaning. Since no embodied speaker can produce more than a partial account, and since the process of producing meaning is necessarily collective, everyone's account within a specified community needs to be encouraged. I agree with a great deal of Trebilcot's argument. I certainly agree that in some instances speaking for others constitutes a violence and should be stopped

A2 – On Behalf Of...

A speech for the oppressed is to re-create their silence and force them to conform to our expectations and definitions

Marino, 5—philosophy professor at Macalester University (Lauren, 5/1/5, "Speaking for Others", Macalester Journal of Philosophy, Volume 14, Issue 1, Article 4, digitalcommons.macalester.edu/cgi/viewcontent.cgi?article=1016&context=philo)//twemchen

If the language games are so disparate that initiation in one, offers no insight into the rules of the other, than there is doubt that translation can be done at all. If translation cannot be done, the best to be hoped for is cooption forcing the margins into the mainstream. What then is the solution? I agree with bell hooks that **the oppressed must celebrate their position on the margins. The oppressed must produce intellectuals so that the dominated can speak to the dominating.** The idea goes back to Antonio Gramsci's concept of the organic intellectual. 7 The elites are indoctrinated in the ruling ideology and have an investment in the current order. **No matter how progressive their politics may be, the elite will always be the elite. Their investment in the current social order precludes offers of true systemic change.** Gramsci writes of the need for the working class to develop its own intellectuals who are organically tied to their class. This argument is similar to hooks' argument. **The margin must produce organic intellectuals.** It might be thought that these organic intellectuals should translate between language games. But as hooks points out, **using "the oppressor's language" is not adequate because it cannot articulate the experience of the oppressed.** Yet, it is the only language game the oppressing can play. Organic intellectuals affect the center from the margins if they are able to incorporate multiple voices in the texts they create. The goal of the organic intellectual according to hooks is to "identify the spaces where we begin a process of revision" to create a counter-ideology. 8 Hooks relates this agency to language. "Language is also a place of struggle."9 The counterculture can produce a counter-language, which is able to produce a new language to mediate between the margins and the center. Necessarily the new game must include portions of both old language games or no one will understand it. It must use old understandings to create 7 Gramsci, Antonio. The Prison Notebooks. The Intellectuals. New York: International Publishers. 1971 p.3-23 8 hooks, bell. "Choosing the Margin as a Space of Radical Openness." Yearning: Race, Gender and Cultural Politics. Between the Lines. 1990. 9 Ibid. 45 new meanings. These counter-languages can function as the intermediary language games that the oppressed and the elites can be initiated simultaneously. A new language game must be created. A good example of this is Martin Luther King's "I Have a Dream" speech. He used concepts of freedom and democracy familiar to the center to explain the experience of the oppressed within in the mainstream language game, as well as created new metaphors and linguistic form, i.e. the preacher's sermon, to bring the voice of the oppressed and the oppressors into a realm of communication. (bell hooks uses the preachers sermon form in her refrain 'language is also a place of struggle'). 10 One famous metaphor is freedom as a bounced check to African Americans. This created a new understanding of the situation. It worked between the language of oppression understood by African Americans and the center's understanding of freedom and the promises of democracy. King was able to include multiple voices, building a bridge between the margin and the center. The conclusion of hooks is that the margin can be more than a place of oppression and alienation. **It can be "a site of radical possibility, a space of resistance," that is not open to those in the center.** It is the space to produce counter-hegemonic culture that the organic intellectual is looking for. **The oppressed can retell their story, and** if we accept Rorty's argument that the self is contingent, **the oppressed create themselves in the process. To speak for the oppressed is to silence them. Moreover, in their absence of voice, we define them. We can define them in many ways, but they will always be a "they" and not an "us." They will be the other. We must have faith in the margins to produce new language games to communicate with us.**

The alternative is not a blanket rejection of the stories of the Other—but our links outline why their speech act is bad

Alcoff, 91—Associate Professor of Philosophy and Women's Studies and the Meredith Professor for Teaching Excellence at Syracuse University (Linda, Winter 1991, "The Problem of Speaking for Others," Cultural Critique, No. 20, p. 5-32)//twemchen

III. In rejecting a general retreat from speaking for, I am not advocating a return to an unself-conscious appropriation of the other, but rather that anyone who speaks for others should only do so out of a concrete analysis of the particular power relations and discursive effects involved. I want to develop this point by elucidating four sets of interrogatory practices which are meant to help evaluate possible and actual instances of speaking for. In list form they may appear to resemble an algorithm, as if we could plug in an instance of speaking for and factor out an analysis and evaluation. However, they are meant only to suggest the questions that should be asked concerning any such discursive practice. These are by no means original: they have been learned and practiced by many activists and theorists.

Their intentions are irrelevant—their speech from a social location of privilege and knowledge imposes silence and racism on the silent Muslim Americans who have suffered from racial surveillance

Alcoff, 91—Associate Professor of Philosophy and Women's Studies and the Meredith Professor for Teaching Excellence at Syracuse University (Linda, Winter 1991, "The Problem of Speaking for Others," *Cultural Critique*, No. 20, p. 5-32)//twemchen

(1) The impetus to speak must be carefully analyzed and, in many cases (certainly for academics!), fought against. This may seem an odd way to begin discussing how to speak for, but the point is that the impetus to always be the speaker and to speak in all situations must be seen for what it is: a desire for mastery and domination. If one's immediate impulse is to teach rather than listen to a less-privileged speaker, one should resist that impulse long enough to interrogate it carefully. Some of us have been taught that by right of having the dominant gender, class, race, letters after our name, or some other criterion, we are more likely to have the truth. Others have been taught the opposite and will speak haltingly, with apologies, if they speak at all.¹⁶ At the same time, we have to acknowledge that the very decision to "move over" or retreat can occur only from a position of privilege. Those who are not in a position of speaking at all cannot retreat from an action they do not employ. Moreover, making the decision for oneself whether or not to retreat is an extension or application of privilege, not an abdication of it. Still, it is sometimes called for.

(2) We must also interrogate the bearing of our location and context on what it is we are saying, and this should be an explicit part of every serious discursive practice we engage in. Constructing hypotheses about the possible connections between our location and our words is one way to begin. This procedure would be most successful if engaged in collectively with others, by which aspects of our location less obvious to us might be revealed.¹⁷ One deformed way in which this is too often carried out is when speakers offer up in the spirit of "honesty" autobiographical information about themselves, usually at the beginning of their discourse as a kind of disclaimer. This is meant to acknowledge their own understanding that they are speaking from a specified, embodied location without pretense to a transcendental truth. But as Maria Lugones and others have forcefully argued, such an act serves no good end when it is used as a disclaimer against one's ignorance or errors and is made without critical interrogation of the bearing of such an autobiography on what is about to be said. It leaves for the listeners all the real work that needs to be done. For example, if a middle class white man were to begin a speech by sharing with us this autobiographical information and then using it as a kind of apologetics for any limitations of his speech, this would leave to those of us in the audience who do not share his social location all the work of translating his terms into our own, appraising the applicability of his analysis to our diverse situation, and determining the substantive relevance of his location on his claims. This is simply what less-privileged persons have always had to do for ourselves when reading the history of philosophy, literature, etc., which makes the task of appropriating these discourses more difficult and time-consuming (and alienation more likely to result). Simple unanalyzed disclaimers do not improve on this familiar situation and may even make it worse to the extent that by offering such information the speaker may feel even more authorized to speak and be accorded more authority by his peers. (3) Speaking should always

carry with it an accountability and responsibility for what one says. To whom one is accountable is a political/epistemological choice contestable, contingent and, as Donna Haraway says, constructed through the process of discursive action. What this entails in practice is a serious commitment to remain open to criticism and to attempt actively, attentively, and sensitively to "hear" the criticism (understand it). A quick impulse to reject criticism must make one wary. (4) Here is my central point. In order to evaluate attempts to speak for others in particular instances, we need to analyze the probable or actual effects of the words on the discursive and material context. One cannot simply look at the location of the speaker or her credentials to speak; nor can one look merely at the propositional content of the speech; one must also look at where the speech goes and what it does there. Looking merely at the content of a set of claims without looking at their effects cannot produce an adequate or even meaningful evaluation of it, and this is partly because the notion of a content separate from effects does not hold up. The content of the claim, or its meaning, emerges in interaction between words and hearers within a very specific historical situation. Given this, we have to pay careful attention to the discursive arrangement in order to understand the full meaning of any given discursive event. For example, in a situation where a well-meaning First world person is speaking for a person or group in the Third world, the very discursive

arrangement may reinscribe the "hierarchy of civilizations" view where the U. S. lands squarely at the top. This effect occurs because the speaker is positioned as authoritative and empowered, as the knowledgeable subject, while the group in the Third World is reduced, merely because of the structure of the speaking practice, to an object and victim that must be championed from afar. Though the speaker may be trying to materially improve the situation of some lesser-privileged group, one of the effects of her discourse is to reinforce racist, imperialist conceptions and perhaps also to further silence the lesser-privileged group's own ability to speak and be heard.¹⁸ This shows us why it is so important to reconceptualize discourse, as Foucault recommends, as an event, which includes speaker, words, hearers, location, language, and so on. All such evaluations produced in this way will be of necessity indexed. That is, they will obtain for a very specific location and cannot be taken as universal. This simply follows from the fact that the evaluations will be based on the specific elements of historical discursive context, location of speakers and hearers, and so forth. When any of these elements is changed, a new evaluation is called for. Our ability to assess the effects of a given discursive event is limited; our ability to predict these effects is even more difficult. When meaning is plural and deferred, we can never hope to know the totality of effects. Still, we can know some of the effects our speech generates: I can find out, for example, that the people I spoke for are angry that I did so or appreciative. By learning as much as possible about the context of reception I can increase my ability to discern at least some of the possible effects. This mandates incorporating a more dialogic approach to speaking, that would include learning from and about the domains of discourse my words will affect. I want to illustrate the implications of this fourth point by applying it to the examples I gave at the beginning. In the case of Anne Cameron, if the effects of her books are truly disempowering for Native women, they are counterproductive to Cameron's own stated intentions, and she should indeed "move over." In the case of the white male theorist who discussed architecture instead of the politics of postmodernism, the effect of his refusal was that he offered no contribution to an important issue and all of us there lost an opportunity to discuss and explore it. Now let me turn to the example of George Bush. When Bush claimed that Noriega is a corrupt dictator who stands in the way of democracy in Panama, he repeated a claim which has been made almost word for word by the Opposition movement in Panama. Yet the effects of the two statements are vastly different because the meaning of the claim changes radically depending on who states it. When the president of the United States stands before the world passing judgement on a Third World government, and criticizing it on the basis of corruption and a lack of democracy, the immediate effect of this statement, as opposed to the Opposition's, is to reinforce the prominent Anglo view that Latin American corruption is the primary cause of the region's poverty and lack of democracy, that the U.S. is on the side of democracy in the region, and that the U.S. opposes corruption and tyranny. Thus, the effect of a U.S. president's speaking for Latin America in this way is to re-consolidate U.S. imperialism by obscuring its true role in the region in torturing and murdering hundreds and thousands of people who have tried to bring democratic and progressive governments into existence. And this effect will continue until the U.S. government admits its history of international mass murder and radically alters its foreign policy.

Islam K

1nc Islam K

The aff's invocation of "islamophobia" lumps racist government policy with legitimate criticisms of Islam— it's an academically bankrupt and dangerous epistemology

Duss 13 (Matthew Duss. "Denying the Existence of Islamophobia." January 10, 2013. <http://thinkprogress.org/security/2013/01/10/1427861/denying-the-existence-of-islamophobia/>)/EMerz

I'm hesitant to wade into a discussion on a book I haven't yet read, but Jonathan Schanzer's review of Nathan Lean's "The Islamophobia Industry: How the Right Manufactures Fear of Muslims" in today's Wall Street Journal makes some pretty big claims about the term "Islamophobia" itself, so I'll confine my comments to those. "In reality," Schanzer writes, "Islamophobia is simply a pejorative neologism designed to warn people away from criticizing any aspect of Islam": Those who deploy it see no difference between Islamism — political Islam and its extremist offshoots — and the religion encompassing some 1.6 billion believers world-wide. Thanks to this feat of conflation, Islamophobia transforms religious doctrines and political ideologies into something akin to race; to be an "Islamophobe" is in some circles today tantamount to being a racist. First, while Schanzer severely overstates it, **the problem of conflation is real.** I noted this in my critical review of scholar Deepa Kumar's "Islamophobia and the Politics of Empire," in which I wrote, "The problem with defining Islamophobia as broadly as Kumar does is that it threatens to divest the term of meaning": It is possible to condemn terrorism committed by Muslims in the name of religion, or to have serious concerns over the development of pluralistic democracy under Islamist-controlled governments, without being anti-Islam. **What defines Islamophobia is the belief that terrorist violence is somehow inherent to Islam, or that democracy is incompatible with correct Islamic practice.** In uncovering Islamophobia here, there, and everywhere, Kumar unfortunately gives form to the straw man arguments of actual Islamophobes, who often cry that they are being silenced for voicing any criticism of Muslims. Having said that, Schanzer's assertion about all of "those who deploy" the term is indefensibly broad. I doubt the Muslims of Murfreesboro, Tennessee, or Temecula, California, or South Arlington, Texas, or of the other American mosques that have endured bigoted attacks in recent years would agree with Schanzer's blithe dismissal of Islamophobia as "simply a pejorative neologism designed to warn people away from criticizing any aspect of Islam." **Do some use accusations of Islamophobia to stifle legitimate criticism of Islam? Yes, certainly, just as some use accusations of anti-Semitism to stifle legitimate criticism of Israel** (as we've seen in the recent smear campaign against Secretary of Defense nominee Chuck Hagel). But the fact that some use such accusations cynically and recklessly doesn't mean that Islamophobia and anti-Semitism aren't real existing problems. As my co-authors and I noted in our 2011 report, "Fear, Inc," the term Islamophobia shouldn't be used lightly. We defined it as "an exaggerated fear, hatred, and hostility toward Islam and Muslims that is perpetuated by negative stereotypes resulting in bias, discrimination, and the marginalization and exclusion of Muslims from America's social, political, and civic life." We also showed that **there is a well-funded network of scholars and activists committed to promoting this fear, hatred, and hostility.** People can disagree on how serious or widespread a problem

Islamophobia actually is in the U.S. (my own view is that it is now on the wane), but Schanzer's argument that the whole thing is simply an invention of scheming Islamists and Arab governments is obvious nonsense.

It is an undeniable fact that gender inequality is disproportionately high in Muslim communities—the alternative is to use our position as students from the West to encourage a Muslim Reformation

Ali, 14—a fellow of the Belfer Center at Harvard's Kennedy School of Government and founder of the AHA Foundation (Ayaan Hirshi, 4/10/14, "Here's what I would have said at Brandeis", The Wallstreet Journal, <https://www.aei.org/publication/heres-what-i-would-have-said-at-brandeis/>)/tamara&twemchen

On Tuesday, after protests by students, faculty and outside groups, Brandeis University revoked its invitation to Ayaan Hirsi Ali to receive an honorary degree at its commencement ceremonies in May. The protesters accused Ms. Hirsi Ali, an advocate for the rights of women and girls, of being "Islamophobic." Here is an abridged version of the remarks she planned to deliver. One year ago, the city and suburbs of Boston were still in mourning. Families who only weeks earlier had children and siblings to hug were left with only photographs and memories. Still others were hovering over bedsides, watching as young men, women, and children endured painful surgeries and permanent disfiguration. All because two brothers, radicalized by jihadist websites, decided to place homemade bombs in backpacks near the finish line of one of the most prominent events in American sports, the Boston Marathon. All of you in the Class of 2014 will never forget that day and the days that followed. You will never forget when you heard the news, where you were, or what you were doing. And when you return here, 10, 15 or 25 years from now, you will be reminded of it. The bombs exploded just 10 miles from this campus. I read an article recently that said many adults don't remember much from before the age of 8. That means some of your earliest childhood memories may well be of that September morning simply known as "9/11." You deserve better memories than 9/11 and the Boston Marathon bombing. And you are not the only ones. In Syria, at least 120,000 people have been killed, not simply in battle, but in wholesale massacres, in a civil war that is increasingly waged across a sectarian divide. Violence is escalating in Iraq, in Lebanon, in Libya, in Egypt. And far more than was the case when you were born, organized violence in the world today is disproportionately concentrated in the Muslim world. Another striking feature of the countries I have just named, and of the Middle East generally, is that violence against women is also increasing. In Saudi Arabia, there has been a noticeable rise in the practice of female genital mutilation. In Egypt, 99% of women report being sexually harassed and up to 80 sexual assaults occur in a single day. Especially troubling is the way the status of women as second-class citizens is being cemented in legislation. In Iraq, a law is being proposed that lowers to 9 the legal age at which a girl can be forced into marriage. That same law would give a husband the right to deny his wife permission to leave the house. Sadly, the list could go on. I hope I speak for many when I say that this is not the world that my generation meant to bequeath yours. When you were born, the West was jubilant, having defeated Soviet communism. An international coalition had forced Saddam Hussein out of Kuwait. The next mission for American armed forces would be famine relief in my homeland of Somalia. There was no Department of Homeland Security, and few Americans talked about terrorism. Two decades ago, not even the bleakest pessimist would have anticipated all that has gone wrong in the part of world where I grew up. After so many victories for feminism in the West, no one would have predicted that women's basic human rights would actually be reduced in so many countries as the 20th century gave way to the 21st. Today, however, I am going to predict a better future, because I believe that the pendulum has swung almost as far as it possibly can in the wrong direction. When I see millions of women in Afghanistan defying threats from the Taliban and lining up to vote; when I see women in Saudi Arabia defying an absurd ban on female driving; and when I see Tunisian women celebrating the conviction of a group of policemen for a heinous gang rape, I feel more optimistic than I did a few years ago. The misnamed Arab Spring has been a revolution full of disappointments. But I believe it has created an opportunity for traditional forms of authority—including patriarchal authority—to be challenged, and even for the religious justifications for the oppression of women to be questioned. Yet for that opportunity to be fulfilled, we in the West must provide the right kind of encouragement. Just as the city of Boston was once the cradle of a new ideal of liberty, we need to return to our roots by becoming once again a beacon of free thought and civility for the 21st century. When there is injustice, we need to speak out, not simply with condemnation, but with concrete actions. One of the best places to do that is in our institutions of higher learning. We need to make our universities temples not of dogmatic orthodoxy, but of truly critical thinking, where all ideas are welcome and where civil debate is encouraged. I'm used to being shouted down on campuses, so I am grateful for the opportunity to address you today. I do not expect all of you to agree with me, but I very much appreciate your willingness to listen. I stand before you as someone who is fighting for women's and

girls' basic rights globally. And I stand before you as someone who is not afraid to ask difficult questions about the role of religion in that fight. The connection between violence, particularly violence against women, and Islam is too clear to be ignored. We do no favors to students, faculty, nonbelievers and people of faith when we shut our eyes to this link when we excuse rather than reflect. So I ask: Is the concept of holy war compatible with our ideal of religious toleration? Is it blasphemy—punishable by death—to question the applicability of certain seventh-century doctrines to our own era? Both Christianity and Judaism have had their eras of reform. I would argue that the time has come for a Muslim Reformation. Is such an argument inadmissible? It surely should not be at a university that was founded in the wake of the Holocaust, at a time when many American universities still imposed quotas on Jews. The motto of Brandeis University is "Truth even unto its innermost parts." That is my motto too. For it is only through truth, unsparring truth, that your generation can hope to do better than mine in the struggle for peace, freedom and equality of the sexes.

Failure to interrogate sexual difference guarantees extinction and genocide

Irigaray, 91 (Luce, Famous french scholar, The irigaray Reader, p.33)

Even a vaguely rigorous analysis of claims to equality shows that they are justified at the level of a superficial critique of culture, and Utopian as a means to women's liberation. The exploitation of women is based upon sexual difference, and can only be resolved through sexual difference. Certain tendencies of the day, certain contemporary feminists, are noisily demanding the neutralization of sex [sexe]. That neutralization, if it were possible, would correspond to the end of the human race. The human race is divided into two genres which ensure its production and reproduction. Trying to suppress sexual difference is to invite a genocide more radical than any destruction that has ever existed in History. What is important, on the other hand, is defining the values of belonging to a sex-specific *genre*. What is indispensable is elaborating a culture of the sexual which does not yet exist, whilst respecting both *genres*. Because of the historical time gaps between the gynocratic, matriarchal, patriarchal and phallogocratic eras, we are in a sexual position which is bound up with generation and not with *genre* as sex. This means that, within the family, women must be mothers and men must be fathers, but that we have no positive and ethical values that allow two sexes of the same generation to form a creative, and not simply procreative, human couple. One of the major obstacles to the creation and recognition of such values is the more or less covert hold patriarchal and phallogocratic roles have had on the whole of our civilization for centuries. It is social justice, pure and simple, to balance out the power of one sex over the other by giving, or restoring, cultural values to female sexuality. What is at stake is clearer today than it was when *The Second Sex* was written.

Their refusal to integrate the perspective of Muslim women is another example of silencing—the alternative eavesdrops with permission—it uses our privileged positions as students to open discussion on the everyday experiences of these women

Dreher, 9—professor at University of Technology, Sydney (Tanja, "Eavesdropping with Permission: the Politics of Listening for Safe Speaking Spaces", Borderlands E-Journal, Volume 8 Number 1, www.borderlands.net.au/vol8no1_2009/dreher_eavesdropping.pdf)//twemchen

What's a middle class white feminist to do? Given these pitfalls, what is a middle class white woman to do? Is there any role for me in the work of creating safe spaces for new conversations? Scholarship which works across feminism, antiracism, postcolonial and critical race and whiteness studies offers many provocative suggestions. The tradition of transnational feminism tends to focus on strategies of alliances and intersectional politics.

while scholars engaging with whiteness and Indigenous sovereignties emphasise the need to unlearn privilege and give up power. Aileen Moreton-Robinson concludes her analysis of whiteness and Australian feminisms by arguing that, 'the real challenge for white feminists is to theorise the relinquishment of power' (2000: 186). In her analysis of speaking positions, the role of academic research and violence against Indigenous women, Sonia Smallacombe argues that the central challenge is 'whether feminists and their institutions interrogate their own power base and whether they are willing to move aside to give space for Indigenous women's voices' (2004: 51). Fiona Nicoll (2004) reflects on her own experiences as a middle-class white woman teaching critical race and whiteness studies in Indigenous sovereignties and suggests that this teaching must challenge students to locate 'their own position within racialised networks of power' and should 'shift focus from the racialised oppression of Indigenous Australians to the white middle-class subject position that is a direct product of this oppression'. According to Nicoll, 'the task of non-Indigenous students and teachers becomes that of observing and beginning to denaturalize the everyday invasiveness of policies and practices underpinned by patriarchal white sovereignty' (2004: 6). These are compelling reminders that white women must do their own race work and focus attention on their own privileges and power (see also Ratcliffe 2005: 5-6). This can be difficult and uncomfortable work, in which good intentions are deeply suspect. Alison Jones (1999) contends that 'even good intentions by the dominant group are not always sufficient to enable their ears to 'hear', and therefore for the other to 'speak'. Many authors analyse the ways in which racism is perpetuated under the guise of 'good intentions' and Damien Riggs (2004: 9) highlights Jane Haggis' suggestion that Australian critical race and whiteness studies 'should not be about making non-Indigenous people 'comfortable', but should instead continue to destabilise the assumptions of privilege that inform non-Indigenous belonging'. My involvement in this project, and the writing of this paper, has been uncomfortable and uncertain. I have experienced levels of panic far greater than my usual nervousness before public speaking — and this anxiety has manifested bodily, in sleeplessness and loss of appetite and nausea and shivering. Mindful of Sara Ahmed's (2004) analyses of 'bad feeling', I reflect on these discomforts as a register of the violent colonial histories and ongoing racisms which form the possibilities for action and change, rather than as markers of an end to or an overcoming of racism. Rather than transcending 'bad feeling' the challenge is to work to redistribute risk and discomfort as a means to developing better possibilities for listening and speaking.

Link - Kundnani

Kundnani's scholarship ignores the intricacies of the Muslim culture and fails to analyze gender hierarchy

Rashid, 14—a Research Associate in the Sociology Department at the University of Manchester, PhD in Sociology from the London School of Economics (Dr. Naaz, May 2014, "Book Review: The Muslims Are Coming! Islamophobia, Extremism, and the Domestic War on Terror by Arun Kundnani", The London School of Economics and Political Science, blogs.lse.ac.uk/lsereviewofbooks/2014/07/08/book-review-the-muslims-are-coming-islamophobia-extremism-and-the-domestic-war-on-terror-by-arun-kundnani/)/twemchen

The issue of terrorism continues to dominate the news whether in relation to the allegations of extremism in Birmingham schools or the long term repercussions of young British Muslims going to fight in Syria and Iraq. What links these two stories is the common sense understanding about how people come to commit acts of terrorist violence. In his new book, *The Muslims are Coming*, Arun Kundnani's primary

focus is the 'radicalization thesis' which underpins the moral panics underlying both phenomena. That is, the idea that people become radicalised through exposure to 'extremist' ideologies which can then lead them to engage in acts of terrorism. Through his rigorously researched analysis of preventive counterterrorism measures in the UK and US, Kundnani skilfully and articulately deconstructs the central tenets of these dominant discourses regarding radicalisation and extremism. Kundnani's stated aims are to consider: firstly, how Islamic ideology has come to be regarded as the root cause of terrorism; and secondly, that acceptance of Muslims as citizens is predicated on them (us) distancing themselves from any particular set of ideological beliefs. He argues that "official and popular understandings of terrorism are more a matter of ideological projection and fantasy than of objective assessment." (p. 17). He suggests that the events in both Boston and Woolwich fit the "current war on terror paradigm of young Muslim men becoming radicalised through their exposure to Islamist ideology". This is despite the fact that in both instances, although not acting entirely alone, the perpetrators were amateurs with no connection to wider networks or terrorist cells. The transatlantic comparison allows Kundnani to showcase his detailed scholarship of policies, both in theory and in practice, weaving together the continuities and parallels between each country's experiences. Common to both countries is the underlying belief in 'the myth of radicalization'. As Kundnani writes, the term was little used prior to 2001, whereas by 2004 it "had acquired its new meaning of a psychological or theological process by which Muslims move toward extremist views"; so much so that by 2010 over 100 articles on the topic were being published in peer-reviewed academic journals each year (p 119). Despite this wealth of research, however, Kundnani argues that the underlying ideological assumptions mean that radicalization scholars systematically fail to address the reality of the political conflicts they claim to understand. Kundnani delineates the divergent histories of the UK and US's respective Muslim populations in the context of very different, albeit occasionally intertwined, histories of (neo)imperialism, migration, and racial politics. He goes on to suggest, however, that 2005 represented a watershed year in which the 7/7 bombings in London brought the UK into close alignment with the US. As a result, the substantive historical, socio-political and demographic differences fell away and the UK and the US were united, not only in their ideologically inspired military encroachments, but also in their preventive counter terrorism measures against 'home grown' terrorism. This is perhaps where it could be argued that the book's weakness lies. Kundnani's scrupulous attention to detail that so enriches his critique of the common sense logic regarding the relationship between radicalization and terrorism is absent in this analysis. If as he argues, the fundamental flaw with the radicalization thesis is its failure to take into account the wider socio- and geo-political context within which such political violence occurs, then equally, in order to assess the outcome of policies based on it, the localised differences between and within the US and UK surely warrant more nuanced analysis. At times he does address US-specific contexts such as the more overt tactics of create and capture used there, which almost amounts to the entrapment of potential terrorists. He also writes a coruscating indictment of Obama's term in office in which the militaristic jingoism of George Bush has become dangerously banal, bureaucratic, and routine, such that the practice and function of the anti-Muslim racism which has been fostered has rendered invisible "the violence of the US empire" (p 14). On balance, however, the differences between the two countries are flattened out and the differential country-specific impacts of such initiatives remain somewhat unexplored. In the British context for example, the Prevent agenda cannot be assessed in isolation from the community cohesion agenda which preceded it and broader debates on multiculturalism and Britishness which foreground it. An underexplored side effect of the Prevent agenda in the UK is its impact on 'inter community' relations given the particularities of the postcolonial British experience. Sikhs have not, for example, been widely 'misrecognised' as Muslims in the UK as they have in the US (where the 'Don't Freak I'm a Sikh' campaign emerged). Similarly, it is not clear whether Sikhs in the US have been drawn to far-right groups premised on an anti-Muslim platform as has occurred in the case of the BNP and the EDL in the UK. Given Kundnani's previous work for the anti-racist left organisation the Institute of Race Relations (IRR) as well as his earlier publications, such as *The End of Tolerance* and *Spooked!* – his analysis of such differences would undoubtedly have been astute. Furthermore, the book does not situate the radicalisation debate in relation to the wider cultural pathologisation of Muslims in both countries as well as across the globe for example, in relation to Muslim women, and the way in which these discourses are so heavily gendered. Nonetheless, given the virulent tenacity with which the violent extremism/radicalisation/counterterrorism discourse matrix permeates the public policy imaginary, in spite of little evidence to support the conceptual framework which underlies it, the book is a very timely intervention. Kundnani draws on a wide range of material to support his case, ranging from the work of Arendt to the analysis of populist representations of terrorism in TV series such as *Homeland* and *South Park*. There is also a wealth of research into and analysis of particular cases of counter terrorist activity and interventions which can challenge the established orthodoxies prevailing on both sides of the Atlantic (although these in depth examples might have benefitted from a more conventional bibliography and index). *The Muslims are Coming* should be required reading for officials and Ministers in the Home Office, Department of Communities & Local Government, the Department of Education, and the Department for Homeland Security, as well as for political commentators everywhere. However, for those engaged in critical studies of the racialised (and gendered) politics of the war on terror, fewer examples and more critical, country-specific analysis of the impact of such measures would have been welcome.

Link – Islamic Principles

Their 1ac proudly proclaims the ability of Islam to lead to self-discipline and cites Malcolm X—absent from that description is the truth the Koran and Sunna at the heart of contemporary Islam is usually quoted to justify misogynistic practices in the Muslim community

Ali, 7—a fellow of the Belfer Center at Harvard’s Kennedy School of Government and founder of the AHA Foundation (Ayaan Hirshi, 8/2/7, “My View of Islam”, <https://www.aei.org/publication/my-view-of-islam/>)/tamara&twemchen

The undisputed definition of Islam by all her adherents is “submission to the will of Allah.” This divine will is outlined in the Koran and in the teachings and deeds of Muhammad, as recorded in the Hadith or Sunna. While the Koran is considered to be the true, undiluted word of God revealed to Muhammad through the angel Gabriel, the Sunna carry less weight and have always been a cause for disagreement amongst Muslim scholars. Theologians of Islam have, however, reached consensus on the authority of a set of six volumes from the Sunna called the Sahih Sita, or authentic six. On the issues of holy war (jihad), apostasy and the treatment of women, the Koran and Sunna are clear. It is the obligation of every Muslim to spread Islam to unbelievers first through dawa, or proselytizing, then through jihad, if the unbelievers refuse to convert. It is the obligation of the unbelievers to accept Islam. Exempted from this edict of conversion are the people of the book: Christians and Jews. Both peoples have a choice. They may adopt Islam and enjoy the same rights as other Muslims, or they may stick to their book and lead the life of a dhimmi (lower citizen). Legally, the rights of the dhimmi are not equal to those of a Muslim. For instance, a Muslim man may take a Jewish or Christian wife, but Jews and Christians are not allowed to marry Muslim women. If a Christian or a Jew kills a Muslim man, they should be killed immediately. In contrast, the blood of a Muslim should never be shed in recompense for the blood of Christians or Jews. The western world would be wise to recognize the realities of Islam, a religion laid down in writing over a millennium ago with violence and oppression at its heart. It is also the obligation of every Muslim to command virtue and forbid vice. Apostasy, the worst possible vice a Muslim can commit, should be punished by death. The punishment need not be carried out by a state, but can easily be enforced by civilians. When it is a question of Islamic law, justice is in the hands of every Muslim. As for the treatment of women, in the Koran and more elaborately in the Sunna, Islam assigns to girls a position in the family that requires them to be docile, makes them dependent on their male relatives for money and gives dominion over their bodies to these same male kin. In Islam there is a strict hierarchy of subservience. First and foremost, all humans are required to be the slaves of Allah. In Muslim societies, all children must obey their parents. Beyond this, women and girls must obey and serve without question their male guardians and especially their husbands. This decree of marital obedience is not in any way reciprocal. A woman in Islam is not competent and must always have a guardian. The responsibility of guardianship may pass from father to brother to uncle before a girl is married off, at which point she must answer to her husband. Marriage is typically arranged, with no choice given to the girl, and there is often an exchange of money in the process. Thus, under the religious rule of Islam, it is still common today that a woman’s rights are essentially sold to a man she may not know, and most likely does not love. As for education of girls under Islam, there is a clear program of indoctrination of inequality. Under Islam, education is the passing on of the rules of submission to the will of Allah. Intrinsic in this “education” is the dictation of gender roles. Girls are instructed in subservience first to God, then to the family and finally to the husband. There is strict emphasis on modesty, defined by virginity. A Muslim girl is taught to guard fiercely her virginity as an expression of loyalty to her creator and to her family and husband. This form of education hampers her chances of ever becoming self-reliant or financially independent. A woman’s lack of social equality and freedom is a direct consequence of the teachings of Islam. Under Islam, a wife must always ask her husband for permission and she must obey indefinitely. This stricture is lifted in the unique event that he asks her to forsake God, wherein she is allowed the right of disobedience. While it is true that in Islam, technically speaking, women have the right to trade and own property, the condition of total obedience to guardians makes this “freedom” hypothetical, at best. The goal of education given to girls under Islam is the achievement of control over female sexuality. The result of this indoctrination is that Muslim girls believe legitimate and often vocally defend their position of subordination. The lengths a Muslim society will go to in the pursuit of sexual control often cross into the territory of the absurd and, by western standards, criminal. In Islam the minimum age of marriage for a girl is after her first menstruation. Muhammad was engaged to his wife Aisha when she was six years old, and he married her (had intercourse with her) when she turned nine. Millions of Muslim men across the world follow Muhammad in this deed, one of the most prominent examples being the late Ayatollah Khomeini. Under sharia law (Islamic law), such as governs in Saudi Arabia,

Iran and parts of Nigeria, the civil rights of women are dramatically reduced. Threat of violent punishment in the form of whipping and stoning makes the prospect of financial independence and sexual freedom for women all but impossible. Miraculously, even in such harsh circumstances you will find women who are relatively well educated, have some say in choosing a husband and manage to earn a living. Let us be clear that these exceptions are due to the compassion and progressiveness of families who have been influenced by the West and not to rules derived from Islam. In the quest for reconciliation between Muslim and western societies, it is important to recognize that Muslims are as diverse as Islam is monolithic. Islam attempts to unify more than a billion people of different geographical origins, languages, ethnicities, and cultural and educational backgrounds into one religious tribe. And while I acknowledge that generally stereotyping believers is difficult since belief is subjective, for the sake of discussion I would like to distinguish between five types of Muslims. The first group includes those Muslims who leave the faith because they cannot reconcile it with their conscience or with modernity. This group is important for the evolution of the Islamic world because they ask the urgent and critical questions believers usually avoid. Ex-Muslims living in the west are just beginning to find their voice and to take advantage of the spiritual and social freedoms available to them. The second group is comprised of genuine Muslim reformers, such as Irshad Manji, who acknowledge the theological out-datedness of the Koranic commands and the immorality of the prophet. They tend to emphasize the early chapters in the Koran urging goodness, generosity and spirituality. They argue that the latter chapters wherein Islam is politicized and the concepts of sharia, jihad and martyrdom are introduced should be read in the context in which they were written, some 1,400 years ago. The third group is made up of those Muslims who support the gradual perpetuation and domination of Islam throughout the world. They use the freedoms offered in democracy to undermine social modernity and, though initially opposed to the use of violence, foresee that once the number of believers reaches a critical mass the last remnants of unbelievers may then be dealt with in violence, and sharia law may be universally implemented. Ayatollah Khomeini used this method successfully in Iran. Erdogan of Turkey is following in his footsteps. Tariq Ramadan, deeply rooted in his Muslim Brotherhood heritage, is devoted to such a program among European Muslims. The fourth group is the most obvious and immediately threatening. In this group we find a growing number of hard-line Muslims who have defined martyrdom as their only goal. This is an army of young men whipped into a frenzy of suicidal violence by power hungry clergy. These clergy have public platforms and work with impunity from institutions untouched and often funded by national authorities. The fifth group is largely ineffective and only threatening in their refusal to acknowledge the truth. Here we find the elite clergy who make a show of trying to reconcile Islam with modernity. They are motivated by self-preservation and have no interest in true reform. They take selective passages from the holy books to make a case for a peaceful Islam, ignoring the many passages inciting violence, such as those verses which command the death of apostates. It is through the first two of these five groups that progress and reform will come. As for the rest, the western world would be wise to recognize the realities of Islam, a religion laid down in writing over a millennium ago with violence and oppression at its heart.

Link—Silence

The 1ac spent 8 minutes creating a simplistic victim narrative that rightly calls out imperial policy but says nothing of the oppression and genuine terror many Muslim women face daily – their lack of discussion of the oppression of Muslim women isn't some innocent omission, it's rooted in Islam misogynist practices—the “rights” of American Muslims that the aff advocates for is at the dowry of Muslim women worldwide

TBOS, 14—Tall Black One Sugar (feminist blogger, 5/3/14,
<http://tallblackonesugar.wordpress.com/2014/05/03/misogyny-boko-haram-and-the-bigger-picture/>)/tamara&twemchen

We must understand how the struggle of Burkinabe women today is part of the worldwide struggle of all women and, beyond that, part of the struggle for the full rehabilitation of our continent. The condition of women is therefore at the heart of the question of humanity itself here, there, and everywhere. – Thomas Sankara Flight MH370 disappeared out of the sky and there was untold news coverage. Chaos erupts in Ukraine without Russia even using its military might. Daily coverage. A ferry containing hundreds of students sinks. Again untold coverage. Two hundred and thirty plus students are kidnapped from a school in Northern Nigeria. Minimal coverage. That is until social media kicked in demanding why the government of Nigeria and other surrounding governments have done nothing to step in and say or do anything. Of course William Hague and Gordon Brown have been vocal on this matter but by and large the #BringBackOurGirls campaign has pushed this issue into the spotlight where most media coverage both here in the UK, and by the sounds of it across the pond in the US, have been somewhat muted. The Nigerian government have been woeful in either addressing this publicly or corraling external support to help deal with this. Whilst Goodluck Jonathan (a misnomer if I ever seen one) and his staff swan around inept to tackle or investigate this further, a much bigger picture emerges here. That where women's lives are not considered as something worth worrying about. What if there were 200 plus foreign nationals? Blonde blue eyed

middle class girls? (Yes, I went there!) What if Boko Haram had hijacked a depot owned by any of the multinationals like Shell, etc? Dare I say it what would have happened if it were boys? One cannot help to think about the underlying misogyny which prevents this inaction. Violence against women is nothing new. We are inundated with other reports where rape, sexual slavery, and other abhorrent uses of physical force to subordinate women are prevalent. Whether it be in Congo, the shooting of the student Malala in Pakistan, or the recent trials in the UK were cases show that men of influence felt that it was the norm to take sexual advantage of younger women. To use and dispose of them as property. This mass kidnapping just goes to reinforce the twisted mindset prevalent not just in Nigeria but across the globe as a whole. There are those who will go even deeper to recognise that the US in part, helped to fund bodies like Boko Haram to destabilise Nigeria. Whether you side with Wikileaks on such a revelation or dismiss it as a conspiracy theory that still pales into insignificance when you realise the patriarchy of governance in Nigeria have done nothing of substance to tackle this crime. To actually lift a finger to rescue their daughters. Our daughters. What makes a group like Boko Haram fear a learned and educated woman so much that they will twist concepts of the Quran to their own end and wilfully abduct a whole generation of young ladies for their own causes? If some reports are to be believed to force some into marriage or sexual slavery. And all in the name of Allah. Go figure. Religion becomes but another vehicle to perpetuate misogyny.

2nc—Alt Wall

Islamic feminism should be your lens of analysis—this framework greater incorporates Muslim identity

Malik 10 (Waleed Malik, York University - Osgoode Hall Law School, Carleton University, "Islamic Feminism", Critique: A worldwide journal of politics, Fall 2010)//ASMITH

As has repeatedly been emphasized, the work carried out by "Islamic feminists" described in the previous sections has enormous potential for politics, in terms of altering notions of legitimate and illegitimate, not just in the lives of millions of individuals across the world but at the levels of institutions, states, and societies as well; but in a sense, the work can also be very limited if carried out just in the ivory towers of the academia. But there are a number of social changes happening within the Muslim world and a number of actors that promise to translate these ideas and the products of these intellectual exercises into some real social change. This change, however, will probably not be coming from within the official institutions of Islam, though it would be wrong to consider them as completely unchanging. Religious establishments have, for instance, moved beyond killing any woman who attempts to become a preacher. There are debates occurring within Shiite establishments over whether or not women should be allowed to reach the highest level of the clergy⁵¹ and recently, within the world of Sunni Islam, the United Arab Emirates (UAE) announced that it will soon appoint a female mufti, which is the highest category in the Sunni clergy, which is an extremely contentious first.⁵² Furthermore, women have been able to access institutions of religious education, allowing them a greater voice in religious debates,⁵³ and are also a growing presence in lower levels of religious organizations, such as lower level preachers, ceremonies held in people's homes, which allow them to play a greater, often crucial, role in the daily experience of religion for many people, including women.⁵⁴ But, by and large, these institutions are still almost entirely run by men, and remain some of the most traditional and conservative elements within their societies, so it

is probably naive to think that any great societal change will flow from their direction.⁵⁵ However, as previously mentioned, there has simultaneously been a “resurgence” of Islam and a “fracturing” of religious authority, which has meant that there has been a growth of organizations that in some way claim an Islamic identity and a growth in their ability to speak about religion in a way and with an authority that had once been the exclusive tool of the clergy.⁵⁶ For instance, after the Islamic Revolution in 1979, there was an obvious increase in the role of the clergy and of religion, but simultaneously there was an increase in welfare organizations, advocacy organizations, and magazines that allowed women a chance to further their voices and their interests on these matters. The fight for women’s rights in Iran has been waged both by secular organizations but also by Islamic ones, to the extent that during the Bonn Conference held in 2001 to determine the future of Afghanistan, a number of feminists there held up Iran as an example of a country where women’s rights, though still not adequately accepted or protected, had been greatly enhanced though an Islamic framework.⁵⁷ In fact, modern day Iran presents a number of examples that shed light on both the effectiveness of “Islamic feminism” as well as the difficulties and limitations it encounters as an environment where Islam has been used both by those who would seek to limit and reduce women’s rights and public role and those who are determined to expand it. In the aftermath of the revolution, the theocratic government that was formed held a neo-traditionalist perspective about Islam and its edicts on women, which assumed that there were some natural differences between the sexes due to which women were appropriate for certain roles (as wives and mothers) and men for others, and it was this perspective that led the government to try to force women out of the judiciary and out of regular employment, preventing them from receiving higher education in many fields and instituting many changes that dramatically scaled back advances women had made in previous decades.⁵⁸ However, the women of Iran, including Islamist ones, refused to accept such measures without a fight. Women, many of them from traditional backgrounds, had played an unprecedented role in the revolution and refused to be marginalized by the regime. When the government tried to force them out of the workforce they formed volunteer organizations (some of them for the war effort against Iraq and many of them with an obvious Islamic motivation) and engaged in activism to remain visible, and when the regime used their discourse of difference to exclude women, the few female members of parliament at the time used that as an argument for why women had to be included, to have different points of view. This fight was largely carried out by four women who were the members of parliament, the majlis, in the eighties and who had been deeply involved in the Islamic revolution. It was clear to them that the Islamic state that was emerging was radically different from what they had expected, and they were determined to have their voice heard in shaping it in a more just manner. And though they did not succeed in halting the conservative tide, they managed to win certain concessions such as having women play an advisory role in the judiciary and, slowly, they were able to remove some restrictions on women being able to work and gain a higher education.⁵⁹ However, greater change began to emerge in the late eighties and early nineties. The change was originally discernible in a number of magazines that had been set up by women to discuss women’s issues, and which often had clerics write for them. At this time there emerged a trend known as “new religious thinking” which argued the inequality that was associated with Islam was the result of a certain historical context in which those interpretations occurred, and that in truth there was no conflict (or rather an affinity) between gender

equality and Islam.⁶⁰ Ultimately the ideas of these magazines spread into society, into more mainstream newspapers, and eventually epitomized the reform movement. This was a movement that was based around the notion of “dynamic jurisprudence” and was exemplified by Mohammad Khatami’s overwhelming victory in the Presidential election of 1997. This was also an important moment for the women’s movement in Iran because Khatami, himself a cleric, had promised many reforms to encourage gender equality in order to gain the support of women, both Islamist and secular, which proved essential to his victory. And though his government saw both symbolic gains, such as by appointing the first female Vice-President in the history of the Islamic Republic, and meaningful improvements, in terms of providing greater education and employment opportunities for women and creating a less repressive environment, he was unable to push most of his reforms through against the wishes of the conservative clerics who held the power to veto all legislation; and ultimately, after the end of Khatami’s two terms, the movement fizzled out due to a combination of repression by the state, economic difficulties and an inability to deliver on many promises. Despite that, and though there was much it failed to tackle, the movement provided a hopeful glimpse of what could be achieved from an Islamic framework and it did make some meaningful improvements for the rights and status of Iranian women.⁶¹

Islamic Fem constructs new understandings and is the only way to disrupt patriarchy

Malik 10 (Waleed Malik, York University - Osgoode Hall Law School, Carleton University, “Islamic Feminism”, Critique: A worldwide journal of politics, Fall 2010)//ASMITH

That changed dramatically in the twentieth century. A massive explosion in literacy in the Muslim world meant that, for the first time, a large number of people were no longer reliant on the traditional clerical class in order to access the intellectual foundations of their faith. Authority in Islam “fractured”, a process that continues to take place today as more and more people turn to the sources of their religion themselves and formulate their own understandings of their religion rather than simply accepting what is handed down from the clerics.¹⁵ It has also mean that for the first time in Islamic history women are able to access the sources of Islam on their own in large numbers, and in doing so they are constructing a new understanding of the religion that is dramatically different from that produced in ninth century Arabia.¹⁶ Though a varied and extremely dissimilar group, almost all of the women who have turned to their faith in this manner (whether scholars or Islamist activists) argue that it is not Islam but rather an interpretation of it that is to blame for the oppression suffered by Muslim women. They argue that the Shariah was created by a group of men without any meaningful participation by women, who were in fact actively marginalized from the process of defining the faith,¹⁷ and that these men, from times and societies that were unabashedly misogynistic, read their patriarchal prejudices into a faith that had actually been progressive and empowering for women.¹⁸ Groups such as the Taliban, who justified their oppressive policies in the name of Islam, are condemned as actually perverting the religion in order to justify their patriarchal beliefs and the unequal power structure between the sexes that exists in traditional Afghan society.¹⁹ Some have gone so far as to argue that the real reason why the traditional understanding of Islam is so pernicious for women is because it is pervaded by values and attitudes of the jahiliyya, the pre-Islamic era of Arabia which is generally considered as the height of moral and social depravity in Islam, which the Prophet Muhammad tried but failed to eradicate and which reasserted themselves after his death through the “Islam” fashioned by the ulema and the

ayatollahs.²⁰ One scholar has, probably metaphorically, claimed that it was a “Satanic logic” that led jurists to insert their patriarchal assumptions when considering the rights of women in Islam, which have (with the passage of time and encouraged by prejudices of societies around them) acquired the status of a “neutral” and correct reading of the religion.²¹ All of these are very powerful condemnations and reveals the strength of these women’s conviction that it is not Islam, but rather a perversion of it, that would deny rights due to them. And there seem to be a number of examples, some of them remarkably blatant, that “Islamic feminists” could utilize to substantiate their claim that it is a perverted version of Islam that legitimizes the subjugation of women and that the religion should have and, but for a series of patriarchal interpreters would have, been very different. For instance, a Quranic verse instructing Muslims not to “pass on your wealth and property to the feeble-minded,” was interpreted by nearly all of the early commentators as referring to women and children, who were to be deprived of all inheritance, despite specific Quranic injunctions against such an interpretation and in direct contradiction to specific rights of inheritance laid out in Islam for women and children. Or when a person called Abu Said al-Khurdi swore he had heard the Prophet tell a group of women, “I have not seen anyone more deficient in intelligence and religion than you,” not only was his claim interpreted as describing the nature of all women across all times despite the lack of any indication of this sort in the saying, his claims and its interpretations were left unchallenged despite the fact that there is ample evidence that the Prophet Muhammad repeatedly sought the advice of his wives and other women, even in military matters.²² Or consider the treatment of Aisha, one of the Prophet’s wives and a prominent personality within early Islamic history, who is treated as an aberration for playing a public role (which is not true as shall be shown later) and who is condemned as being responsible for derailing the unity of the Muslim world and for single-handedly setting off all the conflict that has been experienced in the Muslim world by leading a rebellion against the fourth caliph, which is a ridiculous claim to make, and which is then interpreted as legitimating the exclusion of all Muslim women from the public realm, which does would not logically follow even if the first ridiculous claim was true.²³

Islamic Feminism resolves equity and tolerance

Mirza 08 (Qudsia Mirza is Frances Lewis Law Center Scholar-in-Residence at Washington and Lee University, School of Law, US.) (“Islamic Feminism & Gender Equality”, I S I M R E V I E W 2 1 / S P R I N G 2 0 0 8, pg 30-31)//ASMITH

The ethical project of Islamic feminism shares the central ideals and values of Islam itself—of justice, egalitarianism, equity, compassion, and tolerance. By opening up the question of who has the authority to interpret scripture, and by challenging the power of traditional interpretive communities and the producers of religious knowledge, Islamic feminists are at the forefront of the contemporary reformist movement. Writers such as Amina Wadud and Asma Barlas are conferring upon themselves the authority to challenge the monopoly of traditional interpreters of the Quran, whilst scholars such as Fatima Mernissi are engaged in contesting received notions of Hadith literature. All such scholars are engaged in revisiting

Islamic sources and actively furthering what has been succinctly termed the “democratization of ijtihad.”¹ Working within Islamic jurisprudence, this entails the use of an interpretive methodology, ijtihad (to strive for) to dynamically re-interpret foundational Quranic principles in order to bring about equal rights for women. Feminists look to the time of Islam’s origin and assert that women, who had played a significant role as the creators of oral texts, became invisible after the inception of Islam, both as originators and interpreters of such texts. Scriptural literature was then produced by men who incorporated their own restrictive assumptions and understanding of gender relations. Legal texts were also created in this way and a masculine bent was inscribed into the legal literature of that time, resulting in the atrophying of the egalitarian ethos of Islam.² Thus, the feminist project is based squarely upon an Islamic framework within which an ethically correct gender paradigm and resulting legal rights for women may be configured. The reform of Islamic law is seen as one of the principal means by which the discrimination women have suffered under certain interpretations of Islam can be addressed. In pursuance of this, feminists are advancing new interpretations of the sources of Islamic law, and theorizing a “liberatory praxis” with a “Quranic hermeneutics of liberation” at the vanguard of this endeavour. This means that writers such as Wadud and Barlas are utilizing the notion of ijtihad to establish interpretations of the Quran which bring to light the gender egalitarian impulse of the Quran. These new interpretations then form the basis for an emancipatory agenda for the establishment of equality. Therefore, this project encapsulates the vision of a post-patriarchal Islam which guarantees women legal and social rights, equal with men. This will only be possible, feminists argue, by liberating Islamic orthodox scripture from the stranglehold of male-centred interpretations that have become entrenched in the Islamic canon. Thus, by challenging traditional notions of authority, and deconstructing gendered Islamic discourses, Islamic feminists are producing interpretations of scripture that can be utilized for the radical re-configuration of gendered legal rights. However, despite this uniformity of aim, Islamic feminism is also characterized by great diversity of opinion. Therefore, it may be more appropriate to talk of Islamic feminisms which can be differentiated by cultural and regional, as well as significant doctrinal differences, which have led to divergent schools of thought. A number of writers have offered typologies of contemporary feminist thought and, broadly speaking, they can be divided into two main groups: first, those who see the “inequality” of the sexes in Islam as divinely ordained; and second, those who have engaged in progressive readings of the Quran and the Hadith to unearth the authentic configuration of women’s rights in Islam.

2nc—Chilling Effect

Discussion of Islam is often considered Islamophobic- that impedes understanding of the religion and its problems- it’s a reverse chilling effect

Benn 7 (Piers Benn. “On Islamophobia-phobia.” May 31, 2007.

<https://newhumanist.org.uk/articles/524/on-islamophobia-phobia> //EMerz

The act of hatred that destroyed the World Trade Center in New York led, unsurprisingly, to anti-Muslim feeling in both America and Britain, and the suspicion that it was carried out with the blessing of Islam. George W. Bush and Tony Blair hurriedly tried to counter this impression. They denounced anti-Muslim feeling and taunts and attacks on Muslims. Blair stated that the principles of Islam do not support the deliberate killing of innocent civilians 'Islam', he announced, means 'peace' and claimed that Muslims who support terrorist attacks are out of line

with the authentic teachings of their religion. In one way, Blair was right. Social psychology and everyday experience show us how easy it is to dehumanise an opponent and project onto him all our worst fears and fantasies. This primitive tendency appears on all sides, whether in the intractably paranoid world view of Osama bin Laden, or in the suspicion that all Muslims are somehow implicated in the attacks. It is unacceptable that the hatred of out-groups – in this case, 'infidels' – that led to the original horror should show itself, on the other side, in hatred of Muslims. At the same time, the attack provided various pundits and politicians with an excuse to reiterate their concerns about 'Islamophobia'. We often hear that Islamophobia is widespread in the British media and culture. As a result, considerable efforts are made to counter the image of Islam as an intolerant religion – a faith that supports terrorism, cuts off limbs, and subordinates women. 'Moderate' British Muslims are regularly summoned onto the media to represent Islam's acceptable face and to challenge these stereotypes – among them academics like Zaki Badawi and Ali Akbar, and well-known journalists such as Yasmin Alibhai-Brown, Rana Kabbani and Ziauddin Sardar. Furthermore, many politicians appear reluctant to say anything critical of Islam. In an edition of Radio Four's 'Any Questions' last Autumn, the panel was asked to respond to former Italian premier Silvio Berlusconi's reported claim that Western civilisation was superior to Islamic civilisation. The panel, which included Charles Kennedy and Chris Patten, was unanimous in pouring scorn on Berlusconi's remarks. Such an outburst, in their opinion, exemplified ignorant, crude, racist cultural imperialism. All of this raises two matters of concern. One is about the definition of Islamophobia, and the sloppy way in which the term is used. The other concerns the general indifference to intellectual matters of religious doctrine, truth and justification. 'Islamophobia' is a negatively loaded word. Not many people would admit to being Islamophobic, any more than they would admit to being homophobic. Indeed, there is an interesting parallel between the two concepts. Although 'homophobia' really means fear of homosexuals, it is now widely used to refer to any criticism of homosexuality. Many who use the word appear oblivious to the distinction between the fear (or hatred) of homosexual individuals, and disapproval of homosexual behaviour. Of course, one might argue that language evolves and words change their meaning. But this misses the point. There is a real distinction to be made here, which needs to be reflected in language. With Islamophobia, the same applies. It is essential to distinguish criticism of Islam both from fear of Islam, and from fear, hatred or contempt for Muslims. But all too often, moral criticism of Muslim practices, or scepticism about doctrines, is dismissed as Islamophobic. What would be a rational response to this? There are at least two strategies. One, as just suggested, is to deny any necessary connection between criticism of Islam on the one hand, and fear of Islam or contempt for Muslims, on the other. Another, more direct one would be to ask squarely whether Islamophobia, understood as fear of Islam, is wrong after all. After all, if Islam really does advocate jihad to achieve world domination (as is claimed, for example, in a Christian website devoted to rebutting Islamic doctrines: www.answering-islam.org), if it really does say that the testimony of a woman in court is worth half that of a man, and that Muslims should not befriend Jews or Christians, then why wouldn't fear or other negative reactions be entirely reasonable? The usual counter-argument is to deny the factual accuracy of these claims about Islamic doctrine and practice. Islamophobia is said to manifest itself in ignorant and prejudiced ideas of what 'true' Islam really teaches. And it is here that the debate gets interesting, and leads to the second worry I mentioned, about public and media indifference to solid issues of truth and justification in religious matters. Indulgent theological relativism The consensus against Islamophobia – call it 'Islamophobia-phobia' – often appears oddly unconcerned to inform itself of Muslim (or even Christian) theology. In place of informed tolerance we have an indulgent and ignorant theological relativism – call it 'religious correctness' if you like – disseminating the platitude that all the major world religions are more or less the same, with the same basic values. Why do people believe this? Partly because all religions that sustain human communities through the joys, sorrows, and uncertainties of life are likely to share certain values. For example, respect for life and property, the maintenance of retributive and distributive justice, and a concern to regulate sex will probably be found in most successful religions. Moreover, if, as many non-religious people say, it is morality that gives rise to religion rather than the other way round, we would expect the best (as well as the worst) elements of human motivation to find religious expression. So it is not surprising that Muslims who are naturally civilised and humane, like the Principal of the Muslim College in London, Zaki Badawi, tend to select the most compassionate elements in Islam as examples of its essential nature, and share many values with reflective and tolerant non-Muslims. But the idea that all religions are essentially the same is one that is rejected by clear-thinking Christians, Muslims (and others) alike. Of course, many secular people look upon internecine theological wrangles with amused condescension. However, it is of great importance both to Christians and to Muslims whether or not Jesus was divine and died for our sins, whether he rose from the dead, or whether the Koran was dictated by God. For these are issues about which orthodox Christianity and Islam are in fundamental disagreement. Their claims contradict one another; it follows that they cannot both be entirely authentic revelations. The liberal British media, anxious to distance itself from 'Islamophobia', plays these logical problems down, partly because it cannot be bothered to understand them, and partly because it cannot believe that some religious people are less wishy-washy than they are themselves. As a result, the intellectual debates we should be having get a

woefully inadequate hearing. The most fundamental problem is that of the claimed status of the Koran as the infallible, revealed word of God. All Muslims are committed to this claim, although there are disputes about interpretation and emphasis, just as there are about any other sacred book. The Koran has frightening things to say about the fate of those who do not believe in God and the Last Day, and there is considerable stress on hell: God is 'stern in retribution'. Of course, if these teachings are true, then we have very good prudential reasons for trying to acquire the beliefs in question, to avoid a truly terrible fate. But as students of Pascal's Wager know, this does not settle the evidential question of whether these claims are true. Indeed, Pascal, who famously advocated acquiring Catholic beliefs for reasons of prudence, would no doubt have judged Muslims susceptible to a similar fate, and Dante placed Mohammed in the lower circles of the Inferno, among other false prophets. Suppose one asks the simple questions: what grounds are there for believing that the Koran is an authentic revelation? How likely is it, that if there were a God with an extremely important message to deliver to humanity, he would have chosen to reveal it to one man, in the way he is said to have done to Mohammed? Why not, indeed, reveal it to a large number of people, who could then compare their revelations and agree on their content? And how easily could Mohammed's belief that he was a prophet have arisen, if he was not, in fact, a recipient of divine revelations? There is no obvious difficulty about this; apart from anything else, he is far from unique in believing himself the recipient of special revelations. Think of Joseph Smith or Sun Myung Moon. Of course, Christians have been familiar with similar challenges to their scriptures for nearly two hundred years, and have developed various apologetics. In any case, apart from some 'fundamentalists', most Christians (at least outside the USA) do not believe the Bible was dictated verbatim by God, though they do believe it is divinely inspired. Indeed, Christian 'fundamentalism' of the sort we see reported, especially in connection with 'young-earth' creationism, is a largely modern phenomenon, born as a reaction to the secularisation of Christian societies and the challenge of the Enlightenment. Islamic nations have barely been secularised, and there was no Islamic equivalent of the Reformation. Many who fear the rise of Islamophobia veer away from critical analysis of Islamic claims and practices, perhaps for fear of what they might find. They denounce critical scrutiny of Islam as somehow impolite, or ignorant of the religion's true nature. This is not intellectually or morally healthy. The real lesson of tolerance is that disputes should be settled by reasoned dialogue rather than abuse or violence, and that we should always accept that we may have much to learn from people whose beliefs initially appear strange. But these virtues are a far cry from the sentimental pretence that all claims to religious truth are somehow 'equal', or that critical scrutiny of Islam (or any belief system) is ignorant, prejudiced, or 'phobic'. By all means let us be well-informed about Islam, but let us not assume that once we are, we shall altogether like what we find.

2nc—Root Cause

The representations of terrorist threat and the fears that follow are based in gender—they're founded on a fundamental division between the sacred world of the mother that has been identified as the world of fundamentalism and the world of the west which is defined by reason and masculinity – this psychic division is the root of Western vs Eastern fundamentalist conflict.

Condren 2006 (Mary; "War, Religion, Gender and Psyche: An Irish Perspective," in Holy War and Gender: "Gotteskrieg" und Geschlecht"; http://mywebgrrl.ca/ifr/000_Berlin_Paper_Final.pdf)

The sacred world, the semiotic, is the psychic field of the Mother. Therefore, whereas killing or maiming the enemy is inevitable, terrorists usually uphold strict rules of sexual conduct. Terrorist legitimacy derives from their desperate efforts to establish their righteous relations within this field. Control of their women usually accompanies terrorism, underpinned by the most fundamentalist interpretations of religious texts. In terrorist warfare, underpinned by mythologies of self-sacrifice, especially where cultures have been subjected to colonial or imperial humiliation, masculinity is often damaged or much less secure. Establishing a high moral ground, or secure point of identity becomes the aim which is achieved effectively by controlling the bodies of women, and by denigrating and persecuting anyone (homosexuals) who threatens rigid gender boundaries. Sexual purity rather than sexual triumph is normative. In conventional warfare sexual triumph over women is the norm and is explicitly celebrated.

But since the strategies of religious and political fundamentalists are essentially female, fundamentalist regimes usually enforce the subordination of women, and the denigration or persecution of anyone (homosexuals) who threatens rigid gender boundaries. Securing such boundaries by controlling female bodies both symbolises and establishes a grammar of fundamentalism that is inter-religious and international. Fundamentalist regimes often attempt to uphold their regressive practices toward women on the grounds of ethnicity, religious freedom or human rights. In addition, religions often enjoy immunity from equality legislation, probably because of the unconscious awareness of how such religions legitimate the patriarchal assumptions at the heart of statehood. Feminist legal scholars must now be assisted in their efforts to explore and deconstruct the connections. 52 6. The Question of Representation Melanie Klein spoke of reparative strategies typical of the mother/infant relationship. The infant engages in attacks, phantasied or otherwise, on the mother's body, but, fears disintegration or retaliation. Unconscious guilt, and the strategies of reparation that accompany it play a major role in this dynamic, and often remain with us for the rest of our lives, feeding various religious fantasies. In Christian theology, according to Julia Kristeva, such reparation is directed toward God the Father, enabling the unconscious erasure of the mother from salvation history, and achieving the foundation of paternal law. 53 The strategy enables the paternal law to supersede the dangerous maternal semiotic energies, but also succeeds in permanently exiling women from culture, except insofar as they serve to uphold the status quo, preferably by becoming as men. Since the sacrificial dynamics and legitimating strategies of both conventional and terrorist warfare foster and depend on mythological religion, not surprisingly, in religious traditions based on sacrifice, women are not permitted to be religious officiators. The exclusion of women from significant participation in all the major religions has widespread implications that go way beyond church practice. Political and religious agencies often work hand in hand. Furthermore the strategies outlined here point to a grammar of political relationships that is inter-religious and international. The presence or absence of women in systems of representation does not automatically correlate either with the liberation or denigration of women: the variables are extremely complex. Nonetheless, given the analysis here, the effects of exclusively male systems of representation (such as an all male Trinity) must be interrogated for their psychic effects as they impinge upon the possible agency of sexed subjects. 7. The Maternal Debt Patriarchal culture thrives on the defiance of death and on spurious means to transcend death. Meanwhile, the weapons of mass destruction threaten the future of civilisation itself

2nc—Sequencing

A discussion of the brutal practice of muslim communities should come first

Ali, 7—a fellow of the Belfer Center at Harvard's Kennedy School of Government and founder of the AHA Foundation (Ayaan Hirshi, 8/2/7, "Infidel" pg. 347-348)//tamara&twemchen

Muhammad attempted to legislate every aspect of life. By adhering to the rules of what is permitted and what is forbidden, we Muslims suppressed the freedom to think for ourselves and to act as we chose. froze the moral outlook of billions of people into the mind-set of . Arab desert in the seventh century. We were not just servants of Allah, re slaves. The little shutter at the back of my mind, where I pushed all my · sonant thoughts, snapped open after the 9/11 attacks, and it refused close again. I found myself thinking that the Quran is not a holy mandate. It is a historical record, written by humans. It is one version as perceived by the men who wrote it 150 years after the Prop Muhammad died. And it is a very tribal and Arab version of events. It spreads a culture that is brutal, bigoted, fixated on controlling women, and harsh in war. The Prophet did teach us a lot of good things. I found it spiri appealing to believe in a Hereafaet My life was enriched by the Qu injunctions to be compa(sjonate and show charity to others. Jjiere times when I, like inany otheilvluslims, found it too complicated to with the whole issue of war against the unbelievers. Most Musi' never delve into theology, and we rarely read the Quran; we are taught in Arabic, which most Muslims can't speak. As a result, most people think that Islam is about peace. It is from these people, honest and kind that the fallacy has arisen that Islam is peaceful and tolerant. But I could no longer avoid seeing the totalitarianism, the pure moral framework that is Islam. It regulates every detail of life and subjagtes free will. True Islam, as a rigid belief is system and a moral framework leads to cruelty. The inhuman act of those nineteen hijackers was the logical outcome of this detailed system for regulating human behavior. Their world is divided between "Us" and "Them"-if you don't accept Islam you should perish. It didn't have to be this way. The West underwent a period of religious warfare and persecution, but then society freed itself from the grip of violent organized religion. I assumed-I still assume-that the same process could occur among the millions of Muslims. we Muslims could shed our attachment..to those dogmas that clearly lead to ignorance and opression. In fact, I

thought, we were lucky: there were now so many books that Muslims could read them and leapfrog the Enlightenment, just as the Japanese have done.

2nc—Turns Case

Shielding Islam from criticism in the name of resisting Islamophobia prevents effective and sustainable challenges to Islamic hatred and turns the case

Deacon 14 (Liam Deacon. "Critiquing Islam or Islamophobia?" May 16, 2014.

http://www.huffingtonpost.co.uk/liam-deacon/islamophobia_b_4973979.html) //EMerz

For nine years in a row a controversial resolution on, "Combating Defamation of Religions," described by some as an, "international blasphemy law," has been consistently losing support in the United Nations General Assembly. Until 2010, the only religion mentioned in the legislation was Islam, when the authors of the legislation, the Organisation of the Islamic Conference, invented the terms; "Judeophobia and Christianophobia," to quell criticism. Domestically too, the term Islamophobia has come under intense scrutiny, just this week. Opinion is sharply divided. The discourse here in the UK often mirrors the international debate. In one camp, the appropriateness of the terms very existence is questioned; critics lambast the fact that in reality there is no equivalent terminology in existence to describe those who critique other ideologies and religions (other than Anti-Semitism, of course). They say it is telling of the particular defensiveness and privilege that Islam demonstrates and is often afforded. Others, however, maintain that the phenomena is one of the most concerning and potentially dangerous of our age. They contend that the recent increase in Islamophobia is akin to the rise of Anti-Semitism in the last century and portray Islamophobia as a current of hate, engulfing Europe and risking unrest, conflict even. There is truth on both ends of this dialectic. Islamophobia clearly exists. It is a genuine phenomenon. A 'phobia' is an irrational fear or hatred of something - one need only browse the Internet momentarily before confronting a plethora of overtly irrational, hateful and inflammatory views directed towards Muslims. On the other hand, **the term is very commonly misappropriated to deflect genuine and much needed criticism of Islam. And it is grossly misappropriated when used to scare and accuse those interested in discussing theology, ethics and progress of racism and bigotry.** However, misappropriation of the term is so common, and confusion so easy, because alongside the rising tide of irrational Islamophobia described by Ansar, there is an increasing need for a rational critique Islam (a process Ansar is deeply involved in himself). Religions are not static or homogeneous. They change / evolve over time and at any one time there is often a plurality of voices within any religion advocating differing interpretations. Rigorous and continuous criticism is an important catalyst for this ongoing process. Denying the need for such a critique, and assuming Islam is static and unchanging, is as crude and misleading as islamophobia itself. Religion is a historical process of change and modernization. Many early religions described man's relationship with nature. There were Gods of sun, thunder and earth. Later, religions are often seen to embody man's relationship with the state. The god of Athena, say, represented to the Greeks their relationship with the polis. Later, the great monotheistic religions of Islam and Christianity began to function as

the Polis itself. Church and state became one; it was the fear of God, rather than the Police, that kept citizens in line and it was parish / sharia courts who made judicial rulings. After coming to dominate politics in Europe, Christianity did not give up its political power lightly. From Galileo to Copernicus, for centuries, owners of any voice of decent were persecuted. It was a long and bloody battle before Christianity began to communicate with post enlightenment thought. Christianity was battered and berated into submission by a reformation, enlightenment and a well-established tradition of biblical criticism. The result was the subdued and less political Christianity we know today (maybe not so in America). The simple fact is that Islam is not as far through this stage of its historical development, through which it will be brought to communicate with post enlightenment thought and secular politics, as Christianity, which began it in the 17th century. Comparatively, very little is known about the true origins of the Koran. Historians such as Patricia Crone and Tom Holland have only recently begun this mammoth task. Historical and Archeological examinations of the Bible helped Christians a great deal in reconciling their views with the realities of the modern world. Hopefully the same can be true for Islam. As I've said, **Islam is far from monolithic; Muslim feminists and gay rights activists are a historical fact. But today, particularly since the Islamic resurgence, Islam is dominated by conservative, and primarily male, voices.** Such voices have been politicizing the religion and pushing an oppressive, conservative social agenda. **This has resulted in the social regression we see in Iran and more recently, Turkey and Egypt. Critiquing the authoritarian, misogynistic and homophobic values of these interpretations of Islam is of pivotal importance for the survival and wellbeing of millions of people worldwide.** Another issue at hand is the confluence of Islamic culture with Islamic faith. If such a critique is to be as successful as it has been for Christianity then it is likely that many Muslims, especially those living in the west, will come to reject the dogmatism of religion and embrace Agnosticism and Atheism. It is critical that Apostates of Islam can hold on to their cultural identity despite losing their faith. It's been decades since people, un-ironically, discussed 'Christendom' or 'Christian culture' instead of 'western culture,' and it's time Islamic culture was more commonly afforded such respect, as something quite distinct from mere faith. **As conservative Muslim populations living inside western liberal democracies become more vocal and politicized, it must be remembered that a central condition of freedom of religion is the freedom of others to criticize your religion.** New Atheism and 'Dawkinism' are consistently more abrasive and less patient with conservative religious views. If every time the two groups come into conflict commentators call it Islamophobia, the true meaning and importance of the word will very soon be lost. I must stress, none of what is said above is written to suggest that the majority of Muslims today are not already moderate and do not accept post-enlightenment thought. Rather, **if we are to begin to see the end of political Islam and the small but significant strains of radical Islam that western media is so obsessed with, then a vigorous and open discussion must be had about Islam.** At a time when genuinely Islamophobic views are on the rise, keeping such a rational discussion distinct from genuinely Islamophobic, irrational prejudice will be increasingly difficult.

Islamophobia studies squelch discussion about legitimately dangerous countries and silences Muslim activists- this rhetoric is what extremists want- lack of criticism sets Islam up for failure

Schanzer 13 (Jonathan Schanzer. "A Nasty Neologism." January 9, 2013.

<http://www.wsj.com/articles/SB10001424127887324391104578227543258640614>)/E Merz

"The enemy of America is not our many Muslim friends," President George W. Bush declared soon after the 9/11 attacks. Mr. Bush's statement set the tone for the tumultuous decade to come, one in which the nation prosecuted a war on terrorism in two Muslim lands while taking great pains to protect the rights of Muslim Americans. Yet if the author Nathan Lean is to be believed, Americans today are caught in the grip of an irrational fear of Islam and its adherents. In his short book on the subject, Mr. Lean, a journalist and editor at the website Aslan Media, identifies this condition using the vaguely medical sounding term "Islamophobia." It is by now a familiar diagnosis, and an ever widening range of symptoms—from daring to criticize theocratic tyrannies in the Middle East to drawing cartoons of the Prophet Muhammad—are attributed to it. In reality, **Islamophobia is simply a pejorative neologism designed to warn people away from criticizing any aspect of Islam.** Those who deploy it see no difference between Islamism—political Islam and its extremist offshoots—and the religion encompassing some 1.6 billion believers world-wide. Thanks to this feat of conflation, Islamophobia transforms religious doctrines and political ideologies into something akin to race; to be an "Islamophobe" is in some circles today tantamount to being a racist. American Islamophobia, Mr. Lean claims, is fomented by a "small cabal of xenophobes." "The Islamophobia Industry: How the Right Manufactures Fear of Muslims" is less a book than a series of vignettes about some of these antagonists, who are "bent on scaring the public about Islam." His Islamophobic figures and institutions range from political leaders like Mr. Bush, Sen. John McCain and New York Mayor Rudy Giuliani, who, Mr. Lean says, have "harnessed Muslims and Islam to terrorism"; to the pro-Israel community, which is alleged to be animated by a "violent faith narrative" and funded by magnates who inject "eye-popping cash flows into the accounts of various fear campaigns"; to pretty much everyone who campaigned in 2010 against the construction of the so-called Ground Zero Mosque near the site of the 9/11 attacks in lower Manhattan. Mr. Lean tars with the same brush the likes of the scholar Daniel Pipes and the Muslim activist, physician and U.S. Navy veteran Zuhdi Jasser. Mr. Pipes, the author writes, is "deeply entrenched in the business of selling fear." He portrays Dr. Jasser as a puppetlike figure, "a 'good Muslim,' one that openly and forcefully denounced various tenets of his faith." These are crude and uncharitable caricatures of these men. Mr. Pipes was one of the first Western commentators to raise the alarm about the subterranean spread of extremist attitudes in both the Middle East and among some Muslim communities in the West. Dr. Jasser, a devout Muslim, is the founder of the American Islamic Forum for Democracy, an organization that advances the notion that "the purest practice of Islam is one in which Muslims have complete freedom to accept or reject any of the tenants or laws of the faith no different than we enjoy as Americans in this Constitutional republic." Both men argue that the real contest is the serious war of ideas raging within Islam itself, between the forces of liberalism and pluralism and those of obscurantism. To Mr. Lean, though, any such distinction is simply a false perception manufactured by Islamophobes. Thus the author

fails to grapple with the fact that, unlike average Muslims, Islamist terror groups like al Qaeda, Hamas and Hezbollah do commit unspeakable acts of violence in the name of Islam—actions that surely help account for why many Americans (49%, according to a 2010 poll) hold an unfavorable view of Islam, even when they view favorably Muslims that they personally know. Mr. Lean also can't seem to tell the difference between Islamist organizations and ordinary Muslims. Consider his view of the Council on American Islamic Relations, a self-proclaimed civil-rights organization that wields outsize influence on questions of Muslim integration in the U.S. Mr. Lean barely mentions CAIR and, when he does, it is in invariably glowing terms. The author lauds "cooperation between the FBI and CAIR" that supposedly "led to the capture of five American Muslim men in Pakistan suspected of trying to join radical, anti-American forces." But he neglects to mention that CAIR was named by federal prosecutors as an unindicted co-conspirator in the Holy Land Foundation terror-finance trial of 2007. The same group, according to an unclassified State Department cable, sought to raise \$50 million for an Islamophobia campaign from Saudi Arabia and the United Arab Emirates. **Islamist states and groups have been at the forefront of promoting the concept of Islamophobia.** As far back as 1999, the United Association for Studies and Research, a group founded by Hamas leader Mousa Abu Marzook, published a book that purported to expose "The Truth Behind the Anti-Muslim Campaign in America." After 9/11, Muslim states mounted a campaign to characterize the fear of Muslim violence as blind hatred. In 2004, United Nations Secretary-General Kofi Annan assured the world that U.N. "special rapporteurs continue to monitor the exercise and infringements of this right [freedom of religion], and to recommend ways to combat Islamophobia." According to anti-Islamophobia crusaders, though, even questioning the origins of the concept is itself a form of Islamophobia. **Such dogmatism chills the crucial conversations that need to take place about Islamism here in the West.** It also does a profound injustice to liberal Muslims around the world. After all, if Islam is dominated by its most violent and illiberal elements, and questioning these forces is deemed by intellectual elites to be a form of racism, then reform-minded Muslims really stand no chance.

A2.Cherry Picking

Even if limited experiences don't speak to the structural truth of Islam, they reveal personal struggles we have to recognize— it's the same reason your authors that reveal the stories of individual Muslim Americans is key to breaking down the Surveillance State

Kundnani, 14—professor at New York University (Arun, 3/28/14, "No NSA reform can fix the American Islamophobic surveillance complex", The Guardian, www.theguardian.com/commentisfree/2014/mar/28/nsa-reform-american-islamophobic-surveillance-complex)/twemchen

Better oversight of the sprawling American national security apparatus may finally be coming: President Obama and the House Intelligence Committee unveiled plans this week to reduce bulk collection of telephone records. The debate opened up by Edward Snowden's whistle-blowing is about to get even more legalistic than all the parsing of hops and stores and metadata. These reforms may be reassuring, if sketchy. But for those living in so-called "suspect communities" - Muslim Americans, left-wing campaigners, "radical" journalists - the days of living on the receiving end of excessive spying won't end there. How come when we talk about spying we don't talk about the lives of ordinary people being spied upon? While we have been rightly outraged at the government's warehousing of troves of data, we have been less interested in the consequences of mass surveillance

for those most affected by it – such as Muslim Americans. In writing my book on Islamophobia and the War on Terror, I spoke to dozens of Muslims, from Michigan to Texas and Minnesota to Virginia. Some told me about becoming aware their mosque was under surveillance only after discovering an FBI informant had joined the congregation. Others spoke about federal agents turning up at colleges to question[ing] every student who happened to be Muslim. All of them said they felt unsure whether their telephone calls to relatives abroad were wiretapped or whether their emails were being read by government officials. There were the young Somali Americans in Minnesota who described how they and their friends were questioned by FBI agents for no reason other than their ethnic background. Some had been placed under surveillance by a local police department, which disguised its spying as a youth mentoring program and then passed the FBI intelligence on Somali-American political opinions. There were the Muslim students at the City University of New York who discovered that fellow students they had befriended had been informants all along, working for the New York Police Department's Intelligence Division and tasked with surveilling them. There was no reasonable suspicion of any crime; it was enough that the targeted students were active in the Muslim Students Association. And then there was Luqman Abdullah, a Detroit-based African-American imam, whose mosque was infiltrated by the FBI, leading to a 2009 raid in which he was shot and killed by federal agents. The government had no evidence of any terrorist plot; the sole pretext was that Abdullah had strongly critical views of the US government. These are the types of people whom the National Security Agency can suspect of being two "hops" away from targets. These are the types of "bad guys" referred to by outgoing NSA director Keith Alexander. Ten years ago, around 100,000 Arabs and Muslims in America had some sort of national security file compiled on them. Today, that number is likely to be even higher. A study published last year by the Muslim American Civil Liberties Coalition documented the effects of this kind of mass surveillance. In targeted communities, a culture of enforced self-censorship takes hold and relationships of trust start to break down. As one interviewee said: "You look at your closest friends and ask: are they informants?" This is what real fear of surveillance looks like: not knowing whom to trust, choosing your words with care when talking politics in public, the unpredictability of state power.

A2 Getting Better

Woman in Islam are treated like second class citizens. The way Islam is practiced has as gone as far as to say that women are worth half of a men. They're even less than ¾ as slaves were ruled.

Beyer, 2K1 (Lisa, Beyer served as Time bureau chief in Jerusalem[2] for much of the time between the two Persian Gulf Wars. In 2000, she left Jerusalem to begin working in New York as a Senior Editor for TIME magazine.[1], Nov. 25, "Women of Islam", <http://content.time.com/time/world/article/0,8599,185647,00.html>)//tamara&twemchen

For his day, the Prophet Muhammad was a feminist. The doctrine he laid out as the revealed word of God considerably improved the status of women in 7th century Arabia. In local pagan society, it was the custom to bury alive unwanted female newborns; Islam prohibited the practice. Women had been treated as possessions of their husbands; Islamic law made the education of girls a sacred duty and gave women the right to own and inherit property. Muhammad even decreed that sexual satisfaction was a woman's entitlement. He was a liberal at home as well as in the pulpit. The Prophet darned his own garments and among his wives and concubines had a trader, a warrior, a leatherworker and an imam. Of course, ancient advances do not mean that much to women 14 centuries later if reform is, rather than a process, a historical blip subject to reversal. While it is impossible, given their diversity, to paint one picture of women living under Islam today, it is clear that the religion has been used in most Muslim countries not to liberate but to entrench inequality. The Taliban, with its fanatical subjugation of the female sex, occupies an extreme, but it nevertheless belongs on a continuum that includes, not so far down the line, Saudi Arabia, Kuwait, Pakistan and the relatively moderate states of Egypt and Jordan. Where Muslims have afforded women the greatest degree of equality--in Turkey--they have done so by overthrowing Islamic precepts in favor of secular rule. As Riffat Hassan, professor of religious studies at the University of Louisville, puts it, "The way Islam has been practiced in most Muslim societies for centuries has left millions of Muslim women with battered bodies, minds and souls." Part of the problem dates to Muhammad. Even as he proclaimed new rights for women, he enshrined their inequality in immutable law, passed down as God's commandments and eventually recorded in scripture. The Koran allots daughters half the inheritance of sons. It

decrees that a woman's testimony in court, at least in financial matters, is worth half that of a man's. Under Shari'a, or Muslim law, compensation for the murder of a woman is half the going rate for men. In many Muslim countries, these directives are incorporated into contemporary law. For a woman to prove rape in Pakistan, for example, four adult males of "impeccable" character must witness the penetration, in accordance with Shari'a. Family law in Islamic countries generally follows the prescriptions of scripture. This is so even in a country like Egypt, where much of the legal code has been secularized. In Islam, women can have only one spouse, while men are permitted four. The legal age for girls to marry tends to be very young. Muhammad's favorite wife, A'isha, according to her biographer, was six when they wed, nine when the marriage was consummated. In Iran the legal age for marriage is nine for girls, 14 for boys. The law has occasionally been exploited by pedophiles, who marry poor young girls from the provinces, use and then abandon them. In 2000 the Iranian Parliament voted to raise the minimum age for girls to 14, but this year, a legislative oversight body dominated by traditional clerics vetoed the move. An attempt by conservatives to abolish Yemen's legal minimum age of 15 for girls failed, but local experts say it is rarely enforced anyway. (The onset of puberty is considered an appropriate time for a marriage to be consummated.) Wives in Islamic societies face great difficulty in suing for divorce, but husbands can be released from their vows virtually on demand, in some places merely by saying "I divorce you" three times. Though in most Muslim states, divorces are entitled to alimony, in Pakistan it lasts only three months, long enough to ensure the woman isn't pregnant. The same three-month rule applies even to the Muslim minority in India. There, a national law provides for long-term alimony, but to appease Islamic conservatives, authorities exempted Muslims. Fear of poverty keeps many Muslim women locked in bad marriages, as does the prospect of losing their children. Typically, fathers win custody of boys over the age of six and girls after the onset of puberty. Maryam, an Iranian woman, says she has stayed married for 20 years to a philandering opium addict she does not love because she fears losing guardianship of her teenage daughter. "Islam supposedly gives me the right to divorce," she says. "But what about my rights afterward?" Women's rights are compromised further by a section in the Koran, sura 4:34, that has been interpreted to say that men have "pre-eminence" over women or that they are "overseers" of women. The verse goes on to say that the husband of an insubordinate wife should first admonish her, then leave her to sleep alone and finally beat her. Wife beating is so prevalent in the Muslim world that social workers who assist battered women in Egypt, for example, spend much of their time trying to convince victims that their husbands' violent acts are unacceptable.

A2 K = Islamophobic

Even if limited experiences don't speak to the structural truth of Islam, they reveal personal struggles we have to recognize— it's the same reason your authors that reveal the stories of individual Muslim Americans is key to breaking down the Surveillance State

Kundnani, 14—professor at New York University (Arun, 3/28/14, "No NSA reform can fix the American Islamophobic surveillance complex", The Guardian, www.theguardian.com/commentisfree/2014/mar/28/nsa-reform-american-islamophobic-surveillance-complex)/twemchen

Better oversight of the sprawling American national security apparatus may finally be coming: President Obama and the House Intelligence Committee unveiled plans this week to reduce bulk collection of telephone records. The debate opened up by Edward Snowden's whistle-blowing is about to get even more legalistic than all the parsing of hops and stores and metadata. These reforms may be reassuring, if sketchy. But for those living in so-called "suspect communities" - Muslim Americans, left-wing campaigners, "radical" journalists - the days of living on the receiving end of excessive spying won't end there. How come when we talk about spying we don't talk about the lives of ordinary people being spied upon? While we have been rightly outraged at the government's warehousing of troves of data, we have been less interested in the consequences of mass surveillance for those most affected by it - such as Muslim Americans. In writing my book on Islamophobia and the War on Terror, I spoke to dozens of Muslims, from Michigan to Texas and Minnesota to Virginia. Some told me about becoming aware their mosque was under surveillance only after discovering an FBI informant had joined the congregation. Others spoke about federal agents turning up at colleges to question[ing] every

student who happened to be Muslim. All of them said they felt unsure whether their telephone calls to relatives abroad were wiretapped or whether their emails were being read by government officials. There were the young Somali Americans in Minnesota who described how they and their friends were questioned by FBI agents for no reason other than their ethnic background. Some had been placed under surveillance by a local police department, which disguised its spying as a youth mentoring program and then passed the FBI intelligence on Somali-American political opinions. There were the Muslim students at the City University of New York who discovered that fellow students they had befriended had been informants all along, working for the New York Police Department's Intelligence Division and tasked with surveilling them. There was no reasonable suspicion of any crime; it was enough that the targeted students were active in the Muslim Students Association. And then there was Luqman Abdullah, a Detroit-based African-American imam, whose mosque was infiltrated by the FBI, leading to a 2009 raid in which he was shot and killed by federal agents. The government had no evidence of any terrorist plot; the sole pretext was that Abdullah had strongly critical views of the US government. These are the types of people whom the National Security Agency can suspect of being two "hops" away from targets. These are the types of "bad guys" referred to by outgoing NSA director Keith Alexander. Ten years ago, around 100,000 Arabs and Muslims in America had some sort of national security file compiled on them. Today, that number is likely to be even higher. A study published last year by the Muslim American Civil Liberties Coalition documented the effects of this kind of mass surveillance. In targeted communities, a culture of enforced self-censorship takes hold and relationships of trust start to break down. As one interviewee said: "You look at your closest friends and ask: are they informants?" This is what real fear of surveillance looks like: not knowing whom to trust, choosing your words with care when talking politics in public, the unpredictability of state power.

A2 Not All Islam!

Islam oppresses women and instills a society of gender inequality—this must be evaluated before the pervasive surveillance system—or else the women's struggles will never be evaluated

Ali, 7—a fellow of the Belfer Center at Harvard's Kennedy School of Government and founder of the AHA Foundation (Ayaan Hirshi, 8/2/7,

"Infidel" pg.347-348)//tamara&twemchen

Death lures many others to take their own lives in order to escape a dismal reality. For many women, because of the perception of lost honor, death comes at the hands of a father, brother, or husband. Death comes to young women giving birth to new life, leaving the new-born orphaned in the hands of strangers. For those who live in anarchy and civil war, as in the country of my birth, Somalia, death is everywhere. When I was born, my mother initially thought death had taken me away. But it didn't. When I got malaria and pneumonia, I recovered. When my genitals were cut, the wound healed. When a bandit held a knife to my throat, he decided not to slit it. When my Quran teacher fractured my skull, the doctor who treated me kept death at bay. Even with bodyguards and death threats I feel privileged to be alive and free. When I took the train to Amsterdam thirteen years ago, I took a chance at a life in freedom, a life in which I would be free from bondage to someone I had not chosen, and in which my mind, too, could be free. I first encountered the full strength of Islam as a young child in Saudi Arabia. It was very different from the diluted religion of my grandmother, which was mixed with magical practices and pre-Islamic beliefs. Saudi Arabia is the source of Islam and its quintessence. It is the place where the Muslim religion is practiced in its purest form, and it is the origin of much of the fundamentalist vision that has, in my lifetime, spread far beyond its borders. In Saudi Arabia, every breath, every step we took, was infused with concepts of purity or sinning, and with fear. Wishful thinking about the peaceful tolerance of Islam cannot interpret away this reality: hands are still cut off, women still stoned and enslaved, just as the Prophet Muhammad decided centuries ago. The kind of thinking I saw in Saudi Arabia, and among the Muslim Brotherhood in Kenya and Somalia, is incompatible with human rights and liberal values. It preserves a feudal mind-set based on tribal concepts of honor and shame. It rests on self-deception, hypocrisy, and double standards. It relies on the technological advances of the West while pretending to ignore their origin in Western thinking. This mind-set makes the transition to modernity very painful for all who practice Islam. It is always difficult to make the transition to a modern world. It was difficult for my grandmother, and for all my relatives from the miye. It was difficult for me, too. I moved from the world of faith to the world of reason—from the world of excision and forced marriage to the world of sexual emancipation. Having made that journey, I know that one of those worlds is simply better than the other. Not because of its flashy gadgets, but fundamentally, because of

its values. The message of this book if it must have a message, is that we in the West would be wrong to prolong the pain of that transition unnecessarily, by elevating cultures full of bigotry and hatred toward women to the stature of respectable alternative ways of life. People accuse me of having interiorized a feeling of racial inferiority, so that I attack my own culture out of self-hatred, because I want to be white. This is a tiresome argument. Tell me, is freedom then only for white people? **Is it self-love to adhere to my ancestors' traditions and mutilate my daughters? To agree to be humiliated and powerless? To watch passively as my countrymen abuse women and slaughter each other in pointless disputes?** When I came to a new culture, where I saw for the first time that human relations could be different, would it have been self-love to see that as a foreign cult, which Muslims are forbidden to practice? **Life is better in Europe than it is in the Muslim world because human relations are better, and one reason human relations are better is that in the West, life on earth is valued** in the here and now, **and individuals enjoy rights and freedoms that are recognized and protected by the state. To accept subordination and abuse because Allah willed it-that, for me, would be self-hatred.** The decision to write this book didn't come to me easily. Why would I expose such private memories to the world? I don't want my arguments to be considered sacrosanct because I have had horrible experiences; I haven't. In reality, my life has been marked by enormous good fortune. How many girls born in Digfeer Hospital in Mogadishu in November 1969 are even alive today? And how many have a real voice? I also don't want my reasoning to be dismissed as the bizarre ranting of someone who has been somehow damaged by her experiences and who is lashing out. **People often imply that I am angry because I was excised, or because my father married me off. They never fail to add that such things are rare in the modern Muslim world. The fact is that hundreds of millions of women around the world live in forced marriages, and six thousand small girls are excised every day. My excision in no way damaged my mental capacities; and I would like to be judged on the validity of my arguments, not as a victim. My central, motivating concern is that women, in Islam are oppressed.**

A2 Not Just Islam

as a victim. My central, motivating concern is that **women, in Islam are oppressed.**

Not all cultures are equal—Fundamentalist Islam teachings oppress women and are underdeveloped

Ali, 7—a fellow of the Belfer Center at Harvard's Kennedy School of Government and founder of the AHA Foundation (Ayaan Hirshi, 8/2/7,

"Infidel" pg. 295-296)//tamara&twemchen

I wanted Muslim women to become more aware of just how bad, and how unacceptable, their suffering was. I wanted to help them develop the vocabulary of resistance. I was inspired by Mary Wollstonecraft, the pioneering feminist thinker who told women they had the same ability to reason as men did and deserved the same rights. Even after she published *A Vindication of the Rights of Women*, it too more-than-a century before the suffragettes marched for the vote. I knew that **freeing Muslim women from their mental cage would take time**, too. I didn't expect immediate waves of organized support among Muslim women. **People who are conditioned to meekness, almost to the point where they have no mind of their own** sadly **have no ability to organize or will to express their opinions** when I worked at the Labor Party think tank, trying to talk about these issues, **people always accused me of failing to back up my arguments with data.** But **hard numbers were completely unavailable.** When I tried to find out about **honor killings, for instance--how many girls were killed every year in Holland by their fathers and brothers because of their precious family honor--civil servants at the Ministry of Justice would tell me 'We don't register murders based on that category of motivation it would stigmatize one group in society.'** The Dutch government counted the number of drug-related killings and traffic accidents year, but not the number of honor killings, because no **Dutch wanted to recognize that this kind of murder happened on a regular basis.** Even Amnesty International didn't keep statistics on how women

around the world were victims of honor killings. They could tell you how many men were imprisoned and tortured, but they couldn't keep tabs on the number of women flogged in public for fornication or executed for adultery. That wasn't their subject. I decided that if I were to become a member of the Dutch Parliament it would become my holy mission to have these statistics registered. I wanted someone, somewhere, to take note every time a man in Holland murdered his child simply because she had a boyfriend. I wanted someone to register domestic violence by ethnic background- and abuse, and incest- and to investigate the number of excisions of little girls that took place every year on Dutch kitchen tables. Once these figures were clear, the facts alone would shock the country. With one stroke, they would eliminate the complacent attitude of moral relativist who claimed that all cultures are equal. The excuse that nobody knew would be removed. If I were in Parliament, I could try to act on my beliefs, not just them. And Neelie was right: although the Labor Party had seemed the right party for me, and although I was truly loyal to Paul and Job Cohen, many things about me had never fit with Labor's. Social democracy is grounded in the rights of groups of people, individuals. The Liberal Party may not have been as ideal as its philosophy was grounded in the values of personal freedom ideas felt comfortable there. I was a one-issue politician, I decided. I am still. I am also so that this is the largest, most important issue that our society and planet will face in this century. Every society that is still in the rigid grip of Islam oppresses women and also lags behind in development. Most these societies are poor; many are full of conflict and war. Societies that respect the rights of women and their freedom are wealthy and peaceful. I decided I would go wherever I had the capability to effect it. If the Liberal Party was offering me a platform to stand on, then so. I phoned Paul Kalma and told him I would be leaving both the Party and my job.

A2 Perm

The 1AC's unquestioning endorsement of Islam is another form of oppression of women— we must first re-evaluate the context of the Quran to contemporary politics and gender equality instead of combating Islamophobia

Ali, 7—a fellow of the Belfer Center at Harvard's Kennedy School of Government and founder of the AHA Foundation (Ayaan Hirshi, 8/2/7,

"Infidel" pg.313-314)//tamara&twemchen

In the film Theo and I made, Submission: Part One, is first and foremost about the relation of the individual with Allah. In Islam, unlike in Christianity and Judaism, the relationship of the individual to God is one of total submission, slave to master. To Muslims, worship of God means total obedience to Allah's rules and total abstinence from the thoughts and deeds that He has declared forbidden in the Quran. To modernize Islam and adapt it to contemporary ideals would require a dialogue with God, even disagreement with God's rules; but as Islam is conceived, any kind of disagreement with Allah is insolence because it assumes equality with Him. The Quran tells a vivid story about how Satan was expelled from the realm of angels after Allah created Adam. Allah ordered all the angels to bow to Adam, but Satan refused to obey. He talked back to Allah: Why should he, an elevated angel, bow down to a creature made of mud? Allah threw Satan out of Paradise, and from then on Satan has tried to lure Adam and his offspring from the Straight Path. For a human being to doubt any of Allah's rules is to fall into Satan's clutches. Probably every Muslim is taught that story, and as a child I thought of it often. Now, as an adult, I felt that liberation of Muslim women must be preceded by liberation of the mind from this rigid, dogmatic obedience to Allah's dictates. Allah is constantly referred to in the Quran as "the most compassionate, the most merciful"; He also says several times that he has given us a will of our own. In that case, I wonder, why would He mind a little debate? When I sat down to write the script for our film, I decided to use the format of prayer to bring about dialogue with Allah. I pictured a woman standing in the center of a room. In the four corners of the room, four women depict restrictive verses from the Quran. The woman in the middle of the room is veiled, but her veil is transparent at the front, opaque at the back. The transparency is necessary because it challenges Allah to look at what he created: the body of woman. On her torso is written the opening verse of the Quran, the "Sura Fatiha," which every Muslim is required to recite first, at every prayer: In the name of God, the merciful, the beneficent. Praise be to God, the Lord of the worlds, the merciful, the

beneficent, ruler of the day of judgment! Thee we serve and Thee we ask for aid. Guide us in the right path, the path of those to whom Thou art gracious; not of those with whom Thou art wroth; nor of those who err. 314 The woman observes the rules of prayer: her head is lowered and her gaze is fixed on the front of the mat, where she will place her forehead: when she bows to express total obedience. But after she recites the Suro. Fatiha, she does something unusual: she raises her head. The camera to the first woman, who tells Allah that she has obeyed all his injunctions but she now lies in a corner, bleeding. She has fallen in love, and for she has been flogged. She ends, very simply, with the sentence, "I may no longer submit." Another of the women is repelled by the odor of her husband. She has been forced to marry him and now is forced to submit to him for the Quran says, When your wives have purified themselves, ye may approach them in any manner, time or place. A third woman is beaten by her husband at least once a week: As to those women on whose part you fear disobedience and conduct, admonish them, scourge them and banish them to beds apart. A fourth a young girl who lives cloistered in her own home. She has been raped by her uncle, and now she is pregnant; she will be punished for having an outside marriage. I called the film Submission, Part One, because submission to Islam causes many other kinds of suffering. I saw this as the first in a series of films that would tackle the master-slave relationship of God and individual. My message was that the Quran is an act of man, not God. We should be free to interpret it; we should be permitted to apply it to the modern era in a different way, instead of performing painful contortions to try to recreate the circumstances of a horrible distant past. My intention was to liberate Muslim minds so that Muslim women and Muslim men, too, might be freer. Men, too, are forced to obey Islamic laws. It was a simple film to make. Theo wasn't interested in writing up proposals for grants and subsidies: he said we should just make a ten-minute film and see what happened. I finished the script at the end of July. Theo rented a studio and hired an actress and a makeup woman, and a few props. We did discuss the danger of making a film with this message. He had already spoken out about Islam, I knew how dangerous it was. I told Theo; I wanted him to keep his name off the project. But Theo called himself the village idiot. He said, "Nobody shoots the village idiot." He believed that I was the one who would be attacked, and nobody would bother with him. The movie almost didn't happen.

“Islamophobia” Word PIC

1nc

_____ and I advocated the entirety of the first affirmative constructive without their use of the word ‘Islamophobia.’

The usage of the term ‘Islamophobia’ is inappropriate, undermines anti-semitism, causes homogenization and essentialism, hinders freedom of expression, and generalizes the concept of Islam based oppression

Lorente 10 (Javier Rosón Lorente, PhD. in Social Anthropology from the University of Granada and is currently researcher at Casa Árabe e Instituto Internacional de Estudios Árabes y del Mundo Musulmán (Spain). Discrepancies Around the Use of the Term “Islamophobia”, The Omar Khayyam Center for Integrative Research in Utopia, Mysticism, and Science, HUMAN ARCHITECTURE: JOURNAL OF THE SOCIOLOGY OF SELF-KNOWLEDGE, VIII, 2, FALL 2010, 115-128)//ASMITH

As mentioned above, there is another order of criticism or discrepancy toward the term Islamophobia, which though fully linked to ethnic, religious and cultural aspects, is in itself used as individual criticism over the use of this terminology. Such is firstly the case of ‘etymological/ terminological criticism.’ From this viewpoint, the terms ‘anti-Muslim racism,’ ‘anti- Arab’ or even ‘intolerance against Muslims’ 18 are clearer than the term Islamophobia for various reasons. On the one hand, use of the word ‘phobia’ in the concept is not considered appropriate, as it would imply the existence of a sort of mental illness (phobia: obsessive aversion to someone or something and/or compulsive irrational fear); on the other, the term Islamophobia is not considered ‘ideal,’ for there is no specific rejection of Islam as a religion, but rather a rejection of Muslim individuals or collectives or those defined as such. This kind of criticism even makes an analogy between the word Islamophobia and the word ‘anti-Semitism,’ arguing that from a grammatical standpoint anti-Semitism should signify a prejudice against Semitic peoples in general, even though it is exclusively used to refer to hostility against the Jews. In this regard, the grammatically incorrect Islamophobia would require the 150 years which the term ‘anti-Semitism’ needed to become grammatically acceptable, except that Jews recognize themselves and are recognized as being a single ethnic group, contrary to the case of Muslims.

Parallel to this, inclusion of the word ‘Islam’ in the word Islamophobia raises another kind of discrepancy: based on an undeniable question, the religious, racial, cultural and ethnic diversity of the groups ‘supposedly’ the object of Islamophobia, the term Islamophobia homogenizes everything associated to Islam and therefore to Muslims. In this homogenization process the diversity of communities and individuals is essentialized, and distinct and differentiated processes are eventually included in a same concept. It is held in turn that widespread use of the term Islamophobia by distinct communities may also essentialize internal plurality at local, regional, national and international level. Other terms which semantically attempt to approach the national particularities or ‘realities’ (besides the more extended ‘anti-Arab anti-Muslim racism’) are becoming alternative though critical lines vis-à-vis usage of the term Islamophobia. For example ‘Islamfeindlichkeit’ in the

German context literally means hostility to Islam, or its rejection, but not phobia in the sense of fear, or 'maurofobia/morofobia' in the Spanish case.

Second, we should look at 'criticism' linked to the 'identity-building process' which initially does not reject use of the term, but does question the generalization and value of same, as well as its ability to describe the social reality in a non-essentialized manner. This criticism is meant to show both the use and abuse of a terminology— Islamophobia—which we ourselves have constructed. This identity-building presumes that the term Islamophobia is not put up in a 'one-way' manner addressed to Muslim communities and/or individuals, but rather that the prejudice we are dealing with is very likely two-way. According to this thesis, the term Islamophobia is not complete, given that to understand it we should delve into the contemporary public discussion regarding 'Islam' and 'West,' and also delimit the confusing 'inter-relational' debate being generated. From this point of view both sides have a tendency to essentialize from the 'Muslim' and 'Western' standpoint both the Muslim population and the rest of the non- Muslim population. On the one hand there is widespread social 'alarmism' based on the 'threat' of how Islam presents the Western world¹⁹, and on the other, how from the West²⁰ it is presented to Muslims. The 'simplification' from the West's viewpoint involves a number of prejudices regarding many aspects associated to the world around Islam: to think that all (or most) Muslims are terrorists; to consider widespread the 'degree of aggressiveness' disseminated by news media with respect to Arab countries; to think that the universal denial of human rights encompasses the whole Arab world; and to think that the billion Muslims, their social and ethnic groups, are all the same. Likewise and bilaterally there is a process of essentialization by Muslims vis-à-vis the West—the a priori Muslim 'simplification' of a comprehensive and uniform 'West,' along with the stereotyped idea of a single unitary and universal Muslim identity extended to all Muslims, their holy texts and their culture²¹. In this regard, before the distinct processes of Western social and religious intolerance, processes whose tangible result is seen in conflicts which reject the 'other' and are in turn the root of Islamophobia, an endless number of responses to social exclusion have been generated, such as signs of power loss and de-structuring of the bases of identity thought, beyond the 'hardening' of Western ideological postures and the root of the very concept of Islamophobia.

Thirdly, we encounter criticism or discrepancies which consider use of the term Islamophobia to be unmerited, along with its respective symbolic burden, as it 'hinders' the freedom of expression of certain sectors and/or social players. This debate initially emerged as criticism of the Runnymede Trust report. Those who currently hold up the lack of freedom of expression to justify the insistence or imprecision of the term Islamophobia make biased use of the sectors, Muslim or not: for example, the Mohammed caricatures controversy (2005), the film Fitna (by Dutch far-right MP Geert Wilders) or the theatre play The Satanic Verses using the book of the same title by Salman Rushdie, which opened in Germany on 30 March 2008, etc. These and other social players hold that the charge of Islamophobia hampers their freedom of expression. They ironically point to the 'freedom of expression' enjoyed by people who want to condemn or denounce discourses and acts, such as the 'Islamophobia Award' granted by the Islamic Human Rights Commission, a British organization. On this point, we must note that freedom of expression, albeit vital for democratic life, should not be deemed an absolute universal value. It should be wielded within established legal frameworks and under the appropriate ethical and legal

responsibility of the different social players involved. This means that Islamophobic speeches cannot be justified through recourse to the protection of fundamental rights.²² In fourth and last place we should take into account differences regarding the term Islamophobia in the framework of 'ideological discourse.' This criticism is grounded in the eagerness of researchers and/or academics to demonstrate that Islamophobia exists in the society they are studying; they go so far as to generalize and make universal considerations with no criteria whatsoever regarding both the phenomenon and the distinct readings associated to same. This generalization causes the term Islamophobia to lose its original meaning, distorting the observed reality. From this point of view criticism is addressed to our inability to differentiate between discourse and practice—at the level of discourse not everything can or should be called Islamophobia. This implies veiled criticism of how the term Islamophobia has grouped such a variety of forms of discourse and acts, aiming to show that any act marked as Islamophobic proceeds from a same ideological core²³, which has distorted and/or lost its original meaning. This 'criticism' aims to show that indiscriminate use of this terminology is not positive and that 'not all Islamophobic acts or incidents are Islamophobia.' To avoid this 'generalization,' it holds that all the observable and related nuances of acts marked as Islamophobic must be studied in depth, as it would be wrong to have to choose between Islamophobia or 'nothing.' To that end, it proposes distinguishing, per national specificity, between academic discussions about Islam and modernity; public debates about whether Islam recognizes the principle of separation of church and state; the public clamour which essentializes Islam; and the forms of inciting hatred, such as discourse associated to the death of Theo van Gogh, etc.

This is a *pre-requisite* to effectively challenging anti-Muslim violence

Edvardsson 08 (Linda Edvardsson, "Islamophobia – Features of Islamophobia and Strategies against it" Malmö University Department of International Migration and Ethnic Relations IMER 91-120 Fall 2008 Master Thesis)

There is ultimately a need to address Islamophobia; both on a social level and also within a legal discourse and this need have descriptively been told by two imams alongside a theoretical foundation. The imams have demonstrated that 'bad news' and negative images are in fact causing more disfavour than what everyday life might do. The media can therefore become a dual force in which negative images are flourishing and being rooted, yet at the same time a constitution that can cause the opposite. This relationship is depending on which news that is more favoured in that given time and/or place that one is referring to. In Sweden it has been demonstrated through both the imam's voices and a theoretical framework that Islamophobia is not so obvious and a prominent feature in everyday life, rather, lies beneath the surface and are characterised in Swedish media. Yet, mental and physical damage cannot be excluded.¹⁶⁸ For instance, one of the imams stated that it is always a struggle to tell the truth about Islam and also mentioned the segregation within Swedish labour market and housing. The imam also spoke of the importance of what is prioritised by the police and other authorities and that this eventually decides if, how and when Islamophobia can be prevented and eliminated.¹⁶⁹ Both the imams did not identify that Islamophobia is so apparent in Sweden, in contrast to other countries. Yet underline that Islamophobia could have crucial effects on both Muslims and the society in general. For instance, they both mention the incident with the Danish newspaper and media's role

whereas Muslims ought not to react against these kinds of things, instead work as good ambassadors or good employees.¹⁷⁰ One of the imams mentioned that there are differences between those acts against Islam itself and those acts that are against the Muslims.¹⁷¹ Hitherto, this research mainly underlined the phobia against the religious practice rather than 'the ethnic phobia'; although, the need to address Islamophobia must maybe start with a separation between what we mean with the concept Islamophobia. In order to address more specifically the acts that is carried out. Higher attention must therefore be drawn to if Islamophobic acts are anticipated against one's ethnic or religious belonging. Ergo a separation must maybe be realised, before Islamophobia can be solved. In this manner, an extension of Islamophobia such as, Muslimophobia might be plausible as it depicts a phobia against one's ethnic belonging. This phobia might reveal a fear or hostility against Muslim culture, countries, lifestyles, traits etcetera. This extension of Islamophobia, **Muslimophobia, can perhaps make it easier to erase some misunderstandings thus easier being decreased and grasped which methods that ought to be used more specifically.** After all, within the racialisation process it can be evident that the religion Islam and its various ethnic followers are categorised as one group and/or one identity. It also portrays a discourse in which all groups become homogenous and static hence neglect perspectives that sees ethnicity and culture as dynamic elements. Strategies and efforts against Muslimophobia can therefore reduce influences and stereotypes caused by, for instance, the essentialist view. This also emphasises the need to divide what the struggle is against more detailed. **Then it might be easier to solve those effects caused by Islamophobia and implement new laws that react against it more effectively.** After all, Karaman revealed experiences where some situations had been hard to interpret as Islamophobia or a dangerous and reckless game by some teenagers; as misunderstandings can easily cause more damage than good. However, clearly it has been verified that there is a need to address Islamophobia both within the media, the labour market, housing, medical care, schools and so forth. Most importantly, as the imams also declared, it is maybe time to embrace and highlight the positive attributes of Islam and the Muslim population instead of always doing the opposite.

Labeling discussion of terror as 'Islamophobic' stifles discourse about terrorism and problematic parts of extremism

Spencer 11 (Robert Spencer. "A Response to Matt Duss: A Defamation By Any Other Name." October 19, 2011. <http://www.nationalreview.com/corner/280529/response-matt-duss-defamation-any-other-name-robert-spencer>)//EMerz

Indicative of Matt Duss's dishonesty in his response to the article I co-wrote with David Horowitz about the manipulative neologism "Islamophobia" is his initial labeling of us as "anti-Muslim activists" and his characterization of our work as "the dissemination of hateful anti-Muslim ideas." This appellation is not only inaccurate; it is highly defamatory, as it is intended to mislead Duss's readers into assuming that we oppose a group of people out of sheer racism or bigotry, rather than opposing a radically intolerant and oppressive ideology. In reality, neither David Horowitz nor I are "anti-Muslim," as I have stated many

times. It is neither “anti-Muslim” nor “hateful” to stand for human rights for all people, including Muslims, and to defend the freedom of speech, the freedom of conscience, and equality of rights for women, all of which are denied under traditional forms of sharia. Duss claims that we are part of “an organized campaign to spread misinformation about the religious faith of millions of Americans” — while denying that he is “peddling ‘conspiracy theories’” about us. He makes much of the fact that the reliably Leftist Anti-Defamation League has smeared us also, asking rhetorically, “Should the Anti-Defamation League also be lumped among the ‘jihadist apologists?’” Why not? Why should it be surprising that an organization that consistently follows a far-Left political line would follow it in this also? Above all, like the CAP report itself, Duss does not and cannot provide any evidence either that an “organized campaign to spread misinformation” exists, or that anything that Horowitz or I or any of the other targeted “Islamophobes” have said is false. He does try, however. He quotes, as if it is self-evidently false, my statement that Islam “is the only major world religion with a developed doctrine and tradition of warfare against unbelievers,” but offers no refutation of it. If Duss can produce evidence of another major world religion with a developed doctrine or tradition of warfare against unbelievers (the Crusades, for those who may wish to toss them in here, did not proceed on the basis of any such Christian doctrine; no sect of Christianity ever taught as a matter of faith that believers were obligated to make war upon unbelievers), or that the sects of Islam and schools of Islamic law do not contain such developed doctrines and traditions, I will duly retract. But with Al-Azhar University, the most prestigious institution in Sunni Islam, endorsing (as conforming “to the practice and faith of the orthodox Sunni community”) a manual of Islamic law that declares that Muslims must wage war “upon Jews, Christians, and Zoroastrians . . . until they become Muslim or pay the non-Muslim poll tax,” Duss may find such a refutation rough going. Duss shows a similar lack of knowledge of Islamic doctrine and law when he attempts to refute my statement that “there is no form of sharia that does not contain . . . [the] death penalty for apostasy” by asserting that I am “obviously ignorant of the manner in which Islam is practiced by millions of sharia-adherent Muslims in the United States.” The ignorance is his: more Muslims in the U.S. do not adhere to sharia in its fullness, as no less an authority than the Ground Zero Mosque imam Faisal Abdul Rauf recently affirmed when he said that “the only truly clashing area” between Islamic law and modern Western society “is the penal code, and no Muslim has the intention of introducing that to America.” So if Rauf affirms that Muslims in America do not adhere to the sharia penal code, and Duss affirms that Muslims in America are “sharia-adherent,” whom should we believe? I will go with the internationally renowned imam over the non-Muslim Leftist ideologue, thank you. And as for whether or not there is actually a form of sharia, that is, a school of Islamic jurisprudence, that does not teach that apostates deserve death, I challenge Duss to find it. But he will search in vain. Duss then claims that “the unmistakable implication of these claims is that all observant Muslims should be viewed with suspicion simply by virtue of being observant Muslims,” and that “that’s obviously Islamophobic.” In reality, **the unmistakable implication of these facts is only that there are aspects of traditional Islamic law that are incompatible with constitutional values.** Here again, Rauf himself says nothing less. Is he, too, an “Islamophobe”? In concluding his new smear piece, Duss complains that National Review published our article in the first place, and pleads that we be read out of honorable American conservatism. Here he exposes his real agenda in all its ugliness. Duss’s Center for American Progress, the Hamas-linked Council on American-

Islamic Relations (CAIR), and other leftist and Islamic-supremacist groups are conducting an ongoing campaign to discredit and marginalize everyone who dares to stand up against the jihad and Islamic supremacism. They are bent on destroying every last individual who does not adopt a warmly positive stance toward the spread of sharia in the West and all other manifestations of the advancing jihad. The stakes are very high. If we don't resist this Islamic supremacist thuggery, Duss and his Islamic-supremacist allies will succeed in stamping out all discussion of the truth about Islam and jihad, thereby rendering us mute and defenseless before its advance. That's why we have to resist now, at every step, and continue to expose this propagandistic "Islamophobia" campaign.

2nc Language First

Your first question should be the way that language is used – it's the most concrete, immediate way to target and challenge oppression

Collins and Glover 2 (John Collins, Ass. Prof. of Global Studies at St. Lawrence, and Ross Glover, Visiting Professor of Sociology at St. Lawrence University, 2002, *Collateral Language*, p. 6-7, *The Real Effects of Language*)

As any university student knows, theories about the "social construction" and social effects of language have become a common feature of academic scholarship. Conservative critics often argue that those who use these theories of language (e.g., deconstruction) are "just" talking about language, as opposed to talking about the "real world." The essays in this book, by contrast, begin from the premise that language matters in the most concrete, immediate way possible: its use, by political and military leaders, leads directly to violence in the form of war, mass murder (including genocide), the physical destruction of human communities, and the devastation of the natural environment. Indeed, if the world ever witnesses a nuclear holocaust, it will probably be because leaders in more than one country have succeeded in convincing their people, through the use of political language, that the use of nuclear weapons and, if necessary, the destruction of the earth itself, is justifiable. From our perspective, then, every act of political violence—from the horrors perpetrated against Native Americans to the murder of political dissidents in the Soviet Union to the destruction of the World Trade Center, and now the bombing of Afghanistan—is intimately linked with the use of language. Partly what we are talking about here, of course, are the processes of "manufacturing consent" and shaping people's perception of the world around them; people are more likely to support acts of violence committed in their name if the recipients of the violence have been defined as "terrorists" or if the violence is presented as a defense of "freedom." Media analysts such as Noam Chomsky have written eloquently about the corrosive effects that this kind of process has on the political culture of supposedly democratic societies. At the risk of stating the obvious, however, the most fundamental effects of violence are those that are visited upon the objects of violence; the language that shapes public opinion is the same language that burns villages, besieges entire populations, kills and maims human bodies, and leaves the ground scarred with bomb craters and littered with land mines. As George Orwell so famously illustrated in his work, acts of violence can easily be made more palatable through the use of euphemisms such as "pacification" or, to use an example discussed in this book, "targets." It is important to point out, however, that the need for such language derives from the simple fact that the violence itself is abhorrent. Were it not for the abstract language of "vital interests" and "surgical strikes" and the flattering language of "civilization" and "just" wars, we would be less likely to avert our mental gaze from the physical effects of violence.

2nc S Wall

We'll isolate 8 reasons why the word 'Islamophobia' is bad—any of them outweighs the solvency deficit

Richardson 12 (Robin Richardson, a director of the Insted consultancy. He was director of the Runnymede Trust, 1991–96, and editor of report of the Commission on the Future of Multi-Ethnic Britain) ("Islamophobia or anti-Muslim racism – or what? – concepts and terms revisited", autumn 2012)//ASMITH

The disadvantages of the term Islamophobia are significant. Some of them are primarily about the echoes implicit in the concept of phobia. Others are about the implications of the term Islam. For convenience, they can be itemised as follows. **1. Medically, phobia implies a severe mental illness of a kind that affects only a tiny minority of people.** Whatever else anxiety about Muslims may be, it is not merely a mental illness and does not merely involve a small number of people. **2. To accuse someone of being insane or irrational is to be abusive and, not surprisingly, to make them defensive and defiant.** Reflective dialogue with them is then all but impossible. **3. To label someone with whom you disagree as irrational or insane is to absolve yourself of the responsibility of trying to understand, both intellectually and with empathy,** why they think and act as they do, and of seeking through engagement and argument to modify their perceptions and understandings. **4. The concept of anxiety is arguably more useful in this context than the concept of phobia.** It is widely recognised that anxiety may not be (though certainly may be) warranted by objective facts, for human beings can on occasions perceive dangers that do not objectively exist, or anyway do not exist to the extent that is imagined. Also it can sometimes be difficult to identify, and therefore to name accurately, the real sources of an anxiety. **5. The use of the word Islamophobia on its own implies that hostility towards Muslims is unrelated to, and basically dissimilar from, forms of hostility such as racism, xenophobia, sectarianism, and such as hostility to so-called fundamentalism** (Samuels 2006). **Further, it may imply there is no connection with issues of class, power, status and territory; or with issues of military, political or economic competition and conflict.** **6. The term implies there is no important difference between prejudice towards Muslim communities within one's own country and prejudice towards cultures and regimes elsewhere in the world where Muslims are in the majority, and with which 'the West' is in military conflict or economic competition.** **7. The term is inappropriate for describing opinions that are basically anti-religion as distinct from anti-Islam.** 'I am an Islamophobe,' wrote the journalist Polly Toynbee in reaction to the Runnymede 1997 report, adding '... I am also a Christophobe. If Christianity were not such a spent force in this country, if it were powerful and dominant as it once was, it would still be every bit as damaging as Islam is in those theocratic states in its thrall... If I lived in Israel, I'd feel the same way about Judaism'. **8. The key phenomenon to be addressed is arguably anti-Muslim hostility, namely hostility towards an ethno-religious identity within western countries (including Russia), rather than hostility towards the tenets or practices of a worldwide religion.** **The 1997 Runnymede definition of Islamophobia was 'a shorthand way of referring to dread or hatred of Islam – and, therefore, to fear or dislike of all or most Muslims'.** In retrospect, it would have been as accurate, or arguably indeed more accurate,

to say 'a shorthand way of referring to fear or dislike of all or most Muslims – and, therefore, dread or hatred of Islam'.

2nc Islam K NB

Islamophobia studies squelch discussion about legitimately dangerous countries and silences Muslim activists- this rhetoric is what extremists want- lack of criticism sets Islam up for failure

Schanzer 13 (Jonathan Schanzer. "A Nasty Neologism." January 9, 2013.

<http://www.wsj.com/articles/SB10001424127887324391104578227543258640614>)//E Merz

"The enemy of America is not our many Muslim friends," President George W. Bush declared soon after the 9/11 attacks. Mr. Bush's statement set the tone for the tumultuous decade to come, one in which the nation prosecuted a war on terrorism in two Muslim lands while taking great pains to protect the rights of Muslim Americans. Yet if the author Nathan Lean is to be believed, Americans today are caught in the grip of an irrational fear of Islam and its adherents. In his short book on the subject, Mr. Lean, a journalist and editor at the website Aslan Media, identifies this condition using the vaguely medical sounding term "Islamophobia." It is by now a familiar diagnosis, and an ever widening range of symptoms—from daring to criticize theocratic tyrannies in the Middle East to drawing cartoons of the Prophet Muhammad—are attributed to it. In reality, **Islamophobia is simply a pejorative neologism designed to warn people away from criticizing any aspect of Islam.** Those who deploy it see no difference between Islamism—political Islam and its extremist offshoots—and the religion encompassing some 1.6 billion believers world-wide. Thanks to this feat of conflation, Islamophobia transforms religious doctrines and political ideologies into something akin to race; to be an "Islamophobe" is in some circles today tantamount to being a racist. American Islamophobia, Mr. Lean claims, is fomented by a "small cabal of xenophobes." "The Islamophobia Industry: How the Right Manufactures Fear of Muslims" is less a book than a series of vignettes about some of these antagonists, who are "bent on scaring the public about Islam." His Islamophobic figures and institutions range from political leaders like Mr. Bush, Sen. John McCain and New York Mayor Rudy Giuliani, who, Mr. Lean says, have "harnessed Muslims and Islam to terrorism"; to the pro-Israel community, which is alleged to be animated by a "violent faith narrative" and funded by magnates who inject "eye-popping cash flows into the accounts of various fear campaigns"; to pretty much everyone who campaigned in 2010 against the construction of the so-called Ground Zero Mosque near the site of the 9/11 attacks in lower Manhattan. Mr. Lean tars with the same brush the likes of the scholar Daniel Pipes and the Muslim activist, physician and U.S. Navy veteran Zuhdi Jasser. Mr. Pipes, the author writes, is "deeply entrenched in the business of selling fear." He portrays Dr. Jasser as a puppetlike figure, "a 'good Muslim,' one that openly and forcefully denounced various tenets of his faith." These are crude and uncharitable caricatures of these men. Mr. Pipes was one of the first Western commentators to raise the alarm about the subterranean spread of extremist attitudes in both the Middle East and among some Muslim communities in the West. Dr. Jasser, a devout Muslim, is the founder of the American Islamic Forum for Democracy, an organization that advances the notion that "the purest practice of Islam is one in which Muslims have complete freedom to accept or reject any of the tenants or laws of the faith no

different than we enjoy as Americans in this Constitutional republic." Both men argue that the real contest is the serious war of ideas raging within Islam itself, between the forces of liberalism and pluralism and those of obscurantism. To Mr. Lean, though, any such distinction is simply a false perception manufactured by Islamophobes. Thus the author fails to grapple with the fact that, unlike average Muslims, Islamist terror groups like al Qaeda, Hamas and Hezbollah do commit unspeakable acts of violence in the name of Islam—actions that surely help account for why many Americans (49%, according to a 2010 poll) hold an unfavorable view of Islam, even when they view favorably Muslims that they personally know. Mr. Lean also can't seem to tell the difference between Islamist organizations and ordinary Muslims. Consider his view of the Council on American Islamic Relations, a self-proclaimed civil-rights organization that wields outsize influence on questions of Muslim integration in the U.S. Mr. Lean barely mentions CAIR and, when he does, it is in invariably glowing terms. The author lauds "cooperation between the FBI and CAIR" that supposedly "led to the capture of five American Muslim men in Pakistan suspected of trying to join radical, anti-American forces." But he neglects to mention that CAIR was named by federal prosecutors as an unindicted co-conspirator in the Holy Land Foundation terror-finance trial of 2007. The same group, according to an unclassified State Department cable, sought to raise \$50 million for an Islamophobia campaign from Saudi Arabia and the United Arab Emirates. **Islamist states and groups have been at the forefront of promoting the concept of Islamophobia.** As far back as 1999, the United Association for Studies and Research, a group founded by Hamas leader Mousa Abu Marzook, published a book that purported to expose "The Truth Behind the Anti-Muslim Campaign in America." After 9/11, Muslim states mounted a campaign to characterize the fear of Muslim violence as blind hatred. In 2004, United Nations Secretary-General Kofi Annan assured the world that U.N. "special rapporteurs continue to monitor the exercise and infringements of this right [freedom of religion], and to recommend ways to combat Islamophobia." According to anti-Islamophobia crusaders, though, even questioning the origins of the concept is itself a form of Islamophobia. **Such dogmatism chills the crucial conversations that need to take place about Islamism here in the West.** It also does a profound injustice to liberal Muslims around the world. After all, if Islam is dominated by its most violent and illiberal elements, and questioning these forces is deemed by intellectual elites to be a form of racism, then reform-minded Muslims really stand no chance.

A2 Defintions of Islamophobia

Having one authors' interp of islamophobia demonstrates the link, it doesn't answer it – even *your* authors can't agree on a common interpretation of what islamophobia is and what it means – i.e. Kumar describes it in terms of prejudice and Kundnani describes it as structural racism – this all just proves our arg that the word 'Islamophobia' is extremely broad

Lorente 10 (Javier Rosón Lorente, PhD. in Social Anthropology from the University of Granada and is currently researcher at Casa Árabe e Instituto Internacional de Estudios

Árabes y del Mundo Musulmán (Spain). Discrepancies Around the Use of the Term “Islamophobia”, The Omar Khayyam Center for Integrative Research in Utopia, Mysticism, and Science, HUMAN ARCHITECTURE: JOURNAL OF THE SOCIOLOGY OF SELF-KNOWLEDGE, VIII, 2, FALL 2010, 115-128)//ASMITH

Nowadays and as a result of the September 11, March 11 and June 7 attacks, the “circle has closed” vis-à-vis Western prejudices, greatly strengthening the “essentialist stigmatization of the Muslim world”²: the entire immigrant population living in neighbourhoods and cities has come to be identified and compared with ‘the terrorist,’ and a national and international alarmism has emerged, leading to the rejection of Muslim communities and anything associated to Islam. For this reason Muslims in Europe have been particularly liable to be targeted by diverse prejudices and stereotypes, gradually consolidating use of the term Islamophobia and hence Islamophobic acts. However, although the concept is increasingly widespread, it seems especially hard to define in practice just what Islamophobia is, as it is often put on a par with other processes such as racism (anti- Maghrebi, anti-Muslim, anti-Arab, etc), hostility to Islam and xenophobia, etc., and confused with or likened to terms such as ‘Maurophobia,’ ‘Moorophobia’ or ‘Arabophobia.’ This has given way to a wavering definition, with no consensus as to either its definition or legal formulation, reaffirming both the emerging and changing social reality and the broad ignorance at different levels over what is taking place in our societies, regions and neighbourhoods, etc. Parallel to this a line of thinkers and academics has emerged³, who assert that use of the term Islamophobia is increasingly more controversial, given that it often serves to contain very diverse phenomena running from xenophobia to the fight against terrorism. Although the term mainly refers to instilled fear and/or hostility towards Islam, it also encompasses the practical consequences of such hostility vis-à-vis discrimination (both positive and negative), prejudices, discourse and the less favourable treatment of Muslim individuals and communities, and the exclusion of same from political/social mainstreams. In this article we shall deal with this sort of criticism and/or discrepancies around use of the term Islamophobia, though not without making clear that from our standpoint the term was coined because there is a new reality which needs a name. This reality must be described and defined, for objectively⁴ the prejudice against Muslims has grown considerably and so quickly and exponentially that in recent years a new term had to be coined into the vocabulary, able to identify and act against a wide range of acts and attitudes which particularly oppose the Arab and/or Muslim communities residing in Europe and the West.

The meaning of Islamophobia varies enormously

Lorente 10 (Javier Rosón Lorente, PhD. in Social Anthropology from the University of Granada and is currently researcher at Casa Árabe e Instituto Internacional de Estudios Árabes y del Mundo Musulmán (Spain). Discrepancies Around the Use of the Term “Islamophobia”, The Omar Khayyam Center for Integrative Research in Utopia, Mysticism, and Science, HUMAN ARCHITECTURE: JOURNAL OF THE SOCIOLOGY OF SELF-KNOWLEDGE, VIII, 2, FALL 2010, 115-128)//ASMITH

Terms/concepts are theoretical constructions derived from a given reality which can capture and synthesize aspects of that reality. They can respond to social constructions resulting from processes of interaction among different individuals (their own identity and practices) or to his-toric constructions which in an adjustable manner are organized and

modified in time and in space. Presumably we should understand the term Islamophobia to be a way to 'read' what is going on, a way to express the (current) reality and account for its practices. In other words, Islamophobia is a term/concept we have constructed to weld together a 'universal container' of social practices and meanings, regardless of the contextual conditions upon which those built until present have been based. These conditions are diverse in their 'form and content,' such as the different degrees of associationism, technical components, inclusion policies, specific and differentiated mass media treatment, etc. They encompass⁵ an infinite number of acts and attitudes which have no need to be highlighted or signified according to the daily logic of 'minorities and majorities,' but which are rather clear acts of exclusion and a broad state of 'uncertainty' centred especially on the more significant 'other' and currently and historically essentialized per the keys of what we take to be Islamophobia. Attacks (verbal, physical, on private property of the 'other,' etc.), negative stereotypes, mimesis and comments in the discourse of various social players, job discrimination, bureaucratic disregard and delay regarding the construction of mosques, prayer rooms and cemeteries, etc., and even the non-recognition of a distinctive identity, both ethnic and religious, are examples of what all too often happens in our societies with respect to a certain population—a minority 'we' identify as foreign (even if Spanish), Arab and/or Muslim. Although the term in both its 'practical' and theoretical facet seems objectively defined, as to what is or is not an "Islamophobic" act and/or attitude, it is nevertheless roundly criticized by some analysts/academics due to its ambiguity and the scant consensus over its definition, and to its application or general acknowledgment. This non-definition gives rise to three main currents of criticism, mostly interrelated: religious, racial and ethno-cultural. There is also another order of criticism which can involve etymology, identity, politics, freedom of expression and ideological discourse, etc., which complete and/or complement the distinct discrepant lines around its use. To this criticism we must add differential and contextual aspects, many of which are wielded against 'universal' use of the term. Yet we must make clear a priori that the contextual importance—specifically regarding criticism addressed to use or not of the term Islamophobia—is relative from the moment that the basis for such discrimination, above all due to 9/11, has varied. While initial prejudice was directed against historically stigmatized populations, such as the Maghrebi and especially Moroccan population in the Spanish case, prejudice now encompasses the Muslim population in general, regardless of where the people subject to Islamophobic acts come from. Moreover, one might say that Islamophobia at present is basically addressed to people we have defined as Muslims, independently of whether or not they are, and independently of their own self-description. In the Spanish context we can find an example of this in Sub-Saharan ethnic communities (as in other contexts, the stigmatized ethnic population can be another⁶)—the Senegalese, for instance. In this case, the 'host society' has established no mechanical relationship whereby any 'Black' Senegalese identified as Muslim, yet there is a cause-effect reaction whereby most Moroccans or Maghrebis (formerly colonized and not 'submissive') are Muslims, even if the 'departure point' for both groups is the same (in this case Sunni, etc.)—the same which in the other would apply to Mouride Muslims of the Wolof ethnic group, or those pertaining to the Tijaan (Tijaniyyah) confraternity, etc. This leads to reflection on the processes of identity-building versus the 'other,' via which in most cases the place of origin is not distinguished: one does not know what the invented enemy is, neither culturally nor ethnically, as suspicion is extended to anything that 'sounds' Arab,

Muslim or 'Islamic,' beyond 'sure' analyses regarding the construction of otherness. To that end, the 'only good Muslim,' one not subject to the prejudices and judgments of the surrounding society, is the one not identified as such or who simply keeps out of the limelight or hides his/her respective identity. However, this is not entirely valid, given that the 'Muslimness' label, which identifies and at times categorizes or serves to discredit an individual or community, goes beyond its own bounds, given that it depends on other factors and perhaps the biased view we have of the 'us' against the other.

A2 k2 Challenge Racism

The word 'Islamophobia' triggers rejection, rather than acceptance, and fails to include other forms of prejudice- over use of the term only weakens the movement

Allen 07 (CHRIS ALLEN, a Lecturer in Social Policy. He is based in the Institute of Applied Social Studies, School of Social Policy at the University of Birmingham where he is the Acting Director of Undergraduate Social Policy Programmes and Programme Lead on the Policy, Politics & Economics (PPE) programme)("ISLAMOPHOBIA AND ITS CONSEQUENCES", 2007, Centre for European Policy Studies (CEPS))//ASMITH

However both the report and its model have failed to stand the test of time and a detailed analysis highlights a number of serious flaws.²⁰ The most obvious disadvantage of the term is that it is understood to be a 'phobia'. As phobias are irrational, such an accusation makes people defensive and defiant, in turn making reflective dialogue all but impossible. Likewise, Islamophobia as a separate and stand-alone concept implies that prejudice against Muslims is unrelated to other forms of prejudice, for example prejudice based around physical appearance and skin colour; prejudice against immigrants; prejudice against military, religious or economic rivals; and prejudices around class, power and status. The separateness of the concept can also imply that Muslims themselves want to be 'separate' or 'different' even, thereby failing to recognise or accept the 'similarities' and 'overlaps' that also exist. Relevant to the contemporary climate in particular is that the continued use or over-use of the term prevents - either inadvertently or deliberately, depending upon the sources in question, legitimate criticisms of Muslims being voiced, let alone attended to. Elsewhere it has been used far too indiscriminately and inappropriately, failing to differentiate between opinions that are antireligion per se from those that are specifically anti-Islam. For example, 'I am an Islamophobe, yes,' said Polly Toynbee in the Guardian newspaper, 'But I am a Christophobe and Judeophobe too'.²¹ As Halliday has argued, the key phenomenon to be addressed is an anti-Muslim hostility directed at an ethno-religious identity rather than the tenets of a religion.²² In terms of the Runnymede model and Rokeach's Dogmatism Scale upon which it was based therefore, "the instrument does not measure up to the theory".²³ As regards Islamophobia per se, the same is blatantly true: the instruments we have to define, identify and explain it neither measure up to the theory nor are they entirely bias-free. Despite being able to identify incidents, events and expressions of what we might simplistically suggest as being 'Islamophobia', as the EUMC 9/11 report noted, "these were not necessarily in themselves the reason for any attacks...". Islamophobia seemed to be the "...stimulant" underpinning them.²⁴ Consequently, what

was thought to be known about Islamophobia failed to provide any insight or explanation as to why Islamophobic retaliatory acts ensued or why such a phenomenon exists. Consequently, we are trying to locate something that we maybe do not adequately understand, hence Maussen's comments. Nonetheless, the EUMC's 9/11 report does offer some respite from this lack of clarity. As it stated: [N]either exhaustive nor conclusive...[it did] clarify some of the common trends and themes that were apparent in the wake of September 11. No single explanation can completely account for the events that followed those in the US, but this does allow an insight into a certain identifiable phenomenon...²⁵ Most important therefore is the report's categorical and justifiable conclusion that a "certain identifiable phenomenon" was evident.²⁶ In doing so, and in contrast to the Runnymede model, the report differentiated the manifestations – the 'common trends and themes' – from what it saw as the phenomenon of Islamophobia itself, neither concluding nor making the assumption that the manifestations or forms of that 'certain identifiable phenomenon' were either that which constituted it or defined it.

A2 Homogenizing Bad

The term 'Islamophobia' causes homogenization of Islam identity and enforces the concept of the other – prevents successful results

Halliday 99 (FRED HALLIDAY is Professor of International Relations at The London School of Economics and Political Science.)("Islamophobia' reconsidered", 1999, Ethnic and Racial Studies, 22:5, 892-902, DOI: 10.1080/014198799329305)//ASMITH

Such historicization and disaggregation is relevant to the issue of what to term prejudice against Muslims.⁶ That there is such a thing as denoted by the term 'Islamophobia' is undoubtedly true. Recent examples in the British press are not hard to find.⁷ Elsewhere we can see similar trends: in Denmark the People's Party has made such hostility central to its programme; ⁸ in 1998 Hollywood produced an alarmist film, *The Siege*, focusing on Islamic terrorism, in marked contrast, be it said, to its indulgent treatment of Irish republicanism. Nor is this specific to the Christian or Jewish world: perhaps the most striking instance of hostility to Muslims today is to be found in India. The BJP ran for re-election in 1997 on three anti-Muslim issues: rebuilding the Temple at Ayodhya, removing separate legal codes for Muslims, and ending the special status of Kashmir. Other BJP policies – renaming Bombay after a Hindu goddess, rewriting history books – follow a similar logic. The positing of a continuous, historic, past of confrontation may not only be historically inaccurate but may ascribe cause to religion, an eternal factor, where other, more contingent and contemporary causes, may be at work. It also misses the point about what it is that is being attacked: 'Islam' as a religion was the enemy in the past: in the crusades or the reconquista. It is not the enemy now: Islam is not threatening to win large segments of western European society to its faith, as Communism did, nor is the polemic, in press, media or political statement, against the Islamic faith. There are no books coming out questioning the claims of Muhammad or the Koran. The attack now is against not Islam as a faith but Muslims as a people, the latter grouping together all, especially immigrants, who might be covered by the term. Equally, the 'Islamophobic' attack is against states which may be

among the most secular in the world, as Saddam Hussein's is. If we take the study as one of negative stereotyping, of what in German is called the Feindbild, the enemy image, then the enemy is not a faith or a culture, but a people. Hence the more accurate term is not 'Islamophobia' but 'anti-Muslimism'. Use of the term 'Islamophobia' may also convey two other, misleading associations. One is that the term reproduces the distortion, already discussed, that there is one Islam: that there is something out there against which the phobia can be directed. This serves not only to obscure diversity, but also to play into the hands of those, within the Muslim communities, who wish to reply to this attack by offering their own selective interpretation of the tradition, be this on women, rights of free speech, the right to renounce religion or anything else. 'Islamophobia' indulges conformism and authority within Muslim communities: one cannot avoid the sense, in regard to work such as the Runnymede Report, that the race relations world has yielded, for reasons of political convenience, on this term. Use of the term 'Islamophobia' also challenges the possibility of dialogue based on universal principles. It suggests, as the Runnymede and Wilton Park reports do, that the solution lies in greater dialogue, bridge building, respect for the other community: but this inevitably runs the risk of denying the right, or possibility, of criticisms of the practices of those with whom one is having the dialogue. Not only those who, on universal human rights grounds, object to elements in Islamic or other traditions and current rhetoric, but also those who challenge conservative readings from within, can more easily be classed as Islamophobes.⁹ The advocacy of a dialogue, one that presupposes given, homogeneous, communities places the emphasis on understanding the 'other', rather than on engaging with the ways in which communities, national and religious, violate universal rights. The danger in these reports is that they are denied, if not monopolized, by representatives of religious bodies, and of community organizations, who apply to them the conventions of inter-faith dialogue: ¹⁰ the churches have a role, in educating their own people about the faith, but also about the everyday lives and political grievances, of other faiths, Muslims included. This cannot and should not be at the expense of a critical examination of how these religions treat their members. 'Islamophobia' may also **have confusing practical results. The grievances voiced by Muslims in any society may relate directly to religious matters: of school curriculum, dress, diet, observance of ceremonial days. But much of what is presented as the Islamic critique of the West has little or nothing to do with religion: it is secular, often nationalist, protest and none the less valid for that. Support for Palestine, denunciations of Western hegemony in the oil market, solidarity with Iraq, opposition to Soviet involvement in Afghanistan, denunciations of cultural imperialism, protests at double standards on human rights – these are all part of the 'Muslim' indictment of the West, but are not necessarily religious in content, or specific to the Muslim world.** The Chinese denunciation of Western human rights interference, on the ground that it violates sovereignty, is the same as the Iranian. It has little to do with belief, and a lot to do with political power in the contemporary world. Similarly, within Western society, issues of immigration, housing, employment, racial prejudice, anti-immigrant violence are not specifically religious: the British term 'Paki' can, in a racist attack by white youth, as easily denote a Hindu, a Sikh or a Christian from Tamil Nadu as a Muslim. Nor should the international implications of all this be overlooked, not least because they so directly affect the level of dialogue within Western societies: the violation of human rights, in the name of religion or secular power, is found in many Muslim as in non-Muslim societies. The analysis within the West of attitudes to Islam, and of renderings of Islamic

tradition, cannot be divorced from what is going on within Muslim societies themselves: here horrendous violations of human rights are being committed, against Muslims, in the name of religion. The fight against fundamentalism is not, as Bobby Sayyid presents it, between the West and the Muslim world, but within the Muslim world itself: the briefest acquaintance with the recent history of Iran, Afghanistan, Pakistan, Egypt or Algeria would bear this out. Those who protest the loudest about such violations are inhabitants of these countries, that is to say, Muslims themselves. Their protests are framed in universal terms, and demand a universal response.¹¹ This is as true for political prisoners, trade unionists, journalists, women, as it is for representatives of ethnic groups within Muslim countries who are denied recognition and group rights. There are, as in any discussion of human rights, dif.cult issues here – relating to accuracy of information, approach, impartiality. But to deny their right to make these protests, on the grounds that there can only be one Muslim voice, or that their invocation of universal principles violates tradition, is a paradoxical conclusion for those who begin by protesting at non- Muslim discrimination against Muslims. ‘Islamophobia’, like its predecessor ‘imperialism’, can too easily be used to silence critics of national states and élites.

Terror DA

CT Good—1nc**

Religion stokes violent extremism—counterterrorism policies are key

Rashi, 14—freelance journalist and writer for the Huffington Post (Tanjil, 3/16/14, "'The Muslims are Coming!', by Arun Kundnani", Financial Times, www.ft.com/intl/cms/s/2/af5ef4c6-aa15-11e3-8bd6-00144feab7de.html)//twemchen

**edited for language

In truth, counterterrorism policies targeting Muslims are a legitimate response to homegrown extremism, from the murder of Fusilier Lee Rigby to the 366 (by one count) British citizens waging jihad in Syria. Furthermore, the victims of the 2005 London bombings bear witness to the reality of radicalism bred at home. At best, Kundnani's argument is compelling in its dissection of governments' disproportional responses. He estimates the FBI has one counter-terrorism agent per 94 Muslims in the US, which approaches a Stasi-esque ratio of spies to citizens. He shows that authorities keep drawing spurious lists of suspected radicals; one in the UK included almost 300 children under 15. A commonplace at the core of Kundnani's critique is that radicalism is mainly the byproduct of western foreign policy. "Religion had nothing to do with this," according to Kundnani, citing a conspirator in the London bombings. This view is undermined by the existence of two generations of British Muslims predating the war on terror – men who fought in Afghanistan in the 1980s and in Bosnia in the 1990s. The diminution of religion's role in stoking radicalism is as inaccurate as UK Labour politicians' denial that wars in Iraq and Afghanistan acted even as recruiting sergeants. Kundnani scrutinises responses to terrorism better than outlining its causes. He probes the mutations of liberalism in the face of Islam, resulting in "war on terror liberals" for whom liberalism "became an ideology of total war", from the UK Labour party's interventionist foreign policy to Martin Amis's innumerate paranoia about Muslim birth rates. Liberals hold up the Enlightenment, conservatives "campaign to defend Judeo-Christian identity" – both banners explicitly excluding Muslims; both groups inclined, Kundnani writes, to see "terrorists motivated by fanaticism inherent to Islam". History offers correctives to these narratives, demonstrating varieties of Islam being as rooted in rationalism as the Enlightenment; the Enlightenment being as tied to terror as Islam (the word "terrorism" itself was first used during The Terror of the Enlightenment-inspired French revolution). The Muslims are Coming! lacks optimism but there is every reason to believe "Muslim" might one day be suffixed to "Judeo-Christian" when de-scribing the west's culture and values. Note how one prominent French intellectual writes about Europe's growing population of a certain religious minority: "All of them are born with raging fanaticism in their hearts." The author of these unenlightened remarks? Voltaire. His subject? The Jews.

A2 Ks/D—Overview

If we win the radicalization thesis is true, i.e. that ISIS really is trying to recruit lone wolf terrorists, it's proof we need at least some agent infiltrators, material support legislation and community engagement. They eliminate all of those – even if those should be *reduced* because they're overused, an inevitability as more suspects are investigated and then disqualified, the plan leaves us dangerously vulnerable to the next Charlie Hebdo or Boston bombing.

This answers most of their Ks and proves we overcome most logical defense. Terrorists wouldn't need to launch some 9/11 style cross-border attack, they'd just need to flip one impressionable young activist into doing something catastrophic and provide them the basic know-how and resources in constructing WMDs – we've done tons of work on the case supporting this

Capability and motivation for attacks exist—European terrorists prove and are on the rise **Uhlmann, 8**—research associate at the Institut für Europäische Politik in Berlin (Milena, Summer 2008, pp. 31-37, "European Converts to Terrorism", The Middle East Quarterly, www.meforum.org/1927/european-converts-to-terrorism)//twemchen

Conversion to Islam among native Europeans is on the rise. Many converts live at peace within their native societies; some convert only for marriage, and reject neither contemporary culture nor Europe's Judeo-Christian values. A minority, however, embraces radical interpretations of Islam and can pose a security risk. The involvement of Muslim converts in recent terrorist attacks has raised concern in Europe about these "converts to terrorism." While intelligence agencies and security services track international communications and guard borders, such homegrown terrorists pose just as potent a threat to the security of Western democracies. European security services and politicians remain unprepared to handle this growing phenomenon. A Growing Problem In Europe, there is very little hard data on conversion to Islam due to the difficulty of gathering proper statistics. Because Muslim communities usually have an informal structure and no formal clergy, most do not keep records. In France, for instance, state agencies do not record citizens' religious affiliations; to do so, French officials say, would counter France's commitment to secularism. In German registration offices, Muslim residents are included in a pool of "diverse religious affiliations." [1] German converts apparently account for only a small portion—between 12,000 and 100,000—of Germany's total Muslim population of 2.8-3.2 million, [2] which itself comprises less than 4 percent of the total population of Germany. In 2006, the Federal Ministry of the Interior commissioned a study from the Zentralinstitut Islam-Archiv Deutschland (ZIIAD) to determine the number of converts, but amid suspicion over the ZIIAD's methodology, discounted as exaggerated its findings and ended its relationship with the institute. [3] Nevertheless, it appears that both conversions and Islamist outreach to converts is increasing. Thomas Hamza Fischer, founder of the Islamisches Informationszentrum (IIZ) in Ulm, a city in Baden-Württemberg known for its radical Islamist scene, died fighting in Chechnya. [4] The IIZ's journal, Denk mal Islamisch (Think Islamic) is geared to converts, addressing issues such as emotional and personal support. The police, the German Federal Office for the Protection of the Constitution (FOC), as well as the Islamisches Informationszentrum's neighbors say that more German converts have visited the center since summer 2007 than they had in seasons past. [5] Apparently anticipating a ban by the Bavarian Ministry of Interior, the IIZ dissolved in October 2007. [6] In recent years, police and intelligence services have become increasingly aware of the threat of homegrown terrorism. In 2003, Judge Jean Louis Bruguière, the former French investigating magistrate in charge of counterterrorism affairs, observed that Al-Qaeda had increased its recruiting efforts in Europe and in particular was on the lookout for women and converts to Islam. [7] In March 2004, the Dutch General Intelligence and Security Service (AIVD) released an analysis of jihadi recruits' backgrounds, [8] and the following year, the British Home and Foreign Offices released a similar study. [9] In August 2007, the New York Police Department released a report on radicalization within Western societies, focusing on trends in homegrown terrorism and emphasizing the increasing role of converts in terror plots. [10] Wolfgang Schäuble, Germany's federal minister of the interior, argues that the prevalence of homegrown jihadis is increasing. [11] Germaine Maurice Lindsay, also known as Abdullah Shaheed Jamal, was one of four terrorists who detonated bombs on the London Underground and on a bus in central London, July 7, 2005, killing fifty-six (including themselves) and injuring more than 700. Lindsay, who changed his name after his conversion to Islam, was born in Jamaica. The 2004 murder of Dutch filmmaker Theo Van Gogh, the Madrid train bombings the same year, and the following year's attacks on London's Tube and bus system demonstrate that European citizens and residents can conduct horrendous acts against their respective countries. The culmination of this trend will be the planning of and participation in such attacks by European converts to Islam. On September 4, 2007, the German security services arrested three men for plotting car bomb attacks in Germany targeting the U.S. military base at Ramstein and pubs and nightclubs frequented by Americans. [12] Two of the three were German-born converts to Islam. [13] This plot was not the first involving German converts. In 1997, Israeli security services detained Steven Smyrek at Ben Gurion International Airport as he tried to enter Israel to survey possible Hezbollah terror targets. [14] Christian Ganczarski, a Polish immigrant of German descent who had converted to Islam in 1986, played a major role as the intermediary between Al-Qaeda's leadership and the suicide bomber who carried out the 2002 bombing of a Tunisian synagogue in Djerba, which killed twenty-one people. [15] In 2006, the German police arrested Sonja B., a 40-year-old German convert who sought to travel to Iraq with her 1-year-old son and to carry out a suicide attack. [16] For Islamist terrorists, the European convert is a prized recruit, at ease

in society, cognizant of informal rules and opportunities, and able to move freely without arousing suspicion. Their citizenship enables them to travel freely under the terms of the European Schengen agreement and, in many cases, the U.S. visa waiver program.^[17] Richard Reid, a British convert to Islam who attempted to blow up an airliner with explosives hidden in his shoes and boarded a flight to the United States under the visa waiver program, highlighted the threat of European converts to terrorism to both their own homelands and U.S. security. Short of requiring visas for British, French, and German passport holders, U.S. authorities have requested that airlines provide detailed passenger rosters for incoming flights to the United States. European carriers have followed suit. Identifying Terrorist Converts European security services are unsure of how to address the problem of radicalized converts largely due to their uncertainty about how to integrate competing security and civil liberties interests. On one hand, the abandonment of passport control posts along internal European borders—the heart of the European integration process—needs to be addressed; EU states must adjust to the fact that criminal enterprises span borders. On the other hand, the European public distrusts any measure that might lead European institutions, let alone a European intelligence service, to increase surveillance, especially given the opacity of EU decision-making. At the national level, however, there is perhaps a greater sense of urgency in monitoring converts to terrorism. In September 2007, Günther Beckstein, the Bavarian minister of the interior, proposed registering and observing every convert to Islam in Germany in order to determine whether the future Muslim would pursue a liberal or an Islamist orientation.^[18] This suggestion provoked an uproar. Critics said it put converts under general suspicion, undercut religious dialogue, and contradicted the principle of religious freedom. Such populist tactics, though, are likely to be counterproductive. Nothing is gained by placing converts under surveillance simply because they married a Muslim or found religious satisfaction through Islamic theology. Such tactics might backfire if they alienate the convert, and they would require a massive investment in intelligence gathering for a questionable return. They would also be domestically unpopular: Europeans would certainly argue that turning all converts to Islam into terrorism suspects runs counter to the ideals of European liberalism. Profiling potential terrorists, however, should not be taboo. Doing so requires an understanding of the mentality of both the individual convert and of the group into which the individual converts. Many converts embrace their new faith with zeal, and Islamist groups can channel this fervor into a process of quick radicalization.^[19] New converts are often less proficient in religious matters than religious leaders but are eager to fill in the gaps, making them susceptible to indoctrination by organizations like the Islamisches Informationszentrum. In larger cities such as Berlin, advocates of various Islamic trends often recruit new converts. Among the most aggressive are the Salafists.^[20] Converts wanting to explore and learn more about their new religion are often attracted to fundamentalist interpretations as they seek "pure" and "true" Islam. Jihadi websites reinforce this search—indeed, this was how Sonja B., the would-be Iraq suicide bomber, discovered militant Islam.^[21] Foreign scholarships also provide a means of recruitment. After his conversion but prior to becoming involved in terrorism, Ganczarski, the German Al-Qaeda intermediary, studied Islam on a scholarship at the University of Medina, described by the Deutsches Orient-Institut as a "recruiting pool" for Islamists.^[22] After his arrest, Ganczarski said there had been a recruitment wave for such scholarships in Germany in the mid-1990s, focusing on young converts. After he returned from Saudi Arabia where he probably became radicalized, he went on to Chechnya and Pakistan as well as Afghanistan^[23] where he met Osama bin Laden.^[24] Apparently, Saudi Arabia provided thousands of such scholarships.^[25] The background of the convert is as important as the nature of the absorbing group. Those who convert to Islam for practical purposes, for example, to marry a Muslim woman, seldom become extremists. Others are predisposed to radicalism. Smyrek is an extreme example: He was always a radical and actively sought out Islamist terror groups in order to become a suicide bomber. The convert's socioeconomic background is another vital factor. Conversion is, in part, a migration from one worldview to another,^[26] described by sociologist Thomas Luckmann as a decision to go shopping in a supermarket of religious goods.^[27] As the individual tries to reconcile his old and new belief systems, he selects explanations that best meet his needs. Sometimes, this involves the endorsement of terrorism as a means of righting perceived wrongs. Motives to Convert Because Islam often has a negative reputation in Europe, conversion to Islam enables the convert to project sentiments of rebellion. Indeed, Olivier Roy from the French Centre National de la Recherche Scientifique has suggested that radical Islam is tantamount to a protest identity.^[33] Some converts emphatically champion Islam as the best alternative to post-industrial Western society. Such is the rationale for Murad Wilfried Hofmann,^[34] a former German diplomat who converted to Islam in 1980 and has since acted as an intellectual leader for German converts. Ayyub Axel Köhler, the current chairman of the Zentralrat der Muslime in Deutschland, who converted to Islam in 1963, has remarked that Islam is a way of life and thus offers its adherents the chance to avoid the alienation of life in Western societies.^[35] If the numbers of conversions to Islam in the West are on the rise, the cultural criticism underlying such conversions becomes especially relevant. Identity issues play an important role, as does globalization and modern communications, which have allowed the exploration of new identities. When societies lose their coherence, threats increase from within.^[36]

Anti-Blackness

Link—Junior Partners

Appeals to solve oppression of society's junior partners is always underwritten by a supplemental anti-blackness which masks the prison-slave and the prison-slave-in-waiting
Wilderson, 7

(Frank B. Wilderson III 2007. Warfare in the American Homeland: Policing and Prison in a Penal Democracy. Duke University Press. pg 23 –kpcb)

There is something organic to civil society that makes it essential to the destruction of the Black body. Blackness is a positionality of "absolute dereliction" (Fanon), abandonment, in the face of civil society, and therefore cannot establish itself, or be established, through hegemonic interventions. Blackness cannot become one of civil society's many junior partners: Black citizenship, or Black civic obligation, are oxymorons. In light of this, coalitions and social movements, even radical social movements like the Prison Abolition Movement, bound up in the solicitation of hegemony, so as to fortify and extend the interlocutory life of civil society, ultimately accommodate only the satiable demands and finite antagonisms of civil society's junior partners (i.e., immigrants, white women, and the working class), but foreclose upon the insatiable demands and endless antagonisms of the prison slave and the prison-slave-in-waiting. In short, whereas such coalitions and social movements cannot be called the outright handmaidens of white supremacy, their rhetorical structures and political desire are underwritten by a supplemental anti-Blackness.

Link—Law

The aff's call for legal relief is the perfection of slavery

Farley 5 [Boston College (Anthony, "Perfecting Slavery",
<http://lawdigitalcommons.bc.edu/cgi/viewcontent.cgi?article=1028&context=lsfp>)]

Slavery is **with us still**. We are **haunted** by slavery. We are **animated** by slavery. **White-over-black is slavery** and segregation and neosegregation **and every situation in which the distribution of material or spiritual goods follows the colorline**. The movement from slavery to segregation to neosegregation to whatever form of white-over-black it is that may come with post-modernity or after is not toward freedom. **The movement from slavery to segregation to neosegregation is the movement of slavery perfecting itself**. White-over-black is neosegregation. White-over-black is segregation. White-over-black is slavery. All of it is **white-over-black, only white-over-black, and that continually**. The story of progress up from slavery is a lie, the longest lie. **The story of progress up from slavery is told juridically in the form of the rule of law**. Slavery is the rule of law. And **slavery is death**. **The slave perfects itself as a slave when it bows down** before its master of its own free will. That is the moment in which the slave accomplishes the impossible reconciliation of its freedom **with its unfreedom by willing itself unfree**.³ When exactly does this perfection of slavery take place? **The slave bows down before its master when it prays for legal relief, when it prays for equal rights, and**

while it cultivates the field of law hoping for an answer. The slave's free choice, the slave's leap of faith, **can only be taken under conditions of legal equality. Only after emancipation and legal equality, only after rights, can the slave perfect itself as a slave.** Bourgeois legality is the condition wherein equals are said to enter the commons of reason⁴ or the kingdom of ends⁵ or the New England town meeting of the soul **to discuss universalizable principles, to discuss equality and freedom.** Much is made of these meetings, these struggles for law, these festivals of the universal. Commons, kingdom, town meeting, there are many mansions in the house of law, but **the law does not forget its father,** as Maria Grahn-Farley observes: **The law of slavery has not been forgotten by the law of segregation; the law of segregation has not been forgotten by the law of neosegregation. The law guarding the gates of slavery, segregation, and neosegregation has not forgotten its origin;** it remembers its father and its grandfather before that. **It knows what master it serves; it knows what color to count.**⁶ **To wake from slavery is to see that everything must go, every law room, every great house, every plantation, all of it, everything.** Requests for equality and freedom will always fail. Why? Because **the fact of need itself means that the request will fail.** The request for equality and freedom, for rights, **will fail whether the request is granted or denied. The request is produced through an injury.**⁸ **The initial injury is the marking of bodies for less—less respect, less land, less freedom, less education, less.** The mark must be made on the flesh because that is where we start from. Childhood is where we begin and, under conditions of hierarchy, that childhood is already marked. The mark organizes, orients, and differentiates our otherwise common flesh. The mark is race, the mark is gender, the mark is class, the mark is. The mark is all there is to the reality of those essences—race, gender, class, and so on—that are said to precede existence. The mark is a system.⁹ Property and law follow the mark. And so it goes. There is a pleasure in hierarchy. We begin with an education in our hierarchies. We begin with childhood and childhood begins with education. To be exact, education begins our childhood. We are called by race, by gender, by class, and so on. **Our education cultivates our desire in the direction of our hierarchies.** If we are successful, **we acquire an orientation that enables us to locate ourselves and our bodies vis-à-vis all the other bodies that inhabit our institutional spaces. We** follow the call and move in the generally expected way. **White-overblack is an orientation, a pleasure, a desire that enables us to find our place, and therefore our way, in our institutional spaces.** This is why no one ever need ask for equality and freedom. This is why the fact of need means that the request will fail. The request for rights—for equality—will always fail because there are always ambiguities. To be marked for less, to be marked as less than zero, to be marked as a negative attractor, is to be in the situation of the slave. The slave is not called. The slave is not free. The slave is called to follow the calling that is not a calling. The slave is trained to be an object; the slave is trained, in other words, to not be. The slave is death. Death is the end of ambiguity. To be in the situation of the slave is to have all the ambiguities organized against you. But there are always ambiguities, one is always free. How, then, are the ambiguities organized? How is freedom ended? **The slave must choose the end of ambiguity, the end of freedom, objecthood.** The slave must freely choose death. **This the slave can only do under conditions of freedom that present it with a choice.** The perfect slave gives up the ghost and commends its everlasting spirit to its master. **The slave's final and perfect prayer is a legal prayer for equal rights.** The texts of law, like the manifest content of a dream, perhaps of wolves, may tell a certain story or an uncertain story. The certainty or uncertainty of the story is of absolutely no consequence. The story, the law, the wolves' table manners, do not matter. The story, the law, the story of law, the dream of wolves,¹⁰ however, represents a disguised or latent wish that does matter. **The wish is a matter of life or death.** We are strangers to ourselves. **The dream of equality, of rights, is the disguised wish for hierarchy.** The prayer for equal rights is the disguised desire for slavery. **Slavery is death. The prayer for equal rights, then, is the disguise of the deathwish. The prayer for equal rights is the slave's perfect moment.** The slave's perfect prayer, the prayer of the perfect slave, is always answered. **The slave, however, knows not what it does when it prays for rights, for the slave is estranged from itself.** Of its own inner strivings it knows not. The slave strives to be property, but since property cannot own property the slave cannot own its inner strivings. The slave strives to produce the final commodity—law. In other words, the slave produces itself as a slave through law. **The slave produces**

itself as a slave (as a commodity) through its own prayer for equal rights. And that prayer is all there is to law. The slave bows down before the law and prays for equal rights. The slave bows down before the law and then there is law. There is no law before the slave bows down. The slave's fidelity becomes the law, and the law is perfected through the slave's struggle for the universal, through the slave's struggle for equality of right.

The slave prays for equality of right. Rights cannot be equal. Its perfect prayer is answered; the law's ambiguities open, like the gates of heaven, just above its head. And all of the white-over-black accumulated within the endless ambiguities of law rains down. White over-black is slavery and slavery is death. Death is the end of forever. The end of forever is perfection and perfection, for us, seems divine, beyond the veil, beyond death; hence, the end of forever.

Link—State

We cannot resolve anti-blackness through the state because of the institutions ethics and acting through the state makes anti-blackness worse because it erases the existence of the black body – the state forecloses the possibility of humanity for those in the non-human positionality

Wilderson, 10

(Award-winning author of Incognegro: A Memoir of Exile and Apartheid. He is one of two Americans to hold elected office in the African National Congress and is a former insurgent in the ANC's armed wing, 2010 (Frank B. III "Introduction: Unspeakable Ethics" Red, White, & Black: Cinema and the Structure of U.S. Antagonisms, Pg 15-16)

Regarding the Black position, some might ask why, after claims successfully made on the state by the Civil Rights Movement, do I insist on positing an operational analytic for cinema, film studies, and political theory that appears to be a dichotomous and essentialist pairing of Masters and Slaves? In other words, why should we think of today's Blacks in the US as Slaves and everyone else (with the exception of Indians) as Masters? One could answer these questions by demonstrating how nothing remotely approaching claims successfully made on the State has come to pass. In other words, the election of a Black President aside, police brutality, mass incarceration, segregated and substandard schools and housing, astronomical rates of HIV infection, and the threat of being turned away en masse at the polls still constitute the lived experience of Black life. But such empirically based rejoinders would lead us in the wrong direction; we would find ourselves on "solid" ground, which would only mystify, rather than clarify, the question. We would be forced to appeal to "facts," the "historical record," and empirical markers of stasis and change, all of which could be turned on their head with more of the same. Underlying such a downward spiral into sociology, political science, history, and/or public policy debates would be the very rubric that I am calling into question: the grammar of suffering known as exploitation and alienation, the assumptive logic whereby subjective dispossession is arrived at in the calculations between those who sell labor power and those who acquire it. The Black qua the worker. Orlando Patterson has already dispelled this faulty ontological grammar in Slavery and Social Death, where he demonstrates how and why work, or forced labor, is not a constituent element of slavery. Once the "solid" plank of "work" is removed from slavery, then the conceptually coherent notion of "claims against the state"—the proposition that the state and civil society are elastic enough to even contemplate the possibility of an emancipatory project for the Black position—disintegrates into thin air. The imaginary of the state and civil society is parasitic on the Middle Passage. Put another way: no slave, no world. And, in addition, as Patterson argues, no slave is in the world. If, as an ontological position, that is, as a grammar of suffering, the Slave is not a laborer but an

anti-Human, a positionality against which Humanity establishes, maintains, and renews its coherence, its corporeal integrity; if the Slave is, to borrow from Patterson, generally dishonored, perpetually open to gratuitous violence, and void of kinship structure, that is, having no relations that need be recognized, a being outside of relationality, then our analysis cannot be approached through the rubric of gains or reversals in struggles with the state and civil society, not unless and until the interlocutor first explains how the Slave is of the world. The onus is not on one who posits the Master/Slave dichotomy, but on the one who argues there is a distinction between Slaveness and Blackness. How, when, and where did such a split occur? The woman at the gates of Columbia University awaits an answer.

Root Cause**

Islamophobia is instrumentalized across cultures and societies by association with *blackness*—even if Islamophobia is a branch of the tree, anti-black racism is the root

Love 09 (Erik Love, an ISPU Fellow and an Assistant Professor of Sociology at Dickinson College in Pennsylvania, received his MA and Ph.D. in sociology from the University of California at Santa Barbara.) (Confronting Islamophobia in the United States: framing civil rights activism among Middle Eastern Americans, 23 Sep 2009. Patterns of Prejudice, Vol. 43, Nos 3-4, 401-425, DOI: 10.1080/00313220903109367)//ASMITH

Before examining details of Islamophobic discourse in the United States, a sketch of current Middle Eastern American demographics will be useful. However, even without taking into consideration important issues of gender, sexuality and hybrid identities, there is great diversity across Middle Eastern American communities, and space constraints do not permit a full discussion of the contemporary demographics of these groups. Groups in the United States who trace their heritage to southern Asia*/a region usually defined to include Afghanistan, Bangladesh, Bhutan, India, Pakistan, Nepal and Sri Lanka*/are quite diverse and difficult to describe in general terms. Aside from the many national-origin groups elided under the pan-ethnic label 'South Asian', there are several ethnic groups from this region that are well represented in the United States, including Bengali, Pashtun and Punjabi Americans. In terms of religion, immigrants from this region belong to many denominations of Islam and Christianity, and there are Sikh, Hindu, Parsi and other religious identifications as well.¹⁹ Socio-economically, South Asian Americans have one of the highest levels of education and income of any demographic group, but the most recent (since 1990) immigrants from this region are more often working-class and relatively less well off financially.²⁰ The category 'Arab' similarly defies easy definition. There is considerable disagreement among people who trace their heritage to the Arab world about whether everyone from an Arab country should identify as Arab, or whether Arab ethnicity is purely voluntary. In terms of demographics, Arab Americans today include families who moved to the United States as many as five or six generations ago, and there are also a significant number of recent (post-1970) immigrants from the more than twenty nations in the Arab world.²¹ In terms of religion, Arab Americans belong to many different religious communities, including several denominations of Christianity and Islam, along with Judaism and other faiths. The largest nationality groups among Arab Americans include Lebanese, Syrians, Palestinians, Egyptians, Iraqis and people from Gulf states like Yemen and the United Arab Emirates. Socio-economically, Arab Americans have similar characteristics to

South Asian Americans. Arab Americans who immigrated earlier in the twentieth century tend to have higher educational attainment and income levels than the average American family, while the most recent immigrants tend to have a range of socio-economic class backgrounds.²² Further complicating the demographic picture are the many Americans who trace their heritage to parts of the Middle East (including parts of the Arab world) and do not identify as Arab American. These include Iranians, Turks, Assyrians, Chaldeans, Druze, Kurds, Copts and people who identify with many other ethnicities, religions and nationalities. The demographics of these communities in the United States are often the inverse of that found in their nations of origin, as minority populations in the Middle East, particularly in terms of religious identification, tend to emigrate in higher numbers.²³ Detailed demographic information on these communities is particularly difficult to find, since most surveys overlook them or simply count them as 'Arabs'.²⁴ In terms of religion, these Middle Easterners belong to several denominations of Islam as well as Christianity, Judaism, Zoroastrianism and other religions as well. Neither can Muslim Americans be easily categorized: there are Muslim Americans in every demographic group, and they follow several different Islamic traditions (or denominations) while holding a wide range of personal religious beliefs within those traditions. Rendering a coherent description of Muslim American communities is particularly difficult because surveys about religious identity are notoriously inaccurate and contradictory. Still, there is considerable recent literature describing Muslim American demography in terms of ethnicity and nationality, socio-economic class, geographic concentration and political tendencies.²⁵ There have been substantial changes in Muslim American demographics in a short period of time. One widely cited recent survey from the Pew Research Center reports that some two-thirds of immigrant Muslim Americans are first-generation immigrants, with more than a third of those arriving after 1990. In terms of numbers, the survey reports that the largest ethnic group of Muslim Americans are from South Asia and Iran, followed by families from the Arab world. The survey also reports that many Muslims migrated from Europe, and there are also many Muslim converts representing all heritages and backgrounds.²⁶ Prior to the most recent migration of Muslims to the United States after 1990, **the largest subgroup under the Muslim American umbrella were those Muslims who also identified as African Americans, a group sometimes referred to as 'indigenous Muslims'.**²⁷ There are significant differences between immigrant and indigenous Muslim Americans, in terms of theology, socio-economic status and political involvement. In short, there is vast diversity among Middle Eastern Americans. But in spite of the diversity across all these groups, the ideology of race means that any of these groups is a potential target of American Islamophobia.

A2 Coalitions

Islamophobia is only a manifestation of racialization—the fact that Middle Easterners are deemed white by law means they could never include other minorities in their struggle against law

Love 09 (Erik Love, an ISPU Fellow and an Assistant Professor of Sociology at Dickinson College in Pennsylvania, received his MA and Ph.D. in sociology from the University of California at Santa Barbara.) (Confronting Islamophobia in the United States: framing civil

rights activism among Middle Eastern Americans, 23 Sep 2009. Patterns of Prejudice, Vol. 43, Nos 3-4, 401-425, DOI: 10.1080/00313220903109367)//ASMITH

Approaching Islamophobia as a product of racial dynamics in the United States brings certain analytical advantages. First, this approach draws on a wealth of knowledge about race and ethnicity to explain how Islamophobia does not always target Islam and Muslims per se, but instead takes on the familiar pattern of racial scapegoating: fear and hatred, prejudice and discrimination directed towards groups crudely demarcated primarily by physical appearance.⁵ Race clearly plays a role when Sikh American and African American Muslim children are harassed in similar ways in classrooms, when Syrian Americans along with Pakistani Americans have to present themselves to immigration authorities for 'special registration', when Lebanese American and Iranian American workers lose their jobs for the same discriminatory reasons, and when Chaldean churches and Sunni mosques alike are vandalized and receive the same kinds of hate mail. These kinds of incidents, which impact on a large range of communities in spite of their diversity, occur primarily **as a result of the racial lens through which Americans understand the world.** The ideology of race is understood as a flexible social construct, subject to modification through the work of actors who target the state as they seek recognition and redress.⁶ The process of racialization profoundly affects all individuals in the United States, because each person is perceived to belong to socially constructed racial categories. The categories themselves change over time, as do the criteria for membership in any particular category; people recognized as belonging to the Irish race, for example, later became 'white' due to changes in the predominant racial ideology. These identity categories take on meaning and have material consequences via state policy and resource provision, through representations in cultural space and through the organization of institutions in civil society. The prevailing 'racial order' at any point in history indicates the schema or hierarchy of recognized racial identity categories, created through a 'compromise between racial movements and the state'.⁷ From the latter part of the twentieth century to the present day (the so-called 'post-civil rights era'), the 'racial pentagon' of black, white, Latino, Asian and Native American has been described as the prevailing list of recognized racial identity categories in the United States.⁸ Where do individuals and groups affected by racialized Islamophobia 'fit'? According to the United States Census, people from the broadly defined Middle Eastern region legally count as racially white. This creates a paradox, as described by John Tehranian: On one hand, [Middle Eastern Americans] suffer from the types of discrimination that face minority groups. On the other hand, formally speaking, Middle Easterners are deemed white by law. This dualistic and contested ontology of the Middle Eastern racial condition creates an unusual paradox. Reified as the other, Americans of Middle Eastern descent do not enjoy the benefits of white privilege. Yet, as white under the law, they are denied the fruits of remedial action.⁹ The unclear position caused by this racial paradox*/in terms of citizenship, rights and identity*/of migrants and their descendants who came to the United States from North Africa and western and southern Asia, a large region now vaguely defined as the Middle East, dates back to the eighteenth century if not earlier. The groups under the Middle Eastern racial umbrella often have little in common with one another except that, in the United States, Islamophobia lumps them together and makes them targets of discrimination and racism. In other words, 'Islamophobia' is the latest term for a centuries-long history of American state policy, cultural discourses and discriminatory practices that enforce racial boundaries around Middle Easterners in America.

Foucault

1nc—Foucault Link

The aff's invocation of state reform perpetuates the same governmentality that drove the ethnicization, racialization and culturalization of Islamophobia in the first place – we don't need to win an alt if we win we turn the case

Kaya 11 (Ayhan Kaya, Willy Brandt Professor at Malmö University, and Professor of Politics at Istanbul Bilgi University)(“Islamophobia as a form of Governmentality: Unbearable Weightiness of the Politics of Fear”, Willy Brandt Series of Working Papers in International Migration and Ethnic Relations 1/11, 2011, Malmö Institute for Studies of Migration, Diversity and Welfare (MIM))//ASMITH

As a discourse that travels between state, civil society, and citizens, that produces and organizes subjects, and that is used by subjects to govern themselves, islamophobia could also be seen to embody what Foucault formulated as a distinctive feature of modern governmentality. An analysis of modern ‘government’ needs to pay particular attention to the role accorded to ‘indirect’ mechanisms for aligning economic, social and personal conduct with socio-political objectives. Today, political power is exercised through a set of multiple agencies and techniques, some of which are only loosely associated with the executives and bureaucracies of the formal organs of state (Miller and Rose, 2011: 26). The state is not the source or agent of all governing power, nor does it monopolize political power; rather, the powers and rationalities governing individual subjects and the population as a whole operate through a range of formally nonpolitical knowledges and institutions. The ensemble of legal and nonlegal, pedagogical, cultural, religious, nationalist, and social discourses of Islamophobia together produce what Foucault understands as the signature of modern governmentality. According to Foucault, modern governmental rationality is simultaneously about individualizing and totalizing: that is, about finding answers to the question of what it is for an individual, and for a society or population of individuals, to be governed or governable (Gordon, 1991: 36). Simultaneously totalizing and individualizing, gathering and distinguishing, and achieving each effect through its seeming opposite, Islamophobia emerges as one technique in an arsenal for organizing and managing large and potentially disruptive populations. As such, it is a strand of biopower, that modality of power so named by Foucault because it operates through the orchestration and regulation of life rather than the threat of death (Brockling et al., 2011; Miller and Rose, 2008; Brown, 2006). The orchaestration and regulation of life in modern societies is operationalized by the states through multiple forms of governmentality ranging from nationalism to Islamophobia, or from racism to multiculturalism. Michel Foucault defines governmentality as the ensemble formed by the institutions, procedures, analyses, and reflections, the calculations and tactics that allow this very specific albeit complex form of power, which has as its target population, as its principal form of knowledge political economy, and as its essential technical means apparatuses of security. In other words, governmentality refers to the practices which characterise the form of supervision a state exercises over its subjects, their wealth, misfortunes, customs, bodies, souls and habits (Foucault, 1979). It is the conduct of conduct, that is to say a form of activity aiming to shape, guide or affect the conduct of individuals or groups. The semantic linking of governing (gouverner) and modes of thought (mentalité) indicates that it is not possible to

study the technologies of power without an analysis of the political rationality underpinning them. In this sense, according to Michel Foucault, modern societies can be understood only by reconstructing certain techniques of power, designed to observe, monitor, shape, discipline, or control the behaviour of individuals situated within a range of social and economic institutions such as the school, the factory, the prison, the media, and the church. Foucault (2007) discerned three inter-related meanings of security: 1) sovereignty confirmed through the enactment of law on the population within a territory; 2) discipline consisting of techniques of individualization directed at making individual subjects docile, conformists and governable; 3) security as an abstraction of the diversity within a population that can be statistically conceived and managed through the guidance of the human sciences such as demographics, economics, and administrative sciences. The key issue here is not the increasing control of the state over its population, but the shifting emphasis in the 'ethos' and 'art' of governing. For example, following the Foucaultian perspective, one could trace the shift from the administrative state of the past shaped by the police and discipline, to one in which governmental power is dispersed through society by way of professional power at different sites such as education, health, correction systems, media, and fear (Truong and Gasper, 2011). Contemporary states are more inclined to use multiple governmentalities to control and rule the masses. These multiple governmentalities could range from the processes of securitization of migration (Doty, 2000; Huysmans, 2006; Walters, 2006; Kaya, 2009) to the growing political discourse of tolerance (Brown, 2006), or from multiculturalism (Povinelli, 2002) to Islamophobia. As Miller and Rose (2011: 17) put it very well, governmentalities change by entering into periods of criticism and crisis, where multiple perceptions of failure come together, and where alternatives are proposed – for the failures of one mode of governing are opportunities for the formulation of another. The ways in which multiple forms of governmentality are being performed by the states demonstrate to us that there are two sides to governmentality. Firstly, the term refers to a specific form of representation: government defines a discursive field such as prevention of migration or “combating Islamic terrorism” in which exercising power is rationalized. This occurs by the description of concepts, the specification of objects and borders, the provision of fears, arguments and justifications. In this manner, government defines a problem to be addressed and offers certain strategies for handling the problem. And secondly, Foucault uses the term government in a more general context in the ways in which it was used until the 18th century. Government was a term discussed not only in political tracts, but also in philosophical, religious, medical and pedagogic texts. This is why, Foucault defines government as conduct, or, more precisely, as “the conduct of conduct” and thus as a term which ranges from “governing the self” to “governing others”. In other words, in his history of governmentality Foucault endeavours to show how the modern sovereign state and the modern autonomous individual codetermine each other's emergence (Foucault, 1979). **Islamophobia as a form of governmentality is being manufactured in parallel with the growing stream of ethnicization, racialization and culturalization of what is social and political in the west since the early 1990s** (Brown, 2006). This stream is advocated by several politicians, public servants, bureaucracy, judiciary, police and the media in order to hold socio-economically and politically deprived migrants and their descendants responsible from their isolation, exclusion, poverty, unemployment, unschooling and any kind of failure in everyday life (Balibar, 2004: 37-38). The process of ethnicizing, racializing

and culturalizing what is social and political is not only shaped by dominant political discourses with a great conservative tone, but also by the enormous demographic changes, led by the dissolution of the Eastern Block in late 1980s and early 1990s (Brubaker, 1991; and Kaya, 2009). The year 1989 signalled the very beginning of a new epoch that resulted in massive migration flows of ethnic Germans, ethnic Hungarians, ethnic Russians and Russian Jews from one place to another.²⁴ The post- Communist era has also brought about a process of re-homogenization in western nation-states like Germany, Austria, France, Italy, Belgium and the Netherlands. Political instability and ethnic conflicts in the former Eastern Bloc (USSR and former Yugoslavia) on the other hand pushed some ethnic groups to immigrate to Western European countries in which they could find ethnic affinities. The mobility of millions of people has stimulated nation-states to ethnicise their migration policies in a way that approved the arrival of co-ethnic immigrants, but disapproved the status of existing immigrants with different ethno-cultural and religious background from that of majority society. Nation-states were not suitably equipped in the 1990s to absorb the spontaneous arrival of so many immigrants. This period of demographic change in Western Europe occurred in parallel with the rise of heterophobic discourses such as the 'clash of civilisations', 'culture wars', 'religious wars' and 'Islamophobia', as well as with the reinforcement of restrictive migration policies and territorial border security vis-à-vis the nationals of countries outside the European space.

CVE prevents cooperation and precludes analysis of bigger terror threats

Southers, 2015 [Director of Homegrown Violent Extremism Studies at USC, adjunct prof at USC]

(Erroll, 7/16, "Rethinking Countering Violent Extremism Programs,"
securitydebrief.com/2015/07/16/rethinking-countering-violent-extremism-
programs/#axzz3h2ec63r0)

In 2003, in an effort to reduce the risk of "al Qaeda-inspired" recruitment, radicalization and related terrorist incidents, the United Kingdom launched the Preventing Violent Extremism Strategy (Prevent). It was considered one of the best in the world when it was first implemented. At its core, Prevent focused on radicalization and recruitment prevention (rather than simply HVE detection) and acknowledged the importance of enlisting the community in the fight against terrorism. In the words of Charles Farr, the head of the U.K.'s Office for Security and Counter-terrorism, Prevent was "the Government's recognition that as a nation, we cannot arrest our way out of the terrorist threat we face" nor can we "protect ourselves physically to the point where the threat is mitigated entirely."

That is sage wisdom for America's challenges with terrorism, but we need to also look at the results of the British program. The Prevent strategy was criticized (and ultimately failed in its initial form) for four primary problems: The strategy's concept of radicalization: There was a lack of consensus or conceptual clarity on the definition of radicalization. A narrow focus on Muslims: The original program looked exclusively at the Muslim community, essentially labeling all Muslims as potentially "at risk" while ignoring other groups engaged in extremist activities. The implementation methodology: The program funded efforts in Muslim communities based on the size of the Muslim population in a given area. Inasmuch as the additional risk factors were ignored (particularly other sources of extremism), the community perceived that the program was intended to "spy on Muslims." Negative program consequences: In considering the Muslim population (irrespective of behavior), the program inadvertently created a relationship of mistrust. This compromised the goal of community engagement and support and potentially helped create an environment ripe for extremist recruitment based on the resentment of the British government. One major error with Prevent was a failure to engage stakeholders before implementation so as to determine challenges unique to the communities it was meant to help. What is more, evaluation of Prevent occurred only after widespread criticism of the strategy's shortcomings. At that point, the challenge became not just creating an effective strategy but also rebuilding the community trust that is central to addressing HVE. Looking to the United States, it would seem we are heading down a similar (and ultimately futile) path. The much-debated CVE Pilot Programs in Los Angeles, Minneapolis and Boston have engendered widespread backlash in those cities because the perception is that CVE is focused exclusively on Muslim populations. Yet, in Britain, we saw how approaching communities based on religion or country of origin neutralizes an effort before it gets out of the gate. To be sure, Muslim-identity extremism is a threat, but it is not the only nor even the greatest threat. Consider two recent studies assessing the threat from HVE: In 2014, a National Consortium for the Study of Terrorism and Responses to Terrorism (START) Center's report found that law enforcement views the anti-government Sovereign Citizen movement as the top terrorist threat, followed by Muslim extremists and militia/patriot group members. In 2015, the New America Foundation reported that since September 11, 2001, nearly twice as many victims have been killed by anti-government adherents, white supremacists and other non-Muslim extremists than by radical Muslims: 48 were killed by non-Muslim extremists, compared with 26 self-proclaimed jihadists. As explained in my book, Homegrown Violent Extremism, terrorism is the product of an alienated individual, a legitimizing ideology and an enabling environment. The environment (i.e., the community) is most susceptible to positive influence to reduce the risk of HVE. The issue of an enabling environment must be addressed in terms of enhancing social morality, responsibility and community integrity, with the intended outcome of facilitating community-based efforts to identify and explore solutions to continuing challenges. If CVE becomes synonymous with countering violent Muslim extremism, we are doomed to fail and will not even address the greatest terrorist threats in this country. The United States can enhance its security posture by implementing strategies that work with communities. It begins with those residents having a seat at the table to contribute to policy development, implementation and evaluation that will ultimately affect them. The community holds the key to the success of any program intended to counter violent extremism. Let's get this right.

fails – broadly allows government to crush all dissent or inevitably targets only Muslims
Saylor, 2015, [directs the department to monitor and combat Islamophobia at the Council on American-Islamic Relations]

(Corey, July 15, "Is countering violent extremism ready for a \$40 million investment?" The Hill thehill.com/blogs/congress-blog/civil-rights/247908-is-countering-violent-extremism-ready-for-a-40-million)

House Homeland Security Committee Chairman Mike McCaul's (R-Texas) proposed new Office for Countering Violent Extremism (CVE) in the Department of Homeland Security would redirect 40 million taxpayer dollars over four years into a dubious expansion of government programming. We all want to prevent violent extremism. But currently, CVE programming fails to provide meaningful solutions that would substantively interdict barbaric acts. A 2014 National Counterterrorism Center (NCTC) document titled 'Countering Violent Extremism' serves as food for thought. Its expert authors say CVE's ends are "not easy to quantify." This means return-on-investment metrics will be elusive. The report authors then offer risk factors to help public service providers identify at-risk youth such as "Parent-Child Bonding, Empathic Connection," "Presence of Emotional or Verbal Conflict in Family" and "Parent Involvement in Child's Education." As these factors encompass issues with which most American families have struggled at some point, their use in identifying at-risk individuals is nearly non-existent. On this subject, McCaul's proposal assigns the office to the task of "identifying risk factors that contribute to violent extremism." But such efforts at classification have already been attempted. In 2008, the UK's counter-intelligence and security agency, M15, concluded that "it is not possible to draw up a typical profile of the 'British terrorist' as most are 'demographically unremarkable.'" Similarly, in its 2010 report titled "Preventing Violent Extremism," Britain's House of Commons' Communities and Local Government Committee said, "Regarding the Government's analysis of the factors which lead people to become involved in violent extremism, we conclude that there has been a pre-occupation with the theological basis of radicalisation, when the evidence seems to indicate that politics, policy and socio-economics may be more important factors in the process." This pre-occupation with religion raises another problem with expanding the scope of DHS programming. While the security field's current focus is on Daesh (ISIS), this has not and will not always be the case, and we join other security and civil liberties organizations in our concern that the program's scope may be expanded at-will in ways not envisioned by its current advocates. In February, 2009 the Missouri Information Analysis Center (MIAC), a DHS "fusion center," issued a report labeling common ideologies or affiliations as warning signs of being a "right-wing extremist" or member of a domestic paramilitary group. According to the MIAC report, any U.S. citizen could potentially be a domestic terrorist if they are in favor of "strong state rights," hold "anti-abortionist" or "anti-Immigration" views, are in strong opposition to "the collection of federal income taxes" or "the Federal Reserve Banks," or support third-party presidential candidates like Ron Paul. The report also noted that "It is not uncommon for militia members to display Constitutional Party, Campaign for Liberty or Libertarian material" or the "Gadsden Flag." Setting the enormous costs of monitoring everyone who dislikes paying their taxes or votes for Ron Paul aside, such broad-swath categorizations of what might constitute subversive behavior risk criminalizing anyone who holds views with which the government disagrees, a chilling prospect. Finally, it is worth noting what has already happened on the ground in those areas in which CVE programming has been proposed; after all, CVE can only work if it is widely accepted as effective by the communities in which it would profess to build ties. Last year, former U.S. Attorney General Holder announced a CVE initiative, designating Los Angeles, Boston, and Minneapolis as pilot cities. While the program was supposed to target all forms of violent extremism, in practice only Muslims were actually examined. In all three cities, local Muslim community leaders, who have longstanding records of supporting efforts to make our nation more secure, engaged in the U.S. attorney-led meetings aimed at shaping local CVE frameworks. In time, however, they distanced themselves from the project as they formed a deeper understanding of CVE's problematic realities. In Los Angeles, both the Islamic Shura Council of Southern California, an umbrella organization of mosques and Muslim organizations serving the Muslims of Southern California, and the Muslim Student Association of the West Coast (MSA West) voted to oppose the narrow scope of the federal government's CVE program. In Minnesota, nearly 50 Muslim organizations joined together to urge law enforcement to "consider our grave concerns" and discontinue this stigmatizing, divisive, and ineffective initiative. A "top leader of Boston's Muslim community" opted against the local framework because it targeted only American Muslims and was "founded on the premise that your faith determines your propensity towards violence." Given that one of the goals of violent extremists is to transform our nation into their vision of an authoritarian state, Americans must be vigilant that the measures we fund

to stop them do not ultimately themselves fulfill these aims. CVE, with its call for teachers, guidance counselors, public health workers, and police officers to assess a person's thoughts, rather than actions, to identify violent extremists, does not represent an effective solution for these very real threats.

focus on Muslim terrorism falls victim to media hype and ignores real threats

Kurzman and Schanzer 6/16/15, [Professor of Sociology at University of North Carolina at Chapel Hill who specializes in Middle East and Islamic studies; Associate Professor of the Practice in the Sanford School of Public Policy]

(Charles and David, "The Growing Right-Wing Terror Threat"
www.nytimes.com/2015/06/16/opinion/the-other-terror-threat.html)

THIS month, the headlines were about a Muslim man in Boston who was accused of threatening police officers with a knife. Last month, two Muslims attacked an anti-Islamic conference in Garland, Tex. The month before, a Muslim man was charged with plotting to drive a truck bomb onto a military installation in Kansas. If you keep up with the news, you know that a small but steady stream of American Muslims, radicalized by overseas extremists, are engaging in violence here in the United States. But headlines can mislead. The main terrorist threat in the United States is not from violent Muslim extremists, but from right-wing extremists. Just ask the police. In a survey we conducted with the Police Executive Research Forum last year of 382 law enforcement agencies, 74 percent reported anti-government extremism as one of the top three terrorist threats in their jurisdiction; 39 percent listed extremism connected with Al Qaeda or like-minded terrorist organizations. And only 3 percent identified the threat from Muslim extremists as severe, compared with 7 percent for anti-government and other forms of extremism. The self-proclaimed Islamic State's efforts to radicalize American Muslims, which began just after the survey ended, may have increased threat perceptions somewhat, but not by much, as we found in follow-up interviews over the past year with counterterrorism specialists at 19 law enforcement agencies. These officers, selected from urban and rural areas around the country, said that radicalization from the Middle East was a concern, but not as dangerous as radicalization among right-wing extremists. An officer from a large metropolitan area said that "militias, neo-Nazis and sovereign citizens" are the biggest threat we face in regard to extremism. One officer explained that he ranked the right-wing threat higher because "it is an emerging threat that we don't have as good of a grip on, even with our intelligence unit, as we do with the Al Shabab/Al Qaeda issue, which we have been dealing with for some time." An officer on the West Coast explained that the "sovereign citizen" anti-government threat has "really taken off," whereas terrorism by American Muslim is something "we just haven't experienced yet." Last year, for example, a man who identified with the sovereign citizen movement — which claims not to recognize the authority of federal or local government — attacked a courthouse in Forsyth County, Ga., firing an assault rifle at police officers and trying to cover his approach with tear gas and smoke grenades. The suspect was killed by the police, who returned fire. In Nevada, anti-government militants reportedly walked up to and shot two police officers at a restaurant, then placed a "Don't tread on me" flag on their bodies. An anti-government extremist in Pennsylvania was arrested on suspicion of shooting two state troopers, killing one of them, before leading authorities on a 48-day manhunt. A right-wing militant in Texas declared a "revolution" and was arrested on suspicion of attempting to rob an armored car in order to buy weapons and explosives and attack law enforcement. These individuals on the fringes of right-wing politics increasingly worry law

enforcement officials. Law enforcement agencies around the country are training their officers to recognize signs of anti-government extremism and to exercise caution during routine traffic stops, criminal investigations and other interactions with potential extremists. “The threat is real,” says the handout from one training program sponsored by the Department of Justice. Since 2000, the handout notes, 25 law enforcement officers have been killed by right-wing extremists, who share a “fear that government will confiscate firearms” and a “belief in the approaching collapse of government and the economy.” **Despite public anxiety** about extremists inspired by Al Qaeda and the Islamic State, the number of violent plots by such individuals has remained very low. Since 9/11, an average of nine American Muslims per year have been involved in an average of six terrorism-related plots against targets in the United States. Most were disrupted, but the 20 plots that were carried out accounted for 50 fatalities over the past 13 and a half years. In contrast, right-wing extremists averaged 337 attacks per year in the decade after 9/11, causing a total of 254 fatalities, according to a study by Arie Perliger, a professor at the United States Military Academy’s Combating Terrorism Center. The toll has increased since the study was released in 2012. Other data sets, using different definitions of political violence, tell comparable stories. The Global Terrorism Database maintained by the Start Center at the University of Maryland includes 65 attacks in the United States associated with right-wing ideologies and 24 by Muslim extremists since 9/11. The International Security Program at the New America Foundation identifies 39 fatalities from “non-jihadist” homegrown extremists and 26 fatalities from “jihadist” extremists. Meanwhile, terrorism of all forms has accounted for a tiny proportion of violence in America. There have been more than 215,000 murders in the United States since 9/11. For every person killed by Muslim extremists, there have been 4,300 homicides from other threats. Public debates on terrorism focus intensely on Muslims. But this focus does not square with the low number of plots in the United States by Muslims, and it does a disservice to a minority group that suffers from increasingly hostile public opinion. As state and local police agencies remind us, right-wing, anti-government extremism is the leading source of ideological violence in America.

ex kurtzman -

different media angles, inherent biases all cover up real violence – turns case and reinscribes muslim stereotypes

Shane, 6/24/15, [Washington reporter at New York Times]

(Scott, "Homegrown Extremists Tied to Deadlier Toll than Jihadists in US Since 9/11, www.nytimes.com/2015/06/25/us/tally-of-attacks-in-us-challenges-perceptions-of-top-terror-threat.html)

WASHINGTON — In the 14 years since Al Qaeda carried out attacks on New York and the Pentagon, extremists have regularly executed smaller lethal assaults in the United States, explaining their motives in online manifestoes or social media rants. But the breakdown of extremist ideologies behind those attacks may come as a surprise. **Since Sept. 11, 2001, nearly twice as many people have been killed by white supremacists, antigovernment fanatics and other non-Muslim extremists than by radical Muslims:** 48 have been killed by extremists who are not Muslim, including the recent mass killing in Charleston, S.C., compared with 26 by self-proclaimed jihadists, according to a count by New America, a Washington research center. The slaying of nine African-Americans in a Charleston church last week, with an avowed white supremacist charged with their murders, was a particularly savage case. But it is only the latest in a string of lethal attacks by people espousing racial hatred, hostility to government and theories such as those of the “sovereign citizen” movement, which denies the legitimacy of most statutory law. The assaults have taken the lives of police officers, members of racial or religious minorities and random civilians. **Non-Muslim extremists have carried out 19 such attacks since Sept. 11,** according to the latest count, compiled by

David Sterman, a New America program associate, and overseen by Peter Bergen, a terrorism expert. By comparison, seven lethal attacks by Islamic militants have taken place in the same period. If such numbers are new to the public, they are familiar to police officers. A survey to be published this week asked 382 police and sheriff's departments nationwide to rank the three biggest threats from violent extremism in their jurisdiction. About 74 percent listed antigovernment violence, while 39 percent listed "Al Qaeda-inspired" violence, according to the researchers, Charles Kurzman of the University of North Carolina and David Schanzer of Duke University. Homegrown Terrorism In the United States since Sept. 11, terrorist attacks by antigovernment, racist and other nonjihadist extremists have killed nearly twice as many people as those by Islamic jihadists. Campaigns JUNE 22, 2015 A photo from a white supremacist website showing Dylann Roof, the suspect in the Charleston, S.C., church shooting. Dylann Roof Photos and a Manifesto Are Posted on Website JUNE 20, 2015 A scene from a vigil at Morris Brown African Methodist Episcopal Church in Charleston, S.C., for the victims. Many Ask, Why Not Call Church Shooting Terrorism? JUNE 18, 2015 "Law enforcement agencies around the country have told us the threat from Muslim extremists is not as great as the threat from right-wing extremists," said Dr. Kurzman, whose study is to be published by the Triangle Center on Terrorism and Homeland Security and the Police Executive Research Forum. John G. Horgan, who studies terrorism at the University of Massachusetts, Lowell, said the mismatch between public perceptions and actual cases had become steadily more obvious to scholars. "There's an acceptance now of the idea that the threat from jihadist terrorism in the United States has been overblown," Dr. Horgan said. "And there's a belief that the threat of right-wing, antigovernment violence has been underestimated." Counting terrorism cases is a subjective enterprise, relying on shifting definitions and judgment calls. If terrorism is defined as ideological violence, for instance, should an attacker who has merely ranted about religion, politics or race be considered a terrorist? A man in Chapel Hill, N.C., who was charged with fatally shooting three young Muslim neighbors had posted angry critiques of religion, but he also had a history of outbursts over parking issues. (New America does not include this attack in its count.) Likewise, what about mass killings in which no ideological motive is evident, such as those at a Colorado movie theater and a Connecticut elementary school in 2012? The criteria used by New America and most other research groups exclude such attacks, which have cost more lives than those clearly tied to ideology. Some killings by non-Muslims that most experts would categorize as terrorism have drawn only fleeting news media coverage, never jelling in the public memory. But to revisit some of the episodes is to wonder why. In 2012, a neo-Nazi named Wade Michael Page entered a Sikh temple in Wisconsin and opened fire, killing six people and seriously wounding three others. Mr. Page, who died at the scene, was a member of a white supremacist group called the Northern Hammerskins. In another case, in June 2014, Jerad and Amanda Miller, a married couple with radical antigovernment views, entered a Las Vegas pizza restaurant and fatally shot two police officers who were eating lunch. On the bodies, they left a swastika, a flag inscribed with the slogan "Don't tread on me" and a note saying, "This is the start of the revolution." Then they killed a third person in a nearby Walmart. And, as in the case of jihadist plots, there have been sobering close calls. In November 2014 in Austin, Tex., a man named Larry McQuilliams fired more than 100 rounds at government buildings that included the Police Headquarters and the Mexican Consulate. Remarkably, his shooting spree hit no one, and he was killed by an officer before he could try to detonate propane cylinders he drove to the scene. Some Muslim advocates complain that when the perpetrator of an attack is not Muslim, news media commentators quickly focus on the question of mental illness. "With non-Muslims, the media bends over backward to identify some psychological traits that may have pushed them over the edge," said Abdul Cader Asmal, a retired physician and a longtime spokesman for Muslims in Boston. "Whereas if it's a Muslim, the assumption is that they must have done it because of their religion." On several occasions since President Obama took office, efforts by government agencies to conduct research on right-wing extremism have run into resistance from Republicans, who suspected an attempt to smear conservatives. A 2009 report by the Department of Homeland Security, which warned that an ailing economy and the election of the first black president might prompt a violent reaction from white supremacists, was withdrawn in the face of conservative criticism. Its main author, Daryl Johnson, later accused the department of "gutting" its staffing for such research. William Braniff, the executive director of the National Consortium for the Study of Terrorism and Responses to Terrorism at the University of Maryland, said the outsize fear of jihadist violence reflected memories of Sept. 11, the daunting scale of sectarian conflict overseas and wariness of a strain of Islam that seems alien to many Americans. "We understand white supremacists," he said. "We don't really feel like we understand Al Qaeda, which seems too complex and foreign to grasp." The contentious question of biased perceptions of terrorist threats dates back at least two decades, to the truck bombing that tore apart the federal building in Oklahoma City in April 1995. Some early news media speculation about the attack assumed that it had been carried out by Muslim militants. The arrest of Timothy J. McVeigh, an antigovernment extremist, quickly put an end to such theories. The bombing, which killed 168 people, including 19 children, remains the second-

deadliest terrorist attack in American history, though its toll was dwarfed by the roughly 3,000 killed on Sept 11. "If there's one lesson we seem to have forgotten 20 years after Oklahoma City, it's that extremist violence comes in all shapes and sizes," said Dr. Horgan, the University of Massachusetts scholar. "And very often, it comes from someplace you're least suspecting."

islamophobia aff

vague policy focus papers over entrenched inequality – Britain proves

Joppke, 2009, [German political sociologist, Professor and chair in General Sociology at the University of Bern, Switzerland]

(Christian, Feb 16, "Limits of Integration Policy: Britain and her Muslims" Journal of Ethnic and Migration Studies: Vol. 35, No. 3, March 2009, pp. 453-472 Taylor and Francis)

-vs islamophobia w/o CVE mechanism proves their approach is symbolic/token gesture

This essay examines a paradox: while the British state has done more than other European states to accommodate the claims of Muslim minorities, recent polls have shown British Muslims to be more disaffected and alienated than other Muslims in Europe. This raises the question of the limits of integration policy, which is obvious but rarely posed. I argue that, more than reflecting an adverse reality, the neologism 'Islamophobia' has functioned as a symbolic device of the British state to recognise the Muslim minority. However, the policy focus on Islamophobia had two negative consequences: first, it deflected from the real causes of disadvantage; secondly, it fuelled the quest for 'respect and recognition' that stands to be disappointed in a liberal state. I take the latter to be the main limit of integration policy as revealed by the British case. Keywords: Immigrant Integration; Multiculturalism; Muslims in Britain and Europe; Discrimination; Liberalism A recent survey of 'how Westerners and Muslims view each other' in thirteen Western and non-Western countries (Pew 2006) contains a striking puzzle: while there is the good news that European Muslims have more positive opinions about Europe than Muslims in traditionally Muslim countries, Britain stands out as the Western country whose Muslim minority is the most negatively disposed toward the non-Muslim majority. Conversely, and a surprise if one considers that the notion of 'Islamophobia' is of British vintage (Commission on British Muslims and Islamophobia 1997), British non-Muslims espouse rather favourable views of British Muslims. Germany is at the opposite end, with a hostile majority but a docile Muslim minority. And, surprising for all who followed the French headscarf troubles and banlieue unrest, the best of all (European) worlds seems to be France, where Muslims and non-Muslims hold relatively benign views of one another. Further underlining the British/French contrast Joppke is Professor of Political Science at The American University of Paris. Correspondence to: Prof. C. Joppke, The American University of Paris, 6 rue du Colonel Combes, 75007 Paris, France. E-mail: cjoppke@aup.fr. ISSN 1369-183X print/ISSN 1469-9451 online/09/030453-20 # 2009 Taylor & Francis DOI: 10.1080/13691830802704616 Journal of Ethnic and Migration Studies Vol. 35, No. 3, March 2009, pp. 453-472 Downloaded by [] at 14:15 26 July 2015 contrast, almost half of British Muslims (47 per cent) found that there is a 'conflict between being a devout Muslim and living in a modern society', whereas close to three-quarters of French Muslims (72 per cent) deny that there is any such conflict (Pew 2006: 3). The British/French contrast is paradoxical if one considers the British mantra that 'our diversity is our strength' and the smug response by British officials to the French anti-headscarf law of 2004, billed by London's left-wing mayor, Ken Livingstone, as 'the most reactionary proposal to be considered by any parliament in Europe since the Second World War' (Guardian, 13 July 2004: 4). In her informative study of the European Muslim elite, Jytte Klausen comes to similar results. She describes

Europe's political Muslim elite as pragmatic, integration-minded and optimistic, with 'little time for left-wing ideas about global citizenship and transnational identities' (Klausen 2005: 19). But again there is one exception: Britain, whose Muslim leaders were found to be 'exceptionally unhappy with current policies' (Klausen 2005: 63). Moreover, within her typology of 'approaches to the integration of Islam', her British Muslim interviewees came out as staunchly 'neo-orthodox', defined by a clear 'No' to the questions as to whether Islam is 'compatible' with Western values and whether Islam should be 'mainstreamed' for a better fit with its European host societies (Klausen 2005: 87). In line with this, 70 per cent of her interviewed British Muslim leaders came out in favour of 'legal dualism', that is, of applying religious Sharia rules in private law, such as marriage and divorce—a stance that was rejected by even larger majorities of Muslim leaders in most other Western European countries (Klausen 2005: 192). Finally, British Muslims' integration deficits stand out in a recent survey by the UK think-tank Policy Exchange, which found that 31 per cent of surveyed British Muslims 'feel more in common' with Muslims in other countries than with fellow citizens (Policy Exchange 2007: 38), and that a considerable 13 per cent in the younger age bracket (1624) 'admire organisations like Al Qaeda that are prepared to fight against the West' (Policy Exchange 2007: 62).¹ Attitudes were found to be particularly extreme among the young, which suggests that the rift between Muslims and the majority society is growing. Accordingly, only 19 per cent of the interviewed Muslims over 55 years think that apostasy should be 'punishable by death', while almost twice as many (36 per cent) of the 1624-year-olds think so; a mere 18 per cent of Muslims over 55 advocate polygamy for Muslim men, compared to 52 per cent in the 1624 age bracket; and, while not a few older Muslims think that 'homosexuality is wrong and should be illegal' (50 per cent), even more of the very young think that way (71 per cent). Indeed, as a Financial Times columnist summarised the Policy Exchange findings, '(t)his is the clearest report we yet have from any European country that the rift between Muslims and non-Muslims is deepening, not disappearing' (Caldwell 2007). Since home-grown Islamic terrorism has struck Europe, there has been much debate about a general failure of European societies to successfully integrate their postwar immigrants, especially those of Muslim origin. Unfailingly, this debate is conducted in terms of a presumed failure of states to integrate immigrants, with the 454 C. Joppke Downloaded by [] at 14:15 26 July 2015 reverse hope that, by means of revamped integration policies, states will eventually resolve the problem. Rarely is the question of the limits of state policy posed. But one should at least consider that one of the most successful immigrant societies in the world, the United States, has integrated her immigrants, at least in the past halfcentury, without any explicit state policy, relying instead on flexible markets and the fabled assimilatory powers of American mass culture. Even if one brushes this aside as American exceptionalism, putting high hopes on the state is still strangely countertide. For example, consider the retreat of the state on so many policy fronts, from economic to welfare policy; and, not even to mention the 'state-as-diminished-byglobalisation' mantra, consider the polycentric nature of functionally differentiated societies, which have 'neither peak nor centre' (Luhmann 1986: 16782), so that the entire idea of state-led integration appears misguided from the start. The question of the limits of integration policy is obvious but rarely posed. Britain is a particularly interesting case in this respect. This is because the British case shows a puzzling disjunction between an apparently ill-adapted and dissatisfied Muslim minority and a rather accommodative state policy, which has rarely been far from what organised Muslims want the state to do. Formulated as a counter-factual, if you look for a place in Europe where you would not expect Muslim integration to pose a particular problem, you would expect this place to be Britain. Of all European societies, Britain has perhaps gone the furthest in accommodating her ethnic minorities by means of explicit state policy, Muslims included. Britain was the first European country to devise remedial 'race relations' policies for her immigrants, whose logic of combating not just personal insult and injury but structural exclusions in key societal sectors became the European mainstream only 40 years later. This first and paradigm-setting anti-discrimination policy in Europe was framed within a consensual view of Britain as a multicultural society, where 'diversity' was extolled as a virtue long before this happened elsewhere.

discourse of islamophobia is totalizing and stigmatizing – ignores alt causes

Joppke, 2009, [German political sociologist, Professor and chair in General Sociology at the University of Bern, Switzerland]

(Christian, Feb 16, "Limits of Integration Policy: Britain and her Muslims" Journal of Ethnic and Migration Studies: Vol. 35, No. 3, March 2009, pp. 453-472 Taylor and Francis)

The Runnymede report defines Islamophobia as certain 'closed' views of Islam, which are distinguished from 'open views' in terms of eight binary oppositions, such as 'monolithic/diverse', 'separate/interacting', or 'inferior/different' (the first adjective always marking a 'closed', the second an 'open' view). This makes for an elastic definition of Islamophobia, with little that could not be packed into it. Consider the eighth binary opposition, 'Criticism of West rejected/considered'. If 'criticisms made by Islam of "The West" (are) rejected out of hand', there is an instance of Islamophobia, the non-biased attitude being that 'criticisms of "the West" and other cultures are considered and debated'. Is it reasonable to assume that people enter debate by putting their point of view to disposition? Under such demanding standards, only an advocate of Habermasian communicative rationality would go free of the charge of Islamophobia. However, the real problem is to leave unquestioned the exit position, 'criticism of the West'. In being sweeping and undifferentiated, such a stance seems to be no less phobic than the incriminated opposite. If the point of the Runnymede report is to 'counter Islamophobic assumptions that Islam is a single 456

C. Joppke Downloaded by [] at 14:15 26 July 2015 monolithic system', it seems inconsistent to take for granted a similarly monolithic 'criticism of "the West"', which the 'West' is asked to 'consider and debate'. There is a double standard here, in that 'the West' is asked to swallow what on the other side would qualify as phobia. Moreover, if in terms of the lead binary opposition, 'monolithic' versus 'diverse', a 'closed' and thus Islamophobic view of the Islam is to consider the Islam 'as a single monolithic bloc, static and unresponsive to new realities', one has to retort that this is precisely the view of Islam that Jytte Klausen (2005) found dominant among the British Muslim elite. In her study, 71.4 per cent of her interviewees espoused a 'neoorthodox' view of integration, according to which 'the basic tenets of Islam are not for "modification"' and 'Islam is what it is', so that the idea of a 'Westernised', British or European Islam is rejected out of hand (Klausen 2005: 100). As the very notion of Islamophobia suggests, the 'trouble with the idea is that it confuses hatred of, and discrimination against Muslims on the one hand with criticism of Islam on the other' (Malik 2005). Tellingly, the first six of Runnymede's Islamophobia-defining stances denote 'wrong' attitudes toward Islam as belief system, while only the last two address discrimination against people. Accordingly, the notion has been attacked for stifling free speech and 'end(ing) up defending the nastiest and most right-wing part of the Muslim community' (Hari 2006). In the wake of the Danish Cartoon Affair, where such risks were promptly apparent, a group of 12 prominent writers*mostly liberal Muslim intellectuals, including Salman Rushdie* consequently declared that 'Islamophobia' is 'a wretched concept that confuses criticism of Islam as a religion and stigmatisation of those who believe in it'.

Unsurprisingly, on the basis of a vaguely and contestably defined Islamophobia, the Runnymede report drew a dark picture of British society as permeated by anti-Islamic and anti-Muslim sentiment, expressed in misrepresentations in the media and in everyday life no less than in hate crimes and discrimination in employment and schooling. Once the concept was there, there had to be a reality described by it. Of course, the purported causality is the reverse: '(A)nti-Muslim prejudice has grown so considerably and so rapidly in recent years that a new item in the vocabulary is needed so that it can be identified and acted against' (Commission on British Muslims and Islamophobia 1997: 1). In fact, the true success of the report was to introduce the word 'Islamophobia' into the public vocabulary, and even outside Britain it 'has become a popular summary explanation for the difficulties that Muslims face' (Klausen 2005: 58). Assuming, for the sake of argument, that Britain was Islamophobic when the concept was launched in the mid-1990s, what has been the development since? A good measure is the follow-up report by the Runnymede's Commission on British Muslims and Islamophobia, *Islamophobia: Issues, Challenges and Action* (2004). The report comes to optimistic conclusions, at least with respect to measures that fall within the ambit of state policy. If one considers only non-EU domestic measures, a new question on religion was included in the 2001 census after 'much lobbying' by Muslim organisations (Commission on British Muslims and Islamophobia 2004: 75). *Journal of Ethnic and Migration Studies* 457 Downloaded by [] at 14:15 26 July 2015 This allows for monitoring by religion analogous to already existing ethnic monitoring. Secondly, a 2001 amendment to the 1998 Crime and Disorder Act created the new legal term of 'religiously aggravated' offence, thus adding 'religious' to already existing protection from 'racially' motivated offences. This was complemented, two years after the publication of Runnymede's 2004 progress report, by the 2006 Racial and Religious Hatred Act, which extended the 1986 Public Order Act to create a new offence of incitement to religious hatred. Whereas the 2001 amendment of the Crime and Disorder Act had outlawed direct acts of offending or harassing Muslims, the new law added to this the incitement of others to do so. There was, again, logic to this extension, because Jews and Sikhs were already protected via 'race'. However, the 2006 Racial and Religious Hatred Act became widely criticised, especially by writers, intellectuals and entertainers, as injurious to free speech. The government pointed out that the law was 'about protecting people, not faiths', and that this was not a 'new blasphemy law'.² As in the entire campaign against Islamophobia, the line distinguishing between people and their beliefs is nevertheless unclear. Moreover, as one critic pointed out, the analogy between race and religion does not really work: 'There is no possible rational objection to blackness. There are many possible rational objections to religion ... and some of the greatest thinkers in modern history have held them' (Garton Ash 2005). Multiply withdrawn and re-introduced, and eventually realised only in a watered-down version,³ the 2006 Act was the Labour government's attempt to reconcile the unison opposition by British Muslims to the war on Iraq, by 'trying to deliver an agenda that has shown consideration and respect for Muslims'.⁴ Taking effect not long after the so-called Danish Cartoon Affair of Autumn 2005, the Act could not be tested for its claimed irrelevance for free speech: in an astounding act of self-censorship, all major British newspapers refused to reprint the incriminated cartoons. For Tariq Modood (2006: 3) this 'restraint in the uses of freedom directed against religious people' epitomised 'some progress (in Britain) since the Satanic Verses affair'. Not even including this latest legislative advance, the Runnymede's 2004 'review of progress', much of it achieved at the presumed height of Islamophobia after 9/11, is impressive. While the Muslim Council of Britain lamented that the 'government has done little to ... protect its Muslim citizens and residents from discrimination, vilification, harassment and deprivation' (Commission on British Muslims and Islamophobia 2004: 3), in reality perhaps no European government has gone further than the British in protecting Muslims from these vices. And Muslims have clout in Britain. For instance, the domestic incorporation of the EU Employment Directive in December 2003 went along with a stunning victory of the Muslim lobby over gay rights, no small feat in the land of Virginia Wolf and Oscar Wilde. At the behest of the Muslim lobby, the 2003 UK Employment Equality (Sexual Orientation) regulations, which implement the sex-related part of the EU Employment Directive, contain a clause that allows religious organisations to refuse employment to a known homosexual, if such refusal is in line with religious script. As the Times 458 C. Joppke Downloaded by [] at 14:15 26 July 2015 commented, 'Gay rights campaigners have been snubbed by the government for fear of upsetting Muslim voters who are regarded as more important to Labour's election campaign' (quoted in Klausen 2005: 74). The Causes of Disadvantage The notion of Islamophobia cannot be meaningfully decoupled from an actor's intent to harm or discriminate. A phobia, after all, is an irrational fear: this can only be the disposition of an actor. Islamophobia inherits this limitation from its

closest historical progenitor, 'anti-Semitism'. However, in its subject-centredness Islamophobia falls short of the model that it aspires to emulate, 'racism', which has increasingly come to denote an objective fact built into the anonymous workings of institutions. This weakness might well have been strength, because there are good reasons to be sceptical of the construct of 'institutional racism' in which 'racism' is an objective outcome separate from actors' intentions. Unfortunately, the advocates of the concept of Islamophobia are generally not fond of conceptual subtleties, applying the latter, like 'racism', to generic discrimination that afflicts Muslims qua Muslims. Accordingly, the Commission on British Muslims and Islamophobia suggested the existence of 'institutional Islamophobia', analogous to the notion of institutional racism, defining the former as 'those established laws, customs and practices which systematically reflect and produce inequalities in society between Muslims and non-Muslims' (2004: 14). However, considering only the key sector of employment, it is difficult to argue that Muslims are systematically discriminated against and disadvantaged because they are Muslims. One study found that only 26 per cent of Pakistanis and 23 per cent of Bangladeshis had full-time work in 1994,5 which are the lowest rates of all ethnic groups in Britain (Brown 2000). However, at the same time, 41 per cent of Indian Muslims had full-time work. Factoring in similarly good showings by Middle-Eastern Muslims, one must conclude that being 'Muslim' cannot be the cause of the disadvantage that Pakistanis and Bangladeshis face. Instead, it is more likely that their relative disadvantage is due to a combination of demographic and social-structural factors, such as the relative youth of the Pakistani and Bangladeshi populations, their concentration in economically depressed regions and sectors, and the low skill level and traditionalist profiles of the first immigrant generation (Policy Exchange 2007: 68). Finally, if one considers the particularly low employment level of Muslim women, religion may very well be involved in this*however, as a factor of choice, not of discrimination. 2005 Labour Force Survey figures show that only 23 per cent of Pakistani and Bangladeshi women aged 16-34 actually want to work. Conversely, Muslim women who want to work are relatively successful and thus do not seem to suffer inordinately from discrimination: 25 per cent of Muslim women in employment are working in managerial or professional jobs, which is a higher proportion than Christian women at 21 per cent (Policy Exchange 2007: 69). Journal of Ethnic and Migration Studies 459 Downloaded by [] at 14:15 26 July 2015 When seeking to explain why British Muslims fare worse in socio-economic terms than other ethnic groups, a 'conspiracy of silence' prevents 'honest discussion' of internal cultural factors that may be responsible for this (Lewis 2002: 134). Take the example of Bradford, which has the third-largest Muslim community in Britain after London and Birmingham, and which was one of the sites of the 2001 race riots that led to a massive questioning of British multiculturalism. One authoritative review found Bradford in a 'very worrying drift towards self-segregation', with 'communities ... fragmenting along racial, cultural and faith lines', but where political etiquette and a discourse of victimisation prevented 'talking openly and honestly about problems', lest one risked being labelled 'racist' (Ouseley 2001). In one description in the Yorkshire Post of 22 November 2002, 'Bradford is an Asian city*or, more precisely, a Kashmiri city. Four decades after the first immigrants came here, their families still read newspapers published in Urdu, the conversation around the breakfast table is conducted in Punjabi, the Shalvar kameez is preferred to the suit, purdah is practiced in the majority of homes and the faithful are summoned up to worship...by the cry of the muezzin'. In this 'Asian city', South Asian Muslims further 'self-segregate' around a handful of inner-city wards, which provide all of the city's 13 Muslim councillors (in 2001) and whose schools are up to 90 per cent frequented by Muslim students (Lewis 2002).

****terror da links**

must analyze religious ties to violence before effective policymaking – avoiding discussion yields the reins to radicals

Rubin, 2015 [resident scholar @ AEI, former Pentagon official whose major research areas are the Middle East, Turkey, Iran and diplomacy]

(Michael, Feb 12, "Countering violent extremism? 'It's the theology, stupid"

<https://www.aei.org/publication/countering-violent-extremism-its-the-theology-stupid/>)

Unfortunately, Obama's efforts will fail before they begin, sacrificed upon the altar of political correctness and a diplomatic desire not to offend. Obama seems more concerned with protecting the sensitivities of Islamists than he does the lives of their victims. He walks on eggshells to avoid singling out Islam, and so uses the euphemism "violent extremism." That condemns any resulting policy to failure: To discuss violent extremism but refuse to define what it means is the equivalent of hosting a conference to cure cancer, but barring any mention of cancer or discussion of tumors or metastases. **The sacrifice of precision and reality to wordplay and diplomacy has long undercut the international fight against terrorism. In 1988, Western countries used more than 100 different definitions of terrorism; a quarter-century later, they used 250 different definitions. Obama, for his part, has simply sidestepped the issue. His 2011 "National Strategy for Counterterrorism" avoids defining terrorism, even as it defined other terms such as "affiliates" and "adherents." In 1988, Western countries used more than 100 different definitions of terrorism; a quarter-century later, they used 250 different definitions.** That won't stop other countries from condemning terrorism. That part is easy, but most states take an à la carte approach: All terrorism is bad unless it happens to be for a cause with which they agree. Hence, Turkey considers the Kurdistan Workers Party (PKK) a terrorist group, yet sees no irony in supporting Hamas, even as that group launches rockets indiscriminately at Israeli towns and bombs civilian buses in pursuit of a genocidal platform outlined in its charter. Likewise, the Islamic Republic of Iran condemns as a terrorist group the Mujahedin al-Khalq, a cult blending Islamic and Marxist influences which has many followers in Europe and America, yet blesses Hezbollah as a "resistance organization." Even with regard to al Qaeda, whose defeat the 2011 Counterterrorism Strategy declared its main goal, however, political correctness and a desire to avoid offense have tied America's hands. **There can be no groups that more represent "violent extremism" than al Qaeda and the Islamic State.** Yet the **White House** consistently **refuses to acknowledge the theological basis of the actions** of either. Instead, it insists (without evidence) that al Qaeda's ideology "has been rejected repeatedly and unequivocally by peoples of all faiths around the world." Likewise, on September 10, 2014, Obama declared, "ISIL [The Islamic State of Iraq and the Levant] is not 'Islamic,'" and added, "No religion condones the killing of innocents, and the vast majority of ISIL's victims have been Muslim." **The mantra that terrorism has nothing to do with Islam**, or at least "legitimate" Islam, might reassure the sensitivities of the 57-member Organization of Islamic Cooperation, but **it is a counterfactual refrain**. Woven into the Islamic State's videos are Koranic recitations and theological incantations. Two verses of the Koran bless beheading, and the Islamic State justified the burning alive of Jordanian pilot Moath al-Kasabeh with a citation from Ibn Taymiyyah, the early 14th-century scholar from whose exegesis most Sunni Islamic radicalism springs today. In Obama's latest National Security Strategy, unveiled on February 6, 2015, the White House declared, "We reject the lie that America and its allies are at war with Islam." That is, of course, a straw man argument: beyond the propaganda of al Qaeda and the Islamic State themselves, no one accused the United States of waging war against Islam. In the conflicts in both Afghanistan and Iraq, the United States worked directly in concert with multiple majority-Muslim states: Qatar hosted US Central Command's forward operating base; Bahrain is home to the US Fifth Fleet; Kuwait hosts Camp Arifjan, a logistics base and transit hub used in the Iraq and Afghanistan campaigns; and Oman allowed US forces to launch airstrikes from its territory. Meanwhile, Jordan helped train the new Iraqi army, and other majority-Muslim countries like Albania, Azerbaijan, Bosnia, and Kazakhstan also participated in Operation Iraqi Freedom. Jordan and the United Arab Emirates both sent contingents to Afghanistan. Multiple Arab allies participated in air strikes against the Islamic State. If that represents a war against Islam, someone forgot to tell Muslims. Beyond the propaganda of al Qaeda and the Islamic State themselves, no one accused the United States of waging war against Islam. **Subordinating the Islamic basis for "violent extremism" to diplomatic sensitivity leads not to solutions but rather to the ridiculous.** Take the Taliban: In 1997, John Holzman, then the number two American diplomat in Pakistan, sent a secret cable to Washington suggesting that the best way to moderate the Taliban would be to encourage dialogue between the Taliban and Saudi Arabia, never mind that Saudi Arabia was one of the prime enablers of al Qaeda; the State Department rewarded him with an ambassadorship. Art therapy in Saudi Arabia — this decade's magic solution — is about as wise and effective. Back to the Summit on Countering Violent Extremism: **By performing intellectual somersaults to deny the theological basis and justification of Islamist terrorism today, and by ignoring the need to engage**

in a battle of interpretation within Islam, at best, the White House initiative will be ineffective. At worst, it will provide cover for extremism. There is precedent: In 2012, Obama formed a “Global Counter Terrorism Forum” but then acquiesced to Arab and Turkish demands that he exclude Israel. Just as Mary Robinson, then the UN High Commissioner for Human Rights, transformed her “World Conference against Racism, Racial Discrimination, Xenophobia, and Related Intolerance” into a platform celebrating racism, racial discrimination, anti-Semitism, and terrorism, so too did Obama transform a counterterrorism forum into a celebration of those states most responsible for Islamist terror. Turkey, as mentioned, openly supports Hamas, and has covertly aided the most extreme elements in Syria. The Organization of Islamic Cooperation, for its part, has focused its energy more on efforts to ban discussion of extremist Islam than it has on addressing the cancer of radicalism and the battle of interpretation within Islam. Qatar, Saudi Arabia, and other Gulf states continue to teach Ibn Taymiyyah in secondary school curriculums. While it is true that extremism exists outside of Islam, the world is not confronted by Jewish and Christian radicals beheading journalists, immolating prisoners on camera, kidnapping hundreds of school girls, or enslaving religious minorities. Even if there are exceptions to the rule, these do not provide reason to sidestep discussion of theology. Should the United States join in efforts to counter violent extremism? Absolutely. But leadership means not swapping substantive if difficult discussions for political correctness and photo ops. Countering extremism is vitally important and growing more so every month. The explosion of radicalism and violence should be evidence enough that providing diplomatic cover for radicalism’s enablers rather than addressing controversial topics head-on not only fails but sets the fight back further. It is a lesson Obama would do well to learn.

religion’s influence on squo terrorism makes it UNIQUELY dangerous
Kheiriddin, 2015 [political analyst and president at TJK communications]

(Tasha, Feb 23, "We can't fight terrorism by ignoring religion", ipolitics.ca/2015/02/23/we-cant-fight-islamist-terrorism-by-ignoring-the-role-of-religion/)

They preach the supremacy of the state, declare its omnipotence over individual man and predict its eventual domination of all peoples on the Earth. They are the focus of evil in the modern world.... I urge you to beware the temptation of pride, the temptation of blithely declaring yourselves above it all and label both sides equally at fault, to ignore the facts of history and the aggressive impulses of an evil empire, to simply call (this conflict) a giant misunderstanding and thereby remove yourself from the struggle between right and wrong and good and evil. That was the late U.S. President Ronald Reagan speaking in Florida on March 8, 1983. Reagan was talking about the arms race between the United States and the former Soviet Union, but his argument could apply just as well to the conflict between the West and Islamist terrorists, twenty-two years later. Today, organizations like ISIS, Boko Haram and the Taliban preach the supremacy of the religious state over the secular. The most extreme among them daydream about dominating the planet with a world-wide caliphate. Just as in Reagan’s day, naysayers downplay the conflict between the West and these groups. They blame Westerners for provoking the terrorists’ attacks by fighting their incursions or by publishing “blasphemous” cartoons. And just as in Reagan’s day, those naysayers – including President Barack Obama — are missing the point. In their zeal to be honest brokers, they refuse to admit that Islamist terrorism is Islamist — that the religion plays a role in inspiring this violence, just as political ideology inspired the aspirations of the former USSR and the assorted terror groups it inspired and funded. Without communism, there would have been no Shining Path, no Red Brigades, no Khmer Rouge, no Soviet invasions of Czechoslovakia, Hungary and assorted satellite republics. And without Islam, there would be no al Qaida, no Al-Shabab, no countries ruled by the brutality of Sharia law. Yes, Harper’s response to this threat — the Conservatives’ anti-terror bill C-51 — is overbroad. Yes, the Tories are using terrorism as a political prop. But the reality is that Canada has been attacked by Islamist fanatics twice, and likely will be attacked again. In some respects, the terrorism perpetrated by Islamist fanatics is even more deadly than the violence perpetrated or bankrolled by the former communist superpower and its allies. Islamist terrorists are engaged in a hot war, not a cold one. They base their appeal in faith — an even more potent opiate than ideology, because it holds up the promise of an afterlife. And they are not confined to a specific territory: their operatives live, work and plot in the West itself. This makes them more difficult to combat because they’re here, not “over there”. So when Prime Minister Stephen Harper speaks of the threat of jihadis or radicals in mosques, he is not, as NDP Leader Tom Mulcair claims, fomenting “Islamophobia”. He is acknowledging that the West, Canada included, faces

a real and specific problem — and that we need to acknowledge the role played by religion in inspiring that problem, whether the faith in question has been “perverted” or not. If religious fanatics were plotting in synagogues or churches, the PM would have a responsibility to call that out, too. In the past few decades, Christian fundamentalists have committed attacks, chiefly in the United States. They have mostly killed those they felt acted contrary to their faith, such as abortion providers. But they have not invaded entire countries, flown planes into skyscrapers, raped thousands of women and girls, beheaded hostages and burned them alive. **Islamist terrorism is on an entirely different level.**

****cp working**

nb = terror (or politics I guess, increasing counterterror measures are popular)

as a pic maybe it'd work - lessen muslim profiling but increase strategic terror research vs the broad 1ac people read without defending CVE?

CP text - The United States Federal Government should increase funding to forge a comprehensive plan for research, development, and deployment of technologies to detect, cure, or prevent a biological attack as per our Myhrvold evidence

! to the terror da when reading this cp

terrorists attack and cause extinction – allies and deterrence don't check – timeframe is now **Myhrvold, 2013**, [formerly Chief Technology Officer at Microsoft, co-founder of Intellectual Ventures]

(Nathan P, July, "Strategic Terrorism: A Call to Action"
cco.dodlive.mil/files/2014/04/Strategic_Terrorism_corrected_II.pdf)

Would They Do It? Would terrorists really try to kill millions, or will they stick to convincing their own youth to blow themselves up in small-scale suicide bombings? Several lines of reasoning suggest that stateless terror groups will acquire and use weapons having high-M impact. Table 2 shows the possible M impact of terrorist weapons. Stateless groups have the same level of ambition as nation-states and ought to be treated as operating on the same footing. Was it rational to worry that the Soviet Union would launch a nuclear war to further their communist hegemony or simply to destroy the United States—or out of fear that we would attack them in this way first? Dealing with those questions consumed \$1 trillion of defense spending and shaped the Cold War. When compared to the Soviets, the risk that al-Qaeda or some future group will use high M-impact weapons seems higher on every level. Their geopolitical goals are more ambitious. The ideology is more extreme. The vulnerability to counterattack or reprisal is low. Terrorists have demonstrated a shocking degree of ruthlessness. Under any rational theory of risk, these foes must be considered likely to act. Plus, it is no secret that the United States aims to exterminate al-Qaeda and similar terrorist groups—and rightly so. With revenge and self-preservation on their minds, our primary adversaries are not likely to show us unnecessary mercy. Additionally, terrorism survives by making a big impact; when the world gets desensitized to car bombs, mass shootings, and beheadings, the temptation to one-up the last attack increases. The belief that terror groups will not use terrible weapons if they get them seems foolish in the extreme. To borrow a phrase from A Streetcar Named Desire, to hold this belief is, in effect, to rely “on the kindness of” terrorists. Any rational analysis must assign a substantial amount of the terror risk to large-scale, highmagnitude events. Yet that is not how our defenses are organized and not how we are spending our resources. Instead, we focus most of our counterterrorism efforts on thwarting small-scale attacks. Tactical vs. Strategic Counterterrorism The enormous range of possible terrorist actions mirrors a situation encountered in modern warfare. Military commanders must confront war at many levels, from hand-to-hand combat to global thermonuclear war. That broad range is difficult to cover with a single organization. The military answer is to split the problem into pieces by both scale and approach. The division by scale is usually phrased as the difference between strategic and tactical. Tactical terrorism is important to fight. We want to keep hijackers off airplanes and suicide bombers out of shopping malls. Referring to such problems as tactical does not suggest they are unimportant. Rather, it highlights the need to make even greater efforts to thwart strategic terrorism. Strategic counterterrorism is another matter altogether. The security forces inside the United States are ill prepared for the threat from terrorists intent on using contagious biological agents or nuclear weapons. By the time such terrorists have arrived at the airport or harbor, they have all but won. Are U.S. authorities doing enough to combat terrorism at the strategic level? The indirect evidence indicates that the answer is most certainly no. Aside from a few inadequate efforts to screen a fraction of ships and aircraft overseas before they depart for American shores, the problem is simply not being managed. By the time such terrorists have arrived at the airport or harbor, they have all but won. Are U.S. authorities doing enough to

combat terrorism at the strategic level? The indirect evidence indicates that the answer is most certainly no. Aside from a few inadequate efforts to screen a fraction of ships and aircraft overseas before they depart for American shores, the problem is simply not being managed. Effective Threat Management A basic principle of management accountability is to ask the following question: Who is the most senior person in the organization whose full-time job is dedicated to function X? So ask, “Who is the most senior government official whose full-time job is defending the United States against strategic terrorism?” In the worst possible case, no single leader is focused solely on this problem. Instead, the people who are focused exclusively on terrorism are relatively low-level government workers employed in different departments and agencies with conflicting missions. Contrast this with our efforts to prevent strategic nuclear war, for which an elaborate and well-defined chain of command exists. We have a comprehensive set of early-warning systems and contingency plans that cover every foreseeable eventuality. An extremely welldefined set of people have full-time jobs preparing for and responding to a strategic nuclear attack. Where are our early warning systems for strategic terrorism? Who is in charge of building them? What is the remedy if an attack takes place? When it comes to devising a response to biological terrorism, who is in charge? Is this an issue for the Centers for Disease Control and Prevention? Or should it be handled by the uniformed Public Health Service? Or is the Department of Homeland Security (DHS) supposed to be organizing hospitals? Currently, token and understaffed efforts are fragmented across dozens of government agencies. The Sleeping Dogs of War To understand the government agencies responsible for defending us against terrorism, we must consider the handful of men that influenced the building of American intelligence and defense institutions—men like Hitler, Tōjō, Stalin, Khrushchev, and Brezhnev. MYHRVOLD 48 | FEATURES PRISM 4, NO. 4 Prior to World War II, the United States turned inward and steadfastly ignored the threats from Germany and Japan. The assault on Pearl Harbor (coupled with dogged scheming by Franklin Delano Roosevelt egged on by Winston Churchill) persuaded America to confront the threat from Japan and Germany. In a very real sense, Tōjō and Hitler were, in effect, the fathers of the modern American defense establishment. Stalin took over where Hitler and Tōjō left off and launched us into the Cold War. This was a long and tiring struggle. If at any point American interest or determination flagged, Khrushchev was there to bang his shoe on the table to get our attention. Following the dissolution of the Soviet Union in 1991, no adversary has so dominated our attention. Inertia and the absence of a compelling threat have kept the large bureaucracies in the defense establishment doing largely what they had done before. The 9/11 attacks and subsequent military operations in Afghanistan and Iraq have brought some changes. But the vast machinery of the Cold War, built up over five decades, has yet to retool. If our future threats were the same as those of the past, we could stay this course. Unfortunately, there is every reason to believe that the most significant dangers we will face will be completely new. The precautions we take must be novel as well. The steps necessary to prevent nuclear and biological terrorism are qualitatively different from those needed to plug the holes that allowed 9/11 to happen. Yet our military forces and government agencies seem not to recognize this difference. Nearly all personnel and resources are focused on the immediate problems posed by tactical issues in Afghanistan and by low-level terrorism directed at the United States. The Long View, Backward and Forward Your car has a very large windshield, through which you can see the road ahead, but only a few small mirrors to view what is coming up behind. That’s because the threat is largely from the front, the direction in which you are moving. A bureaucracy (particularly one that exists within a democracy) has the opposite arrangement: an enormous rearview mirror and just a tiny peephole facing forward. The structures and mandates of bureaucracies are based on what has already happened, not what will happen. They cite history to justify their operations. Actions based on a view into the future are speculative and open to criticism, especially when the problems of the present loom large. The only force with a proven ability to shake the complacency inherent in bureaucracies is a determined adversary that persistently and openly fights or antagonizes us. For much of the last decade, both we and al-Qaeda have been distracted by Iraq and Afghanistan. For al-Qaeda, attacks in Afghanistan are cheaper and easier to mount than direct operations against the United States. Attacking the U.S. mainland now would only antagonize the American public and recommit us to the war on terrorism. Eventually this strategic calculus will change. Whether it changes tomorrow or in 2033, it is hard to believe that another major attack won’t occur within a generation. If the next major incident is “only” a 9/11-scale (M3.5 attack) it will be traumatic, but our society will survive largely intact. The problem is that we are not apt to be that lucky. The clear pattern of al-Qaeda—from Somalia, to Khobar Towers, to the African embassy bombings, to the U.S.S. Cole, to the STRATEGIC TERRORISM PRISM 4, NO. 4 FEATURES | 49 World Trade Center and the Pentagon—is one of infrequent attacks which escalate in severity. The next one could be an M5.0 or M6.0 nuclear or biological event. Waiting until it occurs to begin our preparations is utterly irresponsible, but that is just what we’re doing. Meanwhile, we are only beginning to look beyond al-Qaeda to the groups that will succeed this faltering foe. This is alarming when one considers that 20 years ago, neither al-Qaeda nor any other radical Islamic organization were on anybody’s list of major threats to U.S. security. Twenty years from now, new terrorist groups and causes will exist. Radical Islam is likely to remain a concern in 2033, but it won’t be the only one. Some of today’s players will leave the international arena, and new ones will enter. But strategic terrorism is here to stay. It is crucial that we realize that the fundamental problem is not limited to a specific organization like al-Qaeda or to a specific ideology like radical Islam. Bin Laden is dead and gone, yet this general threat persists. Just as managing nuclear weapons became a permanent part of the world order after World War II, combating strategic terrorism must become a permanent part of ensuring global security today. This challenge demands dramatic shifts in American defense and foreign policy. It isn’t a temporary crisis. It requires a fundamental and long-lasting adjustment to the new state of affairs. The investment needed is similar in scale to that spent during the Cold War—hundreds of billions of dollars. This doesn’t mean a Cold War revival. The Cold War was about building a deterrent—implementing the strategy of mutually assured destruction for any party foolish enough to initiate nuclear hostilities. It was relatively straightforward: create a defensive deterrent by building ever more

terrible offensive weapons in multiple redundant systems. The war on terror is fundamentally different. We cannot win by developing more powerful offensive weapons than our adversaries. Deterrence of the old sort simply does not work.

scientists and tech are ready – cp resolves governmental indifference to countering strategic terror

Myhrvold, 2013, [formerly Chief Technology Officer at Microsoft, co-founder of Intellectual Ventures]

(Nathan P, July, "Strategic Terrorism: A Call to Action"
cco.dodlive.mil/files/2014/04/Strategic_Terrorism_corrected_II.pdf)

The Research Challenge In most wars, scientific research is a secondary activity rather than a frontline effort. This approach is emphatically not appropriate in the struggle against strategic terrorism, a primarily technological and scientific battle. For more than two decades, we have allowed an unprecedented explosion of work in molecular biology to occur without providing substantial STRATEGIC TERRORISM PRISM 4, NO. 4 FEATURES | 51 funding for understanding and preventing the misuse of this knowledge. Scientists routinely publish results that either implicitly or, in many cases, explicitly contain recipes for mayhem. Yet, no funding agency has devoted substantial resources to understanding these threats in detail or to developing countermeasures against them. Ironically, this sort of research is precisely the kind at which our society excels. But developing solutions will be impossible if we don't identify the problems and do the work. As it stands, we do neither. The reason is simple enough—little, if any, funding is available for countermeasures research. The National Institutes of Health (NIH), the National Science Foundation, and other government grant-making agencies provide research funding in biology and medicine to combat natural scourges, but not bioterrorism. Why? Because plenty of here-and-now diseases, such as cancer, diabetes, and AIDS, are vying for their attention. Spending money to fight speculative future threats is far more risky and, hence, is rarely done. The only way to change this situation is to forge a comprehensive plan for research, development, and deployment of technologies to detect, cure, or prevent a biological attack. In addition to creating counterterrorism strategies, a well-funded research initiative to develop bioterrorism defenses would give an enormous boost to biomedical research in some areas that may ultimately prove just as useful. At the moment, all of humanity is susceptible to natural infections that are very similar in some ways to those that might be unleashed during an act of bioterrorism: a novel strain of pandemic influenza or an emergent pathogen such as the one that causes SARS. Counter-bioterrorism research could lead to broad-spectrum antiviral drugs and vaccines or to monitoring systems for detecting outbreaks early. We could expect enormous dividends from this research in areas well outside of bioterrorism defense itself. Scientists will rise to this challenge if given adequate resources—indeed the United States excels at such scientific and technological research. Still, considerable patience will be required: countering strategic terrorism isn't a single, isolated problem. Instead, it is hundreds of disparate problems. However, the situation is not hopeless. The R&D capabilities of the United States are still unmatched in the world. A full description of the research agenda is beyond the scope of this treatment, but it could be put together in short order. The Intelligence Challenge Preventing nuclear war and fighting common crime are similar in some ways. Both efforts typically exploit the principle of deterrence by inflicting punishment after the fact. This approach works well when the deterrence is real—when it is clear that the probability of punishment or retaliation is high. With strategic terrorism, we already know we cannot retaliate effectively. Besides deterrence, the other main approach to security is guarding: preventing crime by having forces on the scene that stop criminals or attackers in their tracks. Guarding is used quite a bit in counterterrorism—air marshals on flights, security screeners in airports, and bomb-sniffing dogs at large events. Guarding does not prevent strategic terrorism. If the goal of a terrorist is to spread an infectious disease in the United States, it is simple to put a few infected volunteers on a plane headed into our country. It MYHRVOLD 52 | FEATURES PRISM 4, no. 4 would be difficult for security to notice anything amiss. The terrorists wouldn't be obviously sick or carrying suspicious items. Even if a way existed to detect such attackers, by the time someone found them in the United States, it would already be too late. Even with nuclear, chemical, or noncontagious bio warfare, guarding the country is of limited use. Intercepting a nuclear bomb in a shipping container works only if you stop it in a place you don't mind losing if the weapon detonates. Having a nuclear bomb explode in a Port Authority facility in New Jersey may be marginally better than having it explode in midtown Manhattan, but it would be a

Pyrrhic victory. The need to battle strategic terrorists preemptively sets the bar for 21st-century intelligence services: they must provide information of sufficient quality and timeliness to enable policy makers to decide whether or not to act. The intelligence community needs a complete bottom-up review to determine whether its structure and methodologies match present and future needs. The new approach will require large and unpopular budget increases. Existing program budgets will need to be redistributed. Congress will vigorously defend current projects affecting their constituents and contractors will howl. Action is nevertheless imperative. The Military Challenge Gathering intelligence is only the first step. The second is what to do with it when it indicates a threat. What is the threshold for action? What sort of team do you send in? What are CBP officer with his explosive detection dog clears vehicles entering the Super Bowl area. Gerald Nino STRATEGIC TERRORISM PRISM 4, NO. 4 FEATURES | 53 terrorism are treated as criminal activities and are left to local SWAT teams or the FBI. It is unrealistic to expect such forces to have the training and expertise to deal with strategic threats. Instead, we need a nationally trained and nationally funded force, even more developed than the FBI's WMD Directorate and Critical Incident Response Group (CIRG). Strategic terrorism spans a wide range of possibilities from a criminal act by one or a small number of people to an all-out invasion. Our military must be prepared to handle the full range of possibilities, domestically and internationally. The Domestic-Policy Challenge American jurisprudence is firmly grounded in the sentiment expressed by Sir William Blackstone, an 18th-century jurist: "it is better that ten guilty persons escape than that one innocent suffer." Thus, there will be a seemingly insurmountable clash between the American tradition of liberal freedoms for its citizens and the extreme circumstances of strategic terrorism. There is substantial logic to the idea that trampling the rights of millions of citizens is, in aggregate, worse than letting a small number of criminals escape justice. The implicit calculus of harm is that whatever havoc a guilty party may wreak is less odious to society than the damage that may be caused by prosecuting the innocent or abridging their rights through unreasonable search and seizure or other police behavior. When the Founding Fathers established the Constitution and the Bill of Rights, constraining the power of the state was a radical, untested, and unprecedented experiment. Liberal protection of human rights, pioneered on a large scale first in the United States and the risks of collateral damage? What if we're wrong? The primary military challenge is to develop enough depth and breadth of new forms of special operations to give decisionmakers an appropriate set of options. Taking out a terrorist camp that is building a nuclear weapon or brewing up smallpox is a very specific challenge. What if that camp is in a city? What if it is in an American city? First, we need to develop new weapons. For example, our military lacks practical weapons that can destroy a bioweapons facility in a way that guarantees the contents are sterilized. The so-called "surgical" air strikes of the past have improved greatly but a tremendous amount of collateral damage still occurs. Weapon systems must be rethought and optimized for a wide range of special operations, from small-scale covert action to large-scale efforts such as the current one in Afghanistan. The U.S. military also needs to retool its organization. Troops involved in special operations—Rangers, Green Berets, Delta Force members, and so forth—have been treated as adjuncts to the "real" forces. This is a World War II mindset and is unlikely to be useful. Instead, attacks will often use special-operations units without involving conventional forces. The years since 9/11 have seen an increase in the size and importance of special operations, but this increase appears to be a small down payment on the capabilities the future will demand. It may even make sense to unify all special operations under a separate branch of the armed services, one more on par with the Army, Navy, Marines, and Air Force than today's Special Operations Command (SOCOM). The reach of military operations inside the United States must also change. Most acts of MYHRVOLD 54 | FEATURES PRISM 4, NO. 4 then exported to Europe and other developed nations, has been a great success. Indeed, the project has expanded substantially. The actions of the U.S. Congress in writing new laws, of the courts in interpreting the Constitution, and of advocacy groups such as the American Civil Liberties Union and a very active criminal-defense bar have expanded the civil rights of Americans. Indeed, the number of rights and privileges enjoyed by Americans has steadily increased over time. This entire endeavor is, however, called into question by the nature of strategic terrorism, whose potential for harm is enormous enough to demand a reexamination of the quantitative bargain. We need to ask, "Is the cost to society in lives really worth more than the cost of constraints on civil liberties?" Sir Blackstone's trade-off implicitly assumes that the harm done by causing one innocent man to suffer is worse than whatever harm the ten guilty men may do with their freedom. Is he still correct if one of those ten guilty men is a strategic terrorist who could kill millions of innocent Americans?

myhrvold was reviewed by a security expert AND tons of experts agree—we don't hear about them because they have no significant role in the gov – the cp changes that

Harris, 2013, [senior staff writer at Foreign Policy, covering intelligence and cyber security]

(Shane, Sept 18, "Meet the Microsoft Billionaire Who's Trying to Reboot US Counterterrorism", foreignpolicy.com/2013/09/18/meet-the-microsoft-billionaire-whos-trying-to-reboot-u-s-counterterrorism/

Add to Nathan Myhrvold's already eclectic résumé — which includes ex-chief technology officer of Microsoft, co-founder of one of the world's largest patent-holding firms, and author of a \$625 cookbook — a new credit: terrorism expert. Myhrvold, a famous autodidact, recently published a 33-page paper that he rousingly calls, "Strategic Terrorism: A Call to Action." The core of his argument is easy enough to understand, and probably true: The United States is more focused on stopping a guy who blows up an airplane and kills 300 people than on a guy who intentionally spreads smallpox and kills 300,000. "In my estimation, the U.S. government, although well-meaning, is unable to protect us from the greatest threats we face," Myhrvold writes. "[M]odern technology can provide small groups of people with much greater lethality than ever before. We now have to worry that private parties might gain access to weapons that are as destructive as — or possibly even more destructive than — those held by any nation-state." Myhrvold to Washington: National security ... you're doin' it wrong. The paper is accessible to a layman, which is what Myhrvold was when he started thinking about the strategic aspects of terrorism not long after the 9/11 attacks. He wrote the piece in his spare time — apparently he does have some — and it was mostly finished in 2006. Myhrvold had no intention of publishing it until recently, when he met Benjamin Wittes, the editor of the influential national security and legal site Lawfare. Wittes thought that parts of the paper accurately described the threat posed by small actors with big weapons, and he decided that Myhrvold's analysis deserved a wider audience. Lawfare published the paper in July. Since then, the document has made the rounds. It has been

discussed in military and intelligence circles. Law professors are reading it and talking about it at symposia. Members of Congress and their staffs have reviewed Myhrvold's findings. Chances are that if you ask a national security expert, he either has read the paper or will tell you he plans to right away. As these kinds of things go in wonkland, Myhrvold's paper has buzz. And last week, Myhrvold started making the rounds too. He was in Washington meeting with senior officials in the intelligence agencies and committee members and staff on Capitol Hill. He was hesitant to tell Foreign Policy, when we sat down for a chat, precisely whom he has been talking to. But he was clear that it was a large number. And they weren't all meetings that Myhrvold had set up. A lot of people in government were calling him, asking if he'd stop by to talk about the paper and how he thinks the United States could improve its security policy. This is all profoundly strange. Not strange that Myhrvold — who is probably best known for talking about pistachio ice cream on The Colbert Report and for an unflattering profile of his company that aired on This American Life — would be chatting up spooks and congressional committee chiefs about his views. Washington is full of rich and important guys pushing their passion projects, and Myhrvold is a very rich and important guy. What's strange is that so many in the national security establishment are apparently surprised, even unnerved, by Myhrvold's findings. As Myhrvold will be the first to tell you, the paper contains few new insights or warnings about how terrorists could use a biological weapon to kill millions of people. And it's central "call to action," for the United States to shore up its woefully weak defenses against such an attack, have echoed around Washington in the 12 years since the 9/11 attacks. A lot of people with more official expertise on terrorism have already written these warnings. They show up repeatedly in the 9/11 Commission report. There are books on the subject. The Homeland Security Department was established in part to defend against this stuff. The enthusiastic reception that Myhrvold is getting in Washington is a measure of how much this town seems to have forgotten about potentially catastrophic terrorism — and specifically about what security experts call "low-probability, high-impact" events like turning a virus into a weapon or detonating a small nuclear bomb. "Big things actually matter a ridiculous amount, even if they're not probable," Myhrvold told Foreign Policy. He points out that a bioterrorist attack is at least as likely as, and probably more likely than, a nuclear weapons strike was by the Soviet Union during the Cold War. The United States devoted enormous resources and manpower to managing that threat — and it still does — and there is nothing comparable to preventing bioterrorism. Myhrvold says that not everyone he talks to is surprised by what he wrote. (And it should be said that the paper is well written, concise, and thoughtful, which helps explain why it's catching on.) But when he does find out that an agency or department has a resident expert on bioterrorism or portable nukes, that expert is not working in the front office. He's not part of the strategic discussion. Myhrvold's broad complaint is that there's no one person in charge of thinking about those unlikely but potentially awful doomsday scenarios. It's perhaps discouraging but not that surprising that it takes a relatively famous outsider to focus the mind on what countless white papers and task force reports have been saying for more than a decade.

Islamophobia DDI

Global-Local K

1NC

Islamophobia is engrained within American culture. Changing government policies is ineffective, can't lead to broader change, and only serves to distance Americans from their own Islamophobia.

Sheehi 11 (Stephen, March 9, 2011. "Don't Blame the Kingdom for Islamophobia, Blame the Kingdom." Shehi is a professor of Middle East studies at the College of William and Mary. <http://www.jadaliyya.com/pages/index/840/dont-blame-the-king-for-islamophobia-blame-the-kin> // EMS).

To approach the current hearings on "radicalization" of American Muslims along partisan boundaries is to deflect from the depths to which Islamophobia is engrained within American political culture. That Geller had to "beg" to be included in the CPAC convention and attack paleo-conservatives such as Grover Norquist suggest that the Republican Party realizes the liability of the visibility of Tea Bag xenophobia.¶ **Blaming opportunistic and predatory Islamophobes is a convenient means to distance the American mainstream from their own Islamophobia.** King's hearings are dangerous not for their demonizing of Muslims but because they further mainstream these predators and offer them a prominent political platform and the credibility that comes with it.¶ However, the difference between good ole' fashioned Muslim and Arab hating and **Islamophobia** as a mass cultural phenomenon is that the latter **is a fully fledged ideological component of American culture that has flowered since the end of the Cold War to accommodate US power in a unipolar world.** Consequently, **Islamophobia permeates all spectra of American culture.** Juan Williams' honesty that Muslims make him nervous, Howard Dean accusing Islam of being "stuck in the 12th century," and Obama's clear distaste for the "wisdom" of Park 51 mosque show how Democrats share their counterparts' suspicion of Muslims.¶ **In the media, discussion of Muslims and Islam is, at best, infused with the Good Muslim-Bad Muslim dichotomy that poses patriotic loyalty against religious identity.** While highlighting the psychological instability of white terrorists and ignoring the white supremacy beliefs of anti-government militias, cable news obsesses over "home grown terrorism," perpetuating the stereotype of the "Muslim threat" and, therefore, legitimizing it as a valid analytical topic.¶ **Islamophobia is not only a set of misrepresentations, misunderstandings and intolerance by overt racists and the religiously bigoted. It is a culture formation that has been activated for ideological reasons. As such, the shared Islamophobia of both parties translates into very real effects for Muslims.** For example, municipal police hire Islamophobe charlatans to train them to identify home grown threats using outlandishly racist anti-Muslim literature. As a consequence, not only do police profile and target anyone who might look like their version of a Muslim but they under report hate crimes against Muslim and Arab Americans.

The 1AC is an act of world ordering – images of disempowering structures produce a vision of the world that negates activism at the level of the self. The I-In-Relationship is a necessary starting point for changing larger structures

Jayan **Nayar**, Law—University of Warwick, 1999 "SYMPOSIUM: RE-FRAMING INTERNATIONAL LAW FOR THE 21ST CENTURY: Orders of Inhumanity," 9 Transnat'l L. & Contemp. Probs. 599

Despite the fixation of the beneficiaries of ordered worlds, even the ordered "critic," with the prescribed languages, visions and possibilities of human socialities, other realities of humanity nevertheless persist. Notwithstanding the globalization of social concern and the transnationalization of professionalized critique and reformatory action, struggles against violence remain energized, persistent and located. They are waged through the bodies of lives lived in experiential locations against real instruments of terror, functioning within embodied sites of violence. Non-information and non-representation of the existence of such struggles, and non-learning of the wisdoms thus generated do not negate their truths or the vibrancy of their socialities. 51 **"We" are participants in ordered worlds, not merely observers. The choice is whether we wish to recognize our own locations of ordered violence and participate in the struggle to resist their orderings, or whether we wish merely to observe violence in far-off**

worlds in order that our interventionary participation "out there" never destabilizes the ground upon which we stand. I suggest that we betray the spirit of transformatory struggle, despite all our expressions of support and even actions of professionalized expertise, if our own locations, within which are ordered and from which we ourselves order, remain unscrutinized. And so, what might I contribute to the present collective exercise toward a futuristic imaging of human possibilities? I am unsure. It is only from my view of the "world," after all, that I can project my visions. These visions do not go so far as to visualize any "world" in its totality; they are uncertain even with regard to worlds closer to home, worlds requiring transformatory actions all the same. Instead of fulfilling this task of imagining future therefore I simply submit the following two "poems." [*629] Changing the "I" of the World: The Essential Message of Mahatmas?" We are today bombarded by images of our "one world." We speak of the world as "shrinking" into a "global village." We are not all fooled by the implicit benign-ness of this image of "time-space" contracted--so we also speak of "global pillage." This astuteness of our perceptions, however, does not prevent us from our delusion of the "global;" the image of the "global" world persists even for many activists amongst us who struggle to "change" the world. This is recent delusion. It is a delusion which anesthetizes us from the only world which we can ever locate ourselves in and know--the worlds of "I"-in relationships. The "I" is seldom present in "emancipatory" projects to change the world. This is because the "relational I"-world and the "global"-world are negations of one another; the former negates the concept of the latter whilst the latter negates the life of the former. And concepts are more amenable to scrutiny than life. The advance in technologies of image-ing enables a distancing of scrutiny, from the "I"-world of relationships to the "global"-world of abstractions. As we become fixated with the distant, as we consume the images of "world" as other than here and now, as we project ourselves through technological time-space into worlds apart from our here and now, as we become "global," we are relieved of the gravity of our present. We, thus, cease the activism of self (being) and take on the mantle of the "activist" (doing). This is a significant displacement. ¶ 1NC¶ That there is suffering all over the world has indeed been made more visible by the technologies of image-ing. Yet for all its consequent fostering of "networks," images of "global" suffering have also served to disempower. By this, we mean not merely that we are filled with the sense that the forces against which the struggle for emancipations from injustice and exploitation are waged are pervasive and, therefore, often impenetrable, but, more importantly, that it diverts our gaze away from the only true power that is in our disposal--the power of self-change in relationships of solidarities. ¶ The "world," as we perceive it today, did not exist in times past. It does not exist today. There is no such thing as the global "one world." The world can only exist in the locations and experiences revealed through and in human relationships. It is often that we think that to change the world it is necessary to change the way power is exercised in the world; so we go about the business of exposing and denouncing the many power configurations that dominate. Power indeed does lie at the core of human misery, yet we blind ourselves if we regard this power as the power out there. Power, when all the complex networks of its reach are untangled, is personal; power does not exist out there. [*630] it only exists in relationship. To say the word, power, is to describe relationship, to acknowledge power, is to acknowledge our subservience in that relationship. There can exist no power if the subservient relationship is refused--then power can only achieve its ambitions through its naked form, as violence. Changing the world therefore is a misnomer for in truth it is relationships that are to be changed. And the only relationships that we can change for sure are our own. And the constant in our relationships is ourselves--the "I" of all of us. And so, to change our

relationships, we must change the "I" that is each of us. Transformations of "structures" will soon follow. This is, perhaps, the beginning of all emancipations. This is, perhaps, the essential message of Mahatmas.

Reject the 1AC in order to politicize our own relationships with structures – this is the first step towards liberation

Nayar, Law—University of Warwick, 1999 "SYMPOSIUM: RE-FRAMING INTERNATIONAL LAW FOR THE 21ST CENTURY: Orders of Inhumanity," 9 Transnat'l L. & Contemp. Probs. 599

So, back to the question: to what extent, for this, "our world," do we contemplate change when "we" imagine transformed "world-orders?" In addition to the familiar culprits of violent orderings, such as government, financial institutions, transnational corporations, the World Bank, the IMF, and the WTO (as significant culprits they indeed are), do we, in our contemplations of violent orders, vision our locations within corporate "educational" institutions as "professional academics" and "researchers," our locations within corporate NGOs as "professional activists," our locations within "think-tanks" and "research organizations" as "professional policy-formulators," and whatever other locations of elite "expertise" we have been "trained" to possess, as ordered sites, complicit and parasitic, within a violent "world-order"? Do we see in our critiques of world-orderings, out there, the orderings we find, right here, in our bodies, minds, relationships, expectations, fears and hopes? Would we be willing to see "our (ordered) world" dismantled in order that other worlds, wherein our "privileges" become extinguished, may flourish? These concerns are, then, I believe, the real complexities of judgment and action. Consideration should be given, not only to those of the political-structural, so often honed in on, but also to the [*628] issue of the political-personal, which ultimately is the "unit" of "worlds" and of "orders." If "globalization," as a recent obsession of intellectual minds, has contributed anything to an understanding of the ways of the "world," I suggest, it is that we cannot escape "our" implication within the violence of "world (mis)orders." IV. A WORLD FOR TRANSFORMATION: TWO POEMS Despite the fixation of the beneficiaries of ordered worlds, even the ordered "critic," with the prescribed languages, visions and possibilities of human socialities, other realities of humanity nevertheless persist. Notwithstanding the globalization of social concern and the transnationalization of professionalized critique and reformatory action, struggles against violence remain energized, persistent and located. They are waged through the bodies of lives lived in experiential locations against real instruments of terror, functioning within embodied sites of violence. Non-information and non-representation of the existence of such struggles, and non-learning of the wisdoms thus generated do not negate their truths or the vibrancy of their socialities. n51 "We" are participants in ordered worlds, not merely observers. The choice is whether we wish to recognize our own locations of ordered violence and participate in the struggle to resist their orderings, or whether we wish merely to observe violence in far-off worlds in order that our interventionary participation "out there" never destabilizes the ground upon which we stand. I suggest that we betray the spirit of transformatory struggle, despite all our expressions of support and even actions of professionalized expertise, if our own locations, within which are ordered and from which we ourselves order, remain unscrutinized.

Government reform doesn't solve- Islamaphobia is psychological, not just a system of concrete policies.

Kundnani 14 (Arun, March 28 2014, "No NSA Reform Can Fix the American Islamophobic Security Complex." Kundnani is the author of "The Muslims Are Coming! Islamophobia, Extremism, and the Domestic War on Terror" and teaches at New York University. <http://www.theguardian.com/commentisfree/2014/mar/28/nsa-reform-american-islamophobic-surveillance-complex> // EMS).

Better **oversight of the sprawling American national security apparatus may finally be coming:** President Obama and the House Intelligence Committee unveiled plans this week to reduce bulk collection of telephone records. The debate opened up by Edward Snowden's whistle-blowing is about to get even more legalistic than all the parsing of hops and stores and metadata.¶ **These reforms may be reassuring, if sketchy. But for those living in so-called "suspect communities" – Muslim Americans,** left-wing campaigners, "radical" journalists – **the days of living on the receiving end of excessive spying won't end there.**¶ How come when we talk about spying we don't talk about the lives of ordinary people being spied upon? While we have been rightly outraged at the government's warehousing of troves of data, we have been less interested in the consequences of mass surveillance for those most affected by it – such as Muslim Americans.¶ In writing my book on Islamophobia and the War on Terror, I spoke to dozens of **Muslims,** from Michigan to Texas and Minnesota to Virginia. Some told me about becoming aware their mosque was under surveillance only after discovering an FBI informant had joined the congregation. Others spoke about federal agents turning up at colleges to question every student who happened to be Muslim. All of them said **they felt unsure whether their telephone calls to relatives abroad were wiretapped or whether their emails were being read by government officials.**¶ There were the young Somali Americans in Minnesota who described how they and their friends were questioned by FBI agents for no reason other than their ethnic background. Some had been placed under surveillance by a local police department, which disguised its spying as a youth mentoring program and then passed the FBI intelligence on Somali-American political opinions.¶ There were the Muslim students at the City University of New York who discovered that fellow students they had befriended had been informants all along, working for the New York Police Department's Intelligence Division and tasked with surveilling them. **There was no reasonable suspicion of any crime; it was enough that the targeted students were active in the Muslim Students Association.**¶ And then there was Luqman Abdullah, a Detroit-based African-American imam, whose mosque was infiltrated by the FBI, leading to a 2009 raid in which he was shot and killed by federal agents. The government had no evidence of any terrorist plot; the sole pretext was that Abdullah had strongly critical views of the US government.¶ These are the types of people whom the National Security Agency can suspect of being two "hops" away from targets. These are the types of "bad guys" referred to by outgoing NSA director Keith Alexander. **Ten years ago, around 100,000 Arabs and Muslims in America had some sort of national security file compiled on them. Today, that number is likely to be even higher.**¶ A study published last year by the Muslim American Civil Liberties Coalition documented the effects of this kind of mass surveillance. **In targeted communities, a culture of enforced self-censorship takes hold and relationships of trust start to break down. As one interviewee said: "You look at your closest friends and ask: are they informants?"**¶ **This is what real fear of surveillance looks like: not knowing whom to trust, choosing your words with care when talking politics in public, the unpredictability of state power.** Snowden has rightly drawn our attention to the power of what intelligence agencies call "signals intelligence" – the surveillance of our digital communications – but equally important is "human intelligence", the result of informants and undercover agents operating within communities.¶ **Underpinning all the surveillance of Muslim Americans is an assumption that Islamic ideology is linked to terrorism.** Yet, over the last 20 years, far more people have been killed in acts of violence by right-wing extremists than by Muslim American citizens or permanent residents. The huge numbers being spied upon are not would-be terrorists but law-abiding people, some of whom have "radical" political opinions that still ought to be protected by the First Amendment to the constitution. Just the same, there are plenty of other minority Americans who are not would-be "home-grown" terrorists – but they still live in fear that they might be mistaken as one.¶ So let's reform the NSA and its countless collections. But **let's not forget the FBI's reported 10,000 intelligence analysts working on counter-terrorism and the 15,000 paid informants helping them do it. Let's not forget the New York Police Department's intelligence and counter-terrorism division with its 1,000 officers, \$100m budget and vast program of surveillance. Let's not forget the especially subtle psychological**

terror of being Muslim in America, where, sure, maybe your phone calls won't be stored for much longer, but there's a multitude of other ways you're always being watched.

World-ordering is the ordering of worlds – a civilizing mission that subdues assimilates and eradicates the other

Jayan **Nayar**, Law—University of Warwick, **1999** “SYMPOSIUM: RE-FRAMING INTERNATIONAL LAW FOR THE 21ST CENTURY: Orders of Inhumanity,” 9 *Transnat'l L. & Contemp. Probs.* 599

[*606] Distinguishing these two meanings of "order" provides us with radically opposed directions of analysis and orientations for future imagings of social relations. Although the rhetoric of world-order would focus on visions of some projected "world" that provides the aspiration for collective endeavors, "order" does not come to be without necessary "ordering;" the "world" of "world-order" has not come to be without the necessary ordering of many worlds. The ordering and the ordered, the world of order and the ordered world, all are inextricable parts of the past and the present of "civilization." Despite the vision of world-order founded on a notion of a universal society of humankind aspiring toward a universal common good, (first given meaning within a conceptual political-legal framework through the birth of the so-called "Westphalian" state system n14), the materialities of "ordering" were of a different complexion altogether. Contrary to the disembodied rhetoric of world-order as bloodless evolution, the new images of the world and languages of "globality" did not evolve out of a sense of "hospitality" n15 to the "other," the "stranger." Rather, the history of the creation of the post-Westphalian "world" as one world, can be seen to be most intimately connected with the rise of an expansionist and colonizing world-view and practice. Voyages of "discovery" provided the necessary reconnaissance to image this "new world." Bit by bit, piece by piece, the jigsaw of the globe was completed. With the advance of the "discoverer," the "colonizer," the "invader," the "new" territories were given meaning within the hermeneutic construct that was the new "world." [*607] The significance of this evolution of the world does not, however, lie merely in its acquiring meaning. It is not simply the "idea" of the world that was brought to prominence through acts of colonization. The construction of the "stage" of the world has also occurred, albeit amid the performance of a violent drama upon it. The idea of a single world in need of order was followed by a succession of chained and brutalized bodies of the "other." The embodied world that has been in creation from the "colonial" times to the present could not, and does not, accommodate plurality. The very idea of "one world" contains the necessary impetus for the absorption, assimilation, if not destruction, of existing worlds and the genocide of existing socialities. This violence of "order-ing" within the historical epoch of colonialism is now plainly visible. Through "colonialism" was reshaped the material basis of exchange that determined human relationships. Put differently, the very idea of what is "human" was recast by the imposed value-systems of the "civilizing" process that was colonialism. To be human, to live, and to relate to others, thus, both lost and gained meaning. Lost were many pre-colonial and indigenous conceptions of human dignity, of subsistence, production, consumption, wealth and poverty. Gained was the advent of the human "self" as an objective "economic" agent and, with it, the universals of commodification as the basis for human relations. Following this transformation of the material political-economy of the colonized,

or "ordered," colonialism entrenched the "state" as the symbolic "political" institution of "public" social relations. The effect of this "colonization of the mind" was that the "political-economic" form of social organization--the state--was universalized as common, if not "natural," resulting in a homogenization of "political" imagination and language. Thus, diversity was unified, while at the same time, unity was diversified. The particularities and inconveniences of human diversity--culture and tradition--were subordinated to the "civilized" discourse of secular myths (to which the "rule of law" is central), n16 while concurrently, humanity was formally segregated into artificial "states," enclosures of mythic solidarities and common destinies. This brief remembering of colonialism as an historic process, provides us with the most explicit lessons on the violence of the "ordering" of "worlds." From its history we see that an important feature of ordering prevails. The world of those who "order" is the destruction of the "worlds" of those ordered. So many ideologies of negation and (re)creation served to justify this "beginning"--terra nullius, the "savage" native, the "civilizing mission." n17 The [*608] "world," after all, had to be created out of all this "unworldly" miasma, all for the common good of the universal society of humankind. Although historical colonialism as a formal structure of politico-legal ordering of humanity has come and gone, the violence of colonization is very much a persistent reality. A striking feature of historical world-orderings was the confidence with which the "new world" was projected upon human imagination. Colonialism was not a tentative process. The "right" of colonization, both as a right of the colonizer and as a right thing to do by the colonizer, was passionately believed and confidently asserted. Thus, for the most part, this "right" was uncontested, this confidence unchallenged. "World-order" today is similarly asserted with confidence and rectitude. Contemporary world-orderings, consistent with those of the past, are implemented using a range of civilizational legitimization. With the advent of an ideology of "humanity," a "post-colonial" concession to human dignity demanded by the previously colonized, new languages of the civilizational project had to be conceived of and projected. "Freed" from the brutalities of the order of historical colonialism, the "ordered" now are subjected to the colonizing force of the "post-colonial," and increasingly, globalization-inspired ideologies of development and security. Visible, still, is the legitimization of "order" as coercive command through the rhetoric of "order" as evolutionary structure.

A speech is not capable of divorcing you from a liberal society that has over-determined your identity.

Alcoff 5, Linda, Professor of Philosophy at Hunter College and the CUNY Graduate Center, Visible Identities: Race, Gender, and the Self (Studies in Feminist Philosophy) [Paperback]//AG

This moment crystallizes for me the effect of social identity, precisely because it is so obvious that global capital and neocolonial political formations had over-determined that encounter between the U.S. soldiers and my father. My argument in this book begins from the premise that structural power relations such as those created by global capital are determinate over the meanings of our identities, the possibilities of social interaction, and the formations of difference. Nonetheless, the focal point of power most often today operates precisely through the very personal sphere of our visible social identities. This should be no surprise, given that capitalism was a racial and gender system from its inception, distributing roles and resources according to

identity markers of status and social position and thus reinforcing their stability. Social identities such as race, ethnicity, and gender remain the most telling predictors of social power and success, predicting whether one works in the service sector, the trades, or the managerial class, whether and how much profit can be had by selling one's home, how likely one is to be incarcerated, how likely one is to suffer sexual or domestic violence, and even how high one is likely to score on the SAT. Such facts do not displace the importance of class; rather, they reveal that class works through, rather than alongside, the categories of visible identity.

Islamophobia PIC

1NC

We advocate for the entirety of the 1AC replacing the word “Islamophobia” with “Islamoprejudice”

The term “Islamophobia” conceals that discrimination against Muslims constitutes a long-standing tradition in Western countries and implies that the religion is the target of discrimination, when in reality it is the people.

Imhoff and Recker 12 (Roland and Julia, “Differentiating Islamophobia: Introducing a New Scale to Measure Islamoprejudice and Secular Islam Critique,” August 17, Political Psychology. Imhoff is an assistant professor of social psychology/cognition at the University of Cologne. [//EMS">http://www.academia.edu/545302/Differentiating_Islamophobia_Introducing_a_new_scale_to_measure_Islamoprejudice_and_Secular_Islam_Critique // EMS](http://www.academia.edu/545302/Differentiating_Islamophobia_Introducing_a_new_scale_to_measure_Islamoprejudice_and_Secular_Islam_Critique)).

In 1998, the British non-governmental organization Runnymede Trust provided a definition of Islamophobia that equated it with closed(vs. open) views of Islam (Commission on British Muslims and Islamophobia, 1998). According to this definition, the eight main features of Islamophobia are views of the Islam as (1) monolithic, (2) separate from and (3) inferior to Western cultures. Islam is seen as (4) “an enemy” and as (5) a manipulative political ideology. Criticism of the West is (6) a priori rejected, (7) discrimination against Muslims is justified, and (8) Islamophobia is seen as natural. This definition remains the most ambitious effort to explicitly define Islamophobia. Use of the term has become widespread, and yet **its definition is highly contested**. Two particular criticisms are regularly raised. One claims that **Islamophobia is an expendable neologism that merely describes a rather well-known phenomenon of prejudice and discrimination against immigrants (particularly from Muslim countries)**. The other, more intransigent, objection denounces Islamophobia as a discursive weapon intended to silence well-justified critique of Islamic practices and dogmas. We will briefly outline these two critical positions below before introducing our empirical approach to the question.¶ Old Wine in a New Bottle¶ Critics of the term have claimed that **Islamophobia is a highly popular, new phrase for a rather old phenomenon: racism**. In this understanding, **the new label Islamophobia would conceal that discrimination and prejudice against immigrants – also but not exclusively from predominantly Muslim countries – constitute a long-standing tradition in many Western countries**. Thus, Islamophobia is characterized as neologism for racism (Love, 2009; Semati, 2006). Halliday (1999) argued that, in contrast to what the term Islamophobia suggests, **“the enemy is not a faith or a culture but a people”** (p. 898). Thus, Sakaita (2006) proposed the term anti-Arab racism as a more accurate replacement for Islamophobia. At the same time, several scholars have argued that religious categories have not only replaced ethnic categories as the salient part of immigrant self-concepts, but also as political categories (Modood & Ahmad, 2007). However, **the term Islamophobia implies that Islam as a religion is the target of discriminatory practice, when in fact it is individuals who suffer discrimination**. One of the most prominent manifestations of such a view was expressed in the Manifesto signed by twelve intellectuals and initially published in the French weekly Charlie Hebdo in February 2006 (Hirsi Ali, Chafiq, Forest, Levy, Manji, Mozzafari et al., 2006). According to the English translation, there is no use for the neologism of Islamophobia as it “confuses criticism of Islam as a religion and stigmatization of those who believe in it”

Islamoprejudice is better able to capture the religious, ethnic, and racial aspects of anti-Muslim discrimination.

Imhoff and Recker 12 (Roland and Julia, “Differentiating Islamophobia: Introducing a New Scale to Measure Islamoprejudice and Secular Islam Critique,” August 17, Political Psychology. Imhoff is an assistant professor of social psychology/cognition at the University of Cologne. [//EMS">http://www.academia.edu/545302/Differentiating_Islamophobia_Introducing_a_new_scale_to_measure_Islamoprejudice_and_Secular_Islam_Critique // EMS](http://www.academia.edu/545302/Differentiating_Islamophobia_Introducing_a_new_scale_to_measure_Islamoprejudice_and_Secular_Islam_Critique)).

Considering this wide range of interpretation of what Islamophobia is – from a descriptive term for hatred directed against Islam to a denunciatory catchword directed against those who express legitimate criticism of Islam – **it seems highly desirable to provide an operational definition that clearly distinguishes a prejudiced view of Islam from criticism of Islam motivated by universalistic, secular, and democratic convictions**. Such a differentiation is needed in **order to facilitate both research and discussion**. We suggest that **the neologism Islamophobia may conceal more than it illuminates** and

thus developed a scale that incorporates both understandings—prejudiced and secular views – but clearly differentiates between them.

Islamophobia as a descriptive term of prejudiced or “closed views” (Commission on British Muslims and Islamophobia, 1998) of Islam **is a misnomer when describing prejudice against rather than an actual fear of Islam** (for an Islamophobia definition actually referring to a fear of Islam see Lee, Gibbons, Thompson, & Timani, 2009). Likewise, other proposals like the term anti-Arab racism (Salaita, 2006) seem misleading as Arabs are only one small minority in the global community of Islam (Ummah). Despite general agreement with the definition provided by the Runnymede Trust, **we propose to refer to such prejudiced views of Islam with the term, *Islamoprejudice***, rather than Islamophobia. To support the usefulness of this concept it needs to be shown that it is an internally consistent concept, has any incremental value above and beyond existing prejudice scales, and that it is not just a denunciatory term for a secular critique of Islam.

2NC Extensions

Your first question should be the way that language is used – it’s the most concrete, immediate way to target and challenge oppression

Collins and Glover 2 (John Collins, Ass. Prof. of Global Studies at St. Lawrence, and Ross Glover, Visiting Professor of Sociology at St. Lawrence University, 2002, *Collateral Language*, p. 6-7, *The Real Effects of Language*)

As any university student knows, theories about the “social construction” and social effects of language have become a common feature of academic scholarship. **Conservative critics often argue that those who use these theories of language** (e.g., deconstruction) **are “just” talking about language, as opposed to** talking about **the “real world.”** The essays in this book, by contrast, begin from the premise that **language matters in the most concrete, immediate way possible: its use, by political and military leaders, leads directly to violence in the form of war, mass murder (including genocide), the physical destruction of human communities, and the devastation of the natural environment.** Indeed, **if the world ever witnesses a nuclear holocaust, it will probably be because leaders** in more than one country have **succeeded in convincing their people, through the use of political language, that the use of nuclear weapons and, if necessary, the destruction of the earth itself, is justifiable.** From our perspective, then, **every act of political violence**—from the horrors perpetrated against Native Americans to the murder of political dissidents in the Soviet Union to the destruction of the World Trade Center, and now the bombing of Afghanistan—**is intimately linked with the use of language.** Partly what **we are talking about** here, of course, are the **processes of “manufacturing consent” and shaping people’s perception of the world around them; people are more likely to support acts of violence committed in their name if the recipients of the violence have been defined as “terrorists,” or if the violence is presented as a defense of “freedom.”** Media analysts such as Noam Chomsky have written eloquently about the corrosive effects that this kind of process has on the political culture of supposedly democratic societies. At the risk of stating the obvious, however, the most fundamental effects of violence are those that are visited upon the objects of violence; **the language that shapes public opinion is the same language that burns villages, besieges entire populations, kills and maims human bodies, and leaves the ground scarred with bomb craters and littered with land mines.** As George Orwell so famously illustrated in his work, **acts of violence can easily be made more palatable through the use of euphemisms such as “pacification”** or, to use an example discussed in this book, “targets.” It is important to point out, however, that **the need for such language derives from the simple fact that the violence itself is abhorrent. Were it not for the** abstract language of “vital interests” and “surgical strikes” and the **flattering language of “civilization” and “just” wars, we would be less likely to avert our mental gaze from the physical effects of violence.**

“Islamophobia” ascribes a mental disability to bigots, while in reality it is a learned prejudice.

Blumenfeld 12 (Warren J, “The Associated Press and Terms Like ‘Homophobia,’” December 5, HuffPost.com. Blumenfeld is a contributor to the Huffington Post and is a social justice educator at the University of Massachusetts Amherst, with a focus on multicultural and queer studies. http://www.huffingtonpost.com/warren-j-blumenfeld/the-associated-press-and-terms-like-homophobia_b_2235169.html // EMS).

The Associated Press (AP) revealed recently that its new stylebook will no longer include the words "homophobia" and **"Islamophobia"** in political or social contexts. AP Deputy Standards Editor Dave Minthorn told Politico that the **terms are "just off the mark" and seem "inaccurate."**¶ **In psychology a "phobia" generally refers to an irrational fear, as in agoraphobia (a fear of open or public spaces) or phasmophobia (a fear of ghosts),** for example. Minthorn justified AP's decision by asserting, **"It's ascribing a mental disability to someone, and suggests a knowledge that we don't have."**¶ Though the terms "homophobia" and "Islamophobia" have adequately communicated their intended meanings, the person who coined the term "homophobia" in his 1972 book *Society and the Healthy Homosexual*, Dr. George Weinberg, did actually consider people who feared and hated homosexuals as having a psychological problem, in stark contrast to the then-prevailing notion that it was homosexuality that constituted a psychosexual malady.¶ Oddly, though, and for entirely different reasons, I agree with the AP that **the terms "homophobia" and "Islamophobia"** (and "biphobia" and "transphobia," for that matter) **are imprecise at best,** so I, too, find them problematic. **What we have been calling "homophobia" and "Islamophobia" are, in reality, not irrational fears.** In fact, **they are not irrational at all but socially taught and learned attitudes (prejudices) and behaviors (acts of discrimination). They stand not merely in the realm of psychological disorders but as forms of oppression on multiple levels, including the individual/interpersonal, institutional and societal/cultural** (Hardiman & Jackson 1997), **as do other forms of oppression, such as racism, sexism, classism, ableism, ageism, adultism, ethnocentrism, looksism and others. These stand as "isms" rather than as "phobias."**¶ Written in the form of a mathematical equation, **O = P + SP**, we can chart oppression (**O**) as constituting prejudice (**P**) plus the social power (**SP**) to enforce that prejudice upon members of minoritized groups (Howard 2006). If we understand this symbolic depiction to explain oppression, then we can clearly recognize that the term "reverse oppression" represents a contradiction, or an inaccuracy at best.¶

The usage of the term 'Islamophobia' is inappropriate, bolsters anti-semitism, causes homogenization and essentialism, hinders freedom of expression, and generalizes the concept of Islam based oppression

Lorente 10 (Javier Rosón Lorente, PhD. in Social Anthropology from the University of Granada and is currently researcher at Casa Árabe e Instituto Internacional de Estudios Árabes y del Mundo Musulmán (Spain). Discrepancies Around the Use of the Term “Islamophobia”, The Omar Khayyam Center for Integrative Research in Utopia, Mysticism, and Science, HUMAN ARCHITECTURE: JOURNAL OF THE SOCIOLOGY OF SELF-KNOWLEDGE, VIII, 2, FALL 2010, 115-128)

As mentioned above, there is another order of criticism or discrepancy toward the term Islamophobia, which though fully linked to ethnic, religious and cultural aspects, is in itself used as individual criticism over the use of this terminology. Such is firstly the case of 'etymological/ terminological criticism.' From this viewpoint, the terms 'anti-Muslim racism,' 'anti- Arab' or even 'intolerance against Muslims' 18 are clearer than the term Islamophobia for various reasons. On the one hand, use of the word 'phobia' in the concept is not considered appropriate, as it would imply the existence of a sort of mental illness (phobia: obsessive aversion to someone or something and/or compulsive irrational fear); on the other, the term Islamophobia is not considered 'ideal,' for there is no specific

rejection of Islam as a religion, but rather a rejection of Muslim individuals or collectives or those defined as such. This kind of criticism even makes an analogy between the word Islamophobia and the word 'anti-Semitism,' arguing that from a grammatical standpoint anti-Semitism should signify a prejudice against Semitic peoples in general, even though it is exclusively used to refer to hostility against the Jews. In this regard, the grammatically incorrect Islamophobia would require the 150 years which the term 'anti-Semitism' needed to become grammatically acceptable, except that Jews recognize themselves and are recognized as being a single ethnic group, contrary to the case of Muslims. Parallel to this, inclusion of the word 'Islam' in the word Islamophobia raises another kind of discrepancy: based on an undeniable question, the religious, racial, cultural and ethnic diversity of the groups 'supposedly' the object of Islamophobia, the term Islamophobia homogenizes everything associated to Islam and therefore to Muslims. In this homogenization process the diversity of communities and individuals is essentialized, and distinct and differentiated processes are eventually included in a same concept. It is held in turn that widespread use of the term Islamophobia by distinct communities may also essentialize internal plurality at local, regional, national and international level. Other terms which semantically attempt to approach the national particularities or 'realities' (besides the more extended 'anti-Arab anti-Muslim racism') are becoming alternative though critical lines vis-à-vis usage of the term Islamophobia. For example 'Islamfeindlichkeit' in the German context literally means hostility to Islam, or its rejection, but not phobia in the sense of fear, or 'maurofobia/morofobia' in the Spanish case. Second, we should look at 'criticism' linked to the 'identity-building process' which initially does not reject use of the term, but does question the generalization and value of same, as well as its ability to describe the social reality in a non-essentialized manner. This criticism is meant to show both the use and abuse of a terminology— Islamophobia—which we ourselves have constructed. This identity-building presumes that the term Islamophobia is not put up in a 'one-way' manner addressed to Muslim communities and/or individuals, but rather that the prejudice we are dealing with is very likely two-way. According to this thesis, the term Islamophobia is not complete, given that to understand it we should delve into the contemporary public discussion regarding 'Islam' and 'West,' and also delimit the confusing 'inter-relational' debate being generated. From this point of view both sides have a tendency to essentialize from the 'Muslim' and 'Western' standpoint both the Muslim population and the rest of the non- Muslim population. On the one hand there is widespread social 'alarmism' based on the 'threat' of how Islam presents the Western world¹⁹, and on the other, how from the West²⁰ it is presented to Muslims. The 'simplification' from the West's viewpoint involves a number of prejudices regarding many aspects associated to the world around Islam: to think that all (or most) Muslims are terrorists; to consider widespread the 'degree of aggressiveness' disseminated by news media with respect to Arab countries; to think that the universal denial of human rights encompasses the whole Arab world; and to think that the billion Muslims, their social and ethnic groups, are all the same. Likewise and bilaterally there is a process of essentialization by Muslims vis-à-vis the West—the a priori Muslim 'simplification' of a comprehensive and uniform 'West,' along with the stereotyped idea of a single unitary and universal Muslim identity extended to all Muslims, their holy texts and their culture²¹. In this regard, before the distinct processes of Western social and religious intolerance, processes whose tangible result is seen in conflicts which reject the 'other' and are in turn the root of Islamophobia, an endless number of responses to social exclusion

have been generated, such as signs of power loss and de-structuring of the bases of identity thought, beyond the 'hardening' of Western ideological postures and the root of the very concept of Islamophobia. Thirdly, we encounter criticism or discrepancies which consider use of the term Islamophobia to be unmerited, along with its respective symbolic burden, as it 'hinders' the freedom of expression of certain sectors and/or social players. This debate initially emerged as criticism of the Runnymede Trust report. Those who currently hold up the lack of freedom of expression to justify the insistence or imprecision of the term Islamophobia make biased use of the sectors, Muslim or not: for example, the Mohammed caricatures controversy (2005), the film Fitna (by Dutch far-right MP Geert Wilders) or the theatre play The Satanic Verses using the book of the same title by Salman Rushdie, which opened in Germany on 30 March 2008, etc. These and other social players hold that the charge of Islamophobia hampers their freedom of expression. They ironically point to the 'freedom of expression' enjoyed by people who want to condemn or denounce discourses and acts, such as the 'Islamophobia Award' granted by the Islamic Human Rights Commission, a British organization. On this point, we must note that freedom of expression, albeit vital for democratic life, should not be deemed an absolute universal value. It should be wielded within established legal frameworks and under the appropriate ethical and legal responsibility of the different social players involved. This means that Islamophobic speeches cannot be justified through recourse to the protection of fundamental rights.²² In fourth and last place we should take into account differences regarding the term Islamophobia in the framework of 'ideological discourse.' This criticism is grounded in the eagerness of researchers and/or academics to demonstrate that Islamophobia exists in the society they are studying; they go so far as to generalize and make universal considerations with no criteria whatsoever regarding both the phenomenon and the distinct readings associated to same. This generalization causes the term Islamophobia to lose its original meaning, distorting the observed reality. From this point of view criticism is addressed to our inability to differentiate between discourse and practice—at the level of discourse not everything can or should be called Islamophobia. This implies veiled criticism of how the term Islamophobia has grouped such a variety of forms of discourse and acts, aiming to show that any act marked as Islamophobic proceeds from a same ideological core²³, which has distorted and/or lost its original meaning. This 'criticism' aims to show that indiscriminate use of this terminology is not positive and that 'not all Islamophobic acts or incidents are Islamophobia.' To avoid this 'generalization,' it holds that all the observable and related nuances of acts marked as Islamophobic must be studied in depth, as it would be wrong to have to choose between Islamophobia or 'nothing.' To that end, it proposes distinguishing, per national specificity, between academic discussions about Islam and modernity; public debates about whether Islam recognizes the principle of separation of church and state; the public clamour which essentializes Islam; and the forms of inciting hatred, such as discourse associated to the death of Theo van Gogh, etc.

This is a pre-requisite to effectively challenging anti-Muslim violence

Edvardsson 08 (Linda Edvardsson, "Islamophobia – Features of Islamophobia and Strategies against it" Malmö University Department of International Migration and Ethnic Relations IMER 91-120 Fall 2008 Master Thesis)

There is ultimately a need to address Islamophobia; both on a social level and also within a legal discourse and this need have descriptively been told by two imams alongside a theoretical foundation. The imams have demonstrated that 'bad news' and negative images are in fact causing more disfavour than what everyday life might do. The media can therefore become a dual force in which negative images are flourishing and being rooted, yet at the same time a constitution that can cause the opposite. This relationship is depending on which news that is more favoured in that given time and/or place that one is referring to. In Sweden it has been demonstrated through both the imam's voices and a theoretical framework that Islamophobia is not so obvious and a prominent feature in everyday life, rather, lies beneath the surface and are characterised in Swedish media. Yet, mental and physical damage cannot be excluded.¹⁶⁸ For instance, one of the imams stated that it is always a struggle to tell the truth about Islam and also mentioned the segregation within Swedish labour market and housing. The imam also spoke of the importance of what is prioritised by the police and other authorities and that this eventually decides if, how and when Islamophobia can be prevented and eliminated.¹⁶⁹ Both the imams did not identify that Islamophobia is so apparent in Sweden, in contrast to other countries. Yet underline that Islamophobia could have crucial effects on both Muslims and the society in general. For instance, they both mention the incident with the Danish newspaper and media's role whereas Muslims ought not to react against these kinds of things, instead work as good ambassadors or good employees.¹⁷⁰ One of the imams mentioned that there are differences between those acts against Islam itself and those acts that are against the Muslims.¹⁷¹ Hitherto, this research mainly underlined the phobia against the religious practice rather than 'the ethnic phobia'; although, the need to address Islamophobia must maybe start with a separation between what we mean with the concept Islamophobia. In order to address more specifically the acts that is carried out. Higher attention must therefore be drawn to if Islamophobic acts are anticipated against one's ethnic or religious belonging. Ergo a separation must maybe be realised, before Islamophobia can be solved. In this manner, an extension of Islamophobia such as, Muslimophobia might be plausible as it depicts a phobia against one's ethnic belonging. This phobia might reveal a fear or hostility against Muslim culture, countries, lifestyles, traits etcetera. This extension of Islamophobia, **Muslimophobia, can perhaps make it easier to erase some misunderstandings thus easier being decreased and grasped which methods that ought to be used more specifically.** After all, within the racialisation process it can be evident that the religion Islam and its various ethnic followers are categorised as one group and/or one identity. It also portrays a discourse in which all groups become homogenous and static hence neglect perspectives that sees ethnicity and culture as dynamic elements. Strategies and efforts against Muslimophobia can therefore reduce influences and stereotypes caused by, for instance, the essentialist view. This also emphasises the need to divide what the struggle is against more detailed. **Then it might be easier to solve those effects caused by Islamophobia and implement new laws that react against it more effectively.** After all, Karaman revealed experiences where some situations had been hard to interpret as Islamophobia or a dangerous and reckless game by some teenagers; as misunderstandings can easily cause more damage than good. However, clearly it has been verified that there is a need to address Islamophobia both within the media, the labour market, housing, medical care, schools and so forth. Most importantly, as the imams also declared, it is maybe time to

embrace and highlight the positive attributes of Islam and the Muslim population instead of always doing the opposite.

Duss 13 (Matthew Duss. "Denying the Existence of Islamophobia." January 10, 2013. <http://thinkprogress.org/security/2013/01/10/1427861/denying-the-existence-of-islamophobia/>)

I'm hesitant to wade into a discussion on a book I haven't yet read, but Jonathan Schanzer's review of Nathan Lean's "The Islamophobia Industry: How the Right Manufactures Fear of Muslims" in today's Wall Street Journal makes some pretty big claims about the term "Islamophobia" itself, so I'll confine my comments to those. "In reality," Schanzer writes, "Islamophobia is simply a pejorative neologism designed to warn people away from criticizing any aspect of Islam": Those who deploy it see no difference between Islamism — political Islam and its extremist offshoots — and the religion encompassing some 1.6 billion believers world-wide. Thanks to this feat of conflation, Islamophobia transforms religious doctrines and political ideologies into something akin to race; to be an "Islamophobe" is in some circles today tantamount to being a racist. First, while Schanzer severely overstates it, **the problem of conflation is real.** I noted this in my critical review of scholar Deepa Kumar's "Islamophobia and the Politics of Empire," in which I wrote, "The problem with defining Islamophobia as broadly as Kumar does is that it threatens to divest the term of meaning": It is possible to condemn terrorism committed by Muslims in the name of religion, or to have serious concerns over the development of pluralistic democracy under Islamist-controlled governments, without being anti-Islam. What defines Islamophobia is the belief that terrorist violence is somehow inherent to Islam, or that democracy is incompatible with correct Islamic practice. In uncovering Islamophobia here, there, and everywhere, Kumar unfortunately gives form to the straw man arguments of actual Islamophobes, who often cry that they are being silenced for voicing any criticism of Muslims. Having said that, Schanzer's assertion about all of "those who deploy" the term is indefensibly broad. I doubt the Muslims of Murfreesboro, Tennessee, or Temecula, California, or South Arlington, Texas, or of the other American mosques that have endured bigoted attacks in recent years would agree with Schanzer's blithe dismissal of Islamophobia as "simply a pejorative neologism designed to warn people away from criticizing any aspect of Islam." **Do some use accusations of Islamophobia to stifle legitimate criticism of Islam? Yes, certainly, just as some use accusations of anti-Semitism to stifle legitimate criticism of Israel** (as we've seen in the recent smear campaign against Secretary of Defense nominee Chuck Hagel). But the fact that some use such accusations cynically and recklessly doesn't mean that Islamophobia and anti-Semitism aren't real existing problems. As my co-authors and I noted in our 2011 report, "Fear, Inc," the term Islamophobia shouldn't be used lightly. We defined it as "an exaggerated fear, hatred, and hostility toward Islam and Muslims that is perpetuated by negative stereotypes resulting in bias, discrimination, and the marginalization and exclusion of Muslims from America's social, political, and civic life." We also showed that **there is a well-funded network of scholars and activists committed to promoting this fear, hatred, and hostility.** People can disagree on how serious or widespread a problem Islamophobia actually is in the U.S. (my own view is that it is now on the wane), but

Schanzer's argument that the whole thing is simply an invention of scheming Islamists and Arab governments is obvious nonsense.

Labeling discussion of terror as 'Islamophobic' stifles discourse about terrorism and problematic parts of extremism

Spencer 11 (Robert Spencer. "A Response to Matt Duss: A Defamation By Any Other Name." October 19, 2011. <http://www.nationalreview.com/corner/280529/response-matt-duss-defamation-any-other-name-robert-spencer>)

Indicative of Matt Duss's dishonesty in his response to the article I co-wrote with David Horowitz about the manipulative neologism "Islamophobia" is his initial labeling of us as "anti-Muslim activists" and his characterization of our work as "the dissemination of hateful anti-Muslim ideas." This appellation is not only inaccurate; it is highly defamatory, as it is intended to mislead Duss's readers into assuming that we oppose a group of people out of sheer racism or bigotry, rather than opposing a radically intolerant and oppressive ideology. In reality, neither David Horowitz nor I are "anti-Muslim," as I have stated many times. It is neither "anti-Muslim" nor "hateful" to stand for human rights for all people, including Muslims, and to defend the freedom of speech, the freedom of conscience, and equality of rights for women, all of which are denied under traditional forms of sharia. Duss claims that we are part of "an organized campaign to spread misinformation about the religious faith of millions of Americans" — while denying that he is "peddling 'conspiracy theories'" about us. He makes much of the fact that the reliably Leftist Anti-Defamation League has smeared us also, asking rhetorically, "Should the Anti-Defamation League also be lumped among the 'jihadist apologists'?" Why not? Why should it be surprising that an organization that consistently follows a far-Left political line would follow it in this also? Above all, like the CAP report itself, Duss does not and cannot provide any evidence either that an "organized campaign to spread misinformation" exists, or that anything that Horowitz or I or any of the other targeted "Islamophobes" have said is false. He does try, however. He quotes, as if it is self-evidently false, my statement that Islam "is the only major world religion with a developed doctrine and tradition of warfare against unbelievers," but offers no refutation of it. If Duss can produce evidence of another major world religion with a developed doctrine or tradition of warfare against unbelievers (the Crusades, for those who may wish to toss them in here, did not proceed on the basis of any such Christian doctrine; no sect of Christianity ever taught as a matter of faith that believers were obligated to make war upon unbelievers), or that the sects of Islam and schools of Islamic law do not contain such developed doctrines and traditions, I will duly retract. But with Al-Azhar University, the most prestigious institution in Sunni Islam, endorsing (as conforming "to the practice and faith of the orthodox Sunni community") a manual of Islamic law that declares that Muslims must wage war "upon Jews, Christians, and Zoroastrians . . . until they become Muslim or pay the non-Muslim poll tax," Duss may find such a refutation rough going. Duss shows a similar lack of knowledge of Islamic doctrine and law when he attempts to refute my statement that "there is no form of sharia that does not contain . . . [the] death penalty for apostasy" by asserting that I am "obviously ignorant of the manner in which Islam is practiced by millions of sharia-adherent Muslims in the United States." The ignorance is his: more Muslims in the U.S. do not adhere to sharia in its fullness, as no less an authority than the Ground Zero Mosque imam Faisal Abdul Rauf recently affirmed when he said that "the only truly clashing area" between Islamic law and modern Western society

“is the penal code, and **no Muslim has the intention of introducing that to America.**” So if Rauf affirms that Muslims in America do not adhere to the sharia penal code, and Duss affirms that Muslims in America are “sharia-adherent,” whom should we believe? I will go with the internationally renowned imam over the non-Muslim Leftist ideologue, thank you. And as for whether or not there is actually a form of sharia, that is, a school of Islamic jurisprudence, that does not teach that apostates deserve death, I challenge Duss to find it. But he will search in vain. Duss then claims that “the unmistakable implication of these claims is that all observant Muslims should be viewed with suspicion simply by virtue of being observant Muslims,” and that “that’s obviously Islamophobic.” In reality, **the unmistakable implication of these facts is only that there are aspects of traditional Islamic law that are incompatible with constitutional values.** Here again, Rauf himself says nothing less. Is he, too, an “Islamophobe”? In concluding his new smear piece, Duss complains that National Review published our article in the first place, and pleads that we be read out of honorable American conservatism. Here he exposes his real agenda in all its ugliness. Duss’s Center for American Progress, the Hamas-linked Council on American-Islamic Relations (CAIR), and other leftist and Islamic-supremacist groups are conducting an ongoing campaign to discredit and marginalize everyone who dares to stand up against the jihad and Islamic supremacism. They are bent on destroying every last individual who does not adopt a warmly positive stance toward the spread of sharia in the West and all other manifestations of the advancing jihad. The stakes are very high. If we don’t resist this Islamic supremacist thuggery, Duss and his Islamic-supremacist allies will succeed in stamping out all discussion of the truth about Islam and jihad, thereby rendering us mute and defenseless before its advance. That’s why we have to resist now, at every step, and continue to expose this propagandistic “Islamophobia” campaign.

Metal Detectors PIC

1NC

The United States Federal Government should substantially curtail its domestic surveillance conducted by the Transportation Security Administration with the exception of metal detectors and bomb-sniffing dogs.

Metal detectors and explosive sniffing dogs solve for terrorism while eliminating full body scanning

Levi 15 [Levi, Ned [Ned S. Levi has traveled the world as an engineer and business executive. He is the founder of NSL Associates, a Tech Consulting company, as well as a professional photographer, and writes about travel photography in the NSL Photography blog.]. 6/8/2015, "TSA Security Test Results: Replace Humans with Machines," Consumer Travel, accessed: 7/21/2015. <http://consumertraveler.com/columns/getting-there/new-dhs-directives-wont-solve-tsas-failures/>]/ALepow

TSA needs to recognize that passenger screening will never be perfect, and it doesn't have to be. Strategically, passenger screening only has to be reasonably good to stop terrorists. When there's a better than even chance they'll get caught, terrorists won't try to pass through airport security checkpoints, but will use other means to access airplanes, or move on to other

targets. Moreover, knives and guns are much less of a problem than explosives, which can be more devastating to a flight, and more likely to go undetected by our current airport checkpoint systems. In part, what makes this true is what TSA calls its "twentieth security layer": passengers. Since 9/11, passengers have shown they are prepared to take on terrorists in-flight, and have been successful subduing them. TSA needs to dump the seriously flawed full-body

MMW scanners, go back to magnetometers, and add low-tech, but effective, explosives sniffing dogs to the security mix. Beyond these two major changes to TSA systems, better training and even raising the minimum hiring standards for TSOs couldn't hurt, but if TSA is to really improve their effectiveness, they've got to overhaul their systems, which primarily depend on security checkpoints at US airports. Currently, of TSA's \$7.3B budget, \$4.5B is spent on airport screening. That's about 62 percent of their total budget, much of it spent looking for pocket knives, large shampoo bottles and toothpaste tubes, and even toy ray-guns carried by ordinary passengers, not terrorists. TSA should be focusing on intelligence. They should be focusing on the terrorists when they are planning their attacks. They should be utilizing their resources to keep terrorists far from airports. Intelligence should

comprise the vast majority of TSA's budget. When TSA confiscates a 5-ounce container of shampoo, they've failed because they spent their time hunting down a false alarm. When intelligence stops a terror plot like the British did in 2006, stopping terrorists who were planning to blow up seven airplanes with liquid explosives, that's a success.

TSA prescreening programs based on the Customs and Border Protection's Global Entry Program eliminates BDO and SPOT programs in airports while effectively stopping terrorists

Peterson 12 (Peterson, Barbara [Barbara Peterson is senior correspondent for aviation at Conde Nast Traveler and the author of BLUE STREAK: Inside JetBlue, the Upstart that Rocked an Industry, published by Penguin Portfolio (hardcover, 2004; paperback, 2006). She is the winner of the Lowell Thomas Award for Investigative Reporting and the Gene DuBois Award for Excellence in Travel and Aviation Reporting.]. 11/8/2012, "How to Fix the TSA," Popular Mechanics, accessed: 7/21/2015. <http://www.popularmechanics.com/flight/a8258/how-to-fix-the-tsa-14553186/>)//ALepow

One Size Does Not Fit All Ruth Sherman, 88, of Sunrise, Fla., is not what most people think of when they imagine a security risk. Yet on Nov. 28, 2011, TSA agents at New York's JFK airport took the wheelchair-bound Sherman to a private screening room to examine a bulge in her colostomy bag. The following day at the same terminal, Lenore Zimmerman, 85, of Long Beach, N.Y., who weighs less than 110 pounds and also uses a wheelchair, was subjected to what she calls a strip search, including the removal of her back brace. The TSA apologized for improperly examining the elderly women's medical devices but disputed that Zimmerman was strip-searched. Just two weeks before these incidents, a congressional committee had noted, "[The] TSA has failed to develop an effective, comprehensive plan to evolve from a one-size-fits-all operation—treating all passengers as if they pose the same risk..." The Fix: Frisking innocent people is eroding public support for airport security. We could restore common sense to checkpoints by instituting a risk-based system. "If the TSA had the courage to do data-based screening," Robert Poole, a transportation analyst at the Reason Foundation, says, "you could reduce the body scans, pat downs, and shoe removals." Two TSA prescreening programs currently expedite passage through airport checkpoints, but neither is a true trusted-traveler setup, which would include biometric IDs, background checks, and other data to identify low-risk fliers. Secure Flight compares passenger manifests with watch lists, while PreCheck, which operates at selected checkpoints in 23 U.S. airports, relies on airline-provided frequent-flier rolls for its members, who retain shoes, belts, and jackets while moving through checkpoints. A better idea: The TSA should come up with a true vetting system modeled on the Customs and Border Protection's Global Entry program, which allows citizens and permanent residents who clear background checks and pay a \$100 fee, good for five years, to bypass immigration and customs lines. Members must also have an in-person interview and get fingerprinted. The TSA program would be voluntary, which would placate some privacy watchdogs. And, unlike PreCheck, which has been criticized for inconsistency, this system would be a more predictable way to move proved, low-risk travelers through security.

TSA baggage screening remains noninvasive to passengers while greatly reducing the risk of terrorism

Peterson 12 (Peterson, Barbara [Barbara Peterson is senior correspondent for aviation at Conde Nast Traveler and the author of BLUE STREAK: Inside JetBlue, the Upstart that Rocked an Industry, published by Penguin Portfolio (hardcover, 2004; paperback, 2006). She is the winner of the Lowell Thomas Award for Investigative Reporting and the Gene DuBois Award for Excellence in Travel and Aviation Reporting.]. 11/8/2012, "How to Fix the TSA," Popular Mechanics, accessed: 7/21/2015. <http://www.popularmechanics.com/flight/a8258/how-to-fix-the-tsa-14553186/>)//ALepow

Danger in the Hold In the early hours of Oct. 29, 2010, a police forensics team boarded a Philadelphia-bound UPS cargo plane at East Midlands Airport in England. The police were acting on a tip from Saudi Arabia, where intelligence sources alerted

them to a bomb on board. The technicians delicately opened the flagged parcel, which was addressed to a Chicago synagogue, and discovered it contained a printer. Police and military explosives experts examined the machine for hours before concluding there was nothing dangerous about it. But later that day, authorities in Dubai discovered a bomb in a similar printer on a FedEx plane. The East Midlands officials then took another look and discovered that the printer's cartridge contained enough PETN to bring down the plane. By removing the cartridge from the printer during the examination, investigators had inadvertently defused the device—just 3 hours before it was set to explode. If the plane had followed its original schedule, the alarm clock in a mobile phone attached to the cartridge would have triggered the bomb, likely over the eastern seaboard of the U.S. This kind of plot also threatens passenger planes, which carry about 40 percent of all air cargo in their lower holds. Members of a Yemen-based al-Qaida affiliate sent the two printer bombs. The one found in Dubai had traveled on two passenger planes without detection before being loaded onto the FedEx jet. "It is well-known in security circles that the biggest threat to aviation right now is a flight into the United States, originating from a point overseas, using a hidden bomb," says Steve Elson, a former Navy SEAL who was a member of the Federal Aviation Administration's covert "red team" that tested airport checkpoints. The Fix: The Aviation and Transportation Security Act of 2001, which created the TSA, stipulated that by the end of 2002 all checked bags had to be screened for explosives. The TSA installed minivan-size CTX (computed tomography X-ray) machines in airport lobbies as a short-term measure, but airports were expected eventually to integrate CAT-scan-like explosive-detection systems into the regular baggage-handling apparatus. Ideally, these inline systems screen and sort baggage in a single pass. It's estimated this one change would save the TSA nearly \$470 million over five years in staffing costs, as well as greatly reduce screener injuries (and hence turnover) and would eliminate large concentrations of people clustered around lobby-based EDS machines, which are potential targets for suicide bombers. A recent congressional investigation by the Committee on Oversight and Government Reform, however, notes that fewer than half of the nation's 35 largest airports have inline setups. Further, the report revealed that millions of dollars worth of inline machines are gathering dust in TSA warehouses. The TSA needs to deploy them. In May the TSA set a deadline of Dec. 3, 2012, for passenger air carriers to conduct 100 percent cargo screening on international flights bound for the U.S. The TSA must adopt an aggressive role to establish this system effectively or it could fail as it did with inline screening. And total screening should extend to air-cargo flights. The specter of a massive freighter detonating over a major airport should be all the encouragement aviation haulers need to make flights safe. Insurance companies can offer discounts for increased security, and the TSA and the National Institute of Standards and Technology could vet technology for making this process timely and cost-effective.

Ending the list of banned items, allowing liquids, encouraging BDO programs based in science, eliminating baggage fees, and randomizing security makes security flexible and responsive to terrorist while ending programs such as SPOT and body imaging technology

Hawley 12 (Hawley, Kip [Kip Hawley is a former head of The Transportation Security Administration and is the Author of the book "Permanent Emergency: Inside the TSA and the Fight for the Future of American Security," to be published April 24 by Palgrave Macmillan.]. 4/15/2012, "Why Airport Security is Broken—And How to Fix it," The Wall Street Journal, accessed: 7/21/2015. <http://www.wsj.com/articles/SB10001424052702303815404577335783535660546>)/ALepow

Airport security has to change. The relationship between the public and the TSA has become too poisonous to be sustained. And the way that we use TSA officers—as little more than human versions of our scanners—is a tremendous waste of well-trained, engaged brains that could be evaluating

risk rather than looking for violations of the Standard Operating Procedure. What would a better system look like? If politicians gave the TSA some political cover, the agency could institute the following changes before the start of the summer travel season: Embracing risk could reduce the hassle of today's airport while making us safer at the same time. JOSH COCHRAN 1. No more banned items: Aside from obvious weapons capable of fast, multiple killings—such as guns, toxins and explosive devices—it is time to end the TSA's use of well-trained security officers as kindergarten teachers to millions of passengers a day. The list of banned items has created an "Easter-egg hunt" mentality at the TSA. Worse, banning certain items gives terrorists a complete list of what not to use in their next attack. Lighters are banned? The next attack will use an electric trigger. 2. Allow all liquids: Simple checkpoint signage, a small software update and some traffic management are all that stand between you and bringing all your liquids on every U.S. flight. Really. 3. Give TSA officers more flexibility and rewards for initiative, and hold them accountable: No security agency on earth has the experience and pattern-recognition skills of TSA officers. We need to leverage that ability. TSA officers should have more discretion to interact with passengers and to work in looser teams throughout airports. And TSA's leaders must be prepared to support initiative even when officers make mistakes. Currently, independence on the ground is more likely to lead to discipline than reward. 4. Eliminate baggage fees: Much of the pain at TSA checkpoints these days can be attributed to passengers overstuffing their carry-on luggage to avoid baggage fees. The airlines had their reasons for implementing these fees, but the result has been a checkpoint nightmare. Airlines might increase ticket prices slightly to compensate for the lost revenue, but the main impact would be that checkpoint screening for everybody will be faster and safer. 5. Randomize security: Predictability is deadly. Banned-item lists, rigid protocols—if terrorists know what to expect at the airport, they have a greater chance of evading our system. In Richmond, Va., we tested a system that randomized the security procedures encountered by passengers (additional upper-torso pat-downs, a thorough bag search, a swab test of carry-ons, etc.), while not subjecting everyone to the full gamut. At other airports, we tried out a system called "Playbook," which gave airports a virtual encyclopedia of possible security actions and let local law-enforcement, airport and TSA officials choose a customized set of counterterror measures. Implemented nationally, this approach would give to the system as a whole a value greater than the sum of its parts—making it much harder for terrorists to learn how to evade our security protocols. To be effective, airport security needs to embrace flexibility and risk management—principles that it is difficult for both the bureaucracy and the public to accept. The public wants the airport experience to be predictable, hassle-free and airtight and for it to keep us 100% safe. But 100% safety is unattainable. Embracing a bit of risk could reduce the hassle of today's airport experience while making us safer at the same time.

Intelligence gathering before airport security is the best way to solve terror—it's a question of data gathering rather than invasive personal searches

Schneier 10 (Schneier, Bruce [Bruce Schneier is a contributing writer for *The Atlantic* and the chief technology officer of the computer-security firm Co3 Systems.]. 12/2/2010, "Why the TSA Can't Back Down," *The Atlantic*, accessed: 7/21/2015. <http://www.theatlantic.com/national/archive/2010/12/why-the-tsa-cant-back-down/67337/>)//ALepow

The truth is that exactly two things have made air travel safer since 9/11: reinforcing cockpit doors and convincing passengers they need to fight back. The TSA should continue to screen checked luggage. They

should start screening airport workers. And then they should return airport security to pre-9/11 levels and let the rest of their budget be used for better purposes. Investigation and intelligence is how we're going to prevent terrorism, on airplanes and elsewhere. It's how we caught the liquid bombers.

It's how we found the Yemeni printer-cartridge bombs. And it's our best chance at stopping the next serious plot. Because if a group of well-planned and well-funded terrorist plotters makes it to the airport, the chance is pretty low that those blue-shirted crotch-groping water-bottle-confiscating TSA agents are going to catch them. The agents are trying to do a good job, but the deck is so stacked against them that their job is impossible. Airport security is the last line of defense, and it's not a very good one.

"Puffer machines" do not involve body-imaging technology and are able to successfully detect explosive materials

Carmichael 10 (Carmichael, Scott [Scott Carmichael is a staff writer for *Gadling.com* focusing in travelling and airport security.]. 1/28/2010, "Airport Security—What Works and What Does Not?" *Gadling.com*, accessed: 7/21/2015. <http://gadling.com/2010/01/28/airport-security-what-works-and-what-does-not/>)//ALepow

Passenger puffer machine The "puffer machine" was supposed to be the ultimate in airport security. You step into the machine, it blows puffs of air on you, and "smells" for explosives. It all sounds like the perfect solution. These machines were in place at several airports on a trial basis before they were all removed due to "unforeseen technical problems". Millions were invested in the devices, which are now probably collecting dust in a storage facility. High profile research labs are still working on better solutions, and there are several very promising technologies in the very early stages of development. Sadly, without some really serious government money, those machines won't be at your local airport any time soon.

Model Minority K

1NC

The US categorization of Muslims as either “good” or “bad” is a particular formation of the model minority stereotype. The Affirmatives redemption of “bad” Muslims into the category of “good” Muslims perpetuates the dichotomy, making hyper-visible those who do not conform to the ideal societal position ascribed to them

Jackson and Kim 11(John L. Jackson is Dean of the University of Pennsylvania's School of Social Policy and Practice. He also is the Richard Perry University Professor of Communication, Africana Studies, and Anthropology in the Standing Faculty of the Annenberg School for Communication and the Standing Faculty of the School of Arts and Sciences. David K. Kim is a Professor of Religious Studies , Chair of the Religious Studies Department , and Associate Professor in American Studies at Connecticut College. “Race, Religion, and Late Democracy” https://books.google.com/books?id=f0dcGarZj0AC&pg=PA192&lpg=PA192&dq=model+minority+islam&source=bl&ots=pbOVG4ECMU&sig=9zhvyJBjAVBhK9WBJQnAdzJBr3U&hl=en&sa=X&ved=0CDAQ6AEwAmoVChMItd_zq6jixgIVgZeACh3IeABK#v=onepage&q=model%20minority%20islam&f=false)

Asian Americans as model minorities operated to discipline African Americans as an example of racial success, yet the emphasis on minority status reaffirmed the super position of whites. Unlike the use of the foreignness trope to serve foreign policy, the model minority trope is domestic and serves to discipline African Americans. The model minority is also a pan-Asian category: it is applied to most Asian Americans, not limited to a particular national origin. Together, the two tropes offer a more complete racial landscape for Asian Americans. The “good Asian” performs racially as a model minority, assimilated and successful. But if there is resistance to racial subordination organized through ethnic or group identity, those ethnic excesses can be labeled as foreign. Labeling a racial performance as foreign is an invitation to discrimination and disciplinary actions against the “bad Asian.” Furthermore, in the case of conflict with an Asian nation, the raced bodies of Asian Americans are available through the trope of foreignness as a mobilization point for Americans. “Good Muslim” Corresponding to the Asian American model minority, we can see the emergence of the “good Muslim” and “bad Muslim” stereotypes. While the “Muslim terrorist” is now well established, the scripting of the “good Muslim” is a work in progress. The new republican majority in Congress is holding congressional hearings on the threat of “Islamic radicalization.” The first noncongressional witness to testify was Zuhdi Jasser, A Republican and self-identified Muslim; founder of the American Islamic Forum for Democracy, he is politically active and appears often in conservative media. He is reported as “calling on Muslim leaders to aggressively oppose a “culture of separatism” and urges Islamic clerics “to disavow scripture that belittles non-Muslims and women and to renounce a role for Islam in the government” (Boorstein 2011). Jasser’s appearances on controversial television commentator Glen Beck’s show suggest that this is not a doctrinal or sectarian dispute among Islamic faithful. This is an example of the crafting of the “model minority” for the racial category of Muslims. We should expect continued efforts to create a script for the proper racial performance of the “good Muslim.” The emergence of the possibility of the “good Muslim” suggests that the Muslim racial category will follow the dual track of Asian American racialization with two different ascribed racial stereotypes: the Muslim terrorist and the good Muslim. The Muslim terrorist is an extreme example of the foreignness trope, providing a domestic body in the service of our foreign military operations in Iraq and Afghanistan. For those

Americans who are collected in then Muslim category, the disciplinary function of the “good Muslim” corresponding to the “model minority” is available for use against Muslims or those with Asiatic brown bodies who protest or disagree with American domestic or foreign policy. The loose framework for the Muslim racial category and its racial trope, the “Muslim terrorist,” makes organizing difficult. Mosques offer important centers for faith and community. But it is unclear how a faith-based community can organize to include non-Muslims against a racial trope. One promising development was the support given by Asian Americans to the victims of hate crimes after 9/11. The racial category of Asian Americans as a panethnic group could, over time, encompass faith-based communities. The implications of the racialization of Islam for American foreign policy considerations are less ambiguous but more discouraging. The racialization of Islam through the Muslim racial category seems to be following the model of Asian American racialization. There is a simplistic duality. One side is the bad Muslim, the “Muslim terrorist,” useful to further American foreign policy goals. On the other side is the good Muslim, assimilating to conventional American secular ideals. While that awkward binary may be adequate for domestic racial politics, it is clearly inadequate to address Islam and democracy in the world today. The democratic upheavals in North Africa and the Arab world are far more complex and subtle than the gross categories offered by American racialization.

Thus we advocate a counterhegemonic storytelling of the myth of the model minority. Challenging this racism is key to solving for the institutional discrimination of POC and creating real social change.

Caroline **Hargreaves**, 2010, "How Important is Discourse to Social Change? Case: Micro-blogging Community Tumblr," London School of Economics and Political Science
https://www.academia.edu/1635691/How_Important_is_Discourse_to_Social_Change_Case_Micro-blogging_Community_Tumblr

Discourse can be described as a set of values and beliefs that informs our social responses and actions, More importantly, a thorough understanding of the discursive forces that shape our social fabric presents a valuable opportunity and instrument for resistance groups to challenge dominant discourses. Foucault's famous work on the relationship between power and knowledge brings the debate to another level, where discourses serve as the meeting place of these two forces. This conception opens up possibilities to bring about change, as power in a Foucauldian perspective is ubiquitous and operates without agency, beyond traditional notions of the state and through culturally embedded factors. Foucault rejects the liberal notion that knowledge can flourish only in the absence of power (see Evans, 2005), which allows alternative discursive methods onto the scene. These can challenge the way in which relations and structures of power are embedded in everyday life by providing alternative values and norms as well as morally validating the identities and perspectives of those oppressed by the existing relations and structures of power (Stammers, 1999). This is why much attention should be paid (by actors seeking to challenge the status quo) towards discourse in particular in terms of locating both opportunities and constraints for social change. As argued by Hacking (1999:58) "Politics, ideology and power matter more than metaphysics to most advocates of construction. Talk of construction tends to undermine the authority of knowledge and categorization. It challenges complacent ways of doing things not by refuting or proposing better, but by ‘unmasking’." This will reveal how categories of knowledge are used in power relationships and towards moulding the global society in a particular way. With reference to the discourse of human rights, Hunt (1990) argues that the Gramscian concepts of hegemony and counter-hegemony make it possible to advance a positive evaluation certain strategies within progressive politics. The 'discursive war of position' is here seen as taking practical measurements to bring about shifts and modifications in popular consciousness. In discourse specifically, Mouffe (2005:18) explains that "every hegemonic order is susceptible of being challenged by counter-hegemonic practices, i.e. practices which will attempt to disarticulate the existing order so as to install other

forms of hegemony." Hegemony then becomes a process that generates a question of culturally altering social consciousness, reworking what already exists and introducing elements that transcend dominant narratives of issues and movements. Without going too far into the reasons behind resisting the mainstream media logic, the main concerns are to what extent this logic can be seen as representative of the larger voice of society, locally and globally. Mass culture has been perceived to be an instrument of ideological dominance over 'social consciousness' (see Gramsci, 1971), or what Hirst (1976:386) later labeled the 'imaginary', shaping social subjects. Discourses are therefore not deliberately created narratives, but rather ideological extensions of the hegemonic forces in play on both macro- and micro levels of society. The democratic deficits inherent in a media system dominated by corporate and commercial structures are apparent alongside inequalities of access, representation and ideological power (Carroll and Hackett, 2006). At every point in history when a larger minority has felt oppressed by a smaller majority, revolutions have taken place, often manifested in large social movements. Melucci (1996:84) also takes the constructivist approach and writes that at the core of social movements is the construction of collective identity, an interactive process that addresses the question of how a collective becomes a collective. Since our identities and cultures are ultimately shaped through cognitive perceptions and flows of information, its democratization is integral to the collective welfare and progression. Collective action therefore becomes a way of communicating a message to the rest of society. As argued by Faiclough and Wodak (1997: 258), discourse is "constitutive both in the sense that it helps to sustain and reproduce the social status quo, and in the sense that it contributes to transforming it." From the mere conception of ideas to the distribution of messages through e.g. self-mediation, policy-makers, marketing-companies, social movements and NGOs, the significance of discourse to progressive social change is clear.

2NC Extensions

Hypervisible bodies are simultaneously marginalized and rendered invisible through specular abstraction by the privileged observer

Traise **Yamamoto, 2000**, "In/Visible Difference: Asian American Women and the Politics of Spectacle on JSTOR," *Race, Gender & Class Journal*,
http://www.jstor.org/stable/41675310?seq=1#page_scan_tab_contents

You will find, this season, signs of yourself everywhere, but while Asian fashion accessories can be worn "as accents or top-to-toe" (Marie Claire, 134) in order to achieve that eponymous "China Girl" look, not a single Asian American model is to be found in these pages. Inclusion of "Asianness" expands style horizons, extends the fashion frontier, but Asian bodies remain firmly on the other side of the geo-sartorial border. Such magazines perfectly emblemize the function of difference in this age of spectacle and multi-cultural display, and the ways in which the appearance of inclusion (as well as the inclusion of appearance) substitutes specular, commodified representations for structural visibility as national subjects. **The insidiousness of difference as spectacle is that it is just as often used to lay claim to a supposed ideology of inclusion, as it is to demarcate the boundaries beyond which colored bodies may not go.** This was made all too clear by the now infamous cover of the March 24th, 1997, issue of National Review magazine, which depicts Al Gore and Bill and Hilary Clinton as a Chinese monk, peasant and Maoist, respectively. Outfitted with cues, slanted eyes, and the requisite buck teeth, the three Manchurian Candidates" (the lead article's title) are a stark figuration of what it means to be hyper visible as a racialized object - the parsed, exaggerated and fetishized signs of which circulate in a discursive and representational arena in which the Asian American body, like all bodies of color in the United States, is primarily useful as ideological cultural capital. French political theorist Guy DeBord asserts that "The Spectacle is capital accumulated to the point where it becomes image" (1965/1997), and these magazines collectively display that the ideological work of demarcating and delimiting national subjects is enacted through infinitely manipulable images of Asianness, which run the gamut from politically-charged yellowface to fashionable chinoiserie. In both cases, signs of Asianness, orientaba, mark the cutting edge of or transgression beyond the border of normative whiteness. Lauren Berlant, among others, has argued that national identity is formulated through the ways in which historical or "everyday" persons are abstracted and "reconstituted as a collective subject, or citizen" (1991). That is, the individual person "acquires a new body by participation in the political public sphere. The American subject is privileged to suppress the fact of his historical situation in the abstract 'person': but then, in

return, the nation provides a kind of prophylaxis for the person, as it promises to protect his privileges," one effect of which "is to appear to be disembodied or abstract while retaining cultural authority" (1991a). Yet, this process of privileged abstraction implicitly assumes a subject whose particularities of race, gender, class and sexuality are coded as normative and therefore invisible. The male, white, heterosexual and propertied subject is structurally visible in direct proportion to that subject's invisibility as a site of marked embodiment. But what obtains for those whose marked particularity remains, in a sense, uncollectible, unabstractable, who are marked "as precisely not abstract, but as imprisoned in the surplus embodiment of a culture that values abstraction" (1991a). **Women, people of color, the poor, the queer are subject to an enforced embodiment wherein the particularity of their hyper-visible bodies defines their status as the obverse of American ideality,** or more accurately as the obverse upon which the idea of American national identity depends.

The myth of model minority demonizes and makes other POCs hyper visible by reinforcing existing racial prejudices—countering this stereotype is a prerequisite to any aff solvency
Noy **Thrupkaew**, 3-25-2002 "The Myth of the Model Minority," American Prospect, <http://prospect.org/article/myth-model-minority> AC

The Southeast Asia Resource Action Center (SEARAC), an advocacy group in Washington, estimates that more than 2.2 million Southeast Asians now live in the United States. They are the largest group of refugees in the country and the fastest-growing minority. Yet for most policy makers, the plight of the many Mali Keos has been overshadowed by the well-known success of the Asian immigrants who came before and engendered the myth of the "model minority." Indeed, conservatives have exploited this racial stereotype -- arguing that Asians fare well in the United States because of their strong "family values" and work ethic. These values, they say, and not government assistance, are what all minorities need in order to get ahead. Paradoxically, Southeast Asians -- supposedly part of the model minority -- may be suffering most from the resulting public policies. They have been left in the hands of underfunded community-assistance programs and government agencies that, in one example of well-intentioned incompetence, churn out forms in Khmer and Lao for often illiterate populations. But fueled by outrage over bad services and a fraying social safety-net, Southeast Asian immigrants have started to embrace that most American of activities, political protest -- by pushing for research on their communities, advocating for their rights, and harnessing their political power. The model-minority myth has persisted in large part because political conservatives are so attached to it. "Asian Americans have become the darlings of the right," said Frank Wu, a law professor at Howard University and the author of *Yellow: Race beyond Black and White*. "The model-minority myth and its depiction of Asian-American success tells a reassuring story about our society working." The flip side is also appealing to the right. Because Asian Americans' success stems from their strong families and their dedication to education and hard work, conservatives say, then the poverty of Latinos and African Americans must be explained by their own "values": They are poor because of their nonmarrying, school-skipping, and generally lazy and irresponsible behavior, which government handouts only encourage.

Specifically, model minority obscures the identity of Southeast Asians and increase their vulnerability to poverty and similar problems faced by black and Latino communities
Noy **Thrupkaew**, 3-25-2002 "The Myth of the Model Minority," American Prospect, <http://prospect.org/article/myth-model-minority> AC

What most dramatically skews the data, though, is the fact that about half the population of Asian (or, more precisely, Asian-Pacific Islander) Americans is made up of the highly educated immigrants who began arriving with their families in the 1960s. The plight of refugees from Cambodia, Laos, and Vietnam, who make up less than 14 percent of Asian Americans, gets lost in the averaging. Yet these refugees, who started arriving in the United States after 1975, differ markedly from the professional-class Chinese and Indian immigrants who started coming 10 years earlier. The Southeast Asians were fleeing wartime persecution and had few resources. And those disadvantages have had devastating effects on their lives in the United States. The most recent census data available show that 47 percent of Cambodians, 66 percent of Hmong (an ethnic group that lived in the mountains of Laos), 67 percent of Laotians, and 34 percent of Vietnamese were impoverished in 1990 -- compared with 10 percent of all Americans and 14 percent of all Asian Americans. Significantly, poverty rates among Southeast Asian Americans were much higher than those of even the "nonmodel" minorities: 21 percent of African Americans and 23 percent of Latinos were poor. Yet despite the clear inaccuracies created by lumping populations together, the federal government still groups Southeast Asian refugees under the overbroad category of "Asian" for research and funding purposes. "We've labored under the shadow of this model myth for so long," said KaYing Yang, SEARAC's executive director. "There's so little research on us, or we're lumped in with all other Asians, so people don't know the specific needs and contributions of our communities." To get a sense of those needs, one has to go back to the beginning of the Southeast Asian refugees' story and the circumstances that forced their migration. In 1975, the fall of Saigon sent shock waves throughout Southeast Asia, as communist insurgents toppled U.S.-supported governments in Vietnam and Cambodia. In Laos, where the CIA had trained and funded the Hmong to fight Laotian and Vietnamese communists as U.S. proxies, the communists who took over vowed to purge the country of ethnic Hmong and punish all others who had worked with the U.S. government. The first refugees to leave Southeast Asia tended to be the most educated and urban, English-speakers with close connections to the U.S. government. One of them was a man who wishes to be identified by the pseudonym John Askulraskul. He spent two years in a Laotian re-education camp -- punishment for his ability to speak English, his having been educated, and, most of all, his status as a former employee of the United States Agency for International Development (USAID). "They tried to brainwash you, to subdue you psychologically, to work you to death on two bowls of rice a day," Askulraskul told me recently. After being released, he decided to flee the country. He, his sister, and his eldest daughter, five and a half years old, slipped into the Mekong River with a few others. Clinging to an inflated garbage bag, Askulraskul swam alongside their boat out of fear that his weight would sink it. After they arrived on the shores of Thailand, Askulraskul and his daughter were placed in a refugee camp, where they waited to be reunited with his wife and his two other daughters. It was not to be. "My wife tried to escape with two small children. But my daughters couldn't make it" -- he pained, drawing a ragged breath -- "because the boat sank." Askulraskul's wife was swept back to Laos, where she was arrested and placed in jail for a month. She succeeded in her next escape attempt, rejoining her suddenly diminished family. Eventually, with the help of his former boss at USAID, they moved to Connecticut, where Askulraskul found work helping to resettle other refugees. His wife, who had been an elementary-school teacher, took up teaching English as a second language (ESL) to Laotian refugee children. His daughter adjusted quickly and went to school without incident. Askulraskul now manages a project that provides services for at-risk Southeast Asian children and their families. "The job I am doing now is not only a job," he said. "It is part of my life and my sacrifice. My daughter is 29 now, and I know raising kids in America is not easy. I cannot save everybody, but there is still something I can do." Like others among the first wave of refugees, Askulraskul considers himself one of the lucky ones. His education, U.S. ties, and English-language ability -- everything that set off the tragic chain of events that culminated in his daughters' deaths -- proved enormously helpful once he was in the United States. But the majority of refugees from Southeast Asia had no such advantages. Subsequent waves frequently hailed from rural areas and lacked both financial resources and formal schooling. Their psychological scars were even deeper than the first group's, from their longer years in squalid refugee camps or the killing fields. The ethnic Chinese who began arriving from Vietnam had faced harsh discrimination as well, and the Amerasians -- the children of Vietnamese women and U.S. soldiers -- had lived for years as pariahs. Once here, these refugees often found themselves trapped in poverty, providing low-cost labor, and receiving no health or other benefits, while their lack of schooling made decent jobs almost impossible to come by. In 1990, two-thirds of Cambodian, Laotian, and Hmong adults in America had less than a high-school education -- compared with 14 percent of whites, 25 percent of African Americans, 45 percent of Latinos, and 15 percent of the general Asian-American population. Before the welfare-reform law cut many of them off, nearly 30 percent of Southeast Asian Americans were on welfare -- the highest participation rate of any ethnic group. And having such meager incomes, they usually lived in the worst neighborhoods, with the attendant crime, gang problems, and poor schools. But shouldn't the touted Asian dedication to schooling have overcome these disadvantages, lifting the refugees' children out of poverty and keeping them off the streets? Unfortunately, it didn't. "There is still a high number of dropouts for Southeast Asians," Yang said. "And if they do graduate, there is a low number going on to higher education." Their parents' difficulty in navigating American school systems may contribute to the problem. "The parents' lack of education leads to a lack of role models and guidance. Without those things, youth can turn to delinquent behavior and in some very extreme cases, gangs, instead of devoting themselves to education," said Narin Sihavong, director of SEARAC's Successful New Americans Project, which interviewed Mali Keo. "This underscores the need for Southeast Asian school administrators or counselors who can be role models, ease the cultural barrier, and serve as a bridge to their parents." "Sometimes families have to choose between education and employment, especially when money is tight," said Porthira Chimm, a former SEARAC project director. "And unfortunately, immediate money concerns often win out." The picture that emerges - - of high welfare participation and dropout rates, low levels of education and income -- is startlingly similar to the situation of the poorest members of "nonmodel" minority groups. Southeast Asians, Latinos, and African Americans also have in common significant numbers of

single-parent families. Largely as a result of the killing fields, nearly a quarter of Cambodian households are headed by single women. Other Southeast Asian families have similar stories. Sihavong's mother, for example, raised him and his five siblings on her own while his father was imprisoned in a Laotian re-education camp. No matter how "traditional" Southeast Asians may be, they share the fate of other people of color when they are denied access to good education, safe neighborhoods, and jobs that provide a living wage and benefits. But for the sake of preserving the model-minority myth, conservative policy makers have largely ignored the needs of Southeast Asian communities. One such need is for psychological care. Wartime trauma and "lack of English proficiency, acculturative stress, prejudice, discrimination, and racial hate crimes" place Southeast Asians "at risk for emotional and behavioral problems," according to the U.S. surgeon general's 2001 report on race and mental health. One random sample of Cambodian adults found that 45 percent had post-traumatic stress disorder and 51 percent suffered from depression. John Askulraskul's past reflects trauma as well, but his education, English-language ability, and U.S. connections helped level the playing field. Less fortunate refugees need literacy training and language assistance. They also need social supports like welfare and strong community-assistance groups. But misled by the model-minority myth, many government agencies seem to be unaware that Southeast Asians require their services, and officials have done little to find these needy refugees or accommodate them. Considering that nearly two-thirds of Southeast Asians say they do not speak English very well and more than 50 percent live in linguistically isolated ethnic enclaves, the lack of outreach and translators effectively denies them many public services. The problem extends beyond antipoverty programs, as Mali Keo's story illustrates. After her husband left her, she formed a relationship with another man and had two more children. But he beat the family for years, until she asked an organization that served Cambodian refugees to help her file a restraining order. If she had known that a shelter was available, she told her interviewer, even one without Khmer-speaking counselors, she would have escaped much earlier. Where the government hasn't turned a blind eye, it has often wielded an iron fist. The welfare-reform law of 1996, which cut off welfare, SSI, and food-stamp benefits for most noncitizens -- even those who are legal permanent residents -- sent Southeast Asian communities into an uproar. Several elderly Hmong in California committed suicide, fearing that they would become burdens to their families. Meanwhile, the lack of literacy programs prevented (and still does prevent) many refugees from passing the written test that would gain them citizenship and the right to public assistance.

Politics

INC

Obama can hold off a veto now – but his political capital is key

Walsh and Barrett 7/16 (Deirdre, Senior Congressional Producer for CNN, Ted, senior congressional producer for CNN Politics, “WH dispatches Joe Biden to lock down Iran deal on Capitol Hill,” CNN, 7/16/2015, <http://www.cnn.com/2015/07/15/politics/iran-deal-white-house-democrats-congress/>)/duncan

Two days after the Iran deal was unveiled, **the Obama administration's sales job is in full swing.** Vice President Joe **Biden traveled** to Capitol Hill on Wednesday **to convince House Democrats to support the deal**, while a small group of senators were invited to the White House to get their questions answered directly from officials who sat across from the Iranians at the negotiating table. Biden meets with Senate Democrats of the Foreign Relations Committee on Thursday. House lawmakers said Biden was candid about the strengths and weaknesses of the compromise deal. One described his behind closed doors pitch. “I’m going to put aside my notes and talk to you from my heart because I’ve been in this business for 45 years,” Biden said in his opening comments, according to Rep. Bill Pascrell, D-New Jersey, who attended the session. “I’m not going to BS you. I’m going to tell you exactly what I think,” the vice president reportedly said. **Obama got a boost** from the leader of his party in the chamber **when** Minority Leader Nancy **Pelosi** formally **announced** Thursday that **she was backing the deal.** **Since Republicans in the House and Senate are firmly against the Iran nuclear deal** -- announced by President Barack Obama on Tuesday -- **the administration is cranking up its campaign to sway concerned Democrats to back the agreement.** Under legislation that allows Congress to review the agreement, **the White House needs to secure enough votes from members of his own party to sustain the President's promised veto** on an resolution of disapproval -- 145 in the House and 34 in the Senate. After the session with Biden, several **House Democrats stressed that while the process is just beginning, right now the administration likely has the votes to sustain the President's veto on a resolution to block the deal.** “I’m confident they will like it when they understand it all,” the vice president told reporters on his way into the session, beginning what will be a two month campaign culminating in a vote, expected in September. **Democrats, both for and against the deal, praised Biden's presentation.** “Joe Biden was as good as I’ve seen him,” Rep. John Larson, D-Connecticut, told CNN. “I thought he did an excellent job.” Texas Democratic Rep. Henry **Cuellar said Biden** is a “master of detail” and **helped clarify some concerns** he had about the verification provisions in the deal, **but** he still planned to carefully study it and **said he was undecided.** Pascrell also cited the verification issue as a potential sticking point but said he is leaning ‘yes’ on the agreement. “On our side of the aisle **there is concern and skepticism shared by a number of members but an openness to be persuaded if the facts take them that way.**” Rep. Gerry Connolly of Virginia said. “I think (Biden) made some real progress on behalf of the administration today.” But Democratic Rep. Steve Israel of New York, a former member of Democratic leadership, told reporters he wasn’t sold yet. “For me, I still have some very significant questions with respect to lifting of the embargo on conventional arms. And missiles. The (International Atomic Energy Agency) verification process for me is not any time anywhere, I think there are some very significant delays built into that,” Israel said. Larson noted that both **Biden's presentation**, along with Hillary Clinton’s a day earlier, who he said spoke favorably about the deal, **helped lay the groundwork for most Democrats to back the White House.** At the same time on Wednesday that the President held a news conference trying to persuade the public he had brokered an strong and effective deal with Iran, Sen. Joe Manchin, a Democrat from West Virginia, and a handful of other senators, were in a separate part of the White House meeting with some of the President’s top negotiators, who had just returned from Vienna. “I was very satisfied with an awful lot of the answers we received,” Manchin told CNN. **The intimate meeting for senators was another example of the White House's effort to shore up support in the Senate where leaders believe as many as 15 Democrats could oppose the deal.** If they did, **it could provide Senate Republicans the votes needed to override a veto** of the disapproval resolution and **scuttle**

the deal.¶ But Manchin, a centrist who has close relations with senators on both sides of the aisle, said at this point he has not detected major blowback from Senate Democrats to the deal.¶ "At caucus yesterday I didn't get a reading there is hard, hard opposition. I did not," he said.¶ In fact, Manchin said he thought Republicans actually might struggle getting the 60 votes they will need to pass the disapproval resolution, much less the dozen or so votes that might be needed to sustain a veto.¶ One key senator whose position will be closely monitored by the White House and his colleagues from both parties on the Hill, is Sen. Chuck Schumer of New York, the third-ranking Democrats who is poised to become the Democratic leader in the next Congress. Schumer has many Jewish voters in his state who are wary of the impact of the Iran agreement on the security of Israel. Schumer said he is skeptical of the deal and won't decide whether to support it before doing his homework.¶ "I will sit down, I will read the agreement thoroughly and then I'm gonna speak with officials -- administration officials, people all over on all different sides," he said when asked about his decision-making process. "Look, this is a decision that shouldn't be made lightly and I am gonna just study this agreement and talk to people before I do anything else."¶ Sen. John McCain, R-Arizona, a leading critic of the agreement with Iran, said "the pressure will be enormous from the administration," as it tries to keep Democrats from defecting. As chairman of the Armed Services Committee, McCain said he intends to hold hearings to demonstrate what he calls the "fatal flaws" in the deal.¶ House conservatives speaking at a forum sponsored by the Heritage Foundation, a conservative think tank, one after another ripped the Iran deal. But they conceded that ultimately they may not be able to block it.¶ "The game is rigged in favor of getting this done" Ohio Rep. Jim Jordan said.

Obama supports current surveillance of Muslims- Recent meeting with Muslim activists proves he's more concerned with domestic counterterrorism.

Ackerman 14 (Spencer, "White House Iftar Dinner Guests Press Obama on Surveillance of Muslims, TheGuardian.com Ackerman is the national security editor for the Guardian US, they were the senior writer at WIRED and the senior reporter at the Washington Independent. <http://www.theguardian.com/world/2014/jul/16/white-house-iftar-obama-surveillance-muslims> // EMS).

Attendees of a White House dinner this week celebrating a Muslim holiday attempted to leverage their direct interaction with Barack Obama into a presidential commitment to discuss widespread and controversial surveillance of their communities.¶ They left feeling they had Obama's interest, but not much more.¶ Less than a week after the Intercept, based on documents leaked by Edward Snowden, showed US Muslim activists and attorneys had been targeted for surveillance, Obama gathered legislators, diplomats and US Muslim community leaders to the White House on Monday night for an Iftar dinner, the sunset meal during Ramadan. In remarks released by the White House, Obama stressed the value of pluralism, sidestepping the surveillance controversy.¶ Not everyone was satisfied with the omission.¶ Some of the people who attended were signatories of a letter sent to the White House in the wake of the Intercept story urgently requesting a meeting with Obama. Without that commitment yet in hand, took the opportunity to raise the issue with Obama personally at the Monday dinner.¶ "I specifically asked the president if he would meet with us to discuss NSA spying on the American Muslim community. The president seemed to perk up and proceeded to discuss the issue, saying that he takes it very seriously," said Junaid Sulahry, the outreach manager for Muslim Advocates, a legal and civil rights group.¶ Obama was non-committal, Sulahry said, but displayed "a clear willingness to discuss the issue."¶ Hoda Elshishtawy, the national policy analyst for the Muslim Public Affairs Council, said that she brought it up as part of a "table-wide discussion" on post-9/11 surveillance of US Muslims.¶ "Our communities can't be seen as suspects and partners at the same time," Elshishtawy said.¶ That tension has plagued the Obama administration's domestic counterterrorism — or, as it prefers, "countering violent extremism" — for its entire tenure. The departments of justice and homeland security lead outreach efforts in Muslim and other local communities, stressing vigilance against radicalizing influences and dialogue with law enforcement.¶ Yet Muslim communities labor under widespread suspicion of incubating terrorism. Surveillance from law enforcement and US intelligence is robust, from the harvesting of digital communications to the recruitment of informants inside mosques. The Federal Bureau of Investigation compiles maps of Muslim businesses and

religious institutions, without suspicion of specific crimes. **The mixed message comes amidst the freight of a foreign policy featuring drone strikes in Muslim countries, a reluctance to foreclose on indefinite detention that functionally is only aimed at Muslims, and difficulty concluding the war in Afghanistan** – all of which have strained relations with American-Muslim communities.¶

Failure will spur proliferand war with Iran – the plan tanks Obama’s ability to hold off Congress
Beauchamp 14 (Zack – B.A.s in Philosophy and Political Science from Brown University and an M.Sc in International Relations from the London School of Economics, former editor of TP Ideas and a reporter for ThinkProgress.org. He previously contributed to Andrew Sullivan’s The Dish at Newsweek/Daily Beast, and has also written for Foreign Policy and Tablet magazines, now writes for Vox, “How the new GOP majority could destroy Obama’s nuclear deal with Iran,” <http://www.vox.com/2014/11/6/7164283/iran-nuclear-deal-congress>.)

There is one foreign policy issue on which the GOP’s takeover of the Senate could have huge ramifications, and beyond just the US: **Republicans are likely to try to torpedo President Obama’s ongoing efforts to reach a nuclear deal with Iran.** And they just **might pull it off.** November 24 is the latest deadline for a final agreement between the United States and Iran over the latter’s nuclear program. That’ll likely be extended, but it’s a reminder that the negotiations could soon come to a head. **Throughout his presidency, Obama has prioritized these negotiations;** he likely doesn’t want to leave office without having made a deal. But **if Congress doesn’t like the deal, or just wants to see Obama lose, it has the power to torpedo it by imposing new sanctions on Iran.** Previously, Senate Majority Leader Harry Reid used procedural powers to stop this from happening and save the nuclear talks. But Senate Majority Leader Mitch **McConnell** may not be so kind, and he **may have the votes to destroy an Iran deal. If he tries, we could see one of the most important legislative fights of Obama’s presidency.** Why Congress can bully Obama on Iran sanctions At their most basic level, the international negotiations over Iran’s nuclear program (they include several other nations, but the US is the biggest player) are a tit-for-tat deal. If Iran agrees to place a series of verifiable limits on its nuclear development, then the United States and the world will relax their painful economic and diplomatic sanctions on Tehran. “The regime of economic sanctions against Iran is arguably the most complex the United States and the international community have ever imposed on a rogue state,” the Congressional Research Service’s Dianne Rennack writes. To underscore the point, Rennack’s four-page report is accompanied by a list of every US sanction on Iran that goes on for 23 full pages. The US’s sanctions are a joint Congressional-executive production. Congress puts strict limits on Iran’s ability to export oil and do business with American companies, but it gives the president the power to waive sanctions if he thinks it’s in the American national interest. “In the collection of laws that are the statutory basis for the U.S. economic sanctions regime on Iran,” Rennack writes, “the President retains, in varying degrees, the authority to tighten and relax restrictions.” **The key point here is that Congress gave Obama that power — which means they can take it back.** “You could see a bill in place that makes it harder for the administration to suspend sanctions,” Ken Sofer, the Associate Director for National Security and International Policy at the Center for American Progress (where I worked for a little under two years, though not with Sofer directly), says. “You could also see a bill that says the president can’t agree to a deal unless it includes the following things or [a bill] forcing a congressional vote on any deal.” **Imposing new sanctions on Iran wouldn’t just stifle Obama’s ability to remove existing sanctions, it would undermine Obama’s authority to negotiate with Iran at all, sending the message to Tehran that Obama is not worth dealing with because he can’t control his own foreign policy. So if Obama wants to make a deal with Iran, he needs Congress to play ball.** But it’s not clear that Mitch McConnell’s Senate wants to. Congress could easily use its authority to kill an Iran deal To understand why the new Senate is such a big deal for congressional action on sanctions, we have to jump back a year. In November 2013, the Obama administration struck an interim deal with Iran called the Joint Plan of Action (JPOA). As part of the JPOA, the US agreed to limited, temporary sanctions relief in exchange for Iran limiting nuclear program components like uranium production. Congressional Republicans, by and large, hate the JPOA deal. Arguing that the deal didn’t place sufficiently serious limits on Iran’s nuclear growth, the House passed new sanctions on Iran in December. (There is also a line of argument, though often less explicit, that the Iranian government cannot be trusted with any deal at all, and that US policy

should focus on coercing Iran into submission or unseating the Iranian government entirely.) Senate Republicans, joined by more hawkish Democrats, had the votes to pass a similar bill. But in February, Senate Majority leader Harry Reid killed new Iran sanctions, using the Majority Leader's power to block consideration of the sanctions legislation to prevent a vote. McConnell blasted Reid's move. "There is no excuse for muzzling the Congress on an issue of this importance to our own national security," he said. So now that McConnell holds the majority leader's gavel, it will remove that procedural roadblock that stood between Obama and new Iran sanctions. To be clear, it's far from guaranteed that Obama will be able to reach a deal with Iran at all; negotiations could fall apart long before they reach the point of congressional involvement. But if he does reach a deal, and Congress doesn't like the terms, then they'll be able to kill it by passing new sanctions legislation, or preventing Obama from temporarily waiving the ones on the books. And **make no mistake — imposing new sanctions or limiting Obama's authority to waive the current ones would kill any deal. If Iran can't expect Obama to follow through on his promises to relax sanctions, it has zero incentive to limit its nuclear program.** "If Congress adopts sanctions," Iranian Foreign Minister Javad Zarif told Time last December, "the entire deal is dead." Moreover, it could fracture the international movement to sanction Iran. **The United States is far from Iran's biggest trading partner, so it depends on international cooperation in order to ensure the sanctions bite. If it looks like the US won't abide by the terms of a deal, the broad-based international sanctions regime could collapse.** Europe, particularly, might decide that going along with the sanctions is no longer worthwhile. "Our ability to coerce Iran is largely based on whether or not the international community thinks that we are the ones that are being constructive and [Iranians] are the ones that being obstructive," Sofer says. "If they don't believe that, then the international sanctions regime falls apart." This could be one of the biggest fights of Obama's last term **It's true that Obama could veto any Congressional efforts to blow up an Iran deal with sanctions. But a two-thirds vote could override any veto — and, according to Sofer, an override is entirely within the realm of possibility.** "There are plenty of Democrats that will probably side with Republicans if they try to push a harder line on Iran," Sofer says. **For a variety of reasons, including deep skepticism of Iran's intentions and strong Democratic support for Israel, whose government opposes the negotiations, Congressional Democrats are not as open to making a deal with Iran as Obama is. Many will likely defect to the GOP side out of principle. The real fight, Sofer says, will be among the Democrats — those who are willing to take the administration's side in theory, but don't necessarily think a deal with Iran is legislative priority number one, and maybe don't want to open themselves up to the political risk. These Democrats "can make it harder: you can filibuster, if you're Obama you can veto — you can make it impossible for a full bill to be passed out of Congress on Iran," Sofer says. But it'd be a really tough battle, one that would consume a lot of energy and lobbying effort that Democrats might prefer to spend pushing on other issues.** "I'm not really sure they're going to be willing to take on a fight about an Iran sanctions bill," Sofer concludes. "I'm not really sure that the Democrats who support [a deal] are really fully behind it enough that they'll be willing to give up leverage on, you know, unemployment insurance or immigration status — these bigger issues for most Democrats." So **if the new Republican Senate prioritizes destroying an Iran deal, Obama will have to fight very hard to keep it — without necessarily being able to count on his own party for support. And the stakes are enormous: if Iran's nuclear program isn't stopped peacefully, then the most likely outcomes are either Iran going nuclear, or war with Iran.** The administration believes **a deal with Iran is their only way to avoid this horrible choice.** That's why it's been **one of the administration's top priorities** since day one. It's also why this could become one of the biggest legislative fights of Obama's last two years.

Nuke war

Stevens 13 (Philip Stevens, associate editor and chief political commentator for the Financial Times, Nov 14 2013, "The four big truths that are shaping the Iran talks," <http://www.ft.com/cms/s/0/af170df6-4d1c-11e3-bf32-00144feabdc0.html>)

The who-said-what game about last weekend's talks in Geneva has become a distraction. The six-power negotiations with Tehran to curb Iran's nuclear programme may yet succeed or fail. But wrangling between the US and France on the terms of an acceptable deal should not allow the trees to obscure the forest. The organising facts shaping the negotiations have not changed.¶ The first of these is that Tehran's acquisition of a bomb would be more than dangerous for the Middle East and for wider international security. It would most likely set off a nuclear arms race that would see Saudi Arabia, Turkey and Egypt signing up to the nuclear club. The nuclear non-proliferation treaty would be shattered. A future regional conflict could draw Israel into launching a pre-emptive nuclear strike. This is not a region obviously susceptible to cold war disciplines of deterrence.¶ The second ineluctable reality is that Iran has mastered the nuclear cycle. How far it is from building a bomb remains a subject of debate. Different intelligence agencies give different answers. These depend in part on what the spooks actually know and in part on what their political masters want others to hear. The progress of an Iranian warhead programme is one of the known unknowns that have often wreaked havoc in this part of the world.¶ Israel points to an imminent threat. European agencies are more relaxed, suggesting Tehran is still two years or so away from a weapon. Western diplomats broadly agree that Ayatollah Ali Khamenei has not taken a definitive decision to step over the line. What Iran has been seeking is what diplomats call a breakout capability – the capacity to dash to a bomb before the international community could effectively mobilise against it.¶ The third fact – and this one is hard for many to swallow – is that neither a negotiated settlement nor the air strikes long favoured by Benjamin Netanyahu, Israel's prime minister, can offer the rest of the world a watertight insurance policy.¶ It should be possible to construct a deal that acts as a plausible restraint – and extends the timeframe for any breakout – but no amount of restrictions or intrusive monitoring can offer a certain guarantee against Tehran's future intentions.¶ By the same token, bombing Iran's nuclear sites could certainly delay the programme perhaps for a couple of years. But assuming that even the hawkish Mr Netanyahu is not proposing permanent war against Iran, air strikes would not end it. You cannot bomb knowledge and technical expertise. To try would be to empower those in Tehran who say the regime will be safe only when, like North Korea, it has a weapon. So when Barack Obama says the US will never allow Iran to get the bomb he is indulging in, albeit understandable, wishful thinking.¶ The best the international community can hope for is that, in return for a relaxation of sanctions, Iran will make a judgment that it is better off sticking with a threshold capability. To put this another way, if Tehran does step back from the nuclear brink it will be because of its own calculation of the balance of advantage.¶ The fourth element in this dynamic is that Iran now has a leadership that, faced with the severe and growing pain inflicted by sanctions, is prepared to talk. There is nothing to say that Hassan Rouhani, the president, is any less hard-headed than previous Iranian leaders, but he does seem ready to weigh the options.

Obama will fight the plan- It undermines administration's counterterrorism efforts

Ackerman 14 (Spencer Ackerman: National security editor for Guardian, "White House Iftar dinner guests press Obama on surveillance of Muslims", The Guardian, 7/16/2014, <http://www.theguardian.com/world/2014/jul/16/white-house-iftar-obama-surveillance-muslims>, Accessed: 7/17/14, RRR)

Attendees of a White House dinner this week celebrating a Muslim holiday attempted to leverage their direct interaction with Barack Obama into a presidential commitment to discuss widespread and controversial surveillance of their communities.¶ They left feeling they had Obama's interest, but not much more.¶ Less than a week after the Intercept, based on documents leaked by Edward Snowden, showed US Muslim activists and attorneys had been targeted for surveillance, Obama gathered legislators, diplomats and US Muslim community leaders to the White House on Monday night for an Iftar dinner, the sunset meal during Ramadan. In remarks released by the White House, Obama stressed the value of pluralism, sidestepping the surveillance controversy.¶ Not everyone was satisfied with the omission.¶ Some of the people who attended were signatories of a letter sent to the White House in the wake of the Intercept story urgently requesting a meeting with Obama. Without that commitment yet in hand, took the opportunity to raise the issue with Obama personally at the Monday dinner.¶ "I specifically asked the president if he would meet with us to discuss NSA spying on the American Muslim community. The president seemed to perk up and proceeded to discuss the issue, saying that he takes it very seriously," said Junaid Sulahry, the outreach manager for Muslim Advocates, a legal and civil rights group.¶ Obama was non-committal, Sulahry said, but displayed "a clear willingness to discuss the issue."¶ Hoda Elshishtawy, the national policy analyst for the Muslim Public Affairs Council, said that she brought it up as part of a "table-wide discussion" on post-9/11 surveillance of US Muslims.¶ "Our communities can't be seen as suspects and partners at the same time," Elshishtawy said.¶ That tension has plagued the Obama administration's domestic counterterrorism – or, as it prefers, "countering violent extremism" – for its entire tenure. The departments of justice and homeland security lead outreach efforts in Muslim and other local communities, stressing vigilance against radicalizing influences and dialogue with law enforcement.¶ Yet Muslim communities labor under widespread suspicion of incubating terrorism. Surveillance from law enforcement and US intelligence is robust, from the harvesting of digital communications to the recruitment of informants inside mosques. The Federal Bureau of Investigation compiles maps of Muslim businesses and religious institutions, without suspicion of specific crimes.¶ The mixed message comes amidst the freight of a foreign policy featuring drone strikes in Muslim countries, a reluctance to foreclose on indefinite detention that functionally is only aimed at Muslims, and difficulty concluding the war in Afghanistan – all of which have strained relations with American-Muslim communities.¶ Some of those community leaders have already come under fire for attending the White House dinner. The American-Arab Anti-Discrimination Committee urged a boycott over the surveillance and administration support for Israel during the current Gaza offensive, rejecting what it

called "normalization of the continuous breach of our fundamental rights."¶ Representatives of organizations that rejected the boycott argued that they can exercise greater influence through access than through rejection.¶ "Our strategy is to work through the system," said Farhana Khera, Muslim Advocates' executive director.¶ The White House declined comment on what it called "private conversations at a closed press event."

Obama will oppose the plan – the White House funds NYPD’s Muslim surveillance programs.

Sullivan 12 (Eileen, “Report: White House Helped Pay for NYPD Muslim Surveillance Programs,” February 27, Sullivan is a journalist and AP reporter focusing on current events and politics. <http://www.officer.com/news/10634052/report-white-house-helped-pay-for-nypd-muslim-surveillance-programs> // EMS).

¶ WASHINGTON -- **Millions of dollars in White House money has helped pay for New York Police Department programs that put entire American Muslim neighborhoods under surveillance.**¶ The money is part of a little-known grant intended to help law enforcement fight drug crimes. Since the terrorist attacks of Sept. 11, 2001, **the Bush and Obama administrations have provided \$135 million** to the New York and New Jersey region through the High Intensity Drug Trafficking Area program, known as HIDTA.¶ Some of that money — it's unclear exactly how much because the program has little oversight — **has paid for the cars that plainclothes NYPD officers used to conduct surveillance on Muslim neighborhoods. It also paid for computers that store even innocuous information about Muslim college students, mosque sermons and social events.**¶ When NYPD Commissioner Raymond Kelly was filled in on these efforts, his briefings were prepared on HIDTA computers.¶ The AP confirmed the use of White House money through secret police documents and interviews with current and former city and federal officials. The AP also obtained electronic documents with digital signatures indicating they were created and saved on HIDTA computers. **The HIDTA grant program is overseen by the White House Office of National Drug Control Policy.**¶ **The disclosure that the White House is at least partially paying for the NYPD's wholesale surveillance of places where Muslims eat, shop, work and pray complicates efforts by the Obama administration to stay out of the fray over New York's controversial counterterrorism programs.** The administration has championed outreach to American Muslims and has said law enforcement should not put entire communities under suspicion.¶ **The Obama administration, however, has pointedly refused to endorse or repudiate the NYPD programs it helps pay for.** The White House last week declined to comment on its grant payments.¶

Terror DA

INC

Terror risk is high- maintaining current surveillance is key

Inserra, 6-8-2015

David Inserra is a Research Associate for Homeland Security and Cyber Security in the Douglas and Sarah Allison Center for Foreign and National Security Policy of the Kathryn and Shelby Cullom Davis Institute for National Security and Foreign Policy, at The Heritage Foundation, 6-8-2015, "69th Islamist Terrorist Plot: Ongoing Spike in Terrorism Should Force Congress to Finally Confront the Terrorist Threat," Heritage Foundation, <http://www.heritage.org/research/reports/2015/06/69th-islamist-terrorist-plot-ongoing-spike-in-terrorism-should-force-congress-to-finally-confront-the-terrorist-threat>

On June 2 in Boston, Usaamah Abdullah Rahim drew a knife and attacked police officers and FBI agents, who then shot and killed him. Rahim was being watched by Boston's Joint Terrorism Task Force as he had been plotting to behead police officers as part of violent jihad. A conspirator, David Wright or Dawud Sharif Abdul Khaliq, was arrested shortly thereafter for helping Rahim to plan this attack. This plot marks the 69th publicly known Islamist terrorist plot or attack against the U.S. homeland since 9/11, and is part of a recent spike in terrorist activity. The U.S. must redouble its efforts to stop terrorists before they strike, through the use of properly applied intelligence tools.

The Plot According to the criminal complaint filed against Wright, Rahim had originally planned to behead an individual outside the state of Massachusetts,[1] which, according to news reports citing anonymous government officials, was Pamela Geller, the organizer of the "draw Mohammed" cartoon contest in Garland, Texas.[2] To this end, Rahim had purchased multiple knives, each over 1 foot long, from Amazon.com. The FBI was listening in on the calls between Rahim and Wright and recorded multiple conversations regarding how these weapons would be used to behead someone.

Rahim then changed his plan early on the morning of June 2. He planned to go "on vacation right here in Massachusetts.... I'm just going to, ah, go after them, those boys in blue. Cause, ah, it's the easiest target." [3] Rahim and Wright had used the phrase "going on vacation" repeatedly in their conversations as a euphemism for violent jihad. During this conversation, Rahim told Wright that he planned to attack a police officer on June 2 or June 3. Wright then offered advice on preparing a will and destroying any incriminating evidence. Based on this threat, Boston police officers and FBI agents approached Rahim to question him, which prompted him to pull out one of his knives. After being told to drop his weapon, Rahim responded with "you drop yours" and moved toward the officers, who then shot and killed him. While Rahim's brother, Ibrahim, initially claimed that Rahim was shot in the back, video surveillance was shown to community leaders and civil rights groups, who have confirmed that Rahim was not shot in the back.[4] Terrorism Not Going Away This 69th Islamist plot is also the seventh in this calendar year. Details on how exactly Rahim was radicalized are still forthcoming, but according to anonymous officials, online propaganda from ISIS and other radical Islamist groups are the source. [5] That would make this attack the 58th homegrown terrorist plot and continue the recent trend of ISIS playing an important role in radicalizing individuals in the United States. It is also the sixth plot or attack targeting law enforcement in the U.S., with a recent uptick in plots aimed at police.

While the debate over the PATRIOT Act and the USA FREEDOM Act is taking a break, the terrorists are not. The result of the debate has been the reduction of U.S. intelligence and counterterrorism capabilities, meaning that the U.S. has to do even more with less when it comes to connecting the dots on terrorist plots.[6] Other legitimate intelligence tools and capabilities must be leaned on now even more. Protecting the Homeland To keep the U.S. safe, Congress must take a hard look at the U.S. counterterrorism enterprise and determine other measures that are needed to improve it. Congress should: Emphasize community outreach. Federal grant funds should be used to create robust community-outreach capabilities in higher-risk urban areas. These funds must not be used for political pork, or so broadly that they no longer target those communities at greatest risk. Such capabilities are key to building trust within these communities, and if the United States is to thwart lone-wolf terrorist attacks, it must place effective community outreach operations at the tip of the spear. Prioritize local cyber capabilities. Building cyber-investigation capabilities in the higher-risk urban areas must become a primary focus of Department of Homeland Security grants. With so much terrorism-related activity occurring on the Internet, local law

enforcement must have the constitutional ability to monitor and track violent extremist activity on the Web when reasonable suspicion exists to do so. Push the FBI toward being more effectively driven by intelligence. While the FBI has made high-level changes to its mission and organizational structure, the bureau is still working on integrating intelligence and law enforcement activities. Full integration will require overcoming inter-agency cultural barriers and providing FBI intelligence personnel with resources, opportunities, and the stature they need to become a more effective and integral part of the FBI.

Maintain essential counterterrorism tools. Support for important investigative tools is essential to maintaining the security of the U.S. and combating terrorist threats. Legitimate government surveillance programs are also a vital component of U.S. national security and should be allowed to continue. The need for effective counterterrorism operations does not relieve the government of its obligation to follow the law and respect individual privacy and liberty. In the American system, the government must do both equally well. Clear-Eyed Vigilance

The recent spike in terrorist plots and attacks should finally awaken policymakers—all Americans, for that matter—to the seriousness of the terrorist threat. Neither fearmongering nor willful blindness serves the United States. Congress must recognize and acknowledge the nature and the scope of the Islamist terrorist threat, and take the appropriate action to confront it.

TSA is key to protect against dangerous weapons, explosives, and innovate in security technologies.

John S. Pistole, 3-5-2012, "Counterterrorism, Risk-Based Security and TSA's Vision for the Future of Aviation Security," Transportation Security Administration, <https://www.tsa.gov/press/speeches/counterterrorism-risk-based-security-and-tsa%E2%80%99s-vision-future-aviation-security>

Remember that before September 11, 2001, there was:

- ¶ No cohesive system in place to check passenger names against terrorist watch lists in advance of flying;
- ¶ Only limited technologies in place for uncovering a wide array of threats to passengers or aircraft;
- ¶ No comprehensive federal requirements to screen checked or carry-on baggage;
- ¶ Minimal in-flight security on most flights; and,
- ¶ From a coordination standpoint, before 9/11 there was a lack of timely intelligence-sharing, in both directions — from the federal level down to the individual airports, as well as from an individual airport up to the national level.

¶ I came to TSA more than a year and a half ago, having worked the previous 26 years in a variety of positions within the FBI. That experience with a range of partners inside the law enforcement and intelligence communities helped shape my approach to solidifying TSA's place within the national counterterrorism continuum. ¶ Every day, we strive to ensure our operational planning and decision making process is timely, efficient and as coordinated as possible — and critically, based on intelligence. We work to share critical information with key industry stakeholders whenever appropriate, and we are constantly communicating with our frontline officers through shift briefings held several times a day. ¶ Thanks to the effective partnerships we've forged with industry stakeholders, with our airline and airport partners, and with law enforcement colleagues at every level, TSA has achieved a number of significant milestones during its first 10 years of service. ¶ These include matching 100 percent of all passengers flying into, out of, and within the United States against government watch lists through the Secure Flight program. ¶ It includes screening all air cargo transported on passenger planes domestically and, as you know, we work closely with our international partners every day to screen 100% of high-risk inbound cargo on passenger planes. We're also working hard with these same partners to screen 100% of all international inbound cargo on passenger planes by the end of this year. ¶ And it also includes improving aviation security through innovative technology that provides advanced baggage screening for explosives. ¶ Since their inception in 2005 through February 2012, we have also conducted more than 26,000 Visible Intermodal Prevention and Response or VIPR operations. We have 25 multi-modal

VIPR teams working in transportation sectors across the country to prevent or disrupt potential terrorist planning activities.¶ Additionally, since 2006, TSA has completed more than 190 Baseline Assessments for Security Enhancement for transit, which provides a comprehensive assessment of security programs in critical transit systems.¶ We are seeing the benefits of how these important steps — combined with our multiple layers of security including cutting-edge technology — keep America safe every day.¶ Since our standup in 2002, we have screened nearly six billion passengers. Our front line officers have detected thousands of firearms and countless other prohibited items and we have prevented those weapons from entering the cabin of an aircraft.¶ In fact, more than 10 years after 9/11, TSA officers still detect, on-average, between three and four firearms every day in carry-on bags at security checkpoints around the country.¶ Deploying advanced, state-of-the-art technologies continue to factor significantly into our multi-layered approach to transportation security. In particular, we continue to see the efficacy of Advanced Imaging Technology, or AIT, machines at hundreds of passenger security checkpoints around the United States.¶ From February 2011 to June 2011, the Office of the Inspector General (OIG) assessed the manner in which TSA inspects, maintains and operates backscatter units used in passenger screening.¶ The OIG found that TSA was in compliance with standards regarding radiation exposure limits and safety requirements. As a result of intensive research, analysis, and testing, TSA concludes that potential health risks from screening with backscatter X-ray security systems are minuscule.¶ While there is still no perfect technology, AIT gives our officers the best opportunity to detect both metallic and non-metallic threats including improvised explosive devices such as the device Umar Farouk Abdulmutallab attempted to detonate on Christmas Day, 2009.¶ As manufacturers continue enhancing the detection capability and strengthening the privacy features of their machines, we maintain the ability to upgrade the software used on them to stay ahead of the rapidly shifting threat landscape. Maintaining a high level of adaptability enables us to keep an important technological advantage.¶ Throughout 2011, this and other technologies helped our officers detect hundreds of prohibited, dangerous, or illegal items on passengers.¶ These “good catches” as we call them, illustrate how effective our people, process and technology are at finding concealed metallic and non-metallic items concealed on a passenger or in their bags.¶ In an ongoing effort to help educate the traveling public, we highlight many of these good catches every week in blog posts uploaded to TSA.gov. I hope some of you have seen these. They have included incidents of items concealed in shoes, to weapons hidden in a hollowed out book, to ceramic knives, to exotic snakes strapped to a passenger’s leg. As strange as some of these tales may be, they are a stark reminder that now — more than 10 years after the September 11, 2001, attacks — people are still trying to bring deadly weapons onto aircraft. And our officers are detecting numerous weapons every day and keeping them off of planes.¶ Less than one month ago in fact, over Presidents Day weekend in February, our officers detected 19 guns in carry-on bags at various checkpoints around the country. In total, 1,306 guns were detected at airport checkpoints in 2011.

A terrorist attack would crush the economy

Bandyopadhyay et al 15 -- Subhayu Bandyopadhyay is Research Officer at the Federal Reserve Bank of St. Louis and Research Fellow at IZA, Bonn, Germany. Todd Sandler is Vibhooti Shukla Professor of Economics and Political Economy at the University of Texas at Dallas. Javed Younasis Associate Professor of Economics at the American University of Sharjah, United Arab Emirates. “The Toll of Terrorism” <http://www.imf.org/external/pubs/ft/fandd/2015/06/bandyopa.htm>

modified for ableist language

New technology has lowered transportation costs and increased trade and capital flows across nations. But the same technology that has fostered international economic growth has also allowed terrorism to spread easily among countries whose interests are tightly interwoven. Terrorism is no longer solely a local issue. Terrorists can strike from thousands of miles away and cause vast destruction. The effects of terrorism can be terrifyingly direct. People are kidnapped or killed. Pipelines are sabotaged. Bombers strike markets, buses, and restaurants with devastating effect. But terrorism inflicts more than human casualties and material losses. It can also cause serious indirect harm to countries and economies by increasing the costs of economic transactions—for example, because of enhanced security measures to ensure the safety of employees and customers or higher insurance premiums. Terrorist attacks in Yemen on the USS Cole in 2000 and on the French tanker Limburg in 2002 seriously damaged that country’s shipping industry. These attacks contributed to a 300 percent rise in insurance premiums for ships using that route and led ships to bypass

Yemen entirely (Enders and Sandler, 2012). In this article we explore the economic burden of terrorism. It can take myriad forms, but we focus on three: national income losses and growth-[slowing]-retarding effects, dampened foreign direct investment, and disparate effects on international trade.

2NC Extensions

High risk of terrorism – TSA surveillance is key to target the most dangerous perpetrators

Herrige '14 (Catherine; 12/17/14; Chief Intelligence correspondent for FOX News Channel, cites Former Head of TSA, John Pistole; "TSA head: Threat from terrorism worse now but US better able to combat it"; <http://www.foxnews.com/politics/2014/12/17/tsa-head-threat-from-terrorism-worse-now-but-us-better-able-to-combat-it/>)

The outgoing and longest-serving head of the Transportation Security Administration says the threat from terrorism is worse now than when he took the job four years ago, but the U.S. is better positioned to combat foreign plots. "The threat today is unfortunately more expansive than what it was four-and-a-half years ago," John Pistole told Fox News during an interview before he leaves at the end of the month, concluding 31 years of government service -- including 27 at the FBI, where he rose to the rank of deputy director. "With that being said, we also have better insights into who the potential bombers are," he added. From Pistole's unique position at the TSA and FBI, he watched Al Qaeda's strategy evolve from the 9/11 attacks that murdered nearly 3,000 Americans, to the failed underwear bomb plot to bring down a jet on Christmas Day 2009 and the non-metallic explosive devices buried in cargo a year later. Although Al Qaeda experimented in 2012 with surgically implanted bombs before apparently abandoning the idea as impractical, Pistole suggested they are now focused on devices held close or strapped to the body. "That is one of things that concerns us, how well do they design, construct and then conceal," he said. Pistole will become president of his alma mater, Anderson University in Anderson, Ind., this spring. Fox News asked Pistole whether the threat to American aviation had diminished since August, when the U.S. launched a bombing campaign against ISIS in Syria and Iraq, and the Al Qaeda-led "Khorasan" group. Khorasan contains long-time associates of Usama bin Laden, including Sanafi al-Nasr and Muhsin al-Fadhli, as well as a handful of operatives trained by the Yemeni bomb maker Ibrahim al-Asiri, who specializes in non-metallic bombs that traditional airport screening can miss. "Without going into details about what that may look like from a classified intelligence perspective, we do remain concerned that there is active plotting going on," Pistole said. And with new information that the French bomb maker David Drugeon likely survived a U.S. air strike last month, Pistole added, "there is concern that there are still individuals out there who have not only the ability to do that, but also the intent to use that on a flight to Europe or the US." The TSA administrator also described classified procedures that track foreign fighters, based on their travel history, before they check in at overseas airports for U.S.-bound flights. "There are individuals we are concerned about and we are again looking at if they make travel reservations, then they of course receive proper scrutiny," Pistole said. The continued threat from groups like Khorasan explains why procedures, implemented in July, requiring passengers to turn on their phone and computers at some airports, remain in place. As the holiday travel season begins, TSA officials say they are not expecting big changes at the checkpoints, but if there are changes, they will be driven by new and specific intelligence. Pistole said the transition from a one-size-fits-all approach after 9/11 to a risk-based strategy -- driven by intelligence -- is one of the TSA workforce's accomplishments. "I think that's been one of the biggest changes. ... We're more efficient. Complaints are down. Wait times are down," he said. Data provided by the TSA showed that over Thanksgiving, more than 12.5 million passengers were screened, a 1.3 percent increase from 2013, with nearly 50 percent of these passengers getting expedited screening. Nationwide, TSA said 99.6 percent of passengers waited in a line for less than 20 minutes. Pistole was in Australia days before the hostage situation unfolded in Sydney last weekend, telling Fox it fit the profile of a classic lone wolf attack. "I am not aware of any intelligence about it as of last week, there was no talk about something like that," he said. But it's not that kind of attack that keeps Pistole up at night. "My greater concern, rather than just a lone wolf, is simultaneous attacks such as you saw on 9/11 ... with that being said, we also have better insights into who the potential bombers are," he said.

Topicality

PRISM

1. Interpretation—domestic surveillance is the acquisition of nonpublic information regarding US citizens

Small 8 MATTHEW L. SMALL. United States Air Force Academy 2008 Center for the Study of the Presidency and Congress, Presidential Fellows Program paper "His Eyes are Watching You: Domestic Surveillance, Civil Liberties and Executive Power during Times of National Crisis" <http://cspc.nonprofitsoapbox.com/storage/documents/Fellows2008/Small.pdf>

Before one can make any sort of assessment of domestic surveillance policies, it is first necessary to narrow the scope of the term "domestic surveillance." Domestic surveillance is a subset of intelligence gathering. Intelligence, as it is to be understood in this context, is "information that meets the stated or understood needs of policy makers and has been collected, processed and narrowed to meet those needs" (Lowenthal 2006, 2). In essence, domestic surveillance is a means to an end; the end being intelligence. The intelligence community best understands domestic surveillance as the acquisition of nonpublic information concerning United States persons (Executive Order 12333 (3.4) (i)). With this definition domestic surveillance remains an overly broad concept. This paper's analysis, in terms of President Bush's policies, focuses on electronic surveillance; specifically, wiretapping phone lines and obtaining caller information from phone companies. Section f of the USA Patriot Act of 2001 defines electronic surveillance as:

[T]he acquisition by an electronic, mechanical, or other surveillance device of the contents of any wire or radio communication sent by or intended to be received by a particular, known United States person who is in the United States, if the contents are acquired by intentionally targeting that United States person, under circumstances in which a person has a reasonable expectation of privacy and a warrant would be required for law enforcement purposes;

2. Violation—PRISM conducts surveillance of people throughout the world.

Rosebach et al 13 (Marcel Rosebach, Holger Stark, and Jonathan Stock, "Prism Exposed: Data Surveillance with Global Implications," Spiegel Online. Roseblach is a journalist at Spiegel Online and graduated from Hamburg University with a degree in journalism and political science. After graduated they attended the Henri Nannen School of Journalism. <http://www.spiegel.de/international/world/prism-leak-inside-the-controversial-us-data-surveillance-program-a-904761.html> // EMS).

South of Utah's Great Salt Lake, **the** National Security Agency (**NSA**), a **United States foreign intelligence service, keeps watch over** one of its most expensive secrets. Here, on 100,000 square meters (1,100,000 square feet) near the US military's Camp Williams, the NSA is constructing enormous buildings to house superfast computers. All together, the project will cost around \$2 billion (€1.5 billion) and the computers will be capable of storing a gigantic volume of data, at least 5 billion gigabytes. The energy needed to power the cooling system for the servers alone will cost \$40 million a year.¶ Former NSA employees Thomas Drake and Bill Binney told SPIEGEL in March that the facility would soon store personal data **on people from all over the world** and keep it for decades. This includes emails, Skype conversations, Google searches, YouTube videos, Facebook posts, bank transfers -- electronic data of every kind.¶ They have everything about you in Utah," Drake says. "Who decides whether they look at that data? Who decides what they do with it?" Binney, a mathematician who was previously an influential analyst at the NSA, calculates that **the servers are large enough to store the entirety of humanity's electronic communications** for the next 100 years -- and that, of course, gives his former colleagues plenty of opportunity to read along and listen in.¶ James Clapper, the country's director of national intelligence, has confirmed the existence of a large-scale surveillance program. President Barack Obama further explained that Congress authorized the program -- but that **American citizens are exempt from it.**¶ A top-secret document published last week by the *Washington Post* and Britain's *Guardian* shows where the NSA may be getting the majority of its data. According to the document, which was allegedly leaked by former CIA employee Edward Snowden, the intelligence agency began seeking out direct access to servers belonging to American Internet companies on a wide scale in 2007. The first of these companies to come onboard was Microsoft. Yahoo followed half a year later, then Google, Facebook, PalTalk, YouTube, Skype and AOL. The most recent company to declare its willingness to cooperate was Apple, in

October 2012, according to the secret government document, which proudly states that this access to data is achieved "directly from the servers" of the companies.¶ The companies in question denied that claim on Friday. But if what the document says is true, the NSA has the potential to know what every person in the world who uses these companies' services is doing, and **that** presumably **includes millions of Germans.**¶ **Total Surveillance of Germans is Inappropriate**¶ On Monday, German Chancellor Angela Merkel confirmed through a spokesman that she plans to discuss the NSA's controversial data surveillance program with President Obama during his visit to Berlin next week. A spokesperson for the German Justice Ministry also said that talks are currently underway with US authorities. The discussions will include implications to Germany and "possible impairment of the rights of German citizens."¶ German Consumer Protection Minister Ilse Aigner has called for "clear answers" from the companies implicated in the document, and the German Green Party has demanded that the government investigate the circumstances of **Prism** immediately.¶ **Total surveillance of all German citizens** by the NSA **is** completely **disproportionate.**" Volker Beck, secretary of the Green Party group in parliament, said on Monday. The party has proposed that the topic be discussed at next week's parliamentary session.¶

Voting issue:

- A. Limits—the affirmative allows the curtailment of information gathering on non-US citizens—this explodes the number of topical affs and the negs research burden
- B. Ground—they kill neg offense like international CPs and can spike out of links

Strict Scrutiny

1. "Its" indicates possession.

Oxford Dictionary 14 (Oxford Dictionary, "its,"

http://www.oxforddictionaries.com/us/definition/american_english/its, accessed 7/2/14)

its¶ Top 1000 frequently used words¶ Syllabification: its¶ Pronunciation: /its /¶ DETERMINER¶ **Belonging to** or associated with **a thing previously mentioned** or easily identified:¶ turn the camera on its side¶ he chose the area for its atmosphere

2. Violation: they reduce NYPD surveillance – Love their solvency advocate talks about strict scrutiny in the context of ending NYPD mosque surveillance.

3. The Affirmative Interp is bad for debate

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. Including the NYPD as an actor adds THOUSANDS of different actors and affirmatives.

4. T is a voter because the opportunity to prepare promotes better debating

Curtail

1. "Curtail" means to restrict

Webster's 15 – Webster's New World College Dictionary, 4th Ed., "curtail",

<http://www.yourdictionary.com/curtail>

verb

To curtail is defined as to restrict something. stop something or deprive of something.

An example of curtail is when a town wants to stop drunk driving.

2. Violation - "Restrictions" are direct governmental limitations –

Viterbo 12 (Annamaria, Assistant Professor in International Law – University of Torino, PhD in International Economic Law – Bocconi University and Jean Monnet Fellow – European University Institute, International Economic Law and Monetary Measures: Limitations to States' Sovereignty and Dispute, p. 166)

In order **to distinguish** an exchange **restriction from a trade measure, the Fund chose not to give relevance to the** purposes or the **effects of the measure and to adopt, instead, a technical criterion that focuses on the method** followed to design said measure.

An interpretation that considered the economic effects and purposes of the measures (taking into account the fact that the measure was introduced for balance of payments reasons or to preserve foreign currency reserves) would have inevitably extended the Fund's jurisdiction to trade restrictions, blurring the boundaries between the IMF and the GATT. The result of such a choice would have been that a quantitative restriction on imports imposed for balance of payments reasons would have fallen within the competence of the Fund.

After lengthy discussions, in 1960 the IMF Executive Board adopted Decision No. 1034-(60/27).⁴⁶ This Decision clarified that **the distinctive feature of a restriction** on payments and transfers for current international transactions **is "whether it involves a direct governmental limitation on** the availability or use of **exchange** as such".⁴⁷ **This is a limitation imposed directly** on the use of currency in itself, for all purposes.

3. The plan does not curtail – enacting Strict Scrutiny Standards may have an effect of possibly curtailing surveillance in the distant future, but it does not have a direct effect as of the 1ac plantext of curtailing surveillance much less restricting it.

Assess whether the means themselves are a limit---allowing actions that effect a reduction ruins precision

Randall 7 (Judge – Court of Appeals of the State of Minnesota, "Dee Marie Duckwall, Petitioner, Respondent, vs. Adam Andrew Duckwall, Appellant", 3-13, http://law.justia.com/cases/minnesota/court-of-appeals/2007/opa0606_95-0313.html#_ftnref2)

[2] When referring to parenting time, **the term "restriction[,]" is a term of art that is not the equivalent of "reduction"** of parenting time. **"A modification of visitation that results in a reduction of total visitation time, is not necessarily a restriction" of visitation.** Danielson v. Danielson, 393 N.W.2d 405, 407 (Minn. App. 1986). **When determining whether a reduction constitutes a restriction, the court should consider the reasons for the change as well as the amount of the reduction."** Anderson v. Archer, 510 N.W.2d 1, 4 (Minn. App. 1993).

4. Voting issue---

Limits---allowing effectual reductions explodes the topic. Any action can potentially result in less surveillance. Limits are key to depth of preparation and clash. They get more ground to weigh as offense against counterplans or to link turn DAs like politics, at the expense of negative preparation, because it's impossible to research every single non-topical trick the aff could deploy. That crushes competitive equity which comes first because debate is a game. It's very unlikely that a direct effect of the plan is a curtailment of surveillance, hold them to a very high standard.

Case

Islamophobia

Frontline – 1NC

Their impacts are overblown – the majority of Muslims do not feel impacted by surveillance policies – we have poll data

Sidhu 7 — (Dawinder S. Sidhu, Associate Professor of Law, B.A. 2000 from University of Pennsylvania, M.A. 2003 from Johns Hopkins University, J.D. 2004 from The George Washington University, Member of the Maryland Bar, served as a fellow at the Supreme Court of the United States, received a Distinguished Service Award, taught at the Georgetown University Law Center and University of Baltimore School of Law, held visiting research posts at the Oxford University Faculty of Law and Georgetown University Law Center, held fellowships at Harvard University and Stanford University research centers, presented at various law schools, including the University of Pennsylvania Law School and Stanford Law School, participated in programs at leading think tanks, such as the Aspen Institute and Council on Foreign Relations, served as a legal observer of the military commissions at Guantanamo, cited by the Solicitor General of the United States and U.S. Department of Justice, cited in briefs submitted to the Supreme Court of the United States, 2007, “The Chilling Effect of Government Surveillance Programs on the Use of the Internet by Muslim-Americans,” *7 U. Md. L.J. Race, Religion, Gender & Class*, Available online at <http://heinonline.org/HOL/Page?handle=hein.journals/margin7&collection=journals&page=375>)

Identity: Of the 311 respondents, all identified themselves as Muslims.83

General Internet Usage: A vast majority of respondents (80.1%) used the Internet prior to 9/11, while the rest did not. After 9/11, the Internet usage of the respondents increased 7.7%, with 87.8% stating that they have used the Internet after the terrorist attacks, while only 11.9% reporting that they have not. The trend towards greater Internet usage continued, as 90.4% of respondents note that they "currently use" the Internet, and only 9.3% state that they do not.

Views Regarding Government Surveillance: 71.7% of respondents believe (48.9% strongly, 22.8% somewhat) that the government is currently monitoring the activities of Muslims in the United States. By contrast, only 4.2% (1.6% somewhat and 2.6% strongly) disbelieve that such monitoring is taking place. Similarly, 70.7% of respondents believe (45.0% strongly, 25.7% somewhat) that the government is currently monitoring the Internet activities of Muslims in the United States. Only 4.8% disbelieve (2.9% somewhat, 1.9% strongly) that such monitoring is taking place.

Alterations in Behavior—Generally: 86.8% of respondents said they have not changed at all their general activities after 9/11 due to a concern that the government may be monitoring their activities. Only 11.6% of respondents changed their general activities (6.1% made slight changes, 2.3% made moderate changes, 1.6% made many changes, 1.6% made significant changes) due to this concern.

65.9% of respondents stated that they were not personally aware of any other Muslims in the United States who changed, in any way, their general activities after 9/11, because of a concern that the government may be monitoring their activities. 25.4% of respondents stated they were personally aware of any other Muslims in the United States who changed, in any way, their general activities after 9/11, because of a concern that the government may be monitoring their activities.

Alterations in Behavior-Internet Usage: 89.1% of respondents said they have not changed their Internet usage at all-the sites they visit or the amount of time they spend on the Internet-after 9/11 due to a concern that the government may be monitoring their activities. Only 8.4% of respondents changed their Internet usage (3.9% made slight changes, 1.6% made moderate changes, 1.9% made many changes, 1.0% made significant changes)

due to this concern. Of those who stated that they have made changes in their Internet usage, 57.6% noted that they did not visit websites after 9/11, because of a concern that the government may be monitoring their online activities.

77.2% of respondents stated that they were not personally aware of any other Muslims in the United States who changed, in any way, their Internet usage after 9/11, because of a concern that the government may be monitoring their activities. 11.9% of respondents stated they were personally aware of any other Muslims in the United States who changed, in any way, their Internet usage after 9/11, because of a concern that the government may be monitoring their activities. Of these respondents, 45.6% stated that they are personally aware of other Muslim-Americans who have not visited certain web sites after 9/11, because of a concern that the government may be monitoring their online activities.

Islamophobia IS messed up – that’s undeniable – but it’s equally undeniable that almost all terrorists ARE Muslim, making it the most effective method to combat terrorist operations – this evidence is comparative.

McMillen 06 (Lucas McMillen, University of St. Thomas, “Eye on Islam: Judicial Scrutiny Along the Religious Profiling/Suspect Description Reliance Spectrum”, [<http://ir.stthomas.edu/cgi/viewcontent.cgi?article=1107&context=ustlj>])

Immediately after the September 11th terrorist attacks, Attorney General John Ashcroft converted the Federal Bureau of Investigation into a counterterrorism agency: "That day, in those early hours," said Ashcroft in a 2002 press conference announcing the Bureau's reorientation, "the prevention of terrorist acts became the central goal of the law enforcement and national security mission of the FBI."¹ But, while Ashcroft may have properly redirected the FBI toward confronting the primary threat to United States safety and security, his identification of our enemy was not as particular as it could have been. In 2004, the 9/11 Commission aimed for further clarity: "[T]he enemy is not just "terrorism," some generic evil. This vagueness blurs the strategy. The catastrophic threat at this moment in history is more specific. It is the threat posed by Islamist terrorism-especially the al Qaeda network, its affiliates, and its ideology."² Indeed, no characteristic unites the perpetrators of recent terrorist acts so much as their Muslim identity. Middle Eastern nationality may be thought to provide the link, but this trait proves to be underinclusive: to name just a few examples, Richard Reid, the "shoe bomber," is a Muslim who was born and educated in the United Kingdom,³ as were the four July 7th London Underground bombers.⁴ Zacarias Moussaoui, the only person to be charged and convicted by United States courts in connection with the September 11th terrorist attacks, is a French Muslim.⁵ Earnest James Ujaama, an indicted al-Qaeda associate, is a Muslim convert who was born in Denver and raised in Seattle.⁶ Furthermore, of the twenty-six terrorists currently on the FBI's Most Wanted List, three are from the Philippines; two are from Kenya; one, Abdul Rahman Yasin, is from Indiana-all are Muslims.⁷ Nor does Arab ethnicity serve as a reliably accurate terrorist-identifying characteristic: on December 5th, 2005, a white woman who was raised as a Catholic in Belgium became the first European Muslim suicide bomber when she detonated herself in Baquba.⁸ Indeed, the use of stereotype-defying terrorist operatives is entirely consistent with al-Qaeda's expressed intent to employ deceptive tactics in carrying out its attacks.⁹ Of course, **the one characteristic that Islamist radicals cannot obscure by selective conscription is Islamic identity.** Accordingly, **Muslim identity should be considered the attribute that correlates most positively with terrorist involvement;** or, in the words of Abdel Rahman al-Rashed, the general manager of Al-Arabiya, a top pan-Arab television station in the Middle East,¹⁰ **"It is a certain fact that not all Muslims are terrorists. but it is equally certain, and exceptionally painful, that almost all terrorists are Muslims."**¹¹ Our question then becomes, what is the proper role for Muslim identity in our law-enforcement officials' preventive counterterrorism efforts? It is a question that calls for a survey of our Constitution as well as our conscience, as the answer may compel us to contemplate taking permissible but regrettable measures against a particular religious group. In 1785, James Madison wrote: "[A just government] will be best supported by protecting every citizen in the enjoyment of his Religion with the same equal hand which protects his person and his property."¹² **But what shall be done when those two ideals are incompatible, when protecting persons and their property requires the government to take action that may infringe on others' religious enjoyment?**

We are faced with bad (ostracizing Muslims) and worse (suffering another terrorist attack) choices, a predicament expressed in the dour words of the reliably relevant Winston Churchill, who, speaking in a different context, said, "We seem to be very near the bleak choice between War and Shame. My feeling is that we shall choose Shame, and then have War thrown in a little later on even more adverse terms than at present." ¹³ To assist legal and law enforcement authorities in avoiding both Shame and War, this Article will aim to provide a legal framework allowing law enforcement officials greater flexibility in targeting religious groups. In doing so, it will focus exclusively on religious-group targeting and will not address the related issues of racial and ethnic profiling, which have been adequately covered by other commentators. I will begin by discussing the difference between acts of religious profiling and acts of suspect description reliance, and then discuss how most acts of religious-group targeting can be plausibly characterized as either. Finally, I will recommend that courts adopt a view toward religious-group targeting that allows law-enforcement officials greater flexibility in countering the Islamist terrorist threat.

No solvency – Muslims don't know if they're being surveyed, circumvention is inevitable, and islamophobia is too engrained.

Kundani 14 (Arun Kundani, The Guardian, March 28, 2014, "No NSA Reform can fix the American Islamophobic Surveillance Complex", <http://www.theguardian.com/commentisfree/2014/mar/28/nsa-reform-american-islamophobic-surveillance-complex>)

Better oversight of the sprawling American national security apparatus may finally be coming: President Obama and the House Intelligence Committee unveiled plans this week to reduce bulk collection of telephone records. The debate opened up by Edward Snowden's whistle-blowing is about to get even more legalistic than all the parsing of hops and stores and metadata. ¶ These reforms may be reassuring, if sketchy. But for those living in so-called "suspect communities" – Muslim Americans, left-wing campaigners, "radical" journalists – the days of living on the receiving end of excessive spying won't end there. ¶ How come when we talk about spying we don't talk about the lives of ordinary people being spied upon? While we have been rightly outraged at the government's warehousing of troves of data, we have been less interested in the consequences of mass surveillance for those most affected by it – such as Muslim Americans. ¶ In writing my book on Islamophobia and the War on Terror, I spoke to dozens of Muslims, from Michigan to Texas and Minnesota to Virginia. Some told me about becoming aware their mosque was under surveillance only after discovering an FBI informant had joined the congregation. Others spoke about federal agents turning up at colleges to question every student who happened to be Muslim. All of them said they felt unsure whether their telephone calls to relatives abroad were wiretapped or whether their emails were being read by government officials. ¶ There were the young Somali Americans in Minnesota who described how they and their friends were questioned by FBI agents for no reason other than their ethnic background. Some had been placed under surveillance by a local police department, which disguised its spying as a youth mentoring program and then passed the FBI intelligence on Somali-American political opinions. ¶ There were the Muslim students at the City University of New York who discovered that fellow students they had befriended had been informants all along, working for the New York Police Department's Intelligence Division and tasked with surveilling them. There was no reasonable suspicion of any crime; it was enough that the targeted students were active in the Muslim Students Association. ¶ And then there was Luqman Abdullah, a Detroit-based African-American imam, whose mosque was infiltrated by the FBI, leading to a 2009 raid in which he was shot and killed by federal agents. The government had no evidence of any terrorist plot; the sole pretext was that Abdullah had strongly critical views of the US government. ¶ These are the types of people whom the National Security Agency can suspect of being two "hops" away from targets. These are the types of "bad guys" referred to by outgoing NSA director Keith Alexander. Ten years ago, around 100,000 Arabs and Muslims in America had some sort of national security file compiled on them. Today, that number is likely to be even higher. ¶ A study published last year by the Muslim American Civil Liberties Coalition documented the effects of this kind of mass surveillance. In targeted communities, a culture of enforced self-censorship takes hold and relationships of trust start to break down. As one interviewee said: "You look at your closest friends and ask: are they informants?" ¶ This is what real fear of surveillance looks like: not knowing whom to trust, choosing your words with care when talking politics in public, the unpredictability of state power. Snowden has rightly drawn our attention to the power of what intelligence agencies call "signals intelligence" – the surveillance of our digital communications – but equally important is "human intelligence", the result of informants and undercover agents operating within communities. ¶ Underpinning all the surveillance of Muslim Americans is an assumption that Islamic ideology is linked to terrorism. Yet, over the last 20 years, far more people have been killed in acts of violence by right-wing extremists than by Muslim American citizens or

permanent residents. The huge numbers being spied upon are not would-be terrorists but law-abiding people, some of whom have "radical" political opinions that still ought to be protected by the First Amendment to the constitution. Just the same, there are plenty of other minority Americans who are not would-be "home-grown" terrorists – but they still live in fear that they might be mistaken as one. So let's reform the NSA and its countless collections. But let's not forget the FBI's reported 10,000 intelligence analysts working on counter-terrorism and the 15,000 paid informants helping them do it. Let's not forget the New York Police Department's intelligence and counter-terrorism division with its 1,000 officers, \$100m budget and vast program of surveillance. Let's not forget the especially subtle psychological terror of being Muslim in America, where, sure, maybe your phone calls won't be stored for much longer, but there's a multitude of other ways you're always being watched.⁹

Alt cause – state and local enforcement means the impact is inevitable

AP 12 (Samantha Henry, Matt Appuzzo, Wayne Perry, reporters for the Associated Press, American multinational nonprofit news agency, 2012, "New Jersey Muslims Angry Over NYPD Surveillance Findings," *The Huffington Post*, May 25, Available online at http://www.huffingtonpost.com/2012/05/25/new-jersey-muslims-cangry-nypd-surveillance_n_1545319.html)

Muslim leaders in New Jersey say they are angry but uncertain what their next step will be after the state's attorney general found that New York City police did not violate any laws in its surveillance of Muslim businesses, mosques and student groups in New Jersey. Several mosque leaders who attended a meeting Thursday with Attorney General Jeffrey S. Chiesa said they were shocked he found no violation of state criminal or civil laws by the NYPD in operations that many Muslims considered unjustified surveillance based solely on religion. "This is a big violation of our civil rights, and we need to go to our communities and explain it?" Imam Mohammad Qatanani, the spiritual leader of the Islamic Center of Passaic County said Thursday as he left the meeting. Qatanani said he would not tell his congregants to stop collaborating with law enforcement, but added, "We need from them to show us the same seriousness and honesty in building bridges with the Muslim community." Chiesa had been asked by Gov. Chris Christie, who appointed him, to look into operations in New Jersey that were part of a widespread NYPD program to collect intelligence on Muslim communities both inside New York and beyond. Undercover officers and informants eavesdropped in Muslim cafes and monitored sermons, even when there was no evidence of a crime. They infiltrated Muslim student groups, videotaped mosque-goers or collected their license plate numbers as they prayed. The result was that many innocent business owners, students and others were cataloged in police files. The interstate surveillance efforts, revealed by The Associated Press earlier this year, angered many Muslims and New Jersey officials. Some, like Newark Mayor Cory Booker and the state's top FBI official, criticized the tactics. Others, like Christie, focused more on the fact that the NYPD didn't tell New Jersey exactly what it was up to. In response, Chiesa launched what he described as a fact-finding review. Further, authorities found that New Jersey has no laws barring outside law enforcement agencies from secretly conducting operations in the state, representatives of the attorney general's office told the AP. However, New York police have agreed to meet with New Jersey law enforcement regularly to discuss counterterrorism intelligence and operations, the attorney general said.

Aff can't solve — Anti-Arab sentiment is entrenched in mainstream media and history

Salaita 6 — Steven George Salaita, scholar, author and public speaker, received his B.A. in political science from Radford University in 1997, his M.A. in English from Radford in 1999, and completed his Ph.D. at the University of Oklahoma in Native American studies with a literature emphasis, became an assistant professor of English at University of Wisconsin in Whitewater, where he taught American and ethnic American literature until 2006, associate professor of English at Virginia Tech, won a 2007 Gustavus Myers Outstanding Book Award for writing the book *Anti-Arab Racism in the USA: Where It Comes from and What it Means for Politics Today*,

2006 (“9/11, Anti-Arab Racism, and the Mythos of National Pride,” *Beyond Orientalism and Islamophobia*, Fall, Available online at https://muse.jhu.edu/journals/new_centennial_review/v006/6.2salaita.pdf)

My second observation that **anti-Arab racism is not confined to the political right also is worth analysis.** Racism, as writers from Elizabeth Cook-Lynn to bell hooks have illustrated, **is never limited to particular social or discursive movements, nor is it ever rooted in consistent sites of cultural or linguistic production.** Any comprehensive survey of popular opinion in the United States over the past decade (a time frame that purposely straddles 9/11) will demonstrate that the blatant anti-Arab racism of the political right is, using a vocabulary appropriate to specific political agendas, **reinscribed continually in the discourse, or at least the ethos, of mainstream and progressive media.** For instance, leftist liberal publications such as Dissent, Tikkun, and MoveOn.org have been guilty of expressing racist attitudes either in the form of support for Palestinian dispossession or by totalizing all Arabs and Muslims as potential terrorists; or the racism arrives subtly by precluding Arabs from speaking on their own behalf. **A similar guilt is shared by mainstream (supposedly liberal) publications such as the New York Times, Newsweek, Los Angeles Times, and Slate.com, which, given their corporate obligations, cannot realistically be expected to attack anti-Arab racism when it is so fundamental to the interests of American capitalism** (and to the survival of the publications). Of major concern to this essay is the recognition that, in keeping with the seminal work of Louis Althusser and Terry Eagleton, **we cannot seriously interrogate racism by attributing it solely to one political ideology without analyzing how the racism is interpolated through a multitude of discourses at the benefit of various ideologies.** Beyond this intercultural observation, we can say that **anti-Arab racism has specific historical dimensions that render it unique even as it has been an inheritor of countless tensions and anxieties.** Some of those dimensions—travel narratology, Orientalist scholarship, imperialism—have been discussed by others in some detail; the dimension I invariably find most interesting is the relationship of anti-Arab racism with settler colonization, both in the New World and Holy Land. **This relationship indicates that a centuries-old Holy Land mania in the United States not only facilitated what Cook-Lynn (2001) calls “anti-Indianism,” but has allowed the anti-Indianism to evolve into support for a new Messianic conquest that positions today’s Arabs in a fascinating theological continuum.** If Natives were the first victims of racism in North America, then Arabs, the new schematic evildoers, are merely the latest to be the first.

Security Good

Security endorsement is necessary to explore human becoming and open space for life possibilities

Booth 05 (Ken – visiting researcher – US Naval War College, Critical Security Studies and World Politics, p. 22)

The best starting point for conceptualizing security lies in the real conditions of insecurity suffered by people and collectivities. Look around. What is immediately striking is that **some degree of insecurity, as a life-determining condition, is universal.** **To the extent an individual or group is insecure, to the extent their life choices and changes are taken away;** this **is because of the resources and energy they need to invest in seeking safety from domineering threats**—whether these are the lack of food for one’s children, or organizing to resist a foreign aggressor. **The corollary of the relationship between insecurity and a determined life is that a degree of security creates life possibilities.** Security might therefore be conceived **as synonymous with opening up space in people’s lives. This allows for individual and collective human becoming**—the capacity to have some choice about living differently—**consistent with the same but different search by others.** Two interrelated conclusions follow from this. First, security can be understood as an instrumental value; it frees its possessors to a greater or lesser extent from life-determining constraints and so allows different life possibilities to be explored. Second, **security is not synonymous simply with survival.** One can survive without being secure (the experience of refugees in long-term camps in war-torn parts of the world, for example). **Security is therefore more than mere animal survival** (basic animal existence). **It is survival-plus, the plus being the possibility to**

explore human becoming. As an instrumental value, security is sought because it free people(s) to some degree to do other than deal with threats to their human being. The achievement of a level of security—and security is always relative – gives to individuals and groups some time, energy, and scope to choose to be or become, other than merely surviving as human biological organisms. Security is an important dimension of the process by which the human species can reinvent itself beyond the merely biological.

Realism

Realism and securitization are inevitable

Thayer 04 – Thayer has been a Fellow at the Belfer Center for Science and International Affairs at the Kennedy School of Government at Harvard University and has taught at Dartmouth College and the University of Minnesota (*Darwin and International Relations: On the Evolutionary Origins of War and Ethnic Conflict*, University of Kentucky Press, 2004, pg. 75-76)

The central issue here is what causes states to behave as offensive realists predict. Mearsheimer advances a powerful argument that anarchy is the fundamental cause of such behavior. **The fact that there is no world government compels the leaders of states to take steps to ensure their security, such as striving to have a powerful military, aggressing when forced to do so, and forging and maintaining alliances. This is what neorealists call a self-help system:** leaders of states are forced to take these steps because nothing else can guarantee their security in the anarchic world of international relations. I argue that **evolutionary theory also offers a fundamental cause for offensive realist behavior. Evolutionary theory explains why individuals are motivated to act as offensive realism expects**, whether an individual is a captain of industry or a conquistador. My argument is that anarchy is even more important than most scholars of international relations recognize. **The human environment of evolutionary adaptation was anarchic; our ancestors lived in a state of nature in which resources were poor and dangers from other humans and the environment were great**—so great that it is truly remarkable that a mammal standing three feet high—without claws or strong teeth, not particularly strong or swift—survived and evolved to become what we consider human. Humans endured because natural selection gave them the right behaviors to last in those conditions. **This environment produced the behaviors examined here: egoism, domination, and the in-group/out-group distinction. These specific traits are sufficient to explain why leaders will behave, in the proper circumstances, as offensive realists expect them to behave. That is, even if they must hurt other humans or risk injury to themselves, they will strive to maximize their power**, defined as either control over others (for example, through wealth or leadership) or control over ecological circumstances (such as meeting their own and their family's or tribes need for food, shelter, or other resources).

AT – Threatcon -> War

Construction of threats does not cause wars

Kaufman 09 (Stuart J, Prof Poli Sci and IR – U Delaware, “Narratives and Symbols in Violent Mobilization: The Palestinian-Israeli Case,” *Security Studies* 18:3, 400 – 434)

Even when hostile narratives, group fears, and opportunity are strongly present, war occurs only if these factors are harnessed. Ethnic narratives and fears must combine to create significant ethnic hostility among mass publics. **Politicians must also seize the opportunity to manipulate that hostility,** evoking hostile narratives and symbols to gain or hold power by riding a wave of chauvinist mobilization. **Such mobilization is often spurred by prominent events** (for example, episodes of violence) that increase feelings of hostility and make chauvinist appeals seem timely. **If the other group also mobilizes and if each side's felt security needs threaten the security of the other side, the result is a security dilemma** spiral of rising fear, hostility, and mutual threat that results in violence. A virtue of this symbolist theory is that **symbolist logic explains why ethnic peace is more common than ethnonationalist war. Even if hostile narratives, fears, and opportunity exist, severe violence usually can still be avoided if ethnic elites skillfully define group needs in moderate ways and collaborate across group lines to prevent violence:** this is consociationalism. ¹⁷ War is likely only if hostile narratives, fears, and opportunity spur hostile attitudes, chauvinist mobilization, and a security dilemma.

Critical terror studies are garbage

Jones and Smith 9 – * University of Queensland, Queensland, Australia AND ** King's College, University of London, London, UK (David and M.L.R., “We're All Terrorists Now: Critical—or Hypocritical—Studies “on” Terrorism?,” *Studies in Conflict & Terrorism*, Volume 32, Issue 4 April 2009 , pages 292 – 302, Taylor and Francis)

The journal, in other words, is not intended, as one might assume, to evaluate critically those state or non-state actors that might have recourse to terrorism as a strategy. Instead, the journal's ambition is to deconstruct what it views as the ambiguity of the word “terror,” its manipulation by ostensibly liberal democratic state actors, and the complicity of “orthodox” terrorism studies in this authoritarian enterprise. Exposing the deficiencies in any field of study is, of course, a legitimate scholarly exercise, but what the symposium introducing the new volume announces questions both the research agenda and academic integrity of journals like *Studies in Conflict and Terrorism* and those who contribute to them. Do these claims, one might wonder, have any substance?¶ Significantly, the original proposal circulated by the publisher Routledge and one of the editors, Richard Jackson, suggested some uncertainty concerning the preferred title of the journal. *Critical Studies on Terrorism* appeared last on a list where the first choice was *Review of Terror Studies*. Evidently, the concision of a review fails to capture the critical perspective the journal promotes. Criticism, then, is central to the new journal's philosophy and the adjective connotes a distinct ideological and, as shall be seen, far from pluralist and inclusive purpose. So, one might ask, what exactly does a critical approach to terrorism involve?¶ What it Means to be Critical¶ The editors and contributors explore what it means to be “critical” in detail, repetition, and opacity, along with an excessive fondness for italics, in the editorial symposium that introduces the first issue, and in a number of subsequent articles. The editors inform us that the study of terrorism is “a growth industry,” observing with a mixture of envy and disapproval that “literally thousands of new books and articles on terrorism are published every year” (pp. 1-2). In adding to this literature the editors premise the need for yet another journal on their resistance to what currently constitutes scholarship in the field of terrorism study and its allegedly uncritical acceptance of the Western democratic state's security perspective.¶ Indeed, to be critical requires a radical reversal of what the journal assumes to be the typical perception of terrorism and the methodology of terrorism research. To focus on the strategies practiced by non-state actors that feature under the conventional denotation “terror” is, for the critical theorist, misplaced. As the symposium explains, “acts of clandestine non-state terrorism are committed by a tiny number of individuals and result in between a few hundred and a few thousand casualties per year over the entire world” (original italics) (p. 1). The United States's and its allies' preoccupation with terrorism is, therefore, out of proportion to its effects.¹ At the same time, the more pervasive and repressive terror practiced by the state has been “silenced from public and ... academic discourse” (p. 1).¶ The complicity of terrorism studies with the increasingly authoritarian demands of Western, liberal state and media practice, together with the moral and political blindness of established terrorism analysts to this relationship forms the journal's overriding assumption and one that its core contributors repeat ad nauseam. Thus, Michael Stohl, in his contribution “Old Myths, New Fantasies and the Enduring Realities of Terrorism” (pp. 5-16), not only discovers ten “myths” informing the understanding of terrorism, but also finds that these myths reflect a “state centric security focus,” where analysts rarely consider “the violence perpetrated by the state” (p. 5). He complains that the press have become too close to government over the matter. Somewhat contradictorily Stohl subsequently asserts that media reporting is “central to terrorism and counter-terrorism as political action,” that media reportage provides the oxygen of terrorism, and that politicians consider journalists to be “the terrorist's best friend” (p. 7).¶ Stohl further compounds this incoherence, claiming that “the media are far more likely to focus on the destructive actions, rather than on ... grievances or the social conditions that breed [terrorism]—to present episodic rather than thematic stories” (p. 7). He argues that terror attacks between 1968 and 1980 were scarcely reported in the United States, and that reporters do not delve deeply into the sources of conflict (p. 8). All of this is quite contentious, with no direct evidence produced to support such statements. The “media” is after all a very broad term, and to assume that it is monolithic is to replace criticism with conspiracy theory. Moreover, even if it were true that the media always serves as a government propaganda agency, then by Stohl's own logic, terrorism as a method of political communication is clearly futile as no rational actor would engage in a campaign doomed to be endlessly misreported.¶ Nevertheless, the notion that an inherent pro-state bias vitiates terrorism studies pervades the critical position. Anthony Burke, in “The End of Terrorism Studies” (pp. 37-49), asserts that established analysts like Bruce Hoffman “specifically exclude states as possible perpetrators” of terror. Consequently, the emergence of “critical terrorism studies” “may signal the end of a particular kind of traditionally state-focused and directed ‘problem-solving’ terrorism studies—at least in terms of its ability to assume that its categories and commitments are immune from challenge and correspond to a stable picture of reality” (p. 42).¶ Elsewhere, Adrian Guelke, in “Great Whites, Paedophiles and Terrorists: The Need for Critical Thinking in a New Era of Terror” (pp. 17-25), considers British government-induced media “scare-mongering” to have legitimated an “authoritarian approach” to the purported new era of terror (pp. 22-23). Meanwhile, Joseba Zulaika and William A. Douglass, in “The Terrorist Subject: Terrorist Studies and the Absent Subjectivity” (pp. 27-36), find the War on Terror constitutes “the single,” all embracing paradigm of analysis where the critical voice is “not allowed to ask: what is the reality itself?” (original italics) (pp. 28-29). The construction of this condition, they further reveal, if somewhat abstrusely, reflects an abstract “desire” that demands terror as “an ever-present threat” (p. 31). In order to sustain this fabrication: “Terrorism experts and commentators” function as “realist policemen”; and not very smart ones at that, who while “gazing at the evidence” are “unable to read the paradoxical logic of the desire that fuels it, whereby *lack* turns *to excess*” (original italics) (p. 32). Finally, Ken Booth, in “The Human Faces of Terror: Reflections in a Cracked Looking Glass” (pp. 65-79), reiterates Richard Jackson's contention that state terrorism “is a much more serious problem than non-state terrorism” (p. 76). Yet, one searches in vain in these articles for evidence to support the ubiquitous assertion of state bias: assuming this bias in conventional terrorism analysis as a

fact **seemingly does not require** a corresponding concern with **evidence** of this fact, **merely its continual reiteration by conceptual fiat**. **A critical perspective dispenses not only with terrorism studies** but also with the norms of accepted scholarship. Asserting what needs to be demonstrated commits, of course, the elementary logical fallacy *petitio principii*. But **critical theory apparently emancipates (to use its favorite verb) its practitioners from the confines of logic, reason, and the usual standards of academic inquiry**.¶ Alleging a constitutive weakness in established scholarship without the necessity of providing proof to support it, therefore, appears to define the critical posture. **The unproved “state centrism” of terrorism studies serves as a platform for further unsubstantiated accusations** about the state of the discipline. Jackson and his fellow editors, along with later claims by Zulaika and Douglass, and Booth, again assert that “orthodox” analysts rarely bother “to interview or engage with those involved in 'terrorist' activity” (p. 2) or spend any time “on the ground in the areas most affected by conflict” (p. 74). Given that Booth and Jackson spend most of their time on the ground in Aberystwyth, Ceredigion, not a notably terror rich environment if we discount the operations of *Meibion Glyndwr* who would as a matter of principle avoid *pob sais* like Jackson and Booth, this seems a bit like the pot calling the kettle black. It also overlooks the fact that *Studies in Conflict and Terrorism* first advertised the problem of “talking to terrorists” in 2001 and has gone to great lengths to rectify this lacuna, if it is one, regularly publishing articles by analysts with first-hand experience of groups like the Taliban, Al Qaeda and *Jemaah Islamiyah*.¶ A consequence of avoiding primary research, it is further alleged, leads conventional analysts uncritically to apply psychological and problem-solving approaches to their object of study. This propensity, Booth maintains, occasions another unrecognized weakness in traditional terrorism research, namely, an inability to engage with “the particular dynamics of the political world” (p. 70). Analogously, Stohl claims that “the US and English [sic] media” exhibit a tendency to psychologize terrorist acts, which reduces “structural and political problems” into issues of individual pathology (p. 7). Preoccupied with this problem-solving, psychopathologizing methodology, terrorism analysts have lost the capacity to reflect on both their practice and their research ethics.¶ By contrast, the critical approach is not only self-reflective, but also and, for good measure, self-reflexive. In fact, the editors and a number of the journal's contributors use these terms interchangeably, treating a reflection and a reflex as synonyms (p. 2). A cursory encounter with the *Shorter Oxford Dictionary* would reveal that they are not. Despite this linguistically challenged misidentification, “reflexivity” is made to do a lot of work in the critical idiom. Reflexivity, the editors inform us, requires a capacity “to challenge dominant knowledge and understandings, is sensitive to the politics of labelling ... is transparent about its own values and political standpoints, adheres to a set of responsible research ethics, and is committed to a broadly defined notion of emancipation” (p. 2). This covers a range of not very obviously related but critically approved virtues. Let us examine what reflexivity involves as Stohl, Guelke, Zulaika and Douglass, Burke, and Booth explore, somewhat repetitively, its implications.¶ Reflexive or Defective? ¶ Firstly, **to challenge dominant knowledge and understanding and retain sensitivity to labels leads inevitably to a fixation with language, discourse, the ambiguity of the noun, terror, and its political use and abuse**. **Terrorism**, Booth enlightens the reader unremarkably, is “a politically loaded term” (p. 72). Meanwhile, Zulaika and Douglass consider terror “the dominant tropic [sic] space in contemporary political and journalistic discourse” (p. 30). Faced with the “serious challenge” (Booth p. 72) and pejorative connotation that the noun conveys, critical terrorologists turn to deconstruction and bring the full force of postmodern obscurantism to bear on its use. Thus the editors proclaim that terrorism is “one of the most powerful signifiers in contemporary discourse.” There is, moreover, a “yawning gap between the 'terrorism' signifier and the actual acts signified” (p. 1). “[V]irtually all of this activity,” the editors pronounce *ex cathedra*, “refers to the *response* to acts of political violence not the violence itself” (original italics) (p. 1). Here again they offer no evidence for this curious assertion and assume, it would seem, all conventional terrorism studies address issues of homeland security.¶ In keeping with this critical orthodoxy that he has done much to define, Anthony Burke also asserts the “instability (and thoroughly politicized nature) of the unifying master-terms of our field: 'terror' and 'terrorism’” (p. 38). To address this he contends that a critical stance requires us to “keep this radical instability and inherent politicization of the concept of terrorism at the forefront of its analysis.” Indeed, “without a conscious reflexivity about the most basic definition of the object, our discourse will not be critical at all” (p. 38). More particularly, drawing on a jargon-infused amalgam of Michel Foucault's identification of a relationship between power and knowledge, the neo-Marxist Frankfurt School's critique of democratic false consciousness, mixed with the existentialism of the Third Reich's favorite philosopher, Martin Heidegger, Burke “*questions the question*.” This intellectual *potpourri* apparently enables the critical theorist to “question the ontological status of a 'problem' before any attempt to map out, study or resolve it” (p. 38).¶ Interestingly, Burke, Booth, and the symposiastahood deny that there might be objective data about violence or that a properly focused strategic study of terrorism would not include any prescriptive goodness or rightness of action. While a strategic theorist or a skeptical social scientist might claim to consider only the complex relational situation that involves as well as the actions, the attitude of human beings to them, the critical theorist's radical questioning of language denies this possibility.¶ **The critical approach to language and its deconstruction of an otherwise useful, if imperfect, political vocabulary has been the source of much confusion and inconsequentiality in the practice of the social sciences**. It dates from the relativist pall that French radical post structural philosophers like Gilles Deleuze and Felix Guattari, Foucault, and Jacques Derrida, cast over the social and historical sciences in order to demonstrate that social and political knowledge depended on and underpinned power relations that permeated the landscape of the social and reinforced the liberal democratic state. **This radical assault on the possibility of either neutral fact or value ultimately functions unfalsifiably, and as a substitute for philosophy, social science, and a real theory of language**.¶ The problem with the critical approach is that, as the Australian philosopher John Anderson demonstrated, to achieve a genuine study one must either investigate the facts that are talked about or the fact that they are talked about in a certain way. More precisely, as J.L. Mackie explains, “if we concentrate on the uses of language we fall between these two stools, and we are in danger of taking our discoveries about manners of speaking as answers to questions about what is there.”² Indeed, **in so far as an account of the use of language spills over into ontology it is liable to be a confused mixture of what should be two distinct investigations: the study of the facts about which the language is used, and the study of the linguistic phenomena themselves**.¶ It is precisely, however, this confused mixture of fact and discourse that critical thinking seeks to impose on the

study of terrorism and infuses the practice of critical theory more generally. From this confused seed no coherent method grows.¶ What is To Be Done?¶ This ontological confusion notwithstanding, Ken Booth sees critical theory not only exposing the dubious links between power and knowledge in established terrorism studies, but also offering an ideological agenda that transforms the face of global politics. “[C]ritical knowledge,” Booth declares, “involves understandings of the social world that attempt to stand outside prevailing structures, processes, ideologies and orthodoxies while recognizing that all conceptualizations within the ambit of sociality derive from particular social/historical conditions” (original italics) (p. 78). Helpfully, Booth, assuming the manner of an Old Testament prophet, provides his critical disciples with “big-picture navigation aids” (original italics) (p. 66) to achieve this higher knowledge. Booth promulgates fifteen commandments (as Clemenceau remarked of Woodrow Wilson's nineteen points, in a somewhat different context, “God Almighty only gave us ten”). When not stating the staggeringly obvious, the Ken Commandments are hopelessly contradictory. Critical theorists thus should “avoid exceptionalizing the study of terrorism.”³ “recognize that states can be agents of terrorism,” and “keep the long term in sight.” Unexceptional advice to be sure and long recognized by more traditional students of terrorism. The critical student, if not fully conversant with critical doublethink, however, might find the fact that she or he lives within “Powerful theories” that are “constitutive of political, social, and economic life” (6th Commandment, p. 71), sits uneasily with Booth's concluding injunction to “stand outside” prevailing ideologies (p. 78).¶ In his preferred imperative idiom, Booth further contends that terrorism is best studied in the context of an “academic international relations” whose role “is not only to interpret the world but to change it” (pp. 67-68). Significantly, academic—or more precisely, critical—international relations, holds no place for a realist appreciation of the status quo but approves instead a Marxist ideology of praxis. It is within this transformative praxis that critical theory situates terrorism and terrorists.¶ The political goals of those non-state entities that choose to practice the tactics of terrorism invariably seek a similar transformative praxis and this leads “critical global theorizing” into a curiously confused empathy with the motives of those engaged in such acts, as well as a disturbing relativism. Thus, Booth again decrees that the gap between “those who hate terrorism and those who carry it out, those who seek to delegitimize the acts of terrorists and those who incite them, and those who abjure terror and those who glorify it—is not as great as is implied or asserted by orthodox terrorism experts, the discourse of governments, or the popular press” (p. 66). The gap “between us/them is a slippery slope, not an unbridgeable political and ethical chasm” (p. 66). So, while “terrorist actions are always—without exception—wrong, they nevertheless might be contingently excusable” (p. 66). From this ultimately relativist perspective gang raping a defenseless woman, an act of terror on any critical or uncritical scale of evaluation, is, it would seem, wrong but potentially excusable.¶ On the basis of this worrying relativism a further Ken Commandment requires the abolition of the discourse of evil on the somewhat questionable grounds that evil releases agents from responsibility (pp. 74-75). This not only reveals a profound ignorance of theology, it also underestimates what Eric Voeglin identified as a central feature of the appeal of modern political religions from the Third Reich to Al Qaeda. As Voeglin observed in 1938, the Nazis represented an “attractive force.” To understand that force requires not the abolition of evil [so necessary to the relativist] but comprehending its attractiveness. Significantly, as Barry Cooper argues, “its attractiveness, [like that of al Qaeda] cannot fully be understood apart from its evilness.”⁴¶ The line of relativist inquiry that critical theorists like Booth evince toward terrorism leads in fact not to moral clarity but an inspissated moral confusion. This is paradoxical given that the editors make much in the journal's introductory symposium of their “responsible research ethics.” The paradox is resolved when one realizes that critical moralizing demands the “ethics of responsibility to the terrorist other.” For Ken Booth it involves, it appears, empathizing “with the ethic of responsibility” faced by those who, “in extremis” “have some explosives” (p. 76). Anthony Burke contends that a critically self-conscious normativism requires the analyst, not only to “critique” the “strategic languages” of the West, but also to “take in” the “side of the Other” or more particularly “engage” “with the highly developed forms of thinking” that provides groups like Al Qaeda “with legitimizing foundations and a world view of some profundity” (p. 44). This additionally demands a capacity not only to empathize with the “other,” but also to recognize that both Osama bin Laden in his *Messages to the West* and Sayyid Qutb in his Muslim Brotherhood manifesto *Milestones* not only offer “well observed” criticisms of Western decadence, but also “converges with elements of critical theory” (p. 45). This is not surprising given that both Islamist and critical theorists share an analogous contempt for Western democracy, the market, and the international order these structures inhabit and have done much to shape.¶

Historically Speaking¶ Critical theory, then, embraces relativism not only toward language but also toward social action. Relativism and the bizarre ethicism it engenders in its attempt to empathize with the terrorist other are, moreover, histrionic. As Leo Strauss classically inquired of this relativist tendency in the social sciences, “is such an understanding dependent upon our own commitment or independent of it?” Strauss explains, if it is independent, I am committed as an actor and I am uncommitted in another compartment of myself in my capacity as a social scientist. “In that latter capacity I am completely empty and therefore completely open to the perception and appreciation of all commitments or value systems.” I go through the process of empathetic understanding in order to reach clarity about my commitment for only a part of me is engaged in my empathetic understanding. This means, however, that “such understanding is not serious or genuine but histrionic.”⁵ It is also profoundly dependent on Western liberalism. For it is only in an open society that questions the values it promotes that the issue of empathy with the non-Western other could arise. The critical theorist's explicit loathing of the openness that affords her histrionic posturing obscures this constituting fact.¶ On the basis of this histrionic empathy with the “other,” critical theory concludes that democratic states “do not always abjure acts of terror whether to advance their foreign policy objectives ... or to buttress order at home” (p. 73). Consequently, Ken Booth asserts: “If terror can be part of the menu of choice for the relatively strong, it is hardly surprising it becomes a weapon of the relatively weak” (p. 73). Zulaika and Douglass similarly assert that terrorism is “always” a weapon of the weak (p. 33).¶ At the core of this critical, ethicist, relativism therefore lies a syllogism that holds all violence is terror: Western states use violence, therefore, Western states are terrorist. Further, the greater terrorist uses the greater violence: Western governments exercise the greater violence. Therefore, it is the liberal democracies rather than Al Qaeda that are the greater terrorists.¶ In its desire to empathize with the transformative ends, if not the means of terrorism generally and Islamist terror in particular, critical theory reveals itself as a form of Marxist unmasking. Thus, for Booth “terror has multiple forms” (original italics) and the real terror is economic, the product it would seem of “global capitalism” (p. 75). Only the *engagee* intellectual academic finding in deconstructive criticism the philosophical weapons that reveal the illiberal neo-conservative purpose informing the conventional study of terrorism and the democratic state's prosecution of counterterrorism can identify the real terror lurking behind the “manipulation of the politics of fear” (p. 75).¶ Moreover, the resolution of this condition of escalating violence requires not any strategic solution that creates security as the basis for development whether in London or Kabul. Instead, Booth, Burke, and the editors

contend that the only solution to “the world-historical crisis that is facing human society globally” (p. 76) is universal human “emancipation.” This, according to Burke, is “the normative end” that critical theory pursues.

Following Jurgen Habermas, the godfather of critical theory, terrorism is really a form of distorted communication. The solution to this problem of failed communication resides not only in the improvement of living conditions, and “the political taming of unbounded capitalism,” but also in “the telos of mutual understanding.” Only through this telos with its “strong normative bias towards non violence” (p. 43) can a universal condition of peace and justice transform the globe. In other words, the only ethical solution to terrorism is conversation: sitting

around an un-coerced table presided over by Kofi Annan, along with Ken Booth, Osama bin Laden, President Obama, and some European Union pacifist sandalista, a transcendental

communicative reason will emerge to promulgate norms of transformative justice. As Burke enunciates, the panacea of un-coerced communication would establish “a secularism that might create an enduring architecture of basic shared values” (p. 46).¶ In the end, un-coerced norm projection is not concerned with the world as it is, but how it ought to be.

This not only compounds the logical errors that permeate critical theory, it advances an ultimately utopian agenda under the guise of soi-disant cosmopolitanism where one somewhat vaguely recognizes the “human interconnection and mutual vulnerability to nature, the cosmos and each other” (p. 47) and no doubt bursts into spontaneous chanting of Kumbaya.¶ In analogous visionary terms,

Booth defines real security as emancipation in a way that denies any definitional rigor to either term. The struggle against terrorism is, then, a struggle for emancipation from the oppression of political violence everywhere. Consequently, in this Manichean struggle for global emancipation against the real terror of Western democracy, Booth further maintains that universities have a crucial role to play. This also is something of a concern for those who do not share the critical vision, as university international relations departments are not now, it would seem, in business to pursue dispassionate analysis but instead are to serve as cheerleaders for this critically inspired vision.¶ Overall, the journal’s fallacious commitment

to emancipation undermines any ostensible claim to pluralism and diversity. Over determined by this transformative approach

to world politics, it necessarily denies the possibility of a realist or prudential appreciation of politics and the promotion not of universal solutions but pragmatic ones that accept the best that may be achieved in the circumstances. Ultimately, to present the world how it ought to be rather than as it is conceals a deep intolerance notable in the contempt with which many of the contributors

to the journal appear to hold Western politicians and the Western media.6¶ It is the exploitation of this oughtistic style of thinking that leads the critic into a Humpty Dumpty world where words mean exactly what the critical theorist “chooses them to mean—neither more nor less.”

However, in order to justify their disciplinary niche they have to insist on the failure of

established modes of terrorism study. Having identified a source of government grants and academic perquisites, critical studies in fact does not deal with the notion of terrorism as such, but instead the manner in which the Western liberal democratic state has supposedly manipulated the use of violence by non-state actors in order to “other” minority communities and create a politics of fear.¶ Critical Studies and Strategic Theory—A Missed Opportunity¶

Of course, the doubtful contribution of critical theory by no means implies that all is well with what one might call conventional terrorism studies. The subject area has in the past produced superficial assessments that have done little to contribute to an informed understanding of conflict. This is a point readily conceded by John Horgan and Michael Boyle who put “A Case Against ‘Critical Terrorism Studies’” (pp. 51-74).

Although they do not seek to challenge the agenda, assumptions, and contradictions inherent in the critical approach, their contribution to the new journal distinguishes itself by actually having a well-organized and well-supported argument. The authors’ willingness to acknowledge deficiencies in some

terrorism research shows that critical self-reflection is already present in existing terrorism studies. It is ironic, in fact, that the most clearly reflective, original, and *critical* contribution in the first edition should come from established terrorism researchers who critique the critical position.¶ Interestingly, the specter haunting both conventional and critical terrorism studies is that both assume that terrorism is an existential phenomenon, and thus has causes and solutions. Burke makes this explicit: “The inauguration of this journal,” he declares, “indeed suggests broad agreement that there is a phenomenon called terrorism” (p. 39). Yet this is not the only way of looking at terrorism. For a strategic theorist the notion of terrorism does not exist as an independent phenomenon. It is an abstract noun. More precisely, it is merely a tactic—the creation of fear for political ends—that can be employed by any social actor, be it state or non-state, in any context, without any necessary moral value being involved.¶

Ironically, then, strategic theory offers a far more “critical perspective on terrorism” than do the

perspectives advanced in this journal. Guelke, for example, propounds a curiously orthodox standpoint when he asserts: “to describe an act as one of terrorism, without the qualification of quotation marks to indicate the author’s distance from such a judgement, is to condemn it as absolutely illegitimate” (p. 19). If you are a strategic theorist this is an invalid claim. Terrorism is simply a method to achieve an

end. Any moral judgment on the act is entirely separate. To fuse the two is a category mistake. In

strategic theory, which Guelke ignores, terrorism does not, ipso facto, denote “absolutely illegitimate violence.”¶ Intriguingly, Stohl, Booth, and Burke also imply that a strategic understanding forms part of their critical viewpoint. Booth, for instance, argues in one of his commandments that terrorism should be seen as a conscious human choice. Few strategic theorists would disagree. Similarly, Burke feels that there does “appear to be a consensus” that terrorism is a “form of instrumental political violence” (p. 38). The problem for the contributors to this volume is that they cannot emancipate themselves from the very orthodox assumption that the word terrorism is pejorative. That may be the popular understanding of the term, but inherently terrorism conveys no necessary connotation of moral condemnation. “Is terrorism a form of warfare, insurgency, struggle, resistance, coercion, atrocity, or great

political crime,” Burke asks rhetorically. But once more he misses the point. All violence is instrumental. Grading it according to whether it is insurgency, resistance, or atrocity is irrelevant. Any strategic actor may practice forms of warfare. For this reason Burke's further claim that existing definitions of terrorism have “specifically excluded states as possible perpetrators and privilege them as targets,” is wholly inaccurate (p. 38). Strategic theory has never excluded state-directed terrorism as an object of study, and neither for that matter, as Horgan and Boyle point out, have more conventional studies of terrorism.¶ Yet, Burke offers—as a critical revelation—that “the strategic intent behind the US bombing of North Vietnam and Cambodia, Israel's bombing of Lebanon, or the sanctions against Iraq is also terrorist.” He continues: “My point is not to remind us that states practise terror, but to show how mainstream *strategic doctrines* are terrorist in these terms and undermine any prospect of achieving the normative consensus if such terrorism is to be reduced and eventually eliminated” (original italics) (p. 41). This is not merely confused, it displays remarkable nescience on the part of one engaged in teaching the next generation of graduates from the Australian Defence Force Academy. Strategic theory conventionally recognizes that actions on the part of state or non-state actors that aim to create fear (such as the allied aerial bombing of Germany in World War II or the nuclear deterrent posture of Mutually Assured Destruction) can be terroristic in nature.⁷ The problem for critical analysts like Burke is that they impute their own moral valuations to the term terror. Strategic theorists do not. Moreover, the statement that this undermines any prospect that terrorism can be eliminated is illogical: you can never eliminate an abstract noun.¶ Consequently, those interested in a truly “critical” approach to the subject should perhaps turn to strategic theory for some relief from the strictures that have traditionally governed the study of terrorism, not to self-proclaimed critical theorists who only replicate the flawed understandings of those whom they criticize. Horgan and Boyle conclude their thoughtful article by claiming that critical terrorism studies has more in common with traditional terrorism research than critical theorists would possibly like to admit. These reviewers agree: they are two sides of the same coin.¶ Conclusion ¶ In the looking glass world of critical terror studies the conventional analysis of terrorism is ontologically challenged, lacks self-reflexivity, and is policy oriented. By contrast, critical theory's ethicist, yet relativist, and deconstructive gaze reveals that we are all terrorists now and must empathize with those sub-state actors who have recourse to violence for whatever motive. Despite their intolerable othering by media and governments, terrorists are really no different from us. In fact, there is terror as the weapon of the weak and the far worse economic and coercive terror of the liberal state. Terrorists therefore deserve empathy and they must be discursively engaged.¶ At the core of this understanding sits a radical pacifism and an idealism that requires not the status quo but communication and “human emancipation.” Until this radical post-national utopia arrives both force and the discourse of evil must be abandoned and instead therapy and un-coerced conversation must be practiced. In the popular ABC drama Boston Legal Judge Brown perennially referred to the vague, irrelevant, jargon-ridden statements of lawyers as “jibber jabber.” The Aberystwyth-based school of critical internationalist utopianism that increasingly dominates the study of international relations in Britain and Australia has refined a higher order incoherence that may be termed Aber jabber. The pages of the journal of Critical Studies on Terrorism are its natural home.

Internal Link Defense

Aff can't resolve how deeply islamophobia has engrained itself in the American psyche.

Ali 12 (Yaser, Managing Attorney at Yaser Ali Law and J.D at University of California, Berkeley - School of Law, “Shariah and Citizenship—How Islamophobia Is Creating a Second-Class Citizenry in America”, CALIFORNIA LAW REVIEW, 8-1-2012, <http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=4176&context=californialawreview>)

One would assume that anti-Muslim sentiment reached its high water mark after 9/11. To the contrary, however, it has increased dramatically in the third phase of Islamophobia, which began during President Obama's 2008 campaign. If Volpp's contentions about Muslims' being relegated to second-class citizenship were true in 2002, then today that distinction has crystallized even further.¹³⁶ Whereas a vast majority of the incursions in the second phase occurred under the umbrella of national security, Islamophobia has now evolved beyond simply encouraging profiling and other surveillance techniques aimed at Muslims under the professed interests of national security. An institutionalized version of Islamophobia in this third phase now focuses on the “creeping threat of Shariah” and, in the process, more explicitly threatens the foundational conceptions of citizenship described by Professor Bosniak. Further, while citizens enjoy some fundamental level of respect for their individual beliefs and practices, this is no longer the case with regard to Muslims, both in journalism and politics today. Whereas it is widely recognized as socially unacceptable to be openly disparaging toward

minority groups, the privilege reflected in that norm is increasingly denied to Muslims. In this third phase of Islamophobia, mainstream discourse now explicitly challenges the notion that American Muslims deserve the same liberal notions of rights that other citizens enjoy. One might surmise that since the contours of this phase cannot easily be demarcated, the third phase is in fact a difference in degree rather than in kind. It is true that unlike the transition from the first to the second phase, there is no single demonstrable event or tipping point that represents the transition from the second to third period; however, there was a gradual progression that increased in intensity since the presidential campaign of 2008 when the term "Muslim" was actually converted into a slur, as political opponents "accused" then-Senator Obama of secretly being a Muslim. The **suggestion that a Muslim citizen would be less suited for office represents the deep-seated fear and mistrust of Muslims in the American consciousness.** President Obama's opponents recognized this fact and knew that it would be a powerful tool for discrediting him. Yet what was perhaps most striking about the "allegations" was not the partisan claims themselves, but the responses that President Obama and other government leaders offered. Obama felt compelled to reject the "accusations," doing his best to distance himself from the Muslim community and choosing not to make any campaign stops in mosques or meet with any Muslim organizations during the campaign (despite making numerous stops at churches and synagogues). President Obama did not state, that although he was not a Muslim, there was nothing wrong with Muslims per se. Instead, he reiterated the bias by referring to the accusations on his website as a "smear." Further, during one campaign rally, his aides asked two young Muslim women dressed in headscarves to exit the stage area where he would be speaking. Arguably, the pervasiveness of such insidious discourse from the President helped normalize the notion to the public that American Muslims are not "citizens," but indeed "others."

Circumvention

Generic

State-centric curtailment will inevitably fail—circumvention, increase in suppression, and extension of power

Schriefer, 10—advocacy director at Freedom House and contributor to New York Times (Paula, 11/9/10, "The Wrong Way to Combat 'Islamophobia'", New York Times, [//twemchen](http://www.nytimes.com/2010/11/10/opinion/10iht-edschriefer.html?_r=0&module=ArrowsNav&contentCollection=Opinion&action=keypress®ion=FixedLeft&pgtype=article)

This week, member states of the United Nations will vote on what has become an annual resolution, "On Combating Defamation of Religions," put forward by the Organization of the Islamic Conference, a group of 57 states with large Islamic populations. The resolution condemns what it calls "defamation of religions" — a vague notion that can perhaps best be described as a form of expression that offends another's religious sensibilities — and urges countries to enact laws that prohibit such forms of expression. The resolutions are part of a larger and dangerous campaign to create a global blasphemy law to combat what Muslim leaders refer to as "Islamophobia." **Such a campaign is deeply flawed from a human rights perspective, both in its equation of religious discrimination (a legitimate human rights violation) with the vague concept of defamation, as well as in the proposed remedy of imposing legal limits on freedom of expression.** A recent Freedom House report looking at blasphemy laws in seven countries documents the negative impact of such laws on a range of fundamental human rights, while noting how such laws actually contribute to greater interfaith strife and conflict. Because no one can agree on what constitutes blasphemy, **laws that attempt to ban it are themselves vague, highly prone to arbitrary enforcement and are used to stifle everything from political opposition to religious inquiry. Particularly when applied in countries with weak democratic safeguards — e.g., strong executives, subservient judiciaries, corrupt law enforcement — blasphemy laws do nothing to achieve their supposed goals of promoting**

religious tolerance and harmony and instead are **disproportionally used to suppress the freedom of religious minorities** or members of the majority religion that hold views considered unorthodox. In Pakistan, for example, Christians and Ahmadiyya (Muslims who do not believe Muhammad was the final prophet) make up only 2 percent of the population, but have been the target of nearly half of the more than 900 prosecutions for blasphemy in the past two decades. The remaining prosecutions have been made against Muslims themselves, often simply as an easy way to settle personal scores that have nothing to do with religion. Mere accusations of blasphemy have led to mob violence in which people have been maimed or killed and whole communities devastated. The governments of countries that already have such problematic laws on the books are precisely those countries leading the charge to create an international blasphemy law through the United Nations. The motivations of states like Egypt, Pakistan and Saudi Arabia — countries with appalling records on religious freedom and broader human rights — are unquestionably hypocritical and have more to do with their desire to score points with unhappy domestic populations and religious extremists than the desire to foster religious tolerance. Support for blasphemy laws is high among the general public in the Islamic world. Even the staunchest advocates of human rights in the Middle East, individuals who are openly critical of their corrupt and authoritarian leaders, balk at the idea that the publication of the Danish cartoons or the burning of a Koran should be protected forms of freedom of expression. In a part of the world where one's religion is as key to one's identity as nationality and race, most people simply view such forms of expression as a bigoted attack on their very existence. Such views are bolstered by the need to better address the real issues of discrimination and violence against individuals because of their religious beliefs, even in established democracies. It is a fact that political parties espousing xenophobic and anti-Islamic views in Europe have gained in both popularity and representation, and that legal policies have been enacted that most human rights organizations rightly see as restricting the fundamental rights of Muslims to practice their religious beliefs. It is also a fact that many of the same people who defended the Danish cartoons as an important form of free expression somehow feel perfectly justified in criticizing the plans to build an Islamic Center near the site of the World Trade Center because it offends them. Yet hypocrisy in Europe and the United States does not justify attempts to bring governmental oversight into what constitutes offensive expression. Even with the best intentions, which are often lacking, governments should never be in the business of policing speech. The tools of defeating intolerance, including religious intolerance, start with a legislative environment that protects people's fundamental political rights and civil liberties, including freedom of expression. Blasphemy laws don't work in any context and U.N. member states should reject them unconditionally.

Circumvention – Fusion centers

**Note: don't read against strict standards SWS version*

Fusion centers monitor lawful religious activity

Patel and Price '12 Faiza Patel serves as co-director of the Brennan Center's Liberty and National Security Program; Michael Price serves as counsel for the Brennan Center's Liberty and National Security Program (10/18/12, Faiza Patel, Michael Price, Brennan Center for Justice, "Fusion Centers Need More Rules, Oversight", <https://www.brennancenter.org/analysis/fusion-centers-need-more-rules-oversight>)

Instead of looking for terrorist threats, fusion centers were monitoring lawful political and religious activity. That year, the Virginia Fusion Center described a Muslim get-out-the-vote campaign as "subversive." In 2009, the North Central Texas Fusion Center identified lobbying by Muslim groups as a possible threat. The DHS dismissed these as isolated episodes, but the two-year Senate investigation found that such tactics were hardly rare. It concluded that fusion centers routinely produce "irrelevant, useless or inappropriate" intelligence that endangers civil liberties. None of their information has disrupted a single terrorist plot. These revelations call into question the value of fusion centers as currently structured. At a minimum, they underscore the need for greater oversight and clearer rules on what information fusion centers collect and disseminate. Of course, effective information sharing is critical to national security. But as the Senate investigation demonstrates, there is little value in distributing information if it is shoddy, biased or simply irrelevant. When fusion centers feed such information into the echo chamber of federal databases, they only compound mistakes and clog the system. The DHS has failed to create effective mechanisms or incentives for quality control.

Instead, **fusion centers collect and share information according to their individual standards, which vary considerably. These rules often permit information to flow to federal agencies that has no connection to criminal activity** — let alone terrorism. This creates the risk that intelligence networks will become saturated with poor or irrelevant information as well as lend undue credibility to inaccurate data. The Senate report showed that these risks are not just theoretical. **Fusion centers need explicit and consistent rules.** The DHS should ensure that the information the centers collect and distribute is relevant, useful and constitutional by requiring them to show some reasonable suspicion that criminal activity is afoot. This is not a particularly high bar to clear. The reasonable suspicion standard is familiar to every police officer. The requirement would serve as an important bulwark against privacy and civil rights violations, but it would also keep meaningless information out of the system. Without such well-defined and familiar standards, as the Senate report demonstrates, fusion centers are left rudderless. In addition, fusion centers must have active, independent oversight. While Congressional inquiries are important for exposing problems, the Senate should not have been the first governmental body to take a critical look at fusion centers. At the state and local level, **there is often no mechanism to ensure that fusion centers are generating useful information or complying with the law.** At the federal level, the DHS is responsible for verifying that the data shared by fusion centers meet certain minimum standards. But **the DHS has delegated this responsibility to the centers themselves and has not conducted independent audits. DHS oversight has been so poor that the department could not even say how much money it has spent** on fusion centers, estimating the cost at somewhere from \$289 million to \$1.4 billion.

Fusion centers guarantee profiling will continue post-plan

Constitution Project '12 The Constitution Project (8/15/12, The Constitution Project, “RECOMMENDATIONS FOR FUSION CENTERS”,

<http://www.constitutionproject.org/pdf/fusioncenterreport.pdf>

2. Reports of Political, Racial and Religious Profiling Despite these constitutional principles, there have been numerous anecdotal reports of incidents in which fusion centers have targeted individuals in the United States for surveillance and investigation based solely on beliefs and characteristics that are protected by the First and Fourteenth Amendments. Although federal guidance to fusion centers cautions against profiling, these incidents demonstrate that significant additional guidance, training and oversight are crucial to ensure that fusion centers and other law enforcement agencies do not engage in racial, religious and political profiling.⁴¹ Recent **reports from across the country bear testament to the potential for problematic profiling at fusion centers, particularly regarding bulletins and intelligence reports circulated by fusion centers.** These are a few examples: • **The February 2009 “Prevention Awareness Bulletin,” circulated by a Texas fusion center, described Muslim lobbying groups as “providing an environment for terrorist organizations to flourish”** and warned that “the threats to Texas are significant.” The bulletin called on law enforcement officers to report activities such as Muslim “hip hop fashion boutiques, hip hop bands, use of online social networks, video sharing networks, chat forums and blogs.”⁴² • A Missouri-based fusion center issued a February 2009 report describing support for the presidential campaigns of Ron Paul or third party candidates, possession of the iconic “Don’t Tread on Me” flag and anti-abortion activism as signs of membership in domestic terrorist groups.⁴³ • **The Tennessee Fusion Center listed a letter from the American Civil Liberties Union (ACLU) to public schools on its online map of “Terrorism Events and Other Suspicious Activity.”** The letter had advised schools that **holiday celebrations focused exclusively on Christmas were an unconstitutional government endorsement of religion.**⁴⁴ • **The Virginia Fusion Center’s 2009 Terrorism Risk Assessment Report described student groups at Virginia’s historically black colleges as potential**

breeding grounds for terrorism and characterized the “diversity” surrounding a military base as a possible threat.⁴⁵

Circumvention – NYPD

Local Surveillance like the NYPD is Islamophobic

Kane 13 (Alex Kane is an assistant editor for the news website Mondoweiss, which covers the Israel–Palestine conflict, and the World section editor at AlterNet. His work has also appeared in Salon, The Daily Beast’s “Open Zion” blog, Vice, BBC Persian, +972 magazine, the Electronic Intifada, Extra!, and Common Dreams, Kane is citing the book “Enemies Within” by Matt Apuzzo and Adam Goldman, “Alex Kane on Enemies Within : Inside the NYPD’s Secret Spying Unit and bin Laden’s Final Plot Against America”, October 24th, 2013, <http://lareviewofbooks.org/review/raking-the-coals-islamophobia-surveillance-targeting-and-the-nypds-secret-spying-unit>)

Like the NYPD, the FBI has used its own power to pressure Muslims into becoming informants in exchange for help. According to the American Civil Liberties Union, the FBI has told Muslim-Americans trapped abroad because of their inclusion on a no-fly list that they could get off easily — by spying on their own communities back home in the US. For all the oversight of the FBI — something the NYPD doesn’t have to contend with — parts of the federal agency still view Muslims as targets for spying rather than partners in the fight against terrorism. Far from an aberration in America's post-9/11 landscape, the NYPD is merely the most extreme example of a law enforcement apparatus running roughshod over the rights of Muslim Americans.[¶] What's also missing from Apuzzo and Goldman’s otherwise excellent exposé of **the NYPD is the larger political context in which the spying took place. The NYPD's logic is Islamophobic at its core: all Muslims are deemed potential terrorists until they're proven not to be, an inversion of how law enforcement is supposed to work.** Yet there's little exploration of how Islamophobic discourse from the media and elected officials contribute to the implementation and acceptance of spying targeting Muslims.[¶] In the same year that **Apuzzo and Goldman began reporting on the NYPD's Intelligence Division, New York Republican Peter King set up House hearings to probe “radicalization” among Muslim-Americans — a transparent attempt to cast aspersions on one particular community.** In 2010, anti-Muslim blogger Pamela Geller worked the national media into a frenzy over what was inaccurately labeled the “Ground Zero mosque.” **King, Geller and other prominent figures who demonized Muslims directly after 9/11 opened up space for institutions with even more power, like the police, to move a discourse of bigotry into policies of bigotry. In an atmosphere where anti-Muslim sentiment largely went unchallenged, it's no surprise that hardly an eye was batted when the NYPD hired CIA officials to implement an intelligence collection program aimed at law-abiding citizens.**[¶] The book presents an undeniably damning portrait of the NYPD’s surveillance operation. Now, it’s up to the courts and lawmakers to decide whether these operations are legal or prudent. Three federal lawsuits are being pursued in reaction to Apuzzo's and Goldman's groundbreaking investigations. The next New York City mayor will have to grapple with the question of continuing or halting the spy operations. Judges and elected officials will have a documented record on which to look back to decide these weighty questions in the coming months: Enemies Within.[¶]

Surveillance is heavily biased– It is assumed that Muslims are terrorists

Khalek 14 (Rania Khalek is an independent journalist reporting on the underclass and marginalized communities, “How NSA Spying Impacts Muslim Communities and Cultivates Islamophobia”, January 26, 2014, <http://raniakhalek.com/2014/01/26/how-nsa-spying-impacts-muslim-communities-and-cultivates-islamophobia/> -JD)

RANIA KHALEK: That's a really good point that you make and I actually want you to touch on that a little bit more about how **the vilification and demonization of Muslims inside the United States and foreign has really been used to justify this type of mass surveillance and in some cases it seems to have worked. All you have to do is say terrorist, Islamic terrorism and people are like, oh okay.**

Could you talk a little bit about that?¶ ABBAS: I agree wholeheartedly that **the fear of Islam, the fear of Muslims, is a notion I think has been cultivated by policy choices at the federal level. The use of airport screenings, that inevitably cultivates and reflects the bias that people have against Muslims, has** I think **created space for an anti-Muslim movement to take root.** Right after September 11, you didn't

have your Act for America's, your David Yerushalmi's, your Center for Security Policy's—**this well-organized, well-financed movement dedicated towards marginalizing Muslims and that gave rise to essentially an engine of generating anti-Muslim sentiment that creates this terrible and despicable cycle** where now you have the overt argument being made that Muslims are here in the United States to abrogate the US constitution, to overthrow the US government and replace it with Sharia law, which couldn't be further from the truth.¶ As the facts would have it, the American Muslim community is a well-educated, well-integrated and looking to continue to do so in the world. You can't identify an American Muslim radical voice in the United States, whereas if you go to Europe, you can find people that have a platform that say despicable objectionable things. In the US, that's just not the case.¶ But we still have in the US, which is really exporting anti-Muslim sentiment to other parts of the world especially Europe, we still have this fear of Islam that absolutely does give rise to justify these surveillance policies.¶ GOSZTOLA: So for people who are hearing this debate and they maybe think it's kind of abstract, we've been hearing people talk about collection of the information and then we've been hearing about how the information is stored. And right now when we're talking about the program under the Patriot Act, the Section 215 program, which is the bulk records collection of the phone records, it's all about who's going to hold it, who's going to store it, and it's kind of like we're not talking about the collection. I'd like you to talk about why the collection would be really bad and I think a thing you could address is how the collection of people's information in Muslim communities in New York is a huge deal for them and collecting that information is the beginning of the injustice.¶ ABBAS: Absolutely. What we know a lot about now regarding the NSA's surveillance programs is what is collected,

some of the searching mechanisms that can be utilized to sift through the collected information. But what **we really get to see in more granular detail with the NYPD's specifically designed Muslim surveillance program is how indiscriminately collected information gets utilized and what people in positions of authority that can collect such information think is an appropriate use of taxpayer dollars.** And what we find is that **the NYPD thought it was absolutely worth taxpayer money to send their agents on camping trips of 19 and 20-year-old college students. They thought it was absolutely critical for them to map the Muslim community in Newark, New Jersey, and beyond, identifying every halal grocery store, every halal restaurant.** These things are laughable when we see them up close and in granular detail and just like the PCLOB board has determined itself, a board that was authorized by Congress years ago, that the sifting through everybody's information on an ongoing basis actually is not only objectionable in itself but it's not productive by any criteria.¶ So you have for instance James Clapper arguing that there's the 'piece of mind' quotients that is part of the benefit of their surveillance program because we're monitoring everything. At the very least we know that nothing is happening. But this mentality that gave rise to the NSA program is really the objectionable thing that needs to end because it gives rise to not only indiscriminate collection of information automatically through these telecommunications companies, but it's also given rise to a network of 15,000 FBI informants that have saturated the Muslim community across the country, that are sent to mosques without any type of criminal predicate just to collect information because there's a sense that that's where the problem. And that's the inevitable result of indiscriminate collection. It's always going to be the case that indiscriminate collection—in addition to not being productive—will lead to despicable consequences.¶ And I'll end my answer here.¶ The saddest thing I've ever heard as a CAIR staff attorney, and I hear lots of sad things, was when **a young guy told me that when he goes to the mosque to pray, his mom warns him to be careful. And the mom warns him to be careful because there's an understanding based on experience that the mosque is likely filled with informants and infiltrators that are not there to make us any safer but there to extract information from innocent Americans by any means necessary.**¶

NYPD surveillance of Muslim communities increasing in the status quo

Martini 13 (Judge Williams Martini, United States District Court/Eastern District of New York, 6/18/2013)

As documented extensively in the NYPD's own records, **its Intelligence Division has singled out Muslim religious and community leaders, mosques, organizations, businesses, and individuals for pervasive surveillance that is not visited upon the public at large or upon institutions or individuals belonging to any other religious faith. That surveillance has included the mapping of Muslim communities and their religious, educational, and social institutions and businesses in New York**

City (and beyond); deploying NYPD officers and informants to infiltrate mosques and monitor the conversations of congregants and religious leaders without Any suspicion of wrongdoing; and conducting other forms of suspicionless surveillance of Muslim individuals, organizations, and institutions, including through the use of informants and monitoring of websites, blogs, and other online forums. Information collected from these activities has been entered into intelligence databases. According to the commanding officer of the NYPD's Intelligence Division, its mapping activities have not generated a single lead, nor led to a single terrorism investigation. The NYPD's mapping efforts specifically excluded non-Muslims from law enforcement scrutiny. For example, the Intelligence Division's Demographics Unit mapped Iranian community institutions in one NYPD document, but specifically noted when those persons and institutions were Jewish or Christian—not Muslim—and therefore not of interest to the NYPD. In a report mapping the Egyptian community in 2007, the NYPD noted that Coptic Christian Egyptians were "the majority of the Egyptian community in New York City. This report does not represent the Coptic Egyptian community and is merely an insight into the Muslim Egyptian community of New York City." Similarly, in its 2007 map of the Syrian community in New York City, the NYPD stated that the community is "divided into two parts, a Jewish Syrian and a Muslim Syrian community with the Jewish community being the larger of the two. This report will focus on the smaller Muslim community." Although the NYPD acknowledged the religious diversity in New York's Albanian population, police officials only mapped and photographed Albanian mosques for the NYPD's Demographics Report on Albanians. The NYPD dispatched teams of plainclothes officers known as "rakers" into neighborhoods with concentrated communities associated with Muslim "ancestries of interest" to monitor daily life in those communities. In addition, the NYPD has engaged informants to conduct suspicionless surveillance of Muslims. So-called "seeded" informants work or reside in certain ethnic neighborhoods and report to the police on neighborhood happenings. "Directed" informants gather information from locations that rakers have identified as "hot spots," notwithstanding the absence of any indication of criminal activity. Among the institutions on which the NYPD has specifically focused its suspicionless surveillance are mosques, which are central to Muslim religious life. The NYPD identified and mapped more than 250 area mosques in New York and neighboring states, NYPD officials then determined the "ethnic orientation, leadership, and group affiliations" of each mosque, either by surveilling it from the outside, or by entering the mosque to make those determinations. Using rakers and informants, the NYPD identified fifty-three "mosques of concern" in which the Department placed additional informants and plainclothes officers.

NYPD surveillance of Mosques will continue post plan.

Pilkington '13 (Ed, 10-24, "ACLU leads call for federal investigation of NYPD mosque surveillance," Guardian, <http://www.theguardian.com/world/2013/oct/24/aclu-new-york-nypd-mosques-muslims>)

A coalition of 125 civil rights, religious and community groups has written to the Department of Justice, calling for a federal investigation into the blanket surveillance of mosques and other Muslim outlets by the New York Police Department (NYPD). The coalition, which includes the American Civil Liberties Union (ACLU) and the Council on American Islamic Relations (CAIR), is calling on the attorney general, Eric Holder, to use his powers to launch a federal civil rights investigation into NYPD practices. Once any investigation is completed, the Department of Justice could, if it chose, take civil legal action to put a stop to the controversial surveillance dragnet. "For over a decade, the NYPD has engaged in unlawful religious profiling and suspicionless surveillance of Muslims in New York City," the letter says. "The NYPD's biased policing practices hurt not only Muslims, but all communities who rightfully expect that law enforcement will serve and protect America's diverse population equally, without discrimination." The NYPD's focus on Muslim communities in

the wake of the 9/11 attacks on the Twin Towers, in 2001, began in 2002 and is ongoing. The city's police commissioner, Ray Kelly, and mayor, Michael Bloomberg, have consistently defended their counter-terrorism strategy. In a series of Pulitzer-prize winning articles, the Associated Press revealed **details of the NYPD's joint surveillance program with the CIA, based on the police department's internal documents. The files showed that the police had designated entire mosques as "terrorism enterprises", allowing them to circumvent normal constraints on surveillance. The department sent undercover officers, codenamed "rakers", into Muslim neighbourhoods, and ran a network of informants known as "mosque crawlers" to monitor sermons – even when there had been no evidence of criminality.** One 2007 NYPD report, titled "Radicalization in the West: the Homegrown Threat", stated that "enclaves of ethnic populations that are largely Muslim often serve as 'ideological sanctuaries' for the seeds of radical thought". **The AP also revealed that since 2003 the NYPD has been mapping New York communities for monitoring, based on whether the local population originates from countries with Muslim majorities.**

TSA-No Enforcement

TSA regulation enforcement is ineffective- Sikh turbans are still invasively searched despite better regulation

Leadership Conference 11

The Leadership Conference, coalition charged by its diverse membership of more than 200 national organizations to promote and protect the civil and human rights of all persons in the United States, "The Reality of Racial Profiling", <http://www.civilrights.org/publications/reports/racial-profiling2011/the-reality-of-racial.html?referrer=https://www.google.com/>, 2011//SRawal

Individuals wearing Sikh turbans or Muslim head coverings are also profiled for higher scrutiny at airports. In response to criticism from Sikh organizations, the Transportation Security Administration (TSA) recently revised its operating procedure for screening head coverings at airports. **The current procedure provides that: All members of the traveling public are permitted to wear head coverings (whether religious or not) through the security checkpoints.** The new standard procedures subject all persons wearing head coverings to the possibility of additional security screening, which may include a patdown search of the head covering. **Individuals may be referred for additional screening if the security officer cannot reasonably determine that the head area is free of a detectable threat item. If the issue cannot be resolved through a pat-down search, the individual will be offered the opportunity to remove the head covering in a private screening area.**⁶³ Despite this new procedure, and TSA's assurance that in implementing it "TSA does not conduct ethnic or religious profiling, and employs multiple checks and balances to ensure profiling does not happen,"⁶⁴ Sikh **travelers report that they continue to be profiled and subject to abuse at airports.**⁶⁵ Amardeep Singh, director of programs for the Sikh Coalition and a second-generation American, recounted the following experience in his June 2010 testimony before the Subcommittee on the Constitution, Civil Rights, and Civil Liberties of the House Judiciary Committee: Two months ago, my family and I were coming back to the United States from a family vacation in Playa Del Carmen, Mexico. At Fort Lauderdale Airport, **not only was I subjected to extra screening, but so was [my 18 month-old son Azaad].** I was sadly forced to take my son, Azaad, into the infamous glass box so that he could [be] patted down. He cried while I held him. He did not know who that stranger was who was patting him down. His bag was

also thoroughly searched. His Elmo book number one was searched. His Elmo book number two was searched. His minimail truck was searched. **The time spent waiting for me to grab him was wasted time. The time spent going through his baby books was wasted time.** I am not sure what I am going to tell him when he is old enough and asks why his father and grandfather and soon him—**Americans all three**—are **constantly stopped by the TSA 100% of the time at some airports.**

Government action has empirically failed to avoid racial profiling in airports individual action is key.

Chandrasekha 3 (Charu A. Chandrasekha, Writer for Asian American Law Journal Volume 10 Issue 2 Article 4 Flying while Brown: Federal Civil Rights Remedies to Post-9/11 Airline Racial Profiling of South Asians, <http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=1014&context=aalj>)

In response to similar incidents, less than a month after 9/11 **the Department of Transportation ("DOT") issued several strong directives banning airlines from racially profiling their customers.**¹
4 The DOT instructed airlines: Do not subject persons or their property to inspection, search and/or detention solely because they appear to be Arab, Middle Eastern, Asian, and/or Muslim; or solely because they speak Arabic, Farsi, or another foreign language; or solely because they speak with an accent that may lead you to believe they are Arab, Middle Eastern, Asian, and/or Muslim. This directive contained detailed instructions for performing passenger security checks on Sikh men wearing turbans and Muslim women wearing headcoverings to avoid violating these passengers' civil liberties and religious beliefs.¹⁶ **In spite of these efforts, the airlines persisted in discriminating against South Asian passengers who posed no apparent flight risks.**⁷ Some victims of these activities have sought legal redress for the harms they suffered. Notably, in June 2002, the American Civil Liberties Union ("ACLU") and Relman & Associates, a Washington, D.C.-based civil rights law firm, jointly filed five individual lawsuits against American Airlines, Continental Airlines, Northwest Airlines, and United Airlines on behalf of five passengers ejected from their flights.⁸ Although the airlines contended that these passengers posed security risks that justified denying them passage, the ACLU-Relman lawsuits allege that the removals constituted racial profiling tantamount to illegal discrimination.⁹ This Comment will not discuss the merits of the individual ACLU-Relman claims in detail, but rather will use the broad factual and legal issues raised by the cases to examine the legal redress available to South Asian airline passengers who were ejected from flights, as well as those who suffered disparate treatment but were ultimately granted passage. It examines the viability of claims alleging violations of 42 U.S.C. § 1981 ("section 1981")² and Title VI of the Civil Rights Act of 1964 ("Title VI")² 1 as an aspect of South Asian American and other community responses to post 9/11 racial and ethnic violence.

The aff does nothing –The CBP, TSA, and ICE will still be allowed to use racial profiling-

Horwitz 14

Sari Horwitz, covers the Justice Department and criminal justice issues nationwide for The Washington Post, where she has been a reporter for 30 years, 12-5-2014, "Racial profiling will still be allowed at airports, along border despite new policy," *Washington Post*, http://www.washingtonpost.com/politics/racial-profiling-will-still-be-allowed-at-airports-along-border-despite-new-policy/2014/12/05/a4cda2f2-7ccc-11e4-84d4-7c896b90abdc_story.html//SRawal

In recent months, **DHS officials pushed** the White House and Justice Department **to allow major exclusions for prominent DHS agencies such as the TSA, Immigration and Customs Enforcement, and Customs and Border Protection, officials said. CBP, for instance, will still be allowed to use racial profiling when conducting inspections at the country’s “ports of entry” and interdictions of travelers at the border, officials said. Some DHS officials also questioned the Justice Department’s authority to set policies for a separate federal agency.** DHS Secretary Jeh Johnson made the case in a series of high-level meetings, **arguing that while his department did not condone profiling, immigration and customs agents and airport screeners needed to consider a variety of factors to keep the nation safe, according to officials familiar with his personal efforts. TSA officials** meanwhile, **argued that they should not be covered by the new limits on the grounds that the TSA is not a law enforcement agency. “We tend to have a very specific clientele** that we look for,” said one federal official involved in immigration enforcement, who spoke on the condition of anonymity to discuss internal deliberations. “If you look at numbers, the vast majority of people we deal with are Hispanic. Is that profiling, or just the fact that most of the people who come into the country happen to be Hispanic?”

Racial profiling in these agencies is still legally allowed- Muslims will be targeted

Rhodan 14

Maya Rhodan, Web Reporter at Time Magazine, 12-8-2014, "New Federal Racial Profiling Guidelines Worry Civil Rights Groups," *TIME*, <http://time.com/3623851/justice-department-racial-profiling-muslims-sikhs-aclu//SRawal>

But some **carve-outs—such as screenings and inspections by the Transportation Security Administration and U.S. Customs and Border Protection—have raised eyebrows among groups including the American Civil Liberties Union, Muslim Advocates and the Sikh Coalition. “It’s baffling that even as the government recognizes that bias-based policing is patently unacceptable, it gives a green light for the FBI, TSA, and CBP to profile racial, religious and other minorities at or in the vicinity of the border and in certain national security contexts,** and does not apply the Guidance to most state and local law enforcement,” said Laura Murphy, the director of ACLU’s Washington legislative office. **Muslim Advocates,** a faith-based legal and educational advocacy organization, **echoed those sentiments. “While these changes are welcome,”** a statement reads, **“it is difficult to see how the guidance will improve the lives of law-abiding American Muslims who are singled out and targeted based on their faith,** not evidence of wrongdoing, **by the FBI, Customs and Border Protection, and other law enforcement agencies.”** **The Department of Justice guidelines do not apply to activities conducted by military, intelligence or diplomatic personnel.** Border screening activities are also not covered, which has been of particular concern to civil rights groups. After 9/11, sweeping counterterrorism efforts were imposed that led Arab and Muslim Americans—and some perceived to be Muslim or Arabic such as South Asians and Sikhs—to feel singled out and profiled by the federal government. A 2009 ACLU and Rights Working Group report found that **Arabs, Muslims and South Asians “have been disproportionately victimized through various government initiatives” including FBI surveillance, questioning, airline profiling and no-fly lists.**

Alt cause- the No Fly list disproportionately targets Muslim passengers and creates an atmosphere of Islamophobia

Huus 11 (Kari Huus, Fulbright Scholar Taiwan, "Muslim Travelers Say They're Still Saddled with 9/11 Baggage", www.today.com/id/44334738/ns/today-today_news/t/muslim-travelers-say-theyre-still-saddled-baggage/#.VafqhnTWKF4, 9/13/2011, // EMS)

The TSA is also required to conduct secondary screening according to two lists — **the “no-fly” list** and the “selectee” list, which are provided by the Terrorism Screening Center, a division of the FBI.¶ The screening center says **there are 16,000 individuals** — including about 500 U.S. citizens — **on the no-fly list, which bars the individuals on it from flying to, from or within the United States.** Another 16,000 are on the selectee list, which triggers secondary screening.¶ Both are subsets of a consolidated watch list called the Terrorism Screening Database of “known or appropriately **suspected terrorists.**” The number of names in the database fluctuates, but at present it names 420,000 individuals, about 2 percent of them Americans, the screening center says. The FBI distributes relevant subsets of the database to different frontline agencies such as TSA, CBP, financial watchdogs and law enforcers. **Even people stopped for traffic violations can be quickly checked against the list.**¶ Each agency “must comply with the law, as well as its own policies and procedures to protect privacy rights and civil liberties,” the screening center said.¶ The effectiveness of the lists came into question after an attempted bombing of an airliner on Christmas Day 2009, when Nigerian Umar Farouk Abdulmutallab, who was not on either watch list, tried to detonate plastic explosives on a flight from Amsterdam to Detroit. Ultimately he hurt only himself, but the scare prompted the screening center to expand the criteria it uses to populate the no-fly list.¶ By design, none of the criteria that land an individual in the database or on the watch lists is made public.¶ **“People are put on the watch list based on a series of criteria,”** said Sheldon Jacobson, a security expert and computer science professor at University of Illinois at Urbana-Champaign. **“Nobody really knows them. They are very secret and they keep evolving. In many ways (the government) has to keep it private because if they give it out, people will game the system.”**¶ **That secrecy presents a conundrum for many people who believe they are on a list and do not belong there.**¶ **Some of the cases involve mistaken identity because a traveler possesses a common name like Mohammad** — the Arabic equivalent of Smith. As a result, some civil rights lawyers believe that **the lists affect two to three times as many fliers as are legitimately on them.**¶ Marooned **One of the most chilling cases surrounding the no-fly list is that of Gulet Mohamed, a 19-year-old American citizen of Somali heritage.**¶ **Mohamed had been visiting family in Yemen and Somalia — two countries with active Islamist terrorist groups. When he went to the Kuwait airport to extend his visa in December, he was arrested and taken to a detention facility, where he was blindfolded, questioned and beaten by unknown agents,** according to his lawyer, Gadeir Abbas.¶ The questioners were especially interested in information about Anwar al-Awlaki, a dual U.S. and Yemeni citizen turned Islamic extremist in Yemen, Abbas said. Mohamed insisted he had no information and, after a week, Kuwait ordered his deportation.¶ But **when he tried to board a flight to the United States, he was told he was on the no-fly list.** Only after Abbas filed a lawsuit on his behalf in January was Mohamed allowed to return home to Virginia.¶ Mohamed is pursuing a claim for damages and to be removed from the list. The federal government wants the case thrown out on the grounds that it is irrelevant now that he is back in the U.S. Meantime, it will not confirm if he is on the no-fly list. The lawsuit is pending, after a judge moved it to a circuit court on jurisdictional grounds.¶ “It’s this very Kafkaesque world where no one has charged (people on the list) with any crime ... but they can see its effects,” said Abbas, an attorney with CAIR. “... His case is the most heinous example of what the no-fly list can do.”¶ Other pending court cases allege that **Muslim American travelers have encountered similar violations of their rights, including some who were forced to take thousand-mile circuitous land routes to get back into the U.S. or were stuck overseas for weeks or months** until lawyers here took up their cases.¶ The ACLU, which argues that the watch list system is unconstitutional, has filed a lawsuit against the Justice Department, the FBI and the Terrorist Screening Center naming 20 people — 18 U.S. citizens and two permanent residents — who allegedly have been prevented from boarding airline flights to or from the U.S. The plaintiffs say they were told by security or airline staff that their names were on the no-fly list.¶ **“Thousands of people have been barred altogether from commercial air travel without any opportunity to confront or rebut the basis for their inclusion, or apparent inclusion” on the no-fly list," the lawsuits says. "The result is a vast and growing list of individuals whom, on the basis of error or innuendo, the government deems too dangerous to fly,** but too harmless to arrest.”¶ In response,

the government objected on jurisdictional grounds and argued that the policy does not violate the constitutional rights of the travelers because “they have not been denied the right to re-enter and reside in the United States, nor have they been denied the ability to travel.”¶ But critics of the list note that in cases like that of the lead plaintiff, Ayman Latif, a 33-year-old U.S. citizen and disabled Marine Corps veteran, that would have meant weeks of travel from the Middle East to the United States by sea and land, at considerable additional expense.¶ The U.S. District Court in Portland, Ore., dismissed the case on jurisdictional grounds, ruling that it should go instead to an appeals court. The ACLU is appealing that decision.¶

Islamophobia exists at every level of the airport system- changing one TSA program can't solve.

Bazian 14 (Hatem, “The ‘Randomness’ of Islamophobia at US Airports,” TurkeyAgenda.com. Bazian has a Ph.D in Philosophy and Islamic Studies from UC Berkeley and is a professor and co-founder of Zaytuna College. They are also a senior lecturer at UC Berkeley. <http://www.turkeyagenda.com/the-randomness-of-islamophobia-at-us-airports-1111.html> // EMS).

In June 2014, **I traveled to Qatar to attend and present a paper at a conference focusing on Arab-US relations** hosted by the Arab Center for Research and Policy Studies, right before heading to Granada, Spain, to teach a summer course on Muslims in the West from pre-1492 to the present. The conference was well attended and had academic, non-academic, and participants from across the Arab world, Europe and the United States.¶ While it would be worthwhile to write a summary of the conference proceedings, this article is not about the gathering itself but the journey back, which was very eventful **as I came face to face with the ‘randomness’ of four largely printed SSSS on the face of my ticket.** For those well acquainted with this procedure, it means **you have been selected to ‘randomly’ be searched, given the necessary full-body pat down or “massage” as well as asked multiple questions at various moments by different people.**¶ My initial alarm went off when I was unable to check-in online for my flights and was directed on the computer screen at the hotel to go to the counter at the airport in the morning as the ticket required special agent handling. Once at the Frankfurt airport in Germany, **I was asked to accompany the agents and was subject to full body search, complete luggage check, computer and phone turned-on and off, questions about where I traveled, whom I met and what business I had** in Qatar and Spain.¶ This process took sometime and **I was close to being the last allowed to board the plane, even though I was one of the early arrivals at the airport.** The agents responsible for the secondary screening and body search were nice throughout the process but made small talk referring to the places that I traveled to and the concern it raised, which they thought I surely would understand considering the circumstances. I did respond by confirming that I completely understood the ‘randomness’ of Islamophobia and the need for extra security measures for someone attending an academic conference on Arab-US relations.¶ The flight from Frankfurt to San Francisco took 11 hours and I arrived around 7:49pm but had already prepared myself mentally for the questions to come due to the four largely printed SSSS ‘randomly’ appearing on the face of my ticket. I was quick out of the plane and into the passport line, **Sure enough, the process unfolded with a directive to go to another room at the end of the hall because I was ‘randomly’ selected for the extra special secondary screening.**¶ I followed the instruction and headed to the room at the end of the hall and gave my passport and ticket to the agent who directed me to sit down and wait to be called back to the counter. **I could only see a few Muslims in the room,** a Pilipino man with his family (I do not know if he was a Muslim) and no one else ‘randomly’ selected for this honor of questioning upon landing in San Francisco airport. In this context, **one gets a clearer image of the narrowly constructed security apparatus giving the impression of randomness but which in reality is laser focused on Muslims.** Flying while Muslim is riving or walking like Black in today’s America. **How are the names selected and what constitute a threat that warrant such secondary screening?**¶ After some time sitting and waiting, I was called-up to the counter and an interview soon got underway. **I** have to say part of me was laughing while the other **was getting angry at the questions and the racist nature implied in each one.** I was asked the same set of questions from the Frankfurt encounter then another line of interrogation began to unfold. “Did you meet any tribes on your travel?” I said, “Tribes like the fans of the 49ers or the Raider’s Nation?” I asked the person doing the interrogation, “what do you mean by tribes’ as I don’t know what you are talking about?” He responded, “you know what I mean by tribes.” I said, “no, I don’t know what you mean and when I met people on my travel I did not ask if they belonged to a tribe and what tribe it was. I attended an academic conference on Arab-US Relations held at the Doha’s Ritz Carlton Hotel, a Western company and they do not have an area on the registration for tribal affiliation or a tea-coffee time to meet the local tribes.”¶ After a back and forth on the tribe issue **he asked “whether I visited any suspicious countries during my travel?”** I asked if he could tell me what a suspicious country is so I can determine whether I did or did not

undertake such a trip since the countries I visited did not identify themselves as such at the airport or when I got the passport stamped. His response was again “you know what I am asking!” I said, “no, I don’t know what you are talking about and need you to define what a suspicious country is then I can answer your question.” After a back and forth on this few times he decided to drop it and went to ask questions about my work, employment, University of California, Berkeley summer course etc. The process took a while and afterward I was directed to collect my luggage and head to the customs section, which I thought would be easy and straightforward but it was not the case.¶ With my luggage in hand, **three custom officers directed me to place my bags on the counter and to step back so they could begin careful examination of all my items. They went ahead and searched it carefully examining each piece by hand and also took bomb swabs for tests.** I thought this would be the end of it but I encountered another round of questioning in the same pattern experienced in the earlier two stops. This time the focus was more on the officers wanting names of people and my contacts on the ground in Qatar and Granada, Spain and my relationship to each.¶ I did ask if it was Qatar or Spain that was a suspicious country to cause all this careful examination! If Qatar were the suspicious country then why would it be the case considering the U.S. Central Command’s Forward Headquarters and the Combined Air Operations Center are located in the country and I and other US citizens should have been warned about visiting the country in the first place and does this apply to all American civilians who work in and travel regularly to Doha!¶ **What I experienced is the norm for many American Muslims traveling through US airports on international and some also when flying domestically. The ‘random’ selection process is intended to produce a virtual internment feeling in the American Muslim community and engender a certain level of fear that is then cultivated to produce cooperation on a variety of domestic and international policies.¶ More critically, the monitoring structure and the secondary screening is a form of racial profiling based on religion but is pushed and rationalized under the war on terrorism rubric, which has witnessed a massive abrogation of civil and human rights in the US and abroad.** In a random unscientific poll of about 10 American Muslim leaders, each one of them said they faced the same ‘random’ screening at the airport and a few even upon returning from a State Department Public Diplomacy sponsored trip to the Muslim world. Thus, even when Muslims are working to support US soft power project in the Muslim world they are subject to this extra special treatment at the airport.¶ The challenge at this point is how to confront this security structure that has become normalized and developed a large bureaucratic infrastructure around it employing hundreds of thousands with billions allocated to sustain it. **Muslims today are living in a security fish bowl and everything they do, be it at the individual or community levels, are being watched since they collectively have been identified as the ‘archetypal terrorist’ and all measures are accepted in defending the society from him/her.¶ We can ask today how it feels to be treated like a prisoner while being free: the randomness of Islamophobia at the airport is a case in point and the current ‘war on terrorism’ has managed to problematize and criminalize Muslims across the globe and treating all as guilty until proven innocent.**¶

Solvency

AT – Strict Scrutiny

Strict Scrutiny is inconsistent and arbitrary – status quo solves better.

Riccucci 7 (Norma Riccucci, Rutgers University, June 2007, “Moving Away From a Strict Scrutiny Standard for Affirmative Action Implications for Public Management”, <http://arp.sagepub.com/content/37/2/123.short>)

This article addresses the concept of strict scrutiny, the burden of persuasion test used by the courts to determine the constitutionality of affirmative action. Through a systematic analysis of U.S. Supreme Court decisions, **it illustrates that strict scrutiny has been applied in an inconsistent, arbitrary manner and, therefore, should not serve as the basis for judicial review of affirmative action programs.** It shows that the rule of law established under the Civil Rights Act provides an equally if not more compelling basis for judging the legality of affirmative action programs. Relying

on the legal standards advanced by the courts under civil rights statutes provides managers with greater flexibility in developing and implementing affirmative action programs. In effect, the ability of governments to promote diversity of their workforces is greatly enhanced.

Strict scrutiny gets an unequivocal F.

Riccucci 7 (Norma Riccucci, Rutgers University, June 2007, "Moving Away From a Strict Scrutiny Standard for Affirmative Action Implications for Public Management", <http://arp.sagepub.com/content/37/2/123.short>)

The constitutional litmus test for judging affirmative action is a failure—it gets an unequivocal “F.” It lacks reliability, validity, and hence legitimacy, characteristics that even the most basic civil service tests are required to demonstrate. More over, it becomes almost impossible for policymakers in educational or employment settings to develop affirmative action policies that will meet some rule of law, when those rules are hollow and inconstant. It must be questioned at this point in the history of affirmative action: why does the Court continue to wrestle with appropriate standards of review, when it will ultimately disregard those standards on a whim or apply them in an erratic, illogical manner? Perhaps strict scrutiny is simply one area where the Court will expressly continue to “legislate from the bench.” As argued here, the framework advanced under Title VII is much less cryptic, arcane, and mercurial, and therefore, could be applied more broadly to all questions of law concerning affirmative action programs and policies. This will greatly facilitate the work of managers and policymakers who are striving to create culturally diverse environments for public employees and students in public universities. As the composition of the Supreme Court has changed since the 2003 Grutter ruling, it becomes imperative for public administrators and policymakers to engage in a dialogue around the irrelevance of strict scrutiny.

Strict scrutiny doesn't work in context of Muslims.

Figueroa 12 (Tiffani B. Figueroa, associate in Morrison Foerster's Litigation Department, J.D. magna cum laude from Hofstra University School of Law, "ALL MUSLIMS ARE LIKE THAT": HOW ISLAMOPHOBIA IS DIMINISHING AMERICANS' RIGHT TO RECEIVE INFORMATION, Hofstra Law Review, Winter 2012)

As discussed above, the fear of Muslims or those perceived as Muslim has resulted in the government's failure to protect Americans' First Amendment right to receive information. n332 The strict scrutiny test [*499] that courts normally employ when assessing the content-neutrality of a regulation on speech has not been effective in light of the increased development of Islamophobia. n333 Following the 9/11 attacks, Islamophobia has impacted the free speech rights of Muslims and the mobility of foreign scholars, as well as the right to receive information for all Americans. n334 "In an age of official insecurity and anxiety, the most difficult constitutional problem may not be controlling arbitrariness in permitting, but compensating for a chronic tendency to overestimate the likelihood of any damage to public security from public exercises of freedom of speech." n335 Given the current state of events and the vulnerability of the right to receive information, a new standard to deal with the right to receive information in times of political controversy is required. In order to resolve this issue of dealing with national security and the right to receive information, courts should adopt a specific test under First Amendment speech analysis where: (1) there is a political conflict and (2) there is a clear group that society and the government targets because of the conflict. As discussed earlier, the government may restrict the content of speech in certain situations; however, it cannot favor one viewpoint over another. n336 The test will essentially focus on the effects of a regulation on speech when a specific group is targeted by the government action. n337 Once the court determines there is a disparate impact on a certain group, the court will then resolve the issue as to whether the government has curtailed the right to receive information through this disproportionate treatment of the specified group. By first looking at the effects of a government action, courts will provide a framework for which they can work through their First Amendment analysis. n338 When dealing with political conflicts, such as [*500] the war on terror, there are often certain groups that are discriminated against through practices that seem constitutional. Such discrimination is not only overlooked, but it has a subsequent effect on all Americans who are willing to explore different ideas other than those the government makes readily available. n339 The government's actions discussed above, such as dealing with speech at a protest, n340 forcing a woman to remove her hijab in prison, n341 and

revoking the visas of foreign scholars n342 serve as examples. These actions appear to be neutral; however, the effects of the actions unevenly target one particular group: Muslims and those perceived as Muslim. n343 It is important that the courts look beyond the language of the laws or government actions in order to gauge whether the government is in fact practicing viewpoint discrimination and violating the First Amendment right to receive information for Americans. n344 When looking at the effects of government actions: A law [may] not discriminate against a particular viewpoint on its face, and there [may be] no evidence of an improper legislative purpose in enacting the law. Within that framework of facial neutrality, however, we must examine restrictions on speech with particular care when their effects fall unevenly on different viewpoints and groups in society. n345 Looking at the effects of regulation on speech is something that the Supreme Court itself has taken into consideration when looking at the right to receive information. n346 As determined in *Martin v. Struthers*, n347 the Court explained that, "in considering legislation which thus limits the dissemination of knowledge, we must "be astute to examine the effect of the challenged legislation' and must "weigh the circumstances and appraise the substantiality of the reasons advanced in support of the regulation." n348 Courts have taken a similar stance in other cases. n349 The [*501] bottom line is: courts must look at the effects of government regulations because laws that have a disparate impact on one viewpoint run the risk of being viewpoint-based. n350 As in the case of Islamophobia, it is easy to target a specific group because some Americans automatically associated the 9/11 hijackers with all Muslims and those perceived as Muslim. n351 Similarly, in the interest of national security, the government at times partook in practices that people may view as discriminatory. The government failed to protect the free speech rights of Muslims as a targeted group, and these actions subsequently harmed the right to receive information for Americans. Although the government's purpose in enforcing the laws discussed in this Note was not to close off Muslim ideas, the effects may show otherwise. n352 Justice Antonin Scalia stated, "the vice of content-based legislation - what renders it deserving of the high standard of strict scrutiny - is not that it is always used for invidious, thought-control purposes, but that it lends itself to use for those purposes." n353 "Unavoidable targeting" stemming from a government regulation is included within this "vice of content-based legislation." This phenomenon may shine light on what has occurred following the 9/11 attacks. By employing an effects test in the First Amendment analysis, courts will more efficiently investigate whether there is viewpoint discrimination affecting the right to receive information since the courts must first establish if a government action falls disproportionately on a specific group. n354 [*502] VI. Conclusion Surely, the government has a highly supported interest in protecting the United States at all times. However, protection should not ensue at the expense of severely limiting civil liberties and substantially restricting the marketplace of ideas. In times of political strife, such as facing terrorism today, the courts' current approach to dealing with First Amendment violations of the right to receive information fails to protect civil liberties. By looking at the discriminatory effects of regulations on speech, the court can protect a thriving marketplace of ideas.

Strict scrutiny can easily be circumvented that destroys the rigor of legal proceedings – turns the case.

Bunker et al. 11 (MD Bunker, Clay Calvert, William C. Nevin, "Strict in Theory, But Feeble in Fact? First Amendment Strict Scrutiny and The Protection of Speech", <http://www.tandfonline.com/doi/abs/10.1080/10811680.2011.603624#.VZV-0-1Vikp>)

Professor Gerald Gunther famously declared strict scrutiny to be "strict' in theory and fatal in fact" in 1972. Although Professor Gunther's pithy and influential slogan may have been a reasonably accurate characterization at that time, strict scrutiny in the realm of the First Amendment is now much less fatal to government regulation of expression. This article explores the beginnings of the strict scrutiny test and the underpinnings of its subsequent dilution. The article examines the multiple ways courts can avoid applying strict scrutiny and argues that compelling state interests are proliferating in a manner that is harmful to robust speech protection. It also critiques the lack of precision in narrow tailoring analysis. The article concludes that First Amendment strict scrutiny has serious weaknesses that threaten to undermine vigorous protection for expression and offers suggestions for increasing the rigor and precision of the doctrine.

Difference between strict scrutiny and rational basis—and explanation by Justice Kennedy

McMillen 06 (Lucas McMillen, University of St. Thomas, “Eye on Islam: Judicial Scrutiny Along the Religious Profiling/Suspect Description Reliance Spectrum”, [http://ir.stthomas.edu/cgi/viewcontent.cgi?article=1107&context=ustlj])

For the issue of religious-group targeting, of course, one must address an issue that Oneonta did not. While Oneonta's issue of racial profiling is a Fourteenth Amendment question exclusively, the issue of religious-group targeting-involving a potentially discriminatory infringement of religious exercise-represents a point of convergence for the protections of the First and Fourteenth Amendments.²⁵ When these two constitutional claims are collapsed, a court's analysis of them collapses as well, such that a court will use the Fourteenth Amendment's analytical framework to evaluate the state's imposition on First Amendment free exercise rights. Put another way, in reviewing a potentially unconstitutional state infringement on free exercise, a court will evaluate the infringement with one of two levels of scrutiny²⁶: it will determine whether the infringement is either (1) rationally related to a legitimate government purpose ("rational basis scrutiny"),²⁷ or (2) whether it is necessary to achieve a compelling government purpose ("**strict scrutiny**").²⁸ The question of which level of scrutiny will be applied is, of course, the crux of the matter, as rational basis scrutiny is enormously deferential, while strict scrutiny has generally proven to be, to quote Professor Gunther, "**strict in theory and fatal in fact.**"²⁹ 1. Level of Scrutiny In *Church of the Lukumi Babalu Aye, Inc. v. City of Hialeah*,³⁰ the Court employed the converged First-and-Fourteenth-Amendment analysis and established that its critical question of scrutiny turns on whether government officials, in imposing upon religious exercise, have done so with intent to suppress the targeted religion-discriminatory intent. At issue in *Lukumi* was the constitutionality of the City of Hialeah's animal sacrifice prohibition, a prohibition contained in a series of ordinances that the city's Santeria practitioners challenged as being a thinly veiled effort to curtail their religious activities.³¹ Justice Kennedy, writing for the *Lukumi* majority, began describing the mechanics of the Court's merged First-and-Fourteenth-Amendment analysis by discussing *Employment Division v. Smith*,³² the case in which the Court gave a rational basis review to an Oregon peyote prohibition that frustrated Native American religious practice.³³ According to Kennedy, *Smith* establishes the first direction that a court can take in the merged analysis: when it finds that conditions similar to those in *Smith* are present-Le., when the state's action is neutrally postured towards religion-a court should review that action with light scrutiny. To this effect, Kennedy wrote, "A law that is neutral and of general applicability need not be justified by a compelling governmental interest even if the law has the incidental effect of burdening a particular religious practice."³⁴ Kennedy then continued, moving on to describe the second direction of the merged analysis, which he deemed to be the proper direction to take in *Lukumi*: when a court finds that the conditions of *Smith* are not met, such that **discriminatory intent is the state action's raison d'etre, the state's action will be subjected to strict scrutiny.** Kennedy worded the second direction this way: "If the object of a law is to infringe upon or restrict practices because of their religious motivation, the law is not neutral; and it is invalid unless it is justified by a compelling interest and is narrowly tailored to advance that interest."³⁵ Ultimately, the Court determined that discriminatory intent lay behind *Lukumi*'s animal sacrifice prohibition-that it "had as [its] object the suppression of religion"-and struck it down as unconstitutional.

Squo Solves

Status quo solves – government is expanding regulations now, but local enforcement won't comply

Apuzzo 14 (Matt, "U.S. to Expand Rules Limiting Use of Profiling by Federal Agents", January 16, http://www.nytimes.com/2014/01/16/us/politics/us-to-expand-rules-limiting-use-of-profiling-by-federal-agents.html?_r=0)

The Justice Department will significantly expand its definition of racial profiling to prohibit federal agents from considering religion, national origin, gender and sexual orientation in their investigations, a government official said Wednesday. The move addresses a decade of criticism from civil rights groups that say federal authorities have in particular singled out Muslims in counterterrorism investigations and Latinos for immigration investigations. The Bush administration banned profiling in 2003, but with two caveats: It did not apply to national security

cases, and it covered only race, not religion, ancestry or other factors. Since taking office, Attorney General Eric H. Holder Jr. has been under pressure from Democrats in Congress to eliminate those provisions. "These exceptions are a license to profile American Muslims and Hispanic-Americans," Senator Richard J. Durbin, Democrat of Illinois, said in 2012. President George W. Bush said in 2001 that racial profiling was wrong and promised "to end it in America." But that was before the terrorist attacks of Sept. 11. After those attacks, federal agents arrested and detained dozens of Muslim men who had no ties to terrorism. The government also began a program known as special registration, which required tens of thousands of Arab and Muslim men to register with the authorities because of their nationalities. "Putting an end to this practice not only comports with the Constitution, it would put real teeth to the F.B.I.'s claims that it wants better relationships with religious minorities," said Hina Shamsi, a national security lawyer with the American Civil Liberties Union. It is not clear whether Mr. Holder also intends to make the rules apply to national security investigations, which would further respond to complaints from Muslim groups. "Adding religion and national origin is huge," said Linda Sarsour, advocacy director for the National Network for Arab American Communities. "But if they don't close the national security loophole, then it's really irrelevant." Ms. Sarsour said she also hoped that Mr. Holder would declare that surveillance, not just traffic stops and arrests, was prohibited based on religion. The Justice Department has been reviewing the rules for several years and has not publicly signaled how it might change them. Mr. Holder disclosed his plans in a meeting on Wednesday with Mayor Bill de Blasio of New York, according to an official briefed on the meeting who spoke on the condition of anonymity because the conversation was private. Mr. de Blasio was elected in November after running a campaign in which he heavily criticized the Police

Department's stop-and-frisk tactic, which overwhelmingly targets minorities and which a federal judge declared unconstitutional. The mayor and attorney general did not discuss when the rule change would be announced, the official said. A senior Democratic congressional aide, however, said the Obama administration had indicated an announcement was "imminent." The Justice Department would not confirm the new rules on Wednesday night but released a short statement saying that the mayor and the attorney general discussed "preventing crime while protecting civil rights and civil liberties." In the past, Mr. Holder has spoken out forcefully against profiling. "Racial profiling is wrong," he said in a 2010 speech. "It can leave a lasting scar on communities and individuals. And it is, quite simply, bad policing — whatever city, whatever state." Officials in the Bush administration made similar statements, however, which is why civil rights groups have eagerly waited to hear not just Mr. Holder's opinion, but also the rules he plans to enact. As written, the Justice Department's rules prohibit federal agents from using race as a factor in their investigations unless there is specific, credible information that makes race relevant to a case. For example, narcotics investigators may not increase traffic stops in minority neighborhoods on the belief that some minorities are more likely to sell drugs. They can, however, rely on information from witnesses who use race in their descriptions of suspects. The rules cover federal law enforcement agencies such as the F.B.I. They do not cover local or state police departments. That is significant because Muslim groups have sued the New York Police Department over surveillance programs that mapped Muslim neighborhoods, photographed their businesses and built files on where they eat, shop and pray. Mr. Holder's comments about the new racial profiling rules came up in a conversation about that topic, the official said. William J. Bratton, the city's new police commissioner, has said he will review those practices. While the rules directly control only federal law enforcement activities, their indirect effect is much broader, said Fahd Ahmed, the legal director of the Queens-based South Asian immigrant advocacy group Desis Rising Up and Moving. For instance, he said, immigration bills in Congress have copied the Justice Department profiling language. And civil rights groups can use the rules to pressure state and local agencies to change their policies. "Federal guidelines

definitely have an impact,” Mr. Ahmed said. “Local organizers can say, ‘These policies are not in line with what’s coming from the federal level.’”

Squo solves – newly established SORC limits religious surveillance

Bullard ’13 (Ben Bullard; June 14, 2013; Personal Liberty; “The FBI Can Pull Back Your Curtain, But Mosques Are Off-Limits”; <http://personalliberty.com/the-fbi-can-pull-back-your-curtain-but-mosques-are-off-limits/>)

Ever since Islamic groups cried out against the FBI’s semi-successful surveillance into terrorist plots that emanated from mosques, the agency has been forced to turn its attention elsewhere in the ongoing campaign to uncover domestic terrorism. In February 2011, the American Civil Liberties Union (ACLU) joined the Council for American-Islamic Relations of Greater Los Angeles in filing a Federal class-action lawsuit against the FBI for infiltrating mosques in Southern California and allegedly gathering general information without probable cause. Regardless of the merits of that suit, the backlash over the Southern California case had a subversive effect on Federal domestic surveillance policy. Later that same year, the Administration of President Barack Obama established a review panel within the Department of Justice called the Sensitive Operations Review Committee, effectively carving out special treatment for the religious, political, journalistic and academic spheres: A sensitive investigative matter (SIM) is defined as an investigative matter involving the activities of a domestic public official or domestic political candidate (involving corruption or a threat to the national security), a religious or domestic political organization or individual prominent in such an organization, or the news media; an investigative matter having an academic nexus; or any other matter which, in the judgment of the official authorizing the investigation, should be brought to the attention of FBI Headquarters (FBIHQ) and other DOJ officials. (Attorney General’s Guidelines for Domestic FBI Operations (AGG-I Dom), Part VILN.) As a matter of FBI policy, “judgment” means that the decision of the authorizing official is discretionary. Whether the FBI should be indiscriminately watching any individual or affiliated group is a matter for a separate article (indeed, we’ve written several of them), and recent scandals showing that the Nation’s vast enforcement empire is doing just that are both loathsome and alarming. But if Obama is going to watch most of us, it’s only fair (and makes a fair amount of sense) that he watch all of us.

No Data Sharing

Federal changes don’t affect local communities – fusion centers don’t work which is the only way for different levels of enforcement to share information.

PSI 12 (PERMANENT SUBCOMMITTEE ON INVESTIGATIONS, the oldest subcommittee of the U.S. Senate Committee on Homeland Security and Governmental Affairs, “FEDERAL SUPPORT FOR AND INVOLVEMENT IN STATE AND LOCAL FUSION CENTERS”, October 3, 2012)

Sharing terrorism-related information between state, local and Federal officials is crucial to protecting the United States from another terrorist attack. Achieving this objective was the motivation for Congress and the White House to invest hundreds of millions of taxpayer dollars over the last nine years in support of dozens of state and local fusion centers across the United States. 1 Congress directed the Department of Homeland Security (DHS) to lead this initiative. A bipartisan investigation by the Permanent Subcommittee on Investigations has found, however, that DHS’s work with those state and local fusion centers has not produced useful intelligence to support Federal counterterrorism efforts. The Subcommittee investigation found that DHS-assigned detailees to the fusion centers forwarded “intelligence” of uneven quality – oftentimes shoddy, rarely timely, sometimes endangering citizens’ civil liberties and Privacy Act protections, occasionally taken from already-published public sources, and more often than not unrelated to terrorism. The Subcommittee investigation also found that DHS officials’ public claims about fusion centers were not always accurate. For instance, DHS officials asserted that some fusion centers existed when they did not. At times, DHS officials overstated fusion centers’ “success

stories.” At other times, DHS officials failed to disclose or acknowledge non-public evaluations highlighting a host of problems at fusion centers and in DHS’s own operations.

Local-federal police data distribution fails—it’s too unorganized—local law enforcement cellphone data collection is another alt cause

Ackerman 13 (Spencer, national security editor for Guardian US and won the 2012 National Magazine Award for Digital Reporting, “Data-sharing among US law agencies amounts to 'organised chaos' – report”, December 10, 2013, <http://www.theguardian.com/world/2013/dec/10/data-sharing-law-enforcement-organised-chaos>)

The sharing of crucial intelligence about counter-terrorism between the FBI, the Department of Homeland Security and local police departments takes place through a patchwork process that amounts to “organized chaos”, according to a new report. The report, released Tuesday by the Brennan Center for Justice, a public-policy institute at New York University law school that has a track record of being skeptical of government surveillance, found inconsistent rules, inadequate oversight, apparent wastefulness and insufficient regard for civil liberties nationwide. “This poorly organized system not only wastes time and resources; it also risks masking reliable intelligence that could be crucial to an investigation.” the report says, warning that a “din of data” is overwhelming law enforcement. “There’s a lot of irrelevant information being collected.” said Michael Price, a counsel with the Brennan Center and the author of the report. “As a result of that, it seems pretty easy for information to slip through the cracks.” A Department of Homeland Security spokesman took vigorous exception to the report’s factual presentation and its conclusions, saying that much of the responsibility for the patchwork rules should properly be attributed to discrepancies in laws across the 50 states and arguing that the fusion centers contribute strongly to national security while protecting civil liberties. Scrutiny of the wide-reaching intelligence apparatus in federal, state and local law enforcement since 9/11 has largely taken a backseat during the past six months’ worth of revelations from whistleblower Edward Snowden about the National Security Agency’s surveillance activities. But this week, several reports pointed to an enormous amount of data collected by police departments – particularly from cellular towers. The Brennan Center report examined 16 major police departments across the US, along with 19 affiliated “fusion centers” – controversial data-sharing pools between federal, state and local agencies – and 14 of the FBI’s joint terrorism task force partnerships with police. It found, among other problems, inconsistent quality control, which permitted a flood of local tips – some as innocuous as “ordering food at a restaurant and leav[ing] before the food arrives” (an example from California, according to a Fusion Center training document obtained by the report’s authors) – into fusion centers. Data like that does not meet the legal standard for “reasonable suspicion” normally required to pursue surveillance, let alone the requirements of probable cause. Yet it can be stored within fusion centers and accessed by a variety of law enforcement and homeland security agencies for up to a year. the report said. Despite efforts by the Department of Homeland Security, most of the fusion centers operate with “minimal oversight, or no oversight whatsoever”, the report found. Out of 19 centers reviewed, only five require independent audits of retained data. “We’re calling for clear, consistent processes and stronger standards for collecting and sharing information to reduce some of the noise coming from this din of data,” Price said. A Department of Homeland Security spokesman contended Tuesday that the report misrepresented the complexities of data-sharing across local, state and federal agencies, and strongly defended the relevance and performance of fusion centers. “This report fundamentally misunderstands the role of fusion centers within our national security structure and their value to state and local law enforcement,” said DHS press secretary Peter Boogaard. “As pointed out by congressional leaders and major law enforcement organizations across the country, fusion centers greatly improve information sharing and co-ordination between federal, state and local law enforcement. By receiving classified and unclassified information from the federal government and assessing its local implications, fusion centers help law enforcement on the front lines better protect their communities from all threats, whether it is terrorism or other criminal activities.” The FBI did not respond to a request for comment made after a media embargo on the Brennan Center report lifted. Fusion centers have been the subject of criticism from both civil libertarians and powerful elected officials. A 2012 investigation by the bipartisan Senate permanent subcommittee on investigations of more than 80,000 fusion center documents could not find any contribution

the centers had made to “disrupt[ing] an active terrorist plot”. DHS disputes the results of that investigation, as do several legislators on committees overseeing the department. Senator Tom Coburn, an Oklahoman who serves as the top Republican on the Senate government reform and homeland security committee, has emerged as a leading legislative critic of fusion centers and joint terrorism task forces, for many of the same reasons detailed in the Brennan Center report. After a government inquiry indicated many federal data-sharing efforts were duplicative, Coburn issued a statement in April calling them “a vital component of national security”, but adding, “that is not an excuse to waste taxpayer funds”. The Brennan Center’s report comes as **police departments’ widespread use of cellphone data is attracting new scrutiny**. On Monday, the Washington Post revealed that police departments around the country relied 9,000 times last year on so-called “tower dumps”, or data collected from cellphone signals that went to a given cellphone tower during a certain period of time. That data necessarily includes call information from cellphone subscribers who are never suspected of any crime. “There are **serious questions about how law enforcement handles the information of innocent people swept up in these digital dragnets,**” congressman Ed Markey, a Massachusetts Democrat who plans to introduce legislation limiting tower dumps, told the Post. Also on Monday, USA Today reported that approximately a quarter of police departments in the US have employed tower dumps, and at least 25 departments around the country employ a portable piece of spoofing hardware, called a Stingray, that tricks cellphones into thinking it is a cell tower, allowing it siphon data and send it directly to police. And all that information is on top of the fruits of the NSA’s vast data collection efforts, which are not entirely off limits to federal law enforcement. The controversial bulk collection of Americans’ phone data has been repeatedly described by the NSA as a tool to aid the FBI in detecting domestic terrorism activity. NSA deputy director John C Inglis recently stated that the FBI cannot search directly through the NSA’s data troves, but the agency shares telephone metadata with the bureau following searches through its databases based on “reasonable articulable suspicion” of connections to specific terrorist organizations. The Brennan Center report did not specifically analyze law enforcement tower dumps, but Price called the reports of them alarming. “This is another indication of the vast trove of information that state and local police are collecting about law abiding Americans,” Price said. “To date, that information does not appear to be particularly useful in preventing terror attacks.”

Fusion centers fail—local law enforcement doesn’t have oversight

Price 13 (Michael, serves as counsel for the Brennan Center’s Liberty and National Security Program, “NATIONAL SECURITY AND LOCAL POLICE, December 10, 2013, https://www.brennancenter.org/sites/default/files/publications/NationalSecurity_LocalPolice_web.pdf)

Since the attacks of September 11, 2001, many state and local law enforcement agencies have assumed a critical but unfamiliar role at the front lines of the domestic fight against terrorism. The federal government has encouraged their participation, viewing them as a tremendous “force multiplier”² with approximately 800,000 officers nationwide.³ Indeed, by collecting and sharing information about the communities they serve, police departments have been able to significantly increase the data accessible to members of the federal intelligence community.⁴ At the same time, **however, the headlong rush into counterterrorism intelligence has created risks for state and local agencies, with too little attention paid to how to manage them**. Although prevention of terrorist attacks is often described as a new, post-9/11 paradigm for law enforcement, the prevention of all crime has been a central tenet of modern policing since its debut nearly 200 years ago.⁵ Intelligence activities, including the use of surveillance, undercover officers, and informants, have helped fulfill this mandate. But due to the potential for abuse that came to light during the 1960s and 70s, many courts and legislatures placed checks on police intelligence operations. Most importantly, they required officers engaged in intelligence activities to have reasonable suspicion that a person or group is involved in criminal activity before collecting, maintaining, or sharing information about them. Of course, this rule does not apply to most other police activities. Officers responding to an emergency, for example, may record a victim’s statement or document an eyewitness account without suspecting either individual of wrongdoing. But for many police departments, reasonable suspicion became a prerequisite for creating intelligence files.⁶ Since 9/11, some police departments have established counterterrorism programs to collect and share intelligence information about the everyday activities of law-abiding Americans, even in the absence of reasonable suspicion.⁷ This information is fed into an array of federal information sharing networks, creating mountains of

data.⁸ Whether these practices have made us safer is debatable.⁹ What is clear is that they raise issues of accountability and oversight in ways that have not been given sufficient attention. The centerpiece of this new counterterrorism architecture is a national information sharing network connecting police departments and federal agencies, known as the Information Sharing Environment (ISE). But there is little consistency regarding the types of information that local law enforcement agencies collect and share with their federal counterparts. The policies and procedures governing such activities are often opaque or unavailable to the public, while a deliberately decentralized system produces rules that vary considerably across the country. Inconsistent rules jeopardize the quality of shared intelligence and raise serious civil liberties concerns. In some jurisdictions, for example, police have used aggressive information gathering tactics to target American Muslim communities without any suspicion of wrongdoing. Such practices have not generated investigative leads or proven especially useful in preventing potential terrorist attacks.¹⁰ But they have strained community relations with law enforcement, thereby jeopardizing the very terrorism prevention mission they are intended to accomplish.¹¹ Many state and local intelligence programs lack adequate oversight. While federal agencies operate under the watch of independent inspectors general, there is often no equivalent for state and local information sharing ventures. Very few local governments have built the kind of oversight structures that should accompany such a significant expansion of police functions.

Multitude of barriers to data-sharing—localized law enforcement cannot effectively model/cooperate with federal agencies

AFCEA International 7 (The Armed Forces Communications and Electronics Association (AFCEA) established in 1946, is a non-profit membership association serving the military, government, industry, and academia as an ethical forum for advancing professional knowledge and relationships in the fields of communications, information technology, intelligence, and security, “The Need to Share: The U.S. Intelligence Community and Law Enforcement”, April 2007)

The committee believes certain steps can help the intelligence and law enforcement communities move forward in their ability to share information and intelligence better. Communicate and Reinforce the Need for Sharing: People have a natural tendency to resist change. For this reason, leaders throughout the intelligence and law enforcement communities must consistently and repeatedly deliver the message of change and ensure that everyone understands the importance of sharing information. Analysts who have been told for years that releasing certain types of information violates the law must now be strongly encouraged to exchange the information with others. The new Director of National Intelligence, Mike McConnell, has made a strong statement to all intelligence professionals with his direction that it is not enough to share intelligence: There is a responsibility to provide it. Earn Public Trust: Abuses of the past have made the public skeptical about the government’s role in personal lives. Yet, the public wants and deserves a collaborative intelligence and law enforcement community effectively working together to prevent another terrorist attack. A Markle Foundation task force⁷ noted, “For information sharing to succeed, there must be trust.... Building trust requires strong leadership, clear laws and guidelines, and advanced technologies to ensure that information sharing serves important purposes and operates consistently with American values.” The communities must ensure compliance with the law and make the commitment visible to the public. Manage Risk: The intelligence and law enforcement communities have been risk averse in the past regarding sharing information—often for good reasons. Today’s environment calls for a different approach. The risk of sharing information must be balanced against the risk of not “connecting the dots.” What is the true value of having important information—even if it comes from a tenuous source in some cases—if the information is never shared with others who may need it and who may add value to the information? As a first step, local law enforcement should have a formal role and presence within the NCTC. This would give law enforcement officials early warning about terrorist tactics used overseas before the terrorists try to apply them in the United States, and it would help law enforcement plan and train better. Create Clear, Understandable, and Consistent Guidelines: Many current guidelines and policies are complex, confusing, inconsistent, and make sharing information difficult to achieve. This complexity causes delays in sharing data and undermines its utility. People are more apt to give up if the rules are too hard to follow.

Eliminate the Construct of “Data Ownership:” The “owners” do not always appreciate why information they control could be significant to others. For sharing to be effective, those who have a broader picture may be the best advocates regarding what needs to be shared. For example, local and state law enforcement, fire, and public health organizations can make a critical contribution in terms of detection, prevention, and response. The federal intelligence or law enforcement communities may not be taking full advantage of these capabilities and skills because they do not have a clear understanding of what they can contribute. These individuals on the “front lines” may hold key pieces of the puzzle. The fact that some of their information comes from an unclassified source does not automatically mean it is not useful or important. Use Technology in a Meaningful Way: Most of the obstacles to meaningful change in this arena are cultural, but technology still can play an important role. Most, if not all, of the technological impediments to protecting sources and methods while enabling effective information sharing have been solved. Technology should be embraced as a key in easing the administrative burdens of sharing information. Emphasize Training: Effective and focused training can improve the confidence of community members and the public’s perception that information is being handled appropriately. The right training, coupled with intelligence policies, will better enable sharing and ultimately will help change the cultures. Share Good Ideas and Lessons Learned: The District of Columbia, among others, has taken first and useful steps. It has initiated discussions in the law enforcement and intelligence communities to broaden understanding of what types of information are needed and why. Once state or local law enforcement organizations articulate and justify specific needs, and it becomes clear the contribution they can make to mission success, the willingness to share information will improve significantly. Other steps are possible. In the early 1980s the Drug Enforcement Agency (DEA) partnered with local law enforcement to educate U.S. police officers on the trends, tactics, and patterns of the South American drug cartels. As a result, local law enforcement officers knew what behavior, precursor chemicals, and modes of transportation were associated with major trafficking and violent crimes of the international cartels. Such partnerships work. Leaders in both communities should look to the partnership model within the Joint Terrorism Task Force as an approach to enabling information sharing. The Director of National Intelligence has recently created an Information Sharing Steering Committee (ISSC) and declared the ISSC will “move the Intelligence Community beyond the ‘need to share’ philosophy and more to a ‘responsibility to provide.’”⁸ This commitment can steer the federal, state, and local communities closer to the goal of a shared information environment. Conclusion Since September 11, 2001, the intelligence and law enforcement communities have struggled to adapt to new challenges and to refocus and reorder priorities. **Nonetheless, the seam between federal, state, and local communities has inhibited the United States’ ability to fight terrorism. Although Congress has removed many of the existing barriers to cooperation, and limited examples of progress exist, implementation is lagging. The key to change is strong leadership in both communities. Leaders must understand and nurture cultural change that emphasizes a responsibility for providing information—not just for sharing it.** They must also communicate to their subordinates a willingness to accept risk in sharing data and must deemphasize data ownership. These steps, along with clear guidelines, inter-community training, the exchange of lessons learned, and the effective use of technology, can open doors of cooperation that have been closed for too long.

AT – Modeling

Modeling args are wrong—no correlation between grants and modeling—only our studies include the broader law enforcement environment—other things are more important than federal influence

Burruss et al 12 (George W. Burruss has a Ph.D. in Criminology & Criminal Justice at Southern Illinois University Carbondale, Joseph A. Schafer has a Ph.D from Michigan State in Social Science (Criminal Justice), Matthew J. Giblin, an associate professor and undergraduate program director in the Department of Criminology and Criminal Justice at Southern Illinois University Carbondale, Melissa R. Haynes, Member of the Department of Criminology and Criminal Justice, “Homeland Security in Small Law Enforcement Jurisdictions: Preparedness,

Efficacy, and Proximity to Big-City Peers”, September 2012, <https://www.ncjrs.gov/pdffiles1/nij/grants/239466.pdf>)

Second, much of the literature implicitly or explicitly assumes that homeland security preparedness can be improved through funding allocations (e.g., grants), particularly from state and local governments (Davis et al., 2006; Gerber et al., 2005). Alternatively, other writings have assumed that preparedness is simply a byproduct of, or rational response to, the potential for a terrorist attack in a jurisdiction (Davis, 2004; Henry, 2002). What **these studies tend to ignore is the larger environment**. The efficacy of efforts to enhance homeland security may not be just a function of perceived/actual risk or funding, but both of those forces and others. For example, enhanced preparedness and innovative practices may also flow from written products such as books and journals, as well as conferences, training, and other professional networks and channels. These sources, as shown in a study of Illinois law enforcement agencies, play a significant role in determining preparedness levels, independent of risk and resource allocation (Burruss, Giblin, & Schafer, 2010). To date, however, **researchers have largely ignored these sources** (termed institutional pressures) as determinants of homeland security practices. Moreover, if these channels are salient, **the proximity of small agencies to big-city peers might be irrelevant as learning and modeling is indirect rather than direct. This omission is glaring considering that research verifying the significance of these factors could be used to shape the diffusion of a range of innovations across the law enforcement industry.**

No federal modeling internal link—local law enforcement models regional agencies—our ev is comparative

Burruss et al 12 (George W. Burruss has a Ph.D. in Criminology & Criminal Justice at Southern Illinois University Carbondale, Joseph A. Schafer has a Ph.D from Michigan State in Social Science (Criminal Justice), Matthew J. Giblin, an associate professor and undergraduate program director in the Department of Criminology and Criminal Justice at Southern Illinois University Carbondale, Melissa R. Haynes, Member of the Department of Criminology and Criminal Justice, “Homeland Security in Small Law Enforcement Jurisdictions: Preparedness, Efficacy, and Proximity to Big-City Peers”, September 2012, <https://www.ncjrs.gov/pdffiles1/nij/grants/239466.pdf>)

Respondents were asked a range of questions designed to assess the extent to which institutional pressures influenced their approaches to homeland security. The **measures address factors that are independent of any one person in the organization; that is, they focus on the influence of other agencies, professional associations, and publications without addressing who within the organization was specifically affected by these factors.**¹⁰ Table 8 reports the results of a number of questions measuring whether agency practices were influenced by the actions of their peers. In evaluating their own homeland security performance, 25.8 percent of respondents indicated they paid **significant attention to other agencies like their own**. An additional 59.8 percent of agencies paid some attention to similar agencies. Less than one percent of responding agencies reported that they paid no attention to similar agencies in evaluating their homeland security performance. Participating agencies were asked to what extent their agency modeled homeland security policies and practices after other agencies that they viewed as successful. The majority of agencies indicated they did engage in such modeling often (35.3 percent) or occasionally (54.9 percent). Other sources of institutional pressure are professional associations and relevant publications. In defining homeland security practices and approaches agencies might be influenced by the resources offered by these other entities. Respondents were asked to rate the influence of four sources of influence on a three-point scale from not at all influential (0.0) to very influential (2.0). **Peer agencies were reported to be the most influential.** Strong influence was also indicated for professional associations and government publications. Journal articles and books were the least

influential, with an average rating between somewhat influential and not at all influential. Grant programs and other funding opportunities were generally less influential. In relative terms, federal and state grant funding for equipment and training were most influential. Private or community funding sources were least influential in formulating homeland security approaches and practices.

Alt Causes

Aff can't resolve local policing which is more abusive – frisking and high-tech profiling

Cyril 15 (Malkia Amala, founder and executive director of the Center for Media Justice (CMJ) and co-founder of the Media Action Grassroots Network, a national network of 175 organizations working to ensure media access, rights, and representation for marginalized communities, March 30, 2015, “Black America's State of Surveillance”,

<http://www.progressive.org/news/2015/03/188074/black-americas-state-surveillance>)

This model is deceptive, however, because it presumes data inputs to be neutral. They aren't. In a racially discriminatory criminal justice system, surveillance technologies reproduce injustice. Instead of reducing discrimination, predictive policing is a face of what author Michelle Alexander calls the “New Jim Crow”—a de facto system of separate and unequal application of laws, police practices, conviction rates, sentencing terms, and conditions of confinement that operate more as a system of social control by racial hierarchy than as crime prevention or punishment. In New York City, the predictive policing approach in use is “Broken Windows.” This approach to policing places an undue focus on quality of life crimes—like selling loose cigarettes, the kind of offense for which Eric Garner was choked to death. Without oversight, accountability, transparency, or rights, predictive policing is just high-tech racial profiling—indiscriminate data collection that drives discriminatory policing practices. As local law enforcement agencies increasingly adopt surveillance technologies, they use them in three primary ways: to listen in on specific conversations on and offline; to observe daily movements of individuals and groups; and to observe data trends. Police departments like Bratton's aim to use sophisticated technologies to do all three. They will use technologies like license plate readers, which the Electronic Frontier Foundation found to be disproportionately used in communities of color and communities in the process of being gentrified. They will use facial recognition, biometric scanning software, which the FBI has now rolled out as a national system, to be adopted by local police departments for any criminal justice purpose. They intend to use body and dashboard cameras, which have been touted as an effective step toward accountability based on the results of one study, yet storage and archiving procedures, among many other issues, remain unclear. They will use Stingray cellphone interceptors. According to the ACLU, Stingray technology is an invasive cellphone surveillance device that mimics cellphone towers and sends out signals to trick cellphones in the area into transmitting their locations and identifying information. When used to track a suspect's cellphone, they also gather information about the phones of countless bystanders who happen to be nearby. The same is true of domestic drones, which are in increasing use by U.S. law enforcement to conduct routine aerial surveillance. While drones are currently unarmed, drone manufacturers are considering arming these remote-controlled aircraft with weapons like rubber bullets, tasers, and tear gas. They will use fusion centers. Originally designed to increase interagency collaboration for the purposes of counterterrorism, these have instead become the local arm of the intelligence community. According to Electronic Frontier Foundation, there are currently seventy-eight on record. They are the clearinghouse for increasingly used “suspicious activity reports”—described as “official documentation of observed behavior reasonably indicative of pre-operational planning related to terrorism or other criminal activity.” These reports and other collected data are often stored in massive databases like e-Verify and Prism. As anybody who's ever dealt with gang databases knows, it's almost impossible to get off a federal or state database, even when the data collected is incorrect or no longer true. Predictive policing doesn't just lead to racial and religious profiling—it relies on it. Just as stop and frisk legitimized an initial, unwarranted contact between police and people of color, almost 90 percent of whom turn out to be innocent of any crime, suspicious activities reporting and the dragnet approach of fusion centers target communities of color. One review of such reports collected in Los Angeles shows approximately 75 percent were of people of color.

Alt cause – Local police is the problem—community oriented policing is failing

Jrank Law Library No Date, (No Date,<http://law.jrank.org/pages/2228/Urban-Police-Policing-minority-citizens.html>)

Historically, cooperation and communication between police and minorities has been troubled. Williams and Murphy described a history of policing shaped by the enforcement of laws that

have discriminated against minority groups, particularly African Americans. Slavery, segregation, and discrimination are historical realities that shaped the current distrustful, strained, and often hostile relationship between police and minority citizens. This poor relationship reached its pinnacle during the police-citizen crisis of the 1960s. The civil rights movement had gained momentum and become more militant. Protesters gathered to demonstrate against race discrimination and injustice within the criminal justice system. Police officers responded to protesters with physical brutality, which increased the tension between minorities and the police. This tension exploded in the form of riots and civil disobedience, often sparked by incidents involving the police (Walker, 1999). As a result of several crime commission reports and research findings questioning the effectiveness of "professional" police organizations, police organizational strategies evolved to focus on strengthening relationships and creating partnerships between the police and citizens. Police departments attempted to improve community relations through the creation of police-community relations units, race relations training for officers, and the hiring of more minorities and women. Some of these techniques were relatively successful. As reported by Walker (1999), African American officers represented a majority of the force in departments such as Detroit, Washington, and Atlanta in 1993. In addition, African Americans were selected as police chiefs in several large departments, including New York City, Los Angeles, Atlanta, Chicago, Houston, and others. Furthermore, by the mid-1990s, women represented 13 percent of all officers in large police departments. Despite these advances, police still struggle with minority community relations. In 1993, the acquittal of four officers accused of beating Rodney King, an African American motorist in Los Angeles, sparked race riots across the country. Other major cases of police abuse of force in the 1990s (e.g., the Louima and Diallo cases in New York City) further increased tension between the police and minorities. In 1996, 26 percent of African American citizens surveyed reported they had very little or no confidence in the police, compared to only 9 percent of white respondents (Bureau of Justice Statistics, 1996). Furthermore, when asked about attitudes toward use of force, 60 percent of whites had favorable attitudes compared to 33 percent of African Americans and 42 percent of Hispanics (Huang and Vaughn). Serious questions regarding police discrimination remain. Studies routinely show that minorities are overrepresented as suspects who have force used against them, and who are shot and killed by officers. Worden's analysis of 1977 data showed that police were more likely to use both reasonable and unreasonable force against black male suspects. This is also true of the use of deadly force. However, changes in police departments' administrative policies led to decreases in the use of deadly force by officers. In a study of the New York City Police Department, Fyfe found that changes in the department's formal policies governing police shootings in 1972 reduced the average numbers of shots fired by officers by 30 percent. The total number of uses of deadly force decreased by nearly 50 percent from 1970 to 1984. In that same time period, the ratio of African Americans to whites who had deadly force used against them decreased from six-to-one to three-to-one (Walker, 1999). Reductions in police use of deadly force toward minorities were also noted after the fleeing-felon standard guiding police use of deadly force was ruled unconstitutional by the Supreme Court in *Tennessee v. Garner*, 105 S. Ct. 1694 (1985). African Americans are also disproportionately arrested more often than whites. It is unclear whether these disparities in arrest statistics represent actual discrimination (i.e., disparity based on extra legal factors, such as race). When other factors are taken into consideration (e.g., seriousness of the offense, the evidence available, demeanor of the suspect, etc.), it appears that arrest decisions are influenced more by situational and legal factors than strictly race (Riksheim and Chermak). However, police are more likely to police inner-city neighborhoods, which are predominantly minority areas. In this sense, police may be showing a form of contextual discrimination by heavily policing particular neighborhoods or particular types of crimes. A concern is that police officers are profiling citizens based on race and ethnicity. The term DWB or driving while black is a vivid descriptor of this phenomenon. Minority groups claim that police are more likely to pull over motorists simply because of their race. In fact, studies of New Jersey State Police have shown that minorities are pulled over disproportionately. This same argument is made in urban areas, where minorities believe they have become the targets of police harassment through tactics of aggressive enforcement of minor crimes. Studies of police have shown that African Americans and Hispanics are disproportionately stopped, questioned, and frisked by police (Browning et al.). Surveys of citizens also indicated that African Americans and Hispanics are more likely to be stopped and interrogated by police. One survey of African American high school students revealed that 80 percent had been stopped by police and 62 percent of those stopped said the police treated them disrespectfully (Walker, Spohn, and DeLone). At the same time, however, minority citizens complain that police are not responding to their needs in these areas. Citizens allege that police are not providing adequate protection or attention in their neighborhoods. According to Walker, this apparent contradiction can be explained by "the diversity within racial and ethnic minority communities Complaints about police harassment generally come from young males who have a high level of contact with the police. Most members of racial

minority communities, however, are law-abiding adults with jobs and families. Like their white counterparts, they want more not less police protection" (1999, p. 222). In the 1980s, **new strategies of community oriented policing** have encouraged the partnership between citizens and the police. Research has shown, however, that **strategies of community policing tend to have the strongest impact on neighborhoods where they are least needed**. Satisfaction with community policing techniques is highest in homogeneous, higher socioeconomic status communities, and lowest in heterogeneous, lower socioeconomic status communities (Bayley, 1988). It is clear that new approaches to improve police-minority relations are needed.

Alt Cause—Underrepresentation of local minorities in the police force is a larger problem

Badger, Keating, and Elliot 14 Emily Badger, Dan Keating, and Kennedy Elliot, ("Where minority communities still have overwhelmingly white police", August 14, <http://www.washingtonpost.com/blogs/wonkblog/wp/2014/08/14/where-minority-communities-still-have-overwhelmingly-white-police/>)

There is something unsettling about the scenes this week **out of Ferguson, Mo., that goes beyond the rare sight of military equipment on city streets or the disproportionate deployment of it. In so many of these images, the unarmed residents are black. But almost all of the officers facing them are white.** The fatal police shooting Saturday of an unarmed black teen that set off these confrontations in a St. Louis suburb has raised questions not just about the conduct of one officer, but the makeup of an entire police force. **How could a community that's two-thirds black have a police force that's almost entirely white?** How could such divisions ubiquitous in the 1960s persist in 2014? **Across the country, this racial imbalance is not rare.** Fifty years after the Civil Rights movement called attention to the under-representation of minorities in police departments, the pattern is still widespread. **More than three quarters of cities on which the Census Bureau has collected data have a police presence that's disproportionately white relative to the local population.** Meanwhile, in more than 40 percent of cities, **blacks are under-represented among police officers, a Washington Post analysis of Census data revealed.** While the pattern is widespread, broad variations exist. The charts below show which cities have the greatest and smallest disparities between population and police. **These numbers are more encompassing than a mere count of officers in a municipal police department.** From the point of view of residents in each community, **they reflect the larger police presence one might encounter.** The center line in each chart represents equality — or how we might expect a police force to look if it perfectly reflected the demographics of the city it serves. Non-Hispanic white representation in most cities is above this line; in other words, the share of white police officers in Memphis or Charlotte is higher than the share of whites living in those cities. **If we count cities within five percentage points of that line as having relative equality, just one in 10 cities and towns in America meets that standard. If we look at the data from the perspective of black officers, about 45 percent of cities and towns meet this definition of equality.** That number, though, is largely driven by cities with few or no black officers but also very small black populations. **Remove cities where less than 5 percent of the population is black, and 72 percent of all such places — 446 in total — have police forces where blacks are under-represented. In the 609 communities where Hispanics make up at least 5 percent of the population, they are under-represented among police as well in 66 percent of places.** Even **the best intentions by police departments won't automatically create perfect equality** because city demographics shift over time — in some places more rapidly than others. The Department of Justice, which has filed hundreds of lawsuits against discriminatory local agencies since the 1970s, has historically looked at demographic data like this, along with hiring and recruiting practices. **It is striking on the above charts, however, that many of America's biggest cities are hovering more closely around equality than others.** These are the same cities where fierce battles were fought and federal lawsuits waged over unequal hiring practices after 1972, when amendments to the Civil Rights Act extended protection from discrimination to state and local government employers. "Politicians realized that they couldn't have an all-white police force in a city with a substantial minority population," says Richard Ugelow, who worked on such lawsuits in the Civil Rights Division of the DOJ for 29 years. "That changed the culture of the police departments and the willingness of law enforcement, police and fire departments to become more diverse. You see that **in Chicago, New York, Atlanta, in these large cities. They want to have a diverse workforce.** You don't have those same pressures in these smaller

communities." The public outcry and federal pressure that made such inequality so visible in Chicago — prompting dramatic change there — hasn't historically extended to places like Ferguson, a suburb of 21,000 with 53 commissioned police officers. "It's hard for the government to bring a lawsuit," Ugelow says, "against a police force of 100 people." The above charts show many places with either all-white or no-black police forces. Many of them are smaller cities, such as Niagara Falls, N.Y., where 20 percent of the population is black but all 250 police are white, according to the data. In Florissant, Mo., a quarter of the population is black, but none of the 25 police are. Some seemingly unequal communities have also experienced demographic shifts that have exacerbated the imbalance between the police presence and the population. Ferguson is an example of such a place: In 1990, the city was almost three-quarters white. By 2010, it was two-thirds black. Its police force today may in some ways be a legacy of the makeup and policies of an earlier moment of time. Ugelow doubts that the picture above is the result of intentional discrimination today — "blacks need not apply." But some of the same historic practices and applicant tests that effectively excluded minorities may still exist in departments that never updated their policies. During the recession, small-town police agencies that have had to cut resources may have trimmed the HR staffs and recruitment programs that address this issue. Ugelow also worries that, since the Bush Administration, the DOJ has eased up on its civil rights litigation. Historically, the issue of inequality in police departments has focused on the relationship between blacks and whites. But as the country's Hispanic population continues to grow, communities have to take into account demographic patterns that encompass more than white and black. In San Antonio, for instance, blacks and whites only account for one-third of the local population, and a slightly higher proportion of the police; Hispanics make up 63 percent of the population, and 58 percent of the police. As a note, the data above draws from a special 2010 Census count of workers in 755 cities and towns, including every place with a population of at least 50,000 at that time. Once a decade, the Census creates this employment file for federal agencies that monitor employment practices and enforce civil rights laws. The data include the number and demographics of police officers — counting police and sheriff's patrol officers, and transit and railroad police — working in each city. The data do not include detectives, security guards or parking enforcement officers.

MASSIVE alt cause—they can't solve racial profiling by local law enforcement agencies—comparatively more exposure to them than federal law enforcement

Harris 99 (David A., Distinguished Faculty Scholar and Professor of Law at University of Pittsburgh, "DRIVING WHILE BLACK: RACIAL PROFILING ON OUR NATION'S HIGHWAYS", June 1999, <https://www.aclu.org/report/driving-while-black-racial-profiling-our-nations-highways>)

On a hot summer afternoon in August 1998, 37-year-old U.S. Army Sergeant First Class Rossano V. Gerald and his young son Gregory drove across the Oklahoma border into a nightmare. A career soldier and a highly decorated veteran of Desert Storm and Operation United Shield in Somalia, SFC Gerald, a black man of Panamanian descent, found that he could not travel more than 30 minutes through the state without being stopped twice: first by the Roland City Police Department, and then by the Oklahoma Highway Patrol. During the second stop, which lasted two-and-half hours, the troopers terrorized SFC Gerald's 12-year-old son with a police dog, placed both father and son in a closed car with the air conditioning off and fans blowing hot air, and warned that the dog would attack if they attempted to escape. Halfway through the episode – perhaps realizing the extent of their lawlessness – the troopers shut off the patrol car's video evidence camera. Perhaps, too, the officers understood the power of an image to stir people to action. SFC Gerald was only an infant in 1963 when a stunned nation watched on television as Birmingham Police Commissioner "Bull" Connor used powerful fire hoses and vicious police attack dogs against nonviolent black civil rights protesters. That incident, and Martin Luther King, Jr.'s stirring I Have a Dream speech at the historic march on Washington in August of that year, were the low and high points, respectively, of the great era of civil rights legislation: the 1964 Civil Rights Act and the 1965 Voting Rights Act. How did it come to be, then, that 35 years later SFC Gerald found himself standing on the side of a dusty road next to a barking police dog, listening to his son weep while officers rummaged through his belongings simply because he was black? I feel like I'm a guy who's pretty much walked the straight line and that's

respecting people and everything. We just constantly get harassed. So we just feel like we can't go anywhere without being bothered... I'm not trying to bother anybody. But yet a cop pulls me over and says I'm weaving in the road. And I just came from a friend's house, no alcohol, nothing. It just makes you wonder – was it just because I'm black?" – James, 28, advertising account executive Rossano and Gregory Gerald were victims of discriminatory racial profiling by police. There is nothing new about this problem. Police abuse against people of color is a legacy of African American enslavement, repression, and legal inequality. Indeed, during hearings of the National Advisory Commission on Civil Disorders ("The Kerner Commission") in the fall of 1967 where more than 130 witnesses testified about the events leading up to the urban riots that had taken place in 150 cities the previous summer, one of the complaints that came up repeatedly was "the stopping of Negroes on foot or in cars without obvious basis." Significant blame for this rampant abuse of power also can be laid at the feet of the government's "war on drugs," a fundamentally misguided crusade enthusiastically embraced by lawmakers and administrations of both parties at every level of government. From the outset, the war on drugs has in fact been a war on people and their constitutional rights, with African Americans, Latinos and other minorities bearing the brunt of the damage. It is a war that has, among other depredations, spawned racist profiles of supposed drug couriers. On our nation's highways today, police ostensibly looking for drug criminals routinely stop drivers based on the color of their skin. This practice is so common that the minority community has given it the derisive term, "driving while black or brown" – a play on the real offense of "driving while intoxicated." One of the core principles of the Fourth Amendment is that the police cannot stop and detain an individual without some reason – probable cause, or at least reasonable suspicion – to believe that he or she is involved in criminal activity. But recent Supreme Court decisions allow the police to use traffic stops as a pretext in order to "fish" for evidence. Both anecdotal and quantitative data show that nationwide, the police exercise this discretionary power primarily against African Americans and Latinos. No person of color is safe from this treatment anywhere, regardless of their obedience to the law, their age, the type of car they drive, or their station in life. In short, skin color has become evidence of the propensity to commit crime, and police use this "evidence" against minority drivers on the road all the time.

NYPD is an example of local, racist policies that the plan can't reform

AP 12 — Samantha Henry, Matt Appuzzo, Wayne Perry, reporters for the Associated Press, American multinational nonprofit news agency, 2012 ("New Jersey Muslims Angry Over NYPD Surveillance Findings," *The Huffington Post*, May 25, Available online at http://www.huffingtonpost.com/2012/05/25/new-jersey-muslims-cangry-nypd-surveillance_n_1545319.html)

Muslim leaders said they were told that every instance of NYPD activity in New Jersey had been justified by a lead, but that the attorney general would not provide any details on the nature of any of those leads, saying the fact-finding was ongoing. Imam Mustafa El-Amin of the Newark-based Masjid Ibrahim said he was concerned that Chiesa refused to explain what leads had been received. With the NYPD compiling a map of every mosque in Newark – including his – he said he wanted to know about any problems or potential dangers in his mosque he might be unaware of. "We understand the need for surveillance and security," said El-Amin, "We just don't appreciate how this was done. We as Muslims feel we were violated, simply because we are Muslims." Several Muslim leaders at Thursday's meeting said that they did not find the assertion that the NYPD had leads for all their operations in New Jersey credible, adding that efforts to maintain communication between the community and law enforcement would be hurt by the findings that the NYPD had done nothing wrong – and could keep doing what they have been doing. "It was basically an, 'FYI, good Thursday afternoon, let it die in the media before the Memorial Day weekend,'" said Mohamed El-Filali, executive director of the Islamic Center of Passaic County, across the Hudson River from New York. If the surveillance of every mosque, burger joint and barbershop targeted was justified, he asked, why were no arrests made? Aref Assaf of the American Arab Forum said the attorney general made them feel like second-class citizens. "I said to him it's not only insulting, it's offensive to our sense

of justice, that you bring us to Trenton to tell us that you accept as legal and valid the actions of the NYPD, and I will not be surprised if you're issuing an order informing your law enforcement officials that they too can spy on American Muslims because if it's legal for NYPD, than it must be legal for NJ to do the same." The Muslim leaders said they would consider all legal options, including renewed appeals for action by the U.S. Justice Department. A federal civil rights lawsuit has also been considered.

Local police surveillance targeted at Muslims is unchangeable

Friedersdorf 13 — Conor Friedersdorf, staff writer at The Atlantic, where he focuses on politics and national affairs, has a Masters degree in Journalism from New York University and a BA in Politics, Philosophy, and Economics from Pomona college, 2013 ("The Horrifying Effects of NYPD Ethnic Profiling on Innocent Muslim Americans," *The Atlantic*, March 28, Available online at <http://www.theatlantic.com/politics/archive/2013/03/the-horrifying-effects-of-nypd-ethnic-profiling-on-innocent-muslim-americans/274434/>)

The Associated Press brought the NYPD's clandestine spying on Muslims to the public's attention in a series of vital stories. Starting shortly after the September 11 terrorist attacks, officers infiltrated Muslim communities and spied on hundreds or perhaps thousands of totally innocent Americans at mosques, colleges, and elsewhere. These officers "put American citizens under surveillance and scrutinized where they ate, prayed and worked, not because of charges of wrongdoing but because of their ethnicity," the news agency reported, citing NYPD documents. Informants were paid to bait Muslims into making inflammatory statements. The NYPD even conducted surveillance on Muslim Americans outside its jurisdiction, drawing a rebuke from an FBI field office, where a top official charged that "the department's surveillance of Muslims in the state has hindered investigations and created 'additional risks' in counterterrorism." NYPD brass and Mayor Michael Bloomberg defend these policies as counterterrorism efforts that are necessary to keep New Yorkers safe. As you ponder the specific costs of these policies, as evocatively described below, keep in mind one thing about the ostensible benefits: "In more than six years of spying on Muslim neighborhoods, eavesdropping on conversations and cataloguing mosques," the Associated Press reported, "the New York Police Department's secret Demographics Unit never generated a lead or triggered a terrorism investigation." They acknowledged, in court testimony, having generated zero leads.

Local police are oppressive – maple heights proves

Dewan 14, Shaila Dewan, Reporter for the New York Times, 2014 (Mostly White Forces in Mostly Black Towns: Police Struggle for Racial Diversity, New York Times, September 9, <http://www.nytimes.com/2014/09/10/us/for-small-police-departments-increasing-diversity-is-a-struggle.html>)

Maple Heights police officers with a driver stopped for a traffic violation. The department has only two black officers out of 35. Credit Michael F. McElroy for The New York Times MAPLE HEIGHTS, Ohio — The population of this working-class Cleveland suburb has gone from nearly all white to two-thirds black since its mayor declared more than 35 years ago that he did not know "what a minority is." But its police and fire departments have not kept pace: The Maple Heights police force today still has only two black officers out of 35; the fire department is 100 percent white. Maple Heights is far from unique. Across the country, police departments still struggle to hire and retain minority candidates — in some cases despite great efforts, in others because of a lack of initiative. But now, the problem has taken on new relevance since the fatal shooting of a young black man last month in Ferguson, Mo., where just four of the 53 police officers are black, according to the police chief. Nationwide, the total number of minority police officers has risen, but they remain heavily concentrated in larger cities, with the numbers falling off sharply in smaller ones, like Ferguson and Maple Heights. In 1977, Maple Heights agreed to increase minorities in its police and fire departments. But officials did not follow through. Credit Michael F. McElroy for The New York Times Data from a federal survey of police departments in 2007, analyzed for The New York Times by Andrew A. Beveridge, a sociologist at Queens College, found that nearly 400

departments, most with fewer than a hundred officers, were substantially whiter than the populations they served. In these departments, the share of white officers was greater than the share of white residents by more than 50 percentage points. Ferguson and Maple Heights are about the same size, just over 20,000 people, and in both, the black population has surged in recent decades. Both cities have white mayors and largely white political leaderships. And both police departments have fallen far short of reflecting the communities they serve — even as some of Maple Heights’s neighboring police departments have achieved much higher levels of diversity. Critics point to the lack of racial balance in police departments as evidence of systemic racism. But experts say the experiences of the two towns illustrate the obstacles to achieving diversity in law enforcement, even for departments that have made it a priority. “I see all these pundits come on the Sunday talk shows and say: ‘Of course you can hire more black people. Of course they’re not trying,’ ” said Nelson Lim, a senior sociologist at the RAND Corporation’s Center on Quality Policing who has consulted with departments in Los Angeles and San Diego. “But it’s very, very, very difficult.” There is little hard evidence that diversity correlates with better performance, in part because it is difficult to control for complex variables and to know which outcomes, from crime rates to brutality cases, to measure. In fact, one study of a Florida police department found that black officers were more likely than white to use force against black suspects. A review of court cases going back to the early 1990s revealed only a handful of civil rights or excessive-force cases against the Maple Heights police, two of which involved a white officer who is no longer with the department, and none that involved a fatality like the shooting in Ferguson. Still, it is an accepted tenet of community policing that when departments reflect the communities they serve, they have an easier time building trust and defusing, rather than escalating, tense situations. In Maple Heights, some residents said they would like to see more black officers, while others said that it was the attitude, experience and training of the officer, not race, that mattered. Chris Turney, a home renovator who lives with his wife and two daughters, said it was more important for officers to live in the city. All but one do not. “The police come here, they do their jobs, they don’t try to get to know anybody,” said Mr. Turney, who is black. “The police don’t waver.” Hundreds of police departments across the nation have forces with a white percentage that is more than 30 percentage points higher than the communities they serve. Other residents drew a contrast between police attitudes in Maple Heights and neighboring Bedford Heights, where three-quarters of the residents, and nine of 28 police officers, are black. “Bedford’s not going to do you like Maple,” said Carlos Walker, 41, who is black. “You have to do something real stupid for Bedford. Maple, soon as they get behind you, you sweating.” In her 11 years as an officer in Bedford Heights, Detective Ericka Payne, who is black, has often provided backup on calls in Maple Heights. There are definitely differences in the ways the departments interact with the outside community,” Detective Payne said. “We try to be a little bit more community oriented. Because we are a little bit more diverse, we understand those dynamics and maybe have a little bit more ease dealing with that.” Several Maple Heights officials said the diversity of the police and fire departments had never been a major issue. It is hard to find qualified candidates of any race, said John C. Popielarczyk, who has been with the Maple Heights Police Department since 1990 and the acting police chief since May. Maple Heights, devastated by the foreclosure crisis, has fallen on hard times, and the police force has shrunk. And with most officers staying on the job for 25 years, Chief Popielarczyk said, the opportunity to hire is scarce. Of eight recent hires, two were black. One, the chief said, was fired for cause before his probationary period ended. The department has advertised in minority newspapers and changed the private company that administers its Civil Service exam in hopes that more minority candidates would pass, he said. But he added: “The real goal of the department is to provide qualified officers who are competent and can provide quality service regardless of race. I don’t think people really care about the color of the officer that responds; they care that the officer responds quickly, is effective, treats them well and is respectful.” The acting fire chief, James Castelucci, said much the same, adding that one promising black candidate withdrew when his current employer offered him more money. The obstacles to diversity are many, Dr. Lim, the sociologist, said. Candidates usually must pass written tests, physical agility tests, psychological tests, polygraphs and background checks, some of which can have a disparate impact on minority candidates. Qualified black candidates are sought after not just by competing police departments, but also by employers in other industries. And some police chiefs have cited a negative attitude toward law enforcement among blacks that hinders recruiting. Police departments have tried all kinds of remedies, from personal trainers to help with physical fitness tests to tailored recruiting. (A RAND survey found that women were attracted to the good salaries in policing, blacks to the profession’s prestige and Asians to the excitement of the job.) But many small departments lack the resources, or the will, to conduct an exhaustive review of their hiring practices. In Maple Heights, job candidates are ranked by how well they score on the written exam, earning bonus points for factors like previous training, military experience and city residency. For each opening, the candidates are considered one by one, in order of their score. Frank Ross said he did not accept the city’s explanations for having few minority police officers. Credit Michael F. McElroy for The New York Times Some nearby suburbs like Bedford Heights and Cleveland Heights — where about 40 percent of the residents and 22 of 102 officers are black — do things differently. The chiefs of both departments said officials were allowed to consider the top 10 candidates on the list, which helps them hire more minority candidates. Both chiefs said their cities took an aggressive approach to diversity as early as the 1970s. Cleveland Heights has two types of officer positions, one that requires a Civil Service exam and a college degree, and a lower tier, called basic patrol, that does not. Once a basic patrol officer is hired, the city will reimburse tuition costs, and many eventually earn a degree and work their way to the upper tier. The diversity of neighboring police departments poses a challenge to cities like Maple Heights, Dr. Lim said: “If the leadership, if the police chief, is dedicated to getting more diversity in the work force, how hard is it to figure out how the other department is doing such a good job?” Asked why Maple Heights considered only one candidate at a time, Chief Popielarczyk said: “We’ve always done it that way. My understanding is that that’s how we’re supposed to do it.” Some Maple Heights residents have tried to persuade the city to hire more blacks, forming a committee called the Maple Heights Citizens for Change. In 2012, Elaine Stone, a committee member who runs a blog called the

Maple Heights African American Gazette, was digging around and discovered a long-forgotten affirmative action agreement, signed by the mayor, a citizens' committee and a representative from the federal Justice Department in 1977. In that deal, Maple Heights, at the time about 96 percent white, agreed that within three years minorities would make up at least 4 percent of its police and fire departments. But it soon became clear that the city was less than fully committed to this goal. "I figure we're all minorities," the mayor at the time, Emil J. Lisy Jr., told reporters when he was criticized for failing to live up to the agreement. "The first thing is to find out what a minority is, and I haven't figured that out." Federal officials threatened to withhold \$500,000 in funds, but backed down after the mayor submitted a 65-page response. When Ms. Stone learned about the agreement, she contacted Frank Ross, the only surviving signer of the document. Mr. Ross was a teacher in his 20s when he came to Maple Heights, at a time when real estate brokers steered black customers to a part of town called Presidential Row. He now lives 12 miles away, but agreed to go to meetings of the committee, where he suggested that the group call the Community Relations Service of the Justice Department, the same office that helped broker the earlier deal. Though new discussions were opened between the city and the service, which provides mediation and training to governments, residents feel the talks have stalled. Neither the mayor nor the Maple Heights legal director returned calls for comment for this article, and the service does not publicly discuss its work. Participation by local governments is strictly voluntary. Ms. Stone said economics, not overt racism, had kept the police and fire departments largely white. "There was white flight, but people were trying to hold on to their jobs," she said. "I can understand you don't want to give up that job." Mr. Ross said apathy among black voters was partly to blame for the situation. But he does not accept the city's excuses. "They're telling me in 40 years they can't find any African-American policemen?" he said. Forty years later — it's very emotional for me. Forty years later, I'm still dealing with the same thing."

NSA surveillance targets those with Arab-sounding names and those who call Middle Eastern countries, creating an atmosphere of depression and anxiety throughout Muslim-American communities.

Miller 13 (Anna Lekas, "If Your Name is Ahmed or Fatima, You Live in Fear of NSA Surveillance," June 19, [TheGuardian.com](http://www.theguardian.com/commentisfree/2013/jun/19/nsa-surveillance-muslim-arab-americans). Miller is a journalist who specifically covers stories about Middle Eastern politics. <http://www.theguardian.com/commentisfree/2013/jun/19/nsa-surveillance-muslim-arab-americans> // EMS).

One of the most common responses from the 66% of American citizens in favor of the NSA's data-collection programs is, "I have nothing to hide, so why should I have anything to fear?" But what if you have nothing to hide but are targeted as a suspect nevertheless? By that I mean, what if your name is Ahmed, Jihad, Anwar or Abdulrahman? Fatima, Rania, Rasha or Shaima? What if some of your phone calls – which the NSA is tracking with particular interest – are made to loved ones in Pakistan, Yemen, Iraq, Syria, Iran, Lebanon or Palestine? What if the language you speak on these phone calls is not English, but Arabic, Urdu or Farsi, not because it is a special jihadist code, but because it is your native language that you still speak in your home. In other words, what if you are one of America's 1.9 million Arab-Americans or 2.8 million Muslim-Americans? President Barack Obama defends the NSA's recently revealed spying apparatus as essential to helping to prevent terrorist attacks. But how does the Obama administration define a terrorist or terrorism? In Pakistan, Yemen, Somalia or anywhere else that is designated a "strike zone" by the US government, subject to so-called signature strikes by drones, any military-age man – meaning all men between the ages of 16 and 40 – are potentially categorized as a "militant". If he is killed in a US-authorized drone strike, his death is recorded as a "militant" death rather than a civilian death. The rhetoric helps to feed the victories of the war on terror as innocent civilian casualties are recorded in history as militant terrorists. A number of said "militants" have spent significant amount of time in the west and many have family there. Sixteen-year-old Abdulrahman al-Awlaki was even a US citizen. Are these innocent civilians labeled as militants the same as the terrorists Barack Obama is talking about? Back on United States soil, invasive spying and government surveillance in the name of fighting terrorism is hardly news for Arab and Muslim-American communities. Starting as early as 2001 – immediately following the attacks on 11 September – the FBI began spying on Arab and Muslim communities across the United States, while the NYPD specifically kept tabs on Arab and Muslim communities in New York City. Any mosque, local business, community or student organization run by Arabs or Muslims – or focusing on Arab and Muslim issues – was fair game for informants to lurk, "befriend"

patrons and watch. After all, any of them could have been seasoned terrorists planning radical jihad.¶ Despite more than six years of surveillance, the NYPD program hasn't foiled any terrorist plots, according to the Associated Press reports. The FBI claims some success stories, but it is unclear whether they come from their specific targeting programs. What is clear is that **these programs worked to create a pervading sense of depression and anxiety throughout the Muslim and Arab American communities and a blanket distrust of authorities.**¶ Arab and Muslim communities are hardly new to the United States. Once upon a time, the neighborhood surrounding where the World Trade Center would later be built was known as Little Syria. Of course, these communities have since been pushed out of New York's financial district, but still thrive in pockets of Brooklyn, Boston, Chicago, Dearborn and many other American cities.¶ In the Middle East, most of the time when you mention you are from the United States, rather than spewing aspirations for radical jihad, locals will respond with, "Oh, the United States! My cousin lives in Chicago, do you know him?"¶ Despite the perception that the United States and the Arab and Muslim world operate in opposition to one another, the two regions are inextricably connected via the Arab and Muslim communities who immigrated, or are the descendants of immigrants to the United States. A snippet of Arabic conversation or a phone call to Syria, Yemen or Pakistan is more likely to be a standard family phone call than the prelude of the demise of western civilization.¶ **After all, most of us really do have nothing to hide – so why is it that we have everything to fear?**

The media causes Islamoprejudice by demonizing all Muslims and treating them as a monolithic whole.

Harrison 06 (David, "Media 'Contributing to Rise of Islamophobia,'" *The Telegraph.com*. Harrison was a journalist at *The Telegraph*. They won the Paul Foot Award and the Amnesty International Press Award for journalism. <http://www.telegraph.co.uk/news/1528485/Media-contributing-to-rise-of-Islamophobia.html> // EMS).

"There are a few bad apples in the Muslim community who are doing terrible acts and we want to root them out," Dr Bari told *The Sunday Telegraph*.¶ "But some police officers and sections of **the media are demonising Muslims, treating them as if they're all terrorists — and that encourages other people to do the same.**" If that demonisation continues, then Britain will have to deal with two million Muslim terrorists — 700,000 of them in London," he said. **"If you attack a whole community, it becomes despondent and aggressive."**¶ Mr Bari was speaking at the East London Mosque, where he is chairman, after a month-long tour of Britain's Muslim communities, during which he said he picked up a mood of "anxiety, frustration and, especially among young people, anger".¶ His comments come days after Peter Clarke, the head of the Metropolitan Police anti-terrorist branch, said "thousands" of British Muslims were being watched by police and MI5 over suspected terrorist links.¶ Dr Bari, 52, who has succeeded Sir Iqbal Sacranie as the head of the council, said: "We want to isolate the bad people and put them in the dock. But we all have to work together to do that — police, politicians, the media and the Muslim community."¶ He did not understand why "the whole of our diverse community" was being targeted. **"When the IRA was blowing people up, the entire Catholic population of Britain was not demonised, so why is it happening to the Muslim community?"**¶ The council leader — who took his post two days before a police raid in east London, in which a Muslim man was shot but no charges were brought — said **the media had contributed to the demonisation by concentrating on a few extremists and ignoring the law-abiding majority.**¶ He said it was "ridiculous" that moderate Muslims had been accused of not speaking out. **"When we speak we are ignored by the media, but when Abu Hamza or Omar Bakri Mohammed say something they are all over the papers."**¶ Mr Bari, a former air force engineer in Bangladesh and now a special needs teacher in east London, said Islamophobia had increased after 9/11, 7/7, last month's arrests over the alleged plot to blow up transatlantic aircraft, and the raids last weekend on **an Islamic school in East Sussex** and a London restaurant. Seventeen people have been charged over the alleged plot and 14 were arrested in last weekend's raids¶

Media reporting paints Muslims as the dangerous other- this legitimizes anti-Muslim violence.

Ahmed 12 (Nafeez Mosaddeq, "Time to Hold the Media Accountable for Islamophobia," June 18, *HuffPost Politics*. Dr. Nafeez Mosaddeq Ahmed is an investigative journalist, international security scholar and bestselling author. He is a regular contributor to *The Guardian*, writing on the geopolitics of interconnected environmental, energy, and economic crises via his *Earth Insight* blog. He has also written for *The Independent*, *Sydney Morning Herald*, *The Age*, *The Scotsman*, *Foreign Policy*, *The Atlantic*, *Quartz*, *Prospect*, *New Statesman*, *Le Monde diplomatique*, among others. http://www.huffingtonpost.co.uk/dr-nafeez-mosaddeq-ahmed/muslims-and-the-media_b_1682041.html // EMS).

Specialist **studies of media coverage on Islam and Muslims over the last two decades demonstrate an overwhelming trend of negative, stereotypical and inaccurate reporting.** As Jason Beattie, political editor of the *Daily Mirror*, told us: "In general, though not exclusively, the portrayal of Muslims in the mainstream media has been unsatisfactory... [including] sloppy and sometimes stereotypical reporting."¶ But this isn't because all media outlets sing from the same 'Islamophobic' hymn sheet - far from it. Rather, poor journalistic standards in the populist tabloid press generate inaccurate reporting which tends to set the wider news agenda in print and broadcasting by framing the 'big stories' of the day.¶ This was the case both before and after 9/11. One study of British **broadsheets** in the late 1990s, for example, **found that they consistently associated the Muslim world with "extremism and terrorism", "despotism", and "sexism"; while reporting of British Muslims focused primarily on "Muslim violence in the public sphere", including terrorism, faith schools, and crime.**¶ Another study of two liberal and conservative British broadsheets between 1994 and 1996 found that 88% of articles on Islam reported the faith as a foreign phenomenon; and that British Muslims were most commonly linked with "fundamentalism".¶ After 9/11, and 7/7, this trend accelerated. A study commissioned by the Greater London Authority of 352 articles over a randomly selected one week period in 2007, found that **91% of articles about Muslims were "negative"**. A wider Channel 4-commissioned survey of 974 British press articles from 2000 to 2008 found **two thirds of them to portray British Muslims as a "threat" and a "problem", with references to "radical Muslims" outnumbering references to "moderates" by 17 to one.**¶ A further big-picture University of Ottawa study of British press representations over the last 15 years found that the biggest shift in reporting after 9/11 was to associate British Muslims with terrorism and extremism; and to associate acts of terrorism with Islamic belief. In all articles on terrorism, the study concluded, the "Muslimness" of perpetrators of terrorism is emphasised.¶ So **there is no question about it. Reporting on Islam and Muslims in the British media has been predominantly inaccurate, false and racist.**¶ But there is another side to this picture which is, perhaps, even more disturbing. **Correlated with the rise in negative media reporting on Muslims, my survey of opinion poll data over the last decade illustrates a rising trend of anti-Muslim sentiment** in wider British society. Professor Julian Petley of the Campaign for Press & Broadcasting Freedom points out that, "if non-Muslims are led to believe that Muslims and Islam pose an existential threat to the 'English way of life', then this cannot but seriously damage community cohesion." Thus, from 2001 to 2006, the number of UK non-Muslims who said they felt threatened by Islam rose from 32% to 53%. By 2010, a further survey found that 75% of non-Muslims now believe Islam is negative for Britain, and that Muslims do not engage positively in society; **with 63% not disagreeing that "Muslims are terrorists."**¶ **This has had a double-whammy impact. On the one hand, media discrimination has contributed to the alienation of some British Muslims.** In 2007, 63% of British Muslims felt that UK media portrayals of Muslims were "Islamophobic" - and 72% of those reported that they "don't feel a sense of belonging" to Britain. As Julian Bond, Director of the Christian Muslim Forum, explains, "even the most engaged, integrated, and inter-faith Muslims" finds such negative media portrayals to be "wearying, frustrating and irritating".¶ On the other hand, **anti-Muslim hate crimes have risen steadily over the last decade, and are now at record levels.** Since 1999, racist offences in general have increased by fourfold - but Muslims are overrepresented as victims in these crimes. The latest Crown Prosecution Service (CPS) figures record a rise of 45% in the number of cases referred to the CPS by police on grounds of religious hostility, and that over most of this decade **Muslims accounted for more than 54% of religiously aggravated offences,** and are the largest faith group experiencing hate crimes. As of 2010, **though only 3% of the population, Muslims represent a massive 44% of those who have died in lethal racist attacks since the 1990s.** And police data from two regions over the period 2009 to 2011 documents a total of 1,200 recorded anti-Muslim hate crimes.¶ And so we come full circle: **the predominantly negative and racist reporting on Muslims in the media has promoted an increasingly dangerous anti-Muslim mindset** in British society, **which in turn has led to an escalation of violent attacks** on British Muslims. As former Daily Star reporter Richard Peppiatt observes, **"False and inaccurate stories about Muslims routinely put out by the press are, in turn, routinely used as tools by far right groups to legitimise their case and gain followers. The internet is full of forums using mainstream newspaper reporting as proof that their hateful views about Muslims are true. Unfortunately, newspapers refuse to recognise their role in that."**¶

Jurisprudence DDI

Framework

Our interpretation is that an affirmative should defend curtailing federal government surveillance as the endpoint of their advocacy. This does not mandate roleplaying, immediate fiat or any particular means of impact calculus.

Surveillance can only be understood in relation to the agent doing the surveying – understanding federal government surveillance as unique is key or the topic becomes abstract and unlimited

Cetina 14

(DANIEL K. CETINA, BALANCING SECURITY AND PRIVACY IN 21ST CENTURY AMERICA: A FRAMEWORK FOR FISA COURT REFORM, 47 J. Marshall L. Rev. 1453 2013-2014, Hein)

Any legitimate attempt to discuss and critique United States surveillance tactics necessarily demands defining exactly what surveillance is and what it entails. Although discourse surrounding governments' intelligence and law enforcement techniques transcends any specific epoch or state.

1 modern communication technologies "have revolutionized our daily lives [and] have also created minutely detailed recordings of those lives," 12 thereby making governmental surveillance simple, potentially ubiquitous, and susceptible to abuse.¹³ Of course, recent surveillance programs were implemented for the noble purpose of conducting the War on Terrorism; 14 but the danger is that pursuing this purpose unchecked can undermine the central principles that both provide the Republic's foundation and differentiate it from the very enemies it combats. 15¶ While the prospect of governmental surveillance seems to implicitly suggest a quasi-Orwellian dystopia,¹⁶ fantastical science fiction mythologies, 17 abstruse philosophical concepts, 18 or documented repressive regimes,¹⁹ the reality is both less foreboding and more nuanced. Although American society, ostensibly, is looking increasingly akin to such fiction, theory, and totalitarianism, surveillance as applied is not so disturbing. Surveillance involves and encompasses many topics and practices, both abstract and practical,²⁰ but it primarily involves power relationships. 21 Specifically, surveillance is "the focused, systematic and routine attention to personal details for purposes of influence, management, protection or direction."²² Surveillance can target a modern society's numerous communications networks, 28 which exist to send and receive information. 24 The communications include both envelope information and content information, distinct categories that draw varying degrees of interest from the surveillance authority. 25¶ But surveillance is not strictly the province of the federal government. 26 Indeed, state and local governments have their own surveillance practices, as do private corporations, which routinely use surveillance data to determine purchasing trends and calibrate advertising, especially through such social media sites as Facebook.²⁸ Surveillance, therefore, transcends the boundary between the private sector and the public sector. 29¶ The focus here, however, is on federal governmental surveillance. It is therefore critical to understand from where the federal government derives its authority to monitor and analyze communications networks.

The Aff undermines the ability to have a limited and stable number of Affirmatives to prepare against. The link magnitude is high. Their affirmative prevents arguments about ____.

This is a reason to vote negative.

Our first standard is competition – every affirmative argument needs to be filtered through the question of “how does this function in a competitive venue of debate where there must be a win or a loss assigned to each team. All their evidence will assume non-competitive academic environment rather than one where a forced choice will inevitably take place with every ballot.

Second is substantive side bias

Not defending the clear actor and mechanism of the resolution produces a substantive side bias.

They have the ability to recontextualize link arguments, shift focus to different proscriptive claims of the 1AC while using traditional competition standards like perms to make non-absolutist disagreements irrelevant.

The first impact to Aff sides bias is absolutism – their interp creates bad debates where negatives are forced into the absolutist positions like cap and Baudrillard to ensure links and have generic positions that can apply to everything. This is bad for education -- forcing us to the academic margins, makes us less effective scholars and less literate in current events. Trains us only for leftist infighting, rather than social change.

Second, it undermines research – Aff has an incentive to constantly break new affs at every tournament making any real attempt at engagement irrelevant and decreasing the quality of all debates. They don't spur engagement and exploration cause there are so many teams reading so many Affs, the only way to respond it with generics. The Aff is conversely incentivized to pick a body of literature with very little negative literature and a prolif of aff advocacies based on single articles or created phrases. There is no incentive to produce detailed strategies because academic disagreements in the literature are minute and easily wished away by perms or Aff changes.

And we have an external impact – Sufficient research-based preparation and debates focused on detailed points of disagreement are key to political effectiveness

Gutting 13

(professor of philosophy at the University of Notre Dame)

(Gary, Feb 19, A Great Debate, <http://opinionator.blogs.nytimes.com/2013/02/19/a-great-debate/?emc=eta1>)

This is the year of what should be a decisive debate on our country's spending and debt. But our political “debates” seldom deserve the name. For the most part representatives of the rival parties exchange one-liners: “The rich can afford to pay more” is met by “Tax increases kill jobs.” Slightly more sophisticated discussions may cite historical precedents: “There were higher tax rates during the post-war boom” versus “Reagan's tax cuts increased revenues.”¶ Such volleys still don't even amount to arguments: they don't put forward generally accepted premises that support a conclusion. Full-scale speeches by politicians are seldom much more than collections of such slogans and factoids, hung on a string of platitudes.

Despite the name, candidates' pre-election debates are exercises in looking authoritative, imposing their talking points on the questions, avoiding gaffes, and embarrassing their opponents with “zingers” (the historic paradigm: “There you go again.”)¶ There is a high level of political discussion in the editorials and op-eds of national newspapers and magazines as well as on a number of blogs, with positions often carefully formulated and supported with argument and evidence. But even here we seldom see a direct and sustained confrontation of rival positions through the dialectic of assertion, critique, response and counter-critique.

Such exchanges occur frequently in our law courts (for example, oral arguments before the Supreme Court) and in discussions of scientific papers. But they are not a significant part of our deliberations about public policy. As a result, partisans typically remain safe in their ideological worlds, convincing themselves that they hold to obvious truths, while their opponents must be either knaves or fools — with no need to think through the strengths of their rivals' positions or the weaknesses of their own.¶ Is there any way to make genuine debates — sustained back-and-forth exchanges, meeting high intellectual standards but still widely accessible — part of our political culture? (I leave to historians the question of whether there are historical precedents— like the Webster-Hayne or Lincoln-Douglas debates.) Can we put our politicians in a situation where they cannot ignore challenges, where they must genuinely engage with one another in responsible discussion and not just repeat talking points?¶ A first condition is that the debates be focused on specific points of major disagreement. Not, “How can we improve our economy?” but “Will tax cuts for the wealthy or stimulus spending on infrastructure do more to improve our economy?” This will prevent vague statements of principle

that don't address the real issues at stake.¶ Another issue is the medium of the debate. Written discussions, in print or online could be easily arranged, but personal encounters are more vivid and will better engage public attention. They should not, however, be merely extemporaneous events, where too much will depend on quick-thinking and an engaging manner. We want remarks to be carefully prepared and open to considered responses.

This guts any educational potential of the aff – failure to engage with the legal detail of surveillance policy prevents translating their argument into action.

Cohen 15 (professor of law at Georgetown University Law Center)

(Julie, 2015, Studying Law Studying Surveillance, Studying Law Studying Surveillance. Surveillance & Society 13(1): 91-101)

Relative to legal scholarship, work in Surveillance Studies is more likely to build from a solid foundation in contemporary social theory. Even so, such work often reflects both an insufficient grasp of the complexity of the legal system in action and lack of interest in the ways that legal and regulatory actors understand, conduct, and contest surveillance. By this I don't mean to suggest that Surveillance Studies scholars need law degrees, but only to point out what ought to be obvious but often isn't: legal processes are social processes, too, and in overlooking these processes, Surveillance Studies scholars also engage in a form of black-boxing that treats law as monolithic and surveillance and government as interchangeable. Legal actors engage in a variety of discursive and normative strategies by which institutions and resources are mobilized around surveillance, and understanding those strategies is essential to the development of an archaeology of surveillance practices. Work in Surveillance Studies also favors a type of theoretical jargon that can seem impenetrable and, more importantly, unrewarding to those in law and policy communities. As I've written elsewhere (Cohen 2012a: 29), "[t]oo many such works find power everywhere and hope nowhere, and seem to offer well-meaning policy makers little more than a prescription for despair." Returning to the topics already discussed, let us consider some ways in which Surveillance Studies might benefit from dialogue with law.¶ Let us return first to the problem of digitally-enhanced surveillance by law enforcement—the problem of the high-resolution mosaic. As discussed in the section above, works by Surveillance Studies scholars exploring issues of mobility and control offer profound insights into the ways in which continual observation shapes spaces and subjectivities—the precise questions about which, as we have already seen, judges and legal scholars alike are skeptical. Such works reveal the extent to which pervasive surveillance of public spaces is emerging as a new and powerful mode of ordering the public and social life of civil society. They offer rich food for thought—but not for action. Networked surveillance is increasingly a fact of contemporary public life, and totalizing theories about its power don't take us very far toward gaining regulatory traction on it. That enterprise is, moreover, essential even if it entails an inevitable quantum of self-delusion. Acknowledgment of pervasive social shaping by networked surveillance need not preclude legal protection for socially-shaped subjects, but that project requires attention to detail. To put the point a different way, the networked democratic society and the totalitarian state may be points on a continuum rather than binary opposites, but the fact that the continuum exists is still worth something. If so, one needs tools for assessment and differentiation that Surveillance Studies does not seem to provide.¶ As an example of this sort of approach within legal scholarship, consider a recent article by legal scholars Danielle Citron and David Gray (2013), which proposes that courts and legislators undertake what they term a technology-centered approach to regulating surveillance. They would have courts and legislators ask whether particular technologies facilitate total surveillance and, if so, act to put in place comprehensive procedures for approving and overseeing their use. From a Surveillance Studies perspective, this approach lacks theoretical purity because its technology-specific focus appears to ignore the fact that total surveillance also can emerge via the fusion of data streams originating from various sources. But the proposal is pragmatic; it does not so much ignore that risk as bracket it while pursuing the narrower goal of gaining a regulatory foothold within the data streams. And because it focuses on the data streams themselves, it is administrable in a way that schemes based on linear timelines and artificial distinctions between different types of surveillance are not. One can envision both courts and legislatures implementing the Citron and Gray proposal in a way that enables far better oversight of what law enforcement is doing.¶ Turning next to the linked practices of commercial profiling and social media surveillance, we have already seen that work in Surveillance Studies again steps in where legal scholarship badly needs supplementation: on the question of how pervasive surveillance by private market actors shapes the production of culture and the patterns of emergent subjectivity. Such work typically does not, however, consider or explore the ways that the legal construct of consent mobilizes legal and policy discourses to sanction ongoing expansions of private-sector surveillance and insulate them from regulatory oversight. Work in Surveillance Studies also has not seemed to pay particularly careful attention to the roles that rhetorics of innovation and competition play in regulatory debates about information privacy. For a discipline that seeks to develop comprehensive and rigorous accounts of surveillance as social ordering and as cultural practice, these are large omissions. As we have seen, the notice-and-choice paradigm has deep roots within liberal theory, and legal and policy discourses about notice and choice reflect legal culture in action. By the same token, understanding surveillance simply as a means to effective administration, or as a means for pursuing and performing security, misses the extent to which a narrative about the inevitable nature of innovation and knowledge production positions

surveillance as a modality of technical and social progress (Cohen 2015). The “surveillance-industrial complex” does not simply parallel the military-industrial complex; it is also deeply rooted in Silicon Valley’s technoculture and (albeit paradoxically) in the tropes of romantic individualism and cultural iconoclasm with which its participants self-identify. These themes have been especially salient for privacy regulators. Engagement with legal scholarship on information privacy would inform the project of understanding surveillance as social ordering and as culture in a number of complementary ways. First and most basically, many legal writings on information privacy are important as primary sources that reveal the notice-and-choice paradigm and the narrative of inevitable innovation at work. But there is also a rich vein of legal scholarship interrogating the assumptions and the politics that underlie privacy and data protection regulation (e.g., Cohen 2012a, 2012c, 2013, 2015; Kerr 2013; Ohm 2010; Solove 2013). In addition, legal scholars have produced richly detailed and revealing investigations of regulatory and compliance processes; for example, scholars concerned with the operation of “surveillant assemblages” and “digital enclosures” ought to read and consider the important work by Kenneth Bamberger and Deirdre Mulligan on corporate privacy compliance cultures (2011a, 2011b).¶ If Surveillance Studies is to inform the content of laws and the nature of regulatory practice in the domain of commercial profiling and social media, however, surveillance theorists will need to do more than simply read legal sources. Work in Surveillance Studies so far has not been particularly well-adapted to helping policymakers figure out what, if anything, to do about evolving practices of commercial surveillance. Once again, if it is to be useful to policymakers, the view from Surveillance Studies requires translation into a form that might furnish a framework for action. Here I want to identify three important sets of questions on which Surveillance Studies scholars who want their work to make a difference might take their cues from legal scholarship.¶ An initial set of questions concerns how to redefine privacy and data protection in functional terms that do not presuppose the stable, liberal self, and that instead offer real benefit to the situated subjects who might claim their protection. David Lyon (2001) has argued that the organizing concepts of “privacy” and “data protection” are inadequate to comprehend surveillance as a mode of social ordering. From a sociological perspective that is undoubtedly right, but privacy and data protection still might be made effective as legal constructs if articulated differently, in ways that correspond more closely to the ways that surveillance shapes experience. That project calls for the sort of theoretical cannibalization that makes Ph.D. committees in Real Disciplines nervous, but at which legal scholars excel. With some trepidation, I offer my own work on privacy as boundary management for the postliberal self (Cohen 2012a, 2013), as well as Valerie Steeves’ (2009) work on relational subjectivity, as examples of the sort of exercise that is necessary to reframe the effects of surveillance as social ordering in ways to which legal systems can respond. For law to develop a sustainable and effective approach to regulating data protection and protecting privacy, the ways of theorizing about the subject represented by these projects must become second nature, not only for scholars but also and more importantly for legislatures, regulators, and courts. That in turn requires second process of translation, from the language of academia into a vernacular that can supply inputs into policy processes.¶ A second set of questions concerns how to understand what constitutes privacy harm in an era in which some surveillance is a constant. To the Surveillance Studies reader this may seem to be a variation on the first question, but it is different: in law, harm is what makes violation of an interest actionable, and the potential for harm is what creates the predicate for comprehensive regulation of particular domains of activity. Harm need not be individualized or monetizable; environmental regulations and financial market regulations address systemic and often nonmonetizable risk. But it must be reasonably definite; talk of power, power everywhere is plainly insufficient and it should come as no surprise that policymakers find it risible. Work on this problem is still preliminary, but here legal scholarship has a leg up because it deals in practicalities. Surveillance Studies scholars might profitably read works by Danielle Citron (2007) and Paul Ohm (2010) that identify and name the systemic risks associated with leaky and largely unregulated data reservoirs, and that draw on resources ranging from the history of tort law to computational science to craft recommendations for more effective regulatory strategies.¶ A final set of questions concerns the design of governance mechanisms. As we have already seen, the flows of surveillance within social media create novel institutional design challenges. In the domain of commercial profiling, many activities on the business-facing side of personal information markets, removed from consumer-facing processes that purport to ensure notice and choice, have eluded regulatory scrutiny entirely. Some of the classic works on privacy governance originate within the Surveillance Studies tradition; these include Priscilla Regan’s (1995) study of the way privacy legislation emerges within the U.S. political system and Colin Bennett and Charles Raab’s (2006) work on privacy governance and the emergence of data protection as a regulatory paradigm. But the question of governance badly needs to be revisited; in particular, Surveillance Studies scholars have not yet engaged with the “new privacy governance” now emerging as official policy in the U.S. (and as de facto policy in the European Union) in a sustained and meaningful way. Works by legal scholars on the political, epistemological, and normative dimensions of the new governance (e.g., Bamberger 2010; Cohen 2012b, 2013; Freeman 2000; Lobel 2004) offer starting points for an inquiry that moves beyond “doing Surveillance Studies” to consider the more pressing challenge of doing surveillance regulation wisely and effectively.¶ Conclusion: Doing Law-and-Surveillance-Studies Differently¶ The prospects for fruitful interchange and collaboration between legal scholars and Surveillance Studies scholars are likely to remain complicated by pronounced differences in underlying theoretical orientation. But since Surveillance Studies is itself an interdiscipline (Garber 2001), and since legal scholarship has thrived on interdisciplinary exploration, the prospects for effective communication also seem reasonably good. Bridging the gaps requires, first and foremost, efforts by emissaries from both traditions to foster a more tolerant and curious dialogue directed toward improved understanding and, ultimately, toward methodological hybridization. Within one’s own academic community, it can become too easy to mistake consensus on methodological conventions for epistemological rigor, and to forget that methodological strength also derives from refusal to be hemmed in by disciplinary boundaries.¶ From the standpoint of theory, a more sustained dialogue between law and Surveillance Studies would count as a success if it produced a mode of inquiry

about surveillance that melded the theoretical sophistication of Surveillance Studies with lawyerly attention to the details, mechanisms, and interests that constitute surveillance practices as legal practices, and to the kinds of framing that mobilize legal and policy communities. To do Surveillance Studies better, legal scholars need to challenge their own preference for putting problems in categories that fit neatly within the liberal model of human nature and behavior, and Surveillance Studies scholars can help by calling attention to the social and cultural processes within which surveillance practices are embedded. Surveillance Studies scholars need to do more to resist their own penchant for totalizing dystopian narratives, and should delve more deeply into the legal and regulatory realpolitik that surrounds the administration of surveillance systems; legal scholars can help by demystifying legal and regulatory processes.¶ From a legal scholar's perspective, however, theory achieves its highest value when it becomes a tool for forcing productive confrontations about how to respond to real problems. And so I think it would count as an even bigger success if dialogue between law and Surveillance Studies generated not only a hybridized theoretical discourse of law-and-Surveillance-Studies but also the beginnings of a more accessible policy discourse about surveillance and privacy, along with reform proposals designed to put the animating concepts behind such a discourse into practice. Here the goal would be a hybridization between law's ingrained pragmatism and Surveillance Studies' attentiveness to the social and cultural processes through which surveillance is experienced and assimilated. Working together, legal scholars and Surveillance Studies scholars might advance the project of formulating working definitions of privacy interests and harms, and might develop more sophisticated projections of the likely effects of different policy levers that could be brought to bear on systems of surveillance.

Next is Mechanism Education

The Aff's failure to identify an agent and mechanism makes cost-benefits analysis impossible, meaning debates take place in an academic vacuum where tradeoffs are irrelevant. It makes link comparisons vacuous and means that detailed PICs about substance are all but impossible.

And this turns the Aff – debates over mechanisms for change are crucial to solve material violence on a large scale

Capulong 9 (Assistant Professor of Law, University of Montana)
(Eduardo R.C., CLIENT ACTIVISM IN PROGRESSIVE LAWYERING THEORY, CLINICAL LAW REVIEW, 16 Clinical L. Rev. 109, Fall, 2009)

Motivating client activism under dynamic social conditions requires the development and constant assessment and reassessment of a political perspective that measures that resistance and its possibilities. That task in turn requires the development of specific activist goals within the context of such analyses, and perhaps broader, national and international strategy--what some call the political "next step." This is particularly true today, when the economic crisis plaguing capitalism, the "war on terror" and climate change undeniably have world-wide dimensions. Instances of failure, too, need to be part of that analysis, because they teach us much about why otherwise promising activist efforts do not become sustained mass movements of the sort to which we all aspire.¶ Thus, the theoretical need is two-fold: to construct a broader organizing perspective from a political standpoint, and to consider activism writ large. Without reading the pulse of prevailing social conditions, it is easy to miscalculate what that next step ought to be. We will not build a mass movement though sheer perseverance--a linear, idealist conception of change at odds with dynamic social conditions. By the same token, we may underestimate the potential of such mass activism if we focus simply on the local dimensions of our work.¶ The dialectic between a dynamic social context and political consciousness and action requires a constant organizational and political calibration and modulation often missing from theoretical scholarship. Without such a working perspective, we are apt to be either ultra-left or overly conservative. As Jim Pope put it recently in the context of new forms of labor organizing: "If we limit our vision of the future to include only approaches that work within the prevailing legal regime and balance of forces, then we are likely to be irrelevant when and if the opportunity for a paradigm shift arises." n449 The cyclical nature of labor organizing, he argues, mirrors politics generally:¶ American political life as a whole has likewise alternated between periods characterized by public action, idealism, and reform on the [*189] one hand, and periods of private interest, materialism, and retrenchment on the other. A prolonged private period spawns orgies of corruption and extremes of wealth and poverty that, sooner or later, ignite passionate movements for reform. n450¶ C. 'Activism': Towards a Broader, Deeper, Systematic Framework¶ In progressive lawyering theory, grassroots activism is frequently equated with "community organizing" and "movement" or "mobilization" politics. n451 Indeed, these methods have come to predominate activist lawyering in much the same way as "public interest law" has come for many to encompass all forms of progressive practice. "Activism" is, of course, broader still. Even on its own terms, the history of community organizing and social movements in the

United States includes two vitally important traditions frequently given short shrift in this realm: industrial union organizing and alternative political party-building. n452 In this section, my aim is not to catalogue the myriad ways in which lawyers and clients can and do become active (methodically or institutionally)--which, given human creativity and progress, in any event may be impossible to do--but rather to problematize three assumptions: first, the tendency to define grassroots activity narrowly; second, the notion that certain groups--for example "the poor" or the "subordinated"--are the definitive agents of social change; and finally, the conviction that mass mobilization or movement-building, by itself, is key to social transformation.¶ 1. Grassroots Activism¶ There are countless ways in which people become socially or politically active. Yet even the more expansive and sophisticated considerations of activism in progressive lawyering theory tend to unnecessarily circumscribe activism. For example, Cummings and Eagly argue that we need to "unpack" the term "organizing." n453 Contrasting two strategies of the welfare rights movement in the 1960s, these authors distinguish between "mobilization as short-term community action and organizing as an effort to build long-term institutional power." n454 In the same breath, however, they define organizing "as shorthand for a range of community-based practices," n455 even though at least some activism, for example union organizing or, say, [*190] fasting, might not be best characterized as "community-based."¶ What is required is a larger framework that takes into account the sum total of activist initiatives. Lucie White argues that we need to "map out the internal microdynamics of progressive grassroots initiatives ... observe the multiple impacts of different kinds of initiatives on wide spheres of social and political life ... and devise typologies, or models, or theories that map out a range of opportunities for collaboration." n456 This map would be inadequate--and therefore inaccurate--if we include certain activist initiatives and not others. But that is precisely what the progressive lawyering literature has done by failing to regularly consider, for example, union organizing or alternative political party-building.¶ 2. Agents of Social Change: Identity, Class and Political Ideology As with our definition of activism, here, too, the problem is a lack of clarity, breadth or scope, which leads to misorientation. Have we defined, with theoretical precision, the social-change agents to whom we are orienting--e.g., the "people," the "poor," the "subordinated," "low-income communities" or "communities of color?" And if so, are these groupings, so defined, the primary agents of social change? By attempting to harmonize three interrelated (yet divergent) approaches to client activism--organizing on the bases of geography and identity, class and the workplace, and political ideology--modern community organizing simultaneously blurs and balkanizes the social-change agents to whom we need to orient. What, after all, is "community?" In geographic terms, local efforts alone cannot address social problems with global dimensions. n457 As Pope observed of workers' centers: "the tension between the local and particularistic focus of community unionism and the global scope of trendsetting corporations like Wal-Mart makes it highly unlikely that community unionism will displace industrial unionism as 'the' next paradigm of worker organization." n458 On the other hand, members of cross-class, identity-based "communities" may not necessarily share the same interests. In the "Asian American community," Ancheta explains: using the word "community" in its singular form is often a misnomer, because Asian Pacific Americans comprise many communities, each with its own history, culture and language: Filipino, Chinese, Japanese, Korean, Vietnamese, Thai, Cambodian, Lao, Lao-Mien, [*191] Hmong, Indian, Indonesian, Malaysian, Samoan, Tongan, Guamanian, Native Hawaiian, and more. The legal problems facing individuals from different communities defy simple categorization. The problems of a fourth-generation Japanese American victim of job discrimination, a monolingual refugee from Laos seeking shelter from domestic violence, an elderly immigrant from the Philippines trying to keep a job, and a newcomer from Western Samoa trying to reunite with relatives living abroad all present unique challenges. Add in factors such as gender, sexual orientation, age, and disability, and the problems become even more complex. n45 Angela Harris echoes this observation by pointing out how some feminist legal theory assumes "a unitary, 'essential' women's experience [that] can be isolated and described independently of race, class, sexual orientation, and other realities of experience." n460 The same might be said of the "people," which, like the "working class," may be too broad. Other categorizations--such as "low-income workers," "immigrants", and the "poor", for example--may be too narrow to have the social weight to fundamentally transform society. In practice, progressive lawyers orient to the politically advanced among these various "communities." In so doing, then, we need to acknowledge that we are organizing on the basis of political ideology, and not simply geography, identity or class. Building the strongest possible mass movement, therefore, requires an orientation not only towards certain "subordinated" communities, but to the politically advanced generally. Otherwise, we may be undermining activism writ large. This is not to denigrate autonomous community efforts. As I have mentioned, subordinated communities of course have the right to self-determination, i.e. to organize separately. But the point is not simply to organize groups of people who experience a particular oppression, but rather to identify those who have the social power to transform society. Arguing that these agents are the collective, multi-racial working class, Smith explains: The Marxist definition of the working class has little in common with those of sociologists. Neither income level nor self-definition are [sic] what determine social class. Although income levels obviously bear some relationship to class, some workers earn the same or higher salaries than some people who fall into the category of middle class. And many people who consider themselves "middle [*192] class" are in fact workers. Nor is class defined by categories such as white and blue collar. For Marx the working class is defined by its relationship to the means of production. Broadly speaking, those who do not control the means of production and are forced to sell their labor power to capitalists are workers. n461 The practical consequence of this very well may be that we redefine who we represent as clients and consider activism or potential activism outside subordinated communities, for example union activity and alternative political-party building, as part of our work.¶ 3. From Movementism to Political Organization¶ Dogged as our work is in the activist realm, any effort at fundamental social transformation is doomed without effective political leadership. Such leadership, in turn, requires work not often associated with "activism," such as, for example, theoretical study. n462 "Movementism," n463 by which I mean the conviction that building a mass movement is the answer to oppression and exploitation, has its limitations. Even though activism itself is perhaps the best school for political education, we have an enormous amount to learn from our predecessors. In the final analysis, fundamental social transformation will only come about if there are political organizations clear enough, motivated enough, experienced enough, large enough, embedded enough and agile enough to respond to the twists and turns endemic in any struggle for power. "The problem," as Bellow astutely observed, "is not our analytic weaknesses, but the opportunistic, strategic, and political character of our subject." n464 Such opportunities typically occur when there is a confluence of three factors: a social

crisis: a socio-economic elite that finds itself divided over how to overcome it; and a powerful mass movement from below. As I understand the nature of social change, successful social transformations occur when there is a fourth element: political organization.¶ Conclusion¶ Client activism is not a monolithic, mechanical object. Most of the time, it is neither the gathering mass movement many of us wish for, nor the inert, atomized few in need of external, professional motivation. Rather, activism is a phenomenon in constant ebb and flow, a [*193] mercurial, fluid complex shaped by an unremitting diversity of factors. The key through the maze of lawyering advice and precaution is therefore to take a hard, sober look at the overarching state of activism. Are our clients in fact active or are they not? How many are and who are they? What is the nature of this period? Economically? Politically? Culturally? What are the defining issues? What political and organizing trends can be discerned? With which organizations are our clients active, if any? What demands are they articulating, and how are they articulating them?¶ This is a complex evaluation, one requiring the formulation, development and constant assessment and reassessment of an overarching political perspective. My aim in this Article is to begin to theorize the various approaches to this evaluation. In essence, I am arguing for the elaboration of a systematic macropolitical analysis in progressive lawyering theory. Here, my purpose is not to present a comprehensive set of political considerations, but rather to develop a framework for, and to investigate the limitations of, present considerations in three areas: strategic aims; prevailing social conditions; and methods of activism. Consciously or not, admittedly or not, informed and systematic or not, progressive lawyers undertake their work with certain assumptions, perspectives and biases. Progressive lawyering theory would be a much more effective and concrete guide to action--to defining the lawyer's role in fostering activism--if it would elaborate on these considerations and transform implicit and perhaps delimited assumptions and approaches into explicit and hopefully broader choices.¶ Over the past four decades, there has been remarkable continuity and consistency in progressive lawyers' use of litigation, legislation, direct services, education and organizing to stimulate and support client activism. The theoretical "breaks" to which Buchanan has referred n465 have not been so much about the practice of lawyering itself, but rather about unarticulated shifts in ultimate goals, societal analyses, and activist priorities, each necessitated by changes in the social, economic, and political context. That simply is another way of stating the obvious: that progressive lawyers change their practices to adapt to changing circumstances. The recurrent problem in progressive lawyering theory is that many commentators have tended to generalize these practice changes to apply across social circumstances. In so doing, they displace and often replace more fundamental differences over strategic goals, interpretation of social contexts, and organizing priorities with debates over the mechanics of lawyering practice.¶ The argument is turned on its head: we often assume or tend to [*194] assume agreement over the meanings and underlying conceptual frameworks relating to "fundamental social change," current political analysis, and "community organizing," and debate lawyering strategy and tactics; but instead we should be elaborating and clarifying these threshold political considerations as a prerequisite to using what we ultimately agree to be a broad and flexible set of lawyering tools. In effect, the various approaches to lawyering have become the currency by which scholars have debated politics and activism. The irony is that our disagreements are less about lawyering approaches per se, I believe, than they are about our ultimate political objectives, our analyses of contemporary opportunities, and our views of the optimal paths from the latter to the former. The myriad lawyering descriptions and prescriptions progressive lawyering theory offers are of limited use unless they are anchored in these primary considerations. How do we decide if we should subscribe to "rebellious" and not traditional "public interest" lawyering, for example, or "collaborative" over "critical" lawyering, if we do not interrogate these questions and instead rush too quickly into practical questions? The differences among these approaches matter precisely because they have different political goals, are based on different political analyses, and employ different political activist strategies.¶ Activist lawyers already engage in these analyses--necessarily so. To foster client activism, they must read prevailing social conditions and strategize with their clients about the political next step, often with an eye toward a long-term goal. But I don't think we necessarily engage in these analyses as consciously, or with as full a picture of the history and dynamics involved or options available, as we could. Often this is because there simply isn't time to engage these questions. Or perhaps not wanting to dominate our clients, we squelch our own political analysis and agenda to allow for organic, indigenous leadership from below. But if we are truly collaborative--and when we feel strongly enough about certain political issues--we engage on issues and argue them out. In either event, we undertake an unsystematic engagement of these fundamental issues at our peril.¶ If we adhere to the belief that only organized, politicized masses of people can alter or replace exploitative and oppressive institutions and bring about lasting fundamental social change, then, as progressive lawyers, we need to be clear about which legal tactics can bring about such a sustained effort in each historical moment. Without concrete and comprehensive diagnoses of ultimate political goals, social and economic contexts, and organizing priorities, progressive legal practice will fail to live up to its potential.¶

Now the State debate

We do not need to win that the state is good, rather just that the value of the state is something that should be debated about. This is the screen you should adopt for the Aff's ev – it can't just say that the state is bad or ineffective, their ev has to say that the state should not even be discussed. General indictments of the state can be done on the neg, while still preserving limited and effective debate and research.

First, engaging with the law is inevitable and can be effective

Capulong 9 (Assistant Professor of Law, University of Montana)

(Eduardo R.C., CLIENT ACTIVISM IN PROGRESSIVE LAWYERING THEORY, CLINICAL LAW REVIEW, 16 Clinical L. Rev. 109, Fall, 2009)

Nevertheless, in contrast to what Steve Bachmann has called the [*116] "a-legal" or "crude Marxist" approach, n19 progressive activists recognize that the legal arena remains a forum for social struggle. n20 This is so for three reasons:

First, activists often do not have a choice but to work within the legal system, as when they are arrested or otherwise prevented from engaging in activism by state authorities. Second, because law is relatively autonomous from economic and political interests, n21 campaigns for legal reform can win substantial gains and are frequently the only vehicles through which more far-reaching change takes shape; struggles for reform, in other words, beget more radical possibilities and aspirations. n22 And third, law is constitutive of the social order. Law--or, more accurately, the concept of it--is not (again as some crude analysts would argue) simply a tool of one ruling class or other, but rather an essential component of a just society. n23¶ Commentators observe that lawyers who base their practice on these three premises are "hungry for theory," n24 for theory checks the "occupational hazards [of] reformism or cynicism." n25 The theoretical project is thus a dialectic: while law reform alone cannot "disturb the basic political and economic organization of modern American society," n26 [*117] law and lawyering are "a complex, contradictory, and open-textured setting that provides opportunities to challenge the status quo."¶

Second, debate about arcane legal details are crucial to the short-term survival of oppressed populations. Outside of the law being good or bad, legal education is crucial to empower even the most revolutionary of movements.

Arkles et al 10

(Gabriel Arkles, Pooja Gehi and Elana Redfield, The Role of Lawyers in Trans Liberation: Building a Transformative Movement for Social Change, Seattle Journal for Social Justice, 8 Seattle J. Soc. Just. 579, Spring / Summer, 2010, LN)

While agenda-setting by lawyers can lead to the replication of patterns of elitism and the reinforcement of systems of oppression, we do believe that legal work is a necessary and critical way to support movements for social justice. We must recognize the limitations of the legal system and learn to use that to the advantage of the oppressed. If lawyers are going to support work that dismantles oppressive structures, we must radically rethink the roles we can play in building and supporting these movements and acknowledge that our own

individual interests or even livelihood may conflict with doing radical and transformative work. n162 A. Community Organizing for Social Justice When we use the term community organizing or organizing, we refer to the activities of organizations engaging in base-building and leadership development of communities directly impacted by one or more social [*612] problems and conducting direct action issue campaigns intended to make positive change related to the problem(s). In this article, we discuss community organizing in the context of progressive social change, but community-organizing strategies can also be used for conservative ends. Community organizing is a powerful means to make social change. A basic premise of organizing is that inappropriate imbalances of power in society are a central component of social injustice. In order to have social justice, power relationships must shift. In Organizing for Social Change: Midwest Academy Manual for Activists (hereinafter, "the Manual"), n163 the authors list three principles of community organizing: n164 (1) winning real, immediate, concrete improvements in people's lives; (2) giving people a sense of their own power; and (3) altering the relations of power. n165 Before any of these principles can be achieved it is necessary to have leadership by the people impacted by social problems. n166 As Rinku Sen points out: [E]ven allies working in solidarity with affected groups cannot rival the clarity and power of the people who have the most to gain and the least to lose . . . organizations composed of people whose lives will change when a new policy is instituted tend to set goals that are harder to reach, to compromise less, and to stick out a fight longer. n167 She also notes that, "[I]f we are to make policy proposals that are grounded in reality and would make a difference either in peoples' lives or in the debate, then we have to be in touch with the people who are at the center of such policies." n168 We believe community organizing has the potential to make fundamental social change that law reform strategies or "movements" led by lawyers cannot achieve on their own. However, community organizing is not always just and effective. Community-organizing groups are not immune to any number of problems that can impact other organizations, including internal oppressive dynamics. In fact, some strains of white, male-dominated [*613] community organizing have been widely criticized as perpetuating racism and sexism. n169 Nonetheless, models of community organizing, particularly as revised by women of color and other leaders from marginalized groups,

have much greater potential to address fundamental imbalances of power than law reform strategies. They also have a remarkable record of successes. Tools from community organizers can help show where other strategies can fit into a framework for social change. The authors of the Manual, for example, describe various strategies for addressing social issues and illustrate how each of them may, at least to some extent, be effective. n170 They then plot out various forms of making social change on a continuum in terms of their positioning with regard to existing social power relationships. n171 They place direct services at the end of the spectrum that is most accepting of existing power relationships and community organizing at the end of the spectrum that most challenges existing power relationships. n172 Advocacy organizations are listed in the middle, closer to community organizing than direct services. n173 The Four Pillars of Social Justice Infrastructure model, a tool of the Miami Workers Center, is somewhat more nuanced than the Manual. n174 According to this model, four "pillars" are the key to transformative social justice. n175 They are (1) the pillar of service, which addresses community needs and stabilizes community members' lives; (2) the pillar of policy, which changes policies and institutions and achieves concrete gains with benchmarks for progress; (3) the pillar of consciousness, which alters public opinion and shifts political parameters through media advocacy and popular education; and (4) the pillar of power, which achieves autonomous community power through base-building and leadership development. n176 According to the Miami Workers Center, all of these pillars are essential in making social change, but the pillar of power is most crucial in the struggle to win true liberation for all oppressed communities. n177 [*614] In their estimation, our movements suffer when the pillar of power is forgotten and/or not supported by the other pillars, or when the pillars are seen as separate and independent, rather than as interconnected, indispensable aspects of the whole infrastructure that is necessary to build a just society. n178 Organizations with whom we work are generally dedicated solely to providing services, changing policies, or providing public education. Unfortunately, each of these endeavors exists separate from one another and perhaps most notably, separate from community organizing. In SRLP's vision of change, this separation is part of maintaining structural capitalism that seeks to maintain imbalances of power in our society. Without incorporating the pillar of power, service provision, policy change, and public education can never move towards real social justice. n179 B. Lawyering for Empowerment In the past few decades, a number of alternative theories have emerged that help lawyers find a place in social movements that do not replicate oppression. n180 Some of the most well-known iterations of this theme are "empowerment lawyering," "rebellious lawyering," and "community lawyering." n181 These perspectives share skepticism of the efficacy of impact litigation and traditional direct services for improving the conditions faced by poor clients and communities of color, because they do not and cannot effectively address the roots of these forms of oppression. n182 Rather, these alternative visions of lawyering center on the empowerment of community members and organizations, the elimination of the potential for dependency on lawyers and the legal system, and the collaboration between lawyers and directly impacted communities in priority setting. n183 Of the many models of alternative lawyering with the goal of social justice, we will focus on the idea of "lawyering for empowerment," generally. The goal of empowerment lawyering is to enable a group of people to gain control of the forces that affect their lives. n184 Therefore, the goal of empowerment lawyering for low-income transgender people of [*615] color is to support these communities in confronting the economic and social policies that limit their life chances.¶ Rather than merely representing poor people in court and increasing access to services, the role of the community or empowerment lawyer involves:¶ organizing, community education, media outreach, petition drives, public demonstrations, lobbying, and shaming campaigns . . . [¶]Individuals and members of community-based organizations actively work alongside organizers and lawyers in the day-to-day strategic planning of their case or campaign. Proposed solutions--litigation or non-litigation based--are informed by the clients' knowledge and experience of the issue. n185¶ A classic example of the complex role of empowerment within the legal agenda setting is the question of whether to take cases that have low chances of success. The traditional approach would suggest not taking the case, or settling for limited outcomes that may not meet the client's expectations. However, when our goals shift to empowerment, our strategies change as well. If we understand that the legal system is incapable of providing a truly favorable outcome for low-income transgender clients and transgender clients of color, then winning and losing cases takes on different meanings.¶ For example, a transgender client may choose to bring a lawsuit against prison staff who sexually assaulted her, despite limited chance of success because of the "blue wall of silence," her perceived limited credibility as a prisoner, barriers to recovery from the Prison Litigation Reform Act, and restrictions on supervisory liability in § 1983 cases. Even realizing the litigation outcome will probably be unfavorable to her, she may still develop leadership skills by rallying a broader community of people impacted by similar issues. Additionally, she may use the knowledge and energy gained through the lawsuit to change policy. If our goal is to familiarize our client with the law, to provide an opportunity for the client [*616] and/or community organizers to educate the public about the issues, to help our client assess the limitations of the legal system on their own, or to play a role in a larger organizing strategy, then taking cases with little chance of achieving a legal remedy can be a useful strategy.¶

Lawyering for empowerment means not relying solely on legal expertise for decisionmaking. It means recognizing the limitations of the legal system, and using our knowledge and expertise to help disenfranchised communities take leadership.

If community organizing is the path to social justice and "organizing is about people taking a role in determining their own future and improving the quality of life not only for themselves but for everyone," then "the primary goal [of empowerment lawyering] is building up the community." n186¶ C. Sharing Information and Building Leadership¶ A key to meaningful participation in social justice movements is access to information. Lawyers are in an especially good position to help transfer knowledge, skills, and information to disenfranchised communities--**the legal system is maintained by and predicated on arcane knowledge that lacks relevance in most contexts but takes on supreme significance in courts, politics, and regulatory agencies.** It is a system intentionally obscure to the uninitiated; therefore the lawyer has the opportunity to expose the workings of the system to those who seek to destroy it, dismantle it, reconfigure it, and re-envision it.¶ As Quigley points out, the ignorance of the client enriches the lawyer's power position, and thus the transfer of the power from the lawyer to the client necessitates a sharing of information. n187 Rather than simply performing the tasks that laws require, a lawyer has the option to teach and to collaborate with clients so that they can bring power and voice back to their communities and perhaps fight against the system, become politicized, and take leadership. "This demands that the lawyer undo the secret wrappings of the legal system and share the essence of legal advocacy--doing so lessens the

mystical power of the lawyer, and, in practice, enriches the advocate in the sharing and developing of rightful power." n188¶ Lawyers have many opportunities to share knowledge and skills as a form of leadership development. This sharing can be accomplished, for example, through highly collaborative legal representation, through community clinics, through skill-shares, or through policy or campaign meetings where the lawyer explains what they know about the existing structures and fills in gaps and questions raised by activists about the workings of legal systems.¶ D. Helping to Meet Survival Needs¶ SRLP sees our work as building legal services and policy change that directly supports the pillar of power. n189 Maintaining an awareness of the limitations and pitfalls of traditional legal services, we strive to provide services in a larger context and with an approach that can help support libratory work. n190 For this reason we provide direct legal services but also work toward leadership development in our communities and a deep level of support for our community-organizing allies.¶ Our approach in this regard is to make sure our community members access and obtain all of the benefits to which they are entitled under the law, and to protect our community members as much as possible from the criminalization, discrimination, and harassment they face when attempting to live their lives. While we do not believe that the root causes keeping our clients in poverty and poor health can be addressed in this way, we also believe that our clients experience the most severe impact from state policies and practices and need and that they deserve support to survive them. n191 Until our communities are truly empowered and our systems are fundamentally changed to increase life chances and health for transgender people who are low-income and people of color, our communities are going to continue to have to navigate government agencies and organizations to survive.¶

Monolithic rejections of the law are wrong – cooption is more likely in non-state activism and fails to compare to alternative mechanisms for change. Concrete mechanisms for success should be your metric for evaluation.

Lobel 7 (Assistant Professor of Law, University of San Diego)

(Orly, THE PARADOX OF EXTRALEGAL ACTIVISM: CRITICAL LEGAL CONSCIOUSNESS AND TRANSFORMATIVE POLITICS, 120 Harv. L. Rev. 937, February, 2007, LN)

In the following sections, I argue that the extralegal model has suffered from the same drawbacks associated with legal cooption. I show that as an effort to avoid the risk of legal cooption, the current wave of suggested alternatives has effects that ironically mirror those of cooption itself. Three central types of difficulties exist with contemporary extralegal scholarship. First, in the contexts of the labor and civil rights movements, arguments about legal cooption often developed in response to a perceived gap between the conceptual ideal toward which a social reform group struggled and its actual accomplishments. But, ironically, the contemporary message of opting out of traditional legal reform avenues may only accentuate this problem. As the rise of informalization (moving to nonlegal strategies), civil society (moving to extralegal spheres), and pluralism (the proliferation of norm-generating actors) has been effected and appropriated by supporters from a wide range of political commitments, these concepts have had unintended implications that conflict with the very social reform ideals from which they stem. Second, the idea of opting out of the legal arena becomes self-defeating as it discounts the ongoing importance of law and the possibilities of legal reform in seemingly unregulated spheres. A model encompassing exit and rigid sphere distinctions further fails to recognize a reality of increasing interpenetration and the blurring of boundaries between private and public spheres, profit and nonprofit sectors, and formal and informal institutions. It therefore loses the critical insight that law operates in the background of seemingly unregulated relationships. Again paradoxically, the extralegal view of decentralized activism and the division of society into different spheres in fact have worked to subvert rather than support the progressive agenda. Finally, since extralegal actors view their actions with romantic idealism, they fail to develop tools for evaluating their success. If the critique of legal cooption has involved the argument that legal reform, even when viewed as a victory, is never radically transformative, we must ask: what are the criteria for assessing the achievements of the suggested alternatives? As I illustrate in the following sections, much of the current scholarship obscures the lines between the descriptive and the prescriptive in its formulation of social activism. If current suggestions present themselves as alternatives to formal legal struggles, we must question whether the new extralegal politics that are proposed and celebrated are capable of producing a constructive theory and meaningful channels for reform, rather than passive status quo politics.¶ A. Practical Failures: When Extralegal Alternatives Are Vehicles for Conservative Agendas¶ We don't want the 1950s back. What we want is to edit them. We want to keep the safe streets, the friendly grocers, and the milk and cookies, while blotting out the political bosses, the tyrannical headmasters, the inflexible rules, and the lectures on 100 percent Americanism and the sinfulness of dissent. n163¶ A basic structure of cooption arguments as developed in relation to the labor and civil rights movements has been to show how, in the move from theory to practice, the ideal that was promoted by a social group takes on unintended content, and the group thus fails to realize the original vision. This risk is particularly high when ideals are framed in broad terms that are open to multiple interpretations. Moreover, the pitfalls of the potential risks presented under the umbrella of cooption are in fact accentuated in current proposals. Paradoxically, as the extralegal movement is framed by way of opposition to formal legal reform paths, without sufficiently defining its goals, it runs the very risks it sought to avoid by working outside the legal system.¶ Extralegal paths are depicted mostly in negative terms and as resorting to new alternative forms of

action rather than established models. Accordingly, because the ideas of social organizing, civil society, and legal pluralism are framed in open-ended contrarian terms, they do not translate into specific visions of social justice reform. The idea of civil society, which has been embraced by people from a broad array of often conflicting ideological commitments, is particularly demonstrative. Critics argue that "some ideas fail because they never make the light of day. The idea of civil society ... failed because it [*972] became too popular." n164 Such a broadly conceived ideal as civil society sows the seeds of its own destruction.¶ In former eras, the claims about the legal cooptation of the transformative visions of workplace justice and racial equality suggested that through legal strategies the visions became stripped of their initial depth and fragmented and framed in ways that were narrow and often merely symbolic. This observation seems accurate in the contemporary political arena; the idea of civil society revivalism evoked by progressive activists has been reduced to symbolic acts with very little substance. On the left, progressive advocates envision decentralized activism in a third, nongovernmental sphere as a way of reviving democratic participation and rebuilding the state from the bottom up. By contrast, the idea of civil society has been embraced by conservative politicians as a means for replacing government-funded programs and steering away from state intervention. As a result, recent political uses of civil society have subverted the ideals of progressive social reform and replaced them with conservative agendas that reject egalitarian views of social provision.¶ In particular, recent calls to strengthen civil society have been advanced by politicians interested in dismantling the modern welfare system. Conservative civil society revivalism often equates the idea of self-help through extralegal means with traditional family structures, and blames the breakdown of those structures (for example, the rise of the single parent family) for the increase in reliance and dependency on government aid. n165 This recent depiction of the third sphere of civic life works against legal reform precisely because state intervention may support newer, nontraditional social structures. For conservative thinkers, legal reform also risks increasing dependency on social services by groups who have traditionally been marginalized, including disproportionate reliance on public funds by people of color and single mothers. Indeed, the end of welfare as we knew it, n166 as well as the [*973] transformation of work as we knew it, n167 is closely related to the quest of thinkers from all sides of the political spectrum for a third space that could replace the traditional functions of work and welfare. Strikingly, a range of liberal and conservative visions have thus converged into the same agenda, such as the recent welfare-to-work reforms, which rely on myriad non-governmental institutions and activities to support them. n168¶ When analyzed from the perspective of the unbundled cooptation critique, it becomes evident that there are multiple limits to the contemporary extralegal current. First, there have been significant problems with resources and zero-sum energies in the recent campaigns promoting community development and welfare. For example, the initial vision of welfare-to-work supported by liberal reformers was a multifaceted, dynamic system that would reshape the roles and responsibilities of the welfare bureaucracy. The Personal Responsibility and Work Opportunity Reconciliation Act of 1996 n169 (PRWORA), supported by President Clinton, was designed to convert various welfare programs, including Aid to Families with Dependent Children, into a single block grant program. The aim was to transform passive cash assistance into a more active welfare system, in which individuals would be better assisted, by both the government and the community, to return to the labor force and find opportunities to support themselves. Yet from the broad vision to actual implementation, the program quickly became limited in focus and in resources. Indeed, PRWORA placed new limits on welfare provision by eliminating eligibility categories and by placing rigid time limits on the provision of benefits. n170¶ Moreover, the need to frame questions relating to work, welfare, and poverty in institutional arrangements and professional jargon and to comply with various funding block grants has made some issues, such as the statistical reduction of welfare recipients, more salient, whereas other issues, such as the quality of jobs offered, have been largely eliminated from policymakers' consideration. Despite aspects of the reform that were hailed as empowering for those groups they were designed to help, such as individual private training vouchers, serious questions have been raised about the adequacy of the particular [*974] policy design because resources and institutional support have been found lacking. n171 The reforms require individual choices and rely on the ability of private recipients to mine through a vast range of information. As in the areas of child care, health care, and educational vouchers, critics worry that the most disadvantaged workers in the new market will not be able to take advantage of the reforms. n172 Under such conditions, the goal of eliminating poverty may be eroded and replaced by other goals, such as reducing public expenses. Thus, recalling the earlier cooptation critique, once reforms are envisioned, even when they need not be framed in legalistic terms, they in some ways become reduced to a handful of issues, while fragmenting, neglecting, and ultimately neutralizing other possibilities.¶ At this point, the paradox of extralegal activism unfolds. While public interest thinkers increasingly embrace an axiomatic rejection of law as the primary form of progress, their preferred form of activism presents the very risks they seek to avoid. The rejected "myth of the law" is replaced by a "myth of activism" or a "myth of exit," romanticizing a distinct sphere that can better solve social conflict. Yet these myths, like other myths, come complete with their own perpetual perils. The myth of exit exemplifies the myriad concerns of cooptation. For feminist agendas, for example, the separation of the world into distinct spheres of action has been a continuous impediment to meaningful reform. Efforts to create better possibilities for women to balance work and family responsibilities, including relaxing home work rules and supporting stay-at-home parents through federal child care legislation, have been couched in terms of support for individual choice and private decisionmaking. n173 Indeed, recent initiatives in federal child care legislation to support stay-at-home parents have been clouded by preconceptions of the separation of spheres and the need to make one-or-the-other life choices. Most importantly, the emergence of a sphere-oriented discourse abandons a critical perspective that distinguishes between valuing traditional gender-based characteristics and celebrating feminine difference in a universalist and essentialist manner. n174 [*975] Not surprisingly then, some feminist writers have responded to civil society revivalism with great skepticism, arguing that efforts to align feminine values and agendas with classic republican theory of civil society activism should be understood, at least in part, as a way of legitimizing historical social structures that subordinated women.¶ The feminist lesson on the law/exit pendulum reveals a broader pattern. In a classic example of cooptation, activists should be concerned about the infusion (or indeed confusion) of nonlegal strategies with conservative privatization agendas. Indeed, in significant social policy contexts, legal scholarship oriented toward the exploration of extralegal paths reinforces the exact narrative that it originally resisted - that the state cannot and should not be accountable for sustaining and improving the lifeworld of individuals in the twenty-first-century economy and that we must seek alternative ways to bring about social reform. Whether using the terminology of a path-dependent process, an inevitable downward

spiral, a transnational prisoner's dilemma, or a global race to the bottom, current analyses often suggest a lack of control over the forces of new economic realities. Rather than countering the story of lack of control, pointing to the ongoing role of government and showing the contradictions between that which is being kept regulated and that which is privatized, alternative extralegal scholarship accepts these developments as natural and inevitable. Similar to the arguments developed in relation to the labor movement - in which focusing on a limited right to collective bargaining demobilized workers and stripped them of their voice, participation, and decisionmaking power - contemporary extralegal agendas are limited to very narrow and patterned sets of reforms.¶ A striking example has been the focus on welfare reform as the single frontier of economic redistribution without a connection being made between these reforms and social services in which the middle class has a strong interest, such as Social Security and Medicare. Similarly, on the legal pluralism frontier, when activists call for more corporate social responsibility, the initial expressions are those of broad demands for sustainable development and overall industry obligations for the social and environmental consequences of their activities. n176 The discourse, however, quickly becomes coopted by a shift to a narrow focus on charitable donations and corporate philanthropy or [*976] private reporting absent an institutionalized compliance structure. n177 Moreover, because of institutional limitations and crowding out effects possible in any type of reform agenda, the focus shifts to the benefits of corporate social responsibility to businesses, as marketing, recruitment, public relations, and "greenwashing" strategies. n178 Critics therefore become deeply cynical about the industry's real commitments to ethical conduct.¶ A similar process can be described with regard to the literature on globalization. Globalization scholarship often attempts to produce a unifying narrative and an image of unitary struggle when in fact such unity does not exist. Embodied in the aforementioned irony of a "global anti-globalization" movement, social reform activism that resides under the umbrella of global movements is greatly diverse, some of it highly conservative. An "anti-globalization" movement can be a defensive nationalist movement infused with xenophobia and protective ideologies. n179 In fact, during central instances of collective action, such as those in Seattle, Quebec, Puerto Alegre, and Genoa, competing and conflicting claims were frequently encompassed in the same protest. n180 Nevertheless, there is a tendency to celebrate and idealize these protests as united and world-altering.¶ Similarly, at the local level, grassroots politics often lack a clear agenda and are particularly ripe for cooptation resulting in far lesser achievements than what may have been expected by the groups involved. In a critical introduction to the law and organizing model, Professor Scott Cummings and Ingrid Eagly describe the ways in which new community-based approaches to progressive lawyering privilege grassroots activism over legal reform efforts and the facilitation of community mobilization over conventional lawyering. n181 After carefully unpacking the ways in which community lawyers embrace [*977] law and organizing, Professor Cummings and Eagly rightfully warn against "exaggerating the ineffectiveness of traditional legal interventions" and "closing off potential avenues for redress." n182 Significantly, the strategies embraced by new public interest lawyers have not been shown to produce effective change in communities, and certainly there has been no assurance that these strategies fare comparatively better than legal reform. Moreover, what are meant to be progressive projects of community action and community economic development frequently can have a hidden effect of excluding worse-off groups, such as migrant workers, because of the geographical scope and zoning restrictions of the project. n183 In the same way that the labor and corporate social responsibility movements have failed because of their embrace of a legal framework, the community economic development movement - so diverse in its ideological appeal yet so prominent since the early 1990s as a major approach to poverty relief - may bring about its own destruction by fracture and diffusion. n184¶ In all of these cases, it is the act of engagement, not law, that holds the risks of cooptation and the politics of compromise. It is not the particularities of lawyers as a professional group that create dependency. Rather, it is the dynamics between skilled, networked, and resourced components and those who need them that may submerge goals and create reliance. It is not the particularities of the structural limitations of the judiciary that threaten to limit the progressive vision of social movements. Rather, it is the essential difficulties of implementing theory into practice. Life is simply messier than abstract ideals. Cooptation analysis exposes the broad, general risk of assuming ownership over a rhetorical and conceptual framework of a movement for change. Subsequently, when, in practice, other factions in the political debate embrace the language and frame their projects in similar terms, groups experience a sense of loss of control or possession of "their" vision. In sum, in the contemporary context, in the absence of a more programmatic and concrete vision of what alternative models of social reform activism need to achieve, the conclusions and rhetoric of the contemporary critical legal consciousness are appropriated by advocates representing a wide range of political commitments. Understood [*978] from this perspective, cooptation is not the result of the turn to a particular reform strategy. Rather, cooptation occurs when imagined ideals are left unchecked and seemingly progressive rhetoric is reproduced by a conservative agenda. Dominant interpretations such as privatization and market competitiveness come out ahead, whereas other values, such as group empowerment and redistributive justice, receive only symbolic recognition, and in turn serve to facilitate and stabilize the process. n185¶

Neoliberalism K

The AFF's paranoia of excessive government induces neoliberalism's control of society

Anderson 12

Ben Anderson, Reader in the Department of Geography at Durham University, "Affect and biopower: towards a politics of life," *Transactions of the Institute of British Geographers*, Vol. 37, No. 1, p. 37-8, fwang

By 'affective condition' I mean an affective atmosphere that predetermines how something - in this case the state - is habitually encountered, disclosed and can be related to. Bearing a family resemblance to concepts such as 'structure of feeling' (Williams 1977) or 'emotional situation' (Virno 2004), an 'affective condition' involves the same doubled and seemingly contradictory sense of the ephemeral or transitory alongside the structured or durable. As such, it does not slavishly determine action. An 'affective condition' shapes and influences as atmospheres are taken up and reworked in lived experience, becoming part of the emotions that will infuse policies or programmes, and may be

transmitted through assemblages of people, information and things that attempt to organise life in terms of the market. **State-phobia obviously exists in complex coexistence with other affective conditions.** To give but two examples, note how Connolly (2008) shows how **existential bellicosity and resentments infuse the networks of think tanks, media and companies that promote neoliberal policies.** Or consider how Berlant (2008) shows how 'nearly utopian' affects of belonging to a world of work are vital to the promise of neoliberal policies in the context of precariousness. In addition **state-phobia has and will vary as it is articulated with distinct political movements.** For example, **the USA 'Tea Party' phenomenon is arguably animated by an intensified state-phobia named in the spectre of 'Big Government' and linked to a reactivation of Cold War anxieties about the threat of 'Socialism'**. But the 'Tea Party' also involves a heady combination of white entitlement and racism, affective-ideational feelings of freedom, and the pervasive economic insecurity that follows from economic crisis.

How, then, do we get from state-phobia to a logic of governing that purports to govern 'as little as possible' but actually intervenes 'all the way down' through 'permanent activity, vigilance and intervention' (Foucault 2008, 246)? **State-phobia traverses quite different apparatuses, and changes across those apparatuses.** As Foucault puts it, it has many 'agents and promoters' (2008, 76), meaning that **it can no longer be localised.** It circulates alongside the concern with excessive government, reappears in different sites and therefore overflows any one neoliberalising apparatus (2008, 187). Hinting to a genealogy of state-affects, **Foucault differentiates it from a similarly 'ambiguous' phobia** at the end of the 18th century **about despotism**, as linked to tyranny and arbitrariness (2008, 76). **State-phobia is different. It gives a push to the question of whether government is excessive, and as such animates policies and programmes that are based on extending the market form to all of society. State-phobia is, on this account, both cause and effect of the neoliberal identification of an 'economic-political invariant'** (2008, 111) **across disparate forms of economic intervention** (including the New Deal, Keynesianism and Nazism). Developing Foucault's brief comments on its 'inflationary' logic (2008, 187), **we can think of state-phobia as being bound up with the anticipatory hyper-vigilance of paranoia** (Sedgwick 2003). It is based on an 'elision of actuality' that passes over what the state is actually doing **to always find the 'great fantasy of the paranoid and devouring state'** (Foucault 2008, 188). In short, **neoliberalism is imbued with a suspicion of any state economic action that is not wholly in the service of organising life around the market form.**

The idea of racism is swabbed through the neoliberal ideology- failure to take into account reinforces racist pedagogy

Davis, 08

(Angela Y. Davis is a Professor of History of Consciousness and Feminist Studies University of California, Santa Cruz. "Recognizing Racism in the Era of Neoliberalism."
http://www.omi.wa.gov.au/resources/clearinghouse/Recognizing_Racism_in_the_Era_of_Neoliberalism_davis.pdf. Date Accessed-07/22/15.//Anshul)

To recapitulate, neoliberalism sees the market as the very paradigm of freedom and democracy emerges as a synonym for capitalism, which has reemerged as the telos of history. In the official narratives of U.S. history, the historical victories of Civil Rights are dealt with as the final consolidation of democracy in the U.S., having relegating racism to the dustbin of history. **The path toward the complete elimination of racism is represented in the neoliberalist discourse of colorblindness. Equality can only be achieved when the law, as well as individual subjects, become blind to race and fail to apprehend the material and ideological work that race continues to do.** When obvious examples of **racism appear to the public, they are considered to be isolated aberrations,** to be addressed as anachronistic attributes of individual behavior. There have been a number of such cases in recent months in the U.S. I mention the noose that was hung on a tree branch by white students. 1 What is Neoliberalism? A Brief Definition for Activists by Elizabeth Martinez and Arnoldo Garcia <http://www.corpwatch.org/article.php?id=376> Vice Chancellor's Oration 2008 at a school in Jena, Louisiana as a sign that black students were prohibited from gathering under that tree. I can also allude to the public use of racist epithets by a well-known white comedian, the racist and misogynist language employed by a well-known radio host in referring to black women on a college basketball team, and finally, the recent comments regarding the golfer Tiger Woods. Perhaps I should elaborate on this final example: two sports journalists were recently involved in a conversation regarding the seemingly unstoppable

Tiger Woods in relation to the new generation of golfers, who are having great difficulty catching up with him. One journalist noted that the younger golfers would probably have to get together and gang up on Woods. The other responded by saying that they would have to catch him and “lynch him in a back alley,” thus conjuring, with a single casual phrase, a vast repressed history of ruthless racist violence. These comments were, of course, readily identified as racist, familiar – exceedingly familiar – expressions of **attitudinal racism that are now treated as anachronistic expressions of racism that were once articulated with state-sponsored racisms but are now relegated to the private sphere** and only become public when they are literally publicized. Whereas, during an earlier period in our history, such comments would have been clearly understood as linked to state policy and to the material practices of social institutions, they are now **treated as individual and private irregularities, to be solved by punishing and reeducating the individual by teaching them colorblindness, by teaching them not to notice the phenomenon of race.** But if we see these individual eruptions of racism as connected to the persistence and further entrenchment of institutional and structural racism that hides behind the curtain of neoliberalism, their meanings cannot be understood as individual aberrations. In the cases we have discussed, the racism is explicit and blatant. There is no denying that these are racist utterances. What happens, however, when racism is expressed, not through the words of individuals, but rather through institutional practices that are “mute” – to borrow the term Dana-Ain Davis uses – with respect to racism? The inability to recognize the contemporary persistence of racisms within institutions and other social structures results in the attribution of responsibility for the effects of racisms to the individuals who are its casualties, **thus further exacerbating the problem of failing to identify the economic, social, and ideological work of racism.** There is a similar logic undergirding the criminalization of those communities, which are vastly overrepresented in jails and prisons. **By failing to recognize the material forces of racism that are responsible for offering up such large numbers of black and Latino youth to the carceral state,** the process of criminalization imputes responsibility to the individuals who are its casualties, thus reproducing the very conditions that produce racist patterns in incarceration and its seemingly infinite capacity to expand. **The misreading of these racist patterns replicates and reinforces the privatization that is at the core of neoliberalism,** whereby social **activity is individualized and the enormous profits generated by the punishment industry are legitimized.** O

The impact is extinction – neoliberal social organization ensures extinction from resource wars, climate change, and structural violence – only accelerating beyond neoliberalism can resolve its impacts

Williams & Srnicek 13

(Alex, PhD student at the University of East London, presently at work on a thesis entitled 'Hegemony and Complexity', Nick, PhD candidate in International Relations at the London School of Economics, Co-authors of the forthcoming *Folk Politics*, 14 May 2013, <http://criticallegalthinking.com/2013/05/14/accelerate-manifesto-for-an-accelerationist-politics/>)

At the begin-ning of the second dec-ade of the Twenty-First Cen-tury, **global civilization faces a new breed of cataclysm.** These com-ing apo-ca-lypses ridicule the norms and organ-isa-tional struc-tures of the polit-ics which were forged in the birth of the nation-state, the rise of cap-it-al-ism, and a Twen-ti-eth Cen-tury of unpre-ced-en-ted wars. 2. **Most significant is the break-down of the planetary climatic system.** In time, **this threatens the continued existence of the present global human population.** Though this is the most crit-ical of the threats which face human-ity, **a series of lesser but potentially equally destabilising problems exist along-side and inter-sect with it.** **Terminal resource depletion, especially in water and energy reserves, offers the prospect of mass starvation, collapsing economic paradigms, and new hot and cold wars.** **Continued financial crisis has led governments to embrace the para-lyz-ing death spiral**

policies of austerity, privatisation of social welfare services, mass unemployment, and stagnating wages. Increasing automation in production processes including 'intellectual labour' **is evidence of the secular crisis of capitalism, soon to render it incapable of maintaining current standards of living** for even the former middle classes of the global north.

3. In contrast to these ever-accelerating catastrophes, **today's politics is beset by an inability to generate the** new ideas and **modes of organisation necessary to transform our societies to confront** and resolve the **coming annihilations**. While crisis gathers force and speed, politics withers and retreats. In this paralysis of the political imaginary, the future has been cancelled.

4. Since 1979, **the hegemonic global political ideology has been neoliberalism**, found in some variant throughout the leading economic powers. In spite of the deep structural challenges the new global problems present to it, most immediately the credit, financial, and fiscal crises **since 2007 – 8, neoliberal programmes have only evolved** in the sense of deepening. **This continuation** of the neoliberal project, or neoliberalism 2.0, **has begun to apply another round of structural adjustments**, most significantly in the form of encouraging new and aggressive incursions by the private sector into what remains of social democratic institutions and services. **This is in spite of the immediately negative** economic and social **effects of such policies**, and the longer term fundamental barriers posed by the new global crises.

The alternative articulates a "counter-conduct" – voting neg pushes towards a *cooperative conduct* that organizes individuals around a collectively shared *commons* – affirming this conduct creates a new heuristic that de-couples government from the demand for competition and production

Dardot & Laval 13

(Pierre Dardot, philosopher and specialist in Hegel and Marx, Christian Laval, professor of sociology at the Université Paris Ouest Nanterre La Défense, *The New Way of the World: On Neoliberal Society*, pgs. 318-321)

This indicates to what extent we must take on board in our own way the main lesson of neoliberalism: **the subject is always to be constructed**. **The whole question is then how to articulate subjectivation with resistance to power**

Now, precisely this issue is at the heart of all of Foucault's thought. However, as Jeffrey T. Nealon has recently shown, part of the North American secondary literature has, on the contrary, stressed the alleged break between Foucault's research on power and that of his last period on the history of subjectivity.⁵⁵ According to the 'Foucault consensus', as Nealon aptly dubs it, the successive impasses of the initial neo-structuralism, and then of the totalizing analysis of panoptical power, led the 'last Foucault' to set aside the issue of power and concern himself exclusively with the aesthetic invention of a style of existence bereft of any political dimension. Furthermore, if we follow this de-politicizing reading of Foucault, the aestheticization of ethics anticipated the neo-liberal mutation precisely by making self-invention a new norm. In reality, far from being oblivious of one another, the issues of power and the subject were always closely articulated, even in the last work on modes of subjectivation. If one concept played a decisive role in this respect, it was 'counter-conduct', as developed in the lecture of 1 March 1978.⁵⁶

This lecture was largely focused on the crisis of the pastorate. It involved identifying the specificity of the 'revolts' or **'forms of resistance of conduct'** that are the correlate of the pastoral mode of power. If such forms of resistance are said to be 'of conduct', it is because they are forms of resistance to power as conduct and, as such, **are themselves forms of conduct opposed to this 'power-conduct'**. **The term 'conduct'** in fact **admits of two meanings: an activity that consists in conducting others, or 'conduction'; and the way one conducts oneself under the influence of this activity of conduction.**⁵⁷ **The idea of 'counter-conduct'** therefore **has the advantage of directly signifying a 'struggle against the procedures implemented for conducting others', unlike the term 'misconduct', which only**

refers to the passive sense of the word.⁵⁸ Through ‘counter-conduct’, people seek both to escape conduction by others and to define a way of conducting themselves towards others.[¶]

What relevance might this observation have for a reflection on resistance to neo-liberal governmentality? It will be said that the concept is introduced in the context of an analysis of the pastorate, not government. **Governmentality**, at least in its specifically neo-liberal form, precisely makes conducting others through their conduct towards themselves its real goal. The peculiarity of this conduct towards oneself, conducting oneself as a personal enterprise, is that it immediately and directly induces a certain conduct towards others: competition with

others, regarded as so many personal enterprises. Consequently, counter-conduct as a form of resistance to this governmentality must correspond to a conduct that is indivisibly a conduct towards oneself and a conduct towards others. One cannot struggle against such an indirect mode of conduction by appealing for rebellion against an authority that supposedly operates through compulsion external to individuals. If ‘politics is nothing more and nothing less than that which is born with resistance to governmentality, the first revolt, the first confrontation’⁵⁹ it means that ethics and politics are absolutely inseparable.[¶] To the subjectivation-subjection represented by ultra-subjection, we must oppose a subjectivation by forms of counter-conduct. To neo-liberal governmentality as a specific way of

conducting the conduct of others, we must therefore oppose a no less specific double refusal: a refusal to conduct oneself towards oneself as a personal enterprise and a refusal to conduct oneself towards others in accordance with the norm of competition. As such, the double refusal is not ‘passive disobedience’.⁶⁰ For, if it is true that the personal enterprise’s relationship to the self immediately and directly determines a certain kind of relationship to others – generalized competition – conversely, the refusal to function as a personal enterprise, which is self-distance and a refusal to line up in the race for performance, can only practically occur on condition of establishing cooperative relations with others, sharing and pooling. In fact, where would be the sense in a self-distance severed from any cooperative practice? At worst, a cynicism tinged with contempt for those who are dupes. At best, simulation or double dealing, possibly dictated by a wholly justified concern for

self-preservation, but ultimately exhausting for the subject. Certainly not a counter-conduct. All the more so in that such a game could lead the subject, for want of anything better, to take refuge in a compensatory identity, which at least has the advantage of some stability by contrast with the imperative of indefinite self-transcendence. Far from threatening the neo-liberal order, fixation with identity, whatever its nature, looks like a fall-back position for subjects weary of themselves, for all those who have abandoned the race or been excluded from it from the outset. Worse, it recreates the logic of competition at the level of relations between ‘little communities’. Far from being valuable in itself, independently of any articulation with politics, individual subjectivation is bound up at its very core with collective subjectivation. In this sense, sheer aestheticization of ethics is a pure and simple abandonment of a genuinely ethical attitude. The invention of new forms of existence can only be a collective act, attributable to the multiplication and intensification of cooperative counter-conduct.

A collective refusal to ‘work more’, if only local, is a good example of an attitude that can pave the way for such forms of counter-conduct. In effect, it breaks what André Gorz quite rightly called the ‘structural complicity’ that binds the worker to capital, in as much as ‘earning money’, ever more money, is the decisive goal for both. It makes an initial breach in the ‘immanent constraint of the “ever more”, “ever more rapidly”’.^{61¶} The genealogy of neo-liberalism attempted in this book teaches us that the new global rationality is in no wise an inevitable fate shackling humanity. Unlike Hegelian Reason, it is not the reason of human history. It is itself wholly historical – that is, relative to strictly singular conditions that cannot legitimately be regarded as untranscendable. The main thing is to understand that nothing can release us from the task of promoting a different rationality. That is why the belief that the financial crisis by itself sounds the death-knell of neo-liberal capitalism is the worst of beliefs. It is possibly a source of pleasure to those who think they are witnessing reality running ahead of their desires, without them having to move their little finger. It certainly comforts those for whom it is an opportunity to celebrate their own past ‘clairvoyance’. At bottom, it is the least acceptable form of intellectual and political abdication. Neo-liberalism is not falling like a ‘ripe fruit’ on account of its internal contradictions; and traders will not be its undreamed-of ‘gravediggers’ despite themselves. Marx had already made the point powerfully: ‘History does nothing’.⁶² There are only human beings who act in given conditions and seek through their

action to open up a future for themselves. It is up to us to enable a new sense of possibility to blaze a trail. The government of human beings can be aligned with horizons other than those

of maximizing performance, unlimited production and generalized control. It can sustain itself with self-government that opens onto different relations with others than that of competition between 'self-enterprising actors'. The practices of 'communization' of knowledge, mutual aid and cooperative work can delineate the features of a different world reason. Such an alternative reason cannot be better designated than by the term reason of the commons.

Policing the Color Line

The aff does nothing to solve local surveillance rooted in racism

APUZZO 15 (Matt Apuzzo is a reporter for the NYT, and Professor at Georgetown University, and reported for Associated Press and the Standard-Times, "Ferguson Police Routinely Violate Rights of Blacks, Justice Dept. Finds", MARCH 3, 2015, http://www.nytimes.com/2015/03/04/us/justice-department-finds-pattern-of-police-bias-and-excessive-force-in-ferguson.html?_r=0)

WASHINGTON — **Ferguson, Mo., is a third white, but the crime statistics compiled in the city over the past two years seemed to suggest that only black people were breaking the law.** They accounted for 85 percent of traffic stops, 90 percent of tickets and 93 percent of arrests. In cases like jaywalking, which often hinge on police discretion, blacks accounted for 95 percent of all arrests. **The racial disparity in those statistics was so stark that the Justice Department has concluded in a report** scheduled for release on Wednesday **that there was only one explanation: The Ferguson Police Department was routinely violating the constitutional rights of its black residents.** **The report,** based on a six-month investigation, **provides a glimpse into the roots of the racial tensions that boiled over in Ferguson last summer after a black teenager, Michael Brown, was fatally shot by a white police officer,** making it a worldwide flash point in the debate over race and policing in America. **It describes a city where the police used force almost exclusively on blacks and regularly stopped people without probable cause.** Racial bias is so ingrained, the report said, that Ferguson officials circulated racist jokes on their government email accounts. ¶ In a November 2008 email, a city official said Barack Obama would not be president long because "what black man holds a steady job for four years?" Another email included a cartoon depicting African-Americans as monkeys. A third described black women having abortions as a way to curb crime. ¶ **"There are serious problems here that cannot be explained away," said a law enforcement official** who has seen the report and spoke on the condition of anonymity because it had not been released yet. ¶ Those findings reinforce what the city's black residents have been saying publicly since the shooting in August, that the criminal justice system in Ferguson works differently for blacks and whites. A black motorist who is pulled over is twice as likely to be searched as a white motorist, even though searches of white drivers are more likely to turn up drugs or other contraband, the report found. ¶ Minor, largely discretionary offenses such as disturbing the peace and jaywalking were brought almost exclusively against blacks. When whites were charged with these crimes, they were 68 percent more likely to have their cases dismissed, the Justice Department found. ¶ "I've known it all my life about living out here," Angel Goree, 39, who lives in the apartment complex where Mr. Brown was killed, said Tuesday by phone. ¶ Many such statistics surfaced in the aftermath of Mr. Brown's shooting, but the Justice Department report offers a more complete look at the data than ever before. Federal investigators conducted hundreds of interviews, reviewed 35,000 pages of police records and analyzed race data compiled for every police stop. ¶ The report will most likely force Ferguson officials to either negotiate a settlement with the Justice Department or face being sued by it on charges of violating the Constitution. Under Attorney General Eric H. Holder Jr., the Justice Department has opened more than 20 such investigations into local police departments and issued tough findings against cities including Newark; Albuquerque, N.M.; and Cleveland. ¶ But the Ferguson case has the highest profile of Mr. Holder's tenure and is among the most closely watched since the Justice Department began such investigations in 1994, spurred by the police beating of Rodney King in Los Angeles and the riots that followed. ¶ While much of the attention in Ferguson has been on Mr. Brown's death, federal officials quickly concluded that the shooting was simply the spark that ignited years of pent-up tension and animosity in the area. The Justice Department is expected to issue a separate report Wednesday clearing the police officer, Darren Wilson, of civil rights violations in the shooting. ¶ **It is not clear what changes Ferguson could make that would head off a lawsuit.** **The report calls for city**

officials to acknowledge that the police department's tactics have caused widespread mistrust and violated civil rights. Ferguson officials have so far been reluctant to do so,

particularly as relations between the city and Washington have grown strained.¶ Mr. Holder was openly critical of the way local officials handled the protests and the investigation into Mr. Brown's death, and declared a need for "wholesale change" in the police department. Ferguson officials criticized Mr. Holder for a rush to judgment and saw federal officials as outsiders who did not understand their city.¶

Local Police police surveillance easily turns into violence – the Aff cannot solve this

FRIEDERSDORF 15 (Conor Friedersdorf is a staff writer at The Atlantic, where he focuses on politics and national affairs. He lives in Venice, California, and is the founding editor of The Best of Journalism, a newsletter devoted to exceptional nonfiction, "Few Conservatives Take Police Abuses Seriously", MAY 1, 2015, <http://www.theatlantic.com/politics/archive/2015/05/few-conservatives-take-police-abuses-seriously/391886/>)

¶ Nearly a quarter century ago, the libertarian magazine Reason published an essay on civil unrest suffused with an insight that movement conservatism still hasn't grasped. Then-editor Virginia Postrel was writing in the wake of the Los Angeles riots of 1992. "What caused the riots?" she asked. "How do we prevent them from recurring?" She agreed with law-and-order voices of that era that a dearth of conscience and empathy were factors. **"Only people without empathy could drag people out of their cars and beat them within an inch of their lives,"** she wrote. **"Only people without empathy could burn and loot the lives and dreams of their neighbors." But she went on to observe that a small criminal element preys on South Los Angeles every day whereas riots occur once in a generation.** Rottenness may have been necessary to explain the beating of Reginald Denny or the terror inflicted on small business owners, but it wasn't sufficient to explain such mayhem.¶ **To turn rottenness into riots,** she argued, **another necessary condition was widespread rage. "Black Angelenos, black Americans, are very, very angry. Most did not riot; many saw their stores burn, their dreams explode, their lives suddenly get harder,"** she wrote. **"Nor were all the rioters either black or angry: a plurality of looters arrested were Latino; many in Hollywood and downtown were white ...** But rage did fuel these riots, at least at the beginning. To violent people, the not-guilty verdicts—and the rage they engendered among the general public—provided a signal to riot, to converge at once on shops and passersby. Rage supplied cover for more venal motivations. And it spurred the political apologies for the rioters.¶ As well, the attention paid to the riots gave the non-violent majority a chance to peacefully voice their rage. "If you listen to what those people are actually saying—often in loud and angry voices—you will not hear the clichés of pundits and politicians," she wrote. "The Great Society, pro or con, will not come up. Instead you will hear **this: The criminal justice system does not protect black Americans. It does not make their streets safe from violence. It does not rally to the side of black crime victims.** It sees black people only as criminals, never as citizens. It does not give them respect." **The LAPD was not the only contributing factor, but anyone hoping to understand the L.A. riots had to contend with the city's policing.**

Fusion centers will still continue racial profiling

Cyril '15 Staff writer for The Progressive (April 2015, Malkia Amala Cyril, The Progressive, "Black America's State of Surveillance", <http://www.progressive.org/news/2015/03/188074/black-americas-state-surveillance>)

They will use **fusion centers**. Originally designed to increase interagency collaboration for the purposes of counterterrorism, these **have instead become the local arm of the intelligence**

community. According to Electronic Frontier Foundation, there are currently seventy-eight on record. **They are the clearinghouse for increasingly used “suspicious activity reports”**—described as “official documentation of observed behavior reasonably indicative of pre-operational planning related to terrorism or other criminal activity.” These reports and other collected data are often stored in massive databases like e-Verify and Prism. As anybody who’s ever dealt with gang databases knows, **it’s almost impossible to get off a federal or state database, even when the data collected is incorrect or no longer true.**

Predictive policing doesn’t just lead to racial and religious profiling—it relies on it. Just as stop and frisk legitimized an initial, unwarranted contact between police and people of color, almost 90 percent of whom turn out to be innocent of any crime, **suspicious activities reporting and the dragnet approach of fusion centers target communities of color**. One review of such reports collected in Los Angeles shows approximately 75 percent were of people of color.

This is the future of policing in America, and it should terrify you as much as it terrifies me. Unfortunately, it probably doesn’t, because my life is at far greater risk than the lives of white Americans, especially those reporting on the issue in the media or advocating in the halls of power.

One of the most terrifying aspects of high-tech surveillance is the invisibility of those it disproportionately impacts

Miseducation

Self Serving Role of the Ballots bad because it justifies giving the ballot for other reasons besides to whoever did the better debating

Surveillance based on race is sometimes good because it prevents ethnographic segregation and database restriction **<Multiple uses for this card>** **<Can use this to talk about how the state is key in challenging racist practices; this helps for FW>**

Sperry, 15

(Paul Sperry is an analyst for the New York Post. “Obama collecting data for a secret race database.” <http://nypost.com/2015/07/18/obama-has-been-collecting-personal-data-for-a-secret-race-database/>. Date Accessed- 07/21/15. //Anshul)

A key part of President Obama’s legacy will be the fed’s unprecedented collection of sensitive data on Americans by race. The government is prying into our most personal information at the most local levels, all for the purpose of “racial and economic justice.”¶ Unbeknown to most Americans, **Obama’s racial bean counters are furiously mining data on their health,** home loans, credit cards, places of work, neighborhoods, even how their kids are disciplined in school **— all to document “inequalities” between minorities and whites**.¶ This Orwellian-style stockpile of statistics includes a **vast and permanent network of discrimination databases, which Obama already is using to make “disparate impact” cases against: banks that don’t make enough prime loans to minorities;** schools that suspend too many blacks; **cities that don’t offer enough Section 8 and other low-income housing for minorities;** and employers who turn down African-Americans for jobs due to criminal backgrounds.¶ Big Brother Barack wants the databases operational before he leaves office, and much of the data in them will be posted online.¶ So civil-rights attorneys and urban activist groups will be able to exploit them to show patterns of “racial disparities” and “segregation,” even if no other evidence of discrimination exists.¶ OBAMA IS PRESIDING OVER THE LARGEST CONSOLIDATION OF PERSONAL DATA IN US HISTORY.¶ Housing database¶ The granddaddy of them all is the Affirmatively Furthering Fair Housing database, which the

Department of Housing and Urban Development rolled out earlier this month to racially balance the nation, ZIP code by ZIP code. It will **map every US neighborhood by four racial groups** — white, Asian, black or African-American, and Hispanic/Latino — **and publish “geospatial data” pinpointing racial imbalances.** **The agency proposes using nonwhite populations of 50% or higher as the threshold for classifying segregated areas.** Federally funded cities deemed overly segregated will be pressured to change their zoning laws to allow construction of more subsidized housing in affluent areas in the suburbs, and relocate inner-city minorities to those predominantly white areas. HUD’s maps, which use dots to show the racial distribution or density in residential areas, will be used to select affordable-housing sites. HUD plans to drill down to an even more granular level, **detailing the proximity of black residents to transportation sites, good schools, parks and even supermarkets.** If the **agency’s social engineers rule the distance between blacks and these suburban “amenities” is too far, municipalities must find ways to close the gap or forfeit federal grant money and face possible lawsuits for housing discrimination.** Civil-rights groups will have access to the agency’s sophisticated mapping software, and will participate in city plans to re-engineer neighborhoods under new community outreach requirements. “By opening this data to everybody, everyone in a community can weigh in,” Obama said. “If you want affordable housing nearby, now you’ll have the data you need to make your case.” Mortgage database. Meanwhile, the Federal Housing Finance Agency, headed by former Congressional Black Caucus leader Mel Watt, is building its own database for racially balancing home loans. The so-called National Mortgage Database Project will compile 16 years of lending data, broken down by race, and hold everything from individual credit scores and employment records. Mortgage contracts won’t be the only financial records vacuumed up by the database. According to federal documents, the repository will include “all credit lines,” from credit cards to student loans to car loans — anything reported to credit bureaus. This is even more information than the IRS collects. The FHFA will also pry into your personal assets and debts and whether you have any bankruptcies. The agency even wants to know the square footage and lot size of your home, as well as your interest rate. FHFA will share the info with Obama’s brainchild, the Consumer Financial Protection Bureau, which acts more like a civil-rights agency, aggressively investigating lenders for racial bias. The FHFA has offered no clear explanation as to why the government wants to sweep up so much sensitive information on Americans, other than stating it’s for “research” and “policymaking.” However, CFPB Director Richard Cordray was more forthcoming, explaining in a recent talk to the radical California-based Greenlining Institute: **“We will be better able to identify possible discriminatory lending patterns.”** Credit database. CFPB is separately amassing a database to monitor ordinary citizens’ credit-card transactions. It hopes to vacuum up some 900 million credit-card accounts — all sorted by race — representing roughly 85% of the US credit-card market. Why? **To sniff out “disparities” in interest rates, charge-offs and collections.** Employment database. CFPB also just finalized a rule **requiring all regulated banks to report data on minority hiring** to an Office of Minority and Women Inclusion. It will collect reams of employment data, broken down by race, to police diversity on Wall Street as part of yet another fishing expedition. School database. Through its mandatory Civil Rights Data Collection project, the **Education Department is gathering information on student suspensions and expulsions, by race, from every public school district in the country.** **Districts that show disparities in discipline will be targeted for reform.** Those that don’t comply will be punished. Several already have been forced to revise their discipline policies, which has led to violent disruptions in classrooms. Obama’s educrats want to know how many blacks versus whites are enrolled in gifted-and-talented and advanced placement classes. Schools that show blacks and Latinos under-enrolled in such curricula, to an undefined “statistically significant degree,” could open themselves up to investigation and lawsuits by the department’s Civil Rights Office. Count on a flood of private lawsuits to piggyback federal discrimination claims, as **civil-rights lawyers use the new federal discipline data in their legal strategies against the supposedly racist US school system.** Even if no one has complained about discrimination, even if there is no other evidence of racism, the numbers themselves will “prove” that things are unfair. Such databases have never before existed. Obama is presiding over the largest consolidation of personal data in US history. He is creating a diversity police state where government race cops and civil-rights lawyers will micromanage demographic outcomes in virtually every aspect of society. The first black president, quite brilliantly, has built a quasi-reparations infrastructure perpetually fed by racial data that will outlast his administration.

Bell’s ideas of Racial Realism provide a smokescreen for the realities of racial domination Powell 1991

(John A. Powell is a Berkeley Law Graduate. “Racial Realism or Racial Despair.”
<http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=1537&context=facpubs>. Date Accessed- 7/21/15. //Anshul)

The core message of Racial Realism is that the racial domination and subjugation of blacks in America is immutable. Bell contends: Black people will never gain full equality in this country. Even those herculean efforts we hail as successful will produce no more than

temporary "peaks of progress," short-lived victories that slide into irrelevance as racial patterns adapt in ways that maintain white dominance. This is a hard-to-accept fact that all history verifies. We must acknowledge it and move on to adopt policies based on what I call: "Racial Realism." This mind-set or philosophy requires us to acknowledge the permanence of our subordinate status. That acknowledgement enables us to avoid despair, and frees us to imagine and implement. *National Legal Director of the American Civil Liberties Union, New York; J.D. 1973. University of California at Berkeley School of Law, B.A. 1969. Stanford University. I would like to thank Professor Martha Minow, Adam Cohen and Victor Bolden for their helpful suggestions, and Topaz Lennard for her editorial and secretarial assistance. ¶ 1. Derrick Bell, Racial Realism, 24 CONN. L. REV. 363 (1992). ¶ HeinOnline -- 24 Conn. L. Rev. 533 1991-1992. ¶ CONN. L. REV. [Vol. 24:533] ment racial strategies that can bring fulfillment and even triumph. 2. Bell's aim is to free blacks from the psychological burden of despair. The goal of "Racial Realism" is therefore limited. The despair, according to Bell, is not caused by actual racial domination that blacks experience, but by the false belief that things can get better and that eventually equality will be achieved. He asserts that it is the rhetoric of equality that keeps these false hopes alive in black America and prevents us from acknowledging the reality of racial domination. According to Racial Realism, therefore, it is the false hope for equality, and not racism, that must be vanquished. 3. Racial Realism is a provocative and thoughtful piece, written in an elegant style that adds to its power. It draws on a number of areas, from philosophy, politics, law, and history. Using broad strokes, Professor Bell both describes and explains the conditions of African Americans in society today. This all comes together as he takes what he describes as a "hard-eyed" view of this reality-Racial Realism concludes that racial subordination of blacks in this country is a permanent fixture of our society. Bell tries to support these troubling claims by attacking equality logically and pragmatically. He looks to history for proof that there has been no real change in racial domination in our society. He would have blacks continue to struggle, not for equality or to transform racial domination, but in order to "harass white folks." Despite the power of his message-seemingly plausible, given the current state of race relations-I will argue that he fails on all fronts to support his claim and that his message must be rejected. ¶ In Part I, I will examine Professor Bell's logical critique of equality; in Part II, I will focus on his pragmatic critique; and in Part III, I will examine Bell's treatment of hope and power. ¶ I. THE LOGICAL CRITIQUE OF EQUALITY ¶ Bell begins his attack by setting his sights on formal equality, using what I call his logical critique." He argues that formal equality-the idea that rights protection can be grounded on an objective foundation of principles-is merely an abstract concept that is not only incoherent and indeterminate, but also a tool of domination

The 1AC maintains the racial domination of the status quo Powell 1991

(John A. Powell is a Berkeley Law Graduate. "Racial Realism or Racial Despair."
<http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=1537&context=facpubs>. Date Accessed- 7/21/15. //Anshul)

Professor Bell shifts to his pragmatic analysis as he moves into a discussion of legal cases. 20 From this perspective, he is no longer concerned with the logical foundation of the value or rhetoric of equality, but with how it affects the lives of subordinated blacks. ¶ The pragmatic analysis is much more significant in determining whether there is merit to Bell's claim that the goal of "equality" should be abandoned. Most people will not and should not abandon their values or goals simply because these aims do not rest on an objective, logical foundation. Bell claims that, aside from the issue of formal equality, the true condition of subjugation and subordination of blacks has never really improved, and never will. This claim is much more devastating and far-reaching than the earlier claim that formal equality is unattainable. It is the heart of the foundation for Racial Realism: If the goal of equality does not bring even some progress for the black situation, there is no reason to rely on it. Upon examination, though, it becomes clear that this claim is simply wrong, robbing Racial Realism of most of its value. ¶ Even if equality is unobtainable, as long as we can make substantial and real improvements in the status quo, equality as a regulative ideal would maintain much of its force. 2' If the ideal goal of equality could help us move from slavery to non-slavery, with or without Jim Crow laws in place, this would be progress. This would justify using equality as an ideal, even if it would never be a reality-especially if the alternative were to maintain the condition of slavery. The issue of whether equality can be achieved or not is irrelevant from a pragmatic view. This pragmatic reason for accepting equality as an ideal would fail only if it could not help improve the status quo. ¶ The pragmatic attack on equality has force only if it can be shown that equality has no positive transformative value for addressing black subjugation, or that equality rhetoric makes things worse. Bell cites Regents of the University of California v. Bakke 22 as the ultimate example of how "equality" in fact has been used to hurt blacks. ¶ As every civil rights lawyer has reason to know ... abstract principles lead to legal results that harm blacks and perpetuate their inferior status. Racism provides a basis for a

judge to select one available premise rather than another when incompatible claims arise. A paradigm example presents itself in the case of Regents of the University of California v. Bakke.²³ ¶ Bell goes on to add that "cases such as Bakke should inspire many civil rights lawyers to reexamine the role of equality jurisprudence in its potential to improve the lives of black Americans. ²¹ ¶ Bell is critical of the civil rights community for relying on these abstract legal principles. Not only is such reliance ill-founded, goes his critique, but the reliance worsens the condition of the black community. ¶ Although it seems clear that Bakke was wrongly decided for the reasons Bell suggests, it does not support his position that equality cannot have a transformative role in addressing the needs of black Americans. What Bakke demonstrates is that a conservative Court was able to ignore the present and historical conditions of blacks in using formal equality to limit the claims of blacks. Justice Powell wrote the majority opinion that accepted an abstract notion of equality of which Bell is critical. However, four members of the Court, as well as the civil rights community, rejected "formal equality" as the correct standard to apply in this case and argued for a standard that Bell seems to accept.²⁰ When Bell cites with approval the "flexible reasoning" used by the Court in Griggs, he seems to have in mind something close to the substantive equality standard argued by Brennan and Marshall and much of the civil rights community in Bakke.² ¶ But if the civil rights community was not attached to the false value of formal equality, the real injury in Bakke was not despair at the hand of the community's own false consciousness, but an injury at the hand of a conservative Court intent on maintaining the status quo. Racial Realism does not address this. Instead, Bell wrongly paints the civil rights community as ideological dupes, unaware of how abstract principles are used to visit damage on the black community.²⁸ ¶ Bell suggests that what is wrong with the reliance on the rule of law in Bakke is that it allowed a conservative Court the discretion to choose to adhere to "neutral principles," thereby hurting the goal of racial equality. But choice is not the problem. There is no method that can eliminate choice, whether one calls it flexible reasoning, substantive equality, or Racial Realism. There are two serious problems with how formalism in general, and formal equality in particular, is used by the Court. The first problem is that the Court obscures what it is doing by denying that it is making choices in deciding cases. The second more serious problem is that the choices the Court makes under formalism often maintain racial domination. I believe it is better to make explicit that choices are being made—in fact, must be made—and then demand justification to support their selection. By accepting this approach, I would argue that a choice that maintains the status quo of racial domination cannot be justified and must be refuted. ¶ Professor Bell, in broad strokes, collapses the nonformal aspects of equality into the suspect use of formal equality. He therefore concludes that all aspects of equality fail the black community. However, Bell's approach does not help us to determine if the value of equality plays either a role of transformation or a role of maintaining the status quo.

The state is key to monitor and address prejudice and discrimination inside their organizations

Devey et. al., 09

(Donald Tomaskovic-Devey and Patricia Warren are analysts for the magazine Contexts which includes feature articles, culture and book reviews, and photography, as well as analysis of the latest social science research. "explaining and eliminating racial profiling." <http://contexts.org/articles/explaining-and-eliminating-racial-profiling/>. Date Accessed- 07/23/15. //Anshul)

Unconscious biases are particularly difficult for an organization to address because offending individuals are typically unaware of them, and when confronted they may deny any racist intent. ¶ There is increasing evidence that even deep-seated stereotypes and unconscious biases can be eroded through both education and exposure to minorities who don't fit common stereotypes, and that they can be contained when people are held accountable for their decisions. Indeed, it appears that acts of racial discrimination (as opposed to just prejudicial attitudes or beliefs) can be stopped through managerial authority, and prejudice itself seems to be reduced through both education and exposure to minorities. ¶ Unconscious biases can be eroded through education and exposure to minorities who don't fit common stereotypes. Biases can also be contained when people are held accountable for their decisions. ¶ For example, a 2006 study by sociologists Alexandra Kalev, Frank Dobbin, and Erin Kelly of race and gender employment bias in the private sector found that holding management accountable for equal employment opportunities is particularly efficient for reducing race and gender biases. Thus, the active monitoring and managing of police officers based on racial composition of their stops and searches holds much promise for mitigating this "invisible" prejudice. ¶ Citizen and police review boards can play proactive and reactive roles in monitoring both individual police behavior as well as problematic organizational practices. Local police forces can use data they collect on racial disparity in police stops to identify problematic organizational behaviors such as intensively policing minority neighborhoods, targeting minorities in white neighborhoods, and racial profiling in searches. ¶ Aggressive enforcement of civil rights laws will also play a key role in encouraging local police chiefs and employers to continue to monitor and address prejudice and discrimination inside their organizations. This is an area where the federal government has a clear role to play. Filing lawsuits against cities

and states with persistent patterns of racially biased policing—whether based on the defense of segregated white neighborhoods or the routine patrolling of crime “hot spots”—would send a message to all police forces that the routine harassment of minority citizens is unacceptable in the United States.¶ justice in the obama era¶ **Given the crucial role the federal justice department has played in both creating and confronting racial profiling**, one may wonder whether the election of President Barack Obama will have any consequences for racially biased policing.¶ **Obama certainly has personal reasons to challenge racist practices.** And given the success of his presidential campaign, it would seem **he has the political capital to address racial issues in a way and to an extent unlike any of his predecessors.**¶ At the same time, the new president has vowed to continue to fight a war on terrorism, a war often understood and explicitly defined in religious and ethnic terms. In some ways, the threat of terrorism has replaced the threat of African Americans in the U.S. political lexicon. There’s evidence as well that politicians, both Democrat and Republican, have increased their verbal attacks on illegal immigrants and in doing so may be providing a fertile ground for new rounds of profiling against Hispanics in this country. So, while the racial profiling of African Americans as explicit national policy is unlikely in the Obama Administration, other groups may not be so **lucky.**¶ **Americans committed to racial justice and equality will likely take this as a cautionary tale.** **They will also likely hope the Obama Administration** decides to take a national leadership role in ending racial profiling. But if it does, as sociologists we hope the administration won’t make the all too common mistake of assuming racial profiling is primarily the result of racial prejudice or even the more widespread psychology of unconscious bias.

2NC Framework

Topical Version of the Aff

T-Version of the Aff: The USFG should ban the use of unwarranted stop & frisk, policing and criminalization based on skin color by revitalizing the End Racial Profiling Act

Brooks et. al., 14

(Cornell Williams Brooks is the president of the National Association of the Advancement of Colored People. “Stop-and-Frisk Abuses & the Continued Fight to End Racial Profiling in America” http://action.naacp.org/page/-/Criminal%20Justice/Born_Suspect_Report_final_web.pdf. Date Accessed- 07/23/15. //Anshul.)

Sponsored by Julius Volker, a member of the New York State Assembly, New York’s stop-and-frisk law was first passed in 1964, with the goal of making it easier for evidence that came from stops based on less than “probable cause” to be considered in court. The law would also allow police officers to prevent crimes and increase public safety in New York City. 50 African American communities have since challenged the law as a form of racial profiling that allows officers to more easily target and harass communities of color. The US Supreme Court has also addressed the question of stop-and-frisk. In 1968, in Terry v. Ohio, the Court ruled that stopping and frisking are constitutional if done under certain conditions. Specifically, the Court said that in order for a police officer to stop an individual, the officer only needs “reasonable suspicion” that an individual is committing or about to commit an illicit activity. However, for a police officer to then lawfully frisk an individual, somewhere between the “reasonable suspicion” standard and the “probable cause” standard, required for search warrants is necessary—where a police officer either witnessed or was informed that a suspect is armed and poses an immediate threat to the officer.⁵¹ However, in 2013 a federal court found that the NYPD’s use of stop-and-frisk reflected a widespread pattern and practice of stops that did not meet the legal standard of “reasonable suspicion” put forth by Terry. In fact, data indicated that many of the stops by the NYPD over the last decade failed to meet even this lower 11% standard. For example, in 2009, officers failed to cite an acceptable “suspected crime” for the stop 36% of the time.⁵² And in 2011, over half of the stops conducted were for “furtive movements”—an abstract, relatively subjective, and meaningless basis for a stop—although one that the courts have not yet taken a firm stance against.⁵³ The court also found a widespread pattern and practice of racially discriminatory stops and frisks, in violation of the 14th Amendment. A closer look at the statistics for stop-and-frisk throughout the last decade can shed further light on the NYPD’s abuse of this tactic, the negative impact it has had on communities, and ultimately serve as further evidence of the futility of racial profiling as a tool for effective law enforcement.

<Over 24 paragraphs later>

at the height of the movement to improve law enforcement accountability and end racial profiling, the End Racial Profiling Act (ERPA) was introduced in both houses of Congress.⁸² The bill had bipartisan support and aimed to ban racial profiling at all levels of government, provide provisions for data collection and monitoring, include training, and offer sanctions and remedies for violations of the law. The NAACP, along with a broad range of coalition partners, supported the bill, which at that point seemed likely to pass. Following the attacks of September 11, 2001, the bill lost momentum and with it the chance of passage for more than a decade. ERPA has been repeatedly introduced in Congress; without the level of support it enjoyed in 2001, its passage remains challenging. One roadblock is the false claim often used by political leaders that racial profiling is a necessary tool for enhancing national security. However, during this same period, leaders from the top ranks of several administrations have also verbally committed to ending racial profiling. In February of 2001, President George W. Bush promised to end racial profiling in America in an address to Congress: “Earlier today I asked John Ashcroft, the Attorney General to develop specific recommendations to end racial profiling. It’s wrong and we will end it in America.”⁸³ Two years later, in June 2003, the Department of Justice issued the Guidance Regarding the Use of Race by Federal Law Enforcement Agencies.⁸⁴ Although the guidance was a good first step in meeting the Bush Administration’s promise, it fell short in many ways that have not been addressed to date and the policy still stands as is almost 6 years into the Obama Administration.⁸⁵ Specifically, the Guidance: • Does not apply to local or state agencies • Does not protect people from being profiled on the basis of religion or national origin • Does not include a private right of action, fiscal sanctions or any other enforcement mechanisms • Does not offer penalties for officers found in violation of the provisions • Has a blanket exception for “enforcing laws protecting the integrity of the Nation’s borders,” and “threats to national security and other catastrophic events.”⁸⁶ More recently, during an address at the 2013 NAACP National Convention, following the verdict in the case of George Zimmerman on the shooting death of Trayvon Martin, Attorney General Eric Holder touched upon the problem of racial profiling. In his address, Holder shared personal stories of being profiled as a young adult, including being stopped and searched by police on the New Jersey Turnpike. Holder also recounted conversations his father had with him about how to properly conduct himself as an African American man with law enforcement—conversations he finds himself

having with his son.⁸⁷ Holder reiterated: [W]e must confront the underlying attitudes, mistaken beliefs, and unfortunate stereotypes that serve too often as the basis for police action, and private judgment.⁸⁸ In addition to advocating for the passage of ERPA, over the last decade advocates have also waged a campaign to update the Federal Guidance and to eliminate its shortcomings. In 2012, more than 225 groups, including the NAACP, signed a letter urging the Attorney General to update the Guidance to:

- Ban profiling based on religion or national origin.
- Close the “national security” and “border integrity” loophole.
- 19
- Apply profiling ban to data collection assessments and investigations carried out by law enforcement and to include the mapping of communities as demonstrated by the NYPD’s Demographics Unit.
- Create enforceable standards to be met by law enforcement agencies.
- Prevent federal agencies from working with state and local departments that do not have racial profiling policies meeting the standard of the renewed Guidance.

⁸⁹ An updated Guidance is expected in the near future, and it is expected that it will expand the prohibited profiling categories to include national origin, religion, gender, and sexual orientation. Initial reports indicate, however, that it will not ban the use of nationality to map communities stereotypically thought more likely to commit certain kinds of crime. Despite the existence of constitutional protections, a partial federal guidance, and numerous promises by officials over several presidential administrations, the country continues to grapple with solving the problem of racial profiling and preventing abuses of power by law enforcement

Neoliberalism K

2NC Links

Market organization of society is at least as coercive as state action – its interventions into society are simply cloaked as “protecting property rights” and “encouraging competition”

Noys 10

Benjamin Noys, Professor of Critical Theory at the University of Chichester, “The Grammar of Neoliberalism,” September 2010, talk given at the Accelerationism workshop at Goldsmiths, fwang

It was the extinction of the Nazi state that made post-war Germany the ideal site to re-found the state in terms of the economic, in which legitimation was achieved through economic growth rather than in political terms. At the same time **neo-liberalism solidifies a ‘state-phobia’, by arguing that the tendency of any intervention to a state-controlled economy, planning, and economic interventionism will lead to** Nazism or **totalitarianism**. In a provocative series of formulations Foucault argues that **this ‘state phobia’ permeates modern thought**, aligning the critique of the spectacle (Debord) and ‘one-dimensionality’ (Marcuse) with Werner Sombart’s proto-Nazi critiques of capitalism (113-4). Here we might say **we can see the emergence of the ‘grammar’ argument, in the sense of a common phobia of the state that leaves us vulnerable to historical re-inscription under the terms of neo-liberalism**, or, as Foucault puts it: ‘All those who share in the great state phobia should know that **they are following the direction of the wind and that in fact**, for years and years, **an effective reduction of the state has been on the way, a reduction of both the growth of state control and of a “statifying” and “statified” governmentality.**’ (191-2)

What is the precise nature, then, of neo-liberalism? Of course, the obvious objection to the ‘anti-state’ vision of neo-liberalism is that neo-**liberalism itself is a continual form of state intervention**, usually summarised in the phrase **‘socialism for the rich, capitalism for the poor’**. Foucault notes that neo-liberalism concedes this: **‘neo-liberal government intervention is no less dense, frequent, active, and continuous than in any other system.’** (145) **The difference**, however, **is the point of application. It intervenes on society ‘so that competitive mechanisms can play a regulatory role at every moment and every point in society and by intervening in this way its objective will become possible**, that is to say, a general regulation of society by the market.’ (145) Therefore, we miss the point if we simply leave a critique of neo-liberalism at the point of saying ‘neo-liberalism is as statist as other governmental forms’. Instead, **the necessity if to analyse how neo-liberalism creates a new form of governmentality in which the state performs a different function: permeating society to subject it to the economic.**

2NC Impact Framing

The “white gaze” survives through the guise of neoliberalism

Davis,08

(Angela Y. Davis is a Professor of History of Consciousness and Feminist Studies University of California, Santa Cruz. “Recognizing Racism in the Era of Neoliberalism.” http://www.omi.wa.gov.au/resources/clearinghouse/Recognizing_Racism_in_the_Era_of_Neoliberalism_davis.pdf. Date Accessed-07/22/15.//Anshul)

Parenthetically, when I recently mentioned these new figures to a group in London, including Members¶ of Parliament, almost everyone thought that either I had misspoken myself or that they had misheard¶ me. As it turns out, they were familiar with the figures

regarding the incarceration of young black men and were not so surprised that immense numbers of people of color were in jail. But it was difficult for them to grasp the idea that, given a majority white population, one in every one hundred adults in the U.S. is behind bars. In 1985, there were fewer than 800,000 people behind bars. Today there are almost three times as many imprisoned people and the vast increase has been driven almost entirely by the practices of incarcerating young people of color. Although the figures are not comparable, one can argue that a similar dynamic drives imprisonment here in Australia, with imprisoned aboriginal people accounting for ten times their proportion in the general population.

Why, then, is it so difficult to name these practices as racist? Why does the word “racist” have such an archaic ring to it – as if we were caught in a time warp? **Why is it so difficult to name the crisis in imprisonment as a crisis of racism?** According to the Pew Report, the United States incarcerates more people than any country in the world, including the far more populous nation of China. At the start of the new year, the American penal system held more than 2.3 million adults. China was second, with 1.5 million people behind bars, and Russia was a distant third with 890,000 inmates, according to the latest available figures. Beyond the sheer number of inmates, America also is the global leader in the rate at which it incarcerates its citizenry, outpacing nations like South Africa and Iran. In Germany, 93 people are in prison for every 100,000 adults and children. In the U.S, the rate is roughly eight times that, or 750 per 100,000. These figures have been produced by the vastly disproportionate numbers of youth of color, especially young black men who are currently behind bars. For example, if one out of every sixty white men between the ages of twenty and twenty-four is behind bars, then one out of every nine black men of the same age is incarcerated.

According to neoliberalist explanations, the fact that these young black men are behind bars has little to do with race or racism and everything to do with their own private family upbringing, and their inability to take moral responsibility for their actions. Such explanations remain “mute” – to use Dana-Ain Davis’s term again – about the social, economic, and historical power of racism. They remain “mute” about the dangerous contemporary work that race continues to do. The incarceration of youth of color – and of increasing numbers of young women of color (women have constituted the fastest growing sector of the incarcerated population for some time now) – is **not viewed as connected to the vast structural changes produced by deregulation, privatization, by the devaluation of the public good,** and by the deterioration of community. Because there is no public vocabulary which allows us to place these developments within a historical context, individual deviancy is the overarching explanation for the grotesque rise in the numbers of people who are relegated to the country’s and the world’s prisons.

According to Henry Giroux, “racism survives through the guise of neoliberalism, a kind of repartee that imagines human agency as simply a matter of individualized choices, the only obstacle to effective citizenship and agency being the lack of principled self-help and moral responsibility.”⁴ **Because racism is viewed as an anachronistic vestige of the past, we fail to grasp the extent to which the long memory of institutions** – especially those that constitute the intimately connected circuit of education and incarceration – continue to permit race to determine who has access to education and who has access to incarceration. While laws have had the effect of privatizing racist attitudes and eliminating the explicitly racist practices of institutions, **these laws are unable to apprehend the deep structural life of racism and therefore allow it to continue to thrive.**⁴

Giroux, Henry A. (2003) ‘Spectacles of Race and Pedagogies of Denial: Anti-Black Racist Pedagogy Under the Reign of Neoliberalism’, *Communication Education*, 52:3, 191 - 211. Vice Chancellor’s Oration 2008. This **invisible work of racism not only influences the life chances of millions of people, it helps to nourish a psychic reservoir of racism that often erupts through the utterances and actions of individuals,** as in the cases previously mentioned. The frequent retort made by such individuals who are caught in the act is: “I’m not a racist. I don’t even know where that came from” can only be answered if we are able to recognize this deep structural life of racism. The deep structural racism of the criminal justice system affects our lives in complicated ways. What we acknowledged more than a decade ago as the U.S. prison industrial complex through which racism generates enormous profits for private corporations can now be recognized as a global prison industrial complex that profits the world over from postcolonial forms of racism and xenophobia. With the dismantling of the welfare state and the structural adjustment in the southern region required by global financial institutions, the institution of the prison – which is itself an important product marketed through global capitalism – becomes the privileged site into which surplus impoverished populations are deposited. Thus new forms of global structural racism are emerging. The **deep structural life of racism bleeds out from the U.S. criminal justice system and is having a devastating effect on the political life of the nation and the world.** Since the era of slavery, racism has been associated with death. Geographer Ruth Gilmore has defined racism as “the state-sanctioned and/or legal production and exploitation of group-differentiated vulnerabilities to premature death, in distinct yet densely interconnected political geographies.”⁵ The death to which Gilmore refers is multi-dimensional, embracing corporeal death, social death, and civil death. From its advent, the institution of the prison has been organically linked to the political order of democracy in that it negatively demonstrates the centrality of individual rights and liberties. Civil life is negated and the prisoner is relegated to the status of Civil Death. Following Claude Meillasoux and Orlando Patterson, Colin (Joan) Dayan and other scholars have compared the social death of slavery to the civil death of imprisonment, particularly given the landmark legal case *Ruffin v. Commonwealth*, which in 1871 declared the prisoner to be “the slave of the state.” Although prisoners’ state of civil death has now mutated so that

Neoliberalism is producing accelerating inequality, environmental destruction, and conflict in the squo – statistics showing the world is getting better only illustrate the positive impact of Latin American and Chinese resistance to the neoliberal model

Milne 15

(Seumus Milne, Guardian columnist and associate editor, “The Davos oligarchs are right to fear the world they’ve made,” 22 January 2015,

<http://www.theguardian.com/commentisfree/2015/jan/22/davos-oligarchs-fear-inequality-global-elite-resist>)

The scale of the crisis has been laid out for them by the charity Oxfam. **Just 80 individuals now have the same net wealth as 3.5 billion people – half the entire global population.** Last year, the best-off 1% owned 48% of the world’s wealth, up from 44% five years ago. **On current trends, the richest 1% will have pocketed more than the other 99% put together next year.** The 0.1% have been doing even better, quadrupling their share of US income since the 1980s.¶ This is a wealth grab on a grotesque scale. **For 30 years, under the rule of what Mark Carney, the Bank of England governor, calls “market fundamentalism”, inequality in income and wealth has ballooned, both between and within the large majority of countries.** **In Africa, the absolute number living on less than \$2 a day has doubled** since 1981 as the rollcall of billionaires has swelled.¶ In most of the world, **labour’s share of national income has fallen continuously and wages have stagnated under this regime of privatisation, deregulation and low taxes on the rich.** At the same time **finance has sucked wealth from the public realm into the hands of a small minority,** even as it has laid waste the rest of the economy. Now the **evidence has piled up that** not only is **such appropriation of wealth** a moral and social outrage, but it **is fuelling social and climate conflict, wars, mass migration and political corruption, stunting health and life chances, increasing poverty, and widening gender and ethnic divides.**¶ **Escalating inequality has also been a crucial factor in the economic crisis** of the past seven years, squeezing demand and fuelling the credit boom. We don’t just know that from the research of the French economist Thomas Piketty or the British authors of the social study The Spirit Level. After years of promoting Washington orthodoxy, even the western-dominated OECD and IMF argue that the **widening income and wealth gap has been key to the slow growth** of the past two neoliberal decades. **The British economy would have been almost 10% larger if inequality hadn’t mushroomed.** Now **the richest are using austerity to help themselves to an even larger share** of the cake.¶ **The big exception** to the tide of inequality in recent years **has been Latin America. Progressive governments across the region turned their back on a disastrous economic model, took back resources from corporate control and slashed inequality. The numbers living on less than \$2 a day have fallen from 108 million to 53 million** in little over a decade. **China, which also rejected much of the neoliberal catechism, has seen sharply rising inequality at home but also lifted more people out of poverty than the rest of the world combined, offsetting the growing global income gap.**¶ **These two cases underline that increasing inequality and poverty are very far from inevitable. They’re the result of political and economic decisions.** The thinking person’s Davos oligarch realises that allowing

things to carry on as they are is dangerous. So some want a more “inclusive capitalism” – including more progressive taxes – to save the system from itself.¶ But it certainly won’t come about as a result of Swiss mountain musings or anxious Guildhall lunches. Whatever the feelings of some corporate barons, **vested corporate and elite interests** – including the organisations they run and the political structures they have colonised – **have shown they will fight even modest reforms tooth and nail**. To get the idea, you only have to listen to the squeals of protest, including from some in his own party, at Ed Miliband’s plans to tax homes worth over £2m to fund the health service, or the demand from the one-time reformist Fabian Society that the Labour leader be more pro-business (for which read pro-corporate), or the wall of congressional resistance to Barack Obama’s mild redistributive taxation proposals.¶ **Perhaps a section of the worried elite might be prepared to pay a bit more tax. What they won’t accept is any change in the balance of social power** – which is why, in one country after another, they resist any attempt to strengthen trade unions, even though weaker unions have been a crucial factor in the rise of inequality in the industrialised world.¶ **It’s only through a challenge to the entrenched interests that have dined off a dysfunctional economic order that the tide of inequality will be reversed. The anti-austerity Syriza party, favourite to win the Greek elections this weekend, is attempting to do just that – as the Latin American left has succeeded in doing over the past decade and a half. Even to get to that point demands stronger social and political movements to break down or bypass the blockage in a colonised political mainstream**. Crocodile tears about inequality are a symptom of a fearful elite. But **change will only come from unrelenting social pressure and political challenge**.

Social inequality causes extinction – produces background of structural violence that makes conflict and environmental collapse inevitable

Szentes ‘8

Tamás Szentes, a Professor Emeritus at the Corvinus University of Budapest. “Globalisation and prospects of the world society” 4/22/08

http://www.eadi.org/fileadmin/Documents/Events/exco/Glob.____prospects_-_jav..pdf

It’s a common place that human society can survive and develop only in a lasting real peace. Without peace countries cannot develop. Although since 1945 there has been no world war, but --numerous local wars took place, --terrorism has spread all over the world, undermining security even in the most developed and powerful countries, --arms race and militarisation have not ended with the collapse of the Soviet bloc, but escalated and continued, extending also to weapons of mass destruction and misusing enormous resources badly needed for development, --**many “invisible wars” are suffered by the poor** and oppressed people, **manifested in mass misery, poverty, unemployment, homelessness, starvation** and malnutrition, epidemics and poor health conditions, **exploitation and oppression**, racial and other discrimination, physical terror, organised injustice, disguised forms of violence, the denial or regular infringement of the democratic rights of citizens, women, youth, ethnic or religious minorities, etc., **and** last but not least, **in the degradation of human environment**, which means that --the “war against Nature”, i.e. the disturbance of ecological balance, wasteful management of natural resources, and large-

scale pollution of our environment, is still going on, causing also losses and fatal dangers for human life. **Behind global terrorism and “invisible wars” we find striking international and intrasociety inequities and distorted development patterns, which tend to generate social as well as international tensions,** thus **paving the way for unrest and “visible” wars.** It is a commonplace now that peace is not merely the absence of war. The prerequisites of a lasting peace between and within societies involve not only - though, of course, necessarily - demilitarisation, but also a systematic and gradual elimination of the roots of violence, of the causes of “invisible wars”, of the structural and institutional bases of large-scale international and intra-society inequalities, exploitation and oppression. Peace requires a process of social and national emancipation, a progressive, democratic transformation of societies and the world bringing about equal rights and opportunities for all people, sovereign participation and mutually advantageous co-operation among nations. It further requires a pluralistic democracy on global level with an appropriate system of proportional representation of the world society, articulation of diverse interests and their peaceful reconciliation, by non-violent conflict management, and thus also a global governance with a really global institutional system. Under the contemporary conditions of accelerating globalisation and deepening global interdependencies in our world, **peace** is indivisible in both time and space. It cannot exist if reduced to a period only after or before war, and **cannot be safeguarded in one part of the world when some others suffer visible or invisible wars.** Thus, peace requires, indeed, a new, demilitarised and democratic world order, which can provide equal opportunities for sustainable development. “Sustainability of development” (both on national and world level) is often interpreted as an issue of environmental protection only and reduced to the need for preserving the ecological balance and delivering the next generations not a destroyed Nature with overexhausted resources and polluted environment. However, **no ecological balance can be ensured, unless the deep international development gap and intra-society inequalities are substantially reduced.** Owing to global interdependencies there may exist hardly any “zero-sum-games”, in which one can gain at the expense of others, but, instead, the “negative-sum-games” tend to predominate, in which everybody must suffer, later or sooner, directly or indirectly, losses. Therefore, the actual question is not about “sustainability of development” but rather about the “sustainability of human life”, i.e. survival of mankind – because of ecological imbalance and globalised terrorism. When Professor Louk de la Rive Box was the president of EADI, one day we had an exchange of views on the state and future of development studies. We agreed that development studies are not any more restricted to the case of underdeveloped countries, as the developed ones (as well as the former “socialist” countries) are also facing development problems, such as those of structural and institutional (and even system-) transformation, requirements of changes in development patterns, and concerns about natural environment. While all these are true, today I would dare say that besides (or even instead of) “development studies” we must speak about and make “survival studies”. While the monetary, financial, and debt crises are cyclical, we live in an almost permanent crisis of the world society, which is multidimensional in nature, involving not only economic but also socio-psychological, behavioural, cultural and political aspects. **The narrow-minded, election-oriented, selfish behaviour motivated by thirst for power and wealth,** which still characterise the political leadership almost all over the world, **paves the way for the final, last catastrophe.** One cannot doubt, of course, that great many positive historical changes have also taken place

in the world in the last century. Such as decolonisation, transformation of socio-economic systems, democratisation of political life in some former fascist or authoritarian states, institutionalisation of welfare policies in several countries, rise of international organisations and new forums for negotiations, conflict management and cooperation, institutionalisation of international assistance programmes by multilateral agencies, codification of human rights, and rights of sovereignty and democracy also on international level, collapse of the militarised Soviet bloc and system-change³ in the countries concerned, the end of cold war, etc., to mention only a few. Nevertheless, the crisis of the world society has extended and deepened, approaching to a point of bifurcation that necessarily puts an end to the present tendencies, either by the final catastrophe or a common solution. **Under the circumstances provided by rapidly progressing science and technological revolutions, human society cannot survive unless such profound intra-society and international inequalities prevailing today are soon eliminated.** Like a single spacecraft, the Earth can no longer afford to have a 'crew' divided into two parts: the rich, privileged, wellfed, well-educated, on the one hand, and the poor, deprived, starving, sick and uneducated, on the other. Dangerous 'zero-sum-games' (which mostly prove to be "negative-sum-games") can hardly be played any more by visible or invisible wars in the world society. Because of global interdependencies, the apparent winner becomes also a loser. The real choice for the world society is between negative- and positive-sum-games: i.e. between, on the one hand, continuation of visible and "invisible wars", as long as this is possible at all, and, on the other, transformation of the world order by demilitarisation and democratization. No ideological or terminological camouflage can conceal this real dilemma any more, which is to be faced not in the distant future, by the next generations, but in the coming years, because of global terrorism soon having nuclear and other mass destructive weapons, and also due to irreversible changes in natural environment.

Case

2NC Miseducation

Bell's views are flawed because he is narrow-sighted with the ideologies of giving values
Powell 1991

(John A. Powell is a Berkley Law Graduate. "Racial Realism or Racial Despair."
<http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=1537&context=facpubs>. Date Accessed- 7/21/15. //Anshul)

The reason why Professor Bell believes that the lack of an objective foundation means that we have to drop formal equality may be that he accepts what Bernstein has called the "Cartesian Anxiety": either there is some transcendent grounding for our principles or we are doomed to relativism, where everything is a matter of power and personal preference.⁹ But as Bernstein and others cogently demonstrate, there are other ways to give values and principles legitimacy. Principles and values need not be objective or relative.¹⁰ Although Bell is right to argue that the values and rhetoric we use do leave choices to be made, he fails to see that despite real choice, we are nonetheless constrained by the values we embrace and the conversations in which we engage."¹¹ Bell's logical critique does not help us to choose between competing principles or theories and assessing the application of a value. Yet unless one embraces relativism, there must be some way of judging and choosing among these different theories and principles. 2 Although Bell flirts with relativism, he rejects it. He accepts that there are ways of legitimately deciding moral issues and criticizing others.¹² For example, he cites *Griggs v. Duke Power Co.* as an example of the Court's use of "flexible reasoning"¹³ to arrive at the correct result.¹⁴ Bell also suggests that Racial Realism would aid in delivering a more correct result.¹⁵ Bell's logical critique is correct to suggest that moral issues cannot be mechanically compelled by objective principles. Moral judgment and moral choices will have to be made and defended on some other basis. If the goal is to end racial domination, substantive equality may provide a more legitimate choice than formal equality.¹⁶ 8
Ultimately, the struggle over which language we use, though it does not resolve all the issues, is also a struggle over the kind of world in which we want to live.¹⁷ At this time in our legal and racial history, it seems clear that formal equality must be rejected as an adequate way of transforming racial domination; but not for the logical reasons that Bell sets forth. Formal equality should be rejected because it has become a better tool for maintaining—rather than ending—the status quo of racial domination. However, this pro-status quo use was not always the case. For example, during the Jim Crow period, formal equality served a transformative value for lessening racial domination.¹⁸ This is a pragmatic assessment of the role of "equality," however, not a logical one. I will now turn to Bell's pragmatic critique.

2NC Policing the Color

The affirmative's criticism doesn't solve for how local law enforcement treats black lives matter like a terrorist threat

Johnson '15 associate editor at AlterNet (4/29/15, Adam, Popular Resistance, "Government Treating #BlackLivesMatter Like A Terrorist Group",
<https://www.popularresistance.org/government-treating-blacklivesmatter-like-a-terrorist-group/>)

We learned in the wake of the Occupy Wall Street movement that the government's use of its anti-terror apparatus at a local and federal level was both routine and pervasive. Thus far, the means with which similar practices have been used on #BlackLivesMatter have been subtly emerging — thanks in large part to some truly intrepid journalism — from across the country. Here is a recap of the five of the worst examples:¹ 1. NYPD and FBI uses counter-terror apparatus on #BlackLivesMatter New York.² Though it was mostly taken for granted by those paying attention within the activists community, official recognition that the NYPD and its FBI Joint Terror Task Force were using their counter terror units on #BlackLivesMatter didn't really come until a casual admission by the NYPD in the New York Post the day before the announcement of the Eric Garner verdict in December of last year:³ "They wore me out," said one counterterror expert who monitored the protests. "Their ability to strategize on the fly is something we haven't dealt with before to this degree."⁴ A few weeks later, the New York Post would again be the forum with which the NYPD would casually assert counter terror units

were used on #BlackLivesMatter, this time in connection to an alleged assault on an NYPD officer: “Linsker was nabbed by members of the Joint Terrorism Task Force around 3:45 a.m., sources said.”¶ Alex Kane reported for Vice:¶ [How the NYPD’s Counterterrorism Apparatus Is Being Turned on Protesters](#)¶ **The police wearing the counterterrorism jackets at protests are perhaps the most palpable sign of the agency’s transformation since 2001.** Before 9/11 the NYPD had no counterterrorism bureau and the Intelligence Division focused its resources on gang activity. After the September 11 attacks, however, billions of dollars were poured into the department to counter the threat of terrorism, as a 2011 60 Minutes report showed. Critics of the NYPD’s post-9/11 turn have been arguing that practices devoted to fighting terrorism have violated the Constitution.¶ Now, they say, the NYPD is unleashing its counterterrorism tools on activists against police brutality, conflating legitimate protest with the threat of terrorism.¶ 2. California Highway Patrol used counterterror units to monitor #BlackLivesMatter in Bay Area.¶ A cache of emails [revealed by Darwin BondGraham of the East Bay Express](#) two weeks ago **revealed the California Highway Patrol were using its anti-terrorism apparatus, including fusion centers like Northern California Regional Intelligence Center to monitor #BlackLivesMatter activists on social media.** As BondGraham would lay out:¶ An email sent on December 12 illustrates how counter-terrorism officials working out of fusion centers helped CHP monitor protesters. At 12:12 p.m. that day, Elijah Owen, a senior intelligence advisor with the California State Threat Assessment Center (Cal STAC) sent CHP officer Michael Berndl [a copy of a protest flier](#) calling for a speak-out and march against the CHP the next day. “Just so it’s on your folks’ radar,” wrote Owen. Cal STAC officers appear in other CHP emails as sources of information, or recipients of intel gathered by the Oakland Police Department, Alameda County Sheriff’s Office, and other agencies.¶ Earlier this year, **the California Highway Patrol would also casually drop in the LA Times how they used fake twitter profiles to monitor protesters:**¶ Despite Wednesday’s incident, Browne said he will continue to deploy plainclothes officers to gather intelligence from protesters. Officers have also been creating Twitter accounts, on which they don’t identify themselves as police, in order to monitor planned demonstrations.¶ It’s unclear to what extent these two approaches – using anti-terror apparatus to monitor #BlackLivesMatter social media and the use of fake online profiles to monitor #BlackLivesMatter-overlapped.¶ 3. Massachusetts **Counterterror fusion centers were used to monitor #BlackLivesMatter protesters** in Boston.¶ Similarly, fusion centers were used to monitor #BlacklivesMatter protests in Massachusetts. As the ACLU’s Kade Crockford [noted last November:](#)¶ Law enforcement officials at the Department of Homeland Security-funded “Commonwealth Fusion Center” spied on the Twitter and Facebook accounts of Black Lives Matter protesters in Boston earlier this week, the Boston Herald [reports.](#)¶ The reference to the so-called ‘fusion’ spy center comes at the very end of a news story quoting Boston protesters injured by police in Tuesday night’s demonstrations, which was possibly the largest Ferguson related protest in the country the day after the non-indictment of Darren Wilson was announced.¶ The state police Commonwealth Fusion Center monitored social media, which provided “critical intelligence about protesters’ plans to try to disrupt traffic on state highways,” state police said.¶ Though it was buried at the end of the Boston Herald story, **the use of fusion centers – deliberately set up for the purposes of stopping terrorism – are, once again, being used to monitor peaceful domestic dissent.**¶ 4. FBI Joint Terror Task Force was used to track #BlackLivesMatter Minnesota.¶ Just as with the California Highway Patrol, internal emails between local police departments and federal authorities revealed the extent to which the counter-terror apparatus was casually – and entirely turn-key – used on #BlackLivesMatter. The Intercept’s Lee Fang revealed in March:¶ [Why Was an FBI Joint Terrorism Task Force Tracking a BlackLives Matter protest?](#)¶ Members of an FBI Joint Terrorism Task Force tracked the time and location of a Black Lives Matter protest last December at the Mall of America in Bloomington, Minnesota, email obtained by The Intercept shows.¶ The email from David S. Langfellow, a St. Paul police officer and member of an FBI Joint Terrorism Task Force, informs a fellow task force member from the Bloomington police that “CHS just confirmed the MOA protest I was talking to you about today, for the 20th of DEC @ 1400 hours.” CHS is a law enforcement acronym for “confidential human source.”¶ In other words, these emails revealed that not only was the FBI using its Joint Terror Task Force – an entity that exploded post-9/11 in the name of fighting terrorism – but also using paid informants who were undercover posing as protesters. Once again, tactics and legal allowances created in the name of “stopping terrorism” are being used, without any oversight or public debate, on entirely peaceful domestic activism.¶ 5. Emails reveal Missouri National Guard viewed Ferguson protestors as “enemy forces.”¶ The most haunting revelation may just be the latest, from CNN:¶ **Missouri National Guard’s term for Ferguson protesters: ‘Enemy forces’**¶ As the Missouri National Guard prepared to deploy to help quell riots in Ferguson, Missouri, that raged sporadically last year, **the guard used highly militarized words such as “enemy forces” and “adversaries” to refer to protesters, according to documents obtained by CNN.**¶ CNN’s use of military speak aside (“quell riots”), the report clearly shows those in charge viewed both rioter and protester alike as enemy combatants and Ferguson as a war zone.¶ What makes this, and the other above examples, so pernicious isn’t just the use of anti-terror language, legal authority, and apparatuses on peaceful domestic activism, it’s the entirely casual nature with which it’s done. Beyond a few PR tweaks, there doesn’t seem to be, in any of these internal documents, an ounce of doubt or hesitation as to whether or not using systems set up ostensibly to combat al-Qaeda should be so quickly turned on domestic activism. If all you have is a hammer, as the cliché goes, everything looks like a nail. We’ve given our hyper-militarized police and the FBI the hammer of coordinated mass surveillance, infiltration, and monitoring in the name of fighting a phenomenon that kills fewer people a

year than [bee stings](#). It was only a matter of time, therefore, that mass protests would begin to look like a nail in the eyes of our paranoid, over-equipped security officials.

General Local surveillance can break the law without consequence – they can they can cover it up with non disclosure agreements

Fenton 15 (Justin Fenton, who joined The Sun in 2005, has covered the Baltimore Police Department since 2008. His work includes an investigation into Cal Ripken Jr.'s minor league baseball stadium deal with his hometown of Aberdeen and a three-part series chronicling a ruthless con woman, "Baltimore Police used secret technology to track cellphones in thousands of cases", April 9, 2015, <http://www.baltimoresun.com/news/maryland/baltimore-city/bs-md-ci-stingray-case-20150408-story.html#page=1> -JD)

The Baltimore Police Department has used an invasive and controversial cellphone tracking device thousands of times in recent years while following instructions from the FBI to withhold information about it from prosecutors and judges, a detective revealed in court testimony Wednesday.¶The testimony shows for the first time how frequently city police are using a cell site simulator, more commonly known as a "stingray," a technology that authorities have gone to great lengths to avoid disclosing.¶The device mimics a cellphone tower to force phones within its range to connect. Police use it to track down stolen phones or find people.¶Until recently, the technology was largely unknown to the public. Privacy advocates nationwide have raised questions whether there has been proper oversight of its use.¶Baltimore has emerged in recent months as a battleground for the debate. In one case last fall, a city detective said a nondisclosure agreement with federal authorities prevented him from answering questions about the device. The judge threatened to hold him in contempt if he didn't provide information, and prosecutors withdrew the evidence.¶The nondisclosure agreement, presented for the first time in court Wednesday, explicitly instructs prosecutors to drop cases if pressed on the technology, and tells them to contact the FBI if legislators or judges are asking questions.¶Detective Emmanuel Cabreja, a member of the Police Department's Advanced Technical Team, testified that police own a Hailstorm cell site simulator — the latest version of the stingray — and have used the technology 4,300 times since 2007.¶Cabreja said he had used it 600 to 800 times in less than two years as a member of the unit.¶Nate Wessler, an attorney with the American Civil Liberties Union, said 4,300 uses is "huge number." He noted that most agencies have not released data.¶The Florida Department of Law Enforcement says its officers have used the device about 1,800 times. Police in Tallahassee say they have used it more than 250 times; police in Tacoma, Wash., 170 times.¶Former U.S. Judge Brian L. Owsley, a law professor at Indiana Tech, said he was "blown away" by the Baltimore figure and the terms of the nondisclosure agreement. "That's a significant amount of control," he said.¶Agencies have invoked the nondisclosure agreement to keep information secret. At a hearing last year, a Maryland State Police commander told state lawmakers that "Homeland Security" prevented him from discussing the technology.¶Wessler said the secrecy is upending the system of checks and balances built into the criminal justice system.¶"In Baltimore, they've been using this since 2007, and it's only been in the last several months that defense attorneys have learned enough to start asking questions," he said. "Our entire judicial system and constitution is set up to avoid a 'just trust us' system where the use of invasive surveillance gear is secret."¶

Case Neg vs. Condemnation of Jurisprudence Aff

Strategy Notes

In terms of T/FW, T – curtail and T—its could be pretty persuasive

The gender consideration counter advocacy should be in most 1NCs – thank you to Brooke for the awesome 1nc

In CX, the aff will not specify what the world looks like post-aff or post advocacy. Their only response is that it will be better than the squo and that a focus on race movements is key

Given this, some no spillover arguments on framework could be good

CX

What does it mean to be a racial wake up call?

How does the affirmative access any form of deconstruction when all the solvency evidence in the context of racial realism?

What's the impact to miseducation? (I don't really know)

What qualifies as “performatively” meeting you role of the ballot?

How does antiblack racism explain latin@ racism or oppression?

How does a racial wake up call solve for widespread xenophobia and racism?

Off-Case Positions

Framework (from the generic)

Framework 1NC

Our interpretation is that an affirmative should defend curtailing federal government surveillance as the endpoint of their advocacy. This does not mandate roleplaying, immediate fiat or any particular means of impact calculus.

Surveillance can only be understood in relation to the agent doing the surveying – understanding federal government surveillance as unique is key or the topic becomes abstract and unlimited

Cetina 14

(DANIEL K. CETINA, BALANCING SECURITY AND PRIVACY IN 21ST CENTURY AMERICA: A FRAMEWORK FOR FISA COURT REFORM, 47 J. Marshall L. Rev. 1453 2013-2014, Hein)

Any legitimate attempt to discuss and critique United States surveillance tactics necessarily demands defining exactly what surveillance is and what it entails.

Although discourse surrounding governments' intelligence and law enforcement techniques transcends any specific epoch or state,¹¹ modern communication technologies "have revolutionized our daily lives [and] have also created minutely detailed recordings of those lives,"¹² thereby making governmental surveillance simple, potentially ubiquitous, and susceptible to abuse.¹³ Of course, recent surveillance programs were implemented for the noble purpose of conducting the War on Terrorism;¹⁴ but the danger is that pursuing this purpose unchecked can undermine the central principles that both provide the Republic's foundation and differentiate it from the very enemies it combats.¹⁵

While the prospect of governmental surveillance seems to implicitly suggest a quasi-Orwellian dystopia,¹⁶ fantastical science fiction mythologies,¹⁷ abstruse philosophical concepts,¹⁸ or documented repressive regimes,¹⁹ the reality is both less foreboding and more nuanced. Although American society, ostensibly, is looking increasingly akin to such fiction, theory, and totalitarianism, surveillance as applied is not so disturbing. Surveillance involves and encompasses many topics and practices, both abstract and practical,²⁰ but it primarily involves power relationships. ²¹ Specifically, surveillance is "the focused, systematic and routine attention to personal details for purposes of influence, management, protection or direction."²² Surveillance can target a modern society's numerous communications networks,²⁸ which exist to send and receive information. ²⁴ The communications include both envelope information and content information, distinct categories that draw varying degrees of interest from the surveillance authority. ²⁵

But surveillance is not strictly the province of the federal government. ²⁶ Indeed, state and local governments have their own surveillance practices, as do private corporations, which routinely use surveillance data to determine purchasing trends and calibrate advertising, especially through such social media sites as Facebook.²⁸ Surveillance, therefore, transcends the boundary between the private sector and the public sector. ²⁹

The focus here, however, is on federal governmental surveillance. It is therefore critical to understand from where the federal government derives its authority to monitor and analyze communications networks.

The Aff undermines the ability to have a limited and stable number of Affirmatives to prepare against. The link magnitude is high. Their affirmative prevents arguments about ____.

This is a reason to vote negative.

Our first standard is competition – every affirmative argument needs to be filtered through the question of “how does this function in a competitive venue of debate where there must be a win or a loss assigned to each team. All their evidence will assume non-competitive academic environment rather than one where a forced choice will inevitably take place with every ballot.

Second is substantive side bias

Not defending the clear actor and mechanism of the resolution produces a substantive side bias.

They have the ability to recontextualize link arguments, shift focus to different proscriptive claims of the 1AC while using traditional competition standards like perms to make non-absolutist disagreements irrelevant.

The first impact to Aff sides bias is absolutism – their interp creates bad debates where negatives are forced into the absolutist positions like cap and Baudrillard to ensure links and have generic positions that can apply to everything. This is bad for education -- forcing us to the academic margins, makes us less effective scholars and less literate in current events. Trains us only for leftist infighting, rather than social change.

Second, it undermines research – Aff has an incentive to constantly break new affs at every tournament making any real attempt at engagement irrelevant and decreasing the quality of all debates. They don't spur engagement and exploration cause there are so many teams reading so many Affs, the only way to respond it with generics. The Aff is conversely incentivized to pick a body of literature with very little negative literature and a prolif of aff advocacies based on single articles or created phrases. There is no incentive to produce detailed strategies because academic disagreements in the literature are minute and easily wished away by perms or Aff changes.

And we have an external impact – Sufficient research-based preparation and debates focused on detailed points of disagreement are key to political effectiveness

Gutting 13 (professor of philosophy at the University of Notre Dame)

(Gary, Feb 19, A Great Debate, <http://opinionator.blogs.nytimes.com/2013/02/19/a-great-debate/?emc=eta1>)

This is the year of what should be a decisive debate on our country's spending and debt. But our political “debates” seldom deserve the name. For the most part representatives of the rival parties exchange one-liners: “The rich can afford to pay more” is met by “Tax increases kill jobs.” Slightly more sophisticated discussions may cite historical precedents: “There were higher tax rates during the post-war boom” versus “Reagan's tax cuts increased revenues.”

Such volleys still don't even amount to arguments: they don't put forward generally accepted premises that support a conclusion. Full-scale speeches by politicians are seldom much more than collections of such slogans and factoids, hung on a string of platitudes. Despite the name, candidates' pre-election debates are exercises in looking authoritative, imposing their talking points on the questions, avoiding gaffes, and embarrassing their opponents with “zingers” (the historic paradigm: “There you go again.”).

There is a high level of political discussion in the editorials and op-eds of national newspapers and

magazines as well as on a number of blogs, with positions often carefully formulated and supported with argument and evidence. But even here we seldom see a direct and sustained confrontation of rival positions through the dialectic of assertion, critique, response and counter-critique. Such exchanges occur frequently in our law courts (for example, oral arguments before the Supreme Court) and in discussions of scientific papers. But they are not a significant part of our deliberations about public policy. As a result, partisans typically remain safe in their ideological worlds, convincing themselves that they hold to obvious truths, while their opponents must be either knaves or fools — with no need to think through the strengths of their rivals’ positions or the weaknesses of their own. Is there any way to make genuine debates — sustained back-and-forth exchanges, meeting high intellectual standards but still widely accessible — part of our political culture? (I leave to historians the question of whether there are historical precedents— like the Webster-Hayne or Lincoln-Douglas debates.) Can we put our politicians in a situation where they cannot ignore challenges, where they must genuinely engage with one another in responsible discussion and not just repeat talking points?

A first condition is that the debates be focused on specific points of major disagreement. Not, “How can we improve our economy?” but “Will tax cuts for the wealthy or stimulus spending on infrastructure do more to improve our economy?” This will prevent vague statements of principle that don’t address the real issues at stake.

Another issue is the medium of the debate. Written discussions, in print or online could be easily arranged, but personal encounters are more vivid and will better engage public attention. They should not, however, be merely extemporaneous events, where too much will depend on quick-thinking and an engaging manner. We want remarks to be carefully prepared and open to considered responses.

This guts any educational potential of the aff – failure to engage with the legal detail of surveillance policy prevents translating their argument into action.

Cohen 15 (professor of law at Georgetown University Law Center)

(Julie, 2015, Studying Law Studying Surveillance, Studying Law Studying Surveillance. Surveillance & Society 13(1): 91-101)

Relative to legal scholarship, work in Surveillance Studies is more likely to build from a solid foundation in contemporary social theory. Even so, such work often reflects both an insufficient grasp of the complexity of the legal system in action and lack of interest in the ways that legal and regulatory actors understand, conduct, and contest surveillance. By this I don’t mean to suggest that Surveillance Studies scholars need law degrees, but only to point out what ought to be obvious but often isn’t: legal processes are social processes, too, and in overlooking these processes, Surveillance Studies scholars also engage in a form of black-boxing that treats law as monolithic and surveillance and government as interchangeable. Legal actors engage in a variety of discursive and normative strategies by which institutions and resources are mobilized around surveillance, and understanding those strategies is essential to the development of an archaeology of surveillance practices. Work in Surveillance Studies also favors a type of theoretical jargon that can seem impenetrable and, more importantly, unrewarding to those in law and policy communities. As I’ve written elsewhere (Cohen 2012a: 29), “[t]oo many such works find power everywhere and hope nowhere, and seem to offer well-meaning policy makers

little more than a prescription for despair.

Let us return first to the problem of digitally enhanced surveillance by law enforcement—the problem of the high-resolution mosaic. As discussed in the section above, works by Surveillance Studies scholars exploring issues of mobility and control offer profound insights into the ways in which continual observation shapes spaces and subjectivities—the precise questions about which, as we have already seen, judges and legal scholars alike are skeptical. Such works reveal the extent to which pervasive surveillance of public spaces is emerging as a new and powerful model of ordering the public and social life of civil society. They offer food for thought—but not for action. Networked surveillance is increasingly a fact of contemporary public life, and realizing theories about it proves difficult to do so very far beyond gaining regulatory traction on it. That enterprise is, moreover, essential even if it entails an inevitable quantum of self-deception.

Acknowledgment of pervasive social shaping by networked surveillance need not preclude legal protection for socially-shaped subjects, but that project requires attention to detail.

To put the point a different way, the networked democratic society and the totalitarian state may be points on a continuum rather than binary opposites, but the fact that the continuum exists is still worth something. If so, one needs tools for assessment and differentiation that Surveillance Studies does not seem to provide. As an example of this sort of approach within legal scholarship, consider a recent article by legal scholars Danielle Citron and David Gray (2013), which proposes that courts and legislators undertake what they term a technology-centered approach to regulating surveillance. They would have courts and legislators ask whether particular technologies facilitate total surveillance and, if so, act to put in place comprehensive procedures for approving and overseeing their use. From a Surveillance Studies perspective, this approach lacks theoretical parity because its technology-specific focus appears to ignore the fact that total surveillance also can emerge via the fusion of data streams originating from various sources. But the proposal is pragmatic; it does not so much ignore that risk as bracket it while pursuing the narrower goal of gaining a regulatory foothold within the data streams. And because it focuses on the data streams themselves, it is administrable in a way that schemes based on linear timelines and artificial distinctions between different types of surveillance are not. One can envision both courts and legislators implementing the Citron and Gray proposal in a way that enables far better oversight of what law enforcement is doing. Turning next to the related practice of commercial profiling and social media surveillance, we have already seen that work in Surveillance Studies again steps in where legal scholarship badly needs supplementation: on the question of how pervasive surveillance by private market actors shapes the production of culture and the patterns of emergent subjectivity. Such work typically does not, however, consider or explore the ways that the legal context of consent mobilities, legal and policy discourses to sanction ongoing exposures of private-sector surveillance and insulate them from regulatory oversight. Work in Surveillance Studies also has not seemed to pay particularly careful attention to the risks that theories of innovation and competition play in regulatory debates about information privacy. For a discipline that seeks to develop comprehensive and rigorous accounts of surveillance as social ordering and as a cultural practice, these are large omissions. As we have seen, the notice-and-choice paradigm has deep roots within liberal theory, and legal and policy discourses about notice and choice reflect legal culture in action. By the same token, understanding surveillance simply as a means to effective administration, or as a means for pursuing and performing security, misses the extent to which a narrative about the inevitable nature of innovation and knowledge production positions surveillance as a modality of technical and social progress (Cohen 2015). The “surveillance-industrial complex” does not simply parallel the military-industrial complex; it is also deeply rooted in Silicon Valley’s technoculture (and, albeit paradoxically, in the tropes of romantic individualism and cultural modernism with which its participants self-identify). These themes have been especially salient for privacy regulators.

Engagement with legal scholarship on information privacy would inform the project of understanding surveillance as social ordering

and as culture in a number of complementary ways. First and most basically, many legal writings on information privacy are important as primary sources that reveal the notice-and-choice paradigm and the narrative of inevitable innovation at work. But there is also a rich vein of legal scholarship interrogating the assumptions and the politics that underlie privacy and data protection regulation (e.g., Cohen 2012a, 2012c, 2013, 2015; Kerr 2013; Ott 2010; Solove 2013). In addition, legal scholars have provided richly detailed and revealing investigations of regulatory and compliance processes, for example, scholars’ ought to read and consider the impact of work by Kenneth Bamberger and Deirdre Mulligan on corporate privacy compliance cultures (2011a, 2011b).

surveillance theorists will need to do more than simply read legal sources. Work in Surveillance Studies so far has not been particularly well-adapted to helping policymakers figure out what, if anything, to do about evolving practices of commercial surveillance. Once again, if it is to be useful to policymakers, the view from Surveillance Studies requires translation into a form that might furnish a framework for action.

Here I want to identify three important sets of questions on which Surveillance Studies scholars who want their work to make a difference might take their cues from legal scholarship. An initial set of questions concerns how to redefine privacy and data protection in functional terms that do not presuppose the stable, liberal self, and that instead offer real benefit to the situated subjects who might claim their protection. David Lyon (2001) has argued that the organizing concepts of “privacy” and “data protection” are inadequate to comprehend surveillance as a mode of social ordering. From a sociological perspective that is unashamedly rights-based, privacy and data protection will struggle to make effective as legal constructs if articulated differently, in ways that correspond more closely to the ways that surveillance shapes experience. That project calls for the sort of theoretical cannibalization that makes Ph.D. committees at Real Disciplines nervous, but at which legal scholars excel. With some trepidation, I offer my own work on privacy as boundary management for the postliberal self (Cohen 2012a, 2013), as well as Valerie Steeves’ (2009) work on relational subjectivity, as examples of the sort of exercise that is necessary to reframe the effects of surveillance as social ordering in ways to which legal systems can respond. But how to develop a sustainable and effective approach to regulating data protection and protecting privacy, the ways of theorizing about the subject represented by these projects must become second nature, not only for scholars but also and more importantly for legislators, regulators, and courts. That in turn requires second process of translation, from the language of academia into a vernacular that can supply inputs into policy processes. A second set of questions concerns how to understand what constitutes privacy harm in an era in which some surveillance is a constant. To the Surveillance Studies reader this may seem to be a variation on the first question, but it is different: in law, harm is what makes violation of an interest actionable, and the potential for harm is what creates the predicate for comprehensive regulation of particular domains of activity. Harm need not be individualized or monetizable; environmental regulation and financial market regulation address systems and often nonmonetizable risk, but it must be reasonably definite, task of power, proven every where is plainly insufficient and it should come as no surprise that policymakers find it risible. Work on this problem is still preliminary, but here legal scholarship has a leg up because it deals in practicalities. Surveillance Studies scholars might profitably read works by Danielle Citron (2007) and Paul Otter (2010) that identify and name the systemic risks associated with leaky and largely unregulated data reservoirs, and that draw on resources ranging from the history of law to contemporary regulatory strategies. A final set of questions concerns the design of governance mechanisms. As we have already seen, the flows of surveillance within social media create novel institutional design challenges. In the domain of commercial profiling, many activities on the business-facing side of personal information markets, removed from customer-facing processes that support to consent notice and choice, have eluded regulatory scrutiny entirely. Some of the choice works on privacy governance originate within the Surveillance Studies tradition; these include Priscilla Kegan’s (1995) study of the way privacy legislation emerges within the U.S. political system and Colin Bennett and Charles Raab’s (2006) work on privacy governance and the emergence of data protection as a regulatory paradigm. But the question of governance badly needs to be revisited, in particular, Surveillance Studies scholars have not yet engaged with the “new privacy governance” now emerging as official policy in the U.S. (and as de facto policy in the European Union) as a sustained and meaningful way. Works by legal scholars on the political, epistemological, and normative dimensions of the new governance (e.g., Bamberger 2010; Cohen 2012b, 2013; Freeman 2000; Lobel 2004) offer starting points for an inquiry that goes beyond “doing Surveillance Studies” to consider the most pressing challenge of doing surveillance regulation wisely and effectively. Conclusion: Doing Law and Surveillance Studies Differently

The prospects for fruitful interchanges and collaboration between legal scholars and Surveillance Studies scholars are likely to remain complicated by pronounced differences in underlying theoretical orientation. But since Surveillance Studies is itself an interdisciplinary (Garber 2001), and since legal scholarship has thrived on interdisciplinary exploration, the prospects for effective communication also seem reasonably good.

Bridging the gaps requires, first and foremost, efforts by emissaries from both traditions to foster a more tolerant and curious dialogue directed toward improved understanding and, ultimately, toward methodological hybridization. Within one’s own academic community, it can become too easy to mistake consensus on methodological conventions for epistemological rigor, and to forget that methodological strength also derives from refusal to be hemmed in by disciplinary boundaries.

From the standpoint of theory, a more sustained dialogue between law and Surveillance Studies would count as a success if it produced a mode of inquiry about surveillance that melded the theoretical sophistication of Surveillance Studies with lawyerly attention to the details, mechanisms, and interests that constitute surveillance practices as legal practices, and to the kinds of framing that mobilize legal and policy communities. To do Surveillance Studies better, legal scholars need to challenge their own preference for putting problems in categories that fit neatly within the liberal model of human nature and behavior, and Surveillance Studies scholars can help by calling attention to the social and cultural processes within which surveillance practices are embedded. Surveillance Studies scholars need to do more to resist their own penchant for totalizing dystopian narratives, and should delve more deeply into the legal and regulatory realpolitik that surrounds the administration of surveillance systems; legal scholars can help by demystifying legal and regulatory processes.

From a legal scholar’s perspective, however, theory achieves its highest value when it becomes a tool for forcing productive confrontations about how to respond to real problems. And so I think it would count as an even bigger success if dialogue between law and Surveillance Studies generated not only a hybridized theoretical discourse of law-and-Surveillance-Studies but also the beginnings of a more accessible policy discourse about surveillance and privacy, along with reform proposals designed to put the animating concepts behind such a discourse into practice. Here the goal would be a hybridization between law’s ingrained pragmatism and Surveillance Studies’ attentiveness to the social and cultural processes through which surveillance is experienced and assimilated. Working together, legal scholars and

Surveillance Studies scholars might advance the project of formulating working definitions of privacy interests and harms, and might develop more sophisticated projections of the likely effects of different policy levers that could be brought to bear on systems of surveillance.

Next is Mechanism Education

The Aff's failure to identify an agent and mechanism makes cost-benefits analysis impossible, meaning debates take place in an academic vacuum where tradeoffs are irrelevant. It makes link comparisons vacuous and means that detailed PICs about substance are all but impossible.

And this turns the Aff – debates over mechanisms for change are crucial to solve material violence on a large scale

Capulong 9 (Assistant Professor of Law, University of Montana)

(Eduardo R.C., CLIENT ACTIVISM IN PROGRESSIVE LAWYERING THEORY, CLINICAL LAW REVIEW, 16 Clinical L. Rev. 109, Fall, 2009)

Motivating client activism under dynamic social conditions requires the development and constant assessment and reassessment of a political perspective that measures that resistance and its possibilities. That task in turn requires the development of specific activist goals within the context of such analyses, and perhaps broader, national and international strategy--what some call the political "next step." This is particularly true today, when the economic crisis plaguing capitalism, the "war on terror" and climate change undeniably have world-wide dimensions. Instances of failure, too, need to be part of that analysis, because they teach us much about why otherwise promising activist efforts do not become sustained mass movements of the sort to which we all aspire.

Thus, the theoretical need is two-fold: to construct a broader organizing perspective from a political standpoint, and to consider activism writ large. Without reading the pulse of prevailing social conditions, it is easy to miscalculate what that next step ought to be. We will not build a mass movement though sheer perseverance--a linear, idealist conception of change at odds with dynamic social conditions. By the same token, we may underestimate the potential of such mass activism if we focus simply on the local dimensions of our work.

The dialectic between a dynamic social context and political consciousness and action requires a constant organizational and political calibration and modulation often missing from theoretical scholarship.

Without such a working perspective, we are apt to be either ultra-left or overly conservative. As Jim Pope put it recently in the context of new forms of labor organizing: "If we limit our vision of the future to include only approaches that work within the prevailing legal regime and balance of forces, then we are likely to be irrelevant when and if the opportunity for a paradigm shift arises." n449 The cyclical nature of labor organizing, he argues, mirrors politics generally: American political life as a whole has likewise alternated between periods characterized by public action, idealism, and reform on the [189] one hand, and periods of private interest, materialism, and retrenchment on the other. A prolonged private period spawns orgies of corruption and extremes of wealth and poverty that, sooner or later, ignite passionate movements for reform. n450 C. "Activism": Towards a Broader, Deeper, Systematic Framework In progressive lawyering theory, grassroots activism is frequently equated with "community organizing" and "movement" or "mobilization" politics. n451 Indeed, these methods have come to predominate activist lawyering in much the same way as "public interest law" has come for many to encompass all forms of progressive practice. "Activism" is, of course, broader still. Even on its own terms, the history of community organizing and social movements in the United States includes two vitally important traditions frequently given short shrift in this realm: industrial union organizing and alternative political party-building. n452 In this section, my aim is not to catalogue the myriad ways in which lawyers and clients can and do become active (methodically or institutionally)--which, given human creativity and progress, in any event may be impossible to do--but rather to problematize three assumptions: first, the tendency to define grassroots activity narrowly; second, the notion that certain groups--for example "the poor" or the "subordinated"--are the definitive agents of social change; and finally, the conviction that mass mobilization or movement-building, by itself, is key to social transformation. 1. Grassroots Activism There are countless ways in which people become socially or politically active. Yet even the more expansive and sophisticated considerations of activism in progressive lawyering theory tend to unnecessarily circumscribe activism. For example, Cummings and Eagly argue that we need to "unpack" the term "organizing." n453 Contrasting two strategies of the welfare rights movement in the 1960s, these authors distinguish between "mobilization as short-term community action and organizing as an effort to build long-term institutional power." n454 In the same breath, however, they define organizing "as shorthand for a range of community-based practices." n455 even though at least some activism, for example union organizing or, say, [190] fasting, might not be best characterized as "community-based." What is required is a larger framework that takes into account the sum total of activist initiatives. Lucie White argues that we need to "map out the internal microdynamics of progressive grassroots initiatives ... observe the multiple impacts of different kinds of initiatives on wide spheres of social and political life ... and devise typologies, or models, or theories that map out a range of opportunities for collaboration." n456 This map would be inadequate--and therefore inaccurate--if we include certain activist initiatives and not others. But that is precisely what the progressive lawyering literature has done by failing to regularly consider, for example, union organizing or alternative political party-building. 2. Agents of Social Change: Identity, Class and Political Ideology As with our definition of activism, here, too, the problem is a lack of clarity, breadth or scope, which leads to misorientation. Have we defined, with theoretical precision, the social-change agents to whom we are orienting--e.g., the "people," the "poor," the "subordinated," "low-income communities" or "communities of color?" And if so, are these groupings, so defined, the primary agents of social change? By attempting to harmonize three interrelated (yet divergent) approaches to client activism--organizing on the bases of geography and identity, class and the workplace, and political ideology--modern community organizing simultaneously blurs and balkanizes the social-change agents to whom we need to orient. What, after all, is "community?" In geographic terms, local efforts alone cannot address social problems with global dimensions. n457 As Pope observed of workers' centers: "the tension between the local and particularistic focus of community unionism and the global scope of transnational corporations like Wal-Mart makes it highly unlikely that community unionism will displace industrial unionism as 'the' next paradigm of worker organization." n458 On the other hand, members of cross-class, identity-based "communities" may not necessarily share the same interests. In the "Asian American community," Anchetta explains: using the word "community" in its singular form is often a misnomer, because Asian Pacific Americans comprise many communities, each with its own history, culture and language: Filipino, Chinese, Japanese, Korean, Vietnamese, Thai, Cambodian, Lao, Lao-Mien, [191] Hmong, Indian, Indonesian, Malaysian, Samoan, Tongan, Guamanian, Native Hawaiian, and more. The legal problems facing individuals from different communities defy simple categorization. The problems of a fourth-generation Japanese American victim of job discrimination, a monolingual refugee from Laos seeking shelter

from domestic violence, an elderly immigrant from the Philippines trying to keep a job, and a newcomer from Western Samoa trying to reunite with relatives living abroad all present unique challenges. Add in factors such as gender, sexual orientation, age, and disability, and the problems become even more complex. n45 Angela Harris echoes this observation by pointing out how some feminist legal theory assumes "a unitary, 'essential' women's experience [that] can be isolated and described independently of race, class, sexual orientation, and other realities of experience." n460 The same might be said of the "people," which, like the "working class," may be too broad. Other categorizations--such as "low-income workers," "immigrants", and the "poor", for example--may be too narrow to have the social weight to fundamentally transform society. In practice, progressive lawyers orient to the politically advanced among these various "communities." In so doing, then, we need to acknowledge that we are organizing on the basis of political ideology, and not simply geography, identity or class. Building the strongest possible mass movement, therefore, requires an orientation not only towards certain "subordinated" communities, but to the politically advanced generally. Otherwise, we may be undermining activism writ large. This is not to denigrate autonomous community efforts. As I have mentioned, subordinated communities of course have the right to self-determination, i.e. to organize separately. But the point is not simply to organize groups of people who experience a particular oppression, but rather to identify those who have the social power to transform society. Arguing that these agents are the collective, multi-racial working class, Smith explains: The Marxist definition of the working class has little in common with those of sociologists. Neither income level nor self-definition are [sic] what determine social class. Although income levels obviously bear some relationship to class, some workers earn the same or higher salaries than some people who fall into the category of middle class. And many people who consider themselves "middle [192] class" are in fact workers. Nor is class defined by categories such as white and blue collar. For Marx the working class is defined by its relationship to the means of production. Broadly speaking, those who do not control the means of production and are forced to sell their labor power to capitalists are workers. n461 The practical consequence of this very well may be that we redefine who we represent as clients and consider activism or potential activism outside subordinated communities, for example union activity and

alternative political-party building, as part of our work. 3. From Movementism to Political Organization **Dogged as our work is in the activist realm, any effort at fundamental social transformation is doomed without effective political leadership.** Such leadership, in turn, requires work not often associated with "activism," such as, for example, theoretical study. n462 "Movementism," n463 by which I mean the conviction that building a mass movement is the answer to oppression and exploitation, has its limitations. Even though activism itself is perhaps the best school for political

education, we have an enormous amount to learn from our predecessors. In the final analysis, **fundamental social transformation will**

only come about if there are political organizations clear enough, motivated enough, experienced enough, large enough, embedded enough and agile enough to respond to the twists and turns endemic in any struggle for power. "The problem," as Bellow astutely observed, "is not our analytic weaknesses, but the opportunistic, strategic, and political character of our subject." n464 Such opportunities typically occur when there is a confluence of three factors: a social crisis; a socio-economic elite that finds itself divided over how to overcome it; and a powerful mass movement from below. As I understand the

nature of social change, **successful social transformations occur when there is a fourth element: political organization.**

Conclusion

Client activism is not a monolithic, mechanical object. Most of the time, it is neither the gathering mass movement many of us wish for, nor the inert, atomized few in need of external, professional motivation. Rather, activism is a phenomenon in constant ebb and flow, a [193] mercurial, fluid complex shaped by an unremitting diversity of factors. The key through the maze of lawyering advice and precaution is therefore to take a hard, sober look at the overarching state of activism. Are our clients in fact active or are they not? How many are and who are they? What is the nature of this period? Economically? Politically? Culturally? What are the defining issues? What political and organizing trends can be discerned? With which organizations are our clients active, if any? What demands are they articulating, and how are they articulating them?

This is a complex evaluation, one requiring the formulation, development and constant assessment and reassessment of an overarching political perspective. My aim

in this Article is to begin to theorize the various approaches to this evaluation. In essence, I am arguing for the elaboration of a systematic macropolitical analysis in progressive lawyering theory. Here, my purpose is not to present a comprehensive set of political considerations, but rather to develop a framework for, and to investigate the limitations of, present considerations in three areas: strategic aims; prevailing social conditions; and methods of activism. Consciously or not, admittedly or not, informed and systematic or not, progressive lawyers undertake their work with certain assumptions, perspectives and biases. Progressive lawyering theory would be a much more effective and concrete guide to action--to defining the lawyer's role in fostering activism--if it would elaborate on these considerations and transform implicit and perhaps delimited assumptions and approaches into explicit and hopefully broader choices. Over the past four decades, there has been remarkable continuity and consistency in progressive lawyers' use of litigation, legislation, direct services, education and organizing to stimulate and support client activism. The theoretical "breaks" to which Buchanan has referred n465 have not been so much about the practice of lawyering itself, but rather about unarticulated shifts in ultimate goals, societal analyses, and activist priorities, each necessitated by changes in the social, economic, and political context. That simply is another way of stating the obvious: that progressive lawyers change their practices to adapt to changing circumstances. The recurrent problem in progressive lawyering theory is that many commentators have tended to generalize these practice changes to apply across social circumstances. In so doing, they displace and often replace more fundamental differences over strategic goals, interpretation of social contexts, and organizing priorities with debates over the mechanics of lawyering practice. The argument is turned on its head: we often assume or tend to [194] assume agreement over the meanings and underlying conceptual frameworks relating to "fundamental social change," current political analysis, and "community organizing," and debate lawyering strategy and tactics; but instead we should be elaborating and clarifying these threshold political considerations as a prerequisite to using what we ultimately agree to be a broad and flexible set of lawyering tools. In effect, the various approaches to lawyering have become the currency by which scholars have debated politics and activism. The irony is that our disagreements are less about lawyering approaches per se, I believe, than they are about our ultimate political objectives, our analyses of contemporary opportunities, and our views of the optimal paths from the latter to the former. The myriad lawyering descriptions and prescriptions progressive lawyering theory offers are of limited use unless they are anchored in these primary considerations. How do we decide if we should subscribe to "rebellious" and not traditional "public interest" lawyering, for example, or "collaborative" over "critical" lawyering, if we do not interrogate these questions and instead rush too quickly into practical questions? The differences among these approaches matter precisely because they have different political goals, are based on different political analyses, and employ different political activist strategies. Activist lawyers already engage in these analyses--necessarily so. To foster client activism, they must read prevailing social conditions and strategize with their clients about the political next step, often with an eye toward a long-term goal. But I don't think we necessarily engage in these analyses as consciously, or with as full a picture of the history and dynamics involved or options available, as we could. Often this is because there simply isn't time to engage these questions. Or perhaps not wanting to dominate our clients, we squelch our own political analysis and agenda to allow for organic, indigenous leadership from below. But if we are truly collaborative--and when we feel strongly enough about certain political issues--we engage on issues and argue them out. In either event, we undertake an unsystematic engagement

of these fundamental issues at our peril. If we adhere to the belief that **only organized, politicized masses of people can alter or replace exploitative and oppressive institutions and bring about lasting fundamental social change, then, as progressive lawyers, we need to be clear about which legal tactics can bring about such a sustained effort in each historical moment. Without concrete and comprehensive diagnoses of ultimate political goals, social and economic contexts, and organizing priorities, progressive legal practice will fail** to live up to its potential.

T – curtail

T curtail 1NC

A. Curtail means reduce or limit

Merriam-Webster 15 © 2015 Merriam-Webster, Incorporated <http://www.merriam-webster.com/dictionary/curtail>

Curtail verb cur-tail \ (,)kər-'tāl\

: to reduce or limit (something)

Full Definition of CURTAIL

transitive verb

: to make less by or as if by cutting off or away some part <curtail the power of the executive branch> <curtail inflation>

B. The plan violates – even without using the USFG as an actor, the aff still must advocate for a reduction in federal government surveillance, or even a curtailment of surveillance in general. A “racial wake up call” does nothing to curtail surveillance. Neither does “deconstructing modernity’s conceptions of criminality, deviance, and whiteness.”

C. THE AFFIRMATIVE INTERPRETATION IS BAD FOR DEBATE

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. Permitting advocacies that engage societal surveillance writ large like the aff permits a huge number of cases. The aff’s “conversation about surveillance” is not a sufficient limit on the topic

D. T IS A VOTER because the opportunity to prepare promotes better debating

T – its

T – its 1NC

A. Its means relating to

Meriam Webster 13 <http://www.merriam-webster.com/dictionary/its>

Definition of ITS

: of or relating to it or itself especially as possessor, agent, or object of an action <going to its kennel> <a child proud of its first drawings> <its final enactment into law>

Examples of ITS

the dog in its kennel

The landscape is beautiful in its own unique way.

Each region has its own customs.

The company is hoping to increase its sales.

B. The plan violates – even without using the USFG as an actor, the aff still must advocate for a decrease in federal government surveillance. This is distinct from local police stop’n’frisk and the “white gaze” which exists in an infinite number of settings separate from federal government surveillance.

C. THE AFFIRMATIVE INTERPRETATION IS BAD FOR DEBATE

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. Permitting advocacies that engage societal surveillance writ large like the aff permits a huge number of cases. The aff’s “conversation about surveillance” is not a sufficient limit on the topic

D. T IS A VOTER because the opportunity to prepare promotes better debating

T – substantial

T – substantial 1NC

A. SUBSTANTIALLY REQUIRES AT LEAST A 2% REDUCTION --- THIS IS THE SMALLEST PERCENTAGE WE COULD FIND

Word and Phrases 1960

'Substantial' means "of real worth and importance; of considerable value; valuable."
Bequest to charitable institution, making 1/48 of expenditures in state, held exempt from taxation; such expenditures constituting "substantial" part of its activities. Tax Commission of Ohio v. American Humane Education Soc., 181 N.E. 557, 42 Ohio App.

B. PLAN VIOLATES

It isn't even 2% of the billions of instances of surveillance that occur daily

Stray 13 Jonathan Stray, Special to ProPublica, Aug. 5, 2013, 3:20 p.m. FAQ: What You Need to Know About the NSA’s Surveillance Programs <http://www.propublica.org/article/nsa-data-collection-faq>

Massive amounts of raw Internet traffic The NSA intercepts huge amounts of raw data, and stores billions of communication records per day in its databases. Using the NSA’s XKEYSCORE software, analysts can see “nearly everything a user does on the Internet” including emails, social media posts, web sites you visit, addresses typed into Google Maps, files sent, and more. Currently the NSA is only authorized to intercept Internet communications with at least one end outside the U.S., though the domestic collection program used to be broader. But because there is no fully reliable automatic way to separate domestic from international communications, this program also captures some amount of U.S. citizens’ purely domestic Internet activity, such as emails, social media posts, instant messages, the sites you visit and online purchases you make.

C. THE AFFIRMATIVE MUST DEFEND AN INTERPRETATION

They cannot just quibble with our definition. They have to counter-define and defend the limits of their definition. Substantially must be given meaning

CJS 83 Corpus Juris Secundum, 1983 , 765.

“Substantially. A relative and elastic term which should be interpreted in accordance with the context in which it is used. While it must be employed with care and discrimination, it must, nevertheless, be given effect.” 48

D. THE AFFIRMATIVE INTERPRETATION IS BAD FOR DEBATE

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. Permitting advocacies like the aff permits a huge number of cases. The aff’s “conversation about surveillance” is not a sufficient limit on the topic

E. T IS A VOTER because the opportunity to prepare promotes better debating

K – Historical Materialism

Historical Materialism K 1NC

Critical race theory and intersectional approaches displace the essential focus on class in relation to racial issues – class, as informed by patterns of labor and productivity, is the only structural antagonism determinant of practices sanctioning racial and gender oppression

San Juan, Professor Emeritus of English/Comparative Literature/Ethnic Studies at Harvard, 2005 (Epifanio San Juan, Jr., Nature, Society, and Thought, Vol 3 Iss 18 2005 “From Race to Class Struggle: Marxism and Critical Race Theory” proquest; accessed 7/21/15)//JH @ DDI

Owing to the unrelenting ideological and political constraints of the Cold War, academic discourse on racism and ethnic/racial relations has erased the Marxian concept of class as an antagonistic relation, displacing it with neo-Weberian notions of status, life-style, and other cultural contingencies. Despite the civil rights struggles of the sixties, methodological individualism and normative functionalism continue to prevail in the humanities and social sciences. The decline of militant trade unionism and the attenuation of “third world” liberation struggles contributed to the erasure of class conflicts. With the introduction of structuralist and poststructuralist paradigms in the last three decades, the concept of class struggle has been effectively displaced by the concept of power and differential relations. From the viewpoint of the humanities and cultural studies (fields in which I am somehow implicated), the advent of critical race theory (CRT) in the eighties was salutary if not anticlimactic. For the strategic foregrounding of racism and the race problematic (following feminism’s assault on the Cold War stereotypes of economic determinism and class reductionism synonymous with Marxism tout court in the previous decades), CRT served to remedy the inadequacies of the intersectionality paradigm of gender, class, and race. Unfortunately, with the neoconservative resurgence in the Reagan/Bush administrations and the collapse of “actually existing socialism” in the Soviet Union and arguably in China, the deconstruction of bourgeois legal discourse and its attendant institutions will no longer suffice. This is so not only because of the reconfigured international situation and the emergence of neoliberal apologetics and authoritarian decrees, but because of the accelerated class war manifest in ongoing deindustrialization, huge income gaps, unemployment, destruction of welfare-state guarantees, and disabling of traditional challenges to corporate rule. Challenge of the epochal divide The advent of critical race theory marked a

rediscovery of the primacy of the social relations of production and the division of labor in late modern industrial society. A historicizing perspective was applied by Derrick Bell and elaborated by, among others, Charles Mills in his theory of the United States as a "racial polity." However, a tendency to juxtapose "class" as a classifying category with "race" and "gender" in an intersectional framework has disabled the Marxian concept of class relation as a structural determinant. This has led to the reduction of the relational dynamic of class to an economistic factor of identity, even though critical race theory attacks capitalist relations of production and its legal ideology as the ground for racist practices and institutions. The intersectionality approach (where race, class, and gender function as equally salient variables) so fashionable today substitutes a static nominalism for concrete class analysis. It displaces a Marxian organon of knowledge. As Gregory Meyerson notes, the "explanatory primacy of class analysis" is a theoretical requisite for understanding the structural determinants of race, gender, and class oppression (2003). Class as an antagonistic relation is, from a historical-materialist viewpoint, the only structural determinant of ideologies and practices sanctioning racial and gender oppression in capitalist society.

Capitalism is the structural totality that underlies all forms of oppression – the erosion of justice and values creates disparities that result in crime, disposability, incarceration, authoritarianism, excessive surveillance, exclusion, marginalization, and social death

Giroux, Network Chair Professorship at McMaster University in the English and Cultural Studies Department and a Distinguished Visiting Professorship at Ryerson, University, 2014 (Henry A. Giroux, Tikkun, Volume 29, Number 3, Summer 2014, Duke University Press "Neoliberalism's War Against the Radical Imagination" project muse; accessed 7/20/15)//JH @ DDI

Democracy is on life support in the United States. Throughout the social order, the forces of predatory capitalism are on the march. Their ideological and material traces are visible everywhere—in the dismantling of the welfare state, the increasing role of corporate money in politics, the assault on unions, the expansion of the corporate surveillance-military state, widening inequalities in wealth and income, the defunding of higher education, the privatization of public education, and the war on women's reproductive rights. As Marxist geographer David Harvey, political theorist Wendy Brown, and others have observed, neoliberalism's permeation is achieved through various guises that collectively function to undercut public faith in the defining institutions of democracy. As market mentalities and moralities tighten their grip on all aspects of society, public institutions and public spheres are first downsized, then eradicated. When these important sites of democratic expression— from public universities to community health care centers—vanish, what follows is a serious erosion of the discourses of justice, equality, public values, and the common good. Moreover, as literary critic Stefan Collini has argued, under the regime of neoliberalism, the "social self" has been transformed into the "disembedded individual," just as the notion of the university as a public good is now repudiated by the privatizing and atomistic values at the heart of a hyper-market-driven society. We live in a society that appears to embrace the vocabulary of "choice," which is ultimately rooted in a denial of reality. In fact, most people experience daily an increasing limitation of choices, as they bear the heavy burden of massive inequality, social disparities, the irresponsible concentration of power in relatively few hands, a racist justice and penal system, the conversion of schools into detention centers, and a pervasive culture of violence and cruelty—all of which portends a growing machinery of social death, especially for those disadvantaged by a ruthless capitalist economy. Renowned economist Joseph Stiglitz is one of many public intellectuals who have repeatedly alerted Americans to the impending costs of gross social inequality. Inequality is not simply about disproportionate amounts of wealth and income in fewer hands, it is also about the monopolization of power by the financial and corporate elite. As power becomes global and is removed from local and nation-

based politics, what is even more alarming is the sheer number of individuals and groups who are being defined by the free-floating class of ultra-rich and corporate powerbrokers as disposable, redundant, or a threat to the forces of concentrated power. Power, particularly the power of the largest corporations, has become less accountable, and the elusiveness of illegitimate power makes it difficult to recognize. Disposability has become the new measure of a neoliberal society in which the only value that matters is exchange value. Compassion, social responsibility, and justice are relegated to the dustbin of an older modernity that now is viewed as either quaint or a grim reminder of a socialist past. The Institutionalization of Injustice A regime of repression, corruption, and dispossession has become the organizing principle of society in which an ironic doubling takes place. Corporate bankers and powerbrokers trade with terrorists, bankrupt the economy, and commit all manner of crimes that affect millions, yet they go free. Meanwhile, across the United States, citizens are being criminalized for all sorts of behaviors ranging from dress code infractions in public schools to peaceful demonstrations in public parks. As Michelle Alexander has thoroughly documented in her book *The New Jim Crow*, young men and women of color are being jailed in record numbers for nonviolent offenses, underscoring how justice is on the side of the rich, wealthy, and powerful. And when the wealthy are actually convicted of crimes, they are rarely sent to prison, even though millions languish under a correctional system aimed at punishing immigrants, low-income whites, and poor minorities. An egregious example of how the justice system works in favor of the rich was recently on full display in Texas. Instead of being sent to prison, Ethan Couch, a wealthy teen who killed four people while driving inebriated, was given ten years of probation and ordered by the judge to attend a rehabilitation facility paid for by his parents. (His parents had previously offered to pay for an expensive rehabilitation facility that costs \$450,000 a year.) The defense argued that he had “affluenza,” a “disease” that afflicts children of privilege who are allegedly never given the opportunity to learn how to be responsible. In other words, irresponsibility is now an acceptable hallmark of having wealth, enabling the rich actually to kill people and escape the reach of justice. Under such circumstances, “justice” becomes synonymous with privilege, as wealth and power dictate who benefits and who doesn’t by a system of law that enshrines lawlessness. In addition, moral and political outrage is no longer animated by the fearful consequences of an unjust society. Rather than fearing injustice at the hands of an authoritarian government, nearly all of us define our fears in reference to overcoming personal insecurities and anxieties. In this scenario, survival becomes more important than the quest for the good life. The American dream is no longer built on the possibility of social mobility or getting ahead. Instead, it has become for many a nightmare rooted in the desire to simply stay afloat and survive. One consequence of the vicissitudes of injustice is the growing number of people, especially young people, who inhabit zones of hardship, suffering, exclusion, and joblessness. As renowned sociologist Zygmunt Bauman has stated, this is the zero generation—a generation with zero hopes, jobs, or future possibilities. The plight of the outcast now envelops increasing numbers of youth, workers, immigrants, and a diminishing middle class. They live in fear as they struggle to survive social conditions and policies more characteristic of authoritarian governments than democratic states. Indeed, Americans in general appear caught in a sinister web of ethical and material poverty manufactured by a state that trades in suspicion, bigotry, state-sanctioned violence, and disposability. Democracy loses its character as a disruptive element, a force of dissent, and an insurrectional call for responsible change. In effect, democracy all but degenerates into an assault on the radical imagination, reconfigured as a force for whitewashing all ethical and moral considerations. What is left is a new kind of authoritarianism that thrives in such a state of exception, which in reality is a state of permanent war. A regime of greed, dispossession, fear, and surveillance has now been normalized. The ideological script recited by the disciples of neoliberalism is now familiar: there is no such thing as the common good; market values provide the template for governing all of social life, not just the economy; consumerism is the only obligation of citizenship; a survival-of-the-fittest ethic should govern how we think and behave; militaristic values should trump democratic ideals; the welfare state is the arch enemy of freedom; private interests should be safeguarded, while public values wane; law and order is the preferred language for mobilizing shared fears rather than shared responsibilities; and war becomes the all-embracing organizing principle for developing society and the economy. As individual responsibility has been promoted as a weapon in order to tear up social solidarities, experiences that once resonated with public purpose and meaning have been transformed into privatized spectacles and fragmented modes of consumption that are increasingly subjected to the

surveillance tactics of the military-security state. The endpoint is the emergence of what the late British historian Tony Judt called an “eviscerated society”—“one that is stripped of the thick mesh of mutual obligations and social responsibilities” integral to any viable democracy. This grim reality has produced a failure in the power of the civic imagination, political will, and open democracy. It is also part of a politics that strips society of any democratic ideals and renders its democratic character inoperative.

The alternative is a historical materialist analysis of the relationship between race and class – this is the only starting point for effective solvency

San Juan, Professor Emeritus of English/Comparative Literature/Ethnic Studies at Harvard, 2005 (Epifanio San Juan, Jr., Nature, Society, and Thought, Vol 3 Iss 18 2005 “From Race to Class Struggle: Marxism and Critical Race Theory” proquest; accessed 7/21/15)//JH @ DDI

Following the lead of Anderson and others, I would reaffirm the need to situate racism in late-capitalist society within the process of class rule and labor exploitation to grasp the dynamics of racial exclusion and subordination. Beyond the mode of production, the antagonistic relations between the capitalist class and the working class are articulated with the state and its complex bureaucratic and juridical mechanisms, multiplying cultural and political differentiations that affect the attitudes, sentiments, and actual behavior of groups. A critique of ideologies of racism and sexism operating in the arena of class antagonism becomes crucial in the effort to dismantle their efficacy. Moreover, as Bensaid observes in Marx for Our Times (2002), “the relationship between social structure and political struggle is mediated by the relations of dependence and domination between nations at the international level.” Linear functionalism yields to the dialectical analysis of concrete mediations. Viewed historically, the phenomenon of migrant labor, in particular Filipina domestics in North America and elsewhere, demonstrates how racial and gender characteristics become functional and discursively valorized when they are inserted into the dialectic of abstract and concrete labor, of use value and exchange value, in the production of commodities--in this case, domestic labor as a commodity. Contrary to any attempts to legitimate the use of the underpaid services of women of color from the South, the racializing and gendering discourse of global capitalism can only be adequately grasped as the mode through which extraction of surplus value, wage differentiation, and control and representation of bodies are all negotiated. A study of racist practices and institutions, divorced from the underlying determinant structure of capital accumulation and class rule allowing such practices and institutions to exercise their naturalizing force, can only perpetuate an abstract metaphysics of race and a discourse of power that would reinforce the continuing reification or commodification of human relations in everyday life. We cannot multiply static determinations in an atomistic manner and at the same time acquire the intelligible totality of knowledge that we need for formulating strategies of radical social transformation. A first step in this project of renewing critical race theory is simple: begin with the concept of class as an antagonistic relation between labor and capital, and then proceed to analyze how the determinant of “race” is played out historically in the class-conflicted structure of capitalism and its political/ideological processes of class rule. It is of course important to maintain vigilance concerning the mystifying use of “race” and the practice of racialization in any location, whether in the privacy of the family, home, school, factory, or state institutions (court, prison, police station, legislature). Grace Chang (2000) has meticulously documented how people of color, exploited immigrants and refugees, have themselves used racist images and rhetoric in their role as “gatekeepers” to the racialized class system. Nevertheless, without framing all these within the total picture of the crisis of capital and its globalized restructuring from the late seventies up to the present, and without understanding the continued domination of labor by capital globally, we cannot effectively counteract the racism that underwrites the relation of domination and subordination among nationalities, ethnic communities, and gender groups. The critique of an emergent authoritarian state and questionable policies sanctioned by the USA Patriot Act is urgently necessary. In doing so, naming the system and understanding its operations would be useful in discovering precisely that element of self-activity, of agency, that has supposedly been erased in totalizing metanarratives such as the “New World Order,” the “New American Century” that will end ideology and history, and in revolutionary projects of achieving racial justice and equality. As the familiar quotation goes, we do make history—but not under circumstances of our choosing. So the question is, as always, “What alternatives do we have to carry out which goals at what time and place?” The goal of a classless communist society and strategies to attain it envisage the demise of racist ideology and practice in their current forms. But progressive forces around the world are not agreed about this. For

example, the World Conference against Racism, Racial Discrimination, Xenophobia, and Related Intolerance-NGO Forum held in Durban, South Africa, from 31 August to 7 September, 2001 publicized the global problem of racism but was unable to formulate a consensus on how to solve it. Its final declaration highlighted the historic origin of racism in the slave trade, colonialism, and genocide, and it raised the possibility of reparations for its victims, but did not offer a concrete program of action (see Mann 2002). Because of its composition and the pervasive climate of reaction, the Forum could not endorse a radical approach that would focus on the elimination of the exploitation of labor (labor power as commodity) as a necessary first step. Given its limits, it could not espouse a need for a thoroughgoing change of the material basis of social production and reproduction--the latter involving the hegemonic rule of the propertied bloc in each society profiting from the unequal division of labor and the unequal distribution of social wealth--on which the institutional practices of racism (apartheid, discrimination, genocide) thrive. "Race is the modality in which class is lived," as Stuart Hall remarks concerning post-1945 Britain (Solomos 1986, 103). Without political power in the hands of the democratic-popular masses under the leadership of the working class, the ideological machinery (laws, customs, religion, state bureaucracy) that legitimizes class domination, with its attendant racist practices, cannot be changed. What is required is a revolutionary process that mobilizes a broad constituency based on substantive equality and social justice as an essential part of the agenda to dissolve class structures. Any change in the ideas, beliefs, and norms would produce changes in the economic, political, and social institutions, which would in turn promote wide-ranging changes in social relations among all groups and sectors. Within a historical-materialist framework, the starting point and end point for analyzing the relations between structures in any sociohistorical totality cannot be anything but the production and reproduction of material existence. The existence of any totality follows transformation rules whereby it is constantly being restructured into a new formation (Harvey 1973). These rules reflect the dialectical unfolding of manifold contradictions constituting the internal relations of the totality. Within this conflicted, determinate totality, race cannot be reduced to class, nor can class be subsumed by race, since those concepts express different forms of social relations.

K – Global Local

Global Local K 1NC

The 1AC is an act of world ordering – images of disempowering structures produce a vision of the world that negates activism at the level of the self. The I-In-Relationship is a necessary starting point for changing larger structures

Jayan **Nayar**, Law—University of Warwick, **1999** “SYMPOSIUM: RE-FRAMING INTERNATIONAL LAW FOR THE 21ST CENTURY: Orders of Inhumanity ,” 9 *Transnat'l L. & Contemp. Probs.* 599

Despite the fixation of the beneficiaries of ordered worlds, even the ordered "critic," with the prescribed languages, visions and possibilities of human socialities, other realities of humanity nevertheless persist. Notwithstanding the globalization of social concern and the transnationalization of professionalized critique and reformatory action, struggles against violence remain energized, persistent and located. They are waged through the bodies of lives lived in experiential locations against real instruments of terror, functioning within embodied sites of violence. Non-information and non-representation of the existence of such struggles, and non-learning of the wisdoms thus generated do not negate their truths or the vibrancy of their socialities. 51 "We" are participants in ordered worlds, not merely observers. The choice is whether we wish to recognize our own locations of ordered violence and participate in the struggle to resist their orderings, or whether we wish merely to observe violence in far-off worlds in order that our interventionary participation "out there" never destabilizes the ground upon which we stand. I suggest that we betray the spirit of transformatory struggle, despite all our expressions of support and even actions of professionalized expertise, if our own locations, within which are ordered and from which we ourselves order, remain unscrutinized. And so, what might I contribute to the present collective exercise toward a futuristic imaging of human possibilities? I am unsure. It is only from my view of the "world," after all, that I can project my visions. These visions do not go so far as to visualize any "world" in its totality; they are uncertain even with regard to worlds closer to home,

worlds requiring transformatory actions all the same. Instead of fulfilling this task of imagining future therefore I simply submit the following two "poems." [*629] Changing the "I" of the World: The Essential Message of Mahatmas?" We are today bombarded by images of our "one world." We speak of the world as "shrinking" into a "global village." We are not all fooled by the implicit benign-ness of this image of "time-space" contracted--so we also speak of "global pillage." This astuteness of our perceptions, however, does not prevent us from our delusion of the "global;" the image of the "global" world persists even for many activists amongst us who struggle to "change" the world. This is recent delusion. It is a delusion which anesthetizes us from the only world which we can ever locate ourselves in and know--the worlds of "I"-in relationships. The "I" is seldom present in "emancipatory" projects to change the world. This is because the "relational I"-world and the "global"-world are negations of one another; the former negates the concept of the latter whilst the latter negates the life of the former. And concepts are more amenable to scrutiny than life. The advance in technologies of image-ing enables a distanciation of scrutiny, from the "I"-world of relationships to the "global"-world of abstractions. As we become fixated with the distant, as we consume the images of "world" as other than here and now, as we project ourselves through technological time-space into worlds apart from our here and now, as we become "global," we are relieved of the gravity of our present. We, thus, cease the activism of self (being) and take on the mantle of the "activist" (doing). This is a significant displacement. ¶ 1NC¶ That there is suffering all over the world has indeed been made more visible by the technologies of image-ing. Yet for all its consequent fostering of "networks," images of "global" suffering have also served to disempower. By this, we mean not merely that we are filled with the sense that the forces against which the struggle for emancipations from injustice and exploitation are waged are pervasive and, therefore, often impenetrable, but, more importantly, that it diverts our gaze away from the only true power that is in our disposal--the power of self-change in relationships of solidarities. ¶ The "world," as we perceive it today, did not exist in times past. It does not exist today. There is no such thing as the global "one world." The world can only exist in the locations and experiences revealed through and in human relationships. It is often that we think that to change the world it is necessary to change the way power is exercised in the world; so we go about the business of exposing and denouncing the many power configurations that dominate. Power indeed does lie at the core of human misery, yet we blind ourselves if we regard this power as the power out there. Power, when all the complex networks of its reach are untangled, is personal; power does not exist out there. [*630] it only exists in relationship. To say the word, power, is to describe relationship, to acknowledge power, is to acknowledge our subservience in that relationship. There can exist no power if the subservient relationship is refused--then power can only achieve its ambitions through its naked form, as violence. Changing the world therefore is a misnomer for in truth it is relationships that are to be changed. And the only relationships that we can change for sure are our own. And the constant in our relationships is ourselves--the "I" of all of us. And so, to change our relationships, we must change the "I" that is each of us. Transformations of "structures" will soon follow. This is, perhaps, the beginning of all emancipations. This is, perhaps, the essential message of Mahatmas.

World-ordering is the ordering of worlds – a civilizing mission that subdues assimilates and eradicates the other

Jayan **Nayar**, Law—University of Warwick, 1999 “SYMPOSIUM: RE-FRAMING INTERNATIONAL LAW FOR THE 21ST CENTURY: Orders of Inhumanity ,” 9 *Transnat'l L. & Contemp. Probs.* 599

[*606] Distinguishing these two meanings of "order" provides us with radically opposed directions of analysis and orientations for future imagings of social relations. Although the rhetoric of world-order would focus on visions of some projected "world" that provides the aspiration for collective endeavors, "order" does not come to be without necessary "ordering;" the "world" of "world-order" has not come to be without the necessary ordering of many worlds. The ordering and the ordered, the world of order and the ordered world, all are inextricable parts of the past and the present of "civilization." Despite the vision of world-order founded on a notion of a universal society of humankind aspiring toward a universal common good, (first given meaning within a conceptual political-legal framework through the birth of the so-called "Westphalian" state system n14), the materialities of "ordering" were of a different complexion altogether. Contrary to the disembodied rhetoric of world-order as bloodless evolution, the new images of the world and languages of "globality" did not evolve out of a sense of "hospitality" n15 to the "other," the "stranger." Rather, the history of the creation of the post-Westphalian "world" as one world, can be seen to be most intimately connected with the rise of an expansionist and colonizing world-view and practice. Voyages of "discovery" provided the necessary reconnaissance to image this "new world." Bit by bit, piece by piece, the jigsaw of the globe was completed. With the advance of the "discoverer," the "colonizer," the "invader," the "new" territories were given meaning within the hermeneutic construct that was the new "world." [*607] The significance of this evolution of the world does not, however, lie merely in its acquiring meaning. It is not simply the "idea" of the world that was brought to prominence through acts of colonization. The construction of the "stage" of the world has also occurred, albeit amid the performance of a violent drama upon it. The idea of a single world in need of order was followed by a succession of chained and brutalized bodies of the "other." The embodied world that has been in creation from the "colonial" times to the present could not, and does not, accommodate plurality. The very idea of "one world" contains the necessary impetus for the absorption, assimilation, if not destruction, of existing worlds and the genocide of existing socialities. This violence of "order-ing" within the historical epoch of colonialism is now plainly visible. Through "colonialism" was reshaped the material basis of exchange that determined human relationships. Put differently, the very idea of what is "human" was recast by the imposed value-systems of the "civilizing" process that was colonialism. To be human, to live, and to relate to others, thus, both lost and gained meaning. Lost were many pre-colonial and indigenous conceptions of human dignity, of subsistence, production, consumption, wealth and poverty. Gained was the advent of the human "self" as an objective "economic" agent and, with it, the universals of commodification as the basis for human relations. Following this transformation of the material political-economy of the colonized, or "ordered," colonialism entrenched the "state" as the symbolic "political" institution of "public" social relations. The effect of this "colonization of the mind" was that the "political-economic" form of social organization--the state--was universalized as common, if not "natural," resulting in a homogenization of "political" imagination and language. Thus, diversity was unified, while at the same time, unity was diversified. The particularities and inconveniences of human diversity--culture and tradition--were subordinated to the "civilized" discourse of secular myths (to which the "rule of law" is central), n16 while concurrently, humanity was formally segregated into artificial "states," enclosures of mythic solidarities and common destinies. This brief remembering of colonialism as an historic process, provides us with the most explicit lessons on the violence of the "ordering" of "worlds." From its history we see that an important feature of ordering prevails. The world of those who "order" is the destruction of the "worlds" of those ordered. So many ideologies of negation and (re)creation served to justify this "beginning"--terra nullius, the "savage" native, the "civilizing mission." n17 The [*608] "world," after all, had to be created out of all this "unworldly" miasma, all for the common good of the universal society of humankind. Although historical colonialism as a formal structure of politico-legal ordering of humanity has come and gone, the violence of colonization is very much a persistent reality. A striking feature of historical world-orderings was the confidence with which the "new world" was projected upon human imagination. Colonialism was not a tentative process. The "right" of colonization, both as a right of the colonizer and as a right thing to do by the colonizer, was passionately believed and confidently asserted. Thus, for the most part, this "right" was uncontested, this confidence unchallenged. "World-order" today is similarly asserted

with confidence and rectitude. Contemporary world-orderings, consistent with those of the past, are implemented using a range of civilizational legitimization. With the advent of an ideology of "humanity," a "post-colonial" concession to human dignity demanded by the previously colonized, new languages of the civilizational project had to be conceived of and projected. "Freed" from the brutalities of the order of historical colonialism, the "ordered" now are subjected to the colonizing force of the "post-colonial," and increasingly, globalization-inspired ideologies of development and security. Visible, still, is the legitimization of "order" as coercive command through the rhetoric of "order" as evolutionary structure.

Reject the 1AC in order to politicize our own relationships with structures – this is the first step towards liberation

Nayar, Law—University of Warwick, **1999** “SYMPOSIUM: RE-FRAMING INTERNATIONAL LAW FOR THE 21ST CENTURY: Orders of Inhumanity ,” 9 *Transnat'l L. & Contemp. Probs.* 599

So, back to the question: to what extent, for this, "our world," do we contemplate change when "we" imagine transformed "world-orders?" In addition to the familiar culprits of violent orderings, such as government, financial institutions, transnational corporations, the World Bank, the IMF, and the WTO (as significant culprits they indeed are), do we, in our contemplations of violent orders, vision our locations within corporate "educational" institutions as "professional academics" and "researchers," our locations within corporate NGOs as "professional activists," our locations within "think-tanks" and "research organizations" as "professional policy-formulators," and whatever other locations of elite "expertise" we have been "trained" to possess, as ordered sites, complicit and parasitic, within a violent "world-order"? Do we see in our critiques of world-orderings, out there, the orderings we find, right here, in our bodies, minds, relationships, expectations, fears and hopes? Would we be willing to see "our (ordered) world" dismantled in order that other worlds, wherein our "privileges" become extinguished, may flourish? These concerns are, then, I believe, the real complexities of judgment and action. Consideration should be given, not only to those of the political-structural, so often honed in on, but also to the [*628] issue of the political-personal, which ultimately is the "unit" of "worlds" and of "orders." If "globalization," as a recent obsession of intellectual minds, has contributed anything to an understanding of the ways of the "world," I suggest, it is that we cannot escape "our" implication within the violence of "world (mis)orders." IV. A WORLD FOR TRANSFORMATION: TWO POEMS Despite the fixation of the beneficiaries of ordered worlds, even the ordered "critic," with the prescribed languages, visions and possibilities of human socialities, other realities of humanity nevertheless persist. Notwithstanding the globalization of social concern and the transnationalization of professionalized critique and reformatory action, struggles against violence remain energized, persistent and located. They are waged through the bodies of lives lived in experiential locations against real instruments of terror, functioning within embodied sites of violence. Non-information and non-representation of the existence of such struggles, and non-learning of the wisdoms thus generated do not negate their truths or the vibrancy of their socialities. n51 "We" are participants in ordered worlds, not merely observers. The choice is whether we wish to recognize our own locations of ordered violence and participate in the struggle to resist their orderings, or whether we wish merely to observe violence in far-off worlds in order that our interventionary participation "out there" never destabilizes the ground upon which we stand. I suggest that we betray the spirit of transformatory struggle, despite all our expressions of support and even actions of professionalized expertise, if our own locations, within which are ordered and from which we ourselves order, remain unscrutinized.

K – Colonialism/Settlerism

Colonialism/Settlerism K 1NC

The Affirmative's attempt to challenge the "white gaze" and the logic of domestic colonialism reifies the status quo's lack of discussion of the roots of settlerism in the United States – the oppression of indigenous populations

The United States is a colonial state, and the current political system excludes natives. In the current system, civil rights are not afforded to the indigenous, silencing their voice once again. an effort that uses the state is doomed to fail.

Tuck and Yang 12 (Eve Tuck, State University of New York at New Paltz, K. Wayne Yang University of California, San Diego, Decolonization: Indigeneity, Education & Society Vol. 1, No. 1, 2012, Decolonization is not a metaphor, pp 6-7, accessed 7/24/15) CH

The settler, if known by his actions and how he justifies them, sees himself as holding dominion over the earth and its flora and fauna, as the anthropocentric normal, and as more developed, more human, more deserving than other groups or species. The settler is making a new "home" and that home is rooted in a homesteading worldview where the wild land and wild people were made for his benefit. He can only make his identity as a settler by making the land produce, and produce excessively, because "civilization" is defined as production in excess of the "natural world" (i.e. in excess of the sustainable production already present in the Indigenous world). In order for excess production, he needs excess labor, which he cannot provide himself. The chattel slave serves as that excess labor, labor that can never be paid because payment would have to be in the form of property (land). The settler's wealth is land, or a fungible version of it, and so payment for labor is impossible.⁶ The settler positions himself as both superior and normal; the settler is natural, whereas the Indigenous inhabitant and the chattel slave are unnatural, even supernatural. Settlers are not immigrants. Immigrants are beholden to the Indigenous laws and epistemologies of the lands they migrate to. Settlers become the law, supplanting Indigenous laws and epistemologies. Therefore, settler nations are not immigrant nations (See also A.J. Barker, 2009). Not unique, the United States, as a settler colonial nation-state, also operates as an empire - utilizing external forms and internal forms of colonization simultaneous to the settler colonial project. This means, and this is perplexing to some, that dispossessed people are brought onto seized Indigenous land through other colonial projects. Other colonial projects include enslavement, as discussed, but also military recruitment, low-wage and high-wage labor recruitment (such as agricultural workers and overseas-trained engineers), and displacement/migration (such as the coerced immigration from nations torn by U.S. wars or devastated by U.S. economic policy). In this set of settler colonial relations, colonial subjects who are displaced by external colonialism, as well as racialized and minoritized by internal colonialism, still occupy and settle stolen Indigenous land. Settlers are diverse, not just of white European descent, and include people of color, even from other colonial contexts. This tightly wound set of conditions and racialized, globalized relations exponentially complicates what is meant by decolonization, and by solidarity, against settler colonial forces. Decolonization in exploitative colonial situations could involve the seizing of imperial wealth by the postcolonial subject. In settler colonial situations, seizing imperial wealth is inextricably tied to settlement and re-invasion. Likewise, the promise of integration and civil rights is predicated on securing a share of a settler-appropriated wealth (as well as expropriated 'third-world' wealth). Decolonization in

a settler context is fraught because empire, settlement, and internal colony have no spatial separation. Each of these features of settler colonialism in the US context - empire, settlement, and internal colony - make it a site of contradictory decolonial desires⁷. Decolonization as metaphor allows people to equivocate these contradictory decolonial desires because it turns decolonization into an empty signifier to be filled by any track towards liberation. In reality, the tracks walk all over land/people in settler contexts. Though the details are not fixed or agreed upon, in our view, decolonization in the settler colonial context must involve the repatriation of land simultaneous to the recognition of how land and relations to land have always already been differently understood and enacted; that is, all of the land, and not just symbolically. This is precisely why decolonization is necessarily unsettling, especially across lines of solidarity. "Decolonization never takes place unnoticed" (Fanon, 1963, p. 36). Settler colonialism and its decolonization implicates and unsettles everyone.

The central question of this debate is that the exclusion of indigenous peoples provides the ontological grounding for modern sovereignty—any analysis which fails to foreground these histories is doomed to reproduce the horrors of colonialism

D'Errico 97 (D'Errico, Peter. "AMERICAN INDIAN SOVEREIGNTY: NOW YOU SEE IT, NOW YOU DON'T." American Indian Civics Project. CA, USA, Arcata. 24 Oct. 1997. *UMASS*. Web. 1 Feb. 2015. <<http://www.umass.edu/legal/derrico/nowyouseeit.html>>. //TB)

Contemporary Non-Recognition of Indigenous Peoples Over 300 million people on earth today can be said to be truly |||lare||| "indigenous" -- living on lands which they have inhabited since time immemorial. In every instance, indigenous communities are legally circumscribed by one or more nation-states, within territorial boundaries drawn by government geography. These 300 million constitute an increasingly self-aware force for global rethinking of the nature of power. Their challenge is increasingly overt and serious to the world's political structure. The United Nations' designation of The Decade of Indigenous People is a symptom of this challenge. The nature of the challenge becomes more clear when we consider the revision of the original designation, which referred to indigenous peoples. The plural form -- "peoples" -- triggered immense anxiety and successful resistance by member states of the UN, on the grounds that these 300 million people are individual citizens of states claiming jurisdiction over them, and not members of independent peoples. "Peoples" in international law implies rights of self-determination, which the United States took the lead to challenge|||d||| as not applicable to indigenous peoples. The U.S. argues that there can collective self-determination exist only through states, and that indigenous people are groups of individuals with shared cultural, linguistic, and social features, but without any internal coherence as "peoples." This argument contradicts the U.S. claim that it deals with indigenous peoples on a "government-to-government" basis. Here is one example of "now you see it, now you don't." In light of the history of treaty-making and with an eye toward restoring the sense of equality between nations that justified the treaty process to begin with, American Indians are -- in concert with indigenous peoples worldwide -- asserting a sense of their own "sovereignty." The United Nations Draft Declaration of the Rights of Indigenous Peoples is at the center of this global struggle for self-determination. The Declaration is the product of twenty years of negotiating among indigenous peoples and U.N. bodies. Its very title draws the line of battle -- rights of indigenous peoples (plural). Federal Indian Law When we enter into the realm of "federal Indian law," we need to keep in mind that we are traveling in a semantic world created by one group to rule another. The terminology of law is a powerful naming process. In working with this law, we will use the names that it uses, but we will always want to keep in mind that the reality behind the names is what we are struggling over. According to the theory of sovereignty in federal Indian law, "tribal" peoples have a lesser form of "sovereignty," which is not really sovereignty at all, but dependence. In the words of Chief Justice John Marshall in *Cherokee Nation v. Georgia* (1831), American Indian societies,

though they are "nations" in the general sense of the word, are not fully sovereign, but are "domestic, dependent nations." The shell game of American Indian sovereignty -- the "now you see it, now you don't" quality -- started right at the beginning of federal Indian law. **The foundation of federal Indian law is the assertion by the United States of a special kind of non-sovereign sovereignty.**

This continued exclusion of the native voice results in racialized genocide in the name of protecting the nation.

Wolfe 6 [Patrick Wolfe, researches stuff on genocide and settler colonialism. "Settler colonialism and the elimination of the native", <http://www.kooriweb.org/foley/resources/pdfs/89.pdf//Rahul>]

The question of genocide is never far from discussions of settler colonialism. Land is life—or, at least, land is necessary for life. Thus contests for land can be—indeed, often are—contests for life. Yet this is not to say that **settler colonialism is simply a form of genocide.** In some settler-colonial sites (one thinks, for instance, of Fiji), native society was able to accommodate—though hardly unscathed—the invaders and the transformative socioeconomic system that they introduced. Even in sites of wholesale expropriation such as Australia or North America, settler colonialism's genocidal outcomes have not manifested evenly across time or space. Native Title in Australia or Indian sovereignty in the US may have deleterious features, but these are hardly equivalent to the impact of frontier homicide. Moreover, there can be genocide in the absence of settler colonialism. The best known of all genocides was internal to Europe, while genocides that have been perpetrated in, for example, Armenia, Cambodia, Rwanda or (one fears) Darfur do not seem to be assignable to settler colonialism. In this article, **I shall begin to explore**, in comparative fashion, the relationship between genocide and the settler-colonial tendency that I term the logic of elimination.¹ I contend that, though the two have converged—which is to say, the settler-colonial logic of elimination has manifested as genocidal—they should be distinguished. Settler colonialism is inherently eliminatory but not invariably genocidal. As practised by Europeans, both genocide and settler colonialism have typically employed the organizing grammar of race. European xenophobic traditions such as anti-Semitism, Islamophobia, or Negrophobia are considerably older than race, which, as many have shown, became discursively consolidated fairly late in the eighteenth century.² But the mere fact that race is a social construct does not of itself tell us very much. As I have argued, different racial regimes encode and reproduce the unequal relationships into which Europeans coerced the populations concerned. For instance, Indians and Black people in the US have been racialized in opposing ways that reflect their antithetical roles in the formation of US society. Black people's enslavement produced an inclusive taxonomy that automatically enslaved the offspring of a slave and any other parent. In the wake of slavery, this taxonomy became fully racialized in the "one-drop rule," *Journal of Genocide Research* (2006), 8(4), December, 387–409 ISSN 1462-3528 print; ISSN 1469-9494 online/06=040387-23 # 2006 Research Network in Genocide Studies DOI: 10.1080=14623520601056240 whereby any amount of African ancestry, no matter how remote, and regardless of phenotypical appearance, makes a person Black. For Indians, in stark contrast, non-Indian ancestry compromised their indigeneity, producing "half-breeds," a regime that persists in the form of blood quantum regulations. **As opposed to enslaved people, whose reproduction augmented their owners' wealth, Indigenous people obstructed settlers' access to land, so their increase was counterproductive.** In this way, the restrictive racial classification of Indians straightforwardly furthered the logic of elimination. Thus we cannot simply say that settler colonialism or genocide have been targeted at particular races, since a race cannot be taken as given. It is made in the targeting.³ Black people were racialized as slaves; slavery constituted their blackness. Correspondingly, Indigenous North Americans were not killed, driven away, romanticized, assimilated, fenced in, bred White, and otherwise eliminated as the original owners of the land but as Indians. Roger Smith has missed this point in seeking to distinguish between victims murdered for where they are and victims murdered for who they are.⁴ So far as Indigenous people are concerned, where they are is who they are, and not only by their own reckoning. As Deborah Bird Rose has pointed out, to get in the way of settler colonization, all the native has to do is stay at home.⁵ **Whatever settlers may say—and they generally have a lot to say—the primary motive for elimination is not race** (or religion, ethnicity, grade of civilization, etc.) **but access to territory. Territoriality is settler colonialism's specific, irreducible element.** The logic of elimination not only refers to the summary liquidation of Indigenous people, though it includes that. In common with genocide as Raphael Lemkin characterized it,⁶ settler colonialism has both negative and positive dimensions. Negatively, it strives for the dissolution of native societies. Positively, it erects a new colonial society on the expropriated land base—as I put it, settler colonizers come to stay: invasion is a structure not an event.⁷ In its positive aspect, elimination is an organizing principal of settler-colonial society rather than a one-off (and superseded) occurrence. The positive outcomes of the logic of elimination can include officially encouraged miscegenation, the breaking-down of native title into alienable individual freeholds, native citizenship, child abduction, religious conversion, resocialization in total institutions such as missions or boarding schools, and a whole range of cognate biocultural

assimilations. All these strategies, including frontier homicide, are characteristic of settler colonialism. Some of them are more controversial in genocide studies than others.

The Alternative is to decolonize unconditionally, decolonization is a pre-requisite to any reform

Burke 9 (Nora Butler Burke, 11-25-2009, "Building a "Canadian" Decolonization Movement: Fighting the Occupation at "Home", No Publication, <http://theanarchistlibrary.org/library/nora-butler-burke-building-a-canadian-decolonization-movement-fighting-the-occupation-at-home>)
CH

Perhaps the first step that we can take in allying ourselves with Indigenous peoples is to face up to our colonial past and present. And here I'd like to assert that Canada is not a post-colonial state, nor is it neo-colonial, as is the case in other parts of the world. In Canada, colonialism dominates [4]. While Aboriginal peoples continue to be forced or excluded from their lands, capitalist interests rush to invade their territories in attempts to seize resources from it. Indigenous nations remain culturally, economically and politically under attack within this colonial apparatus — a distinct experience which undoubtedly shares parallels with the experiences of other racialized and oppressed communities in Canada. Beyond facing up to the past, as a means of owning our history, we must take responsibility for that history. While many of us are excluded from and denied much of the wealth of the Canadian state ourselves, those of us who are Canadian citizens none the less benefit from that wealth to some degree. What we can not take for granted is the fact that much of that wealth was accumulated at the expense of Aboriginal peoples. Therefore, any movement which seeks to address the injustices perpetrated against Indigenous peoples must also take into account the positioning of non-native people within this colonial state. Decolonisation is not a process which entails solely the Indigenous nations of this continent. All people living in Canada have been distorted by colonialism. It effects us all, not only those whom it most severely oppresses. Therefore, a decolonisation movement cannot be comprised solely of solidarity and support for Indigenous peoples' sovereignty and self-determination. If we are in support of self-determination, we too need to be self-determining. Unless we exercise our own self-determination and fight our own governments, then we risk reinforcing the isolation of Indigenous communities and their resistance. A movement for decolonisation must be premised on a parallel process of self-determination. While Indigenous nations continue to assert their autonomy and nationhood, we, as non-native settlers, must also assert our own autonomy within our respective communities, and resist our governments' attempts to further consolidate its control over all communities, Indigenous and non-Indigenous alike. I think it is clear from what I am saying here, but I want to take a second to address a common misperception held by non-native people that decolonisation would require a mass departure of all non-Indigenous peoples from the continent. While I can't speak for any Indigenous people or communities, my understanding, based on conversations with and readings by many Indigenous activists, has been that the fundamental change which North American decolonisation would bring about would be a change in the nature of the relationship between immigrants and Aboriginal peoples. It would be to bring an end to our imperialist relationship, and an end to the colonial imposition of foreign systems, be they governmental, ideological, religious, or otherwise, on the many hundreds of nations which exist on this continent. Rather than attempting to re-establish the conditions of a pre-colonial North America, many see it as being much more realistic to abandon the current relationship between native and non-native peoples. The state has long defined that relationship, one which has been characterized foremost

by oppression. It is time to cut the state out of this relationship, and to replace it with a new relationship, one which is mutually negotiated, and premised on a core respect for autonomy and freedom. Furthermore, decolonisation means ridding ourselves of the super-states of Canada and the United States. They only serve an elite few while maintaining a liberal system of economic and social apartheid.

2NC Link – Race

Race theorists do not take into account the plight of the indigenous, ignoring that without involving the native voice there is no progress.

Smith 10

Andrea Smith, Andrea Smith is associate professor in the Department of Media and Cultural Studies at the University of California, Riverside, "Indigeneity, Settler Colonialism, White Supremacy," Global Dialogue Volume 12 • Number 2 • Summer/Autumn 2010 ♦ Race And Racisms, <http://www.worlddialogue.org/content.php?id=488>, accessed 7/26/15) CH

This tendency for theorists of race to presume the givenness of the settler state is not unique to Bell or Omi and Winant, and in fact appears to be the norm. For instance, Joe Feagin has written several works on race that focus on the primacy of anti-black racism because he argues that “no other racially oppressed group ... has been so central to the internal economic, political, and cultural structure and evolution of the North American society”.¹⁶ He does note that the United States is formed from stolen land and argues that the “the brutal and bloody actions and consequences of European conquests do often fit the United Nations definition of genocide”.¹⁷ So, if the United States is fundamentally constituted through the genocide of Native peoples, why are Native peoples not central to the development of American society? Again, the answer is that the Native genocide is relegated to the past so that the givenness of settler colonialism today can be presumed.¹⁸ Jared Sexton, in his otherwise brilliant analysis in Amalgamation Schemes, also presumes the continuance of settler colonialism.¹⁹ He describes Native peoples as a “racial group” to be collapsed into all non-black peoples of colour. Sexton goes so far as to argue for a black/non-black paradigm that is parallel to a “black/immigrant” paradigm, rhetorically collapsing indigenous peoples into the category of immigrants, in effect erasing their relationship to this land and hence reifying the settler colonial project. Similarly, Angela Harris argues for a “black exceptionalism” that defines race relations in which Native peoples play a “subsidiary” role. To make this claim, she lumps Native peoples into the category of racial minority and even “immigrant” by contending that “contempt for blacks is part of the ritual through which immigrant groups become ‘American’ ”.²⁰ Of course, what is not raised in this analysis is that “America” itself can exist only through the disappearance of indigenous peoples. Feagin, Sexton and Harris fail to consider that markers of “racial progress” for Native peoples are also markers of genocide. For instance, Sexton contends that the high rate of interracial marriages for Native peoples indicates racial progress rather than being part of the legacy of US policies of cultural genocide, including boarding schools, relocation, removal and termination. Interestingly, a central intervention made by Sexton is that the politics of multiculturalism depends on anti-black racism. That is, multiculturalism exists to distance itself from blackness (since difference from whiteness, defined as racial purity, is already a given). However, with an expanded notion of the logics of settler colonialism, his analysis could resonate with indigenous critiques of mestizaje, whereby the primitive indigenous subject always disappears into the more complex, evolved mestizo subject. These signs of “racial progress” could then be rearticulated as markers of indigenous

disappearance and what Denise Ferreira da Silva terms as racial engulfment into the white self-determining subject.²¹ Thus, besides presuming the genocide of Native peoples and the givenness of settler society, these analyses also misread the logics of anti-indigenous racism (as well as other forms of racism).

2NC Alt Solves

The alternative's method of decolonizing unconditionally is key to solving for indigenous oppression is impossible in the current system, decolonization must come first.

Waziyatawin 11

(Waziyatawin, Waziyatawin is a Dakota professor, author, and activist from the Pezihutazizi Otunwe in southwestern Minnesota, 1-2-2011, "Colonialism on the Ground," Unsettling America, <https://unsettlingamerica.wordpress.com/2011/01/02/colonialism-on-the-ground/#more-45>, accessed 7/26/15) CH

Ah, but some might argue that Indigenous Peoples in the United States are sovereign nations and are already self-determined. By what standards? Every system and institution that we bump up against on a daily basis is not of our making, but has been imposed under colonial rule. The economic system, land tenure system, educational system, social welfare system, governmental structure, religious institutions are all colonial institutions that continue to oppress Indigenous Peoples and deny Indigenous liberation. Even freedoms that theoretically apply to all American citizens, such as religious freedom, are routinely denied to Indigenous Peoples. We do not even have control over the protection of our ancestors' remains. Certainly, the fundamental freedoms that are necessary for Indigenous ways of being, such as access to homeland, clean air and water, are not part of our reality. What, in our lives, do we have complete control over? While we, along with other anti-statist communities, occasionally experience what Hakim Bey identifies as Temporary Autonomous Zones (created as an alternative to the existing hegemonic order), we have yet to produce lasting Indigenous communities in the U.S. that operate fully outside of a colonial existence. Instead, we create spaces where our ways of being are practiced and nurtured, where we attempt to liberate ourselves from the oppression that surrounds our daily existence, where it is good to be Indigenous. We make them last as long as we can, but because they, as of yet, cannot be sustained, we are forced to return to the "real world" that smothers with an oppressive weight not all of us can bear to carry. Self-determination is an impossibility under colonial rule. Meaningful change will require dramatic action on our part that can move us beyond colonial interference. If we as Indigenous Peoples in the United States ever want a liberated future for our future generations or ourselves, we have to work toward decolonization. Decolonization is "the intelligent, calculated, and active resistance to the forces of colonialism that perpetuate the subjugation and/or exploitation of our minds, bodies, and lands, and it is engaged for the ultimate purpose of overturning the colonial structure and realizing Indigenous liberation."¹ A growing awareness of colonialism inexorably leads to a simultaneous dissatisfaction with the situation and a growing unrest. This, in turn, has the potential to lead to revolutionary praxis. Thus, recognition of this colonial reality is the first step toward our liberation. We cannot resist what we cannot identify and name. Then we need to begin to imagine an alternative reality. Our colonizers have told us that we must accept the way things are because we cannot change them. That is, we must accept our own subjugation and their domination as a natural and inevitable state. Decolonization is a rejection of that logic. It therefore requires opening up the mind to new visions of what is possible. If we were not subject to the authority or

presence of the United States government and its citizens what would we want our lives to look like? The struggle for decolonization requires us to identify clearly our objectives as Indigenous Peoples and to critically question whether those objectives are constrained by the parameters of thought set by colonialism, or whether they traverse those parameters and reflect our desires as free, Indigenous Peoples of the land. If this critical interrogation of our own vision does not occur, even upon overturning colonialism we would run the risk of replicating colonial institutions and systems among our own populations.

K – Undercommons

Undercommons K 1NC

The AFF's politics of recognition ties reinscribes oppression by tying subjecthood to suffering
Tuck and Yang 14 [Eve, & K.W., 2014, “R-Words: Refusing Research.” In n D. Paris & M. T. Winn (Eds.) Humanizing research: Decolonizing qualitative inquiry with youth and communities (pp. 223-248). Thousand Oakes, CA: Sage Publications. Pp. 228]

The costs of a politics of recognition that is rooted in naming pain have been critiqued by recent decolonizing and feminist scholars (Hartman, 1997, 2007; Tuck, 2009). In Scenes of Subjection, Sadiya Hartman (1997) discusses how recognizing the personhood of slaves enhanced the power of the Southern slaveowning class. Supplicating narratives of former slaves were deployed effectively by abolitionists, mainly White, well-to-do, Northern women, to generate portraits of abuse that ergo recognize slaves as human (Hartman, 2007). In response, new laws afforded minimal standards of existence, “making personhood coterminous with injury” (Hartman, 1997, p. 93), while simultaneously authorizing necessary violence to suppress slave agency. The slave emerges as a legal person only when seen as criminal or “a violated body in need of limited forms of protection” (p. 55). Recognition “humanizes” the slave, but is predicated upon her or his abjection. **You are in pain, therefore you are.** “[T]he recognition of humanity require[s] the event of excessive violence, cruelty beyond the limits of the socially tolerable, in order to acknowledge and protect the slave’s person” (p. 55). Furthermore, Hartman describes how slave-as-victim as human accordingly establishes slave-as-agent as criminal. Applying Hartman’s analysis, we note how the agency of Margaret Garner or Nat Turner can only be viewed as outsider violence that humane society must reject while simultaneously upholding the legitimated violence of the state to punish such outsider violence. Hartman asks, “Is it possible that such recognition effectively forecloses agency as the object of punishment . . . Or is this limited conferral of humanity merely a reinscription of subjugation and pained existence?” (p. 55).

University creates social death

Occupied UC Berkeley 09 [“The Necrosocial: Civic Life, Social Death, and the UC.
<http://anticapitalprojects.wordpress.com/2009/11/19/the-necrosocial/>]

In this graveyard our actions will never touch, will never become the conduits of a movement, if we remain permanently barricaded within prescribed identity categories—our force will be dependent on the limited spaces of recognition built between us. Here we are at odds with one another socially, each of us: students, faculty, staff, homebums, activists, police, chancellors, administrators, bureaucrats, investors, politicians, faculty/ staff/ homebums/ activists/ police/ chancellors/ administrators/ bureaucrats/ investors/ politicians-to-be. That is, we are students, or students of color, or queer students of color, or faculty, or Philosophy Faculty, or Gender and Women Studies faculty, or we are custodians, or we are shift leaders—each with our own office, place, time, and given

meaning. We form teams, clubs, fraternities, majors, departments, schools, unions, ideologies, identities, and subcultures—and thankfully each group gets its own designated burial plot. Who doesn't participate in this graveyard? In the university we prostrate ourselves before a value of separation, which in reality translates to a value of domination. We spend money and energy trying to convince ourselves we're brighter than everyone else. Somehow, we think, we possess some trait that means we deserve more than everyone else. We have measured ourselves and we have measured others. It should never feel terrible ordering others around, right? It should never feel terrible to diagnose people as an expert, manage them as a bureaucrat, test them as a professor, extract value from their capital as a businessman. It should feel good, gratifying, completing. It is our private wet dream for the future; everywhere, in everyone this same dream of domination. After all, we are intelligent, studious, young. We worked hard to be here, we deserve this. We are convinced, owned, broken. We know their values better than they do: life, liberty, the pursuit of happiness. This triumvirate of sacred values are ours of course, and in this moment of practiced theater—the fight between the university and its own students—we have used their words on their stages: Save public education! When those values are violated by the very institutions which are created to protect them, the veneer fades, the tired set collapses: and we call it injustice, we get indignant. We demand justice from them, for them to adhere to their values. What many have learned again and again is that these institutions don't care for those values, not at all, not for all. And we are only beginning to understand that those values are not even our own. The values create popular images and ideals (healthcare, democracy, equality, happiness, individuality, pulling yourself up by your bootstraps, public education) while they mean in practice the selling of commodified identities, the state's monopoly on violence, the expansion of markets and capital accumulation, the rule of property, the rule of exclusions based on race, gender, class, and domination and humiliation in general. They sell the practice through the image. We're taught we'll live the images once we accept the practice. In this crisis the Chancellors and Presidents, the Regents and the British Petroleums, the politicians and the managers, they all intend to be true to their values and capitalize on the university economically and socially—which is to say, nothing has changed, it is only an escalation, a provocation. Their most recent attempt to reorganize wealth and capital is called a crisis so that we are more willing to accept their new terms as well as what was always dead in the university, to see just how dead we are willing to play, how non-existent, how compliant, how desirous.

.¶ Furthermore, Hartman describes how slave-as-victim as human accordingly¶ establishes slave-as-agent as criminal. Applying Hartman's analysis, we note how¶ the agency of Margaret Garner or Nat Turner can only be viewed as outsider¶ violence that humane society must reject while simultaneously upholding the¶ legitimated violence of the state to punish such outsider violence. Hartman asks,¶ “Is it possible that such recognition effectively forecloses agency as the object of¶ punishment . . . Or is this limited conferral of humanity merely a reinscription of¶ subjugation and pained existence?” (p. 55).

We must not attempt to redeem this world but refuse the demand for redemption, of ourselves or this world. Instead we need to tear shit down. Do not ask what will come next. The world beyond cannot be access except through a refusal to be held hostage to this one.

Halberstam 13 [Jack Halberstam, Prof. English @ USC, 2013, “The Wild Beyond: With and For the Undercommons” in The Undercommons: Fugitive Planning & Black Study, p. 5-6]

It ends with love, exchange, fellowship. It ends as it begins, in motion,¶ in between various modes of being and belonging, and on the way to,¶ new economies of giving, taking, being with and for and it ends with¶ a ride in a Buick Skylark on the way to another place altogether. Surprising,¶ perhaps, after we have engaged dispossession, debt, dislocation¶ and violence. But not surprising when you have understood that¶ the projects of “fugitive planning and black study” are mostly about¶ reaching out to find connection; they are about making common,¶ cause with the brokenness of being, a brokenness, I would venture to¶ say, that is also blackness, that remains blackness, and will, despite all,¶ remain broken because this book is not a prescription for repair. If we do not seek to fix what has been broken, then what? How do we resolve,¶ to live with

brokenness, with being broke, which is also what Moten¶ and Harney call “debt.” Well, given that debt is sometimes a history of¶ giving, at other times a history of taking, at all times a history of capitalism¶ and given that debt also signifies a promise of ownership but never delivers¶ on that promise, we have to understand that debt is something that¶ cannot be paid off. Debt, as Harney puts it, presumes a kind of individualized, relation to a naturalized economy that is predicated upon exploitation. Can we have, he asks, another sense of what is owed that does not, presume a nexus of activities like recognition and acknowledgement, payment and gratitude. Can debt “become a principle¶ of elaboration”? Moten links economic debt to the brokenness of being in the interview¶ with Stephen Shukaitis; he acknowledges that some debts, should be paid, and that much is owed especially to black people by, white people, and yet, he says: “I also know that what it is that is, supposed to be repaired is irreparable. It can’t be repaired. The only, thing we can do is tear this shit down completely and build something, new.” The undercommons do not come to pay their debts, to, repair what has been broken, to fix what has come undone.¶ If you want to know what the undercommons wants, what Moten¶ and Harney want, what black people, indigenous peoples, queers and, poor people want, what we (the “we” who cohabit in the space of the, undercommons) want, it is this – we cannot be satisfied with the recognition, and acknowledgement generated by the very system that, denies a) that anything was ever broken and b) that we deserved to¶ be the broken part; so we refuse to ask for recognition and instead we, want to take apart, dismantle, tear down the structure that, right now,¶ limits our ability to find each other, to see beyond it and to access the¶ places that we know lie outside its walls. We cannot say what new, structures will replace the ones we live with yet, because once we have, orn shit down, we will inevitably see more and see differently and, feel a new sense of wanting and being and becoming. What we want, after “the break” will be different from what we think we want before, the break and both are necessarily different from the desire that issues¶ from being in the break.

2NC Link – Focus on difference/resistance

Focusing on resistance and difference forecloses politics

Dean 05 [Jodi Dean, Prof. Poli Sci @ Hobart & William Smith, 2005, “Communicative Capitalism: Circulation and the Foreclosure of Politics,” Cultural Politics Vol 1 Issue 1, p. 53]

The post-political world, then, is marked by emphases on multiple sources of value, on the plurality of beliefs and the importance of tolerating these beliefs through the cultivation of an attunement to the contingencies already pervading one's own values. Divisions between friends and enemies are replaced by emphases on all of us. Likewise, politics is understood as not confined to specific institutional fields but as a characteristic of all of life. There is an attunement, in other words, to a micropolitics of the everyday. But this very attunement forecloses the conflict and opposition necessary for politics. Finally, Hardt and Negri's description of the current technoglobalcapitalist formation coincides with Agamben's account of communication without communicability and with Zizek's portrayal of a global formation characterized by contingency, multiplicity and singularity. For example, they agree that “communication is the form of capitalist production in which capital has succeeded in submitting society entirely and globally to its regime, suppressing all alternative paths” (Hardt and Negri 2000: 347; cf. Dean 2002b: 272-5). Emphasizing that there is no outside to the new order of empire, Hardt and Negri see the whole of empire as an “open site of conflict” wherein the incommunicability of struggles, rather than a problem, is an asset insofar as it releases opposition from the pressure of organization and prevents co-optation. As I argue elsewhere, this position, while inspiring, not only embraces the

elision between the political and the economic but also in so doing cedes primacy to the economic, taking hope from the intensity and immediacy of the crises within empire. The view I advocate is less optimistic insofar as it rejects the notion that anything is immediately political, and instead prioritizes politicization as the difficult challenge of representing specific claims or acts as universal (cf. Laclau 1996: 56-64). Specific or **singular acts of resistance, statements of opinion or instances of transgression are not political in and of themselves**; rather, they have to be politicized, that is articulated together with other struggles, resistances and ideals in the course or context of opposition to a shared enemy or opponent (cf. Laclau and Mouffe 1986:188). Crucial to this task, then, is understanding how communicative capitalism, especially insofar as it relies on networked communications, prevents politicization. To this end, I turn now to the fantasies animating communicative capitalism.

K – Baudrillard Visibility

Baudrillard 1NC

The visibility of the affirmative recreates virulence through the hyper-signification of the 1ac. The medium has become the message. The 1ac's politics of transparency internalizes control through the panopticon, where individuals become transparent to themselves. Reality only exists through hyper-expression and over-representation; the modern "subject" no longer exists, rather an empty screen projecting a fake sociality.

Baudrillard 2 – "The violence of the image", <http://www.egs.edu/faculty/jean-baudrillard/articles/the-violence-of-the-image/>

This is the typical **violence of information**, of media, of images, of the spectacular. **Connected to a total visibility, a total elimination of secrecy**. Be it of a psychological or mental, or of a neurological, biological or genetic order - soon we shall discover the gene of revolt, the center of violence in the brain, perhaps even the gene of resistance against genetic manipulation - biological brainwashing, brainstorming, brainlifting, with nothing left but recycled, whitewashed lobotomized people as in Clockwork Orange. At this point **we should not speak of violence anymore, but rather of virulence**. Inasmuch that it does not work frontally, mechanically, but by contiguity, by contamination, along chain reactions, breaking our secret immunities. And operating not just by a negative effect like the classical violence, but on the contrary by an excess of the positive, just as a cancerous cell proliferates by metastasis, by restless reproduction and an excess of vitality.

That is the point in the controversy about the **violence on the screens and the impact of images on people's mind**. The fact is that **the medium itself has a neutralizing power**, counterbalancing the direct effect of the violence on the imagination. I would say: the violence of the third type annihilates the violence of the first and second type - but at the price of a more virulent intrusion in the deep cells of our mental world. The same as for anti-biotics: they eradicate the agents of disease by reducing the general level of vitality.

When the medium becomes the message (MACLUHAN), then **violence as a medium becomes its own message, a messenger of itself**, so the violence of the message cannot be compared with the violence of the medium as such, with the **violence emanating from the confusion between medium and message**. It is the same with viruses: the virus also is information, but of a very special kind - it is **medium, and message, agent and action at the same time**. That the very origin of its "virulence", of its uncontrollable proliferation. In fact, **in all actual biological, social or mental processes, virulence has substituted violence**. **The traditional violence of alienation, power and oppression has been superated by something more violent than violence itself: the virality**, the virulence. And while it was an historical or individual subject of violence, **there is no subject, no personal agent of virulence** (of contamination, of chain reaction), **and then no possibility to confront it efficiently**. The classical violence was still haunted by the specter of the Evil, it was still visible. **Virulence only transappears**, it is **of the order of transparency** and its logic is that of the transparency of the Evil.

The image (and more generally the sphere of information) is **violent** because what happens there is **the murder of the Real**, the vanishing point of Reality. **Everything must be seen, must be visible**, and the **image is the site par**

excellence of this visibility. But at the same time it is the site of its disappearance. And that something in it has disappeared, has returned to nowhere, makes the very fascination of the image.

Particularly in the case of all professional of **press-images which testify of the real events**. **In making reality**, even the most violent, **emerge to the visible, it makes the real substance disappear**. It is like the Myth of Eurydice : when Orpheus turns around to look at her, she vanishes and returns to hell. That is why, the more exponential the marketing of images is growing the more fantastically grows the indifference towards the real world. Finally, **the real world becomes a useless function, a collection of phantom shapes and ghost events**. We are not far from the silhouettes on the walls of the cave of Plato.

A wonderful model of this **forced visibility** is Big Brother and all similar programs, reality shows, docusoaps etc. **Just there; where everything is given to be seen there is nothing left to be seen**. It is **the mirror of platitude**, of banality, of the zero degree of everyday life. There is the place of **a fake sociality**, a virtual sociality where the Other is desperately out of reach - this very fact illuminating perhaps the fundamental truth that the human being is not a social being. Move over in all these scenarii the televisual public is mobilized as spectator and judged as become itself Big Brother. **The power of control and transvisuality has shifted to the silent majorities themselves**.

We are far beyond the panoptikon, where **there was still a source of power and visibility** it was so to say a panexoptikon - **things were made visible to an external eye**, whereas **here they are made transparent to themselves - a panendoptikon** - thus erasing the **traces of control and making the operator himself transparent**. **The power of control is internalized**, and **people** are no more victims of the image : **they transform themselves into images - they only exist as screens**, :or in a superficial dimension.

All that is visualized there, in the operation Big Brother, **is pure virtual reality**, a synthetic image of the banality, produced : as in a computer. **The equivalent of a ready-made - a given transcripion of everyday life - which is itself already recycled by all current patterns**.

Is there any sexual voyeurism ? Not at all. Almost no sexual scenery. But people dont want that, what they secretly want to see is the spectacle of the banality, which is from now our real pornography, own true obscenity - that of the nullity, of insignificance and platitude (i.e. the extreme reverse of the "There of the Cruelty"). But maybe in that scene lies a certain form of cruelty, at least of a virtual one. At the time when media and television are more and more unable to give an image of the events of the world, then they discover the everyday life, the existential banality as the most criminal event, as the most violent (in)actua-lity, as the very place of the Perfect Crime. And that it is, really. And people are fascinated, terrified and fascinated by this indifference of the Nothing-to-see, of the Nothing-to-say, by the indifference of their own life, as of the zero degree of living. The banality and the consumption of banality have now become an olympic discipline of our time - the last form of the experiences of the limits.

In fact, this deals with the naive impulsion to be nothing, and to comfort oneself in this nothingness - sanctioned by the right to be nothing and to be considered and respected as such. Something like a struggle for Nothing and for Virtual death - the perfect opposite to the basic anthropological postulat of the struggle for life. At least it seems that we are all about to change our basic humanistic goals.

There are two ways of disappearing, of being nothing, (in the Integral Reality, everything must logically want to disappear - automatic abreaction to the overdose of reality). **Either to be hidden**, and to insist on the right not-to-be-seen (the actual defense of private life). Or one shifts to a delirious exhibitionism of his own platitude and insignificance - ultimate protection against the servitude of being, and of being himself. **Hence the absolute obligation to be seen**, to make oneself visible at any price. **Everyone deals on both levels at the same time**. **Then we are in the double bind - not to be seen, and to be continously visible**. No ethics, no legislation can solve this dilemma, and the whole current polemic about the right to information, all this polemic is useless. **Maximal information, maximal visibility** are now part of the human rights (and of human duties all the same) and **the destiny of the image is trapped between the unconditional right to see and that, unconditional as well, not to be seen**.

This means that **people are deciferable at every moment**. **Overexposed to** the light of **information**, and addicted to their own image. **Driven to express themselves at any time** - self-expression as the ultimate form of confession, as Faucauld said. To become an image, one has to give a visual object of his whole everyday life, of his possibilities, of his feelings and desires. **He-has to keep no secrets and to interact permanently**. Just here is the deepest violence, **a violence done to the deepest core**, to the hard core of the individual.

And at the same-time to the **language**, because **it also loses its symbolic originality - being nothing more than the operator of visibility**. It loses its ironic dimension, its conceptual distance, its autonomous dimension - where language is more important than what it signifies. **The image too is more important than what it sneaks of**. That we forget usually, again and again and that is a source of the violence done to the image.

Today everything takes the look of the image - then all pretend that the real has disappeared under the pressure and the profusion of images. What is totally neglected is that **the image also disappears under the blow and the impact of reality**. The image is usually **spoiled** of its own existence as image, devoted to a **shameful complicity with the real**. The violence exercised by the image is largely balanced by the violence done to the image - **its exploitation as a pure vector of documentation, of testimony, of message** (including the message of misery and violence), its allegiance to morale, **to pedagogy, to politics, to publicity**. Then **the magic of the image, both as fatal and as vital illusion, is fading away**. The Byzantine Iconoclasts wanted to destroy images in order to abolish meaning and the representation of God. Today we are still iconoclasts, but in an opposite way: **we kill the images by an overdose of meaning**

Borgès' fable on "The People of the Mirror" gives the hypothesis that **behind each figure of resemblance and representation there is a vanquished enemy**, a defeated singularity, a dead object. And the Iconoclasts clearly understood how icons were the best way of letting God disappear. (but perhaps God himself had chosen to disappear behind the images? Nobody knows). Anyway, today is no more the matter of God: **We disappear behind our images**. No chance anymore that our images are stolen from us, that we must give up our secrets - because we no longer have any. That is at the same time the sign of our ultimate morality and of our total obscenity.

There is a deep misunderstanding of the process of meaning. Most **images** and photographs today **reflect the misery and the violence of human condition**. But all this affects us less and less, just because it is over signified. In order for the meaning, for the message to affect us, **the image has to exist on its own to impose its original language**. In order for the real to be transferred to our imagination, or our imagination transferred to the real, it must be a counter-transference upon the image, and this countertransference has to be resolved, worked through (in terms of psychoanalysis). Today we see misery and violence becoming a leitmotiv of publicity just by the way of images. Toscani for example is reintegrating sex and Aids, war and death into fashion. And why not? Jubilating advertisements are no less obscene than the pessimistic ones) **But at one condition to show the violence of publicity itself, the violence of fashion, the violence of the medium**. What actually publishers are not able even to try to do. However, **fashion and high society are themselves a kind of spectacle of death**. The world's misery is quite so visible, quite so transparent in the line and the face of any top-model as on the skeletal body of an African boy. The same cruelty is to be perceived everywhere, if one only knows how to look at it.

The 1AC is nothing more than the production and assimilation of otherness. This creates a violent form of identification whereby the other becomes an object of manipulation, another commodity in the economy of symbolic exchange.

Baudrillard 02

/Jean, Screened Out, 51 – 56/

With **modernity**, we enter **the age of the production** of the Other. **The aim is no longer to kill the Other, devour it, seduce it, vie with it, love it or hate it, but, in the first instance, to produce it**. The Other is no longer an object of passion, but an object of production. Perhaps, in its radical otherness or its irreducible singularity, the Other has become dangerous or unbearable, and its seductive power has to be exorcized. Or perhaps, quite simply, **otherness** and the dual relation **progressively disappear with the rise of individual values and the destruction of symbolic ones**. The fact remains that otherness does come to be in short supply and, if we are not to live

otherness as destiny, **the other has to be produced imperatively as difference**. This goes for the world as much as for the body, sex and social relations. It is to escape the world as destiny, the body as destiny, sex (and the opposite sex) as destiny, that the production of the other as difference will be invented. For example, sexual difference: each sex with its anatomical and psychological characteristics, with its own desire and all the irresolvable consequences that ensue, including the ideology of sex and the Utopia of a difference based both in right and in nature. None of this has any meaning in seduction, where it is a question not of desire but of a game with desire, and where it is a question not of the equality of the sexes or the alienation of the one by the other, since game-playing involves a perfect reciprocity of partners (not difference and alienation, but otherness and complicity). Seduction is as far from hysteria as can be. Neither of the sexes projects its sexuality on to the other; the distances are given; otherness is intact - it is the very condition of that higher illusion that is play with desire.

However, with the coming of the nineteenth century and Romanticism, a masculine hysteria comes into play and with it a change in the sexual paradigm, which we must once again situate within the more general, universal framework of the change in the paradigm of otherness.

In this hysterical phase, it was, so to speak, **the femininity of man which projected itself on to woman and shaped her as an ideal figure** in his image. In Romantic love, **the aim was not now to conquer the woman**, to seduce her, **but to create her from the inside, to invent her**, in some cases **as achieved Utopian vision**, as idealized woman, in others as *jemme jatale*, as star - another hysterical, supernatural metaphor. **The Romantic Eros can be credited with** having invented this ideal of harmony, of **loving fusion**, this ideal of an almost incestuous form of twin beings — the woman as projective resurrection of the same, who assumes her supernatural form only as ideal of the same, an artefact doomed henceforth to *Vamour ox*, in other words, to a pathos of the ideal resemblance of beings and sexes - a pathetic confusion which substitutes for the dual otherness of seduction. **The whole mechanics of the erotic changes meaning, for the erotic attraction** which previously arose out of otherness, out of the strangeness of the Other, **now finds its stimulus in sameness** - in similarity and resemblance. Auto-eroticism, incest? No. Rather a hypostasis of the Same. Of the same eyeing up the other, investing itself in the other, alienating itself in the other - but the other is only ever the ephemeral form of a difference which brings me closer to me. This indeed is why, with Romantic love and all its current spin-offs, **sexuality becomes connected with death**: it is because it becomes connected with incest and its **destiny** - even in banalized form (for we are no longer speaking of mythic, tragic incest here; with modern eroticism we are dealing with a secondary incestuous form - of the protection of the same in the image of the other - which amounts to a confusion and corruption of all images).

We have here then, in the end, the invention of a femininity which renders woman superfluous. **The invention of a difference which is merely a roundabout copulation with its double. And which, at bottom, renders any encounter with otherness impossible** (it would be interesting to know whether there was not any hysterical *quid pro quo* from the feminine in the construction of a virile, phallic mythology; feminism being one such example of the hysterization of the masculine in woman, of the hysterical projection of her masculinity in the exact image of the hysterical projection by man of his femininity into a mythical image of woman).

However, there still remains a dissymmetry in this enforced assignment to difference.

This is why I have contended, paradoxically, that man is more different from woman than woman is from man. I mean that, within the framework of sexual difference, man is merely different, whereas in woman there remains something of the radical otherness which precedes the debased status of difference.

In short, **in this process of extrapolation of the Same into the production of the Other**, of hysterical invention of the sexual other as twin sister or brother (if the twin theme is so prominent today, that is because it reflects this mode of libidinal cloning), **the sexes become progressively assimilated to each other**. This develops from difference to lesser difference through to the point of **role-reversal and the virtual non-differentiation of the sexes**. And it ends up making sexuality a useless function. In cloning, for example, pointlessly sexed beings are going to be reproduced, since sexuality is no longer needed for their reproduction.

If **the real woman seems to disappear** in this hysterical invention of the feminine (though she has other means of existing this), **in this invention of sexual difference**, in which the masculine occupies the privileged pole from the outset, and in which all the **feminist struggles will merely reassert that insoluble privilege or difference**, we must recognize too that masculine desire also becomes entirely problematical since it is able only to project itself into another in its image and, in this way, render itself purely speculative. So all the nonsense about the phallus and male sexual privilege, etc. needs revising. **There is a kind of transcendent justice which means that**, in this process of sexual differentiation which culminates inexorably in non-differentiation, **the two sexes each lose as much of their singularity and their otherness**. This is the era of the Transsexual, in which all the conflicts connected with this sexual difference carry on long after any real sexuality, any real alterity of the sexes, **has disappeared**.

Each individual repeats on his or her own body this (successful?) takeover of the feminine by masculine projection hysteria. **The body is identified and appropriated as a self-projection, and no longer as otherness and destiny**. In the facial features, in sex, in sickness and death, **identity is constantly being altered**. You can do nothing about that. It is destiny. But this is precisely what has to be warded off at all costs in the identification of the body, **the individual appropriation of the body, of your desire, your appearance, your image**, plastic surgery on all fronts. **For if the body is no longer a site of otherness, of a dual relation, if it is a site of identification, then you have urgently to reconcile yourself with it, to repair it, perfect it, turn it into an ideal object**. Everyone treats his/her body as man treats woman in the projective identification we have described: **he invests it as a fetish in a desperate attempt at self-identification. The body becomes an object of autistic worship, of an almost incestuous manipulation**. And it is the body's resemblance to its model which becomes a source of eroticism and unconsummated self-seduction, insofar as it virtually excludes the Other and is the best means of excluding any seduction from elsewhere.

Many other things relate also to this production of the Other - a hysterical, speculative production. Racism is one example, in its development throughout the modern era and its current recrudescence. Logically, it ought to have declined with progress and the spread of Enlightenment. **But the more we learn how unfounded the genetic theory of race**

is, the more racism intensifies. This is because we are dealing with an artificial construction of the Other, on the basis of an erosion of the singularity of cultures (of their otherness one to another) and entry into the fetish-istic system of difference. So long as there is otherness, alienness and a (possibly violent) dual relation, there is no racism properly so called. That is to say, roughly, up to the eighteenth century, as anthropological accounts attest. **Once this 'natural' relation is lost, we enter upon an exponential relation with an artificial Other. And there is nothing in our culture with which we can stamp out racism, since the entire movement of that culture is towards a fanatical differential construction of the Other, and a perpetual extrapolation of the Same through the Other.** Autistic cul- ture posing as altruism.

We talk of alienation. But **the worst alienation is not being dispossessed by the other, but being dispossessed of the other: it is having to produce the other in the absence of the other, and so continually to be thrown back on oneself and one's own image.** If, today, we are condemned to our image (to cultivate our bodies, our 'looks', our identities, our desires), this is not because of alienation, but because of the end of alienation and the virtual disappearance of the other, which is a much worse fate. In fact, the definition of alienation is to take oneself as one's focus, as one's object of care, desire, suffering and communication. **This definitive short-circuiting of the**

other ushers in the era of transparency. **Plastic surgery becomes universal. And the surgery performed on the face and the body is merely the symptom of a more radical surgery: that performed on otherness and destiny.**

What is the solution? There is no solution to this erotic trend within an entire culture; to this fascination, this whirl of denial of otherness, of all that is alien and negative; to this foreclosing of evil and this reconciliation around the Same and its multiple figures: incest, autism, twinning, cloning. **All we can do is remind ourselves that seduction lies in non-reconciliation with the other, in preserving the alien status of the Other. One must not be reconciled with oneself or with one's body. One must not be reconciled with the other, one must not be reconciled with nature, one must not be reconciled with the feminine** (that goes for women)

We present no alternative. The system demands that we maximize production of meaning – in response, we refuse communication, we refuse signification, and we refuse meaning.

Baudrillard 2K ~<http://www.egs.edu/faculty/jean-baudrillard/articles/simulacra-and-simulations-viii-the-implosion-of-meaning-in-the-media/>

What is essential today is to evaluate this double challenge – the challenge of the masses to meaning and their silence (which is not at all a passive resistance) - the challenge to meaning that comes from the media and its fascination. All the marginal, alternative efforts to revive meaning are secondary in relation to that challenge.

Evidently, there is a paradox in this inextricable conjunction of the masses and the media: do the media neutralize meaning and produce unformed [informe] or informed [informée] masses, or is it the masses who victoriously resist the media by directing or absorbing all the messages that the media produce without responding to them? Sometime ago, in "Requiem for the Media," I analyzed and condemned the media as the institution of an irreversible model of communication without a response. But today? This absence of a response can no longer be understood at all as a strategy of power, but as a counterstrategy of the masses themselves when they encounter power. What then? Are the mass media on the side of power in the manipulation of the masses, or are they on the side of the masses in the liquidation of meaning, in the violence perpetrated on meaning, and in fascination? Is it the media that induce fascination in the masses, or is it the masses who direct the media into the spectacle? Mogadishu-Stammheim: the media make themselves into the vehicle of the moral condemnation of terrorism and of the exploitation of fear for political ends, but simultaneously, in the most complete ambiguity, they propagate the brutal charm of the terrorist act, they are themselves terrorists, insofar as they themselves march to the tune of seduction (cf. Umberto Eco on this eternal moral dilemma: how can one not speak of

terrorism, how can one find a good use of the media - there is none). **The media carry meaning and countermeaning**, they manipulate in all directions at once, **nothing can control this process**, they are the vehicle for the simulation internal to the system and the **simulation that destroys the system**, according to an absolutely Mobian and circular logic - and it is exactly like this. **There is no alternative** to this, no logical resolution. **Only a logical exacerbation and a catastrophic resolution.**

With one caution. **We are face to face with this system in a double situation** and insoluble double bind - exactly like children faced with the demands of the adult world. **Children are simultaneously required to constitute themselves as autonomous subjects, responsible, free and conscious, and to constitute themselves as submissive, inert, obedient, conforming objects. The child resists on all levels, and to a contradictory demand he responds with a double strategy. To the demand of being an object, he opposes all the practices of disobedience, of revolt, of emancipation; in short, a total claim to subjecthood. To the demand of being a subject he opposes, just as obstinately and efficaciously, an object's resistance**, that is to say, exactly the opposite: **childishness, hyperconformism, total dependence, passivity, idiocy. Neither strategy has more objective value than the other. The subject-resistance is today unilaterally valorized and viewed as positive - just as in the political sphere only the practices of freedom, emancipation, expression, and the constitution of a political subject are seen as valuable and subversive. But this is to ignore the equal, and without a doubt superior, impact of all the object practices, of the renunciation of the subject position and of meaning** - precisely the practices of the masses - **that we bury under the derisory terms of alienation and passivity.** The liberating practices respond to one of the aspects of the system, to the constant ultimatum we are given to constitute ourselves as pure objects, but they do not respond at all to the other demand, **that of constituting ourselves as subjects**, of liberating ourselves, expressing ourselves at whatever cost, of voting, producing, deciding, speaking, participating, playing the game - a form of blackmail and ultimatum just as serious as the other, even more serious today. To a system whose argument is oppression and repression, the strategic resistance is the liberating claim of subjecthood. But this strategy is more reflective of the earlier phase of the system, and even if we are still confronted with it, it is no longer the strategic terrain: **the current argument of the system is to maximize speech, the maximum production of meaning. Thus the strategic resistance is that of the refusal of meaning and of the spoken word** - or of the hyperconformist simulation of the very mechanisms of the system, which is a form of refusal and of non-reception. **It is the strategy of the masses: it is equivalent to returning to the system its own logic by doubling it, to reflecting meaning**, like a mirror, **without absorbing it.** This strategy (if one can still speak of strategy) prevails today, because it was ushered in by that phase of the system which prevails.

To choose the wrong strategy is a serious matter. All the movements that only play on liberation, emancipation, on the resurrection of a subject of history, of the group, of the word based on "consciousness raising," indeed a "raising of the unconscious" of subjects and of the masses, do not see that they are going in the direction of the system, whose imperative today is precisely the overproduction and regeneration of meaning and of speech.

Their celebration of difference is the precondition for the extermination of the Other. Only that which remains radically Other is safe from racism.

Grace 2000—Senior Lecturer in Feminist Studies @ University of Canterbury at Christchurch (Victoria, 2000, Routledge, “Baudrillard’s Challenge: A Feminist Reading,”
<http://sociology.sunimc.net/html/edit/uploadfile/system/20100724/20100724151252877.pdf>, rmf)

Baudrillard develops his most sustained discussion of the erasure of ‘Otherness’ and the proliferation of ‘difference’ in *The Transparency of Evil* (TE). His critique distinguishes ‘difference’ from a form of otherness that is radical, in which there is no scale of values upon which otherness can be registered. Baudrillard is emphatic that not only is otherness not the same as difference, but **difference is what destroys otherness.** Differences are indeed differentiated along a single scale of values. In an interview with *Le Journal des Psychologues* he says that difference is diversification, ‘it is the spectre of modality’, making it distinct from alterity in a way he describes there as ‘absolute’ (Gane 1993: 173). The ‘hell of the same’ (the void in the second quotation cited at the beginning of this section) is deflected by the hyperreal ‘melodrama of difference’ (both being chapter titles in TE). Simulation of a spectacular, everproliferating display of ‘difference’ is entirely consistent with the logic of sign value. Baudrillard claims that **otherness can now be considered to be subject to the law of the market, and** in fact, as a rare item, **is highly valued. The ‘Other’ is no longer to be conquered, exterminated, hated, excluded, or seduced but rather now to be understood, liberated, recognised, valued, ‘coddled’, resurrected as ‘different’** This distinction between a form of ‘otherness’ that is indeed structurally irreducible, neither comparable nor opposable, and a form of ‘difference’ that is precisely predicated on establishing criteria against which difference is ascertained,³ is central to the critique offered here of feminist insistence on ‘irreducible difference’. For this feminist proclamation to be meaningful we need some kind of structural critique of the social, political, economic, and semiotic structuring of difference and otherness. Baudrillard’s analysis shifts the ground considerably. It makes additional questions pertinent; for example, what is at stake contemporarily in insisting on the importance of ‘irreducible difference’? His work suggests that this kind of question has to be addressed through a critique of the political economy of the sign. At least. With reference to Baudrillard’s ‘melodrama of difference’, the word ‘melodrama’ has the sense of ‘decidedly overdone’. A dictionary definition is: ‘sensational dramatic piece with crude appeals to emotions and usually happy ending’. The ‘usually happy ending’ is rather ironic given its humanist appeal, and the ‘happy ending’ of cultural hybridity would see the end of the apparent anachronism of racism, a form of discrimination Baudrillard analyses as precisely prescribed by ‘difference’ (I will elaborate on this below). Baudrillard uses the term ‘melodrama’ in conjunction with ‘psychodrama’ and ‘sociodrama’ to critique contemporary discourses and practices of ‘otherness’, both of which conjure the centrality of simulation to the scene of ‘cultural difference’, and metaphorically depict the simulated and dramatised absence of the other, with its ‘melodramatic’ undertones of crude emotionality. Baudrillard’s argument that racism is an artefact of the institution of difference is integrally related to the structure of differentiation and the axiological and semiological form of its logic. To differentiate in the hyperreal mode of simulation is to discriminate: to establish differences that, generated from the model, are nothing more than more of the same. **Racism,** Baudrillard argues, does not exist ‘so long as the other remains Other’ (TE: 129). When the Other is foreign, strange, ‘other’, for example, within the order of the symbolic in Baudrillard’s critical terms, **there is no scale of**

equivalence or difference against which discrimination can be performed. Encounter and transformation are fully open and reversible, in all forms (including the agonistic encounter of violence and death). Racism becomes possible when ‘the other becomes merely different’ as then the other becomes ‘dangerously similar’. This is the moment, according to Baudrillard, when ‘the inclination to keep the other at a distance comes into being’ (TE: 129). The intolerable introjection of difference in the case of the construction of ‘the subject’ as ‘different’, or traversed by a multiplicity of ‘differences’, means **the other must be excised: the differences of the other must be made materially manifest.** The inevitability of a fluctuation, oscillation, vacillation of differences in a differential system means the ‘happy ending’ will always be illusory. ‘Difference’ (of others) is fetishised as the icon that keeps ‘the subject’ different.

CA – Gender Consideration

Gender Consideration Counter Advocacy 1NC

The 1AC begs a question of critical importance – a racial wake up call for who?

_____ and I advocate the abolishment of surveillance of feminized Black bodies as a racial and gendered wake-up call. Our form of racial radicalism moves towards (de)constructing (trans)misogynoir, anti-Black homophobia, and patriarchy.

The counter-advocacy is competitive –

Our advocacy is not plan plus, rather we argue that the 1AC is a poorly written piece of scholarship that you as the educator have the ability to reject in favour of analysis of the manifestations of transphobic, misogynoirist, and homophobic rhetoric in Black liberation rhetoric.

No Link of Omission -- It's not just who you didn't say, it's who you did.

Anti-Black violence is gratuitous, it's recognition is not. Our argument is that, holistically, the affirmative is same one-trick pony that the system always uses; it gives the illusion of protection by making small concessions that divide minoritarian groups which hurts them all, long-term. Trayvon Martin has become the center icon in the “Black Lives Matter” movements and literature; which gives literally no unique reason why he is key to the call of the affirmative. Centering of feminized Black bodies, meaning Trans,Queers, and Women offer a more intersection criticism of both the world and the presentation of the 1AC.*

We'll win the UQ debate – Sandra Bland political murder should've literally changed the entire 1AC, but it didn't.

SAY HER NAME, Sandra Annette Bland is a Black Woman who died while in police custody. The facts about her death are contradictory and against protocol but don't warrant a mention from the affirmative. Black Women occupy a unique space within the US culture of voyeurism; maintaining a simultaneous invisible and hyper-visible dichotomy— the 1AC's failure to acknowledge this structural issue turns the case and ignores a specific instance in which a large portion of antiblackness is generated – black women have been historically targeted by intrusive surveillance

Harry 14 (Sydette, cultural critic, troublemaker and writer from NYC. Her next project is a decidedly low/high tech response to media, age and race, also grad school. She has been published on Salon. “Everyone Watches, Nobody Sees: How Black Women Disrupt Surveillance Theory” <https://modelviewculture.com/pieces/everyone-watches-nobody-sees-how-black-women-disrupt-surveillance-theory>)

It kind of pains me to call Mason Betha prophetic, but 17 years ago when “Looking at Me” hit the Billboard charts, the Harlem native pretty much described the current state of surveillance and tech in America. Especially for black people and doubly so for black women. Surveillance is based on a presumption of entitlement to access, by right or by force. More importantly, it hinges on the belief that those surveilled will not be able to reject surveillance — either due to the consequences of resisting, or the stealth of the observance. They either won't say no, or they can't. Discussions of stolen celebrity selfies often miss the “by force” aspect of the breeches, instead focusing on salacious details. Surveillance is part of the information age, but it has always been part of abusive dynamics. As opting into surveillance becomes increasingly mandatory to participate in societies and platforms, surveillance has been woven into the fabric of our lives in ways we can not readily reject. Being watched is not just an activity of Big Brother-style surveillance, but also fannish adulation and social enmeshment. As Black women have been historically denied the ability to consent to surveillance, modern discussion of watching and observing black women needs better historical context. When I' nasah Crockett points out how black women online have constantly been portrayed as “raving amazons,” one of the unspoken through lines is how easily media, even on the left, believes dissecting black women, tracking their online habits, consuming illegally obtained images of them, and demanding education is a “right”. Black women cannot say no, and do not need to be in any way respected or fully informed about how they will be studied or used. Media collects the data of black activity and media production as a weapon, without black participation. The lack of black participation can be unintentional or intentional, but usually ends in gross appropriation, clumsy “admiration”, willful erasure or a troublesome combo of all three. Combined with historical blindness, racist condescension and content desperation, the modern surveillance of black women too often results in the same historical abuse and erasure of black women. When Patricia Garcia says the that the big booty era has finally arrived as a “high fashion” moment, but credits Jennifer Lopez and Iggy Azalea, it erases the very real abuse that black bodies have suffered for those exact body types, that were surveilled to produce the standard that Garcia hands over to Lopez et. al. She writes: “Rihanna shows up to the CFDA Awards practically naked with her crack fully on display and walks off with a Fashion Icon Award. Perhaps we have Jennifer Lopez to thank (or blame?) for sparking the booty movement.” Suggesting the way to Rihanna's 2014 moment was paved by Lopez shows a dangerous laziness towards the stated goal of body positivity. Rihanna's moment was a direct tribute to Josephine Baker, another black woman often sexualized and placed under surveillance, not just for celebration of her uniquely black body but for her participation in World War II and the civil rights movement. Garcia's “cultural surveillance” ends up being a contextless mess that insults both Rihanna and Baker. Writing for Salon, I pointed out that Media has no idea how to talk about race, and more recently I am convinced they do not actually care to learn. Unfortunately when covering Black women, this inability or unwillingness to learn defaults to common stereotypes at best and complete cultural propaganda at worst. That unwillingness create a vacuum of knowledge, as history repeats itself over and over. Take Alessandra Stanley's profile of Shonda Rhimes in the New York Times: a cringe-worthy attempt at “complimenting” Rhimes' stereotype-breaking television output that instead relies on empty surveillance of black characters while Stanley offers no evidence of having actually watched the shows she cites. Stanley's descriptions of Rhimes and her work are filled with words like “angry, terrorizing and sassy,” recalling Crockett's angry amazons perfectly while perpetuating and prolonging logic that for decades kept Viola Davis from being the leading lady Stanley describes. Her piece ignores multi-year plot developments as well as a wonderful opportunity to discuss Rhimes' accomplishments as possibly the only non-white-male with multiple, simultaneous network TV hits. Her surveillance provides little in the way of edification and a lot in codifying uncomfortable catch 22's for black women and privacy: visibility is part of achievement in media, but is it worth it when even at the pinnacle of your success the only thing made visible is the racism of those observing you? Even more difficult, how do you fight back? Steven Mann's concept of sousveillance centers on wearing portable cameras and technology to record

activity, but I would like to expand it to include all forms of using tech to jam surveillance. Mann, a pioneer in the field of wearable computing and computation photography, framed the concept of wearable cameras functioning as recording data for the user, not an outside network. Hashtags, street recordings, phone taps can all be looked at as ways of using tech to push back against surveillance. #Yourslipsshowing in particular was used to fight #4chan surveillance of black women. Crockett, user @sassycrass, and a community of black women (myself included) used the hashtag to expose 4chan board members who declared “war” on black feminists by tracking and attempting to infiltrate their “ranks.” The attempt was foiled mostly by how their racist caricatures of black women (much like Stanley’s) were so jarringly incongruent with reality. However, sousveillance often requires large amounts of disclosure to be effective and ultimately negates privacy even more. Hasan M. Elahi responded to being incorrectly surveilled by making a project of displaying his personal information. Similarly, Black women’s responses to abusive surveillance has often been heart-rending accounts of personal trauma and exposure of personal networks. What goes unmentioned is that social capital and safety are often key to being able to go public with sousveillance as a strategy. Mann and Elahi – credentialed, well-known professors – have a much easier time of saying they agree to be watched than those on the margins. Stacia L. Brown offers a beautiful examination of the ramifications of ahistorical surveillance, discussing representation as well as more diverse media sources as counter-tactics. As Brown points out in response to Garcia’s flippant mess: “It isn’t about who gets credit for popularizing the ‘big booty.’ It’s about who is erased and minimized in the process.” Her recommendations are solid but also bring up a very real question: for populations whose fundamental problem under surveillance is the inability to declare privacy and boundaries, what kind of solution is being made to expose one’s self “voluntarily,” to invite more observation into one’s life? The response to these articles and continued moments of ahistorical abuse and sometimes outright violence are a version of cultural sousveillance. Black women must lay themselves bare, exposing trauma and constantly excavating painful historical memory to gain sympathy and respect. Surveillance must be used as sousveillance, with the records generated by the intrusive observation of blackness, used to bolster black testimony. BuzzFeed has an article that is a triggering reminder of the murkiness of this dilemma. While being one of the few places to acknowledge how Daniel Holtzclaw, a predatory policeman targeted black women, it also notes how he used surveillance, and even the more stringent sousveillance to track black women to abuse. To emphasize the gravity of his offense, once again black women’s trauma is made public with overly specific details on the abuse of his victims. More disturbingly have been the deaths of three black men: Eric Garner, Michael Brown and John Crawford III, all murdered by police. In all three cases there was video/photo evidence of the deaths that circulated the internet, and in Brown’s case, even AFTER the mother requested it stop. Crawford’s death is a disturbing illustration of the interplay of surveillance and sousveillance with historical discrimination. The police who ultimately ended his life were responding to a report, via citizen surveillance, that he had been observed with a gun. The surveillance video which showed him being shot? Still not enough for indictment. Why must black death be broadcast and consumed to be believe, and what is it beyond spectacle if it cannot be used to obtain justice? When Janay Rice was assaulted by her husband, it became a rallying cry for domestic violence and resulted in job creation for white feminists. What stuck out immediately was the ease at which the surveillance aspects were skipped over. Echoing a similar leak of a private moment that targeted the Knowles-Carter family, little discussion was made of how a culture of intrusion seemed to focus on the abuse of black women as breaking news without asking about breaches of boundaries. That the same online communities that continually prodded and mocked black women are incubators for sex criminals who expose private pictures of celebrities isn’t shocking, it’s inevitable. They watched the world not care, why should they anticipate consequences now? Predators are often wrongly pictured as targeting the defenseless, when they also target the undefended. Black people, women particularly have historically been able to defend themselves, but have also been shown to be undefended. The problem is not that they can’t fight back, but that their fight and the record of what they were fighting is erased and sanitized for easier consumption. When Laurie Penny and Lola Okolosie claim a victory over racist and sexists online, they willfully erase the original problem of targeted women not wanting to be surveilled, and shut down conversations about how that issue can be addressed. If they have won already, what does the trauma of the women used in that success matter? Just recently, threats to “expose” Emma Watson’s nudes turned out to be a prank to “draw attention” to attacks on feminists. The very real trauma of women — who even after they were transgressed were asked to answer for it like they had committed the crime — becomes a “gotcha” moment. A time to ask what factors lead to the abuse of women and where it starts — usually with black women expressing feminist or anti-racist ideals — becomes covered in really uncomfortable racist/classist overtones, namely: “What happens if this happens to a white woman we actually care about?!” Even as women of all colors have been fighting for years to make legislation against revenge porn. When Janay Rice was assaulted by her husband, it became a rallying cry for domestic violence and resulted in job creation for white feminists. It’s a cry that does not truly encompass the necessary complexity of the problem in the NFL, or give anything at all to the attacked woman. This major step to “address issues” still hinges on making a black woman’s personal affairs heartbreakingly public and assuring that no one who represents her voice — which has asked for very different things than advocacy — will be heard. What we have decided to call surveillance is actually a constant interplay of various forms of monitoring that have existed and focused on black people, and specifically black women, long before cameras were around, let alone ubiquitous. Surveillance technology is a dissemination of cultural standards of monitoring. Our picture of surveillance needs to factor in not just tech developments, but the cultural standards that have bred surveillance, especially towards black culture, as part and parcel in our world. Elahi can use the intrusion into his privacy to further his work. But if all you want to do is have space to mind your own business, handle your family issues in private, or exist without interference, sousveillance isn’t an answer... it’s a reminder of defeat. If what you want is representation as you are, what do you do when the reality is ignored for the easy win, even when it leaves you worse than before? What is the solution for being constantly watched, if no one sees you at all?

Extensions: Trans Impact

Furthermore, surveillance via scanners subject trans- bodies to constant discipline at the hands of the state – creating discursive and structural violence

Shepherd & Sjoberg 12 (Laura J Shepherd and Laura Sjoberg, Associate Professor of International Relations at the School of Social Sciences at UNSW and a feminist scholar of international relations and international security, 7-1-2012, "Feminist Review," Feminist Review (2012) 101, 5–23., <http://www.palgrave-journals.com/fr/journal/v101/n1/full/fr201153a.html> //MV)

However, even these nuanced accounts of the immanence of gender in global politics as a noun, a verb and an organisational logic do not explicitly interrogate transgender and genderqueer logics of security. In fact, frequently they focus on a dichotomous or binary understanding of sex/gender to read gendered logics of security. This is not to deride or dismiss the important and varied contributions of these scholars, but rather to suggest a way in which we might contribute in this article to the literature on which we draw, and in relation to which we wish to situate ourselves.

Feminist scholars of security have emphasised the analytical salience of gender and, in doing so, raised questions about the possibility of security/ies of the self, particularly in reference both to (corpo)realities of gendered violence (see, for example, Bracewell, 2000; Hansen, 2001; Alison, 2007) and to the ontological security of gender identity itself (see, for example, Browne, 2004; Shepherd, 2008; MacKenzie, 2010). Opening to critical scrutiny, however, the practices through which gender uncertainty is erased and gender certainty inscribed—the practices through which the ontological presumption of gender difference is maintained and gender fluidity denied—allows scholars to develop different understandings of the ways in which in/security is not only written on the body but is performative of corporeality. We coin the neologism ‘genderinsecurity’ to emphasise the multiple dynamics of gendering security, understanding gender in security and interrogating gender insecurity, all of which animate in various ways the scholarship we discuss here. In different ways, these accounts of gender insecurity engage a politics of corporeality, asking under what circumstances, in what ways and with what effects subjects embody different gendered ideas and ideals. On this view, the body is ‘not ... an object but ... an “event”’ (Budgeon, 2003: 36; see also Wilton, 2000: 251), an ongoing event that is culturally produced, mediated and disciplined (Grosz, 1994: 23). Bodies are disciplined in part through security practices: those practices that speak to and of the physical security of the state or individual subject (such as immigration policies); and those practices that aim to order physical beings in the world (such as surveillance techniques, or the WBI scanning we discuss below). In both cases, the gendered logics that (re)produce regulatory and disciplinary techniques are firmly grounded in the idea and ideal of gender/sex as a binary construct. Queer bodies upset this binary logic in mundane ways (detention facilities, for example, holding those pending immigration review are divided into ‘male’ and ‘female’ accommodations, which led in the USA to ‘a blanket policy of placing transgender immigrant detainees in restrictive segregation’, according to a complaint filed against the Department of Homeland Security (DHS) on behalf of thirteen immigrants by Heartland Alliance for Human Needs and Human Rights on 13 April 20114) and in ways that are less immediately apparent and less frequently considered, at least in the realm of security studies (such as the trauma experienced when travelling with identity papers that do not ‘fit’ the assumed gender of the bearer, see Coyote, 2010;5 TransGriot, 20116).

Extensions: CP Solves/Is key

Black movements must incorporate members of the black LGBT community – anything else reinforces oppression and continues the disproportionate violence and discrimination enacted on the black LGBT community – the supreme court and #blacklivesmatters provide uniqueness

Patterson, editorial fellow at Mother Jones' San Francisco bureau whose work has appeared on Politic365 and NBCBLK , 2015 (By Brandon Ellington Patterson , Thu Jul. 2, 2015 “Why You Can't Be Pro-Black and Homophobic at the Same Time”,

<http://www.motherjones.com/politics/2015/06/black-lives-matter-gay-marriage-lgbt-supreme-court>, accessed 7/27/15)//JH @ DDI

Last Friday's Supreme Court ruling to legalize same-sex marriage nationwide was a milestone for the LGBT rights movement. While it didn't give gay Americans complete equality in every aspect of their lives, the decision provided a long-sought-after victory: an acknowledgement that their love is equal in the eyes of the law. This last year has also seen a dramatic rise in visibility for transgender celebrities—Janet Mock, Laverne Cox, and Caitlyn Jenner among them—drawing attention to the legal discrimination and socioeconomic inequalities faced by the transgender community, especially transgender people of color, and those on the economic margins of society. But not everyone is fond of Friday's ruling, or of the so-called "transgender tipping-point"—including parts of the black community. Of course, I've noticed support for LGBT rights from within the black community over these last few weeks: NBCBLK, NBC's showcase for stories by and about the black community, featured a black church in DC that performs same-sex marriages and employs LGBT clergy; the Rev. Clementa Pinckney, the pastor of Emanuel AME Church in Charleston, South Carolina, where he was murdered two weeks ago, was celebrated by some as a gay ally in the statehouse; and there's a push under way to get the Black Lives Matter movement, criticized for focusing too narrowly on straight black men, to address violence facing women and LGBT people, especially black trans women. But I've seen a lot of pushback from black people as well. On social media, I've seen black people imply that marriage equality is a frivolous concern, and that gay people shouldn't have received the right to marry before black people got the right to walk down the street without being shot by the police. I've seen black people argue against gay marriage by pointing out that it's still not legal to smoke weed in most of the United States. Then there are those who reject gay marriage and homosexuality as a sin. Despite steady growth across the entire US population, support for same-sex marriage among black Americans remains in the minority, and is lower among black Protestants than all other religious groups except white evangelicals. I've seen some in the black community also reject transgender people. In one argument that totally misunderstands what it means to be trans, some suggested that Caitlyn Jenner was "pretending" to be a woman, and that black people who embraced Jenner were hypocritical for accepting her while at the same time rejecting Rachel Dolezal for pretending to be black. The simple truth is this: It's problematic for members of any one marginalized group to challenge the progress made by members of another, especially when both groups suffer as a result of the same system—a system that favors being white, male, straight and "cisgender," a term used by academics and advocates to describe the opposite of trans. But it is especially problematic for black people to reject the LGBT rights struggle, especially when, over the past year, black people have been particularly vocal about their own racial oppression, via sustained, high-profile protests that have swept the nation. Most glaringly, it's problematic because blackness and LGBT identities are not mutually exclusive. There are lesbian black women, gay black men, bisexual black people, transgender black men and women, "genderqueer" black people—identifying as neither gender or both—and black people who are any combination of any of the above. And black LGBT people and their allies have made incredible contributions to the black liberation struggle, from Bayard Rustin during the civil rights movement to Audre Lorde, a poet, feminist, and LGBT advocate, as well as the three women who founded the hashtag #BlackLivesMatter and the organization that birthed the movement: Alicia Garza, Patrisse Cullors, and Opal Tometi. Activism like this is even more inspiring than most because, in addition to state-sanctioned racism, LGBT people face state-sanctioned homophobia and transphobia in the form of unchecked employment and wage discrimination, housing discrimination, health care disparities, increased risk of brutality at the hands of police, and so much more. And then they face ridicule and violence, oftentimes from within the black communities they call home. Thirty-four percent of black transgender people live in extreme poverty, a rate three times that of black people as a whole and eight times that of the general US population. Homelessness is rife. Only 19 states have statewide employment non-discrimination laws that cover both sexual orientation and gender identity. In 2013, two-thirds of all LGBT homicide victims were transgender women of color, while LGBT people are more likely than others to be subjected to hostility, brutality, and unjust arrest from police after reporting they have been victims of crime. And 43 percent of black gay youth have attempted suicide as a result of issues related to their sexual orientation. Through anti-LGBT bigotry, we add to the marginalization of these black folk. Straight black people should be fighting for them, not the

reverse. Yet, so many black LGBT people are down for us, despite the fact that we so often remind them that, no, we are not down for them. This must change. There is no caveat or asterisk on the phrase "black lives matter." All black lives matter, not just the ones you are comfortable with. You cannot be pro-black if you oppress black people. And, more importantly, you cannot love all black people if you oppress black people. You do not mean "black lives matter" if you protest when an unarmed straight black man is killed by the police because they are black, but don't care about the the many transgender black women who have been murdered this year because they were trans. If we are to liberate black people as a whole, then we must combat all forms of discrimination against black people, including anti-LGBT discrimination and that which we inflict upon them from within our own communities. The struggle must be multilayered, just like the identities of black people. Every chain must be broken. If black people do not come to grips with the homophobia and transphobia within our own communities, then all black people will never be free. That, indeed, would be a tragedy that we brought upon ourselves. I, for one, join the LGBT community—black LGBT people—in celebrating a milestone in their struggle for freedom.

Case

Note – some of the stuff on case is repetitive with off-case. Edit accordingly

1NC Policing Contention Frontline

1. Racial Binaries Turn -- the aff attempts explain latino/a racial oppression in terms of antiblackness – their role of the ballot claim that “The 1AC explains oppression against Latin@ groups being intrinsic to those of black communities” proves

This reifies the black/white binary which renders other racially oppressed populations invisible – this reinforces marginalization and status quo ignorance

Alcoff, Professor of Philosophy, Syracuse University/SUNY Stony Brook, 2003 (Linda Martín Alcoff, *The Journal of Ethics*, Vol. 7, No. 1, Race, Racism, and Reparations (2003), pp. 5-27 “Latino/As, Asian Americans, and the Black-White Binary”; JSTOR, accessed 7/26/15)/JH @ DDI

Critics of the black/white paradigm have argued that, although all communities of color have shared the experience of political and economic disenfranchisement in the U.S., there are significant differences between the causes and the forms of this disenfranchisement. Bong Hwan Kim, a Korean American community leader who has worked both as the Director of the Korean Community Center of East Bay in Oakland, CA, and as Director of the Korean Youth and Community Center in Los Angeles, blames the black/white binary for disabling relationships among people of color and even for creating the conditions leading to the Los Angeles civil disaster of April 1992, in which 2,300 small Korean owned businesses were destroyed by mostly Latino/a and African American looters. Kim cites the xenophobia marshaled by African American leader Danny Bakewell before the looting occurred, and argues that the Korean American community had been and continues to be systematically rendered incapable of responding to such rhetoric because they are not recognized in the media as a player in racial politics.²⁰ Elaine Kim explains: It is difficult to describe how disempowered and frustrated many Korean Americans felt during and after the sa-i-ku p'ok-dong (the April 29 "riots"). Korean Americans across the country shared the anguish and despair of the Los Angeles tongp'o (community), which everyone seemed to have abandoned - the police and fire departments, black and white political leaders, the Asian and Pacific American advocates who tried to dissociate themselves from us because our tragedy disputed their narrow and risk-free focus on white violence against Asians ... the Korean Americans at the center of the storm were mostly voiceless and all but invisible (except when stereotyped as hysterically inarticulate, and mostly female, ruined shopkeepers ...).²¹ Similar to the Mexicans in Texas, the Koreans have been denied the legal or socially recognized category of being a politicized group at

the same time that they are made subject to group based scapegoating. Moreover, as this event demonstrates, the black/white paradigm of race is incapable of theoretically or politically addressing racism among communities of color, or racism, in other words, which is not all about white people. A response to this line of reasoning might be that it is white supremacy which is at the root of the conflictual relations among communities of color, and responsible for their acceptance of stereotypes manufactured by a white dominant power structure. Thus, on this reading, what occurred in Los Angeles can be reductively analyzed as caused by white supremacy. Although I do find explanatory arguments that focus on political economy often compelling, it is far too simplistic, as I think Karl Marx himself knew, to imagine cultural conflict as the mere epiphenomenon of economic forces with no life or grounding of their own. To blame only white supremacy for what occurred in Los Angeles would also deny power and agency to any groups but the dominant, which is increasingly untrue. We must all accept our rightful share of the blame, whatever that turns out to be in particular instances, and resist explanations that would a priori reduce that blame to zero for communities of color. Supporting the arguments of both Elaine Kim and Bong Hwan Kim, Juan Perea argues that because of the wide acceptance of the black/white paradigm, "other racialized groups like Latino/as, Asian Americans, and Native Americans are often marginalized or ignored altogether".²² He points out that the concerns of Asian Americans and Latino/as cannot be addressed through immigration legislation because all are not immigrants, which is one of the reasons to reject the claim of some ethnic theorists that these groups will follow the path of European immigrants in gradual assimilation and economic success (the other reason to reject this claim is their racialization).²³

2. Pain Turn – the AFF’s politics of recognition ties reinscribes oppression by tying subjecthood to suffering

Tuck and Yang 14 [Eve, & K. W., 2014, “R-Words: Refusing Research.” In n D. Paris & M. T. Winn (Eds.) Humanizing research: Decolonizing qualitative inquiry with youth and communities (pp. 223-248). Thousand Oakes, CA: Sage Publications. Pp. 228]

The costs of a politics of recognition that is rooted in naming pain have been critiqued by recent decolonizing and feminist scholars (Hartman, 1997, 2007; Tuck, 2009). In Scenes of Subjection, Sadiya Hartman (1997) discusses how recognizing the personhood of slaves enhanced the power of the Southern slaveowning class. Supplicating narratives of former slaves were deployed effectively by abolitionists, mainly White, well-to-do, Northern women, to generate portraits of abuse that ergo recognize slaves as human (Hartman, 2007). In response, new laws afforded minimal standards of existence, “making personhood coterminous with injury” (Hartman, 1997, p. 93), while simultaneously authorizing necessary violence to suppress slave agency. The slave emerges as a legal person only when seen as criminal or “a violated body in need of limited forms of protection” (p. 55). Recognition “humanizes” the slave, but is predicated upon her or his abjection. You are in pain, therefore you are. “[T]he recognition of humanity require[s] the event of excessive violence, cruelty beyond the limits of the socially tolerable, in order to acknowledge and protect the slave’s person” (p. 55). Furthermore, Hartman describes how slave-as-victim as human accordingly establishes slave-as-agent as criminal. Applying Hartman’s analysis, we note how the agency of Margaret Garner or Nat Turner can only be viewed as outsider violence that humane society must reject while simultaneously upholding the legitimated violence of the state to punish such outsider violence. Hartman asks, “Is it possible that such recognition effectively forecloses agency as the object of punishment . . . Or is this limited conferral of humanity merely a reinscription of subjugation and pained existence?” (p. 55).

2NC Racial Binaries Turn – Turns Case

The hegemony of the black/white binary stymies solutions to racial issues – its reductionist views cannot encompass the discrimination experienced by other racially oppressed populations

Alcoff, Professor of Philosophy, Syracuse University/SUNY Stony Brook, 2003 (Linda Martín Alcoff, *The Journal of Ethics*, Vol. 7, No. 1, Race, Racism, and Reparations (2003), pp. 5-27 “Latino/As, Asian Americans, and the Black-White Binary”; JSTOR, accessed 7/26/15)//JH @ DDI

One clear lesson to be learned from this legal history is that race is a construction that is variable enough to be stretched opportunistically as the need arises to maintain and expand discrimination. The fact that Latino/as and Asians had to be put into either one of two categories - black and white - has not been of benefit to them. Nonetheless, one might take these legal cases to indicate that discrimination against African Americans was the paradigm case which U.S. courts stretched when they could to justify discrimination against other nonwhites, and thus to provide support for the black/white paradigm of race. The distinguished historian John Hope Franklin argued in this way at the first official meeting of the Race Relations Commission which was convened by former U.S. President Bill Clinton to advance his initiative for a national dialogue on race. Franklin maintained that "racism in the black/white sphere" developed first in North America when slavery was introduced in the Jamestown colony in 1619 and has served as a model for the treatment of race in the U.S. Attorney Angela Oh, also serving on the commission, argued against Franklin on this point, using the example of the uprising of April 29, 1992 in Los Angeles to show that the specific history and racist treatment of Asian Americans needs to be accounted for in order to understand what occurred during that event. "I just want to make sure we go beyond the black-white paradigm. We need to go beyond that because the world is about much more than that ..." she said.¹⁶ Frank Wu, commenting on this exchange, tries diplomatically to unite both sides, affirming that "African Americans bear the greatest burden of racial discrimination" and that the Los Angeles uprising needs to be understood in relation both to African American history as well as Korean American history (and, I would add, Latino/a history, since Latino/as were the largest number of arrested). Wu advocates the following: Whatever any of us concludes about race relations, we should start by including all of us ... Our leaders should speak to all individuals, about every group, and for the country as a whole. A unified theory of race, race relations, and racial tensions must have whites, African Americans, and all the rest, and even within groups must include Arab Americans, Jewish Americans, white ethnicities, and so forth. Our theory is an inadequate account otherwise.¹⁷ The question Wu does not address directly is whether the continued acceptance of the black/white paradigm will allow such a comprehensive account. The reality of race in the U.S. has always been more complicated than black/white. The initial exclusionary laws concerning testimony in court, as mentioned earlier, grouped "blacks, mulattoes, and Native Americans." The Chinese laborers brought to the West in the 1800's had specific rulings and ideological justifications used against them, restricting their right not only to vote or own property but even to marry other Chinese. This latter ruling outlasted slavery and was justified by invoking images of Asian overpopulation. To avoid reproduction, Chinese women were allowed to come as prostitutes but not as wives, a restriction no other group faced. The Mexicans defeated in the Mexican-American War were portrayed as cruel and cowardly barbarians, and although the Treaty of Guadalupe-Hidalgo ratified in 1848 guaranteed the Mexicans who stayed in the U.S. full rights of citizenship, like the treaties with Native Americans neither local governments nor the federal courts upheld the Mexicans right to vote or respected the land deeds they held before the Treaty.¹⁸ By the time of the Spanish American War of 1898 the image of barbarism used against Mexicans was consistently attributed to a Latin-Catholic heritage and expanded for use throughout Latin American and the Caribbean, thus subsequently affecting the immigrant populations coming from these countries as well as justifying U.S. claims of hegemony in the region.¹⁹ The so-called Zoot Suit riots in Los Angeles in 1943 targeted Mexicans and their ethnically specific style of dress. The attempts made to geographically sequester and also to forcibly and totally assimilate Native American groups were not experienced by any other group, and had their own ideological justifications that combined contradictory images of the Great Chain of Being with the romanticized Noble Savage. Native peoples were represented as vanquished, disappearing, and thus of no account. The paradigm of an antiblack racism intertwined with slavery does not help to illuminate these and other specific experiences of other nonwhite groups, where ideologies often relied on charges of evil, religious backwardness, horde mentalities, being a disappearing people, and other projections not used in regard to African Americans. The hegemony of the black/white paradigm

has stymied the development of an adequate account of the diverse racial realities in the U.S., and weakened the general theories of racism which attempt to be truly inclusive. This has had a negative effect on our ability to develop effective solutions to the various forms racism can take, to make common cause against ethnic and race based forms of oppression and to create lasting coalitions, and has recently played a significant role in the demise of affirmative action. I will support these claims further in what follows.

The black/white binary forces a reactionary politics that make coalition building and identity definition impossible while artificially inflating white domination to the point of inevitability

Alcoff, Professor of Philosophy, Syracuse University/SUNY Stony Brook, 2003 (Linda Martín Alcoff, *The Journal of Ethics*, Vol. 7, No. 1, Race, Racism, and Reparations (2003), pp. 5-27 “Latino/As, Asian Americans, and the Black-White Binary”; JSTOR, accessed 7/26/15)//JH @ DDI

Roberto Suro argues that the black/white binary disadvantages Latino/as and other people of color who are not African Americans by forcing them to adopt the strategies of civil rights litigation even though it was "not particularly well-suited to Latino/as" who are a much more diverse group.²⁴ For example, any meaningful redress of economic discrimination affecting Latino/as and Asian Americans will need to disaggregate these groups, as some "target of opportunity" programs today in fact do, since the gap between median incomes in Filipino and Japanese households, or between Puerto Rican and Cuban households, makes averaging these incomes useless as an indicator of economic success. Richard Delgado argues that "If one's paradigm identifies only one group as deserving of protection, everyone else is likely to suffer." Current civil rights legislation, in Delgado's view, has provided legal advantages for African Americans, unwittingly perhaps, over other people of color. I do not take Delgado to be implying that the legislation has effectively benefited the African American population and been applied forcefully and universally, but that the language of the law, however much it has yet to be applied, identifies only one group and this is a problem. Just as the protection of the right of property advantages the propertied, and the protection of free speech increases the influence of those who are articulate and can afford microphones, TV air time, and so on ... the Equal Protection Clause produces a social good, namely equality, for those falling under its coverage - blacks and whites. These it genuinely helps - at least on occasion. But it leaves everyone else unprotected.²⁵ Put in more general terms, these arguments can be summarized as follows: 1) The black/white paradigm has disempowered various racial and ethnic groups from being able to define their own identity, to mark their difference and specificity beyond what could be captured on this limited map. Instead of naming and describing our own identity and social circumstance, we have had descriptions foisted on us from outside. 2) Asian Americans and Latino/as have historically been ignored or marginalized in the public discourse in the U.S. on race and racism. This is a problem for two reasons, first, because it is simply unfair to be excluded from what concerns one, and second, because it has considerably weakened the analysis of race and racism in the mainstream discussions. To explain the social situation of Asian Americans or Latino/as simply in terms of their de jure and de facto treatment as nonwhites is to describe our condition only on the most shallow terms. We must be included in the discussions so that a more adequate account can be developed. 3) By eliminating specificities within the large "black" or nonwhite group, the black/white binary has undercut the possibility of developing appropriate and effective legal and political solutions for the variable forms that racial oppression can take. A broad movement for civil rights does not require that we ignore the specific circumstances of different racial or ethnic identities, nor does it mandate that only the similarities can figure into the formulation of protective legislation. I will discuss an example of this problem, one that concerns the application of affirmative action in higher education, at the end of this essay. 4) Another major disadvantage of eliminating specificities within the large "black" or nonwhite group is that one cannot then either understand or address the real conflicts and differences within this amalgam of peoples. The black/white paradigm proposes to understand all conflicts between communities of color through anti-black racism, when the reality is often more complex. 5) For all these reasons, the black/white paradigm seriously undermines the possibility of achieving coalitions. Without being a conspiracy theorist, it is obvious that keeping us in conflict with each other and not in coalition is in

the interests of the current power structure. I would add to these arguments the following two. 6) The black/white binary and the constant invocation of all race discourses and conflicts as between blacks and whites has produced an imaginary of race in this country in which a very large white majority confronts a relatively small black minority, which has the effect of reenforcing the sense of inevitability to white domination. This is not the reality of racial percentages in almost any major urban center in the country today. Nonwhites outnumber whites in New York, NY, Miami, FL, Chicago, IL, Atlanta, GA, and Los Angeles, CA, and come very close in San Francisco, CA, Dallas, TX, and Washington DC. The original intent of the electoral college was to protect small states and create a buffer between the hoi polloi and the U.S. Government, but the current effect of the electoral college given these changed demographics has the added "advantage" of disenfranchising the occupants of cities generally and people of color specifically from influencing national electoral outcomes. If the popular vote determined elections, the cities would have the determining numbers of votes, since this is where the majority of U.S. citizens now live and where the trend of movement is toward. The numbers and concentrations of people of color in the U.S. means that we are quickly moving past the politics of recognition, where people of color clamor for recognition from the all powerful majority, and reaching the politics of power negotiation, where we can negotiate from a position of power rather than having to rely exclusively on moral appeals. The white majority will not maintain its near hegemonic political control as new configurations of alliances develop.²⁶ Moreover, the white majority is far from monolithic, splintering most notably along gender and class lines: the gender gap has widened in electoral politics along with the gap between union and non-union households (the two largest gaps in the last presidential election), with droves of white women and white union members voting the same as the majority of people of color. Thus, thinking of race in terms only of black and white produces a sense of inevitability to white domination which is not empirically supportable. I believe this issue of imagery is very significant. Whites must come to realize that maintaining white dominance for much longer is simply not a viability, short of fascism, or significantly expanding the fascist treatments that many communities already experience. By maintaining the black/white binary we only persist in falsely representing the realities of race in the U.S.; by opening up the binary to rainbow images and the like we can more accurately and thus helpfully present the growing and future conditions within which political action and contestations will occur. This is in everyone's interests. For this reason, the increasingly high profile of Asian Americans, Native Americans, and Latino/as is all to the good. It may also someday lead away from the imagery of oppositionality, or mutually exclusive interests, which the very terms black and white have long conveyed, and move toward an imagery of pluralism (which has some of its own problems, I realize, but which can more readily recognize the diverse ways in which alliances and differences can occur). 7) The next argument that I would make in regard to the black/white binary is that it mistakenly configures race imagistically as exclusively having to do with color, as if color alone determines racial identity (which has not been the case even for African Americans), and it makes it seem as if between African Americans and European Americans all the other races must be lined up somewhere on this continuum of color since "white" and "black" clearly represent the polar extremes. There is certainly a racist continuum of color operating in this and in many countries, but this continuum is not the only axis by which racism operates.

2NC Racial Binaries Turn – A2 trivializaing antiblackness/antiblackness focus key

The argument is not that antiblackness is wrong or unimportant, rather, it is necessary to acknowledge other racisms to effectively combat racial issues

Alcoff, Professor of Philosophy at Hunter College/CUNY, 2013 (linda martin alcoff, critical philosophy of race, vol. 1, no. 1, 2013 “afterword The Black/White Binary and Antiblack Racism” project muse; accessed 7/27/15)//JH @ DDI

Living in these times of ongoing, persistent, and extreme antiblack racism, from police violence to voter suppression to crushing unemployment and poverty, it feels a harsh task to criticize the hegemony of the black/white binary in antiracist discourses. The difficult challenge of this critical project has always been the question of how to critique the binary without deflating our commitment to address antiblack racism or implicitly denying the value and importance of work that is centered on this virulent form of racism. The presidency of Barack Obama in the United States has only underscored the fact that even in the twenty-

first century the hysteria of what some have called “negrophobia” continues to thrive and even to grow. And what is also persistently obvious is that antiblack racism is a kind of equal-opportunity phenomenon, infecting all communities of color in both overt and subtle ways. Yet combating antiblack racism will require a coalition of forces motivated to come together with a sense that the full range of race and identity related problems are acknowledged and addressed. It thus requires an understanding of all the ways racism itself works. The articles in this special issue showcase the growth in our understandings of racism, from antiblack racism, to the explosion of xenophobic nativism, to the incapacity of the binary to capture Asian American women. Clearly, we should begin to refer to racisms in the plural. The multiple ways in which the targets of racism are constituted, (mis)represented, and interpellated reveal differences of form, and not only, or even always, differences of degree. Some groups are purported to be intellectual and cultural inferiors, some are purported to be intellectually superior but unable or unwilling to assimilate, others are viewed as constituting an inherent existential threat to the West as a whole because of their religious culture. These are just the main examples. Contrasting narratives yield different affective responses, from contempt to animosity to fear to a complete disavowal of existence, with coordinated practical responses that range from forced assimilation into a stratified and segregated structure, to hysterical overreactions of competitiveness, to military aggression. There may be commonalities running through these variations such as a basic disrespect for life, but these variations cannot explain the formations of specific racist narratives or the diversity of practices. Rather than highly general arguments about functionalism and universal aversions to difference (arguments that breed pessimism, lack convincing evidence, and eclipse important distinctions), we need local analyses. Anti-Latino racisms are themselves pluralist and diverse, with quite different treatment meted out to Cubans of the professional class versus Guatemalan day laborers or Puerto Ricans seeking social services. Latinos in Germany often have quite a different experience than those in Arizona. Racisms take their opportunities from local discourses and conflicts and histories.

1NC Miseducation Contention Frontline

- 1. There's no impact to miseducation and debate isn't a classroom – they can't access a shift in epistemic frame*
- 2. They have no solvency advocate – their own author advocates counter-gazing to redirect attention to whiteness making it visible*

Yancy, 12 (George Yancy Ph.D. at Philosophy, Duquesne University) Look, A White! Philosophical Essays on Whiteness [1-3]

Look, a Negro! The utterance grabs ones attention. It announces something to be seen, to be looked at, to be noticed, to be watched, and, in the end, to be controlled. "Look" catches our attention, forcing us to turn our heads in anticipation, to twist our bodies, to redirect our embodied consciousness. The entire scene is corporeal. "Negro!" functions as a signifier that gives additional urgency to the command to "Look." So the imperative "Look" becomes intensified vis-a-vis the appearance of a "Negro." "Look, a shooting star!" elicits a response of excitement, of hoping to catch sight of the phenomenon and perhaps even to make a wish. "Look, a Negro!" elicits white fear and trembling, perhaps a prayer that one will not be accosted. In short, "Look" has built in it—when followed by "a Negro!"—a gestured warning against a possible threat, cautioning those whites within earshot to be on guard, to lock their car doors, to hold their wallets and purses for dear life, to gather their children together, to prepare to move house, and (in some cases) to protect the "purity" of white women and to protect white men from the manipulating dark temptress. Frantz Fanon writes about his experiences when a little white boy "sees" him: "Look, a Negro!" It was an external stimulus that flicked over me as I passed by. I made a tight smile. "Look, a Negro!" It was true. It amused me. "Look, a Negro!" The circle was drawing a bit tighter. I made no secret of my amusement. "Mama, see the Negro! I'm frightened!" Frightened! Frightened! Now they were beginning to be afraid of me. I made up my mind to laugh myself to tears, but laughter had become impossible. Note the iterative "Look, a Negro!" It is repetitive and effectively communicates something of a spectacle to behold. Yes. It's a Negro! Be careful! Negroes steal, they cheat, they are hypersexual, mesmerizingly so, and the quintessence of evil and danger. The tight smile on Fanons face is a forced smile, uncomfortable, tolerant. Fanon feels the impact of the collective white gaze. He is, as it were, "strangled" by the attention. He has become a peculiar thing. He becomes a dreaded object, a thing of fear, a

frightening and ominous presence. The turned heads and twisted bodies that move suddenly to catch a glimpse of the object of the white boy's alarm function as confirmation that something has gone awry. Their abruptly turned white bodies help to "materialize" the threat through white collusion. The white boy has triggered something of an optical frenzy. Everyone is now looking, bracing for something to happen, something that the Negro will do. And given his "cannibal" nature, perhaps the Negro is hungry. Fanon writes, "The little white boy throws himself into his mother's arms: Mama, the niggers going to eat me up."² Fanon has done nothing save be a Negro. Yet this is sufficient. The Negro has always already done something by virtue of being a Negro. It is an anterior guilt that always haunts the Negro and his or her present and future actions. After all, this is what it means to be a Negro—to have done something wrong. The little white boy's utterance is felicitous against a backdrop of white lies and myths about the black body. As Robert Gooding-Williams writes, "The [white] boy's expression of fear posits a typified image of the Negro as behaving in threatening ways. This image has a narrative significance, Fanon implies, as it portrays the Negro as acting precisely as historically received legends and stories about Negroes generally portray them as acting."³ One can imagine the "innocent" white index finger pointing to the black body. "Here the 'pointing' is not only an indicative, but the schematic foreshadowing of an accusation, one which carries the performative force to constitute that danger which it fears and defends against."⁴ The act of pointing is by no means benign; it takes its phenomenological or lived *toll* on the black body. As Fanon writes, "My body was given back to me sprawled out, distorted, recolored, clad in mourning in that white winter day. The Negro is an animal, the Negro is bad, the Negro is mean, the Negro is ugly; look, a nigger."⁵ Fanon is clear that the white boy, while not fully realizing the complex historical, psychological, and phenomenological implications, has actually distorted his (Fanon's) body. "Look, a Negro!" is rendered intelligible vis-a-vis an entire play of white racist signifiers that ontologically truncate the black body; it is an expression that calls forth an entire white racist worldview. The white boy, though, is not a mere innocent proxy for whiteness. Rather, he is learning, at that very moment, the power of racial speech, the power of racial gesturing. He is learning how to think about and feel toward the so-called dark Other. He is undergoing white subject formation, a formation that is fundamentally linked to the object that he fears and dreads.

3. The aff has no method to access deconstruction -- the Bell evidence is all in the context of racial realism

4. Instead of fetishizing breaking silence we should embrace silence as a means of resisting regulation and depoliticization

Brown 1996 [Wendy Brown, Prof. Political Science, Prof. Rhetoric, Prof. Critical Theory @ UC-Berkeley, 96, "In the 'folds of our own discourse': The Pleasures and Freedoms of Silence," 3 U. Chi. L. Sch. Roundtable, 186]

But if the silences in discourses of domination are a site for insurrectionary noise, if they are the corridors we must fill with explosive counter-tales, it is also possible to make a fetish of breaking silence. Even more than a fetish, it is possible that this ostensible tool of emancipation carries its own techniques of subjugation—that it converges with non-emancipatory tendencies in contemporary culture (for example, the ubiquity of confessional discourse and rampant personalization of political life), that it establishes regulatory norms, coincides with the disciplinary power of confession, in short, feeds the powers we meant to starve. While attempting to avoid a simple reversal of feminist valorizations of breaking silence, it is this dimension of silence and its putative opposite with which this Article is concerned. In the course of this work, I want to make the case for silence not simply as an aesthetic but a political value, a means of preserving certain practices and dimensions of existence from regulatory power, from normative violence, as well as from the scorching rays of public exposure. I also want to suggest a link between, on the one hand, a certain contemporary tendency concerning the lives of public figures—the confession or extraction of every detail of private and personal life (sexual, familial, therapeutic, financial) and, on the other, a certain practice in feminist culture: the compulsive putting into public discourse of heretofore hidden or private experiences—from catalogues of sexual pleasures to litanies of sexual abuses, from chronicles of eating disorders to diaries of homebirths, lesbian mothering, and Gloria Steinam's inner revolution. In linking these two phenomena—the privatization of public life via the mechanism of public exposure of private life on the one hand, and the compulsive/compulsory cataloguing of the details of women's lives on the other—I want to highlight a modality of regulation and depoliticization specific to our age that is not simply confessional but empties private life

into the public domain, and thereby also usurps public space with the relatively trivial, rendering the political personal in a fashion that leaves injurious social, political and economic powers unremarked and untouched. In short, while intended as a practice of freedom (premised on the modernist conceit that the truth shall make us free), these productions of truth not only bear the capacity to chain us to our injurious histories as well as the stations of our small lives but also to instigate the further regulation of those lives, all the while depoliticizing their conditions. My concern with what might be called compulsory feminist discursivity and the presumed evil of silences has yet another source. Notwithstanding American academic feminism's romance with Foucault, there is an oddly non or pre-Foucauldian quality to much feminist concern with censorship and silencing. In these formulations, expression is cast either as that which makes us free, tells our truth, puts our truth into circulation, or as that which oppresses us by putting "their" truth into circulation in the form of pornography, hate speech, harassment or simply the representation of the world from "the male point of view."⁴ If one side in the debate argues for more expression on our part—for example, by making our own pornography or telling our own stories—and the other argues for less on "their" part, both sides nonetheless subscribe to an expressive and repressive notion of speech, its capacity to express the truth of an individual's desire or condition, or to repress that truth. Both equate freedom with voice and visibility. Both assume recognition to be unproblematic when we tell our own story, and assume that such recognition is the material of power and pleasure. Neither, in short, confronts the regulatory potential of speaking ourselves. I think the whole contemporary debate over censorship—whether focused on porn or rap music—is necessarily bound to an expressive-repressive model of power and freedom, which may explain why those who feel passionately about both freedom and dignity have trouble finding their way in this debate. If the choice is cast either as the free circulation of music and pictures venerating rape, racism, and misogyny, or state repression of the same, how does one choose? To inaugurate a different kind of analysis of the relationship between silence, speech, and freedom, I want to turn to two passages in Foucault's work, the first from *The History of Sexuality: Discourses are not once and for all subservient to power or raised up against it, any more than silences are . . . Discourse transmits and produces power; it reinforces it, but also undermines and exposes it, renders it fragile and makes it possible to thwart it.* In like manner, silence and secrecy are a shelter for power, anchoring its prohibitions; but they also loosen its hold and provide for relatively obscure areas of tolerance. Foucault here marks the ambiguity of silence in relationship to power, insisting that silence functions not only as a "shelter for power" but also as a shelter from it. (Foucault's example is the putative freedom of homosexual practice in a historical age when there is no discourse for or about it).⁸ This paradoxical capacity of silence to engage opposites with regard to power is rarely associated with Foucault's thinking due to his emphasis on discourse as power. Yet I do not think he is here renegeing on this emphasis nor, in speaking of silence as a shelter from power, suggesting a pre-discursive existence to things. Critical here is the difference between what Foucault calls unitary discourses, which regulate and colonize, and those which do not perform these functions with same social pervasiveness, even as they do not escape the tendency of all discourse to establish norms by which it regulates and excludes. It is through this distinction that one can make sense of Foucault's otherwise inexplicable reference to sex in the eighteenth century as being "driven out of hiding and constrained to lead a discursive existence,"⁹ or his troubling example of the village simpleton whose "inconsequential" habit of molesting young girls in exchange for pennies was suddenly subjected to medical, judicial, and popular scrutiny and condemnation. ° Neither in these cases nor in others where Foucault seems to imply a "freer" because pre-discursive existence to certain practices would he appear to mean that they really occurred "outside" discourse, but rather that they had not yet been brought into the pervasive regulatory discourses of the age—science, psychiatry, medicine, law, pedagogy, and so forth." Silence, as Foucault affirms it, then, is identical neither with secrecy nor with not speaking. Rather, it signifies a relation to regulatory discourses, as well as a possible niche for the practice of freedom within those discourses. If, as Foucault insists, freedom is a practice (as opposed to an achievement, condition, or institution), then the possibility of practicing freedom inside a regulatory discourse occurs in the empty spaces of that discourse as well as in resistance to the discourse. Moreover, silence can function as speech in both ways at once, as in the following autobiographical example offered by Foucault: *Maybe another feature of this appreciation of silence is related to the obligation of speaking. I lived as a child in a petit bourgeois, provincial milieu in France and the obligation of speaking, of making conversation with visitors, was for me something both very strange and very boring. I often wondered why people had to speak.* 2

5. *The Yancey 12 role of the ballot card doesn't mention Latin@s at all – its just power tagged*

6. *Academia has been militarized – the affirmative's radical strategy of visibility and calls for dialogue will be co-opted for sovereign violence*

Giroux '08 [Henry A., Professorship at McMaster University in the English and Cultural Studies Department, "Against the Militarized Academy", <http://www.truth-out.org/archive/component/k2/item/81138:against-the-militarized-academy>] from Ani's moten neg

In a post-9/11 world, with its all-embracing war on terror and a culture of fear, the increasing spread of the discourse and values of militarization throughout the social order is intensifying the shift from the promise of a liberal democracy to the reality of a militarized society. Militarization suggests more than simply a militaristic ideal - with its celebration of war as the truest measure of the health of the nation and the soldier-warrior as the most noble expression of the merging of masculinity and unquestioning patriotism - **but an intensification and expansion of the underlying values, practices, ideologies, social relations and cultural representations associated with military culture.** What appears new about **the amplified militarization of the post-9/11 world** is that it **has become normalized, serving as a powerful educational force that shapes our lives, memories and daily experiences. As an educational force, military power produces identities, goods, institutions, knowledge, modes of communication and affective investments - in short, it now bears down on all aspects of social life and the social order.** As Michael Geyer points out, what is distinctive about the militarization of the social order is that **civil society not only "organizes itself for the production of violence,"(2) but increasingly spurs a gradual erosion of civil liberties. Military power and policies are expanded to address not only matters of defense and security, but also problems associated with the entire health and social life of the nation, which are now measured by military spending, discipline and loyalty, as well as hierarchical modes of authority.** As citizens increasingly assume the roles of informer, soldier and consumer willing to enlist in or be conscripted by the totalizing war on terror, we see the very idea of the university as a site of critical thinking, public service and socially responsible research being usurped by a manic jingoism and a market-driven fundamentalism that enshrine the entrepreneurial spirit and military aggression as means to dominate and control society. This should not surprise us, since, as William G. Martin, a professor of sociology at Binghamton University, indicates, **"universities, colleges and schools have been targeted precisely because they are charged with both socializing youth and producing knowledge of peoples and cultures beyond the borders of Anglo-America."**(3) But **rather than be lulled into complacency by the insidious spread of corporate and military power, we need to be prepared to reclaim institutions such as the university that have historically served as vital democratic spheres protecting and serving the interests of social justice and equality.** What I want to suggest is that **such a struggle is not only political, but also pedagogical in nature.** Over 17 million students pass through the hallowed halls of academe, and it is crucial that they be educated in ways that enable them to recognize creeping militarization and its effects throughout American society, particularly in terms of how these effects threaten "democratic government at home just as they menace the independence and sovereignty of other countries."(4) But **students must also recognize how such anti-democratic forces work in attempting to dismantle the university itself as a place to learn how to think critically and participate in public debate and civic engagement.**(5) In part, **this means giving them the tools to fight for the demilitarization of knowledge on college campuses - to resist complicity with the production of knowledge, information and technologies in classrooms and research labs that contribute to militarized goals and violence. Even so, there is more at stake than simply educating students to be alert to the dangers of militarization and the way in which it is redefining the very mission of higher education.** Chalmers Johnson, in his continuing critique of the threat that the politics of empire presents to democracy at home and abroad, argues that if the United States is not to degenerate into a military dictatorship, in spite of Obama's election, a grass-roots movement will have to occupy center stage in opposing militarization, government secrecy and imperial power, while reclaiming the basic principles of democracy.(6) Such a task may seem daunting, but

there is a crucial need for faculty, students, administrators and concerned citizens to develop alliances for long-term organizations and social movements to resist the growing ties among higher education, on the one hand, and the armed forces, intelligence agencies and war industries on the other - ties that play a crucial role in reproducing militarized knowledge.

7. The aff fails to engage larger structures of power—forecloses possibility of change

Ebert 93 (Teresa Ebert, “Ludic Feminism, the Body, Performance, and Labor: Bringing “Materialism” Back into Feminist Cultural Studies”, <http://www.jstor.org/stable/1354189>, winter 1992-1993) from Samantha’s Handmaid Neg

A move toward an emancipatory politics for feminism needs to be based on a materialist cultural critique. But in order to be effective, cultural critique must intervene in the system of patriarchal oppression at both the macropolitical level of the structural organization of domination (a transformative politics of labor relations) and the micropolitical level of different and contradictory manifestations of oppression (cultural politics). Ludic postmodern cultural studies and much recent feminist theory all tend to confine their analysis to the micropolitics of oppression and the local level of differences. In doing so, they inhibit any effective intervention in the structures of totalities like patriarchy. I believe resistance postmodern cultural studies and postmodern materialist feminism, with their dialectical critiques of both the structures of difference-in-relation and the specific enunciations of these differences, will develop a transformative theory and practice that can contribute to the end of patriarchal exploitation. For it is through the unrelenting critique of the socioeconomic relations of difference, particularly the division of labor, and the way they construct and restrict the meanings and subjectivities they require that feminist cultural studies can help bring about the nonexploitative future.

2NC Micropolitics fails extension

Theorizing is useless without application to the real world

Wark 12 (McKenzie Wark, “How Do You Occupy an Abstraction?”, <https://larvalsubjects.wordpress.com/2012/08/04/mckenzie-wark-how-do-you-occupy-an-abstraction/>, 8/4/12) from Samantha’s Handmaid Neg

The crisis of contemporary politics is thus the crisis of the erasure of site. In the age of hyperobjects, we come to dwell in a world where there is no clear site of political antagonism and therefore no real sense of how and where to engage. Here I’m also inclined to say that we need to be clear about system references in our political theorizing and action. We think a lot about the content of our political theorizing and positions, but I don’t think we think a lot about how our political theories are supposed to actually act in the world. As a result, much contemporary leftist political theory ends up in a performative contradiction. It claims, following Marx, that its aim is not to represent the world but to change it, yet it never escapes the burrows of academic journals, conferences, and presses to actually do so. Like the Rat-Man’s obsessional neurosis where his actions in returning the glasses were actually designed to fail, there seems to be a built in tendency in these forms of theorization to unconsciously organize their own failure. And here I can’t resist suggesting that this comes as no surprise given that, in Lacanian terms, the left is the position of the hysteric and as such has “a desire for an unsatisfied desire”. In such circumstances the worst thing consists in getting what you want. We on the left need to traverse our fantasy so as to avoid this sterile and self-defeating repetition; and this entails shifting from the position of political critique (hysterical protest), to political construction—actually envisioning and building alternatives.

LEADS Act SDI

****Off-Case**

Terrorism/Crime—1NC Link

Relying on MLATs results in lengthy delays – compromises responses to terrorism and drug trafficking

Schultheis 15 (Ned, Summer Associate at Ropes & Gray LLP, “WARRANTS IN THE CLOUDS: HOW EXTRATERRITORIAL APPLICATION OF THE STORED COMMUNICATIONS ACT THREATENS THE UNITED STATES’ CLOUD STORAGE INDUSTRY,” Volume 9 Issue 2, CMR)

At the same time, there is merit to the U.S. government’s argument that the current MLAT process is slow and subject to political objectives that may not conform to time sensitive investigations of international matters of concern.²³³ It is evident Microsoft and Ireland denounce the U.S. government’s alleged bypass of the U.S.-Irish MLAT.²³⁴ Although the U.S.- Irish MLAT’s purpose is “to improve the effectiveness of the law enforcement authorities of both countries in the investigation, prosecution, and prevention of crime through cooperation and mutual legal assistance in criminal matters,”²³⁵ and, traditionally, is the process by which the U.S. government would obtain evidence located in Ireland through a domestic warrant, the U.S. government’s arguments for efficiency in relation to criminal investigation has legitimate backing in today’s post-9/11 era. Criminal investigations on high security matters, such as drug enforcement or terrorism, need to run smoothly and efficiently because time of the essence. There is no reason to bog down investigations where critical evidence is located abroad and risk losing valuable intelligence due to another nation’s potential political goals that may be in opposition with the ongoing U.S. investigation in sending the evidence in a timely manner.

---Laundry List 2NC Link

The plan creates numerous hurdles for law enforcement: weak MLAT process, U.S. person exception, and evasion from cross-country providers

Nojeim 14 (Greg, Senior Counsel and Director, Freedom, Security and Technology Project, “LEADS Act Extends Important Privacy Protections, Raises Concerns,” Sept 18, <https://cdt.org/blog/leads-act-extends-important-privacy-protections-raises-concerns/>, CMR)

However, it is widely admitted that the MLAT process for trans-border access does not work very well now. Basically, it is under-resourced and too slow. Recognizing that the MLAT process is the best way to accommodate the interests of two governments when one country seeks data stored in another country, the LEADS Act includes a number of sensible improvements to the U.S. MLAT process; improvements that the U.S. can hold up as a model for other countries to emulate. The bill would require the Department of Justice to create an online intake form through which foreign governments could request mutual legal assistance, and it would permit the DOJ to give preference to requests made on-line. The bill also would require the DOJ to track and report on its processing of MLAT requests. These requirements are designed to make MLAT processing more efficient and transparent to the foreign government seeking the disclosures. The Department of Justice had already sought a \$25.1 appropriation to hire more lawyers to handle MLAT requests it receives and makes. CDT supports this funding request and believes that, should the LEADS Act pass, MLAT funding should be increased to help DOJ implement the improvements in the bill. The LEADS Act creates one exception to the principle that U.S. warrants are not sufficient to reach content stored abroad. The bill says that a U.S. warrant, served on a company in the U.S. can force that service provider to disclose email and other content stored outside the U.S. if the holder of the account is a “U.S. person” — a citizen or lawful permanent resident of the United States, or a company organized under the laws of the United States or of a state. A savings clause permits the service provider to seek a

modification of the warrant if compliance would put the provider in the position of violating the law in the place where the data is stored. This U.S. person exception gives us pause. One way to look at it, and at the bill as a whole, is that it extends the warrant protection to all content stored in the U.S., regardless of citizenship of the account holder, and it extends the warrant requirement to all content of U.S. persons stored by U.S. companies abroad, while disavowing U.S. claims to unilaterally obtain the content of non-U.S. persons stored abroad. Looked at that way, the U.S. person exception is not an exception – it is a further extension of the warrant requirement. It will reduce the burden the bill would otherwise place on the MLAT process because MLATs would not be necessary for content stored abroad in an account a U.S. person had established. On the other hand, the exception may be difficult to administer. Sometimes, the citizenship or residence of the account holder will be unknown, and when it is, does the warrant reach that stored content, or not? Also, the exception would seem to create some odd results. Consider, for example, two people working side-by-side in the U.S., one a citizen and one a foreign national. The LEADS Act would establish one rule (the extraterritorial warrant) for U.S. law enforcement to access content that a U.S. provider stores abroad on behalf of the American, and a different rule (the MLAT process) for the person who sits in the cubical next door, but who happens to be a non-citizen working in the U.S. on a temporary visa. Also, we have to consider how foreign governments will react. Some adverse consequences would be mitigated because the LEADS Act would make it clear that data stored in the U.S. could be disclosed only with a warrant. Even if foreign governments copied the LEADS Act's extraterritorial assertion of authority over data regarding their own citizens, those governments could not unilaterally force U.S. companies to disclose data stored in the U.S. ECPA already protects that data and requires compliance with the MLAT process, and the LEADS Act enhances that protection. However, all stakeholders need to think carefully about how the LEADS Act would affect the global balance of privacy versus government power with respect to data U.S. providers store outside the U.S. for account holders who are not Americans. There is also a risk that the LEADS Act will increase the pressure for data localization mandates. The bill includes language that puts the Senate on record as opposing data localization, but it may not be enough. Finally, it is not clear how the bill would apply to providers who move data to different data centers around the globe in order to balance the burden on their network and better serve their users. If a load-balancing provider stores a user's data at one moment in India, the next in the U.K., and the next in the U.S., will the U.S. warrant reach the data because the data at some point comes to the U.S.?

---Evasion 2NC Link

The plan sets a precedent for manipulation and evasion by criminals – crushes law enforcement effectiveness

Bharara 14 (Preet, United States Attorney Southern District of New York, “GOVERNMENT’S BRIEF IN SUPPORT OF THE MAGISTRATE JUDGE’S DECISION TO UPHOLD A WARRANT ORDERING MICROSOFT TO DISCLOSE RECORDS WITHIN ITS CUSTODY AND CONTROL,” July 9, <http://cdn.arstechnica.net/wp-content/uploads/2014/07/federalbrief-microsoftcase.pdf>, CMR)

4. Policy Considerations Weigh Decisively Against Microsoft’s Position The policy consequences of Microsoft’s position further demonstrate that it cannot reflect the intent of Congress. 14 In today’s digital environment, email and other electronic communications are used extensively by criminals of all types in the United States and abroad, from fraudsters to hackers to drug dealers, in furtherance of violations of U.S. law. The ability to obtain electronically stored information from domestic service providers—pursuant to judicial authorization as required by the SCA—is a fundamental component of effective modern law enforcement. Yet such information, like the data sought by the Warrant here, can be maintained in any location and moved around the world easily, at any time and for any reason. Were Microsoft’s position adopted, the Government’s ability to obtain such information from a provider would turn entirely on whether it happens to be stored here or abroad, even though the provider, based in the United States, maintains control over the data wherever it is. Such a regime would be rife with potential for arbitrary outcomes and criminal abuse. Microsoft’s own data storage policy provides but one illustration.

According to Microsoft, where a user's data is stored depends entirely on which country the user selects when signing up for the account. Microsoft does not require or verify any actual connection between the user and the selected country. As Judge Francis noted, **a criminal user can easily manipulate such a policy to evade the reach of U.S. law enforcement** "by the simple expedient of giving false residence information, thereby causing the [provider] to assign his account to a server outside the United States." In re Warrant, 2014 WL 1661004, at *8. Of course, a provider need not base the location where it stores a user's data on the user's location at all—whether self-reported or verified. A provider may choose to store user data abroad, for example, simply to take advantage of lower costs associated with foreign server-hosting facilities. Or, on any given day, a provider might move a particular user's data from a U.S.-based server to a foreign server, and perhaps back again, for network maintenance or load-balancing reasons, which is an increasingly common practice with the growth of cloud computing. See Paul M. Schwartz, Information Privacy in the Cloud, 161 U. Pa. L. Rev. 1623, 1629 (May 2013) ("[C]loud computing is most frequently based on a complete lack of any stable location of data within the cloud provider's network. Data can be in one data center at 2pm and on the other side of the world at 4pm." (quoting Article 29 Data Prot. Working Party, Opinion 05/2012 on Cloud Computing 17, (EC) No. 01037/12, WP 196 (Jul. 1, 2012))). **A provider may even choose to store user data abroad with the specific intent to place it out of the Government's reach**, based, for example, on a desire to avoid the inconvenience of responding to legal process. Indeed, some providers less scrupulous than Microsoft **may do so with the specific intent to accommodate criminal users**. See, e.g., United States v. Paunescu, No. 13 Cr. 41 (RPP), Indictment (S.D.N.Y. filed Jan. 17, 2013) (bringing charges under 18 U.S.C. § 1030(b) against operator of "bulletproof hosting service," who, "in exchange for fees, . . . provided cyber criminals with Internet Protocol . . . addresses and servers in a manner designed to enable them to preserve their anonymity and evade detection by law enforcement").

---Delay 2NC Link

Existing policy key to expedience – any risk of delay is catastrophic

Schultheis 15 (Ned, Summer Associate at Ropes & Gray LLP, "WARRANTS IN THE CLOUDS: HOW EXTRATERRITORIAL APPLICATION OF THE STORED COMMUNICATIONS ACT THREATENS THE UNITED STATES' CLOUD STORAGE INDUSTRY," Volume 9 Issue 2, CMR)

Another prominent issue of contention was whether Congress intended for the SCA warrant to reach or apply extraterritorially.⁷⁶ When Congress enacted the SCA as part of the ECPA, it did not expressly cover the issue of its extraterritorial application.⁷⁷ However, **even though the Senate report "did not address the specific issue of extraterritoriality," the court felt there reflected an understanding that information was being maintained remotely by third-party entities.**⁷⁸ Microsoft argued that the U.S. Supreme Court previously held that a presumption against extraterritoriality exists when Congress has not given "clear indication of an extraterritorial application" within the language of the statute or explicitly noted otherwise.⁷⁹ However, **the court rejected Microsoft's argument.** The court stated that the existence of "the nationality principle," which recognizes that American criminal laws can apply outside the United States to legal entities subject to the jurisdiction of the United States, may require U.S. companies, such as Microsoft, to obtain evidence located abroad in connection with an ongoing domestic criminal investigation.⁸⁰ **To help its argument on the ambiguity of Congress's extraterritorial intent for the SCA, the court used other pieces of Congressional legislation to fill in the holes left by Congress within the SCA statute itself.**⁸¹ The court looked to the legislative history of the Uniting and Strengthening America By Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act of 2001 (the Patriot Act) for guidance and found that Section 108 of the Patriot Act allows "nationwide service of search warrants for electronic evidence."⁸² Specifically, the House Committee stated **the incredible time sensitivity of suspected terrorist's criminal proceedings rationalized the expansion of national search warrants.**⁸³ **The House Committee was focused on the potentially devastating "investigative delays caused by the cross-jurisdictional nature of the Internet."**⁸⁴ The Patriot Act allows a warrant under § 2703 to reach throughout the United States, so long as the ISP was located within the United States.⁸⁵ Therefore, it does not matter where the actual server that stored the electronic information (emails, etc.) was located.⁸⁶ The court interpreted the focus on the location of the ISP as opposed to the location of the actual server as evidence that Congress had "anticipated that an ISP located in the United States would be obligated to respond to a warrant issued pursuant to section 2703(a) by producing information within its control, regardless of where that information was stored."⁸⁷ **Based on the courts' interpretation of congressional legislative history, the court ultimately upheld the SCA warrant forcing Microsoft to disclose the e-mails located in Dublin, Ireland.**

---MLATs 2NC Link

No precedent for reliance on MLATs – only results in delays and resource overstretch

Schultheis 15 (Ned, Summer Associate at Ropes & Gray LLP, “WARRANTS IN THE CLOUDS: HOW EXTRATERRITORIAL APPLICATION OF THE STORED COMMUNICATIONS ACT THREATENS THE UNITED STATES’ CLOUD STORAGE INDUSTRY,” Volume 9 Issue 2, CMR)

Microsoft contends that extraterritorial application of the SCA allows the United States to bypass its MLAT obligation to Ireland and to obtain emails without going through the proper request channels.¹³² According to Microsoft, the United States avoided asking for permission to obtain emails held within Irish borders altogether and instead, demanded Microsoft to produce the e-mails without Irish consent.¹³³ In response, the U.S. government claimed that nowhere is there a law that mandates the U.S. government to obtain evidence located in foreign nations through the MLAT process when other legal measures exist to appropriately obtain that evidence.¹³⁴ More importantly, the U.S. government argued that the MLAT process was, if anything, an impractical method of obtaining the pertinent evidence in the ongoing investigation.¹³⁵ Ultimately, the court affirmed the Magistrate Judge’s opinion that it made little sense to require the U.S. government go through the U.S.-Irish MLAT process.¹³⁶ Chief Judge Preska agreed with Magistrate Judge Francis that in drafting the SCA, Congress likely did not intend the U.S. government go through the time consuming and inefficient MLAT process to obtain overseas documents and information located on domestic ISPs.¹³⁷ The court found reliance on MLAT process alone was not necessary, as the process is excessively dependent on mutual cooperation between nations who could have varying political and judicial agendas, which runs counter to the time sensitive nature of ongoing criminal investigations.¹³⁸

MLATs don’t work – results in excessive delays and to much political variability

Bharara 14 (Preet, United States Attorney Southern District of New York, “GOVERNMENT’S BRIEF IN SUPPORT OF THE MAGISTRATE JUDGE’S DECISION TO UPHOLD A WARRANT ORDERING MICROSOFT TO DISCLOSE RECORDS WITHIN ITS CUSTODY AND CONTROL,” July 9, <http://cdn.arstechnica.net/wp-content/uploads/2014/07/federalbrief-microsoftcase.pdf>, CMR)

Microsoft’s cavalier retort to these practical concerns—that the Government can simply use an MLAT whenever records are unavailable through the SCA (Br. 27- 30)—hardly suggests a satisfactory alternative. As an initial matter, Microsoft’s rosy view of the efficacy of the MLAT process bears little resemblance to reality. In contrast to an SCA warrant, which can be served upon a provider immediately upon issuance by a judge, an MLAT request typically takes months to process, with the turnaround time varying widely based on the foreign country’s willingness to cooperate, the law enforcement resources it has to spare for outside requests for assistance, and the procedural idiosyncrasies of the country’s legal system. See, e.g., In re Grand Jury Subpoenas, 318 F.3d 379, 381-82 (2d Cir. 2003) (noting that foreign country’s response to MLAT request was still incomplete after two years); United States v. Safavian, 644 F. Supp. 2d 1, 14 n.5 (D.D.C. 2009) (noting the long “length of time that frequently is required to acquire evidence by way of an MLAT”). It is no accident that federal law specifically provides for an exclusion of time under the Speedy Trial Act (for up to a year), as well as the suspension of a criminal statute of limitations (for up to three years), while the Government is waiting to receive foreign evidence in response to an MLAT request. See 18 U.S.C. §§ 3161(h)(8) & 3292.

Providers will evade MLATs by exceeding territorial jurisdiction – direct disclosure is best

Bharara 14 (Preet, United States Attorney Southern District of New York, “GOVERNMENT’S BRIEF IN SUPPORT OF THE MAGISTRATE JUDGE’S DECISION TO UPHOLD A WARRANT ORDERING MICROSOFT TO DISCLOSE RECORDS WITHIN ITS CUSTODY AND CONTROL,” July 9, <http://cdn.arstechnica.net/wp-content/uploads/2014/07/federalbrief-microsoftcase.pdf>, CMR)

Moreover, there are many countries in the world that do not even have MLATs with the United States. A U.S. provider could easily choose to locate its user data in such a country, either for business reasons or for the specific purpose of evading the reach of U.S. law enforcement. By the same token, a U.S. provider could—again, for legitimate or illegitimate reasons—distribute the contents of a single user account across computers maintained in dozens of countries, making it practically impossible for the Government to collect the account data through international channels, regardless of whether the countries involved have MLATs or not. As Judge Francis observed, it is even conceivable that a provider could establish server locations at sea or otherwise beyond the territorial jurisdiction of any nation. In re Warrant , 2014 WL 1661004, at *9. There is no reason to believe that Congress intended for such obstacles to thwart the Government from obtaining evidence of criminal activity, particularly when the providers involved often can, like Microsoft, easily disclose the relevant data through their information systems in the United States, no matter where the original copy happens to reside.

MLATs weak and beyond repair – risks years of delay, compromising law enforcement response
Hill 15 (Jonah Force, writes on Internet policy and cybersecurity issues, and formerly served in the White House Office of the Cybersecurity Coordinator and as a Cybersecurity Teaching Fellow at Harvard, “Problematic Alternatives: MLAT Reform for the Digital Age,” Jan 28, <http://harvardnsj.org/2015/01/problematic-alternatives-mlat-reform-for-the-digital-age/>, CMR)

But the MLAT system has struggled to keep pace with globalized data. The number of MLAT requests has skyrocketed and the matters they concern have grown vastly more complex. The United States Department of Justice (DOJ) estimates that over the past decade the “number of MLAT requests for assistance from foreign authorities has increased by nearly 60 percent, and the number of requests for computer records has increased ten-fold.” Many of today’s MLATs were drafted before globalized data and therefore do not address core questions of data jurisdiction, like how to treat data held overseas by a subsidiary of a domestic parent company. Perhaps most significantly, many MLATs do not effectively address fundamental issues like notions of privacy versus law enforcement’s need for evidence. For example, MLATs frequently do not specify what constitutes “protected data” or under what conditions “content” differs from “metadata” for the purposes of information sharing. This hinders cooperation between states with differing domestic understanding of these terms. The increase in MLAT requests and legal uncertainty surrounding privacy and data protection regulations have significantly delayed the MLAT process. The President’s Review Group on Intelligence and Communication Technologies (the independent review board tasked with assessing U.S. intelligence collection practices following Snowden) estimates that it takes an average of ten months for DOJ to process MLAT requests, and can take years. Foreign countries’ MLAT requests are similarly drawn out, and can take far longer. Such delays are unacceptable to law enforcement officials who urgently need information. Unsurprisingly, impatient prosecutors are looking for MLAT alternatives. However, those prosecutors and their governments must be mindful of the potential long-term consequences of those alternatives, particularly adverse consequences to the functioning of the Internet itself.

MLATs bad – Months of delay and whims of foreign governments

Kerr 14 (Orin, Fred C. Stevenson Research Professor at The George Washington University Law School, where he has taught since 2001, “What legal protections apply to e-mail stored outside the U.S.?” July 7, <http://www.washingtonpost.com/news/volokh-conspiracy/wp/2014/07/07/what-legal-protections-apply-to-e-mail-stored-outside-the-u-s/>, CMR)

I gather that is the same reason why DOJ doesn't want to go through the alternative of Mutual Legal Assistance. It's not that Irish law is more privacy protective. My understanding is that in Ireland, where the e-mails are stored, e-mails are disclosed to law enforcement when the e-mails will “likely . . . be of substantial value to the investigation” and “it must be in the public interest that they be produced, having regard to the likely benefit to the investigation and the circumstances under which the person in possession of the documents holds them.” Some folks who work in this area have suggested to me that this is actually somewhat lower than the U.S. probable cause standard. I gather the problem from DOJ's perspective is that mutual legal assistance takes a really long time — from what I hear, on the order of several months — and it often gives the foreign governments various discretionary calls as to whether they will go agree to hand over the data. Given that time is often critical in criminal investigations, that kind of delay and uncertainty presumably is a big problem from the government's perspective.

MLATs fails – squo is preferable

Hill 15 (Jonah Force, writes on Internet policy and cybersecurity issues, and formerly served in the White House Office of the Cybersecurity Coordinator and as a Cybersecurity Teaching Fellow at Harvard, “Problematic Alternatives: MLAT Reform for the Digital Age,” Jan 28, <http://harvardnsj.org/2015/01/problematic-alternatives-mlat-reform-for-the-digital-age/>, CMR)

DOJ made a policy choice to seek a warrant rather than using the MLAT process, based in large part on concerns about the efficacy of the MLAT system and the potential for a drawn-out waiting period. In its brief to the District Court supporting the warrant, the government argued, “[i]n contrast to an SCA warrant [the statutory form of warrant issued], which can be served upon a provider immediately upon issuance by a judge, an MLAT request typically takes months to process, with the turnaround time varying widely based on the foreign country's willingness to cooperate, the law enforcement resources it has to spare for outside requests for assistance, and the procedural idiosyncrasies of the country's legal system.” The Federal Magistrate ruling in support of the government's issuance of the warrant likewise noted that the “slow and laborious” MLAT procedures placed such a “substantial” burden on the government as to necessitate other means of retrieval. In other words, the government, the Federal Magistrate, and the District Court all rejected Microsoft's contentions and accepted the view that MLAT did not offer a satisfactory means of obtaining evidence and a warrant was a necessary alternative, notwithstanding extraterritoriality concerns.

Politics—ECPA Reform Unpopular

ECPA reform is a huge political fight

Rosenblatt 14 (Senior writer Seth Rosenblatt covered Google and security for CNET News, with occasional forays into tech and pop culture. Formerly a CNET Reviews senior editor for software, he has written about nearly every category of software and app available, “Google

cheers growing support for ECPA reform,” June 18, <http://www.cnet.com/news/google-cheers-growing-support-for-ecpa-reform/>, (CMR)

The ECPA changes still face a long road ahead. While Google says that it agrees with the 2010 federal appeals court ruling that declared unconstitutional the portions of ECPA that pertain to email storage, and the reform bill now has a slim bipartisan majority of support in the House, it still must be voted on by a Congress notorious for its inaction. Furthermore, the bill is likely to face political opposition from the Justice Department, which has argued against reform.

ECPA reform empirically unpopular – GOP resistance

Gross 14 (Grant, “Republican gains in Congress would have limited impact on big tech issues,” IDG News Service, Oct 30, <http://www.pcworld.com/article/2841572/republican-gains-in-congress-would-have-limited-impact-on-big-tech-issues.html>, (CMR)

Anticipated Republican gains in the U.S. Congress after next Tuesday’s election have limited implications for tech-related issues like net neutrality and reform of National Security Agency surveillance programs, with some observers expecting no huge changes. Many pollsters and prognosticators are predicting Republicans will add to their majority in the House of Representatives and possibly take over majority control of the Senate, allowing Republicans to set the legislative agenda for the next two years. In recent years, with split party control in the two chambers of Congress, it’s been difficult for lawmakers to pass any major pieces of legislation, particularly involving anything controversial. That may not change with Republican majorities, with many in their ranks resisting new regulations, with a few exceptions. On many tech issues, however, there isn’t a clear partisan breakdown and trade groups have worked to court lawmakers in both parties. Here’s how Republican control of Congress could affect several major tech-related issues. Net neutrality Majority Republicans in the House have attempted several times in recent years to stop the U.S. Federal Communications Commission from creating net neutrality rules. Those efforts have gone nowhere, partly because of a Democratic majority in the Senate that supports new rules. If Republicans take control of the Senate, there may be a new push to stop the FCC’s current net neutrality rulemaking proceeding. The Democratic minority in the Senate would have the numbers to filibuster any legislation, however, and President Barack Obama almost certainly would veto any legislative efforts to sidetrack the FCC’s proceeding. Some observers say they don’t expect Congress to focus on the issue, because it’s in the FCC’s hands. If the FCC’s rules don’t heavily regulate broadband providers, Republicans in Congress may see little benefit to pushing against net neutrality rules when their efforts would be unlikely to become law, some observers said. Nearly 4 million people filed comments in the FCC’s net neutrality proceeding and it appears that a large majority of those support net neutrality rules, noted Althea Erickson, policy director at Etsy, an online marketplace that has supported strong rules. On any attempts to overturn FCC net neutrality rules, advocates and members of the public “would have their back and take that fight to the Senate and the House to protect the rules,” Erickson said. The people who’ve filed millions of comments at the FCC “could easily turn their attention to the folks ... who might try to overturn those protections.” That said, if Republicans gain control of both houses of Congress this year, then maintain that majority, and if a Republican president is also elected in 2016, then net neutrality rules could be in trouble. Surveillance reform NSA reform isn’t a partisan issue, with liberal Democrats joining with Tea Party and libertarian-leaning Republicans to push for major changes in surveillance programs. Lawmakers are likely to push for a vote on the USA Freedom Act in a lame-duck session of the current Congress, following Tuesday’s elections. Some of the loudest voices against sweeping reform have come from Republicans, including Representative Mike Rogers of Michigan. But Rogers, chairman of the House Intelligence Committee, announced earlier this year he’s leaving Congress to become a radio talk show host. On the other side, the Senate may lose one of its loudest voices for surveillance reform. Senator Mark Udall, a Colorado Democrat, faces a tough re-election fight. Still, Republican gains in Congress could come from the Tea Party and libertarian wings of the party, with many new lawmakers generally skeptical of government surveillance programs. “I think this is actually an opportunity for the Republican party in a big way,” said Chris Calabrese, senior policy director at the Center for Democracy and Technology (CDT), a digital rights group that supports surveillance reform. Republicans, by passing surveillance reform, can “put their stamp on privacy and become the libertarian privacy party that core parts of the Republican party would like it to become.” CDT and several other tech groups would also like to see Congress update the Electronic Communications Privacy Act (ECPA) to give more privacy protections for stored electronic communications. The Email Privacy Act, an ECPA reform bill introduced in the House last year, had 270 cosponsors, more than half of all House members, but failed to move forward. Tech groups have been pushing for ECPA reform since early 2010, but Congress has failed to pass legislation.

Huge backlash – err neg on empirics

Molly 14 (MS, “Over Easy: Reform the ECPA,” June 20,
<http://firedoglake.com/2014/06/20/over-easy-reform-the-ecpa/>, CMR)

The bill is still stalled out, because the SEC and the IRS have scared off the House leadership. Attempts to update the law — including from Senate Judiciary Committee Chairman Patrick Leahy (D-Vt.) — have been largely supported by law enforcement agencies but have faced backlash from some agencies, like the SEC, which as a civil agency relies on subpoenas to obtain information. At a hearing in April, SEC Chairperson Mary Jo White could not explain why they think paper documents require a warrant, but yet the SEC doesn’t bother with the much higher standard (including judicial review) of a warrant for electronic documents. A big collection of organizations and companies, including the Center for Democracy and Technology, Free Press, EFF, Fight for the Future, Demand Progress, and the ACLU — got together last year to establish VanishingRights.com, committed to working for a long overdue update to ECPA’s archaic rules. The NSA revelations have helped give House bill 1852 extra momentum, but it’s important to note that this is separate from the NSA reform issue. ECPA reform is an effort that’s been ongoing for more than ten years, and with more than half the House now backing it, when will the Congressional leadership finally take it up? The bill still must be voted on by a Congress infamous for its inaction, and it is likely to face political opposition from the Justice Department, which has argued against reform. I’m hopeful, but I’m not holding my breath!

Politics—LEADS Act Unpopular

Plan ensures bruising political fights

Schultheis 15 (Ned, Summer Associate at Ropes & Gray LLP, “WARRANTS IN THE CLOUDS: HOW EXTRATERRITORIAL APPLICATION OF THE STORED COMMUNICATIONS ACT THREATENS THE UNITED STATES’ CLOUD STORAGE INDUSTRY,” Volume 9 Issue 2, CMR)

The introduction of the LEADS Act into the Senate floor is a start to clarifying and narrowing the scope of the SCA.²⁴¹ However, the LEADS Act is only the beginning of what is a long process of overhauling data privacy statutes written during the Internet’s mainstream conception in the Regan-Era. Beyond making congressional statutes more relevant to modern times, however, the U.S. government must also assist U.S. Technology Companies by updating its own cross-border processes as well. The U.S. government should take advantage of the technological advances available in order to improve the efficiency of the international exchange of online information and evidence for criminal proceedings. The world will only continue to become more and more globally dependent. Issues of crossborder conflict over the exchange of online information will be a continuously heated issue of contention unless steps are taken now to catch up to the realities of the global infrastructure of electronic information.

LEADS Act is controversial – lack of support and debates over MLATs

Schultheis 15 (Ned, Summer Associate at Ropes & Gray LLP, “WARRANTS IN THE CLOUDS: HOW EXTRATERRITORIAL APPLICATION OF THE STORED COMMUNICATIONS ACT THREATENS THE UNITED STATES’ CLOUD STORAGE INDUSTRY,” Volume 9 Issue 2, CMR)

As previously discussed, a clear indication of Congress's extraterritorial intent is worriedly missing from SCA itself.²²⁷ The language of the SCA is vague at best, and its legislative history does not give insight as to whether Congress intended the SCA warrant to apply so broadly when it was first drafted in 1986. The LEADS Act seeks to clarify Congress's intention of the extraterritorial application of the SCA and to limit the judicial warrant's international scope and reach. The courts should not be forced to interpret the SCA as it is currently written with as much discretion as they are forced to use since the statute is dated and presently insufficient. The reactions from U.S. Technology Companies and nations abroad from the current SCA warrant interpretation shows that clarification and limitations on the United States' extraterritorial warrant powers on electronic data is necessary going forward.²²⁸ Whether the LEADS Act clarifies the SCA enough or whether it will be passed by the Senate and ratified at all remains to be seen. In addition, the LEADS Act seeks to improve the MLAT process. The U.S. government's decision to seek an SCA warrant for the e-mails in Ireland, as opposed to following MLAT procedure for production, was largely based on the MLAT's inefficiencies, especially in matters of high security.²²⁹ The LEADS Act would "require the Department of Justice to create an online intake form through which foreign governments could request mutual legal assistance, and it would permit the DOJ to give preference to requests made on-line."²³⁰ The LEADS Act seeks to modernize the MLAT process so that countries can more easily obtain evidence abroad through their respective treaties.³¹ However, such computerization of the MLAT requires money, and this is subject to the politics of obtaining sufficient federal funding.

Politics—Link Alone Turns Case

Huge opposition to reform – ensures watered-down version of the plan, kills solvency

Stanley 13 (Mark Stanley is currently an Account Supervisor at Edelman, "Five Reasons to Reform ECPA Now," Sept 4, <https://cdt.org/blog/five-reasons-to-reform-ecpa-now/>, CMR)

After years of inertia, ECPA reform legislation is moving. In the Senate, Judiciary Chairman Patrick Leahy (D-VT) and Sen. Mike Lee (R-UT) have introduced the ECPA Amendments Act, which passed out of the Judiciary Committee this spring with bipartisan support and is poised to go to a floor vote this fall. In the House, the Email Privacy Act, introduced by Representatives Kevin Yoder (R-KS) and Sam Graves (R-GA), now has 137 bipartisan co-sponsors. 5. We're close, but opposition is working to derail reform. Despite all of the progress on ECPA this year, there have been hurdles. The biggest has been an ongoing attempt by the SEC to attach a provision to the Leahy-Lee bill that would give regulatory agencies authority to access digital communications without a warrant. As CDT Senior Counsel Greg Nojeim warns, while the Leahy-Lee bill is a crucial and long overdue reform, the SEC exception would "neuter" the bill from a privacy standpoint. The attempts by the SEC to hijack the Senate bill illustrate an important point: If advocates and all of those who care about digital rights stand on the sidelines this fall without pushing for clean legislation, we could get stuck with a bad bill or no bill at all. Now's not the time to sit back – it's time we finally update ECPA.

**Top-Shelf

Squo Solves

No retaliation or risk to competitiveness – it's exaggeration that glosses over existing protections

Bharara 14 (Preet, United States Attorney Southern District of New York, "GOVERNMENT'S BRIEF IN SUPPORT OF THE MAGISTRATE JUDGE'S DECISION TO UPHOLD A WARRANT ORDERING MICROSOFT TO DISCLOSE RECORDS WITHIN ITS CUSTODY AND CONTROL," July 9, <http://cdn.arstechnica.net/wp-content/uploads/2014/07/federalbrief-microsoftcase.pdf>, CMR)

Microsoft asserts that, unless the Government is required to use MLATs to obtain data stored abroad, U.S. foreign relations will be damaged and other countries will retaliate by asserting jurisdiction over electronic data stored here. (Br. 29). Aside from being purely speculative, such concerns are exclusively for the consideration of the political branches and do not provide a sound basis to graft extra-statutory restrictions on duly enacted legislation. See generally *Oetjen v. Cent. Leather Co.*, 246 U.S. 297, 302 (1918) ("The conduct of the foreign relations of our Government is committed by the Constitution to the executive and legislative—the political—departments of the government, and the propriety of what may be done in the exercise of this political power is not subject to judicial inquiry or decision."). They do not provide a basis for challenging enforcement of a warrant validly issued under the SCA. Microsoft also argues that, unless its position is adopted, the U.S. technology sector stands to lose overseas customers who fear "the U.S. Government's extraterritorial access to their user information." (Br. 30). However, an SCA warrant permits the Government to access user information—wherever it may be stored—only after a neutral magistrate judge has found probable cause to believe that the information contains evidence of criminal activity. This is a time-tested manner by which the Government obtains evidence in criminal prosecutions, and nothing could be farther from an unchecked exercise of power. The form of legal process at issue is specifically designed to protect legitimate privacy interests, by requiring that a any intrusion on those interests be properly justified by the need to uncover evidence of a crime.

Existing protections solve

Schultheis 15 (Ned, Summer Associate at Ropes & Gray LLP, "WARRANTS IN THE CLOUDS: HOW EXTRATERRITORIAL APPLICATION OF THE STORED COMMUNICATIONS ACT THREATENS THE UNITED STATES' CLOUD STORAGE INDUSTRY," Volume 9 Issue 2, CMR)

Additionally, the current extraterritorial application of the SCA warrant does not allow the U.S. government to obtain electronic information from anyone for any reason. There are constitutional measures in place, in particular the Fourth Amendment that requires the U.S. government to show before a judge probable cause for issuing the SCA warrant. To establish probable cause, the U.S. government must establish the individual in question is suspected of illegal activity and that obtaining the e-mails located abroad is vital to the ongoing investigation.²³⁶ The extraterritorial application of the SCA would not unduly expand the power of the U.S. government to freely obtain any electronic information from anybody it so chooses. However, there are serious problems with allowing the U.S. government to bypass the MLAT process altogether. Instead, the U.S. government has chosen to take an expansive interpretation of a dated statute to allow the U.S. government to obtain electronic evidence without the consent or even request of the

foreign nation where the electronic evidence is stored."37 It was able to do this because the SCA is so vague to begin with and therefore can be construed widely. The courts had little choice but to uphold the extraterritorial application of the SCA warrant based on current legislation.

No Solvency—Circumvention

DOJ will circumvent the plan

Rash 15 (Wayne, "U.S. Bill Would Ban DoJ Warrant for Email in Overseas Microsoft Server," 2-14, <http://www.eweek.com/cloud/u.s.-bill-would-ban-doj-warrant-for-email-in-oversears-microsoft-server-2.html>, CMR)

However, if the LEADS Act were to be passed and signed by President Obama, there would be little choice. But of course that's the issue for the current administration, which so far has not hesitated to carry out actions of questionable legality, such as ignoring existing treaties to gain access to foreign emails. Would President Barack Obama sign the LEADS Act? Considering the level of support in both houses of Congress, he might realize that he has no choice, but the president might also dare Congress to override his veto. However, I don't think a veto for this bill is likely. It has strong bipartisan support in both houses. It's also presented as a way to update the Electronic Communications Privacy Act to reflect current technology, which the Obama administration has consistently said it favors. The act is also presented as a way to keep U.S. companies from breaking the law, which is pretty difficult for the president to oppose. "Law enforcement agencies wishing to access Americans' data in the cloud ought to get a warrant," Coons explained when the act was introduced, "and just like warrants for physical evidence, warrants for content under ECPA shouldn't authorize seizure of communications that are located in a foreign country. "The government's position that ECPA warrants do apply abroad puts U.S. cloud providers in the position of having to break the privacy laws of foreign countries in which they do business in order to comply with U.S. law. This not only hurts our businesses' competitiveness and costs American jobs, but it also invites reciprocal treatment by our international trading partners," Coons said. While there's every reason to believe that eventually federal prosecutors' demands that Microsoft disgorge emails stored abroad will be found contrary to existing law, the LEADS Act removes all doubt. Attempting to extend the reach of U.S. domestic laws to apply anywhere in the world is one of the worst types of overreach. This law would rein in the DoJ's excesses. Assuming, of course, the DoJ didn't decide to ignore that law as well.

****AT: Competitiveness Adv**

Competitiveness durable and free riding solves

Fallows 10 – correspondent for The Atlantic Monthly, studied economics at Oxford University as a Rhodes Scholar. He has been an editor of The Washington Monthly and of Texas Monthly, and from 1977 to 1979 he served as President Jimmy Carter's chief speechwriter. His first book, National Defense, won the American Book Award in 1981; he has written seven others (James. "How America Can Rise Again", Jan/Feb edition, <http://www.theatlantic.com/doc/201001/american-decline>)

This is new. Only with America's emergence as a global power after World War II did the idea of American "decline" routinely involve falling behind someone else. Before that, it meant falling short of expectations—God's, the Founders', posterity's—or of the previous virtues of America in its lost, great days. "The new element in the '50s was the constant comparison with the Soviets," Michael Kazin told me. Since then, **external falling-behind comparisons have become** not just a staple of American self-assessment but often a crutch. If we are concerned about our schools, it is because children are learning more in Singapore or India; about the development of clean-tech jobs, because it's happening faster in China. Having often lived outside the United States since the 1970s, I have offered my share of falling-behind analyses, including a book-length comparison of Japanese and American strengths (More Like Us) 20 years ago. But at this point in America's national life cycle, I think the exercise is largely a distraction, and that Americans should concentrate on what are, finally, our own internal issues to resolve or ignore. Naturally there are lessons to draw from other countries' practices and innovations; the more we know about the outside world the better, as long as we're collecting information calmly rather than glancing nervously at our reflected foreign image. For instance, if you have spent any time in places where tipping is frowned on or rare, like Japan or Australia, you view the American model of day-long small bribes, rather than one built-in full price, as something similar to baksheesh, undignified for all concerned. Naturally, too, it's easier to draw attention to a domestic problem and build support for a solution if you cast the issue in us-versus-them terms, as a response to an outside threat. In *If We Can Put a Man on the Moon ...*, their new book about making government programs more effective, William Eggers and John O'Leary emphasize the military and Cold War imperatives behind America's space program. "The race to the moon was a contest between two systems of government," they wrote, "and the question would be settled not by debate but by who could best execute on this endeavor." Falling-behind arguments have proved convenient and powerful in other countries, too. But **whatever their popularity or utility in other places at other times, falling-behind concerns seem too common** in America now. As I have thought about why overreliance on this device increasingly bothers me, I have realized that it's because **my latest stretch out of the country has left me less and less interested in whether China or**

some other country is “overtaking” America. **The question that matters is not whether America is “falling behind” but instead** something like John Winthrop’s original question of **whether it is falling short**—or even falling apart. This is not the mainstream American position now, so let me explain. First is the simple reality that one kind of “**decline is inevitable and therefore not worth worrying about. China has about four times as many people as America does. Someday its economy will be larger than ours. Fine!**” A generation ago, its people produced, on average, about one-sixteenth as much as Americans did; now they produce about one-sixth. That change is a huge achievement for China—and a plus rather than a minus for everyone else, because a business-minded China is more benign than a miserable or rebellious one. When the Chinese produce one-quarter as much as Americans per capita, as will happen barring catastrophe, their economy will become the world’s largest. **This will be good for them but will not mean “falling behind” for us. We know that for more than a century, the consciousness of decline has been a blight on British politics, though it has inspired some memorable, melancholy literature. There is no reason for America to feel depressed about the natural emergence of China, India, and others as world powers. But second, and more important, America may have reasons to feel actively optimistic about its prospects in purely relative terms.** The crucial American advantage Let’s start with the more modest claim, that China has ample reason to worry about its own future. Will the long-dreaded day of reckoning for Chinese development finally arrive because of environmental disaster? Or via the demographic legacy of the one-child policy, which will leave so many parents and grandparents dependent on so relatively few young workers? Minxin Pei, who grew up in Shanghai and now works at Claremont McKenna College, in California, has predicted in *China’s Trapped Transition* that within the next few years, tension between an open economy and a closed political system will become unendurable, and an unreformed Communist bureaucracy will finally drag down economic performance. **America will be better off if China does well than if it flounders. A prospering China will mean a bigger world economy with more opportunities and probably less turmoil—and a China likely to be more cooperative on environmental matters.** But whatever happens to China, prospects could soon brighten for America. The **American culture’s particular strengths could** conceivably be about to **assume new importance and give our economy new pep. International networks will matter more** with each passing year. As the one truly universal nation, **the United States continually refreshes its connections with the rest of the world**—through languages, family, education, business—**in a way no other nation does, or will.** The countries that are comparably open—Canada, Australia—aren’t nearly as large; those whose economies are comparably large—Japan, unified Europe, eventually China or India—aren’t nearly as open. The simplest measure of whether a culture is dominant is whether outsiders want to be part of it. At the height of the British Empire, colonial subjects from the Raj to Malaya to the Caribbean modeled themselves in part on Englishmen: Nehru and Lee Kuan Yew went to Cambridge, Gandhi, to University College, London. Ho Chi Minh wrote in French for magazines in Paris. These days the world is full of businesspeople, bureaucrats, and scientists who have trained in the United States. Today’s China attracts outsiders too, but in a particular way. Many go for business opportunities; or because of cultural fascination; or, as my wife and I did, to be on the scene where something truly exciting was under way. The Haidian area of Beijing, seat of its universities, is dotted with the faces of foreigners who have come to master the language and learn the system. But true immigrants? People who want their children and grandchildren to grow up within this system?

Although I met many foreigners who hope to stay in China indefinitely, in three years I encountered only two people who aspired to citizenship in the People's Republic. From the physical rigors of a badly polluted and still-developing country, to the constraints on free expression and dissent, to the likely ongoing mediocrity of a university system that emphasizes volume of output over independence or excellence of research, the realities of China heavily limit the appeal of becoming Chinese. Because of its scale and internal diversity, China (like India) is a more racially open society than, say, Japan or Korea. But China has come nowhere near the feats of absorption and opportunity that make up much of America's story, and it is very difficult to imagine that it could do so—well, ever. Everything we know

We're lightyears ahead in key sectors

Zakaria 8 (Fareed, Newsweek Editor, International Relations Expert, Host of Fareed Zakaria: GPS (on CNN), "The Future of American Power," Foreign Affairs, May/June)

This difference between the United States and Britain is reflected in the burden of their military budgets. Britannia ruled the seas but never the land. The British army was sufficiently small that Otto von Bismarck once quipped that were the British ever to invade Germany, he would simply have the local police force arrest them. Meanwhile, London's advantage over the seas -- it had more tonnage than the next two navies put together -- came at ruinous cost. The U.S. military, in contrast, dominates at every level -- land, sea, air, space -- and spends more than the next 14 countries combined, accounting for almost 50 percent of global defense spending. The United States also spends more on defense research and development than the rest of the world put together. And crucially, it does all this without breaking the bank. U.S. defense expenditure as a percent of GDP is now 4.1 percent, lower than it was for most of the Cold War (under Dwight Eisenhower, it rose to ten percent). As U.S. GDP has grown larger and larger, expenditures that would have been backbreaking have become affordable. The Iraq war may be a tragedy or a noble endeavor, but either way, it will not bankrupt the United States. The price tag for Iraq and Afghanistan together -- \$125 billion a year -- represents less than one percent of GDP. The war in Vietnam, by comparison, cost the equivalent of 1.6 percent of U.S. GDP in 1970, a large difference. (Neither of these percentages includes second- or third-order costs of war, which allows for a fair comparison even if one disputes the exact figures.) U.S. military power is not the cause of its strength but the consequence. The fuel is the United States' economic and technological base, which remains extremely strong. The United States does face larger, deeper, and broader challenges than it has ever faced in its history, and it will undoubtedly lose some share of global GDP. But the process will look nothing like Britain's slide in the twentieth century, when the country lost the lead in innovation, energy, and entrepreneurship. The United States will remain a vital, vibrant economy, at the forefront of the next revolutions in science, technology, and industry. In trying to understand how the United States will fare in the new world, the first thing to do is simply look around: the future is already here. Over the last 20 years, globalization has been gaining breadth and depth. More countries are making goods, communications technology has been leveling the playing field, capital has been free to move across the world -- and the United States has benefited massively from these trends. Its economy has received hundreds of billions of dollars in investment, and its companies have entered new countries and

industries with great success. Despite two decades of a very expensive dollar, U.S. exports have held ground, and the World Economic Forum currently ranks the United States as the world's most competitive economy. GDP growth, the bottom line, has averaged just over three percent in the United States for 25 years, significantly higher than in Europe or Japan. Productivity growth, the elixir of modern economics, has been over 2.5 percent for a decade now, a full percentage point higher than the European average. This superior growth trajectory might be petering out, and perhaps U.S. growth will be more typical for an advanced industrialized country for the next few years. But the general point -- that the United States is a highly dynamic economy at the cutting edge, despite its enormous size -- holds. Consider the industries of the future. **Nanotechnology** (applied science dealing with the control of matter at the atomic or molecular scale) **is likely to lead to fundamental breakthroughs** over the next 50 years, **and the United States dominates the field.** It has more dedicated "nanocenters" than the next three nations (Germany, Britain, and China) combined and has issued more patents for nanotechnology than the rest of the world combined, highlighting its unusual strength in turning abstract theory into practical products. Biotechnology (a broad category that describes the use of biological systems to create medical, agricultural, and industrial products) is also dominated by the United States.

AT: Competitiveness—Resilient

Competitiveness inevitable – U.S. can absorb innovation from anywhere

Beckley, Harvard International Security Program research fellow, 2012

(Michael, "China's Century? Why America's Edge Will Endure", International Security 36.3, lexis)

In theory, globalization should help developing countries obtain and absorb advanced technology. In practice, however, this may not occur because some of the knowledge and infrastructure necessary to absorb certain technologies cannot be specified in a blueprint or contained within a machine. Instead they exist in peoples' minds and can be obtained only through "hands-on" experience. The World Bank recently calculated that 80 percent of the wealth of the United States is made up of intangible assets, most notably, its system of property rights, its efficient judicial system, and the skills, knowledge, and trust embedded within its society. If this is the case, then a huge chunk of what separates the United States from China is not for sale and cannot be copied. Economies and militaries used to consist primarily of physical goods (e.g., conveyor belts and tanks), but today they are composed of systems that link physical goods to networks, research clusters, and command centers. ⁷² **Developing countries may be able to purchase or steal certain aspects of these systems from abroad, but many lack the supporting infrastructure, or "absorptive capacity," necessary to integrate them into functioning wholes.** ⁷³ For example, in the 1960s, Cummins Engine Company, a U.S. technological leader, formed joint ventures with a Japanese company and an Indian company to produce the same truck engine. The Japanese plant quickly reached U.S. quality and cost levels while the Indian plant turned out second-rate engines at three to four times the cost. The reason, according to Jack Baranson, was the "high degree of technical skill . . . required to convert techniques and produce new technical drawings and manufacturing specifications." ⁷⁴ This case illustrates how an intangible factor such as skill can lead to significant productivity differences even when two countries have access to identical hardware. **Compared to developing countries such as China, the United States is primed for technological absorption. Its property rights, social networks, capital markets, flexible labor laws, and legions of multinational companies not only help it innovate, but also absorb innovations created elsewhere.** Declinists liken the U.S. economic system to a leaky bucket oozing innovations out into the international system. But in the alternative perspective, **the United States is more like a sponge, steadily increasing its mass by soaking up ideas, technology, and people from the rest of the world. If this is the case, then the spread of technology around the globe may paradoxically favor a concentration of technological and military capabilities in the United States.**

AT: Competitiveness—Alt Cause: STEM

STEM shortage means US competitiveness is unsustainable

Waldron '12 [Travis, reporter for ThinkProgress.org at the Center for American Progress Action Fund, “REPORT: How America’s Falling Share Of Global College Graduates Threatens Future Economic Competitiveness,” <http://thinkprogress.org/economy/2012/08/21/722571/report-us-share-of-college-graduates-dropped-over-last-decade-compared-to-china-india/>]

The **United States’ share of global college graduates fell substantially** in the first decade of the 21st century **and stands to drop even more** by 2020 as developing economies in China and India have graduated more college students, **presenting challenges for American workers’ ability to remain competitive in a global economy** in the future. The U.S. share of college graduates fell from nearly one-in-four to just more than one-in-five from 2000 to 2010, according to “The Competition That Really Matters,” a report from the Center for American Progress and The Center for the Next Generation: From 2000 to 2010, the U.S. share of college graduates fell to 21% of the world’s total from 24%, while China’s share climbed to 11% from 9%. India’s rose more than half a percentage point to 7%. Based on current demographic and college enrollment trends, we can project where each country will be by 2020: the U.S. share of the world’s college graduates will fall below 18% **while China’s and India’s will rise** to more than 13% and nearly 8% respectively.

AT: Competitiveness—No Impact

No impact to US competitiveness- it’s all hype

Krugman '11 [Paul, Nobel Prize-winning economist, professor of Economics and International Affairs at Princeton University, received his B.A. from Yale University in 1974 and his Ph.D. from MIT in 1977. He has taught at Yale, MIT and Stanford. At MIT he became the Ford International Professor of Economics, “The Competition Myth,” 1-24-11, http://www.nytimes.com/2011/01/24/opinion/24krugman.html?_r=0]

Meet the new buzzword, same as the old buzzword. In advance of the State of the Union, President Obama has telegraphed his main theme: competitiveness. The President’s Economic Recovery Advisory Board has been renamed the President’s Council on Jobs and Competitiveness. And in his Saturday radio address, the president declared that “We can out-compete any other nation on Earth.” This may be smart politics. Arguably, Mr. Obama has enlisted an old cliché on behalf of a good cause, as a way to sell a much-needed increase in public investment to a public thoroughly indoctrinated in the view that government spending is a bad thing.¶ But let’s not kid ourselves: talking about “competitiveness” as a goal is fundamentally misleading. At best, it’s a misdiagnosis of our problems. At worst, it could lead to policies based on the false idea that what’s good for corporations is good for America.¶ About that misdiagnosis: What sense does it make to view our current woes as stemming from lack of competitiveness?¶ It’s true that we’d have more jobs if we exported more and imported less. But the same is true of Europe and Japan, which also have depressed economies. And we can’t all export more while importing less, unless we can find another planet to sell to. Yes, we could demand that China shrink its trade surplus — but if confronting China is what Mr. Obama is proposing, he should say that plainly.¶ Furthermore, while America is running a trade deficit, this deficit is smaller than it was before the Great Recession began. It would help if we could make it smaller still. But ultimately, we’re in a mess because we had a financial crisis, not because American companies have lost their ability to compete with foreign rivals.¶ But isn’t it at least somewhat useful to think of our nation as if it were America Inc., competing in the global marketplace? No.¶ Consider: A corporate leader who increases profits by slashing his work force is thought to be successful. Well, that’s more or less what has happened in America recently: employment is way down, but profits are hitting new records. Who, exactly, considers this economic success?¶ Still, you might say that talk of competitiveness helps Mr. Obama quiet claims that he’s anti-business. That’s fine, as long as he realizes that the interests of nominally “American”

corporations and the interests of the nation, which were never the same, are now less aligned than ever before.¶ Take the case of General Electric, whose chief executive, Jeffrey Immelt, has just been appointed to head that renamed advisory board. I have nothing against either G.E. or Mr. Immelt. But with fewer than half its workers based in the United States and less than half its revenues coming from U.S. operations, G.E.'s fortunes have very little to do with U.S. prosperity.¶ By the way, some have praised Mr. Immelt's appointment on the grounds that at least he represents a company that actually makes things, rather than being yet another financial wheeler-dealer. Sorry to burst this bubble, but these days G.E. derives more revenue from its financial operations than it does from manufacturing — indeed, GE Capital, which received a government guarantee for its debt, was a major beneficiary of the Wall Street bailout.¶ So what does the administration's embrace of the rhetoric of competitiveness mean for economic policy?¶ The favorable interpretation, as I said, is that it's just packaging for an economic strategy centered on public investment, investment that's actually about creating jobs now while promoting longer-term growth. The unfavorable interpretation is that Mr. Obama and his advisers really believe that the economy is ailing because they've been too tough on business, and that what America needs now is corporate tax cuts and across-the-board deregulation.¶ My guess is that we're mainly talking about packaging here. And if the president does propose a serious increase in spending on infrastructure and education, I'll be pleased.¶ But even if he proposes good policies, the fact that Mr. Obama feels the need to wrap these policies in bad metaphors is a sad commentary on the state of our discourse.¶ The financial crisis of 2008 was a teachable moment, an object lesson in what can go wrong if you trust a market economy to regulate itself. Nor should we forget that highly regulated economies, like Germany, did a much better job than we did at sustaining employment after the crisis hit. For whatever reason, however, the teachable moment came and went with nothing learned.¶ Mr. Obama himself may do all right: his approval rating is up, the economy is showing signs of life, and his chances of re-election look pretty good. But the ideology that brought economic disaster in 2008 is back on top — and seems likely to stay there until it brings disaster again.

AT: Competitiveness—Heg D

Competitiveness not key to heg

Nuno P. **Monteiro** is an Assistant Professor of Political Science at Yale University, where he teaches International Relations theory and security studies. He earned his Ph.D. in Political Science from the University of Chicago in 2009. “Theory of Unipolar Politics” (Cambridge University Press) April **2014** p. 14-17

At the same time, the debate on unipolar durability is almost exclusively focused on differential rates of economic growth and their determinants. Will China continue to grow faster than the United States, or will its economic development slow down or even stall? When will China's economy overtake that of the United States? What can the United States do to boost its own pace of economic growth? Although these are important questions in their own right, they are nearly irrelevant for the durability of U.S. military power preponderance. The reason is simple: military power is not a side product of economic development. Rather, military power is the result of purposeful state action. Specifically, it is the product of a decision by a state to invest a fraction of the country's wealth into the production of military capabilities over time. As such, military power does not necessarily follow from economic growth.¶ Put in the context of a unipolar world in the nuclear age, this means that - independently from recurrent arguments about U.S. economic decline - the power preponderance of the United States is not set to end. But, again, nowhere in the literature do we have an argument laying out the conditions under which a unipolar distribution of military power is likely to end - or, on the contrary, to endure for a long time even in the presence of a shifting distribution of economic power. This book sets out to provide one such theory, refocusing the debate on unipolar durability from differential rates of economic growth to political decisions to invest in additional military capabilities.

Competitiveness doesn't threaten heg-US leads in R&D, innovation and corporations.

Cox, London School of Economics IR professor, 2012

(Michael, "Power Shifts, Economic Change and the Decline of the West?", International Relations, December, SAGE)

We also have to judge economic power not only in terms of the size of an economy but also by the qualitative criteria of 'competitiveness'. Economies like China, India and Brazil are undoubtedly large and will no doubt get larger over time. But this does not necessarily make them competitive in relationship to most Western countries or the United States. In a 2011 survey, in fact, the United States came fourth in the world in a group of 15 countries. Moreover, 11 within the 15 were definably Western, while the other 4 included Japan, Taiwan, Hong Kong and Singapore – countries all closely tied to the West and to the United States. As for the BRICs, they came well down the list. Thus, China came in at 27, India at 51, Brazil at 58 and Russia at 63.⁶⁶ Other studies have arrived at not dissimilar conclusions concerning the qualitative gap that continues to exist between a number of the 'rising' economies and many of the more established ones, the United States, in particular. In terms of cutting-edge research in science and technology, for example, the United States continues to hold a clear lead. Indeed in 2008, the United States accounted for 40 per cent of total world research and development (R&D) spending and 38 per cent of patented new technology inventions. More significantly, scientific research produced in the United States accounted for 49 per cent of total world citations and 63 per cent of the most highly cited articles. The United States also continued to employ around 70 of the world's Nobel Prize winners and could lay claim to two-thirds of its most cited individual researchers in science and technology.⁶⁷ Innovation is also an American strength.⁶⁸ Other countries are clearly beginning to catch up. The United States, however, is still a country that continues to innovate across the board. Critics would no doubt point to the fact that the United States is slipping down the league table. However, it still ranks fourth in the world. China meanwhile only came in at 54th in 2009, India at 56th and Brazil and Russia even further behind. Of course, this does not take account of change over the longer term, or of the fact that a country like China is making a concerted effort to build a more innovative economy.⁶⁹ But as even the Chinese would accept, it still has very long way to go. Indeed, in spite of official efforts to encourage what is termed in China a 'capacity for independent innovation', there remain several weaknesses in the Chinese political economy. Among the most significant, it has been noted, are 'poor enforcement of intellectual property rights, an educational system that emphasizes rote learning over critical thinking, and a shortage of independent organizations that can evaluate scientific progress'.⁷⁰ There is also wider political restraint as well. Innovation usually requires open debate, a capacity to challenge established truths and incentives to think the unthinkable; and none of these, to be blunt, are much in evidence in modern China today.⁷¹ Finally, in terms of global economic power, the United States is still well ahead in one other vital respect: corporate strength.⁷² Some of the emerging economies are beginning to catch up, and some of America's closest allies in Europe and Asia run it a good second.⁷³ But the United States clearly remains in 'poll position' with American companies in 2011 constituting 4 of the top 10 corporations in the world, 14 of the top 30 and 25 of the top 50. Western companies more generally still outperform all others, with the United States and the EU together representing 6 out of the top 10 global corporations, 22 out of the top 30 and 37 out of the top 50. Some of the BRIC economies do have some very large companies with China, unsurprisingly, leading the way with 4 out of the top 10, 8 out of the top 50 and 61 out of the top 500, a remarkable achievement for a country that only 25 years ago was virtually irrelevant in the world economy. ⁷⁴ Still, as a recent Brookings study has shown, it does not follow that these companies are internationally active or should even be regarded as 'multinationals' in the true sense of that word. Indeed, 49 of the top 57 mainland companies in China remain under state control; and with a very few exceptions, the overwhelming majority all operate predominantly within the country – and for several good reasons including a shortage of managers with the necessary linguistic skills and experience of working abroad, a lack of transparency, poor global brand presence, and a very real difficulty in adapting easily to foreign legal, tax and political environments.⁷⁵

Competitiveness not key to heg

Brooks and Wohlforth, 8

[Stephen G. Brooks is Assistant Professor and William C. Wohlforth is Professor in the Department of Government at Dartmouth College, "World out of Balance, International Relations and the Challenge of American Primacy," p. 32-35]

American primacy is also rooted in the country's position as the world's leading technological power. The United States remains dominant globally in overall R&D investments, high-technology production, commercial innovation, and higher education (table 2.3). Despite the weight of this evidence, elite perceptions of U.S. power had shifted toward pessimism by the middle of the first decade of

this century. As we noted in chapter 1, this was partly the result of an Iraq-induced doubt about the utility of material predominance, a doubt redolent of the post-Vietnam mood. In retrospect, many assessments of U.S. economic and technological prowess from the 1990s were overly optimistic; by the next decade important potential vulnerabilities were evident. In particular, chronically imbalanced domestic finances and accelerating public debt convinced some analysts that the United States once again confronted a competitiveness crisis.²³ If concerns continue to mount, this will count as the fourth such crisis since 1945; the first three occurred during the 1950s (Sputnik), the 1970s (Vietnam and stagflation), and the 1980s (the Soviet threat and Japan's challenge). None of these crises, however, shifted the international system's structure: multipolarity did not return in the 1960s, 1970s, or early 1990s, and each scare over competitiveness ended with the American position of primacy retained or strengthened.²⁴

Our review of the evidence of U.S. predominance is not meant to suggest that the United States lacks vulnerabilities or causes for concern. In fact, it confronts a number of significant vulnerabilities; of course, this is also true of the other major powers.²⁵ The point is that adverse trends for the United States will not cause a polarity shift in the near future. If we take a long view of U.S. competitiveness and the prospects for relative declines in economic and technological dominance, one takeaway stands out: relative power shifts slowly. The United States has accounted for a quarter to a third of global output for over a century. No other economy will match its combination of wealth, size, technological capacity, and productivity in the foreseeable future (tables 2.2 and 2.3).

The depth, scale, and projected longevity of the U.S. lead in each critical dimension of power are noteworthy. But what truly distinguishes the current distribution of capabilities is American dominance in all of them simultaneously. The chief lesson of Kennedy's 500-year survey of leading powers is that nothing remotely similar ever occurred in the historical experience that informs modern international relations theory. The implication is both simple and underappreciated: the counterbalancing constraint is inoperative and will remain so until the distribution of capabilities changes fundamentally. The next section explains why.

****AT: MLATs Adv**

AT: MLATs

Reform in the MLAT system wont change government motives

Woods, '15 (Andrew K. Woods is an assistant professor at the University of Kentucky College of Law. He holds a JD from Harvard Law School and a PhD in Politics from the University of Cambridge. “You should Care About Mutual Legal Assistance More Than You Do” Just Security, 1-28-15, <http://justsecurity.org/19449/care-mutual-legal-assistance/> 7-9-15)

About a year ago, I wrote here that the mutual legal assistance (MLA) regime – the legal system that regulates government-to-government requests for evidence in criminal investigations, including personal data – was badly in need of reform. Today, the Global Network Initiative is releasing my report on the subject. The report outlines some of the key reforms that can and ought to be implemented by states in the next year to improve the MLA process. (The report is being launched at the Center for Strategic and International Studies (CSIS) in DC at 1pm EST today and will be live streamed here.) Many of us live much of our lives “online” – meaning that we store our personal data on internet-connected servers, which are very often located in far away locations. As a result of our peripatetic lives, our data is flung across a number of different jurisdictions. When governments seek access to this data – perhaps in connection with a criminal investigation – they increasingly find that it is beyond their jurisdictional reach. (This is the problem raised by the much-discussed Microsoft Ireland case.) If you care about privacy, you might think this is all good because it means that the government has a harder time getting access to the digital goods. But this view badly misunderstands the tradeoffs associated with the MLA regime. Embracing the fact that MLA tends to prevent governments from gaining lawful access to personal data is both shortsighted and dangerous. When governments do not get access to data through MLA, they occasionally try other tactics that do not have the same built-in due process constraints that MLA provides (tactics, in other words, that might make those of who care about privacy prefer MLA). When governments feel they cannot get access to data through the MLA process, they might assert that their laws apply extraterritorially – as the US has done in the Microsoft Ireland case – or they might demand that communications companies store data locally on servers (the easier to raid). Even worse: they might turn to surveillance. A few months ago, I spoke with a salesman from a company (I will not name) who was selling a tool that allows states to intercept their citizens’ communications. I asked him if he had ever heard of the mutual legal assistance treaties. He grinned and said: “MLAT! I love MLAT! States buy my product because MLAT doesn’t work!” It is no longer a surprise to learn that governments turn to surveillance to gain unwarranted access to citizen data. Here, however, we are talking about data that might be warranted, but the government does not have the patience or felt the need to go through the MLA process to prove that their access is in fact justified. For example, an Italian judge may issue a warrant for data only to discover that the data controller – perhaps a foreign company or a domestic company with data stored abroad – will not submit to its jurisdiction. Local law enforcement agencies can then request MLA from the country with the authority to compel the data and wait 9 or 10 months for the response. Or they can buy off-the-rack software and get the data now. If any of these alternatives bothers you, you should be urging your government to improve its handling of MLA requests, both outgoing and incoming. That is the thrust of the report being released today. The report highlights a number of important reforms that ought to be implemented by governments in the next year. These include: creating an electronic system for making and processing MLA requests (which are sometimes still done in paper); better training for government officials as to how to file and process MLA requests; and more staffing at justice departments around the world for the oncoming wave of MLA requests that is likely to materialize in the next few years. These reforms are low-hanging fruit. The report says little about the much larger and more intractable problems that arise from an Internet that spans multiple jurisdictions. For

example, the report is silent on how to determine the scope of a state's jurisdiction. Needless to say, this is the subject of much debate. (Again, see the Microsoft Ireland case for evidence of this controversy.) Nor does the report attempt to resolve the deeper "conflict of laws" questions that arise when two states do not agree about the legality of the conduct in question. For example, if France asks the United States for data in connection to speech that constitutes a crime in France but not in the U.S., what should the U.S. government do? And what if the suspect is French, the harm is felt in France, and there is no tie to the U.S. but for the location of the data or the location of the company managing the data? There are some who think that in order to resolve these deeper issues, we need a completely new regime to regulate government access to personal data. That may be the case. But for now, let us fix the MLA system we have.

AT: Organized Crime—Inevitable

Organized crime funding inevitable.

GIFT No Date – UN Global Initiative to Fight Human Trafficking, HUMAN TRAFFICKING – QUESTIONS & ANSWERS, www.unglobalcompact.org/.../HUMAN_TRAFFICKING_-_BACKGROUND_BRIEFING_NOTE_-_final.pdf

However, a conservative estimate of the crime puts the number of victims at any one time at 2.5 million. We also know that **it affects every region of the world, ranks as the third largest source of income for organized crime** (exceeded only by arms and drugs trafficking), **and is the fastest growing form of international crime**. We also know that **it generates tens of billions of dollars** in profits each year.

Organized crime resilient.

Adamoli et al, Joint Research Centre on Transnational Crime Research Assistant, **1998**, (Sabrina, "Organized Crime Around the World", European Institute for Crime Prevention and Control, Publication Series No. 31, Pg. 17) www.heuni.fi/uploads/mmadzpnix.pdf

Some of the changes in organised crime have been brought about by the altered environment²³ in which criminal organisations operate. The growing globalisation of financial markets and communications, together with the increased effectiveness of law enforcement control activities, are provoking a series of changes in the structure of organised crime groups and in their relations with other criminal groups.²⁴ Evident today, therefore, is the growth of **transnational criminal organisations** able to **adapt to changes in this global environment** rather than to national changes. Analysis of the transnational operations of criminal groups in association with multinational organisations is therefore of paramount importance. Since criminal activities are transnational, the criminal groups engaged in them must be able to deal with different markets, even if this means developing a structured organisation, like a corporation, with different tasks and sections for every phase from production to marketing.²⁵ Large, monolithic and rigidly hierarchical structures have proved relatively easy targets for law enforcement operations. The results of these operations suggest that **criminal enterprises are now replacing a centralised structure**, often without multinational characteristics, **with more flexible and decentralised ones**. **The current trend seems to be towards** the creation of **small organisations** based on mutual understandings and agreements, and with relatively few operating procedures, adjusting them to new market features so that they can maximise the profits deriving from new business opportunities and minimise their vulnerability to law enforcement (arrest of their members and the seizure of their assets).²⁶ This re-organisation of criminal enterprises in terms of structure seems to be happening along the lines of more flexibility and more co-operation with other criminal groups. **A flexible structure allows for the prompt re-organisation of illicit activities** according to demand and to the number of competitors. Occasional businesses or specific targets increasingly require small sub-units²⁷ of criminal specialists, who work with external individuals to provide services and expertise in fields unknown or not directly accessible to the criminal organisation, thus enabling their rapid adjustment to new market opportunities. An outstanding example is provided by the Nigerian networks in the drugs market. Small groups of executives, or even individuals, carry out operational tasks or missions coordinated and instructed by a strategic centre in the country of origin. Further examples are provided by the fraudulent activities of Belgian or Dutch white-collar criminals and by the car thefts carried out by Polish and Yugoslav organisations, networks which have acquired specific expertise in the division of labour.

Organized crime resilient.

Ayling 9 - Australian Research Council Centre of Excellence in Policing and Security, Regulatory Institutions, Julie, "Criminal organizations and resilience", International Journal of Law, Crime and Justice

37 (2009) 182e196

Criminal organizations inhabit dynamic environments where the pressures of competition and state opposition constantly challenge their very existence. To survive and prosper, they **must be** sufficiently **resilient to adapt to changing conditions arising from new competition, alterations in laws, policies and law enforcement practices, expansion or contraction of illegal markets and the availability of new technologies. Change may also result from internal conflicts**: the organization may splinter, merge with other groups or reorganize (Weisel, 2002a). While the study of criminal organizations has not entirely overlooked resilience (see, for example, Williams, 2001; Kenney, 2006, 2007; Jackson, 2006; Bouchard, 2007), little attention has been paid to how resilience in criminal organizations develops. What is it about criminal organizations that have survived and flourished amid constant threat and frequent confrontation that has given them the resilience to do so?

Shift

Adamoli et al, Joint Research Centre on Transnational Crime Research Assistant, **1998**, (Sabrina, "Organized Crime Around the World", European Institute for Crime Prevention and Control, Publication Series No. 31, Pg. 17) www.heuni.fi/uploads/mmadzpnix.pdf

Turning to the trafficking of migrants and their exploitation (especially of migrant women and children) **in the prostitution markets of host countries, the same pattern of vertical interdependence among offences emerges**. In fact, in order to perpetrate these crimes, a criminal organisation involved in alien smuggling activities (also with the further purpose of sexually exploiting migrants or of placing them on black labour markets) must usually plan the commission of further offences, such as deception, illegal immigration, corruption of public officials and theft and counterfeiting of documents for use in their trafficking operations. Once it is realised that the activities of organised criminal groups are increasingly interdependent, it becomes easier to understand the way in which transnational organised crime shifts from one activity to another. The more a criminal organisation develops horizontal interdependencies, the more it is characterised by opportunism. The **horizontal interdependencies**, distinctive of opportunistic criminal organisations, **display a pattern of diversification** rather than one of specialisation. The concept of horizontal interdependencies among activities refers, in fact, to the connections established among different activities by the same criminal organisation. A criminal enterprise usually relies on the particular expertise, skills and means acquired in a specific illicit sector to expand its criminal activities, changing into new criminal circuits. In practice, **a criminal group** with already-trained personnel, already-acquired means, already-tested trafficking routes, already-developed corruption networks, and already-existing contacts in different countries of the world, **will move into new illicit markets** (adding new activities to the ones in which it already specialises). Examples of these horizontal interdependencies are readily available. **One thinks**, for example, **of the connections established between drug trafficking and alien smuggling** operations by the Albanian groups which transport both nationals and drugs across the Adriatic Sea. The same applies to the organised crime groups of Asiatic origin which move illegal immigrants across the Canada-US border, utilising the routes, means and methods already developed for the smuggling of cigarettes. Generally speaking, when activities of this kind involve diverse forms of trafficking (in drugs, arms, humans, toxic waste, stolen vehicles), it is not difficult for criminals to shift from one form to another, exploiting the knowledge that they have already acquired.

AT: Organized Crime—No Violence

Organized crime doesn't cause violence

Igor V. Dubinsky, 2007, B.A.: Integrated Science, Advanced Physics, and Molecular/Genetic Biology, 2004, Northwestern University; J.D. Candidate, May 2007: DePaul University College of Law Winter, 2007, (DePaul Business & Commercial Law Journal, 5 DePaul Bus. & Comm. L.J. 379, COMMENT: How Bad Boys Turn Good: The Role of Law in Transforming Criminal Organizations Into Legitimate Entities by Making Rehabilitation An Economic Necessity, p. Lexis)

Yet even an underground business must still operate as close as possible to the guidelines of the law - the further it deviates, the higher its costs. **Destruction and gang wars** may look like fun in movies, but they **are** generally **unprofitable and cause increased prosecutions**.ⁿ³³ In both legal and illegal markets, "the best of all monopoly profits is a quiet life."ⁿ³⁴ Instead of attempting competition in the same area, criminal organizations split up territories establishing cartels and geographic monopolies.ⁿ³⁵ For example, it may be easier to kill a rival-drug selling mafia than to engage in product competition (manufacturing higher quality and cheaper drugs), but if this will lead to government prosecutions, rival mafia wars, or increased police enforcement, it may be cheaper to instead cartelize the industry or divide up the territory between the various suppliers.ⁿ³⁶ **The more murders the mafia commits, the more police and judges it has to bribe, and the more witnesses it has to kill**. For example, when a Chicago drug ring leader was asked by one of his subordinates why he could not just shoot and kill competitors, he explained: "you've got to belong to a serious organization - you can't just tear [things] up. It's bad for business."ⁿ³⁷ Thus **a mafia behaves just like any other profit maximizing organization - seeking to minimize its costs and maximize its profits**. However, unlike a legal organization, the mafia will use illegal means if the expected profits from those means are more than the expected profits from their legal counterparts.ⁿ³⁸ As one Mafioso eloquently said in [*386] Mario Puzo's Godfather, "I don't like violence ... I'm a businessman; blood is a big expense."ⁿ³⁹

PhD

Although one may agree with ecologists such as Ehrlich and Raven that **the earth stands on the brink of** an episode of **massive extinction, it may not follow** from this grim fact **that human beings will suffer** as a result. On the contrary, skeptics such as science writer Colin **Tudge** have **challenged biologists to explain why we need more than a tenth of the 10 to 100 million species that grace the earth**. Noting that "cultivated systems often out-produce wild systems by 100-fold or more," **Tudge declared** that "the argument that humans need the variety of other species is, when you think about it, a theological one."ⁿ³⁴³ Tudge observed that "the **elimination of all but a tiny minority of our fellow creatures does not affect the material well-being of humans one iota**."ⁿ³⁴⁴ This skeptic challenged ecologists to list more than 10,000 species (other than unthreatened microbes) that are essential to ecosystem productivity or functioning.ⁿ³⁴⁵ **The human species could**

survive just as well if 99.9% of our fellow creatures went extinct, provided only that we retained the appropriate 0.1% that we need." n346 [*906] The monumental Global Biodiversity Assessment ("the Assessment") identified two positions with respect to redundancy of species. "At one extreme is the idea that each species is unique and important, such that its removal or loss will have demonstrable consequences to the functioning of the community or ecosystem." n347 The authors of the Assessment, a panel of eminent ecologists, endorsed this position, saying it is "unlikely that there is much, if any, ecological redundancy in communities over time scales of decades to centuries, the time period over which environmental policy should operate." n348 These eminent ecologists rejected the opposing view, "the notion that species overlap in function to a sufficient degree that removal or loss of a species will be compensated by others, with negligible overall consequences to the community or ecosystem." n349 Other **biologists believe**, however, that **species are so fabulously redundant in the ecological functions they perform that the life-support systems and processes of the planet and ecological processes in general will function perfectly well with fewer of them, certainly fewer than the millions and millions we can expect to remain even if every threatened organism becomes extinct.** n350 Even the kind of sparse and miserable world depicted in the movie Blade Runner could provide a "sustainable" context for the human economy as long as people forgot their aesthetic and moral commitment to the glory and beauty of the natural world. n351 The Assessment makes this point. "Although any ecosystem contains hundreds to thousands of species interacting among themselves and their physical environment, the emerging consensus is that the system is driven by a small number of . . . biotic variables on whose interactions the balance of species are, in a sense, carried along." n352 [*907] To make up your mind on the question of the functional redundancy of species, consider an endangered species of bird, plant, or insect and ask how the ecosystem would fare in its absence. The fact that the creature is endangered suggests an answer: it is already in limbo as far as ecosystem processes are concerned. **What crucial ecological services does the black-capped vireo, for example, serve? Are any of the species threatened with extinction necessary to the provision of any ecosystem service on which humans depend? If so, which ones are they?** Ecosystems and the species that compose them have changed, dramatically, continually, and totally in virtually every part of the United States. **There is little ecological similarity, for example, between New England today and the land where the Pilgrims died. n353 In view of the constant reconfiguration of the biota, one may wonder why Americans have not suffered more as a result of ecological catastrophes.** The cast of species in nearly every environment changes constantly-local extinction is commonplace in nature-but the crops still grow. Somehow, it seems, property values keep going up on Martha's Vineyard in spite of the tragic disappearance of the heath hen. One might argue that **the sheer number and variety of creatures available to any ecosystem buffers that system against stress.** Accordingly, we should be concerned if the "library" of creatures ready, willing, and able to colonize ecosystems gets too small. (Advances in genetic engineering may well permit us to write a large number of additions to that "library.") **In the United States as in many other parts of the world, however, the number of species has been increasing dramatically, not decreasing, as a result of human activity. This is because the hordes of exotic species coming into ecosystems in the United States far exceed the number of species that are becoming extinct.** Indeed, introductions may outnumber extinctions by more than ten to one, so that the United States is becoming more and more species-rich all the time largely as a result of human action. n354 [*908] Peter Vitousek and colleagues estimate that over 1000 non-native plants grow in California alone; in Hawaii there are 861; in Florida, 1210. n355 In Florida more than 1000 non-native insects, 23 species of mammals, and about 11 exotic birds have established themselves. n356 Anyone who waters a lawn or hoes a garden knows how many weeds desire to grow there, how many birds and bugs visit the yard, and how many fungi, creepy-crawlies, and other odd life forms show forth when it rains. All belong to nature, from wherever they might hail, but not many homeowners would claim that there are too few of them. Now, not all exotic species provide ecosystem services; indeed, some may be disruptive or have no instrumental value. n357 This also may be true, of course, of native species as well, especially because all exotics are native somewhere. Certain exotic species, however, such as Kentucky blue grass, establish an area's sense of identity and place; others, such as the green crabs showing up around Martha's Vineyard, are nuisances. n358 Consider an analogy [*909] with human migration. Everyone knows that after a generation or two, immigrants to this country are hard to distinguish from everyone else. The vast majority of Americans did not evolve here, as it were, from hominids; most of us "came over" at one time or another. This is true of many of our fellow species as well, and they may fit in here just as well as we do. It is possible to distinguish exotic species from native ones for a period of time, just as we can distinguish immigrants from native-born Americans, but as the centuries roll by, species, like people, fit into the landscape or the society, changing and often enriching it. Shall we have a rule that a species had to come over on the Mayflower, as so many did, to count as "truly" American? Plainly not. When, then, is the cutoff date? Insofar as we are concerned with the absolute numbers of "rivets" holding ecosystems together, extinction seems not to pose a general problem because a far greater number of kinds of mammals, insects, fish, plants, and other creatures thrive on land and in water in America today than in prelapsarian times. n359 **The Ecological Society of America has urged managers to maintain biological diversity as a critical component in strengthening ecosystems against disturbance. n360 Yet as Simon Levin observed, "much of the detail about species composition will be irrelevant in terms of influences on ecosystem properties."** n361 [*910] He added: "For net primary productivity, as is likely to be the case for any system property, **biodiversity matters only up to a point; above a certain level, increasing biodiversity is likely to make little difference.**" n362 **What about the use of plants and animals in agriculture? There is no scarcity foreseeable. "Of an estimated 80,000 types of plants [we] know to be edible,"** a U.S. Department of the Interior document says, **"only about 150 are extensively cultivated."** n363 About twenty species, not one of which is endangered, provide ninety percent of the food the world takes from plants. n364 Any new food has to take "shelf space" or "market share" from one that is now produced. Corporations also find it difficult to create demand for a new product; for example, people are not inclined to eat paw-paws, even though they are delicious. It is hard enough to get people to eat their broccoli and lima beans. It is harder still to develop consumer demand for new foods. This may be the reason the Kraft Corporation does not prospect in remote places for rare and unusual plants and animals to add to the world's diet. Of the roughly 235,000 flowering plants and 325,000 nonflowering plants (including mosses, lichens, and seaweeds) available, farmers ignore virtually all of them in favor of a very few that are profitable. n365 To be sure,

any of the more than 600,000 species of plants could have an application in agriculture, but would they be preferable to the species that are now dominant? Has anyone found any consumer demand for any of these half-million or more plants to replace rice or wheat in the human diet? There are reasons that farmers cultivate rice, wheat, and corn rather than, say, Furbish's lousewort. There are many kinds of louseworts, so named because these weeds were thought to cause lice in sheep. How many does agriculture really require? [*911] The species on which agriculture relies are domesticated, not naturally occurring; they are developed by artificial not natural selection; they might not be able to survive in the wild. n366 This argument is not intended to deny the religious, aesthetic, cultural, and moral reasons that command us to respect and protect the natural world. These spiritual and ethical values should evoke action, of course, but we should also recognize that they are spiritual and ethical values. We should recognize that ecosystems and all that dwell therein compel our moral respect, our aesthetic appreciation, and our spiritual veneration; we should clearly seek to achieve the goals of the ESA. There is no reason to assume, however, that these goals have anything to do with human well-being or welfare as economists understand that term. These are ethical goals, in other words, not economic ones. Protecting the marsh may be the right thing to do for moral, cultural, and spiritual reasons. We should do it-but someone will have to pay the costs. In the narrow sense of promoting human welfare, protecting nature often represents a net "cost," not a net "benefit." It is largely for moral, not economic, reasons-ethical, not prudential, reasons-that we care about all our fellow creatures. They are valuable as objects of love not as objects of use. What is good for [*912] the marsh may be good in itself even if it is not, in the economic sense, good for mankind. **The most valuable things are quite useless.**

Biodiversity is resilient and inevitable

Sagoff 8 Mark, Senior Research Scholar @ Institute for Philosophy and Public Policy @ School of Public Policy @ U. Maryland, Environmental Values, "On the Economic Value of Ecosystem Services", 17:2, 239-257, EBSCO

What about the economic value of biodiversity? **Biodiversity represents nature's greatest** largess or **excess** since **species appear nearly as numerous as the stars** the Drifters admired, except that **scientists have a better understanding of how many stars there are in the galaxy than how many species there are on Earth.**⁷⁰ Worldwide **the variety of biodiversity is effectively infinite.** the myriad **species of plants and animals, not to mention microbes** that are probably more important, apparently **exceed our ability to count or identify them.** The "next" or "incremental" thousand species taken at random would not fetch a market price because another thousand are **immediately available** and **another thousand after that.** No one has suggested an economic application, moreover, for any of the thousand species listed as threatened in the United States.⁷⁷ To defend these species - or the next thousand or the thousand after that - on economic grounds is to trade convincing spiritual, aesthetic, and ethical arguments for bogus, pretextual, and disingenuous economic ones.⁷⁸ As David Ehrenfeld has written,

We do not know how many [plant] species are needed to keep the planet green and healthy, but it seems very unlikely to be anywhere near the more than quarter of a million we have NOW. Even a mighty dominant like the American chestnut, extending over half a continent, all but disappeared without bring-ing the eastern deciduous forest down with it. And if we turn to the invertebrates, the source of nearly all biological diversity, what biologist is willing to find a value - conventional or ecological - for all 600,000-plus species of beetles?^{7*}

The **disappearance** in the wild **even of agriculturally useful species** appears to **have no effect on production.** The last wild aurochs, the progenitor of dairy and beef cattle, went extinct in Poland in 1742, yet no one believes the beef industry is threatened. The **genetic material** of crop species **is contained in** tens of thousands of **landraces** and cultivars in use - rice is an example - **and does not depend on the persistence of wild ancestral types.** **Genetic engineering can introduce DNA from virtually any species into virtually any other** - **which allows for the unlimited creation of biodiversity.**

A neighbor of mine has collected about 4,000 different species of insects on his two-acre property in Silver Spring, Maryland. These include 500 kinds of Lepidoptera (mostly moths) - half the number another entomologist found at his residence.⁸⁰ When you factor in plants and animals, the amount of "backyard biodiversity" in suburbs is astounding and far greater than you can imagine.^{8*} **Biodiversity has no value** "at the margin" because **nature provides far more of it than anyone could possibly administer.** If one kind of moth flies off, you can easily attract hundreds of others.

AT: Disease

No extinction

Gladwell, '95

Malcolm Gladwell, The New Republic, July 17 and 24, 1995, excerpted in Epidemics: Opposing Viewpoints, 1999, p. 31-32

Every infectious agent that has ever plagued humanity has had to adapt a specific strategy but **every strategy carries a corresponding cost and this makes human counterattack possible.** Malaria is vicious and deadly but it relies on mosquitoes to spread from one human to the next, which means that draining swamps and putting up mosquito netting can all but halt endemic malaria. Smallpox is extraordinarily durable remaining infectious in the environment for years, but its very durability its essential rigidity is what makes it one of the easiest microbes to create a vaccine against. AIDS is almost invariably lethal because it attacks the body at its point of great vulnerability, that is, the immune system, but the fact that it targets blood cells is what makes it so relatively uninfamous. Viruses are not superhuman. I could go on, but the point is obvious. **Any microbe capable of wiping us all out would have to be everything at once: as contagious as flu, as durable as the cold, as lethal as Ebola, as stealthy as HIV and so doggedly resistant to mutation that it would stay deadly over the course of a long epidemic. But viruses are not, well, superhuman. They cannot do everything at once.** It is one of the ironies of the analysis of **alarmists** such as Preston that they are all too willing to point out the limitations of human beings, but they **neglect to point out the limitations of microscopic life forms.**

No risk of pandemics – new advances

Economist, 10

(11 22, <http://www.economist.com/node/17493456>)

Fortunately, **globalisation will also speed the flow of health data.** In 2011 the growing field of digital epidemiology will attract more students, health officials and resources than ever before. People in viral hotspots around the world will report suspicious human and animal deaths (often a warning sign of a coming plague) by mobile phones. These data will be posted to the web, instantly enriching the data that came from traditional surveillance systems and electronic medical records. Organisations like Google.org will scour search patterns around the world, expanding their search-based predictions of influenza to other infectious diseases. Still more creative early-detection systems will begin to pull together illness information present in social-networking sites like Facebook and Twitter, **allowing us to see changing disease patterns before they make the morning news. Novel laboratory approaches to the discovery of new viruses will emerge.** The long-awaited era of single-molecule DNA sequencing will begin in earnest with new machines from companies like Pacific Biosciences, and with a bit of luck this will improve the speed at which we can recognise unknown bugs. At the cutting edge, new studies of virus evolution and chips housing tiny cell cultures will improve our capacity to sort through the viral chatter and determine if a newly identified outbreak has the potential to spread globally or is likely to fade away. The discovery of new viruses will make the move from universities to laboratories around the world, helping to facilitate international scientific collaboration and decrease fears of biopiracy. Towards a global immune system In 2011 you may be among those who will watch "Contagion", a forthcoming movie about a frightening fictional pandemic. But whether you are a head of state wary of the political and economic costs of a disease catastrophe, a CEO concerned by supply-chain and staff disruption associated with the next pandemic or a citizen worried about your family, in 2011 you will have access to better, more accurate and rapidly available data on actual outbreaks. **In the increasingly popular Silicon Valley model, organisations like ours will mash up multiple data sources—combining lab results in far-flung viral listening-posts with international news feeds, text messages, social-networking and search patterns to create a new form of epidemic intelligence.** The past ten years have seen noteworthy progress in the development of truly global systems. **In the world of outbreaks, 2011 will mark the beginning of the development of a worldwide immune system that will detect and respond to biological threats before they go global.** Although this will take years to build fully, if successful **it could make pandemic anniversaries a thing of the past.**

AT: US-China War

No China war---leaders are pragmatic

Goldstein 11—professor emeritus of IR, American U. PhD in pol sci from MIT. Former visiting professor emeritus at Yale

(Sept 2011, Joshua, Think Again: War, http://www.foreignpolicy.com/articles/2011/08/15/think_again_war)

What about China, the most ballyhooed rising military threat of the current era? Beijing is indeed modernizing its armed forces, racking up double-digit rates of growth in military spending, now about \$100 billion a year. That is second only to the United States, but it is a distant second: The Pentagon spends nearly \$700 billion. Not only is China a very long way from being able to go toe-to-toe with the United States; it's not clear why it would want to. A military conflict (particularly with its biggest customer and debtor) would impede China's global trading posture and endanger its prosperity. Since Chairman Mao's death, China has been hands down the most peaceful great power of its time. For all the recent concern about a newly assertive Chinese navy in disputed international waters, China's military hasn't fired a single shot in battle in 25 years.

"A More Democratic World Will Be a More Peaceful One."

Not necessarily. The well-worn observation that real democracies almost never fight each other is historically correct, but it's also true that democracies have always been perfectly willing to fight non-democracies. In fact, democracy can heighten conflict by amplifying ethnic and nationalist forces, pushing leaders to appease belligerent sentiment in order to stay in power. Thomas Paine and Immanuel Kant both believed that selfish autocrats caused wars, whereas the common people, who bear the costs, would be loath to fight. But try telling that to the leaders of authoritarian China, who are struggling to hold in check, not inflame, a popular undercurrent of nationalism against Japanese and American historical enemies. Public opinion in tentatively democratic Egypt is far more hostile toward Israel than the authoritarian government of Hosni Mubarak ever was (though being hostile and actually going to war are quite different things).

Economic interdependence checks war

Doctoroff 10—MBA at the University of Chicago, North Asia Area Director of JWT advertising firm (Tom, 28 November 2010, "Standing Up to China, the Obama Way", http://www.huffingtonpost.com/tom-doctoroff/standing-up-to-china-the_b_788704.html)

Third, and fortunately, China knows its ascent will not continue without Western complicity. No matter how successful the central government is in rebalancing the economy toward domestic consumption, exports to Western markets, which have fueled more than 60% of economic expansion since 1990, will determine growth rates for decades to come. Even the military acknowledges armed conflict with the United States would strike a fatal blow to China's "peaceful rise." Importantly, China has always productively engaged with other societies -- from Indian Buddhism to American capital markets, absorbing new influences and applying them in Chinese contexts. After the Great Leap Backwards -- thirty years of economic and social disaster triggered by post-Liberation isolation -- it knows walls, at least outside cyberspace, are counterproductive. As one street smart sixty-year-old confided, "We're afraid of not having any friends." In China, there is no desire, even amongst reactionary military factions, to become divorced from global forces of progress.

AT: Terrorism—Adaptation/Resilience

Terrorists adapt---cutting funding makes them stronger

Santos 11 – Major David N Santos, Active Duty Army Intelligence Officer Currently Attending the U.S. Army Command & General Staff College, "What Constitutes Terrorist Network Resiliency?", Small Wars Journal, 5-31, <http://smallwarsjournal.com/jrnl/art/what-constitutes-terrorist-network-resiliency>

As important as ideology and social networking are, their benefits will only carry a terrorist organization to a certain extent. As with virtually any other organization or activity around the world, money, is the lifeblood of any organization or movement. Without a reliable source of funding a terrorist organization loses its ability to be proactive in conducting operations as well as procure needed support services and material items. Since acquiring and maintaining sources of financing is vital to the existence of a terrorist organization, security for those sources of funding

along with the methods of transferring and storing funds is equally vital. As a result, terrorist organizations have proved to be exceptionally agile in identifying and implementing numerous methods of funding and transferring money in order to prevent effective countermeasures by state governments (Williams, 2005).

The process of globalization has created unprecedented levels of interconnectivity among not only state governments but also among domestic and international financial institutions. As such, vast sums of money can be transferred from one part of the world to another nearly instantaneously. The sheer pace and vastness of the globalization process with developments in information and telecommunications technology has created a nearly impossible task to monitor effectively daily financial transactions to ensure there is no link to terrorist activity. Previous attempts to counter terrorist financing, such as in the wake of the 9/11 attacks, has been to freeze known or suspected terrorist financial assets. Yet this countermeasure has only yielded limited success. As Williams (2005) notes, current attempts to identify and attack terrorist financing has only served to increase the “capacity of terrorist organizations to adapt quickly to new regulations by adopting novel methods of circumventing rules and regulations” (pp. 6).

If Williams (2005) is correct in his analysis that current efforts to target terrorist funding are only resulting in making smarter and more efficient fiscally minded terrorist organizations than what is enabling this trend? One of the key issues is current international law is lacking in specificity and applicability to the nature of the threat posed by transnational terrorist organizations like al Qaeda. One of the main deficiencies with international law is with the Financial Action Task Force (FATF) which had been created in 1989 by the G-7 states to counter money laundering activities conducted by international criminal and drug trafficking organizations (Williams, 2005). The FATF identified 40 recommendations to be implemented to counter money laundering activities. However, no formal binding convention or treaty was created therefore consistent implementation of the FATF recommendations did not occur thus leaving loop holes in international law for use by terrorist organizations to circumvent the FATF. Efforts like the FATF can only be successful if they receive the full support of the international community. Limited or no support provides opportunities for terrorist organizations to continue their financing operations relatively unmolested. The FATF was a lackluster effort to combat terrorist financing due to inefficiency in the manner in which it operated resulting in money laundering not being truly deterred but rather shifted to other areas around the globe where these activities could be conducted more freely (Williams, 2005). The FATF is only one example of inconsistencies in international economic law (as well as with state domestic law) which have inhibited effective terrorist financing countermeasures. The ineffectiveness of the FATF and other counter drug and organized crime measures which have been used to target terrorist financing has only served to actually create more experienced and smarter terrorist financing practices. Instead of preventing terrorist financing, efforts such as the FATF have only facilitated it to expand.

They'll move to other areas

Vaknin 5 – Sam Vaknin, Ph.D., Editor in Chief of Global Politician and Investment Politics, “Money Laundering in A Changed World”, May, <http://samvak.tripod.com/pp96.html>

Quo Vadis, Money Laundering? Crime is resilient and fast adapting to new realities. Organized crime is in the process of establishing an alternative banking system, only tangentially connected to the West's, in the fringes, and by proxy. This is done by purchasing defunct banks or banking licences in territories with lax regulation, cash economies, corrupt politicians, no tax collection, but reasonable infrastructure. The countries of

Eastern Europe - Yugoslavia (Montenegro and Serbia), Macedonia, Ukraine, Moldova, Belarus, Albania, to mention a few - are natural targets. In some cases, organized crime is so all-pervasive and local politicians so corrupt that the distinction between criminal and politician is spurious. Gradually, money laundering rings move their operations to these new, accommodating territories. The laundered funds are used to purchase assets in intentionally botched privatizations, real estate, existing businesses, and to finance trading operations. The wasteland that is Eastern Europe craves private capital and no questions are asked by investor and recipient alike. The next frontier is cyberspace. Internet banking, Internet gambling, day trading, foreign exchange cyber transactions, e-cash, e-commerce, fictitious invoicing of the launderer's genuine credit cards - hold the promise of the future. Impossible to track and monitor, ex-territorial, totally digital, amenable to identity theft and fake identities - this is the ideal vehicle for money launderers. This nascent platform is way too small to accommodate the enormous amounts of cash laundered daily - but in ten years time, it may. The problem is likely to be exacerbated by the introduction of smart cards, electronic purses, and payment-enabled mobile phones.

Shifts to hawala---makes detection impossible

Gouvin 3 – Eric J. Gouvin, Professor of Law at the Western New England College School of Law, “Bringing Out the Big Guns: The USA Patriot Act, Money Laundering, and the War on Terrorism”, Baylor Law Review, Fall, 55 Baylor L. Rev. 955, Lexis

C. Terrorists Move Money Through Hard-to-Regulate Non-Bank Channels Even if the reporting requirements of the Patriot Act work perfectly, the new law still will not be effective to intercept terrorist financing because terrorists do not have to use banks to move money. The lynchpin of our existing money laundering scheme is the conventional banking system. We count on bankers to file CTRs and SARs because bankers are subject to a rigorous regulatory scheme and they know they will get into trouble if they do not comply with the law. Terrorists, however, do not necessarily rely on the banking system to move money because they have access to other reliable ways to transfer funds around the world. The Islamic world is tied together financially by a traditional banking system known as the hawala. n104 These ancient networks of settling [*978] payments have deep roots in Islamic culture. They are essentially based on trust, and involve no physical transfer of funds. For example, a hawala broker in one country instructed by his client arranges for a broker in another country to make a payment to the intended beneficiary. n105 Such informal systems are not designed to deal with official transactions; instead, they provide complete confidentiality and no paper trail. Given the pervasiveness of the hawala system and its informality, law enforcement officials find it difficult to use the hawala network to fight crime. In India, Pakistan, and the Middle East where these systems are common, they create significant money laundering problems. One big problem they present is the difficulty of distinguishing between legitimate transactions and those involving money laundering. n106 In the aftermath of September 11, the United States and other nations froze a Dubai based hawala called "Al Barakaat." n107 This action made headlines and significant sums were impounded, but one wonders what effect it had on terrorist operations. n108 These networks are highly adaptive entities and if currency transfers are targeted by law enforcement, they may very well change tactics. If need be, the funds to be transferred are paid in jewelry to the brokers, who later rationalize their own inter-banking levels and fund flows amongst themselves. n109 The Patriot Act ostensibly applies to hawala banking, n110 but enforcement will be difficult. FinCEN has identified a strategy for dealing with hawalas: [*979] Our strategy is (1) to force terrorist financiers to reduce reliance on hawala and similar systems and to channel their money into more transparent, formal financial transactions; (2) to regulate hawaladars so that legitimate hawaladars comply with financial reporting structures; and (3) to target the illegal use of hawala for intensive investigation. n111 Although this approach is laudable, it sounds like a true clash of cultures. Given the long history of hawala banking, its informality, its secrecy, and its deep roots in Islam, it seems unlikely that hawala bankers will be enthusiastic in their compliance with the new law. More importantly, the law might never be enforced against the hawala because the identities of the hawala bankers are difficult to establish. Without knowing who is participating in the hawala, the regulatory scheme will be ineffective. n112

Or, charities

Santos 11 – Major David N Santos, Active Duty Army Intelligence Officer Currently Attending the U.S. Army Command & General Staff College, “What Constitutes Terrorist

Network Resiliency?”, Small Wars Journal, 5-31, <http://smallwarsjournal.com/jrnl/art/what-constitutes-terrorist-network-resiliency>

Perhaps one of the most widely used methods of rising, moving and storing funds by terrorist organizations is through the use of charities. The concept of charity is an integral part of the Islamic faith and the responsibility of every Muslim to perform. According to Islamic law each Muslim is expected to donate a percentage of their own personal wealth (a process known as zakat) as well as provide assistance to charitable efforts through personal service of some kind (Comras, 2005). These donations are quite often collected by local religious centers or mosques and later distributed to other charitable organizations to support various social programs. However, terrorist organizations like al Qaeda, Hizbollah and Jemaah Islamiyah have gained access to these donations through their support of the religious centers and mosques where these donations are made. To complicate matters these donations, viewed as individual religious obligations, have little to no oversight by state governments, particularly within the Middle East (Comras, 2005). Therefore these donation sites provide in many ways a secure and continuous form of access to funds for terrorist organizations. Unfortunately, many of the individuals providing these donations do not know their funds will ultimately end up supporting terrorist violence.

Terror funding’s resilient and adaptable

Santos 11 – Major David N Santos, Active Duty Army Intelligence Officer Currently Attending the U.S. Army Command & General Staff College, “What Constitutes Terrorist Network Resiliency?”, Small Wars Journal, 5-31, <http://smallwarsjournal.com/jrnl/art/what-constitutes-terrorist-network-resiliency>

Since the devastating attacks of September 11, 2001 there have been numerous discussions on the issue of terrorism and terrorist networks, such as al Qaeda, within the media and the intelligence community. At times these discussions have created an image of the terrorist phenomenon as one of a monolithic and unstoppable menace continuing to spread around the world unabated. Lost in these discussions is a basic understanding of what any organization needs to continue to exist. What are its basic needs? What are its sources of strength and resiliency? Most organizations, whether terrorist or not, rely on some basic essential elements that are used to help define, guide and maintain the organization. These elements allow an organization to develop strength in its structure as well as its cause in order to maintain a resilient mindset. These elements of strength and resiliency enable the organization to experience periods of adversity, look critically at the outcomes of those experiences and take the lessons learned to improve the organization’s performance. Every successful organization, to include terrorist organizations, has to identify what their most essential elements for survival are. These basic elements will vary to some degree based on an organization’s unique qualities. However, there are some elements that are almost universal to all organizations and those identified as terrorist organizations in particular. Some of the more universal elements that can contribute to a terrorist network’s strength, longevity and resiliency involve the organization’s ideology, social network apparatus and capability as well as the ability to maintain a source of funding for its operations. These are the key basic elements needed by any terrorist network to maintain and further a viable long lasting organization. If a terrorist organization were to fail to maintain a high level of proficiency in each of these elements, either individually or collectively, the organization could experience a degraded ability to achieve its desired objectives.

Advantage CP—MLATs 1NC

Text: The United States federal government should pass comprehensive reforms to Mutual Legal Assistance Treaties including a substantial increasing in funding and establishing online request forms.

The counterplan institutes key reforms to streamline MLATs – dramatically improves law enforcement cooperation

Hill 15 (Jonah Force, writes on Internet policy and cybersecurity issues, and formerly served in the White House Office of the Cybersecurity Coordinator and as a Cybersecurity Teaching Fellow at Harvard, “Problematic Alternatives: MLAT Reform for the Digital Age,” Jan 28, <http://harvardnsj.org/2015/01/problematic-alternatives-mlat-reform-for-the-digital-age/>, CMR)

V. Policy Recommendations These MLAT alternatives are potentially harmful to a robust and free Internet, and could be rendered unnecessary by appropriate MLAT reforms like the following. A. Increase MLAT funding Insufficient resources are a primary cause of MLAT backlogs. The United States must spend more money to make MLATs work for foreign law enforcement. America’s recent \$24 million in new funding was necessary but insufficient. More MLAT requests will come in as criminal prosecutions increasingly focus on digital evidence. The United States is also entitled to expect other countries to spend more to expedite responses to American requests. Realistically, other nations must recognize that American prosecutors will turn to warrants like in Microsoft if their MLAT requests gather dust in foreign justice ministries. B. Issue unilateral guidelines for direct data requests Governments should issue unilateral, self-binding guidelines to limit prosecutors’ authority to bypass an applicable MLAT and compel production of electronic records stored outside their own jurisdiction. For instance, when the information sought is particularly sensitive (perhaps political or financial information) governments should unilaterally require that prosecutors use MLAT procedures. Further, once increased resources (recommendation #1) speed up the MLAT process, governments ought to consider instituting a “first use” constraint, requiring that law enforcement agencies try in good faith to use to the MLAT process prior to pursuing direct access. A “first use” constraint, of course, is likely to be politically palatable only among nations that adopt parallel reciprocal procedures. C. Streamline the MLAT process The MLAT review process should be reformed and streamlined. There are no online submission forms for MLAT requests today. MLATs must either be submitted by paper or by email to relevant authorities in a slow and cumbersome process. All nations with MLATs should create an online submission form and guide. As the President’s Review Group has noted, the current MLAT process also contains multiple, often redundant, request reviews. For instance, the U.S. DOJ’s Office of International Affairs and the U.S. Attorney’s Office must conduct separate, independent reviews. Such redundancies should be reevaluated for efficacy and necessity. D. Adopt industry-wide legal interpretations for data requests Major technology and Internet firms should seek industry-wide consensus on how to interpret national and international law on data collection from law enforcement authorities. This industry-wide statement will not necessarily alter the way in which governments seek to access data, but it will give law enforcement a sense of the types of requests that will be challenged versus the types of requests that are broadly seen as appropriate. This could help avoid unnecessary legal and political confrontations.[2] E. Renegotiate existing MLATs Tech sector innovation and data globalization has complicated former notions of jurisdiction. Nevertheless, agreement can be reached on key terms and principles in a sufficiently broad way as to avoid bottlenecks in the MLAT process. These key terms and principles must be incorporated into updated MLAT agreements. To ensure that MLATs keep pace with changing technologies, provisions dealing with data issues should be revisited frequently within multi-national working groups.[3] V. Conclusion Reforming the MLAT system is tremendously important to inter-state law enforcement cooperation and the future of the global Internet more generally. If left unreformed, or reformed poorly, law enforcement and jurisdictional battles among and between governments and technology firms could place yet another strain on the already stressed global Internet system. By contrast, developing updated and efficient MLATs could pay enormous dividends, not only for law enforcement as it faces enormous international challenges, but also by serving as confidence-building measures as sovereign nations take on the task of resolution of other, even more difficult, global

Internet policy challenges. The question is whether or not governments will take the steps necessary to expedite and modernize the MLAT system before alternatives do irreversible damage to the international system.

Homosexual PIC

1NC

CP Text:

(Replace "Homosexual" with "gay")

Homosexual is an offensive, politically loaded term used to discriminate against gay communities

PETERS 14 [Jeremy W. Peters is a reporter in the Washington bureau of The New York Times. He covers Congress, writing about the full range of issues that the House and Senate confront, and the personalities that run the Capitol. "The Decline and Fall of the 'H' Word", 3-21-14,

<http://www.nytimes.com/2014/03/23/fashion/gays-lesbians-the-term-homosexual.html>, msm]

To most ears, it probably sounds inoffensive. A little outdated and clinical, perhaps, but innocuous enough: homosexual.¶ But that five-syllable word has never been more loaded, more deliberately used and, to the ears of many gays and lesbians, more pejorative.¶ "Homosexual" has the ring of 'colored' now, in the way your grandmother might have used that term, except that it hasn't been recuperated in the same way." said George Chauncey, a Yale professor of history and an author who studies gay and lesbian culture.¶ Consider the following phrases: homosexual community, homosexual activist, homosexual marriage. Substitute the word "gay" in any of those cases, and the terms suddenly become far less loaded, so that the ring of disapproval and judgment evaporates.¶ Some gay rights advocates have declared the term off limits. The Gay and Lesbian Alliance Against Defamation, or GLAAD, has put "homosexual" on its list of offensive terms and in 2006 persuaded The Associated Press, whose stylebook is the widely used by many news organizations, to restrict use of the word.¶ George P. Lakoff, a professor of cognitive science and linguistics at the University of California, Berkeley, has looked at the way the term is used by those who try to portray gays and lesbians as deviant. What is most telling about substituting it for gay or lesbian are the images that homosexual tends to activate in the brain, he said.¶ "Gay doesn't use the word sex," he said. "Lesbian doesn't use the word sex. Homosexual does."¶ "It also contains 'homo,' which is an old derogatory," he added. "They want to have that idea there. They want to say this is not normal sex, this is not normal family, it's going against God."¶ Historians believe the first use of "homosexual" was by Karl-Maria Kertbeny, a Hungarian journalist who wrote passionately in opposition to Germany's anti-sodomy laws in the 19th century.¶ But by the 20th century, the word had taken on a definition associated with the American Psychiatric Association's classification of same-sex attractions as a mental disorder. That did not change until the association reversed itself in 1973.¶ William Leap, a professor of anthropology at American University who studies the field of "lavender linguistics," which examines how gay people use certain words and phrases, said the offensiveness of the word stems from its medical history. "It already has all that clinical baggage heaped on it: that's the legacy of the term now," he said, adding that because of its use in a scientific way, many people do not realize how it can fall on gay and lesbian ears.

Human Rights Promotion CP

INC

CP Text: The United States federal government should create a non-United Nations body for human rights directed to promote and scrutinize human rights practices around the world.

The CP is key – the human rights council is ineffective and irreparable, only a new U.S. led institution can be responsive, politically objective, and send a global signal.

Schaefer 11 (Brett D., Jay Kingham Fellow in International Regulatory Affairs in the Margaret Thatcher Center for Freedom, a division of the Kathryn and Shelby Cullom Davis Institute for International Studies, at The Heritage Foundation, “The U.S. Should Pursue an Alternative to the U.N. Human Rights Council”, 6/23/11, <http://www.heritage.org/research/reports/2011/06/the-us-should-pursue-an-alternative-to-the-un-human-rights-council>, accessed 6/29/15)

The Human Rights Council, the premier human rights body in the United Nations, exemplifies this erratic, unprincipled approach to human rights. The council has demonstrated repeatedly that it will act selectively and reluctantly to promote respect for human rights and will confront human rights violations only when its examinations are welcomed by the target government or when the violations are so violent and extensive that they simply cannot be ignored. The results of the mandatory review clearly demonstrate the member states’ unwillingness to address the council’s key flaws. The council will continue to wallow in mediocrity regardless of whether the U.S. remains a member.¶ Other parts of the U.N. have been slightly more effective in promoting basic human rights, but they are all vulnerable to varying degrees to the politicization that plagues the council. For instance, the Third Committee of the General Assembly—which deals with social, humanitarian, and cultural issues—annually musters support for resolutions condemning a few notorious human rights violators, although most violators escape even this cursory criticism. Individual treaties, like the International Covenant on Civil and Political Rights, generally have independent bodies of experts charged with monitoring treaty compliance. These treaty bodies have at times abused their authority by reinterpreting their respective treaties in ways never envisioned when the treaties were ratified.^[58] Similarly, some special rapporteurs and independent experts have engaged in polemics and pushed political agendas rather than focus on their mandates. Nonetheless, selectively supporting the positive and useful aspects of these efforts can support America’s interest in advancing human rights. But such selective support does not require U.S. membership on or robust engagement with the HRC.¶ The United States and other countries interested in promoting fundamental human rights should not tolerate institutionalized mediocrity, ineffectiveness, or politicization that undermines the very purpose of a human rights body. The U.N. has no monopoly on the promotion of human rights in the world, and the United States should explore alternative means to promote respect for fundamental human rights, including establishing a body outside the U.N. system to promote and scrutinize human rights practices. By establishing it outside of the U.N., its membership need not and should not be universal, but based on strict human rights criteria.^[59]¶ What the U.S. Should Do¶ Regrettably, the Human Rights Council is poised to prolong the gravely disappointing record of its first five years, even with the U.S. seated at the table. The majority of the U.N. member states either oppose the council functioning as an objective advocate of basic human rights and fundamental freedoms or are simply uninterested in undertaking the steps necessary for it to fulfill that mission. Rather than focusing on difficult and ephemeral efforts to temporarily improve the council’s voting dynamics, the U.S. should:¶ Not seek another term on the Human Rights Council. After five years—two with the U.S. as an eager, active member—the council’s record echoes the worst behavior of the Commission on Human Rights in its bias against Israel, deliberate disregard of many serious human rights situations, partiality and politicization of its examination of human rights, and membership that includes governments with terrible human rights records. Investment of American resources can marginally improve the council’s performance, but even the most dedicated efforts cannot overcome its fundamental weaknesses. The U.S. needs to recognize that the costs of improving the council exceed the benefits. The Obama Administration should reverse its decision to seek another term on the council.¶ Withhold the U.S. share of the council’s budget from U.S. contributions to the U.N.’s regular budget. The HRC’s gravely disappointing record has not improved significantly over the past two years, despite U.S. membership. Congress concluded previously that the council’s infrequent positive actions do not

outweigh its many shortcomings. Regrettably, the U.S. cannot directly withhold its contribution to the council because the council's budget is funded through the U.N. regular budget. However, withholding the U.S. portion of the council's budget from its contribution to the U.N. regular budget sends an unmistakable, if symbolic, signal of U.S. dissatisfaction. ¶ Work with other U.N. member states to eliminate the council in favor of the U.N. General Assembly's Third Committee. As with the Commission on Human Rights, occasional positive actions should from not prevent the General Assembly concluding that the HRC is deficient. With the mandatory review of the council complete, the council's critical flaws will clearly not be addressed in 2011 and are unlikely to be revisited in the future. The absence of reform, particularly the unwillingness to establish meaningful membership criteria, virtually ensures that the council will continue to be weak and feckless. This situation should lead the U.S. to ask whether the council provides any vital, unique contribution. ¶ In many ways, the council duplicates the responsibilities of the Third Committee of the General Assembly, which is responsible for human rights. As a universal membership body, the Third Committee exhibits the same problems of universal U.N. membership. Yet the Third Committee has proven capable of condemning specific countries and could fulfill the council's bureaucratic and reporting functions, particularly since it already receives reports on the activities of the U.N. High Commissioner for Human Rights, the special procedures, and the Human Rights Council. Eliminating the HRC in favor of the Third Committee would remove the need for lobbying during elections, save funds by eliminating an unnecessary body, and increase participation because the Third Committee meets in New York, where every country maintains a mission, rather than Geneva where fewer countries have a mission. ¶ Continue to participate in those parts of the U.N. human rights system that the U.S. finds relevant or useful. The United States should provide voluntary support on a case-by-case basis to the U.N. High Commissioner for Human Rights and those special procedures whose experts have demonstrated objectivity, impartiality, and dedication to fulfilling their mandates. It should also participate in the Human Rights Committee and other expert bodies of treaties that the United States has ratified. ¶ Explore options for creating an alternative human rights body outside the U.N. system. The U.N. has no monopoly on the promotion of human rights in the world, and the United States and like-minded countries should explore alternative means to promote respect for fundamental human rights, including establishing a body outside the U.N. system. It should have strict membership criteria and be directed to promote and scrutinize human rights practices around the world. Such an alternative institution composed of nations that observe fundamental human rights and basic freedoms could easily surpass the HRC in objectivity, responsiveness, decisiveness, and non-selectivity.^[60]

Solvency/Alt. Causes

Alt. causes to modeling – the CP solves all of them

Telesur 15 (Telesur, “India Says US Needs a Human Rights Institution for Own Abuses”, 5/12/15, <http://www.telesurtv.net/english/news/India-Says-US-Needs-a-Human-Rights-Institution-for-Own-Abuses-20150512-0013.html>, accessed 6/29/15)

The U.S. delegation faced criticism and questions from more than 100 country representatives at the half-day review on Monday. ¶ The UN Human Rights Council began its review of the US human rights record as part of its Universal Periodic Reviews expressing concern over excessive use of force by law enforcement. Indian representative to the United Nations Human Rights Council, Ajiit Kumar, recommended that the United States establish a “national human rights institution” in order to address allegations of human rights abuses. Addressing the UN Human Rights Council in Geneva, Kumar noted that policing tactics by law enforcement authorities in the US and deficiencies in their procedures are areas of concern. ¶ Kumar's suggestion coincides with previous calls by a UN Human Rights committee that the United States implement a mechanism to monitor human rights at the federal, state, and local levels. ^{The high-profile} deaths of Eric Garner and Michael Brown and the subsequent decisions not to prosecute the officers responsible sparked a nationwide debate over race and police tactics, as well as a strong protest movement. These recent incidents prompted a recommendation by the UN Committee on the Elimination of Racial Discrimination (CERD) that the United States adopt a national action plan to combat structural racial discrimination. According to a Pew Research survey carried out in August, 7 in 10 Black US citizens say police do a poor job of holding officers accountable for misconduct and of treating racial and ethnic groups equally. An analysis by the investigative news website ProPublica of fatal police shootings of teens aged 15-19 concluded that between 2010-2012, Black teens were killed at a rate of 31.17 per million, compared to 1.47 per million among white teens. Some of the other issues raised during the review included surveillance and Guantanamo Bay. ^{The council recommended the U.S. ensure surveillance laws respect the right to privacy, and close its prison facilities at Guantanamo.}

U.S. needs to control its own abuses as a prerequisite to global modeling. Only the CP solves the alt. causes.

Schulz 8 (William F., Senior Fellow at the Center for American Progress and served as Executive Director of Amnesty International USA, “The Future of Human Rights: Restoring America’s Leadership”, 2008, <http://www.betterworldcampaign.org/assets/pdf/humanrights-schulz-final.pdf>)

The truth is that if human rights and the U.S.’s pursuit of them are discredited, American interests are put in peril. Reserving the option to torture prisoners, denying them habeas corpus, sending them into “black site” prisons—all this makes it harder to defend America against the charge of hypocrisy; the claim that we are carrying out a war in defense of the rule of law by abandoning that very rule. Such a charge hands fodder for recruitment to our adversaries and makes the world less safe for Americans. No country can claim protection for its own citizens overseas (be they soldiers taken as prisoners, nationals charged with crimes, or corporations faced with extortion) if it fails to respect international norms at home. Global relations are based in good part on reciprocity. Nor can the U.S. offer effective objection to the human rights violations of others if it is guilty of those same violations itself or has shunned cooperation with international allies. No nation, no matter how powerful, can successfully pursue improvements in human rights around the world independent of the international community. Unilateral sanctions imposed upon a country to protest human rights abuses will inevitably fail if they lack the support of others.¶

Solves Coop. on HR

A U.S. lead human rights council solves – a central authority is key to overcome the status quo ineffectiveness and inertia of equally shared responsibility.

Miller 6 (David, Nuffield College, Oxford Memo for the workshop on Global Governance, Princeton University, “The Responsibility to Protect Human Rights”, 2/18/06, https://www.princeton.edu/~pcglobal/conferences/normative/papers/Session6_Miller.pdf)

One might, however, think that this problem of assigning responsibilities is central to establishing an effective international human rights regime. Intervening to protect human rights is typically costly, in material resources in every case, in human resources in many cases (when soldiers, peace-keepers or aid workers are killed or 3 taken hostage), in political capital (when intervention is interpreted in sinister terms by third parties). So states have good reasons to avoid becoming involved if at all possible, particularly democratic states where the government will come under heavy domestic fire if the intervention goes wrong. The fact that there are often many agencies – states, coalitions of states, or other bodies – that might in principle discharge the responsibility to protect makes the problem worse. We might draw an analogy here with instances in which individuals are confronted with a situation in which they would have to perform a Good Samaritan act – say going to the rescue of somebody who collapses in the street. Empirical studies of situations like this reveal that the more potential rescuers are present, the less likely any one of them is to intervene – so the victim stands a better chance of being picked up if there is only one passer-by at the time he collapses than if there are, say, six people nearby.² Several factors may combine to produce this outcome: people interpret other people’s inaction as a sign that the problem is less serious than it might appear; there is a parallel normative effect whereby each person takes the others’ behaviour as defining what is expected or right under the circumstances; but perhaps most importantly, responsibility is diffused among the potential helpers: if the victim were to die, no-one in particular could be held responsible for the death. This problem of diffused responsibility leading to inaction can potentially be solved in two ways. One is the appearance of an authority that can then single out agents and assign them particular tasks. In the street collapse case we might imagine a policeman arriving on the scene and asking bystanders to do specific things to help the victim. Obviously this can only work where the authoritative status of the assigner is commonly recognized. The second is the emergence of shared norms that identify one person in particular as having the responsibility to take the lead. These norms do not

have to carry all of the justificatory load needed to support the intervention. After all we can probably assume that all of the bystanders looking at the victim would agree that 'somebody should help that man'. What is needed is an additional norm that can tell us who that somebody is. If we return to the case of the international protection of human rights, we can again assume widespread agreement on the principle that where widespread violations of human rights are taking place, some agency should step in to prevent them. The problem is to identify the particular agency.

It solves the perception of U.S. compliance to international demands

Kaufman 14 (Risa E., executive director of the Human Rights Institute at Columbia Law School and a Lecturer-in-Law, "On Human Rights Day: Isn't it Time for a U.S. Human Rights Institution?", 12/10/14, http://lawprofessors.typepad.com/human_rights/2014/12/on-human-rights-day-isnt-it-time-for-a-us-human-rights-institution-.html, accessed 6/29/15)

On this Human Rights Day, it seems particularly compelling to renew the call for a national human rights institution (NHRI) in the United States. Every week offers new and stark examples of the need for continual, vigilant and independent review of the nation's commitment to and compliance with its international human rights commitments. Yet, the U.S. has no central body to monitor and report on human rights compliance by federal, state and local authorities, and no independent body to assess legislation, policies and practices in light of human rights principles and impacts. This is in sharp contrast to the over 100 countries around the world with national human rights institutions (though, to be sure, these institutions vary in form, function and effectiveness).¶ The range of pressing issues explored during yesterday's hearing by the Senate Judiciary Subcommittee on the Constitution, Civil Rights, and Human Rights on the State of Civil and Human Rights in the United States underscores the urgent need for such a mechanism. Indeed, we've just concluded an extraordinary year in which U.N. expert committees reviewed the U.S. for its compliance with each of the core human rights treaties that it has ratified, and issued hard hitting, and remarkably consistent, recommendations for how the U.S. can improve its human rights record. Yet, there is no independent and comprehensive mechanism for analyzing and assessing the resulting Concluding Observations, or for communicating the treaty bodies' recommendations to the state and local officials with front line responsibilities for ensuring that the U.S. meets its human rights obligations.¶ In the course of reviewing the United States, both the Committee on the Elimination of All Forms of Racial Discrimination and the Human Rights Committee noted concern with the lack of a national human rights institution within the U.S., and urged the United States to create such an institution. The CERD Committee, in particular, urged the U.S. to: "create a permanent and effective coordinating mechanism, such as a national human rights institution ... to ensure the effective implementation of the Convention throughout the State party and territories under its effective control; monitor compliance of domestic laws and policies with the provisions of the Convention; and systematically carry out anti-discrimination training and awareness-raising activities at the federal, state and local levels."¶ When asked by U.N. treaty bodies what steps it is taking to develop an NHRI, the U.S. demurs, pointing to "multiple complementary protections and mechanisms" in the United States which "serve to reinforce the ability of the United States to guarantee respect for human rights, including through its independent judiciary at both federal and state levels." Yet, these are no replacement for an independent human rights monitoring body.¶ The U.S. need not start with a blank slate in developing an NHRI. A set of non-binding international principles ("The Paris Principles") endorsed by the U.N. General Assembly establishes minimum standards for such institutions. As a general matter, they call for NHRIs to have a broad mandate, take on advisory, educational and internationally participatory roles, and be politically independent and comprised of a pluralistic membership. Significantly, the Paris Principles explicitly call upon national human rights bodies to "setup local or regional sections" or "maintain consultation with the other bodies . . . responsible for the promotion and protection of human rights."¶ U.S. advocates have called for a U.S. human rights institution with a broad mandate to address the full range of human rights concerns in the United States, and with the ability to monitor human rights compliance, raise awareness of civil and human rights norms, engage with government officials, and investigate how policies play out on the ground in local communities. This could be done through fact-finding, advising and report writing, research, agency monitoring, and engaging with civil society and with regional and international human rights bodies. Some or all of these functions could be done through the existing U.S. Civil Rights Commission.

Solves Modeling

A U.S. human rights initiative ensures U.S. conformance with international standards – reverses skepticism to solve modeling and provides a framework for multilateral cooperation.

Schulz 8 (William F., Senior Fellow at the Center for American Progress and served as Executive Director of Amnesty International USA, “The Future of Human Rights: Restoring America’s Leadership”, 2008, <http://www.betterworldcampaign.org/assets/pdf/humanrights-schulz-final.pdf>)

By definition, human rights only gain meaning if they can claim a global imprimatur. They are, after all, universal human rights, not particular to any one country alone. They “become” rights only because a significant number of countries have recognized them as such. This means that any nation that would understand itself to be a nation that respects and promotes human rights must ipso facto be a nation that recognizes the authority of the international community when it comes to human rights or else it faces a contradiction. The United States has been living in contradiction for more than fifty years; the last seven have merely made that contradiction starker. On the one hand, the U.S. has with some good reason prided itself on being a champion of human rights around the world; on the other, it has regularly balked at the authority of the international community upon which those rights are based, especially when it comes to its own practices. Moreover, no nation, no matter how powerful, can successfully pursue improvements in human rights around the world independent of that international community. If it tries, for example, to impose unilateral sanctions upon a country to protest human rights abuses there, those sanctions will inevitably fail if they lack the support and cooperation of others. What has been especially damaging to human rights over the past seven years is that policies inimical to human rights have been carried out in the name of human rights. This includes the Iraq War of course (since human rights were at least a latter-day rationale for that conflict), but also encompasses the larger war on terror that has been pursued in the name of defending freedom and the rule of law. The result has been an unfortunate identification of human rights with America’s worldly ambitions—an identification that has only exacerbated the customary suspicion in which human rights have been held by some in the developing world who see them as a guise for imposition of Western values. All of this has contributed markedly to the decline in the U.S.’s global reputation. A new administration, whether Republican or Democratic, has an opportunity to reverse that decline and, in the process, renew America’s reputation for human rights leadership. How it addresses these issues cannot be considered independent of many of the other topics addressed in the “Don’t Go It Alone” series: the Iraq War, for example, or the promotion of democracy, or the pursuit of women’s health, or the fight against poverty. All of these have implications for human rights policy. There are several distinct steps that a new President can take. Foremost among them will be to conform the U.S.’s own practices to international human rights norms. Only when no gap remains between domestic practices and international standards can the U.S. begin to reclaim the mantle of human rights leadership and disarm the arguments of human rights violators around the world who have cited the U.S. as a model for their own repressive policies. Therefore, the next Administration should close Guantanamo Bay and either release its occupants or transfer them to the American military or criminal justice system for prosecution. It should also renounce the use of torture unequivocally; discard the practice of extraordinary rendition; commit to close and never re-open so-called secret “black site” prisons; and restore habeas corpus rights to all detainees.

HRC/UN Ineffective

The UN Human Rights Council fails - it’s politicized – that also means there’s no hope of reform.

Schaefer 11 (Brett D., Jay Kingham Fellow in International Regulatory Affairs in the Margaret Thatcher Center for Freedom, a division of the Kathryn and Shelby Cullom Davis Institute for International Studies, at The Heritage Foundation, “The U.S. Should Pursue an Alternative to the U.N. Human Rights Council”, 6/23/11, <http://www.heritage.org/research/reports/2011/06/the-us-should-pursue-an-alternative-to-the-un-human-rights-council>, accessed 6/29/15)

The HRC's record has consisted of repeated disappointment and inaction interspersed with rare positive actions of dubious long-term effect. Individual nations, including the U.S. and Canada, have injected some balance into discussions through diplomatic pressure and enticements and occasionally shepherded positive resolutions through the body. However, convincing the world's premier human rights body to support human rights standards should not be this difficult. The problems are systemic: an institutional bias against Israel, a Universal Periodic Review with rules and procedures designed to minimize scrutiny and challenges, and a vulnerability to politicization by influential states that consistently violate human rights. The ability of states with poor human rights records to win seats on the council exacerbates these problems and undermines the council's mission. As long as these problems remain, U.S. efforts to positively influence the council will be difficult, rarely successful, and impermanent.¶ Only a new General Assembly resolution modifying the resolution that established the council could address these flaws to a lasting degree. The original resolution included a provision requiring a performance review of the council by 2011, when reforms could be proposed.[49] This mandatory review presented the best chance for enacting membership standards and other reforms necessary to make the council effective.¶ In October 2009, the council established "an open-ended intergovernmental working group on the review of the work and functioning of the Human Rights Council" charged with considering recommendations for improving the council and its work and to draft a resolution for the U.N. General Assembly to consider as the culmination of the mandatory five-year review.[50] NGOs, the U.S., and other nations proposed numerous substantive reforms in the working group's two sessions in October 2010 and February 2011. The Obama Administration alone proposed more than two dozen reforms, including creating multiple means for calling special sessions, establishing stronger criteria for candidates running for seats on the council, mandating competitive elections, and making the Israel country mandate subject to renewal like the other mandates.¶ In nearly every case, the proposed reforms were rejected. The committee failed to address membership standards; the selectivity and inability of the council to address urgent human rights situations, especially those in specific countries; and the permanent country mandate on Israel.[51] Aside from a few minor changes to UPR rules and procedures, such as ensuring that all states have the opportunity to speak during the UPR, the draft resolution lacks any substantive reforms that would improve the work of the body or address the key problems identified in its first five years.[52] Instead, the review has focused primarily on minor issues, such as shifting the council from the current June–June schedule to a calendar-year schedule.

Bipartisan

Bipartisan support in the house

Gaylord 15 (Shawn M., Human Rights First, "Human Rights First Welcomes Reintroduction of International Human Rights Defense Act", 1/29/15, <http://www.humanrightsfirst.org/press-release/human-rights-first-welcomes-reintroduction-international-human-rights-defense-act>, accessed 6/29/15)

Washington, D.C. – Human Rights First today welcomes the re-introduction of The International Human Rights Defense Act, a bill to direct the Department of State to establish a Special Envoy in the Bureau of Democracy, Human Rights, and Labor responsible for foreign policy initiatives to protect the human rights of lesbian, gay, bisexual, and transgender (LGBT) people. The bill was introduced today in the Senate by Senator Edward J. Markey (D-MA) and with bipartisan support in the House by Representative Alan Lowenthal (D-CA).¶ Events of the past few months only reinforce the need for a Special Envoy for the rights of LGBT people," said Human Rights First's Shawn Gaylord. "Around the world, governments continue to introduce and pass legislation designed to criminalize and marginalize LGBT communities. In fact the very gains the community has made may be fueling a simultaneous crackdown. We cannot afford to go backwards now, and we welcome the re-introduction of this important bill that would ensure that the United States continues to make safety and freedom from persecution for all a foreign policy priority."

Human rights legislation is bipartisan in congress

Freedom House 14 (Freedom House, independent watchdog organization that supports democratic change, “Congress has Bipartisan Support for Human Rights Defense Act”, 7/16/14, <https://freedomhouse.org/article/congress-has-bipartisan-support-human-rights-defense-act#.VZHMSflViko>, accessed 6/29/15)

In response to the introduction of the International Human Rights Defense Act in the House of Representatives by Rep. John Tierney (D-MA), Freedom House issued the following statement.¶ “We support Rep. Tierney for taking leadership in the House on the issue of rights for LGBTI persons,” said Chloe Schwenke, vice president for global programs at Freedom House. “Freedom House welcomes the genuine bipartisan base of support for fundamental human rights performance as covered by this bill. The legislation, which is the House companion of the International Human Rights Defense Act introduced by Sen. Ed Markey in the Senate last month, would solidify the United States’ commitment to protecting and promoting the rights of LGBTI people around the world. It is vital that the United States support these communities through foreign assistance and diplomacy, and this legislation would give the State Department and USAID additional tools to do so.” ¶ The International Human Rights Defense Act would direct the State Department to:¶ Make preventing and responding to discrimination and violence against the LGBTI community a foreign policy priority and devise a global strategy to achieve those goals.¶ Coordinate efforts to promote international LGBTI human rights with local advocacy groups, governments, multilateral organizations, and the private sector.¶ Create the position of “Special Envoy for the Human Rights of LGBT Peoples” in the Bureau of Democracy, Human Rights, and Labor, which will be responsible for all inter-bureau and inter-agency coordination of the United States government’s efforts to defend human rights for the LGBTI community internationally.¶ Continue to include a section on LGBTI international human rights in the annual State Department Report on Human Rights.¶

ENDA CP

Counterplan text: The United States federal government should enact the Employment Non-Discrimination Act.

ENDA would prevent employers from discriminating based on sexual orientation or gender identity – it's the first step in ending discrimination

HRC, international nonprofit human rights organization, 2015 (Human Rights Campaign, “Employment Non-Discrimination Act” March 9 2015, <http://www.hrc.org/resources/entry/employment-non-discrimination-act>, MMV)

Qualified, hardworking Americans are denied job opportunities, fired or otherwise discriminated against just because they are lesbian, gay, bisexual or transgender (LGBT). There is no federal law that consistently protects LGBT individuals from employment discrimination; there are no state laws in 29 states that explicitly prohibit discrimination based on sexual orientation, and in 32 states that do so based on gender identity. As a result, LGBT people face serious discrimination in employment, including being fired, being denied a promotion and experiencing harassment on the job.¶ What is the Employment Non-Discrimination Act?¶ The Employment Non-Discrimination Act (ENDA) would provide basic protections against workplace discrimination on the basis of sexual orientation or gender identity. ENDA simply affords to all Americans basic employment protection from discrimination based on irrational prejudice. The bill is closely modeled on existing civil rights laws, including Title VII of the Civil Rights Act of 1964 and the Americans with Disabilities Act. The bill explicitly prohibits preferential treatment and quotas and does not permit disparate impact suits. In addition, it exempts small businesses, religious organizations and the military.

ENDA avoids the link to politics – massive public and congressional support

HRC, international nonprofit human rights organization, 2015 (Human Rights Campaign, “Employment Non-Discrimination Act” March 9 2015, <http://www.hrc.org/resources/entry/employment-non-discrimination-act>, MMV)

Supermajorities of Republicans and Democrats back ENDA. More than 2/3 of voters - including a strong majority of Republicans - support a federal law protecting LGBT people from discrimination in the workplace, according to a September 2013 poll by Republican pollster Alex Lundry. Majorities in each of the 50 states, according to statistical modeling, are on board.

Courts CP

CP text: The Supreme Court of the United States should:

-find the state inaction doctrine inapplicable in equal protection cases involving states that have failed to include LGBT protections in broad antidiscrimination laws

- hold that failures to include LGBT protections in broad antidiscrimination laws can violate the Equal Protection Clause even if not animated by a discriminatory purpose

Oleske 15 [James M., Associate Professor of Law at Lewis and Clark Law School, former Special Assistant to President Obama and Chief of Staff of the White House Office of Legislative Affairs; 05/10/15; “STATE INACTION,” EQUAL PROTECTION, AND RELIGIOUS RESISTANCE TO LGBT RIGHTS;

http://papers.ssrn.com.proxy.lib.umich.edu/sol3/papers.cfm?abstract_id=2589743&download=yes;

06/29/15; jac]

Absent a wholesale abandonment of the *Washington v. Davis* rule, the answer cannot simply be “anytime a state policy choice has a disproportionate impact on members of a vulnerable and historically disadvantaged minority.” But drawing upon the language of the Equal Protection Clause itself, as well as *Schuetz*, the answer could and should be “when a state policy specifically concerning protection against discrimination has the serious risk of causing specific injury to members of a constitutionally protected class.” One such injury is the profound insecurity and indignity of being left uniquely vulnerable to legal discrimination in the marketplace when members of other constitutionally protected classes—and some non-constitutionally protected class—are safeguarded against such discrimination.¹⁹⁷ Thus, if the Supreme Court finally concludes that gay and lesbian people are entitled to heightened constitutional protection from discrimination,¹⁹⁸ a state’s failure to protect against sexual-orientation discrimination in its otherwise broad civil rights laws should easily meet the “serious risk” criteria that Justice Kennedy laid out in *Schuetz*. As the *Vriend* court put it, the “denial of access to remedial procedures for discrimination on the ground of sexual orientation,” when such remedies are afforded for discrimination on analogous grounds, “must have dire and demeaning consequences for those affected.”¹⁹⁹ In sum, to effectuate fully the guarantee of equal protection of the laws, the Supreme Court should (1) find the state inaction doctrine inapplicable in equal protection cases involving states that have failed to include LGBT protections in broad antidiscrimination laws, and (2) hold that such failures can violate the Equal Protection Clause even if not animated by a discriminatory purpose. In reaching the first conclusion, the Court should draw on the reasoning of Justice Goldberg’s opinion in *Bell* and the Canadian Supreme Court’s opinion in *Vriend*. In reaching the second conclusion, the Court should draw upon the reasoning of both *Vriend* and the *Schuetz* plurality.

Russia Backlash DA

1NC – Russia Backlash DA

Russia has a hardline stance against LGBT rights. The plan angers Russia and triggers a backlash against the US – kills relations

ROHRICH 14 [Kyle James Rohrich is a Master of Arts in Law and Diplomacy (MALD) candidate at The Fletcher School, with a focus on conflict resolution and public international law. He is a Boren National Security Fellow to Azerbaijan and previously a Boren Scholar to Kyrgyzstan. Kyle is also an inaugural "Diplomacy and Diversity" Fellow for Humanity in Action, an international human rights organization. "Human Rights Promotion Backfiring as "World War LGBT" Shakes Eurasia", 8-30-14, <http://www.fletcherforum.org/2014/08/30/rohrich/msm>]

Russia and the West are fighting the greatest geopolitical battle since the end of the Cold War not with nuclear arms races, aerial warfare, or military buildups. Rather, the most prevalent form of weaponry in the standoffs in Ukraine and throughout Eurasia is as unique as it is effective: the gays.¶ As the United States and European Union (EU) have begun advocating internationally for LGBT rights, Russian President Vladimir Putin has constructed an alternative ideology to rile populist movements throughout Eurasia—a region spanning Eastern and Southeastern Europe, the Caucasus, and Central Asia—against EU association. By casting LGBT rights promotion as Western aggression, Putin is succeeding in, for the first time, making sexual orientation part of nationalist discourse. If Western actors really care about the LGBT individuals caught in the subsequent crossfire, they should reexamine their LGBT rights strategies to weaken this dangerous linkage.¶ Putin's reactionary, so-called traditional values argument against LGBT rights emerged as a product of his own political and geopolitical calculus. Shortly after former U.S. Secretary of State Hillary Clinton famously asserted that "gay rights are human rights," Western political leaders promoted this belief abroad through conditional use of foreign aid, bilateral diplomatic levers, and efforts to codify LGBT rights into international human rights law. Putin found himself cornered as international actors, from his viewpoint, impinged upon Russian sovereignty through attempts to bind the country into accepting the LGBT "human rights" framework. Appealing to the country's powerful social conservative base, Putin decided to transform LGBT rights into a nationalist issue, with Western promotion framed as an assault on the "traditional values" of the Russian people. His stance served a dual-purpose: it consolidated his domestic support after a wave of anti-Putin protests in 2012, and it provided a vehicle to expand Russia's influence over similarly conservative societies in its "near-abroad."¶ Unfortunately, Putin's strategy is succeeding. At first glance, it appears LGBT rights are advancing in Eastern and Southern European countries as a result of EU accession standards that mandate countries to provide legal protections for their LGBT populations. Under the surface, however, large portions of the populations of Poland and Turkey remain intensely homophobic, and many EU candidate governments often fail to uphold in practice what LGBT protections exist on paper. Homophobic attitudes are actually increasing throughout much of the Balkans, despite the apparent success of Western countries in spearheading reforms against LGBT hate speech and discrimination in these countries. And in the Caucasus, belief that "homosexuality can never be justified" soars well into the ninetieth percentile. Politicians from Macedonia to Kazakhstan are proposing anti-LGBT legislation for their political gain, all while U.S., EU, and other international delegations have released numerous LGBT rights reports, conditioned millions of dollars of foreign assistance, and lit up government buildings in rainbow colors in efforts to advance LGBT rights in the region.¶ This Western LGBT rights advocacy has played directly into Putin's hands. A master of political spin, Putin identified LGBT rights as an issue that separates East and West and used it as a wedge to push Eurasian countries away from the West. By framing

LGBT rights as a Western import, Putin harnessed homophobic public opinion throughout the region to help achieve his geopolitical goal of rebuilding Russian influence. His strategy has been all but subtle. As the West threw its support to Ukrainian protestors in May 2014, Putin called the activists a group of “gay Nazis.” State-controlled Russian media outlets referred to the Maidan Square, the scene of the protests, as the “Gayeuromaidan,” reinforcing the popularly held notion that “LGBT” is a Western construct.¶ The pawns in this new Great Game, LGBT individuals, face increasingly grim prospects as sexual orientation becomes further associated with national identity. In this past year alone, Lithuania and six other Eurasian countries introduced Russian-style LGBT propaganda bills, thousands of Georgian nationalists chased LGBT activists through the streets of Tbilisi, and state-sanctioned anti-LGBT violence soared in eastern Ukraine. In Kyrgyzstan, a swarm of young Kyrgyz nationalists rumored to be funded by the Kremlin burned photos of a local human rights activist in protest of American intervention in local issues. With Western led LGBT advocacy now embroiled in a nationalist debate, local LGBT activists are increasingly wary of this dangerous linkage. Young activist Danik Kasmamytov told me, “We are very much afraid of the rhetoric that LGBT rights come from the West.”¶ In World War LGBT—the EU’s and Russia’s competition to establish their respective spheres of influence—one man’s LGBT freedom fighter is another man’s cultural imperialist. However, whether LGBT rights are human rights or an affront to traditional values is irrelevant. Should Western actors believe in the cause, it is time they evaluate the results of their diplomacy. The fates of millions of LGBT individuals depend on it.

US-Russia relations solve every impact

CFR Task Force 2006 [Council on Foreign Relations Independent Task Force for Russia, Chaired by John Edwards and Jack Kemp, “RUSSIA’S WRONG DIRECTION: WHAT THE UNITED STATES CAN AND SHOULD DO,” http://www.cfr.org/content/publications/attachments/Russia_TaskForce.pdf, msm]

Since the dissolution of the Soviet Union, American presidents and¶ policymakers have believed that the interests of the United States are served by engagement with Russia. This Task Force, too, began its¶ review of U.S. policy—and concludes it—convinced of the extraordinary¶ importance of getting U.S. relations with Russia right.¶ U.S.-Russian cooperation can help the United States to handle¶ some of the most difficult challenges it faces: terrorism, the proliferation¶ of weapons of mass destruction, tight energy markets, climate change,¶ the drug trade, infectious diseases, and human trafficking. These problems¶ are more manageable when the United States has Russia on its¶ side rather than aligned against it.¶ Good relations between Moscow and Washington also bolster one¶ of the most promising international realities of our time—the near¶ absence of security rivalries among the major powers. That the world’s¶ leading states deal with each other in a spirit of accommodation is a¶ great asset for American policy, and the United States will be in a better¶ position to protect that arrangement if relations with Russia are on a¶ positive track.

2NC – Link/Internals

The Aff dives a wedge between the US and Russia – wrecks relations

RT 13 [Reuters, “Western promotion of LGBT values a concern”, 9-13-13, <http://rt.com/politics/russia-blasts-lgbt-promotion-820/>, msm]

A senior Russian diplomat has blasted as unacceptable the ongoing attempts of Western nations to impose their values on other countries, while at the same time infringing on the socio-economic rights of their own citizens.¶ “The urge of Western countries to impose their neoliberal system of values on the other

members of the international community as a universal basis of living can only cause concern. This is especially noticeable on the background of their aggressive promotion of the sexual minorities' rights.” said the Foreign Ministry’s plenipotentiary for human rights, Konstantin Dolgov, while addressing the International Human Rights Forum, currently underway in Beijing.¶ Attempts to force other nations into accepting homosexuality and same-sex marriage as some natural social phenomenon which deserves support at a state level cannot be tolerated. Dolgov emphasized.¶ He added that such an approach was met with resistance not only in countries that hold to traditional values, but also those that have always had liberal attitudes to people of non-traditional orientation. He recalled the protests held in France after same sex marriage was legalized earlier this year.¶ In addition, Dolgov noted that the aggressive advertising of neo-liberal values is often done at the same time with frequent infringement of socio-economic rights and liberties inside the countries that pursue such politics. ¶ The speech was made against the backdrop of the massive international campaign against a Russian act that outlaws the promotion of non-traditional sexual relations to minors. LGBT activists around the world dubbed the act ‘the gay propaganda ban’ and called for protest measures ranging from a boycott of Russian vodka to a boycott of the 2014 Winter Olympics in the Russian city of Sochi.¶

Plan undermines relations – Russia spins western criticism to create anti-Western sentiment within Russia – turns the Russia advantage

Kaufman 14 [Sarah is a freelance journalist. She has her master's in journalism from Medill and specializes in Russian language. “Why Putin is Loving the West's Protests Against Russia's Anti-Gay Laws”, 2-18-14, <http://mic.com/articles/82569/why-putin-is-loving-the-west-s-protests-against-russia-s-anti-gay-laws,msm>]

Have you heard about Russia's ban on "gay propaganda"? The piece of legislation, which Vladimir Putin passed into law last year, has sparked star-studded protests across the Western world. Putin's laws have triggered countless campaigns and petitions — he's drawn ire from celebrities, among them Madonna, Jamie Lee Curtis and Melissa Etheridge. ¶ But what if I told you that Putin likes the attention he's getting?¶ Of course Russia has a terrible record for gay rights — but what some protesters don't understand is that the legislation is part of Putin's deliberately anti-Western agenda. The movement is one he set out to create in order to boost his power over a country with deep conservative roots by angering Americans and making antagonists out of them. Many protesters criticize the anti-gay propaganda policy without understanding Russia's complicated relationship with homophobia. Their lack of understanding the very country they're trying so hard to vilify leads to narrow-minded and Eurocentric arguments and actions, which only fuel Russian nationalism.¶ Protest against Russia's gay propaganda ban in Los Angeles, CA. Image Credit: AP¶ A string of anti-Putin protests in 2012, with more than 14,000 participants each, threatened the president's strong grip on the country. From 2008 to 2012, he saw his approval rating steadily drop. In order to solidify his power, he came up with the concept of the "good Russian," according to Masha Lipman, an analyst at the Carnegie Endowment for International Peace's Moscow Center. Putin's "good Russian" holds "traditional family values" and practices "a life of religion."¶ It sounds like the "good Russian" is a conservative Republican, and he is, only he's also anti-American. He is against the West as well as against the gays. And he has lots and lots of children from his heterosexual relationship because helping to stop Russia's birthrate from declining is of utmost importance to him.¶ Putin at the Orthodox Christmas service earlier this year. Image Credit: AP¶ When Putin passed the anti-gay law as part of a line of conservative policies based on the "good Russian" mentality, Russians loved it. A poll conducted by the Russian Public Opinion Research Center right after the law was passed found that 88% of Russians supported the legislation. The law's massive popularity helped Putin to finally define post-communist Russia by juxtaposing it with Western society. According to Lipman, there hasn't been this much anti-Western sentiment in Russia since the fall of the Soviet Union.¶ Throughout the past year, Putin said that traditional Russian values are superior to the West's "faceless, sexless tolerance" — a phrase he used in his address to the

Russian Federal Assembly in December. Russia is also fighting for "traditional values" on the international stage too: the country has been spearheading an effort at the UN to pass a resolution protecting traditional as well as "cultural" values. ¶ By criticizing the anti-gay propaganda law without wrapping their minds around what led to the legislation, Americans corroborate the picture Putin has painted of America – that it's a chaotic, atheist society of "tainted capitalism," where gays are running around expressing their pointless "free speech" and demoralizing society.¶

Russia won't model – empirically rejects promotion of sexual minority rights – Aff causes backlash

Al Jazeera 14 [“Russia slams Europe for ‘aggressive promotion’ of gay rights”, 1-24-14, <http://america.aljazeera.com/articles/2014/1/24/russia-slams-eu-foraggressivepromotionofgayrights.html>, msm]

A Russian human rights report released Thursday lashed out at European Union nations for its "aggressive promotion" of the rights of sexual minorities, the latest in a spate of anti-gay statements from Russian President Vladimir Putin's administration.¶ The 150-page Russian Foreign Ministry report on the state of human rights across the EU criticized the rise of xenophobia, racism, violent nationalism and chauvinism — notably in eastern nations with Russian minorities — as well as anti-Semitism and neo-Nazism.¶ It also claimed that EU nations, while championing human rights worldwide, saw as "one of their priorities the dissemination of their neo-liberal values as a universal lifestyle."¶ This is particularly evident in their aggressive promotion of the sexual minorities' rights," the report said.¶ Noting protests in France last year over the legalization of same-sex marriage, the report said this approach had met resistance not only in nations with traditional values "but also in those countries which have always taken a liberal attitude towards queers."¶ Attempts have been made to enforce on other countries an alien view of homosexuality and same-sex marriages as a norm of life and some kind of a natural social phenomenon that deserves support at the state level," the report said.¶

2NC – Impact

US-Russian relations are essential to prevent a Russia-China nuclear war
Newsweek 95

[Michael Elliott, “Why Russia still matters to America,” May 15, LN]

"Russia," says Deputy Secretary of State Strobe Talbott, "is a big country." That it is; lop off the newly independent states born within the old Soviet husk and you've still got a lot left -- a highly educated work force sitting on top of some of the globe's most valuable resources. True, much of that vast territory has an awful climate (climate matters-for different reasons than Russia's, it explains why Australia will never be a great power). But unlike India and China, two other "giant" states, Russia will be able to husband its vast resources without the additional strain of feeding -- and employing-more than a billion souls. It also, of course, is the only country that can launch a devastating nuclear attack on the United States. That kind of power demands respect. And sensitive handling.¶ Stephen Sestanovich, head Russia watcher at the Carnegie Endowment for International Peace in Washington, argues that present U.S. policy is geared too much to "dismantling Russian military might" -- a policy that, since it breeds Russian resentment of Western meddling, is self-defeating. "We have to reorient Russian power," says Sestanovich, "not eliminate it. Because we can't eliminate it." Indeed, Washington should prefer a strong Russia. A Russia so weak, for example, that it could not resist a Chinese land grab of its Far East without resorting to nuclear weapons is a 21st-century nightmare. All this implies a close

U.S. -- Russian relationship stretching into the future. American officials say it will be a "pragmatic" one, recognizing that Russian and U.S. national interests will sometimes collide. The danger, for the United States, is that a pragmatic relationship could be dominated by security issues. In Western Europe, some futurists say that in the coming decades Russia will talk to the United States about nuclear weapons but to the European Union about everything else-trade, economic development and the rest. Bullish forecasts: Talbott insists that won't happen. America has good reasons for wanting a relationship with Russia based on more than security. For Russia may one day be very rich, and if it is, American investors and exporters will want to share in its wealth. The last month has seen a rash of bullish forecasts on Russian economic growth. (Though be warned: in previous years such optimism has not lasted the fall. If you lived in Moscow, you'd think May was nice, too.)

Politics Links

Unpopular – Reps

Republicans hate LGBT rights

Reynolds 6-18 [Andrew Reynolds is a Professor of Political Science at the University of North Carolina at Chapel Hill and the Director of the LGBT Representation and Rights Research Initiative. His book *The Children of Harvey Milk* will be published by Oxford University Press early in 2016. “Why does the Republican Party still oppose LGBT rights?”, 6-18-15, <http://www.washingtonpost.com/blogs/monkey-cage/wp/2015/06/18/why-does-the-republican-party-still-oppose-lgbt-rights/>, msm]

Recently, GOP presidential candidates have been tripping over themselves to defend “traditional marriage.” In North Carolina and Michigan, Republican statehouses are passing laws giving public officials and state-funded institutions the right to discriminate against gay people. And in Texas, 93 out of 98 Republican state legislators made it clear that they will ignore or try to override a SCOTUS ruling in favor of marriage equality in Obergefell, expected this month.¶ In other words, “American conservatives” may have given up fighting same-sex marriage, but the Republican Party clearly has not.¶ Why is the Republican Party still fighting LGBT rights, which puts it out of step with not just voters in America, but other right-of-center parties in established developed world democracies?¶ In other developed democracies, conservative parties increasingly support LGBT rights.¶ Conservative parties in much of the democratic world have become more socially liberal while maintaining their fiscally conservative bona fides. In most places the political parties and politicians who have moved furthest towards support of LGBT rights have been on the right.¶ David Cameron oversaw the charge for marriage equality in Britain in 2013, in the face of considerable hostility from some of his own members. In return British LGBT voters were as likely to vote Conservative in the 2015 general election as they were Labour. Last month, every major party in Ireland, including the conservatives, campaigned for a Yes vote on its marriage equality referendum. Tony Abbott, the right-wing Prime Minister of Australia is facing mounting pressure from his own MPs to drop his opposition to marriage equality.¶ Outside the U.S., parties of every ideology increasingly include openly LGBT politicians.¶ On June 6, Nick Gibb, the Minister for Schools in the newly minted Conservative government of Prime Minister David Cameron, came out as gay. He did so first to his family and then to the gossip-hungry British media—so he could marry his partner of 29 years, pollster Michael Simmonds. After he came out in *The Times*, he was showered with praise and affection from constituents, colleagues and opponents alike.¶ The symbolism was powerful: A generation before, Gibb’s party, led by Margaret Thatcher, had systematically demonized lesbian and gay Britons and outlawed the teaching of the “acceptability of homosexuality as a pretended family relationship” through the much-reviled Section 28 of the Local Government Act. Now the Tory government had an openly gay man in charge of British schools.¶ Nick Gibb is no anomaly. British voters apparently no longer see sexual orientation or gender identity as relevant politically: The 155 lesbian, gay, bisexual and transgender candidates who stood in last month’s general election did no worse than their straight colleagues. In fact, in the fifty races where there were competitive LGBT candidates, Tory LGBT candidates performed considerably better; 72 percent had larger vote share increases than the national trend, and on average their gains were three times the Tory average.¶ Gibb’s coming out brings the Tory lesbian, gay and bisexual caucus in the British House of Commons to thirteen, equal in size to the Labour Party LGBT group. (There were four transgender candidates, but none were elected.) The ascendant Scottish Nationalists have seven LGBT MPs, more than 12 percent of their parliamentary cohort. In the previous Scottish parliament, Tories had more gay MPs than all other parties.¶ Nor is this a peculiarly British phenomenon. Of the 82 openly LGBT national representatives newly elected around the world over the last five years, one-third have been from right-wing parties, another third have come from left-wing parties, and the remaining third are centrists, greens and nationalists. Right-of-center politicians who identify as LGBT are members of parliaments in Denmark, Estonia, France, Germany, Ireland, Lithuania, Luxembourg, Netherlands, New Zealand, Norway, Slovakia, Sweden, and Switzerland, and there is likely to be a gay Likud MP in the Israeli Knesset soon. In Scandinavia, this trend has gone on for while; in fact, openly gay Per-Kristian Foss was briefly the Conservative Party’s acting Prime Minister of Norway in 2002.¶ As the graph shows, the most rapid growth in LGBT representation has been among political conservatives.¶ (Data and figure: Andrew Reynolds)¶ Why are American Republicans so different from their conservative counterparts on LGBT issues?¶ Against this global trend stands a distinct outlier: the GOP. Republicans still have no openly LGBT office holder, either nationally or even statewide. And the party’s leading presidential candidates rail against gay rights. Scott Walker says he wants a constitutional amendment to ban gay marriage. Ted Cruz says that a Supreme Court ruling in favor of marriage equality would be “fundamentally illegitimate.” Mike Huckabee, Marco Rubio, Rick Perry, Rick Santorum, and Ben Carson have all made opposition to gay rights features of their campaigns.¶ In contrast to Europe, LGBT voters in America are overwhelmingly liberal. Three-quarters of self-identified LGBT voters supported Obama in 2012. But the Republicans aren’t losing only those few votes by opposing LGBT rights. Republicans’ antigay agenda limits their ability to reach out to moderates and independents. Although few voters say they decide whom to vote for solely on LGBT issues, they draw larger conclusions about the Republican Party’s core values based on its aggressively LGBT-hostile stance.¶ As American voters increasingly embrace LGBT friends, family members and neighbors, and in turn LGBT rights, Republicans increasingly are seen as out of sync. The most recent Pew polling shows that as many

independents support same-sex marriage as Democrats: 65 percent. More than two-thirds of voters who identify as 'moderate' support marriage equality. Among both Republicans and Democrats, younger voters support gay rights in larger numbers than any other category.¶ And across the board, Pew recently found that nearly 60 percent of Republicans did not think their party was doing a good job of representing them on the issue of marriage equality.¶ Why is the Republican Party so out of step with voters? Indeed, why is the American right so far behind similar parties in other democracies?

The answer may rest on a distinctive idiosyncrasy: the GOP is often beholden to evangelical Christians. "Evangelical" is key in that sentence. Mainline Christians, Catholics and Jews in the U.S. favor LGBT rights; that's true elsewhere in the world, with Catholics (and Catholic countries) being notable supporters. But evangelicals are a particularly powerful constituency within the Republican Party, and can threaten to "primary" a candidate who does not stay close to their position.¶ But while evangelicals may help win GOP primaries, they are not enough to win a general election.¶ One way or another, Republicans' pronouncements about the coming Supreme Court ruling on same-sex marriage will influence the general electorate's sense of whether or not the party is in touch with modern Americans. Right-of-center parties in much of the world have recognized that opposing LGBT rights makes them less electable—and now seek to portray themselves as modern, inclusive, and LGBT-welcoming.

Republicans are massively anti-gay

Gray 6-28 [Awards Editor for Variety, "Rachel Maddow on How Republicans Are 'Rabidly Anti-Gay, Like It's 1985'", 6-28-15,

<http://variety.com/2015/tv/news/rachel-maddow-lgbt-rights-anti-gay-republicans-1201529567/>, msm]

How wide-ranging is the Supreme Court decision?¶ Friday's ruling is about marriage, which is an important aspect of equal rights. But the fact remains that in many places, you can still get fired or evicted if your boss or landlord knows you're gay — or even thinks you're gay. Basic discrimination issues can have a material impact on the lives of many gay people; a lot of those fights will remain. There's been a self-congratulatory, easy narrative — how gay rights have won, the issue is settled, the battle is over. The progress is true about the country as a whole. But we have a 50-50 divided political system, and one party is rabidly anti-gay, like it's 1985.¶ How will this play in 2016?¶ If anybody were against marriage equality in the Democratic primary, it would hurt them. But there are about two dozen Republicans seeking the nomination and, other than George Pataki, every one of them is against marriage equality. None of them thinks it will be a liability to be anti-gay in 2016. And some of them are anti-gay on every civil-rights issue. Scott Walker wants to amend the Constitution to deny gay rights. When George W. Bush was running in 2004, that's one of the things he said he wanted to do. But once he got re-elected, he dropped it. It's surprising that more than 10 years later, it's still considered a live issue.¶ There's a lot of anti-gay organizing happening in the Republican party; they're still passing legislation all over the country, even though we are supposedly in a more tolerant time. Much of this anti-gay movement flies under the radar, because the Big Picture is that the country is becoming more accepting. But the backlash is vicious. I know there are a lot of progressive Republicans. But what's going on inside high-end Republican politics and Republican politics within the states doesn't match this happy-talk narrative.¶

Terrorism DA Links

Link – Profiling

Profiling based off of behavior is key to counterterrorism

Baum 10

Philip Baum, editor of Aviation Security International, Managing Director of Green Light Limited and aviation security consultant, “Common Sense Profiling Works,” January 4, 2010, New York Times,

<http://roomfordebate.blogs.nytimes.com/2010/01/04/will-profiling-make-a-difference/> (NV)

I have been an ardent supporter of passenger profiling for many years. It is the only solution that addresses the problems of the past as well as those of the future. The problem is the word “profiling” itself as it conjures up negative connotations. A traveler’s appearance, behavior, itinerary and passport are factors to consider in effective profiling. Effective profiling is based on the analysis of the appearance and behavior of a passenger and an inspection of the traveler’s itinerary and passport; it does not and should not be based on race, religion, nationality or color of skin. We need an intelligent approach to aviation security that deploys common sense to the security checkpoint. We require highly trained, streetwise, individuals who can make risk assessments of passengers as they arrive at the airport and determine which technology should be used for screening. Passengers deemed to pose minimal risk should be fast-tracked through the system, without removing their belts or shoes or having liquids confiscated, and allowed to board flights using existing, albeit flawed, technology. Those who are perceived to pose a threat or whose travel intent is indeterminate should be screened by one of the emerging technologies and/or questioned. Body scanners should have been deployed years ago as the threat of a passenger carrying explosives on their body is not a recent discovery. Yet, we should not use them to screen all passengers or even all those flying on a given route. They need to be used intelligently or we will simply create even longer lines at our security checkpoints which may be the next target for a suicidal bomber. Equally, the decision to focus on nationals of certain countries is flawed and backward. Perhaps I, as a British citizen, should be screened more intensely given that Richard Reid (a.k.a “the Shoebomber”) was a U.K. passport holder and my guess is there are plenty more radicalized Muslims carrying similar passports. Has American forgotten the likes of Timothy McVeigh? It only takes one bad egg and they exist in every country of the world. In any case, the very best examples of profiling working we have are the identification of people who did not match the stereotypical image of the terrorist. Furthermore, every day passengers are identified at U.S. airports by customs and immigration agents, who don’t screen everybody the same way. But those agents find people doing something wrong after they have got off a flight. Can’t we do it before they board?

The plan dramatically reduces the government ability to profile – hurts counterterror efforts

Freedom House No Date

Freedom House, a watchdog organization dedicated to the spread of freedom around the world, “The Civil Liberties Implications Of Counterterrorism Policies: Full Chapter,” No date, Freedom House,

<https://freedomhouse.org/report/todays-american-how-free/civil-liberties-implications-counterterrorism-policies-full-chapter#.VZGyfflVikq> (NV)

Although security agents have broad authority to search passengers and profiling is permitted, U.S. law does not permit race or ethnicity to be the sole basis of the profile that triggers a search. Nonetheless, since its inception the TSA has been plagued by accusations that its screeners single out passengers who appear to be of Arab descent or Muslim faith. In response, the TSA has implemented “racially neutral profiling,” which targets passengers who behave suspiciously, for instance by paying cash for airline tickets, buying one-way tickets, or appearing agitated at

security checkpoints. Passengers are also now subject to random additional searches based on their ticket numbers. Yet other critics charge that terrorists can adapt to behavior-based searches, and that random searches waste resources on passengers who are unlikely to be terrorists. A no-fly list of suspected terrorists had been in use prior to 9/11, but it was greatly expanded following the attacks. While the list had 16 names on September 11, 2001, the CBS news program 60 Minutes has claimed that a March 2006 copy had 44,000 names. Since 2001, there have been hundreds of false identifications in which individuals are delayed or prevented from flying because their names are similar to those on the list. Following a lawsuit brought by the ACLU in 2004, the government agreed to release details of how the list was compiled and used. Some experts protest that many of the TSA's procedures amount to "security theater,"²⁹ designed to make passengers feel safer without actually enhancing security. For example, after Richard Reid attempted in December 2001 to blow up a jet with a bomb concealed in his shoes, the TSA began inspecting shoes at airport terminal checkpoints. In August 2006, in response to reports that terrorists planned to blow up planes using liquid explosives, passengers were forbidden to bring liquids or gels aboard planes. TSA officials and their defenders say these measures prevent terrorists from using known methods of attack and deter potential terrorists by creating an environment in which they are likely to be caught. Some state and local law enforcement agencies have implemented their own search policies in response to threats against transportation infrastructure. In July 2005, after the London subway was bombed, the New York City Police Department began randomly searching bags carried by passengers entering the city's subway system. Yet because the police eschewed profiling, some argued that the searches would be ineffectual, while other critics charged that they violated the Fourth Amendment. A federal judge ruled in December 2005 that the searches were lawful,³⁰ and in October 2006 the Massachusetts Bay Transit Authority announced that it intended to introduce a similar program. These practices have been compared both favorably and unfavorably to the system used by the Israeli national airline, which candidly applies enhanced scrutiny to Arabs and foreign nationals. Although many revile ethnic profiling, even some critics of the technique acknowledge that Israel has effectively prevented hijackings. Proponents of profiling have argued that prohibitions against it should be relaxed to make the American system more efficient.

Foucault Links

The Aff's pursuit of liberal reform simply gets incorporated into the system of domination – the plan legitimizes the surveillance state while leaving intact deeper systems of oppression

Irving 14 (Dan, assistant professor of human rights and coordinates the Sexuality Studies Minor Program in the Institute of Interdisciplinary Studies at Carleton University, "Capital", 2014, *Transgender Studies Quarterly*, Volume 1, No. 1-2, <http://tsq.dukejournals.org/content/1/1-2/107.full.pdf>)

Freedom and democracy are linked to one's ability to participate in competitive productive relations. Individuals become human capital. This concept indicates ways in which oppressed and marginalized groups are interpolated into capital(ist) "common sense" relations. As sole proprietor of oneself, one is encouraged to acquire the education, skills, and experiential knowledge necessary to increase competitive advantage within all spheres of market society (Foucault 2008). Care of the self is an element of exploitative relations, since labor is re-created as an affective, intellectual, and communicative activity, a "creation of being" (Negri 2008: 222). Akin to corporate actors, many transgender activists work to achieve recognition for trans and two-spirit-identified people through promoting images of them as rational active subjects. It is understood that such acknowledgment from state and society will most likely ensure the vitality of trans subjects as well as the well-being of their families and communities. The logics that comprise capital as a social relation, as well as the ways in which capital intertwines with other power relations, are hidden from view; however, by analyzing "possessive individualism" (Macpherson 1962), certain dimensions of capital can be uncovered. Capital continuously maneuvers to normalize exploitative relationships, to naturalize private property relations (e.g., whiteness as property), and to steadily erode common, collective, and cooperative spaces. Despite the fact that only a few actually own private property (the "1 percent"), whiteness as property refers to the expectations of power and control held by whites in US society (Harris 1993). Like racialized others, the majority of whites are forced to sell their labor to those with capital; however, their elevated sociocultural and political status shapes their unreflective claims to privilege ("We deserve to live in a safe neighborhood," for example). Trans activist efforts to remove Gender Identity Disorder from the American Psychiatric Association's Diagnostic and Statistical Manual, 4th ed., and to include "gender identity" in nondiscrimination and hate-crimes laws are two additional examples. Given global economic crises, escalating rates of un(der)employment, and declining economic growth, an increasing number of people are rendered object as surplus populations. Members of surplus populations are denigrated in language reflective of capital as worth-less, unproductive, unfit, backward, risky, and/or inflexible and are subsequently blamed for their social and often literal deaths. Given that racialized, queer, and trans people are overrepresented within the category of surplus, it is imperative that research within transgender studies problematize discourses of sex and gender self-determination, geopolitical dimensions of transitioning medically, and trans rights struggles. "Trans-" (Stryker, Currah, and Moore 2008) methods can enrich the formation of resistance strategies. While nearly impossible to see in its totality, capital is a whole system (Jameson 2011: 3, 6) of scattered economic practices (Gibson-Graham 2006: 2) framing social orders. Like sex and gender, capital(ism) is an historical phenomenon that is neither naturally dominant nor self-containing (ibid.: 54). Capital's continuous movement to legitimize itself reveals moments at which it falters or fails. It is within these spaces that it can be disrupted (Browning and Kilmister 2006: 136) as monstrous others labor to cultivate the diverse relations of solidarity necessary for transitioning into "new economic becomings" (Gibson-Graham 2006: 60).

The small-scale reforms of the Aff function as a validation of the liberal surveillance state—it fails to recognize that the problem lies in the overarching structure of surveillance itself

Beauchamp 9 (Toby Beauchamp, University of California, Davis. "Artful Concealment and Strategic Visibility: Transgender Bodies and U.S. State Surveillance After 9/11," *Surveillance and Society*, Vol. 6 No. 4 (2009). library.queensu.ca/ojs/index.php/surveillance-and-society/article/view/3267/3230 jsk)

While surveillance measures like the DHS Advisory may appear to primarily target transgender individuals as suspicious, the bodies being policed for gender deviance are not necessarily trans-identified, but rather demonstrate non-compliance with gender norms that may have as much to do with race, religion, class and sexuality as with transgender identity. Surveillance of these bodies centers less on their identification as transgender per se than it does on the perceived deception underlying transgressive gender presentation. Because normative, non-threatening gender is always read through ideals of whiteness, economic privilege and heterosexuality, “going stealth” is an option available only to those segments of the transgender population able to achieve or approximate those ideals. And in the context of national security and the U.S. War on Terror, going stealth may be less grounded in passing as nontransgender than in maintaining the appearance of a good, compliant citizen, an appearance solidified by the fact that these bodies need not conceal anything from state institutions or authorities, because they have nothing to hide. Approaching the relationship between gender-nonconformity and state surveillance in this way means resisting the urge to think about surveillance of gendered bodies as limited only to medical and legal monitoring of specifically transgender-identified individuals. In fact it points to the importance of thinking more broadly about the interactions between regulatory gender norms, racialization processes and ideals of citizenship. Moreover, it refuses a view of state surveillance as something disconnected from or unconcerned with gender, and instead foregrounds the ways that gendered and racialized bodies are central both to perceptions of safety and security and to the structuring of state surveillance practices. As these bodies attempt to evade surveillance either through careful invisibility or through strategic disclosure – each of which entails engaging the other to some degree – they do so not in isolation, but in the context of war, nationalism and militarization, and power relations that are themselves ever more starkly revealed in the act of going stealth.

Absent the alt’s spurring of massive change, individual attempts at limiting surveillance of Trans bodies only serve to augment the efficiency of the biopolitical state

Beauchamp 9 (Toby Beauchamp, University of California, Davis. "Artful Concealment and Strategic Visibility: Transgender Bodies and U.S. State Surveillance After 9/11," *Surveillance and Society*, Vol. 6 No. 4 (2009).
library.queensu.ca/ojs/index.php/surveillance-and-society/article/view/3267/3230 *jsk*)

Nothing to Hide: Organizational Responses In their responses to the DHS Advisory, the Real ID Act and the SSA no-match letters, transgender advocacy organizations have opposed these measures’ effects on transgender individuals. But they have not typically considered the implications for state regulation of gender presentation more broadly, particularly as it might resonate for individuals marked as gender deviant who are not transgender-identified or linked in any obvious way to trans communities or histories. Nor have they addressed the ways in which particular groups of trans-identified people may be targeted differently by such policing. For example, in a 2006 statement to DHS regarding the no-match letter policy, NCTE recommends that gender no longer be one of the pieces of data used to verify employees, arguing that employers are not legally required to submit gender classification to SSA, and therefore any exchange of information about employees’ gender is “an invasion of private and privileged medical information” (Keisling 2006: 2). In an effort to protect transgender employees, the NCTE statement aims to limit the information shared between SSA and DHS. Yet it also works to support no-match letters as a form of regulatory state surveillance, by stating clearly the importance of “avoiding fraud” through Social Security number confirmation. The statement does not oppose state surveillance measures more broadly, but instead seeks to improve them, offering recommendations on behalf of trans employees “in order for the employee verification system to be efficient and equitable” (1).¶ While arguing for privacy rights may benefit some gender-nonconforming employees, this strategy assumes equal access to privacy and legal recourse for all transgender people and fails to consider how privacy rights are compromised or nonexistent for undocumented immigrants, prisoners, and individuals suspected of terrorism, who may or may not be transgender-identified or perceived as gender-nonconforming. Diminished rights to privacy are particularly evident in the wake of the 2001 USA PATRIOT Act, legislation that provides much of the ideological and legal foundation for more recent state surveillance measures. Building on earlier policies such as the 1996 Anti-Terrorism and Death Penalty Act and the FBI’s COINTELPRO activities, the USA PATRIOT Act further limits individual privacy rights by expanding the federal government’s ability to secretly search private homes; collect medical, financial and educational records without probable cause; and monitor internet activity and messages. Passed in the flurry of anti-immigrant nationalism and increased racial profiling that followed 9/11, the Act bolsters particular understandings of the relationships between citizenship, race, privacy and danger that underpin surveillance measures like the Real ID Act and SSA no-match policy. Though absent from the NCTE statement, this context demonstrates the frailty of any claim to privacy rights, particularly for trans and gender-nonconforming immigrants and people of color. The statement seeks to protect transgender employees, but remains within – and is limited by – the constraints of the current medico-legal system.

Russia Modeling Advantage

No Modeling

The Aff triggers backlash by homophobic regimes – it lets leaders justify taking up arms against an imaginary Western plot to spread “perversion”.

The Economist 14 (The Economist, “The gay divide”, 10/11/14, <http://www.economist.com/news/leaders/21623668-victories-gay-rights-some-parts-world-have-provoked-backlash-elsewhere-gay>, accessed 6/29/15)

Yet there are still parts of the world where it is not safe to be homosexual. Extra-judicial beatings and murders are depressingly common in much of Africa and in some Muslim countries. African gangs subject lesbians to “corrective rape”. In some countries **persecution has intensified.** Chad is poised to ban gay sex. Nigeria and Uganda have passed draconian anti-gay laws (though a court recently struck Uganda’s down). Russia and a few other countries have barred the “promotion” of homosexuality. This is partly **a reaction to the spread of gay rights in the West.** Thanks to globalisation, people who live in places where everyone agrees that homosexuality is an abomination can now see pictures of gay-pride parades in Sydney or men marrying men in Massachusetts. **They find this shocking.** Meanwhile some homophobic Western preachers have gone to fire up anti-gay audiences in Africa, and American conservatives offer advice to countries thinking of drafting anti-gay laws. Revulsion against homosexuals is ancient, deep and, in its way, sincere, even if some of the politicians leading the backlash do so for cynical reasons. **By taking up arms against an imaginary Western plot to spread perversion, Vladimir Putin and Nigeria’s Goodluck Jonathan doubtless hope to distract attention from the corruption and incompetence of their own regimes.** But they have picked their scapegoats shrewdly: 74% of Russians and 98% of Nigerians disapprove of homosexuality. In places like Indonesia, Senegal, Uganda and Malaysia the young are no more tolerant than the old—sometimes less so.

Policing Advantage

Gay Marriage Solves

Gay Marriage Solves the advantage

HANSEN 6-27 [JAMIE HANSEN, THE PRESS DEMOCRAT, 6-27-15, “Santa Rosa couple grateful for progress on gay rights: 'It feels like I'm living in a new world'”, <http://www.pressdemocrat.com/news/local/4124263-181/santa-rosa-couple-grateful-for?page=2>, msm]

Santa Rosa resident Ramon Meraz and his partner, Terah Deason, left for a vacation to Mexico about a week ago having no idea they'd return to a drastically altered nation, one of expanded possibility for their fledgling relationship.¶ So when they turned on their television Friday morning, still groggy-eyed from their flight home the day before, and saw the news that same-sex marriage was now legal across the country, they could do little more than sit and stare in disbelief.¶ “At first we were just in shock,” said Meraz, 46, who works as a freelance concierge and sits on numerous community boards, including the Sonoma County Commission on Human Rights. Reflecting on the ruling with Deason at a coffee shop on Friday evening, Meraz said when he was a teenager in Los Angeles decades ago and came out as gay, he never foresaw the day when he would have the right to marry. California granted him that right two years ago, but Friday's ruling signaled what he called a national acceptance of same-sex love.¶ “Now any relationship that grows and matures has the potential to make the ultimate commitment and have the rights associated with it,” he said. “To know we have that, and for that love to be valued, is amazing.”¶ He said he was happiest for gay youths, like his niece, who may not have to experience the feelings of shame he had as a teenager discovering his sexual orientation.¶ “They won't have to suffer,” he said. “They will be able to find a loved one, to have a union and to be accepted by society. It is such a privilege to see this in my life.”¶ He and Deason, a nurse at Kaiser Permanente in Santa Rosa, have been together a little less than a year and have no immediate plans to marry. But Deason said that knowing he and millions of other LGBT people now have that right, no matter where they live in the United States, eliminates legal obstacle that once stood in the way of any romantic relationship.¶ He credited older gay couples who have lived together for decades and fought for equal marriage rights.¶ “To those of us in new relationships, it's like they handed us a gift,” he said.¶ Up until Friday's decision, Deason, 52, said he had feared the Supreme Court would rule against gay marriage.
