There is a fundamental reciprocity between how sufferers represent themselves, or are represented, and the way in which their subjectivities and those of the injurers are theorized in various political programs. Together, they determine the form of agency that is granted to the victim within any paradigm. In many theoretical attempts at redeeming victims, the work of the wounded remains attached to an imputed aspiration for agency modeled on the "health" of the agent qua perpetrator, bystander, and rescuer. **Seeing the wounded as agency-impaired affirms the definition of victim as inadequate subject.** There can be no justice done to the experience of suffering in its particularity if the only choice is to define it in relation to—even when only as the antithesis of—normalized healthy sovereign action. Critiques of liberalism that build on responses to orientalism and other colonial discourses are suspicious of the mechanics of the identification of victims. For them, the victim status precludes any status beyond that of the object of an action, necessitates powerlessness, and imposes slave morality.20 An inevitable result is the object's own resignation to its "assigned" lack of subjectivity.21 In these criticisms, the question of naming becomes inextricable from representation. It follows that the need and validity of representing the victims, the oppressed, the third world, is doubted and, finally, rejected. However, these challenges still remain attached to a relation to health as agency and to agency as health. An example is the call that victims and agents are not mutually exclusive—something to the effect that victims can be agents, too. Mohanty, for one, tells us of cottage-industry working women in Narsapur who "are not mere victims of the production process, because they resist, challenge, and subvert the process at various junctures."22 What is implicit in the "not mere victim" reaction? It brings to mind Martha Nussbaum's claim that victimization does not preclude "agency."23 Clearly at work in Mohanty's account is a defensiveness that ends up condoning and affirming the dominant notion of agency it opposes. Occupying very different locations on the philosophical spectrum, Mohanty and Nussbaum seem closer in their gut reaction than their avowals would suggest. **Why is a victim merely a victim? What does it tell us regarding how we understand victimization? These reactions betray an inability to factor in the mode of practice that is suffering**, which may spurn the redemption of the victim on the terms of health and agency, liberal style. These thinkers highlight how voice and representation are so frequently framed in terms of agency, where agency itself becomes linked to representation: the victims or nonagents need representation, and they are redeemed by obviating representation and granting a voice all in one fell swoop. In my view, this link between agency and the authenticity of voice is a dubious one. It is on this suspect convergence that Spivak makes an important intervention. In "Can the Subaltern Speak?" she concludes that the subaltern cannot speak, an answer that, in dismissing Western intellectuals who "make space" for the subaltern to speak, reinstates a project of rethinking representation and the victim's experience. Spivak's analysis is more nuanced than Mohanty's, which rejects the very need and validity of this representation. Spivak takes issue with Foucault's wish to let the subaltern speak "in their own voice," which does not take seriously the notion that they have no voice as yet, and that this speechlessness is what defines the subaltern. She saves the notion of representation by arguing that, in the absence of a language of their own, there is no alternative but to represent the subaltern in a way that is sensitive to their silence.24 As I argued in Chapters 2 and 3, the fetish of voice itself must be subject to a suspicion, since it serves those who thrive on its consolations more than those who are bid speak and must do so in order to write themselves in. This is not to say that that the "victim"—its discursive and material reality—does not need redressal in a liberatory politics. Far from that, one can see it as a representation—a Darstellung and a Vorstellung— that has to itself be a subject of any social theoretical endeavor that is materialist in its imperative to make conditions (for the possibility of change) out of necessities. Liberal fictions and power structures need victims; unwittingly or not, they sustain them as they are themselves nourished by the latter's surplus suffering. Interestingly, the same Nietzsche who inspires a suspicion of the agent is also someone who forces a consideration of the material history, weight, and imperatives of agency, and of the terms and labor of its overcoming. It is more than a coincidence that Nietzsche's transition from the slave revolt in the first essay of On the Genealogy or Morals to the story of guilt, ressentiment, and punishment in the second essay, involves the myth of the doer behind the deed.25 This transition is about suffering. Nietzsche's views on subjects and subjection suggest not merely that there is no doer but that the core of human existence is the suffering of that doing—that the subject is, in any case, subject to itself and its deeds. (As far as the fictive nature of the subject is concerned, Nietzsche drives home the very brutally material nature of fictions— are fictions ever merely fictions?) The centrality of the agent in liberalism's focus on suffering is manifest in the necessity of an agent as the cause or remedy of suffering. This raises the question of which fiction is more enduring in the liberal framework: the agent who causes the injury or the victim who is injured with that agency? In both cases, liberalism's attention is clear. In its keenness to see as good for liberal justice only the suffering that can be traced to a sanctioned agent, it makes victims into objects of the action. While neither of these options exhausts the possibilities in reality, they do necessitate each other. **This is why the agent looms so large, even in the imaginations of critics of liberalism, that it holds the promise, in its potential idealist-linguistic overcoming, of the undoing of the stigmatizing victim identity it spawns. However, the sufferer subjected to the fictions of agency and of the production of injury suffers these fictions** through her labors of sustaining and unwriting them.

Turns dehumanization - their Miller 14 narrative paints a picture that all there is to Tohonos is their oppression

Delgado 93 [46 Vand. L. Rev. 672 (1993) On Telling Stories in School: A Reply to Farber and Sherry ; Delgado, Richard]

It is difficult to evaluate someone who at the same time is evaluating you – putting you under the glass, dissecting your culture, laws, profession, and norms of political fairness. **The outsider's task is formidable enough: first seeing, then addressing, defects in the culture in which all of us, including the outsider, are immersed**. But when one sets out, as Daniel Farber and Suzanna Sherry do in a recent article, to come to terms with outsider scholarship fairly and sympathetically, the task's difficulty increase by an order of magnitude. **Empowered groups long ago established a host of stories, narratives**, conventions, and understandings **that** today, through repetition, **seem natural and true. Among these are criteria of judgment-the terms and categories by which we decide which things are good, valid, worthy, and true.** Today, newcomers are telling their own versions, including counterstories, whose purpose is to **reveal the contingency, partiality, and self-serving quality of the stories** on which we have been relying to order our world.

Their evidence on pseudo-speciation only says tribal police participate in it

Miller 14 (*Todd Miller has researched and written about U.S.-Mexican border issues for more than 10 years. He has worked on both sides of the border for BorderLinks in Tucson, Arizona, and Witness for Peace in Oaxaca, Mexico. He now writes on border and immigration issues for* NACL, Todd Miller, 4-22-2014, "Tomgram: Todd Miller, The Creation of a Border Security State," Tomdispatch, http://www.tomdispatch.com/blog/175834/tomgram%3A_todd_miller,_the_creation_of_a_border_security_state/)TB

Between the unbridled enthusiasm of the vendors with their techno-optimistic "solutions" and the reality of border life in the Tohono O'odham Nation -- or for that matter just about anywhere along the 2,000-mile divide -- the chasm couldn't be wider. On the reservation back in 2012, Longoria called in the GPS coordinates of the unknown dead woman, as so many agents have done in the past and will undoubtedly do in the years to come. Headquarters in Tucson contacted **the Tohono O'odham tribal police**. The agents waited in the baking heat by the motionless body. When the tribal police pulled up, they took her picture, as they have done with other corpses so many times before. **They** rolled her over and took another picture. Her body was, by now, deep purple on one side. The tribal police explained to Longoria that it was because the blood settles there. They brought out a plastic body bag. "Pseudo-speciation," Longoria told me. That, he said, is how **they** deal with it. He talked about an interview he'd heard with a Vietnam vet on National Public Radio, who said that to deal with the dead in war, "you have to take a person and change his genus. Give him a whole different category. You couldn't stand looking at these bodies, so you detach yourself. You give them a different name that detracts from their humanness." The tribal police worked with stoic faces. They lifted the body of this woman, whose past life, whose story, whose loved ones were now on another planet, onto a cart attached to an all-terrain vehicle and headed off down a bumpy dirt road with the body bouncing up and down.

There is property damage committed against the indigenous from passing migrants.

There is only a risk that reducing U.S. border patrol would cause this to increase.

Pitts 13 (Byron Pitts, ABC News Anchor & Chief National Correspondent, "In Efforts to Secure US-Mexico Border, Ariz. Native Americans Feel Caught in the Middle", 7/27/2013, ABC News, http://abcnews.go.com/US/efforts-secure-us-mexico-border-ariz-native-americans/story?id=19496394, DJE)

In the Tohono O'odham Nation is "The San Miguel Gate," an area on the U.S.-Mexico border considered to be sacred by the Tohono O'odham. It is the only place where Native Americans can freely walk across the border, but there, the only thing separating Mexico and the U.S. is a low fence guarded by a lone border patrol agent and a light pole powered by a generator. Verlon Jose, a Tohono O'odham tribal leader whose family has lived on the reservation for generations, and other members of his tribe talked to "Nightline" at "The San Miguel Gate." Jose acknowledged that **the Gate carries a myriad of problems. "Drugs come through here, migrants come through here,"** he said. **"We see harassment from individuals who are moving contraband north, moving migrants north. Homes broken into, vehicles broken into. It's gotten more aggressive." Jose's cousin Francine Jose** lives in a remote part of the reservation **and estimated that her house is broken into about once a month by people crossing the border illegally. There is no cell service inside her house so she can't easily call for help -- according to authorities, the police response time to her house can take up to 45 minutes -- and she said the border crossers who walk across her property know it. "They are constantly breaking in all the time," Francine Jose said. "There was one just recently where they cooked stuff, about a month ago, slept."**

Yes, Border patrol agents can be abusive, but they are only part of the problem.

Corruption, tribal police and white supremacists are alt causes.

Norrell 13 (Brenda Norrell, a reporter of Indian country for 33 years, "Tohono O'odham oppose new federal police on sovereign Indian land", 7/25/2013, The Narcosphere, http://narcosphere.narconews.com/notebook/brenda-norrell/2012/07/tohono-oodham-oppose-new-federal-police-sovereign-indian-land, DJE)

SELLS, Arizona -- Tohono O'odham members say it is time to halt the swarm of federal agents on their sovereign land, who are violating their rights and abusing them. This week, a new federal police vehicle of the Bureau of Indian Affairs was seen on sovereign Tohono O'odham land making traffic stops. "I'm wondering who is behind the tinted windows. Are they O'odham or non-O'odham," said an O'odham member, whose name is not published due to the constant targeting of O'odham activists by police and agents. "Many of our tribal police are non-O'odham and do not know about our culture. They cannot communicate with our people who are non-English speakers, and don't understand about the sacredness of Tohono O'odham land." "O'odham living on our land do not know who these new federal police are, with these new vehicles." **"The**

land is over-run by Immigration, Customs, Enforcement (ICE,) US Border Patrol, Department of Homeland Security, tribal police, tribal rangers and now the BIA federal police." "We have all this enforcement on Tohono O'odham land and innocent people get harassed, innocent people get pulled over and held at gunpoint. It is a police state." **"The abuse of sovereignty now extends to our own people. Tribal police are coopted by Homeland Security and carry out their abuse,"** the O'odham member said. Along with the swarm of police and border agents on sovereign Tohono O'odham land, there are the Shadow Wolves, a US public relations scheme which the media writes romantic fiction about. Meanwhile, the few reporters that do actually go out to Tohono O'odham land are most often spoonfed their report by politicians and agents. **Tohono O'odham members say the elected tribal government is being controlled by dollars from the US government. The elected tribal politicians refuse to protect O'odham from the ongoing abuse by tribal police and US border agents.** O'odham are held at gunpoint, flashlights shined in their homes at night and even beaten by US Border Patrol agents. The media continues to cover up the facts, and instead fuels US/Mexico border xenophobia. While focusing on drug running, the media fails to report the murder of migrants by Border Patrol agents and the large number of Border Patrol agents being convicted of drug running and aiding cartels. **Further, both the media and law enforcement ignore the heavily-armed white supremacists at the border.**

If anything, the lack of law enforcement leaves natives open to Cartel abuse

Pavlich 14 (Katie Pavlich, editor and New York Times Best-Selling author, "Illegal Immigrant Sentenced For Sexual Abuse of 11-Year-Old Girl", 2/10/2014, http://townhall.com/tipsheet/katiepavlich/2014/02/10/illegal-immigrant-sentenced-for-sexual-abuse-of-two-native-american-women-n1792584, DJE)

An illegal immigrant from Honduras, 39-year-old Hernan Ramirez-Ortega, has been sentenced to 27 years in prison for sexually abusing an 11-year-old Tohono O'odham girl. He was also sentenced for sexually abusing a woman living on the Gila River Indian Reservation. At the time time of the abuse, Ramirez-Ortega was living on the Tohono O'odham Nation. He plead guilty to the crimes in 2010. **The Tohono O'odham Nation spans** nearly 3 million acres from the U.S. border with Mexico up into Arizona. The reservation **ends near the most popular intersection for drug and human trafficking in the country near Casa Grande**, where I-8 and I-10 intersect**. The lack of law enforcement on the Tohono O'odham allows cartels to operate freely and gives them easy access to the rest of the country. They use it as an entry point, marry into Indian families so they can live on the reservation and, if a village is small enough, cartel members will simply walk in and take property by lethal force.**

Obama is successfully addressing the issue of violence in the Tohono Nation

Wagner 13 (Dennis Wagner, reporter and columnist covering terrorism, the border, federal law enforcement and Native nations, "Poor justice on Arizona Indian reservations has crime running rampant", 9/13/2010,
http://www.azcentral.com/news/investigations/contact/government-accountability.html**, DJE)**

In his first year at the White House, President Barack Obama promised to repair the broken justice system in Indian country. And he appears to be offering substance along with speeches: He appointed Native Americans to key posts and ordered Cabinet secretaries to conduct "listening sessions" with tribal leaders. He requested $449 million for tribal public-safety programs and authorized more FBI victim specialists, BIA investigators and federal prosecutors to fight Native crime. Obama signed the Tribal Law and Order Act of 2010, a measure he promoted to increase authority of Indian police and allow Native courts to issue felony sentences of up to three years. The measure, signed in July, requires training in sexual-assault cases for Indian law officers. Federal agents and attorneys are now obliged to share evidence with tribal justice officials. Obama also issued a mandate, along with Attorney General Eric Holder, that U.S. attorneys visit Indian country regularly to meet with tribal leaders and develop operational plans. The goal: better law enforcement and more prosecutions, especially in cases of violence against women and children. Dennis Burke, the U.S. attorney for Arizona, said communications are paying off. After learning about problems with rape cases on the Navajo Reservation, he sent a letter in June to health officials there requesting records of every incident reported to tribal medical workers during the previous 18 months. In the letter, Burke vows to ensure that "all provable sex assault offenses in Indian country are prosecuted."

Conditions are improving with increased government funding

Wagner 13 (Dennis Wagner, reporter and columnist covering terrorism, the border, federal law enforcement and Native nations, "Poor justice on Arizona Indian reservations has crime running rampant", 9/13/2010,
http://www.azcentral.com/news/investigations/contact/government-accountability.html**, DJE)**

Native American justice advocates, including Hallie Bongar White, executive director of the Southwest Center for Law and Policy in Tucson, said there is restrained belief that Washington, D.C., may finally offer more than lip service. "There is a difference in the Obama administration," said Bongar White, noting that White House rhetoric already has been backed with new funding, programs and appointments. "I see them moving a little bit more to provide resources and listening more to Native nations." Bongar White, whose non-profit group provides legal training to tribal communities, said the change is beginning to show. The Tohono O'odham Nation in southern Arizona recently received money for rape-victim advocates. This spring, she taught tribal police in New Mexico the protocols of rape investigations. Sexual-assault response teams are forming across Indian country. Kim Pound, former police chief at the Fort Apache Reservation, said Congress appropriated money for tribes in the past but it didn't always seem to filter down. There were exceptions, though. Pound said he managed to increase officer salaries in Whiteriver (from starting pay of $14 per hour to $19), purchase crime-scene kits and raise professional standards. Still, he can't help being skeptical. "Stuff that happens in Indian country, if it occurred in any town or city of this country, people would be up in arms," Pound said. "But they don't care." Everette Little Whiteman, police chief for the Oglala Sioux Tribe and a former BIA agent in Arizona, said it will take years to break the cycle of victimization. "The problem is that

crimes are not investigated thoroughly. . . . We need money," he said. Paul Charlton, an outspoken advocate for tribal-justice reform and a former U.S. attorney for Arizona, said Obama has made a start but a paradigm shift is needed before law and order will succeed in Native communities. "This is a system that has been in place since the late 1880s, and it's not working," Charlton said. "The idea that the federal government should be responsible for crimes in Indian country is something that has to be changed."

Plan doesn't solve for the Tohono O'odham police that attempt to shut down villages – their own card

Brenda **Norrell**, 4-8-**2014**, "CENSORED NEWS: Mike Wilson: US Border Patrol shot Tohono O'odham at border," Censored News, http://bsnorrell.blogspot.com/2014/04/mike-wilson-us-border-patrol-shot.html

SAN MIGUEL, TOHONO O'ODHAM NATION — Mike Wilson, Tohono O'odham, said the US Border Patrol shot two Tohono O'odham at the border, one in the face. The Border Patrol claims O'odham side-swiped its vehicle in San Miguel, "The Gate," on Tohono O'odham land at the US Mexico border. However, Wilson points out in the video below that **the Tohono O'odham government, Tohono O'odham police, and US Border Patrol can not be trusted.** Wilson said that **neither the Tohono O'odham government nor police have taken steps to ensure the safety of O'odham** when faced with the US Border Patrol. He said these human rights violations by the US Border Patrol inflicted on O'odham have been going on for more than 10 years and the Tohono O'odham Nation has done nothing to halt this. Further, **Wilson expresses his concern over the Tohono O'odham Nation government's efforts to disable the new district of Hia-Ced** on the western portion of the Tohono O'odham Nation near Ajo, Arizona. **He said even though the Tohono O'odham Nation initially approved of the new district, it is now doing everything in its power to ensure that the new district fails**. Wilson has put out water for years for migrants, over the objections of the Tohono O'odham government, and his life-saving water containers were vandalized. Wilson's water stations have been in the area of the Tohono O'odham Nation with one of the highest rates of death. Wilson has also aided humanitarian groups searching for the bodies of missing migrants on the Tohono O'odham Nation. Meanwhile, **the Tohono O'odham Nation has been able to control and silence much of the mainstream media. The Tohono O'odham police have threatened and stalked O'odham human rights activists to silence them.** Now, the US Homeland Security has given the US southern border contract to an Israeli company, Elbit Systems, which is also responsible for Apartheid security surrounding Palestine. Elbit Systems now has the contract to construct US spy towers on Tohono O'odham land. The Tohono O'odham Legislative Council approved the construction of the 15th spy tower on sovereign O'odham land, according to the May 7, 2013 resolution, despite O'odham protests over the militarization of their lands.

Border Adv

Plan doesn't solve for 225 mile long electric fence cutting through the territory

Indian Country Today Media **Network**, 9-1-**2004**, "An open letter to the UN regarding the Tohono O'odham border," http://indiancountrytodaymedianetwork.com/2004/09/01/open-letter-un-regarding-tohono-oodham-border-93922

To the United Nations Secretariat of the Permanent Forum on Indigenous Issues: We are writing in reference to a press release recently circulated by some members of the Tohono O'odham Nation that contained inaccurate information. While we are sure the intent of these individuals was not to mislead the United Nations or the general public, it is imperative that accurate and complete information on issues of such importance is provided. The media alert released by these members stated in part: "**The 225-mile-long wall will run along the entire Arizona-Mexico border, bisecting 74 miles of O'odham land. The fence will be lit 24 hours a day by 400 high-security floodlights, which will impact local residences.** Along the first wall of railroad ties and steel sheets, 145 remote cameras will conduct surveillance. **Homeland Security forces will patrol a paved road that will that will run in between the**

first fence and a secondary fence with razor-edged coils on top." As the duly-elected leaders of the Tohono O'odham Nation, we submit for the record the current challenges facing the Tohono O'odham Nation and its members in relation to its location on the U.S./Mexico border, and the solutions being undertaken to address these challenges. **The Tohono O'odham Nation is a sovereign government located in Southern Arizona spanning 2.8 million acres, 75 miles of which is contiguous to the U.S border with the Republic of Mexico.** Our members have lived in the deserts of Southern Arizona since time immemorial and, because the U.S.-Mexico international boundary divides our traditional ancestral lands, there are over 1,400 tribal members who currently reside in Mexico. It is critical that all recognized members of the Tohono O'odham Nation maintain the right to cross the border to see families and friends, to receive services and to participate in religious ceremonies and other events. Read more at http://indiancountrytodaymedianetwork.com/2004/09/01/open-letter-un-regarding-tohono-oodham-border-93922

The plan solves nothing. Confirming identity as a projection of Western culture and beliefs onto the Tohono people is inevitable due to legal requirements.

Agencia EFE 14 (Spanish international news agency, "Arizona's Controversial Law Scaring Away Immigrants, Police Chief Says", 8/13/2015, http://latino.foxnews.com/latino/politics/2014/08/12/arizona-police-chief-aim-sb1070-was-scaring-immigrants/, DJE)

Tucson, Arizona – The Tucson police said **Arizona's controversial SB1070 immigration law was designed to make the immigrant community afraid of law enforcement authorities and leave the state. "This law was originally designed so that undocumented immigrants would be afraid of the police, be afraid of coming to ask for help, feel themselves to be a target** and, in that sense, I think that the law was successful, given that some of them have left the state voluntarily," said Roberto Villaseñor in an interview with Efe. Arizona's Hispanic community has continued to fight against SB1070 since it went into effect in 2010, and they complain about cases of abuse by the law enforcement agencies. At the heart of the debate is the law's controversial Section 2(B), also known **as the "show me your papers" provision**, that **since 2012 requires police officers to ask about the immigration status of people they "suspect" of being undocumented.** Villaseñor said that his **officers comply with SB1070 by contacting the Border Patrol as soon as they determine there is probable cause to believe a person may be undocumented**, rejecting accusations that the Tucson Police Department discriminates against the immigrant community. "The idea exists that the police have the option to call the Border Patrol or not, but the truth is that we don't," said Villaseñor, who was appointed police chief in 2009. The TPD has been the target of protests after a confrontation last Sunday between police, Border Patrol agents and activists who lay down underneath official vehicles to try and prevent an undocumented immigrant from being handed over to immigration authorities. "I understand the confusion and the dissatisfaction that exists among activists and members of the community about the interpretation of the law. **The way in which SB1070 is written gives no other option to police departments than to verify the immigration status of the detained person**," Villaseñor said. According to TPD figures, from June 12 to August 10 its officers verified the immigration status of 3,109 people under SB1070. On those occasions, the Border Patrol responded just 45 times and took 24 people into custody. **One of the main things leading the police to ask for the immigration papers of drivers is the lack of a driver's license or other official identification issued by the state.** According to the TPD, 43.1 percent of the people whose immigration status was verified under SB1070 were of Hispanic origin, which, according to Villaseñor, is in line with the proportion of Latinos in Tucson.

TURN: Increasing the flow of immigrants pushes the U.S. over the brink and causes disease spread.

Vliet 14 (Elizabeth Lee Vliet, M.D., Ellis Island Medal of Honor recipient and preventative medicine specialist with practices in Arizona and Texas, "Deadly diseases crossing border with illegals", 6/17/2014, WND News, http://www.wnd.com/2014/06/deadly-diseases-crossing-border-with-illegals/, DJE)

A flood of illegals has massively surged at our southwestern borders. The economic impact of medical care, education and incarceration for illegals forced on taxpayers is bankrupting Arizona. Why are such swarms entering the U.S. illegally NOW, particularly children? Newspapers in Mexico and Central and South America are actually describing U.S. "open borders," encouraging people to come with promises of food stamps or "amnesty." It is textbook Cloward-Piven strategy to overwhelm and collapse the economic and social systems, in order to replace them with a "new socialist order" under federal control. **Carried by this tsunami of illegals are the invisible "travelers" our politicians don't like to mention: diseases the U.S. had controlled or virtually eradicated: tuberculosis (TB), Chagas disease, dengue fever, hepatitis, malaria, measles, plus more.** I have been working on medical projects in Central and South America since 2009, so I am aware of problems these countries face from such diseases. **A public health crisis, the likes of which I have not seen in my lifetime, is looming. Hardest hit by exposures to these difficult-to-treat diseases will be elderly, children, immunosuppressed cancer-patients, patients with chronic lung disease or congestive heart failure. Drug-resistant tuberculosis is the most serious risk, but even diseases like measles can cause severe complications and death in older or immunocompromised patients. TB is highly contagious** – you catch it anywhere around infected people: schools, malls, buses, etc. **The drug-resistant TB now coming across our borders requires a complex, extremely expensive treatment regimen that has serious side effects and a low cure rate.** Chagas, or "kissing bug" disease, caused by the parasite Trypanosoma cruzi, is carried by the triatomine bug that transmits disease to humans. Although "kissing bugs" are already here, they are not as widespread as in Latin America. Right now, Chagas disease is uncommon in the U.S., so many doctors do not think to check for it. Chagas causes debilitating fatigue, headaches, body aches, nausea/vomiting, liver and spleen enlargement, swollen glands, loss of appetite. When Chagas reaches the chronic phase, medications will not cure it. It can kill by arrhythmias, congestive heart failure or sudden cardiac arrest. **Vaccine-preventable diseases like chicken pox, measles and whooping cough spread like wildfire** among unvaccinated children. Other illnesses, along with scabies and head lice, also thrive as children are transported by bus and herded into crowded shelters – courtesy of the federal government. Treatment costs are borne by taxpayers. **Our public health departments complain of being overtaxed by a dozen cases of measles or whooping cough. How will they cope with thousands of patients with many different, and uncommon, diseases? Americans, especially Medicaid patients, will see major delays for treatment.** Delays to see doctors at the Phoenix VA hospital cost the lives of 58 veterans while waiting for care. This is just a portent of far more deaths to come from delays for Americans' medical care as thousands of sick illegals swamp already overcrowded emergency rooms. How will these facilities stay open at all under the financial burden of this huge unfunded federal mandate to provide "free" treatment? People express concern about child endangerment from illegal minors dumped on Arizona streets in hundred-plus degree heat, with no support. **A bigger concern is American endangerment from**

life-threatening diseases added to social and economic collapse from costs of treating hundreds of thousands of illegals.

Diseases cause extinction

Guterl 12 – [Fred, award-winning journalist and executive editor of Scientific American, worked for ten years at Newsweek, has taught science at Princeton University, *The Fate of the Species: Why the Human Race May Cause Its Own Extinction and How We Can Stop It*, 1-2, Google Books, online

Over the next few years, the bigger story turned out not to be SARS, which trailed off quickly, bur avian influenza, or bird flu. It had been making the rounds among birds in Southeast Asia for years. An outbreak in 1997 Hong Kong and another in 2003 each called for the culling of thousands of birds and put virologists and health workers into a tizzy. Although the virus wasn't much of a threat to humans, scientists fretted over the possibility of a horrifying pandemic. Relatively few people caught the virus, but more than half of them died. What would happen if this bird flu virus made the jump to humans? What if it mutated in a way that allowed it to spread from one person to another, through tiny droplets of saliva in the air? One bad spin of the genetic roulette wheel and a deadly new human pathogen would **spread across the globe in a matter of days**. With a kill rate of 60 percent, such a pandemic would be devastating, to say the least.¶ Scientists were worried, all right, but the object of their worry was somewhat theoretical. Nobody knew for certain if such a supervirus was even possible. To cause that kind of damage to the human population, a flu virus has to combine two traits: lethality and transmissibility. The more optimistically minded scientists argued that one trait precluded the other, that if the bird flu acquired the ability to spread like wildfire, it would lose its ability to kill with terrifying efficiency. The virus would spread, cause some fever and sniffles, and take its place among the pantheon of ordinary flu viruses that come and go each season.¶ The optimists, we found out last fall, were wrong. Two groups of scientists working independently managed to create bird flu viruses in the lab that had that **killer combination of lethality and transmissibility among humans**. They did it for the best reasons, of course—to find vaccines and medicines to treat a pandemic should one occur, and more generally to understand how influenza viruses work. If we're lucky, the scientists will get there before nature manages to come up with the virus herself, or before someone steals the genetic blueprints and turns this knowledge against us. ¶ Influenza is a natural killer, but we have made it our own. We have created the conditions for new viruses to flourish—among pigs in factory farms and live animal markets and a connected world of international trade and travel—and we've gone so far as to fabricate the virus ourselves. Flu is an excellent example of how we have, through our technologies and our dominant presence on the planet, begun to multiply the risks to our own survival

Solvency

There would still be non-surveillance border patrol after the plan

Miller 14 (*Todd Miller has researched and written about U.S.-Mexican border issues for more than 10 years. He has worked on both sides of the border for BorderLinks in Tucson, Arizona, and Witness for Peace in Oaxaca, Mexico. He now writes on border and immigration issues for* NACL, Todd Miller, 4-22-2014, "Tomgram: Todd Miller, The Creation of a

Border Security State," Tomdispatch, http://www.tomdispatch.com/blog/175834/tomgram%3A_todd_miller,_the_creation_of_a_border_security_state/) GW

Before 9/11, there was little federal presence on the Tohono O'odham reservation. Since then, the expansion of the Border Patrol into Native American territory has been relentless. Now, **Homeland Security stations, filled with hundreds of agents** (many hired in a 2007-2009 hiring binge**), circle the reservation**. But unlike bouncers at a club, **they check people going out, not heading in**. On every paved road leaving the reservation, **their checkpoints form a second border**. There, **armed agents -- ever more of whom are veterans of America's distant wars -- interrogate anyone who leaves. In addition, there are two "forward operating bases" on the reservation, which are meant to play the role -- facilitating tactical operations in remote regions -- that similar camps did in Afghanistan and Iraq.** Now, thanks to the Elbit Systems contract, a new kind of border will continue to be added to this layering. Imagine part of the futuristic Phoenix exhibition hall leaving Border Expo with the goal of incorporating itself into the lands of a people who were living here before there was a "New World," no less a United States or a Border Patrol. Though **this is** increasingly the reality from Brownsville, Texas, to San Diego, California, on Tohono O'odham land a post-9/11 war posture shades uncomfortably into the leftovers from a nineteenth century Indian war. Think of it as the place **where** the **homeland security** state **meets** its older compatriot, **Manifest Destiny**. On the gate at the entrance to her house**, Tohono O'odham member Ofelia Rivas has put up a sign stating that the Border Patrol can't enter without a warrant. It may be a fine sentiment, reflecting a right embodied in the U.S. Constitution, but in the eyes of the "law," it's ancient history.** Only a mile from the international boundary, her house is well within the 25-mile zone in which the Border Patrol can enter anyone's property without a warrant. These powers make the CBP a super-force in comparison to the local law enforcement outfits it collaborates with. Although **CBP can enter property warrantlessly**, it still needs a warrant to enter somebody's dwelling. In the small community where Rivas lives, known as Ali Jegk, the agents have overstepped even its extra-constitutional bounds with "home invasions" (as people call them). Throughout the Tohono O'odham Nation, people complain about Homeland Security vehicles driving at high speeds and tailgating on the roads. They complain about blinding spotlights, vehicle pull-overs, and unexpected interrogations. **The Border Patrol has pulled O'odham tribal members out of cars, pepper-sprayed them, and beaten them with batons**. As local resident Joseph Flores told a Tucson television station, "It feels like we're being watched all the time." **Another man commented, "I feel like I have no civil rights**." On the reservation, **people speak not only about this new world of intense surveillance, but also about its raw impact on the Tohono O'odham people: violence and subjugation.** Although the tribal legislative council has collaborated extensively with Border Patrol operations, Priscilla Lewis seemed to sum up the sentiments of many O'odham at an open hearing in 2011: "**Too much harassment, following the wrong people, always stopping us, including and especially those who look like Mexicans when driving or walking in the desert... They have too much domination over us**." At her house, Ofelia Rivas tells me a story. One day, she was driving with Tohono O'odham elders towards the U.S.-Mexican border when a low-flying Blackhawk helicopter seemingly picked them up and began following them. Hanging out of the open helicopter doors were CBP gunmen, she said. When they crossed the border into Mexico, the helicopter tracked them through a forest of beautiful saguaro cacti while they headed for a ceremonial site, 25 miles south of the border. They were, of course, crossing what was a non-border to the O'odham, doing something they had

done for thousands of years. Hearing, even feeling the vibration of the propellers, one of the elders said, "I guess we are going to die." They laughed, Rivas added, as there was nothing else to do. They laughed real hard. Then, a mile or so into Mexico, the helicopter turned back. **Americans may increasingly wonder whether NSA agents are scouring their meta-data, reading their personal emails, and the like. In the borderlands no imagination is necessary. The surveillance apparatus is in your face. The high-powered cameras are pointed at you; the drones are above you; you're stopped regularly at checkpoints and interrogated.** Too bad if you're late for school, a meeting, or an appointment. And even worse, if your skin complexion, or the way you're dressed, or anything about you sets off alarm bells, or there's something that doesn't smell quite right to the CBP's dogs -- and such dogs are a commonplace in the region -- being a little late will be the least of your problems. As Rivas told me, a typical exchange on the reservation might involve an agent at a checkpoint asking an O'odham woman whether, as she claimed, she was really going to the grocery store -- and then demanding that she show him her grocery list**. People on the reservation now often refer to what is happening as an armed "occupation."** Mike Wilson, an O'odham member who has tried to put gallon jugs of water along routes Mexican migrants might take through the reservation, speaks of the Border Patrol as an "occupying army." It's hardly surprising. Never before in the Nation's history under Spain, Mexico, or the United States have so many armed agents been present on their land.

Those would circumvent any restrictions on surveillance. They have done it before.

Their Austin evidence provides no warrant that curtailing surveillance solves – It concedes that legislation is ONLY effective if the Tohono people participate

Austin 91(Megan, Fall 1991, A CULTURE DIVIDED BY THE UNITED STATES-MEXICO BORDER: THE TOHONO O'ODHAM CLAIM FOR BORDER CROSSING RIGHTS, Arizona Journal of International and Comparative Law [Vol. 8, No. 2], Accessed 7/14/15) CH

The Tohono O'odham Tribe suffers fundamental human rights violations under current policies governing the international border between the United States and Mexico. The survival of this indigenous culture depends upon its ability to pass through traditional lands freely, to collect raw materials for traditional foods and crafts and to visit religious sites and family members. Current policies and laws of the United States deny the Tohono O'odham these rights. **Border crossing legislation will help to eliminate these abuses**. **However, in order to be effective, the legislation must allow the Tohono O'odham people to participate in decisions regarding regulation of the border.** The goal of the Tohono O'odham Tribe is to protect its culture and assure its continued existence. Approaching the Tohono O'odham claim for border crossing rights as a claim for basic human rights places indigenous groups within the scope of international principles. The new movements of intemational law focus on the unique claims of indigenous groups, which amount not to secession, but to a level of autonomy which permits the survival of their cultures. Guided by these fundamental international principles, the United States and neighboring nations must recognize the right of the Tohono O'odham to keep their culture alive.

Pseudo – Speciation

Utilitarianism is good for policy makers – leads to the most benefits over harms

Manuel **Velasquez**,, 8-1-**2014**, "Calculating Consequences: The Utilitarian Approach to Ethics," Markkula Center For Applied Ethic, http://www.scu.edu/ethics/practicing/decision/calculating.html

Calculating Consequences: The Utilitarian Approach to Ethics Developed by Manuel Velasquez, Claire Andre, Thomas Shanks, S.J., and Michael J. Meyer Imagine that the U.S. Central Intelligence Agency gets wind of a plot to set off a dirty bomb in a major American city. Agents capture a suspect who, they believe, has information about where the bomb is planted. Is it permissible for them to torture the suspect into revealing the bomb's whereabouts? Can the dignity of one individual be violated in order to save many others? Greatest Balance of Goods Over Harms If you answered yes, you were probably using a form of moral reasoning called "utilitarianism." Stripped down to its essentials, **utilitarianism is a moral principle that holds that the morally right course of action in any situation is the one that produces the greatest balance of benefits over harms for everyone affected.** So long as a course of action produces maximum benefits for everyone, utilitarianism does not care whether the benefits are produced by lies, manipulation, or coercion. Many of us use this type of moral reasoning frequently in our daily decisions. When asked to explain why we feel we have a moral duty to perform some action, we often point to the good that will come from the action or the harm it will prevent. **Business analysts, legislators, and scientists weigh daily the resulting benefits and harms of policies when deciding**, for example, whether to invest resources in a certain public project, whether to approve a new drug, or whether to ban a certain pesticide. Utilitarianism offers **a relatively straightforward method for deciding the morally right course of action for any particular situation** we may find ourselves in. To discover what we ought to do in any situation, we first identify the various courses of action that we could perform. Second, we determine all of the foreseeable benefits and harms that would result from each course of action for everyone affected by the action. And third, we choose the course of action that provides the greatest benefits after the costs have been taken into account. The principle of utilitarianism can be traced to the writings of Jeremy Bentham, who lived in England during the eighteenth and nineteenth centuries. Bentham, a legal reformer, sought an objective basis that would provide a publicly acceptable norm for determining what kinds of laws England should enact. He believed that the most promising way of reaching such an agreement was to choose that policy that would bring about the greatest net benefits to society once the harms had been taken into account. His motto, a familiar one now, was "the greatest good for the greatest number." Over the years, the principle of utilitarianism has been expanded and refined so that today there are many variations of the principle. For example, Bentham defined benefits and harms in terms of pleasure and pain. John Stuart Mill, a great 19th century utilitarian figure, spoke of benefits and harms not in terms of pleasure and pain alone but in terms of the quality or intensity of such pleasure and pain. Today utilitarians often describe benefits and harms in terms of the satisfaction of personal preferences or in purely economic terms of monetary benefits over monetary costs. Utilitarians also differ in their views about the kind of question we ought to ask ourselves when making an ethical decision. Some utilitarians maintain that in making an ethical decision, we must ask ourselves: "What effect will my doing this act in this situation have on the general balance of good over evil?" If lying would produce the best consequences in a particular situation, we ought to lie. Others, known as rule utilitarians, claim that we must choose that act that conforms to the general rule that would have the best consequences. In other words, we must ask ourselves: "What effect would everyone's doing this kind of action have on the general balance of good over evil?" So, for example, the rule "to always tell the truth" in general promotes the good of everyone and therefore should always be followed, even if in a certain situation lying would produce the best consequences. Despite such differences among utilitarians, however, most hold to the general principle that **morality must depend on balancing the beneficial and harmful consequences of our conduct.** - See more at: http://www.scu.edu/ethics/practicing/decision/calculating.html#sthash.7QghnbgB.dpuf

Basing an individual's identity off oppression destroys the ability of the individual to create change – turns their impacts of domination, slavery, and "every form of evil"

Abbas 2010 [Asma, Professor and Division Head in Social Studies, Political Science, Philosophy at the Liebowitz Center for International Studies at Bard College at Simon's Rock, Liberalism

and Human Suffering: Materialist Reflections on Politics, Ethics, and Aesthetics, London: Palgrave Macmillan, pg. Pg. 133- 136]

There is a fundamental reciprocity between how sufferers represent themselves, or are represented, and the way in which their subjectivities and those of the injurers are theorized in various political programs. Together, they determine the form of agency that is granted to the victim within any paradigm. In many theoretical attempts at redeeming victims, the work of the wounded remains attached to an imputed aspiration for agency modeled on the "health" of the agent qua perpetrator, bystander, and rescuer. **Seeing the wounded as agency-impaired affirms the definition of victim as inadequate subject.** There can be no justice done to the experience of suffering in its particularity if the only choice is to define it in relation to—even when only as the antithesis of—normalized healthy sovereign action. Critiques of liberalism that build on responses to orientalism and other colonial discourses are suspicious of the mechanics of the identification of victims. For them, the victim status precludes any status beyond that of the object of an action, necessitates powerlessness, and imposes slave morality.20 An inevitable result is the object's own resignation to its "assigned" lack of subjectivity.21 In these criticisms, the question of naming becomes inextricable from representation. It follows that the need and validity of representing the victims, the oppressed, the third world, is doubted and, finally, rejected. However, these challenges still remain attached to a relation to health as agency and to agency as health. An example is the call that victims and agents are not mutually exclusive—something to the effect that victims can be agents, too. Mohanty, for one, tells us of cottage-industry working women in Narsapur who "are not mere victims of the production process, because they resist, challenge, and subvert the process at various junctures."22 What is implicit in the "not mere victim" reaction? It brings to mind Martha Nussbaum's claim that victimization does not preclude "agency."23 Clearly at work in Mohanty's account is a defensiveness that ends up condoning and affirming the dominant notion of agency it opposes. Occupying very different locations on the philosophical spectrum, Mohanty and Nussbaum seem closer in their gut reaction than their avowals would suggest. **Why is a victim merely a victim? What does it tell us regarding how we understand victimization? These reactions betray an inability to factor in the mode of practice that is suffering**, which may spurn the redemption of the victim on the terms of health and agency, liberal style. These thinkers highlight how voice and representation are so frequently framed in terms of agency, where agency itself becomes linked to representation: the victims or nonagents need representation, and they are redeemed by obviating representation and granting a voice all in one fell swoop. In my view, this link between agency and the authenticity of voice is a dubious one. It is on this suspect convergence that Spivak makes an important intervention. In "Can the Subaltern Speak?" she concludes that the subaltern cannot speak, an answer that, in dismissing Western intellectuals who "make space" for the subaltern to speak, reinstates a project of rethinking representation and the victim's experience. Spivak's analysis is more nuanced than Mohanty's, which rejects the very need and validity of this representation. Spivak takes issue with Foucault's wish to let the subaltern speak "in their own voice," which does not take seriously the notion that they have no voice as yet, and that this speechlessness is what defines the subaltern. She saves the notion of representation by arguing that, in the absence of a language of their own, there is no alternative but to represent the subaltern in a way that is sensitive to their silence.24 As I argued in Chapters 2 and 3, the fetish of voice itself must be subject to a suspicion, since it serves those who thrive on its consolations more than those who are bid speak and must do so in order to write themselves in. This is not to say that that the "victim"—its discursive and material reality—does not need redressal in a liberatory politics. Far from that, one can see it as a representation—a Darstellung and a Vorstellung— that has to itself be a subject of any social theoretical endeavor that is materialist in its imperative to make conditions (for the possibility of change) out of necessities. Liberal fictions and power structures need victims; unwittingly or not, they sustain them as they are themselves nourished by the latter's surplus suffering. Interestingly, the same Nietzsche who inspires a suspicion of the agent is also someone who forces a consideration of the material history, weight, and imperatives of agency, and of the terms and labor of its overcoming. It is more than a coincidence that Nietzsche's transition from the slave revolt in the first essay of On the Genealogy or Morals to the story of guilt, ressentiment, and punishment in the second essay, involves the myth of the doer behind the deed.25 This transition is about suffering. Nietzsche's views on subjects and subjection suggest not merely that there is no doer but that the core of human existence is the suffering of that doing—that the subject is, in any case, subject to itself and its deeds. (As far as the fictive nature of the subject is concerned, Nietzsche drives home the very brutally material nature of fictions— are fictions ever merely fictions?) The centrality of the agent in liberalism's focus on suffering is manifest in the necessity of an agent as the cause or remedy of suffering. This raises the question of which fiction is more enduring in the liberal framework: the agent who causes the injury or the victim who is injured with that agency? In both cases, liberalism's attention is clear. In its keenness to see as good for liberal justice only the suffering that can be traced to a sanctioned agent, it makes victims into objects of the action. While neither of these options exhausts the possibilities in reality, they do necessitate each other. **This is why the agent looms so large, even in the imaginations of critics of liberalism, that it holds the promise, in its potential idealist-linguistic overcoming, of the undoing of the stigmatizing victim identity it spawns. However, the sufferer subjected to the fictions of agency and of the production of injury suffers these fictions** through her labors of sustaining and unwriting them.

Turns dehumanization - their Miller 14 narrative paints a picture that all there is to Tohonos is their oppression

Delgado 93 [46 Vand. L. Rev. 672 (1993) On Telling Stories in School: A Reply to Farber and Sherry ; Delgado, Richard]

It is difficult to evaluate someone who at the same time is evaluating you – putting you under the glass, dissecting your culture, laws, profession, and norms of political fairness. **The outsider's task is formidable enough: first seeing, then addressing, defects in the culture in which all of us, including the outsider, are immersed**. But when one sets out, as Daniel Farber and Suzanna Sherry do in a recent article, to come to terms with outsider scholarship fairly and sympathetically, the task's difficulty increase by an order of magnitude. **Empowered groups long ago established a host of stories, narratives**, conventions, and understandings **that** today, through repetition, **seem natural and true. Among these are criteria of judgment-the terms and categories by which we decide which things are good, valid, worthy, and true.** Today, newcomers are telling their own versions, including counterstories, whose purpose is to **reveal the contingency, partiality, and self-serving quality of the stories** on which we have been relying to order our world.

Their evidence on pseudo-speciation only says tribal police participate in it

Miller 14 (*Todd Miller has researched and written about U.S.-Mexican border issues for more than 10 years. He has worked on both sides of the border for BorderLinks in Tucson, Arizona, and Witness for Peace in Oaxaca, Mexico. He now writes on border and immigration issues for* NACL, Todd Miller, 4-22-2014, "Tomgram: Todd Miller, The Creation of a Border Security State," Tomdispatch, http://www.tomdispatch.com/blog/175834/tomgram%3A_todd_miller,_the_creation_of_a_border_security_state/)TB

Between the unbridled enthusiasm of the vendors with their techno-optimistic "solutions" and the reality of border life in the Tohono O'odham Nation -- or for that matter just about anywhere along the 2,000-mile divide -- the chasm couldn't be wider. On the reservation back in 2012, Longoria called in the GPS coordinates of the unknown dead woman, as so many agents have done in the past and will undoubtedly do in the years to come. Headquarters in Tucson contacted **the Tohono O'odham tribal police**. The agents waited in the baking heat by the motionless body. When the tribal police pulled up, they took her picture, as they have done with other corpses so many times before. **They** rolled her over and took another picture. Her body was, by now, deep purple on one side. The tribal police explained to Longoria that it was because the blood settles there. They brought out a plastic body bag. "Pseudo-speciation," Longoria told me. That, he said, is how **they** deal with it. He talked about an interview he'd heard with a Vietnam vet on National Public Radio, who said that to deal with the dead in war, "you have to take a person and change his genus. Give him a whole different category. You couldn't stand looking at these bodies, so you detach yourself. You give them a different name that detracts from their humanness." The tribal police worked with stoic faces. They lifted the body of this woman, whose past life, whose story, whose loved ones were now on another planet, onto a cart attached to an all-terrain vehicle and headed off down a bumpy dirt road with the body bouncing up and down.

Physical Violence

There is property damage committed against the indigenous from passing migrants.

There is only a risk that reducing U.S. border patrol would cause this to increase.

Pitts 13 (Byron Pitts, ABC News Anchor & Chief National Correspondent, "In Efforts to Secure US-Mexico Border, Ariz. Native Americans Feel Caught in the Middle", 7/27/2013, ABC News, http://abcnews.go.com/US/efforts-secure-us-mexico-border-ariz-native-americans/story?id=19496394, DJE)

In the Tohono O'odham Nation is "The San Miguel Gate," an area on the U.S.-Mexico border considered to be sacred by the Tohono O'odham. It is the only place where Native Americans can freely walk across the border, but there, the only thing separating Mexico and the U.S. is a low fence guarded by a lone border patrol agent and a light pole powered by a generator. Verlon Jose, a Tohono O'odham tribal leader whose family has lived on the reservation for generations, and other members of his tribe talked to "Nightline" at "The San Miguel Gate." Jose acknowledged that **the Gate carries a myriad of problems. "Drugs come through here, migrants come through here,"** he said. **"We see harassment from individuals who are moving contraband north, moving migrants north. Homes broken into, vehicles broken into. It's gotten more aggressive." Jose's cousin Francine Jose** lives in a remote part of the reservation **and estimated that her house is broken into about once a month by people crossing the border illegally. There is no cell service inside her house so she can't easily call for help -- according to authorities, the police response time to her house can take up to 45 minutes -- and she said the border crossers who walk across her property know it. "They are constantly breaking in all the time," Francine Jose said. "There was one just recently where they cooked stuff, about a month ago, slept."**

Yes, Border patrol agents can be abusive, but they are only part of the problem.

Corruption, tribal police and white supremacists are alt causes.

Norrell 13 (Brenda Norrell, a reporter of Indian country for 33 years, "Tohono O'odham oppose new federal police on sovereign Indian land", 7/25/2013, The Narcosphere, http://narcosphere.narconews.com/notebook/brenda-norrell/2012/07/tohono-oodham-oppose-new-federal-police-sovereign-indian-land, DJE)

SELLS, Arizona -- Tohono O'odham members say it is time to halt the swarm of federal agents on their sovereign land, who are violating their rights and abusing them. This week, a new federal police vehicle of the Bureau of Indian Affairs was seen on sovereign Tohono O'odham land making traffic stops. "I'm wondering who is behind the tinted windows. Are they O'odham or non-O'odham," said an O'odham member, whose name is not published due to the constant targeting of O'odham activists by police and agents. "Many of our tribal police are non-O'odham and do not know about our culture. They cannot communicate with our people who are non-English speakers, and don't understand about the sacredness of Tohono O'odham land." "O'odham

living on our land do not know who these new federal police are, with these new vehicles." **"The land is over-run by Immigration, Customs, Enforcement (ICE,) US Border Patrol, Department of Homeland Security, tribal police, tribal rangers and now the BIA federal police."** "We have all this enforcement on Tohono O'odham land and innocent people get harassed, innocent people get pulled over and held at gunpoint. It is a police state." **"The abuse of sovereignty now extends to our own people. Tribal police are coopted by Homeland Security and carry out their abuse,"** the O'odham member said. Along with the swarm of police and border agents on sovereign Tohono O'odham land, there are the Shadow Wolves, a US public relations scheme which the media writes romantic fiction about. Meanwhile, the few reporters that do actually go out to Tohono O'odham land are most often spoonfed their report by politicians and agents. **Tohono O'odham members say the elected tribal government is being controlled by dollars from the US government. The elected tribal politicians refuse to protect O'odham from the ongoing abuse by tribal police and US border agents.** O'odham are held at gunpoint, flashlights shined in their homes at night and even beaten by US Border Patrol agents. The media continues to cover up the facts, and instead fuels US/Mexico border xenophobia. While focusing on drug running, the media fails to report the murder of migrants by Border Patrol agents and the large number of Border Patrol agents being convicted of drug running and aiding cartels. **Further, both the media and law enforcement ignore the heavily-armed white supremacists at the border.**

If anything, the lack of law enforcement leaves natives open to Cartel abuse

Pavlich 14 (Katie Pavlich, editor and New York Times Best-Selling author, "Illegal Immigrant Sentenced For Sexual Abuse of 11-Year-Old Girl", 2/10/2014, http://townhall.com/tipsheet/katiepavlich/2014/02/10/illegal-immigrant-sentenced-for-sexual-abuse-of-two-native-american-women-n1792584, DJE)

An illegal immigrant from Honduras, 39-year-old Hernan Ramirez-Ortega, has been sentenced to 27 years in prison for sexually abusing an 11-year-old Tohono O'odham girl. He was also sentenced for sexually abusing a woman living on the Gila River Indian Reservation. At the time time of the abuse, Ramirez-Ortega was living on the Tohono O'odham Nation. He plead guilty to the crimes in 2010. **The Tohono O'odham Nation spans** nearly 3 million acres from the U.S. border with Mexico up into Arizona. The reservation **ends near the most popular intersection for drug and human trafficking in the country near Casa Grande**, where I-8 and I-10 intersect**. The lack of law enforcement on the Tohono O'odham allows cartels to operate freely and gives them easy access to the rest of the country. They use it as an entry point, marry into Indian families so they can live on the reservation and, if a village is small enough, cartel members will simply walk in and take property by lethal force.**

Obama is successfully addressing the issue of violence in the Tohono Nation

Wagner 13 (Dennis Wagner, reporter and columnist covering terrorism, the border, federal law enforcement and Native nations, "Poor justice on Arizona Indian reservations

has crime running rampant", 9/13/2010,
http://www.azcentral.com/news/investigations/contact/government-accountability.html**, DJE)**

In his first year at the White House, President Barack Obama promised to repair the broken justice system in Indian country. And he appears to be offering substance along with speeches: He appointed Native Americans to key posts and ordered Cabinet secretaries to conduct "listening sessions" with tribal leaders. He requested $449 million for tribal public-safety programs and authorized more FBI victim specialists, BIA investigators and federal prosecutors to fight Native crime. Obama signed the Tribal Law and Order Act of 2010, a measure he promoted to increase authority of Indian police and allow Native courts to issue felony sentences of up to three years. The measure, signed in July, requires training in sexual-assault cases for Indian law officers. Federal agents and attorneys are now obliged to share evidence with tribal justice officials. Obama also issued a mandate, along with Attorney General Eric Holder, that U.S. attorneys visit Indian country regularly to meet with tribal leaders and develop operational plans. The goal: better law enforcement and more prosecutions, especially in cases of violence against women and children. Dennis Burke, the U.S. attorney for Arizona, said communications are paying off. After learning about problems with rape cases on the Navajo Reservation, he sent a letter in June to health officials there requesting records of every incident reported to tribal medical workers during the previous 18 months. In the letter, Burke vows to ensure that "all provable sex assault offenses in Indian country are prosecuted."

Conditions are improving with increased government funding

Wagner 13 (Dennis Wagner, reporter and columnist covering terrorism, the border, federal law enforcement and Native nations, "Poor justice on Arizona Indian reservations has crime running rampant", 9/13/2010,
http://www.azcentral.com/news/investigations/contact/government-accountability.html**, DJE)**

Native American justice advocates, including Hallie Bongar White, executive director of the Southwest Center for Law and Policy in Tucson, said there is restrained belief that Washington, D.C., may finally offer more than lip service. "There is a difference in the Obama administration," said Bongar White, noting that White House rhetoric already has been backed with new funding, programs and appointments. "I see them moving a little bit more to provide resources and listening more to Native nations." Bongar White, whose non-profit group provides legal training to tribal communities, said the change is beginning to show. The Tohono O'odham Nation in southern Arizona recently received money for rape-victim advocates. This spring, she taught tribal police in New Mexico the protocols of rape investigations. Sexual-assault response teams are forming across Indian country. Kim Pound, former police chief at the Fort Apache Reservation, said Congress appropriated money for tribes in the past but it didn't always seem to filter down. There were exceptions, though. Pound said he managed to increase officer salaries in Whiteriver (from starting pay of $14 per hour to $19), purchase crime-scene kits and raise professional standards. Still, he can't help being skeptical. "Stuff that happens in Indian country, if it occurred in any town or city of this country, people would be up in arms," Pound said. "But they don't care."

Everette Little Whiteman, police chief for the Oglala Sioux Tribe and a former BIA agent in Arizona, said it will take years to break the cycle of victimization. "The problem is that crimes are not investigated thoroughly. . . . We need money," he said. Paul Charlton, an outspoken advocate for tribal-justice reform and a former U.S. attorney for Arizona, said Obama has made a start but a paradigm shift is needed before law and order will succeed in Native communities. "This is a system that has been in place since the late 1880s, and it's not working," Charlton said. "The idea that the federal government should be responsible for crimes in Indian country is something that has to be changed."

Plan doesn't solve for the Tohono O'odham police that attempt to shut down villages – their own card

Brenda **Norrell**, 4-8-**2014**, "CENSORED NEWS: Mike Wilson: US Border Patrol shot Tohono O'odham at border," Censored News, http://bsnorrell.blogspot.com/2014/04/mike-wilson-us-border-patrol-shot.html

SAN MIGUEL, TOHONO O'ODHAM NATION — Mike Wilson, Tohono O'odham, said the US Border Patrol shot two Tohono O'odham at the border, one in the face. The Border Patrol claims O'odham side-swiped its vehicle in San Miguel, "The Gate," on Tohono O'odham land at the US Mexico border. However, Wilson points out in the video below that **the Tohono O'odham government, Tohono O'odham police, and US Border Patrol can not be trusted.** Wilson said that **neither the Tohono O'odham government nor police have taken steps to ensure the safety of O'odham** when faced with the US Border Patrol. He said these human rights violations by the US Border Patrol inflicted on O'odham have been going on for more than 10 years and the Tohono O'odham Nation has done nothing to halt this. Further, **Wilson expresses his concern over the Tohono O'odham Nation government's efforts to disable the new district of Hia-Ced** on the western portion of the Tohono O'odham Nation near Ajo, Arizona. **He said even though the Tohono O'odham Nation initially approved of the new district, it is now doing everything in its power to ensure that the new district fails**. Wilson has put out water for years for migrants, over the objections of the Tohono O'odham government, and his life-saving water containers were vandalized. Wilson's water stations have been in the area of the Tohono O'odham Nation with one of the highest rates of death. Wilson has also aided humanitarian groups searching for the bodies of missing migrants on the Tohono O'odham Nation. Meanwhile, **the Tohono O'odham Nation has been able to control and silence much of the mainstream media. The Tohono O'odham police have threatened and stalked O'odham human rights activists to silence them.** Now, the US Homeland Security has given the US southern border contract to an Israeli company, Elbit Systems, which is also responsible for Apartheid security surrounding Palestine. Elbit Systems now has the contract to construct US spy towers on Tohono O'odham land. The Tohono O'odham Legislative Council approved the construction of the 15th spy tower on sovereign O'odham land, according to the May 7, 2013 resolution, despite O'odham protests over the militarization of their lands.

Tribal police are understaffed and overworked – the plan would only increase their burden

Wakeling et. al. 01 (Stewart Wakeling; Miriam Jorgensen, Research Director for the Native Nations Institute at the University of Arizona; Susan Michaelson; Manley Begay, director of the Native Nations Institute for Leadership, Management, and Policy, "Policing on American Indian Reservations", July 2001, research report by the US Department of Justice pages 15-18, https://www.ncjrs.gov/pdffiles1/nij/188095.pdf, DJE)

The workload of police departments in Indian Country is increasing at a significant rate. General evidence of this trend comes from our survey data, brief site visits, and four

intensive site visits. Specific evidence is given in exhibits 2–5, which approximate the increase in calls for service, incident reports, and arrests from the Tohono O'odham Nation, the Three Affiliated Tribes of the Fort Berthold Reservation, and the Confederated Salish and Kootenai Tribes of the Flathead Reservation. The Tohono O'odham data (exhibits 2 and 3) show an average annual increase between 1994 and 1996 of more than 20 percent in incident reports and nearly 30 percent in arrests. During that period, not only the overall pressure on the department increased, but also the workload of individual officers because the number of sworn officers remained relatively constant. The Three Affiliated Tribes' data (exhibit 4) show an average annual increase in arrests of more than 30 percent between 1992 and 1994. As at Tohono O'odham, this led to an increased demand for service from individual officers, since the increase in calls for service and arrests outpaced the expansion of the Fort Berthold department staff. The Confederated Salish and Kootenai Tribes' data (exhibit 5) show an average annual increase of 15 percent in calls for service and 45 percent in cited offenses from fiscal year 1992 to fiscal year 1996. Several new officers were hired in fiscal year 1995, but again, not in proportion to the additional workload. Anecdotal evidence suggests that these workload increases are partly due to increases in serious crime and emergencies on reservations. But other simple explanations should not be overlooked. For example, unlike many smaller Indian police departments, the Tohono O'odham department has a 911 system; the community's growing reliance on 911 is a strong contributing factor to the increase in calls for service. These systems may be a broader cause of the increased workload we observed across Indian Country. As Indian police departments implement automated call management, they may be experiencing the surge in high-priority calls and heightened demand that urban departments experienced when they established 911 systems (Sparrow, Moore, and Kennedy 1990). For the Confederated Salish and Kootenai department, the large increase in demand from fiscal year 1994 to 1995 occurred as a result of "retrocession," by which the State of Montana ceded control over reservation policing to the tribe. (This change is discussed in greater depth in chapter 4.) While this was a fairly dramatic increase in tribal control, in which a tribe subject to the authority of PL 83–280 regained its former rights, other Indian nations also are increasing their jurisdictional sweep, largely through cross-deputization agreements. Thus, another simple cause of Indian police departments' increased workload is increased authority over the offenses committed within reservation boundaries. Yet, there is good reason to believe that the increased workload in Indian police departments is not simply the result of rising serious crime and emergencies, the greater availability of 911 services, or expanded jurisdictional rights. It also appears that communities are placing new demands on police departments to respond more frequently and more rapidly to a broad range of problems. Many researchers have asserted that tribal communities have become less and less reliant on traditional methods of problem or conflict resolution and more reliant on the police (for example, Nielsen 1996; Royal Commission on Aboriginal Peoples 1996). Our observations support this conclusion. For example, at Tohono O'odham, not only has the demand for police services increased, but, in recent years, there has also been a steady increase in the tribal advocates' caseloads; by 1996, each of the 10 advocates handled approximately 500 cases per year, an estimate that does not include the cases handled by private attorneys and other legal services providers on the reservation. Similarly, defense advocates at Gila River reported that they stopped accepting traffic cases (misdemeanor violations of tribal traffic laws) in the early 1990s because so many more serious cases filled their dockets.

Border

Plan doesn't solve for 225 mile long electric fence cutting through the territory

Indian Country Today Media **Network**, 9-1-**2004**, "An open letter to the UN regarding the Tohono O'odham border," http://indiancountrytodaymedianetwork.com/2004/09/01/open-letter-un-regarding-tohono-oodham-border-93922

To the United Nations Secretariat of the Permanent Forum on Indigenous Issues: We are writing in reference to a press release recently circulated by some members of the Tohono O'odham Nation that contained inaccurate information. While we are sure the intent of these individuals was not to mislead the United Nations or the general public, it is imperative that accurate and complete information on issues of such importance is provided. The media alert released by these members stated in part: "**The 225-mile-long wall will run along the entire Arizona-Mexico border, bisecting 74 miles of O'odham land. The fence will be lit 24 hours a day by 400 high-security floodlights, which will impact local residences.** Along the first wall of railroad ties and steel sheets, 145 remote cameras will conduct surveillance. **Homeland Security forces will patrol a paved road that will that will run in between the first fence and a secondary fence with razor-edged coils on top."** As the duly-elected leaders of the Tohono O'odham Nation, we submit for the record the current challenges facing the Tohono O'odham Nation and its members in relation to its location on the U.S./Mexico border, and the solutions being undertaken to address these challenges. **The Tohono O'odham Nation is a sovereign government located in Southern Arizona spanning 2.8 million acres, 75 miles of which is contiguous to the U.S border with the Republic of Mexico.** Our members have lived in the deserts of Southern Arizona since time immemorial and, because the U.S.-Mexico international boundary divides our traditional ancestral lands, there are over 1,400 tribal members who currently reside in Mexico. It is critical that all recognized members of the Tohono O'odham Nation maintain the right to cross the border to see families and friends, to receive services and to participate in religious ceremonies and other events. Read more at http://indiancountrytodaymedianetwork.com/2004/09/01/open-letter-un-regarding-tohono-oodham-border-93922

The plan solves nothing. Confirming identity as a projection of Western culture and beliefs onto the Tohono people is inevitable due to legal requirements.

Agencia EFE 14 (Spanish international news agency, "Arizona's Controversial Law Scaring Away Immigrants, Police Chief Says", 8/13/2015, http://latino.foxnews.com/latino/politics/2014/08/12/arizona-police-chief-aim-sb1070-was-scaring-immigrants/, DJE)

Tucson, Arizona – The Tucson police said **Arizona's controversial SB1070 immigration law was designed to make the immigrant community afraid of law enforcement authorities and leave the state. "This law was originally designed so that undocumented immigrants would be afraid of the police, be afraid of coming to ask for help, feel themselves to be a target** and, in that sense, I think that the law was successful, given that some of them have left the state voluntarily," said Roberto Villaseñor in an interview with Efe. Arizona's Hispanic community has continued to fight against SB1070 since it went into effect in 2010, and they complain about cases of abuse by the law enforcement agencies. At the heart of the debate is the law's controversial Section 2(B), also known **as the "show me your papers" provision**, that **since 2012 requires police officers to ask about the immigration status of people they "suspect" of being undocumented.** Villaseñor said that his **officers comply with SB1070 by contacting the**

Border Patrol as soon as they determine there is probable cause to believe a person may be undocumented, rejecting accusations that the Tucson Police Department discriminates against the immigrant community. "The idea exists that the police have the option to call the Border Patrol or not, but the truth is that we don't," said Villaseñor, who was appointed police chief in 2009. The TPD has been the target of protests after a confrontation last Sunday between police, Border Patrol agents and activists who lay down underneath official vehicles to try and prevent an undocumented immigrant from being handed over to immigration authorities. "I understand the confusion and the dissatisfaction that exists among activists and members of the community about the interpretation of the law. **The way in which SB1070 is written gives no other option to police departments than to verify the immigration status of the detained person**," Villaseñor said. According to TPD figures, from June 12 to August 10 its officers verified the immigration status of 3,109 people under SB1070. On those occasions, the Border Patrol responded just 45 times and took 24 people into custody. **One of the main things leading the police to ask for the immigration papers of drivers is the lack of a driver's license or other official identification issued by the state.** According to the TPD, 43.1 percent of the people whose immigration status was verified under SB1070 were of Hispanic origin, which, according to Villaseñor, is in line with the proportion of Latinos in Tucson.

Solvency

There would still be non-surveillance border patrol after the plan

Miller 14 (*Todd Miller has researched and written about U.S.-Mexican border issues for more than 10 years. He has worked on both sides of the border for BorderLinks in Tucson, Arizona, and Witness for Peace in Oaxaca, Mexico. He now writes on border and immigration issues for* NACL, Todd Miller, 4-22-2014, "Tomgram: Todd Miller, The Creation of a Border Security State," Tomdispatch, http://www.tomdispatch.com/blog/175834/tomgram%3A_todd_miller,_the_creation_of_a_border_security_state/) GW

Before 9/11, there was little federal presence on the Tohono O'odham reservation. Since then, the expansion of the Border Patrol into Native American territory has been relentless. Now**, Homeland Security stations, filled with hundreds of agents** (many hired in a 2007-2009 hiring binge**), circle the reservation**. But unlike bouncers at a club, **they check people going out, not heading in**. On every paved road leaving the reservation, **their checkpoints form a second border**. There, **armed agents -- ever more of whom are veterans of America's distant wars -- interrogate anyone who leaves. In addition, there are two "forward operating bases" on the reservation, which are meant to play the role -- facilitating tactical operations in remote regions -- that similar camps did in Afghanistan and Iraq.** Now, thanks to the Elbit Systems contract, a new kind of border will continue to be added to this layering. Imagine part of the futuristic Phoenix exhibition hall leaving Border Expo with the goal of incorporating itself into the lands of a people who were living here before there was a "New World," no less a United States or a Border Patrol. Though **this is** increasingly the reality from Brownsville, Texas, to San Diego, California, on Tohono O'odham land a post-9/11 war posture shades uncomfortably into the leftovers from a nineteenth century Indian war. Think of it as the place **where** the **homeland security** state **meets** its older compatriot, **Manifest Destiny**. On the gate at the entrance to her

house**, Tohono O'odham member Ofelia Rivas has put up a sign stating that the Border Patrol can't enter without a warrant. It may be a fine sentiment, reflecting a right embodied in the U.S. Constitution, but in the eyes of the "law," it's ancient history.** Only a mile from the international boundary, her house is well within the 25-mile zone in which the Border Patrol can enter anyone's property without a warrant. These powers make the CBP a super-force in comparison to the local law enforcement outfits it collaborates with. Although **CBP can enter property warrantlessly**, it still needs a warrant to enter somebody's dwelling. In the small community where Rivas lives, known as Ali Jegk, the agents have overstepped even its extra-constitutional bounds with "home invasions" (as people call them). Throughout the Tohono O'odham Nation, people complain about Homeland Security vehicles driving at high speeds and tailgating on the roads. They complain about blinding spotlights, vehicle pull-overs, and unexpected interrogations. **The Border Patrol has pulled O'odham tribal members out of cars, pepper-sprayed them, and beaten them with batons**. As local resident Joseph Flores told a Tucson television station, "It feels like we're being watched all the time." **Another man commented, "I feel like I have no civil rights**." On the reservation, **people speak not only about this new world of intense surveillance, but also about its raw impact on the Tohono O'odham people: violence and subjugation.** Although the tribal legislative council has collaborated extensively with Border Patrol operations, Priscilla Lewis seemed to sum up the sentiments of many O'odham at an open hearing in 2011: "**Too much harassment, following the wrong people, always stopping us, including and especially those who look like Mexicans when driving or walking in the desert... They have too much domination over us**." At her house, Ofelia Rivas tells me a story. One day, she was driving with Tohono O'odham elders towards the U.S.-Mexican border when a low-flying Blackhawk helicopter seemingly picked them up and began following them. Hanging out of the open helicopter doors were CBP gunmen, she said. When they crossed the border into Mexico, the helicopter tracked them through a forest of beautiful saguaro cacti while they headed for a ceremonial site, 25 miles south of the border. They were, of course, crossing what was a non-border to the O'odham, doing something they had done for thousands of years. Hearing, even feeling the vibration of the propellers, one of the elders said, "I guess we are going to die." They laughed, Rivas added, as there was nothing else to do. They laughed real hard. Then, a mile or so into Mexico, the helicopter turned back.

Americans may increasingly wonder whether NSA agents are scouring their meta-data, reading their personal emails, and the like. In the borderlands no imagination is necessary. The surveillance apparatus is in your face. The high-powered cameras are pointed at you; the drones are above you; you're stopped regularly at checkpoints and interrogated. Too bad if you're late for school, a meeting, or an appointment. And even worse, if your skin complexion, or the way you're dressed, or anything about you sets off alarm bells, or there's something that doesn't smell quite right to the CBP's dogs -- and such dogs are a commonplace in the region -- being a little late will be the least of your problems. As Rivas told me, a typical exchange on the reservation might involve an agent at a checkpoint asking an O'odham woman whether, as she claimed, she was really going to the grocery store -- and then demanding that she show him her grocery list**. People on the reservation now often refer to what is happening as an armed "occupation."** Mike Wilson, an O'odham member who has tried to put gallon jugs of water along routes Mexican migrants might take through the reservation, speaks of the Border Patrol as an "occupying army." It's hardly surprising. Never before in the Nation's history under Spain, Mexico, or the United States have so many armed agents been present on their land.

Those would circumvent any restrictions on surveillance. They have done it before.

It's hardly surprising. Never before in the Nation's history under Spain, Mexico, or the United States have so many armed agents been present on their land.

Their Austin evidence provides no warrant that curtailing surveillance solves – It concedes that legislation is ONLY effective if the Tohono people participate

Austin 91(Megan, Fall 1991, A CULTURE DIVIDED BY THE UNITED STATES-MEXICO BORDER: THE TOHONO O'ODHAM CLAIM FOR BORDER CROSSING RIGHTS, Arizona Journal of International and Comparative Law [Vol. 8, No. 2], Accessed 7/14/15) CH

The Tohono O'odham Tribe suffers fundamental human rights violations under current policies governing the international border between the United States and Mexico. The survival of this indigenous culture depends upon its ability to pass through traditional lands freely, to collect raw materials for traditional foods and crafts and to visit religious sites and family members. Current policies and laws of the United States deny the Tohono O'odham these rights. **Border crossing legislation will help to eliminate these abuses**. **However, in order to be effective, the legislation must allow the Tohono O'odham people to participate in decisions regarding regulation of the border.** The goal of the Tohono O'odham Tribe is to protect its culture and assure its continued existence. Approaching the Tohono O'odham claim for border crossing rights as a claim for basic human rights places indigenous groups within the scope of international principles. The new movements of intemational law focus on the unique claims of indigenous groups, which amount not to secession, but to a level of autonomy which permits the survival of their cultures. Guided by these fundamental international principles, the United States and neighboring nations must recognize the right of the Tohono O'odham to keep their culture alive.

Disease Turn

1NC

(Read this on the Borders advantage)

TURN: Increasing the flow of contaminated immigrants pushes the U.S. over the brink and causes disease spread.

Vliet 14 (Elizabeth Lee Vliet, M.D., Ellis Island Medal of Honor recipient and preventative medicine specialist with practices in Arizona and Texas, "Deadly diseases crossing border with illegals", 6/17/2014, WND News, http://www.wnd.com/2014/06/deadly-diseases-crossing-border-with-illegals/, DJE)

A flood of illegals has massively surged at our southwestern borders. The economic impact of medical care, education and incarceration for illegals forced on taxpayers is bankrupting Arizona. Why are such swarms entering the U.S. illegally NOW, particularly children? Newspapers in Mexico and Central and South America are actually describing U.S. "open borders," encouraging people to come with promises of food stamps or "amnesty." It is textbook Cloward-Piven strategy to overwhelm and collapse the economic and social systems, in order to replace them with a "new socialist order" under federal control. **Carried by this tsunami of illegals are the invisible "travelers" our politicians don't like to mention: diseases the U.S. had controlled or virtually eradicated: tuberculosis (TB), Chagas disease, dengue fever, hepatitis, malaria, measles, plus more.** I have been working on medical projects in Central and South America since 2009, so I am aware of problems these countries face from such diseases. **A public health crisis, the likes of which I have not seen in my lifetime, is looming. Hardest hit by exposures to these difficult-to-treat diseases will be elderly, children, immunosuppressed cancer-patients, patients with chronic lung disease or congestive heart failure. Drug-resistant**

tuberculosis is the most serious risk, but even diseases like measles can cause severe complications and death in older or immunocompromised patients. TB is highly contagious – you catch it anywhere around infected people: schools, malls, buses, etc. **The drug-resistant TB now coming across our borders requires a complex, extremely expensive treatment regimen that has serious side effects and a low cure rate.** Chagas, or "kissing bug" disease, caused by the parasite Trypanosoma cruzi, is carried by the triatomine bug that transmits disease to humans. Although "kissing bugs" are already here, they are not as widespread as in Latin America. Right now, Chagas disease is uncommon in the U.S., so many doctors do not think to check for it. Chagas causes debilitating fatigue, headaches, body aches, nausea/vomiting, liver and spleen enlargement, swollen glands, loss of appetite. When Chagas reaches the chronic phase, medications will not cure it. It can kill by arrhythmias, congestive heart failure or sudden cardiac arrest. **Vaccine-preventable diseases like chicken pox, measles and whooping cough spread like wildfire** among unvaccinated children. Other illnesses, along with scabies and head lice, also thrive as children are transported by bus and herded into crowded shelters – courtesy of the federal government. Treatment costs are borne by taxpayers. **Our public health departments complain of being overtaxed by a dozen cases of measles or whooping cough. How will they cope with thousands of patients with many different, and uncommon, diseases? Americans, especially Medicaid patients, will see major delays for treatment.** Delays to see doctors at the Phoenix VA hospital cost the lives of 58 veterans while waiting for care. This is just a portent of far more deaths to come from delays for Americans' medical care as thousands of sick illegals swamp already overcrowded emergency rooms. How will these facilities stay open at all under the financial burden of this huge unfunded federal mandate to provide "free" treatment? People express concern about child endangerment from illegal minors dumped on Arizona streets in hundred-plus degree heat, with no support. **A bigger concern is American endangerment from life-threatening diseases added to social and economic collapse from costs of treating hundreds of thousands of illegals.**

Diseases cause extinction

Guterl 12 – [Fred, award-winning journalist and executive editor of Scientific American, worked for ten years at Newsweek, has taught science at Princeton University, *The Fate of the Species: Why the Human Race May Cause Its Own Extinction and How We Can Stop It*, 1-2, Google Books, online

Over the next few years, the bigger story turned out not to be SARS, which trailed off quickly, bur avian influenza, or bird flu. It had been making the rounds among birds in Southeast Asia for years. An outbreak in 1997 Hong Kong and another in 2003 each called for the culling of thousands of birds and put virologists and health workers into a tizzy. Although the virus wasn't much of a threat to humans, scientists fretted over the possibility of a horrifying pandemic. Relatively few people caught the virus, but more than half of them died. What would happen if this bird flu virus made the jump to humans? What if it mutated in a way that allowed it to spread from one person to another, through tiny droplets of saliva in the air? One bad spin of the genetic roulette wheel and a deadly new human pathogen would **spread across the globe in a matter of days**. With a kill rate of 60 percent, such a pandemic would be devastating, to say the least.¶ Scientists were worried, all right, but the object of their worry was somewhat theoretical. Nobody knew for certain if such a supervirus was even possible. To cause that kind of damage to the

human population, a flu virus has to combine two traits: lethality and transmissibility. The more optimistically minded scientists argued that one trait precluded the other, that if the bird flu acquired the ability to spread like wildfire, it would lose its ability to kill with terrifying efficiency. The virus would spread, cause some fever and sniffles, and take its place among the pantheon of ordinary flu viruses that come and go each season.¶ The optimists, we found out last fall, were wrong. Two groups of scientists working independently managed to create bird flu viruses in the lab that had that **killer combination of lethality and transmissibility among** humans. They did it for the best reasons, of course—to find vaccines and medicines to treat a pandemic should one occur, and more generally to understand how influenza viruses work. If we're lucky, the scientists will get there before nature manages to come up with the virus herself, or before someone steals the genetic blueprints and turns this knowledge against us. ¶ Influenza is a natural killer, but we have made it our own. We have created the conditions for new viruses to flourish—among pigs in factory farms and live animal markets and a connected world of international trade and travel—and we've gone so far as to fabricate the virus ourselves. Flu is an excellent example of how we have, through our technologies and our dominant presence on the planet, begun to multiply the risks to our own survival

Border surveillance is essential in preventing infected immigrants from crossing the border

Siegel 14 (Marc Siegel, M.D., is a professor of medicine and medical director of Doctor Radio at New York University's Langone Medical Center, "A Public Health Crisis at the Border", 7/3/2014, http://www.slate.com/articles/health_and_science/medical_examiner/2014/07/children_crossing_border_illegally_a_possible_public_health_crisis_from.html, DJE)

Diseases that are endemic to other countries are not always the same ones that we face in the United States. This is a medical observation, not a political one, and **it is the reason immigrants who enter this country legally face rigorous screenings in advance of entry for sexually transmitted diseases, active tuberculosis, new strains of influenza, leprosy, cholera, and plague. The U.S. Department of Health and Human Services and the Centers for Disease Control and Prevention require that all legal immigrants receive a medical exam.** Proof of vaccination is also mandatory for measles, mumps, rubella, polio, tetanus, diphtheria, pertussis, haemophilus strains, hepatitis A and B, rotavirus, meningococcus, chicken pox, pneumonia, and seasonal flu. **None of these rigorous screenings can be done in advance of entry on people who enter this country illegally and undetected. And once people are detained, the screenings they receive are not nearly as rigorous or effective at controlling the spread of disease.** This is the reason that we have a potential public health crisis along our southern border. As many as 50,000 children, mostly from Central American countries, are now being housed in cramped makeshift detention centers by the U.S. government. Unfortunately, they are not being detained for the purpose of identifying illness, with Immigration and Customs Enforcement relying on self-report of symptoms, and many have already been sent to other states, where disease can spread. According to Kenneth J. Wolfe, deputy director of public affairs for the

Administration for Children and Families at Health and Human Services, children who enter the HHS **unaccompanied alien children** program are given a well-child exam and vaccinations against communicable diseases. They **are** also **screened for TB** and mental health problems, **and placed in quarantine or special facilities as needed.** But health care workers at these cramped, overwhelmed centers have not been speaking to the news media, so it is difficult to know exactly which diseases have appeared and how many cases there are. Large outbreaks have been reported of scabies, a highly contagious, intensely itchy rash spread by tiny insects called mites. A senior spokesman for CDC told me that HHS is taking the lead in providing medical services for these centers in southwest Texas and Arizona. When a case of H1N1 swine flu was diagnosed in late June, 2,000 flu vaccines were flown in. Since it takes two to three weeks for a vaccine to confer protection, more cases of flu are likely within the centers. It is also possible that the disease will spread to the local community and beyond. Drug-resistant tuberculosis also appears to have spread, with several counties in southern Texas reporting twice the usual average number of cases. **TB is a disease that needs to be carefully monitored and screened for**, a prospect that is not possible under the current circumstances. Dengue fever, a potentially deadly mosquito-borne disease that causes fatigue, pain in the bones and muscles, and fever, and infects close to 100 million people worldwide every year, has been detected this year in southern Texas for the first time since 2005. Illegal immigrants, possibly from Mexico, are a likely source. If infected mosquitoes begin to breed here, we could see more outbreaks. There have been reports of measles and chicken pox at the centers, both of which are highly contagious and can spread to other children who aren't vaccinated. A physician working to take care of any infected child must treat that child with compassion and appropriate medication. He or she should never provide substandard care or weigh in on the political issue of whether a child should be in this country or how he or she got here. At the same time, **immigrants in poor health or suffering from a communicable illness who enter this country illegally create public health risks. This is why we have such an extensive system for screening the health of legal immigrants in the first place before they are allowed in.** It is not a political statement to say that **the effectiveness of these screenings is being undermined if hundreds of thousands pass through our borders without them.** Whatever the partisan arguments about how this crisis erupted, the most urgent question right now is how to prevent a public health crisis. HHS told me that the CDC has now activated its Emergency Operations Center to Level III, which means it is on 24-hour alert to better coordinate and track their programs in support of what HHS is calling "the urgent humanitarian situation of unaccompanied children along the southwest border." But calling it a crisis and working to contain it are two different things. It is clear that the CDC needs to be more involved immediately to help identify, treat, and contain emerging diseases. Putting a cone of secrecy around the health concerns of 50,000 children helps neither those who are sick nor those who are placed at risk.

Health screening at the US-Mexican border must remain in place to prevent dangerous disease spread.

McKay 13 (Betsy McKay, Atlanta bureau chief for The Wall Street Journal, "Risk of Deadly TB Exposure Grows Along U.S.-Mexico Border", 3/8/2013, The Wall Street Journal, http://www.wsj.com/articles/SB10001424127887323293704578336283658347240, DJE)

TIJUANA, Mexico—He was like many people in their early 20s, at least the type with spiky black hair and two lip rings. Four years ago, while living in this teeming border city, Gonzalo Garcia says he spent free time in the U.S., to shop, meet girls, and "hang out." He had no idea he was developing a potentially deadly form of tuberculosis. Exactly how long he had it will never be known. He says he started losing weight and becoming tired and tried to get help. But it took a year before a doctor finally figured out what was wrong: He had a drug-resistant strain of TB. "Many doctors said I was just fine," said Mr. Garcia, sitting in the clinic where he was cured. The Tijuana General Hospital TB Clinic in Mexico is working to treat drug-resistant strains of tuberculosis. Many people with the deadly disease enter the U.S. from Mexico. WSJ's Betsy McKay reports. To this day, it isn't clear if he infected anyone on either side of the border while he was contagious. But his tale illustrates a nagging concern among **health officials** who **say the 2,000-mile border between the U.S. and Mexico could become a breeding ground for one of the hardest forms of TB to treat. Already, both California and Texas, as well as some states on the Mexico side of the border, have unusually high rates of drug-resistant TB. "This is a very hot region" for drug-resistant TB**, said Rafael Laniado-Laborin, chief of Tijuana General Hospital's tuberculosis clinic and laboratory, who has had an influx of new patients recently—including one who recently returned from the U.S. and is in the middle of treatment. **With tuberculosis of any form, people can get around until the disease is quite advanced. "You will go and work and move around," he said. "You will transmit the disease before you know you're sick." To be sure, the actual number of cases in the U.S. and Mexico is still small** and the rates of multidrug-resistant TB—or MDR—are nowhere near as severe as India, China, or Eastern Europe, where drug-resistant TB is at epidemic proportions. In 2011, the most recent year available, Mexico had 467 MDR-TB cases, the World Health Organization estimates, while the U.S. had 124, according to the Centers for Disease Control and Prevention. Almost half of the U.S. cases came from California and Texas. **Health officials say it is crucial to jump on prevention now, because the disease is transmitted airborne and can spread quickly.** "We're all connected by the air we breathe," said Thomas Frieden, director of the CDC, and a TB expert who successfully battled a major outbreak of multidrug-resistant TB in New York City in the 1990s, then spearheaded India's TB-fighting program for the World Health Organization. Gonzalo Garcia has struggled with drug-resistant tuberculosis while living in Tijuana. He doesn't know when he contracted the disease. **In its drug-resistant forms, TB can still be fatal**, and the treatment may be painful, requiring up to two years or more of medication and potentially months of isolation. Costs are steep too; according to a recent CDC study, treatment on average in the U.S. was about $140,000 and ran as high as $700,000.

T-Surveillance

Interpretation:

Surveillance is systematic collection of information

Kalhan 14 Anil Kalhan, Associate Professor of Law, Drexel University. Maryland Law Review 2014 74 Md. L. Rev. 1 Article: IMMIGRATION SURVEILLANCE lexis
A. The Functions and Practices of Immigration Surveillance
As conceptualized by John **Gilliom and** Torin **Monahan, surveillance involves "the systematic monitoring, gathering, and analysis of information in order to make**

decisions, minimize risk, sort populations, and exercise power." n112 In this Section, I identify and analyze a series of specific surveillance practices and technologies that have become increasingly important components of immigration enforcement strategies. The processes and technologies that comprise the information infrastructure of immigration enforcement enable new approaches to four distinct sets of surveillance activities: identification, screening and authorization, mobility tracking and control, and information sharing.

Violation:

While the aff does curtail a lot of surveillance that falls under our interpretation, they also affect non-surveillance related border operations

Miller 14 (*Todd Miller has researched and written about U.S.-Mexican border issues for more than 10 years. He has worked on both sides of the border for BorderLinks in Tucson, Arizona, and Witness for Peace in Oaxaca, Mexico. He now writes on border and immigration issues for* NACL, Todd Miller, 4-22-2014, "Tomgram: Todd Miller, The Creation of a Border Security State," Tomdispatch, http://www.tomdispatch.com/blog/175834/tomgram%3A_todd_miller,_the_creation_of_a_border_security_state/) GW

Before 9/11, there was little federal presence on the Tohono O'odham reservation. Since then, the expansion of the Border Patrol into Native American territory has been relentless. Now**, Homeland Security stations, filled with hundreds of agents** (many hired in a 2007-2009 hiring binge**), circle the reservation**. But unlike bouncers at a club, **they check people going out, not heading in**. On every paved road leaving the reservation, **their checkpoints form a second border**. There, **armed agents** -- ever more of whom are veterans of America's distant wars **-- interrogate anyone who leaves. In addition, there are two "forward operating bases" on the reservation, which are meant to play the role -- facilitating tactical operations in remote regions** -- that similar camps did in Afghanistan and Iraq. Now, thanks to the Elbit Systems contract, a new kind of border will continue to be added to this layering. Imagine part of the futuristic Phoenix exhibition hall leaving Border Expo with the goal of incorporating itself into the lands of a people who were living here before there was a "New World," no less a United States or a Border Patrol. Though **this is** increasingly the reality from Brownsville, Texas, to San Diego, California, on Tohono O'odham land a post-9/11 war posture shades uncomfortably into the leftovers from a nineteenth century Indian war. Think of it as the place **where** the **homeland security** state **meets** its older compatriot, **Manifest Destiny**. On the gate at the entrance to her house**, Tohono O'odham member Ofelia Rivas has put up a sign stating that the Border Patrol can't enter without a warrant. It may be a fine sentiment, reflecting a right embodied in the U.S. Constitution, but in the eyes of the "law," it's ancient history.** Only a mile from the international boundary, her house is well within the 25-mile zone in which the Border Patrol can enter anyone's property without a warrant. These powers make the CBP a super-force in comparison to the local law enforcement outfits it collaborates with. Although **CBP can enter property warrantlessly**, it still needs a warrant to enter somebody's dwelling. In the small community where Rivas lives, known as Ali Jegk, the agents have overstepped even its extra-constitutional bounds with "home invasions" (as people call them). Throughout the Tohono O'odham Nation, people complain about Homeland Security vehicles driving at high speeds and tailgating on the roads. They complain about blinding spotlights, vehicle pull-overs, and unexpected interrogations. **The Border Patrol has pulled O'odham tribal members out of cars, pepper-sprayed them, and beaten them with batons**. As local resident Joseph Flores told a Tucson television station, "It feels like we're being watched all the time." **Another man commented, "I feel like I have no civil rights**." On the reservation, **people speak not only about this new world of intense surveillance, but also about its raw impact on the Tohono O'odham people: violence and subjugation.** Although the tribal legislative council has collaborated extensively with Border Patrol operations, Priscilla Lewis seemed to sum up the sentiments of many O'odham at an open hearing in 2011: "**Too much harassment, following the wrong people, always stopping us, including and**

especially those who look like Mexicans when driving or walking in the desert... They have too much domination over us." At her house, Ofelia Rivas tells me a story. One day, she was driving with Tohono O'odham elders towards the U.S.-Mexican border when a low-flying Blackhawk helicopter seemingly picked them up and began following them. Hanging out of the open helicopter doors were CBP gunmen, she said. When they crossed the border into Mexico, the helicopter tracked them through a forest of beautiful saguaro cacti while they headed for a ceremonial site, 25 miles south of the border. They were, of course, crossing what was a non-border to the O'odham, doing something they had done for thousands of years. Hearing, even feeling the vibration of the propellers, one of the elders said, "I guess we are going to die." They laughed, Rivas added, as there was nothing else to do. They laughed real hard. Then, a mile or so into Mexico, the helicopter turned back. **Americans may increasingly wonder whether NSA agents are scouring their meta-data, reading their personal emails, and the like. In the borderlands no imagination is necessary. The surveillance apparatus is in your face. The high-powered cameras are pointed at you; the drones are above you; you're stopped regularly at checkpoints and interrogated.** Too bad if you're late for school, a meeting, or an appointment. And even worse, if your skin complexion, or the way you're dressed, or anything about you sets off alarm bells, or there's something that doesn't smell quite right to the CBP's dogs -- and such dogs are a commonplace in the region -- being a little late will be the least of your problems. As Rivas told me, a typical exchange on the reservation might involve an agent at a checkpoint asking an O'odham woman whether, as she claimed, she was really going to the grocery store -- and then demanding that she show him her grocery list**. People on the reservation now often refer to what is happening as an armed "occupation."** Mike Wilson, an O'odham member who has tried to put gallon jugs of water along routes Mexican migrants might take through the reservation, speaks of the Border Patrol as an "occupying army." It's hardly surprising. Never before in the Nation's history under Spain, Mexico, or the United States have so many armed agents been present on their land.

The aff is extra-topical which is a voter for limits.

It allows affirmative teams to gain advantage ground off of planks of plans that do not fall under the resolution and that the neg could never have prepared for.

They are literally gaining advantages off of the removal of checkpoints.

This justifies affs like (insert ideas here).

Cartel DA

1NC

Organized crime along the border is in decline

Cawley 13 (Marguerite Cawley, journalist on organized crime, "Violent Crime on the US Southwest Border Decreased from 2004-2011: Study", 2/27/2013, Insight Crime, http://www.insightcrime.org/news-briefs/violent-crime-on-the-us-southwest-border-decreased-from-2004-2011-study, DJE)

A US government study points to an overall decrease in US border crime between 2004 to 2011, further indicating that fears of a "spillover" effect from Mexico's war against organized crime may be unfounded. **The report**, released by the United States Government Accountability Office (GAO) earlier this month, **found that the average rate for both violent and property crimes had dropped in the US Southwest border states. Arizona saw the most significant decline, of 33 percent over the seven-year time period.** Other decreases were seen in Texas (30

percent), California (26 percent), and New Mexico (eight percent from 2005 onward). Significantly, violent crime was found to be lower in border counties than in non-border counties for all the years examined in three out of the four states -- California, New Mexico and Texas -- with Arizona the only exception. The GAO also reported that **assaults against Border Patrol agents decreased** between 2008 to 2012, to levels 25 percent lower than in 2006. Officials from 31 of the 37 state and local law enforcement agencies interviewed by the GAO stated that they had not observed violent crime from Mexico regularly spilling over into the US, **although many said they were still concerned about safety levels in the region. Local law enforcement officials told the GAO that increased law enforcement personnel and new infrastructure may have contributed to the declining crime rates. Recent US federal efforts -- including technical assistance to Mexico under the 2008 Merida Initiative and $600 million put towards border security in 2010 -- have also aimed to curb violence in the region.** InSight Crime Analysis **Concerns have long existed about the extent to which Mexico's conflict may affect security dynamics in the US border states. Several incidents, involving Mexican nationals carrying out violent attacks in relation to the drug trade on US soil, have only served to feed such fears.** However, available data has generally failed to support these concerns. Figures from the Federal Bureau of Investigations (FBI), for example, show that violent crime in Arizona declined from 532 incidents per 100,000 inhabitants in 2000, to 408 in 2010. An analysis by Austin-based newspaper the Statesman found that, despite the release of a government-sponsored report warning of escalating violence in Texas, the combined number of murders in the state's 14 border counties fell by 33 percent between 2006 and 2010. The GAO's most recent study further supports the interpretation that claims of rampant "spillover violence" in the US border region have been mostly exaggerated.

Eliminating border patrol in the Tohono O'odham nation will collapse the best prevention methods against cartel crime.

Pitts 13 (Byron Pitts, ABC News Anchor & Chief National Correspondent, "In Efforts to Secure US-Mexico Border, Ariz. Native Americans Feel Caught in the Middle", 7/27/2013, ABC News, http://abcnews.go.com/US/efforts-secure-us-mexico-border-ariz-native-americans/story?id=19496394, DJE)

In Southwest Arizona, where the U.S. and Mexico borders meet, **the U.S. Border Patrol has made huge strides in capturing border crossers and seizing drugs from Mexican cartels**, but there is one stretch of land along the border that has made life a daily hell for a tribe of Native Americans. **The Tohono O'odham Nation**, a Native American reservation about the size of Connecticut, is located in the Sonoran Desert, about 60 miles south of Tucson, Ariz., right on the U.S. border with Mexico. Here, there is no barbed-wire high fence, but open desert, with only a vehicle barrier meant to stop cars but not people. It **is an area where the U.S. government has the fewest resources and the widest open space to patrol, making it a hot spot for Mexican drug cartels and human smuggling operations.** "Nightline" spent 48 hours with U.S. Border Patrol agents and the Tohono O'odham reservation police force to get a firsthand look at the battle on the border. **"The Tohono O'odham Nation is one of our most problematic areas," Arizona Commander Jeffrey Self of the U.S. Border Patrol told "Nightline". "The narcotics smugglers have moved up into the mountainous area. There is not a lot of access." While border-crossing apprehensions in Arizona are down 43 percent from two years ago, it is a**

different, more complicated story on the Tohono O'odham Nation. Drug seizures on the reservation are steadily climbing -- nearly 500,000 pounds of marijuana was seized last year, a number that has nearly doubled since 2010. Recently, Tohono O'odham police seized $1 million worth of marijuana in just one week. But **the Tohono O'odham tribal members are caught in the middle of a war between the Mexican drug cartels coming through their community and the U.S. Border Patrol officers who tribal members say have become more aggressive to stop them.**

If cartels gain ground they will launch bioterror attacks

Lentzos '14, Senior Research Fellow in the Department of Social Science, Health and Medicine at King's College London (1/27/14, Filippa Lentzos, BioSocieties, "The risk of bioweapons use: Considering the evidence base")

I can see a situation in **which a group of individuals will set up a cell and do these things in a state that doesn't have effective laws in place**, probably no laws in place at all. And **they could quite easily build up a small laboratory complex in a safe haven state**: **develop a device**, even test it in a sort of rudimentary way within the safe haven state, and then from that, build up a device which they could take and use somewhere else. And I don't think that has happened yet with any group trying to develop biological weapons, but **it's certainly happened with illicit drug type production, where there's been a bunch of individuals who are making illicit drug**s, and as the laws tighten up in one particular country, they'll relocate to a second country. And as things tighten there, they'll go to a third country. So **that's happened** certainly in the Asia Pacific, **with illicit drug cartels**, and I can see a scenario where that could happen with bioweapons too. And that really the motivation behind my interests in helping smaller countries develop legislation, develop government structures, including law enforcement, to make it more difficult for these rogues to do these things within these states.And **just because the Aum Shinrikyo attempts weren't successful, it doesn't mean to say that it's okay, that it's more difficult than everybody thought, it won't happen. I think there may well be a certain level of complacency starting to develop**, and that **we may well be caught out later on**. It mightn't be very sophisticated, but it could be a very disruptive event. Former bioweapons inspector and microbiologist: I agree, **even if biological weapons haven't been used that doesn't mean they won't be**. Maybe it's still easier to cause terror through other means. But we could not have anticipated 9/11; we could not foresee that airplanes would be used for that sort of attack. So we can't foresee all scenarios, we don't know what is next, so I wouldn't exclude anything. And the biothreat is more relevant than a nuclear threat; I mean, you can't easily acquire a nuclear or even dirty bomb. But **you can easily acquire biological agents**. You don't even have to break into a lab, **you can get it in nature, you can get if off a sick person.** And, you don't even necessarily have to weaponize it. I mean how many casualties do you need to cause terror? You don't need mass casualties, it's not war. We're talking about infectious disease agents being spread deliberately, and that doesn't necessarily require weaponization.

Bioterrorism is an existential threat that risks mass deaths and social disorder

Saunders-Hastings 14 (Patrick Saunders-Hastings, doctoral student in the Population Health program at the University of Ottawa, "Securitization Theory and Biological Weapons", 1/8/2014, http://www.e-ir.info/2014/01/08/securitization-theory-and-biological-weapons/, DJE)

A government's decision to securitize an issue is a strategy to make extreme responses seem justified, and it **centers on the perceived existential risk a threat poses to the population**. Beginning with a brief history of biological weapons use, this section will aim to defend the framing of biological weapons use as an existential threat by examining their ability to cause mortality or to generate negative social and economic fallout. A brief discussion of the potential catastrophic consequences of a smallpox attack will illustrate the argument. **The use of biological weapons dates back centuries**. Examples include the Tatars catapulting plague-infected corpses over city walls at the siege of Kaffa in the 14th century, the deliberate triggering of a smallpox epidemic among Native Americans via contaminated blankets in the 18th century during the French and Indian War, and the contamination of salad bars with salmonella at a restaurant in Oregon in the 20th century2. However, **with the development of the germ theory during the 19th and into the 20th century, there was an increase in scientific knowledge about biological weapons. States became increasingly interested in such weapons, with Japan establishing a bioweapons program between 1932-1945, the United States in 1942, and the Soviet Union in 197313.** In 1972, in response to increasing concern about the threat of biological weapons, **the United Nations** proposed the Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on their Destruction, more commonly known as the **Biological Weapons Convention** (or BWC)14. The treaty came into effect in 1975, and banned the development, acquisition, and stockpiling of biological weapons1. However, it **failed to halt the research and development of biological weapons, which have continued into the 21st century. Those who argue that government response to the biological weapons threat has been overstated point to very low mortality in previous attacks**11. The anthrax attacks of 2001 in the United States, for example, resulted in only 5 deaths15. This argument could be used to urge governments to instead invest resources in areas that consistently cause higher mortality, such as infectious diseases like AIDS or even the seasonal flu. **However, in carrying out a threat assessment, it is also important to look at the potential for mortality. Here it has been suggested future attacks may not be on the same relatively small scale as those in the past**15. It is difficult to produce reliable estimates of fatalities that might result from an attack; there is huge variation in estimates and, often, little statistical evidence to support the predictions11. That said, **it is agreed that, in theory, even small amounts of a dangerous biological agent could cause significant mortality if prepared and disseminated effectively**16. For instance, the WHO estimates that 50kg of B. anthracis distributed upwind of a population of 500 000 would leave 95 000 people dead and 125 000 more incapacitated17. Other sources suggest that **100kg of B. anthracis, disseminated via a crop-sprayer**, **could kill as many as three million people**, and comparable values have been projected for other agents2,18. Another concern is that **a contagious biological agent will result in person-to-person transmission, creating a self-sustaining effect not present in any other weapons class**10. While mass casualties are possible, it is also important to note that, even in situations with few casualties, **biological weapons attacks may have profound social and economic ramifications**3. **Such attacks could lead to widespread social panic and disorder, resulting in self-destructive behaviour and creating what is called a "societal autoimmune effect" involving increases in crime and looting19**. While there is little evidence to predict this would occur based on previous disaster situations (such as the terrorist attacks on the World

Trade Center in 1993 and 2001, where the public reaction is described as effective and adaptive, rather than panicked and disruptive), it must remain a consideration20. The effects of a largescale attack involving biological weapons are unknown, and epidemics of highly fatal diseases may cause serious social disruption20. The economic consequences of biological weapons attacks are severe and suggest that investing in defense makes good economic sense. While there were only five deaths in the 2001 anthrax attacks, those attacks resulted in tens of billions of dollars in government spending21. Also, the financial sector may be negatively impacted if investor confidence plummets3. Similarly, an attack on the agricultural sector, which accounts for 15% of the United States GDP, could have severe economic ramifications3. If the biological agent being used is contagious, there could also be implications for trade and travel restrictions3. The SARS epidemic of 2003 showed the economic consequences of a highly infectious disease, essentially "crippling" some of the most dynamic cities in the world4. The Center for Biosecurity has estimated the economic cost of a biological weapons attack in the U.S. could exceed one trillion USD15. In short, **there are social and economic consequences that, considered in conjunction with the potential for catastrophically high mortality, justify the framing of biological weapons as a significant existential threat to the United States.** This is illustrated by considering the specific case of smallpox.

UQ

Violence is down—Juarez proves

Denvir 7/1, A Philadelphia-Based Contributing Writer To Citylab and A Former Staff Reporter At Philadelphia City Paper. (7/1/15, Daniel Denvir, CityLab, "Juárez to Tourists: It's Safe to Come Back Now", http://www.citylab.com/crime/2015/07/juarez-to-tourists-its-safe-to-come-back-now/397232/)

Murder capital of the world is no one's idea of a good tourism promotion. But Ciudad **Juárez's murder tally has long since plummeted from the astronomical high of more than 3,000 recorded in 2010. In 2014, 424** or 538 **people were reported killed in Juárez** (depending on what entity is doing the reporting). **Per capita**, even **that** higher number **represents a murder rate similar to** that ofDetroit or **New Orleans.** The border city nonetheless remains forbidden territory for Americans who in prior decades would cross over from El Paso in droves to visit family, bars, restaurants, dentists, pharmacies and strip clubs. Juárez is by no means a paragon of security, but it's certainly safe enough to grab dinner.

Link

Surveillance is effective in fighting the cartels. The aff removes it.

Bucella '12, Written testimony of U.S. Customs and Border Protection Office of Intelligence and Investigative Liaison Assistant Commissioner Donna Bucella for a House Committee on Homeland Security Subcommittee on Border and Maritime Security hearing titled "Border Security Threats to the Homeland: DHS' Response to Innovative Tactics and Techniques" (6/15/12, Donna Bucella, Department Homeland Security, ""Border Security Threats to the

Homeland: DHS' Response to Innovative Tactics and Techniques"", http://www.dhs.gov/news/2012/06/15/written-testimony-us-customs-border-protection-house-homeland-security-subcommittee)

****NOTE: CBP is Customs and Border Protections

Over the past three years, **the DHS has dedicated historic levels of personnel, technology, and resources in support of our border security efforts**. Most recently, the President's Fiscal Year (FY) 2013 Budget Request continues these efforts by supporting the largest deployment of law enforcement officers to the frontline in our agency's history: more than 21,300 Border Patrol agents; 1,200 Air and Marine agents; and 21,100 CBP officers; working 24/7 with state, local, tribal, and Federal law enforcement to target illicit networks trafficking in people, drugs, weapons, and money. Over the last year, we have brought greater unity to our enforcement efforts, expanded collaboration with other agencies, and improved response times. **CBP has also deployed additional technology assets—including mobile surveillance units**, thermal imaging systems, and large-and small-scale non-intrusive inspection equipment—**along our Nation's borders**. **CBP currently has over 270 aircraft, including nine Unmanned Aircraft Systems (UAS**) and more than 300 patrol and interdiction boats that provide critical aerial and maritime surveillance and operational assistance to personnel on the ground. **The** UAS **program is rapidly changing how ground assets are deployed, supplying Border Patrol Agents with unparalleled situational awareness** through the UAS's broad area electronic surveillance capabilities. Going forward, **CBP will continue to integrate the use of these specialized capabilities into the daily operations of CBP's frontline personnel to enhance our border security efforts. The results of this prioritization to the border and our layered approach to security are clear**. In FY 2011, Border Patrol apprehensions along the Southwest border—a key indicator of illegal immigration—decreased 53 percent since FY 2008, and are less than one fifth of what they were at their peak in 2000. We have matched these decreases in apprehensions with increases in seizures of cash, drugs, and weapons. During FYs 2009 through 2011, DHS seized 74 percent more currency, 41 percent more drugs, and 159 percent more weapons along the Southwest border as compared to FY 2006-2008. In FY 2011, CBP seized more than $126 million in illegal currency and nearly five million pounds of narcotics nationwide. At the same time, according to 2010 Federal Bureau of Investigation (FBI) crime reports, **violent crimes in Southwest border states have dropped by an average of 40 percent in the last two decade**s. **Every key measure shows we are making significant progress; however, we must remain vigilant and focus on building upon an approach that puts CBP's greatest capabilities in place to combat the greatest risks**.

Bioterror

Bioterror leads to species extinction, global economic collapse, culture destruction – more technology and motives

Joseph P. **Dudley and** Michael H. **Woodford**, 7-7-200**2**, "Bioweapons, Biodiversity, and Ecocide: Potential Effects of Biological Weapons on Biological Diversity," No Publication, http://bioscience.oxfordjournals.org/content/52/7/583.full (Dudley is a consultant on military environmental and conservation policy issues with Versar, Inc., Springfield, VA, and a research associate at the Institute of Arctic Biology,

University of Alaska Fairbanks, and at the Department of Earth Sciences, University of Alaska Museum, Rockville, MD 20851-1405. Woodford is a fellow of the Royal College of Veterinary Surgeons, London, and chair of the Working Group on Wildlife Diseases at the Office International des Epizooties, World Organization for Animal Health, Algarve, Portugal.)

Bioweapons, Biodiversity, and Ecocide: Potential Effects of Biological Weapons on Biological Diversity **Bioweapon disease outbreaks could cause the extinction of** endangered **wildlife species, the erosion of genetic diversity** in domesticated plants and animals**, the destruction of** traditional **human livelihoods, and the extirpation of** indigenous **cultures** Many **analysts rank cultured and genetically engineered biological organisms as the most dangerous of all existing weapons technologies, with the potential for producing more extensive and devastating effects on human populations than even** fusion **nuclear weapons** (Henderson 1999). Biological weapons (bioweapons) are defined as biological organisms, and substances derived directly from living organisms, that can be used to cause death or injury to humans, animals, or plants. Diseases and biological toxins have been used as weapons of war throughout recorded history, from at least as early as Biblical times to the present day. Historically, bioweapons were used primarily, although not exclusively, for direct attacks against human populations. Biowarfare has historically involved the use of plant and fungal toxins (hellebore, ergot), animal carcasses, human cadavers, disease-contaminated clothing or blankets, and fecal matter (Christopher et al. 1997, Kortepeter et al. 2001). **The potential** spectrum of **bioterrorism ranges from isolated acts** against individuals by individuals (rogue scientist or Una bomber-type scenarios) **to tactical and strategic military uses and state-sponsored international terrorism intended to cause mass casualties** within or among humans or animals or both (Tucker 2000, Zilinskas 2000). Perhaps the oldest traditional application of bioweapon techniques has been the contamination or poisoning of drinking water sources using animal carcasses, human cadavers, feces, or poisonous plants and their derivatives. During the 14th century, Mongol armies catapulted the infected corpses of plague victims over the walls into the besieged city of Caffa, in what is now the Crimea, to try to force the surrender of the city's inhabitants. During the 18th century, the British colonial army used smallpox-contaminated blankets to spread disease among Native American tribes in northeastern North America and smallpox-infected civilian infiltrators to spread disease among insurgent American militias during the American Revolutionary War (Wheelis 1999). Government-sponsored scientific research into the development of technologically sophisticated applications of biological weapons for use against humans, livestock, and crops began during the early decades of the 20th century. Most government bioweapons programs included research on the culture and testing of disease agents intended specifically for use against livestock and food crops (Ban 2000). During World War I, Germany investigated techniques for using anthrax, glanders, cholera, and fungal diseases of wheat as biological weapons. German espionage agents attempted to create outbreaks of anthrax among livestock in Romania and Argentina and spread glanders among horses and mules—then still critically important as cavalry mounts and draft animals for the transport of artillery, ordnance, and supplies—in Mesopotamia, France, Argentina, and the United States. Germany was also implicated in an attempt to precipitate an epidemic of plague among humans in St. Petersburg, Russia (Dire and McGovern 2002). Japan developed and used biological weapons against human and animal populations in Asia during the period 1932–1945 (Kortepeter et al. 2001). Plague-infected fleas were reportedly used by the Japanese to precipitate plague epidemics in China during World War II, and it has been estimated that some 10,000 human subjects were used for bioweapon experiments in China involving anthrax, plague, tularemia, and smallpox (Christopher et al. 1997). During the 1980s and 1990s, Soviet scientists used **newly developed genetic engineering** techniques to **create antibiotic-resistant and vaccine-subverting strains of smallpox,** anthrax, **plague, and tularemia for bioweapon applications** (Alibek and Handelman 2000). Genetically modified zoonotic and epizootic diseases of humans and animals (plague, tularemia, anthrax) and virulent cultivated or wild strains of natural livestock diseases (e.g., foot and mouth disease [FMD], rinderpest, brucellosis) **represent** potentially **serious threats to livestock, wildlife, and endangered species populations**. Plant diseases developed for bioweapons applications against food crops, opium poppies, and coca plants may, however, infect nontarget species of wild plants and become established locally subsequent to their introduction to new environments (Madden and van den Bosch 2002). **Bioterrorist uses of enzootic livestock diseases and emerging zoonotic diseases** (diseases that can be transmitted between animal and human populations) **represent a potentially serious threat to livestock and wildlife populations never previously exposed to these diseases.** This risk holds true even, and perhaps especially in some instances, for wildlife species that may become infected by serious livestock diseases without exhibiting overt clinical signs of infection. Many formerly ubiquitous diseases that have been eradicated from livestock populations in the United States and Western Europe over the past century are still common elsewhere and readily accessible to individuals and terrorist organizations. Vaccines for many animal diseases still common in developing countries have been phased out in Europe and North America, and these vaccines, along with drugs for routine treatment, may not be readily available in sufficient quantities to suppress large-scale disease outbreaks among animals and livestock. Many of the bioweapons agents cultured and tested for use against animals and humans during the early decades of the 20th century were not highly contagious organisms. **Current biological weapons arsenals**, however, include diseases that **are highly infectious and contagious, easy to produce and deploy, and** able to **cause high** morbidity or **mortality in human** and animal populations. Diseases of particular concern for their bioweapons potential include smallpox, tularemia, plague, Newcastle disease, FMD, classical swine fever ("hog cholera"), avian influenza, African swine fever, Rift Valley fever, African horse sickness, rinderpest, and Venezuelan equine encephalomyelitis (OTA 1993, CNS 2002, Kortepeter et al. 2001). **Prior assumptions that bioweaponeers and bioterrorists might not be willing to endanger their own lives in developing and deploying highly contagious human diseases need to be reevaluated in the light of the many recent suicide attacks in the United States and Israel.** It is important to emphasize that bioterrorist attacks against livestock or crops do not require access to weaponized diseases or laboratory cultures of disease organisms, nor do they involve organisms that may cause disease in humans.

Bioterror is the most severe cause of extinction– they exponentially affect us and materials are becoming accessible

Jason G. **Matheny**, 200**7**. "Reducing the Risk of Human Extinction" Harvard Physics, http://users.physics.harvard.edu/~wilson/pmpmta/Mahoney_extinction.pdf

We already invest in some extinction countermeasures. NASA spends $4 million per year monitoring near-Earth asteroids and comets (Leary, 2007) and there has been some research on how to deflect these objects using existing technologies (Gritzner & Kahle, 2004; NASA, 2007). $1.7 billion is spent researching climate change and there are many strategies to reduce carbon emissions (Posner, 2004, p. 181). There are policies to reduce nuclear threats, such as the NonProliferation Treaty and the Comprehensive Test Ban Treaty, as well as efforts to secure expertise by employing former nuclear scientists. **Of current extinction risks, the most severe may be bioterrorism. The knowledge needed to engineer a virus is modest compared to that needed to build a nuclear weapon; the necessary equipment and materials are increasingly accessible and because biological agents are self-replicating, a weapon can have an exponential effect on a population** (Warrick, 2006; Williams, 2006). 5 Current U.S. biodefense efforts are funded at $5 billion per year to develop and stockpile new drugs and vaccines, monitor biological agents and emerging diseases, and strengthen the capacities of local health systems to respond to pandemics (Lam, Franco, & Shuler, 2006). **There is currently no independent body assessing the risks of high-energy physics experiments.**

Mexico Collapse

Strong cartels risk Mexico becoming a failed state

Luhnow 09 (David Luhnow, Latin America editor, "The Perilous State of Mexico", 2/21/2009, The Wall Street Journal, http://www.wsj.com/articles/SB123518102536038463, DJE)

Much as Pakistan is fighting for survival against Islamic radicals, **Mexico is waging a do-or-die battle with the world's most powerful drug cartels.** Last year, some 6,000 people died in drug-related violence here, more than twice the number killed the previous year. The dead included several dozen who were beheaded, a chilling echo of the scare tactics used by Islamic radicals. Mexican drug gangs even have an unofficial religion: They worship La Santa Muerte, a Mexican version of the Grim Reaper. **In growing parts of the country, drug gangs now extort businesses, setting up a parallel tax system that threatens the government monopoly on raising tax money.** In Ciudad Juarez, just across the border from El Paso, Texas, handwritten signs pasted on schools warned teachers to hand over their Christmas bonuses or die. A General Motors distributorship at a midsize Mexican city was extorted for months at a time, according to a high-ranking Mexican official. A GM spokeswoman in Mexico had no comment. "We are at war," says Aldo Fasci, a good-looking lawyer who is the top police official for Nuevo Leon state, where Monterrey is the capital. "**The gangs** have taken over the border, our highways and our cops. And now, with these protests, they **are trying to take over our cities. The parallels between Pakistan and Mexico are strong enough that the U.S. military singled them out recently as the two countries where there is a risk the government could suffer a swift and catastrophic collapse, becoming a failed state.** Pakistan is the greater worry because the risk of collapse is higher and because it has nuclear weapons. But **Mexico** is also scary: It **has 100 million people on the southern doorstep of the U.S., meaning any serious instability would flood the U.S. with refugees. Mexico is also the U.S.'s second biggest trading partner.** Mexico's cartels already have tentacles that stretch across the border. **The U.S. Justice**

Department said recently that Mexican gangs are the "biggest organized crime threat to the United States," operating in at least 230 cities and towns. Crimes connected to Mexican cartels are spreading across the Southwest. Phoenix had more than 370 kidnapping cases last year, turning it into the kidnapping capital of the U.S. Most of the victims were illegal aliens or linked to the drugs trade. Former U.S. antidrug czar Barry McCaffrey said **Mexico risks becoming a "narco-state"** within five years if things don't improve. Outgoing CIA director Michael Hayden listed Mexico alongside Iran as a possible top challenge for President Obama. Other analysts say the risk is not that the Mexican state collapses, but rather becomes like Russia, a state heavily influenced by mafias. Such comparisons are probably a stretch -- for now anyway. Beyond the headline-grabbing violence, Mexico is stable. It has a thriving democracy, the world's 13th-largest economy and a growing middle class. And as many as 90% of those killed are believed to be linked to the trade in some way, say officials. **"We have a serious problem. The drug gangs have penetrated many institutions. But we're not talking about an institutional collapse. That is wrong,"** says Attorney General Eduardo Medina Mora. Officials in both Washington and Mexico City also say the rising violence has a silver lining: It means that after decades of complicity or ignoring the problem, the Mexican government is finally cracking down on the drug cartels and forcing them to fight back or fight with one another for turf. One telling statistic: In the first three years of President Felipe Calderon's six-year term, Mexico's army has had 153 clashes with drug gangs. In the six years of his predecessor Vicente Fox's term, there were only 16." **If Mexico isn't a failed state, though, it is a country with a weak state -- one the narcos seem to be weakening further.**

A Mexican collapse would draw the U.S. in

Debusmann 09 (Bernd Debusmann, senior correspondent, "Among top U.S. fears: A failed Mexican state", 1/9/2009, The New York Times, http://www.nytimes.com/2009/01/09/world/americas/09iht-letter.1.19217792.html?_r=0, DJE)

According to the Joint Forces study, **a sudden collapse in Mexico is less likely than in Pakistan, "but the government, its politicians, police, and judicial infrastructure are all under sustained assault and pressure by criminal gangs and drug cartels. How that internal conflict turns out over the next several years will have a major impact on the stability of the Mexican state."** It added: **"Any descent by Mexico into chaos would demand an American response based on the serious implications for homeland security alone." What form such a response might take is anyone's guess,** and **the study does not spell it out, nor does it address the economic implications of its worst-case scenario. Mexico is the third biggest trade partner of the United States (after Canada and China) and its third-biggest supplier of oil (after Canada and Saudi Arabia).**

That causes war

Beck 09 (Glenn Beck, radio show host interviewing Texas State Senator Dan Patrick, "What Happens to the U.S. if Mexico Collapses?", 2/16/2009, Fox News, http://www.foxnews.com/story/2009/02/17/what-happens-to-us-if-mexico-collapses.html, DJE)

GLENN BECK, HOST: OK. There is California. Let's try this one. **Mexico is the 12th largest economy and second largest trading partner with the U.S.** And I don't know if you have noticed this. Grab a fire extinguisher. It's on fire. Close to 6,000 people were killed by rival drug gangs which is twice as many as in 2007. Texas is terrified that the violence is going to spill over the border. In a minute, I will explain how **the whole world is going to change if Mexico collapses**. The number one place for kidnappings is Mexico City. Who do you think number two is for kidnapping? You know, I was thinking Bogota, Columbia. Maybe some place in Somalia. Well, close. It is Phoenix, Arizona where there were almost 400 reported kidnappings last year and many more went unreported. Excuse me? John McCain was on the campaign trail for how many months, and we never heard about this and it's happening in his backyard? No one is talking about it, because it's not in anybody's best interest, you know, except yours and mine. I think it's in your best interest to know all of the facts and what it means to you. Texas officials are now planning for the worst-case scenario of, what do you do if Mexico just collapses? State Senator Dan Patrick is joining me now. Hey, Dan, how are you? SEN. DAN PATRICK (R), TEXAS STATE SENATOR: Hi, Glenn. Thank you for your passion on everything. It comes through. • Video: Watch Glenn's interview with Senator Dan Patrick BECK: Thank you. Thank you. PATRICK: Thank you, Glenn. BECK: I have been, and I know you have been, too - talking about the border, not because ... PATRICK: Yes. BECK: ... much to many people's chagrin here in America that I don't hate Mexicans. I don't hate people who are different than me. Almost everybody on the planet is different than me. I mean, look at me. PATRICK: Right. BECK: The problem is this is a dangerous situation. People feel disenfranchised. Mexico is on the verge of collapse. You've got massive murder problems and drug problems. What are you are guys worried about? And how are you preparing in Texas for a possible push into America from people just fleeing a drug state? PATRICK: Well, Glenn, we had hearings a couple of weeks ago. And I asked our Homeland Security Director Steve McCraw of Texas if he feared the collapse of Mexico and did we have a plan. And he didn't deny the fact that it is a concern. And since that subcommittee meeting we had a few weeks ago, he has been working with Gov. Perry and I'm meeting with him in a few days, as a matter of fact, to see their progress on developing a plan. You will love this term, Glenn. The United States has a plan called "mass migration" as opposed to the collapse of Mexico. And **we need a plan here in Texas because there are two scenarios, Glenn. One is a slow collapse, an economic collapse of Mexico in which hundreds of thousands would come here over a period of time. The second is what I call a Colombian collapse of Mexico, an assassination of the president, the drug cartels taking over the country, civil war breaking out on the streets, people fleeing for their lives, not for a job. We have to be prepared in the United States for both and Texas must be prepared.**

Econ Collapse

Strong cartels risk Mexico becoming a failed state

Luhnow 09 (David Luhnow, Latin America editor, "The Perilous State of Mexico", 2/21/2009, The Wall Street Journal, http://www.wsj.com/articles/SB123518102536038463, DJE)

Much as Pakistan is fighting for survival against Islamic radicals, **Mexico is waging a do-or-die battle with the world's most powerful drug cartels.** Last year, some 6,000 people died in drug-related violence here, more than twice the number killed the previous year. The dead included several dozen who were beheaded, a chilling echo of the scare tactics used by Islamic radicals. Mexican drug gangs even have an unofficial religion: They worship La Santa Muerte, a Mexican

version of the Grim Reaper. **In growing parts of the country, drug gangs now extort businesses, setting up a parallel tax system that threatens the government monopoly on raising tax money.** In Ciudad Juarez, just across the border from El Paso, Texas, handwritten signs pasted on schools warned teachers to hand over their Christmas bonuses or die. A General Motors distributorship at a midsize Mexican city was extorted for months at a time, according to a high-ranking Mexican official. A GM spokeswoman in Mexico had no comment. In the six years of his predecessor Vicente Fox's term, there were only 16." **If Mexico isn't a failed state, though, it is a country with a weak state -- one the narcos seem to be weakening further.**

Mexican economy is key to the US economy – heavily interdependent on each other

Wilson, 11 works at the Mexico Institute at the Woodrow Wilson International Center for Scholars **(Christopher E. "Working Together: Economic Ties between the United States and Mexico" November 2011 Wilson Center http://www.wilsoncenter.org/sites/default/files/Working%20Together%20Full%20Document.pdf) // czhang**

Mexico and the United States are no longer distant neighbors whose ¶ economies are engaged in direct competition and where gains on one side¶ of the border imply losses on the other. They **are now deeply integrated ¶ economies**

whose future is also linked. Trade between the two countries is not ¶ a zero-sum game but a question of mutual interest. If the Mexican economy ¶ prospers, it is likely to enhance U.S. competitiveness considerably, and vice ¶ versa. Indeed, it is hard to conceive of a strategy for increasing U.S. economic ¶ competitiveness and supporting job-creation that does not significantly take ¶ into account its two neighboring countries, Mexico and Canada. Unlike ¶ two decades ago, when the agreement to launch a free trade agreement in ¶ North America generated enormous controversy, **the U.S. economy is now ¶ inextricably linked to that of its neighbors**, and future efforts will have to ¶ take this mutual dependence into account. This does not mean that economic ¶ integration across the border is uncomplicated and there are no legitimate ¶ disputes or real dislocations within particular industries that will need to be ¶ addressed. But it does mean that it will be in the self-interest of the United ¶ States to see Mexico primarily as a partner in economic efforts, rather than ¶ as a competitor, and that **calls for policies that enhance existing production ¶ chains and strengthen both economies.** It also suggests that **Mexican economic ¶ growth will have significant positive effects for the U.S. economy, which calls ¶ for greater U.S. policy attention to support Mexico's efforts to strengthen its ¶ economic future.**

Economic decline causes war, multiple warrants and studies

Royal 10 (Jedediah, Director of Cooperative Threat Reduction at the U.S. Department of Defense, 2010, Economic Integration, Economic Signaling and the Problem of Economic Crises, in Economics of War and Peace: Economic, Legal and Political Perspectives, ed. Goldsmith and Brauer, p. 213-215)

Less intuitive is how **periods of economic decline may increase the likelihood of external conflict**. Political science literature has contributed a moderate degree of attention to the impact of economic decline and the security and defence behaviour of interdependent stales. Research in this vein has been considered at systemic, dyadic and national levels. Several notable contributions follow. First, on the systemic level. **Pollins** (20081 **advances Modclski and Thompson's** (1996) **work on leadership cycle theory, finding that rhythms in the global economy are associated with the rise and fall of a pre-eminent power and** the often **bloody transition** from one pre-eminent leader to the next. As such, **exogenous shocks such as economic crises could usher in a redistribution of relative power** (see also Gilpin. 19SJ) **that leads to uncertainty about power balances, increasing the risk of miscalculation** (Fcaron. 1995). Alternatively, **even a** relatively **certain redistribution of power could lead to a permissive environment for conflict as a rising power may seek to challenge a declining power** (Werner. 1999). Separately. **Pollins** (1996) also **shows that global economic cycles combined with parallel leadership cycles impact the likelihood of conflict among** major, medium and small **powers**, although he suggests that the causes and connections between global economic conditions and security conditions remain unknown. Second, on a dyadic level. **Copeland's** (1996. 2000) **theory of trade expectations suggests that 'future expectation of trade' is a significant variable in understanding** economic conditions and **security behaviour of states**. He argues that **interdependent states are likely to gain pacific benefits** from trade so long **as they have an optimistic view of future trade relations**. However, **if the expectations of future trade decline**, particularly for difficult to replace items such as energy resources, **the likelihood for conflict increases**, as **states will be inclined to use force to gain access to** those **resources. Crises could potentially be the trigger** for decreased trade expectations either on its own or **because it triggers protectionist moves** by interdependent states.4 Third, others have considered the link between economic decline and external armed conflict at a national level. **Mom berg and Hess** (2002) **find a strong correlation between internal conflict and external conflict, particularly during** periods of economic **downturn**. They write. The linkage, between internal and external conflict and prosperity are strong and mutually reinforcing. **Economic conflict lends to spawn internal conflict, which** in turn **returns the favour**. Moreover, the **presence of a recession tends to amplify** the extent to which international and **external conflicts** self-reinforce each other (Hlomhen? & Hess. 2(102. p. X9> **Economic decline has also been linked with an increase in the likelihood of terrorism** (Blombcrg. Hess. & Wee ra

pan a, 2004). **which has the capacity to** spill across borders and **lead to external tensions**. Furthermore, **crises** generally **reduce the popularity of a sitting government**. "Diversionary theory" suggests that, **when facing unpopularity arising from economic decline**, sitting **governments have increased incentives to fabricate external military conflicts to create a 'rally around the flag' effect.** Wang (1996), DcRoucn (1995), and Blombcrg. Hess, and Thacker (2006) find supporting evidence showing that **economic decline and use of force are** at least indirecti) **correlated**. Gelpi (1997). Miller (1999). and Kisangani and Pickering (2009) suggest that **Ihe tendency towards diversionary tactics arc greater for democratic** states than autocratic states, due to the fact that **democratic leaders are** generally **more susceptible to being removed from office** due to lack of domestic support. **DeRouen** (2000) has **provided evidence showing that periods of weak economic performance in the United States,** and thus weak Presidential popularity, **are** statistically **linked to an increase in the use of force**. In summary, recent economic scholarship positively correlates economic integration with an increase in the frequency of economic crises, whereas **political science scholarship links economic decline with external conflict** al systemic, dyadic and national levels.' This implied connection between integration, crises and armed conflict has not featured prominently in the economic-security debate and deserves more attention.

(Extra Card)

Cartels are a huge burden on Mexico's economy

Estevez 14 (Dolia Estevez, a news contributor on issues concerning US-Mexico relations and politics, "Mexico's Astonishing Costs Of Fighting Drug Cartels Have Not Reduced Violence", 6/19/2014, http://www.forbes.com/sites/doliaestevez/2014/06/19/mexicos-astonishing-spending-on-fighting-drug-cartels-has-not-reduced-violence/, DJE)

Mexico's efforts to reduce the alarming levels of violence are having a significant impact on the country's economy. In 2013, the cost of fighting the powerful drug cartels rose to almost $172.7 billion (more than twice Mexico's foreign debt), according to the Global Peace Index 2014, published this week by the London-based Institute for Economics & Peace (IEP). The sum, which is almost one tenth (9.4%) of Mexico's GDP, amounts to $1,430 per person. **Mexico's violence containment costs are** not only monetarily much higher than those incurred by Syria, Iraq and Libya, but **among the highest in the world.** Mexico ranks 25th in this category among 162 nations. The global economic impact of violence is estimated at $9.8 trillion or 11.3% of the global GDP. This year Mexico's peacekeeping price tag is believed to be the highest ever. To put things in perspective, **$172.7 billion is significantly more than twice Mexico's foreign debt of $73.5 billion**, according to data from Mexico's Ministry of Finance. Yet violence and homicides have not diminished significantly, due in large part, as the report points out, to the country's endemic corruption and institutional weakness. In this year's IEP's Global Peace Index, Mexico's rank "slightly deteriorated", dropping from 133 to 138 (out of 162 countries), with Iceland, Denmark and Austria being the top three most peaceful, and South Sudan, Afghanistan and Syria the least peaceful countries. Violence containment spending is defined by the IEP as economic activity that is related to the consequences or prevention of violence where the violence is directed against people or property. IEP's methodology values thirteen different dimensions: military expenditure; homicides; internal security; violent crime; private security; incarceration; GDP losses from conflict; deaths from internal conflict; fear; terrorism; UN peacekeeping; internally displaced persons and refugees, and deaths from external conflict of violence.

WMD

Cartels make wmd use likely

BPW '10 BioPrepWatch (1/21/10, BioPrepWatch, "Drug trade could increase availability of bioweapons" http://bioprepwatch.com/stories/510506427-drug-trade-could-increase-availability-of-bioweapons#sthash.SRj9Orv6.dpuf)

Drug **cartels**, as a result of the increase in the narcotics trade, **have been increasingly able to acquire biological and chemical weapons and radioactive material for the purpose of WMD creation**, **the U.S. State Department has warned**. "**The sums of money involved are growing in extraordinary amounts, and that raises the possibility, because of the sums and the areas in which these groups have begun to operate, for that opportunity to be exploited,"** David Johnson, assistant secretary of state for the Bureau of International Narcotics and Law Enforcement Affairs, told The Jerusalem Post. "Some of **these** criminal **syndicates have the organizational and financial wherewithal that could potentially allow them to acquire and sell radioactive material, biological and chemical weapons, and technologies used for weapons** of **mass destruction**."

Terror DA

Opening parts of the U.S. – Mexican border could give terrorists an opening

Rothman '14, Associated Editor of Hot Air (8/29/14, Noah, Hot Air, "Report: ISIS eyeing Mexican border to infiltrate America and execute terrorist attacks", http://hotair.com/archives/2014/08/29/report-isis-eyeing-mexican-border-to-infiltrate-america-and-execute-terrorist-attacks/)

Aside from this being a deeply unnerving development, this has the potential to completely scramble the political thinking in this country regarding immigration reform and border security. A report from Fox News reporter Jana Winter filed on Friday indicates that **Islamic State fighters are eyeing the porous U.S.-Mexico border as a potential area in which aspiring jihadists can infiltrate the country and prepare terrorist attacks.** Social media chatter **shows Islamic State militants are keenly aware of the porous U.S.-Mexico border, and are "expressing an increased interest" in crossing over to carry out a terrorist attack**, according to a Texas law enforcement bulletin sent out this week. "**A review of ISIS social media messaging during the week ending August 26 shows that militants are expressing an increased interest in the notion that they could clandestinely infiltrate the southwest border of US, for terror attack," warns the Texas Department of Public Safety "situational awareness"** bulletin, obtained by FoxNews.com. The three-page bulletin, entitled "ISIS Interest on the US Southwest Border" was released to law enforcement on Thursday. In related news, White House Press Sec. Josh Earnest told reporters on Friday that the number of illegal immigrants crossing the southern border had dropped precipitously. When asked if the crisis on the border was over, Earnest said it was. "For now," he added.

An ISIS presence in Mexico amplifies the link to terrorism

Judicial Watch 15 (A foundation that writes on legal issues, "ISIS Camp a Few Miles from Texas, Mexican Authorities Confirm", 4/14/2015, http://www.judicialwatch.org/blog/2015/04/isis-camp-a-few-miles-from-texas-mexican-authorities-confirm/, DJE)

ISIS is operating a camp just a few miles from El Paso, Texas, according to Judicial Watch sources that include a Mexican Army field grade officer and a Mexican Federal Police Inspector. The exact location where the terrorist group has established its base is around eight miles from the U.S. border in an area known as "Anapra" situated just west of Ciudad Juárez in the Mexican state of Chihuahua**. Another ISIS cell to the west of Ciudad Juárez, in Puerto Palomas, targets the New Mexico towns of Columbus and Deming for easy access to the United States**, the same knowledgeable sources confirm. During the course of a joint operation last week, Mexican Army and federal law enforcement **officials discovered documents in Arabic and Urdu, as well as "plans" of Fort Bliss – the sprawling military installation that houses the US Army's 1st Armored Division.** Muslim prayer rugs were recovered with the documents during the operation. Law enforcement and intelligence sources report the area around Anapra is dominated by the Vicente Carrillo Fuentes Cartel ("Juárez Cartel"), La Línea (the enforcement arm of the cartel) and the Barrio Azteca (a gang originally formed in the jails of El Paso). **Cartel control of the Anapra area make it an extremely dangerous and hostile operating environment for Mexican Army and Federal Police operations.** According to these same sources, "coyotes" engaged in human smuggling – and working for Juárez Cartel – help move ISIS terrorists through the desert and across the border between Santa Teresa and Sunland Park, New Mexico. To the east of El Paso and Ciudad Juárez, cartel-backed "coyotes" are also smuggling ISIS terrorists through the porous border between Acala and Fort Hancock, Texas. These **specific areas were targeted for exploitation by ISIS because of their understaffed municipal and county police forces, and the relative safe-havens the areas provide** for the unchecked large-scale drug smuggling that was already ongoing. Mexican intelligence sources report that ISIS intends to exploit the railways and airport facilities in the vicinity of Santa Teresa, NM (a US port-of-entry). The sources also say that **ISIS has "spotters" located in the East Potrillo Mountains of New Mexico (largely managed by the Bureau of Land Management) to assist with terrorist border crossing operations.** ISIS is conducting reconnaissance of regional universities; the White Sands Missile Range; government facilities in Alamogordo, NM; Ft. Bliss; and the electrical power facilities near Anapra and Chaparral, NM.

Elections Link

Public opposed to the plan – Republicans push for stronger borders – backlash against plan blames Dems and turns votes Republican

John **Mccormick**, 9-4-**2014**, "Americans in Poll Increasingly Want Tough Border Control," Bloomberg, http://www.bloomberg.com/news/articles/2014-09-03/americans-in-poll-increasingly-want-tough-border-control

Sept. 4 (Bloomberg) -- **Americans increasingly want tighter border security and tougher immigration enforcement, bolstering the Republican position as President Barack Obama**

considers executive action on the issue. One-third say stricter controls should be the priority for U.S. policy, up from 25 percent who held that view in February 2013, **according to** a survey by the **Pew Research** Center. Efforts to revise immigration laws remain stalled in Congress, with Republicans stressing border control and Democrats pushing to ease deportations. The White House has said **Obama may delay** executive **action** to change the U.S. policy until after November's congressional elections, **for fear of hurting Democratic candidates.** "Among whites, there is much more support for improving border security and enforcing immigration laws more strictly," the report released yesterday by the Washington-based Pew says. The proportion of whites who place the highest priority on border control is 37 percent, double that of Hispanics. The harder-line position comes even as a separate report by Pew showed no growth in the number of undocumented immigrants in the U.S. over the last four years. Pew's poll, conducted Aug. 20-24 of 1,501 adults, offered a choice of whether border security and law enforcement should be given priority over creating a way for undocumented immigrants to become citizens if they meet certain conditions. Almost a quarter -- 23 percent -- said they give greater importance to offering a path to citizenship. About four-in-10 - - a plurality -- said both should be given equal priority. Igniting Passions A flood of unaccompanied and undocumented children, mostly from Central America, trying to enter the U.S. has ignited passions on the issue. **By a margin of 53 percent to 36 percent, more Republicans say the emphasis should be on better border security and stricter enforcement.** Among independents, 41 percent support giving equal priority to a path to citizenship and better border security, while 33 percent back greater border security and tougher law enforcement, up from 25 percent in February 2013. Even the share of Democrats saying the priority should be on taking a harder line increased to 19 percent from 14 percent. Forty-five percent give equal priority to both a path to citizenship and enhanced security and enforcement, down from 52 percent at the beginning of last year. The Pew report, also released yesterday, offered **Washington politicians leery of dealing with immigration some rationale for their inaction.** It showed that the number of undocumented immigrants in the U.S. has stabilized since the end of the recession and shows no signs of rising. 11.3 Million There were 11.3 million unauthorized immigrants living in the U.S. in March 2013, Pew estimates, the same as in 2009. "The marked slowdown in new arrivals means that those who remain are more likely to be long-term residents, and to live with their U.S.-born children," the report says. The analysis underscores the central role economic conditions play in the flow of immigrants. When times are good, more of them arrive in the U.S. The number of undocumented immigrants rose briskly for decades before plunging during the 2007-2009 recession. As growth has stalled, there's also been a rise in the median length of time that unauthorized immigrants have lived in the U.S., going from less than eight years in 2003 to almost 13 years in 2013.

Iran Politics Link

Border enforcement is supported universally. The plan would pit Obama against everyone.

Johnson 2007(Dean and Mabie-Apallas, Professor of Public Interest Law and Chicana/o Studies, "Opening the Floodgates", New York University Publication)

Conservatives generally find themselves deeply split on the issue of¶ immigration. Some staunch members of the Republican Party, including¶ President George W. Bush, generally favor liberal admission policies, or¶ at least more liberal policies than the ones currently in place. Economic¶ conservatives see gains from immigration and inexpensive labor. In stark¶ contrast, another wing of the Republican Party is deeply concerned with¶ the alleged cultural impacts of immigration**.** This faction aggressively¶ plays on populist fear about cultural changes blamed on immigrants and¶ demands restrictionist policies and tougher border enforcement. Today,¶ this arm of the Republican Party, represented most prominently by Congressman¶ Tom Tancredo and the conservative icon Pat Buchanan, often¶ exercises great influence over the direction of immigration law and policy¶ by tapping into broad-based fears of economically and otherwise insecure¶ U.S. citizens. Poor, working, and middle-income people worry¶ about the changes wrought by immigration and are not likely to sympathize¶ with the desire of big business for cheap labor.¶ On the other hand, Democrats also find themselves divided on immigration.¶ Economically, they are concerned with immigration's downward¶ pressure on the wage scale and its impact on a long-time base of¶ Democratic support, labor unions. Although change has come in recent¶ years, organized labor, often supportive of the basic Democratic agenda,¶ has

historically supported restrictionist immigration laws and policies.¶ Many liberals, however, desire the humane treatment of immigrants and¶ often push for pro-immigration and pro-immigrant laws and policies.¶ There, however, is some common ground. Many Democrats and Republicans¶ often agree that increased border enforcement is necessary.¶ Like tough-on-crime stances, this has proved time and time again to be a¶ politically popular position. This is even true for those sympathetic to¶ 138 | *The Economic Benefits of Liberal Migration of Labor Across Borders*¶ the plight of immigrants. In addition, influenced by public fears of being¶ overrun by floods of immigrants, politicians of both parties often support¶ limits on legal immigration and heavy border enforcement.

Neoliberalism Link

Eliminating borders revitalizes neoliberalism and opens up financial barriers that allows the market to access new sources of capital

Wilkie 2008 [Rob, Assistant Professor of Cultural and Digital Studies at the University of Wisconsin-La Crosse, "Supply Chain Democracy and Circuits of Imperialism", Red Critique Fall/Winter 2008, http://redcritique.org/FallWinter2008/supplychaindemocracyandcircuitsofimperialism.htm, Accessed 7/15/15, *modified for gendered language, AX]

Second, it is argued that the development of post-labor means of production creates the conditions for the expansion of capital globally, in turn disrupting the traditional boundaries between nations, thereby creating a "flat" or "borderless" world of free cultural and financial exchange (Friedman, The World is Flat; Ohmae, The Borderless World). **What "flat" or "borderless" signifies is an increased "capitalization" in the post-WWII period of formerly socialist and colonized nations and their incorporation into the global system of production**, either through the shifting of manufacture from the "North" to the "South" ("outsourcing"/"off-shoring") or **by becoming integral players in a post-national "supply-chain" that has been enabled by advances in communication as well as the opening up of trade and financial barriers to free up the flow of formerly "trapped" or unproductive capital.** Proponents of the "flat world" thesis point to the expansion of international trade which, according to the IMF, "has grown five times in real terms since 1980, and its share of world GDP has risen from 36 percent to 55 percent over this period" (IMF 137). **This "flattening" of the global economy**, in which it is said that the expansion of production and trade relations between nations constitute the emergence of a level playing field between formerly unequal or hostile nations, **is essentially premised upon a theory of a "universal evolution in the direction of capitalism"** (Fukuyama xv) **in which there is no longer any "outside" to capitalism.** In this reading**, the "developed" economies of the North have moved beyond the traditional economic cycle, while transplanting the conditions of new growth and prosperity to the "developing" nations** in the South. As Martin Wolf writes, "In the post-war era, the most successful route to development seems to have been via the export of labor-intensive manufactures, the route on which China has followed Hong Kong, Singapore, Taiwan and South Korea" (147). The "problem" for the ideologists of capital and this image of globalization as leveling the world is that insofar as concepts are abstractions of reality **the continuing existence of deep social and economic inequalities cannot be solved at the level of ideas** and thus still have to be explained. That is to say, **even though "globalization" has become synonymous** in theory **with the end of the economic challenges to capitalism's dominance, this does not change the reality that the expansion of capitalism globally has corresponded in actuality with a rising level of inequality and a sharpening of the class divide**, both between the North and South, as well as within the respective countries of each. This is because **capitalism is a system that depends upon the exploitation of labor. Regardless of** whether or not **the primary location of**

production is the North or the South, or whether the workers work in factories that are highly mechanized or newly digitalized, **it is the production of surplus value** extracted from the surplus labor of workers by owners **that drives capitalism forward. That exploitation remains even in the "global" factories of today** is supported in a recent study from the World Bank which, despite touting the results of "free-market" globalization as having reduced the number of people living in poverty—defined as the ridiculously low, and ultimately arbitrary, sum of less than $1 per day—by 260 million in the period 1990-2004, nonetheless showed that **real inequality between the rich and poor has actually increased during this time in 46 of** the **59 developing countries surveyed** (4). Over the same period, a study by the International Monetary Fund also found that "**Inequality has been rising in countries across all income levels**, except those classified as low income" and that overall "the income share of the richest quintile has risen, whereas the shares of the remaining quintiles have declined" (158-159). That the two main representatives of capitalist finance found rising inequality and a sharpening of the class divide despite representing globalization as moving beyond class binaries is due to the fact that **the economic contradiction between capital and labor does not reside at the level of the concept**—in other words, the conflict over globalization is not simply a political or intellectual struggle over how to best define the term—**but rather in the property relations that enable the owners of the means of production to accumulate capital at the expense of those who own only their labor power**. As Marx argued more than one hundred fifty years ago and which is proven once again by the increases in global inequality, "**even the most favorable situation for the working class,** namely, the most rapid growth of capital, however much it may improve the material life of the worker, **does not abolish the antagonism between [his/her] interests and the interests of the capitalist**" (Wage Labor and Capital 39). Even as developments of labor productivity result in new, higher standards of living for some workers, these **developments are always restricted under capitalism to the accumulation of surplus value and** thus it is **always the interests of the bosses that will take precedence over the needs of the working class.**

We must understand Native Americans as proletarians – their analysis renders invisible the set of historical capitalist relations that informed genocide against the Native body and made oppression possible

Libretti, 1 (Tim, Associate Professor of English and Women's Studies at Northeastern Illinois University. He has published articles on proletarian literature, U.S. Third World and multi-ethnic literatures, Marxism, and cultural studies in such journals as MELUS, Women's Studies Quarterly, and Mediations.2001, Modern Fiction Studies, Vol 47, No. 1, "The Other Proletarians: Native American Literature and Class Struggle," AS)

This rich passage raises many points for discussion in terms of how Ortiz constructs class consciousness and how this text and his writing as a whole relate to and redefine the contours and politics of the proletarian [End Page 180] literary genre. Ortiz here is asserting the privileged historical, economic, and social position, as well as the privileged perspective of the Native American in the historical development and contemporary society of U.S. capitalism. Just as Lukacs in History and Class Consciousness argues that "the superiority of the proletariat must lie exclusively in its ability to see society from the center, as a coherent whole" (69), Ortiz effectively suggests that Native Americans occupy a "more central" position in society from which to comprehend it as a coherent whole. However, while Lukacs argues that "the self-understanding of the proletariat is [. . .] simultaneously the objective understanding of the nature of society" and that "when the proletariat furthers its own class-aims it simultaneously achieves the conscious realization of the--objective--aims of society, aims which would inevitably remain abstract possibilities and objective frontiers but for this conscious intervention" (149), **Ortiz represents Native Americans' self-understanding as yielding a more accurate and insightful vision of the trajectory of social history because they are most immediately threatened and affected by the historical development of capitalism**. First in line for genocide, they are first to understand through experience the operations and aims of our current course of historical development. Thus they occupy the most advantageous position from which both to achieve a full consciousness of U.S. capitalism and to intervene consciously in redirecting historical development. Consequently, Ortiz means to bring the exigency of survival to the forefront of political and class consciousness, **suggesting that while Native Americans are most urgently conscious of the task of survival, it needs to be a larger working-class issue**; it needs to

be the premise of the class struggle itself to prioritize survival by making lands "productive to serve humanity." However, **Ortiz** warns that such a goal "will take real decisions and actions and concrete understanding by the poor and workers of this nation" (360).¶ The above passage also **highlights the importance of understanding Native Americans as a dynamic part of the U.S. proletariat and of U.S. labor history**. In the text as a whole, Ortiz worries about the "preservation" of Native American culture in museums and state parks that tend to hypostatize Native Americans as relics of history rather than as historical and contemporary participants in U.S. society and economy. The worry is that Native Americans will be isolated in "natural wilderness or [End Page 181] cultural parks" (360) and thus relegated to the margins instead of recognized as the center of social change and class consciousness that Ortiz believes they need to be. **The other sectors of the working class need to understand the genocide and exploitation of Native Americans if they are going to understand comprehensively the operations of U.S. capitalism**, the path of their genuine self-interest within that system, and the fate that awaits them if they do no act to redirect the course of history by learning from and following the lead of Native Americans. It is here that Ortiz makes his most passionate plea, one worth quoting at length:¶ They will have to see that the present exploitation of coal at Black Mesa Mine in Arizona does not serve the Hopi and Navajo whose homeland it is. They will have to understand that the political and economic forces which have caused Hopi and Navajo people to be in conflict with each other and within their own nations are the same forces which steal the human fabric of their own communities and lives. They will have to be willing to identify capitalism for what it is, that it is destructive and uncompassionate and deceptive. They will have to be willing to do so or they will never understand why the Four Corners power plants in northwestern New Mexico continue to spew poisons into the air, destroying plant, animal, and human life in the area. They will have to be willing to face and challenge the corporations at their armed bank buildings, their stock brokers, and their drilling, mining, milling, refining and processing operations. If they don't do that, they will not understand what Aacqu and her sister Pueblos in the Southwest are fighting for when they seek time and time again to bring attention to their struggle for land, water, and human rights. The American poor and workers and white middle class, who are probably the most ignorant of all U.S. citizens, must understand how they, like Indian people, are forced to serve a national interest, controlled by capitalist vested interests in collusion with U.S. policy makers, which does not serve them. Only when this understanding is attained and decisions are reached and actions taken to overcome economic and political oppression imposed on us all will there be no longer a national sacrifice area in the Southwest. Only then will there [End Page 182] be no more unnecessary sacrifices of our people and land. (360-61)¶ In this catalog of what the American poor and working class need to see, understand, and do--much of which entails facing and comprehending the particular exploitation and colonized status of Native Americans--Ortiz is suggesting that Native American class consciousness and political self-interests are not only identical to those of the non-Native American working class and poor but that, even more so, they are definitive of class consciousness and working-class political interests. If they do not understand the Native American situation, they will not understand "the same forces which steal the human fabric of their own American communities and lives." This same recognition is equally crucial in the literary critical sphere when we attempt to map the coordinates of a genre of proletarian literature as such a genre becomes the cultural representation and mouthpiece of the U.S. working class and its interests. **To marginalize Native American literature or categorize it wholly apart from and exclusive of proletarian literature re-enacts the same gesture of making invisible the Native American working class, of isolating it from the scene of wage labor.¶** Moreover, **what is also rendered invisible by obscuring the historical experience of Native Americans, their working-class experience, and their narrative of survival and class struggle, is the historical memory of an unalienated relationship with the land.** We have already seen Ortiz represent precolonial moments in which the Aacqu's lives were described as ones of material well being and spiritual integrity. While his narrative of colonization represents their growing dependence on wage labor and their general dependence under capitalism because of the diminution of their access to natural resources caused in part by their dispossession and in part by industrial capitalism's destruction of those resources, Ortiz also highlights that what remains through oral history is a memory of an actual culture or way of life characterized not by alienation but by integrity with nature, oneself, and others. Ortiz writes,¶ I don't know when it was that the grass was as high as a man's waist. I never knew that. All my life, the grass had been sparse and brittle. All my life, the winters have been cold and windy [End Page 183] and the summers hot and mostly rainless. But the people talk about those good years when they could cope with life on their own terms. The winters were always cold and the summers hot, but they could cope with them because there was a system of life which spelled out exactly how to deal with the realities they knew. The people had developed a system of knowledge which made it possible for them to work at solutions. And they had the capabilities of developing further knowledge to deal with new realities. There was probably not anything they could not deal properly and adequately with until the Mericano came. (349)¶ **The phenomenon Ortiz describes here is the general** deskilling of the human, of the **alienation that capitalism inflicts in its will to dominate.** Here Ortiz depicts again, it is worth reiterating, the way capitalism curtails rather than enhances productive efficiency as he represents how the colonizing process hobbled the people, made them dependent rather than self-sufficient, and robbed them of their creative abilities and skills.¶ But what is perhaps most striking about the narrative is that Ortiz represents an actual useable past that is not simply a utopian invention but rather a viable historical model. The importance of Ortiz's identification of this historical actuality is that it challenges those critics who see Marxism's ideal of a culture of disalienation, in which each person realizes her species being, as not only unattainable but also as never having been attained, as historically fantastic. Take, for example, Stephen Greenblatt's criticism of a passage from The Political Unconscious in which Fredric Jameson speaks to the process whereby capitalism diminishes the unalienated individual subject in its production of the fragmented bourgeois individual. Greenblatt writes,¶ The whole passage has the resonance of an allegory of the fall of man: once we were whole, agile, integrated; we were individual subjects but not individuals, we had no psychology distinct from

the shared life of the society; politic and poetry were one. Then capitalism arose and shattered this luminous, benign totality. The myth echoes throughout Jameson's book, though by the close it has been eschatologically reoriented so that the totality lies not in a past revealed to have always [End Page 184] already fallen but in the classless future. A philosophical claim that appeals to an absent empirical event. (3)¶ While Greenblatt no doubt has a point--it is certainly difficult to attribute alienation solely to the onset of capitalism, as though somehow feudal and slave economies featured whole and happy individual subjects--his own sense of the past is equally distorted, at least in light of Ortiz's narrative. Nonetheless, Greenblatt's criticism is one commonly hauled out to attempt to undermine the legitimacy of Marxist theories of human nature and liberation. Thus, Ortiz's identification of this historical moment of integration, as opposed to alienation, serves not only to challenge the cynical bourgeois critics of Marxism but, perhaps even more importantly, to give the Marxist tradition a model of possibility on which to build and imagine a postcapitalist culture. **To distance or isolate Native Americans from the U.S. working class** and their literature from the larger proletarian tradition **is to impoverish and, really, to disempower the U.S. working class** by cutting it off from this model of possibility that ought to inform class struggle.¶ Indeed, as Ortiz strenuously argues throughout the piece, **it is the condition of alienation** from ourselves, nature, and other people that most seriously **needs to be addressed, as alienation is the premise of exploitation and the destructive features of capitalism; Native Americans possess most vividly the collective memory of unalienated life**, as opposed to most elements of the U.S. working class whose memory is confined to a capitalist world and an experience of wage labor, which might explain why so much energy in labor struggles focuses on wages rather than focusing more concertedly on alienation and on the use of resources.¶ Native Americans are best positioned to assess the experience of alienation under capitalism, Ortiz suggests, because they have not just an imagination but also an historical knowledge of a different mode of production, culture, and way of life, as we see in the following passage in which Ortiz discusses the experiences of Laguna and Navajo miners working for the Kerr-McGee mines in New Mexico:¶ The Navajo men who went into the underground mines did not have much choice except to work there, just like the Laguna miners who find themselves as surface labor and semi-skilled [End Page 185] workers. The Kerr-McGee miners who had stayed for any length of time underground breathing the dust laden with radon gas would find themselves cancerous. The Laguna miners would find themselves questioning how much real value the mining operation had when their land was overturned into a gray pit miles and miles in breadth. They would ask if the wages they earned, causing wage income dependency, and the royalties received by the Kawaikah people were worth it when Mericano values beset their children and would threaten the heritage they had struggled to keep for so long. (356)¶ The Laguna miners are able to measure their value system and the social relationships it entails against that of capitalism and its destructive, even murderous, effects on the land and the people. Once again, Ortiz counterpoints two modes of conceptualizing value, embodied in one culture that prioritizes quality of life and in another quantitatively oriented culture committed to accumulating monetary wealth at the expense of life. The importance here, though, is that the Native American working class already possesses the value system for as well as the memory and imagination of a postcapitalist culture that the non-Native American U.S. working class needs to recognize as a valuable and crucial attribute of its tradition of resistance to capital and its aspirations of social transformation. Similarly, Ortiz also speaks of the memory of the Peublo Revolt of 1680 in which enslaved Africans, native Americans, and descendants of the Chicano people fought back against Spanish colonialism. This example of multiracial organizing and resistance is highlighted as a central element of the collective memory of empowerment and change. It is just such models of revolt that the U.S. working class needs as part of its historical and class consciousness, which it needs to be attached to and not dissociated from.¶ But yet when critics narrowly periodize and restrictively define the category of proletarian literature, it is just such dissociation and erasure that takes place. In developing a Marxist cultural tradition on the Left that is capable of directing and imagining full liberation, we must construct a proper proletarian literature genre which maps comprehensively the body of texts that are expressions of class struggle and which mediates the sociological and the cultural in a way that allows us to draw on the whole rich collective tradition of working class struggle [End Page 186] against racial patriarchal capitalism. **Understanding Native American literature as proletarian begins this process of political** and literary **reorganization**. Both Silko and Ortiz offer rethinkings of Marxism and class struggle that position Native Americans as pivotal actants and Native American culture and history as a rich reservoir of models for imagining change as well as postcapitalist culture and economy. Both culturally and politically, the Left needs to revivify its cultural imaginary and not dissociate by virtue of its exclusive cultural and political categories from political and cultural traditions that offer meaningful cross-fertilization. Indeed, just as Marx said the educators must be educated, so the Left must be educated by other left Marxist traditions it might not have even recognized as such. As Ward Churchill admonishes, when you think about Native American political concerns over such issues as land and water rights,¶ The great mass of non-Indians in North America really have much to gain, and almost nothing to lose, from the success of native people in struggles to reclaim the land which is rightfully ours. The tangible diminishment of U.S. material power which is integral to our victories in this sphere stands to pave the way for realization of most other agendas--from anti-imperialism to environmentalism, from African-American liberation to feminism, from gay rights to the ending of class privilege--pursued by progressives on this continent. Conversely, succeeding with any or even all these other agendas would still represent an inherently oppressive situation if their realization is contingent upon an ongoing occupation of Native North America without the consent of Indian people. Any North American revolution which failed to free indigenous territory from non-Indian domination would simply be a continuation of colonialism in another form. (88)¶ Indeed, just as Marx theorizes that **the working class is the lynchpin of liberation because in order to liberate itself it must do away with class altogether**, we can take Churchill here, as well as Silko and Ortiz, to be in some sense saying that for the non-Indian U.S. working class to liberate itself, Native Americans must be liberated. Put another way, the working class cannot liberate only part of itself, so it must identify and understand [End Page 187] itself fully in order to liberate itself fully. Mapping this understanding via the space of a proletarian literary genre is a place to begin.

Tohono Case Neg

Advantage Answers

Tohono key to drug smuggling

Robbins 9 (Ted Robbins, "Border Tribe In Midst Of Drug Smuggling 'Crisis'", NPR, May 19th, 2009, Morning Edition, http://www.npr.org/templates/story/story.php?storyId=104255061, 7/21/15 AV)

This year, law enforcement agencies expect to seize as much as 800,000 pounds of marijuana crossing one stretch of border in southern Arizona that runs through the Tohono O'odham Indian Nation. That's $1 billion worth of pot, and the Drug Enforcement Administration estimates that only about 20 percent of what's coming across is caught. There's a new push to intercept more of the contraband, but it's a huge challenge. The terrain is rugged, it's sovereign Indian land, and some tribal members are working with Mexican drug cartels. The problem has become so acute that tribal leadership, long reluctant to talk about the matter, is addressing it directly. "We are in a crisis," says Ned Norris, Tohono O'odham Tribal chairman. "We have too much drug activity ... we have too many of our people that are being bought into that system." Indeed, over the past five years, tribal members have been involved in 30 percent of all drug cases presented to the U.S. attorney in the region. The Tohono O'odham Nation is a smuggler's paradise. It's huge: roughly the size of Connecticut. It's sparsely populated with small villages spread far apart. And it's crisscrossed by hundreds of back roads and thousands of footpaths. "At any one given time, you probably could smuggle a battleship through there," says Tony Coulson, special agent with the DEA in Tucson. What makes matters more difficult for law enforcement is the fact that the O'odham nation has members and nine villages on the other side of the border in Mexico. And, because federal agents must respect the tribe's rights, members move freely through simple iron gates, the kind you would find on any ranch. Most tribal members cross back and forth from Mexico for legitimate reasons. They visit friends and family, go shopping or to the doctor. But some use the easy access to engage in illegal activity. According to tribal police, smugglers routinely approach tribal members, looking for help shipping drugs north to major cities. "Backpackers bring it across or vehicles bring it across, bring it to a certain location, or take it to the village and stash it somewhere," says Sgt. David Cray with the Tohono O'odham Police Department. "Then the local will pick it up from there and take it to Tucson or Phoenix." While he doesn't condone the activity, Norris says the temptation to get involved with smuggling is great. Poverty is widespread, and unemployment is the norm for the Tohono O'odham. "You wave five grand in somebody's face and say, 'All I want you to do is drive this vehicle from this point to this point, and here's $5,000 to do it,' " says Norris. The tribe wants more federal money for local enforcement, jobs and drug treatment programs. While Norris wants the Border Patrol to stop Mexican cartels from controlling tribal land, he acknowledges that many tribal members resent the presence of hundreds of armed Border Patrol agents. That resentment makes it difficult for the tribal police as well. Cray says that when people know about smuggling, they're unlikely to talk. Paraphrasing tribal members, he says, "It might be my cousin, it might be my brother-in-law ... I'm not going to come to you and tell you, 'Hey I'm going to testify against this guy.' " But Norris is talking about the epidemic of drug smuggling on his land. "I have an obligation," he says. "And unless we start talking about it and accepting the fact that we are in a crisis, then nothing's going to be done about it."

Tohono – drugs and violence

McCombs 8 (Brady McCombs, "Border agents attacked in 3 weekend incidents", Arizona Daily Star, May 8th, 2008, http://tucson.com/news/local/border/border-agents-attacked-in-weekend-incidents/article_07f517e7-6d72-5f1e-8974-e3ae36a08aeb.html, 7/21/15 AV)

U.S. Border Patrol agents this weekend were involved in three violent encounters, found 1,400 pounds of marijuana inside a truck that crashed at the border on the Tohono O'odham Nation and discovered 43 illegal immigrants in a Nogales drop house. In the first violent encounter, an agent fired at an oncoming truck about 9:45 p.m. Sunday near Arivaca Road southwest of Tucson, said Rob Daniels, Border Patrol Tucson Sector spokesman. The incident started when a Border Patrol agent on foot near Arivaca Road spotted a 2001 Ford pickup full of people on the north side of the road. As he approached the vehicle, 12 illegal immigrants fled. The driver stayed in the truck and drove toward the agent. At that point, the agent fired his weapon, Daniels said. It's unclear how many shots he fired. The agent wasn't hurt, and the 12 people were caught by other agents. They found the truck nearby but didn't find the driver. About 2:30 a.m. Sunday an agent was struck by a black Ford pickup near the village of Cocklebur on the Tohono O'odham Nation, Daniels said. The agent was northbound on a remote road when he spotted the pickup truck full of people. It looked like it was stuck so the agent got out of his vehicle and began walking toward it. The driver of the truck drove directly at the agent, striking him and knocking him to the ground. The vehicle drove away. Other agents found the truck about three-fourths of a mile from the area but didn't find the driver or the occupants. There were an estimated 20 people in the truck, which was reported stolen in Phoenix. The agent was treated and released with a sprained right ankle and left arm, Daniels said. On Saturday, an agent standing close to the border fence east of downtown Nogales was hit in the chest with a baseball-sized rock by a suspected smuggling scout, Daniels said. The agent was waiting for some illegal immigrants to head north when a man lobbed some rocks toward him. The agent stood up and identified himself. That's when the man hit him in the chest with the rock. The rock-thrower turned around and ran back toward Mexico. The agent chased him but lost track of him, Daniels said. The agent didn't have serious injuries, he said. The discovery of the 1,400 pounds of marijuana occurred about 1 a.m. Saturday after a Ford F250 pickup that was being monitored by agents crashed into the railroad-rail vehicle barriers about five miles east of the San Miguel gate on the Tohono O'odham Nation, Daniels said. The driver and passenger fled into Mexico. Agents found the drugs inside the cab and in the bed, which had a camper shell. The vehicle had been reported stolen in Tucson. Agents found the drop house at 11:30 p.m. Saturday after receiving a call from Nogales police, Daniels said. They found 43 illegal immigrants inside.

Tohono empirically key to drug and human trafficking

Johnson 10 (Tim Johnson, “Indian reservations on both U.S. borders become drug pipelines”, McClatchy DC, 6/16/10, http://www.mcclatchydc.com/news/nation-world/world/article24585559.html, 7/22/15 AV)

SELLS, Arizona — Like any young man on the Tohono O'odham Indian reservation on the border with Mexico, Clayton Antone can reel off the going rate for smuggling a load of marijuana into the U.S. "You get $2,000 for a 45-minute drive," Antone said. The Mexican and Canadian shiny pick-up trucks and late-model SUVs outside the homes of unemployed Indians on the reservation suggest that some have acted on the math. Traffickers in Mexico and Canada increasingly are using Indian reservations along the borders as conduits for bringing marijuana, Ecstasy and other illicit drugs into the U.S. The drug gangs take advantage of weak and underfunded tribal police forces and the remoteness of tribal lands, and they find that high unemployment rates and resentment of federal law enforcement agencies make some young native Americans ready allies. Drug seizures on the tribal lands have risen sharply. In 2005, law enforcement agents made 292 seizures totaling 67 tons of marijuana. By 2009, they tallied 1,066 seizures totaling more than 159 tons. Cocaine also is moving in. On June 11, the U.S. attorney for Arizona indicted nine Tohono people on trafficking charges, ending a five-month probe in which undercover agents made 39 buys totaling over 250 grams of cocaine. The U.S. Justice Department is closely watching on two reservations where it says the problems are most acute: the St. Regis Mohawk Reservation in upstate New York and the Tohono O'odham Reservation in Arizona. As much as 20 percent of all the high-potency marijuana grown in Canada each year is smuggled through the St. Regis Mohawk Reservation, according to the National Drug Intelligence Center's 2010 drug threat assessment report. Drug gangs smuggle 5 percent to 10 percent of all the marijuana produced in Mexico through the Tohono O'odham Reservation in Arizona, it adds. The

Mohawk reservation includes about 20 miles, or half a percent of the 3,987-mile U.S. border with Canada (not including Alaska), while the Tohono O'odham tribal lands take up about 75 miles, or 4 percent of the 1,933-mile border with Mexico. The Tohono O'odham Police Department employs some 65 officers, yet they must cover a sprawling Sonoran Desert reservation the size of Connecticut. Roads are good, but communities are far apart. "It takes an officer at least two hours to respond in some cases, depending on the locale," said Timothy Joaquin, a tribal council member on the security committee that oversees public safety issues. Compounding problems, the tribal population is only 27,000 — really a large extended family. Those involved in the drug trade aren't distant neighbors but a friend's cousin, or one's own relative, and loyalty runs deep. "I know people who actually go to Mexico and bring the drugs across," said Antone, who works at the Tribal Youth Council, which helps young people find jobs, and he doesn't condone the smuggling he sees around him. "Everybody knows who's doing it." Those involved know the back roads and trails better than do the Border Patrol agents who police the reservation for illegal migrants and smugglers. They're also familiar with when the agents take breaks, change shifts and use sniffer dogs at the checkpoints on the three roads leading out of the tribal area. Tohono smugglers send spotters out to the Border Patrol checkpoints to see when it's safe to pass along the route. "They'll send the message, 'There's no K-9. Come on through,'" Antone said. Joaquin, the council member, said a trip around tribal land suggests that something doesn't quite add up. "You think, 'how can somebody who's not employed afford such a good vehicle?'" he said. At one village, Al-Jek, less than a mile from the border, where a special type of fencing allows the passage of livestock and people but not vehicles, Angelita Castillo said a few hamlets are deeply involved, such as nearby Pisinemo. "Some of us who are here, we try to keep away from it," Castillo said. The trafficking is in people as well as drugs, and the Tohono O'odham reservation pays dearly. Mexican migrants leave trash strewn across the desert, break into homes in search of food, receive treatment at the tribal health services clinic and impose a burden on tribal police. The tribe has paid for autopsies for more than 50 migrants found dead on its land. "They find tons of trash that these individuals leave behind, backpacks and clothes. They've stolen so many bicycles," said Frances G. Antone, a member of the Tohono legislative council who's distantly related to Clayton Antone. Legal experts say Washington bears some blame for what has happened. "The quality of law enforcement on all tribal lands is generally weak," said Kevin Washburn, the dean of the University of New Mexico law school in Albuquerque. "It is primarily a federal responsibility, and the federal government's commitment has been weak. Roughly 2,500 miles northeast, severe environmental pollution and economic dislocation have afflicted the 22-square-mile St. Regis Mohawk Reservation in upstate New York. "The Mohawks basically had their traditional economies destroyed by General Motors and Alcoa polluting the land with PCBs," said David Stoddard, a spokesman for the tribal government. Three foundries and plants that the companies operated, beginning in the 1950s, have become Superfund sites to clean up polychlorinated biphenyls, or PCBs, a contaminant that's gotten into mothers' milk on the reservation. Each year, federal agents say, as much as a billion dollars of hydroponically grown marijuana and other drugs move through the reservation, which straddles the St. Lawrence Seaway. Some drugs, particularly cocaine, are smuggled north. "Multiple tons of high-potency marijuana are smuggled through the St. Regis Mohawk Reservation each week by Native American (drug trafficking organizations)," the drug threat assessment report said. In warmer weather, smugglers use speedboats and Jet Skis to zip across the river, turning to snowmobiles when the river ices over in winter. Montreal is a 90-minute drive, while New York City is a straight shot down Interstate 87. Amid new busts on the reservation, Sen. Charles Schumer, D-N.Y., proposed last December that 10 years be added to the term of any drug trafficker if they use Indian lands. The proposal hasn't yet become law. The smuggling trial of Russian emigre Andrey Nevsky, a left-handed pro boxer, last month in Albany, N.Y., brought new testimony that the reservation was a major transshipment point for tons of marijuana headed south. Prosecutors said smugglers who brought vehicles full of marijuana down I-87 used "blocking" vehicles to break traffic laws on purpose to distract police and protect the smugglers.

Tohono natives key to US-Mexico drug trafficking

Martin 10 (Michel Martin, "Indian Reservations Grapple With Drug Trafficking", NPR, 7/15/10, http://www.npr.org/templates/story/story.php?storyId=128539859, 7/22/15 AV)

Next we focus on drug trafficking through Indian country. The 2010 National Drug Control Strategy says that Indian reservations that straddle the border between U.S. and Mexico and the U.S. and Canada, are prime targets for drug traffickers because they are remote and often lack the policing they need to combat it effectively. We turn now to Ed Reina. He joins us now from the Tohono O'odham Nation where he is director of public safety. The reservation is located in southern Arizona on the U.S./Mexico border. In 2010, the Justice Department reported that 5 to 10 percent of all marijuana grown in Mexico makes its way through

the tribal lands of this Indian nation. And also with us from Mexico City, is Tim Johnson. He's Mexico bureau chief for McClatchy Newspapers and he's done extensive reporting about drug trafficking through Indian country in the United States. And I welcome you both and I thank you both so much for being with us. Mr. TIM JOHNSON (Mexico Bureau Chief, McClatchy Newspapers): Thank you. Mr. ED REINA (Director of Public Safety, Tohono O'odham Nation): Thank you. I appreciate this opportunity. MARTIN: Director Reina, if you'd start by telling us, when did you start to realize that there was this problem with drug traffickers using the Tohono O'odham Nation's lands for trafficking purposes? How did this start to become clear? Mr. REINA: There had always been a problem, but probably in the mid 2000, 2005, the U.S. government started closing down the areas along the border, such as San Diego, Texas, et cetera and they created a funnel effect, which increased the transport of drugs and human cargo through the Tohono O'odham Nation. Since we are a sovereign nation, there wasn't any concerted effort at that time to secure our borders. So those strategies occurred outside in California, Texas, et cetera, then Arizona became the funnel for a lot of the transport of illegal drugs. MARTIN: Can you give us a sense of a scope of the problem? Like, how many times a week you think there are crossings, for example? How much do you think is moving through? Could you just give us any sense of the dimensions of it? Mr. REINA: Well, just using the number of people that come through, and right now we estimate it may be 150 or so a day. As far as the marijuana, which is the major drug that comes across, this fiscal year not ending, this for 2009 we have over 38,000 pounds that are seized. Now this is just the Tohono O'odham police department. We estimate that Border Patrol seizes probably five or six times that amount. MARTIN: I'm just trying to wrap my head around 150 people a day crossing through the land. So I'm thinking that this would lead to, first of all, there's got to be some environmental degradation that goes with that. There's got to be other effects. But what are some of the other effects on the community. For example, are people from the community being induced to participate? Are they being, you know, asked to participate? Are they being forced to participate? What affect is it having on the people? Mr. REINA: Unfortunately, that is one of the aspects of it. People are through various means induced to participate by offering substantial amounts of money to transport or store, within their communities. On occasions, some are forced to, through threats. So we do have the drug cartels that are making their way through the Tohono O'odham Nation either through developing relationships with the people or making threats to the people. Certainly a lot of damage. Our Wildlife, our natural environment, our sacred sites, these are overrun and certainly restricts the cultural practices that the people do do. MARTIN: Tim Johnson, let's bring you into the conversation. You've reported on this extensively. Could you just pick up the thread here from director Reina, and just tell us a little bit about what you've observed first in the Tohono O'odham Nation, the impacts on that community. And, also, let's just broaden it out from there. I'd like to know if other tribes and nations are experiencing this as well. Mr. JOHNSON: Yeah. I was up there, most recently, at the end of May and the beginning of June. And it's I was really struck by the fact that the this is a large the tribal lands of the Tohono O'odhams, you know, is about the size of Connecticut. And the border actually is about 75 miles. And along most of that border, there's what they call coral fencing. That means you can walk through it livestock can walk through it, but vehicles can't get through it. So, you know, when you talk about this illegal migrants and drug smugglers through there, they're coming through in all sorts of ways. But a lot of times they're just walking through with backpacks filled with marijuana. And you see a lot of bicycles abandoned because it's not just desert, it's also tracks. And so, you know, you just see litter and all kinds of stuff there along the border. And it's a lot of people and a lot of stuff moving through. MARTIN: And before we go back to Ed Reina, Tim Johnson, is this happening elsewhere? Are other is elsewhere in Indian country affected by these a similar phenomenon? Mr. JOHNSON: It is. The same funneling effect that happens on the southern border also happens on the northern border, particular the St. Regis Mohawk Reservation in upstate New York. This reservation is only a couple of hours away from Ottawa and Montreal. So for drug trafficking purposes it's an ideal place to use as a pipeline for drugs. And it's different up there because what's coming through is marijuana, but it's also ecstasy coming from Canada and then cocaine moving from the U.S. into Canada. And up there, the reservation is on both sides of the border for the Mohawks. And they use it summer and winter. In the wintertime, you go across the St. Lawrence Seaway on snowmobiles, and they can transport a lot of drugs that way. And I think it's even more severe up in that area rather than in Arizona because you see that on the reservation there are a number of people with mansions and so forth and no really explainable source of riches. It's a lot of drugs moving through that reservation. MARTIN: So it's both the northern border and the southern border. Mr. JOHNSON: It is. It is. MARTIN: Okay. And Ed Reina, finally, a thought from you, what do you think it would take to improve the situation? Mr. REINA: It's going to take a lot of effort and partnering within the Tohono O'odham Nation within our health and human services organizations and the federal agencies. If you look at it from a prevention and intervention aspect, not just law enforcement. But law enforcement, what we're doing is partnering again with the federal agencies, also with some of our county agencies in the state to assist us. MARTIN: Are you feeling can I ask how you - before I let you go, are you feeling optimistic about this or not? Mr. REINA: Well, certainly we have to feel optimistic about it because we can't let it get away from us. We're optimistic that things will change. We're seeing a more collaborative approach from the federal agencies that we're hopefully will improve. Certainly with 600 agents out here, we can certainly develop a more defined strategy to address it. But, remember, the agent border patrol only has immigration authority. They

do the enforcement authority, which is left to Tohono O'odham PD. So we're the ones that have to investigate any of the assaults that occur on these whether they're just migrants trying to cross or the illegal drug smugglers that are assaulted or killed out here. That is up to Tohono O'odham Police Department to investigate. That's why we have only 50 or so agents on the road or officers on the road. The rest are criminal investigators that take quite a load to handle all these 150 or so people that come across our nations on a daily basis. And we investigate all the deaths that occur. And we estimate probably 80 a year that occur out here. For a small department, that's quite a load. We handle - criminally, about 60 percent of our efforts are directed to border-related incidents. So you can see how much that leaves to protection of our communities for all the other issues we have to deal with domestic violence, assaults. MARTIN: I see. Well, thank you for that. Tim Johnson, a final thought from you. What are the authorities saying particularly on the U.S. side? Because you obviously cover both. Do they feel that they are getting a handle on this or not? Mr. JOHNSON: Well, it's a matter of great concern. It's been mentioned in both the National Drug Intelligence Center report this year and in the White House Office on National Drug Control Policy, so both are looking at this with a lot of concern. You know, another factor is the economic factor. It's just very - I mean, there's a certain appeal if you have high unemployment on a tribal lands. And everybody there knows that you can earn $2,000 for a 45-minute drive in your pickup truck by carrying marijuana off the reservation into Tucson or into Phoenix, which isn't very far away. Now, if you don't have a job, you know, you can be tempted by that kind of offer. MARTIN: Tim Johnson is Mexico bureau chief for McClatchy Newspapers. He joined us from his office in Mexico City. Ed Reina is director of public safety with the Tohono O'odham Nation. He joined us from his office there. And I thank you both so much for speaking to us. Mr. JOHNSON: You're welcome. Mr. REINA: Thank you. MARTIN: And tomorrow we're slated to speak with Gil Kerlikowske, President Obama's director of the Office of National Drug Control Policy. Today he has released new survey results on America's fastest growing drug problem for those aged 12 and older, prescription drug abuse. If you have any questions for the nation's drug czar, we'd like to hear them. Please go to our blog at the TELL ME MORE page of NPR.org.

Status Quo Proves No Impact

Contreras 1 (Guillermo Contreras, "Tribe Wants U.S. Citizenship for Members in Mexico", Albuquerque Journal, May 27th, 2001, Guillermo Contreras is a journal staff writer for the Albuquerque Journal, http://suffrage-universel.be/us/usnaoo.htm, 7/22/15 AV)
Members of the Tohono O'odham tribe say they are tired of being treated as noncitizens. A tribal delegation stopped in Albuquerque on Friday, en route to Washington, D.C., to petition Congress to change immigration law so that all members of the tribe are recognized as U.S. citizens. Tribal members say they are falling victim to consequences of immigration policy because their traditional lands span the U.S.-Mexico border in Arizona and Sonora. Many say they are treated as illegal immigrants by the U.S. Immigration and Naturalization Service and Border Patrol, detained and deported. At a news conference hosted by First Nations North to South, an Albuquerque nonprofit group that works to unite native people regardless of borders, the tribe said it plans to ask Congress to amend the Immigration and Nationality Act so that tribal credentials are treated as the equivalent of federally issued certificates of citizenship or state-issued birth certificates. Their crusade is known as the "Make it Right" campaign. Rene Noriega, a spokesman for the Border Patrol's Tucson sector, which encompasses the Tohono O'odham Nation, said a packet of administrative proposals was drafted earlier this year in conjunction with the tribe and sent to INS headquarters in Washington. Part of the packet contains a proposal to grant citizenship to members of the nation on either side of the border "by birth," Noriega said. But the tribe seeks a permanent resolution, not just an administrative fix. The Tohono O'odham, once known as the Papago tribe, have lived along what is now the U.S.-Mexico border since long before the United States and Mexico existed as nations, the tribe said. With the Treaty of Guadalupe Hidalgo that ended the Mexican-American War and with the Gadsden Purchase of 1853, O'odham land was divided between the United States and Mexico. The majority of Tohono O'odham remained in the United States, but a significant number remain in Sonora, along with important villages, planting fields, ceremonial centers and sacred sites. Of the 24,000 registered members of the Tohono O'odham tribe, 7,000 have no birth certificates. About 1,400 live south of the border and are not recognized as U.S. citizens, the Tohono O'odham said. "We Tohono O'odham are no longer able to move freely on our own lands," said a news release read at the news conference by Christine Zuni Cruz of Isleta Pueblo, whose husband is Tohono O'odham and part of the delegation. For fear of arrest, prosecution and deportation, members in the United States don't visit relatives on the Mexican side and those in Sonora are prevented by the Border Patrol from entering the United States or are deported, according to Tohono O'odham vice chairman Henry Ramon, who made the statements on a video played at the news conference. The delegation is scheduled to arrive in Washington on June 2.

Solutions for the Tohono need to allow them to control the border crossing

Austin 91(Megan, Fall 1991, A CULTURE DIVIDED BY THE UNITED STATES-MEXICO BORDER: THE TOHONO O'ODHAM CLAIM FOR BORDER CROSSING RIGHTS, Arizona Journal of International and Comparative Law [Vol. 8, No. 2], Accessed 7/21/15)

The experiences of Canadian border tribes, as well as the provisions of the Texas Band of Kickapoo Act highlight several fundamental rights which Tohono O'odham border crossing legislation should recognize. In addition to a general right to cross the border, the legislation should address border identification requirements, management of ports of entry, search and inspection policies and customs regulations. Most importantly, the legislation should recognize the Tohono O'odham Tribe's rights to participate and to negotiate in national government decisions affecting the tribe. This participation component is crucial. Without the voice of the Tohono O'odham people, decisions affecting their cultural rights and freedoms may not recognize an unqualified right to cross the border. The Blood Tribe74 and the Texas Band of Kickapoo 75 set precedent for the rights of negotiation and participation. Through intergovernmental agreement, the United States Government and the Tohono O'odham Tribe could establish policies and regulations concerning identification, search and inspection and customs. For example, Tohono O'odham border crossing legislation should allow the tribe to establish a membership roll, but should avoid requiring identification issued by the United States Government. Identification such as tribal membership cards should be sufficient for border passage. Furthermore, the tribe should be party to the decision about the identification requirements. The Tohono O'odham people would not be exempt from search and inspection laws due to the problems with drug trafficking between Mexico and the United States. However, non-Indian border officials are not familiar with the traditions of the Tohono O'odham people. As illustrated by the experiences of the Canadian tribes, non-Indian officials often confiscate legal substances which are crucial to spiritual and cultural traditions.16 To avoid violations of these important rights, the Tohono O'odham people could work in some capacity advising border officials about tribal traditions and monitoring the treatment of the people. The suggested provisions recognize the tribe's power of self-government, a basic right necessary for the continued survival of the Tohono O'odham culture. The Tohono O'odham claim for effective border crossing legislation is strengthened by recent movements in international law focusing on cultural rights for indigenous groups.

Substantial T!!

TON's population is 28 thousand members

Tohono O'odham Nation, No Date (Tohono O'odham Nation Government Website, "About Tohono O'odham Nation", TON Government Website, No Date, http://www.tonation-nsn.gov/about_ton.aspx, 7/22/15 AV)

The Tohono O'odham Nation is a federally-recognized tribe that includes approximately 28,000 members occupying tribal lands in Southwestern Arizona. The Nation is the second largest reservations in Arizona in both population and geographical size, with a land base of 2.8 million acres and 4,460 square miles, approximately the size of the State of Connecticut. Its four non-contiguous segments total more than 2.8 million acres at an elevation of 2,674 feet.

U.S. Population approximately 318 million

The Promise of state based reform for native groups is founded in a violent temporal framing that is too little too late

Dillon 13 [Stephen Dillon, Stephen Dillon, assistant professor of Queer Studies, holds a B.A. from the University of Iowa and a Ph.D. in American Studies with a minor in Critical Feminist and Sexuality Studies from the University of Minnesota. "Fugitive Life: Race, Gender, and the Rise of the Neoliberal-Carceral State". https://conservancy.umn.edu/bitstream/handle/11299/153053/Dillon_umn_0130E_13833.pdf?sequence=1, 2013//Rahul]

For example, in the film, the state promises that "in the future" there will be jobs, an end to sexual violence, and racial and gender equality. But for Fanon, the "hopeless dregs of humanity" (or the wretched of the earth) are filled with an "uncontrollable rage" and thus exist in a temporal regime apart from that of the party or the nation. This is a time of intensity and immediacy ("the slaves of modern times are impatient"), where the future of the present as it is means no future at all.185 Like the financial, epistemological, and racialized legacies of slavery Baucom sees intensifying in our current moment, Fanon diagnoses the future of colonialism as the accumulation of the social, biological, and living death of the native. **The native lives a death in life produced by the racism of slavery and colonialism**. The future's horizon is the accumulation of past forms of racial terror and violence. In this way, Baucom and Fanon draw connections between race and time that are crucial to questions of time and futurity. The relationship between race, gender, death, and the future is central to the immediacy and spontaneity of the Women's Army and is foundational to the film's critique of the state, time, and the future. We can turn to the Fanonian-inspired prison 183 Franz Fanon, The Wretched of the Earth (New York: Grove Press, 1963), 107. 184 Ibid, 51. 185 Fanon, 74. 94 writings of George Jackson to further explore the relationship between death, race, and time. In his 1972 text Blood in My Eye, published shortly after he was shot and killed by guards at San Quentin prison, Jackson wrote of racism, death, and revolution: Their line is: 'Ain't nobody but black folks gonna die in the revolution.' This argument completely overlooks the fact that we have always done most of the dying, and still do: dying at the stake, through social neglect or in U.S. foreign wars. The point is now to construct a situation where someone else will join in the dying. If it fails and we have to do most of the dying anyway, we're certainly no worse off than before.186 Here, Jackson argues that the social order of the United States is saturated with an anti blackness that produces, in the words of Ruth Wilson Gilmore, "the state-sanctioned or extralegal production and exploitation of group-differentiated vulnerability to premature death."187 Jackson's text is littered with polemical insights that link race and death in a way that preemptively echoes Michel Foucault's declaration that racism is the process of "introducing a break into the domain of life that is under power's control: the break between what must live and what must die."188 When Jackson, Gilmore, and Foucault define race as the production of premature death, they make a connection between race and the future. Race is the accumulation of premature death and dying. For Jackson, race fractures the future so that the future looks like incarceration or the premature death of malnutrition, disease, and exhaustion. For Jackson, the future was the not the hopefulness of unknown possibilities. It was the devastating weight of knowing that 186 George Jackson, Blood in My Eye (Baltimore: Black Classic Press, 1972), 6. 187 Ruth Wilson Gilmore, Golden Gulags: Prisons, Surplus, Crisis, and Opposition in Globalizing California (Berkeley: University of California Press, 2007), 28. 188 Michel Foucault, Society Must Be Defended: Lectures at the Collège de France, 1975-1976 (New York: Picador Press, 2003), 254. 95 death was coming cloaked in abandonment, neglect, incarceration, or murder. In other words, according to Jackson, death was always already rushing toward the present of blackness.

Using the justification of rights for natives for the aff forgoes the problem that all of this land is still stolen - prior question

Churchill 3 [Ward LeRoy Churchill is an American author and political activist. He was a professor of ethnic studies at the University of Colorado Boulder from 1990 to 2007, "Acts of Rebellion", http://cryptome.org/2013/01/aaron-swartz/Acts-of-Rebellion.pdf, 2003//Rahul]

I'll debunk some of this nonsense in a moment, but first I want to take up the posture of self-proclaimed left radicals in the same connection. And I'll do so on the basis of principle, because justice is supposed to matter more to progressives than to right-wing hacks. Allow me to observe that the pervasive and near-total silence of the left in this respect has been quite illuminating. Nonindian activists, with only a handful of exceptions, persistently plead that they can't really take a coherent position on the matter of Indian land rights because, "unfortunately," they're "not really conversant with the issues" (as if these were tremendously complex). Meanwhile, they do virtually nothing, generation after generation, to inform themselves on the topic of who actually owns the ground they're standing on.50 Listen up folks: The record can be played only so many times before it wears out and becomes just another variation of "hear no evil, see no evil." At this point, it doesn't take Einstein to figure out that the left doesn't know much about such things because it's never wanted to know, or that this is so because it has always had its own plans for utilizing land it has no more right to than does the status quo it claims to oppose.51 The usual technique for explaining this away has always been a sort of pro forma acknowledgement that Indian land rights are of course "really important" (yawn), but that one "really doesn't have a lot of time" to get into it. (I'll buy your book, though, and keep it on my shelf even if I never read it.) Reason? Well, one is just "too busy" working on "other issues" (meaning, things that are considered to actually be important). Typically enumerated are sexism, racism, homophobia, class inequities, militarism, the environment, or some combination thereof. It's a pretty good evasion, all in all. Certainly, there's no denying any of these issues their due; they are all important, obviously so. But more important than the question of whose land we're standing on? There are some serious problems of primacy and priority embedded in the orthodox script.52 To frame things clearly in this regard, let's hypothesize for a moment that all of the various nonindian movements concentrating on each of the above-mentioned issues were suddenly successful in accomplishing their objectives. Let's imagine that the United States as a whole were somehow transformed into an entity defined by the parity of its race, class, and gender relations, its embrace of unrestricted sexual preference, its rejection of militarism in all forms, and its abiding concern with environmental protection. (I know, I know, this is a sheer impossibility, but that's my point.) When all is said and done, the society resulting from this scenario is still, first and foremost, a colonialist society, an imperialist society in the most fundamental possible sense, with all that that implies.53 This is true because the scenario does nothing at all to address the fact that whatever is happening happens on someone else's land, not only without their consent, but through an adamant disregard for their rights to the land. Hence, all it means is that the invader population has rearranged its affairs in such a way as to make itself more comfortable at the continuing expense of indigenous people. The colonial equation remains intact and may even be reinforced by a greater degree of participation and vested interest in maintenance of the colonial order among the settler population at large.54 The dynamic here is not very different from that evident in the American "Revolution" of the late eighteenth century, is it?55 And we all know very well where that led, don't we? Should we therefore begin to refer to socialist imperialism, feminist imperialism, gay and lesbian imperialism, environmentalist imperialism, Afroamerican and la Raza imperialism? I hope not. I hope instead that this is mostly just a matter of confusion, of muddled priorities among people who really do mean well and would like to do better.56 If so, then all that is necessary to correct the situation is a basic rethinking of what it is that must be done, and in what order. Here, I'll advance the straightforward premise that the land rights of "**First Americans" should serve as a first priority** for attainment of everyone seriously committed to accomplishing positive change in North America.

This colonial drive continues the genocide against Indigenous bodies

Wolfe 6 [Patrick Wolfe, researches stuff on genocide and settler colonialis. "Settler colonialism and the elimination of the native", http://www.kooriweb.org/foley/resources/pdfs/89.pdf//Rahul]

The question of genocide is never far from discussions of settler colonialism. Land is life—or, at least, land is necessary for life. Thus contests for land can be— indeed, often are—contests for life. Yet this is not to say that settler colonialism is simply a form of genocide. In some settler-colonial sites (one thinks, for instance, of Fiji),

native society was able to accommodate—though hardly unscathed—the invaders and the transformative socioeconomic system that they introduced. Even in sites of wholesale expropriation such as Australia or North America, settler colonialism's genocidal outcomes have not manifested evenly across time or space. Native Title in Australia or Indian sovereignty in the US may have deleterious features, but these are hardly equivalent to the impact of frontier homicide. Moreover, there can be genocide in the absence of settler colonialism. The best known of all genocides was internal to Europe, while genocides that have been perpetrated in, for example, Armenia, Cambodia, Rwanda or (one fears) Darfur do not seem to be assignable to settler colonialism. In this article, I shall begin to explore, in comparative fashion, the relationship between genocide and the settler-colonial tendency that I term the logic of elimination.1 I contend that, though the two have converged—which is to say, the settler-colonial logic of elimination has manifested as genocidal—they should be distinguished. Settler colonialism is inherently eliminatory but not invariably genocidal. As practised by Europeans, both genocide and settler colonialism have typically employed the organizing grammar of race. European xenophobic traditions such as anti-Semitism, Islamophobia, or Negrophobia are considerably older than race, which, as many have shown, became discursively consolidated fairly late in the eighteenth century.2 But the mere fact that race is a social construct does not of itself tell us very much. As I have argued, different racial regimes encode and reproduce the unequal relationships into which Europeans coerced the populations concerned. For instance, Indians and Black people in the US have been racialized in opposing ways that reflect their antithetical roles in the formation of US society. Black people's enslavement produced an inclusive taxonomy that automatically enslaved the offspring of a slave and any other parent. In the wake of slavery, this taxonomy became fully racialized in the "one-drop rule," Journal of Genocide Research (2006), 8(4), December, 387–409 ISSN 1462-3528 print; ISSN 1469-9494 online/06=040387-23 # 2006 Research Network in Genocide Studies DOI: 10.1080=14623520601056240 whereby any amount of African ancestry, no matter how remote, and regardless of phenotypical appearance, makes a person Black. For Indians, in stark contrast, non-Indian ancestry compromised their indigeneity, producing "half-breeds," a regime that persists in the form of blood quantum regulations. As opposed to enslaved people, whose reproduction augmented their owners' wealth, Indigenous people obstructed settlers' access to land, so their increase was counterproductive. In this way, the restrictive racial classification of Indians straightforwardly furthered the logic of elimination. Thus we cannot simply say that settler colonialism or genocide have been targeted at particular races, since a race cannot be taken as given. It is made in the targeting.3 Black people were racialized as slaves; slavery constituted their blackness. Correspondingly, Indigenous North Americans were not killed, driven away, romanticized, assimilated, fenced in, bred White, and otherwise eliminated as the original owners of the land but as Indians. Roger Smith has missed this point in seeking to distinguish between victims murdered for where they are and victims murdered for who they are.4 So far as Indigenous people are concerned, where they are is who they are, and not only by their own reckoning. As Deborah Bird Rose has pointed out, to get in the way of settler colonization, all the native has to do is stay at home.5 Whatever settlers may say— and they generally have a lot to say—the primary motive for elimination is not race (or religion, ethnicity, grade of civilization, etc.) but access to territory. Territoriality is settler colonialism's specific, irreducible element. The logic of elimination not only refers to the summary liquidation of Indigenous people, though it includes that. In common with genocide as Raphae¨l Lemkin characterized it,6 settler colonialism has both negative and positive dimensions. Negatively, it strives for the dissolution of native societies. Positively, it erects a new colonial society on the expropriated land base—as I put it, settler colonizers come to stay: invasion is a structure not an event.7 In its positive aspect, elimination is an organizing principal of settler-colonial society rather than a one-off (and superseded) occurrence. The positive outcomes of the logic of elimination can include officially encouraged miscegenation, the breaking-down of native title into alienable individual freeholds, native citizenship, child abduction, religious conversion, resocialization in total institutions such as missions or boarding schools, and a whole range of cognate biocultural assimilations. All these strategies, including frontier homicide, are characteristic of settler colonialism. Some of them are more controversial in genocide studies than others.

Vote negative to reject the 1AC in favor of a historical genealogy that traces the political repugnancies to Settlerist invasion.

Churchill 3 [Ward LeRoy Churchill is an American author and political activist. He was a professor of ethnic studies at the University of Colorado Boulder from 1990 to 2007, "Acts of Rebellion", http://cryptome.org/2013/01/aaron-swartz/Acts-of-Rebellion.pdf, 2003//Rahul]

The question arises of how best to approach the mass of information upon which any radical "(re)interpretation of The American Experiment" must proceed. 50 The sheer volume of what has been shunted aside in canonical recounting threatens to overpower the most intrepid of counternarratives, dissolving into a fine mist of contrarian detail. How then to give shape to the whole, ordering and arranging its contents in ways the explicate rather than equivocating or obscuring their implications, making the conclusions to be drawn not just obvious

but unavoidable? How, in other words, to forge an historical understanding which in itself amounts to an open demand for the sorts of popular action precipitating constructive social change? 51 There are several methodological contenders in this connections, beginning with Howard Zinn's commendable efforts in A Peole's History of the United States to more or less straightforwardly rewrite Samuel Eliot Morison's Oxford History of the American People in reverse polarity, effigizing rather than celebrating the status quo. Historical materialism, 53 functionalism, 54 structuralism, 55 hermeneutics, 56 and even some of the less tedious variants of postmodernism offer themselves as alternatives (usually as the alternative). 57 So, too, do subgenres of postcolonialism like subaltern studies. 58 Each of these "versions of history," at least in some of their aspects, are of utility to the development of a bona fide U.S. historical praxis. 59 At face value, however, none are able to avoid the fate of either descending into a state of hopeless atomization, 60 or, alternatively, overarching themselves to the point of producing one or another form of reductionist metahistorical construction. 61 Perhaps the surest route to avoiding these mirrored pitfalls will be found in the Nietzschean method of "historical genealogy" evolved by Michel Foucault in works such as The Archeology of Knowledge. 62 This is a highly politicized endeavor in which the analyst, responding to circumstances s/he finds objectionable in the present, traces its "lineage" back in time until a fundamental difference is discerned (this "historical discontinuity" is invariably marked by an "epistemological disjuncture"). Having thus situated the source of the problem in its emergence from a moment of historical transition, the analyst can proceed to retrace the unfolding of the specific history at issue forward in time, with an eye toward what would need to be "undone" – and how – if the future is to be rendered more palatable than the current state of affairs. In this, whatever set of circumstances prevailed prior to the discontinuity is mined for its potentially corrective features. 63 Instead of condemning the barbarism of pre-modern society, its inhumanity, injustice, and irrationality, Foucault presents the difference of the pre-modern system by demonstrating that, on its own terms, it makes sense and is coherent. The reason for doing so, let it be noted, is not to present a revised picture of the past, nostalgically to glorify [its] charms … but underline the transitory nature of the present system and therefore remove the pretense of legitimacy it holds by dint of a naïve, rationalist contrast with the past. 64 Although firmly grounded in Nietzsche, Foucault's model also incorporates a "post-structuralist strategy of detotalization oriented to the particularity of the phenomena" studied, and "a structuralist strategy oriented to remove the analysis from the register of subjectivist humanism." 65 To this might be added occasional forays into a strategy of immanent critique in which the contemporary order is held strictly accountable to the standards and ideals it typically claims as being descriptive of its own composition and character.66 Overall, the object is to reveal in all their squalor the pretensions of "modern" mores and institutions, "undermining the [illusion of] naturalness" in which they seek to cloak themselves, and to make explicitly thereby both the necessity and tangible possibility of their being dismantled or transcended. 67 This book follows Foucauldian procedure. In the U.S., irrespective of which among the earlier-sketched grotesqueries is emphasized – be it America's voracious greed and genocidal disregard for the wellbeing of others, the concomitants of militarism and virulent racism, or the weird psychic stew in which imperial/racial arrogance has been blended in equal part with the most sanctimonious professions of peaceful innocence – its lineage traces to precisely the same source: the invasion(s) of Native North America by Europeans during the sixteenth and seventeenth centuries.68 Absent that profound and violently imposed rupture in historical continuity, nothing else is objectionable in American history – slavery, for instance – or in contemporary American life – "globalization," to name a salient example – would have been materially possible (or, in the main, conceivable). The relationship between Euro-americans and American Indians is therefore the most fundamental of any on the continent. It is the bedrock upon which all else is built, the wellspring from whence all else flows69 Hence, in tracing the course and temper of Indian-white relations, a considerable light is shed upon the relationship of the U.S. "mainstream" population and virtually every other people it has encountered over the past two and a quarter centuries, both "domestically" and abroad. It might indeed be argued that Euroamerica's attitude towards and treatment of the peoples indigenous to the "homeland" it has seized for itself has been in many respects definitive of those it has accorded all Others, including not least – and in some cases increasingly – certain sectors of its own nominal racial/ethnic constituency.70 The postinvasion history of Native America thus provided the lens through which all of American history must be examined if it is to be in any sense genuinely understood. To put it more personally, it is essential, if one is to truly appreciate the implications of one's own place in American society, that one "read" them in terms of U.S./Indian relations.71 It follows that correction of the socioeconomic, political and other repugnancies marking modern American life is, in the final analysis, entirely contingent upon rectification of nonindian American's abecedarian relationship to American Indians. Here, history provides the agenda concerning what must be done. So long as Native North America remains internally colonized, subject to racial codes, indemnified for the genocide and massive expropriations we've suffered – and continue to suffer – genocide, colonialism, racism, and wholesale theft will remain the signal attributes of American mentality and behavior.72 Insofar as this is so, the U.S. will undoubtedly continue to comport itself in the world as it has in the past. And thus, in turn, will inevitably result in response far more substantial than that made on 9-1-1.

Drug Trafficking DA/Terror DA

1nc

Border Patrol and Tohono nations are arresting cartels – greater surveillance is needed- the plan would reduce surveillance in the territory

PM 11 [Police Mag, Police Magazine is a law enforcement magazine and website containing articles, news, police product reviews, "Cartel Operators Used Indian Reservation As Smuggling Pass-Through", http://www.policemag.com/channel/gangs/news/2011/05/19/sinaloa-cartel-operators-used-indian-reservation-as-smuggling-pass-through.aspx, May 11th, 2011//Rahul]

Members of the Jesus Valencia Rodriguez drug trafficking organization, who work on behalf of the Sinaloa cartel, now face charges of trafficking of marijuana, human smuggling, criminal conspiracy, money laundering, and related charges. "These suspects used remote areas of the Tohono O'Odham Nation in Arizona to funnel drugs and humans into the United States, and to re-direct racketeering proceeds and weapons back into Mexico," according to Arizona Attorney General Tom Horne. "This criminal enterprise was a well-organized operation that constantly worked against law enforcement interdiction efforts with sophisticated counter-surveillance methods, including using human spotters embedded on U.S. soil, night vision equipment and radio communication." Jesus Valencia Rodriguez is suspected of organizing criminal activities for the Caborca-based Paez-Soto cell of the Sinaloa cartel since 2008. Valencia-Rodriguez is responsible for coordinating the importation of multi-ton quantities of marijuana and illegal aliens from Mexico into the U.S. through the San Miguel Gate area and the smuggling of bulk drug proceeds and assault weapons back into Mexico. The San Miguel Gate area is a remote U.S./Mexico border location on the Tohono O'Odham Indian Reservation that allows tribal members to pass freely between the U.S. and Mexico. More than 150 drug seizures totaling approximately 28,000 pounds of marijuana (since May 2008) have been linked to the Valencia-Rodriguez trafficking organization. In February of 2010, law enforcement officials also seized 41 assault weapons in the San Miguel vicinity that were en-route from Phoenix, Ariz., to Mexico. The Valencia-Rodriguez organization uses compartments in vehicles, ramped vehicle loads, concealed-tire loads, and backpackers to facilitate drug transportation operations in the remote desert area, according to the DEA. "We will not tolerate the transport of illegal narcotics through the Tohono O'Odham Nation," according to Ned Norris Jr., chairman of the Tohono O'Odham Nation. "We are committed to protecting our tribal members and the security of the United States, and the Nation will continue to work in collaboration with other law enforcement agencies to ensure this type of illegal activity is stopped."

Drug crime decreases legitimacy of Mexican government – risks collapse

Thoumi et al. 10 (*Francisco E., expert at the Wilson Center, Ph.D., professor of economics and the director of the Research and Minotiring Center on Drugs and Crime at Universidad el Rosario, former research coordinator at the United National Office of Drug Control and Crime Prevention, **Raúl Benitez, public policy scholar at the Wilson Center, researcher at the Center for Interdisciplinary Research in Science and Humanities, professor and researcher at the North America Rsearch Center of UNAM-Mexico, CNAS Senior Fellow, Distinguished Scholar-in-Residence, School of Public Affairs and Washington College of Law, Ph.D in Latin American Studies at UNAM, Master of International Affairs from the Centro de Investigacion y Docencia Economica, ***professor at the University of San Andrés, Ph.D., University of Salvador, political science, Francine, professor of anthropology at the Central University of Venezuela, political science degree, Friedrich, Ebert, and Stiftung Research, "The impact of organized crime on Democratic Governance in Latin America",

Organized crime is a growing problem worldwide. In Latin America and the Caribbean groups of organized crime are undermining the states capacity to govern. In- stitutions of the political system are undercut by the so called »Narcos« or other non state actors. It is obvious that organized crime has adopted mechanisms of the globalized economy such as a high degree of flexibility, the ability to quickly adjust to market changes and the use of socially weak segments of society for their means. While organized crime gets more access to and through politics, already weakened states in Latin America are put under serious pressure. The impact on recently democratized states like Mexico is severe. The role of or- ganized crime in the erosion of democratic governance is marked by zones of fragile statehood, the undermin- ing of political institutions, the replacement of social pol- icies by non state actors, the bribing of political actors and the illicit financing of political campaigns. But not only has the existence of criminal activities cre- ated a threat to democratic governance. The repressive politics that often respond to organized crime activities further create a spiral of mistrust, corruption and vio- lent reactions. High levels of violence and public inse- curity often justify the popularity of zero tolerance ap- proaches: Politics of the »hard hand« such as in Mexico and Colombia where the military is fighting in »a war on drugs«. These politics often produce human rights abus- es and thus further undermine democratic forms of gov- ernance. The involvement of politicians and police forces or the military in illegal businesses further undermine the trust of civil society into institutions of the state.

State failure destabilizes the globe – results in disease spread, nuclear terrorism, and rogue nations – this guarantees nuclear war

TASC et al 03

(The Transnational Institute, The Center of Social Studies, Coimbra University, and The Peace Research Center – CIP-FUHEM, "Failed and Collapsed States in the International System," December, found at: http://www.globalpolicy.org/nations/sovereign/failed/2003/12failedcollapsedstates.pdf)

In the malign scenario of global developments the number of collapsed states would grow significantly. This would mean that several more countries in the world could not be held to account for respecting international agreements in various fields, be it commercial transactions, debt repayment, the possession and proliferation of weapons of mass destruction and the use of the national territory for criminal or terrorist activities. The increase in failed states would immediately lead to an increase in international migration, which could have a knock-on effect, first in neighbouring countries which, having similar politico-economic structures, could suffer increased destabilization and collapse as well. Developments in West Africa during the last decade may serve as an example. Increased international migration would, secondly, have serious implications for the Western world. In Europe it would put social relations between the population and immigrant communities under further pressure, polarizing politics. An increase in collapsed states would also endanger the security of Western states and societies. Health conditions could deteriorate as contagious diseases like Ebola or Sars would spread because of a lack of measures taken in collapsed areas. Weapons of mass destruction could come into the hands of various sorts of political entities, be they terrorist groups, political factions in control of part of a collapsed state or an aggressive political elite still in control of a national territory and intent on expansion. Not only North Korea springs to mind; one could very well imagine such states in (North) Africa. Since the multilateral system of control of such weapons would have ended in part because of the decision of the United States to try and check their spread through unilateral action - a system that would inherently be more unstable than a multilateral, negotiated regime - one could be faced with an arms race that would sooner or

later result in the actual use of these weapons. In the malign scenario, relations between the US and Europe would also further deteriorate, in questions of a military nature as well as trade relations, thus undercutting any possible consensus on stemming the growth of collapsed states and the introduction of stable multilateral regimes towards matters like terrorism, nuclear weapons and international migration. Disagreement is already rife on a host of issues in these fields. At worst, even the Western members of the Westphalian system - especially those bordering on countries in the former Third World, i.e. the European states - could be faced with direct attacks on their national security.

2nc-Uniqueness

Tohono Land Popular for Cartels

CBP has been very successful in stopping drug trafficking operation in Tohono areas

ICTMN 11 [Indina Country News, "Tohono O'odham Reservation Part of Smuggling Route in Drug Raid" http://indiancountrytodaymedianetwork.com/2011/11/02/tohono-oodham-reservation-part-smuggling-route-drug-raid-61065, November 1st, 2011//Rahul]

For the Pinal County Sheriff's office in Arizona a routine traffic stop in June 2010, has landed them one of the largest drug-smuggling busts in Arizona to date. The traffic stop, which began Operation Pipeline Express, saw the third phase of the operation carried out on October 30, with 22 arrests. At a news conference on October 31, investigators announced the three phases led to the seizure of more than 30 tons of marijuana and 76 arrests of people suspected of working for Mexico's notorious Sinaloan Cartel. The cartel, headquartered in the northwestern state of Sinaloa on Mexico's Pacific coast—considered the cradle of Mexican narcotics trafficking since the 1960s, generated proceeds estimated close to $2 billion through the smuggling of 3.3 million pounds of marijuana, 20,000 pounds of cocaine and 10,000 pounds of heroin in its five year existence according to an MSNBC report. The ring, under a massive criminal investigation involving more than two-dozen law-enforcement agencies, used a notorious smuggling route through the Tohono O'odham Indian Reservation. Authorities said cells based in Chandler, Stanfield and Maricopa, used backpackers and vehicles to run narcotics across the border according to an article by The Arizona Republic. Matt Allen, special agent in charge for Immigration and Customs Enforcement in Arizona said the ring was estimated moving $33 million in marijuana, cocaine and heroin into the United States a month. The arrests hit the organization at all levels, from "mules" to border scouts, and bosses in Phoenix. "[October 31] we have dealt a significant blow to a Mexican criminal enterprise that has been responsible for poisoning our communities," said Tom Horne, Attorney General. "These drugs not only destroy lives, they create an environment of violent criminality that ensnares innocent victims. . . . I find it completely unacceptable that Arizona neighborhoods are treated as a trading floor for narcotics." According to a CBS news report, the operation consisted of three raids that spanned 17 months against the cartel that handles up to 65 percent of all drugs illegally transported to the United States experts say. "I expect there will be a shift," Allen said, cautious of declaring this a victory in the war on drugs in a New York Times article. "One investigation is not going to put them out of business. We have to continually adapt."

Impact

Violence TURN

Drug smugglers and undocumented immigrants are committing acts of violence against the Tohono people- turns your violence impact- more border patrol agents needed to solve.

Pitts and Lieberman 13 (June 27, 2013, Byron Pitts and Dan Lieberman, *ABC News*, http://abcnews.go.com/US/efforts-secure-us-mexico-border-ariz-native-americans/story?id=19496394//AGY)

In Southwest Arizona, where the U.S. and Mexico borders meet, the U.S. Border Patrol has made huge strides in capturing border crossers and seizing drugs from Mexican cartels, but there is one stretch of land along the border that has made life a daily hell for a tribe of Native Americans. The Tohono O'odham Nation, a Native American reservation about the size of Connecticut, is located in the Sonoran Desert, about 60 miles south of Tucson, Ariz., right on the U.S. border with Mexico. Here, there is no barbed-wire high fence, but open desert, with only a vehicle barrier meant to stop cars but not people. It is an area where the U.S. government has the fewest resources and the widest open space to patrol, making it a hot spot for Mexican drug cartels and human smuggling operations. "Nightline" spent 48 hours with U.S. Border Patrol agents and the Tohono O'odham reservation police force to get a firsthand look at the battle on the border. "The Tohono O'odham Nation is one of our most problematic areas," Arizona Commander Jeffrey Self of the U.S. Border Patrol told "Nightline". "The narcotics smugglers have moved up into the mountainous area. There is not a lot of access." While border-crossing apprehensions in Arizona are down 43 percent from two years ago, it is a different, more complicated story on the Tohono O'odham Nation. Drug seizures on the reservation are steadily climbing -- nearly 500,000 pounds of marijuana was seized last year, a number that has nearly doubled since 2010. Recently, Tohono O'odham police seized $1 million worth of marijuana in just one week. But the Tohono O'odham tribal members are caught in the middle of a war between the Mexican drug cartels coming through their community and the U.S. Border Patrol officers who tribal members say have become more aggressive to stop them. In the Tohono O'odham Nation is "The San Miguel Gate," an area on the U.S.-Mexico border considered to be sacred by the Tohono O'odham. It is the only place where Native Americans can freely walk across the border, but there, the only thing separating Mexico and the U.S. is a low fence guarded by a lone border patrol agent and a light pole powered by a generator. Verlon Jose, a Tohono O'odham tribal leader whose family has lived on the reservation for generations, and other members of his tribe talked to "Nightline" at "The San Miguel Gate." Jose acknowledged that the Gate carries a myriad of problems. "Drugs come through here, migrants come through here," he said. "We see harassment from individuals who are moving contraband north, moving migrants north. Homes broken into, vehicles broken into. It's gotten more aggressive." Jose's cousin Francine Jose lives in a remote part of the reservation and estimated that her house is broken into about once a month by people crossing the border illegally. There is no cell service inside her house so she can't easily call for help -- according to authorities, the police response time to her house can take up to 45 minutes -- and she said the border crossers who walk across her property know it. "They are constantly breaking in all the time," Francine Jose said. "There was one just recently where they cooked stuff, about a month ago, slept."

Counterplan Maybe

Text: The United States Federal Government should grant the Tohno O'odham Nation full sovereignty and grant any request of financial aid to the Tohono O'odham nation.

Solves the case but avoids the problems of border security

Di Iorio 7 [William R. Di Iorio, B.A., Government and International Studies, University of Notre Dame, 1998; M.A. Political Management, George Washington University, 2002; J.D. Rev. 407, 2007 LexisNexis//Rahul]

Currently, there are no uniform rules governing border crossing by Native American tribe members. The Tohono O'odham Nation of Arizona and Mexico has 24,000 enrolled members who possess the right to cross the border without any restrictions. n73 In many cases, Native Americans [*419] who practice this right to cross face harassment by Border Patrol officials. n74 Border Patrol agents reportedly confiscate certain religious articles because they suspect that the articles are used for drug activity. n75 Others report being threatened by these officials. n76 As a result, many tribe members have stopped traveling between the United States and Mexico, effectively cutting them off from their ancestral home. n77 This treatment is contrary to the prior statements of international norm, a violation of what is at least recognized as sovereignty. It is hard to imagine that a Native American tribe would be an active participant or supporter in promoting more secure borders when the tribe members must bear the majority of the real costs. Contrary to the principles of the Jay Treaty and the Treaty of Ghent, American-born Native Americans can only cross the Canadian border at-will by proving that they possess at least fifty percent Native American blood. n78 Additionally, Native Americans on the United States-Canadian border have largely lost the ability to cross the border without being searched and without the imposition of duties on their transported goods. n79 In United States v. Garrow, the United States Court of Customs and Patent Appeals held that the right to cross the borders duty-free, created by the Jay Treaty, had been abrogated by the War of 1812 between the United States and England. n80 While it appears this decision resulted from faulty reasoning and a failure to consider all applicable law, it remains valid today. n81 Again, promises made to these tribes under the Jay Treaty have been rescinded, violating sovereign principles. C. Rampant Criminal Activity Increased security from the Border Patrol has had limited effect in curbing criminal activity along the United States-Mexico border. n82 For example, Border Patrol has largely closed off the traditional border crossing areas in the Tohono O'odham Nation. n83 Because of this, even tribe members with proper identification cannot cross at these traditional [*420] locations, and instead must cross at official locations many miles away or risk an illegal crossing. n84 The border area within the Nation is responsible for 700 to 1,000 illegal and undetected border crossings per year, revealing the prevalence of these illegal crossings despite the Border Patrol's best efforts. n85 Illegal crossers have begun crossing in less hospitable desert areas and are successful in part because of the welcoming nature of the tribe members. n86 D. Native American Self-Government Internal power struggles create many of the crime problems in Native American lands. The Mohawk tribe of New York and Canada presents a valuable case study of the form of internal conflict faced by many border tribes. n87 Three separate leadership groups attempt to govern the tribe, one council governing the Canadian side, another council governing the United States side, and the traditional tribal council of chiefs continuing to operate over the entire land. n88 As a result, the tribe lacks any uniformity of organization, cannot conduct successful long-term planning, and has tremendous difficulty in providing services to its 7,000 members. n89 E. Intergovernmental Relations Current federal policy largely ignores the role of Native Americans in securing our nation's borders. The Department of Homeland Security's Secure Border Initiative mentions the interrelation between the federal government of the United States, the individual states, Canada, and Mexico, but makes no mention of Native American tribes. n90 The Act creating the Department of Homeland Security specifically and repeatedly mentions working with the states, but never mentions any relationship with Native American tribes, nor does it have any policy promoting intergovernmental relations, contrary to a policy of the Department of Justice mandating such a relationship. n91 An initiative in Arizona, home of the Tohono O'odham, attempts to bolster security along that international [*421] border through federal, state, and local authorities, but does not include any Native American authorities. n92 Lack of consultation in forging security plans creates negative relationships between the federal government and its Native American counterparts. n93 This situation exists despite federal policy to the contrary. n94 F. Limits to Border Patrol Jurisdiction Federal and state governments lack jurisdiction in certain areas to investigate criminal activity along these borders. n95 As a recent example, the Chippewa Cree Tribe in Montana suffered several child abductions, with the children taken from the reservation and transported to Canada. n96 Because of the presence of an international border in this criminal matter, neither the federal government nor that of Montana could assist. n97 Additionally, United States Border Patrol may only use a sixty-foot wide stretch of land from the international boundary line to conduct its operations. n98 Once an illegal entrant passes beyond that sixty foot stretch, Border Patrol agents lose authority to pursue. n99 Because of the difficulties in enforcing certain areas because of this limitation, active enforcement has declined in many areas. n100 G. Border Security Funding Strategy Native American tribes do not receive security funding directly from the federal

government. n101 Despite existing as "dependent domestic states," Native American tribes must request security funds from state governments, rather than the Federal Department of Homeland Security, which disperses the funds to the states. n102 Under current policy, states have the option of providing funding to Native American tribes, but no means exist for those tribes to receive direct funding from the federal [*422] government. n103 This has proven especially problematic, as evidenced by significant funding discrepancies in North Dakota, where only $ 75,000 of a $ 9,000,000 outlay to the state was earmarked to a local tribe, largely due to a failure of the state to consult with the tribe to determine its needs. n104 Rather than participating as partners focused on a common goal, Native Americans are largely overlooked in the federal government's security planning and frequently treated with animosity by Border Patrol. Native American tribes lack the funding to be active participants and through the neglect of the federal government, lack the internal skills and tools to provide assistance. In certain cases, Native American tribes may exacerbate the border security problem by aiding illegal entrants, who are undoubtedly more gracious than many of the Border Patrol agents the tribe members encounter. IV. Possible Solutions and Implications A. Eliminate Sovereignty 1. The Plan The federal government could rescind its grant of limited sovereignty to border tribes, at least to the extent of policing the territories. Case law indicates that such a plan is legally feasible, as Native American sovereignty exists solely at the pleasure of Congress. n105 Under this option, federal officials would have sole authority to patrol the border area within the Native American areas as well as to investigate and pursue potential risks throughout the territory. This would permit the federal government to lower its outlays to state governments and instead increase direct federal spending on its own security efforts. Additionally, by eliminating Native American tribes as part of the security plan, the federal government would significantly reduce the number of parties it must coordinate to effectuate its strategy. 2. Problems While arguably permissible in a legal sense, such a plan violates concepts of good faith. It stands in opposition to international norms and a long history of according certain rights and protections to Native [*423] Americans. While Native Americans would no longer have any obligations to provide border security, it cannot be said that they would not continue to have a role in homeland security. Federal officials would still need cooperation from Native Americans to conduct investigations and pursue suspects within the tribal land. It is difficult to see how such cooperation would be forthcoming from a people who had just lost what few rights they possessed. Additionally, such a plan creates the problem of disparate treatment among the various Native American tribes. There would be no reason to eliminate sovereignty to non-border tribes that do not present the same national security problems. On its own, this disparate treatment is not a true barrier to enacting such a plan. While a tenet of democratic society, equal treatment is largely illusory in practice. In particular, disparate treatment pervades federal government-Native American relations. An example of this was revealed in the previous discussion of border crossing rights. Northern Native American crossing is governed by the fifty percent blood rule, while southern Native Americans have no such system and face more limited border crossing rights because of differing concerns along the United States-Mexico border. Even along that border there is no uniformity. As just one example, the members of the Kickapoo Band of Texas could receive United States citizenship and identification that permitted free crossing into Mexico and return to the United States. n106 Thus, disparate treatment is firmly entrenched as part of this relationship. Expanding disparate treatment in this manner raises certain fears. The danger is that this action might tip the balance of the tenuous relationship. Open hostility between Native Americans and the federal government would detract focus from the very real threat posed by the open borders. Subversive acts by Native Americans, such as assisting illegal entrants in their efforts to cross the borders would similarly hinder border security initiatives. 3. Strength of Plan While this plan might make coordinating homeland security efforts easier for federal officials, the potential detriments inherent in the plan outweigh the benefits. Native American obstruction or open hostility to federal officials as a result of the loss of sovereign rights would likely subvert border control efforts. Such action would also give the United States a black eye in the international community, as the beacon of democracy attempts to preserve itself by taking away the rights of those [*424] under its care. B. True Sovereignty 1. The Plan The federal government can grant border tribes complete sovereignty, treating them like foreign states as argued in Cherokee Nation. Such a change would give the border tribes sole authority to patrol international borders. United States Border Patrol would then shift its operations to controlling the borders between the Native American lands and the United States. The federal and state governments would then have mutual responsibility for patrolling and prosecuting illegal activity crossing into the United States from the Native American lands without having to expend resources in monitoring the soft spots along Native American international borders. 2. Problems Decades of federal assistance have created a strong reliance on the federal government in tribal affairs. Because of federal oversight, Native American tribes have never been completely self-sufficient. Abruptly cutting off this federal assistance would likely leave the tribal lands in greater security disarray than at present. Native American tribes currently lack the ability to combat crime in their territory. Therefore, without federal assistance, their crime problems could significantly worsen. Native American violent crime rates far exceed those of any other group. n107 Additionally, corruption is rampant within tribal governments, a situation that would only worsen without federal supervision. n108 This would require the expenditure of additional resources designated to the transition of Native American lands from domestic dependent nations to true sovereigns. As resources such as these are always scarce, such a plan would likely divert funds from other areas, perhaps from other homeland security operations. As a result of the present internal deficiencies in Native American lands, the border areas would likely become a more attractive point of entry for terrorists, who would recognize that the Native American police forces do not have the capacity to properly secure their borders. This presents additional problems because of the extent of United States infrastructure [*425] contained in border tribal areas. While tribal sovereignty could be granted, power plants cannot be easily moved into other areas of the United States, nor can these plants be immediately shut down, as significant portions of the nation rely upon them for electricity. Thus, if a terrorist could infiltrate a Native American border, which would likely become an easier task, that terrorist could potentially inflict significant damage on United States infrastructure without ever stepping foot on United States soil. It is unlikely that the federal government would be prepared to completely turn over security for this infrastructure to Native American police forces. Native Americans would be in the same situation they are now: called sovereign, but without complete control of their territory. Additionally, such a plan would result in increasing the territory under the jurisdiction of the Border Patrol. For example, instead of just worrying about the Tohono O'odham border with Mexico, the Border Patrol would have to monitor the entire perimeter of the tribe's border in Arizona. This increased area would require additional personnel and funds, both of which are scarce. As a final point, such a strategy would create the same disparate treatment noted previously. Border tribes would receive true sovereignty, while landlocked tribes, which do not present the same homeland security problems, would likely maintain the status quo. It is highly unlikely that the federal government would be willing to carve up small sovereign states in its midsection and elsewhere. Undoubtedly, this would lead to considerable litigation and further complicate an already difficult relationship between Native Americans and the federal government. More dangerously, Native Americans may be pushed too far in this relationship and respond with open hostility. 3. Strength of Plan As a goal for society, granting Native Americans greater control over their territories and destinies is an admirable and noble goal. As a means to combat current deficiencies in homeland security, this plan fails. It would likely result in a further stretching of scarce resources and ultimately create more gaps in security. C. Direct Coordination of Efforts Many of the present problems revolve around the failure of the federal government to work hand-in-hand with Native American tribes. The federal government expects the same level of coordination with Native American tribes as it does

with any state, but clearly does not treat the two [*426] entities with any form of equality. Doing this seems to be the most logical and promising notion for change. 1. The Plan The United States Senate, through the introduction of the Tribal Government Amendments to the Homeland Security Act of 2002, n109 has taken a step to remedy some of the problems created by these border security issues. If passed, this bill would amend the Homeland Security Act by inserting the word "tribal" after every pronouncement of the word "State." n110 The effect of this amendment would be to equate tribal governments with those of states and other local governments for purposes associated with the Act. n111 In so doing, this would require that Native American governments have an equal place at the bargaining and debate table when homeland security funding or programs are discussed. n112 Native American tribes would be able to directly solicit funding from the federal government and then receive that funding directly from the federal government. They would no longer be held at the whim of state governments, who, as noted, maintain tight purse strings on homeland security funding for Native American tribes. Most importantly, this change would reflect the misguidance of Chief Justice Marshall's "savage" imagery in Johnson. While ignorance and racism persist, Marshall's notion no longer pervades society to the same degree. If it did, it is unlikely that Native Americans would ever have been permitted to become members of the federal government, as was Senator Ben Nighthorse Campbell. 2. Problems Unfortunately, the Senate has yet to take any legislative action on this plan, and similar legislation in the previous Congress exhibited similar disinterest. n113 At present, the current legislation does not have any semblance of support in the Senate. n114 Obviously, the political tide has not [*427] turned nearly enough to make so broad a statement as this legislation makes. Apparently, Congress is not prepared to make any statement that equates a Native American tribe with a state. This sentiment is echoed by certain detractors of this legislative proposal, who cite the significant change this legislation would have on longstanding Supreme Court jurisprudence. n115 In recent history, the Supreme Court has significantly limited the sovereignty enjoyed by Native American tribes following the Marshall Trilogy. n116 While touted as a means to secure homeland security funds for Native American governments, the true purpose of this legislation is to regain a certain level of sovereignty lost over the course of the nation's history. n117 As a result, Native American tribes would have expanded authority over non-Native Americans who travel on tribal lands. n118 Thus, American citizens would be subject to tribal law, yet have no voice in tribal government. n119 Conceivably, Native American tribes may refuse federal funding. Accepting these funds means accepting federal directives and obligations. Some tribes may have an aversion to accepting federal orders because it would amount to a further deterioration of sovereignty. If the funds are refused, the border security deficiencies persist. 3. Strength of Plan More likely than not, Native American tribes will gladly accept the direct federal funding. As previously noted, Native American leaders cite the lack of direct funding as a problem and argue for this kind of change. n120 Rather than harm sovereignty, this strategy would actually increase Native American influence and authority. With a seat at the table, Native American concerns would have to be addressed and Native Americans would have to be afforded greater ability to fulfill the additional obligations that would come with the funding. Fears that a course of action might lead to an enhancement of civil rights should never be a bar to taking that action. Even if the true purpose of this type of legislation is that stated by the dissenters, those results do not necessarily outweigh the potential benefits to our nation as a whole. As [*428] previously mentioned, affording Native Americans additional sovereignty merely shows the recognition of the faulty logic of past policy makers. Native Americans have the capacity to self-govern in compliance with American tradition if provided with the proper resources and internal flexibility. Additionally, this legislation would not completely equate Native American tribes with states. It merely states that they should be treated as equal partners in pursuit of a common goal. By creating a Tribal Security Office within the Department of Homeland Security, coordination of efforts would be statutorily required. n121 The announced goals of S. 477 could be achieved without invoking the fears of its dissenters. There would merely be a requirement that the Department of Homeland Security work directly with Native American tribes to determine direct funding levels, disperse those funds, and coordinate the spending of those funds. Conclusion All members of a society confronted by a terrorist threat have an equal interest in preserving their security. With this common motivation, it is logical to expect that every member of society has some role in ensuring the desired security. A common goal suggests common means, or more specifically, a coordinated effort. The nature of the terrorist threat mandates a proactive response to minimize access to the nation by those seeking to carry out acts of terrorism. Meeting this goal necessitates taking a close look at the past and current relationship between the federal government and Native American tribes. Logically, the best solution is one in which hostilities between these partners is eliminated, not compounded, as both parties share in the hopes of internal security. To that effect, the federal government must recognize the important role that Native American tribes have in protecting international borders, and take appropriate steps to make Native American tribes a full and equal partner in combating this common threat. Coming together to meet this mutual homeland security goal may, in the end, bring Native Americans and the federal government closer together, mending more longstanding disputes. Native Americans may come to enjoy the type of sovereignty they possessed prior to European discovery, the limiting statements of Chief Justice Marshall, and later actions by the federal government.

Sovereignty K

1NC Long

The Affirmative's perception of Sovereignty is a western concept projected onto the native body.

Alfred 2K

Taiake Alfred, August 2000, Dr. Taiaiake Alfred is a Kanienkehaka (Mohawk) from Kahnawake. He is the Director of the Indigenous Governance Program of the University of Victoria in Canada, From Sovereignty to Freedom: Towards an Indigenous Political Discourse, Journal of Indian Affairs, http://www.iwgia.org/iwgia_files_publications_files/IA_3-01.pdf) CH

In his work on indigenous sovereignty in the United States, Vine Deloria, Jr. has pointed out the distinction between indigenous concepts of nationhood and those of state-based sovereignty. Deloria sees nationhood as distinct from "self-government" (or the "domestic dependent nation" status accorded indigenous peoples by the United States). The right of "self-determination," unbounded by state law, is a concept appropriate to nations. Delegated forms of authority, like "self-government" within the context of state sovereignty, are concepts appropriate to what we may call "minority peoples" or other ethnically-defined groups within the polity as a whole. In response to the question of whether or not the development of "self-government" and other statedelegated forms of authority as institutions in indigenous communities was wrong, Deloria answers that it is not wrong, but simply inadequate. Delegated forms do not address the spiritual basis of indigenous societies: Self-government is not an Indian idea. It originates in the minds of non-Indians who have reduced the traditional ways to dust, or believe they have, and now wish to give, as a gift, a limited measure of local control and responsibility. Self-government is an exceedingly useful concept for Indians to use when dealing with the larger government because it provides a context within which negotiations can take place. Since it will never supplant the intangible, spiritual, and emotional aspirations of American Indians, it cannot be regarded as the final solution to Indian problems. (Deloria, 1984: 15) The challenge for indigenous peoples in building appropriate post-colonial governing systems is to disconnect the notion of sovereignty from its western, legal roots and to transform it. It is all too often taken for granted that what indigenous peoples are seeking in recognition of their nationhood is, at its core, the same as that which countries like Canada and the United States now possess. In fact, most of the current generation of indigenous politicians see politics as a zero-sum contest for power in the same way that non-indigenous politicians do. Rather than a value rooted in a traditional indigenous philosophy, indigenous politicians regard the nationhood discourse as a lever to gain bargaining position. For the politician, there is a dichotomy between philosophical principle and politics. The assertion of a sovereign right for indigenous peoples is not really believed, and becomes a transparent bargaining ploy and a lever for concessions within the established constitutional framework. Until "sovereignty" as a concept shifts from the dominant "state sovereignty" construct and comes to reflect more of the sense embodied in western notions, such as personal sovereignty or popular sovereignty, it will remain problematic if integrated within indigenous political struggles.

The quest for sovereignty is used as a western smokescreen to pacify resistance

Grande '4 (Sandy; Associate Professor of Education, Director of the Center for the Comparative Study of Race and Ethnicity at Connecticut College; Red Pedagogy; 52-56)

INDIGENIZATION: TOWARD A POLITICS OF ENSOULMENT Just as the imperialist project of imperialism was political, intellectual, and spiritual, so too most be the project of indigenous self-determination. Politi-cally, indigenous peoples need to question whether sovereignty and the quest

for nationhood are indeed useful constructs for their respective communities: Why should indigenous peoples choose models of thinking, organization, and development that were used to destroy non-state societies? Intellectually, the question becomes whether a system of education initially designed to serve the needs and interests of the nation-state can be reconstituted to meet the needs and desires of tribal peoples. Spiritually, as noted by d'Errico, "the most pressing problem for Indigenous self-determination is `the problem' of "the people" (d'Errico 1997). In other words, centuries of colonization have left indigenous peoples with a profound crisis of meaning, compelling as all to ask the question: What does it mean to be a people, a tribe, a community? What does it mean to be indigenous? To Be or Not to Be Sovereign Several scholars have questioned the appropriateness of the concept and aim of "sovereignty" for indigenous peoples (Alfred 1999; Debris and Lytle 1984; d'Errico 1997; Lyons 2000; Richardson and Villenas 2000; Cheyfitz 2003). Deloria and Lytle (1984,15), for example, dismiss "self-government" as an idea that "originates in the minds of non-Indians" who have reduced traditional ways to dust, or at least believe they have, and "now, wish to give, as a gift, a limited measure of local control and responsibility." Taiaiake Al-fred (1999, 57) similarly maintains that even though the discourse has served as an "effective vehicle for indigenous critiques of the state's imposition of control," **sovereignty is an inappropriate goal because it implies a set of val- ues and objectives that are "in direct opposition to those found in traditional indigenous philosophies**" (i.e., respect, harmony, autonomy, and peaceful co- existence). Specifically, Alfred argues that traditional indigenous nations, which had "no absolute authority, no coercive enforcement of decisions, no hierarchy, and no separate ruling entity," stand in sharp contrast to the domi-nant understanding of the state (Alfred 1999, 2). Therefore, some indigenous scholars argue that the retention of sovereignty as the goal of indigenous pol-itics signifies the ultimate concession to the forces of assimilation. In other words, **by accepting the "fiction of state sovereignty," Native com-munities negate their own power, determining that they will forever and only remain in a dependent and reactionary position to the state** (Alfred, 1999, 59). And, within this hegemonic framework, progress toward social justice can only be inadequate and marginal. "In fact," writes Alfred (1999, 57), "progress] will only be tolerated by the state to the extent that it serves, or at least does not oppose" its own interests. He asks us to consider the issue of and claims as a case in point. While the pursuit of land claims is viewed in liberal—progressive circles as "a step in the right direction," unless the colo-nialist structures undergirding such claims are simultaneously dismantled, the resolution of such claims can be defined only by relations of domination. For instance: In Canada ... the ongoing definition of ... "Aboriginal rights" by the Supreme Coon ... is widely seen as progress. Yet even with the legal recognition of col-lective rights to certain subsistence activities within certain territories, indige-nous people are still subject to state control . . . [and] must . . . meet state-defined criteria for Aboriginal identity . . . to gain access to these legal rights. . . . [So] to what extent does the state-regulated 'light" to food-fish represent justice for people who have been fishing on their rivers and seas since time be-gan, (Alfred. 1999, 58) As such, Alfred insists, "to argue on behalf of indigenous nationhood within the dominant Western paradigm is self-defeating" (Alfred, 1999, 58). On the contrary, the task is to detach and dethink the notion of sovereignty from its connection to Western understandings of power and relationships and base it on indigenous notions of power." Building upon Deloria's expressed need for Native communities to "blend the inherent power of tradition with the skills required to manage the institutions of modem society," Alfred sug-gests altering indigenous patterns of governance to achieve four basic goals (Alfred, 1999, 136): I . Structural reform: Legitimating Native governments by rejecting electoral politics and restructuring to accommodate traditional decision making, consultation, and dispute resolution. This requires minimizing dependency on non-Indian advisors by educating and Paining community members, enhancing capacities of self-management. 2. Reintegration of Native languages: Insofar as language serves as a symbol and source of nationhood, Native languages should be made the official language of their communities—"the one in which leaders speak, the processes of government are conducted, and the official versions of all documentation am written." In order to achieve this objective, communi-ties must make teaching the Native language "a top priority." 3. Economic self-sufficiency: Movement toward this goal requires the ex-pansion of Native land bases and increased control over the "economic ac-tivities" within Indian country. Additionally, communities must focus on "business and technical education" as a means of enhancing human re-sources. 3. Nation-to-nation relations with the state: "A political space most be cre-ated for the exercise of self-determination. Native communities most re-ject the claimed authority of the state, assert their right to govern their own territories and people, and act on that right as much as their capacity to do so alloy's.

Sovereignty allows for the continued colonization of the native lands, turns case

Alfred 2K

Taiake Alfred, August 2000, Dr. Taiaiake Alfred is a Kanienkehaka (Mohawk) from Kahnawake. He is the Director of the Indigenous Governance Program of the University of Victoria in Canada, From Sovereignty to Freedom: Towards an Indigenous Political Discourse, Journal of Indian Affairs, http://www.iwgia.org/iwgia_files_publications_files/IA_3-01.pdf) CH

Core to this effort is the theoretical attention given to the entire notion of sovereignty as the guiding principle of government in states. What the Canadian philosopher James Tully calls the "empire of uniformity" is a fact obliterating mythology of European conquest and normality. Tully recognises the ways in which injustice toward indigenous peoples is deeply rooted in the basic injustice of normalised power relations within the state itself. In his Strange Multiplicity, Tully considers the intellectual bases of dominance inherent in state structures, and he challenges us to reconceptualize the state and its relation with indigenous people in order to accommodate what he calls the three post-imperial values: consent, mutual recognition and cultural continuity. Taiaiake Alfred, in his Peace, Power, Righteousness, has engaged this challenge from within an indigenous intellectual framework. Alfred's "manifesto" calls for a profound reorientation of indigenous politics, and a recovery of indigenous political traditions in contemporary society. Attacking both the foundations of the state's claim to authority over indigenous peoples and the process of cooptation that has drawn indigenous leaders into a position of dependency on and cooperation with unjust state structures, Alfred's work reflects a basic sentiment within many indigenous communities: "sovereignty" is inappropriate as a political objective for indigenous peoples. David Wilkins' American Indian Sovereignty and the United States Supreme Court amply illustrates the futility and frustration of adopting sovereignty as a political objective. Wilkins traces the history of the development of a doctrine of Indian tribal sovereignty in the United States Supreme Court, demonstrating its inherent contradictions for Indian nationhood. From the central Marshall decisions in the mid-nineteenth century through contemporary jurisprudence, Wilkins reveals the fundamental weakness of a tribal sovereignty "protected" within the colonizer's legal system. Wilkins' exhaustive and convincing work draws on post-modern and critical legal studies approaches to the law. Examining the negative findings of the Court, he deconstructs the façade of judicial objectivity, demonstrating that in defining sovereignty, the "justices of the Supreme Court, both individually and collectively have engaged in the manufacturing, redefining, and burying of 'principles', 'doctrines', and legal 'truths' to excuse and legitimize constitutional, treaty, and civil rights violations of tribal nations" (297). In the United States, the common law provides for recognition of the inherent sovereignty of indigenous peoples but simultaneously allows for its limitation by the United States Congress. The logic of colonisation is clearly evident in the creation of "domestic dependent nation" status, which supposedly accommodates the historical fact of coexisting sovereignties but does no more than slightly limit the hypocrisy. It accepts the premise of indigenous rights while at the same time legalising their unjust limitation and potential extinguishment by the state.

The Alternative is to reject the Affirmative's western perception of sovereignty and instead re-center the discussion of sovereignty on the indigenous traditional perspective of respect and co-existing.

Alfred 2K

Taiake Alfred, August 2000, Dr. Taiaiake Alfred is a Kanienkehaka (Mohawk) from Kahnawake. He is the Director of the Indigenous Governance Program of the University of Victoria in

Canada, From Sovereignty to Freedom: Towards an Indigenous Political Discourse, Journal of Indian Affairs, http://www.iwgia.org/iwgia_files_publications_files/IA_3-01.pdf) CH

Unlike the earth, social and political institutions were created by men and women. In many indigenous traditions, the fact that social and political institutions were designed and chartered by human beings means that people have the power and responsibility to change them. Where the human-earth relationship is structured by the larger forces in nature outside of human prerogative for change, the human-institution relationship entails an active responsibility for human beings to use their own powers of creation to achieve balance and harmony. Governance structures and social institutions are designed to empower individuals and reinforce tradition to maintain the balance found in nature. Sovereignty, then, is a social creation. It is not an objective or natural phenomenon but the result of choices made by men and women, indicative of a mindset located in, rather than a natural force creative of, a social and political order. The reification of sovereignty in politics today is the result of a triumph of a particular set of ideas over others - no more natural to the world than any other man-made object. Indigenous perspectives offer alternatives, beginning with the restoration of a regime of respect. This ideal contrasts with the statist solution, still rooted in a classical notion of sovereignty that mandates a distributive re-arrangement but with a basic maintenance of the superior posture of the state. True indigenous formulations are non-intrusive and build frameworks of respectful coexistence by acknowledging the integrity and autonomy of the various constituent elements of the relationship. They go far beyond even the most liberal western conceptions of justice in promoting the achievement of peace because they explicitly allow for difference while mandating the construction of sound relationships among autonomously powered elements. For people committed to transcending the imperialism of state sovereignty, the challenge is to de-think the concept of sovereignty and replace it with a notion of power that has at its root a more appropriate premise. And, as James Tully has pointed out, the imperial demand for conformity to a single language and way of knowing has, in any case, become obsolete and unachievable in the diverse (ethnic, linguistic, racial) social and political communities characteristic of modern states. Maintaining a political community on the premise of singularity is no more than intellectual imperialism. Justice demands a recognition (intellectual, legal, political) of the diversity of languages and knowledge that exists among people—indigenous peoples' ideas about relationships and power holding the same credence as those formerly constituting the singular reality of the state. Creating a legitimate post-colonial relationship involves abandoning notions of European cultural superiority and adopting a mutually respectful posture. It is no longer possible to maintain the legitimacy of the premise that there is only one right way to see and do things

The Alternative Solves for all colonial oppression

Alfred 2K

Taiake Alfred, August 2000, Dr. Taiaiake Alfred is a Kanienkehaka (Mohawk) from Kahnawake. He is the Director of the Indigenous Governance Program of the University of Victoria in Canada, From Sovereignty to Freedom: Towards an Indigenous Political Discourse, Journal of Indian Affairs, http://www.iwgia.org/iwgia_files_publications_files/IA_3-01.pdf) CH

Indigenous conceptions, and the politics that flow from them, maintain in a real way the distinction between various political communities and contain an imperative of respect that precludes the need for homogenization. Most indigenous people respect others to the degree that they demonstrate respect. There is no need, as in the western tradition, to create a political or legal hegemony to guarantee respect. There is no imperial, totalising, or assimilative impulse. And that is the key difference: both philosophical systems can achieve peace; but for peace the European demands assimilation to a belief or a country, while the indigenous demands nothing except respect. Within a nation, one might even rethink the need for formal boundaries and precedents that protect individuals from each other and from the group. A truly indigenous political system relies instead on the dominant intellectual motif of balance, with little or no tension in the relationship between the individual and the collective. Indigenous thought is often based on the notion that people, communities, and the other elements of creation co-exist as

equals—human beings as either individuals or collectives do not have special priority in deciding the justice of a situation. Consider the indigenous philosophical alternative to sovereignty in light of the effect sovereignty-based states, structures, and politics have had on North America since the coming of the Europeans. Within a few generations, Turtle Island has become a land devastated by environmental and social degradation. The land has been shamefully exploited, indigenous people have borne the worst of oppression in all its forms, and indigenous ideas have been denigrated. Recently, however, indigenous peoples have come to realise that the main obstacle to recovery from this near total dispossession – the restoration of peace and harmony in their communities and the creation of just relationships between their peoples and the earth – is the dominance of European-derived ideas such as sovereignty. In the past two or three generations, there has been movement for the good in terms of rebuilding social cohesion, gaining economic self-sufficiency and empowering structures of self-government within indigenous communities. There has also been a return to seeking guidance in traditional teachings, and a revitalisation of the traditions that sustained the great cultural achievement of respectful coexistence. People have begun to appreciate that wisdom, and much of the discourse on what constitutes justice and a proper relationship within indigenous communities today revolves around the struggle to promote the recovery of these values. Yet there has been very little movement towards an understanding or even appreciation of the indigenous tradition among non-indigenous people. It is, in fact, one of the strongest themes within indigenous American cultures that the sickness manifest in the modern colonial state can be transformed into a framework for coexistence by understanding and respecting the traditional teachings. There is great wisdom coded in the languages and cultures of all indigenous peoples - this is knowledge that can provide answers to compelling questions if respected and rescued from its status as cultural artefact. There is also a great potential for resolving many of our seemingly intractable problems by bringing traditional ideas and values back to life. Before their near destruction by Europeans, many indigenous societies achieved sovereignty-free regimes of conscience and justice that allowed for the harmonious coexistence of humans and nature for hundreds of generations. As our world emerges into a post-imperial age, the philosophical and governmental alternative to sovereignty, and the central values contained within their traditional cultures, are the North American Indian's contribution to the reconstruction of a just and harmonious world.

2NC Extensions.

Sovereignty is a Eurocentric ideal.

Brown 7

Michael F. Brown, Michael F. Brown, President of the School for Advanced Research, Santa Fe; Lambert Professor of Anthropology & Latin American Studies, Emeritus, Williams College, 2007, Indigenous Experience Today, pp. 176-177, Accessed 7/19/15, http://sites.williams.edu/mbrown/files/2011/04/Brown_SovereigntysBetrayals_2007-1.pdf) CH

Perhaps the most trenchant critique of the notion of indigenous sovereignty is put forward by the Mohawk political scientist Taiaiake Alfred, whose article "From Sovereignty to Freedom" (2001; see also 2005) develops ideas first explored in the work of Vine Deloria Jr., and others. Alfred argues that sovereignty is a profoundly ethnocentric concept predicated on European attitudes toward governance, political hierarchy, and the legitimate uses of power. He finds these

values and practices incompatible with an authentically indigenous politics, which rejects, among other things, "absolute authority," "coercive enforcement of decisions," and the separation of political rule from other aspects of everyday life. To subscribe to a doctrine of sovereignty is, in Alfred's opinion, to evade a moral duty to decolonize indigenous life. "Sovereignty itself implies a set of values and objectives that put it in direct opposition to the values and objectives found in most traditional indigenous philosophies," he insists (Alfred 2001: 27, 28).8 The alternative that Alfred sketches is evocative but indistinct. A nonsovereignty-based system of traditional governance would repudiate coercion and foster healthy relationships with the land. "Indigenous thought is often based on the notion that people, communities, and the other elements of creation co-exist as equals-human beings as either individuals or collectives do not have special priority in deciding Sovereignty's 7 Betrayals 1 79 the justice of a situation" (Alfred 2001: 31). Alfred ends his article on a 1 utopian note, observing that prior to the rise of European colonialism, indigenous peoples had "achieved sovereignty-free regimes of conscience and justice" that, if revived, could help to make the world a better place for everyone (2001: 34). Admittedly, Alfred's conviction that Native people are always and everywhere paragons of participatory democracy is hard to square with historically documented cases of indigenous imperialism and social stratification. Given the modest scale of most Native American tribes or bands today, however, they may be amenable to the retraditionalized systems of governance that Alfred advocates, although most would, as he himself acknowledges, have to adapt such practices to the challenge of dealing with a hierarchical and bureaucratic state.9

The Affirmatives concept of sovereignty is flawed.

Alfred 2K

Taiake Alfred, August 2000, Dr. Taiaiake Alfred is a Kanienkehaka (Mohawk) from Kahnawake. He is the Director of the Indigenous Governance Program of the University of Victoria in Canada, From Sovereignty to Freedom: Towards an Indigenous Political Discourse, Journal of Indian Affairs, http://www.iwgia.org/iwgia_files_publications_files/IA_3-01.pdf) CH

Sovereignty. The word, so commonly used, refers to supreme political authority, independent and unlimited by any other power. Discussion of the term "sovereignty" in relation to indigenous peoples, however, must be framed differently, within an intellectual framework of internal colonisation. Internal colonisation is the historical process and political reality defined in the structures and techniques of government that consolidate the domination of indigenous peoples by a foreign yet sovereign settler state. While internal colonisation describes the political reality of most indigenous peoples, one should also note that the discourse of state sovereignty is and has been contested in real and theoretical ways since its imposition. The inter/ counterplay of state sovereignty doctrines - rooted in notions of dominion - with and against indigenous concepts of political relations - rooted in notions of freedom, respect and autonomy - frames the discourse on indigenous "sovereignty" at its broadest level. The practice of history cannot help but be implicated in colonisation. Indeed, most discussions of indigenous sovereignty are founded on a particular and instrumental reading of history that serves to undergird internal colonisation. Fair and just instances of interaction between indigenous and non-indigenous peoples are legion; yet mythic narratives and legal understandings of state sovereignty in North America have consciously obscured justice in the service of the colonial project. From the earliest times, relations between indigenous peoples and European newcomers vacillated within the normal parameters that characterise any relation between autonomous political groups. Familiar relations - war, peace, cooperation, antagonism and shifting dominance and subservience - are all to be found in our shared history. Yet the actual history of our plural existence has been erased by the narrow fictions of a single sovereignty. Controlling, universalising and assimilating, these fictions have been imposed in the form of law on weakened but resistant and remembering peoples.

Tony Hillerman, 10-29-2008, "Tony Hillerman On Indian Rights," New York Times, http://www.nytimes.com/ref/opinion/29opclassic.html

Thus for the tribal traditionalists the sovereignty issue looks foolish. Who has sovereignty? Nobody. But most Indians these days are not traditionalists. And many of the two million Indians who claim membership in the 554 recognized tribes saw the unsuccessful move by Senator Slade Gorton, a Washington Republican, to attach amendments to the Interior Department spending bill as another white raid on what's left of their property. His proposal would have required tribes to trade protection from civil lawsuits for continued eligibility for Federal financing. Senator Gorton dropped the amendments this week, but only in exchange for hearings and a vote on immunity next year, as well as for a Government study on how to base future Federal payments to Indians. Indians suspect that the Senator's efforts grew out of the fight he lost over tribal treaty rights to salmon fishing. They see it as part of a pattern that threatens other rights. At stake eventually is control over water rights, grazing rights, mineral rights, ski lodges, suburban housing developments, even tribal voting rights. At stake is who controls "the way to make money," which is what First Man of Navajo mythology called his bundle of evil magic. As a die-hard advocate of Indian rights with a "Custer Had It Coming" bumper sticker on my truck, why don't I argue that we should simply declare that Indians have total control over their reservations? Because that raises another question. Which Indians? Most Indians these days measure their tribal blood in fractions. The Osage tribe, for example, counts about 17,000 members. But under a 1906 tribal law recently upheld in Federal court, there are only 26 legitimate members -- all in their 90's. The Kaw tribe includes you if you can claim one-sixty-fourth Kaw blood. Most Indians, including 100 percenters, are as assimilated in America's consumer culture as are Italian-Americans, Irish-Americans, Ethiopian-Americans, English-Americans, Spanish-Americans or any of the rest of us. Yet obviously, many Indians see the argument over tribal sovereignty as dead serious. The Indian boys I grew up with in Oklahoma were mostly Citizen Band Potawatomies. When we played cowboys and Indians they made my brother and me take turns being Indians, since they knew who won. We went to the same school and the same church. We picked cotton and hunted squirrels together. Our friends had only a sentimental knowledge of their tribal culture and lived on "allotment land" many generations distant from their original homeland. For them, any question of sovereignty would have a far different meaning than it would have for Navajos, Hopis, Zunis or any other tribes that still cling to ancestral culture. For the tribes not so totally assimilated into homogenized America, the problem of sovereignty often involves more than how to save what they have from the whites who yearn for it. It can become an internal fight over values. On the Navajo Reservation, for example, two groups of Navajo tribesmen fought over cutting old-growth timber in the Chuska Mountains. The loggers cited the 140 jobs at stake. The environmentalists cited Federal law requiring protection for the endangered spotted owl, which traditional shamans will assure you is a symbol of evil. The internal friction is often between assimilated "city Indians" and the "sheep camp" traditionalists who stayed home. This happened at Taos when veterans returning from World War II wanted to bring electricity into the pueblo. It happened at Wounded Knee when the American Indian Movement (so citified that a journalist had to teach its members how to butcher a steer when they ran out of food) tried to overthrow the traditional tribal government. Hastiin Alexander Etcitty would assure us that all these internal questions could be peacefully resolved if tradition were followed and all the lawyers were made to go away. My own experience suggests that's probably right. But when it comes to defending water ownership, treaty promises, fishing rights, gambling casinos and the rest of it from encroaching white neighbors, the tribes may be forced to rely on lobbyists and lawyers, if they can find ones they can trust. Etcitty would never agree to that. He'd say that part of this is unimportant -- just about money. And he'd point to cloud shadows dappling the dry prairie, and

the thunderheads beginning to build over the San Francisco Mountains. He'd remind me that money can't make it rain.

Video Surveillance Michigan 7

advantage

1nc advantage

Alt cause --- private cameras

Manjoo 13 [Farhad, technology columnist for the New York Times and the author of True Enough, "We Need More Cameras, and We Need Them Now," Slate, April 18, 2013] //khirn

The best reason to welcome a government network of surveillance cameras is that **we're already being watched**—just not systematically, in a way that aids law enforcement. Private security cameras dot every busy street, and people's personal cameras are everywhere. It might have been valuable, at some point, for us to have a discussion about whether we wanted to go down the road of having cameras everywhere. But we missed that moment—instead, you and I and everyone we know went out and bought smartphones and began snapping photos incessantly. Nowadays, when anything big goes down, **we all willingly cede our right to privacy**—we all take it for granted that photos provide valuable insight into news events, and we flood the Web with pictures and clips of the scene of big news.

Turn – surveillance cameras are key to reduce violent crime

Manjoo 13 [Farhad, technology columnist for the New York Times and the author of True Enough, "We Need More Cameras, and We Need Them Now," Slate, April 18, 2013] //khirn

There's ample evidence that **CCTVs combat more routine crime**. According to a study by the Department of Justice's Office of Community Oriented Policing Services, when surveillance networks are installed and competently manned by trained personnel, they **reduce many types of criminal activity by a significant margin**, and they do so cost-effectively. After cameras were installed in downtown Baltimore in 2005, the study says, **violent crime fell by 23 percent** and all crime fell by 25 percent. In one area of Chicago, **crime fell by 38 percent** after CCTVs were installed.

Reliance on federal legal systems to protect women take away their civil liberties and reinforce traditionally gendered divisions between public and private space

Bumiller 6 Professor of Political Science and Women's and Gender Studies at Amherst College (Kristin, *Thomas Jefferson Law Review*, "FREEDOM FROM VIOLENCE AS A HUMAN RIGHT: TOWARD A FEMINIST POLITICS OF NONVIOLENCE" p. 338 – 339, Spring 2006, *ProQuest*) | js

Since a major purpose of the VAWA is to provide women protection from the types of violence for which there are inconsistent legal remedies across states—one important example being marital rape—the model of federalism puts misplaced insistence on recognizing violence through its impact on a woman's role in the public sphere. The logic seems counterintuitive when these provisions aspire to fashion legal remedies that reach into the deeply private context in which violence occurs. The conception of sexual violence as a public problem in the VAWA is, of course, partly the artificial result of the necessity to fashion a compelling constitutional argument. But it also emerges from the inherent logic of federalism, a logic that finds parallels in the paradigm of human rights enforcement. Both systems of governance invest in the federal body the normative authority to set universal standards for the

treatment of citizens. Such guarantees within a federalist system are indeed necessary for citizens to enjoy their political and economic rights within the public sphere. Yet the practice of citizenship is far more complicated, especially in situations involving harm in our most 23. Id. at 148. 24. See Zygmunt Bauman, On Postmodern Uses of Sex, 15 THEORY, CULTURE & SOC'Y 19 (1998). BUMILLER.DOC 8/16/2006 7:39:12 PM 2006] FREEDOM FROM VIOLENCE AS A HUMAN RIGHT 339 intimate relationships. The recognition of freedom from sexual violence, as an expressly public right, does not sufficiently capture how the risk to human dignity is linked to a woman's choice for privacy or autonomy, or the ways that surviving violence may require negotiating a relationship with the state. Specifically in the American context, breaking through the traditional notions of how privacy has prevented legal intervention may have the reverse effect of that intended. It may create a situation where women lose control over their private domain because of mandatory arrest laws and no-drop policies that take away a woman's power to seek help from the authorities. Renee Romkens, a legal scholar from the Netherlands, suggests that in the American experience the shift of wife abuse from the private to the public domain has reinforced the underlying binary of the public and private. This has led to the implementation of policies that have eroded a woman's choices in the private sphere, and the "fact that law, notably criminal law, has been used as a major vehicle to materialize this public responsibility only exacerbates this dynamic."25 In contrast, Romkens argues the shifting of the definition of the battered women to a public identity has been less problematic in Western European countries. In these countries, there is more of a balance between the legal and the social category and the social policy strategies that the battered women's movements have pursued in trying to devise supportive polices. . . . In Western Europe the issue of battering has been a much more effective domain of sociopolitical struggle than in the U.S.26 From this perspective, efforts to define violence against women as a national issue in the United States does less to liberate women from local custom, and more to create the circumstances for state intrusion into private lives. Moreover, actual application of the civil rights remedy under the VAWA requires victims to assert agencies in ways that conform to traditional private and public roles for women.

Not only does electronic surveillance fail to address the root cause of violence against women, but it reifies institutional violence against women through the expansion of the prison-industrial complex

Mason and Magnet 12 professors at the Institute of Women's Studies at the University of Ottawa (Corinne and Shoshana, *Surveillance & Society,* "Surveillance Studies and Violence Against Women" p. 112 – 114, 2012) | js

Surveillance technologies are both produced by as well as part of the expansion of the prison industrial complex. New surveillance features including the time and date stamps we described above can be used to make arrests. Technology producers and marketers assert that surveillance features like those found on the iPhone are important security measures. If they reference violence against women at all, companies selling these products argue that these surveillance features will help institutions like the police to catch perpetrators of violent crimes. For example, according to iPhone hacker and data-forensics expert Jonathan Zdziarski, the iPhone's ability to take a screen snapshot and save it is a personal privacy 'flaw'. However, he and others argue that this in fact can become useful to the prison system since users cannot permanently delete information, and, as a result, storage forensics experts have used the 'flaw to gather evidence against criminals convicted of rape, murder or drug deals' (Chen 2008). In this way, although mainstream media represent surveillance technologies as carrying risks for consumers, they are simultaneously represented as necessary evils. For example, in the popular crime show Criminal Minds, the dangers of surveillance to individual privacy are referenced, but the overall message remains that these technologies help to keep us safer. In a two-part episode entitled 'The Big Game' and 'Revelations' (2007), a techie-turned-murderer accesses computers remotely to fix issues such as sound control, but then maintains access to internal webcams after the service is completed using a Trojan horse virus. Watching women in particular, the murderer observes his victims through the webcam and then allows the videos of his murders to 'go viral'. While the surveillance of victims is depicted as a breach of their privacy, it is the videos captured through webcams that lead the FBI to the murderer's capture and arrest. This fictional show parallels a case in Toronto, Canada in which a young woman attending York University was killed while her boyfriend in China watched part of the women's struggle with her assaulter via a webcam (Sympatico News 2011). In online commentary on Sympatico News, a user claimed that this was 'life imitating art' since an episode of crime show CSI: New York followed a similar story line. The police began their investigation by attempting to uncover the streamed video and ultimately charged a York University student with her murder (Rush 2011). Of course, these technologies did not help to save

this young woman's life. Nor did they help to address the ongoing systemic issue of violence against women. Instead, they became the vehicle by which the police could assert that violence on campus had been addressed since this one 'bad apple' violent student was caught. The approach to perpetrators of violence as 'bad apples' is a familiar strategy: one that helps to distract attention from solutions aimed at addressing the systemic nature of violence as well as its gendered and racialized nature. 5 In suggesting that these new technologies saved the day by helping to catch one perpetrator, the media offers limited critiques of new surveillance technologies while simultaneously 'naturalizing their expansion' (Magnet and Gates 2009: 7). That is, in popular TV shows and news media, surveillance technologies are understood as producing privacy breaches that are justified as a result of their helpfulness in police investigations. This is well captured in the commentary of forensics expert Jonathan Zdziarski. Arguing that these technologies do produce 'significant privacy leak[s]', he asserts that they remain important tools since 'at the same time [they've] been useful for investigating criminals' (Chen 2008). For feminist surveillance studies scholars, surveillance technologies pose more complex questions than 'are they good or bad?'We argue that the relationship of surveillance technologies to their social context and the ways that technologies reproduce and exacerbate social inequalities must be examined. In particular, while surveillance technologies may be useful to police enforcement, more policing practices results in the strengthening of a prison system that continues to overincarcerate women who are victims of violence—and particularly targets women of colour, women with disabilities and queer women for incarceration. Given the role of the prison system as an engine of inequality, we must call into question the assertion that improving intensifying existing connection between anti-violence movements, surveillance technologies, and the police is necessarily positive. Rather, we must ask: what is the impact of deepening connections between anti-violence advocacy, new technologies of surveillance and the prison industrial complex? Connections between anti-violence movements and the prison system have historically been and remain deeply problematic. For anti-violence advocates, the 'criminalization of violence against women' has impacted individual safety tactics and community organizing. According to the INCITE! Women of Color Against Violence collective (2006), the movement from grassroots organizing to 'professional' shelters has meant that the mainstream anti-violence movement is reluctant to challenge institutionalized violence (Smith et al. 2006: 1). The move to government funding regimes in the U.S. and Canada are coupled to an increased reliance on the prison system. According to Smith et al. (2006), the anti-violence movement is 'working with the state, instead of against state violence' (1). The criminal justice system often simply brings many survivors of violence into conflict with the law (INCITE! 2006). In addition to those noted above, mandatory arrest laws in the U.S. and Canada have meant that women who call police for protection are often also arrested. A New York-based study complied in 2001 found that a majority (66 per cent) of domestic violence survivors who were arrested alongside their abuser, or arrested as a result of a complaint lodged by their abuser, were African American or Latina/o, 43 per cent were living below the poverty line and 19 per cent were receiving public assistance. Lesbian survivors are also frequently arrested alongside their abuser since law enforcement officers frame violence within same-sex relationships as 'mutual combat' (Ritchie 2006: 140). Individuals perceived to be transgressing gender 5 For further reading, see Sherene Razack's (2004) excellent examination of the ways that Canadian peacekeepers participating in the torture and murder of Somali civilians were described by the Canadian state simply as 'bad apples', rather than individuals participating in a system of regulated and regular imperial violence perpetrated by the Canadian state against othered bodies (117). Mason and Magnet: Surveillance Studies and Violence Against Women Surveillance& Society 10(2) 114 norms are often subject to excessive force upon arrest (Ritchie 2006: 143). Furthermore, undocumented women who have reported violence have often found themselves deported (Ritchie 2006: 151). To be sure, Canadian women's shelters have been raided by the Canadian Border Services Agency in order to deport 'illegal' immigrants (No One Is Illegal 2011). Given the complex relationship of women of colour, indigenous women, poor women, queer folks, immigrants, sex workers and other women vulnerable to being criminalized by the justice system, the assumption that surveillance measures can provide protection to VAW victims is problematic. In particular, surveillance technologies that deepen existing links to the prison industrial complex pose problems for victims and anti-violence advocates

Urban planning fails to consider the inherently gendered nature of surveillance—modern cities construct women as the constant object of the male watcher

Koskela 2 senior lecturer in the Department of Geography, University of Helsinki,finland (Hille, Urban Geography, "Video Surveillance, Gender, and the Safety of Public Urban Space:

"Peeping Tom" Goes High Tech?" 2002, p. 261 – 3, http://www.tandfonline.com/doi/pdf/10.2747/0272-3638.23.3.257)

Gender Dimensions in Urban Planning "What is at issue, therefore, is not whether public spaces were controlled, but rather whose norms would be used to define those controls" (Domosh, 1998, p. 211). There has been considerable discussion on planning "for women" and implementing policies, which take women's needs into account. It has often been argued that in the mainstream discussions of urban politics and planning the gender dimension is lacking or undervalued and that women have not gained equal recognition in urban design (e.g., Matrix, 1984; Little et al., 1988; Simonsen, 1990; Greed, 1994). There are elements of urban life that simply cannot be understood without gender relations. Urban space is gendered in its essence: the existence of male violence, for example, modifies women's interpretations of space (Rose, 1993; Massey, 1994). The geography of Downloaded by [] at 13:22 05 July 2015 262 HILLE KOSKELA fear is gendered (Valentine, 1989). According to surveys and qualitative data from all over the world, women are more worried about their personal safety in urban space than men. Although it is clear that the category of "women" should not be oversimplified or seen as a homogenous group (e.g., McDowell, 1993; Gilbert, 1997), fear-evoking experiences—such as sexual harassment, threat of violence, and actual violence—can be experienced by all women despite their differences. Often the highly gendered nature of the public realm, which for example sexual harassment (re)produces, is neglected (Gardner, 1995). The threat of (sexual) violence does, to some extent, touch all women. Arguably, the question of urban safety is an issue which very accurately illustrates the gendered nature of space. Despite this, safety has not always been among the most significant aims of planning that takes better account of women's needs. This is apparent especially in the Scandinavian countries. Such planning has been considered to be about ecological housing, healthy building materials, more democratic planning process, lower housing costs, better transport facilities, etc. (Björk, 1991; Friberg, 1993; NordREFO, 1989). Until the late 1990s safety was hardly discussed. This is somewhat paradoxical since the Scandinavian countries do have a reputation for supporting gender equality. In the Anglo-American countries this issue has been debated much more. There has been both theoretical reasoning on the causes and structures of fear (e.g., Merry, 1981; Smith, 1987; Gordon and Riger, 1989; Valentine, 1989; Pain, 1991) and attempts to create "safe city initiatives" by applying this knowledge in urban policies and planning procedures (e.g., Trench et al., 1992; Wekerle and Whitzman, 1995). It has been stated that there is a need to "Ask for public funds to transform public spaces to make them safe and accessible to everyone at night as well as during the day" (Duncan, 1996, p. 132). Increased safety is commonly accepted as an important aim but there is much less consensus as to the means by which it could be achieved. I will now discuss whether video surveillance could be among these means. Space is not just a macro-structure separate from human reality but it has an experienced dimension. Space is interpreted and confronted in the "micropolitics" of everyday life (Domosh, 1998). Meanings about gender and space are produced in social practices and "are not natural offixed but continually contested and subverted" (Boys, 1999, p. 193). The ostensibly trivial gendered practices of the everyday (re)produce the power structures which restrict and confine women's space (Rose, 1993). In addition, as Doreen Massey argues "What is clear is that spatial control, whether enforced through the power of convention or symbolism, or through the straightforward threat of violence, can be a fundamental element in the constitution of gender in its (highly varied) forms." (1994, p. 180, emphasis added) Gender, Security, and Surveillance Technology Because of their levels of fear women have been alleged to be the ones that particularly enjoy the "pay-off" of surveillance (Honess and Charman, 1992, p. 11; also Koskela, 2000a). Is this conclusion valid? Is surveillance perceived by women as improving their personal safety? What kinds of gender relation and gendered practices does surveillance include? Downloaded by [] at 13:22 05 July 2015 VIDEO SURVEILLANCE, GENDER, AND SAFETY 263first, I examine the gender relations of surveillance at the simplest level: who occupies the opposite sides of a surveillance camera? If we look at the places and spaces under surveillance, and the maintenance of surveillance, can we see practices which could be gendered? In public and semipublic space, the places where surveillance most often is practiced are the shopping malls and the shopping areas of city centers, and likewise public transport areas, such as metro stations, railway stations and busy bus stops. Who usually negotiates and decides about surveillance is the management: managers of shopping malls, leading politicians, and city mayors. Furthermore, people who maintain surveillance are the police and private guards. From this it is possible to draw conclusions about the gender structure of surveillance. Women spend more of their time shopping than men. Everyday purchases for the family are mostly bought by women. It is also known that a majority of the users of public transport are women. Thus women are often found in the typical places under surveillance. In contrast, the occupations in charge of deciding on surveillance are male dominated. Even more importantly, the professions that maintain surveillance, police and guards, are also male dominated. Thus, at this simplest level, surveillance is, indeed, gendered: most of the persons "behind" the camera are men and most of the persons "under" surveillance are women (Koskela, 2000a).

2nc crime turn

Cameras deter crime and free police resources to aid law enforcement

La Vigne 13 [Nancy G., "How Surveillance Cameras Can Help Prevent and Solve Crime," UrbanWire, http://www.urban.org/urban-wire/how-surveillance-cameras-can-help-prevent-and-solve-crime] //khirn

The potential value of public surveillance technology took on new meaning last week when investigators identified the two suspects in the Boston Marathon bombing after **sifting through video images** captured by the city's cameras.

This has prompted public officials like Chicago Mayor Rahm Emanuel to speak of the "important function" such cameras play in offering safety on a daily basis and during events both big and small.

The successful use of this technology in such a high-profile investigation is likely to prompt other major cities to reaffirm – and even expand – their investment in and use of surveillance cameras. Civil liberties advocates fear this would create an undue invasion of privacy.

In the ensuing debates over privacy versus safety, advocates on both sides would be wise to consider the following guidelines.

Public surveillance cameras and civil liberties can coexist if cameras are implemented and employed responsibly. Our guidebook for using public surveillance systems advises law enforcement to consider privacy issues when creating surveillance policies. For one, cameras should avoid or mask inappropriate views of private areas, such as yards and second-story windows. Law enforcement agencies should also document and publicize policies governing how surveillance cameras can be used and what the disciplinary consequences are for misuse. Likewise, officers should be thoroughly trained on these policies and held accountable for abiding by them.

Public surveillance camera systems can be a **cost-effective way to deter, document, and reduce crime.** Urban's research has shown that in Baltimore and Chicago, cameras were linked to reduced crime, even beyond the areas with camera coverage. The cost savings associated with crimes averted through camera systems in Chicago saved the city over four dollars for every dollar spent on the technology, while Baltimore yielded a 50 cent return on the dollar.

The usefulness of surveillance technology in preventing and solving crimes depends on the resources put into it. Our evaluation of three cities found that the most effective systems are **monitored by trained staff**, **have enough cameras to detect crimes in progress**, and **integrate the technology into all manner of law enforcement activities**.

As with any technology, the use of cameras is by no means a substitute for good old-fashioned police work. The detectives we interviewed reported that camera footage provides additional leads in an investigation and aids in securing witness cooperation. And prosecutors noted that video footage serves as a complement to—but not a replacement for—eyewitness evidence in the courtroom.

And, the plan precludes the use of artificial intelligence to deter crimes

Manjoo 13 [Farhad, technology columnist for the New York Times and the author of True Enough, "We Need More Cameras, and We Need Them Now," Slate, April 18, 2013] //khirn

The next step in surveillance technology involves **artificial intelligence**. Several companies are working on software that monitors security-camera images in an effort to **spot criminal activity before it happens**. One company, BRS Labs, has built technology for the San Francisco public transportation system that will monitor scenes and alert officials when it spots "unusual or abnormal behavior." What's that, exactly? According the company's proposal and its other promotional material, the software looks for any statistically unusual occurrences. By

monitoring a scene for a long time, it determines what's "normal" for that environment. It then alerts officials when something strays from normalcy. For instance, as BRS' president told the Daily last year, the software sent out an alert when it noticed a truck entering a San Francisco tunnel that's supposed to be used only by subway trains. Other occurrences that might set the software on high alert include people who are loitering instead of getting about their business, people who are jumping turnstiles, and folks who drop a package and then walk away.

at: "we just regulate cameras"

Regulations preclude effective use of cameras

Manjoo 13 [Farhad, technology columnist for the New York Times and the author of True Enough, "We Need More Cameras, and We Need Them Now," Slate, April 18, 2013] //khirn

The study showed a smaller impact in other places—in Washington, D.C., for instance, researchers found that a surveillance system had no discernable impact on crime. But the reason for D.C.'s surveillance failure won't please civil libertarians: Researchers argued that the cameras likely didn't work because their use was too tightly regulated as a result of privacy fears. After getting input from the ACLU, D.C. instituted rules that severely limit who can look at the cameras and whom they can follow. The rules also prevent operators from saving surveillance footage routinely. In practice, the regulations mean that few people are monitoring D.C.'s cameras and responding to crimes that are caught on tape. The report suggests that if the rules were relaxed, the **cameras might prove far more effective**.

2nc can't solve root cause

Surveillance technologies target interpersonal violence while reinforcing state violence against perceived "deviants"

Mason and Magnet 12 professors at the Institute of Women's Studies at the University of Ottawa (Corinne and Shoshana, *Surveillance & Society,* "Surveillance Studies and Violence Against Women" p. 114 – 116, 2012) | js

It is a difficult task to critique surveillance technologies aimed at ensuring women's safety against abusers. When made visible as anti-violence tools, technologies of surveillance appear to be uncontroversial to a range of actors. Certainly, women's safety is a priority for feminists, as is ending violence practices. Yet, the widespread promotion of surveillance tools for anti-violence means must be challenged. By overlooking the complex ways that surveillance practices and technologies are entrenched within the prison industrial complex, one might miss key challenges that surveillance technologies pose anti-violence strategies. Whether it is smartphones, iPhone applications, Google maps, or home surveillance, feminist surveillance studies scholars must investigate the ways that existing inequalities may be exacerbated by their use. The surveillance technologies that are offered to women as safety measures, such as cell phones, smartphone applications, internet-browsing safety and home security systems, are all targeted toward interpersonal violence. Mainstream and criminalized understandings of VAW wrongfully assume that violence is perpetrated by individual abusers who must be incarcerated. Anti-violence advocates including Andrea Smith (2008) and Angela Davis (2003, 2005) remind us that the prison industrial complex has done little to promote anti-violence strategies. Rather than examining the widespread, systemic nature of violence against women, instead, the prison industrial complex has simply incarcerated ever-growing

numbers of people—particularly indigenous people and people of colour. Moreover, it is well studied that violence in the prison system only continues the cycle of violence, as abusers are incarcerated, treated violently in the prison system, and then released (Gilligan 2000). In fact, radical anti-violence activists argue that prison abolition must be a part of any violence strategy in order to interrupt this cycle of violence, a conclusion with which we heartily concur. Practices of violence must always be connected to systems of power and domination, including state-perpetrated racist and sexist violence. Unfortunately, much of the literature on surveillance technologies has focused on individual acts of stalking and control. Of course, feminist literature on the subject of technology and stalking is important. However, in order to understand how surveillance affects the perpetration of violence and influences tactics to end violence practices, feminists must think more broadly and intersectionally about VAW and the connections between surveillance, sexism, racism, and the prison system. Importantly, the surveillance of vulnerable bodies by the state, policing services and even social service providers disproportionately target marginalized and exploited communities. In recent years, feminist and critical race explorations of policing and surveillance have necessarily included the experiences of Arab, Middle Eastern, South Asian and Muslim men and women. While such racialized bodies have always been targeted in white supremacist nations, post-9/11 security rhetoric around national security has helped to shore up surveillance measures. While honour killings, forced marriages, polygamy and dowry-related murders have received increased and disproportionate media attention in the U.S. and Canadian media since 9/11, mainstream conceptions of violence against women of colour are rarely inclusive of harassment, racist violence and sexual abuse at home and abroad at the hands of military and law enforcement agencies (Ritchie 2006: 139). Such violent crimes against women are insufficiently attended to in mainstream anti-violence strategies, and technologies aimed at women's safety may intensify the surveillance and further criminalization of particular communities. Surveillance 'flaws' such as those found in iPhones and iPads are used by the criminal justice system as tools to help them make arrests (Chen 2008). For those already criminalized and stigmatized, including indigenous people and people of colour, especially Arab, Middle Eastern and Muslim individuals post-9/11, surveillance 'flaws' will have a disproportionate effect. Placing marginalized, stigmatized and often criminalized women at the centre of feminist surveillance studies reveals that technologies aimed at the protection from individual abusers, and the arrest of perpetrators, does not work for all cases of violent practices. To be sure, it is a step in the right direction for Google maps and Google Street View to ensure that the addresses of women's shelters are not exposed to the public (National Network to End Violence Against Women 2010). However, feminists should also be concerned with the impact of Google maps and Google Street View for the surveillance of street level sex workers. Problematically, Google maps has allowed street view pictures of women to be visible and circulated widely over the internet. Moreover, the feminist blog Jezebel (2011) noted that, as a result of Google pictures of sex workers, a book titled 'Roadside Prostitutes' has now been published in which women are objectified for the viewing pleasure of others, and without remuneration. The distribution of images reveals pictures of workers who often work anonymously, in illegal bawdy houses, or on the street, and require protection from both unsafe clients and Mason and Magnet: Surveillance Studies and Violence Against Women Surveillance& Society 10(2) 116 law enforcement where their work is criminalized. For indigenous women, people of colour, queer, and non-gender conforming folks taking part in sex work, the visibilization of their bodies and workplaces put them at an even greater risk of violence. Given that these communities are already heavily surveilled by law enforcement, especially those working at street level, the public access to these images compounds safety issues. Sex workers have pointed out that violence is practiced by unsafe clients, but is also experienced at the hands of policing services. For example, due to the criminalization of sex work in Canada, workers are unable to lawfully unionize or assemble for protection, unable to work indoors, and often cannot call on police for help because they risk arrest (Power 2011). The distribution of Google map and Google Street View photos of sex workers and their work places puts women at risk of violence and should be considered alongside protecting shelter addresses when anti-violence advocates work with Google. Yet, sex workers and other marginalized communities have been left out of the mainstream discussions about surveillance technologies and VAW.

2nc urban planning fails

Urban surveillance of women's spaces further engenders apprehension—their fear becomes redirected not only to the present threats, but also the mysterious observer behind the camera lenses

Gray 3 journalist (Mitchell, *Surveillance & Society*, "Urban Surveillance and Panopticism: will we recognize the facial recognition society?" 2003, www.surveillance-and-society.org/articles1(3)/facial.pdf) | js

The negative ways in which urban dwellers may experience facial recognition are all the more salient because they are not countered by the feelings of security they are meant to instil. Koskela's (2002) examination of women's perceptions of surveillance indicates that facial recognition software, and camera surveillance in general, is failing to quell women's fears related to the urban environment. Surveillance proponents argue that women harbour greater concerns about their personal safety in urban areas than men do, and therefore gain even more from urban surveillance, but Koskela challenges this notion. The problem stems from the unverifiability of the presence and character of the observers in a panoptic situation. Bentham praised this as part of the influence of the panopticon as he envisioned it, but it represents a weakness in the modern urban version. Surveillance cameras fail to significantly reduce women's fears because they do not know who is observing them. Koskela says that in general, "Women are constantly reminded that an invisible observer is a threat." This is manifest in warnings from police and others to close their curtains tightly, to beware of snoops or "peeping toms." The problem is Gray: Urban Surveillance and Panopticism Surveillance & Society 1(3) 326 enhanced by the fact that most employees at observation posts are men. A temptation exists to use the surveillance tools for voyeuristic purposes (2002:263-264). The "placeless and faceless" nature of video surveillance, with or without facial recognition, causes women to doubt its value. Observation rooms are generally hidden, rendering them placeless to those experiencing the surveillance. The observation could be taking place at a distance that would mean those watching would have little or no chance of intervening in a dangerous situation. Furthermore, a facial recognition match on a criminal would be of little immediate benefit to a woman under attack. Facelessness becomes an issue because women cannot see the observers and therefore have no ability to form a perception concerning their reliability and their willingness to help in a troublesome situation (Koskela, 2002:267-268). Facial recognition systems have the potential to transform urban spaces in undesirable ways that elude the control of city planne rs, governments and the populace itself. There is also clear evidence that surveillance frequently fails to engender sensations of security in those under its watchful eye, particularly women. And yet increases in surveillance are an essential component of the aggravated risk society, and it is difficult, if not impossible, tofind someone who predicts a halt in the progress of the watchful eye. The question, then, is how can the accountability of those who advocate and operate the systems be ensured?

solvency

1nc solvency

No solvency – court intervention takes years

Powers and Rothman 2 [Stephen and Stanley, Research Associate for the Center for Social and Political Change at Smith College and Professor of Gov and Director of the Center for Social and Political Change at Smith College, *The Least Dangerous? Consequences of Judicial Activism*, p. 179]

A recurrent problem with the judiciary's extension of fundamental rights to the institutions we have studied is that when courts intervene, they do not merely point out a constitutional or statutory violation that must be corrected. They typically dictate a detailed set of remedies to address the issue. This type of intervention has generated a notoriously rigid approach to institutional reform. The judiciary was not designed to legislate or to execute the laws, only to interpret their meaning. It lacks the accountability required of a policy-making body. Judges are only accountable to the public under the most rare and extreme circumstances. Yet in the wake of elaborate court orders, prisons, mental hospitals, schools, police departments, and corporations must all continue to balance individual rights against group or societal interests. Unfortunately, judges do not have the expertise, the time, or the inclination to make the kind of long-term incremental adjustments that may be critical to institutional stability and progress. That is why court-ordered remedies rarely work as planned and have so many unanticipated consequences. Moreover, as we have seen, modification or reversal of court rulings adversely impacting social and political institutions generally takes years.

No enforcement or funding

Pacelle, poli sci prof and legal studies coordinator at the univ of Missouri at St. Louis, **2k2** [Richard, *The Role of the Supreme Court in American Politics: The Least Dangerous Branch?*, p81]

Even if the Supreme Court was to carve out some sphere of power for itself, there would be significant limitations. Any Court decision has to be enforced, but enforcement power is the province of the president and the executive branch. Thus, the Court is at their mercy. If the president does not like the decision, he does not have to enforce it. Indeed, history books report that Andrew Jackson, upset at the Worcester v. Georgia (1832) decision, growled that "John Marshall made his decision, now let him enforce it." There was concern that Dwight Eisenhower would not back the Brown decision when the Southern states resisted. Ultimately, though quite reluctantly, Eisenhower sent troops to Little Rock to support the decision. What if the Court's decision requires active policy intervention and the allocation of resources to help carry out the directives? If the courts determine that prisons are overcrowded or schools are substandard, will the legislature, which has the taxing and spending power, be willing to raise and spend money to correct the problem? It took a decade before serious legislative support for the Brown decision was provided. Title VI of the Civil Rights Act of 1964 empowered the government to cut off federal funds to school districts that did not comply with the desegregation directive (Halpern 1995, 30—59). The bottom line is the adage "the Court lacks the sword and the purse"—it lacks the ability to enforce its decisions and the power over the resources to do so. This places a limitation on the justices. If they stray too far from the acceptable boundaries set by Congress or the president, they risk a negative response from the branches with the real power. If the Court can safely be ignored by the other branches and the public, the cost is its institutional legitimacy.

Plan acts as fly-paper for social movements – it lures them to the courts

Rosenberg 8 (Gerald N., University of Chicago political science and law professor, Ph.D. from Yale University, member of the Washington, D.C. bar, "The Hollow Hope: can courts bring about social change?," pg. 427, 2008)

If this is the case, then there is another important way in which courts affect social change. It is, to put it simply, that courts **act as "fly-paper" for social reformers** who succumb to the **"lure of litigation."** If the constraints of the Constrained Court view are correct, then courts can seldom produce significant social reform. Yet if groups advocating such reform continue to look to the courts for aid, and **spend precious resources** in litigation, then the courts also **limit change by deflecting claims** from substantive political battles, where success is possible, to harmless legal ones where it is not. Even when major cases are won, the achievement is often **more symbolic that real**. Thus, courts may serve an ideological function of luring movements for social reform to an institution that is **structurally constrained** from serving their needs, providing only an illusion of change.

And, causes backlash—conservative reconstruction.

West 93 [Robin, Professor of Law, Georgetown University Law Center, Fall 1993, 88 Nw. U.L. Rev. 241, Northwestern Law review]

Although the adjudicated Constitution obviously has from time to time been used to effectuate progressive gains and to solidify progressive victories, those moments have been rare, anomalous, and often fleeting: the victory has been, as often as not, soured by near instantaneous conservative reconstruction. [18] For the most part, the clauses of the adjudicated Constitution have operated in concert to conserve present distributions of social, economic, and private power against legislative and democratic attempts at redistributing those resources or renegotiating the terms of struggle. If for no other than that reason, progressives would be well advised to break their romance with the United States Constitution. If it is true, as I have suggested, that the adjudicated Constitution is doctrinally and substantively more of a bar to than a vehicle for progressive legislation, then Thayer's rule looks attractive indeed.

That crushes resources to solve widespread social reform

Rosenberg 8 (Gerald N., University of Chicago political science and law professor, Ph.D. from Yale University, member of the Washington, D.C. bar, "The Hollow Hope: can courts bring about social change?," pg. 422-423, 2008)

In contrast to this conclusion, it might be suggested that throughout this book I have asked too much of courts. After all, in all the cases examined, court decisions produced some change, however small. Given that political action appeared impossible in many instances, such as with civil rights in the 1950s, same-sex marriage in the 1990s, and reform of the criminal justice system more generally, isn't some positive change better than none? In a world of unlimited resources, this would be the case. In the world in which those seeking significant social reform live, however, strategic choices have costs, and a strategy that produces little or not change and induces backlash drains resources that could be more effectively employed in other strategies. In addition, vindication of constitutional principles accompanied by small change may be mistaken for widespread significant social reform, inducing reformers to relax their efforts.

2nc courts fail – enforcement

Courts can't implement their decisions

Rosenberg 8 (Gerald N., University of Chicago political science and law professor, Ph.D. from Yale University, member of the Washington, D.C. bar, "The Hollow Hope: can courts bring about social change?," pg. 10, 2008)

The view of courts as unable to produce significant social reform has a distinguished pedigree reaching back to the founders. Premised on the institutional structure of the American political system and the procedures and belief systems created by American law, it suggests that the conditions required for courts to produce significant social reform will seldom exist. Unpacked, the Constrained Court view maintains that courts will generally not be effective producers of significant social reform for three reasons: the limited nature of constitutional rights, the lack of judicial independence, and the judiciary's inability to develop appropriate policies and its lack of powers of implementation.

Courts lack sword and purse.

Pacelle 2 [Richard, poli sci prof and legal studies coordinator at the univ of Missouri at St. Louis, *The Role of the Supreme Court in American Politics: The Least Dangerous Branch?*, p. 92]

The limits and potential limits on justiciability and jurisdiction are only part of a broader concern with the institutional constraints on the Court. The Court has some institutional weaknesses that seem to argue for judicial restraint. The willingness to exercise activism creates the risk that the Court will overstep its boundaries and invites retaliation from the elected branches. The creation of separation of powers and checks and balances was a prescription for political conflict. As Louis Brandeis noted, "the government was created not for efficiency, but to avoid the arbitrary use of power" (O'Brien 1997, 4). The division of authority between the different branches of government is a source of both strength and weakness for the Court. It is a weakness in that the other branches hold some potentially strong weapons over the Court. At the same time, separation of powers means that the elected branches have some weaknesses as well. Those constraints provided opportunities for the Court to step in and enhance its own base of power over time. Perhaps the greatest limitation on the Supreme Court is that the judiciary cannot enforce its own decisions. It lacks "the sword and the purse" Congress has the purse, the president has the sword. If either or both disagree with the Court's decision, that decision may be undermined or not enforced—and either one can retaliate against the Court in a number of ways.

2nc courts fail – social change

People won't respond – they feel courts are out of step with popular beliefs

Rosenberg 8 (Gerald N., University of Chicago political science and law professor, Ph.D. from Yale University, member of the Washington, D.C. bar, "The Hollow Hope: can courts bring about social change?," pg. 425-426, 2008)

Why do judicial decisions appear to effectively mobilize opponents? With same-sex marriage, why was there a ferocious backlash after the Hawaii and Massachusetts decisions but not after the Connecticut or New Hampshire legislative enactments of civil unions? In the particular case, part of the answer likely has to do with timing (Connecticut and New Hampshire acted later) and with the greater public support for civil unions compared to marriage. More generally, legislators are unlikely to enact highly controversial legislation they believe that most of their constituents oppose while judges sometimes

will act without political support. Thus, judicial decisions can appear to come out of the blue. They can be unexpected and shocking. Along the same lines, legislative acts require the support of majorities of relatively large legislatures, typically numbering in the hundreds, in two separate chambers, and the concurrence of the governor, while judicial opinions are the work of a handful of judges. Thus, in contrast to legislative acts, it is easy to characterize a judicial decision as the result of a few "activist" judges who don't share the public's beliefs and attitudes. Throughout the book I quoted opponents of judicial decisions furthering significant social reform criticizing the decisions as illegitimate because they came from the courts. Consider, for example, the remarks of President Bush in his State of the Union address on January 20, 2004, at the start of the presidential election year, in support of a constitutional amendment banning same-sex marriage. Bush underscored this concern with judicial action, saying, in part: Activist judges . . . have begun redefining marriage by court order, without regard for the will of the people and their elected representatives. On an issue of such great consequence, the people's voice must be heard. If judges insist on forcing their arbitrary will upon the people, the only alternative left to the people would be the constitutional process. Our nation must defend the sanctity of marriage. (Bush 2004) This concern may be more than rhetorical. Legislators face frequent elections while judges either have life tenure or infrequently face the electorate. When judges make unpopular decisions, people may feel that their lives are being reordered without their input. Thus, the judiciary may be institutionally structured to be susceptible to backlash.

Crushes all other avenues of protest

Rosenberg 8 (Gerald N., University of Chicago political science and law professor, Ph.D. from Yale University, member of the Washington, D.C. bar, "The Hollow Hope: can courts bring about social change?," pg. 423, 2008)

In general, then, not only does litigation steer activists to an institution that is constrained from helping them, but also it siphons off crucial resources and talent, and runs the risk of weakening political efforts. In terms of financial resources, social reform groups don't have a lot of money. Funding a litigation campaign means that other strategic options are starved of funds. In civil rights, while *Brown* was pending in June 1953, Thurgood Marshall and Walter White sent out a telegram to supporters of the National Association for the Advancement of Colored People asking for money, stating "funds entirely spent" (quoted in Kluger 1976, 617). Compare this to the half-million-dollar estimates of the cost of the freedom rides, largely due to fines and bail (Sarratt 1966, 337). Further, the legal strategy drained off the talents of people such as Thurgood Marshall and Jack Greenberg. As Martin Luther King, Jr., complained: "to accumulate resources for legal actions imposes intolerable hardships on the already overburdened" (King 1963, 157)

Courts only create illusion of trade

Rosenberg 8 (Gerald N., University of Chicago political science and law professor, Ph.D. from Yale University, member of the Washington, D.C. bar, "The Hollow Hope: can courts bring about social change?," pg. 424, 2008)

A further danger of litigation as a strategy for significant social reform is that symbolic victories may be mistaken for substantive ones, covering a reality that is distasteful. Rather than working to change that reality, reformers relying on a litigation strategy for reform may be misled (or content?) to celebrate the illusion of change. Throughout this book, the reader has encountered numerous claims about the symbolic importance of judicial decisions. Yet none of them has withstood empirical analysis. In criminal rights, for example, the contribution of the Court's decisions seems more symbolic than substantive, having "more significance as a declaration of intent than as a working instrument of law" (Elsen and Rosett 1967, 645). For some, however, this is meaningful. As Schulhofer puts it, "the symbolic effects of criminal procedural guarantees are important; they underscore our societal commitment to restraint in an area in which emotions easily run uncontrolled" (Schulhofer 1987, 460).5 Yet, chapter 11 has

shown that these "societal commitments" are not always shared by those responsible for implementing them. There is a danger that symbolic gains cover for actual failings. In strong but colorful language, Tigar sums up this view of the criminal rights revolution, and the dangers of substituting symbolic gain for substantive change more generally: "the constitutional revolution in criminal procedure has amounted to little more than an ornament, or golden cupola, built upon the roof of a structure found rotting and infested, assuring the gentlefolk who only pass by without entering that all is well inside" (Tigar 1970, 7).

2nc courts fail – backlash

Court victories create countermobilization

Rosenberg 8 (Gerald N., University of Chicago political science and law professor, Ph.D. from Yale University, member of the Washington, D.C. bar, "The Hollow Hope: can courts bring about social change?," pg. 425, 2008)

Successful litigation for significant social reform runs the risk of instigating countermobilization. While I have found little evidence that court decisions mobilize supporters of significant social reform, the data suggest that they can mobilize opponents. With civil rights, there was growth in the membership and activities of pro-segregation groups such as the White Citizens Councils and the Ku Klux Klan in the years after Brown. With abortion, the Right to Life movement expanded rapidly after 1973. While both types of groups existed before Court action, they appeared reinvigorated after it. In addition, in the wake of the Supreme Court's 1989 Webster decision, seen by many as a threat to continuing access to safe and legal abortion, pro-choice forces seemed to gain renewed vigor. With same-sex marriage, there was a massive and effective countermobilization in response to the Hawaii, Vermont, and Massachusetts decisions. These examples suggest that one result of litigation to produce significant social reform is to strengthen the opponents of such change. And that, of course, is far from the aim of those who litigate.

Creates legislative backlash

Rosenberg 8 (Gerald N., University of Chicago political science and law professor, Ph.D. from Yale University, member of the Washington, D.C. bar, "The Hollow Hope: can courts bring about social change?," pg. 426, 2008)

A final reason why judicial decisions on controversial issues may spark backlash is that while legislative enactments are about preferences, judicial decisions are about principle. It is possible to compromise preferences but principles, by definition, can't be compromised. To be told by an electorally unaccountable judge that deeply-held principles are wrong may outrage those who hold competing principles. In contrast, when a legislature extends a benefit or enacts an entitlement program, one's disagreement may be less intense. After all, what one legislature has done another can undo and the next election is likely only a few years away. Again, the reasons that make litigation attractive to the relatively disadvantaged are the very reasons that judicial victories are susceptible to backlash.

Courts lead to more conservative legislation – Congress thinks that courts will strike it down

Rosenberg 8 (Gerald N., University of Chicago political science and law professor, Ph.D. from Yale University, member of the Washington, D.C. bar, "The Hollow Hope: can courts bring about social change?," pg. 423-424, 2008)

The pro-choice movement was harmed in a second way by its reliance on Court action. The most restrictive version of the Hyde Amendment, banning federal funding even for the most medically necessary abortions, was passed with the help of a parliamentary maneuver by pro-choice legislators. Their strategy, as reported the following day on the front pages of the New York Times and Washington Post was to pass such a conservative bill that the Court would have "no choice" but to overturn it (Tolchin 1977; Russel 1977).[4] This reliance on the Court was totally unfounded. With hindsight, Karen Mulhauser, former director of NARAL, suggested that "had we made more gains through the legislative and referendum processes, and taken a little longer at it, the public would have moved with us" (quoted in Qilliams 1979, 12). By winning a Court case "without the organization needed to cope with a powerful opposition" (Rubin 1982, 169), pro-choice forces vastly overestimated the power and influence of the Court.

framing

1nc framing

They're wrong about predictions and voting for them makes it worse

Fitzsimmons, 7 – Ph.D. in international security policy from the University of Maryland, Adjunct Professor of Public Policy, analyst in the Strategy, Forces, and Resources Division at the Institute for Defense Analyses (Michael, "The Problem of Uncertainty in Strategic Planning", Survival, Winter 06/07)

In defence of prediction Uncertainty is not a new phenomenon for strategists. Clausewitz knew that 'many intelligence reports in war are contradictory; even more are false, and most are uncertain'. In coping with uncertainty, he believed that 'what one can reasonably ask of an officer is that he should possess a standard of judgment, which he can gain only from knowledge of men and affairs and from common sense. He should be guided by the laws of probability.'34 Granted, one can certainly allow for epistemological debates about the best ways of gaining 'a standard of judgment' from 'knowledge of men and affairs and from common sense'. Scientific inquiry into the 'laws of probability' for any given strate- gic question may not always be possible or appropriate. Certainly, analysis cannot and should not be presumed to trump the intuition of decision-makers.

Nevertheless, Clausewitz's implication seems to be that the **burden of proof** in any debates about planning should belong to the decision-maker who rejects formal analysis, standards of evidence and probabilistic reasoning. Ultimately, though, the value of prediction in strategic planning does not rest primarily in getting the correct answer, or even in the more feasible objective of bounding the range of correct answers. Rather, prediction requires decision-makers to expose, not only to others but to themselves, the beliefs they hold regarding **why** a given event is likely or unlikely and why it would be important or unimportant. Richard Neustadt and Ernest May highlight this useful property of probabilistic reasoning in their renowned study of the use of history in decision-making, Thinking in Time. In discussing the importance of probing presumptions, they contend: The need is for tests prompting questions, for sharp, straightforward mechanisms the decision makers and their aides might readily recall and use to dig into their own and each others' presumptions. And they need tests that get at basics somewhat by indirection, not by frontal inquiry: not 'what is your inferred causation, General?' Above all, not, 'what are your values, Mr. Secretary?' ... If someone says 'a fair chance' ... ask, 'if you were a betting man or woman, what odds would you put on that?' If others are present, ask the same of each, and of yourself, too. Then probe the differences: why? This is tantamount to seeking and then arguing assumptions underlying different numbers placed on a subjective probability assessment. We know of no better way to force clarification of meanings while exposing hidden differences ... Once differing odds have been quoted, the question 'why?' can follow any number of tracks. Argument may pit common sense against common sense or analogy against analogy. What is important is that the expert's basis for linking 'if' with 'then' gets exposed to the hearing of other experts before the lay official has to say yes or no.'35

There are at least three critical and related benefits of prediction in strate- gic planning. The first reflects Neustadt and May's point – prediction enforces a certain level of discipline in making explicit the assumptions, key variables and implied causal relationships that constitute decision-makers' beliefs and that **might otherwise remain implicit**. Imagine, for example, if Shinseki and Wolfowitz had been made to assign probabilities to their opposing expectations regarding post-war Iraq. Not only would they have had to work harder to justify their views, they might have seen more clearly the substantial chance that they were wrong and had to make greater efforts in their planning to prepare for that contingency. Secondly, the very process of making the relevant factors of a decision explicit provides a firm, or at least transparent, basis for making choices. Alternative courses of action can be compared and assessed in like terms. Third, the transparency and discipline of the process of arriving at the initial strategy should heighten the decision-maker's sensitivity toward changes in the environment that would suggest the need for adjustments to that strategy. In this way, prediction enhances rather than under-mines **strategic flexibility**. This defence of prediction does not imply that great stakes should be gambled on narrow, singular predictions of the future. On the contrary, the central problem of uncertainty in plan- ning remains that any given prediction may simply be wrong. Preparations for those eventualities must be made. Indeed, in many cases, relatively unlikely outcomes could be enormously consequential, and therefore merit extensive preparation and investment. In order to navigate this complexity, strategists must return to the dis- tinction between uncertainty and risk. While the complexity of the international security environment may make it somewhat resistant to the type of probabilistic thinking associated with risk, a risk-oriented approach seems to be the only viable model for national-security strategic planning. The alternative approach, which categorically denies prediction, precludes strategy. As Betts argues, Any assumption that some knowledge, whether intuitive or explicitly formalized, provides guidance about what should be done is a presumption that there is reason to believe the choice will produce a satisfactory outcome – that is, it is a prediction, however rough it may be. If there is no hope of discerning and manipulating causes to produce intended effects, analysts as well as politicians and generals should all quit and go fishing.36 Unless they are willing to quit and go fishing, then, strategists must sharpen their tools of risk assessment. Risk assessment comes in many varieties, but identification of two key parameters is common to all of them: the consequences of a harmful event or condition; and the likelihood of that harmful event or condition occurring. With no perspective on likelihood, a strategist can have no firm perspective on risk. With no firm perspective on risk, strategists cannot purposefully discriminate among alternative choices. Without purposeful choice, there is no strategy. One of the most widely read books in recent years on the complicated relation- ship between strategy and uncertainty is Peter Schwartz's work on scenario-based planning, The Art of the Long View. Schwartz warns against the hazards faced by leaders who have deterministic habits of mind, or who deny the difficult implications of uncertainty for strategic planning. To overcome such tenden- cies, he advocates the use of alternative future scenarios for the purposes of examining alternative strategies. His view of scenarios is that their goal is not to predict the future, but to sensitise leaders to the highly contingent nature of their decision-making.37 This philosophy has taken root in the strategic-planning processes in the Pentagon and other parts of the US government, and

properly so. Examination of alternative futures and the potential effects of surprise on current plans is essential. Appreciation of uncertainty also has a number of organisational impli- cations, many of which the national-security establishment is trying to take to heart, such as encouraging multidisciplinary study and training, enhancing information sharing, rewarding innovation, and placing a premium on speed and versatility. The arguments advanced here seek to take nothing away from these imperatives of planning and operating in an uncertain environment. But appreciation of uncertainty carries hazards of its own. Questioning assumptions is critical, but assumptions must be made in the end. Clausewitz's 'standard of judgment' for discriminating among alternatives must be applied. Creative, unbounded speculation must resolve to choice or else there will be no strategy. Recent history suggests that **unchecked scepticism** regarding the validity of prediction can marginalise analysis, trade significant cost for ambig- uous benefit, empower parochial interests in decision-making, and undermine flexibility. Accordingly, having fully recognised the need to broaden their strategic-planning aperture, national-security policymakers would do well now to reinvigorate their efforts in the messy but indispensable business of predicting the future.

Scenario planning is good – allows us to make better choices

Han, 10 [Dong-ho Han, Ph.D. Candidate in Political Science at the University of Nebraska-Lincoln, , "Scenario Construction and Implications for IR Research: Connecting Theory to a Real World of Policy Making," http://www.allacademic.com/one/isa/isa10/index.php?cmd=Download+Document&key=unpublished_manuscript&file_index=1&pop_up=true&no_click_key=true&attachment_style=attachment&PHPSESSID=3e890fb59257a0ca9bad2e2327d8a24f

How do we assess future possibilities with existing data and information? Do we have a systematic approach to analyze the future events of world politics? If the problem of uncertainty in future world politics is increasing and future international relations are **hard to predict**, then it is necessary to devise a useful tool to effectively deal with upcoming events so that **policy makers can reduce the risks of future uncertainties**. In this paper, I argue that **the scenario methodology** is one of the most effective methods **to connect theory to practice**, thereby leading to a better understanding of future world events. The purpose of this paper is to introduce the scenario methodology to the field of IR in a more acceptable fashion and to explore its implications for a real policy world. To achieve this goal, I will explain the scenario methodology and why it is adequate to provide a better understanding of future world events. More specifically, I will clarify what the scenario method is and what its core components are and explain the importance and implications of the scenario method in IR by analyzing existing IR literature with an emphasis on security studies that primarily provide the prospect of future security issues. 1. Introduction How do we assess future possibilities with existing data and information? Do we have a systematic approach to analyze the future events of world politics? Given various theoretical ideas for predicting and analyzing future events in the field of international relations (IR), to understand these events properly it is important both to cast out all plausible outcomes and to think through a relevant theory, or a combination of each major theory, in connection with those outcomes. This paper aims to explain the scenario methodology and why it is adequate to provide a better understanding of future world events. After clarifying the scenario methodology, its core components, and its processes and purposes, I will explore other field's use of this methodology. Then I will explain the importance and implications of the scenario method in the field of IR. I will conclude with summarizing the advantage of the scenario method in a real world of policy making. 2. What is the Scenario Methodology? This section begins with one major question – **what is the scenario methodology?** To answer this, some history regarding the development of this method should be mentioned.1 Herman Kahn, a pioneer of the scenario method, in his famous 1962 book Thinking about the Unthinkable, argued that the decision makers in the United States should think of and prepare for all possible sequences of events **with regard to nuclear war** with the Soviet Union.2 Using scenarios and connecting them with various war games, Kahn showed the importance of thinking ahead in time and using the scenario method based upon imagination for the future.3 According to Kahn and his colleagues, scenarios are "**attempts to describe** in some detail **a hypothetical sequence of events that could lead plausibly** to the situation envisaged."4 Similarly, Peter Schwartz defines scenarios as "stories about the way the world might turn out tomorrow, stories that can help us recognize and adapt to changing aspects of our present environment."5 Given a variety of definitions of scenarios,6 for the purpose of this research, I refer to the scenario-building methodology as a means by which people can articulate **different futures** with trends, uncertainties, and rules over a certain amount of time. Showing all plausible future stories and clarifying important trends, scenario thinking enables decision makers to make an important decision at the present time. Key Terms in the Scenario Methodology **The core of the scenario method** lies in **enabling policy makers to reach a critical decision** at the present time based on thinking about all **plausible future possibilities**. Key concepts in the scenario method include: driving forces, predetermined elements, critical uncertainties, wild cards and scenario plot lines.7 Driving forces are defined as "the causal elements that surround a problem, event or decision," which could be many factors, including those "that can

be the basis, in different combinations, for diverse chains of connections and outcomes."8 Schwartz defines driving forces as "the elements that move the plot of a scenario, that determine the story's outcome."9 In a word, driving forces constitute the basic structure of each scenario plot line in the scenario-making process. Predetermined elements refer to "events that have already occurred or that almost certainly will occur but whose consequences have not yet unfolded."10 Predetermined elements are "givens" which could be safely assumed and understood in the scenario-building process. Although predetermined elements impact outcomes, they do not have a direct causal impact on a given outcome. Critical uncertainties "describe important determinants of events whose character, magnitude or consequences are unknown."11 Exploring critical uncertainties lies at the heart of scenario construction in the sense that the most important task of scenario anaysts is to discover the elements that are most uncertain and most important to a specific decision or event.12 Wild cards are "conceivable, if low probability, events or actions that might undermine or modify radically the chains of logic or narrative plot lines."13 In John Peterson's terms, wild cards are "not simple trends, nor are they byproducts of anything else. They are events on their own. They are characterized by their scope, and a speed of change that challenges the outermost capabilities of today's human capabilities."14 Wild cards might be extremely important in that in the process of scenario planning their emergence could change the entire direction of each scenario plot line. A scenario plot line is "a compelling story about how things happen" and it describes "how driving forces might plausibly behave as they interact with predetermined elements and different combinations of critical uncertainties."15 Narratives and/or stories are an essential part of the scenario method due to the identical structure of analytical narratives and scenarios: "both are sequential descriptions of a situation with the passage of time and explain the process of events from the base situation into the situation questioned."16 Process and Purpose of Scenario Analysis Scenario analysis begins with the exploration of driving forces including some uncertainties. However, scenario building is more than just organizing future uncertainties; rather, it is a **thorough understanding of uncertainties**, thereby distinguishing between something clear and unclear in the process of decision making.17 As Pierre Wack has pointed out, "By **carefully studying some uncertainties, we gained a deeper understanding** of their interplay, which, paradoxically, led us to learn what was certain and inevitable and what was not." In other words, a careful investigation of raw uncertainties helps people figure out more "critical uncertainties" by showing that "what may appear in some cases to be uncertain might actually be predetermined – that many outcomes were simply not possible."18 Exploring future uncertainties thoroughly is one of the most important factors in scenario analysis. Kees van der Heijden argues that in the process of separating "knowns" from "unknowns" analysts could clarify driving forces because the process of separation between "predetermineds" and uncertainties **demands** a fair amount of **knowledge of causal relationships surrounding the issue at stake**.19 Thus, in scenario analysis a thorough understanding of critical uncertainties leads to a well-established knowledge of driving forces and causal relations.20 Robert Lempert succinctly summarized the scenario-construction process as follows: "scenario practice begins with the challenge facing the decisionmakers, ranks the most significant driving forces according to their level of uncertainty and their impact on trends seemingly relevant to that decision, and then creates a handful of scenarios that explore different manifestations of those driving forces."21

at: menand/tetlock

Tetlock's study was so biased that it rigged the game against experts—in reality, experts make better predictions—without defaulting to them, policymakers just make ideological gut-checks

Caplan 7 - associate professor of economics at George Mason University [Bryan, "Have the experts been weighed, measured, and found wanting?," Critical Review 19.1]

This is one of the rare cases where Tetlock gets a little defensive. He writes that he is sorely tempted to dismiss the objection that "the researchers asked the wrong questions of the wrong people at the wrong time" with a curt, "'Well, if you think you'd get different results by posing different types of questions to different types of people, go ahead.' That is how science is supposed to proceed" (184). 3 The problem with his seemingly reasonable retort is that Tetlock deliberately selected relatively hard questions. One of his criteria was that questions pass the "don't bother me too often with dumb questions" test. … No one expected a coup in the United States or United Kingdom, but many regarded coups as serious possibilities in Saudi Arabia,

Nigeria, and so on. Experts guffawed at judging the nuclear proliferation risk posed by Canada or Norway, but not the risks posed by Pakistan or North Korea. Some "ridiculous questions" were thus deleted. (244) On reflection, though, a more neutral word for "ridiculous" is "easy." If you are comparing experts to the chimp's strategy of random guessing, excluding easy questions eliminates the areas where experts would have routed the chimps. Perhaps more compellingly, if you are comparing experts to laymen, positions that experts consider ridiculous often turn out to be popular (Caplan 2007; Somin 2004; Lichter and Rothman 1999; Delli Carpini and Keeter 1996; Thaler 1992; Kraus, Malmfors, and Slovic 1992). To take only one example, when asked to name the two largest components of the federal budget from a list of six areas, the National Survey of Public Knowledge of Welfare Reform and the Federal Budget (Kaiser Family Foundation and Harvard University 1995) found that *foreign aid* was respondents' most common answer, even though only about 1 percent of the budget is devoted to it. Compared to laymen, then, experts have an uncanny ability to predict foreign aid as a percentage of the budget. Tetlock also asks quite a few questions that are controversial among the experts themselves.[4] If his goal were solely to distinguish better and worse experts, this would be fine. Since Tetlock also wants to evaluate the predictive ability of the average expert, however, there is a simple reason to worry about the inclusion of controversial questions: When experts sharply disagree on a topic, then by definition, the average expert cannot do well. But Tetlock does more to help the chimp than just avoiding easy questions and asking controversial ones. He also crafts the response options to make chimps look much more knowledgeable than they are. When questions dealt with continuous variables (like GDP growth or stock market closes), respondents did not have to give an exact number. Instead, they were asked whether variables would be *above* a confidence interval, *below* a confidence interval, or *inside* a confidence interval. The catch is that Tetlock picked confidence intervals that make the chimps' strategy fairly effective: The confidence interval was usually defined by plus or minus 0.5 of a standard deviation of the previous five or ten years of values of the variable. … For example, if GDP growth had been 2.5 percent in the most recently available year, and if the standard deviation of growth values in the last ten years had been 1.5 percent, then the confidence band would have been bounded by 1.75 percent and 3.25 percent. (244) Assuming a normal distribution, Tetlock approach ensures that variables will go up with a probability of 31 percent, stay the same with a probability of 38 percent, and go down with a probability of 31 percent.[5] As a consequence, the chimp strategy of assigning equal probabilities to all events is almost *automatically* well-calibrated. If, however, Tetlock had made his confidence interval zero—or three—standard deviations wide, random guessing would have been a predictive disaster, and experts would have shined by comparison. To truly level the playing field between experts and chimps, Tetlock could have asked the experts for exact numbers, and made the chimps guess from a uniform distribution over the whole range of possibilities. For example, he could have asked about defense spending as a percentage of GDP, and made chimps equally likely to guess every number from 0 to 100. Unfair to the chimps? Somewhat, but it is no more unfair than using complex, detailed information to craft three reasonable choices, and then concluding that the chimps' "guesswork" was almost as good as the experts' judgment. To amplify this lesson, consider the classic question of how long it would take a chimp typing at a keyboard to write *War and Peace*. If the chimp could type anything he wanted, the sun might go out first. But what if each key on the keyboard printed a book rather than a letter, and one of those books was *War and Peace*? It is a lot easier for a chimp to "write" *War and Peace* when someone who actually knows how to do so paves the chimp's way. At this point, one could reasonably object that my corrections merely increase the advantage of experts over chimps. But they do nothing to narrow the gap between experts and the real winners of Tetlock's horserace: case-specific extrapolations and formal statistical models. Both of these methods continue to work well when questions are easy and/or require exact numbers. Fair enough, but what are the implications? Suppose that, properly measured, experts crush chimps, but still lose to extrapolations and formal models. Does that make experts' forecasting abilities "good," or "bad"? In my view, the right answer is: pretty good. Almost no one is smart enough to run extrapolations or estimate formal models in his head. For experts to match formal models, they would have to approach Tetlock's questions as a consulting project, not "just a survey." Speaking at least for my own discipline, most *economists* who are seriously interested in predicting, say, GDP growth rely on formal statistical models. But very few economists would estimate a formal model just to answer a survey. Our time is too valuable, or, to put it less charitably, we're kind of lazy. It is hardly surprising, then, that economists lost to formal models, considering the fact that Tetlock took the time to open his favorite statistical program, and the

economists did not. **All that this shows is that statistical forecasting is better than from-the-hip forecasting, and that experts are not smart enough to do statistical forecasting without the help of a computer**. Experts cannot escape all of Tetlock's indictment. He makes a convincing case that experts break some basic rules of probability, overestimate their predictive abilities for "non-ridiculous" and controversial questions, and respond poorly to constructive criticism. But contrary to the radical skeptics, experts can easily beat chimps in a fair game. For the chimps to stand a chance, the rules have to be heavily slanted in their favor. The Egalitarian Misinterpretation Tetlock tells us that political experts "barely best the chimp." It is easy to conclude that these so-called "experts" are a bunch of quacks. Question: What would happen if the average voter accepted this conclusion? Would he start relying on the winner of Tetlock's horserace—formal statistical models? No. In all likelihood**, if the average voter came to see political experts as quacks, he would rely even more heavily on** ~~his~~ ***own preconceptions*****.** As a result, policies would shift in a populist direction. For example, if the public lost whatever respect it now has for experts, one would expect policy to move away from the free-trade prescription of the vast majority of economists, and towards the protectionist policies that most people instinctively favor. If Tetlock is right, wouldn't a shift toward populism be a good thing—or at least not a bad thing? Many readers will be quick to make this inference, but it is mistaken. Even though Tetlock races experts against a long list of competitors, he says very little about the relative performance of experts versus laymen. As far as I can tell, the only laymen Tetlock tested were a group of: briefly briefed Berkeley undergraduates. In 1992, we gave psychology majors "facts on file" summaries, each three paragraphs long, that presented basic information on the polities and economies of Russia, India, Canada, South Africa, and Nigeria. We then asked students to make their best guesses on a standard array of outcome variables. (2005, 56) Out of all the competitors in Tetlock's tournament, these undergraduates came in dead last: The undergraduates were both less calibrated and less discriminating than professionals working either inside or outside their specialties. … If one insists on thinking like a human being rather than a statistical algorithm … it is especially dangerous doing so equipped only with the thin knowledge base of the undergraduates. The professionals—experts and dilettantes—possessed an extra measure of sophistication that allowed them to beat the undergraduates soundly. … (56) The upshot is that Tetlock does nothing to show that experts are "no better than the rest of us." When he does race the two groups, laymen lose decisively. Tetlock, like Voltaire, finds that "common sense is not so common." The poor performance of the Berkeley undergraduates is particularly noteworthy because these laymen were elite in absolute terms, and received basic information before they made their predictions. We can only imagine how poorly the average American would have done using nothing but the information in his head—and shudder when we realize that "the average American, using nothing but the information in his head" roughly describes the median American voter.6

at: security/pos peace

Zero chance they cause foreign policy realignment—pursuit of security is locked in

McDonough 9 (David. S. McDonough, Fellow at the Centre for Foreign Policy Studies at Dalhousie University, "Beyond Primacy: Hegemony and 'Security Addiction' in U.S. Grand Strategy", Winter 2009, Orbis, ScienceDirect)

The reason that the current debate is currently mired in second-order issues of multilateral versus unilateral legitimacy can be attributed to the post 9/11 security environment. A grand strategy is, after all, ''a state's theory about how it can best cause security for itself.'' 35 It would be prudent to examine why the neoconservative ''theory'' proved to be so attractive to American decision-makers after the 9/11 attacks, and why the Democrats have begun to rely on an equally primacist ''theory'' of their own. As Charles Kupchan has demonstrated, a sense of vulnerability is often directly associated with dramatic shifts in a state's grand strategy. Kupchan is, of course, largely concerned with vulnerability to changes in the global distribution of power. 36

Even so, the 9/11 terrorist attacks have dramatically increased the U.S. sense of strategic vulnerability to both global terrorist organizations like Al Qaeda and even to more traditional threats that are seen, as Donald Rumsfeld said, ''in a dramatic new light–through the prism of our experience on 9/11.'' 37 Perhaps more than any previous terrorist action, these attacks demonstrated the potential influence of non-state terrorist groups like Al Qaeda. U.S. strategic primacy makes conventional responses unattractive and ultimately futile to potential adversaries. The country's societal vulnerability to terrorist attacks will likewise lead to extremely costly defensive **reactions** against otherwise limited attacks. For both the United States and its asymmetrical adversaries, the advantage clearly favors the offense over the defense. With the innumerable list of potential targets, ''preemptive and preventive attacks will accomplish more against. . .[terrorists or their support structures], dollar for dollar, than the investment in passive defenses.'' 38 As former Undersecretary of Defense for Policy Douglas Feith has argued, a primary reliance on defense requires instrusive security measures that would inevitably endanger American civil liberties and curtail its free and open society. 39 Strategic preponderance ensures that the United States will continue to face adversaries eager to implement asymmetrical tactics, even as it offers the very resources necessary to implement both offensive and less effective defensive measures. Unfortunately, terrorist groups with strategic reach (i.e., capable of influencing the actions of states) will likely increase in the coming years due to a combination of factors, including the ''democractization of technology,'' the ''privatization of war'' and the ''miniaturization of weaponry.'' As more groups are imbued with sophisticated technological capabilities and are able to employ increasingly lethal weapons, the United States will be forced to rely even further on its unprecedented global military capabilities to eliminate this threat. The global war on terror, even with tactical successes against al Qaeda, will likely result in an inconclusive ending marked by the fragmentation and proliferation of terrorist spoiler groups. The ''Israelization'' of the United States, in which ''security trumps everything,'' will be no temporary phenomenon. 40 Realism provides an insufficient means for understanding the current post-9/11 strategic threat environment and underestimates the potential impact of the terrorist threat on the American sense of vulnerability. Globalized terrorism must be confronted by proactive measures to reduce the domestic vulnerability to attack and to eliminate these organizations in their external sanctuaries. Even then, these measures will never be able to ensure ''perfect security.'' As a result, significant **public pressure** for expanded security measures will arise after any attack. The United States will be consumed with what Frank Harvey has termed security addiction: ''As expectations for acceptable levels of pain decrease, billions of dollars will continue to be spent by both parties in a never-ending competition to convince the American public that their party's programs are different and more likely to succeed.'' 41 This addiction has an important impact on the dramatically rising levels of homeland security spending. Indeed, while this increased spending is an inevitable and prudent reaction to the terrorist threat, it also creates high **public expectations** that will only amplify outrage in a security failure. 42 Relatedly, American strategic preponderance plays an important role in facilitating a vigorous international response to globalized terrorism, including the use of coercive military options and interventions. A primacist strategy has the dual attraction of both maximizing U.S. strategic dominance and convincing the public of a party's national security credentials. Indeed, the Republicans had developed a **strong advantage in electoral politics** by its adherence to a strong military and aggressive strategy, and the Democrats in turn ''learned the lesson of its vulnerability on the issue and [...] explicitly declared its devotion to national security and support for the military.'' 43 The 9/11 attacks may not have altered the distribution of power amongst major states, but it has directly created a domestic political situation marked by an addiction to expansive security measures that are needed to satisfy increasingly high public expectations. In such a climate, it is easy to see why the neo-conservatives were so successful in selling their strategic vision. The fact that the United States has effectively **settled on a grand strategy of primacy** in the post-9/11 period should come as no surprise. **It is simply inconceivable that a political party could successfully advocate a grand strategy that does not embrace military preeminence and interventionism**, two factors that are seen to provide a definite advantage in the pursuit of a ''global war on terror.'' Political parties may disagree on the necessary tactics to eliminate the terrorist threat. But with increased vulnerability and security addiction, the United States will continue to embrace strategies of primacy– rather than going ''beyond primacy''–for much of the Long War.

Even if gender dynamics are involved in all wars, that doesn't mean they turn our impacts or have an explanation for specific wars

Thom **Workman** (Assistant Professor of Political Science University of New Brunswick) January **1996** "Pandora's Sons: The Nominal Paradox of Patriarchy and War" http://www.yorku.ca/yciss/publications/OP31-Workman.pdf

To the extent that war is contingent upon such gendered constructs, constructs that the practice itself appears to threaten and endanger, the relationship between war and gender might be said to be paradoxical. The paradoxical dynamic between gender and war, however, is softened by the profundity of the links between war and patriarchy. The gendering of experiences during war, along with the restoration of traditional gendered constructs after war, more than compensate for any war induced sundering of the patriarchal tapestry. While the practice of war suggests that it might encourage a rupture in the gendered fabric of society, it overwhelmingly contributes to patriarchal reproduction. Questions oriented around the emancipatory potential of war where women are concerned, therefore, run the risk of losing a perspective on the overall role of modern warfare in the reproduction of women's oppression. II The gender critique of war provides a generalized account of wars and the way they are fought. The gender critique tells us why we have wars at all. While it is suggestive with respect to the frequency, character, and scope of war,

it does not try to account for the timing and location of specific wars. It tells us why war is viewed widely as an acceptable practice or way to resolve human differences (although this acceptance invariably is accompanied with obligatory protestations of reluctance). The gender critique of war, for example, cannot account for the timing and location of the 1991 Gulf War, although it can provide an explanation of the warring proclivities of modern Western states, especially the inconsistency between the peaceful rhetoric of the US and its incessant warring practices. It can account for the spectre of war in the aftermath of Vietnam, with the end of the Cold War, and with the election of George Bush. It is less able to account for the appearance of war in the Middle East in January of 1991. The opening intellectual orientation of the gender critique of war rests upon a constructivist view of human understanding and practice, that is, a view that anchors practices, including war, within humankind's self-made historico-cultural matrix. This view is contrasted starkly with those that ground human practices psychologically or biologically or genetically. War is not viewed as a natural practice as if delivered by the Gods; it arises out of human-created understandings and ways-ofliving that have evolved over the millennia. More specifically, the assumption that men (the nearly exclusive makers and doers of war) are biologically hard-wired for aggression and violence is resisted, as is the related notion that women are naturally passive and non-violent. The explanation for war will not be found in testosterone levels. It is not the essential or bio-social male that makes war. War is the product of the gendered understandings of life—understandings of the celebrated masculine and the subordinated feminine—that have been fashioned over vast tracts of culturaltime. And since war arises from human-created understandings and practices it can be removed when these understandings change. War is not insuperable. Indeed, the rooting of war in human created phenomena is recognized as a response to the political incapacitation associated with biologically determinist arguments: "Attempts of genetic determinists to show a biological basis for individual aggression and to link this to social aggression, are not only unscientific, but they support the idea that wars of conquest between nations are inevitable."8

legislation cp

1nc legislation cp

The 50 United States state governments should regulate police surveillance technologies, including <the plan's technology>, by curtailing the indiscriminate collection and retention of data collected by law enforcement surveillance technology, establishing a maximum timeframe for data retention, limiting the sharing of personally identifiable information, requiring a legitimate investigative purpose for identifying and accessing data, and providing the state attorney general authority to bring lawsuits against police departments that fail to abide by these regulations.

Solves the aff --- avoids Court/federal DA's

Rushin 13 [Stephen, Visiting Assistant Professor, University of Illinois College of Law, "The Legislative Response to Mass Police Surveillance," 79 Brooklyn L. Rev. 1, Fall 2013, Brooklyn Law Review] //khirn

In this article, I present a model statute that a state could enact to regulate the digitally efficient investigative state. This statute adheres to three major principles about the regulation of police surveillance. First, any regulation must provide clear standards that law enforcement can easily understand and apply. n23 Second, as communities differ substantially in their need for public surveillance, any legislation **must provide local municipalities with some ability to vary standards** to meet their **legitimate law enforcement needs**. Third, any regulation must articulate the narrow scope of technologies and devices that fall under its regulatory purview. Because technology changes rapidly, this ensures that the law will not be **misapplied to future, emerging technologies**.

The model statute I offer in this article honors these three important principles. The statute regulates the indiscriminate collection and retention of data by law enforcement surveillance technologies, while also permitting the use of technological surveillance for mere observational comparison. The statute [*5] establishes a **maximum length of time for data retention**. It also limits the sharing of personally identifiable information, and requires that law enforcement demonstrate a legitimate investigative purpose for identifying and accessing data. To enforce these broad regulations, the statute gives the state attorney general the authority to bring lawsuits against police departments that fail to abide by these regulations and excludes from criminal court any locational evidence obtained in violation of the statute.

This statute would not address all of the concerns of the digitally efficient investigative state. After all, no statute can fully predict and control the development of new and emerging technologies. Nevertheless, **it would be a major step toward coherency**. This legislation would give a police department discretion to craft unique data policies tailored to its community's specific needs, while also encouraging some level of statewide consistency. To date, only a small handful of law review articles have addressed the unique issues raised by digitally efficient community surveillance technology, such as automatic license plate readers (ALPR). n24 Furthermore, none of this work has offered a comprehensive legislative response that could guide future regulation. Thus, this article fills a void in the available legal scholarship.

2nc crime/terror net benefit

Allows flexible implementation that solves the crime/terror DA

Rushin 13 [Stephen, Visiting Assistant Professor, University of Illinois College of Law, "The Legislative Response to Mass Police Surveillance," 79 Brooklyn L. Rev. 1, Fall 2013, Brooklyn Law Review] //khirn

Second, communities differ in their need for public surveillance. For example, New York City and Washington, D.C. have previously been targets for international terrorism. Given their plethora of high value targets and landmarks, these two cities may have a legitimate need for more public surveillance than other communities. n279 In arguing for a malleable standard for local departments, the IACP has suggested that some locations--namely bridges, critical infrastructure, and other high value targets--demand more surveillance and data retention to ensure public safety. n280 As an example, the IACP cites the fact that locations targeted on September 11, 2001 were part of a terrorist attack that took many years to plan and execute. n281 [*45] Thus, certain communities may legitimately need and prefer longer retention periods around certain important targets. Conversely, a medium-sized suburb with low crime that places a higher value on privacy might prefer a bar on the retention of surveillance data all together. While any state statute should establish minimally acceptable requirements on data retention, the law must be sufficiently broad to permit necessary variation at the local level. A one-size-fits-all approach may not be workable, given the unique law enforcement needs of each city.

Third, any regulation must clearly articulate the narrow scope of technologies and devices that fall under its regulatory purview. Because technology changes rapidly, this ensures that the law will not be misapplied to future, emerging technologies. Kerr has previously argued that regulations of technology ought to proceed cautiously until the technology has stabilized. n282 Technology may have unforeseen uses that will take time to develop and understand. For example, in 1988, Congress passed the Video Privacy Protection Act. n283 This law protected the privacy of videotape rental information. n284 Congress passed the law after Judge Robert Bork's video rental history became public during his Supreme Court nomination process. n285 But in crafting this limitation on video rentals, Congress defined the term "video tape service provider" expansively as "any person, engaged in the business . . . of rental, sale, or delivery of prerecorded video cassette tapes or similar audio visual material." n286

2nc solvency

The regulations set forth by the counterplan solve any negative usage of the aff

Rushin 13 [Stephen, Visiting Assistant Professor, University of Illinois College of Law, "The Legislative Response to Mass Police Surveillance," 79 Brooklyn L. Rev. 1, Fall 2013, Brooklyn Law Review] //khirn

[*51] C. Model Statute to Regulate Police Surveillance

The presently available statutes and model guidelines suggest a key set of concerns that any future state legislative body must consider. They demonstrate five common regulatory needs: data retention, identification, access, sharing, and training. The model statutory language I offer includes a possible solution for each of these areas. In doing so, I also try to honor the foundational principles for the regulation of police surveillance identified above. The model statute provides a clear standard that law enforcement agencies can implement. It attempts to give departments some latitude to alter their own policies to meet local needs. But the law also includes specific and detailed regulations in hopes of preventing organizational mediation.

The proposed statute also includes multiple enforcement mechanisms to ensure compliance. The model excludes from criminal court any evidence obtained in violation of this statute, thus

removing the incentive for police departments to violate the policy. Of course, evidentiary exclusion is "limited as a means for promoting institutional change" because it is filled with exceptions and is narrower than the scope of police misconduct. n330 Thus, I propose two additional enforcement mechanisms. First, the model statute gives the state attorney general authority to initiate litigation against departments that fail to comply with these mandates. Other statutes regulating police misconduct, like 42 U.S.C. § 14141, have used a similar mechanism. n331 Second, the model mandates periodic state audits of departmental policies and data records to ensure compliance. Overall, the proposed law broadly addresses many of the problems implicit in the digitally efficient state and establishes a number of enforcement mechanisms to ensure organizational compliance.

1. Applicability, Definitions, and Scope

The first part of the proposed statute defines the scope of the legislation, including the technologies regulated by the statute. In this section of the statute, I tried to reflect the foundational principle of regulating police surveillance technologies by creating a tightly defined scope of presently available technologies that fall under the statute's regulatory purview. This might make the statute under-inclusive at some point in [*52] the future, but works to the benefit of avoiding over-inclusivity that can stifle the development of new technologies. n332

§ 1 Applicability, Definitions, and Scope

This statute applies to all community surveillance technologies used by law enforcement that collect personally identifiable, locational data.

"Community surveillance technology" means any device intended to observe, compare, record, or ascertain information about individuals in public through the recording of personally identifiable information. This includes, but is not limited to, surveillance collected with automatic license plate readers, surveillance cameras, and surveillance cameras with biometric recognition.

This scope provision specifically addresses community surveillance devices, such as ALPR and surveillance cameras, as distinguished from traditional surveillance tools like GPS devices and wiretaps. As I have previously argued, "networked community surveillance technologies like ALPR surveil an entire community as opposed to a specific individual." n333 While the use of a GPS device to monitor the movements of one criminal suspect over a long period of time might be constitutionally problematic, such a practice raises an entirely different set of public policy questions. At minimum, the kind of tracking at issue in Jones was narrowly tailored to only affect one criminal suspect. The digitally efficient investigative state uses community surveillance technologies like ALPR and surveillance cameras that can potentially track the movements of all individuals within an entire community regardless of whether there is any suspicion of criminal wrongdoing. Hence, this statute is carefully limited to a small subset of technologies that pose similar risks and thus require similar regulation.

2. Differential Treatment of Observational Comparison and Indiscriminate Data Collection

Next, I propose that state laws should differentiate between observational comparison and indiscriminate data collection. n334 The model law permits the use of community [*53] surveillance technologies for observational comparison. When a department uses these technologies for observational comparison, the device is "an incredibly efficient law enforcement tool that is reasonably tailored to only flag the suspicious." n335

§ 2 Observational Comparison and Indiscriminate Data Collection

Police departments may use community surveillance technologies as needed for observational comparison. But police departments using community surveillance technologies for indiscriminate data retention must abide by data integrity, access, and privacy restrictions outlined in § 3 through § 6.

"Observational comparison" is defined as the retention of locational or identifying data after an instantaneous cross-reference with a law enforcement database reveals reasonable suspicion of criminal wrongdoing.

"Indiscriminate data collection" is defined as the retention of locational or identifying data without any suspicion of criminal wrongdoing.

This distinction strikes a reasonable balance by facilitating law enforcement efficiency in identifying lawbreakers, but also avoiding the unlimited and unregulated collection of data. When applied to ALPR, this statute would mean that police could use that technology to flag passing license plates that match lists of stolen cars or active warrants. But they could not retain locational data on license plates that do not raise any concerns of criminal activity without abiding by the regulations that follow.

3. Data Integrity, Access, and Privacy

I recommend that the indiscriminate collection of data be subject to four separate requirements that limit the retention, identification, access, and sharing of data. The statutory language below was designed to give law enforcement some leeway to create workable internal policies that meet organizational and community needs. As a result, the policy simply serves as a minimum floor of regulation, above which departments could adopt their own regulations.

[*54] § 3 Data Retention

Police departments using community surveillance technologies for indiscriminate data collection must establish and publicly announce a formalized policy on data retention. Departments may not retain and store data for more than one calendar year unless the data is connected to a specific and ongoing criminal investigation.

The one-year retention period is the most significant regulation this statute would place on indiscriminate data collection. Even the IACP acknowledges that the "indefinite retention of law enforcement information makes a vast amount of data available for potential misuse or accidental disclosure." n336 Without limits on retention, police surveillance can develop into "a form of undesirable social control" that can actually "prevent people from engaging in activities that further their own self-development, and inhibit individuals from associating with others, which is sometimes critical for the promotion of free expression." n337 At the same time, law enforcement often claim that information that seems irrelevant today may someday have significance to a future investigation. n338 Without regulation, there is a cogent argument to be made that police would have every incentive to keep as much data as possible. n339 Thus, I recommend that data retention be capped at one year. This would prevent the potential harms of the digitally efficient investigative state that come from long-term data aggregation.

The one-year time window represents a reasonable compromise. The median law enforcement department today retains data for around six months or less. n340 But before accepting this retention limit, state legislatures should critically assess their own state needs to determine whether there is a legitimate and verifiable need for retention beyond this point. The next section of the statute addresses identification of stored data.

[*55] § 4 Data Identification

Police employees must have a legitimate law enforcement purpose in identifying the person associated with any data retained by community surveillance technologies.

The limit on data identification is somewhat different than most current statutory arrangements. This measure would, potentially, limit the ability of law enforcement to use the stored data for secondary uses. A secondary use is the use of data collected for one purpose for an unrelated, additional purpose. n341 This kind of secondary use can generate[] fear and uncertainty over how one's information will be used in the future." n342 By limiting the identification of the data, the statute attempts to prevent such secondary use. Another way to

avoid secondary use is to limit access to data and external sharing, as I attempt to do in the next portions of the statute.

§ 5 Internal Access to Stored Data

Departments must establish a formal internal policy documenting each time a police employee accesses community surveillance databases. Departments shall not allow anyone except authorized and trained police employees to access and search these databases.

§ 6 External Data Sharing

Police departments may share information contained in community surveillance databases with other government agencies, as long as all participating departments honor the minimum requirements established in this statute.

I propose that police limit access to data even among police employees. And each time a police employee accesses data, I require that the department document this event. This achieves two results. First, it creates a record of previous access points that the attorney general or state criminal courts can, theoretically, use to hold police accountable for improper data access. Secondly, and relatedly, this formalized documentation process may prevent nefarious secondary uses of the information. Because some evidence suggests that police retain community surveillance data in databases accessible to [*56] private companies and civilians, n343 this would place the impetus on police departments to take responsibility for internal data management. And while the model statute does not limit the sharing of digitally efficient data, it does require that all departments with access to data abide by the statutory limits. This would promote the sharing of data across jurisdictional lines to facilitate efficient investigations, while providing a consistent level of minimum privacy protection in the state.

Attorney general enforcement solves --- police will follow the counterplan's restrictions

Rushin 13 [Stephen, Visiting Assistant Professor, University of Illinois College of Law, "The Legislative Response to Mass Police Surveillance," 79 Brooklyn L. Rev. 1, Fall 2013, Brooklyn Law Review] //khirn

To remedy the concern over resource limitations, I propose that the state attorney general have statutory [*59] authority to audit police departments. This would expand the regulatory reach of the statute while also **harnessing the power of public opinion to force police compliance**. This would also **guarantee regular interaction between the attorney general and local departments**, allowing the attorney general to check up on data practices. Rather than facing only the remote possibility of a pattern or practice lawsuit, departments would be faced with regular, random audits of their data policies. Because the results of this regular audit system would be posted online, the **departments would also be publicly accountable if they fail to abide by the statute**. This could incentivize administrators to follow state law for fear of public embarrassment that could threaten their job security. Rachel Harmon has suggested the DOJ utilize a similar policy to overcome resource limits and expand the potential impact of § 14141. n358

In sum, these regulations attempt to holistically regulate the digitally efficient investigative state by limiting data retention and ensuring stored data are handled in a way that protects individual privacy, while still leaving ample room for legitimate law enforcement purposes. The enforcement mechanisms are sufficiently varied to ensure widespread compliance. And the statute as a whole follows the foundational principles of police surveillance regulations. The regulations are **clear**

enough to avoid organizational mediation. They allow for individual variation. And they define the scope narrowly to only include a small subset of technologies like ALPR and surveillance cameras that pose a similar social risk.

CONCLUSION

The digitally efficient investigative state is here to stay. The empirical evidence clearly demonstrates that extremely efficient community surveillance technologies are an increasingly important part of American law enforcement. The language in Jones suggests that the judiciary may somehow limit public surveillance technologies in the future. To do so, the Court will have to confront the jurisprudential assumptions of police surveillance. That is no easy task. Much of the Court's previous treatment of police surveillance has rested on the belief that individuals have no expectation of privacy in public places, and [*60] that surveillance technologies that merely improve the efficiency of police investigations comport with the Fourth Amendment.

At present, it remains unclear how and when the Court will begin to alter these important assumptions. The language in Jones offers little guidance. But even when the Court does eventually broach this subject, the judiciary's institutional limitations will prevent it from crafting the type of expansive solution necessary to protect against the harms of the digitally efficient investigative state. In the absence of regulation, police departments across the country have developed dramatically different policies on the use of public surveillance technologies. **Legislative bodies must take the lead and proactively limit the retention**, identification, access, and sharing of personal data acquired by digitally efficient public surveillance technologies. The model state statute proposed in this Article would be a substantial step in reigning in the "unregulated efficiency of emerging investigative and surveillance technologies." n359

court stripping cp

1nc court stripping

The United States Congress should curtail/prohibit <technology that the plan prohibits>.

Congress should exercise its Article III power to eliminate the jurisdiction of any Federal Court to hear any challenges to the constitutionality of this legislation or to the authority of Congressional interpretation of Congress' Article VI treaty powers. Congress should direct that the judges of every state, pursuant to Article VI, treat this law as authoritative, that it must be followed, and that the United States Supreme Court, pursuant to its holdings in *Testa*, ensure that state courts both follow this directive and accept the interpretation of Congress of the Constitution as authoritative.

Solves the aff – The counterplan creates a progressive moment in Congress – it spills over and would empower the Congress to reassert its authority

West 94 [Robin, Prof. of Law. Georgetown, *Progressive Constitutionalism*, 1994, p. 218-220]

The concluding section of this chapter argues that even in the short term, and certainly in the long term, there are good reasons for developing an alternative, non- or postliberal, and explicitly progressive paradigm of constitutional interpretation, even if it is clear, as it seems to be, that the present conservative Supreme Court will not embrace it. It also argues, however, that for both strategic and theoretical reasons, the proper audience for the development of a progressive interpretation of the Constitution is Congress rather than the courts. The progressive Constitution should be meant for, and therefore must be aimed toward, legislative rather than adjudicative change. The strategic reasons for this proposed reorientation of progressive constitutional discourse should be self-evident. Although the progressive Constitution is arguably consistent with some aspects of the liberal-legalist paradigm of the middle of this century, it is utterly incompatible with the conservative paradigm now dominating constitutional adjudication. It does not follow, however, that the progressive Constitution is incompatible with all constitutional decision making: both legislatures and citizens have constitutional obligations, engage in constitutional discourse, and can be moved, presumably, to bring electoral politics in line with the progressive mandates of the Constitution, as those mandates have been understood and interpreted by progressive constitutional lawyers and theorists. I also argue, however, that for theoretical and strategic reasons, the long-range success, the sense, and even more modestly the relevance of the progressive interpretation of the Constitution depend not only on the merits of its interpretive claims but also, and perhaps more fundamentally, on a federal Congress reenlivened to its constitutional obligations. First, of course, it is Congress, not the Supreme Court, that is specifically mandated under the Fourteenth Amendment to take positive action to ensure equal protection and due process rights—the core constitutional tools for attacking illegitimate social and private power. If Congress is ever to fulfill this obligation, it will need the guidance of interpretive theories of the meaning of equal protection, due process, equality, and liberty that are aimed explicitly toward the context of legislative action and are not constrained by the possibilities and limits of adjudicative law. But more fundamentally, the progressive Constitution, I argue, will never achieve its full meaning—and worse, will remain riddled with paradox and contradiction—so long as it remains in an adjudicative forum. This is not only because of the probable political composition of the Court over the next few decades, but also because of the philosophical and political meanings of adjudicative law itself: the possibilities of adjudicative law are constrained by precisely the same profoundly conservative attitudes toward social power that underlie conservative constitutionalism. By acquiescing in a definition of the Constitution as a source of adjudicative law, progressives seriously undermine its progressive potential. Only by reconceptualizing the Constitution as a source of inspiration and guidance for legislation, rather than a superstructural constraint on adjudication, can we make good on its richly progressive promise. Therefore, the concluding section of this chapter argues that, for structural long-term as well as strategic short-term reasons, the progressive Constitution—the cluster of meanings found or implanted in constitutional guarantees by modern progressive scholars—should be addressed to the Congress and

to the citizenry rather than to the courts. The goal of progressive constitutionalists, both in the academy and at the bar, over the coming decades should be to create what Bruce Ackerman has called in other contexts a "constitutional moment" [2]0 and what Owen Fiss might call more dramatically an "interpretive crisis.' Progressives need to create a world in which it is clear that a progressive Congress has embraced one set of constitutional meanings, and the conservative Court a contrasting and incompatible set. The Supreme Court does, and always has, as Fiss reminds us, read the Constitution so as to avoid crisis.22 The lesson to draw is surely that only when faced with such a constitutional moment will this conservative Court change paths.

Supreme Court activism destroys participatory democracy and leads to judicial supremacy – only a congressional override and can solve

Lipkin 6 [Robert - Professor of Law, Widener University School of Law, Ph.D., Princeton University, 1974, J.D., UCLA, 1984, "WHICH CONSTITUTION? WHO DECIDES?," 28 Cardozo L. Rev. 1055, lexis]

Does any institution exercising such enormous unchecked power and authority comport with republican self-government? If the answer is no, what is the remedy? This Article first explains why such unchecked power and authority are incompatible with republican democracy. In a nutshell, republican democracy is a form of selfgovernment where complex deliberation is designed to articulate the community's real interests or what the community reflectively judges its real interests to be. Republican democracy rejects both direct and representative majoritarian democracy.2 Instead, it embraces the distinction between the community's reflective judgment and the everyday attitudes of the populace.3 Republican democracy fortifies this distinction by constructing deliberative governmental filters to transform the electorate's raw, unrefined, and possibly transient beliefs into the reflective judgment of the community. Judicial review may be one of these filters by providing a chance for the lawmaking community to express second-thoughts—or critical reflection—concerning legislation and other governmental conduct.4 Ultimately, however, republican democracy is committed to the proposition that the electorate—after refining its judgment deliberatively through its representatives and other institutional procedures—is the final arbiter of constitutional meaning. Republican democracy founders when any governmental branch has final unchecked authority and uses it to shortcircuit this process. In the American republic, no other political institution has anything like the judiciary's unchecked authority to invalidate or sustain5 federal and state legislation simply because the Court views such legislation to be unconstitutional.6 This power—known as judicial supremacy—is essentially a failure of accountability,7 not, as many jurists and commentators contend, a countermajoritarian difficulty.8 Even if a super-majority or a mere plurality were required to pass ordinary legislation, the problem of judicial supremacy would persist—not because it is countermajoritarian—but rather because no constitutional actor can effectively check the Court when it chooses to speak.9 This point requires emphasis. Accountability need not be majoritarian to its core. Even in such undemocratic governments as monarchies, aristocracies, or theocracies, a failure of accountability may exist when the institution primarily designated to create law is checked by another institution whose role as authoritative reviewer has been garnered informally. In other words, even when the primary designated decision-maker is unaccountable to the people, the problem of accountability is present if a formally undesignated decision-maker can overturn or significantly modify the primary designated decision maker's decisions even if only on special occasions. Hence, one salient form of unaccountability is unchecked power by an undesignated decision maker.10 Defending the practice of judicial supremacy requires too great a tolerance for almost complete unaccountability in deciding constitutional meaning.11 This creates a republic where the constitutional choices of the people are often blocked or come to a virtual dead-end. Such a dead-end republic can, of course, survive; ours has for over 200 years. But it prevents citizens nevertheless from engaging in the joint enterprise of integrating and reconstructing their reflective judgments into a conception of the common good as the only authentic fount of sovereign authority over the society's future.12 Rather than offering an internal remedy of judicial selfregulation— requiring judges to adopt judicial restraint13 or to adhere to the "correct" judicial methodology—I offer instead an external solution to be imposed on judges through a congressional override of Supreme Court decisions. My suggested remedy does not eliminate judicial review, but rather augments this important constitutional practice by fashioning an institutional safety net that permits the best reflective judgment of the people to prevail over the best reflective judgment of the courts.14 Article V makes it clear that the Constitution is committed to the proposition that the best reflective judgment of the electorate should prevail over other constitutional actors.15 However, while recognizing the promise of the electorate's ultimate role in constitutional change, Article V fails to fulfill this promise.16 This Article proposes a congressional override as a more effective way for the electorate to fulfill its role as the ultimate constitutional arbiter. The idea of a congressional override has a grand legacy.17 But it is not the only possible solution to the problem of judicial supremacy. Among the more prominent solutions are: councils of revision; impeaching Justices; recalling Justices; electing Justices; a periodic reappointment procedure; referenda; random and temporary selection of appellate judges to serve as Justices on the Court; formal term limits or informal incentives such as attractive retirement packages; and most recently and controversially, congressional standing to challenge any attempt to strike down a

congressional statute. Each of these remedies warrants examination, and each has costs and benefits. However, a congressional override of Supreme Court decisions as the solution to the problem of judicial supremacy has the advantage of resting the authority for constitutional decision-making in the governmental body representative of the electorate and one that can be held accountable by it.18

Participatory democracy prevents nuclear war and American economic collapse

Manley and Dolbeare 87 (John F., professor emeritus of political science at Stanford University and Kenneth M., retired professor of political science who taught for many satisfying years at the universities of Wisconsin, Washington, Massachusetts, and Colorado-Denver, "The Case Against the Constitution" p. 138)

Our political system works by fits and starts. It is neither responsive nor accountable and it lacks solid grounding in the body of its people. It sits and waits for the next crisis. Unfortunately, to solve that crisis, it may have to transform itself into something that will be very difficult to rationalize as "democracy." We have not addressed the great issues of nuclear war, planetary survival, or even American economic viability in a drastically changing world economy - not because the people don't care, but because there is no linkage between the people's felt needs and their policymakers. No such basic policies can be implemented, even if policymakers were to concur, without the sustained support of some major portion of the people.

2nc gender impact

The current system fails – federal courts do not hold the same value to women's lives as they do men's

West 88 (Robin West, Professor at Georgetown University Law Center, 1988, "Jurisprudence and Gender")

By the claim that modern jurisprudence is "masculine," I mean two things. First, I mean that the values, the dangers, and what I have called the "fundamental contradiction" that characterize women's lives are not reflected at any level whatsoever in contracts, torts, constitutional law, or any other field of legal doctrine. The values that flow from women's material potential for physical connection are not recognized as values by the Rule of Law, and the dangers attendant to that state are not recognized as dangers by the Rule of Law. First, the Rule of Law does not value intimacy-its official value is autonomy. The material consequence of this theoretical undervaluation of women's values in the material world is that women are economically impoverished. The value women place on intimacy reflects our existential and material circumstance; women will act on that value whether it is compensated or not. But it is not. Nurturant, intimate labor is neither valued by liberal legalism nor compensated by the market economy. It is not compensated in the home and it is not compensated in the workplace-wherever intimacy is, there is no compensation. Similarly, separation of the individual from his or her family, community, or children is not understood to be a harm, and we are not protected against it. The Rule of Law generally and legal doctrine in its particularity are coherent reactions to the existential dilemma that follows from the liberal's description of the male experience of material separation from the other: the Rule of Law acknowledges the danger of annihilation and the Rule of Law protects the value of autonomy. Just as assuredly, the Rule of Law is not a coherent reaction to the existential dilemma that follows from the material state of being connected to others, and the values and dangers attendant to that condition. It neither recognizes nor values intimacy, and neither recognizes nor protects against separation. Nor does the Rule of Law recognize, in any way whatsoever, muted or unmuted, occasionally or persistently, overtly or covertly, the contradiction which characterizes women's, but not men's, lives: while we value the

intimacy we find so natural, we are endangered by the invasion and dread the intrusion in our lives which intimacy entails, and we long for individuation and independence. Neither sexual nor fetal invasion of the self by the other is recognized as a harm worth bothering with. Sexual invasion through rape is understood to be a harm, and is criminalized as such, only when it involves some other harm: today, when it is accompanied by violence that appears in a form men understand (meaning a plausible threat of annihilation); in earlier times, when it was understood as theft of another man's property. But marital rape, date rape, acquaintance rape, simple rape, unaggravated rape, or as Susan Estrich wants to say "real rape"8 2 are either not criminalized, or if they are, they are not punished - to do so would force a recognition of the concrete, experiential harm to identity formation that sexual invasion accomplishes. Similarly, fetal invasion is not understood to be harmful, and therefore the claim that I ought to be able to protect myself against it is heard as nonsensical. The argument that the right to abortion mirrors the right of self defense falls on deaf ears for a reason: the analogy is indeed flawed. The right of self defense is the right to protect the body's security against annihilation liberally understood, not invasion. But the danger an unwanted fetus poses is not to the body's security at all, but rather to the body's integrity. Similarly, the woman's fear is not that the she will die, but that she will cease to be or never become a self. The danger of unwanted pregnancy is the danger of invasion by the other, not of annihilation by the other. In sum, the Rule of Law does not recognize the danger of invasion, nor does it recognize the individual's need for, much less entitlement to, individuation and independence from the intrusion which heterosexual penetration and fetal invasion entails. The material consequence of this lack of recognition in the real world is that women are objectified-regarded as creatures who can't be harmed. The second thing I mean to imply by the phrase "masculine jurisprudence" is that both liberal and critical legal theory, which is about the relation between law and life, is about men and not women. The reason for this lack of parallelism, of course, is hardly benign neglect. Rather, the distinctive values women hold, the distinctive dangers from which we suffer, and the distinctive contradictions that characterize our inner lives are not reflected in legal theory because legal theory (whatever else it's about) is about actual, real life, enacted, legislated, adjudicated law, and women have, from law's inception, lacked the power to make law protect, value, or seriously regard our experience. Jurisprudence is "masculine" because jurisprudence is about the relationship between human beings and the laws we actually have, and the laws we actually have are "masculine" both in terms of their intended beneficiary and in authorship. Women are absent from jurisprudence because women as human beings are absent from the law's protection: jurisprudence does not recognize us because law does not protect us. The implication for this should be obvious. **We will not have a genuinely ungendered jurisprudence** (a jurisprudence "unmodified" so to speak) **until we have legal doctrine that takes women's lives as seriously as it takes men's**. We don't have such legal doctrine. The virtual abolition of patriarchy is the necessary political condition for the creation of non-masculine feminist jurisprudence. It does not follow, however, that there is no such thing as feminist legal theory. Rather, I believe what is now inaccurately called "feminist jurisprudence" consists of two discrete projects. The first project is the unmasking and critiquing of the patriarchy behind purportedly ungendered law and theory, or, put differently, the uncovering of what we might call "patriarchal jurisprudence" from under the protective covering of "jurisprudence." The primary purpose of the critique of patriarchal jurisprudence is to show that jurisprudence and legal doctrine protect and define men, not women. Its second purpose is to show how women-that is, people who value intimacy, fear separation, dread invasion, and crave individuation-have fared under a legal system which fails to value intimacy, fails to protect against separation, refuses to define invasion as a harm, and refuses to acknowledge the aspirations of women for individuation and physical privacy. The second project in which feminist legal theorists engage might be called "reconstructive jurisprudence." The last twenty years have seen a substantial amount of feminist law reform, primarily in the areas of rape, sexual harassment, reproductive freedom, and pregnancy rights in the workplace. For strategic reasons, these reforms have often been won by characterizing women's injuries as analogous to, if not identical with, injuries men suffer (sexual harassment as a form of "discrimination;" rape as a crime of "violence"), or by characterizing women's longing as analogous to, if not identical with, men's official values (reproductive freedom-which ought to be grounded in a right to individuation-conceived instead as a "right to privacy," which is derivative of the autonomy right). This

misconceptualization may have once been a necessary price, but it is a high price, and, as these victories accumulate, an increasingly unnecessary one. Reconstructive feminist jurisprudence should set itself the task of rearticulating these new rights in such a way as to reveal, rather than conceal their origin in women's distinctive existential and material state of being. The remainder of this article offers a schematization and criticism of the feminist jurisprudence we have generated to date under the umbrella concept described above, in spite of patriarchy and in spite of the masculinity of legal theory. I then suggest further lines of inquiry.

There must be broader engagement outside of the political sector – gender issues must be addressed both politically and socially

West 88 (Robin West, Professor at Georgetown University Law Center, 1988, "Jurisprudence and Gender")

The "separation thesis," I have argued, is drastically untrue of women. What's worth noting by way of conclusion is that it is not entirely true of men either. First, it is not true materially. Men are connected to another human life prior to the cutting of the umbilical cord. Furthermore, men are somewhat connected to women during intercourse, and men have openings that can be sexually penetrated. Nor is the separation thesis necessarily true of men existentially. As Suzanna Sherry has shown, the existence of the entire classical republican tradition belies the claim that masculine biology mandates liberal values.76 More generally, as Dinnerstein, Chodorow, French, and Gilligan all insist, material biology does not mandate existential value: men can connect to other human life. Men can nurture life. Men can mother. Obviously, men can care, and love, and support, and affirm life. Just as obviously, however, most men don't. One reason that they don't, of course, is male privilege. Another reason, though, may be the blinders of our masculinist utopian visionary. Surely one of the most important insights of feminism has been that biology is indeed destiny when we are unaware of the extent to which biology is narrowing our fate, but that biology is destiny only to the extent of our ignorance. As we become increasingly aware, we become increasingly free. As we become increasingly free, we, rather than biology, become the authors of our fate. Surely this is true both of men and women. On the flip side, the "connection thesis" is also not entirely true of women, either materially or existentially. Not all women become pregnant, and not all women are sexually penetrated. Women can go through life unconnected to other human life. Women can also go through life fundamentally unconcerned with other human life. Obviously, as the liberal feminist movement firmly established, many women can and do individuate, speak the truth, develop integrity, pursue personal projects, embody freedom, and attain an atomistic liberal individuality. Just as obviously, most women don't. Most women are indeed forced into motherhood and heterosexuality. One reason for this is utopian blinders: women's lack of awareness of existential choice in the face of what are felt to be biological imperatives. But that is surely not the main reason. **The primary reason for the stunted nature of women's lives is male power**. Perhaps the greatest obstacle to the creation of a feminist jurisprudence is that **feminist jurisprudence must simultaneously confront both political and conceptual barriers to women's freedom**. The political barrier is surely the most pressing. Feminists must first and foremost counter a profound power imbalance, and the way to do that is through law and politics. But jurisprudence-like law-is persistently utopian and conceptual as well as apologist and political: jurisprudence represents a constant and at least at times a sincere attempt to articulate a guiding utopian vi- sion of human association. Feminist jurisprudence must respond to these utopian images, correct them, improve upon them, and participate in them as utopian images, not just as apologies for patriarchy. **Feminism must envision a post-patriarchal world**, for without such a vision we have little direction. We must use that vision to construct our present goals, and we should, I believe, interpret our present victories against the backdrop of that vision. That vision is not necessarily androgynous; surely in a utopian world the presence of differences between people will be cause only for celebration. In a utopian world, all forms of life will be recognized, respected and honored. A perfect legal system will protect against harms sustained by all forms of life, and will recognize life affirming values generated by all forms of being. Feminist jurisprudence must aim to bring this about and, to do so, it must aim to transform the images as well as the power. Masculine jurisprudence must become humanist jurisprudence, and humanist jurisprudence must become a jurisprudence unmodified.

2nc democracy impact

Status quo emerging democracies model US judicial supremacy -- only an abandonment of judicial supremacy in the US can end the pressures towards it around the world.

Hiebert 4 [Janet L., Associate Professor of Political Studies, Queen's University, Canada, 2004, 82 Tex. L. Rev. 1963]

The reason for caution does not arise out of any inherent conceptual shortcomings with this model, but from the strong influence of American constitutional ideas. Despite the innovative approach these models take, it remains to be seen to what extent these political communities can resist the emphasis on judicial hegemony when interpreting rights and resolving legislative conflicts where rights claims arise. It seems remarkable that the idea of judicial hegemony remains so influential, particularly in light of the cumulative force of challenges posed first by Legal Realists [95] and reinforced by a diverse range of critical perspectives from Critical Legal Studies, [96] feminist, [97] critical race, [98] and lesbian and gay [99] scholarship, all of which have [*1987] challenged the idea that legal reasoning and methodology embody objective principles that negate the political ideology of the judge or the influence of dominant social norms. It is equally remarkable that this judicial hegemony would be accepted in a contemporary environment where bills of rights are overlaid against a modern welfare state that presumes and requires substantial state involvement. Answers to questions of whether a right has been infringed can rarely be assessed by reference to abstract associations of the limited state in classical liberal theory, which assumes that the state is the enemy of freedom. Rather, these resolutions must address numerous questions: How does the activity associated with a claim to a right relate to the normative reasons for protecting certain human activities from the coercive powers of the modern state? How important are the values or objectives that the impugned legislation seeks to advance? Are these values consistent with a free and democratic society? But since these questions may give rise to a range of reasonable answers, it makes little sense to pretend that judges have superior or exclusive insights. [100] Nevertheless, the power of this assumption transcends American constitutional ideas. It influences the assumptions about appropriate political behavior even within polities that have constructed an alternative model recognizing the legitimacy of legislative judgments, and even where these are different from judicial judgments. Only time will tell whether it is possible to establish a bill of rights that will evolve in a manner that can resist the notion that judicial hegemony is required for responsible judgments about rights.

Judicial hegemony entrenches elite power – it hampers democratic transitions

Hirschl 4 [Ran**,** Professor of Political Science & Law, University of Toronto, *Towards Juristocracy*, p. 1-2]

While the benefits of constitutionalization for economic libertarians and judicial elites appear obvious, its appeal for hegemonic sociopolitical forces and their political representatives may at first glance look questionable. However, when their policy preferences have been, or are likely to be, increasingly challenged in majoritarian decision-making arenas, elites that possess disproportionate access to, and influence over, the legal arena may initiate a constitutional entrenchment of rights and judicial review in order to transfer power to supreme courts. Based on the courts' relatively high public reputation for professionalism and political impartiality, their record of adjudication, and the justices' ideological preferences, these elites may safely assume that their policy preferences will be less effectively contested

under the new arrangement. Judicial empowerment through constitutionalization may provide an efficient institutional solution for influential groups who seek to preserve their hegemony and who, given an erosion in their popular support, may find strategic drawbacks in adhering to majoritarian policy-making processes. More "demographically representative" political processes are, in other words, a catalyst, not an outcome, of constitutionalization. The constitutionalization of rights is therefore often not a reflection of a genuinely progressive revolution in a polity; rather, it is evidence that the rhetoric of rights and judicial review has been appropriated by threatened elites to bolster their own position in the polity. By keeping popular decision-making mechanisms at the forefront of the formal democratic political process while shifting the power to formulate and promulgate certain policies to semiautonomous professional policy-making bodies, those who possess disproportionate access to, and have a decisive influence upon, such bodies minimize the potential threat to their hegemony. '

This turns the case and causes global war

Mansfield and Snyder 6 [Edward D., associate professor of political science at Columbia, and Jack, professor of political science and director of the institute of war and peace studies at Columbia, 2006, National Interest]

THE BUSH Administration has argued that promoting democracy in the Islamic world, rogue states and China will enhance America's security, because tyranny breeds violence and democracies co-exist peacefully. But recent experience in Iraq and elsewhere reveals that the early stages of transitions to electoral politics have often been rife with violence. These episodes are not just a speed bump on the road to the democratic peace. Instead, they reflect a fundamental problem with the Bush Administration's strategy of forced-pace democratization in countries that lack the political institutions needed to manage political competition. Without a coherent state grounded in a consensus on which citizens will exercise self-determination, unfettered electoral politics often gives rise to nationalism and violence at home and abroad. Absent these preconditions, democracy is deformed, and transitions toward democracy revert to autocracy or generate chaos. Pushing countries too soon into competitive electoral politics not only risks stoking war, sectarianism and terrorism, but it also makes the future consolidation of democracy more difficult.

2nc progressive constitutionalism

Progressive Constitutionalism sparks progressive legislations which is key to ending societal domination, solving case.

West 94 [Robin, Prof. of Law. Georgetown, *Progressive Constitutionalism*, 1994]

By way of conclusion, let me briefly characterize some of the gains of reorienting progressive constitutional discourse toward legislative rather than adjudicative action, and toward a congressional rather than a judicial audience. First, and perhaps most important, if we were to recharacterize our progressive understanding of the constitutional guarantees of liberty and equality as political ideals to guide legislation, rather than as legal restraints on legislation, many of these tensions within the progressive understanding of the Constitution would disappear. If we imagine Congress, rather than the Court, as the implicit audience of constitutional argument, **it** becomes far easier to envision arguments to the effect that the Fourteenth Amendment requires, rather than permits (as within the liberal paradigm) or precludes (as in the conservative) progressive objectives such as affirmative action programs, child care and support programs, greater police responsiveness to private and domestic violence, reform of marital rape laws, and the criminalization of homophobic, racist, and sexist assaults. Congress, after all, has the textual obligation to do something about the states' refusal

to provide what the progressive means by "equal protection": to protect the citizenry against the damaging effects of rampant social and private inequality.

ALSO, Only in Congress – where the emphasis is on transformation, not conservation – can a truly progressive politics begin

West 94 [Robin, Prof. of Law. Georgetown, *Progressive Constitutionalism*, 1994, p. 313-14]

Within the congressional context, and given congressional purposes, it is not unreasonable to ascribe to the idea of law—and particularly the idea of a higher or supreme law—a quite different essential jurisprudential nature. Congress, again, does not exist to do legal justice, to treat like cases alike, or to judge in a way that respects the similarity of present circumstances with past precedent. To the contrary, Congress has as its central mission the alteration, the deviation, and the transformation—not the conservation—of the past. It exists to bring our present circumstances in line with our ambitions and aspirations of the future, not to bring our present circumstances in line with the authoritative traditions of the past. The law relevant to such an endeavor, then, including the constitutional law, would not, presumably, be a law of binding historical precedent in search of similarly situated present circumstances. It would be a law of ideal moral principles—those principles of distributive justice toward which our politics aspire. The congressional Constitution no less than the judicial Constitution would be law, but the significance of the appellation would be quite different. The law of which the congressional Constitution would be an instance would be a law of moral principle and high ideals, not, as is the case with the judicial Constitution, a law of precedent and past rule facilitating the provision of legal justice. For these two reasons alone, congressional interpretation of the Constitution might produce authoritative meanings more conducive to progressive change than those produced by the Court. And again, the argument is not simply that the constitutional text, like any text, can have an infinite number of meanings, can therefore have progressive as well as conservative meanings, and is therefore likely to be interpreted in a progressive manner by legislators who happen to be more progressive than the present political composition of the Supreme Court. Rather, congressional interpretation of the Constitution might be freed of the conservatism of judicial interpretation because of the quite different purposes that define each branch. The purpose of adjudicating law is conservation and preservation—respect for the traditions of the past is indeed at the heart of the work of doing legal justice. Maintaining continuity with what has gone before is a way of making sense of our present lives, and it is that form of integrity—that urge to maintain our collective identities through the affirmation of our similarities with our history—that constitutes much of the work of judicial or adjudicative law." Given that the Constitution is itself a part of law, it is inevitable that constitutional law, when understood as a part of judicial work, will take on a conservative hue: the idea of constitutionalism in that purposive context simply underscores the ideal of legalism. Law exists to provide a mechanism for maintaining continuity with the past, and constitutional law exists to provide a mechanism for maintaining continuity with the most definitive and ennobling moments of that past." But it does not follow that either law or the constitution, when undertaken by a community of interpreters unified by a very different set of motivating and defining purposes, will think of, perceive, or use either concept in the same way; in fact, what follows is quite the contrary. If the conservatism of constitutional law, of the concept of constitutionalism, and of the concept of law is in part a product of the purposes of the judicial community of its interpreters, as suggested by the reader-response work in interpretive and hermeneutic theory, it then follows that an interpretive community defined and constituted by a different set of purposes might develop quite different understandings.

AND, only Congress can distribute collective resources

West 94 [Robin, Prof. of Law. Georgetown, *Progressive Constitutionalism*, 1994, p. 41-44]

Another reason that even a minimalist version of the abolitionist interpretation may not have prevailed is structural. As the Supreme Court has always been quick to point out, the federal judiciary is ill equipped to remedy the structural, institutional, and social inequalities, practices, and attitudes that result in constitutionally problematic states of affairs, such as unequal sentences for killers of white victims and black victims, or the unequal participation of blacks on the Washington, D.C., police force. The federal judiciary is similarly ill equipped to fashion the massive re- structuring of our market economy that would be necessary to end the millennium-long era of unpaid domestic labor and the subsequent undervaluing of women's work in the market economy. The judiciary could, of course, do some things: it could easily declare marital rape laws unconstitutional; it could reverse itself and affirm our right to protection by a police force; and it could insist

that the state compensate victims of violence such as Joshua DeShaney, who are now denied that protection. But it could do little or nothing to redirect our community resources to guarantee the funds necessary to meaningfully effectuate that promise: to actually create the programs needed to deter domestic violence, to provide additional support for police forces assigned to high-crime neighborhoods, or to ensure that the social services agencies charged with protecting Joshua DeShaney would become a reality for the community at large, rather than for the rare individual who can marshal the funds and fortitude to file a lawsuit. The conservative Court and conservative theorists are probably right to insist that the reordering of priorities and redirecting of collective resources necessary to make these programs a reality must originate with legislative, not judicial action. They are wrong, though, to imply from that structural limit the nonexistence of the background constitutional right. The last obstacle I want to mention to modern implementation of interpretation of the equal protection clause is jurisprudential: it concerns the nature of the "law" discovered or created by courts, as contrasted with the nature of "law" created by legislative process. Here, a quick contrast with the formal equality model presently adopted by the current Supreme Court is helpful. To determine whether or not a statute violates the equal protection clause under the formal equality model, the Court must essentially decide whether the legislature is "treating like groups alike." Whatever may be the shortcomings of this model, and I think there are many, it has one unassailable strength: the formal equality model of equal protection that requires rational categorization in legislation demands of the Court what might be called adjudicative virtues. The work required of the courts under the formal equality model in deciding whether a rule treats like cases alike converges perfectly with the essential core of the judicial task. Deciding whether a precedent or a rule treats like cases alike is what courts do all the time, and, moreover, it is what courts should do all the time. To do this well, to decide whether rules and decisions are rational in precisely this way, is the mark of a good judge. The rationality and the conception of formal justice on which it depends, and which is the central demand of the formal equality model, is itself an "adjudicative virtue": to treat like cases alike is the ideal of good judging toward which judges aspire. It is not at all surprising that judges gravitate toward an understanding of the equal protection clause that, in turn, rests on an understanding of equality that, also in turn, requires of them the exercise of precisely this familiar virtue. By contrast, the general concept of equal protection advanced by the abolitionists (as well as modern antisubordinationists) requires the exercise not of this adjudicative virtue but of citizen and legislative virtues. To know what the equal protection clause requires us to protect, and what it requires us to protect against, requires a view, articulated or not, widely accepted or not, debated and debatable or not, of the content of liberty, of human nature, of natural rights, and, given our commitment to democracy, of human and citizen obligation. We need to know who we are and how we should distribute our collective resources: what we owe to whom. It ultimately demands a theory of distributive, not equal or formal, justice. These distributive and redistributive questions may not be questions that judges can or should answer. They are precisely the questions we need to ask of ourselves and of our representatives, however. If we are to make sense of the equal protection clause as understood by the abolitionists, and as understood by at least many of its framers, we need to do two things. First, we need to reacquaint ourselves with old ways of thinking about our human nature and the natural rights that follow—we need to suspend our postmodernist doubts that this is a sensible and fruitful way to think about political morality. Second, and to my mind of greater importance, if we are to take seriously the view of the equal protection clause intended by its framers and advocates, we need to quit asking what that clause requires of our courts, what it directs our judges to do or refrain from doing, and how much of its vision is compatible with judicial review—whether it does or does not accord with our tripartite common-sensible conception of individual rights, majority rule, and judicial role. We need to ask instead what the clause demands of us as legislators, as citizens, as lawmakers, and as members of a community. When we ask what we are required to do to guarantee to each of us the equal protection of the law, rather than what judges are required to do, we may see very different answers. The answers to that question urged by the abolitionists well over a century ago—to which we may have blinded ourselves through our peculiarly modern intellectual focus on equality and rights rather than equal protection and responsibility and our peculiarly historic insistence on judicial enforcement rather than the congressional enforcement called for by the amendment itself—may be more progressive, more astute, more just, and more caring than either the color-blind or egalitarian charter of equality that we currently read into the clause, and which has stalemated debate and stalled our constitutional, as well as moral, progress.

Only Congress is free of judicial constraints – courts must right narrow decision, treat all cases alike, and have respect for precedent.

Robin **West '94** Prof. of Law. Georgetown (*Progressive Constitutionalism* p. 142-143)

What this implies is simply that if we follow the suggestion of the growing number of commentators—neo-civic-republican and otherwise—arguing for an end to the monopolization by the Court of constitutional interpretation, then we should expect to see a far wider range of interpretations of the "liberty" which the state must respect, nurture, or "leave alone" than that represented by the Scalia-Brennan poles of debate in Michael H. v. Gerald D. Freed of the constraints of the panoply of demands imposed by the adjudicative virtues—the various needs to write narrow decisions, to respect the rights of similarly situated persons, to adhere to the patterns established by past decisions—constitutional interpreters, whether citizens, legislators, or commentators, may see any number of potential meanings in the due process clause to which the Court, by virtue of its identity as a court, is blind. It may be, for example, that liberty is impossible in the face of chronic homelessness, joblessness, or hunger and that this fact should operate as a constitutional constraint on what the state may refuse to do, as well as what the state may do. It may also be that liberty is impossible in the face of stultifying, demoralizing, constant, private oppression and that this fact as well should constrain constitutionally what the state may neglect as well as what it may do. The due process clause may grant us, in other words, both "affirmative" liberty rights and rights to be free of private oppression. Nonjudicial constitutional interpreters, freed of the constraints of judicial ethics, may find these arguments more persuasive than virtually any court would, not only as the conservative Rehnquist Court would. The modern Court, of course, has held to the contrary: it has ruled consistently that liberty does not embrace affirmative welfare rights and that the Fourteenth Amendment does not reach private action. Whether they were right or wrong in doing this is not the argument of this chapter. All I want to suggest is that they have reached these conservative interpretations in large part because they are a court. Should other interpreters enter the debate—should Congress, for example, accept its section 5 burden of passing legislation for the purpose of enforcing the liberty guarantee of the Fourteenth Amendment—they may see very different and much broader meanings in the general phrases of the amendment than the Court has seen to date. Congress is not burdened by the ethical imperative to write decisions consistent with previous decisions. It is not burdened with the need to treat like cases alike. Nor is it charged with the task of "conserving" the societal traditions of the past. It has no reason to interpret liberty in such a way as to maintain a "seamless web" of precedent. It is charged with the task of enforcing the mandate of the Fourteenth Amendment, and it is generally charged with the work of distributing resources in a just manner. It is not asking too much, then, to expect Congress to do its distributive and redistributive work in a way that promotes rather than impedes or frustrates true individual "liberty"—understood not as societal tradition and not as judicial precedent, but as the necessary societal conditions for a genuinely free, autonomous life.

Finally, progressive strategies will only succeed if they originate in the Congress

Robin **West '94** Prof. of Law. Georgetown (*Progressive Constitutionalism* p. 6)

Thus, taken collectively, the essays in this book urge a substantive, institutional, and jurisprudential reorientation of our understanding of the Fourteenth Amendment. Substantively, I argue that the state action doctrine, the formal understanding of the equal protection clause, and a negative rather than positive understanding of the substantive due process clause are all untrue to the history and language of the Fourteenth Amendment. Institutionally, I urge that a progressive understanding of the Fourteenth Amendment is far more likely to be realized through legislative action than judicial intervention, and that, accordingly, progressive constitutional advocates should refocus their attention away from courts and toward the legislative arena. Finally, jurisprudentially, I argue that the Fourteenth Amendment should be grounded in a progressive conception of a responsible democratic state charged with the task of guaranteeing the conditions of positive freedom and guarding against the dangers of social or private enslavement. Such a conception, somewhat paradoxically, is closer to the overriding abolitionist concerns of the framers of the amendment than are the interpretations currently argued by both liberal commentators and the conservative Court. It is also, of the competing conceptions, the interpretation most likely to point us toward a more just society—a society worthy of the costs of the political and deliberative struggle undoubtedly necessary to achieve it.

at: no culture shift

Only Congress culture shifts and rule shifts

Stoddard '97 72 N.Y.U.L. Rev. 967

The arena of change may also have influenced the scope and power of the result. Imagine that the new rules enacted by the Civil Rights Act of 1964 had, instead, emanated from a ruling of the U.S. Supreme Court. (Such a decision, even under the Warren Court, would have seemed unlikely, but not completely implausible. The Court could arguably have relied on a Thirteenth Amendment theory, because the Thirteenth Amendment, unlike the Fourteenth Amendment, is not limited in scope to state action, 19 or it could have turned alternatively to the principle relied on by the Court in Shelley v. Kraemer 20 to invalidate restrictive covenants in housing - the idea that the government must not be an accessory to private discriminatory schemes.) Imagine further no substantial difference between the provisions of the Civil Rights Act of 1964 as enacted and the holdings of one or several hypothetical decisions from the Supreme Court. Would American history have evolved in the same way? Would the [*977] difference in the forum of decisionmaking have resulted in a different public reaction to the new rules of law? I think history would have been different. The new rules of law were widely disliked, especially by whites in the South, but the opponents of the Civil Rights Act of 1964 never rose in rebellion, either formal or informal, against enforcement of the statute. If the new rules had come down from on high from the Supreme Court, many Americans would have probably considered the change of law illegitimate, high-handed, and undemocratic - another act of arrogance by the nine philosopher-kings sitting on the Court. Because the change emanated from Congress, however, such sentiments of distrust (whether grounded in principle or in simple racism) never came to affect the legitimacy of this stunning change in American law and mores. The Civil Rights Act of 1964 came into being because a majority of the members of the national legislature believed it represented sound policy and would improve the life of the country's citizens as a whole; the ideas motivating the Act must therefore have validity behind them. In general, then, not only did the historical fact of the continuing national debate on race facilitate the public's acceptance of the Civil Rights Act of 1964, even in the South, but so did the additional (I believe crucial) fact that the change came through legislative consideration rather than judicial or administrative fiat - lending it "culture-shifting" as well as "rule-shifting" power. 21 The astonishing effectiveness of the Civil Rights Act of 1964 - the breathtaking sweep of its cultural tailcoats - suggests that it should be a model for social change in other settings. It also indicates that how change is made matters almost as much as what is, in the end, done.

Again – the court can't culture shift

Stoddard '97 72 N.Y.U.L. Rev. 967

Changes that occur through legislative deliberation generally entail greater public awareness than judicial or administrative changes do. Public awareness is, indeed, a natural concomitant of the legislative process. A legislature - any legislature - purports to be a representative collection of public delegates engaged in the people's business; its work has inherent public significance. Judicial and administrative proceedings, by contrast, involve private actors in private disputes. Those disputes may or may not have implications for others, and they are often subject to the principle of stare decisis, but they are not public by their very nature. (Administrative rulemaking is a diff- [*981] erent animal, akin - at least in theory - to legislative activity, but it is still typically accorded less attention than the business of legislatures.) Legislative lawmaking is, by its nature, open, tumultuous, and prolonged. It encourages scrutiny and evaluation. Thus, it is much more likely than other forms of lawmaking to promote public discussion and knowledge. For that reason alone, such lawmaking possesses a special power beyond that of mere rulemaking. Indeed, the real significance of some forms of legislative lawmaking lies in the debate they engender rather than the formal consequences of their enactment. Between 1971 and 1986, the New York City Council had before it every year a bill that would amend the city's human rights laws to protect lesbians and gay men from discrimination in employment, housing, and public accommodations. The bill failed each year until 1986, principally because of the personal opposition of the council's majority leader. (In 1986, the majority leader retired, and the election

of a new majority leader allowed the measure to emerge from committee and then attain the approval of the entire council.) As a perennial lobbyist for the gay rights bill, and a gay man to boot, I publicly bemoaned the bill's failure year after year. However, in hindsight, I am not unhappy that enactment of the bill took fifteen years. Over those fifteen years, the city council and the citizens of New York more generally had to confront continually the issue of discrimination against lesbians and gay men. They had to hear again and again the assertions made by my colleagues and by me that gay people exist; that gay people encounter constant scorn, disapproval, and prejudice; and that gay people deserve protection from discrimination in the basic necessities of life. The city council, for a full decade and one-half, became a city-wide civic classroom for a course on sexual orientation discrimination - an intracity teach-in, if you will. If we had our platform during the fifteen years of the bill's pendency, so did our opponents, but in many ways the other side's comments (especially the more rancorous observations) bolstered our advocacy, for the comments prolonged the discussion - and also helped to demonstrate our claims of the existence of prejudice. Immediate passage of New York City's gay rights bill as early as 1971 or 1972 would have afforded immediate political gratification to me and my colleagues (I would have been very gratified indeed), but immediate passage would also have deprived the city and its residents of the extended exploration of the subject of gay people and their rights. And, I am now convinced, it is the city-wide debate of the subject, rather than mere passage itself, that has helped to open eyes and hearts. Mere passage would have added up to "rule-shifting" [*982] when "culture-shifting" is what this controversial and often misunderstood issue really required. Mere passage would have given lesbians and gay men who suffered discrimination (and who could prove their assertions) a form of redress, and it would probably have led some especially principled employers to adopt implementing guidelines, but enactment of the gay rights bill would have eluded the attention of many, if not most, non-gay New Yorkers. The fifteen years of struggle, however, made the subject ultimately inescapable to New Yorkers - and led to genuine and deep "culture-shifting." 24 From my experience on the gay rights bill, and my experience as an activist more generally, I harbor a bias in favor of legislative reform. Legislative reform makes real change - "culture-shifting" - more probable, since it is much more likely than other forms of lawmaking to engage the attention of the public. "Rule-shifting" has its merits and advantages, but it is simply less potent than "culture-shifting" in

Congress is the most flexible, innovative and prepared to approach societal problems

Dodd, prof law Florida, **01**

(Lawrence Dodd. Prof. at University of Florida, 2001, “Re-Envisioning Congress: Theoretical Perspectives on Congressional Change”) [Dan Li]

What we know at this point is that we have adjusted our governing perspectives during these decades and that, despite the bitter partisan battles that have come with the experimentation and shift, and to some extent because of them, our society is as prosperous and productive as ever. We also know one other thing: that Congress, the parties, and the electorate are capable of reassessing governing strategies, experimenting with new ones, learning innovative approaches, and addressing societal problems. To appreciate this capacity, we must attend to the conceptual lenses through which we examine Congress and craft multiple theoretical perspectives that can aid us in looking beyond momentary personalities and short-term stalemate to see the dynamic, historical processes at play. In doing so, we must bring to Congress the common-sense judgment we bring to daily life, taking care to focus on the motives and strategic behavior of participants in the

foreground, on the shifting background contexts, and then ultimately on the critical ways in which the ideas that participants hold about politics and society shape their strategies and actions.

No Net Benefit- It's a weak congressional challenge.

Robert Justin **Lipkin '6** Professor of Law, Widener University School of Law (28 Cardozo L. Rev. 1055)

A congressional override provides a safety net while at the same time permitting the benefits of judicial review to continue. Two conceptions of a congressional override exist: a weak version and a strong version. The weak version permits Congress to override a Supreme Court decision by passing the appropriate legislation, which the Court may then strike down. The strong version makes Congress the final arbiter. The weak version provides a cooperative inter-branch relationship within a **modified form** of judicial supremacy. In essence, the weak override requires the Court to defer to Congress whenever possible, and strike down an override only as a last resort. There is some value to a weak congressional override. Such an override is at [*1113] least an improvement over our current form of judicial supremacy for two reasons. First, it makes Congress a partner - albeit a junior partner - in determining constitutional meaning. In short, it explicitly rejects the notion that courts have an exclusive role in constitutional interpretation. Second, this partnership may be enhanced by Congress publicly explaining its reasons for overriding the Court's decision. Then, if the Court strikes down that override, it in turn must explicitly reply to Congress's rationale and analysis. Accordingly, an explicit, dynamic constitutional dialogue between Congress and the Court is formally created. A Court acknowledging Congress' authority to weakly override its decisions might decline reviewing a challenge to an override by publicly requesting the electorate to chasten the legislators who enacted the override. If this fails, the Court has a choice to defer to the electorate or to strike down the override in an appropriate case. Though this is an improvement over our present system, in all probability it would be insufficient. The Court remains the final arbiter of constitutional meaning. The benefit, however, would be requiring the Court to respond analytically to serious objections from a co-equal branch of government. [172] In the end, however, congressional overrides should be made of sterner stuff. [173]

This snowballs into total court control

Mark **Tushnet '3** (53 Univ. of Toronto L.J. 89)

Professor Roach's important examination of the extensive experience Canada has had in operating the world's leading weak-form system of judicial review shows that we should be cautious about endorsing weak-form judicial review as an alternative to strong-form judicial review. The materials he presents suggest that Canada's weak-form review has become strong-form judicial review, in part because of a lack of political will and in part because of structural obstacles to the legislature's actual ability to respond to Court decisions. The fact that in-your-face statutes are enacted will continue to place on the Canadian constitutional agenda the question of judicial restraint, as such statutes force us to consider whether weak-form systems require that courts exercise restraint when faced with constitutional interpretations with which the judges disagree but which they cannot fairly describe as unreasonable. In the end, then, the invention of weak-form judicial review may not displace the long-standing controversy in strong-form systems over judicial activism and restraint.

AND, reliance Courts destroys progressivism, which is key to solvency. – Also impact is above

(Conservativism fails)

Robin **West '94** Prof. of Law. Georgetown (*Progressive Constitutionalism* p. 281-284)

In this conclusion I want to suggest briefly that there may be reasons to suspect some deeper tensions, not just between the progressive and conservative interpretations of the Constitution, but between the progressive paradigm and the idea of adjudicative law within which both liberal and conservative courts operate. To the degree that progressives acquiesce in an understanding of the Constitution and of constitutional guarantees as a body of adjudicative law—as something that courts enforce as law against unwilling parties—they may be committed to a definition of constitutionalism that is antithetical to the goals of progressive politics; the phrase "progressive constitutionalism" may remain an anomaly. The idea of "adjudicative law" may be antithetical to the progressive understanding of the Constitution for at least four reasons. First, progressives understand constitutional law as possibilistic and open, as change rather than regularity, and as freedom rather than constraint. This understanding of constitutionalism may be right, and it may even be right as an account of law, but as an account of adjudicative law—of what courts in fact do—it is perverse. Adjudicative law is persistently authoritarian: demonstration of the "truth" of legal propositions (arguably unlike other truth statements) relentlessly requires shows of positive authority. Existentialism may not be an odd foundation for a theory of politics, legislation, or constitutionalism, but it is certainly an odd (to say the least) grounding for a theory of adjudication. The lesson from this tension between the possibilistic Constitution envisioned by progressives and the authoritarian structure of adjudicative law is not necessarily that the conventional account of adjudicative law as requiring demonstrations of binding authority is wrong; rather, the important point may be that the identification of constitutional process and choices with the sphere of adjudicative rather than legislative legality—with law rather than politics—is misguided. Second, the instrumental goal toward which the progressive Constitution is aimed is the abolition of subordinating and damaging hierarchies. The justice to which it aspires is not corrective but distributive. Yet the ideal of justice to which adjudicative law aspires has historically been primarily corrective and compensatory, rather than redistributive.121 Another way to put the point is that adjudicative law has for the most part been essentially conservative: it maintains, stabilizes, and reifies the status quo against change. It exists to protect against change. Antisubordination is accordingly a peculiar goal to establish for adjudicative law. It is not, however, a peculiar goal for legislation, nor is it an odd or outlandish understanding of the import of the Fourteenth Amendment. Perhaps, again, we should conclude from this not that it is misguided to understand adjudicative law as aimed at corrective rather than redistributive justice, but, rather, that it is misguided to conceive of a progressive and radically redistributive directive document such as the Fourteenth Amendment as a source of adjudicative law, rather than as a source of inspiration or guidance for legislative change. Third, the "morality" that adjudicative law undoubtedly absorbs from time to time is almost invariably conventional and traditional rather than aspirational or utopian. The Court may indeed read the "Law" through the lens of morality, but the morality that comprises the lens is the morality embraced by the dominant forces in the community,122 not an aspirational morality of unlived ideals informed by experiences of oppression.123 Adjudicative law typically reflects a community's moral beliefs, and only rarely its aspirational ideals. Perhaps, then, we should conclude not that the conventional understanding of the relation between adjudicative law and conventional morality is wrong, but that the Constitution—because it is indeed open to an aspirational interpretation—is simply not exclusively a source of adjudicative law. Fourth, the form and processes of "adjudication" create additional tensions for the progressive paradigm, quite apart from and no less serious than those created by the idea of adjudicative law. As anyone who has ever been unwillingly caught in the process knows, adjudication is profoundly elitist, hierarchic, and nonparticipatory. It is itself a form of domination that creates experiences of subordination. The protestations of modern civic republicans notwithstanding, it is the antithesis of participatory democratic politics. The obsessive attention given by civic republican and liberal constitutionalists alike to the "antimajoritarian difficulty" posed by aggressive judicial review has not done anything actually to solve the difficulty; it has only served to highlight the utter incompatibility of both liberals' and republicans' substantive commitment to egalitarian and participatory democracy with their simultaneous endorsement of nonparticipatory, antidemocratic, and intensely hierarchical adjudicative processes for achieving it.124 There are still other distorting constraints imposed by adjudication on the progressive paradigm. To name just a few: Adjudication presupposes bipolar conflicts; progressivism does not. Adjudication requires at every turn in the road recitation of and support from "authority"; progressivism is constitutively distrustful of authority. Adjudication requires a recalcitrant, guilty, state defendant, one consequence of which is a judicially constructed "nightwatchman"-like Constitution that can act only against pernicious state action, while progressivism understands the problems of inequality, subordination, and bondage in our lives to stem not from state action, but from private and social action followed by state inaction—the failure of the state to act against private oppression. Adjudication is particularistic and individualistic; progressivism is anything but. Finally, adjudication blames, condemns, and punishes; progressivism is fundamentally uninterested, on many levels and for complex reasons, with blame and innocence. These are surely good reasons to fear that a progressive Constitution is not going to fare well in any adjudicative body, not just in front of a conservative Supreme Court. The consequence of the tension between adjudication and progressivism is that the legalization of constitutional discourse may have seriously impoverished the progressive tradition. When we read our progressive politics through the lens of the Constitution, and then read the Constitution through the lens of law, we burden progressivism with the constraints, limits, doctrines, and nature of law. Progressivism, its very content, becomes identified with that which courts might do and that which lawyers can feasibly argue. In the process, progressivism in the courts becomes weak and diluted. The consequence of this tension is not only, however, that progressivism in the Supreme Court is impoverished, although clearly it is. The consequence is also that progressive politics outside the Court is robbed of whatever rhetorical and political support it might have received from a de-legalized conception of the progressive Constitution. In a culture that routinely identifies its political aspirations with constitutionalism, it becomes extremely difficult to demand progressive change of a nature that the adjudicated Constitution cannot support. Redistributive progressive politics, for example, may be burdened by the "shadow effect" of the refusal, both on the Court and outside it, to understand poverty as a suspect basis of

classification, or minimal material well-being as a fundamental right. More generally, any antisubordinationist progressive legislation is marginalized by the inability of the Court to "find" an antisubordination principle in the Constitution. Constitutionalism defines our public morality, to some extent, and the failure of the adjudicated Constitution to accommodate progressive ends accordingly impoverishes progressive morality. Thus, progressive politics is impoverished by the adjudicated Constitution simply because it loses the force, and power, of constitutional thought. The legal profession pervasively, and the larger culture somewhat, has come to view the Constitution as the repository of public morality; as the source, genesis, and articulation of our political obligations. If our collective social morality and our moral aspirations are embedded in our Constitution, if the Constitution is a form of adjudicative "law," and if adjudicative law exists in a state of profound and perpetual (and not particularly creative) tension with progressive morality and ideals, then this conclusion is inescapable: progressive morality will never become part of our public morality, regardless of the composition of the Supreme Court. Progressive constitutionalism may be part of the problem (as the saying goes), not part of the solution. If progressive constitutionalists care as much about progressive politics as they care about the Constitution (a big "if"), then the imperative is unavoidable: the circle must be broken.

at: strike down

The court will uphold the strip – they've done a million times

Phyllis **Schafly '4** President, Eagle Forum (*The Supremacists* p. 116-123)

Congress has the duty to curb the power of the judicial supremacists. We don't trust the federal courts or the Supreme Court to tamper with the definition of marriage by applying supremacist notions of "emerging awareness" or "evolving paradigm." We don't trust the courts to tamper with our right to acknowledge God, whether in the Pledge of Allegiance, the Ten Commandments, our national motto, or voluntary prayer. Therefore, Congress should remove power from all federal courts to impose the rule of judges over our rights of self-government. Our great Constitution has within it the checks and balances we need to deal with the problem of judicial supremacy. This includes the ability of Congress to limit the jurisdiction (judicial power) of all federal courts. Article I, Section 8 of the Constitution states: "The Congress shall have power . . . to constitute tribunals inferior to the Supreme Court." Article III, Section states: "The judicial power of the United States, shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish." These two sections mean that all federal courts except the Supreme Court were created by Congress, which defined their powers and prescribed-what kind of cases they can hear. Whatever Congress created, it can uncreate, abolish, limit or regulate. Article III, Section 2 states: "The Supreme Court shall have appellate jurisdiction, both as to law and fact, with such exceptions, and under such regulations as the Congress shall make. This section means that Congress can make "exceptions" to the types of cases that the Supreme Court can decide. This is the most important way that Congress can and should bring an end to the reign of judicial supremacy. There is nothing new or wrong about Congress telling the federal courts what cases they can and cannot hear. Limiting court jurisdiction is a tool the liberals have used many times. In 2002, Congress passed a law (at Senator Tom Daschle's urging) to prohibit all federal courts from hearing cases about brush clearing in South N Dakota. Surely other issues are as important as brush fires in South Dakota. The Record of Congressional Action. A long historical record conclusively proves that Congress has the power to regulate and limit court jurisdiction, that Congress has used this power repeatedly, and that the courts have accepted it. In Turner v. Bank of North America (1799), Justice Chase commented: "The notion has frequently been entertained, that the federal courts derive their judicial power immediately from the Constitution; but the political truth is, that the disposal of the judicial power (except in a few specified instances) belongs to Congress. If Congress has given the power to this Court, we possess it, not otherwise: and if Congress has not given the power to us, or to any other Court, it still remains at the legislative disposal." Even Chief Justice John Marshall, the judicial supremacists' hero, made similar assertions. For example, in Ex parte Bollman (1807), Marshall said that "courts which are created by written law, and whose jurisdiction is defined by written law, cannot transcend that jurisdiction." The early decisions of the Supreme Court were sprinkled with the assumption that the power of Congress to create inferior federal courts necessarily implied, as stated in U.S. v. Hudson & Goodwin (1812), "the power to limit jurisdiction of those Courts to particular objects." The Court stated, "All other Courts [except the Supreme Court] created by the general Government possess no jurisdiction but what is given them by the power that creates them." The Supreme Court held unanimously in Sheldon v. Sill (1850) that because the Constitution did not create inferior federal courts but rather authorized Congress to create them, Congress was also empowered to define their jurisdiction and to withhold jurisdiction of any of the enumerated cases and controversies. This case has been cited and reaffirmed numerous times. It was applied in the Voting Rights Act of 1965, in which Congress required covered states that wished to be relieved of coverage to bring their actions in the District Court of the District of Columbia. The Supreme Court broadly upheld Congress's constitutional power to define the limitations of the Supreme Court "with such Exceptions, and under such Regulations as the Congress shall make" in Ex parte McCardle (1869). Congress had enacted a provision repealing the act that authorized the appeal McCardle had taken. Although the Court had already heard argument on the merits, it dismissed the case for want of jurisdiction. "We are not at liberty to inquire into the motives of the legislature. We can only examine into its power under the Constitution; and the power to make exceptions to the appellate jurisdiction of this court is given by

express words." McCardle grew out of the stresses of Reconstruction, but the principle there applied has been affirmed and applied in later cases. For example, in 1948 Justice Frankfurter in National Mutual Insurance Co. v. Tidewater Transfer Co. (dissenting) commented: "Congress need not give this Court any appellate power; it may withdraw appellate jurisdiction once conferred and it may do so even while a case is sub judice [already before the court]." In The Francis Wright (1882), the Court said: While the appellate power of this court under the Constitution extends to all cases within the judicial power of the United States, actual jurisdiction under the power is confined within such limits as Congress sees fit to prescribe. . . . What those powers shall be, and to what extent they shall be exercised, are, and always have been, proper subjects of legislative control. . . . Not only may whole classes of cases be kept out of the jurisdiction altogether, but particular classes of questions may be subjected to re-examination and review, while others are not. Numerous restrictions on the exercise of appellate jurisdiction have been upheld. For example, Congress for a hundred years did not allow a right of appeal to the Supreme Court in criminal cases except upon a certification of divided circuit courts. In the 1930s, liberals in Congress thought the federal courts were too pro-business to fairly handle cases involving labor strikes. In 1932 Congress passed the Norris-LaGuardia Act removing jurisdiction in this field from the federal courts, and the Supreme Court had no difficulty in upholding it in Lauf v. E. G. Shinner & Co. (1938). The Supreme Court declared, "There can be no question of the power of Congress thus to define and limit the jurisdiction of the inferior courts of the United States." Liberals followed the same procedure when they passed the Hiram Johnson Acts in order to remove jurisdiction from the federal courts over public utility rates and state tax rates. These laws worked well and no one has suggested they be repealed. Another celebrated example was the Emergency Price Control Act of 1942, in which Congress removed from federal courts the jurisdiction to consider the validity of any price-control regulation. In the test case upholding this law, Lockerty v. Phillips (1943), the Supreme Court held that Congress has the power of "withholding jurisdiction from them [the federal courts] in the exact degrees and character which to Congress may seem proper for the public good."

Even if the strip is unconstitutional, it wouldn't be struck down – empirically proven

Lawrence **Sager '81** Prof of Law, NYU (95 Harv. L. Rev. 17)

To start with, a great weight of institutional precedent favors the view that Congress can withhold from the Supreme Court some of the cases that would otherwise fall within the Court's article III jurisdiction. In the Judiciary Act of 1789, a Congress familiar with the drafting of article la" withheld from the Court large portions of section z jurisdiction. This was no oversight, to be corrected in short order, but the forging of an enduring pattern. Thus, for example, the review of state court decisions favorable to federal claims of right was withheld from the Court's jurisdiction for 125 years, and the Court has never been empowered to review state court litigation between private parties of diverse citizenship. Congress has always understood the exceptions clause to permit it to subtract legal issues and cases from the article III jurisdiction of the Supreme Court. The Court itself has shared this understanding. In no opinion h. the Court taken a contrary view." Indeed, in the pertinent opinions, the Court displays an almost unseemly enthusiasm in discussing Congress' power to lop off diverse heads of the Court's article III jurisdiction.

civilian oversight cp

1nc civilian oversight cp (local police)

The 50 United States state governments should expand support for “Loyal Opposition” Policy Review Boards, served with the task of conducting civilian oversight of police surveillance technologies. “Loyal Opposition” Policy Review Boards should regularly release their findings and recommendations to the general public.

Optional: include that LOPRB’s should recommend of the plan.

The counterplan establishes recommendations for best police surveillance practices in local communities --- they’ll recommend the plan and allow policies to be best tailored to their jurisdiction

Seybold 15 [Steven D., J.D. candidate, “Somebody's Watching Me: Civilian Oversight of Data-Collection Technologies,” March, 2015, Texas Law Review, 93 Tex. L. Rev. 1029] //khirn

While scholars have offered a variety of methods for improving civilian oversight generally, n191 **civilian oversight of surveillance** must be specifically designed to address the unique problems raised by the advancement in data-collection technologies, including that the public is often unaware of how new technologies are being used and even when informed, often discount the potential effect of such technologies because of privacy myopia. Through a membership of invested and knowledgeable "Loyal Opposition" citizens, a more directed focus on policy review, and an emphasis on community outreach, Loyal Opposition Policy Review Boards (LOPRBs) can ensure that the privacy rights of individual citizens are protected while **still allowing police departments** to use **data-collection technologies** to improve law enforcement and public safety.

[*1054]

A.

"Loyal Opposition" Membership

First, LOPRBs would be composed of a group of Loyal Opposition members to ensure the community's and police department's interests are effectively balanced. "Loyal Opposition" refers to a civilian oversight mechanism that would share a similar commitment as police departments to effective policing and ensuring public safety but holds alternative views regarding how those goals can appropriately be achieved. n192 Particularly, the Loyal Opposition of the LORPB would have not only a differing viewpoint on how data-collection technologies can and should be used by police departments n193 but would also be particularly invested in ensuring that such technologies do not unnecessarily infringe on a citizen's rights.

This is accomplished by having the board membership composed of individuals representing public-interest or community organizations that are particularly concerned with technology and privacy or with protecting constitutional rights. n194 Membership can also be drawn from academics specializing in criminal justice issues n195 or from individuals particularly concerned with privacy rights, regardless of law enforcement experience. n196 LOPRBs would thus be staffed by **highly knowledgeable experts in the field**, who would, through their interaction with the police departments, have a keen understanding of how data-collection technologies are currently used and how they may be used in the future. Ultimately, this positions LOPRBs to effectively balance the long-term privacy costs with the short-term policing gains of data-collection technologies.

By drawing membership from these sources, a LOPRB can act as an **effective oversight mechanism** by providing a countervailing viewpoint to police departments. A fundamental problem with self-regulation is the lack of incentive for police departments to voluntarily implement policies that [*1055] are against their interests. n197 On the other hand, the LOPRB mechanism relies on the self-interest of the loyal opposition to counter that of the police department, creating a system similar to the checks-and-balances approach of the tripartite federal government. The investigative interest of the police department and the constitutional rights and privacy interests of the LOPRB will interact against one another to create the proper balance of interests. n198 Furthermore, the public will likely perceive the actions of LOPRBs as not being unduly influenced by the police department because of the loyal opposition members' competing interests to the police department. Thus, the existence of an entity championing the competing privacy interests ensures that the use of data-collection technologies by police departments will neither stray into Orwellian totalitarianism nor into powerless policing.

B. Reviewing Policy, Not Complaints

LOPRBs would also make a significant departure from the traditional civilian oversight paradigm by abandoning complaint review to focus purely on **reviewing and recommending police department policies** for data-collection technologies. The policy review undertaken by LOPRBs would concern all aspects of data-collection technology, from recommending policies for the use of surveillance technologies to addressing how long collected information should be retained by police departments. The emphasis on policy review means LOPRBs provide proactive oversight of police departments' use of data-collection technologies. Other regulatory approaches, especially complaint-directed civilian oversight, usually only reactively respond to the filing of a complaint. n199 Reactive responses only provide a remedy to current practices without providing sufficient guidance on potential future issues that may arise because of advancing technologies that are often significantly dissimilar compared to past technologies. n200 And, because citizens are often unaware of the implementation of data-collection technologies, there is a very low likelihood that a sufficient number of complaints would arise to even correct current practices. By reviewing and recommending proactively, LOPRBs can **establish "best practices" for both current and new technologies**, providing **adequate oversight** to protect the constitutional rights and privacy interests of the community. n201 **Policy review** thus is a powerful tool because it allows civilian oversight to proactively address current and future issues facing [*1056] police departments rather than only focusing reactively on complaints against the past actions of departments and their officers.

Furthermore, LOPRBs, by focusing on policy review at the local level, can provide a more nuanced best practice policy for the local community. Policing is primarily a local activity, n202 and the effects of data-collection technologies will be greatest in the local community where the police department uses such technologies. Just as different states often have diverging viewpoints on a variety of issues, each local community may have a unique viewpoint regarding what the community considers a reasonable expectation of privacy. LOPRBs can formulate policy recommendations that represent the local community's privacy expectations, creating a best practices approach that provides community-sensitive protections above the floor set by constitutional protections. While **one LOPRB may recommend relaxed policies for the use of ALPRs in a community with significant car thefts**, n203 another LOPRB may recommend **strict data retention policies in a community with a history of discriminatory police practices**. n204

Finally, having LOPRBs review data-collection-technology procedures ensures such policies will actually be addressed, compared to being reliant on civilian complaints to bring such technology procedures to the board's attention. A **policy-centric** approach also **helps bring data-collection technologies** and how police departments use those technologies into the **public consciousness**, as the publically available reports and recommendations of LOPRBs would provide the public with greater information regarding how

data-collection technologies affect the everyday privacy of the average citizen. This is especially relevant, considering that the public may often be unaware of the use of data-collection technology by police departments.

1nc civilian oversight cp (federal level)

The United States federal government should establish a civilian oversight agency, comprised of a board of citizens with the task of conducting oversight of federal law enforcement and intelligence gathering. The Board should regularly release its findings and recommendations to the general public.

Optional: include that Board should recommend of the plan.

Solves the 1ac without any political backlash

Weinbeck 11 [Michael P. Weinbeck, J.D. Candidate, William Mitchell College of Law, 2011, "NOTE: WATCHING THE WATCHMEN: LESSONS FOR FEDERAL LAW ENFORCEMENT FROM AMERICA'S CITIES," 36 Wm. Mitchell L. Rev. 1306, William Mitchell Law Review] //khirn

C. A Proposed System of Federal Civilian Oversight

A federal system of civilian oversight should exploit the best practices of the municipal oversight models and abandon - or at least minimize - the practices that have burdened the local systems. Recalling the discussion above, civilian oversight appears to be at its zenith when it operates to call attention to gross misconduct, encourage political pressure for reform, and create the perception of unbiased, direct citizen oversight. And civilian review is hampered when public disclosure is limited, discipline for misconduct is lax, and the board members are unqualified for the work. n158 With these attributes in mind, what might a **civilian oversight model look like at the federal level**?

Ideally, the agency would be made up of a board of citizens who have been thoroughly trained in the work of the agency. The board would be structured to allow for areas of specialization, and the members would be given security clearances to view classified information that may be contained in the complaints.

To prevent the political conflicts that have sometimes plagued municipal boards, n159 board members would be selected for **four-year terms**, and the terms would **expire in odd-numbered years.** These changes avoid the politicization of the major election cycles. Half of the members would be congressional appointees and half would be appointed by the President.

To aid in systematic data-gathering and reporting, the agency would be an arm of one of the government's auditing functions - possibly the Government Accounting Office. Funding for the [*1331] oversight agency would be statutorily guaranteed.

Alternatively, a system of civilian oversight might be achieved by expanding the auspices of the Intelligence Oversight Board. Since the board is established through an enabling executive order, legislative wrangling is avoided and an operational system could be implemented more quickly. However, without a legislative mandate, the Intelligence Oversight Board rests on the goodwill of the President. A board created by statute (negotiated between the White House and Congress) may have a better base for **long-term survival and effectiveness**.

Given the complex and specialized nature of the complaints, it would probably be infeasible for any civilian oversight agency to have its own investigative staff. Instead, the civilian oversight board would serve as an auditor to investigations being carried out by the law enforcement and intelligence agencies. All complaints under investigation would be dual-filed with the board, and the members would select which cases would undergo a board review.

As noted above, the imposition of discipline is a key consideration. If the board finds an investigation or an imposition of discipline inadequate, it should have the authority to require the law enforcement or intelligence agency head to reconsider the case. If the agency head makes no changes to the disposition, he or she would be required to provide the board with an explanation of the decision. If the board is still dissatisfied with the outcome, it would have the authority to refer the case to the President and to the appropriate congressional committee for further action.

The board would also establish a federal system for filing citizen complaints. No matter which federal law enforcement agency the citizen interacted with, the board would serve as a one-stop clearinghouse for complaint filing. Complaints could be filed on the web. All individuals who are taken into federal custody or subjected to federal investigation would be apprised of the existence of the board and given an opportunity to file a complaint.

D. Applying Civilian Oversight to Intelligence Services

In the post-9/11 world, the U.S. government has deliberately attacked the traditional wall of separation between federal law enforcement and intelligence-gathering activities. n160 Today, the FBI [*1332] regularly engages in intelligence-gathering work to protect national security and has run into corollary problems with abuses of power. n161 A former general counsel to the CIA and the National Security Agency has concluded that, absent major changes to the congressional approach to oversight, **progress on oversight reforms are unlikely to be realized**: "Nor can progress be achieved as long as the Congress misuses its oversight role as a point of attack on executive branch primacy in foreign relations, and misuses the oversight committees as the forum for partisan foreign policy disputes with the Administration." n162

Consequently, it bears mentioning that, while civilian oversight has traditionally been applied strictly to law enforcement, there is little to suggest that its use could not extend to oversight of intelligence-gathering activities. Indeed, given the blurring of lines within the FBI between its traditional law enforcement roles and its developing intelligence-gathering roles, it would seem **counterintuitive not to apply an oversight model holistically.**

V. Conclusion

Civilian oversight has been met with many challenges in America's cities. But, with more than 100 civilian oversight agencies in the United States, it appears to be a solution that provides enough community satisfaction to justify its continued existence.

In addition, oversight mechanisms that the federal government currently employs are insufficient to stand up to the expansive authority that has been granted to America's law enforcement agencies. Given the inconsistent results that come from each branch of the government when trying to oversee the nation's law enforcement and domestic intelligence-gathering activities, new approaches are needed. A system of civilian oversight will provide some measure of satisfaction to a public deeply concerned for the stewardship of its civil liberties.

2nc civilian oversight cp

Judicial oversight fails

Seybold 15 [Steven D., J.D. candidate, "Somebody's Watching Me: Civilian Oversight of Data-Collection Technologies," March, 2015, Texas Law Review, 93 Tex. L. Rev. 1029] //khirn

[*1044] 3. Judicial Oversight. - Police departments could be regulated by judicial oversight, ensuring that constitutional and statutory rights are adequately protected from certain uses of data-collection technologies. But regulating data-collection technologies presents a unique challenge for the judiciary. The Fourth Amendment and other constitutional and statutory provisions provide privacy rights some protection from encroachment. n115 However, civil claims, such as § 1983 claims, n116 face significant obstacles to protecting privacy rights from encroachment, including that litigation is "too rare to deter misconduct" and unlikely to encourage changes to systemic police misconduct. n117 Furthermore, judicial oversight through constitutional protections only sets a floor of the minimum-required conduct for police officers and departments. n118 As Armacost recognizes: "Even when criminal laws are enforced effectively, they do not describe sufficiently high norms of behavior to constrain police discretion within professionally acceptable boundaries." n119 Judicial oversight thus only provides a "minimum guarantee," rather than a best practices approach. n120

The judicial regulatory mechanisms can only provide that minimum guarantee if a claimant can overcome the hurdle of showing that use of the data-collection technologies has created an actionable claim. n121 And the minimum guarantee provided by the Fourth Amendment may weaken as data-collection technologies become more prevalent. The determination of a person's "reasonable expectation of privacy" under the Fourth Amendment turns on whether (1) the individual had a subjective expectation of privacy, and (2) society recognizes that expectation as reasonable. n122 As data-collection technologies are further integrated and become more common in the public space, it is less likely that society would recognize privacy in public as reasonable. Judicial oversight thus becomes weaker the more widespread and common mass surveillance becomes. n123 That is, society's shifting perspective regarding what [*1045] constitutes a reasonable expectation of privacy lowers the minimum guarantee of constitutional protections. n124

The Supreme Court's difficulty in fitting new data-collection technologies within current Fourth Amendment jurisprudence tracks with the judiciary's general problems responding to technological changes. When the Supreme Court had the opportunity in United States v. Jones n125 to decide whether long-term monitoring over four weeks using a GPS device violated the Fourth Amendment, the Court punted the issue. n126 Rather than recognizing the changing technology and updating modern judicial precedent to address new and emerging technologies, n127 the Court instead held that the GPS device's physical installation on the vehicle constituted a "search" and a Fourth Amendment violation. n128

Jones does little to address current and future data-collection technologies that do not involve a physical intrusion of a person's property. n129 This is unsurprising because courts often have difficulty analogizing emerging data-collection technologies with the past technology that precedent is based upon. n130 Even as the Court has previously recognized that such surveillance may violate the Fourth Amendment, n131 subsequent precedent has failed to address whether the use of data-collection technologies constitutes such surveillance. The difficulties of judicial oversight to adapt precedent to changing technologies, coupled with the only minimum guarantee provided from constitutional protections, cuts against utilizing judicial oversight as the primary mechanism for regulating police department use of data-collection technology.

Civilian oversight solves better than the plan --- allows tailoring policy to local jurisdictions

Seybold 15 [Steven D., J.D. candidate, "Somebody's Watching Me: Civilian Oversight of Data-Collection Technologies," March, 2015, Texas Law Review, 93 Tex. L. Rev. 1029] //khirn

Civilian oversight can effectively address the **failings of other oversight mechanisms**. Historically, civilian oversight entails "institutions that empower individuals who are not sworn police officers to influence how police departments formulate policies and dispose of complaints [*1046] against police officers." n132 These oversight bodies are generally "created by ordinance or referendum" n133

and exist at all levels of law enforcement. n134 More than 100 civilian oversight bodies exist, and approximately 80% of large American cities have some form of civilian oversight mechanism. n135

Civilian oversight bodies regulating one police department may differ significantly from another civilian oversight body. Traditionally, civilian oversight emphasized reviewing complaints against police officers, n136 but civilian oversight may also include **policy review** and **public outreach**. n137 Civilian oversight has generally been categorized based on two characteristics: (1) the structural independence of the civilian oversight body from the regulated police department, often either as an internal division of, or an independent and external body from, the police department, and (2) the scope of the body's powers, ranging from purely supervisory to investigative or auditing powers. n138 For example, the Civilian Complaint Review Board (CCRB) in New York City was originally an internal unit of the police department that could review reports and make recommendations to the police commissioner; n139 in contrast, the Office of the Police Monitor in Austin, Texas, is an independent city office that assesses citizen complaints and monitors internal affairs investi-gations. n140

Data-collection technologies represent fertile ground of concern regarding police department policies and procedures. In the past, the public's reaction to the persistent problem of police misconduct helped spur the proliferation of civilian oversight. n141 Well-publicized incidents of [*1047] police misconduct made the issue politically salient, creating an impetus for governmental bodies to form civilian oversight mechanisms. n142 As police departments begin to set policies and procedures for new technologies, there exist very real concerns that the local community will disagree with how the police department plans to use new data-collection technologies. **Civilian oversight thus provides the public with a formal voice in police department activities,** providing the local community with a **ready means** to communicate regarding perceived misuses and abuses of such technologies.

The local nature of civilian oversight also allows for a tailored regulatory mechanism. **Policing is primarily a local task**, and the vast majority of law enforcement agencies are local police departments. n143 Local oversight boards reviewing local police department policy can tailor which police misconduct issue to review and what recommendation would best address that issue, based on the needs and desires of the local community. n144 Thus, the closeness of civilian oversight to the immediate community allows the regulatory mechanism to **exert significant corrective power** on local police departments based on the **concerns most pressing to the local community**.

Finally, the fundamental attribute of civilian oversight - civilian participation in the oversight mechanism - makes civilian oversight an attractive remedy. While each of the other three regulatory mechanisms - self-regulation; executive and legislative action; and judicial oversight - involve civilian participation, that participation is indirect. Civilians may pressure police departments to self-regulate, lobby legislatures to enact new laws, and advocate courts to update legal doctrine, but ultimately they are reliant on those other parties (police departments, legislators, and judges) to actually act. That lack of direct participation likely makes it more difficult for communities to believe such regulatory mechanisms are legitimate oversight mechanisms.

Yes enforcement

Seybold 15 [Steven D., J.D. candidate, "Somebody's Watching Me: Civilian Oversight of Data-Collection Technologies," March, 2015, Texas Law Review, 93 Tex. L. Rev. 1029] //khirn

B. Strengths of the Civilian Oversight Regulatory Paradigm

1. Independence. - Perhaps the greatest strength of civilian oversight is its independence from police departments. The structural independence of civilian oversight mechanisms from police departments ensures that departments do not unduly influence the civilian oversight mechanism and provides the necessary independence for informed judgments. n152 That

independence ultimately "helps ensure the integrity" of the oversight and provides legitimacy to the civilian oversight decisions. n153

For instance, public distrust often exists toward internal review because of the perception "that a police-oriented perspective necessarily colors complaint review by police, resulting not only in concealment of officers' past misdeeds but also in encouragement of further abuse of authority." n154 By providing an independent review mechanism on police department use of data-collection technologies, civilian oversight is not hampered by potential biases undermining legitimate review or plagued by the perception of bias often associated with internal review mechanisms. n155

2. Transparency. - Second, civilian oversight can improve transpar-ency in regulating police departments. n156 Some have called for trans-parency from the perspective that "law enforcement's business, in general, is the public's business." n157 Police departments have historically been "closed, self-protective bureaucracies." n158 This led to many reforms designed to make police departments less isolated from the public. n159

Just the existence of an external regulatory mechanism increases transparency by forcing a closed bureaucracy to share information with outside parties. Furthermore, civilian oversight entities can use pamphlets, public hearings, and other methods to increase public awareness of the [*1050] oversight and of any corrective action taken. n160 Such actions help achieve civilian oversight's goal of "enhancing public confidence in the police generally." n161 This increased transparency and openness helps reduce police-community tensions and improves the perception of legitimacy in the process. n162

3. Individual Deterrence and Systemic Correction. - Finally, civilian oversight has some **meaningful deterrence** on individual actors while also providing a functioning mechanism to address local systemic issues. n163 Individual police officers are more likely to undertake regulation of their own behavior when the officer knows that they are **being watched by an oversight body**. n164 External civilian oversight can ensure greater accountability not only among rank-and-file officers, but also among command officers, and can also address systemic issues facing dys-functional departments. n165 Approximately two-thirds of civilian oversight entities undertake policy review in addition to complaint review, n166 allowing civilian oversight bodies to review general policies and advocate for systemic reform. n167 Samuel Walker, a scholar whose work focuses on police accountability, emphasized that successful civilian oversight bodies "take a proactive view of their role and actively seek out the underlying causes of police misconduct or problems in the complaint process." n168 If civilian oversight mechanisms **continually provide policy recommendations** to police departments, those recommendations as a whole can have a significant effect on police misconduct, while at the same time making the police department more "accustomed to input from outsiders." n169 Civilian oversight thus can have a **transformative impact on entire police departments** rather than only correcting the actions of a singular officer.

Establishes community outreach --- solves social signal better

Weinbeck 11 [Michael P. Weinbeck, J.D. Candidate, William Mitchell College of Law, 2011, "NOTE: WATCHING THE WATCHMEN: LESSONS FOR FEDERAL LAW ENFORCEMENT FROM AMERICA'S CITIES," 36 Wm. Mitchell L. Rev. 1306, William Mitchell Law Review] //khirn

C. Community Outreach and Education

Third, LOPRBs would devote the remainder of their resources to community outreach, particularly the dissemination of their policy research. Community outreach would involve both informing the community about the purpose and incentives of the LOPRB and teaching the community about potential future issues arising from how technological changes impact policing in the community. Policy recommendation has a qualitative [*1057] impact on police departments, rather than the quantitative impact of complaint review; for this reason, policy recommendations make it more difficult for the community to have simple metrics to understand the impact of LOPRBs. LOPRBs must establish open and continuous dialogue with the community at large so that the community can learn of the qualitative impact of LOPRBs. That dialogue also provides LOPRBs the opportunity to inform the community not only of the LOPRB's policy recommendations but also to teach the public regarding the changing nature of policing and the impact of data-collection technologies on individuals' privacy and constitutional rights.

Community outreach will also provide greater legitimacy to LOPRBs as a regulatory form. The legitimacy of civilian oversight mechanisms is correlated to the activeness and effectiveness of community outreach; n205 thus, the emphasis of LOPRBs on effectively using community outreach to establish a dialogue with the community will give LOPRBs greater legitimacy. LOPRBs will also have greater legitimacy than traditional civilian oversight because LOPRBs are specifically designed to represent and protect the interests of the general population, rather than merely to function as a punitive measure against police departments.

Strong community outreach can also help overcome the problem of "privacy myopia." n206 By educating the public regarding data-collection technologies and the LOPRB's policy recommendations for effective regulation, the community becomes more informed on the privacy costs associated with data-collection technologies. This will allow the public to overcome internal discounting that makes it difficult for individuals to properly value future costs compared to apparent present gains.

at: links to politics

Avoids political backlash

Weinbeck 11 [Michael P. Weinbeck, J.D. Candidate, William Mitchell College of Law, 2011, "NOTE: WATCHING THE WATCHMEN: LESSONS FOR FEDERAL LAW ENFORCEMENT FROM AMERICA'S CITIES," 36 Wm. Mitchell L. Rev. 1306, William Mitchell Law Review] //khirn

B. The Perceived Benefits of Civilian Oversight

There are more than 100 civilian oversight agencies in the United States covering about eighty percent of the largest cities and serving nearly one-third of the American population. n48 As Jerome Skolnick and James Fyfe observe, the underlying attraction to civilian oversight is plain:

When citizens ask for review of police conduct by civilians, they do so because they don't trust the police to investigate themselves. The demand for civilian review thus implies a failure of police administration that ... probably cannot be put right simply by employing more responsive administrators... . Like the institution of the jury, which arose not because judges were incompetent to hear and evaluate evidence and reach verdicts, but because judges were mistrusted, so too with civilian review of police misconduct. n49

A police department's internal affairs unit, operating on its own, lacks the credibility to conduct an independent investigation that is satisfactory to the community. n50 Minneapolis city council members, in an attempt to assuage community members and preserve their own political futures, established the city's review authority. n51 In theory, at least, a system of civilian oversight inserts into the police investigation process a watchman

without allegiance to the police who will ensure that the investigation is conducted without bias. n52 This, in turn, generally supports a perception by the community that its police department is operating with a proper respect for individual rights. n53 As a result, a greater level of trust develops between the police and the [*1315] community that ultimately greases the cogs of crime detection and prevention. n54

There are other benefits that municipalities enjoy when establishing a system of citizen oversight. Chief among them is the political coverage that the city's elected officials receive when establishing the agency. n55 For example, the Minneapolis Civilian Police Review Authority came into being in 1990 after police officers identified the wrong house in a drug raid. n56 During the course of the botched raid, the police killed an elderly couple who lived in the house. n57 In another episode not long after, the Minneapolis Police Department broke up a peaceful party of college-aged African Americans at a Minneapolis hotel. n58 In response to both incidents, outraged community members engaged in vehement and highly publicized demonstrations. n59

Besides providing a measure of **political coverage**, citizen oversight may also operate as a mechanism for saving cities money. n60 Wronged citizens, instead of bringing their grievances to court, enter the **civilian oversight system** where they may achieve redress that **ends up costing the city nothing more than the administrative costs of the investigation**. n61

LOPRBs solve department backlash

Seybold 15 [Steven D., J.D. candidate, "Somebody's Watching Me: Civilian Oversight of Data-Collection Technologies," March, 2015, Texas Law Review, 93 Tex. L. Rev. 1029] //khirn

While LOPRBs would function as an effective regulatory mechanism for police department use of data-collection technologies, there are two potential concerns with the approach: (1) police department resistance to LOPRBs and (2) the potential application of LOPRBs to very small police departments. While these concerns at first glance appear to be significant hurdles to LOPRBs, neither truly presents a serious issue.

First, even a highly effective LOPRB providing quality policy recommendations to a police department would likely encounter some department resistance to the civilian oversight. This resistance may be created because of police department views of a civilian entity "meddling" or just the potential perception of an adversarial relationship between the [*1058] LOPRB and police department. n207 However, the structure of LOPRBs help overcome most of this resistance traditionally leveled against civilian oversight from police departments. The emphasis on policy review, rather than complaint review, means that LOPRBs will not directly regulate individual police officers but rather the **department as a whole**. This change in focus will likely reduce the intensity of any police department resistance because the potential adversarial relationship will be between the LOPRB and the police department instead of individual officers. n208 Furthermore, any resistance can be ameliorated by public pressure on police departments to enact the LOPRB's policy recommendations. The LOPRB's outreach will inform the local community of the use of data-collection technologies, potentially generating popular support behind LOPRB recommendations. LOPRBs can thus indirectly enforce their recommendations through utilizing that popular support and pressure on police departments. That indirect pressure on police departments will help reduce potential police department resistance because policy changes brought about through public pressure will be a reaction by the police department to the public at large, rather than directly reacting to the adversarial LOPRB.

Thus, while police department resistance likely cannot be completely overcome, **LOPRBs can ameliorate this traditional civilian oversight problem**.

LOPRB solves their DA's

Seybold 15 [Steven D., J.D. candidate, "Somebody's Watching Me: Civilian Oversight of Data-Collection Technologies," March, 2015, Texas Law Review, 93 Tex. L. Rev. 1029] //khirn

Technology has provided police departments with **powerful tools** to collect extensive data on private citizens. Those tools have captured images of every license plate passing through an intersection; n1 used facial-recognition technology to determine whether Super Bowl attendees had criminal records; n2 and implemented multi-technology systems that "aggregate[] and analyze[] information from approximately 3,000 surveil-lance cameras around the city ... ." n3 New technologies allow police departments to collect a range of data on the public space, including private citizens not under investigation, raising concerns regarding how that data may be used in the future. n4 And as storage and database capabilities have become cheaper and more efficient, the potential for expansive databases has become not only a science-fiction trope n5 but a reality. n6

[*1030] But despite potential, these new tools fit poorly within the current regulatory framework. Police departments have embraced the information age with little guidance or oversight, raising significant privacy concerns regarding the effect of mass-data collection on the privacy rights the general public has enjoyed for centuries. n7 At the same time, current regulatory mechanisms have not adequately addressed how police departments should use cutting-edge surveillance technologies. n8 Such regulatory mechanisms often are inhibited by conflicting motivations n9 or poorly adapted to technological change. n10 Scholars have proposed a variety of solutions to address the privacy and criminal law concerns raised by these "data-collection technologies," but these approaches often provide inadequate flexibility to local jurisdictions to address their unique problems n11 or focus too narrowly on correcting a particular, novel iteration of the problem. n12

[*1031] To overcome this regulatory deficit, civilian oversight can provide effective regulatory oversight of police departments' use of new and emerging technologies. Specifically, I argue that a specialized form of civilian oversight, the "Loyal Opposition" Policy Review Board (LOPRB), would function as a regulatory mechanism that not only provides proactive regulatory guidance on technology usage by police departments but would also allow for that guidance to be specifically tailored to the local community. n13 LOPRBs, composed of members who are informed on and invested in technology and civil rights, would undertake policy review of police department procedures for the use of new technologies and recommend "best practices" approaches to ensuring that individual privacy rights and police department investigative needs are effectively balanced. n14 Such a civilian oversight mechanism would ensure that the privacy concerns of the average citizen remain protected as new technologies are **incorporated into the daily operations of police departments**.

at: won't oversee every community

Doesn't matter

Seybold 15 [Steven D., J.D. candidate, "Somebody's Watching Me: Civilian Oversight of Data-Collection Technologies," March, 2015, Texas Law Review, 93 Tex. L. Rev. 1029] //khirn

Second, the valid criticism can be raised that not all jurisdictions or departments have the resources to create a local LOPRB. A LOPRB requires not only financial resources but also a sufficient number of invested and informed community members to draw from to form the Loyal Opposition. n209 In smaller towns and communities where the police department may contain only a few officers, it may be particularly difficult to justify the expense of a LOPRB, let alone draw qualified members to sit on the board. However, LOPRBs **do not have to be created in every jurisdiction** for LOPRBs to **provide effective regulatory oversight of data-collection** technologies nationwide. The exclusive policy-review focus of LOPRBs means that even in communities that do not have their own LOPRB, that community can look to other cities or towns to find the **best practices to implement in their own community**. This **sharing of policy recommendations across communities** is also facilitated by the civilian outreach of LOPRBs; just as the local community can learn about data-collection technologies and policy recommendations from their LOPRB's website or other resources, **other communities can also access those resources**. And communities that are too small to feasibly implement a LOPRB would be able to look to a variety of approaches taken by other [*1059] cities' LOPRBs, allowing those communities to determine which approach is most appropriate for their own community.

politics links

Their advantages prove it's a big ruling – guarantees politicization

Smith 7 [Joseph L., University of Alabama "Presidents, Justices, and Deference to Administrative Action", The Journal of Law, Economics, & Organization 5/9, (23)2]

The consequences of the institutional choice are more complex and potentially far-reaching. A decision endorsing the disputed agency action not only allows the agency decision to stand (with whatever policy consequences that entails) but also signals to the lower courts that agencies should be given latitude to take the disputed action. Every decision upholding a disputed agency action expands, ever so slightly perhaps, the ability of agencies to implement their agendas. Because lower courts are supposed to implement the legal doctrines articulated by the Supreme Court, the effects of this institutional choice, whether or not to defer to the agency decision, will ripple throughout the lower courts and should affect the decisions in many disputes. This article continues a line of research begun by Linda Cohen and Matt Spitzer in the 1990s. Cohen and Spitzer began with the insight that Supreme Court decisions evaluating agency actions do more than merely uphold or overturn the action being litigated. These decisions also communicate legal doctrine to the lower courts, sending signals regarding the level of deference they should show to agency decisions. Given the small number of administrative law cases the Supreme Court hears each term, they assert that the signal- sending or doctrinal element of these decisions will have a larger impact on policy than the direct effects on the litigants. Cohen and Spitzer argue that Supreme Court Justices can best achieve their policy-related goals if they consider their ideological relationship with the executive branch and then factor this relationship into their decisions evaluating administrative actions. Their model generally suggests that as the median member of the Court gets ideologically closer to the president, the Court should become more deferential to the administrative action.

Surveillance cameras can monitor, detect, and deter terrorism---Boston Marathon bombing proves

Manjoo 13 [Farhad, technology columnist for the New York Times and the author of True Enough, "We Need More Cameras, and We Need Them Now," Slate, April 18, 2013] //khirn

On Thursday afternoon, the FBI released photos and video of two persons of interest in the Boston Marathon bombing. According to FBI special agent Richard DesLauriers, authorities are looking for two men, whom he labeled Suspect No. 1 (who was wearing a dark hat) and Suspect No. 2 (who was wearing a white hat). DesLauriers also said that Suspect No. 2 was seen planting a device just before Monday's explosions before heading west on Boylston Street.

What's notable about the images **the FBI released is how clear they are**. Though DesLauriers did not indicate the source of the images, the Boston Globe reported earlier that authorities were focusing on video "from surveillance cameras on the same side of Boylston Street as the explosions." If it turns out that the people in the FBI's photos are the guys who did it, they shouldn't be surprised that **surveillance cameras** turned out to be their undoing. Neither should you. We should see this potential break in the case as a sign of the **virtues of video surveillance.** More than that, we should think about how cameras could help prevent crimes, not just solve them once they've already happened.

Cities under the threat of terrorist attack should install networks of cameras to **monitor everything that happens at vulnerable urban installations**. Yes, you don't like to be watched. Neither do I. But of all the measures we might consider to improve security in an age of terrorism, **installing surveillance cameras everywhere may be the best choice**. They're cheap, less intrusive than many physical security systems, and—as will hopefully be the case with the Boston bombing—**they can be extremely effective at solving crimes**.

Surveillance cameras aren't just the bane of hardcore civil libertarians. The idea of submitting to constant monitoring feels wrong, nearly un-American, to most of us. Cameras in the sky are the ultimate manifestation of Big Brother—a way for the government to watch you all the time, everywhere. In addition to normalizing surveillance—turning every public place into a venue for criminal

investigation—there's also the potential for abuse. Once a city is routinely surveilled, the government can turn every indiscretion into a criminal matter. You used to be able to speed down the street when you were in a hurry. Now, in many places around the world, a speed camera will record your behavior and send you a ticket in the mail. Combine cameras with facial-recognition technology and you've got a recipe for governmental intrusion. Did you just roll a joint or jaywalk or spray-paint a bus stop? Do you owe taxes or child support? Well, prepare to be investigated—if not hassled, fined, or arrested.

These aren't trivial fears. The costs of ubiquitous surveillance are real. But these are not intractable problems. Such abuses and slippery-slope fears could be contained by regulations that circumscribe how the government can use footage obtained from security cameras. In general, we need to be thinking about ways to make cameras work for us, not reasons to abolish them. When you weigh cameras against other security measures, they emerge as the least costly and most effective choice. In the aftermath of 9/11, we've turned most public spaces into fortresses—now, it's impossible for you to get into tall buildings, airports, many museums, concerts, and even public celebrations without being subjected to pat-downs and metal detectors. When combined with competent law enforcement, surveillance cameras are **more effective, less intrusive, less psychologically draining, and much more pleasant than these alternatives**. As several studies have found, a network of well-monitored cameras can help investigators solve crimes quickly, and there's even evidence that cameras can help **deter and predict criminal acts**, too.

CCTV is an effective counter-terror solution

Manjoo 13 [Farhad, technology columnist for the New York Times and the author of True Enough, "We Need More Cameras, and We Need Them Now," Slate, April 18, 2013] //khirn

If the guys in the photos turn out to be the Boston bombers, it **won't be the first time** we've caught terrorists with surveillance cameras. It happened in London, the world's most-surveilled city, almost a decade ago. When a team of suicide bombers attacked the city's transportation systems on July 7, 2005, officials relied primarily on closed-circuit television cameras to identify the attackers. Thanks to CCTV cameras, **the identities of the bombers and their co-conspirators were determined in a few days' time**. Two weeks later, another team of bombers attempted to attack London's subway and bus system. Their bombs failed. The suspects fled. But the cops had them on camera. Within a day, police had isolated images of the attackers and released pictures to the media. Tips from the public poured in—and within a week, the police had **arrested the attackers and their accomplices**. (During the course of the stakeout, the cops also shot and killed an innocent man.)

Plan causes backlash and saps Court capital --- overturns past support for video surveillance and has widespread popularity

Timberg 14 [Craig, February 5, "New surveillance technology can track everyone in an area for several hours at a time," Washington Post, http://www.washingtonpost.com/business/technology/new-surveillance-technology-can-track-everyone-in-an-area-for-several-hours-at-a-time/2014/02/05/82f1556e-876f-11e3-a5bd-844629433ba3_story.html] //khirn

As Americans have grown increasingly comfortable with traditional surveillance cameras, a new, far more powerful generation is being quietly deployed that can track every vehicle and person

across an area the size of a small city, for several hours at a time. Although these cameras can't read license plates or see faces, they provide such a wealth of data that police, businesses and even private individuals can use them to help identify people and track their movements.

Already, the cameras have been flown above major public events such as the Ohio political rally where Sen. John McCain (R-Ariz.) named Sarah Palin as his running mate in 2008, McNutt said. They've been flown above Baltimore; Philadelphia; Compton, Calif.; and Dayton in demonstrations for police. They've also been used for traffic impact studies, for security at NASCAR races and at the request of a Mexican politician, who commissioned the flights over Ciudad Juárez.

Defense contractors are developing similar technology for the military, but its potential for civilian use is raising novel civil liberties concerns. In Dayton, where Persistent Surveillance Systems is based, city officials balked last year when police considered paying for 200 hours of flights, in part because of privacy complaints.

"There are an infinite number of surveillance technologies that would help solve crimes . . . but there are reasons that we don't do those things, or shouldn't be doing those things," said Joel Pruce, a University of Dayton postdoctoral fellow in human rights who opposed the plan. "You know where there's a lot less crime? There's a lot less crime in China."

The **Supreme Court** generally has given wide latitude to police using **aerial surveillance** as long as the photography captures images visible to the naked eye.

minimization cp

Text: replace "substituted selected warrant" with "warrant equivalent"

Solves the aff and avoids the crime/terror DA

Blitz 4 [Marc Jonathan, professor at Oklahoma City University School of Law, "Video Surveillance and the Constitution of Public Space: Fitting the Fourth Amendment to a World that Tracks Image and Identity," *Texas Law Review* 82.6 (May 2004): 1349-1481, lexis] //khirn

1. **Warrant Substitutes and Minimization**.-Even in suspicionless searches where a warrant or probable cause requirement cannot exist without destroying the effectiveness of the search, courts can and should demand "a constitutionally adequate substitute for a warrant."482 Even in such suspicionless searches, there is some constitutionally-mandated requirement or set of requirements that serves the key functions of a warrant, which are to "assur[e] citizens subject to a search or seizure that such intrusions are not the random or arbitrary acts of government agents" and that "the intrusion is authorized by law, and that it is narrowly limited in its objectives and scope."483 Notably, courts do not suggest that the need for such a "warrant equivalent" disappears in the face of a significant security risk. On the contrary, there is an expectation that even when a warrant is impracticable, a warrant equivalent is generally required.

In earlier cases, courts have found adequate constraints in a number of factors. Specifically, the warrantless searches that courts have allowed are often constrained in three ways:

(1) They leave the searching official with little discretion because of the standardization in:

(a) the purposes for which the search will be administered;484

(b) how the search is conducted;485 and

(c) the population on whom the search will be administered.486

(2) They are relatively nonintrusive in that they:

(a) are brief-and often only operate as an "entry condition" rather than an ongoing monitoring system;487

(b) are often entirely avoidable;488

(c) reveal little information-often only the presence or absence of drugs or metallic objects;489 and

(d) occur against the backdrop of regulated environments-leaving freer environments relatively untouched.490

(3) The necessity of the search is clear even without a review by a neutral magistrate because:

(a) the evidence available to those who created the search regime made it clear that the security problem it targets is a serious one;491 and

(b) the type of search used is well-suited to address this problem.492

Not all of these limitations are feasible in the context of public video surveillance in public streets. Unlike searches in schools or workplaces, the effects of searches in streets or parks are not limited to regulated environments, leaving freer environments undamaged. Nor does it seem possible to make the cameras entirely avoidable; on the contrary, doing so might defeat their purpose by giving would-be criminals a means of eluding them.

However, governments can make public cameras less privacy-invasive by imposing some of the constraints listed above. Perhaps the most obvious step they might take is to significantly limit the purposes for which video surveillance may be used. One version of such a purpose limitation is set out in the ABA Standards for Physically-Assisted Physical Surveillance, which requires that police use public video surveillance only when doing so is "reasonably likely to achieve a legitimate law enforcement objective."493

This standard puts some valuable limits on use of powerful new surveillance technologies. Police, for example, **could not build profiles of hundreds of law abiding citizens** simply on a hunch that such profiles might one day prove useful in solving a crime. But the ABA's limitation is still too broad. Authorizing the use of video surveillance for any law enforcement purpose allows officials to take video cameras, reluctantly accepted as tools for fighting violent criminals, and turn them on suspected shoplifters or petty thieves. As Jeffrey Rosen observes, such a transformation is precisely what occurred in Great Britain when public cameras proved to be of little help in fighting terrorism.494 While use of video surveillance to solve relatively minor, nonviolent crimes does benefit society (for example, in the form of less theft), it also carries a significant cost for anonymity and privacy in public life. As Michael Adler has noted in discussing electronic computer searches, such interest in nonviolent crimes brings pervasive police scrutiny closer to the realm of ordinary citizens' day-to-day lives.495 Camera operators charged with stopping shoplifters or pickpockets will have reason to closely scrutinize more ordinary activity than operators charged only with looking for evidence of violent crimes.

2nc minimization solves

Blitz 4 [Marc Jonathan, professor at Oklahoma City University School of Law, "Video Surveillance and the Constitution of Public Space: Fitting the Fourth Amendment to a World that Tracks Image and Identity," *Texas Law Review* 82.6 (May 2004): 1349-1481, lexis] //khirn

Apart from limiting the purposes to which public camera systems are put, courts can also ensure that even when cameras are being used to counter serious crime, they are focused as narrowly as possible on achieving that purpose. Just as the existing legal regime for wiretap demands that police avoid, wherever possible, capturing details of innocent conversations,503 a legal regime for video surveillance might require that governments take reasonable measures to keep innocent, law-abiding activities off of government video screens. As Christopher Slobogin has observed, perhaps the most important measure of this kind is a **strict limitation on suspicionless tracking of individuals**.504 It is here, in a determination of a search technique's reasonableness, that the "minimization" requirement explored earlier is most useful.

Cameras should not be locked onto particular people merely because government officials are interested in observing them, nor should officials be able to easily retrace someone's movements on camera footage without adequate grounds for doing so. As the Ninth Circuit stressed in Taketa, video searches are most offensive to Fourth Amendment values when they are "directed straight at" a person and are not simply searches of a place he happens to be.505

There are a number of measures government might take to ensure that cameras are not easily used to track or spy upon individuals. First, cameras might be trained on places or events instead of specific people. The police might point them only at areas, like subway platforms, where there is concern about crime, or at events, like large rallies, where there is a need for heightened security or crowd control. As Slobogin suggests, neighborhood-wide camera systems might be used only in areas where crime is a significant problem.506 Likewise, cameras might be activated only at specific times, such as when a terrorist alert requires heightened scrutiny in particular parts of a city. Moreover, even where spaces seem to require monitoring, courts might still ask whether camera systems can make public spaces sufficiently safe by monitoring people only at certain "entry-points" to various spaces, instead of subjecting them to pervasive observation when inside.

Second, cameras and recording devices might track suspicious activities or objects instead of particular people, with the aid of pattern recognition software designed to identify guns or other weapons. Even if currently available pattern-recognition software does not allow for visual identification of bombs or other dangerous devices, one might ask whether video networks can be used in conjunction with, and activated by, other technologies that detect the chemical or magnetic "signatures" of such devices.507

foucault links

Status quo surveillance enforces a two binary system, which utilizes information technology to meet ends of concretely identifying genderqueers

Conrad 9

2009, Kathryn Conrad, Department of English University of Kansas, “Surveillance, Gender, and the Virtual Body in the Information Age”
http://www.academia.edu/233018/Surveillance_Gender_and_the_Virtual_Body_in_the_Information_Age//TK

The legal regulation of sexual practices as well as the social stigma attached to non-normative sexual identities and behaviours have meant that those people practicing non-normative sex have had to create strategies for functioning in so-called 'normal' society—whether those strategies include 'outing' oneself and working for legal and social change, 'passing' as normative ('straight'), or, as is the case for many, some combination of these and other strategies. In this sense, surveillance contributes to the reinforcement of sexual norms both by facilitating exposure for deviance, which is then often punished, and by promoting self-regulation and concealment by those who operate outside of the norms. Tied closely to the surveillance and regulation of sexual behaviour and identity—tied in part because of the ways gender identity and sexual object choice are linked in the West—is the surveillance and regulation of gender. The genderqueer body—the intersexed, the hermaphroditic, the transgender(ed), the transexual, and even the 'effeminate male' or the 'masculine' female—is one that does not conform to the accepted biological binary of 'man' and 'woman' and/or its attendant 'masculine' and 'feminine' behaviours and physical markers. The history of lesbian and gay activism is closely tied to that of genderqueer activism (perhaps first and most obviously with the Stonewall Riots in New York in 1969, which saw the birth both of contemporary gay rights activism and transgender activism), and activism to challenge the gender system is one strategy for confronting a system into which genderqueers have not fit. But even

those who are 'out' about their genderqueer status must often 'pass' as one of two genders in order to survive—quite literally—in a two-gendered world. According to the group Gender Education and Advocacy, the between 1970 and 2004, 321 murders of trans people have been tallied; and 'more than one new anti-transgender murder has been reported in the media every month since 1989' (GEA 2004a, c2004b). Although gathering reliable statistics for the number of people killed because they were genderqueer is impossible, these statistics along with more publicised cases, such as that of the murder of Brandon Teena in 1993, suggest that being readably genderqueer, at least in the West, still comes with significant risk. Information technologies, as I have suggested above, have given some gender and queer theorists people hope for liberation from the sometimes oppressive gendered discourses that accompany biological embodiment. But surveillance, whether driven by criminology or marketing, has, as I have suggested above, been the engine for the very informatisation of the body in which these feminist and queer theorists have placed their hope. Further, surveillance, particularly the surveillance tied to prediction, is not only a use to which information technologies have been put; it is also the inspiration for many of the new developments in information systems technology. And the patterns that those information systems create, collect, and circulate are, in turn, intricately and inextricably bound up with surveillance technologies. This, I would suggest, should lead gender and queer theorists away from information technologies as a tool for the transformation of the human subject. The predictive models that are at the centre of current surveillance technologies have been created with the goal of prediction and therefore control of the future, but they must rely on the past to do so. The past provides the patterns from which the models take their shape. Given this, predictive models, and the surveillance systems that feed them, are inherently conservative. By this I do not mean to suggest that they are particularly politically conservative; indeed, many political conservatives are just as invested in the ideology of privacy that surveillance constantly transgresses. Rather, predictive models fed by surveillance data necessarily reproduce past patterns. They cannot take into effective consideration randomness, 'noise', mutation, parody, or disruption unless those effects coalesce into another pattern. This inability to accommodate randomness may simply suggest that predictive models are ineffective. But they are not ineffective; like other surveillance techniques discussed above, they are normative. The potentially normative effect of predictive surveillance might be clearest, and of most concern, in the case of the transsexual body who has transitioned from one gender to another. The virtual body created by data, in the case of a transsexual person, appears contradictory, confusing; the data history for a trans person comprises two bodies (male and female) rather than one genderqueer body. A hopeful reading, inspired perhaps by an optimistic (and selective) reading of Butler, would be that this contradictory data would have the effect of destabilising the gender system. But rather than abandoning the gender system that the transsexual / genderqueer body clearly transgresses, predictive surveillance technology, relying on past data as it does, can only reinforce it. The material body would thus be pressured to conform or be excluded from the system. Further, Lyon's concerns about 'leaky containers' of data are heightened when one's data history does not fit into accepted norms. The Director of the National Center for Transgender Equity in the United States, Mara Keisling, has discussed the potential impact of surveillance technologies on transgendered persons, expressing the fear that, for instance, radio-frequency identification (RFID) tags embedded in identification cards—an option initially considered in the United States REAL ID Act of 2005—would allow for the private gender data of a genderqueer person to be read from afar by those with RFID readers (Keisling 2007; NCTEquality 2008). As suggested above, the risks attending the exposure of personal data for a genderqueer person can be profound. Just as importantly, however, dataveillance that is tied to predictive strategies further embeds the very norms those bodies challenge. At the level of the everyday, such technologies put subjects' ability to control their own self-presentation—and their own decisions to accept, challenge, or 'pass' within the system—even further out of their hands. Conclusion. The potentially transformative effects of the body-as-information depend at least in part on the subject's ability to control that information. When the control of a person's information is out of that person's hands, however, so too is the nature of the potential transformation. The risks to the individual and to society with the rise of dataveillance are many, as Clarke has enumerated, including discrimination at the level of the individual and repression at the level of government (Clarke 1988). Where non-normative bodies are concerned, the risks can be even greater. The rise of information technology has corresponded to a rise in predictive surveillance for multiple uses, including marketing and criminal justice. But the information on which predictive models rely is always part of a

larger system, embedded both in time and place. To disentangle information from its material instantiation is inevitably to do some violence both to the data and the material. And while this violence may most obviously be felt by non-normative physical bodies, it has the potential to affect us all.

Surveillance creates a virtual body – one that's ontology is based completely on how information technology spies on the body's owner, and makes assumptions based on data gained

Conrad 9

2009, Kathryn Conrad, Department of English University of Kansas, "Surveillance, Gender, and the Virtual Body in the Information Age"
http://www.academia.edu/233018/Surveillance_Gender_and_the_Virtual_Body_in_the_Information_Age//TK

Although with a few exceptions, gender and sexuality have largely been invisible in surveillance studies, women and queers—that is, those whose bodies, sexual desires, practices and / or identities fall outside of the perceived heterosexual and gender-normative mainstream—have not been invisible to contemporary surveillance technologies. Although, similarly, surveillance per se remains largely unremarked in gender and queer studies and theories, the disciplines have much to offer each other. As I have suggested elsewhere, "the conjunction of queer studies and surveillance studies has the potential to illuminate the relationship between the state and private forces that shape space, behaviour, subjectivity, consumerism, and citizenship" (Conrad 2009). This essay explores the implications of the increasing 'informatization of the body' (van der Ploeg 2003: 58) in the context of surveillance, the relationship of feminist / gender theory to the ontological shift effected by this informatisation, and the impact of information surveillance and predictive models on non-normative bodies and practices, particularly genderqueer subjects. Predictive justice, predictive marketing: the rise of the virtual body. The rise of the virtual body has its roots in the interconnection between new information technologies and new directions in surveillance. Several scholars have noted that the rise of the contemporary surveillance society corresponds with 'a new form of penology based on "actuarial justice", which is legal abandonment of individualised suspicion' (Norris & Armstrong 1999: 26). The result, as William Staples puts it, is that 'we may be witnessing a historical shift from the specific punishment of the individual deviant to the generalized surveillance of us all' (Staples 1997: 6). This shift is part of a larger attempt to manage risk—a 'shift away from strategies of social control which are reactive (only activated when rules are violated) towards proactive strategies which try to predict dangers one wishes to prevent' (McCahill 1998: 54). More technologically advanced versions of this 'proactive' approach rely on 'dataveillance', or the surveillance of data, which is much cheaper as well as more comprehensive than physical surveillance techniques (Clarke 1994). The proactive approach also relies on predictive models and simulations. As David Lyon argues, behind this proactive approach is the assumption that gathering more and more information can lead to complete knowledge and thus more effective prediction (Lyon 2001)—a claim to which I will return later in this article. The motivation toward body surveillance as a more effective predictive tool is based on an assumption that the information gleaned from biometric technologies is more reliable than other kinds of data (Staples 1997). Faith is placed in the anatomical body as a repository for correct information about the subject, bypassing the mediating filter of human language, memory, desire, need, and so forth—that is, the complex and fallible human subject her- or himself. But perhaps paradoxically, since our culture has had an ambivalent relationship to the body, the data gleaned from the body has increasingly been privileged over the material body itself. Indeed, as N. Katherine Hayles as put it, since World War II, information has 'lost its body' (Hayles 1999). In her examination of cognitive science, philosophy, literature, information theory, cybernetics, and other disciplines and trends, Hayles traces a shift in Western thought toward the 'erasure of embodiment' (4) and toward seeing human consciousness as disembodied information. The physical body, in this

'posthuman' view, is effectively a prosthetic for thought and information, and 'embodiment in a biological substrate is seen as an accident of history rather than an inevitability of life' (2). Following Hayles, Irma van der Ploeg suggests that 'this "informatization of the body" may eventually affect embodiment and identity as such. We may need to consider how the translation of (aspects of) our physical existence into digital code and "information," and the new uses of bodies this subsequently allows, amounts to a change on the level of ontology, instead of merely that of representation' (van der Ploeg 2003: 58-9). In other words, the body itself is changing as a result of new information technologies and the ways in which we interact with them. She continues, 'with technological and discursive practices converging toward an ontology of "information," it is unlikely that their mediating link, embodiment— even while acknowledging its constraining and limiting power—will remain unaffected. And because embodiment concerns our most basic experience of the body and of being in the world, these developments carry profound normative and moral implications we ought to attempt to uncover' (59). In short, the information gleaned from body surveillance is not merely a 'data image', an irrelevant or circumstantial collection of information, but indeed is constitutive of the body. There is no distinct line between the biological body and the 'virtual body', to use another of van der Ploeg's terms; and when the virtual body is circulated, probed, even stolen (as in the case of 'identity theft'), those actions can impact the lived experience of the body. As van der Ploeg points out, 'the new, intensive forms of monitoring, categorizing, scrutinizing and, ultimately, controlling and manipulating of persons through their bodies and embodied identities that become possible in this new ontology suggest that some form of integrity of the person may be at stake' (71). It is worth pointing out that the virtual body appears not simply as the outcome of surveillance in a criminal justice or medical context. A Google search on the terms 'virtual body', for instance, brings up links to anatomical / physiological models, but also brings up the suggestion to 'see results for: virtual model' and links to sites that feature 'My Virtual Model', the latter proclaiming Brand ME I am the brand and Introducing the FACE Your model is now YOU 'My Virtual Model' provides visitors with the opportunity to enter data about their bodies in order to create a virtual image that enables them, for instance, to 'try on' clothing to make more informed purchases, to create an avatar to use in interactions on social networking sites, and to predict and visualise the changes in their biological bodies as the result of weight loss. In rather obvious terms, the site encourages the connection of self, avatar / virtual body, and consumption. What these sites illustrate is the extent to which the drive toward information gathering is driven as much by consumer capitalism as by criminal justice. There is a parallel drive between the 'actuarial justice' that surveillance has enabled and the 'predictive marketing' enabled by new information technologies, particularly those operating on the internet via 'data mining'—both part of the larger trend of 'dataveillance'. Such sites also offer the experience of the virtual body as one of agency and control. But as Lyon has noted, 'the combined influence of deregulation and risk management has done much to permit leaky containers to develop'—i.e., the sites where surveillance data is contained are not 'discrete' or 'sealed' (Lyon 2001: 39, 38, 37). As much as one might like to imagine the virtual body as a discrete entity within one's own control, the body-as-information is dispersed widely throughout an ever-proliferating number of information systems. Further, Hayles, following Frederic Jameson, notes that 'when bodies are constituted as information, they can not only be sold but fundamentally reconstituted in response to market pressures' (42).

Electronic surveillance enforces a panopticon like influence on the way that women act

Abu-Laban 14

2014, Yasmeen Abu-Laban, University of Alberta, Canada. “Gendering Surveillance Studies: The Empirical and Normative Promise of Feminist Methodology”
http://library.queensu.ca/ojs/index.php/surveillance-and-society/article/download/gend/gendering
//TK

Additionally, feminist analyses highlight how not only externalized control, but also how internalized forms of self-regulation may be gendered and historically specific. This is evident, for example, in a recent study of two generations of women in England reflecting on pregnancy. The findings suggest that the more recent cohort of women experience a much more intense form of public surveillance of pregnancy than their own mothers when it comes to their choices of food, drink, and fashion, as well as their body shape and judging their care given to the unborn (Fox, Heffernan and Nicolson 2009: 553-568). Research findings also suggest more widespread and older technologies—like television—may work in distinct ways with new reality show formats to feed into both public and internalized forms of surveillance and control. Thus Magubane (2008) traces the way the show Starting Over uses African-American female characters to function as "modern mammies" by guiding and monitoring white women to utilize self-discipline and seek self-improvement in such areas as weight control, self-esteem, relationships and reducing personal financial debt. Sears and Godderis suggest that the TV reality show A Baby Story engages a form of "lifestyle surveillance" that allows viewers to surveil reality TV participants, and at the same time for the formulaic televised representations to ultimately promote self-surveillance for the (mostly female) audience members. As they put it: "bringing together Foucauldian and feminist theory we argue that the idea of an electronic panopticon is useful in theorizing the potential impact of reality TV shows like A Baby Story" (Sears and Godderis 2011: 183). Taking the panopticon further, studies of the print media, which have systematically shown that female leaders are treated differently than males (Trimble 2007), also suggest that the print media watches with gendered effects. Thus in her analysis of the damaging treatment of former Hewlett-Packard President and CEO Carly Fiorina in The Wall Street Journal, Norander suggests, "For Foucault, the panopticon was the ultimate tool of surveillance—subjects could be watched, but did not know from which angle they were being observed. Women in high profile positions are often subject to such surveillance through the watchful eyes of the press—as well as through the transparency of the 'glass ceiling'"(Noranger 2008: 103). The work on gender and surveillance also reflects on how state surveillance may take gendered forms. One sphere in which women are especially prone to encountering state surveillance is in the area of social welfare. As a contemporary example, Monahan notes how electronic benefit transfer systems for American welfare and food stamp recipients serve to surveil poor and often racialized women. Introduced in the U.S. as part of the 1996 reform of welfare, ostensibly to prevent fraud, these systems track purchases made with electronic cards, with consequences for individual budgeting strategies and choices (Monahan 2010: 119; see also Eubanks 2012: 82). What is equally noteworthy is that as early as World War One, Britain's embryonic welfare state pension programme designed for war widows involved gendered bureaucratic surveillance (Smith 2010). In this way, the state effectively replaced the deceased husband as both the financial and moral guardian of war widows (Smith 2010: 524). These findings suggest the deeply embedded forms of gendered bureaucratic surveillance contained in the welfare state, a finding echoed about the judicial branch of the state by criminologists addressing gender and crime. Such work has much to say about how surveillance practices relate to gender and other social divisions (Barak, Leighton and Flavin 2010), how new forms of surveillance and surveillance technologies may reinforce existing social divides along new lines (Coleman and McCahill 2011: 286), and also how a variety of state institutions may be mobilized. On the latter, for instance Flavin draws attention to how the courts, laws and law enforcement agencies, and social welfare/child welfare agencies, work in tandem to effectively "police" women's reproduction in the United States in relation to conception, abortion, pregnancy and child-rearing (Flavin 2009). The importance of powerful institutions of state and society is further amplified in the work of Virginia Eubanks which provides a feminist take on science, technology and society studies. Specifically, focusing on American programs developed under the Bush and Obama administrations which target the "digital divide," Eubanks finds these have both underestimated the resources of "poor" communities and neighbourhoods, as well as the ways in which institutions relating to criminal justice, welfare and employment work to shape the relationship between "poor" people and information technology. Notably, in contrast to a dichotomous "digital divide," the marginalized women interviewed by Eubanks highlighted variable interaction with new technologies based on social location and complex relations of power (2012: 37-39). As such, the interviews with specific women allowed for the emergence of situated knowledge, so central to much feminist epistemology, and highly relevant for thinking about policies advancing "digital equity." Moreover, interviews with the subjects of surveillance provide one major way in which the technologically driven emphasis of much Surveillance Studies work is not only challenged, but a wider array of experiences and knowledge(s) of surveillance may arise. This is captured in the work of McCahill and Finn (2010) who utilize interviews with UK school-age children (ages 13-16) to illustrate how the actual experience of surveillance varies in relation to class and gender. As such they argue that "it may be useful for future research, including our own, to situate the 'subjective experiences,' and 'behavioural responses' of the 'surveilled' in a wider context by drawing upon sociological theories on 'identity formation' in 'late modernity'" (McCahill and Finn 2010: 286). The gender-specific implications of certain technologies are also a consideration in work done more

explicitly on surveillance, gender and other forms of identity. As one chilling example, the potential ways in which new technologies may be used for harmful ends is given in the recent work of Mason and Magnet (2012) on violence against women, and specifically domestic violence. They suggest violence against women is being increasingly facilitated by new technological strategies like tracking of Facebook and Twitter, installing hidden GPS monitors in cars, and use of computer SpyWare to monitor online activities. They show therefore how the strategies abusive partners may utilize to stalk have been amplified (Mason and Magnet 2012: 107-109). In the process, these popular technologies also transform into technologies of violence (Mason and Magnet 2012: 107). One of the more wide-ranging theoretical considerations of gender and surveillance has been helpfully advanced by Torin Monahan who starts with the observation that control is not the only feature of surveillance directed at women. As Monahan (2010: 113) notes, "Studies find that at least one in ten women are watched by control room operators for voyeuristic reasons alone." Monahan also suggests that the gendered implications of surveillance go beyond voyeurism because modern surveillance involves not only what he calls "context or use discrimination" (e.g. males are often in control rooms and may use video surveillance in voyeuristic ways with particular impact on some women) but also "body discrimination" (privileging male young white and able bodies), as well as "discrimination by abstraction" (evident in the ways that technological systems work on abstraction and often bypass context, and thus may be read as relying on "masculine" control at a distance) (Monahan 2010: 114-117). The idea of masculine control at a distance is one that Monahan posits as the most controversial, and it is a point I will return to from a different angle in considering care. To sum up then, by moving beyond the indifferent (and gender blind) tradition of Michel Foucault, and by bringing gender into the heart of discussions, the empirical findings of the fledgling literature explicitly linking gender and surveillance draws attention to how surveillance may work in ways that are technologically mediated as well as in ways that are not. As such, the surveillant gaze may still equally be the human eye, not just the electronic eye, and it may be differentially experienced as recent work on surveillant subjects makes clear. Work explicitly considering gender in Surveillance Studies suggests that forms of external as well as internal control are socially constructed and historically specific, and take gendered forms. The budding work that takes gender explicitly into account draws attention to state surveillance, and also suggests that technologically mediated surveillance may facilitate voyeurism, stalking and violence with specific implications for women. These important findings provide a base from which to envision further gendering Surveillance Studies research by building on methodological and epistemological pluralism.

Women's active resistance is key to effective counter-surveillance

Pain 1 Professor of Geography and Environmental Management at the University of Northumbria at Newcastle (Rachel, *Urban Studies*, "Gender, Race, Age and Fear in the City" p. 903 – 4, 2001, http://usj.sagepub.com/content/38/5-6/899.full.pdf) | js

Almost every survey of fear of crime finds that women report being more fearful of crime than men. Whether in the home, the workplace or the city, it is fear of sexual violence and harassment from men which underpins women's higher fear (Gordon and Riger, 1989; Valentine, 1989). Feminists have viewed women's higher fear of crime as a manifestation of gender oppression and a damaging form of control of women's lives, reproducing traditional notions about women's 'place' in society (Hanmer and Saunders, 1984; Pain, 1991; Valentine, 1989). Sexual harassment in masculinist, heterosexual environments, whether they are public places or workplaces, has also been implicated in contributing to fear (Gardner, 1995; Junger, 1987). There is plenty empirical evidence about the spatial outcomes of this control, particularly the welldocumented effects of coping strategies which many women employ to avoid harassment and violence in public spaces (Pain, 1997; Painter, 1992; Valentine, 1989). However, there are some conflicts between theoretical development and empirical evidence around women's fear of urban spaces. The most recent suggestion, that men's fear may be considerably higher than previously thought, is dealt with later (in itself this does not challenge the fact that women experience high levels of fear of crime). Much relevant research on women's fear has revolved around two key paradoxes. The first and earliest is the paradox between levels of fear and violence discussed in the introduction—when women's high fear of crime was first discovered, it appeared far greater than their actual risks of victimisation (Balkin, 1979; Hough and Mayhew, 1983). In crime surveys in Britain and North America, reported rates of violence against women in the earlier sweeps were extremely low, leading to the assumption that women's fear must be irrational. This 'vulnerability' perspective has since been

heavily criticised for implying that women are inherently weak and passive 'born victims' and for ignoring structural explanations of violence which focus upon men (Stanko, 1985). This paradox has since been shown to be misleading, produced by the unrepresentative way that criminologists have defined and measured crime against women (Stanko, 1988). More sensitive and intensive research continues to show that levels of violence against women are far higher (Crawford et al., 1990; Hall, 1985; Mirrlees-Black et al., 1998) and easily justify women's high levels of fear of attack. A second paradox has been identified and explored by geographers—most research shows a mismatch between the types of location in which physical and sexual violence usually occur (private space) and the locations in which most women fear (public spaces), calling into question the idea that levels of victimisation can explain fear alone. To resolve this spatial paradox, feminists have argued that women are misinformed about the main location of danger, through the institutions of the family, the education system and the media (Hanmer and Saunders, 1984; Valentine, 1989). More recent research has indicated that misinformation does underlie fear in public space; most women are aware that domestic violence is more common than stranger attacks, but this knowledge has little effect on their fear of crime unless they have personal experience of domestic violence (Pawson and Banks, 1993; Pain, 1997). The fact that urban public spaces are relatively safe compared with the home has provoked attempts to reduce women's fear through changing the physical fabric of city centres and housing estates. Earlier feminist Downloaded from usj.sagepub.com at UNIV OF MICHIGAN on July 10, 2015 904 RACHEL PAIN contributions to the literature on women's experiences of public spaces tended to focus on negative aspects, including poor access to public transport, long distances between residential and shopping areas, and poor design which can make movement around the city difficult for mothers out with prams or young children as well as contributing to women's fear of assault (Little, 1993; Matrix, 1984; Valentine, 1990; Whitzman, 1992). While raising important issues which had previously been neglected by planners and architects, some of this literature has been criticised for taking an unintentionally essentialist perspective on women and urban design. Where the arguments have been extended to women's fear of crime, the overemphasis in policy on design solutions, as well as having little chance of success, ignores the wider social causation of women's fear outlined above (Koskela and Pain, 2000). Meanwhile, feminist writers such as Wilson (1991) have emphasised that the city is frequently a place of excitement and opportunity for women, not just a place to be feared. City centre spaces at once have varying meanings to different people (Pain and Townshend, forthcoming). Different notions of femininity are also entwined with different constructions of the fear of crime. For example, some have suggested that the emphasis on 'fear' and its negative consequences in writing about women and crime reproduces notions about feminine weakness (Segal, 1990). It has also been suggested that responses to the newly identified problem of women's fear from police forces and government departments tend to entrench stereotypes further, rather than challenge them (Stanko, 1990b). Koskela's (1997) analysis of women's fear of attack in Finland emphasises that women respond to the threat of crime with 'boldness' as well as fear and 'spatial confidence' as well as spatial avoidance. She highlights the influence on women's fear of the particular cultural and geographical context of Finland, which has a better record on gender equality than many other European or North American countries. She presents the stories of those women who are not afraid but respond to the threat of violence with boldness and defiance rather than fear and the fact that, just as some women become fearful at certain times, others lose the 'space of fearfulness' through certain life experiences. In so doing, she challenges the unintentional portrayal of previous research of fearfulness as an essentially female quality: It has been pointed out in this study that women do not passively experience space but actively produce, define and reclaim it. Many women in Finland reclaim space for themselves through consciously routinised use, and are able to 'tame' space by various expressions of courage. They have several ways of negotiating danger, reading the signs of danger, taking possession of space, and using power on urban space: women show 'spatial expertise'. This demonstrates that women's everyday spatial practices can be practices of resistance. By their presence in urban space women produce space that is more available not only for themselves but also for other women. Women's spatial confidence can be interpreted as a manifestation of power. Hence, at the level of the whole society, women's safety in public is arguably improved more by women going out than by them staying inside (Koskela, 1999, Epilogue p. 3; original emphasis).

Performative gender is resistance against gendered spaces, which encourage conformity

Bondi 5 Professor of Social Geography at the University of Edinburgh (Liz, "Gender and the Reality of Cities: embodied identities, social relations and performativities" p. 10 – 12, 2005, https://www.era.lib.ed.ac.uk/bitstream/handle/1842/822/lbondi002.pdf?sequence=1&isAllowed=y) | js

I have argued that the ideology of separate spheres has been encoded within the fabric of cities, which can therefore be "read" for their scripts about gender. In this section I shift my focus from the processes through which meanings of gender are incorporated into urban landscapes, to the processes through which these meanings are activated in people's everyday lives. On this account gender is produced performatively, that is through the routine, unselfconscious citation or enactment of gender scripts in the ordinary practices of urban life. These processes are as much about the embedding of gender in urban space as in the bodies of city dwellers. Thus, gender and urban space are performed in relation to each other and are mutually constituted (Rose 1999). Performances of gender and space are not unchanging or set in stone, but are recognisable only if they draw upon at least some elements of previous performances. Consequently meanings of gender and space tend to congeal through their repetition, and these routine, taken-for-granted forms constitute dominant or hegemonic versions, or regulatory fictions (Butler 1990). Dominant gender scripts are like the air that we breathe in that they are ordinarily invisible and unnoticed except in their absence. Consequently, it is often "gender dissidents" whose experiences most easily highlight taken-for-granted ways of doing gender, and, among this group, sexual dissidents – especially lesbians and gays – have been the subjects of most urban research. Gill Valentine (1996), for example, has illustrated the intensely heteronormative qualities of urban space such that a heterosexual couple holding hands or kissing in a street, shop or restaurant is unremarkable, whereas a same-sex couple doing likewise is not. Lesbians and gays have responded to the oppressive qualities of heteronormative space in a variety of ways, often protecting themselves by concealing their sexual orientation and "passing" as heterosexual (Valentine 1993b), and sometimes by working to transform or queer urban space, whether through the creation of gay neighbourhoods (see for example Lauria and Knopp 1985; Rothenberg 1995), or the temporary colonisation of heterosexual spaces in gay pride parades (Johnston 2002; Munt 1995). These latter interventions have the potential to alter the gendered meanings of particular urban spaces whether temporarily or enduringly. In an essay that highlights gender dimensions of dissident performances, David Bell, Jon Binnie, Julia Cream and Gill Valentine (1994) discuss potentially subversive enactments of exaggerated versions of normative masculinity and femininity by lesbians and gays. These include hyper-feminine "lipstick lesbians" wearing make-up, high heels and conventionally feminine clothes and hair-dos, and hyper-masculine "gay skinheads" with shaven heads, work boots and conventionally macho clothing (Bell et al. 1994, 33). In so far as such performances are recognised as parodies of dominant gender scripts, they have the potential to unsettle assumptions that map heterosexual masculinity and femininity as complementary opposites, and lesbian and gay identities as somehow "twisted". However, this account is limited by its reliance on the active choices of performers and the recognition of parodic intent by observers (Nelson 1999). The mutual performativity of gender and space, and the power of regulatory fictions, run deeper than these intentional acts and interpretations. Indeed hyper-feminine and hyper-masculine styles are at least as likely to reinforce as to disrupt normative discourses of gender, and those who adopt them are as likely to be pressed into, and to 11 find themselves colluding with, entirely conventional readings of gender and sexuality, whatever their intentions might be. Gillian Rose (1993) has explored the spatial production of discourses of gender as well as possibilities for their transformation. She argues that dominant conceptions of space privilege binary constructions of gender and press non-dualistic differences back into this form, as I have described in the case of lipstick lesbians and gay skinheads. Thus, while cities are sites in which women and men routinely enact a variety of masculinities and femininities, this diversity generally remains firmly bound within the dominant binary structure, which reduces differences to variations on a theme. Focusing on women's experiences of space, Rose (1993, 150) describes a paradox in which women are simultaneously "prisoners and exiles", trapped within oppressive, hegemonic spaces, and yet also unable to access legitimate positions within these spaces. The power of normative readings of gender is also illustrated by Kath Browne (2004) who describes how women whose bodies are (mis)read as masculine are subject to punitive treatment, especially in the gender-segregated spaces of women's washrooms (also see Namaste 1996). Such accounts highlight the resilience of dominant, binary gender scripts, and might appear to suggest that these regulatory fictions are unbreachable. But Rose (1993, 1999) does not take this pessimistic view, arguing instead that women's paradoxical positioning needs to be grasped as an asset that contains possibilities for the tentative articulation of alternative versions of femininity at the edges of available discourses. Stressing the mutual constitution of space and gender, and spatialising Luce Irigaray's (1993) efforts to re-imagine sexual difference, Rose (1999, 258) attempts to offer "a way of thinking, dreaming and practising other spaces that carry other ways of producing differential relations". Put another way, transcending the binary structure of gender entails making space for other differences: gender and space are necessarily coperformed. The performativity of gender is a vital ingredient in the production urban difference. Notwithstanding the power of binary discourses, the enactment of gender necessarily varies in different contexts, and every citation of the available gender scripts contains possibilities for mis-citations through which meanings of gender might shift. These possibilities are suggested in Hille Koskela's (2005) account of different performances of gendered space. Focusing on women's experiences of urban streets, she differentiates between spaces experienced as unpredictable and anxiety-provoking, which she calls "elastic"; the

boldness and spatial confidence enacted in the "taming" of spaces that might otherwise induce anxiety; and the "suppression" of spontaneity, difference and challenge associated with spaces subject to continuous surveillance by technologies, such as Closed Circuit teleVision cameras. The idea of gender as performative is sometimes criticised on the grounds that it neglects pre-discursive practices and materiality. I have sought to articulate an alternative view that avoids opposing discourse to practice or matter, at the same time as acknowledging limits to discourse (Butler 1993). These limits are the limits of legibility and intelligibility, and can be illustrated by considering the troubling effects of gender-ambiguous bodies in urban space. Most of us recognise the gender of others within the terms of the binary model so swiftly and so routinely that our curiosity is swiftly aroused if we are unable, almost instantly, to allocate someone to one category [12] or the other. Whatever our response to such moments – pleasure, outrage, indifference – the point I wish to make is how they illuminate the power and reach of the binary model, which operates beneath conscious awareness, and remains unarticulated most of the time. Only when brought into question is it noticed. At such moments, and in all the unnoticed ones, discourse, practice and materiality are one and the same. Approaching gender as performative cuts across the distinction between individual embodiment and social relations discussed in the preceding sections, locating gender as simultaneously attached to bodies and transcending them. Performative approaches to gender can therefore serve to enrich consideration of gender identities and gender relations in urban life.

War on Drugs DDI

T

T- domestic

Domestic surveillance deals with information transmitted within a country

HRC 14 Human Rights Council 2014 IMUNC2014
https://imunc.files.wordpress.com/2014/05/hrc-study-guide.pdf

Domestic surveillance: Involves the monitoring, interception, collection, analysis, use, preservation, retention of, interference with, or access to information that includes, reflects, or arises from or a person's communications in the past, present or future with or without their consent or choice, existing or occurring inside a particular country**.**

Violation: they deal with drug cartel that is not within U.S. borders

Any foreign element means it is not domestic

Olberman 6 Countdown with Keith Olberman, msnbc.com updated 1/26/2006 7:05:00 PM ET White House defines 'domestic' spying
http://www.nbcnews.com/id/11048359/ns/msnbc-countdown_with_keith_olbermann/t/white-house-defines-domestic-spying/#.VU1lZJOYF2A

The White House is trying to sell this so hard that it actually issued an official press release titled, "Setting the Record Straight, Charges of Domestic Spying."

Look, your tax dollars in action. Word wealth, SAT training class. As a public service, COUNTDOWN will now review, and, where applicable, provide translations of the White House take on what "domestic" means versus what "international" means, and then we'll add a few bonus examples of our own.

Quoting, "Deputy Director Of National Intelligence General Michael Hayden," semicolon; "One End Of Any Call Targeted Under This Program Is Always Outside The United States."

This is the glass-is-half-full view of warrantless eavesdropping, much as if a U.S. soldier, who, like the average human male, has about 12 pints of blood in his body, would lose six of those pints.

Critics of the NSA terrorist surveillance program would say, That soldier is half empty. The White House would remind you that that soldier is half full.

Anyway, the press release actually gives several examples of the differences between the meanings of these two words. "Definition, Domestic Versus International. Domestic Calls are calls inside the United States. International Calls are calls either to or from the United States."

And don't forget to deposit $2 for the first five minutes, and an extra $2 to cover the cost of the guy listening in at the NSA.

"Domestic Flights," the White House reminds us, "are flights from one American city to another. International Flights are flights to or from the United States."

So what happens if I call a domestic airline about a flight to Europe, but they've outsourced their reservation agents to India? Is that a domestic call about an international flight, or an international call about a domestic flight?

Wait, there's more. "Domestic Mail consists of letters and packages sent within the United States," the press release reads. "International Mail consists of letters and packages sent to or from the United States."

Advertise

And don't forget, we can not only open either kind, kind if we damn well feel like it, but if you're using an international stamp and we need it for our collection, we're keeping it.

One more item from the press release, "Domestic Commerce involves business within the United States. International Commerce involves business between the United States and other countries."

International commerce. You know, the kind of stuff Jack Abramoff did for the -- Huh, leave Abramoff out of it? Gotcha, sorry.

Well, anyway, if you're still not clear on this domestic-versus-international stuff, as promised, a couple of more definitions to help pull you through.

Domestic is an adjective describing your dog or cat or any other animal you have as a pet, like a tiger or a boa constrictor. "The Internationale," meanwhile, is the worldwide anthem of those socialists and communists.

Internationals are soccer players who play in countries in which they were not born.

Domestics is an old-timey kind of term for people who cleaned your house.

International is the kind of law that lets us take terror suspects to old Soviet-era gulags in Eastern Europe and beat the crap out of them, while domestic is the kind of wine they bottle in California.

Ground- No ground for the neg to run any of their args---and this isn't just a neg whine. There would be no CP solvency other than a stale states debate to run against small projects affs or city affs

Voters:

Education- If they are off topic, it ruins the value of debate. The framers of the resolution created it for a reason : for us to learn about a specific topic. If they aren't on topic and going against the very things we learned in elementary school, we don't learn about the topic the way we should and thus destroy the value of debate.

Fairness- The aff is being unfair with their case and interpretation of the resolution. This is explained by the fact they explode the topic by underlimiting it, making it unfair to be the neg because we lose so much ground that we can hardly debate.

Jurisdiction- T is a voter because it is not within the judge's jurisdiction to vote for an untopical case. The judge's realm of jurisdiction is the resolution, and nothing else. Even if the aff proves their untopical case to be a good idea, you can't vote for them when we show they didn't actually affirm the resolution due to the fact they are off topic.

CP

Marijuana cp

Plan: The USFG should legalize marihuana in the United States, and retroactively release those convicted for crimes related to marihuana and compensate them.

every year tons of people are arrested, convicted, prosecuted, and ultimately confined in a prison industrial complex that is growing out of control

BW 12, Brown Watch, News for People of Color, "War on Drugs is a War on Black & Brown Men - 75 Years of Racial Control: Happy Birthday Marijuana Prohibition", October 2, www.brown-watch.com/genocide-watch/2012/10/2/war-on-drugs-is-a-war-on-black-brown-men-75-years-of-racial.html

"There are 100,000 total marijuana smokers in the US, and most are Negroes, Hispanics, Filipinos and entertainers. Their Satanic music, jazz and swing, result from marijuana usage. This marijuana causes white women to seek sexual relatisons with Negroes, entertainers and any others."- Harry Anslinger, first Drug Czar. From [HERE] As we approach the 75th anniversary of marijuana prohibition in the United States on October 1, it is important to remember why marijuana was deemed illicit in the first place, and why we as Americans must open our eyes to the insidious strategy behind 75 years of failed policy and ruined lives. Marijuana laws were designed not to control marijuana, but to control the Mexican immigrants who had brought this native plant with them to the U.S. Fears over loss of jobs and of the Mexicans themselves led cities to look for ways to keep a close eye on the newcomers. In 1914, El Paso Texas became the first jurisdiction in the U.S. to ban the sale and possession of marijuana. This ban gave police the right to search, detain and question Mexican immigrants without reason, except the suspicion that they were in possession of marijuana. Folklore started to erupt about the effect that marijuana had on those who used it. As Harry Anslinger stated, "Reefer makes darkies think they're as good as white men."¶ Fast forward to 2012. Marijuana is still an illicit substance and the laws are still being used to justify the search, detainment and questioning of populations deemed "untrustworthy" and "suspicious" by modern society, namely the poor and young men of color. A prime example is New York's Stop and Frisk program, which stopped nearly 700,000 people in 2011. Hailed as a strategy for removing guns and violent crime from the streets, this method of stopping and questioning "suspicious" individuals, highlights the racial inequities associated with drug laws. From 2002 to 2011, African American and Hispanic residents made up close to 90% of people stopped. This is not limited to New York. In California, African-Americans are 4 times more likely to be arrested for marijuana, 12 times more likely to go to prison with a felony marijuana charge, and 3 times more likely to go to prison with a marijuana possession charge.¶ The strategy of using marijuana laws to stop, detain and imprison poor and minority populations must stop NOW. In the past 75 years we have seen mounting evidence of the benign nature of the marijuana plant, and its tremendous potential for medical development. But the rampant misinformation about the effects of marijuana USE is dwarfed by the lifetime of suffering that a marijuana CONVICTION can bring. In 2010, there were 853,839 marijuana arrests in the U.S., 750,591 of those were for possession. A drug conviction in America is the gift that keeps on giving. Affected individuals must face a lifetime of stigma that can prevent employment, home ownership, education, voting and the ability to be a parent. The issue of mass incarceration and the War on Drugs is featured in the new documentary, The House I Live In. In the film, Richard L. Miller, author of Drug Warriors and Their Prey, From Police Power to Police State, presents a very sinister take on the method behind the Drug War madness. Miller suggests that drug laws, such as those for marijuana are part of a process of annihilation aimed at poor and minority populations. Miller poses that drug laws are designed to identify, ostracize, confiscate, concentrate, and annihilate these populations by assigning the label of drug user, criminal, or addict, seizing

property, taking away freedom and institutionalizing entire communities in our ever growing prison system.¶ We can stop this from happening. Marijuana was deemed illegal without acknowledging science or the will of the people. 75 years later, 50% of the population supports marijuana legalization, and families are still being torn apart and lives destroyed over the criminal sanctions associated with its use. The most vulnerable members of our society are also the targets of a prison industrial complex out of control and getting bigger every day. Someone is arrested for marijuana in the U.S. every 38 seconds, we have no time to waste, tax and regulate now.¶ Oregon, Colorado and Washington are all considering a more sensible and humane approach to marijuana as all three have tax and regulate initiatives on their ballots this November. This is a unique opportunity for citizens to cast a vote heard round the world, to stand up not only for the freedom to consume marijuana, but against the atrocities and human suffering that result from the criminalization of it.

reframing legalization as a question of justice positions it as a viable alternative to the "war on drugs" frame

Katherine **Tate 14**, Professor of Political Science at UC Irvine, *Something's in the Air: Race, Crime, and the Legalization of Marijuana*, pg. 9

For increasing numbers of Americans, **legalization** of personal- use marijuana is the **only alternative** to draconian laws drawn up in the "war on drugs" regime of the past three decades. It is well established that concern and paranoia over petty "crack" cocaine arrests for sales, possession, and use drove the mass warehousing of California's prisons and jail populations to become the largest in the United States (Lusane 1991: Provine 2007: Reinerman and Levine 1997: Weatherspoon 1998: Weaver 2007). Miller (2008) contends that the U.S. federal system of crime control has left minority citizens less able to challenge unfair sentencing laws. Noting that marijuana possession constituted nearly 8 of 10 drug-related arrests in the 1990s. Michelle Alexander (2010) insists that this period of "unprecedented punitiveness" resulted "in prison sentences (rather than dismissal, community service, or probation)" to the degree that "in two short decades, between 1980 and 2000 the number of people incarcerated in our nation's prisons and jails soared from roughly 300.000 to more than 2 million. By the end of 2007, more than 7 million Americans—or one in every 31 adults— were behind bars, on probation, or parole" (Alexander 2010. 59). Pushed by drug prosecutions, the rising rate of incarceration reached unprecedented levels in the 1990s. Today's movement toward more prisons, mandatory minimums and reinstatement of the death penalty logically followed the racially exploitative "law and order" campaigns of the 1960s and 1970s (Murakawa 2008). Conservative American politicians use the mythical Black or Hispanic male drug dealer, like the Black female welfare queen, to drum up votes. A widespread consensus in reported government statistics, advocacy studies, and policy think tanks suggests that African Americans bear the brunt of law-and-order management of U.S. marijuana laws because of how marijuana use is racialized. Political scientist Doris Provine contends that the U.S. government increased its punitive response toward drug use as a response to racial fears and stereotypes. She writes: "[d]rugs remain, symbolically, a menace to white, middle-class values" (2007. 89). Both politicians and media have used this issue to construct a crisis and sustain punitive state drug laws. The war on drugs, she concludes, has greatly harmed minority citizens through their imprisonment, contributing to deep inequalities in education, housing, health care, and equal opportunities to advance economically. The facts of use. sales, and possession, confirmed by academic and critical legal studies literature, are strikingly different from how the national and local media choose to present them. One study focusing on marijuana initiate found "among Blacks, the annual incidence rate (per 1.000 potential new users) increased from 8.0 in 1966 to 16.7 in 1968. reached a peak at about the same time as "Whites" (19.4 in 1976). then remained high throughout the late 1970s. Following the low rates in the 1980s, rates among Blacks rose again in the early 1990s, reached a peak in 1997 and 1998 (19.2 and 19.1. respectively), then dropped to 14.0 in 1999. Similar to the general pattern for Whites and Blacks. Hispanics' annual incidence rate rose during late 1970s and 1990s, with a peak in 1998 (17.8)" (National Survey on Drug Use 1999). Individuals and groups **in** civil society, **advocacy communities**, and state legislatures must put forth a serious struggle among activists and potential coalition **partners** who can understand **the need for reform as a matter of** civil rights and **justice**, and not the morality of marijuana consumption. Supporting decriminalization potentially can be the training ground for a new generation of leadership in addressing the larger problem of mass incarceration and social and political isolation associated with it. For Black people and their allies who long for the days— against all odds—of

political education, voter mobilization, legal reform, group solidarity, challenge to the political parties, and political empowerment, expressed in the modern civil rights movement, the matter of decriminalization is ripe for galvanizing a collaboration at the grassroots. Too many Blacks have assumed that the "War on Drugs" ended with the dissipation of the "crack" emergency, when, in sum, marijuana's criminalization—rather than incarceration—of Black people has been more perennial. If Michelle Alexander (2010) is correct in arguing that mass incarceration has effectively reasserted Jim Crow second-class citizenship (or no citizenship) rights on African American people, then they must get off the sidelines of the legalization of cannabis or decriminalization struggle and stop allowing others to fight what is essentially their battle. This has long been the case in the challenge to the crushing "prison industrial complex." Whites and others, for the most part, have been the leaders in reform efforts concerning such things as mandatory minimums, the old 100:1 gram of cocaine-to-crack formula, and health care for geriatric or HIV AIDS patients in prisons, while we have seen Calvin "Snoop- Dogg"' Broadus become more influential than the congressional Black Caucus to our young. When ordinary people change their thinking and consciousness and begin to demystify small, personal- use marijuana, then the leaders will eventually come around without reticence or fear. **The marijuana debate needs to be reframed to remove all penalties against its use** (Scherlen 2012). **This is our exit strategy:** decriminalization reform is the only path to reversing the dismal trends minorities face in America.

Legalizing marihuana helps stop racial profiling

Associated Press, 15' ("Colorado's pot legalization does little to solve racial disparity in drug arrests ") m.dawghttp://www.theguardian.com/us-news/2015/mar/25/colorado-marijuana-legalization-racial-disparity-drug-arrests

The analysis did not break out data for Colorado's largest ethnic minority, Latinos. That's because data comes from the National Incident-Based Reporting System, which does not tally numbers for Latinos. Advertisement One of the region's top officials for coordinating drug enforcement, Tom Gorman of the Rocky Mountain High Intensity Drug Trafficking Area program, insisted that officers are not racially profiling pot users. "Racial disparities exist in other laws. What does that mean, that homicide law, rape laws, weapon laws are racist? There are other factors going on here that we need to address," Gorman said. After legalization, racial disparities did ease somewhat for marijuana distribution charges. Blacks accounted for about 22% of such arrests in 2010 and around 18% in 2014. The arrest data got a mixed response from the regional head of the NAACP. "The overall decrease in arrests, charges and cases is enormously beneficial to communities of color who bore the brunt of marijuana prohibition," Rosemary Harris Lytle said in a statement.

DA

Terror DA

The threat is increasing – recruiting levels are high and the likelihood of a homegrown attack is huge

VOA News 5/11/15 (Homeland Security Chief: Global Terror Threat Has Entered 'New Phase'")

> Appearing on the Fox News Sunday broadcast from Paris, Congressman Michael McCaul, chairman of the House Homeland Security Committee, said there has been an uptick in threat streams against local police and military bases.¶ "We're seeing these on an almost daily basis. It's very concerning. I'm over here with the French counter-terrorism experts on the Charlie Hebdo case, how we can stop foreign fighters coming out of Iraq and Syria to Europe. But then, we have this phenomenon in the United States where they (terrorists) can be activated by the Internet. And, really, terrorism has gone viral," said McCaul.¶ McCaul said the potential terror threat may even be greater than the FBI has outlined. He said the United States faces two threats: one from fighters coming out of the Middle East and the other from thousands at home who will take up the call to arms when the IS group sends out an Internet message. He warned **the threat will only get worse**, largely because of the existence of so many failed states in the Middle East and North Africa.

Risk of terrorism is low now because of communciations surveillance

Lewis 14 (senior fellow and director of the Strategic Technologies Program at the Center for Strategic and International Studies)
(James Andrew, Underestimating Risk in the Surveillance Debate, http://csis.org/files/publication/141209_-Lewis_UnderestimatingRisk_Web.pdf)

> There is general agreement that as terrorists splinter into regional groups, the risk of attack increases. Certainly, the threat to Europe from militants returning from Syria points to increased risk for U.S. allies. The messy U.S. withdrawal from Iraq and (soon) Afghanistan contributes to an increase in risk.24 European authorities have increased surveillance and arrests of suspected militants as the Syrian conflict lures hundreds of Europeans. Spanish counterterrorism police say they have broken up more terrorist cells than in any other European country in the last three years.25 The chairman of the House Select Committee on Intelligence, who is better placed than most members of Congress to assess risk, said in June 2014 that the level of terrorist activity was higher than he had ever seen it.26 If the United States overreacted in response to September 11, it now risks overreacting to the leaks with potentially fatal consequences.
>
> A simple assessment of the risk of attack by jihadis would take into account a resurgent Taliban, the power of lslamist groups in North Africa, the continued existence of Shabaab in Somalia, and the appearance of a powerful new force, the Islamic State in Iraq and Syria (ISIS). Al Qaeda, previously the leading threat, has splintered into independent groups that make it a less coordinated force but more difficult target. On the positive side, the United States, working with allies and friends, appears to have contained or eliminated jihadi groups in Southeast Asia.
> Many of these groups seek to use adherents in Europe and the United States for manpower and funding. A Florida teenager was a suicide bomber in Syria and Al Shabaab has in the past drawn upon the Somalipopulation in the United States. Hamas and Hezbollah have achieved quasi-statehood status, and Hamas has supporters in the United States. Iran, which supports the two groups, has advanced capabilities to launch attacks and routinely attacked U.S. forces in Iraq. The United Kingdom faces problems from several hundred potential terrorists within its large Pakistani population, and there are potential attackers in other Western European nations, including Germany, Spain, and the Scandinavian countries. France, with its large Muslim population faces the most serious challenge and is experiencing a wave of troubling anti-Semitic attacks that suggest both popular support for extremism and a decline in control by security forces. The chief difference between now and the situation before 9/11 is that all of these countries have put in place much more robust surveillance systems, nationally and in cooperation with others, including the United States, to detect and prevent potential attacks. Another difference is that the failure of U.S. efforts in Iraq and Afghanistan and the opportunities created by the Arab Spring have opened a new "front" for jihadi groups that makes their primary focus regional. Western targets still remain of interest, but are more likely to face attacks from domestic sympathizers. This could change if the well-resourced ISIS is frustrated in its efforts to establish a new Caliphate and turns its focus to the West. In addition, the al Qaeda affiliate in Yemen (al Qaeda in the Arabian Peninsula) continues to regularly plan attacks against U.S. targets.
>
> The incidence of attacks in the United States or Europe is very low, but we do not have good data on the number of planned attacks that did not come to fruition. This includes not just attacks that were detected and stopped, but also attacks where the jihadis were discouraged and did not initiate an operation or press an attack to its conclusion because of operational difficulties. These attacks are the threat that

mass surveillance was created to prevent. The needed reduction in public anti-terror measures without increasing the chances of successful attack is contingent upon maintaining the capability provided by communications surveillance to detect, predict, and prevent attacks. Our opponents have not given up; neither should we.

Terrorist groups work within drug cartel

Judical Watch, 13' (aw-breaking thrives with secrecy. Judicial Watch fights government secrecy through litigation under FOIA (Freedom of Information Act), state Open Records Acts, and related transparency laws. Representative issues and cases, "Mexican Cartels Help Hezbollah Infiltrate U.S.") m.dwag

In a shocking revelation made by a veteran U.S. counterterrorism expert, Hezbollah has infiltrated the Southwest United States by joining forces with Mexican drug cartels that have long operated in the region. Judicial Watch has for years reported on the chilling connection between Islamic extremists and Mexican drug cartels. In fact, as far back as 2007 JW wrote about an astounding Drug Enforcement Agency (DEA) report that lays out how Islamic terrorists and Mexican drug gangs have teamed up to successfully penetrate the U.S. as well as finance terror networks in the Middle East In Hezbollah's case, a growing "business relationship" with cartels has allowed the Shia Islamic militant group to have a growing presence in the U.S., says Matthew Levitt, an esteemed terrorism expert with an impressive resume. Levitt is a former counterterrorism intelligence analyst at the Federal Bureau of Investigation (FBI) and State Department counterterrorism adviser. He also served as the No. 2 intelligence official at the U.S. Treasury where he operated the agency's terrorism and financial intelligence branch. Levitt offers details of this mind-boggling collaboration between two powerful criminal enterprises in a new book titled: "Hezbollah: The Global Footprint of Lebanon's Party of God." A nonprofit dedicated to exposing the dangers of Islamic extremism, the Clarion Project, profiled the book in a recent article titled "Growing Hezbollah Presence in Southwest U.S." Hezbollah's business relationship with Mexican drug cartels is a driving force behind this phenomenon, according to the analysis that quotes alarming excerpts from the book. For instance in 2009, a former Chief of Operations for the DEA said that Hezbollah uses "the same criminal weapons smugglers, document traffickers and transportation experts as the drug cartels." A year later a man (Jamal Yousef) arrested in New York admitted stealing weapons from Iraq for Hezbollah and told authorities of a Hezbollah stockpile in Mexico that included 100 M-16 assault rifles, 100 AR-15 rifles, 2500 hand grenades, C4 explosives and anti-tank weapons. That same year a Hezbollah terrorist was captured in Tijuana and a senior Mexican military officer confirmed the group was conducting explosives training for members of Mexican drug cartels. In the U.S., law enforcement officials across the nation's Southwest region report a rise in imprisoned gang members with Farsi tattoos that experts say express loyalty to Hezbollah, the book analysis reveals. One U.S. law enforcement official is quoted as saying this: "You could almost pick your city and you would probably have a [Hezbollah] presence." This is not surprising considering that for years a number of reports have exposed the connection between Mexico and Middle Eastern terrorists. In 2010 a veteran federal agent in the U.S. immigration system exposed a government cover-up of Middle Eastern terrorists entering the country through Mexico. The 30-year agent confirmed that thousands of SIAs (Special Interest Aliens) from terrorist nations like Yemen, Iran, Sudan and Afghanistan—classified as OTM (Other Than Mexican)—were captured along the southern border. In 2011 a frightening exposé broadcast by the world's largest Spanish news network documented how

Middle Eastern terrorists have infiltrated Latin American countries—especially Mexico—to plan an attack against the United States. The documentary uses undercover videos taken during a seven-month investigation that prove diplomats from Iran, Venezuela and Cuba planned a cybernetic attack against the White House, FBI, Pentagon and U.S. nuclear plants. In a shocking revelation made by a veteran U.S. counterterrorism expert, Hezbollah has infiltrated the Southwest United States by joining forces with Mexican drug cartels that have long operated in the region. Judicial Watch has for years reported on the chilling connection between Islamic extremists and Mexican drug cartels. In fact, as far back as 2007 JW wrote about an astounding Drug Enforcement Agency (DEA) report that lays out how Islamic terrorists and Mexican drug gangs have teamed up to successfully penetrate the U.S. as well as finance terror networks in the Middle East In Hezbollah's case, a growing "business relationship" with cartels has allowed the Shia Islamic militant group to have a growing presence in the U.S., says Matthew Levitt, an esteemed terrorism expert with an impressive resume. Levitt is a former counterterrorism intelligence analyst at the Federal Bureau of Investigation (FBI) and State Department counterterrorism adviser. He also served as the No. 2 intelligence official at the U.S. Treasury where he operated the agency's terrorism and financial intelligence branch. Levitt offers details of this mind-boggling collaboration between two powerful criminal enterprises in a new book titled: "Hezbollah: The Global Footprint of Lebanon's Party of God." A nonprofit dedicated to exposing the dangers of Islamic extremism, the Clarion Project, profiled the book in a recent article titled "Growing Hezbollah Presence in Southwest U.S." Hezbollah's business relationship with Mexican drug cartels is a driving force behind this phenomenon, according to the analysis that quotes alarming excerpts from the book. For instance in 2009, a former Chief of Operations for the DEA said that Hezbollah uses "the same criminal weapons smugglers, document traffickers and transportation experts as the drug cartels.

Terrorism guarantees extinction

Hellman, Stanford Engineering Prof, **8**

[Martin E., emeritus prof of engineering at Stanford, Spring 2008, "Risk Analysis of Nuclear Deterrence" accessed 5-28-14, http://www.nuclearrisk.org/paper.pdf, hec)

> The threat of nuclear terrorism looms much larger in the public's mind than the threat of a full-scale nuclear war, yet this article focuses primarily on the latter. An explanation is therefore in order before proceeding. **A terrorist attack involving a nuclear weapon would be a catastrophe** of immense proportions: "A 10-kiloton bomb detonated at Grand Central Station on a typical work day would likely kill some half a million people, and inflict over a trillion dollars in direct economic damage. America and its way of life would be changed forever." [Bunn 2003, pages viii-ix]. The likelihood of such an attack is also significant. Former Secretary of Defense William Perry has estimated the chance of a nuclear terrorist incident within the next decade to be roughly 50 percent [Bunn 2007, page 15]. David Albright, a former weapons inspector in Iraq, estimates those odds at less than one percent, but notes, "We would never accept a situation where the chance of a major nuclear accident like Chernobyl would be anywhere near 1% .... A nuclear terrorism attack is a low-probability event, but we can't live in a world where it's anything but extremely low-probability." [Hegland 2005]. In a survey of 85 national security experts, Senator Richard Lugar found a median estimate of 20 percent for the "probability of an attack involving a nuclear explosion occurring somewhere in the world in the next 10 years," with 79 percent of the respondents believing "it more likely to be carried out by terrorists" than by a government [Lugar 2005, pp. 14-15]. I support increased efforts to reduce the threat of nuclear terrorism, but that is not inconsistent with the approach of this article. Because **terrorism is one of the potential trigger mechanisms for a full-scale nuclear war**, the risk analyses proposed herein

will include estimating the risk of nuclear terrorism as one component of the overall risk. If that risk, the overall risk, or both are found to be unacceptable, then the proposed remedies would be directed to reduce which- ever risk(s) warrant attention. Similar remarks apply to a number of other threats (e.g., nuclear war between the U.S. and China over Taiwan). his article would be incomplete if it only dealt with the threat of nuclear terrorism and neglected the threat of full-scale nuclear war. If both risks are unacceptable, an effort to reduce only the terrorist component would leave humanity in great peril. In fact, society's almost total neglect of the threat of full-scale nuclear war makes studying that risk all the more important. The cosT of World War iii The danger associated with nuclear deterrence depends on both the cost of a failure and the failure rate.3 This section explores the cost of a failure of nuclear deterrence, and the next section is concerned with the failure rate. While other definitions are possible, this article defines **a failure of deterrence to mean a full-scale exchange of all nuclear weapons available to the U.S. and Russia, an event that will be termed World War III.** Approximately 20 million people died as a result of the first World War. World War II's fatalities were double or triple that number—chaos prevented a more precise deter- mination. In both cases humanity recovered, and the world today bears few scars that attest to the horror of those two wars. Many people therefore implicitly believe that a third World War would be horrible but survivable, an extrapola- tion of the effects of the first two global wars. In that view, World War III, while horrible, is something that humanity may just have to face and from which it will then have to recover. In contrast, some of those most qualified to assess the situation hold a very different view. In a 1961 speech to a joint session of the Philippine Con- gress, General Douglas MacArthur, stated, "Global war has become a Frankenstein to destroy both sides. … If you lose, you are annihilated. If you win, you stand only to lose. No longer does it possess even the chance of the winner of a duel. It contains now only the germs of double suicide." Former Secretary of Defense Robert McNamara ex- pressed a similar view: "**If deterrence fails and conflict develops, the present U.S. and NATO strategy carries with it a high risk that Western civilization will be destroyed**" [McNamara 1986, page 6]. More recently, George Shultz, William Perry, Henry Kissinger, and Sam Nunn4 echoed those concerns when they quoted President Reagan's belief that nuclear weapons were "totally irrational, totally inhu- mane, good for nothing but killing, possibly destructive of life on earth and civilization." [Shultz 2007] Official studies, while couched in less emotional terms, still convey the horrendous toll that World War III would exact: "The resulting deaths would be far beyond any precedent. Executive branch calculations show a range of U.S. deaths from 35 to 77 percent (i.e., 79-160 million dead) … a change in targeting could kill somewhere between 20 million and 30 million additional people on each side .... These calculations reflect only deaths **during the first 30 days**. Additional millions would be injured, and many would eventually die from lack of adequate medical care … millions of people might starve or freeze during the follow- ing winter, but it is not possible to estimate how many. … further millions … might eventually die of latent radiation effects." [OTA 1979, page 8] This OTA report also noted the possibility of serious ecological damage [OTA 1979, page 9], a concern that as- sumed a new potentiality when the TTAPS report [TTAPS 1983] proposed that the ash and dust from so many nearly simultaneous nuclear explosions and their resultant fire- storms could usher in a nuclear winter **that might erase homo sapiens from the face of the earth.** much as many scientists now believe the K-T Extinction that wiped out the dinosaurs resulted from an impact winter caused by ash and dust from a large asteroid or comet striking Earth. The TTAPS report produced a heated debate, and there is still no scientific consensus on whether a nuclear winter would follow a full-scale nuclear war. Recent work [Robock 2007, Toon 2007] suggests that even a limited nuclear exchange or one between newer nuclear-weapon states, such as India and Pakistan, could have devastating long-lasting climatic consequences due to the large volumes of smoke that would be generated by fires in modern megacities. While it is uncertain how destructive World War III would be, prudence dictates that we apply the same engi- neering conservatism that saved the Golden Gate Bridge from collapsing on its 50th anniversary and assume that **preventing World War III is a necessity**—not an option.

Case

No solvency for aff

Greenberg, 15' (Andy Greenberg, senior writer for WIRED, covering security, privacy, information freedom, and hacker culture, "Want to See Domestic Spying's Future? Follow the Drug War") M.dawg

With all those cases in mind, the DEA's now-defunct bulk collection of Americans' phone metadata fits squarely into a long and storied history of drug investigators using and abusing their surveillance powers. That doesn't make privacy advocates like it any better. The Electronic Frontier Foundation and Human Rights Watch filed a lawsuit earlier this week to make sure that the program is completely terminated rather than merely hidden or suspended, considering the 20-year secrecy around the DEA's phone metadata collection. But given that the DEA's phone surveillance program stretched back to 1992 with no public oversight, there's little doubt that drug investigators have since adopted plenty of other stealthy surveillance techniques to stay a step ahead in the War on Drugs. As in any war without an end, there's always a budget for new weapons, and plenty of foot soldiers ready to use them.

The aff does nothing to solve local surveillance rooted in racism

APUZZO 15 (Matt Apuzzo is a reporter for the NYT, and Professor at Georgetown University, and reported for Associated Press and the Standard-Times, "Ferguson Police Routinely Violate Rights of Blacks, Justice Dept. Finds", MARCH 3, 2015, http://www.nytimes.com/2015/03/04/us/justice-department-finds-pattern-of-police-bias-and-excessive-force-in-ferguson.html?_r=0)

WASHINGTON — **Ferguson, Mo., is a third white, but the crime statistics compiled in the city over the past two years seemed to suggest that only black people were breaking the law.** They accounted for 85 percent of traffic stops, 90 percent of tickets and 93 percent of arrests. In cases like jaywalking, which often hinge on police discretion, blacks accounted for 95 percent of all arrests.¶ **The racial disparity in those statistics was so stark that the Justice Department has concluded in a report** scheduled for release on Wednesday **that there was only one explanation**: **The F**erguson **P**olice **D**epartment **was** routinely **violating the constitutional rights of its black residents.¶ The report,** based on a six-month investigation, **provides a glimpse into the roots of the racial tensions that boiled over in Ferguson last summer after a black teenager, Michael Brown, was fatally shot by a white police officer**, making it a worldwide flash point in the debate over race and policing in America. **It describes a city where the police used force almost exclusively on blacks and regularly stopped people without probable cause**. Racial bias is so ingrained, the report said, that Ferguson officials circulated racist jokes on their government email accounts.¶ In a November 2008 email, a city official said Barack Obama would not be president long because "what black man holds a steady job for four years?" Another email included a cartoon depicting African-Americans as monkeys. A third described black women having abortions as a way to curb crime.¶ **"There are serious problems here that cannot be explained away," said a law enforcement official** who has seen the report and spoke on the condition of anonymity because it had not been released yet.¶ Those findings reinforce what the city's black residents have been saying publicly since the shooting in August, that the criminal justice system in Ferguson works differently for blacks and whites. A black motorist who is pulled over is twice as likely to be searched as a white motorist, even though searches of white drivers are more likely to turn up drugs or other contraband, the report found.¶ Minor, largely discretionary offenses such as disturbing the peace and jaywalking were brought almost exclusively against blacks. When whites were charged with these crimes, they were 68 percent more likely to have their cases dismissed, the Justice Department found.¶ "I've known it all my life about living out here," Angel Goree, 39, who lives in the apartment complex where Mr. Brown was killed, said Tuesday by phone.¶ Many such statistics surfaced in the aftermath of Mr. Brown's shooting, but the Justice Department report offers a more complete look at the data than ever before. Federal investigators conducted hundreds of interviews, reviewed 35,000 pages of police records and analyzed race data compiled for every police stop.¶ The report will most likely force Ferguson officials to either negotiate a settlement with the Justice Department or face being sued by it on charges of violating the Constitution. Under Attorney General Eric H. Holder Jr., the Justice Department has opened more than 20 such investigations into local police departments and issued tough findings against cities including Newark; Albuquerque, N.M.; and Cleveland.¶ But the Ferguson case has the highest profile of Mr. Holder's tenure and is among the most closely watched since the Justice Department

began such investigations in 1994, spurred by the police beating of Rodney King in Los Angeles and the riots that followed.¶ While much of the attention in Ferguson has been on Mr. Brown's death, federal officials quickly concluded that the shooting was simply the spark that ignited years of pent-up tension and animosity in the area. The Justice Department is expected to issue a separate report Wednesday clearing the police officer, Darren Wilson, of civil rights violations in the shooting.¶ **It is not clear what changes Ferguson could make that would head off a lawsuit.¶ The report calls for city officials to acknowledge that the police department's tactics have caused widespread mistrust and violated civil rights. Ferguson officials have so far been reluctant to do so**, particularly as relations between the city and Washington have grown strained.¶ Mr. Holder was openly critical of the way local officials handled the protests and the investigation into Mr. Brown's death, and declared a need for "wholesale change" in the police department. Ferguson officials criticized Mr. Holder for a rush to judgment and saw federal officials as outsiders who did not understand their city.¶

Government officials will continue surveillance regardless and even if the USFG stops surveillance, other agencies are capable of replacing that actor

Bernstein, 2015

(Leandra is an author for a world renowned news organization called Sputnik. The article cites a former FBI agent disclosure. Federal Bureau of Investigation agent Coleen Rowley **claims** that the **US government will likely continue its pattern of domestic surveillance**.¶ WASHINGTON (Sputnik), Leandra Bernstein — The US government will likely continue its pattern of domestic surveillance following the Monday court ruling to temporarily extend bulk data collection, whistleblower and former Federal Bureau of Investigation agent Coleen Rowley told Sputnik.¶ "I think, **if the past is any predictor of the future,** that U**S government officials will find yet another way around any legal restrictions** to continue their 'Total Information Awareness' project," Rowley said.¶ On Monday, the **Foreign Information Surveillance Act (FISA) Court issued a ruling upholding the National Security Agency (NSA) to continue bulk collection of metadata**, a program that was supposed to be ended with the passage of the USA Freedom Act in May 2015.¶ The ruling was based on a motion filed by civil libertarian groups demanding an immediate end to the metadata collection program, which was deemed unconstitutional by a US federal appeals court in May 2015.¶ Asked what the Monday ruling means for the future of government surveillance reform, Rowley stated, "I think the Judge [Michael Mosman] probably answered this in his 'Plus ca change, plus c'est la meme chose' [the more things change, the more they stay the same] quote."¶ The new portion of the classified files published by The Intercept now reveals how easily it can be done: "as easy as typing a few words in Google."¶ © FLICKR/ DON HANKINS¶ NSA Spies Can Hack Any Computer in 'A Few Mouse Clicks'¶ The FISA decision to take advantage of the five-month period to continue mass surveillance did not come as a surprise "based on the past record of illegal government spying," Rowley explained.¶ The FISA Court authorizes surveillance carried out by the US intelligence community. The Court is permitted to operate in secret, due to the classified activity it oversees.¶ Following the September 11, 2001 terrorist attacks, the George W. Bush administration proposed the implementation of a massive data-mining program called the Total Information Awareness.¶ The program was **developed by the Department of Defense research agency to be capable of analyzing private communications, commercial transactions and other data domestically and abroad in order to identify and classify potential terrorist threats**.¶ While the program was never officially implemented, **multiple programs across the intelligence community accomplished a similar effect**, as was revealed in classified documents leaked by NSA whistleblower Edward Snowden in 2013.¶ Read more: http://sputniknews.com/us/20150703/1024143850.html#ixzz3fsinxkHH

Agencies circumvent power that was given to them through the Congress all the time

Ackerman, 2015

(Spencer Ackerman is an editor/ reporter for the US News in New York. Full Date: June 1, 2015. "Fears NSA will seek to undermine surveillance reform; Privacy advocates are wary of covert legal acrobatics from the NSA similar to those deployed post-9/11 to circumvent congressional authority" http://www.lexisnexis.com/hottopics/lnacademic/. Date Accessed- 7/15/15. Anshul Nanda)

Privacy advocates fear the **National Security Agency** will attempt to **weaken new restrictions** on the **bulk collection of Americans' phone and email records with a barrage of creative legal wrangles**, as the first major reform of US surveillance powers in a generation looked likely to be a foregone conclusion on Monday.¶ Related: Bush-era surveillance powers expire as US prepares to roll back NSA power¶ The USA Freedom Act, a bill banning the NSA from

collecting US phone data in bulk and compelling disclosure of any novel legal arguments for widespread surveillance before a secret court, has already been passed by the House of Representatives and on Sunday night the Senate voted 77 to 17 to proceed to debate on it. Between that bill and a landmark recent ruling from a federal appeals court that rejected a longstanding government justification for bulk surveillance, civil libertarians think they stand a chance at stopping attempts by intelligence lawyers to undermine reform in secret.¶ Attorneys for the intelligence agencies react scornfully to the suggestion that they will stretch their authorities to the breaking point. Yet reformers remember that such legal tactics during the George W Bush administration allowed the NSA to shoehorn bulk phone records collection into the Patriot Act.¶ Rand Paul, the Kentucky senator and Republican presidential candidate who was key to allowing sweeping US surveillance powers to lapse on Sunday night, warned that NSA lawyers would now make mincemeat of the USA Freedom Act's prohibitions on bulk phone records collection by taking an expansive view of the bill's definitions, thanks to a pliant, secret surveillance court.¶ "**My fear, though, is that the people who interpret this work at a place known as the rubber stamp factory, the Fisa [court]**," Paul said on the Senate floor on Sunday.¶ Paul's Democratic ally, Senator Ron Wyden, warned the intelligence agencies and the Obama administration against attempting to unravel NSA reform.¶ "My time on the **intelligence committee has taught me to always be vigilant for secret interpretations of the law and new surveillance techniques that Congress doesn't know about,**" Wyden, a member of the intelligence committee, told the Guardian.¶ "Americans were rightly outraged when they learned that **US intelligence agencies relied on secret law to monitor millions of law-abiding US citizens.** The **American people are now on high alert for new secret interpretations of the law, and intelligence agencies and the Justice Department would do well to keep that lesson in mind."**¶ The USA Freedom Act is supposed to prevent what Wyden calls " secret law ". It contains a provision requiring congressional notification in the event of a novel legal interpretation presented to the secret Fisa court overseeing surveillance.¶ Yet in recent memory, the **US government permitted the NSA to circumvent the Fisa court entirely. Not a single Fisa court judge was aware of Stellar Wind, the NSA's post-9/11 constellation of bulk surveillance programs**, from 2001 to 2004.¶ Energetic legal tactics followed to fit the programs under existing legal authorities after internal controversy or outright exposure. When the **continuation of a bulk domestic internet metadata collection program risked the mass resignation of Justice Department officials in 2004**, an internal NSA draft history records that attorneys found a different legal rationale that " essentially gave NSA the same authority to collect bulk internet metadata that it had ".¶ After a New York Times story in 2005 revealed the existence of the bulk domestic phone records program, attorneys for the US Justice Department and NSA argued, with the blessing of the Fisa court, that Section 215 of the Patriot Act authorized it all along - precisely the contention that the second circuit court of appeals rejected in May.¶ Despite that recent history, veteran intelligence attorneys reacted with scorn to the idea that **NSA lawyers will undermine surveillance reform.** Robert Litt, the senior lawyer for director of national intelligence, James Clapper, said during a public appearance last month that creating a banned bulk surveillance program was " not going to happen ".¶ "The whole notion that NSA is just evilly determined to read the law in a fashion contrary to its intent is bullshit, of the sort that the Guardian and the left - but I repeat myself - have fallen in love with. The interpretation of 215 that supported the bulk collection program was creative but not beyond reason, and it was upheld by many judges," said the former NSA general counsel Stewart Baker, **referring to Section 215 of the Patriot Act.**¶ This is the **section that permits US law enforcement** and **surveillance agencies to collect business records and expired at midnight,** almost two years after the whistleblower Edward Snowden revealed to the Guardian that the Patriot Act was secretly being used to justify the collection of phone records from millions of Americans.¶ With one exception, the judges that upheld the interpretation sat on the non-adversarial Fisa court, a body that approves nearly all government surveillance requests and modifies about a quarter of them substantially. The exception was reversed by the second circuit court of appeals.¶ Baker, speaking before the Senate voted, predicted: "I don't think anyone at NSA is going to invest in looking for ways to defy congressional intent if USA Freedom is adopted."¶ The USA Freedom Act**, a compromise bill, would not have an impact on the vast majority of NSA surveillance**. **It would not stop any overseas-focused surveillance program, no matter how broad in scope, nor would it end the NSA's dragnets of Americans' international communications authorized by a different law**. Other bulk domestic surveillance programs, like the one the **Drug Enforcement Agency operated, would not be impacted.**¶ The rise of what activists have come to call "bulky" surveillance, like the "large collections" of Americans' electronic communications records the FBI gets to collect under the Patriot Act, continue unabated - or, at least, will, once the USA Freedom Act passes and restores the Patriot Act powers that lapsed at midnight on Sunday.¶ Related: FBI used Patriot Act to obtain 'large collections' of Americans' data, DoJ finds¶ That collection, recently confirmed by a largely overlooked Justice Department inspector general's report, points to a slipperiness in shuttering surveillance programs - one that creates opportunities for clever lawyers.¶ The Guardian revealed in 2013 that Barack Obama had permitted the NSA to collect domestic internet metadata in bulk until 2011. Yet even as Obama closed down that NSA program, the Justice Department inspector general confirms that by 2009, the **FBI was already collecting the same "electronic communications" metadata under a different authority.**¶ It is unclear as yet how the **FBI transformed that authority, passed by Congress** for the collection of "business records", into large-scale collection of Americans' email, text, instant message, internet-protocol and other records. And a **similar power to for the FBI gather domestic internet metadata, obtained through non-judicial subpoenas called "National Security Letters"**, also

exists in a different, non-expiring part of the Patriot Act.¶ Jameel Jaffer, the deputy legal director of the ACLU, expressed confidence that the second circuit court of appeals' decision last month would effectively step into the breach. The panel found that legal authorities permitting the collection of data "relevant" to an investigation cannot allow the government to gather data in bulk - setting a potentially prohibitive precedent for other bulk-collection programs.¶ "We don't know what kinds of bulk-collection programs the government still has in place, but in the past it's used authorities other than Section 215 to **conduct bulk collection of internet metadata, phone records, and financial records. If similar programs are still in place, the ruling will force the government to reconsider them, and probably to end them**," said Jaffer, whose organization brought the suit that the second circuit considered.¶ Julian Sanchez, a surveillance expert at the Cato Institute, was more cautious.¶ "The second circuit ruling establishes that a 'relevance' standard is not completely unlimited - it doesn't cover getting hundreds of millions of people's records, without any concrete connection to a specific inquiry - but doesn't provide much guidance beyond that as to where the line is," Sanchez said.¶ "I wouldn't be surprised if the government argued, in secret, that nearly anything short of that scale is still allowed, nor if the same Fisa court that authorized the bulk telephone program, in defiance of any common sense reading of the statutory language, went along with it."¶

Alt causes

War on Terror is an alt. cause to racism

Miah, 06' (Malik Miah, editor of the US socialist organization Solidarity's magazine Against the Current. He is a long-time activist in trade unions and a campaigner for Black rights and works as an aircraft mechanic in San Francisco, "Racist Undercurrents in the "War on Terror") M.dawg

The use of fear and warmongering has convinced most Americans, including African Americans, that the ends justify the means. The link between racism and the war on terrorism is therefore generally downplayed or ignored. When Dick Cheney says the divide between Republicans and Democrats is between the "cut and run" Democrats and the Bush Administration, he always adds that the critics of their policies (that includes torture, imprisonment for life and racial proofing) don't want to "win the war on terrorism." Bush said critics of his policy are "enablers of terrorists." Racial profiling is tacitly considered an acceptable part of conducting war. The mainstream media, with few exceptions, most notably the editors of The New York Times, give Bush, Cheney and their operatives a free pass on these issues. While some debate is taking place on the use of torture and loss of habeas corpus, little is said about racial profiling. Even civil rights leaders are mostly quiet. Why? Because no one wants to be labeled as soft on fighting terrorism. If you look like an Iranian, an Afghani, a South Asian (mainly a Pakistani) or worse an Arab, it is now okay to racial profile to "protect the country." The fact that little is written about the issue by the mainstream media shows how racism in the war on terrorism is considered acceptable. I tried to pull up articles on the internet to see how many times racial profiling, or racism and terrorism, have been written about. Amazingly, outside the left press, few critical articles or columns have appeared. The majority of pieces in fact have been in defense of racial profiling as a necessary step in today's world. The depth of the problem is seen in an article written in 2005 by an African American Washington Post deputy editorial page editor in an op-ed piece entitled, "You can't fight terrorism with racism." (July 30, 2005). Regarding three op-ed pieces that had appeared in the Post and The New York Times, Colbert King wrote: "A New York Times op-ed piece by Paul Sperry, a Hoover Institution media fellow ['It's the Age of Terror: What Would You Do?'] and a Post column by Charles Krauthammer ['Give Grandma a Pass; Politically Correct Screening Won't catch Jihadists'] endorsed the practice of using

ethnicity, national origin and religion as primary factors in deciding when police should regard as possible terrorists—in other words, racial profiling.

Stop and Frisk is an alt. cause to racism

Rucke, 14' (Katie Rucke, MintPress staff writer and investigative report specializing in the war on drugs, criminal justice, marijuana legislation, education and watchdog investigations as well as whistle-blowers, "Stop-And-Frisk Policies Proof Of Racism In America") M.dawg

While many struggle to understand how racism can still exist here, it's easy to see that American society is plagued with racist policies that disproportionately affect Americans of African, Latin and Middle Eastern descent. As the controversial policy known as stop and frisk clearly illustrates, those who are black- or brown-skinned are more often assumed to be engaged in dangerous criminal activity than their white counterparts. Of the 191,558 times people were stopped and frisked in New York City in 2013, the person stopped was white only 11 percent of the time. Overt, violent racism may no longer exist in mainstream America, but white privilege continues to run rampant in the U.S. A majority of Americans are not only oblivious to this type of racist policy, but when it's pointed out to them, many do nothing to stop it. Christopher E. Smith, a white man, attorney and criminal justice professor, is the father of a biracial son who has darker skin. In the April 2014 issue of The Atlantic, Smith shared how his son's skin color has directly influenced the way people, especially law enforcement, treat him. Even when Smith's 21-year-old son, a student at Harvard University, was working as an intern on Wall Street, Smith says his son was stopped and frisked "on more than one occasion" by police. These officers sometimes didn't even identify themselves as NYPD officers until after the "frisk" was completed. "On one occasion, while wearing his best business suit, [my son] was forced to lie face-down on a filthy sidewalk because—well, let's be honest about it, because of the color of his skin," Smith wrote. He detailed how his black in-laws have also been disproportionately stopped by police while on their way to his home for family events and holidays such as Thanksgiving. Some of Smith's relatives have even had guns pointed at their **heads while being interrogated by police officers, who Smith says stopped his in-laws solely because of the color of their skin.** Because of this stereotypical assumption that a black, Latino or Middle Eastern person would be engaged in criminal behavior, Smith proposed an experiment in which police officers would be required to stop and frisk 10 white people — five men and five women — **for every three non-white people they stopped without a warrant, suspicion or probable cause. Smith said if police officers stopped and frisked white people in a manner similar to what young people of color have experienced throughout the years, white people would begin to argue that "it's a waste of the officers' time to impose these searches on innocent people," and stop-and-frisk policies may cease to exist.**

K

Nietzsche 1NC w/ link

Suffering cannot be eliminated – but worse than suffering is meaningless suffering – its only a question of the meaning we impose on suffering and how we learn from it - pitying the sufferer further increases the suffering that they feel

Kain '07 (Philip J., "Nietzsche, Eternal Recurrence, and the Horror of Existence", The Journal of Nietzsche Studies 33 (2007) 49-63) Franzy

Eternal recurrence also gives suffering another meaning. If one is able to embrace eternal recurrence, if one is able to turn all "it was" into a "thus I willed it," then one not only reduces suffering to physical suffering, breaks its psychological stranglehold, and eliminates surplus suffering related to guilt, but one may even in a sense reduce suffering below the level of physical suffering. One does not do this as the liberal, socialist, or Christian would, by changing the world to reduce suffering. In Nietzsche's opinion that is impossible, and, indeed, eternal recurrence of the same rules it out—at least as any sort of final achievement.23 Rather, physical suffering is reduced by treating it as a test, a discipline, a training, which brings one greater power. One might think of an athlete who engages in more and more strenuous activity, accepts greater and greater pain, handles it better and better, and sees this as a sign of greater strength, as a sign of increased ability. Pain and suffering are turned into empowerment. Indeed, it is possible to love such suffering as a sign of increased power. One craves pain—"more pain! more pain!" (GM III:20). And the more suffering one can bear, the stronger one becomes.

If suffering is self-imposed, if the point is to break the psychological stranglehold it has over us, if the point is to turn suffering into empowerment, use it as a discipline to gain greater strength, then it would be entirely inappropriate for us to feel sorry for the sufferer. To take pity on the sufferer either would demonstrate an ignorance of the process the sufferer is engaged in, what the sufferer is attempting to accomplish through suffering, or would show a lack of respect for the sufferer's suffering (GS 338; D 135). **To pity the sufferer, to wish the sufferer did not have to go through such suffering, would demean the sufferer and the whole process of attempting to gain greater strength through such suffering.**

Let us try again to put ourselves in Nietzsche's place. He has suffered for years. He has suffered intensely for years. He has come to realize that he cannot end this suffering. He cannot even reduce it significantly. But he has finally been able to break the psychological stranglehold it has had over him. He is able to accept it. He wills it. He would not change the slightest detail. He is able to love it. And this increases his strength. How, then, would he respond to our pity? Very likely, he would be offended. He would think we were patronizing him. He would not want us around. He would perceive us as trying to rob him of the strength he had achieved, subjugate him again to his suffering, strip him of his dignity. **He would be disgusted with our attempt to be do-gooders, our attempt to impose our own meaning on his suffering (treating it as something to pity and to lessen) in opposition to the meaning he has succeeded in imposing on it.**

Nietzsche wagers a lot on his commitment to the notion that suffering cannot be significantly reduced in the world. For if it can, then pity and compassion would be most

important to motivate the reduction of suffering. Nietzsche is so committed to the value of suffering that he is willing to remove, or at least radically devalue, pity and compassion. [End Page 60]

To appreciate how committed he is, suppose we are incorrigible do-gooders—liberals, socialists, or Christians. We just cannot bear to see anyone suffer. Suppose we find a researcher who is working on a cure for Nietzsche's disease. This researcher thinks that within a few years a drug can be produced to eliminate the disease. Suppose the researcher is right. And suppose that just as Nietzsche has solidly committed to eternal recurrence, just as he is able to love his fate, just as he has decided he would not change the slightest detail of his life, we tell him about this cure.

How would Nietzsche respond? Would he accept the cure? Would he give up his hard-won attitude of accepting his migraines, nausea, and vomiting, of refusing to desire any change? Would he revert to his old attitude of hoping to reduce his suffering, trying out whatever might accomplish this? Would he give his illness a chance to reassert its psychological stranglehold? We must remember that our supposition is that he would actually be cured in a few years. But he would also forgo the discipline, the strengthening, the empowerment that a commitment to eternal recurrence and amor fati would have made possible. Although his illness would be cured, he would not have developed the wherewithal to deal with any other suffering—in a world characterized by the horror of existence. We cannot know whether Nietzsche would decide to take the cure or not. What we can be sure of is that if he did, he would not be the Nietzsche we know.

Kierkegaard retells the story of Abraham and Isaac. God commands Abraham to take his only son to Mount Moriah and to sacrifice him there as a burnt offering. Faithful Abraham sets off to obey God's will. But just as he arrives, just as he has drawn his knife, just as he is about to offer his son, he is told instead to sacrifice the ram that God has prepared. Kierkegaard suggests that if he had been in Abraham's position, if he had sufficient faith in God and had obeyed him as Abraham did, if he had been able to summon the same courage, then, when he got Isaac back again he would have been embarrassed. Abraham, he thinks, was not embarrassed. He was not embarrassed because he believed all along, by virtue of the absurd, that God would not require Isaac.24

What about Nietzsche? Let us assume that Nietzsche has fully committed to eternal recurrence and amor fati, that he has come to love his fate, that he has decided he would not change the slightest detail. Moreover, he has announced this to the world in his writings. Let us assume that over the years this commitment has empowered him, given him greater strength. We do-gooders now inform him that we can cure his disease and eliminate his suffering. Even further, suppose we were able to prove to him that eternal recurrence is impossible. Would Nietzsche be embarrassed?

Maybe. But it is not absolutely clear that he would be. He might respond that believing in eternal recurrence—perhaps even by virtue of the absurd—allowed him to face the horror of existence. He might respond that it does not really matter whether his life will actually return. The only thing that matters is the attitude he [End Page 61] was able to develop toward his present life. **He might respond that it does not really matter that it has become possible to cure his particular illness; there is still plenty of other suffering to be faced given the horror of existence. He might respond that what matters is the strength he was able to gain from**

believing in eternal recurrence and loving his fate, not whether eternal recurrence is actually true.

Demanding social justice for historical injustice codifies resentment and locks subordinated groups in their subordination.

Brown, Professor of Women's Studies @ UC Santa Cruz, 19**95** [Wendy, *States of Injury: Power and Freedom in Late Modernity* pg. 66-70]

Liberalism contains from its inception a generalized incitement to what Nietzsche terms ressentiment, the moralizing revenge of the powerless,"the triumph of the weak as weak. "22 This incitement to ressentitnent inheres in two related constitutive paradoxes of liberalism: that between individual liberty and social egalitarianism, a paradox which produces failure turned to recrimination by the subordinated, and guilt turned to resentment by the "successful"; and that between the individualism that legitimates liberalism and the cultural homogeneity required by its commitment to political universality, a paradox which stimulates the articulation of politically significant differences on the one hand, and the suppression of them on the other, and which offers a form of articulation that presses against the limits of universalist discourse even while that which is being articulated seeks to be harbored withinincluded inthe terms of that universalism. Premising itself on the natural equality of human beings, liberalism makes a political promise of universal individual freedom in order to arrive at social equality, or achieve a civilized retrieval of the equality postulated in the state of nature. It is the tension between the promises of individualistic liberty and the requisites of equality that yields ressentiment in one of two directions, depending on the way in which the paradox is brokered. A strong commitment to freedom vitiates the fulfillment of the equality promise and breeds ressentiment as welfare state liberalism --- attenuations of the unmitigated license of the rich and powerful on behalf of the "disadvantaged." Conversely, a strong commitment to equality, requiring heavy state interventionism and economic redistribution, attenuates the commitment to freedom and breeds ressentiment expressed as neoconservative antistatism, racism, charges of reverse racism, and so forth. However, it is not only the tension between freedom and equality but the prior presumption of the self-reliant and self-made capacities of liberal subjects, conjoined with their unavowed dependence on and construction by a variety of social relations and forces, that makes all liberal subjects, and not only markedly disenfranchised ones, vulnerable to ressentiment: it is their situatedness within power, their production by power, and liberal discourse's denial of this situatedness and production that cast the liberal subject into failure, the failure to make itself in the context of a discourse in which its selfmaking is assumed, indeed, is its assumed nature. This failure, which Nietzsche calls suffering, must either find a reason within itself (which redoubles the failure) or a site of external blame upon which to avenge its hurt and redistribute its pain. Here is Nietzsche's account of this moment in the production of ressentiment: For every sufferer instinctively seeks a cause for his suffering, more exactly, an agent; still more specifically, a guilty agent who is susceptible to suffering in short, some living thing upon which he can, on some pretext or other, vent his affects, actually or in effigy . . . . This ... constitutes the actual physiological cause of

ressentiment, vengefulness, and the like: a desire to deaden pain by means of affects, . . . to deaden, by means of a more violent emotion of any kind, a tormenting, secret pain that is becoming unendurable, and to drive it out of consciousness at least for the moment: for that one requires an affect, as savage an affect as possible, and, in order to excite that, any pretext at all. Ressentiment in this context is a triple achievement: it produces an affect (rage, righteousness) that overwhelms the hurt; it produces a culprit responsible for the hurt; and it produces a site of revenge to displace the hurt (a place to inflict hurt as the sufferer has been hurt). Together these operations both ameliorate (in Nietzsche's term, "anaesthetize") and externalize what is otherwise "unendurable." In a culture already streaked with the pathos of ressentiment for the reasons just discussed, there are several distinctive characteristics of late modern postindustrial societies that accelerate and expand the conditions of its production. My listing will necessarily be highly schematic: First, the phenomenon William Connolly names "increased global contingency", combines with the expanding pervasiveness and complexity of domination by capital and bureaucratic state and social networks to create an unparalleled individual powerlessness over the fate and direction of one's own life, intensifying the experiences of impotence, dependence, and gratitude inherent in liberal capitalist orders and constitutive of ressentiment.24 Second, the steady desacralization of all regions of life -- what Weber called disenchantment, what Nietzsche called the death of god would seem to add yet another reversal to Nietzsche's genealogy of ressenti;nent as perpetually available to "alternation of direction." In Nietzsche's account, the ascetic priest deployed notions of "guilt, sin, sinfulness, depravity, damnation" to "direct the ressentiment of the less severely afflicted sternly back upon themselves . . . and in this way exploit[ed] the bad instincts of all sufferers for the purpose of selfdiscipline, selfsurveillance, and selfovercoming. "25 However, the desacralizing tendencies of late modernity undermine the efficacy of this deployment and turn suffering's need for exculpation back toward a site of external agency.26 Third, the increased fragmentation, if not disintegration, of all forms of association not organized until recently by the commodities marketcommunities, churches, familiesand the ubiquitousness of the classificatory, individuating schemes of disciplinary society, combine to produce an utterly unrelieved individual, one without insulation from the inevitable failure entailed in liberalism's individualistic construction27 In short, the characteristics of late modern secular society, in which individuals are buffeted and controlled by global configurations of disciplinary and capitalist power of extraordinary proportions, and are at the same time nakedly individuated, stripped of reprieve from relentless exposure and accountability for themselves, together add up to an incitement to ressentiment that might have stunned even the finest philosopher of its occasions and logics Starkly accountable yet dramatically impotent, the late modern liberal subject quite literally seethes with ressentiment. Enter politicized identity, now conceivable in part as both product of and reaction to this condition, where "reaction" acquires the meaning Nietzsche ascribed to it: namely, an effect of domination that reiterates impotence, a substitute for action, for power, for selfaffirmation that reinscribes incapacity, powerlessness, and rejection. For Nietzsche, ressentiment itself is rooted in reaction -- the substitution of reasons, norms, and ethics for deeds -- and he suggests that not only moral systems but identities themselves take their bearings in this reaction. As Tracy Strong reads this element of Nietzsche's thought: Identity ... does not consist of an

active component, but is reaction to something outside; action in itself; with its inevitable self-assertive qualities, must then become something evil, since it is identified with that against which one is reacting. The will to power of slave morality must constantly reassert that which gives definition to the slave: the pain he suffers by being in the world. Hence any attempt to escape that pain will merely result in the reaffirmation of painful structures. If the "cause" of ressentitnent is suffering, its "creative deed" is the reworking of this pain into a negative form of action, the "imaginary revenge" of what Nietzsche terms "natures denied the true reaction, that of deeds."29 This revenge is achieved through the imposition of suffering "on whatever does not feel wrath and displeasure as he does"30 (accomplished especially through the production of guilt), through the establishment of suffering as the measure of social virtue, and through casting strength and good fortune ("privilege," as we say today) as self-recriminating, as its own indictment in a culture of suffering: "it is disgraceful to be fortunate, there is too much misery."31 But in its attempt to displace its suffering, identity structured by ressentiment at the same time becomes invested in its own subjection. This investment lies not only in its discovery of a site of blame for its hurt will, not only in its acquisition of recognition through its history of subjection (a recognition predicated on injury, now righteously revalued), but also in the satisfactions of revenge, which ceaselessly reenact even as they redistribute the injuries of marginalization and subordination in a liberal discursive order that alternately denies the very possibility of these things and blames those who experience them for their own condition. Identity politics structured by ressentiment reverse without subverting this blaming structure: they do not subject to critique the sovereign subject of accountability that liberal individualism presupposes, nor the economy of inclusion and exclusion that liberal universalism establishes. Thus, politicized identity that presents itself as a selfaffirmation now appears as the opposite, as predicated on and requiring its sustained rejection by a "hostile external world."32

The alt is to affirm every moment of our lives. We can not eliminate the suffering we have or will experience. All we can adjust is how we relate to it.

Kain '07 (Philip J., "Nietzsche, Eternal Recurrence, and the Horror of Existence", The Journal of Nietzsche Studies 33 (2007) 49-63) Franzy

Nietzsche embraces the doctrine of eternal recurrence for the first time in The Gay Science 341:

The greatest weight.—What, if some day or night a demon were to steal after you into your loneliest loneliness and say to you: "This life as you now live it and have lived it, you will have to live once more and innumerable times more; and there will be nothing new in it, but every pain and every joy and every thought and sigh and everything unutterably small or great in your life will have to return to you, all in the same succession and sequence—even this spider and this moonlight between the trees, and even this moment and I myself. The eternal hourglass of existence is turned upside down again and again, and you with it, speck of dust!"

Would you not throw yourself down and gnash your teeth and curse the demon who spoke thus? Or have you once experienced a tremendous moment when you would have answered him: "You are a god and never have I heard anything more divine." If this thought gained possession of you, it would change you as you are or perhaps crush you. The question in each and every thing, "Do you desire this once more and innumerable times more?" would lie upon your actions as the

greatest weight. Or how well disposed would you have to become to yourself and to life to crave nothing more fervently than this ultimate eternal confirmation and seal?

(GS 341)6

It is not enough that eternal recurrence simply be believed. Nietzsche demands that it actually be loved. In Ecce Homo, he explains his doctrine of amor fati: **"My formula for greatness in a human being is amor fati: that one wants nothing to be different, not forward, not backward, not in all eternity. Not merely bear what is necessary, still less conceal it . . . but love it"** (EH"Clever" 10; cf. GS 276). In Thus Spoke Zarathustra, Zarathustra says: "To redeem those who lived in the past and to recreate all 'it was' into a 'thus I willed it'—that alone should I call redemption" (Z II: "On Redemption"; cf. Z III: "On Old and New Tablets" 3). To turn all "it was" into a "thus I willed it" is to accept fate fully, to love it. One would have it no other way; one wants everything eternally the same: "Was that life? . . . Well then! Once more!" (Z IV: "The Drunken Song" 1).

How are we to understand these doctrines? Soll argues that eternal recurrence of the same would not crush us at all. If every detail of one recurrence were exactly the same as every detail of another, if they were radically indistinguishable, recurrence would not be terrifying. To be terrified, Soll thinks, we would have to be able to accumulate new experience from cycle to cycle, remember past recurrences, and tremble in anticipation of their return. If all recurrences were exactly the same, if new experience could not build and accumulate, recurrence would be a matter of complete indifference.7 I think this view is mistaken. In the first place, people who lead a life of intense suffering often look forward to death as [End Page 53] an escape from that suffering. Aeneas, for example, when he visits the underworld in book VI of the Aeneid, expects just that. When he finds that he will have to be reincarnated, he is appalled. His next reincarnated life, it is true, would not be exactly the same, as for Nietzschean eternal recurrence, but Aeneas seems to expect it to be similar enough in its misery and suffering. And despite the fact that in his reincarnated life he would not remember his present life, Aeneas is nevertheless horrified at the idea that he will have to go through it all again.8

Furthermore, although it is true that experience cannot build and accumulate from cycle to cycle, nevertheless, we must recognize that there are places in which Nietzsche suggests that it is possible to remember earlier recurrences.9 Moreover, we can certainly be aware of other recurrences in the sense that we believe in them—the demon informs us of these other recurrences. This raises no problems as long as the very same memory, awareness, and reaction recur in each and every cycle at the very same point—each and every cycle must be exactly the same. It is possible that Soll assumes that such memories, awarenesses, and reactions would necessarily make the cycles different because they would have to be absent in at least one cycle—the first.10 But that would be a mistake. Nietzsche is quite clear. Time is infinite (Z III: "On the Vision and the Riddle" 2; WP 1066)—there is no first cycle. These memories, awarenesses, and reactions could occur in all cycles at exactly the same point in the sequence.

Still, Soll argues that it is "impossible for there to be among different recurrences of a person the kind of identity that seems to exist among the different states of consciousness of the same person within a particular recurrence. . . . Only by inappropriately construing the suffering of some future recurrence on the model of suffering later in this life does the question of eternal recurrence of one's pain weigh upon one with 'the greatest stress.'"11 I think this too is mistaken. I can very well not want to live my life again even if in the next cycle I will not remember the pain

of this cycle. If I am to love my life, not want to change the slightest detail, if I am to desire to live it again, it does not matter if in the future cycle I do not remember this cycle. If the demon tells me, if I believe, that the future cycle will be exactly the same, if I know that now, then it could be quite difficult, right now, to be positive enough about my existing painful life to choose to go through it again, even if when I do go through it again I will not remember it.

Soll's point gains whatever plausibility it has by looking back from a future life at our present life and denying that we could remember anything or tremble in anticipation of its return. But that is not the only perspective one can take on the matter, and it is not the perspective Nietzsche wants to emphasize. For Nietzsche the demon forces us to look over our present life, reflect on it, test our attitude toward it, and assess the degree of positiveness we have toward it. We do that by asking how we feel about having to live it over again without the [End Page 54] slightest change. What is relevant here is how we feel about our present life at the present moment.12

It is also irrelevant to suggest that there is insufficient identity for me to think that it will really be me in the next cycle. The point, for Nietzsche, is how I react to my present life—the threat of a future life is brought up to elicit this reaction**. If I do not identify with the person who will live my next life, if I do not care about that person, if I consider that person an other, then I evade the question the demon put to me—and I avoid the heart of the issue. The question is whether I love my life, my present life—love it so completely that I would live it again.** I am being asked if I would live my life again to see if I love my present life. If I insist on viewing the liver of my next life as an other, the least I should do is ask myself whether I love my present life enough that I could wish it on another.

At any rate, **Nietzsche claims that just thinking about the possibility of eternal recurrence can shatter and transform us**.13 In published works, eternal recurrence is presented as the teaching of a sage, as the revelation of a demon, or as a thought that gains possession of one. In The Gay Science 341, we must notice, eternal recurrence is not presented as a truth. Many commentators argue that it simply does not matter whether or not it is true; its importance lies in the effect it has on those who believe it.14

I have written at length about this complex doctrine elsewhere. I refer the reader there for further treatment of details.15 What I want to do here is point out that the philosopher who introduces eternal recurrence, the philosopher who believes in amor fati, is the very same philosopher who also believes in the horror of existence. This is a point that is never emphasized—indeed, it is hardly even noticed—by commentators.16 Lou Salomé tells us that Nietzsche spoke to her of eternal recurrence only "with a quiet voice and with all signs of deepest horror. . . . Life, in fact, produced such suffering in him that the certainty of an eternal return of life had to mean something horrifying to him."17

Try to imagine yourself with a migraine. Imagine yourself in a feverish state experiencing nausea and vomiting. Imagine that this sort of thing has been going on for years and years and that you have been unable to do anything about it. Extreme care with your diet, concern for climate, continuous experimenting with medicines—all accomplish nothing. You are unable to cure yourself. You have been unable to even improve your condition significantly.18 You have no expectation of ever doing so. Suppose this state has led you to see, or perhaps merely confirmed your insight into, the horror and terror of existence. It has led you to suspect that Silenus was right: best never to have been born; second best, die as soon as possible. All you can expect is suffering, suffering for no reason at all, meaningless suffering. You have even thought of suicide

(BGE 157).19 Now imagine that at your worst moment, your loneliest loneliness, a demon appears to you or you imagine a demon appearing to you. And this demon tells you that you will have to live your life over again, innumerable times more, and that everything, [End Page 55] every last bit of pain and suffering, every last migraine, every last bout of nausea and vomiting, will return, exactly the same, over and over and over again.

What would your reaction be? If your reaction were to be negative, no one would bat an eye. But what if your reaction was, or came to be, positive? **What if you were able to love your life so completely that you would not want to change a single moment—a single moment of suffering? What if you were to come to crave nothing more fervently than the eternal recurrence of every moment of your life?** What if you were to see this as an ultimate confirmation and seal, nothing more divine? How could you do this? Why would you do this? Why wouldn't it be madness? What is going on here? How has this been overlooked by all the commentators? This cries out for explanation.

Eternal recurrence, I think we can say, shows us the horror of existence. No matter what you say about your life, no matter how happy you claim to have been, no matter how bright a face you put on it, the threat of eternal recurrence brings out the basic horror in every life. Live it over again with nothing new? It is the "nothing new" that does it. That is how we make it through our existing life. We hope for, we expect, something new, something different, some improvement, some progress, or at least some distraction, some hope. If that is ruled out, if everything will be exactly the same in our next life, well that is a different story. If you think you are supremely happy with your life, just see what happens if you start to think that you will have to live it again.

Suppose that you can, as Aristotle suggested, look back over your life as a whole and feel that it was a good one—a happy one. Would that make you want to live it again? Would you at the moment in which you feel that your life was a happy one also crave nothing more fervently than to live it again? What if your life was a joyous life or a proud life? It is quite clear that you could have a very positive attitude toward your life and not at all want to live it again. In fact, wouldn't the prospect of eternal repetition, if the idea grew on you and gained possession of you, begin to sap even the best life of its attractiveness? Wouldn't the expectation of eternal repetition make anything less appealing? Wouldn't it empty your life of its significance and meaning? Most commentators seem to assume that the only life we could expect anyone to want to live again would be a good life. That makes no sense to me. On the other hand, most people would assume that a life of intense pain and suffering is not at all the sort of life it makes any sense to want to live again. I think Nietzsche was able to see that a life of intense pain and suffering is perhaps the only life it really makes sense to want to live again. Let me try to explain.

For years Nietzsche was ill, suffering intense migraines, nausea, and vomiting. Often he was unable to work and confined to bed. He fought this. He tried everything. He sought a better climate. He watched his diet fanatically. He experimented with medicines. Nothing worked. He could not improve his condition. His suffering was out of his control. It dominated his life and determined his [End Page 56] every activity. He was overpowered by it. There was no freedom or dignity here. He became a slave to his illness. He was subjugated by it. What was he to do? At the beginning of the essay "On the Sublime," Schiller writes:

[N]othing is so unworthy of man than to suffer violence. . . . [W]hoever suffers this cravenly throws his humanity away. . . . This is the position in which man finds himself. Surrounded by countless forces, all of which are superior to his own and wield mastery over him. . . . If he is no

longer able to oppose physical force by his relatively weaker physical force, then the only thing that remains to him, if he is not to suffer violence, is to eliminate utterly and completely a relationship that is so disadvantageous to him, and to destroy the very concept of a force to which he must in fact succumb. To destroy the very concept of a force means simply to submit to it voluntarily.20

Although Nietzsche did not go about it in the way Schiller had in mind, nevertheless, this is exactly what Nietzsche did. What was he to do about his suffering? What was he to do about the fact that it came to dominate every moment of his life? What was he to do about the fact that it was robbing him of all freedom and dignity? What was he to do about this subjugation and slavery? He decided to submit to it voluntarily. He decided to accept it fully. He decided that he would not change one single detail of his life, not one moment of pain. He decided to love his fate. At the prospect of living his life over again, over again an infinite number of times, without the slightest change, with every detail of suffering and pain the same, he was ready to say, "**Well then! Once more!"** (Z IV: "The Drunken Song" 1). He could not change his life anyway. But this way he broke the psychological stranglehold it had over him. He ended his subjugation. He put himself in charge. He turned all "it was" into a "thus I willed it." Everything that was going to happen in his life, he accepted, he chose, he willed. He became sovereign over his life. There was no way to overcome his illness except by embracing it.

III

I think we are now in a position to see that for eternal recurrence to work, for it to have the effect that it must have for Nietzsche, we must accept without qualification, we must love, everysingle moment of our lives, every single moment of suffering. **We cannot allow ourselves to be tempted by what might at first sight seem to be a much more appealing version of eternal recurrence, that is, a recurring life that would include the desirable aspects of our present life while leaving out the undesirable ones.** To give in to such temptation would be to risk losing everything that has been gained. To give in to such temptation, I suggest, would allow the suffering in our present life to begin to reassert its psychological stranglehold. We would start to slip back into subjugation. We would again come to be dominated by our suffering. We [End Page 57] would spend our time trying to minimize it, or avoid it, or ameliorate it, or cure it. We would again become slaves to it.

For the same reason, I do not think it will work for us to accept eternal recurrence merely because of one or a few grand moments—for the sake of which we are willing to tolerate the rest of our lives. Magnus holds that all we need desire is the return of one peak experience.21 This suggests that our attitude toward much of our life, even most of it, could be one of toleration, acceptance, or indifference—it could even be negative. All we need do is love one great moment and, because all moments are interconnected (Z IV: "The Drunken Song" 10;WP 1032), that then will require us to accept all moments. This would be much easier than actually loving all moments of one's life—every single detail. The latter is what is demanded inEcce Homo, which says that amor fati means that one "wants nothing to be different" and that we "[n]ot merely bear what is necessary . . . but love it" (EH "Clever" 10, emphasis added [except to love]). We want "a Yes-saying without reservation, even to suffering. . . . Nothing in existence may be subtracted, nothing is dispensable . . ." (EH "BT" 2). If we do not loveevery moment of our present life for its own sake, those moments we do not love, those moments we accept for the sake of one grand moment, I suggest, will begin to wear on us.22 We will begin to wish we did not have to suffer through so many of them, we will try to develop strategies for coping with

them, we will worry about them, they will start to reassert themselves, they will slowly begin to dominate us, and pretty soon we will again be enslaved by them. Our attitude toward any moment cannot be a desire to avoid it, change it, or reduce it—or it will again begin to dominate us. Indeed, in Ecce Homo, Nietzsche says that he had to display a "Russian fatalism." He did so by

tenaciously clinging for years to all but intolerable situations, places, apartments, and society, merely because they happened to be given by accident: it was better than changing them, than feeling that they could be changed—than rebelling against them.

Any attempt to disturb me in this fatalism, to awaken me by force, used to annoy me mortally—and it actually was mortally dangerous every time.

Accepting oneself as if fated, not wishing oneself "different"—that is in such cases great reason itself.

(EH "Wise" 6)

Eternal recurrence is an attempt to deal with meaningless suffering. It is an attempt to do so that completely rejects an approach to suffering that says, Let's improve the world, let's change things, let's work step by step to remove suffering—the view of liberals and socialists whom Nietzsche so often rails against. If it is impossible to significantly reduce suffering in the world, as Nietzsche thinks it is, then to make it your goal to try to do so is to enslave yourself to that suffering. [End Page 58]

Marijuana cp extensions

2nc overview

The counterplan is the best option in the round. It solves for all of the plan plus more then the plan can solve. Legalizing marijuana makes it so that racism is solved better then the aff does as well as eliminating the terrorism that would be caused by doing the aff.

AT: perm(2nc)

Group the perms:

Either they are severance or intrinsic because they change the aff and add sequencing - voting issue for competitive equity

-OR-

They don't solve - if we win a 1% risk of a link to the DA you should prefer the counterplan, which solves better then case itself

AT: legalizing marijuana doesn't stop racial profiling

Racial progress has occurred though legal change and more in the area of drug laws is still possible---reject pessimism because it ignores specific reforms that achieved lasting reductions in racial inequality

Michael **Omi 13,** and Howard Winant, Resistance is futile?: a response to Feagin and Elias, Ethnic and Racial Studies Volume 36, Issue 6, p. 961-973, 2013 Special Issue: Symposium - Rethinking Racial Formation Theory

In Feagin and Elias's account, white racist rule in the USA appears unalterable and permanent. There is little sense that the 'white racial frame' evoked by systemic racism theory changes in significant ways over historical time. They dismiss **important** rearrangements and **reforms** as **merely 'a distraction** from more ingrained structural oppressions and deep lying inequalities that continue to **define US society'** (Feagin and Elias 2012, p. 21). Feagin and Elias use a concept they call 'surface flexibility' to argue that white elites frame racial realities in ways that suggest change, but are merely engineered to reinforce the underlying structure of racial oppression. Feagin and Elias say the phrase 'racial democracy' is an oxymoron – a word defined in the dictionary as a figure of speech that combines contradictory terms. If they mean the USA is a contradictory and incomplete democracy in respect to race and racism issues, we agree. If they mean that people of colour have no democratic rights or political power in the USA, **we disagree**. The USA is a racially despotic country in many ways, but in our view it is also in many respects a racial democracy, **capable of being influenced** towards **more or less inclusive** and redistributive economic **policies**, social policies, or for that matter, imperial policies. What is distinctive about our own epoch in the USA (post-Second World War to the present) with respect to race and racism? ¶ Over the past decades there has been a steady drumbeat of efforts to contain and neutralize civil rights, to restrict racial democracy, and to maintain or even increase racial inequality. Racial disparities in different institutional sites – employment, health, education – persist and in many cases have increased. Indeed, the post-2008 period has seen a dramatic increase in racial inequality. The subprime home mortgage crisis, for example, was a major racial event. Black and brown people were disproportionately affected by predatory lending practices; many lost their homes as a result; race-based wealth disparities widened tremendously. It would be easy to conclude, as Feagin and Elias do, that **white racial dominance has been continuous**

and unchanging throughout US history. But such a perspective **misses** the **dramatic twists** and turns in racial politics that have occurred since the Second World War and the civil rights era.¶ Feagin and Elias claim that we overly inflate the significance of the changes wrought by the civil rights movement, and that we 'overlook the serious reversals of racial justice and persistence of huge racial inequalities' (Feagin and Elias 2012, p. 21) that followed in its wake. **We do not**. In Racial Formation we wrote about 'racial reaction' in a chapter of that name, and elsewhere in the book as well. Feagin and Elias devote little attention to our arguments there; perhaps because they are in substantial agreement with us. While we argue that the right wing was able to 'rearticulate' race and racism issues to roll back some of the gains of the civil rights movement, we also believe that **there are limits to what the right could achieve** in the post-civil rights political landscape.¶ So we agree that the present prospects for racial justice are demoralizing at best. But we do not think that is the whole story. **US racial conditions have changed** over the post-Second World War period, in ways that Feagin and Elias tend to downplay or neglect. Some of the major reforms of the 1960s have **proved irreversible**; they have set **powerful democratic forces in motion**. These racial (trans)formations were the results of unprecedented political mobilizations, led by the black movement, but not confined to blacks alone. Consider the desegregation of the armed forces, as well as key civil rights movement victories of the 1960s: the Voting Rights Act, the Immigration and Naturalization Act (Hart- Celler), as well as important court decisions like Loving v. Virginia that declared anti-miscegenation laws unconstitutional. While we have the greatest respect for the late Derrick Bell, we do not believe that his 'interest convergence hypothesis' effectively explains all these developments. How does Lyndon Johnson's famous (and possibly apocryphal) lament upon signing the Civil Rights Act on 2 July 1964 – 'We have lost the South for a generation' – count as 'convergence'?¶ The US racial regime **has been transformed in significant ways**. As Antonio Gramsci argues, hegemony proceeds through the incorporation of opposition (Gramsci 1971, p. 182). The civil rights reforms can be seen as a classic example of this process; here the US racial regime – under movement pressure – was exercising its hegemony. But Gramsci insists that such reforms – which he calls 'passive revolutions' – cannot be merely symbolic if they are to be effective: oppositions must win real gains in the process. Once again, we are in the realm of politics, not absolute rule.¶ So yes, we think there were important **if partial** victories that shifted the racial state and transformed the significance of race in everyday life. And yes, we think that further victories can take place **both** on the broad terrain of the state and on the more immediate level of social interaction: in daily interaction, in the human psyche and **across civil society**. Indeed we have argued that in many ways the most important accomplishment of the anti-racist movement of the 1960s in the USA was the politicization of the social. In the USA and indeed around the globe, race-based movements demanded not only the inclusion of racially defined 'others' and the democratization of structurally racist societies, but also the **recognition and validation** by **both the state and civil society** of racially-defined experience and identity. These demands **broadened and deepened democracy** itself. They facilitated not only the **democratic gains** made in the USA by the black movement and its allies, but also the political advances towards equality, social justice and inclusion accomplished by other 'new social movements': second-wave feminism, gay liberation, and the environmentalist and anti-war movements among others.¶ **By no means** do we think that the post-war movement upsurge was an unmitigated success. Far from it: all the new social movements were subject to the same 'rearticulation' (Laclau and Mouffe 2001, p. xii) that produced the racial ideology of 'colourblindness' and its variants; indeed all these movements confronted their mirror images in the mobilizations that arose from the political right to counter them. Yet even their incorporation and containment, even their confrontations with the various 'backlash' phenomena of the past few decades, even the need to develop the highly contradictory ideology of 'colourblindness', **reveal the transformative character** of the 'politicization of the social'. While it is not possible here to explore so extensive a subject, it is worth noting that it was the long-delayed eruption of racial subjectivity and self-awareness into the mainstream political arena that set off this transformation, shaping both the democratic and anti-democratic social movements that are evident in US politics today.¶ What are the political implications of contemporary racial trends?¶ Feagin and Elias's use of racial categories can be imprecise. This is not their problem alone; anyone writing about race and racism needs to frame terms with care and precision, and we undoubtedly get fuzzy too from time to time. The absence of a careful approach leads to '**racial lumping**' and essentialisms of various kinds. **This imprecision is heightened in polemic**. In the Feagin and Elias essay the term 'whites' at times refers to all whites, white elites, 'dominant white actors' and very exceptionally, anti-racist whites, a category in which we presume they would place themselves. Although the terms 'black', 'African American' and 'Latino' appear, the term 'people of colour' is emphasized, often in direct substitution for black reference points.¶ In the USA today **it is important not to frame race in a bipolar manner**. The black/white paradigm made more sense in the past than it does in the twenty-first century. The racial make-up of the nation has now changed dramatically. Since the passage of the Immigration Reform Act of 1965, the USA has become more 'coloured'. A

‘majority–minority’ national demographic shift is well underway. Predicted to arrive by the mid-twenty-first century, the numerical eclipse of the white population is already in evidence locally and regionally. In California, for example, non-Hispanic whites constitute only 39.7 per cent of the state's population. While the decline in the white population cannot be correlated with any decline of white racial dominance, the dawning and deepening of racial multipolarity calls into question a sometimes implicit and sometimes explicit black/white racial framework that is evident in Feagin and Elias's essay. Shifting racial demographics and identities also raise general questions of race and racism in new ways that the ‘systemic racism’ approach is not prepared to explain.3¶ Class questions and issues of panethnicizing trends, for example, call into question what we mean by race, racial identity and race consciousness. No racially defined group is even remotely uniform; groups that we so glibly refer to as Asian American or Latino are particularly heterogeneous. Some have achieved or exceeded socio-economic parity with whites, while others are subject to what we might call ‘engineered poverty’ in sweatshops, dirty and dangerous labour settings, or prisons. Tensions within panethnicized racial groups are notably present, and conflicts between racially defined groups (‘black/brown’ conflict, for example) are evident in both urban and rural settings. A substantial current of social scientific analysis now argues that Asians and Latinos are the ‘new white ethnics’, able to ‘work toward whiteness’4 at least in part, and that the black/white bipolarity retains its distinct and foundational qualities as the mainstay of US racism (Alba and Nee 2005; Perlmann 2005; Portes and Rumbaut 2006; Waters, Ueda and Marrow 2007).¶ We question that argument in light of the massive demographic shifts taking place in the USA. Globalization, climate change and above all neoliberalism on a global scale, all drive migration. The country's economic capacity to absorb enormous numbers of immigrants, low-wage workers and their families (including a new, globally based and very female, servant class) without generating the sort of established subaltern groups we associate with the terms race and racism, may be more limited than it was when the ‘whitening’ of Europeans took place in the nineteenth and twentieth centuries. In other words this argument's key precedent, the absorption of white immigrants ‘of a different color’ (Jacobson 1998), may no longer apply. Indeed, we might think of the assimilationist model itself as a general theory of immigrant incorporation that was based on a historically specific case study – one that might not hold for, or be replicated by, subsequent big waves of immigration. Feagin and Elias's systemic racism model, while offering numerous important insights, does not inform concrete analysis of these issues.¶ It is important going forward to understand how groups are differentially racialized and relatively positioned in the US racial hierarchy: once again racism must be seen as a shifting racial project. This has important consequences, not only with respect to emerging patterns of inequality, but also in regard to the degree of power available to different racial actors to define, shape or contest the existing racial landscape. Attention to such matters is largely absent in Feagin and Elias's account. In their view racially identified groups are located in strict reference to the dominant ‘white racial frame’, hammered into place, so to speak. As a consequence, they fail to examine how racially subordinate groups interact and influence each others’ boundaries, conditions and practices. Because they offer so little specific analysis of Asian American, Latino or Native American racial issues, the reader finds her/himself once again in the land (real or imaginary, depending on your racial politics) of bipolar US racial dynamics, in which whites and blacks play the leading roles, and other racially identified groups – as well as those ambiguously identified, such as Middle Eastern and South Asian Americans (MEASA) – play at best supporting roles, and are sometimes cast as extras or left out of the picture entirely.¶ **We** still want to **acknowledge** that blacks have been catching hell and have borne the brunt of the racist reaction of the past several decades. For example, **we agree** with Feagin and Elias's critique of the reactionary politics of incarceration in the USA. The ‘new Jim Crow’ (Alexander 2012) or even the ‘new slavery’ that the present system practises is something that was just in its beginning stages when we were writing Racial Formation. It is now recognized as a national and indeed global scandal. **How is it to be understood?** Of course there are substantial debates on this topic, notably about the nature of the ‘prison-industrial complex’ (Davis 2003, p. 3) and the social and cultural effects of mass incarceration along racial lines. But beyond Feagin and Elias's denunciation of the ferocious white racism that is operating here, **deeper political implications** are worth considering. As Alexander (2012), Mauer (2006), Manza and Uggen (2008) and movement groups like Critical Resistance and the Ella Baker Center argue, the upsurge over recent decades in incarceration rates for black (and brown) men expresses the fear-based, law-and-order appeals that have shaped US racial politics since the rise of Nixonland (Perlstein 2008) and the ‘Southern strategy’. Perhaps even more central, racial repression aims at restricting the **increasing impact of voters of colour** in a demographically shifting electorate.¶ There is a lot more to say about this, but for the present two key points stand out: first, it is not an area where Feagin and Elias and we have any sharp disagreement, and second, for all the horrors and injustices that the ‘new Jim Crow’ represents, incarceration, profiling and similar practices **remain political issues**. **These** practices and **policies are not ineluctable and unalterable dimensions of the US racial regime**. There have been previous waves of reform in these areas. **They can be transformed again** by mass mobilization, electoral shifts and so on. In other words, **resistance is not futile**.¶Speaking of electoral shifts and the formal political arena, how should President Barack Obama be politically situated in this discussion? How do Feagin and Elias explain Obama? Quite amazingly, his name does not appear in their essay. Is he a mere token, an ‘oreo’, a shill for Wall Street? Or does Obama represent a new development in US politics, a black leader of a mass, multiracial party that for sheer demographic reasons alone might eventually triumph over the white people's party, the Republicans? If the President is neither the white man's token nor Neo, the One,5 then once again we are in the world of politics: neither the near-total white despotism depicted by Feagin and Elias, nor a racially inclusive democracy.¶ President Obama continues to enjoy widespread black support, although it is clear that he has not protected blacks against their greatest cumulative loss of wealth in history. He has not explicitly criticized the glaring racial bias in the US carceral system. He has not intervened in conflicts over workers’ rights – particularly in the public sector where many blacks and other people of colour are concentrated. He has not intervened to halt or slow foreclosures, except in ways that were largely symbolic. Workers and lower-middle-class people were the hardest hit by the great recession and the subprime home mortgage crisis, with black families faring worst, and Latinos close behind (Rugh and Massey 2010); Obama has not defended them. Many writers have explained Obama's centrism and unwillingness to raise the issue of race as functions of white racism (Sugrue 2010).¶ The black community – and other communities of colour as well – remains politically divided. While black folk have taken the hardest blows from the reactionary and racist regime that has mostly dominated US politics since Reagan (if not since Nixon), no united black movement has succeeded the deaths of Malcolm and Martin. Although there is always important political activity underway, a relatively large and fairly conservative black middle class, a ‘black bourgeoisie’ in Frazier's (1957) terms, has generally maintained its position since the end of the civil rights era. Largely based in the public sector, and including a generally centrist business class as well, this stratum has continued to play the role that Frazier – and before him, Charles S. Johnson. William Lloyd Warner, Alison Davis and other scholars – identified: vacillation between the white elite and the black masses. Roughly similar patterns operate in Latino communities as well, where the ‘working towards whiteness’ framework coexists with a substantial amount of exclusion and super-exploitation.¶ Alongside class issues in communities of colour, there are significant gender issues. The disappearance of blue-collar work, combined with the assault by the criminal justice system – chiefly profiling by the police (‘stop and frisk’) and imprisonment, have both unduly targeted

and victimized black and brown men, especially youth. Women of colour are also targeted, especially by violence, discrimination and assaults on their reproductive rights (Harris-Perry 2011); profiling is everywhere (Glover 2009).¶ Here again we are in the realm of racial politics. Debate proceeds in the black community on Obama's credibilty, with Cornel West and Tavis Smiley leading the critics. But it seems safe to say that in North Philly, Inglewood or Atlanta's Lakewood section, the president remains highly popular. Latino support for Obama remains high as well. Feagin and Elias need to clarify their views on black and brown political judgement. Is it attuned to political realities or has it been captured by the white racial frame? Is Obama's election of no importance?¶ ***¶ In conclusion, do Feagin and Elias really believe that white power is so complete, so extensive, so 'sutured' (as Laclau and Mouffe might say) as they suggest here? Do they mean to suggest, in Borg-fashion, that 'resistance is futile?' This seems to be the underlying political logic of the 'systemic racism' approach, perhaps unintentionally so. Is white racism so ubiquitous that no meaningful political challenge can be mounted against it? Are black and brown folk (yellow and red people, and also others unclassifiable under the always- absurd colour categories) utterly supine, duped, abject, unable to exert any political pressure? Is such a view of race and racism even recognizable in the USA of 2012? And is that a responsible political position to be advocating? Is this what we want to teach our students of colour? Or our white students for that matter?¶ We suspect that if pressed, Feagin and Elias would concur with our judgement that racial conflict, both within (and against) the state and in everyday life, is a **fundamentally political** process. We think that they would also accept our claim that the ongoing **political realities of race** provide **extensive evidence** that people of colour in the USA are not so **powerless**, and that whites are not so omnipotent, as Feagin and Elias's analysis suggests them to be.¶ Racial formation theory allows us to see that there are contradictions in racial oppression. The racial formation approach reveals that white racism is unstable and constantly challenged, from the national and indeed global level down to the personal and intra-psychic conflicts that we all experience, no matter what our racial identity might be. While racism – largely white – continues to flourish, it is not monolithic. Yes, there have been enormous increases in racial inequality in recent years. But movement-based anti-racist opposition continues, and sometimes scores victories. **Challenges to white racism continue both within the state and in civil society**. Although largely and properly led by people of colour, anti-racist movements also incorporate whites such as Feagin and Elias themselves. Movements may experience setbacks, the reforms for which they fought may be revealed as inadequate, and indeed their leaders may be co-opted or even eliminated, but **racial subjectivity** and self-awareness, unresolved and conflictual both within the individual psyche and the body politic, **abides**. Resistance is not futile.

Case extensions

Going onto case, look at the plan in the vacuum there's a large solvency deficit. The aff has no way to stop the war on drugs, and there are multiple alternate causes in the squo to the racism they say is being caused currently by the war on the drugs, the counterplan is ultimatley going to solve better then the plan could ever do anyway.

AT: plan wont get circumvented

Terror DA extensions

Overview

The terror DA becomes an immediate net benefit coming out of the 1nc at the point in which the ff cant solve for terrorist groups the work within drug cartel you should prefer the counterplan which solves for the plan plus more

on an impact level the DA takes out impact the aff may garner, due to the pure fact the impact to the DA is extinction

AT: terror low in squo now

Terror threat high now—encryption and radicalization

Investor's Business Daily, 6-23-2015, "Despite Obama's Claim, Our Terror Threat Level Is High," http://news.investors.com/ibd-editorials/062315-758709-diminishing-us-power-has-elevated-our-terror-threat-level.htm

Homeland Security: The president repeatedly claims we're safer than ever. The chairman of the House Intelligence Committee just warned of the opposite. Apparently we have difficulty tracking U.S.-based terrorist cells. The attitude of the Obama administration toward terrorism is summed up by the National Terrorism Advisory System page on the Homeland Security website. "There are no current alerts," it reports. And "there are no expired alerts." Nearby is the question, "Was this page helpful?" The answer is no. The five post-9/11 color-coded terrorism alert levels, abandoned in 2011, were lampooned by comedians for being vague and based on hidden criteria. With the threat level never dropping below "elevated" (yellow), down to "guarded" (blue) or "low" (green), the public was ignoring it, it was said. But now, in its place, is a National Terrorism Advisory System that never issues alerts. In fact, over nearly six and a half years, President Obama has not once, under either the old or new system, issued an alert. Last August he promised "things are much less dangerous now than they were 20 years ago, 25 years ago, or 30 years ago." That contradicted his own Joint Chiefs chairman, secretary of defense, and even his then-Attorney General Eric Holder, who called potential undetectable explosives smuggled in from Syria the most frightening thing he had seen while in office. Enter House Intelligence Committee Chairman Devin Nunes, R-Calif., who told CBS' "Face the Nation" on Sunday that "we face the highest threat level we have ever faced in this country today . .. including after 9/11." Because of obstacles such as encrypted Internet chat rooms, "we are having a tough time tracking terrorist cells," according to Nunes. And "the flow of fighters" from Western nations who have been radicalized into the Islamic State, but "who have now come out" and may seek to commit terrorist attacks back home, is another reason the threat is greater than ever. Nunes noted that the FBI has "cases open in 50 states." Then there is civil war in Yemen, with the AQAP branch of al-Qaida "everywhere," according to Nunes. Last September, outlining his noncombat approach against the Islamic State, Obama cited his Yemen policy as the model. Eleven days later, Iranian-backed Houthi rebels toppled the U.S.-backed government. Obama is poised to make a nuclear deal with those same Iranians, lifting sanctions and handing Tehran tens of billions in cash to terrorize even more and gain regional dominance — all before getting nuclear weapons, which will launch an atomic arms race in the Mideast. Russia's new aggressiveness

counters Obama's claims that the Cold War is ancient history. Iran, the Islamic State and other terrorists are actually, while lacking Moscow's massive nuclear arsenal, a greater threat because of the theocratic-based, self-destructive irrationality and instability underlying their motivations. The Soviets, after all, never murdered thousands of Americans on their own soil. Far less powerful Islamist fanatics did. Under the old color-coded system, today's level of alert would be "severe" (red).

Terror threat high now—Al Qaeda initiatives prove

Mail Online, 7-15-2015, "Terror alert remains high," http://www.dailymail.co.uk/news/article-181751/Terror-alert-remains-high.html

Britain and the US remained on terror alert today, following a call from Osama bin Laden's deputy for Muslims to attack the "missions" of the two countries. An audio tape said to have come from Ayman al-Zawahri was played on Arabic television station al-Jazeera, urging "brothers" to follow the example of the September 11 hijackers. "Consider your 19 brothers who attacked America in Washington and New York with their planes as an example," said the voice, identified as al-Zawahri by al-Jazeera, which did not say how it got the tape. "Attack the missions of the United States, the UK, Australia and Norway and their interests, companies and employees. Turn the ground beneath their feet into an inferno and kick them out of your countries," said the tape. "Know that you are not alone in this battle. Your mujahadeen brothers are following the enemies as well and are lying in wait for them." Al-Zawahri, who has not been seen since the war in Afghanistan, lashed out at Arab leaders for offering "airports and the facilities" to the Allied troops, in an apparent reference to the war on Iraq. His call to arms came as British and US embassies in the Saudi capital Riyadh remained shut amid fears they could be targeted in "imminent" terrorist attacks, and America upped its homeland terror alert status. Hijack plot foiled And details emerged of a possible al Qaida plot to hijack a civilian airliner in the Saudi town of Jeddah and crash it into a bank. According to reports, three armed Moroccans arrested in Jeddah's airport on Monday had planned the suicide hijack and hoped to crash the plane into the headquarters of Saudi's National Commercial Bank. It was not clear if they were linked to last week's triple suicide bombings of foreign residential compounds in Riyadh which killed 34, including two Britons, or similar bombings in Morocco on Friday. Security boosted Security officials warned that al Qaida appeared to be entering an "active" phase of attacks, aimed at showing it was still operational despite the so-called "war on terror". The British, German and Italian embassies in the Saudi capital Riyadh closed to the public yesterday following intelligence reports that terrorist attacks were being planned. The British consulate in Jeddah and trade office in al Khobar were also closed from yesterday. It is expected the offices will reopen on Saturday, although the situation will be kept under review. The US closed its embassy and consulates in the Middle Eastern kingdom on Tuesday, a week after the series of suicide bomb attacks in Riyadh. The Bush administration raised America's terror alert level to orange, its second highest level, amid fears that the wave of terrorist attacks in Saudi, Morocco and Israel will spread to the US.

Homegrown terrorism on the rise—74 plots discovered

Carrie **Blackmore, 1-17-2015**, "Number of homegrown terrorists is rising," USA TODAY, http://www.usatoday.com/story/news/nation/2015/01/17/number-of-homegrown-terrorists-is-rising/21940159/

CINCINNATI — We are far from knowing the outcome of the case against Christopher Cornell, the young local man accused of plotting an attack on the U.S. Capitol, but if he is convicted, he would be added to a growing list of homegrown jihadist terrorists. From Sept. 11, 2001, to January 2014, there were 74 known terrorist plots perpetrated by Americans, lawful U.S. residents or visitors largely radicalized here in the United States, according to the most recent data reported by the Congressional Research Service. Five of those plots were carried out before law enforcement was able to intervene. Fifty-three of the cases – almost 72 percent – happened after April 2009. That's a 152 percent increase over that time period – and constitutes a spike, according to the report by the service, an agency that works exclusively for the U.S. Congress, providing policy and legal analysis to committees and members of the House and Senate. "It may be too early to tell how sustained this uptick is," the report reads. "Regardless, the apparent spike in such activity after April 2009 suggests that ideologies supporting violent jihad continue to influence some Americans – even if a tiny minority." A review of the 74 cases shows that just seven were initiated by someone working independently, a lone wolf. Forty-five of the 74 planned to attack a domestic target.

Case turns?

Terrorism is used as a justification for increased surveillance – empirics prove and turns case

Haggerty and Gazso 20**05** (Kevin, Professor of Criminology and Sociology at the University of Alberta; Amber, Associate Professor in the Department of Sociology at York University, The Canadian Journal of Sociology / Cahiers canadiens de sociologie, Vol. 30, No. 2 (Spring, 2005), pp. 169-187 "Seeing beyond the Ruins: Surveillance as a Response to Terrorist Threats" JSTOR; accessed 7/17/15 JH @ DDI)

A climate of fear and anxiety helped ease the passage of such laws (Davis, 2001). However, a great deal of organizational opportunism was also at work. Many of the surveillance proposals adopted in the days after the attack were recycled from earlier legislative efforts. In previous incarnations these proposals had often been legitimated as essential for the international "war on drugs" or to address other crimes, such as money laundering. The September 11 th attacks gave the authorities a new and apparently unassailable legitimation for long-standing legislative ambitions. Before the dust had settled on Manhattan, the security establishment had mobilized to expand and intensify their surveillance capabilities, justifying existing proposals as necessary tools to fight the new war against terrorism. Ultimately, the police, military and security establishment reaped an unanticipated windfall of increased funding, new technology and loosened legislative constraints by strategically invoking fears of future attacks. There are several examples of such opportunism. Since at least 1999, when Congress initially turned down their request, the U.S. Justice Department has lobbied for the development of new "secret search" provisions. Likewise, prior to the attacks, the FBI and the National Telecommunications and Information Systems Security Committee had a lengthy shopping list of desired surveillance-related measures including legal enhancements to their wiretapping capabilities, legal constraints on the public use of cryptography, and provisions for governmental agents to compel Internet service providers to provide information on their customers (Burnham, 1997). All of these proposals were recycled and implemented after the September 11th attacks now justified as integral tools in the "war on terrorism." New provisions requiring banks to exercise "due diligence" in relation to their large depositors were originally justified by the authorities as a means to counter the "war on drugs." The opportunism of many of these efforts was inadvertently revealed by an RCMP Sergeant when, during a discussion about new official antiterrorism powers to monitor financial transactions, he noted that: "We've been asking for something like this for four years. It's really our best weapon against biker gangs" [emphasis added] (Corcan, 2001). In Canada, the Federal Privacy Commissioner was particularly alarmed by the development of what he

referred to as a "Big Brother database." This amounts to a detailed computerized record of information about Canadian travelers. Although justified as a means to counter terrorism, the data will be made available to other government departments for any purpose they deem appropriate. Such provisions raise the specter of informational "fishing expeditions." Indeed, the Canadian government has already indicated that this ostensible anti-terrorist database will be used to help monitor tax evaders and catch domestic criminals. It will also be used to scrutinize an individual's travel history and destinations, in an effort to try and determine whether they might be a pedophile or money launderer (Radwanski, 2002). While these are laudable goals, they also reveal how a host of other surveillance agendas have been furthered by capitalizing on the new anti-terrorism discourse.

T

T “it’s”

Interpretation- Its can refer to geography

Words and Phrases ‘6 vol 22B p 524

> Nev. 1963. In constitutional provision authorizing Legislature to exceed debt limitation if necessary, expedient or advisable for protection and preservation of any of its property or natural resources, the term "its" has geographical rather than proprietary connotation. Const, art. 9, § 3.—Marlette Lake Co. v, Sawyer, 383 P.2d 369, 79 Nev. 334.— States 115.

Violation-the aff uses the term “it’s” as a means of possession, rather than a term to refer to geography

Standards:

Limits- Prevents explosion of the topic—our interpretation limits the topic to a discussion of how we should curtail domestic surveillance, using the word “it’s” with this definition prevents the topic from becoming about anything the aff pleases.

Grammatical precision—our interp preserves the meaning of the phrase “it’s”

Ground- No ground for the neg to run any of their args---and this isn’t just a neg whine. There would be no CP solvency other than a stale states debate to run against small projects affs or city affs

Voters:

Education- If they are off topic, it ruins the value of debate. The framers of the resolution created it for a reason : for us to learn about a specific topic. If they aren’t on topic and going against the very things we learned in elementary school, we don’t learn about the topic the way we should and thus destroy the value of debate.

Fairness- The aff is being unfair with their case and interpretation of the resolution. This is explained by the fact they explode the topic by underlimiting it, making it unfair to be the neg because we lose so much ground that we can hardly debate.

Jurisdiction- T is a voter because it is not within the judge’s jurisdiction to vote for an untopical case. The judge’s realm of jurisdiction is the resolution, and nothing else. Even if the aff proves their untopical case to be a good idea, you can’t vote for them when we show they didn’t actually affirm the resolution due to the fact they are off topic.

T

T – not domestic surveillance

A. Domestic surveillance is surveillance of us persons

Small 8 matthew l. Small. United states air force academy 2008 center for the study of the presidency and congress, presidential fellows program paper "his eyes are watching you: domestic surveillance, civil liberties and executive power during times of national crisis" http://cspc.nonprofitsoapbox.com/storage/documents/fellows2008/small.pdf

> Before one can make any sort of assessment of domestic surveillance policies, it is first necessary to narrow the scope of the term "domestic surveillance." Domestic surveillance is a subset of intelligence gathering. Intelligence, as it is to be understood in this context, is "information that meets the stated or understood needs of policy makers and has been collected, processed and narrowed to meet those needs" (lowenthal 2006, 2). In essence, domestic surveillance is a means to an end; the end being intelligence. The intelligence community best understands domestic surveillance as the acquisition of nonpublic information concerning united states persons (executive order 12333 (3.4) (i)). With this definition domestic surveillance remains an overly broad concept. This paper's analysis, in terms of president bush's policies, focuses on electronic surveillance; specifically, wiretapping phone lines and obtaining caller information from phone companies. Section f of the usa patriot act of 2001 defines electronic surveillance as:

B. Violation—Surveillance associated with the illegal drug is targeted at Mexicans

Gordon '15, Professor at the the University of San Francisco (5/23/15, Rebecca, InTheseTimes, "When the War on Drugs in Mexico Comes Back Home to the U.S.", http://inthesetimes.com/article/17782/when-the-war-on-drugs-in-mexico-comes-back-home-to-the-u.s)

In Mexico, the U.S. military is directly involved in the War on Drugs. In this country, that "war" has provided the pretext for the militarization of local police forces and increased routine surveillance of ordinary people going about their ordinary lives.

C. Our standard is

Limits—Any interpretation of domestic that allows the targeting of foreign nationals blows the lid off the topic—that makes it impossible to prepare

D. T is a voter for fairness and prepared debates

K

Cartels prevent states from regulating the market—allows for neoliberal globalization and perpetuates violence

Walker '2 Received Bachelor and Master Degrees in International Relations from the London School of Economics (LSE), University of London. (2002, Julius Walker, Global Politics Network, "The role of the state in the international illicit drugs trade: the case of Colombia and external intervention", http://www.globalpolitics.net/essays/Julius_Walker.pdf)

Ultimately, if it is true that the security environment of the post-Cold War era facilitates the growth of transnational organized crime and the international drugs trade, one could argue that globalization is the driving force behind the international drugs trade. Colombia is a particularly vivid example of the effect the drugs trade can have on a state that was already weak. The situation there has developed so far that the overall situation of transnational organized crime in Colombia may be described as being in the 'symbiotic stage', in which the 'host, the legitimate political and economic sectors now become dependent upon the parasite, the monopolies and networks of organized crime to sustain itself' (Lupsha 1996: 32). Within the overarching framework of globalization, Colombia may thus be termed a 'courtesan state', one which serves the interests embodied in neoliberal globalization and which is a central element in the global policy framework of neoliberalism (Mittelman & Johnston 1999: 117). This, ultimately, is its role in the wider context of an increasingly globalized world.

Conclusion and implications for International Relations

The international trade in illegal drugs, and specifically the huge profits generated and the related violence fuelled by it, have the potential to corrupt the state and all the major social and political groups within it. The combination of the factors that Colombia was a drugs-producing country and also a weak state mired by a long-lasting civil war has enabled precisely this to happen. The impact of the international drugs trade thus acts as a powerful catalyst and reinforces this pre-existing situation. Because of the particular nature of the drugs industry in Colombia – and its complexity – the situation becomes a 'war system'. Both Colombia and the US in a sense become parts of this system, become actors - if involuntary ones - in the international drugs trade, and therefore in transnational organized crime. Colombia is thus a 'failed state' or a 'crimestate' in the sense that it is difficult to determine who exactly is the state. The strength of the international drugs trade is such that even a far more powerful and far less corrupted state, the United States, became involved and in a sense implicated, helping to entrench the 'war system'. All of this happened even though both the Colombian and US governments are in the process of fighting this transnational force. In the light of the 'new security agenda' postulated after the end of the Cold War, this truly seems a fearsome challenge to the international system.

The impact is extinction – neoliberal social organization ensures extinction from resource wars, climate change, and structural violence – only accelerating beyond neoliberalism can resolve its impacts

Williams & Srnicek 13

(Alex, PhD student at the University of East London, presently at work on a thesis entitled 'Hegemony and Complexity', Nick, PhD candidate in International Relations at the London School of Economics, Co-authors of the forthcoming Folk Politics, 14 May 2013, http://criticallegalthinking.com/2013/05/14/accelerate-manifesto-for-an-accelerationist-politics/)

At the begin-ning of the second dec-ade of the Twenty-First Cen-tury, global civilization faces a new breed of cataclysm. These com-ing apo-ca-lypses ridicule the norms and organ-isa-tional struc-tures of the polit-ics which were forged in the birth of the nation-state, the rise of cap-it-al-ism, and a Twen-ti-eth Cen-tury of unpre-ced-en-ted wars. 2. Most significant is the break-down of the planetary climatic system. In time, this threatens the continued existence of the present global human population. Though this is the most crit-ical of the threats which face human-ity, a series of lesser but potentially equally destabilising problems exist along-side and inter-sect with it. Terminal resource depletion, especially in water and energy reserves, offers the prospect of mass starvation, collapsing economic paradigms, and new hot and cold wars. Continued financial crisis has led governments to embrace the para-lyz-ing death spiral policies of austerity, privatisation of social welfare services, mass unemployment, and stagnating wages. Increasing automation in production processes includ-ing 'intel-lec-tual labour' is evidence of the secular crisis of capitalism, soon to render it incapable of maintaining current standards of living for even the former middle classes of the global north. 3. In con-trast to these ever-accelerating cata-strophes, **today's politics is beset by an inability to generate the** new ideas and **modes of organisation necessary to transform our societies to confront** and resolve the **coming annihilations**. While crisis gath-ers force and speed, polit-ics with-ers and retreats. In this para-lysis of the polit-ical ima-gin-ary, the future has been cancelled. 4. Since 1979, the hegemonic global political ideology has been neoliberalism, found in some vari-ant through-out the lead-ing eco-nomic powers. In spite of the deep struc-tural chal-lenges the new global prob-lems present to it, most imme-di-ately the credit, fin-an-cial, and fiscal crises since 2007 – 8, neoliberal programmes have only evolved in the sense of deep-en-ing. This continuation of the neo-lib-eral pro-ject, or neo-lib-er-al-ism 2.0, has begun to apply another round of structural adjustments, most sig-ni-fic-antly in the form of encour-aging new and aggress-ive incur-sions by the private sec-tor into what remains of social demo-cratic insti-tu-tions and ser-vices. This is in spite of the immediately negative eco-nomic and social effects of such policies, and the longer term fun-da-mental bar-ri-ers posed by the new global crises.

The alternative articulates a "counter-conduct" – voting neg pushes towards a cooperative conduct that organizes individuals around a collectively shared commons – affirming this conduct creates a new heuristic that de-couples government from the demand for competition and production

Dardot & Laval 13

(Pierre Dardot, philosopher and specialist in Hegel and Marx, Christian Laval, professor of sociology at the Universite Paris Ouest Nanterre La Defense, *The New Way of the World: On Neoliberal Society*, pgs. 318-321)

This indicates to what extent we must take on board in our own way the main lesson of neo-liberalism: **the subject is always to be constructed**. The whole question is then how to articulate subjectivation with resistance to power. Now, precisely this issue is at the heart of all of Foucault's thought. However, as Jeffrey T. Nealon has recently shown, part of the North American secondary literature has, on the contrary, stressed the alleged break between Foucault's research on power and that of his last period on the history of subjectivity.55 According to the 'Foucault consensus', as Nealon aptly dubs it, the successive impasses of the initial neo-structuralism, and then of the totalizing analysis of panoptical power, led the 'last Foucault' to set aside the issue of power and concern himself exclusively with the aesthetic invention of a style of existence bereft of any political dimension. Furthermore, if we follow this de-politicizing reading of Foucault, the aestheticization of ethics anticipated the neo-liberal mutation precisely by making self-invention a new norm. In reality, far from being oblivious of one another, the issues of power and the subject were always closely articulated, even in the last work on modes of subjectivation. If one concept played a decisive role in this respect, it was 'counter-conduct', as developed in the lecture of 1 March 1978.56 This lecture was largely focused on the crisis of the pastorate. It involved identifying the specificity of the 'revolts' or 'forms of resistance of conduct' that are the correlate of the pastoral mode of power. If such forms of resistance are said to be 'of conduct', it is because they are forms of resistance to power as conduct and, as such, are themselves forms of conduct opposed to this **'power-conduct'**. The term **'conduct'** in fact admits of two meanings: an activity that consists in conducting others, or **'conduction'**; and **the way one conducts oneself** under the influence of this activity of conduction.57 The idea of 'counter-conduct' therefore has the advantage of directly signifying a 'struggle against the procedures implemented for conducting others', unlike the term 'misconduct', which only refers to the passive sense of the word.58 Through 'counter-conduct', people seek both to **escape conduction by others** and to **define a way of conducting themselves towards others**.¶ What relevance might this observation have for a reflection on resistance to neo-liberal governmentality? It will be said that the concept is introduced in the context of an analysis of the pastorate, not government. Governmentality, at least in its specifically neo-liberal form, precisely makes conducting others through their conduct towards themselves its real goal. The peculiarity of this conduct towards oneself, conducting oneself as a personal enterprise, is that it immediately and directly induces a certain conduct towards others: **competition with others**, regarded as so many personal enterprises. Consequently, counter-conduct as a form of resistance to this governmentality must correspond to a conduct that is indivisibly a conduct towards oneself and a conduct towards others. One cannot struggle against such an indirect mode of conduction by appealing for rebellion against an authority that supposedly operates through compulsion external to individuals. If 'politics is nothing more and nothing less than that which is born with resistance to governmentality, the first revolt, the first confrontation',59 it means that ethics and politics are absolutely inseparable.¶ To the subjectivation-subjection represented by ultra-subjectivation, we must oppose a subjectivation by forms of counter-conduct. To neo-liberal governmentality as a specific way of conducting the conduct of others, we must therefore oppose a no less specific double refusal: **a refusal to conduct oneself towards oneself as a personal enterprise** and **a refusal to conduct oneself towards others in accordance with the norm of competition**. As such, the double refusal is not 'passive disobedience'.60 For, if it is true that the personal enterprise's relationship to the self immediately and directly determines a certain kind of relationship to others – generalized competition – conversely, the refusal to function as a personal enterprise, which is self-distance and a refusal to line up in the race for performance, can only practically occur on condition of **establishing cooperative relations with others**, **sharing and pooling**. In fact, where would be the sense in a self-distance severed from any cooperative practice? At worst, a cynicism tinged with contempt for those who are dupes. At best, simulation or double dealing, possibly dictated by a wholly justified concern for self-preservation, but ultimately exhausting for the subject. Certainly not a counter-conduct. All the more so in that such a game could lead the subject, for want of anything better, to take refuge in a **compensatory identity**, which at least has the advantage of some stability by contrast with the imperative of indefinite self-transcendence. Far from threatening the neo-liberal order, **fixation with identity**, whatever its nature, looks like **a fall-back position** for subjects weary of themselves, for all those who have abandoned the race or been excluded from it from the outset. Worse, **it recreates the logic of competition** at the level of relations between 'little communities'. Far from being valuable in itself, independently of any articulation with politics, individual subjectivation is bound up at its very core with collective subjectivation. In this sense, sheer aestheticization of ethics is a pure and simple abandonment of a genuinely ethical attitude. The invention of new forms of existence can only be **a collective act**, attributable to the multiplication and intensification of **cooperative counter-conduct**. A collective refusal

to ‘work more’, if only local, is a good example of an attitude that can pave the way for such forms of counter-conduct. In effect, it breaks what André Gorz quite rightly called the ‘structural complicity’ that binds the worker to capital, in as much as ‘earning money’, ever more money, is the decisive goal for both. It makes an initial breach in the ‘immanent constraint of the “ever more”, “ever more rapidly”‘.61¶ The genealogy of neo-liberalism attempted in this book teaches us that the new global rationality is in no wise an inevitable fate shackling humanity. Unlike Hegelian Reason, it is not the reason of human history. It is itself **wholly historical** – that is, relative to strictly singular conditions that cannot legitimately be regarded as untranscendable. The main thing is to understand that nothing can release us from the task of promoting a different rationality. That is why the belief that the financial crisis by itself sounds the death-knell of neo-liberal capitalism is the worst of beliefs. It is possibly a source of pleasure to those who think they are witnessing reality running ahead of their desires, without them having to move their little finger. It certainly comforts those for whom it is an opportunity to celebrate their own past ‘clairvoyance’. At bottom, it is the least acceptable form of intellectual and political abdication. Neo-liberalism is not falling like a ‘ripe fruit’ on account of its internal contradictions; and traders will not be its undreamed-of ‘gravediggers’ despite themselves. Marx had already made the point powerfully: ‘History does nothing’.62 There are only human beings who act in given conditions and seek through their action **to open up a future for themselves**. It is up to us to enable a new sense of possibility to blaze a trail. The government of human beings can be aligned with horizons other than those of maximizing performance, unlimited production and generalized control. **It can sustain itself with self-government that opens onto different relations with others than** that of **competition between ‘self-enterprising actors’**. The practices of ‘communization’ of knowledge, mutual aid and cooperative work can delineate the features of a different world reason. Such an alternative reason cannot be better designated than by the term **reason of the commons**.

ptx

Obama can hold off a veto now – but his political capital is key

Walsh and Barrett 7/16 (Deirdre, Senior Congressional Producer for CNN, Ted, senior congressional producer for CNN Politics, "WH dispatches Joe Biden to lock down Iran deal on Capitol Hill," CNN, 7/16/2015, http://www.cnn.com/2015/07/15/politics/iran-deal-white-house-democrats-congress/)//duncan

Two days after the Iran deal was unveiled, **the** Obama **administration's sales job is in full swing.**¶ Vice President Joe Biden traveled to Capitol Hill on Wednesday to convince House Democrats to support the deal, while a small group of senators were invited to the White House to get their questions answered directly from officials who sat across from the Iranians at the negotiating table. Biden meets with Senate Democrats of the Foreign Relations Committee on Thursday.¶ House lawmakers said Biden was candid about the strengths and weaknesses of the compromise deal. One described his behind closed doors pitch.¶ "I'm going to put aside my notes and talk to you from my heart because I've been in this business for 45 years," Biden said in his opening comments, according to Rep. Bill Pascrell, D-New Jersey, who attended the session.¶ "I'm not going to BS you. I'm going to tell you exactly what I think," the vice president reportedly said.¶ Obama got a boost from the leader of his party in the chamber when Minority Leader Nancy Pelosi formally announced Thursday that she was backing the deal.¶ SInce Republicans in the House and Senate are firmly against the Iran nuclear deal -- announced by President Barack Obama on Tuesday -- **the administration is cranking up its campaign to sway concerned Democrats to back the agreement.**¶ Under legislation that allows Congress to review the agreement, the White House needs to secure enough votes from members of his own party to sustain the President's promised veto on an resolution of disapproval -- 145 in the House and 34 in the Senate.¶ After the session with Biden, several House Democrats stressed that while the process is just beginning, right now **the administration likely has the votes to sustain the President's veto on a resolution to block the deal.**¶ "I'm confident they will like it when they understand it all," the vice president told reporters on his way into the session, beginning what will be a two month campaign culminating in a vote, expected in September.¶ Democrats, both for and against the deal, praised Biden's presentation.¶ "Joe Biden was as good as I've seen him," Rep. John Larson, D-Connecticut, told CNN. "I thought he did an excellent job."¶ Texas Democratic Rep. Henry Cuellar said Biden is a "master of detail" and helped clarify some concerns he had about the verification provisions in the deal, but he still planned to carefully study it and said he was undecided.¶ Pascrell also cited the verification issue as a potential sticking point but said he is leaning 'yes' on the agreement.¶ "On our side of the aisle **there is concern and skepticism shared by a number of members but an openness to be persuaded** if the facts take them that way," Rep. Gerry Connolly of Virginia said. "I think (Biden) made some real progress on behalf of the administration today."¶ But Democratic Rep. Steve Israel of New York, a former member of Democratic leadership, told reporters he wasn't sold yet.¶ "For me, I still have some very significant questions with respect to lifting of the embargo on conventional arms. And missiles. The (International Atomic Energy Agency) verification process for me is not any time anywhere, I think there are some very significant delays built into that," Israel said.¶ Larson noted that both Biden's presentation, along with Hillary Clinton's a day earlier, who he said spoke favorably about the deal, helped lay the groundwork for most Democrats to back the

White House.¶ At the same time on Wednesday that the President held a news conference trying to persuade the public he had brokered an strong and effective deal with Iran, Sen. Joe Manchin, a Democrat from West Virginia, and a handful of other senators, were in a separate part of the White House meeting with some of the President's top negotiators, who had just returned from Vienna.¶ "I was very satisfied with an awful lot of the answers we received," Manchin told CNN.¶ **The intimate meeting for senators was another example of the White House's effort to shore up support in the Senate where leaders believe as many as 15 Democrats could oppose the deal.** If they did, it could provide Senate Republicans the votes needed to override a veto of the disapproval resolution and scuttle the deal.¶ But Manchin, a centrist who has close relations with senators on both sides of the aisle, said at this point he has not detected major blowback from Senate Democrats to the deal.¶ "At caucus yesterday I didn't get a reading there is hard, hard opposition. I did not," he said.¶ In fact, Manchin said he thought Republicans actually might struggle getting the 60 votes they will need to pass the disapproval resolution, much less the dozen or so votes that might be needed to sustain a veto.¶ One key senator whose position will be closely monitored by the White House and his colleagues from both parties on the Hill, is Sen. Chuck Schumer of New York, the third-ranking Democrats who is poised to become the Democratic leader in the next Congress. Schumer has many Jewish voters in his state who are wary of the impact of the Iran agreement on the security of Israel. Schumer said he is skeptical of the deal and won't decide whether to support it before doing his homework.¶ "I will sit down, I will read the agreement thoroughly and then I'm gonna speak with officials -- administration officials, people all over on all different sides," he said when asked about his decision-making process. "Look, this is a decision that shouldn't be made lightly and I am gonna just study this agreement and talk to people before I do anything else."¶ Sen. John McCain, R-Arizona, a leading critic of the agreement with Iran, said "**the pressure will be enormous from the administration," as it tries to keep Democrats from defecting**. As chairman of the Armed Services Committee, McCain said he intends to hold hearings to demonstrate what he calls the "fatal flaws" in the deal.¶ House **conservatives** speaking at a forum sponsored by the Heritage Foundation, a conservative think tank, one after another ripped the Iran deal. But they **conceded that ultimately they may not be able to block it.¶** "The game is rigged in favor of getting this done" Ohio Rep. Jim Jordan said.

Republicans hate the plan

Vance '10, columnist and policy adviser for the Future of Freedom Foundation, an associated scholar of the Ludwig von Mises Institute (11/24/10, Laurence M. Vance, The Freedom of Future Foundation,"WHY DON'T CONSERVATIVES OPPOSE THE WAR ON DRUGS?", http://fff.org/explore-freedom/article/dont-conservatives-oppose-war-drugs/)

Yet, no matter how much it costs to wage the federal drug war (more than $41 billion according to a just-released Cato Institute study), conservatives generally support it. I know of no prominent conservative who publicly calls for drug legalization. I know of no Republican candidate in the recent election (outside of Ron Paul) who has ever publicly voiced his support for the decriminalization of drug possession. Republicans in Congress — by an overwhelming majority — have even criminalized the purchase of over-the-counter allergy-relief products like Sudafed because they contain pseudoephedrine.

Negative arguments about how the war on drugs ruins lives, erodes civil liberties, and destroys financial privacy are unpersuasive to most conservatives. None of these things matter to the

typical conservative because they, like most Americans of any political persuasion, see using drugs for recreational use as immoral.

Failure will spur prolif and war with Iran – the plan tanks Obama's ability to hold off Congress

Beauchamp 14 (Zack – B.A.s in Philosophy and Political Science from Brown University and an M.Sc in International Relations from the London School of Economics, former editor of TP Ideas and a reporter for ThinkProgress.org. He previously contributed to Andrew Sullivan's The Dish at Newsweek/Daily Beast, and has also written for Foreign Policy and Tablet magazines, now writes for Vox , "How the new GOP majority could destroy Obama's nuclear deal with Iran," http://www.vox.com/2014/11/6/7164283/iran-nuclear-deal-congress,)

There is one foreign policy issue on which the GOP's takeover of the Senate could have huge ramifications, and beyond just the US: Republicans are likely to try to torpedo President Obama's ongoing efforts to reach a nuclear deal with Iran. And they just might pull it off. November 24 is the latest deadline for a final agreement between the United States and Iran over the latter's nuclear program. That'll likely be extended, but it's a reminder that the negotiations could soon come to a head. Throughout his presidency, **Obama has prioritized these negotiations**; he likely doesn't want to leave office without having made a deal. But if Congress doesn't like the deal, or just wants to see Obama lose, it has the power to torpedo it by imposing new sanctions on Iran. Previously, Senate Majority Leader Harry Reid used procedural powers to stop this from happening and save the nuclear talks. But Senate Majority Leader Mitch McConnell may not be so kind, and he may have the votes to destroy an Iran deal. If he tries, we could see one of **the most important legislative fight**s **of Obama's presidency.** Why Congress can bully Obama on Iran sanctions At their most basic level, the international negotiations over Iran's nuclear program (they include several other nations, but the US is the biggest player) are a tit-for-tat deal. If Iran agrees to place a series of verifiable limits on its nuclear development, then the United States and the world will relax their painful economic and diplomatic sanctions on Tehran. "The regime of economic sanctions against Iran is arguably the most complex the United States and the international community have ever imposed on a rogue state," the Congressional Research Service's Dianne Rennack writes. To underscore the point, Rennack's four-page report is accompanied by a list of every US sanction on Iran that goes on for 23 full pages. The US's sanctions are a joint Congressional-executive production. Congress puts strict limits on Iran's ability to export oil and do business with American companies, but it gives the president the power to waive sanctions if he thinks it's in the American national interest. "In the collection of laws that are the statutory basis for the U.S. economic sanctions regime on Iran," Rennack writes, "the President retains, in varying degrees, the authority to tighten and relax restrictions." The key point here is that Congress gave Obama that power — which means they can take it back. "You could see a bill in place that makes it harder for the administration to suspend sanctions," Ken Sofer, the Associate Director for National Security and International Policy at the Center for American Progress (where I worked for a little under two years, though not with Sofer directly), says. "You could also see a bill that says the president can't agree to a deal unless it includes the following things or [a bill] forcing a congressional vote on any deal." Imposing new sanctions on Iran wouldn't just stifle Obama's ability to remove existing sanctions, it would undermine Obama's authority to negotiate with Iran at all, sending the message to Tehran that Obama is not

worth dealing with because he can't control his own foreign policy. So **if Obama wants to make a deal with Iran, he needs Congress to play ball**. But it's not clear that Mitch McConnell's Senate wants to. Congress could easily use its authority to kill an Iran deal To understand why the new Senate is such a big deal for congressional action on sanctions, we have to jump back a year. In November 2013, the Obama administration struck an interim deal with Iran called the Joint Plan of Action (JPOA). As part of the JPOA, the US agreed to limited, temporary sanctions relief in exchange for Iran limiting nuclear program components like uranium production. Congressional Republicans, by and large, hate the JPOA deal. Arguing that the deal didn't place sufficiently serious limits on Iran's nuclear growth, the House passed new sanctions on Iran in December. (There is also a line of argument, though often less explicit, that the Iranian government cannot be trusted with any deal at all, and that US policy should focus on coercing Iran into submission or unseating the Iranian government entirely.) Senate Republicans, joined by more hawkish Democrats, had the votes to pass a similar bill. But in February, Senate Majority leader Harry Reid killed new Iran sanctions, using the Majority Leader's power to block consideration of the sanctions legislation to prevent a vote. McConnell blasted Reid's move. "There is no excuse for muzzling the Congress on an issue of this importance to our own national security," he said. So now that McConnell holds the majority leader's gavel, it will remove that procedural roadblock that stood between Obama and new Iran sanctions. To be clear, it's far from guaranteed that Obama will be able to reach a deal with Iran at all; negotiations could fall apart long before they reach the point of congressional involvement. But if he does reach a deal, and Congress doesn't like the terms, then they'll be able to kill it by passing new sanctions legislation, or preventing Obama from temporarily waiving the ones on the books. And make no mistake — imposing new sanctions or limiting Obama's authority to waive the current ones would kill any deal. If Iran can't expect Obama to follow through on his promises to relax sanctions, it **has zero incentive to limit its nuclear program**. "If Congress adopts sanctions," Iranian Foreign Minister Javad Zarif told Time last December, "the entire deal is dead." Moreover, it could fracture the international movement to sanction Iran. The **U**nited **S**tates is far from Iran's biggest trading partner, so it depends on international cooperation in order to ensure the sanctions bite. If it looks like the US won't abide by the terms of a deal, **the broad-based international sanctions regime could collapse**. Europe, particularly, might decide that going along with the sanctions is no longer worthwhile. "Our ability to coerce Iran is largely based on whether or not the international community thinks that we are the ones that are being constructive and [Iranians] are the ones that being obstructive," Sofer says. "If they don't believe that, then the international sanctions regime falls apart." This could be one of the biggest fights of Obama's last term It's true that Obama could veto any Congressional efforts to blow up an Iran deal with sanctions. But a two-thirds vote could override any veto — and, according to Sofer, an override is entirely within the realm of possibility. "There are plenty of Democrats that will probably side with Republicans if they try to push a harder line on Iran," Sofer says. For a variety of reasons, including deep skepticism of Iran's intentions and strong Democratic support for Israel, whose government opposes the negotiations, Congressional Democrats are not as open to making a deal with Iran as Obama is. Many will likely defect to the GOP side out of principle. The real fight, Sofer says, will be among the Democrats — those who are willing to take the administration's side in theory, but don't necessarily think a deal with Iran is legislative priority number one, and maybe don't want to open themselves up to the political risk. These Democrats "can make it harder: you can filibuster, if you're Obama you can veto — you can make it impossible for a full bill to be passed out of Congress on Iran," Sofer says. **But it'd be a really tough battle, one that would consume a lot of energy and lobbying effort that Democrats might prefer to spend pushing on other issues.**

"I'm not really sure they're going to be willing to take on a fight about an Iran sanctions bill," Sofer concludes. "I'm not really sure that the Democrats who support [a deal] are really fully behind it enough that they'll be willing to give up leverage on, you know, unemployment insurance or immigration status — these bigger issues for most Democrats." So if the new Republican Senate prioritizes destroying an Iran deal, **Obama will have to fight very hard to keep it** — without necessarily being able to count on his own party for support. And the stakes are enormous: **if Iran's nuclear program isn't stopped peacefully, then the most likely outcomes are either Iran going nuclear, or war with Iran**. The administration believes a deal with Iran is their only way to avoid this horrible choice. That's why it's been **one of the administration's top priorities** since day one. It's also why this could become one of the biggest legislative fights of Obama's last two years.

Nuke war

Stevens 13 (Philip Stevens, associate editor and chief political commentator for the Financial Times, Nov 14 2013, "The four big truths that are shaping the Iran talks," http://www.ft.com/cms/s/0/af170df6-4d1c-11e3-bf32-00144feabdc0.html)

The who-said-what game about last weekend's talks in Geneva has become a distraction. The six-power negotiations with Tehran to curb Iran's nuclear programme may yet succeed or fail. But wrangling between the US and France on the terms of an acceptable deal should not allow the trees to obscure the forest. The organising facts shaping the negotiations have not changed.¶ The first of these is that Tehran's acquisition of a bomb would be more than dangerous for the Middle East and for wider international security. It would most likely set off a **nuclear arms race** that would see **Saudi Arabia, Turkey and Egypt** signing up to the **nuclear club**. The nuclear **n**on-**p**roliferation **t**reaty would be shattered. A future regional conflict could **draw Israel into launching a pre-emptive nuclear strike.** This is not a region obviously susceptible to **cold war disciplines of deterrence**.¶ The second **ineluctable reality** is that Iran has mastered the nuclear cycle. How far it is from building a bomb remains a subject of debate. Different intelligence agencies give different answers. These depend in part on what the spooks actually know and in part on what their political masters want others to hear. The progress of an Iranian warhead programme is one of the known unknowns that have often wreaked havoc in this part of the world.¶ Israel points to an imminent threat. European agencies are more relaxed, suggesting Tehran is still two years or so away from a weapon. Western diplomats broadly agree that Ayatollah Ali Khamenei has not taken a definitive decision to step over the line. What Iran has been seeking is what diplomats call a breakout capability – the capacity to dash to a bomb before the international community could effectively mobilise against it.¶ The third fact – and this one is hard for many to swallow – is that neither a negotiated settlement nor the air strikes long favoured by Benjamin Netanyahu, Israel's prime minister, can offer the rest of the world a watertight insurance policy.¶ It should be possible to construct a deal that acts as a plausible restraint – and extends the timeframe for any breakout – but no amount of restrictions or intrusive monitoring can offer a certain guarantee against Tehran's future intentions.¶ By the same token, bombing Iran's nuclear sites could certainly delay the programme, perhaps for a couple of years. But, assuming that even the hawkish Mr Netanyahu is not proposing permanent war against Iran, **air strikes would not end it.**¶ You cannot bomb knowledge and technical expertise. To try would be to empower those in Tehran who say the regime will be safe only when, like North Korea, it has a weapon. So when Barack Obama says the US will never allow Iran to get the bomb he is indulging in, albeit understandable, wishful thinking.¶ The **best the** international **community can hope** for is that, in return for a relaxation of sanctions, Iran will make a judgment that it is better off sticking with a threshold capability. To put this another way, if Tehran does step back from the nuclear brink it will be because of **its own calculation of the balance of advantage**.¶ The fourth element in this dynamic is that Iran now has a leadership that, faced with the severe and growing pain inflicted by sanctions, is **prepared to talk**. There is nothing to say that Hassan Rouhani, the president, is any less hard-headed than previous Iranian leaders, but he does seem ready to weigh the options.

Heroin Babies CP

TEXT: The United States federal government should curtail its domestic surveillance in support of the illegal drug trade except for heroin.

Heroin kills people

Forzato '15, Weekend Managing Editor for WTOP's news team. (3/16/2015, Jamie Forzato, WTOP, "Dealing death: The heroin epidemic", http://wtop.com/local/2015/03/dealing-death-heroin-epidemic/slide/1/)

Heroin is killing more people nationwide than ever before. It's cheaper and more potent. The customers are younger. The Centers for Disease Control and Prevention reports fatal overdoses have nearly tripled since 2010.

"Yes, it's the cheapest drug out there. But it's the most powerful drug there is on Earth. It's a wonder I'm still alive," Lancaster says.

He started snorting the drug in his early 30s with his fiancée, and their addiction spun out of control. She overdosed and died in 2000.

"I was just, in a way, tying to end it. I wouldn't say I was suicidal but I didn't care."

Since then, Lancaster has spent seven of the last 14 years behind bars, because as he says, he's been chasing the high.

"I started out with an $8 to $10 habit a day. That went to $300 a day. I was shooting $50 at a time. Really powerful stuff that would kill a normal person. And that was just so I could get up to brush my teeth … Every day I would have to have that much. Just to be normal. Not to be high. You wouldn't even know it."

He bought and sold heroin laced with other dangerous drugs. But he couldn't afford it anymore.

"I'd go on the Internet and see what the hot items are. I would find out what people were stealing the most. I would go into Walmart and take 30 to 40 gallons of Tide at a time, stick them in a cart and walk right out of the Garden Center with a fake receipt. Just waiting to be caught one day … That disease made me do something I didn't want to do every day."

He was arrested and sentenced to two years at the Fairfax County, Virginia Adult Detention Center, where substance abuse counselor Claudette Wells treats hundreds of inmates every year for heroin addiction.

"We are never surprised at this point at the job titles that people have held, the socioeconomic background of these individuals. Yet drugs and alcohol have taken over their lives and robbed them of their degrees, their jobs and their health," Wells says.

"We certainly have seen our opiate addiction increase. In the last 18 months, I've seen more people between the ages of 20 and 30 with opiate addiction and who have been using opiates for more than five years."

Lancaster says he's been clean for three years, and when he's released he wants to save young adults from the misery he experienced.

“I want to talk to young people about addiction. It’s going to be hard with my record. But I can share stories. I just want to change.”

Drug statistics: How bad the problem is

As Lancaster works toward his goal of helping others, new data from the CDC show the heroin fatal overdose rate quadrupled between 2000 and 2013. The data show the problem is getting worse. Just between 2010 and 2013, heroin deaths tripled.

The D.C. area is not immune. Overdoses rose dramatically in the past few years. In Northern Virginia, heroin deaths jumped about 165 percent between 2011 and 2013.

From 2013 to 2014, the number of heroin deaths in Fairfax County, doubled. Lucy Caldwell, county spokeswoman, says at least 76 people overdosed, and 18 people died in the county in 2014.

In Loudoun County, heroin overdoses skyrocketed 400 percent since 2012.

It’s a big problem in Maryland, too. Gov. Larry Hogan and Anne Arundel County officials have declared it a “public health emergency.”

As of September, about 430 people died from heroin in 2014, according to the latest data from the Maryland Department of Health and Mental Hygiene. That’s nearly as many as the number of vehicle fatalities during the entire year of 2013.

Racism

Black inmates aren't incarcerated for drug offenses—jails are full of violent criminals

Riley '14, Editorial board member of the Wall Street Journal. (6/17/14, Jason L. Riley, Encounter Books, "Please Stop Helping Us: Six Ways That Liberals Make It Harder for Minorities to Succeed", No pg. number)

Liberal elites would have us deny what black ghetto residents know to be the truth. These communities aren't dangerous because of racist cops or judges or sentencing guidelines. They're dangerous mainly due to black criminals preying on black victims. Nor is the racial disparity in prison inmates explained by the enforcement of drug laws. In 2006 blacks were 37.5 percent of the 1,274,600 people in state prisons, which house 88 percent of the nation's prison population, explained Heather Mac Donald of the Manhattan Institute. "If you remove drug prisoners from that population, the percentage of black prisoners drops to 37 percent—half of a percentage point, hardly a significant difference." It's true that drug prosecutions have risen markedly over the past thirty years. Drug offenders were 6.4 percent of state prison inmates in 1979 but had jumped to 20 percent by 2004. "Even so," wrote Mac Donald, "violent and property offenders continue to dominate the ranks: in 2004, 52 percent of state prisoners were serving time for violence and 21 percent for property crimes, for a combined total over three and a half times that of state drug offenders." Drug-war critics like to focus on federal prisons, where drug offenders climbed from 25 percent of the inmate population in 1980 to 47.6 percent in 2006. "But the federal system held just 12.3 percent of the nation's prisoners in 2006," noted Mac Donald. "So much for the claim that blacks are disproportionately imprisoned because of the war on drugs."

Surveillance allows police to be held accountable

Bailey '13, Science Correspondent for Reason.com (8/30/13, Ronald, Reason.com, "Watched Cops Are Polite Cops", http://reason.com/archives/2013/08/30/watched-cops-are-polite-cops)

This is a really good idea. Earlier this year, a 12-month study by Cambridge University researchers revealed that when the city of Rialto, California, required its cops to wear cameras, the number of complaints filed against officers fell by 88 percent and the use of force by officers dropped by almost 60 percent. Watched cops are polite cops.

Jay Stanley, a policy analyst with the American Civil Liberties Union (ACLU), calls police-worn video cameras "a win/win for both the public and the police." Win/win because video recordings help shield officers from false accusations of abuse as well as protecting the public against police misconduct. The small cameras like theAXON Flex from Taser International attach to an officer's sunglasses, hat, or uniform.

Surveillance allows for prevention of homicide and violent crimes

Gupta '15, Staff Writer for Fortune, (2/9/15, Shalene Gupta, Fortune, "Police are crunching data to stop murders before they happen", http://fortune.com/2015/02/09/smart-policing-data/)

The plan Kansas City ultimately decided on goes a step further than merely data analysis. It also includes a carrot and stick approach to combating crime.

The carrot: the department has five social workers whose mission is to work with anyone who has been identified as at risk of committing a violent crime—about 800 people in all. The social workers try to identify problems that might cause these people to commit violent crimes—substance abuse and unemployment, for example —and get help find ways to address them like job training and getting a birth certificate.

The stick: the police also work with local community leaders to meet with groups they've identified as likely perpetrators of violent crimes. They explain the consequences of crime and let group members know that if one of them commits violence, everyone else will be put under increased police surveillance for any outstanding legal problems like unpaid parking tickets and graffiti.

Dialogue is insufficient to break down racist structures in society—The oppressors won't listen to what they say—News coverage of racially motivated police brutality should've already solved

The impossibility to attain knowledge of every outcome or abuse leaves utilitarianism as the only option for most rational decision-making

Goodin 95 – Professor of Philosophy at the Research School of the Social Sciences at the Australian National University (Robert E., Cambridge University Press, "Utilitarianism As a Public Philosophy" pg 63)

My larger argument turns on the proposition that there is something special about the situation of public officials that makes utilitarianism more plausible for them (or, more precisely, makes them adopt a form of utilitarianism that we would find more acceptable) than private individuals. Before proceeding with that larger argument, I must therefore say what it is that is so special about public officials and their situations that makes it both more necessary and more desirable for them to adopt a more credible form of utilitarianism. Consider, first the argument from necessity. Public officials are obliged to make their choices under uncertainty, and uncertainty of a very special sort at that. All choices-public and private alike- are made under some degree of uncertainty, of course. But in the nature of things, private individuals will usually have more complete information on the peculiarities of their own circumstances and on the ramifications that alternative possible choices might have for them. Public officials, in contrast, at relatively poorly informed as to the effects that their choices will have on individuals, one by one. What they typically do know are generalities: averages and aggregates. They know what will happen most often to most people as a result of their various possible choices. But that is all. That is enough to allow public policy makers to use the utilitarian calculus – if they want to use it at all – to choose general rules of conduct. Knowing aggregates and averages, they can proceed to calculate the utility payoffs from adopting each alternative possible general rule. But they cannot be sure what the payoff will be to any given individual or on any particular occasion. Their knowledge of generalities, aggregates and averages is just not sufficiently fine-grained for that.

Solvency

The war on drugs goes far beyond surveillance—they can't solve

LaSusa and Albaladejo '14 Angelika Albaladejo completed a master's degree in Latin American Studies at Vanderbilt University ; Mike LaSusa graduated from the University of Miami (12/1/14, Mike LaSusa and Angelika Albaladejo, TruthOut, "US Support for Mexico's Drug War Goes Beyond Guns and Money", http://www.truth-out.org/news/item/27726-with-40-presumed-killed-us-secret-manpower-in-mexico-s-drug-war-exposed)

In spite of widely acknowledged and rampant corruption in Mexico's security and law enforcement institutions, implicated in the September disappearance of more than 40 college students, the United States continues to supply the country with well over $100 million per year in military and police assistance, including world-class weapons, training and intelligence.

Now, a new report from the Wall Street Journal is adding fuel to long-standing criticisms of the United States' extensive role in helping to execute the so-called "war on drugs" in Latin America. Evidently, the United States has gone well beyond simply providing diplomatic, financial and technical support for Mexico's fight against organized crime; it even puts its own personnel on the front lines.

The Journal reported recently that the US Marshal Service has repeatedly sent "specialists," disguised as local security forces, into Mexico to hunt down suspected criminals, including some who aren't on a US wanted list.

The dual government system guarantees circumvention

Glennon '14, Professor of International Law, Fletcher School of Law and Diplomacy, Tufts University. (1/11/14, Michael J. Glennon, Harvard National Security Journal, http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf, vol.5)

The Obama Administration has also continued, and in some ways expanded, Bush-era surveillance policies. For example, the Obama Administration continued to intercept the communications of foreign leaders; 26 further insisted that GPS devices may be used to keep track of certain citizens without probable cause or judicial review27 (until the Supreme Court disapproved28); continued to investigate individuals and groups under Justice Department guidelines re-written in 2008 to permit "assessments" that require no "factual basis" for FBI agents to conduct secret interviews, plant informants, and search government and commercial databases;29 stepped up the prosecution of government whistleblowers who uncovered illegal actions,30 using the 1917 Espionage Act eight times during his first administration to prosecute leakers (it had been so used only three times in the previous ninety-two years);31 demanded that businesses turn over personal information about customers in response to "national security letters" that require no probable cause and cannot legally be disclosed;32 continued broad National Security Agency ("NSA") homeland surveillance;33 seized two months of phone records of reporters and editors of the Associated Press for more than twenty telephone lines of its offices and journalists, including their home phones and cellphones, without notice;34 through the NSA, collected the telephone records of millions of Verizon customers, within the United States and between the United States and other countries, on an "ongoing, daily basis" under an

order that prohibited Verizon from revealing the operation;35 and tapped into the central servers of nine leading U.S. internet companies, extracting audio and video chats, photographs, emails, documents, and connection logs that enable analysts to track foreign targets and U.S. citizens.36 At least one significant NSA surveillance program, involving the collection of data on the social connections of U.S. citizens and others located within the United States, was initiated after the Bush Administration left office.37 These and related policies were formulated and carried out by numerous high- and mid-level national security officials who served in the Bush Administration and continued to serve in the Obama Administration.38 Given Senator Obama's powerful criticism of such policies before he took office as President, the question,39 then, is this: Why does national security policy remain constant even when one President is replaced by another who as a candidate repeatedly, forcefully, and eloquently promised fundamental changes in that policy? I. Bagehot's Theory of Dual Institutions A disquieting answer is provided by the theory that Walter Bagehot suggested in 1867 to explain the evolution of the English Constitution.40 While not without critics, his theory has been widely acclaimed and has generated significant commentary.41 Indeed, it is something of a classic on the subject of institutional change generally, and it foreshadowed modern organizational theory.42 In brief, Bagehot's notion was as follows. Power in Britain reposed initially in the monarch alone. Over the decades, however, a dual set of institutions emerged.43 One set comprises the monarchy and the House of Lords.44 These Bagehot called the "dignified" institutions—dignified in the sense that they provide a link to the past and excite the public imagination.45 Through theatrical show, pomp, and historical symbolism, they exercise an emotional hold on the public mind by evoking the grandeur of ages past.46 They embody memories of greatness. Yet it is a second, newer set of institutions—Britain's "efficient" institutions—that do the real work of governing.47 These are the House of Commons, the Cabinet, and the Prime Minister.48 As Bagehot put it: "[I]ts dignified parts are very complicated and somewhat imposing, very old and rather venerable; while its efficient part . . . is decidedly simple and rather modern . . . . Its essence is strong with the strength of modern simplicity; its exterior is august with the Gothic grandeur of a more imposing age."49 Together these institutions comprise a "disguised republic"50 that obscures the massive shift in power that has occurred, which if widely understood would create a crisis of public confidence.51 This crisis has been averted because the efficient institutions have been careful to hide where they begin and where the dignified institutions end.52 They do this by ensuring that the dignified institutions continue to partake in at least some real governance and also by ensuring that the efficient institutions partake in at least some inspiring public ceremony and ritual.53 This promotes continued public deference to the efficient institutions' decisions and continued belief that the dignified institutions retain real power.54 These dual institutions, one for show and the other for real, afford Britain expertise and experience in the actual art of governing while at the same time providing a façade that generates public acceptance of the experts' decisions. Bagehot called this Britain's "double government."55 The structural duality, some have suggested, is a modern reification of the "Noble Lie" that, two millennia before, Plato had thought necessary to insulate a state from the fatal excesses of democracy and to ensure deference to the golden class of efficient guardians.56 Bagehot's theory may have overstated the naiveté of Britain's citizenry. When he wrote, probably few Britons believed that Queen Victoria actually governed. Nor is it likely that Prime Minister Lord Palmerston, let alone 658 members of the House of Commons, could or did consciously and intentionally conceal from the British public that it was really they who governed. Big groups keep big secrets poorly. Nonetheless, Bagehot's enduring insight—that dual institutions of governance, one public and the other concealed, evolve side-by-side to maximize both legitimacy and efficiency—is worth pondering as one possible explanation of why

the Obama and Bush national security policies have been essentially the same. There is no reason in principle why the institutions of Britain's juridical offspring, the United States, ought to be immune from the broader bifurcating forces that have driven British institutional evolution. As it did in the early days of Britain's monarchy, power in the United States lay initially in one set of institutions—the President, Congress, and the courts. These are America's "dignified" institutions. Later, however, a second institution emerged to safeguard the nation's security. This, America's "efficient" institution (actually, as will be seen, more a network than an institution) consists of the several hundred executive officials who sit atop the military, intelligence, diplomatic, and law enforcement departments and agencies that have as their mission the protection of America's international and internal security. Large segments of the public continue to believe that America's constitutionally established, dignified institutions are the locus of governmental power; by promoting that impression, both sets of institutions maintain public support. But when it comes to defining and protecting national security, the public's impression **is mistaken**. America's efficient institution makes most of the key decisions concerning national security, removed from public view and from the constitutional restrictions that check America's dignified institutions. The United States has, in short, moved beyond a mere imperial presidency to a bifurcated system—a structure of double government—in which even the President now exercises little substantive control over the overall direction of U.S. national security policy. Whereas Britain's dual institutions evolved towards a concealed republic, America's have evolved in the opposite direction, toward greater centralization, less accountability, and emergent autocracy.

The DEA makes up all their evidence—they will continue to surveil post-plan and lie about it in court

Shiffman and Cooke '13, Journalists for Reuters (8/5/13, John Shiffman and Kristina Cooke, Reuters, "Exclusive: U.S. directs agents to cover up program used to investigate Americans", http://www.reuters.com/article/2013/08/05/us-dea-sod-idUSBRE97409R20130805)

The undated documents show that federal agents are trained to "recreate" the investigative trail to effectively cover up where the information originated, a practice that some experts say violates a defendant's Constitutional right to a fair trial. If defendants don't know how an investigation began, they cannot know to ask to review potential sources of exculpatory evidence - information that could reveal entrapment, mistakes or biased witnesses.

"I have never heard of anything like this at all," said Nancy Gertner, a Harvard Law School professor who served as a federal judge from 1994 to 2011. Gertner and other legal experts said the program sounds more troubling than recent disclosures that the National Security Agency has been collecting domestic phone records. The NSA effort is geared toward stopping terrorists; the DEA program targets common criminals, primarily drug dealers.

"It is one thing to create special rules for national security," Gertner said. "Ordinary crime is entirely different. It sounds like they are phonying up investigations."

THE SPECIAL OPERATIONS DIVISION

The unit of the DEA that distributes the information is called the Special Operations Division, or SOD. Two dozen partner agencies comprise the unit, including the FBI, CIA, NSA, Internal Revenue Service and the Department of Homeland Security. It was created in 1994 to combat Latin American drug cartels and has grown from several dozen employees to several hundred.

Today, much of the SOD's work is classified, and officials asked that its precise location in Virginia not be revealed. The documents reviewed by Reuters are marked "Law Enforcement Sensitive," a government categorization that is meant to keep them confidential.

"Remember that the utilization of SOD cannot be revealed or discussed in any investigative function," a document presented to agents reads. The document specifically directs agents to omit the SOD's involvement from investigative reports, affidavits, discussions with prosecutors and courtroom testimony. Agents are instructed to then use "normal investigative techniques to recreate the information provided by SOD."

A spokesman with the Department of Justice, which oversees the DEA, declined to comment.

But two senior DEA officials defended the program, and said trying to "recreate" an investigative trail is not only legal but a technique that is used almost daily.

A former federal agent in the northeastern United States who received such tips from SOD described the process. "You'd be told only, 'Be at a certain truck stop at a certain time and look for a certain vehicle.' And so we'd alert the state police to find an excuse to stop that vehicle, and then have a drug dog search it," the agent said.

"PARALLEL CONSTRUCTION"

After an arrest was made, agents then pretended that their investigation began with the traffic stop, not with the SOD tip, the former agent said. The training document reviewed by Reuters refers to this process as "parallel construction."

The two senior DEA officials, who spoke on behalf of the agency but only on condition of anonymity, said the process is kept secret to protect sources and investigative methods. "Parallel construction is a law enforcement technique we use every day," one official said. "It's decades old, a bedrock concept."

A dozen current or former federal agents interviewed by Reuters confirmed they had used parallel construction during their careers. Most defended the practice; some said they understood why those outside law enforcement might be concerned.

"It's just like laundering money - you work it backwards to make it clean," said Finn Selander, a DEA agent from 1991 to 2008 and now a member of a group called Law Enforcement Against Prohibition, which advocates legalizing and regulating narcotics.

Fusion centers are racist—the aff can't solve

Ford '9, Black Agenda report executive director (4/29/2009, Glen Ford, Black Agenda Report, "Black Colleges Profiled as Suspected Havens for "Extremists"", http://www.blackagendareport.com/content/black-colleges-profiled-suspected-havens-%E2%80%9Cextremists%E2%80%9D)

Black Colleges Profiled as Suspected Havens for "Extremists"

A Black Agenda Radio commentary by Glen Ford

"The Fusion Center appears to believe that Black colleges are by definition hotbeds of militancy and rebellion."

Those deep thinkers in the Homeland Security Department are paying good money for some very bad advice on what constitutes a threat to American society. An inkling of the kind of madness that passes for research at Homeland Security, is provided by a recent report to the Virginia State Police. The report, which emanates from the basement offices of something called the Virginia Fusion Center, claims that "a wide variety of terror or extremist groups" have ties to the Hampton Roads region of the state. Specifically, the report claims that the area's two historically Black universities are virtual magnets for terrorists and "extremists" – as are the two Black universities in the Richmond area.

For those who are familiar with the four schools – Norfolk State University, Hampton University, Virginia State University in Petersburg and Virginia Union University in Richmond – the very thought of them as havens for "extremist" politics is laughable. Political action is not what these schools are known for. And that's too bad. But the Fusion Center, whoever they are, appears to believe that Black colleges are by definition hotbeds of militancy and rebellion. I wish that were true, but it's not. It appears the researchers at Virginia's Fusion Center believe that Black institutions are inherently suspect. The Homeland Security Department is paying these guys millions of dollars a year to give vent to their own racist paranoia – and to sic the political bloodhounds on a bunch of apolitical Black students.

"The presumption seems to be that dangerous people are not white, and white people are not dangerous."

The creeps at the Fusion Center see security dangers in diversity, which they believe creates special national security perils. The Hampton Roads region of Virginia has attracted a wide diversity of population from all parts of the globe. The Fusion Center report says, "While the vast majority of these individuals are law-abiding, this ethnic diversity also affords terrorist operatives the opportunity to assimilate easily into society, without arousing suspicion." The statement reveals the screaming racist posing as a researcher. Clearly the report's authors believe that the safest communities, national security-wise, are those that are uniformly white and English-speaking. Presumably, in such surroundings it's hard for the "dangerous" people to hide in a crowd. The presumption seems to be that dangerous people are not white, and white people are not dangerous. White communities are the ones that need protecting, while the non-white or diverse communities represent some degree of danger.

This is pure racist crap, and dangerous stuff to have circulating among the police. The logic of the Fusion Report, if taken seriously, would lead the State to aggressively infiltrate the student ranks at Black colleges. They wouldn't discover much in the way of subversive anything, but it is in the nature of the spy to invent what he can't find.

Violence advantage

Black inmates aren't incarcerated for drug offenses—jails are full of violent criminals

Riley '14, Editorial board member of the Wall Street Journal. (6/17/14, Jason L. Riley, Encounter Books, "Please Stop Helping Us: Six Ways That Liberals Make It Harder for Minorities to Succeed", No pg. number)

Liberal elites would have us deny what black ghetto residents know to be the truth. These communities aren't dangerous because of racist cops or judges or sentencing guidelines. They're dangerous mainly due to black criminals preying on black victims. Nor is the racial disparity in prison inmates explained by the enforcement of drug laws. In 2006 blacks were 37.5 percent of the 1,274,600 people in state prisons, which house 88 percent of the nation's prison population, explained Heather Mac Donald of the Manhattan Institute. "If you remove drug prisoners from that population, the percentage of black prisoners drops to 37 percent—half of a percentage point, hardly a significant difference." It's true that drug prosecutions have risen markedly over the past thirty years. Drug offenders were 6.4 percent of state prison inmates in 1979 but had jumped to 20 percent by 2004. "Even so," wrote Mac Donald, "violent and property offenders continue to dominate the ranks: in 2004, 52 percent of state prisoners were serving time for violence and 21 percent for property crimes, for a combined total over three and a half times that of state drug offenders." Drug-war critics like to focus on federal prisons, where drug offenders climbed from 25 percent of the inmate population in 1980 to 47.6 percent in 2006. "But the federal system held just 12.3 percent of the nation's prisoners in 2006," noted Mac Donald. "So much for the claim that blacks are disproportionately imprisoned because of the war on drugs."

Body Cams

Surveillance allows police to be held accountable

Bailey '13, Science Correspondent for Reason.com (8/30/13, Ronald, Reason.com, "Watched Cops Are Polite Cops", http://reason.com/archives/2013/08/30/watched-cops-are-polite-cops)

This is a really good idea. Earlier this year, a 12-month study by Cambridge University researchers revealed that when the city of Rialto, California, required its cops to wear cameras, the number of complaints filed against officers fell by 88 percent and the use of force by officers dropped by almost 60 percent. Watched cops are polite cops.

Jay Stanley, a policy analyst with the American Civil Liberties Union (ACLU), calls police-worn video cameras "a win/win for both the public and the police." Win/win because video recordings help shield officers from false accusations of abuse as well as protecting the public against police misconduct. The small cameras like theAXON Flex from Taser International attach to an officer's sunglasses, hat, or uniform.

Body cams deter violent behavior

Feige '15 television writer and the author of Indefensible. He spent 15 years as a public defender. (4/10/15, David Feige, Slate, "Brutal Reality",

http://www.slate.com/articles/news_and_politics/jurisprudence/2015/04/police_body_cameras_cops_commit_less_violence_and_complaints_are_real.html)

The theory behind the use of body cameras is that video evidence will provide us with some objective truth about what happens in violent encounters between civilians and police. But that is the wrong way to look at it. As the tapes of King's beating and Garner's death make clear, video evidence can be very powerful but still not overcome the vast structural advantages enjoyed by the police in the legal system. The real value in body cameras is not what they show, but rather what they don't. That's because the presence of cameras induces an absence of violence.

The central study on the effectiveness of body cameras comes from an experiment in Rialto, California. The results were dramatic: After the wholesale adoption of body cameras, complaints against officers dropped 88 percent and use-of-force reports fell by 60 percent. In a randomly assigned pilot project in Mesa, Arizona, 75 percent fewer use-of-force complaints were filed against officers who wore the cameras than against those who did not.

Homocide turn

Surveillance allows for prevention of homicide and violent crimes

Gupta '15, Staff Writer for Fortune, (2/9/15, Shalene Gupta, Fortune, "Police are crunching data to stop murders before they happen", http://fortune.com/2015/02/09/smart-policing-data/)

The plan Kansas City ultimately decided on goes a step further than merely data analysis. It also includes a carrot and stick approach to combating crime.

The carrot: the department has five social workers whose mission is to work with anyone who has been identified as at risk of committing a violent crime—about 800 people in all. The social workers try to identify problems that might cause these people to commit violent crimes—substance abuse and unemployment, for example —and get help find ways to address them like job training and getting a birth certificate.

The stick: the police also work with local community leaders to meet with groups they've identified as likely perpetrators of violent crimes. They explain the consequences of crime and let group members know that if one of them commits violence, everyone else will be put under increased police surveillance for any outstanding legal problems like unpaid parking tickets and graffiti.

Surveillance helps to reduce crime

Rodríguez'14, Staff writer for Dialogo (10/20/14, Jorge Rodríguez, Dialogo, "Surveillance cameras help police reduce crime in Guatemala City", http://dialogo-americas.com/en_GB/articles/rmisa/features/2014/10/20/feature-01)

Violence rates in sectors under surveillance have dropped by up to 40 percent since law enforcement authorities installed the video cameras at a cost of $150 million (USD).

Police agents monitor the videos from their stations and alert officers on patrol to possible criminal activity in real time. The cameras have helped them respond to crimes quickly enough to capture suspects before they could escape. "Police forces have more 'eyes' for surveillance, which prevents criminals from committing crimes," said Carlos Argueta, Deputy Minister of Technology of the Ministry of the Interior (Mingob). "It's such a novelty that agents patrolling the streets have support from the center. This has allowed them to make some captures red-handed." The cameras have different capabilities. The majority of them – about 80 percent – are stationary and aimed at a fixed location. Police can move about 20 percent of them to the right and left and up and down. And 10 percent of them have facial recognition capability – meaning that they can identify criminals by their faces through their connection to a database maintained by the National Register of Persons (Renap). Police can also compare footage of license plates to the Tax Administration Authority (SAT)'s database to see if vehicles under surveillance have been reported stolen or are subject to seizure.

Presently, the cameras have been installed in various strategic points throughout the city, with a special emphasis on Zone 18, which had a rate of 72 homicides per 100,000 residents in early 2012. By comparison, the entire country has a homicide rate of nearly 40 per 100,000 residents, according to a report presented in April by the United Nations.

Police authorities plan on installing an additional 2,100 surveillance cameras throughout Guatemala City by the end of 2014. Many of the cameras will be placed in neighborhoods at-risk for violent crime, such as Mixco and Amatitlán in the Central District, as well as Escuintla and Sacatepéquez.

Surveillance cameras help police develop anti-crime strategies: Analyst

The surveillance cameras are not only helping police respond quickly to criminal activity, they are helping law enforcement authorities gather data that will allow them to develop long-term approaches to fighting crime.

"Video surveillance can be a useful tool for creating intelligence strategies," said Francisco Guezada, a security analyst at the National Economic Research Center (CIEN). "According to the information collected from surveillance, [security agents] should be able to detect the patterns, routes, and modus operandi of criminals."

Training courses in forensic analysis will be incorporated into the National Civil Police (PNC) Training Academy. The PNC is mandated with gathering intelligence to fight criminal organizations and fight crime.

"We currently have three forensic analysis technicians and they will be responsible for training 30 more," Argueta said. "This way we will improve our criminal investigation processes."

Heroin for Babies Turn

Heroin kills people

Forzato '15, Weekend Managing Editor for WTOP's news team. (3/16/2015, Jamie Forzato, WTOP, "Dealing death: The heroin epidemic", http://wtop.com/local/2015/03/dealing-death-heroin-epidemic/slide/1/)

Heroin is killing more people nationwide than ever before. It's cheaper and more potent. The customers are younger. The Centers for Disease Control and Prevention reports fatal overdoses have nearly tripled since 2010.

"Yes, it's the cheapest drug out there. But it's the most powerful drug there is on Earth. It's a wonder I'm still alive," Lancaster says.

He started snorting the drug in his early 30s with his fiancée, and their addiction spun out of control. She overdosed and died in 2000.

"I was just, in a way, tying to end it. I wouldn't say I was suicidal but I didn't care."

Since then, Lancaster has spent seven of the last 14 years behind bars, because as he says, he's been chasing the high.

"I started out with an $8 to $10 habit a day. That went to $300 a day. I was shooting $50 at a time. Really powerful stuff that would kill a normal person. And that was just so I could get up to brush my teeth … Every day I would have to have that much. Just to be normal. Not to be high. You wouldn't even know it."

He bought and sold heroin laced with other dangerous drugs. But he couldn't afford it anymore.

"I'd go on the Internet and see what the hot items are. I would find out what people were stealing the most. I would go into Walmart and take 30 to 40 gallons of Tide at a time, stick them in a cart and walk right out of the Garden Center with a fake receipt. Just waiting to be caught one day … That disease made me do something I didn't want to do every day."

He was arrested and sentenced to two years at the Fairfax County, Virginia Adult Detention Center, where substance abuse counselor Claudette Wells treats hundreds of inmates every year for heroin addiction.

"We are never surprised at this point at the job titles that people have held, the socioeconomic background of these individuals. Yet drugs and alcohol have taken over their lives and robbed them of their degrees, their jobs and their health," Wells says.

"We certainly have seen our opiate addiction increase. In the last 18 months, I've seen more people between the ages of 20 and 30 with opiate addiction and who have been using opiates for more than five years."

Lancaster says he's been clean for three years, and when he's released he wants to save young adults from the misery he experienced.

"I want to talk to young people about addiction. It's going to be hard with my record. But I can share stories. I just want to change."

Drug statistics: How bad the problem is

As Lancaster works toward his goal of helping others, new data from the CDC show the heroin fatal overdose rate quadrupled between 2000 and 2013. The data show the problem is getting worse. Just between 2010 and 2013, heroin deaths tripled.

The D.C. area is not immune. Overdoses rose dramatically in the past few years. In Northern Virginia, heroin deaths jumped about 165 percent between 2011 and 2013.

From 2013 to 2014, the number of heroin deaths in Fairfax County, doubled. Lucy Caldwell, county spokeswoman, says at least 76 people overdosed, and 18 people died in the county in 2014.

In Loudoun County, heroin overdoses skyrocketed 400 percent since 2012.

It's a big problem in Maryland, too. Gov. Larry Hogan and Anne Arundel County officials have declared it a "public health emergency."

As of September, about 430 people died from heroin in 2014, according to the latest data from the Maryland Department of Health and Mental Hygiene. That's nearly as many as the number of vehicle fatalities during the entire year of 2013.

**This is stupid, don't read

Heroin kills babies

WWMT 7/17, WWMT newschannel (7/17/2015, WWMT, "Two babies die from heroin overdoses", http://www.wwmt.com/news/features/national/stories/Two-babies-die-from-heroin-overdoses-168422.shtml#.Va7ilflViko)

COLUMBUS, Ohio (NEWSCHANNEL 3) - Officials in Columbus, Ohio are investigating after two babies die from drug overdoses. The coroner's report says the two cases are not related. A 14-month old and an 11-month-old died of a heroin overdose. Each death was reported in May, just days apart. No charges have been filed in either case.

Heroin is gaining popularity among youth—overdose is likely

Woliver '10 senior editor at Village Voice's suburban edition, writer for The New York Times, and editor-in-chief of theLong Island Press. He received the Casey Medal for Meritorious Journalism (Robbie Woliver, Psychology Today, "Heroin use among suburban teens grows because it's 'no big deal.'", https://www.psychologytoday.com/blog/alphabet-kids/201006/heroin-use-among-suburban-teens-grows-because-its-no-big-deal)

A little over a year ago, I was at an event where I was representing the newspaper at which I was the editor in chief. A woman came up to me to tell me that she was a fan of an award-winning series of articles I was spearheading called, "Our Children's Brains," which dealt with children's developmental and psychological issues. It turns out she had a suggestion for a new topic: heroin

and its growing popularity with white suburbanteenagers. Her son, a heroin addict, had just lost his best friend to a heroin overdose, his third friend to die from heroin in a month.

This chance meeting with this distraught mother--and nurse--changed the course of many lives, because our newspaper did follow up on the story and we discovered that this wasn't an isolated tale of her son and his particular group of friends, it was an epidemic on Long Island, and soon we learned that it was an epidemic in high schools--and even junior high schools--around the country.

The series broke big and my colleagues Michael Martino and Timothy Bolger and I won many journalism and public service awards for our groundbreaking (and new-law-making) coverage on the topic. The problem? One year later, heroin addiction among teens has not gone away, in fact, it's gotten worse, even with this new awareness. In fact a new study by the Partnership for a Drug-Free America and the MetLife Foundation found that teens girls in particular are now more inclined to use drugs.

I met a lot of interesting young people during the course of my investigation into the topic of heroin use among suburban teens; I watched kids shoot up, score, suffer through withdrawal and leave for prison or rehab. One young junkie, who had been using heroin since he was 15, and lost several friends to ODs, stopped cold turkey. I spent several weeks following him, and often went to his home. He was an animal lover and had a pet monkey. One day when I visited, he literally had the monkey on his back. Clean for weeks, he began using again, well aware of the potential outcome.

"Why heroin?" I asked. "It's no big deal," he answered. It's how all the young junkies answered.

That was the most shocking aspect of this story to me. After all this time, the one thing that still stands out the most was how off-handed and cavalier these kids were about their addiction. This isn't the ‘40s, ‘50s or ‘60s when heroin was only used by the most lowest-life dregs of society in skid rows and downtrodden ghettos in the worst parts of urban areas around the country. These young junkies today aren't looking to some photo of a scabby, withered lost soul in a magazine or documentary as who their peers are, they are looking at Jimmy the high school football player, Sally the cheerleader and Tommy the valedictorian as their role models--and Jimmy, Sally and Tommy are all high on heroin.

It is rampant in schools, we learned through our investigation. "You can count the people who aren't on heroin, as opposed to the ones who are," one high school junkie told me.

Solvency

Not surveillance

The war on drugs goes far beyond surveillance

LaSusa and Albaladejo '14 Angelika Albaladejo completed a master's degree in Latin American Studies at Vanderbilt University ; Mike LaSusa graduated from the University of Miami (12/1/14, Mike LaSusa and Angelika Albaladejo, TruthOut, "US Support for Mexico's Drug War Goes Beyond Guns and Money", http://www.truth-out.org/news/item/27726-with-40-presumed-killed-us-secret-manpower-in-mexico-s-drug-war-exposed)

In spite of widely acknowledged and rampant corruption in Mexico's security and law enforcement institutions, implicated in the September disappearance of more than 40 college students, the United States continues to supply the country with well over $100 million per year in military and police assistance, including world-class weapons, training and intelligence.

Now, a new report from the Wall Street Journal is adding fuel to long-standing criticisms of the United States' extensive role in helping to execute the so-called "war on drugs" in Latin America. Evidently, the United States has gone well beyond simply providing diplomatic, financial and technical support for Mexico's fight against organized crime; it even puts its own personnel on the front lines.

The Journal reported recently that the US Marshal Service has repeatedly sent "specialists," disguised as local security forces, into Mexico to hunt down suspected criminals, including some who aren't on a US wanted list.

The local police lure people with special deals, not surveillance

O'Matz and Maines '14 Reporters for Sun Sentinel (9/29/14, Megan O'Matz and John Maines, Sun Sentinel, "Cops, Cash, Cocaine, How Sunrise Police make Millions Selling Drugs", http://www.sun-sentinel.com/news/interactive/sfl-cops-cash-cocaine-htmlstory.html)

Undercover detectives and their army of informants lure big-money drug buyers into the city from across the United States, and from as far north as Canada and as far south as Peru. They negotiate the sale of kilos of cocaine in popular family restaurants, then bust the buyers and seize their cash and cars.

Police confiscate millions from these deals, money that fuels huge overtime payments for the undercover officers who conduct the drug stings and cash rewards for the confidential informants who help detectives entice faraway buyers, a six-month Sun Sentinel investigation found.

Police have paid one femme fatale informant more than $800,000 over the past five years for her success in drawing drug dealers into the city, records obtained by the newspaper show.

Undercover officers tempt these distant buyers with special discounts, even offering cocaine on consignment and the keys to cars with hidden compartments for easy transport. In some deals, they've provided rides and directions to these strangers to Sunrise.

This being western Broward County, not South Beach, the drama doesn't unfold against a backdrop of fast boats, thumping nightclubs or Art Deco hotels.

It's absurdly suburban.

Many of the drug negotiations and busts have taken place at restaurants around the city's main attraction, Sawgrass Mills mall, including such everyday dining spots as TGI Fridays, Panera Bread and the Don Pan International Bakery.

Why would police bring criminals to town?

Money.

Under long-standing state and federal forfeiture laws, police can seize and keep ill-gotten gains related to criminal activities, such as the money a buyer brings to purchase cocaine and the car driven to the deal.

Sunrise is hauling in three times as much forfeited cash as any other city in Broward and Palm Beach counties, the Sun Sentinel found. Last year, the city raked in $2 million in state and federal forfeiture funds. The year before, in 2011, the figure was twice that — nearly $4 million.

Police generate much of their forfeiture money through reverse stings. The reverse sting, in which the police pose not as buyers, but as suppliers of cocaine, is a legitimate tool used by numerous law enforcement agencies.

Circumvention

The DEA makes up all their evidence—they will continue to surveil post-plan and lie about it in court

Shiffman and Cooke '13, Journalists for Reuters (8/5/13, John Shiffman and Kristina Cooke, Reuters, "Exclusive: U.S. directs agents to cover up program used to investigate Americans", http://www.reuters.com/article/2013/08/05/us-dea-sod-idUSBRE97409R20130805)

The undated documents show that federal agents are trained to "recreate" the investigative trail to effectively cover up where the information originated, a practice that some experts say violates a defendant's Constitutional right to a fair trial. If defendants don't know how an investigation began, they cannot know to ask to review potential sources of exculpatory evidence - information that could reveal entrapment, mistakes or biased witnesses.

"I have never heard of anything like this at all," said Nancy Gertner, a Harvard Law School professor who served as a federal judge from 1994 to 2011. Gertner and other legal experts said the program sounds more troubling than recent disclosures that the National Security Agency has

been collecting domestic phone records. The NSA effort is geared toward stopping terrorists; the DEA program targets common criminals, primarily drug dealers.

"It is one thing to create special rules for national security," Gertner said. "Ordinary crime is entirely different. It sounds like they are phonying up investigations."

THE SPECIAL OPERATIONS DIVISION

The unit of the DEA that distributes the information is called the Special Operations Division, or SOD. Two dozen partner agencies comprise the unit, including the FBI, CIA, NSA, Internal Revenue Service and the Department of Homeland Security. It was created in 1994 to combat Latin American drug cartels and has grown from several dozen employees to several hundred.

Today, much of the SOD's work is classified, and officials asked that its precise location in Virginia not be revealed. The documents reviewed by Reuters are marked "Law Enforcement Sensitive," a government categorization that is meant to keep them confidential.

"Remember that the utilization of SOD cannot be revealed or discussed in any investigative function," a document presented to agents reads. The document specifically directs agents to omit the SOD's involvement from investigative reports, affidavits, discussions with prosecutors and courtroom testimony. Agents are instructed to then use "normal investigative techniques to recreate the information provided by SOD."

A spokesman with the Department of Justice, which oversees the DEA, declined to comment.

But two senior DEA officials defended the program, and said trying to "recreate" an investigative trail is not only legal but a technique that is used almost daily.

A former federal agent in the northeastern United States who received such tips from SOD described the process. "You'd be told only, 'Be at a certain truck stop at a certain time and look for a certain vehicle.' And so we'd alert the state police to find an excuse to stop that vehicle, and then have a drug dog search it," the agent said.

"PARALLEL CONSTRUCTION"

After an arrest was made, agents then pretended that their investigation began with the traffic stop, not with the SOD tip, the former agent said. The training document reviewed by Reuters refers to this process as "parallel construction."

The two senior DEA officials, who spoke on behalf of the agency but only on condition of anonymity, said the process is kept secret to protect sources and investigative methods. "Parallel construction is a law enforcement technique we use every day," one official said. "It's decades old, a bedrock concept."

A dozen current or former federal agents interviewed by Reuters confirmed they had used parallel construction during their careers. Most defended the practice; some said they understood why those outside law enforcement might be concerned.

"It's just like laundering money - you work it backwards to make it clean," said Finn Selander, a DEA agent from 1991 to 2008 and now a member of a group called Law Enforcement Against Prohibition, which advocates legalizing and regulating narcotics.

Agencies will shift surveillance, making enforcement of the law impossible—

Intimidation lets them get around courts

Copblock '14, Report submitted by a whistleblower who wished to remain anonymous: they are am a former federal agent who worked for one of the big three letter agencies for several years I was also a state investigator for 2 years prior to joining the feds (11/24/14, Copblock, "Former Federal Agent Expounds on Illegal Means Used to Frame Targets", http://www.copblock.org/86185/former-federal-agent-expounds-on-illegal-means-used-to-frame-targets/)

I am a former federal agent who worked for one of the big three letter agencies for several years I was also a state investigator for 2 years prior to joining the feds. I am avid follower and supporter of Copblock for several reasons, much of reason being because of the things I saw and then personally experienced while working as a federal agent who was then "turned on" by own former agency and colleagues. However, the story of what was done to me is a very long, complex story that could easy fill its own book.

I wanted to write this email to clarify some things that are already out there in the media and on the net and to further expand on how they are used to violate people's rights and in fact throw many people in jail essentially using illegal means to "frame them".

To start, if one was to do an internet search on "SOD" or "SOD NSA" they would probably get back a small story from a few years ago about how SOD (Special Operations Division) is a secret DEA (Drug Enforcement Agency) program designed to essentially lauder intelligence gained from warrantless wiretaps to be used for purposes of Parallel Construction in DEA drug cases. The reporter who originally reported this only displayed a small part of the truth, probably because they did not have knowledge or documentation really showing what SOD actually is and what it does.

First explaining exactly what SOD is, because up until previously it was only ousted as being a sub-unit within the DEA. Special Operations Division is actually known by a few other names, most likely for reasons of plausible deniability, when someone asks someone in the NSA if they are spying on American's without warrants they can "truthfully" say no because SOD an essentially separate agency is doing it. I have also heard it referred to as SOU (Special Operations Unit) and SAU (Special Activities Unit), it is much more than a single part of the DEA. In actuality it is a "mixed" agency made up of mainly of intelligence agents of the NSA but also from the CIA, FBI, DIA, DEA, ATF, ICE, USSS and pretty much every federal intelligence and federal law enforcement agency. Thus their "scope" is far, far greater then drug related activities. This is that "big brother" arm of the NSA that specializes in the all warrantless wiretapping Edward Snowden, Thomas Drake and William Binney have been talking about.

Let me provide a simple example of how Parallel Construction might work for the federal agencies (or local police). Say I am a federal narcotics agent working along the US/Mexico border. One day I get a duty call from the checkpoint at the border crossing that a vehicle coming into the United States was found to have narcotics in it after a drug sniffing dog "hit" on the vehicle. So the vehicle and the driver are both detained. Regardless of what happens with that

suspect who was originally with the vehicle, I have all his property, and usually there is a cell phone (or 10) that, the person had on them at the time of detention. Well even if we don't for some reason actually arrest this person, like the amount of narcotics was too low for federal prosecution or say there was a mistake and he/she didn't even have narcotics. At a border checkpoint federal agents can still search everything in your possession at the time of crossing, including your electronics. I then use a "Cellbrite" machine to extract ALL of the data off his phone (assuming it isn't encrypted) photo's, texts, call logs, video, browsing history… everything. So now I have all of the contacts and all the information on this person's life that was in their phone.

Now even if there isn't anything in there that I find to be incriminating, even if I really don't have any real reason to think this person or their associates are up to criminal activity, I can now take their phone number and any or all of the phone numbers of their contacts and forward them up to SOD so that SOD will put warrantless wiretaps on all of them. This could be any or all the numbers that were in that person's phone book; their grandmother, their aunts and uncles, their cousin's ex-wife's sister… anyone.

Now say that one of these people is a small time marijuana dealer, not something the feds are typically interested in, but SOD may still get in contact with me and provide me (in a classified document envelope) the transcripts from those conversations. Perhaps one of the conversations talks about someone buying some marijuana at some specific location at some specific time, well now I can call up the local police (because I know the local prosecutors will take any drug case no matter how small) and we can just "happen to have" a marked police car pull over the person at said location after the deal goes down. Assuming I had the phone numbers of the people involved it might have involved a little bit of work but I probably could have identified not only their names but also their vehicles by this point (and probably a lot more).

Now, if the case goes to court and trial if the defense attorney asks the officer who pulled over the person why they did it. The officer usually will just make up something simply to justify reasonable suspicion to pull the person over (they crossed the line in the road, they didn't signal, they were going a few miles above the speed limit, or they had complaints of drug activity in the area, or they could just say they were in the area and witnessed what they thought was illegal activity) either way it's just to legally cover the tracks of how these officers "knew" to pull this particular person over. Fact is they still pulled him over and we assume they were able to find the drugs.

This is a very, very simple example of how a parallel construction case might look. It gets a lot more complex than that depending on the scale and scope of what the government is trying to do.

Of course originally this was sold as to be used for purposes related to international terrorism, but it has become something far more sinister. It is used for every imaginable purpose ranging from the political to the most "hushed up" "pre-criminal enforcements". They justify much of this under the guise of terrorism, simply and easily because you can ask what exactly is terrorism? Much of what some federal agencies consider terrorism might at the absolute most be considered potentially violent acts. I stress potentially, since much of what SOD does it roam people's phone calls listening in for "angry, violent speech" trying to decide if a person is a threat based upon essentially how they express themselves.

Information from SOD can also be fed in directly to the national "Fusion Centers" (if you are not familiar with what these are they are worthy of an entire article themselves) whereby local law

enforcement agencies can now have access to whatever federal agencies might scoop up regarding some of your personal information, details or concerns they have about you.

Now apart from how wrong it is legally but also morally that these programs are being used as mechanisms of political control and vengeance is the fact that people who go on angry tirades on their private phone calls may now be subject to arrest and prosecution for FELONY charges. Because what SOD does to someone who they deem as a threat is they use any and all information from that persons calls, texts and emails to manipulate and twist whatever they might be doing (even normal everyday activities) and turn them into felony charges. And they are not at all hesitant to go as far as blackmailing someone the target might know into filing a false charge against the person just so they can hold them on something. Since they have access to the phone calls, texts and emails of everyone the targeted person might associate with its not hard to see that some person might have something they really don't want known publicly.

Now you say, still if they have no solid proof even if they do frame me, and blackmail someone into filing a false charge, they still have to prove it in front of a jury so I can beat it in court yes? Well, the answer is maybe you can. But it's not a sure thing by a long-shot. What they like to do, and it's something they use quite commonly, is they will force a plea. They do this by having the judge set your bond super, duper high… even if the charge is completely non-violent, and you have no history of violence. All it takes is a phone call by the district attorney/prosecutor at your arraignment to turn a low level felony that usually
has a $5,000 bond into no-bond or a $1,000,000 bond. Then assuming they don't think they have a real case to charge you federally with terrorism (like say you just made an angry comment, and you don't have any plans on your computer detailing a plot or bomb making materials laying around) and they know they can't prove terrorism, or even really prove the bogus charge they arrested you on, now they hold you for a few months and offer a low plea deal; a few years of probation maybe. If you decline to accept the offer because you're a righteous person and believe in the law and justice well guess what? The prosecution will just delay the case for more time, in essence punishing you into accepting the plea, all the while your bond stays really high because by this time the judge who sets your bond is "in on it", fixed so to speak. (federal intelligence agencies have a way of scaring even judges) Time to trial has quadrupled in the past 50 years in this country.

So you can sit in jail or plea out (confess to something you didn't do) and go free, sounds a lot like authoritarian/totalitarian eh? Now for arguments sake and I know this is very rare, but say you are ultra-tough minded and don't have anything better to do then sit in jail. All this time (possibly a year or two) the feds have been digging through your life with a fine toothed comb looking at anything they can use or twist into a being a crime, now they don't care if they won't charge you with it, they'll just use the local police who usually operate a lot more "loosely" and usually have no problem using garbage evidence or false charges on someone, after-all the original bogus charge was probably a state charge to begin with.

For example, say you get framed for something bogus, because you said "I really want to kill such and such person" on your private phone and a search warrant is done on your house/apartment and all your property. While their searching they are obviously looking for weapons of any sort but their also looking for any other contraband and also anything they can use to make you look like a mean horrible person.

Like angry texts, emails or documents on your computer. Because yes of course their going to seize all of that and do computer forensics on it. As I mentioned previously they will also intimidate people into testifying against you, any person they can find who might have a grudge against you (and yes they will talk to everyone who you might have called or texted going back several years), just to make you look like you're a dangerous, evil, insane person. Even if the person doesn't really want to get involved… some encouragement with prosecutorial threats almost always does the trick. Then it's up to the prosecutor if it goes to trial to convince the jury that you're a threat to the natural world even if the facts of the case don't really add up 100 percent. Somewhat of a roll of the dice, if the prosecution has a parade of people coming into court to defame you and talk bad about you… they're also going to attack your "psychological state" traditionally an easy and favorite tactic of the government. All in an effort to deny you of your freedom with probation and take away your 2nd amendment right to bear arms, because at the end of the day that's what this is really all about, controlling people and denying people the NSA thinks might be a threat, of legal access to firearms by using felony charges. Forget the reasons you said what you said, perhaps someone screwed you out of a job, money, business deal went horribly wrong or a love interest conflict. Nope, in their eyes if you say things they don't like you might as well be the next public enemy number one.

Nowhere in the Constitution does it say the government can't "warn" (threaten) people with criminal prosecution, so since we already know their doing things like warrantless wiretaps which is in fact strictly prohibited by the law, of course their going to be doing things that are not legally prohibited by law no matter if they may violate legal ethics.

Neolib

The illegal drug trade and the big banks that dominate the free market are inextricably linked—Neoliberal market structures fuel the violence they criticize

Veltmeyer and Petras '13, Henry Veltmeyer is a professor at Saint Mary's University; James Petras is a retired Bartle Professor of Sociology at Binghamton University (1/28/13, Henry Veltmeyer and James Petras, Ashgate Publishing, "Beyond Neoliberalism: A World to Win")

Mexico's descent into the inferno has been engineered by the leading US financial and political institutions, each supporting one side' in the bloody total war' which spares no one. While the Pentagon arms the Mexican government and the Drug Enforcement Agency enforces the 'military solution', the biggest US banks receive, launder and transfer hundreds of billions of dollars annually to drug lords' accounts, to buy modern arms, pay private armies of assassins and corrupt political and law enforcement officials. Mexico's Descent into the Inferno Every day, scores if not hundreds of corpses appear in streets and unmarked graves. Dozens are murdered in their homes, cars, public transport, offices and homes Unknown victims in the hundreds are kidnapped and disappear; school children, parents. teachers, doctors and businesspeople are seized in broad daylight and held for ransom, thousands of migrant workers are kidnapped, robbed, ransomed and murdered The police are barricaded in their commissaries the military, if and when it arrives, assaults entire cities, shoots more civilians than assassins. Everyday life revolves around surviving the daily death toll threats are everywhere, the armed gangs and military patrols fire and kill with virtual impunity. People live in fear and anger.

In the late 198Os, Mexico was in crisis, but the people chose a legal way out: they elected a president. Cuahtemoc Cardenas and a program to promote the economic revitalization of agriculture and national industry. The Mexican elite, led by Carlos Salinas of the Institutional Revolutionary Party (PRI) decided otherwise; the electorate was denied its victory, the peaceful mass protests were ignored. Salinas and subsequent presidents vigorously pursued a free trade agreement (NAFTA) with the United States and Canada, which devastated millions of Mexican fanners, ranchers and small business people. Ruin and the destruction of the productive forces in the rural areas led to flight—outmigration rural movements of debtors flourished and ebbed, co-opted or repressed. The misery of the legal economy contrasted with the wealth of the drug and people trade and its demand for well-paid armed auxiliaries. The beginning of the drug syndicates was born of local affluence. In the new millennium, popular movements and a new electoral hope arose; Andrés Manuel López Obrador (AMLO). By 2006 a vast peaceful electoral movement promised substantial reform, a basis to 'integrate millions of disaffected youth'. At the same time, the drug cartels were feeding off the misery of the millions marginalized by the elite, which plundered the public treasury, real estate, the petrol industry and privatized communication monopolies and banks.

Once again in 2006 millions were denied their electoral victor: the last best hope for a peaceful transformation was denied. Calderón stole the election and proceeded to launch the 'war on drug traffickers' in compliance with White House dictates. The War Strategy Escalates the Drug War. The Financial Crisis Deepens the Ties with Drug Traffickers The massive escalation of homicides and violence in Mexico began with the declaration of a 'drug War' fraudulently elected President Calderón, a policy pushed initially by the Bush Administration and subsequently strongly backed

by the Obama—Clinton regimes. Over 40,000 soldiers filled the streets, towns and barrios—violently assaulting citizens and especially young people. The cartels retaliated by escalating their armed assaults. The war spread to all the major cities and thoroughfares murders multiplied and Mexico descended further into a Dantesque inferno. The Obama regime reaffirmed' its militarist solutions on both sides of the border: over 500,000 Mexican immigrants were seized and expelled from the United States border patrols multiplied. Cross-border gun sales grew exponentially. The US 'market' for Mexican goods shrank, widening the pool for cartel recruits while the supply of high-powered rules increased, White House gun and drug policy strengthened both sides in this maniacal murderous cycle: the US government sold guns to the Calderón regime and private industry sold guns to the cartels. Drug demand in the United States—and the profits derived from the transport and sales—remained the driving force of the rising tide of violence and societal disintegration in Mexico.

Drug profits. in the most basic sense, are realized through the ability to launder and transact funds through the US banking system. The scale and scope of the US banking—drug cartel alliance far surpasses any other economic activity of the US private banking system. One bank alone, Wachovia, laundered $378.3 billion dollars between May 1, 2004 and May 3 1, 2007 (Guardia,,. May 11, 2011). Every major bank in the United States has served as an active financial partner of the murderous drug cartels, including the Bank of America. Citibank. W Morgan. as well as overseas banks operating out of New York, Miami and Los Angeles. While the White house finances the Mexican state to kill Mexicans suspected of being drug traffickers, the US government only belatedly fines the major US financial accomplices, with no jail time. This is, of course, perfectly in line with US policy on the crimes committed by the financial elite of the capitalist class. Take for example the case of' Goldman Sachs in the recent sub-prime debacle and financial crisis which he helped engineer. Rather than bringing criminal charges against the perpetrators of one of the most notorious financial crimes of the century —or stealing more money (and from their own customers) and lying under oath before Congress. the Department of Justice and federal prosecutors have given the Wall Street master criminals a free ride.

The major agency of the US Treasury involved in investigating money laundering—the Undersecretary for Terrorism and Financial Intelligence—ignored US bank collaboration with drug terrorists, concentrating almost their entire stall and resources to enforcing hank sanctions against Iran, The head (Stuart Levev) for seven years preferred to serve Israel's faux 'War on terrorism against Iran than pursue Wachovia 's collaboration with Mexican drug terrorists murdering 40.000 Mexicans. Without US arms and financial banking of the regime and cartels there would be no drug war', no mass killings and no state terror. If we eliminate the influx of subsidized agriculture goods and the LIS purchase of cocaine there would he neither 'drug soldiers' nor drug markets to kill and fight over.

The Drug Traffickers, the Banks and the White House

If the major US banks are the financial engines which allow the billion-dollar drug empires to operate. the White House. the US Congress and the enforcement agencies are the basic protectors of the banks. Despite the deep and pervasive involvement of the major banks in laundering hundreds of billions of dollars in illicit funds, the court settlement' pursued by US prosecutors did not lead to a jail sentence; the court settlement led to a fine of $50 million dollars. less than 2 percent of one of the hanks (the Wachovia bank) $12.3 billion profits for 2009 (Guardian, Ma 11, 2011). The DEA. and the federal prosecutors acted under the political direction of the US executive branch. The leading economic officials of the Bush and Obama regimes—Summers,

Geithner, Greenspan, Bernacke et al.— are all long-term associates, advisers and members of the leading financial houses and banks implicated in laundering the billions of drug profits.

Laundering drug money is one of the most lucrative sources of profit making for all Wall Street banks: they charge hefty commissions, they lend to borrowing institutions at interest rates far above what—if any—they pay to drug trafficker depositors. Even more important, during the most critical phase of the recent financial meltdown, according to the head of the United Nations Office on Drugs and Crime Antonio Maria Costa. [i]n many instances, drug money (was) ... currently the only Liquid investment capital ... In the second half of 2008. liquidity was the banking system's main problem and hence liquid capital became an important factor ... interbank loans were funded by money that originated from drug trade and other illegal activities ... (there were) signs that some banks were rescued in that way' (Reuters. January 25. 2009. US edition). Capital flows from the drug billionaires were key to floating Wachovia and other leading banks. In a word, drug billionaires saved the capitalist financial system in crisis.

Cartels prevent states from regulating the market—allowing for neoliberal globalization and perpetuating violence

Walker '2 Received Bachelor and Master Degrees in International Relations from the London School of Economics (LSE), University of London. (2002, Julius Walker, Global Politics Network, "The role of the state in the international illicit drugs trade: the case of Colombia and external intervention", http://www.globalpolitics.net/essays/Julius_Walker.pdf)

Ultimately, if it is true that the security environment of the post-Cold War era facilitates the growth of transnational organized crime and the international drugs trade, one could argue that globalization is the driving force behind the international drugs trade. Colombia is a particularly vivid example of the effect the drugs trade can have on a state that was already weak. The situation there has developed so far that the overall situation of transnational organized crime in Colombia may be described as being in the 'symbiotic stage', in which the 'host, the legitimate political and economic sectors now become dependent upon the parasite, the monopolies and networks of organized crime to sustain itself' (Lupsha 1996: 32). Within the overarching framework of globalization, Colombia may thus be termed a 'courtesan state', one which serves the interests embodied in neoliberal globalization and which is a central element in the global policy framework of neoliberalism (Mittelman & Johnston 1999: 117). This, ultimately, is its role in the wider context of an increasingly globalized world.

Conclusion and implications for International Relations

The international trade in illegal drugs, and specifically the huge profits generated and the related violence fuelled by it, have the potential to corrupt the state and all the major social and political groups within it. The combination of the factors that Colombia was a drugs-producing country and also a weak state mired by a long-lasting civil war has enabled precisely this to happen. The impact of the international drugs trade thus acts as a powerful catalyst and reinforces this pre-existing situation. Because of the particular nature of the drugs industry in Colombia – and its complexity – the situation becomes a 'war system'. Both Colombia and the US in a sense become parts of this system, become actors - if involuntary ones - in the international drugs trade, and therefore in transnational organized crime. Colombia is thus a 'failed state' or a 'crimestate' in the sense that it is difficult to determine who exactly is the state. The strength of the international

drugs trade is such that even a far more powerful and far less corrupted state, the United States, became involved and in a sense implicated, helping to entrench the 'war system'. All of this happened even though both the Colombian and US governments are in the process of fighting this transnational force. In the light of the 'new security agenda' postulated after the end of the Cold War, this truly seems a fearsome challenge to the international system.

Surveillance aimed at stopping cartels is a crucial check on neoliberalism

Suzuki '14, For Essex University (7/1/14, Chisato Suzuki, University of Essex, "Neoliberalism and the US-Mexico Border Politics", http://www.essex.ac.uk/sociology/documents/research/publications/ug_journal/vol12/2014SC361_ChisatoSuzuki_3final.pdf)

In contrast to the neoliberal demand of cheap labour, there are some counter movements especially in the US states along the border, as it is workers in those regions that get deprived of their job when migrants enter. The resistance movements are, to some degree, facilitated by the neoliberal decentralisation and privatisation. Some states have created their own immigration acts and private border contractors have made it difficult for immigrants to cross the border. In addition, fear against drug trafficking and violence by illegal immigrants motivated the construction of the border walls.

On the contrary to the expansion of bilateral economic cooperation, the United States strengthened the security of its border with Mexico during the 1990s. The number of border patrol agents doubled between 1993 and 1999, more and more agents of Drug Enforcement Administration and Federal Bureau of Investigation were assigned, and several border walls were constructed and militarised (Domínguez and Castro, 2009). The consequence was the increased death of immigrants. To avoid capture, immigrants would have to cross inhospitable routes, which often resulted in the exposure and dehydration. The wall also made immigrants depend on the professional smugglers—"coyotes"—that required large amount of money, and sometimes even killed the hirers (Regan, 2010). Although this was thought to deter immigration, by 2000, it became obvious that it had no effect on decreasing the number of migrants; instead, it strengthened the criminal activity of "coyotes" and changed the temporary immigrants into permanent ones (Domínguez and Castro, 2009).

Decriminalizing drugs leads to further neoliberal exploitation

Calhoun '14 Philosophy student and activist at the University at Buffalo. (1/12/14, Ryan Calhoun, Center for a Stateless Society, "Weed Legalization As Privatization, Disempowerment", http://c4ss.org/content/23632)

Marijuana's legalization seems much more like neoliberal privatization of markets than true liberation of them. While I do not question the decency of these first major marijuana retailers, there are legitimate concerns. Those most victimized by the state's rabid oppression of marijuana markets will find themselves very often out of luck, as extensive background checks are required by law, and any drug felony charge is enough to exclude individuals from operating as vendors. TakePart magazine notes in an article that even as weed is legalized, those in prison for the crime of possessing or selling marijuana will remain there. While new businesses boom with customers, those who formerly tried to compete in this market remain locked up in cages.

The drug war has affected millions during its hellish tear through Americans' lives and culture, but it has always been particularly racialized and classist. This leaves many black, Hispanic and poor individuals with a permanent hex affixed to them that these laws do not address. Like with the beltway libertarian conception of privatization, legalization picks the winners of the weed market from those who were lucky enough to not find themselves on the wrong side of the law and who already have access to the capital to invest into this expensive business.

Legalization, at its best, functions as an opposition to continued state violence against drug users and possessors. It is therefore troubling that we find even after this so-called legalization, many remain shackled both by the pre-existing landscape of the market and by new regulations which prohibit them from participating in it. It is never by the political means we realize our freedom, but only a hold-back of even worse oppression. We fight an uphill battle against the incredible damage the state does. And now facing the age of Big Marijuana, we might be shocked to find the sorts of restrictions many established pot shops favor. In order to delegitimize street dealers, we have to treat them as inherently dangerous and volatile.

The drug trade expands free-market programs—that is the epitome of neoliberalism

Andreas '95 John Hay Professor of International Studies at the Watson Institute (March 1995, Peter Andreas, Third World Quarterly, "Free Market Reform and Drug Market Prohibition: US Policies at Cross-Purposes in Latin America" Vol. 16, No. 1, pg 75-87

Although the first policy objective is viewed as an economic issue and the second policy objective is viewed as a law enforcement issue, both involve reshaping the relationship between states and markets. Neoliberal policies call for a more minimalist state, while prohibitionist policies call for a more interventionist state. Thus, the USA has promoted a curtailment of state intervention in the market (through liberalisation) even as it has promoted an escalation of state intervention (through prohibition). Latin American countries have been under significant pressure to comply with both liberalisation and prohibition objectives, the first primarily through the financial leverage of US-supported multilateral funding agencies (especially the IMF) and the second primarily through direct US diplomatic and economic leverage.

However, the compatibility of these two very different models of state-market relations is questionable, since legal and illegal markets are often inextricably intertwined.4 In many countries, the drug export sector is not isolated from, but integrated into, the national economy. Not only are they closely linked, but the informal drug economy is guided by many of the same

market principles which regulate the formal economy. Thus, even as the USA seeks to expand the role of market forces and the private sector, the awkward reality in many Latin American countries is that the drug export industry is a leading market force and an integral component of the private sector.

Indeed, as we shall see, the revenues and jobs generated by the illegal drug industry have actually helped some states adopt the very market reforms and austerity measures encouraged by the USA and the IMF, and these neoliberal programmes, in turm, have in some ways actually helped fuel the illegal drug industry. Thus, neoliberalism both stimulates and is stimulated by the very illegal market which the USA is attempting to prohibit. Neoliberalism reduces the role of the state in regulating the national economy, and this has an impact on the drug export sector in those countries where it is integrated into the economy. Similarly, neoliberalism reduces the ability of the state to withstand external market pressures-and the enormous global market demand for drugs is certainly no exception. The logic of neoliberalism is for the state to conform to the dictates of international market pressures (with little regard to state-created distinctions between legal and illegal markets). Robert Cox has called this the 'internationalization of the state': the process whereby national policies are adjusted to the exigencies of the international economy.5 Although illegal, the global drug economy can be seen as part of this broader process.

T

Domestic-US Persons

Next, T- Domestic

T – not domestic surveillance

A. Domestic surveillance is surveillance of us persons

Small 8 matthew l. Small. United states air force academy 2008 center for the study of the presidency and congress, presidential fellows program paper "his eyes are watching you: domestic surveillance, civil liberties and executive power during times of national crisis" http://cspc.nonprofitsoapbox.com/storage/documents/fellows2008/small.pdf

> Before one can make any sort of assessment of domestic surveillance policies, it is first necessary to narrow the scope of the term "domestic surveillance." Domestic surveillance is a subset of intelligence gathering. Intelligence, as it is to be understood in this context, is "information that meets the stated or understood needs of policy makers and has been collected, processed and narrowed to meet those needs" (lowenthal 2006, 2). In essence, domestic surveillance is a means to an end; the end being intelligence. The intelligence community best understands domestic surveillance as the acquisition of nonpublic information concerning united states persons (executive order 12333 (3.4) (i)). With this definition domestic surveillance remains an overly broad concept. This paper's analysis, in terms of president bush's policies, focuses on electronic surveillance; specifically, wiretapping phone lines and obtaining caller information from phone companies. Section f of the usa patriot act of 2001 defines electronic surveillance as:

B. Violation—Surveillance associated with the illegal drug is targeted at Mexicans

Gordon '15, Professor at the the University of San Francisco (5/23/15, Rebecca, InTheseTimes, "When the War on Drugs in Mexico Comes Back Home to the U.S.", http://inthesetimes.com/article/17782/when-the-war-on-drugs-in-mexico-comes-back-home-to-the-u.s)

In Mexico, the U.S. military is directly involved in the War on Drugs. In this country, that "war" has provided the pretext for the militarization of local police forces and increased routine surveillance of ordinary people going about their ordinary lives.

C. Our standard is

Limits—Any interpretation of domestic that allows the targeting of foreign nationals blows the lid off the topic—that makes it impossible to prepare

D. T is a voter for fairness and prepared debates

PTX LINKS

TRU PTX

Republicans love the war on drugs

Vance '10, columnist and policy adviser for the Future of Freedom Foundation, an associated scholar of the Ludwig von Mises Institute (11/24/10, Laurence M. Vance, The Freedom of Future Foundation,"WHY DON'T CONSERVATIVES OPPOSE THE WAR ON DRUGS?", http://fff.org/explore-freedom/article/dont-conservatives-oppose-war-drugs/)

Yet, no matter how much it costs to wage the federal drug war (more than $41 billion according to a just-released Cato Institute study), conservatives generally support it. I know of no prominent conservative who publicly calls for drug legalization. I know of no Republican candidate in the recent election (outside of Ron Paul) who has ever publicly voiced his support for the decriminalization of drug possession. Republicans in Congress — by an overwhelming majority — have even criminalized the purchase of over-the-counter allergy-relief products like Sudafed because they contain pseudoephedrine.

Negative arguments about how the war on drugs ruins lives, erodes civil liberties, and destroys financial privacy are unpersuasive to most conservatives. None of these things matter to the typical conservative because they, like most Americans of any political persuasion, see using drugs for recreational use as immoral.

Surveillance on the border is a highly partisan issue

Abdullah '14 Staff writer for CNN (6/26/14, Halimah Abdullah, CNN, "No permisos. Lawmakers, feds debate surge of immigrant kids", http://www.cnn.com/2014/06/24/politics/immigrant-kid-hearing/)

They are the latest political pawns in a partisan battle over U.S. immigration: Thousands of children who have risked their lives fleeing poverty and violence in Central America seeking "permisos" or a pass to stay in America.

It is a political chimera that touches on thorny issues like immigration reform, foreign aid, human trafficking and the U.S.-Latin American drug trade, which has helped fund violent Central American cartels that are destabilizing that region, federal officials told lawmakers at a House Homeland Security Committee hearing on Tuesday.

During the session, the partisan differences on immigration reform and border security were stark.

It won't get support, politicians don't want to seem soft on crime

NCHRC '11 North Carolina Harm Reduction Coalition (12/14/11, North Carolina Harm Reduction Coalition, "Why Do Politicians Support the War on Drugs (Even Ones Who Know Better)?", http://www.dailykos.com/story/2011/12/14/1045339/-Why-Do-Politicians-Support-the-War-on-Drugs-Even-Ones-Who-Know-Better#)

"The war on drugs is all about politics," explains Scott. "Many elected officials know the war has failed, but are afraid to speak up because they don't want to seem 'soft on crime'. When I worked in law enforcement I noticed that the individual police officers were often against the war on drugs, but most sheriffs supported it – as least in public. That's because sheriff's are elected officials and they say what they think voters want to hear, not always what is right."

Elections

Generic

The illegal drug trade is unpopular with the public

ONDCP '1 Office of National Drug Control Policy (2/1/2001, Office of National Drug Control Policy, "A Look at How Americans View the Country's Drug Problem", https://www.ncjrs.gov/ondcppubs/publications/gallup/summary.html)

Overall, concerns about drug use are high. Over half of all Americans say their concern about drug use has increased over the past five years (53%). Only 3 percent say their concern has decreased, while 44 percent say their concern has stayed the same. Concerns are increasing the most in minority and low-income communities.

Non-whites, including African Americans (69%), other minorities (59%), and Hispanics (63%) are all more likely to report an increased concern about illegal drug use than are whites (51%). Adults aged 55 or older (58%), those living in rural areas (58%), lower income Americans (61%), and those with less than a high school education (64%) are also more likely to say that their concern has increased over the past five years.

When asked why their concern over illegal drug use has increased, Americans no longer cite the crime and violence associated with it as their top reason. Instead, they mention more personal reasons. (See Figure 2.) Most adults report that their concern over drug use has increased because they have become more knowledgeable about it, drug use is becoming more widespread, and they worry about their children and grandchildren.

The public opposes the illegal drug trade

ONDCP '1 Office of National Drug Control Policy (2/1/2001, Office of National Drug Control Policy, "A Look at How Americans View the Country's Drug Problem", https://www.ncjrs.gov/ondcppubs/publications/gallup/summary.html)

Support is Strong for Goals 4 and 5: To Shield America's Air, Land, and Sea Frontiers From the Drug Threat and To Break Foreign and Domestic Drug Sources of Supply

Americans express a strong support for interdiction. More than eight out of ten agree that more money should be spent on stopping drugs from coming into the U.S. from foreign countries (84%). Many Americans also believe this would be the most effective strategy for how to spend the money to reduce the illegal drug problem in the U.S. Supporters of this strategy are more likely to be female, older, African American, and less educated.

The use of illegal drugs is of increasing concern to Americans. Not only do they worry about the crime and violence that is associated with drugs, they worry that drugs are becoming more widespread and are becoming increasingly easy for children to get. Parents, in particular, are trying to communicate with their children about the dangers of drugs and feel they are influencing their children's decisions, but are still searching for better ways to communicate with their children about this difficult subject. Parents are viewed as responsible not only for educating their children about drugs, but also for stopping the drug use once it starts. Advertising campaigns such as ONDCP's can be an effective tool to reaching out to parents with effective communications strategies.

Americans perceive a strong link between illegal drug use and criminal or violent activity, yet they are not in agreement on the best strategy to reduce drug-related crime. Only a slight majority believe that tough penal actions for drug users would be effective. Few believe that building more prisons for drug-related offenses is the right solution. Many believe that support, not punishment is the right strategy, focusing on treatment and rehabilitation.

Half of all Americans personally know someone who has used illegal drugs, and nearly one-third describe these users as seriously addicted. Among those acquaintances who have obtained drug treatment, the efforts are reported to have been successful, with a strong majority now drug-free. This helps explain why, according to the American public, more drug treatment programs are needed.

Finally, support is strong for interdiction efforts. Alongside keeping drugs away from children, lowering drug-related crime, and increasing treatment opportunities, Americans would like to see increased efforts to stop drugs from coming into the U.S.

Hispanics LInk

The public hates drugs—especially Hispanics

Pew '14 Pew Research Center (4/2/14, Pew Research Center, "America's New Drug Policy Landscape", http://www.people-press.org/2014/04/02/americas-new-drug-policy-landscape/)

About a third of all Americans (32%) say that the problem of drug abuse is a crisis across the country and another 55% see it as a serious problem. When asked to think about their own neighborhoods, including the local schools, about one-in-ten (12%) see drug abuse as a crisis in their community and another 38% call it a serious problem.

Opinions about the problem of drug abuse differ little across most demographic and political groups. But young people are less likely than older Americans to say that drug abuse is a crisis nationally. Just 20% of those under 30 think drug abuse is a crisis compared with at least a third in older age groups. And 60% of young people say the problem of drug abuse in their neighborhoods is either a minor problem or not a problem, the lowest percentage of any age group.

Hispanics and those without college experience are more likely to view drug abuse as a serious problem in their neighborhood. A majority of Hispanics (63%) say that drug abuse is either a

crisis or serious problem in their neighborhood, compared with about half of both non-Hispanic blacks (51%) and non-Hispanic whites (47%).

They're a key voting bloc—they could go either way

Kurtzlebel 5/20, political reporter assigned to NPR's Washington Desk. (5/20/15, Daniel Kurtzlebel, NPR, "The Ballooning Importance Of The 'Latino Vote,' In 3 Charts", http://www.npr.org/sections/itsallpolitics/2015/05/20/407954553/the-ballooning-importance-of-the-latino-vote-in-three-charts)

Politicians care so much about capturing the so-called "Latino vote" because the U.S. Hispanic population is exploding.

The share of the population that considers itself Hispanic grew by nearly 49 percent between 2000 and 2012, according to census data. For the rest of the population, growth has only been 5.8 percent.

It's true that the Hispanic population, at 53 million, is still much smaller than the non-Hispanic population, at around 260 million. But it's also a population that represents a massive opportunity for either party.

The Hispanic voting bloc will determine the outcome in key swing states

Metla '15 Staff writer for Law Street Journal, holds two Bachelor Degrees in regional studies and international criminal justice. (5/2/15, Valeriya Metla, Law Street Journal, "What Part Will Hispanic Voters Play in the 2016 Elections?", http://lawstreetmedia.com/issues/politics/part-will-hispanic-voters-play-2016-elections/)

Historically, certain states in the U.S. have always voted for either Democrats or Republicans, while there are states that swing back and forth between the two parties–"swing states." Presidential candidates often campaign more in those states, as they will decide elections. In the 2016 elections, many states with large Hispanic populations are already being viewed as the states to win, including Florida, Colorado, Nevada, and Virginia.

Florida has the largest Hispanic population among the swing states, at more than four million. During the 2012 elections, the Hispanic electorate accounted for 17 percent of total voters. As Florida has a large population of Cubans who historically favor Republicans, the GOP has traditionally made a strong run in Florida. But recently, more Hispanics in Florida have been leaning toward the Democratic Party.

Colorado has the second largest Hispanic population among swing states, at a little over a million. Historically, Colorado has been overwhelmingly Republican, but recent demographic trends have changed the odds for the GOP. During the last two presidential elections,

Hispanic constituencies overwhelmingly backed Obama over McCain and Romney, helping him to victory.

The voting situation in Nevada is also uncertain, as both Bush and Obama won the state twice. Obama won Nevada largely due to Hispanic voters who made up 14 percent of the total electorate. However, Obama didn't do so well with white voters in Nevada, leaving significant chances for the Republican party to capture more non-Hispanic votes in this state.

Traditionally red state Texas may also turn into a swing state. Thirty percent of its eligible voters are Hispanic; as a result experts believe that the Hispanic vote can make a difference in Texas in 2016.

Terror

Terrorists get into the US via the Mexican border

Rothman '14, Associated Editor of Hot Air (8/29/14, Noah, Hot Air, "Report: ISIS eyeing Mexican border to infiltrate America and execute terrorist attacks", http://hotair.com/archives/2014/08/29/report-isis-eyeing-mexican-border-to-infiltrate-america-and-execute-terrorist-attacks/)

Aside from this being a deeply unnerving development, this has the potential to completely scramble the political thinking in this country regarding immigration reform and border security.

A report from Fox News reporter Jana Winter filed on Friday indicates that Islamic State fighters are eyeing the porous U.S.-Mexico border as a potential area in which aspiring jihadists can infiltrate the country and prepare terrorist attacks.

Social media chatter shows Islamic State militants are keenly aware of the porous U.S.-Mexico border, and are "expressing an increased interest" in crossing over to carry out a terrorist attack, according to a Texas law enforcement bulletin sent out this week.

"A review of ISIS social media messaging during the week ending August 26 shows that militants are expressing an increased interest in the notion that they could clandestinely infiltrate the southwest border of US, for terror attack," warns the Texas Department of Public Safety "situational awareness" bulletin, obtained by FoxNews.com.

The three-page bulletin, entitled "ISIS Interest on the US Southwest Border" was released to law enforcement on Thursday.

In related news, White House Press Sec. Josh Earnest told reporters on Friday that the number of illegal immigrants crossing the southern border had dropped precipitously. When asked if the crisis on the border was over, Earnest said it was. "For now," he added.

CARTELS

1nc WOD Module

The War on drugs has been a success –violence is down

DW '14 (9/7/14, DW, "Violence on the decline in Mexico's war on drugs", http://www.dw.com/en/violence-on-the-decline-in-mexicos-war-on-drugs/a-17906401)

Since then, a number of leading capos have been arrested, among them Joaquin "El Chapo" Guzman, who headed the powerful Sinaloa cartel. Just last week, on August 31, police arrested one of the key men behind the exceptionally cruel Los Zetas cartel. One day later, the military stormed one of the gang's training camps.

Perhaps the most important success of the new strategy - at least for Mexican citizens - has been the significant decline in violence. Over the last few years the murder rate has steadily declined, dropping below 2010 levels last year.

The frequency of the cruel narcomensajes has drastically decreased as well, falling from an average of 52 murders a month to just eight.

Surveillance is effective in fighting the cartels

Bucella '12, Written testimony of U.S. Customs and Border Protection Office of Intelligence and Investigative Liaison Assistant Commissioner Donna Bucella for a House Committee on Homeland Security Subcommittee on Border and Maritime Security hearing titled "Border Security Threats to the Homeland: DHS' Response to Innovative Tactics and Techniques" (6/15/12, Donna Bucella, Department Homeland Security, ""Border Security Threats to the Homeland: DHS' Response to Innovative Tactics and Techniques"", http://www.dhs.gov/news/2012/06/15/written-testimony-us-customs-border-protection-house-homeland-security-subcommittee)

****NOTE: CBP is Customs and Border Protections

Over the past three years, the DHS has dedicated historic levels of personnel, technology, and resources in support of our border security efforts. Most recently, the President's Fiscal Year (FY) 2013 Budget Request continues these efforts by supporting the largest deployment of law enforcement officers to the frontline in our agency's history: more than 21,300 Border Patrol agents; 1,200 Air and Marine agents; and 21,100 CBP officers; working 24/7 with state, local, tribal, and Federal law enforcement to target illicit networks trafficking in people, drugs, weapons, and money. Over the last year, we have brought greater unity to our enforcement efforts, expanded collaboration with other agencies, and improved response times.

CBP has also deployed additional technology assets—including mobile surveillance units, thermal imaging systems, and large-and small-scale non-intrusive inspection equipment—along our Nation's borders. CBP currently has over 270 aircraft, including nine Unmanned Aircraft Systems (UAS) and more than 300 patrol and interdiction boats that provide critical aerial and maritime surveillance and operational assistance to personnel on the ground. The UAS program is rapidly changing how ground assets are deployed, supplying Border Patrol Agents with unparalleled situational awareness through the UAS's broad area electronic surveillance

capabilities. Going forward, CBP will continue to integrate the use of these specialized capabilities into the daily operations of CBP's frontline personnel to enhance our border security efforts.

The results of this prioritization to the border and our layered approach to security are clear. In FY 2011, Border Patrol apprehensions along the Southwest border—a key indicator of illegal immigration—decreased 53 percent since FY 2008, and are less than one fifth of what they were at their peak in 2000. We have matched these decreases in apprehensions with increases in seizures of cash, drugs, and weapons. During FYs 2009 through 2011, DHS seized 74 percent more currency, 41 percent more drugs, and 159 percent more weapons along the Southwest border as compared to FY 2006-2008. In FY 2011, CBP seized more than $126 million in illegal currency and nearly five million pounds of narcotics nationwide. At the same time, according to 2010 Federal Bureau of Investigation (FBI) crime reports, violent crimes in Southwest border states have dropped by an average of 40 percent in the last two decades.

Every key measure shows we are making significant progress; however, we must remain vigilant and focus on building upon an approach that puts CBP's greatest capabilities in place to combat the greatest risks.

Cartels make wmd use likely

BPW '10 BioPrepWatch (1/21/10, BioPrepWatch, "Drug trade could increase availability of bioweapons" http://bioprepwatch.com/stories/510506427-drug-trade-could-increase-availability-of-bioweapons#sthash.SRj9Orv6.dpuf)

Drug cartels, as a result of the increase in the narcotics trade, have been increasingly able to acquire biological and chemical weapons and radioactive material for the purpose of **WMD creation**, the U.S. State Department has warned.
"The sums of money involved are growing in extraordinary amounts, and that raises the possibility, because of the sums and the areas in which these groups have begun to operate, for that opportunity to be exploited," David Johnson, assistant secretary of state for the Bureau of International Narcotics and Law Enforcement Affairs, told The Jerusalem Post.
"Some of these criminal syndicates have the organizational and financial wherewithal that could potentially allow them to acquire and sell radioactive material, biological and chemical weapons, and technologies used for weapons of mass destruction."

UQ

Violence is down—Juarez proves

Denvir 7/1, A Philadelphia-Based Contributing Writer To Citylab and A Former Staff Reporter At Philadelphia City Paper. (7/1/15, Daniel Denvir, CityLab, "Juárez to Tourists: It's Safe to Come Back Now", http://www.citylab.com/crime/2015/07/juarez-to-tourists-its-safe-to-come-back-now/397232/)

Murder capital of the world is no one's idea of a good tourism promotion. But Ciudad Juárez's murder tally has long since plummeted from the astronomical high of more than 3,000 recorded in 2010. In 2014, 424 or 538 people were reported killed in Juárez (depending on what entity is

doing the reporting). Per capita, even that higher number represents a murder rate similar to that ofDetroit or New Orleans. The border city nonetheless remains forbidden territory for Americans who in prior decades would cross over from El Paso in droves to visit family, bars, restaurants, dentists, pharmacies and strip clubs. Juárez is by no means a paragon of security, but it's certainly safe enough to grab dinner.

IMPACT Modules

WMD

Cartels make wmd use likely

BPW '10 BioPrepWatch (1/21/10, BioPrepWatch, "Drug trade could increase availability of bioweapons" http://bioprepwatch.com/stories/510506427-drug-trade-could-increase-availability-of-bioweapons#sthash.SRj9Orv6.dpuf)

Drug cartels, as a result of the increase in the narcotics trade, have been increasingly able to acquire biological and chemical weapons and radioactive material for the purpose of **WMD creation**, the U.S. State Department has warned.
"The sums of money involved are growing in extraordinary amounts, and that raises the possibility, because of the sums and the areas in which these groups have begun to operate, for that opportunity to be exploited," David Johnson, assistant secretary of state for the Bureau of International Narcotics and Law Enforcement Affairs, told The Jerusalem Post.

Bioterror

IF cartels gain ground they will launch bioterror attacks

LEntzos '14, Senior Research Fellow in the Department of Social Science, Health and Medicine at King's College London (1/27/14, Filippa Lentzos, BioSocieties, "The risk of bioweapons use: Considering the evidence base")

I can see a situation in which a group of individuals will set up a cell and do these things in a state that doesn't have effective laws in place, probably no laws in place at all. And they could quite easily build up a small laboratory complex in a safe haven state: develop a device, even test it in a sort of rudimentary way within the safe haven state, and then from that, build up a device which they could take and use somewhere else. And I don't think that has happened yet with any group trying to develop biological weapons, but it's certainly happened with illicit drug type production, where there's been a bunch of individuals who are making illicit drugs, and as the laws tighten up in one particular country, they'll relocate to a second country. And as things tighten there, they'll go to a third country. So that's happened certainly in the Asia Pacific, with illicit drug cartels, and I can see a scenario where that could happen with bioweapons too. And that really the motivation behind my interests in helping smaller countries develop legislation, develop government structures, including law enforcement, to make it more difficult for these rogues to do these things within these states.And just because the Aum Shinrikyo attempts weren't successful, it

doesn't mean to say that it's okay, that it's more difficult than everybody thought, it won't happen. I think there may well be a certain level of complacency starting to develop, and that we may well be caught out later on. It mightn't be very sophisticated, but it could be a very disruptive event.

Former bioweapons inspector and microbiologist: I agree, even if biological weapons haven't been used that doesn't mean they won't be. Maybe it's still easier to cause terror through other means. But we could not have anticipated 9/11; we could not foresee that airplanes would be used for that sort of attack. So we can't foresee all scenarios, we don't know what is next, so I wouldn't exclude anything. And the biothreat is more relevant than a nuclear threat; I mean, you can't easily acquire a nuclear or even dirty bomb. But you can easily acquire biological agents. You don't even have to break into a lab, you can get it in nature, you can get if off a sick person. And, you don't even necessarily have to weaponize it. I mean how many casualties do you need to cause terror? You don't need mass casualties, it's not war. We're talking about infectious disease agents being spread deliberately, and that doesn't necessarily require weaponization.

That's the most likely existential risk

Matheny '7 Department of Health Policy and Management, Bloomberg School of Public Health, Johns Hopkins University (2007, Jason G. Matheny, Risk Analysis, "Reducing the Risk of Human Extinction", Vol 27, No. 5)

Of current extinction risks, the most severe may be bioterrorism. The knowledge needed to engineer a virus is modest compared to that needed to build a nuclear weapon; the necessary equipment and materials are increasingly accessible and because biological agents are self-replicating, a weapon can have an exponential effect on a population (Warrick, 2006; Williams, 2006). 5 Current U.S. biodefense efforts are funded at $5 billion per year to develop and stockpile new drugs and vaccines, monitor biological agents and emerging diseases, and strengthen the capacities of local health systems to respond to pandemics (Lam, Franco, & Shuler, 2006).

Way better bioterror impact card that I'll cut tonight

Off-Case

T – Domestic

1NC T-Domestic

A. Interpretation

DOMESTIC SURVEILLANCE IS DISTINCT FROM ORDINARY CRIME

Pfeiffer 4 Constance Pfeiffer, Juris Doctor candidate, The University of Texas School of Law, May 2004
The Review of Litigation Winter, 2004 23 Rev. Litig. 209 NOTE: Feeling Insecure?: United States v. Bin Laden and the Merits of a Foreign-Intelligence Exception For Searches Abroad lexis

> Courts regularly deal with the most difficult issues of our society. There is no reason to believe that federal judges will be insensitive to or uncomprehending of the issues involved in domestic security cases. Certainly courts can recognize that domestic surveillance involves different considerations from the surveillance of "ordinary crime." If the threat is too subtle or complex for our senior law enforcement officers to convey its significance to a court, one may question whether there is probable cause for surveillance. n141

B. Violation

The plan increases surveillance of ordinary crime which is distinct from foreign surveillance.

C. THE AFFIRMATIVE INTERPRETATION IS BAD FOR DEBATE

Limits are necessary for negative preparation and clash, and their interpretation makes the topic too big. Including surveillance of common crimes adds an entirely different legal regime with different laws, judicial standards, and other issues for THOUSANDS of different crimes.

D. T IS A VOTER because the opportunity to prepare promotes better debating

A2 Domestic = Geographic Location

DOMESTIC SURVEILLANCE IS INTELLIGENCE GATHERING, The modifers "foreign" and "domestic" distinguish the type of security threat, not the geographic location of the surveillance

Small 8 MATTHEW L. SMALL. United States Air Force Academy 2008 Center for the Study of the Presidency and Congress, Presidential Fellows Program paper "His Eyes are Watching You: Domestic Surveillance, Civil Liberties and Executive Power during Times of National Crisis" http://cspc.nonprofitsoapbox.com/storage/documents/Fellows2008/Small.pdf

> Before one can make any sort of assessment of domestic surveillance policies, it is first necessary to narrow the scope of the term "domestic surveillance." Domestic surveillance is a subset of intelligence gathering. Intelligence, as it is to be understood in this context, is "information that meets the stated or understood needs of policy makers and has been collected, processed and narrowed to meet those needs" (Lowenthal 2006, 2). In essence, domestic surveillance is a means to an end; the end being intelligence. The intelligence community best understands domestic surveillance as the acquisition of nonpublic information concerning United States persons (Executive Order 12333 (3.4) (i)). With this definition domestic surveillance remains an overly broad concept. This paper's analysis, in terms of President Bush's policies, focuses on electronic surveillance; specifically, wiretapping phone lines and obtaining caller information from phone companies. Section f of the USA Patriot Act of 2001 defines electronic surveillance as:

THE NATURE OF THE SURVEILLANCE IS DIFFERENT

Bazan 7 Elizabeth B. Bazan, Congressional Research Service Legislative Attorney, American Law Division

CRS Report The Foreign Intelligence Surveillance Act: An Overview of the Statutory Framework and U.S. Foreign Intelligence Surveillance Court and U.S. Foreign Intelligence Surveillance Court of Review Decisions

Updated February 15, 2007 https://www.fas.org/sgp/crs/intel/RL30465.pdf

> Investigations for the purpose of gathering foreign intelligence give rise to a tension between the Government's legitimate national security interests and the protection of privacy interests.6 The stage was set for legislation to address these competing concerns in part by Supreme Court decisions on related issues. In Katz v. United States , 389 U.S. 347 (1967), the Court held that the protections of the Fourth Amendment extended to circumstances involving electronic surveillance of oral communications without physical intrusion.7 The Katz Court stated, however, that its holding did not extend to cases involving national security.8 In United States v. United States District Court, 407 U.S. 297 (1972) (the Keith case), the Court regarded Katz as "implicitly recogniz[ing] that the broad and unsuspected governmental incursions into conversational privacy which electronic

surveillance entails necessitate the application of Fourth Amendment safeguards."9 Mr. Justice Powell, writing for the Keith Court, framed the matter before the Court as follows: The issue before us is an important one for the people of our country and their Government. It involves the delicate question of the President's power, acting through the Attorney General, to authorize electronic surveillance in internal security matters without prior judicial approval. Successive Presidents for more than one-quarter of a century have authorized such surveillance in varying degrees, without guidance from the Congress or a definitive decision of this Court. This case brings the issue here for the first time. Its resolution is a matter of national concern, requiring sensitivity both to the Government's right to protect itself from unlawful subversion and attack and to the citizen's right to be secure in his privacy against unreasonable Government intrusion.10

The Court held that, in the case of intelligence gathering involving domestic security surveillance, prior judicial approval was required to satisfy the Fourth Amendment.11 Justice Powell emphasized that the case before it "require[d] no judgment on the scope of the President's surveillance power with respect to the activities of foreign powers, within or without the country."12 The Court expressed no opinion as to "the issues which may be involved with respect to activities of foreign powers or their agents."13 However, the guidance which the Court provided in Keith with respect to national security surveillance in a domestic context to some degree presaged the approach Congress was to take in foreign intelligence surveillance. The Keith Court observed in part:

...We recognize that **domestic surveillance may involve different policy and practical considerations from the surveillance of "ordinary crime."** The gathering of security intelligence is often long range and involves the interrelation of various sources and types of information. The exact targets of such surveillance may be more difficult to identify than in surveillance operations against many types of crime specified in Title III [of the Omnibus Crime Control and Safe Streets Act, 18 U.S.C. § 2510 et seq.]. Often, too, the emphasis of domestic intelligence gathering is on the prevention of unlawful activity or the enhancement of the Government's preparedness for some possible future crisis or emergency. Thus, the focus of domestic surveillance may be less precise than that directed against more conventional types of crimes. Given these potential distinctions between Title III criminal surveillances and those involving domestic security, Congress may wish to consider protective standards for the latter which differ from those already prescribed for specified crimes in Title III. Different standards may be compatible with the Fourth Amendment if they are reasonable both in relation to the legitimate need of Government for intelligence information and the protected rights of our citizens. For the warrant application may vary according to the governmental interest to be enforced and the nature of citizen rights deserving protection.... It may be that Congress, for example, would judge that the application and affidavit showing probable cause need not follow the exact requirements of § 2518 but should allege other circumstances more appropriate to domestic security cases; that the request for prior court authorization could, in sensitive cases, be made to any member of a specially designated court...; and that the time and reporting requirements need not be so strict as those in § 2518. The above paragraph does not, of course, attempt to guide the congressional judgment but rather to delineate the present scope of our own opinion. We do not attempt to detail the precise standards for domestic security warrants any more than our decision in Katz sought to set the refined requirements for the specified criminal surveillances which now constitute Title III. We do hold, however, that prior judicial approval is required for the type of domestic surveillance involved in this case and that such

approval may be made in accordance with such reasonable standards as the Congress may prescribe. 14

Neolib K

1NC Neolib K

The AFF's paranoia of excessive government induces neoliberalism's control of society

Anderson 12

Ben Anderson, Reader in the Department of Geography at Durham University, "Affect and biopower: towards a politics of life," *Transactions of the Institute of British Geographers*, Vol. 37, No. 1, p. 37-8, fwang

By 'affective condition' I mean an affective atmosphere that predetermines how something – in this case the state – is habitually encountered, disclosed and can be related to. Bearing a family resemblance to concepts such as 'structure of feeling' (Williams 1977) or 'emotional situation' (Virno 2004), an 'affective condition' involves the same doubled and seemingly contradictory sense of the ephemeral or transitory alongside the structured or durable. As such, it does not slavishly determine action. An 'affective condition' shapes and influences as atmospheres are taken up and reworked in lived experience, becoming part of the emotions that will infuse policies or programmes, and may be transmitted through assemblages of people, information and things that attempt to organise life in terms of the market. **State-phobia obviously exists in complex coexistence with other affective conditions**. To give but two examples, note how Connolly (2008) shows how **existential bellicosity and ressentiments infuse the networks of think tanks, media and companies that promote neoliberal policies**. Or consider how Berlant (2008) shows how 'nearly utopian' affects of belonging to a world of work are vital to the promise of neoliberal policies in the context of precariousness. In addition **state-phobia has and will vary as it is articulated with distinct political movements**. For example, **the USA 'Tea Party' phenomenon is arguably animated by an intensified state-phobia named in the spectre of 'Big Government' and linked to a reactivation of Cold War anxieties about the threat of 'Socialism'**. But the 'Tea Party' also involves a heady combination of white entitlement and racism, affective-ideational feelings of freedom, and the pervasive economic insecurity that follows from economic crisis.

How, then, **do we get from state-phobia to a logic of governing that purports to govern 'as little as possible' but actually intervenes 'all the way down' through 'permanent activity, vigilance and intervention'** (Foucault 2008, 246)? **State-phobia traverses quite different apparatuses, and changes** across those apparatuses. As Foucault puts it, it has many 'agents and promoters' (2008, 76), meaning that **it can no longer be localised**. It circulates alongside the concern with excessive government, reappears in different sites and therefore overflows any one neoliberalising apparatus (2008, 187). Hinting to a genealogy of state-affects, **Foucault differentiates it from a similarly 'ambiguous' phobia** at the end of the 18th century **about despotism**, as linked to tyranny and arbitrariness (2008, 76). **State-phobia is different. It gives a push to the question of whether government is excessive, and as such animates policies and programmes that are based on extending the market form to all of society. State-phobia is**, on this account, **both cause and effect of the neoliberal identification of an 'economic-political invariant'** (2008, 111) **across disparate forms of economic intervention** (including the New Deal, Keynesianism and Nazism). Developing Foucault's brief comments on its 'inflationary' logic (2008, 187), **we can think of state-phobia as being bound up with the anticipatory hyper-vigilance of paranoia** (Sedgwick 2003). It is based on an 'elision of actuality' that passes over what the state is actually doing **to always find the 'great fantasy of the paranoiac and devouring state'** (Foucault 2008, 188). In short, **neoliberalism is imbued with a suspicion of any state economic action that is not wholly in the service of organising life around the market form**.

This biopolitical neoliberalism creates multiple structural trends towards extinction and cyclical violence

Szentes 8 (a Professor Emeritus at the Corvinus University of Budapest)

(Tamás, “Globalisation and prospects of the world society”, 4/22 http://www.eadi.org/fileadmin/Documents/-Events/exco/Glob.___prospects_-_jav..pdf)

It’ s a common place that human society can survive and develop only in a lasting real peace. Without peace countries cannot develop. Although since 1945 there has been no world war, but --numerous local wars took place, --terrorism has spread all over the world, undermining security even in the most developed and powerful countries, --arms race and militarisation ha[s] not ended with the collapse of the Soviet bloc, but escalated and continued, extending also to weapons of mass destruction and misusing enormous resources badly needed for development, --many “invisible wars” are suffered by the poor and oppressed people, manifested in mass misery, poverty, unemployment, homelessness, starvation and malnutrition, epidemics and poor health conditions, exploitation and oppression, racial and other discrimination, physical terror, organised injustice, disguised forms of violence, the denial or regular infringement of the democratic rights of citizens, women, youth, ethnic or religious minorities, etc., and last but not least, in the degradation of human environment, which means that --the “war against Nature”, i.e. the disturbance of ecological balance, wasteful management of natural resources, and large-scale pollution of our environment, is still going on, causing also losses and fatal dangers for human life. Behind global terrorism and “invisible wars” we find striking international and intrasociety inequities and distorted development patterns , which tend to generate social as well as international tensions, thus pav[e] the way for unrest and “visible” wars. It is a commonplace now that peace is not merely the absence of war. The prerequisites of a lasting peace between and within societies involve not only - though, of course, necessarily - demilitarisation, but also a systematic and gradual elimination of the roots of violence, of the causes of “invisible wars”, of the structural and institutional bases of large-scale international and intra-society inequalities, exploitation and oppression. Peace requires a process of social and national emancipation, a progressive, democratic transformation of societies and the world bringing about equal rights and opportunities for all people, sovereign participation and mutually advantageous co-operation among nations. It further requires a pluralistic democracy on global level with an appropriate system of proportional representation of the world society, articulation of diverse interests and their peaceful reconciliation, by non-violent conflict management, and thus also a global governance with a really global institutional system. Under the contemporary conditions of accelerating globalisation and deepening global interdependencies in our world, peace is indivisible in both time and space. It cannot exist if reduced to a period only after or before war, and cannot be safeguarded in one part of the world when some others suffer visible or invisible wars. Thus, peace requires, indeed, a new, demilitarised and democratic world order, which can provide equal opportunities for sustainable development. “Sustainability of development” (both on national and world level) is often interpreted as an issue of environmental protection only and reduced to the need for preserving the ecological balance and delivering the next generations not a destroyed Nature with overexhausted resources and polluted environment. However, no ecological balance can be ensured, unless the deep international development gap and intra-society inequalities are substantially reduced. Owing to global interdependencies there may exist hardly any “zero-sum-games”, in which one can gain at the expense of others, but, instead, the “negative-sum-games” tend to predominate, in which everybody must suffer, later or sooner, directly or indirectly, losses. Therefore, the actual question is not about “sustainability of development” but rather about the “sustainability of human life”, i.e. survival of mankind – because of ecological imbalance and globalised terrorism. When Professor Louk de la Rive Box was the president of EADI, one day we had an exchange of views on the state and future of development studies. We agreed that development studies are not any more restricted to the case of underdeveloped countries, as the developed ones (as well as the former “socialist” countries) are also facing development problems, such as those of structural and institutional (and even system-) transformation, requirements of changes in development patterns, and concerns about natural environment. While all these are true, today I would dare say that besides (or even instead of) “development studies” we must speak about and make “survival studies”. While the monetary, financial, and debt crises are cyclical, we live in an almost permanent crisis of the world society, which is multidimensional in nature, involving not only economic but also socio-psychological, behavioural, cultural and political aspects. The narrow-minded, election-oriented, selfish behaviour motivated by thirst for power and wealth, which still characterise the political leadership almost all over the world, paves the way for the final, last catastrophe. One cannot doubt, of course, that great many positive historical changes have also taken place in the world in the last century. Such as decolonisation, transformation of socio-economic systems, democratisation of political life in some former fascist or authoritarian states, institutionalisation of welfare policies in several countries, rise of international organisations and new forums for negotiations, conflict management and cooperation, institutionalisation of international assistance programmes by multilateral agencies, codification of human rights, and rights of sovereignty and democracy also on international level, collapse of the militarised Soviet bloc and system-change3 in the countries concerned, the end of cold war, etc., to mention only a few. Nevertheless, the crisis of the world society has extended and deepened, approaching to a point of bifurcation that necessarily puts an end to the present tendencies, either by the final catastrophe or a common solution. Under the circumstances provided by rapidly progressing science and technological revolutions, human society cannot survive unless such profound intra-society and international inequalities prevailing today are soon eliminated. Like a single spacecraft, the Earth can no longer afford to have a 'crew' divided into two parts: the rich, privileged, wellfed, well-educated, on the one hand, and the poor, deprived, starving, sick and uneducated, on the other. Dangerous 'zero-sum-games' (which mostly prove to be “negative-sum-games”) can hardly be played any more by visible or invisible wars in the world society. Because of global interdependencies, the apparent winner becomes also a loser. The real choice for the world society is between negative- and positive-sum-games: i.e. between, on the one hand, continuation of visible and “invisible wars”, as long as this is possible at all, and, on the other, transformation of the world order by demilitarisation and democratization. No ideological or terminological camouflage can conceal this real dilemma any more, which is to be faced not in the distant future, by the next generations, but in the coming years, because of global terrorism soon having nuclear and other mass destructive weapons, and also due to irreversible changes in natural environment.

Our alternative is to refuse neoliberal subjectivity. We control the internal link to political effectiveness of all social movements

Read 9

(Jason, The University of Southern Maine, A Genealogy of Homo-Economicus: Neoliberalism and the Production of Subjectivity, Foucault Studies, No 6, pp. 25-36, February 2009)

Foucault's development, albeit partial, of account of neoliberalism as governmentality has as its major advantage a clarification of the terrain on which neoliberalism can be countered. It is not enough to simply oppose neoliberalism as ideology, revealing the truth of social existence that it misses, or to enumerate its various failings as policy. Rather any opposition to neoliberalism must take seriously its effectiveness, the manner in which it has transformed work subjectivity and social relationships. As Foucault argues, neoliberalism operates less on actions, directly curtailing them, then on the condition and effects of actions, on the sense of possibility. The reigning ideal of interest and the calculations of cost and benefit do not so much limit what one can do, neoliberal thinkers are famously indifferent to prescriptive ideals, examining the illegal drug trade as a more or less rational investment, but limit the sense of what is possible. Specifically the ideal of the fundamentally self-interested individual curtails any collective transformation of the conditions of existence. It is not that such actions are not prohibited, restricted by the dictates of a sovereign or the structures of disciplinary power, they are not seen as possible, closed off by a society made up of self-interested individuals. It is perhaps no accident that one of the most famous political implementers of neoliberal reforms, Margaret Thatcher, used the slogan, "there is no alternative," legitimating neoliberalism based on the stark absence of possibilities. Similarly, and as part of a belated response to the former Prime Minister, it also perhaps no accident that the slogan of the famous Seattle protests against the IMF and World Bank was, "another world is possible," and it is very often the sense of a possibility of not only another world, but of another way of organizing politics that is remembered, the image of turtles and teamsters marching hand and hand, when those protests are referred to.26 It is also this sense of possibility that the present seems to be lacking; it is difficult to imagine let alone enact a future other than a future dominated by interest and the destructive vicissitudes of competition. A political response to neoliberalism must meet it on its terrain, that of the production of subjectivity, freedom and possibility.

Link Extensions

1. Extend the 1NC Excessive Government Link – the aff's state-phobia entrenches the current system of neoliberalism by increasing the fear of all government action, specifically economic action

2. The Border Link - Eliminating borders revitalizes neoliberalism and opens up financial barriers that allows the market to access new sources of capital

Wilkie 2008 [Rob, Assistant Professor of Cultural and Digital Studies at the University of Wisconsin-La Crosse, "Supply Chain Democracy and Circuits of Imperialism", Red Critique Fall/Winter 2008, http://redcritique.org/FallWinter2008/supplychaindemocracyandcircuitsofimperialism.htm, Accessed 7/15/15, *modified for gendered language, AX]

Second, it is argued that the development of post-labor means of production creates the conditions for the expansion of capital globally, in turn disrupting the traditional boundaries between nations, thereby creating a "flat" or "borderless" world of free cultural and financial exchange (Friedman, The World is Flat; Ohmae, The Borderless World). What

"flat" or "borderless" signifies is an increased "capitalization" in the post-WWII period of formerly socialist and colonized nations and their incorporation into the global system of production, either through the shifting of manufacture from the "North" to the "South" ("outsourcing"/"off-shoring") or by becoming integral players in a post-national "supply-chain" that has been enabled by advances in communication as well as the opening up of trade and financial barriers to free up the flow of formerly "trapped" or unproductive capital. Proponents of the "flat world" thesis point to the expansion of international trade which, according to the IMF, "has grown five times in real terms since 1980, and its share of world GDP has risen from 36 percent to 55 percent over this period" (IMF 137). This "flattening" of the global economy, in which it is said that the expansion of production and trade relations between nations constitute the emergence of a level playing field between formerly unequal or hostile nations, is essentially premised upon a theory of a "universal evolution in the direction of capitalism" (Fukuyama xv) in which there is no longer any "outside" to capitalism. In this reading, the "developed" economies of the North have moved beyond the traditional economic cycle, while transplanting the conditions of new growth and prosperity to the "developing" nations in the South. As Martin Wolf writes, "In the post-war era, the most successful route to development seems to have been via the export of labor-intensive manufactures, the route on which China has followed Hong Kong, Singapore, Taiwan and South Korea" (147). The "problem" for the ideologists of capital and this image of globalization as leveling the world is that insofar as concepts are abstractions of reality the continuing existence of deep social and economic inequalities cannot be solved at the level of ideas and thus still have to be explained. That is to say, even though "globalization" has become synonymous in theory with the end of **the economic challenges to capitalism's dominance**, this does not change the reality that the expansion of capitalism globally has corresponded in actuality with a rising level of inequality and a sharpening of the class divide, both between the North and South, as well as within the respective countries of each. This is because capitalism is a system that depends upon the exploitation of labor. Regardless of whether or not the primary location of production is the North or the South, or whether the workers work in factories that are highly mechanized or newly digitalized, it is the production of surplus value extracted from the surplus labor of workers by owners that drives capitalism forward. That exploitation remains even in the "global" factories of today is supported in a recent study from the World Bank which, despite touting the results of "free-market" globalization as having reduced the number of people living in poverty—defined as the ridiculously low, and ultimately arbitrary, sum of less than $1 per day—by 260 million in the period 1990-2004, nonetheless showed that real inequality between the rich and poor has actually increased during this time in 46 of the 59 developing countries surveyed (4). Over the same period, a study by the International Monetary Fund also found that "Inequality has been rising in countries across all income levels, except those classified as low income" and that overall "the income share of the richest quintile has risen, whereas the shares of the remaining quintiles have declined" (158-159). That the two main representatives of capitalist finance found rising inequality and a sharpening of the class divide despite representing globalization as moving beyond class binaries is due to the fact that the economic contradiction between capital and labor does not reside at the level of the concept—in other words, the conflict over globalization is not simply a political or intellectual struggle over how to best define the term—but rather in the property relations that enable the owners of the means of production to accumulate capital at the expense of

those who own only their labor power. As Marx argued more than one hundred fifty years ago and which is proven once again by the increases in global inequality, "even the most favorable situation for the working class, namely, the most rapid growth of capital, however much it may improve the material life of the worker, does not abolish the antagonism between [his/her] interests and the interests of the capitalist" (Wage Labor and Capital 39). Even as developments of labor productivity result in new, higher standards of living for some workers, these developments are always restricted under capitalism to the accumulation of surplus value and thus it is always the interests of the bosses that will take precedence over the needs of the working class.

3. The Cultural Normalization Link - Focusing on specific manifestations of the surveillance state ignores the cultural normalization of surveillance writ large.

Giroux 14

Henry A. Giroux, Global TV Network Chair Professorship at McMaster University in the English and Cultural Studies Department and a Distinguished Visiting Professorship at Ryerson University, "Totalitarian Paranoia in the Post-Orwellian Surveillance State," 2-10, Truth-out, http://www.truth-out.org/opinion/item/21656-totalitarian-paranoia-in-the-post-orwellian-surveillance-state, fwang

Surveillance has become a growing feature of daily life. In fact, it is more appropriate to **analyze the culture of surveillance, rather than address exclusively the violations committed by the corporate-surveillance state**. In this instance, **the surveillance and security state is one that not only listens, watches and gathers massive amounts of information through data mining** necessary for identifying consumer populations **but also acculturates the public into accepting the intrusion of surveillance technologies and privatized commodified values into all aspects of their lives**. **Personal information is willingly given over to social media and other corporate-based websites and gathered daily as people move from one targeted web site to the next across multiple screens and digital apparatuses.** As Ariel Dorfman points out, "**social media users gladly give up their liberty and privacy, invariably for the most benevolent of platitudes and reasons**," all the while endlessly shopping online and texting.7A **This collecting of information might be most evident in the video cameras that inhabit every public space from the streets, commercial establishments and workplaces to the schools our children attend as well as in the myriad scanners** placed at the entry points of airports, stores, sporting events and the like. ¶ Yet **the most important transgression may** not only **be happening through** the unwarranted watching, listening and collecting of information but also **in a culture that normalizes surveillance by upping the pleasure quotient and enticements for consumers who use the new digital technologies and social networks to simulate false notions of community and to socialize young people into a culture of security and commodification in which their identities, values and desires are inextricably tied to a culture of private addictions, self-help and commodification**.

Counter Plan Text: The United States Federal Government should end the "War on Drugs" including the abolition of the DEA, eliminating all federal enforcement of illicit drug laws and stopping all federal assistance of drug law enforcement by state and local governments, except for the enforcement of illicit prescription drugs.

The counter plan solves through the same mechanism of the aff, no solvency deficits.

But, the aff legalizes too many drugs, including pharmaceuticals with dangerous side effects, thalidomide proves

Margaret **Hamburg,** M.D., is Commissioner of the U. S. Food and Drug Administration, 2-7-**2012**, "50 Years after Thalidomide: Why Regulation Matters," FDA, http://blogs.fda.gov/fdavoice/index.php/2012/02/50-years-after-thalidomide-why-regulation-matters/, Date Accessed 7/26/15, JL @ DDI

Fifty years ago, the vigilance of FDA medical officer Dr. Frances Kelsey prevented a public health tragedy of enormous proportion by ensuring that the sedative thalidomide was never approved in the United States. As many remember, in the early 1960's, reports were coming in from around the world of countless women who were giving birth to children with extremely deformed limbs and other severe birth defects. They had taken thalidomide. Although it was being used in many countries, Dr. Kelsey discovered that it hadn't even been tested on pregnant animals. Dr. Kelsey's reaction to thalidomide exemplifies the FDA's mission: protecting and promoting the health of the American people, using science for regulatory decision-making. Now I know that in some circles regulation is viewed as a roadblock to innovation and economic growth. But in actuality, when done right, regulation isn't a roadblock; it's the actual pathway to achieving real and lasting innovation. Smart, science-based regulation instills consumer confidence in products and treatments. It levels the playing field for businesses. It decreases the threat of litigation. It prevents recalls that threaten industry reputation and consumer trust, not to mention levying huge preventable costs on individual companies and entire industries. And it spurs industry to excellence. The tragedy of thalidomide led to changes that strengthened both the regulatory and scientific environment for medical product development and review. In response to the public uproar, in 1962 Congress enacted the Kefauver-Harris amendments to the Federal Food, Drug and Cosmetic Act. Thanks to these new amendments, manufacturers had to prove that a drug was not only safe, but also effective. Approvals had to be based on sound science. Companies had to monitor safety reports that emerged postmarket and adhere to good manufacturing practices that would lead to consistently safe products. And there were new protections for patients. The amendments not only benefited patients, they helped industry, raising scientific standards that eventually ushered in today's sophisticated, science-based life

sciences industry. For the very first time, many companies put in place research and development programs, including the design and implementation of controlled clinical trials. Major therapeutic breakthroughs resulted, including the use of beta blockers in patients after a heart attack and angiotensin-converting enzyme inhibiters to improve survival in patients with heart failure. All of these were good news for public health and for corporate bottom lines. The best drugs and treatments rose to the top, not simply those that were most heavily marketed.

Unapproved Prescription Drugs are Illegal

The FDA's unapproved drugs are illegal drugs

FDA, 9/19/**2011**, "Guidance for FDA Staff and Industry: Marketed Unapproved Drugs – Compliance Policy Guide", FDA: U.S. Department of Health and Human Services: Center for Drug Evaluation and Research; http://www.fda.gov/downloads/drugs/guidancecomplianceregulatoryinformation/guidances/ucm070290.pdf, Date Accessed 8/1/15, JL @ DDI

FDA intends to evaluate on a case-by-case basis whether justification exists to exercise enforcement discretion to allow continued marketing for some period of time after FDA determines that a product is being marketed illegally. In deciding whether to allow such a grace period,9 we may consider the following factors: (1) the effects on the public health of proceeding immediately to remove the illegal products from the market (including whether the product is medically necessary and, if so, the ability of legally marketed products to meet the needs of patients taking the drug); (2) the difficulty associated with conducting any required studies, preparing and submitting applications, and obtaining approval of an application; (3) the burden on affected parties of immediately removing the products from the market; (4) the Agency's available enforcement resources; and (5) any special circumstances relevant to the particular case under consideration. However, as stated above, FDA does not intend to apply any such grace period to an unapproved drug that was introduced onto the market after September 19, 2011.

Unapproved drugs are illegal

FDA, 6-2-**2015**, "Unapproved Prescription Drugs: Drugs Marketed in the United States That Do Not Have Required FDA Approval," FDA, http://www.fda.gov/drugs/guidancecomplianceregulatoryinformation/enforcementactivitiesbyfda/selectedenforcementactionsonunapproveddrugs/default.htm, Date Accessed 8/1/15, JL @ DDI

The Agency has serious concerns that drugs marketed without required FDA approval may not meet modern standards for safety, effectiveness, quality, and labeling. Physicians and other healthcare practitioners, along with consumers, cannot assume that all marketed drugs have been found by the FDA to be safe and effective. For a variety of historical reasons, some drugs, mostly older products, continue to be marketed illegally in the U.S. without required FDA approval. The manufacturers of unapproved drug products have not received FDA approval and do not conform to a monograph for making over-the-counter (OTC) drugs. The lack of evidence demonstrating that these unapproved drugs are safe and effective is a significant public health concern.

Prescription Drug Solvency

FDA regulation of prescription drugs is key to prevent dangerous pharmaceuticals

Taylor and Crowley, 2009

(Tia Taylor, MPH, and Ryan Crowley, 20 April 2009, "IMPROVING FDA REGULATION OF PRESCRIPTION DRUGS", American College of Physicians, https://www.acponline.org/advocacy/current_policy_papers/assets/fda.pdf, Date Accessed 7/27/15, JL @ DDI)

What Does FDA Regulation of Prescription Drugs Entail? Prescription drugs are vital to preventing and treating illness and helping to avoid costlier health problems. The Food and Drug Administration (FDA) is charged with the mammoth and complex task of regulating the safety and effectiveness of new and approved drugs. The FDA reviews proposals for conducting clinical drug trials, evaluates drug applications and proposed drug labeling, and monitors drugs once they are approved and marketed. The current system of drug safety monitoring includes preclinical testing followed by three phases of clinical studies. To obtain approval for a marketing drug in the U.S., drug sponsors must submit a new drug application that details the completed clinical drug trials and includes data on safety and effectiveness, pharmacology, toxicology, chemistry, manufacturing information, and proposed labeling language. The applications are evaluated by FDA reviewers and other experts who help the FDA determine whether to approve a drug for marketing. The FDA Amendments Act of 2007 increased the FDA's regulatory authority for postmarketing surveillance activities, enabling the FDA to require postmarketing testing to identify or assess potential serious risks.

NB Extensions

Dangerous drugs like laetrile will rebound without surveillance

Abc News, 1-6-**2006**, "FDA Cracks Down on Laetrile Resurgence," ABC News, http://abcnews.go.com/Health/story?id=117990, Date Accessed 7/26/15, JL @ DDI

Federal health officials warned Internet users to beware of a concoction made of apricot seeds that's touted as a cancer cure, as a Florida court case became the government's latest attempt to quell a resurgence of laetrile. In the 1970s, thousands of patients went to Mexico seeking laetrile, and some doctors even sold it in the United States, before a National Cancer Institute study concluded that the substance did not fight cancer. Experts also warned that laetrile pills could cause cyanide poisoning. Subsequently, the Food and Drug Administration declared laetrile illegal. Several states fought the FDA action but courts backed the government, ending laetrile's heyday by 1980. Now laetrile is rebounding on the Internet, sometimes sold under the aliases amygdalin or "vitamin B17." On Wednesday, the FDA announced that a U.S. District judge in Miami had issued a preliminary injunction halting sales of laetrile by three Internet sites, and warned consumers to beware. Patients Forego Therapy "We do not want people to take products that have not been proven to be safe and effective," said FDA enforcement chief John Taylor,

noting that the biggest worry is that patients will forego proven cancer therapy. The judge's ruling temporarily stops laetrile sales by World Without Cancer Inc. and Health World International Inc., of Bay Harbor, Fla., and Arizona-based Health Genesis Corp., which also does business in Bay Harbor, while the court considers an FDA lawsuit seeking to permanently halt the sales. The FDA said since 1998 its inspectors have warned David E. Arjona, an official of all three companies, that laetrile is illegal, yet those inspectors were able to buy laetrile from his Web site in June. Arjona did not return a phone call. His attorney, Kirkpatrick Dilling of Chicago, was not aware of the preliminary injunction, but said his client "hasn't sold one thing that's harmful to anybody." The Florida case is the FDA's third laetrile crackdown this year, part of the agency's new attempt to block Internet sales of unapproved drugs. In April, a federal judge ordered a New York company to stop selling laetrile; in July, a federal grand jury indicted an Ohio laetrile seller.

Legalization CP

1NC Legalization CP

Counter Plan Text: The United States should legalize all currently illegal drugs.

US legalization spills over globally

Matthew S. **Jenner,** Articles Editor, Indiana Journal of Global Legal Studies; J.D., 2011, Indiana University Maurer School of Law; B.A. cum laude, 2008, University of Notre Dame, Summer **2011**, "International Drug Trafficking: A Global Problem with a Domestic Solution", Indiana Journal of Global Legal Studies Volume 18, Issue 2, Project Muse, Date Accessed 7/22/15, JL @ DDI

C. The Protagonist: The United States of America

A successful legalization regime implies that, in theory, every nation across the globe should legalize drugs. However, in practice, convincing every nation to do so in the short term is far from plausible. Mexico may seem to be the logical choice to take the first step toward universal legalization because of its recent drug problems. However, Mexico has a relatively low level of consumption of illicit drugs: 0.8% of the population use cocaine and 3.1% use marijuana,133 both near global averages.134 With such a minor share of the demand for drugs, legalization in Mexico would barely affect the global market. Additionally, immediate legalization in Mexico could lead to even more violence because of its ongoing trafficking problem. Without strictly enforced regulation, the traffickers in Mexico could potentially use legalization to their advantage to increase their business in other countries where drugs are still illegal. A better candidate to take the first step toward universal legalization is the United States. In the words of Secretary of State Hilary Clinton, speaking on behalf of the United States, "Our insatiable demand for illegal drugs fuels the drug trade."135 About 3% of U.S. citizens aged fifteen to sixty-four use cocaine (more than six times the global average) and 12.3% use marijuana (more than three times the global average).136 Those numbers equate to about 30% of all cocaine [End Page 923] users globally and 14% of all marijuana users. In addition, the United States—which comprises only 5% of the world's population—consumed 60% of the world's drugs in 1996.137 That number could be different now, but it puts this analysis in perspective. Either way, the United States is one of the

leading consumers of illicit drugs worldwide. If the United States legalized drugs, it would have a profound effect on the market. Mexican President Felipe Calderon said it best: "If there isn't a generalized, universal legalization policy across the world, and mainly in the main drug consumer, the United States, there won't even be any economic benefits, because the price is determined by the American market."138 The United States is also a good candidate because other nations tend to follow its drug policies. Because the United States is the leader of the war on drugs, its drug policies have dominated the United Nations and other global organizations.139 With the United States at the helm of legalization, other countries would quickly follow, and universal legalization could become a reality. D. The Setting: Right Now In the drug legalization debate, the best time to act is now. With each passing day, more people lose their lives to the drug war. Still, skeptics do not see this policy as plausible any time soon. Nevertheless, legalization in the United States is not merely a pipe dream. The recent passing of Mexico's new decriminalization law marks a milestone in global drug policy. A pattern of the United States quashing Mexico's plans to alter its drug policy developed in recent years. Most recently, in 2006, Mexico was close to enacting a similar decriminalization law, but Mexican President Vicente Fox vetoed the bill—one he had supported—after he received pressure from George W. Bush's administration.140 However, Mexico's recent decriminalization law passed in 2009 without U.S. opposition.141 The Obama administration stated that it is taking a "wait-and-see" approach to this legislation.142 Although it is not legalization, it appears that the United States is finally opening the door to the possibility of altering its drug policies after forty years of failures. [End Page 924]

And, that legalization has a laundry list of benefits- decrease in violence, other illicit markets, and a boosted economy

Matthew S. **Jenner,** Articles Editor, Indiana Journal of Global Legal Studies; J.D., 2011, Indiana University Maurer School of Law; B.A. cum laude, 2008, University of Notre Dame, Summer **2011**, “International Drug Trafficking: A Global Problem with a Domestic Solution”, Indiana Journal of Global Legal Studies Volume 18, Issue 2, Project Muse, Date Accessed 7/22/15, JL @ DDI

B. The Plot: Universal Legalization

The most efficient way to affect the global market is to legalize drugs, as prohibition acts as a catalyst in building up the market. It attracts criminals, incentivizes violence, and makes the drug trade one of the most profitable industries in the world. Universal legalization would reverse these trends. It would take the profits out of the industry and put a stop to violent trafficking, possibly ending the drug trade as we know it. When advocates lobby for the legalization or decriminalization of drugs, they often argue from a domestic stance. They see legalization as an opportunity to reallocate police resources, free up prison space, reduce violent crime among drug dealers and consumers, and tax the industry.118 While all of these prospects are inherently part of legalization—and probably bolster this argument even more—this Note focuses on eradicating the global drug trafficking problem. The costs [End Page 919] and benefits of legalization should be assessed on the global level, not on the purely domestic level regarding drug problems each nation inevitably faces.119 The concept of legalization entails legalizing every aspect of the drug trade, from production to consumption, worldwide. The immediate benefit of legalization would be a reduction in the violence associated with the drug trafficking aspect of the trade. Prohibition

creates the opportunity for self-help violence in the drug trade by driving the market underground.120 Legalization would create a legitimate market for drugs, allowing conflicts to be settled in courts of law and attracting commendable market players rather than criminals, much like what happened after the prohibition of alcohol ended in the United States in the 1930s.121 Skeptics may argue that the violent drug trafficking criminals would not simply become peaceful after legalization occurs. This argument has some merit, but these violent criminals would be sifted out of the industry over time. They would most likely focus their attention on other closely linked illicit trade markets that still offer higher profits, like the arms trade and human trafficking. However, without the enormous income of the drug trade, these other illicit industries would also likely suffer. The long-term effects of legalization are most easily illustrated by an economic analysis of the global market. Although the market structures are complicated—drug cartels create a monopoly-like market with fewer players, called an oligopoly—a simple supply and demand analysis will best demonstrate these effects. Due to the increased costs of the global business resulting from prohibition—such as avoiding authorities and violence—the current supply curve for illicit drugs is relatively steep.122 Governments are effectively taxing producers and traffickers by imposing these extra costs; consequently, each unit of drugs is sold at a higher price than it would if drugs were legal.123 In Figure 4 above, the supply curve of drugs under prohibition is labeled S1. If drugs were legalized, the supply curve would flatten out, becoming more elastic, because the additional costs and barriers to entry of the illicit industry would no longer exist.124 The costs of production and distribution would be lower for each unit of drugs, so a lower price would be charged. In Figure 4, the supply curve of drugs under legalization is labeled S2. The demand for drugs, under any policy, is relatively inelastic. The consumption of drugs stays relatively constant when price fluctuates. This is partly due to the addictive nature of drugs—even when price goes up people still need drugs—and the fact that some people will not consume drugs, regardless of how low the price is. In Figure 4, the demand curve under prohibition is labeled D1. If drugs are legalized, demand is likely to increase because the cost to the consumer is lower. However, this increase is likely to be modest because the legal status of drugs tends to have little effect on whether most people choose to consume drugs.125 Evidence of these phenomena can be abstracted from the U.S. experience with the prohibition of alcohol, a similar market. During Prohibition, alcohol consumption did not vary greatly with the change in price, and, after its repeal, consumption did not increase substantially.126 In Figure 4, the demand curve under legalization is labeled D2. The net effect of a change in drug policy from prohibition to legalization is a sharp decrease in price and a modest increase in quantity demanded. Figure 4 above provides price and quantity numbers as an example to better understand this economic situation. As [End Page 921] seen in Figure 4, equilibrium127 price drops from twelve to four, while quantity demanded increases slightly from seven to ten. The difference that most concerns the global drug trade is the net change in revenue. In Figure 4, revenues (the shaded regions) drop drastically from eighty-four under prohibition to forty under legalization, a fifty-two percent reduction. Less revenue in the drug market equates to substantially lower profits for drug traffickers. With lower profits, criminals will likely leave the drug market, abandoning drug production in search of other more profitable, and likely illicit, markets. Additionally, the illicit drug market is closely linked to these other illicit markets, like the arms trade, human trafficking, and terrorism. For instance, illegal investments in the drug trade often fund criminal organizations that procure weapons in the arms trade and train terrorists.128 Without the profits from the $500 billion drug industry, many of these other illicit markets may suffer as well, a substantial benefit to the war on terror.

Solvency Extensions

Both the federal and state governments would regulate drugs after legalization, solves best

Matthew S. **Jenner,** Articles Editor, Indiana Journal of Global Legal Studies; J.D., 2011, Indiana University Maurer School of Law; B.A. cum laude, 2008, University of Notre Dame, Summer **2011**, "International Drug Trafficking: A Global Problem with a Domestic Solution", Indiana Journal of Global Legal Studies Volume 18, Issue 2, Project Muse, Date Accessed 7/22/15, JL @ DDI

Heavy government regulation of the new, legal drug industry is the best solution to these problems. Governments could regulate everything from the cultivation to the consumption of the newly legal drugs, much like the United States has with tobacco and alcohol. In the United States, substantial legislation by both the federal and state governments would be needed to fully regulate the industry and make legalization a success. The cultivation and manufacturing processes would be the first part of the regulatory framework. The government could allow consumers to [End Page 925] cultivate small amounts of drugs for personal use, like the twenty-five square foot plot limit proposed in Proposition 19,148 or could outlaw private growing altogether. This decision would likely turn on which crops are being grown and the corresponding dangers of producing specific drugs. For instance, growing a small amount of marijuana would be relatively harmless and could be permitted. However, if crops, like the coca plant, require further manufacturing to produce the actual drug, governments could limit its private cultivation. For farmers or those growing larger plots, a permit could be required to grow the drug crops. Manufacturers would also need specific regulations detailing the proper manufacturing processes and product specifications. This would ensure a safer product then what may be currently available on the black market. Some might argue that there will still be a demand for these more dangerous forms of drugs. However, the relatively lower price of the safer, legally manufactured drugs and the fear of punishment from consuming the still illegal forms of drugs will likely deter consumption of the illegal, less safe drugs. The distribution of the newly legal drugs could also be heavily regulated. The local distribution of drugs from sellers to consumers would likely be a state law issue. States could regulate which businesses are allowed to sell drugs, potentially requiring permits to sell drugs, similar to liquor licenses. The distribution of drugs would also involve a great deal of federal regulation. First, the federal government could highly tax drug sales to provide the nation with a thriving source of revenue. This tax rate, however, must not be set excessively high. If the tax is set too high, the price of drugs could rise to an artificially high level, inviting competition from violent drug traffickers. Second, the federal government could regulate the international trade of drugs. To prevent drug trafficking by violent traders, importers would be required to acquire some sort of authentication. This would assure that the money for the imported drugs would not be used to support violent or criminal activities. Governments could also impose additional excise taxes on the importation and exportation of the drugs. Possession and consumption could also be heavily regulated. Similar to decriminalization laws in European countries and Mexico, consumers could be allowed to possess drugs up to a certain quantity for personal use. This law would deter distribution by sellers who are not approved. The consumption of drugs would also have limitations. The provisions of Proposition 19 seem to be reasonable: consumption is limited to adults twenty-one years or older, in nonpublic places, and out of the presence of children. States could also enact more specific criminal laws [End Page

926] regarding driving under the influence of drugs, public consumption, and other comparable regulations. State laws on alcohol consumption would provide a good barometer for these newly enacted laws. However, these drug laws should be much more stringent than some laws regarding alcohol to ensure public safety. For example, instead of a "legal limit" similar to driving under the influence of alcohol, there should be a no-tolerance policy for driving under the influence of drugs.

Legalization and regulation of drugs prevents the dangers of currently illegal drugs, MDMA and alcohol prove

Franklin and Hellwich, 2014

(Major Neill Franklin, executive director of Law Enforcement Against Prohibition, a group of more than 100,000 law enforcement officials and supporters opposed to the war on drugs and a 34-year veteran police officer, and Mikayla Hellwich, Horticulture student at the University of Maryland and the outreach coordinator and former president of the university's chapter of Students for Sensible Drug Policy, 01/23/2014, "What We Can't Seem to Remember About MDMA and Why Legalizing Drugs Will Save Your Child's Life", the Huffington Post, http://www.huffingtonpost.com/neill-franklin/mdma-legalization_b_4044755.html, Date Accessed 7/26/15, JL @ DDI)

Thanks to our failed experiment with alcohol prohibition, we know that it's impossible to keep people away from intoxicants, legal or otherwise. The difference is in how we treat those who favor certain substances over others. If Budweiser were suddenly implicated in a salmonella outbreak, there would be a furious investigation. People would ask why nobody had been monitoring the safety equipment, why no one was sanitizing the bottles. We regulate beer so that millions of people who enjoy it every day don't fall ill because of low quality standards or because someone's been pouring paint thinner into the brew. Regulation also keeps us from getting hit by the stray bullets of gangs fighting over the local Bud Light distribution. But for the many illicit drugs that, unlike alcohol, a substance that kills thousands of people every year, do not have the government's seal of approval, there are no such guarantees. MDMA (methylenedioxy-N-methylamphetamine) is a crystalline off-white to brownish substance known to cause feelings of euphoria banned by the U.S. government. This is what Molly, a drug linked to some deaths in the news recently, is intended to be (and can be, depending on the source) but because of large profits to be made, its place on the illegal market, and lack of public drug literacy, Molly is often sold as a mystery bag of off-white powders. There are numerous cheaper chemicals that appear similar but that can be deadly in much lower doses, making buying Molly off the street a dangerous proposition. Victims of the unregulated market include Jeffrey Russ and Olivia Rotondo, who died from overdoses at a recent festival in New York City. Olivia reportedly told paramedics she ingested six hits of Molly before dying. There is no standard unit of measurement for a single "hit" of the drug, however, and Olivia had no way of knowing if what she took was actually MDMA. The difficult truth is that if the drug she wanted were legal, she and Jeffrey might still be alive. They would have known what they were buying and exactly how much to take while minimizing harm. Their drugs would have been labeled with safety precautions necessary to alleviate common symptoms -- such as taking magnesium to reduce

bruxism, sipping on an electrolyte-infused beverage to stay hydrated, and replenishing the brain's serotonin supply with a 5-HTP supplement.

United States = Fed and State Governments

Unites States includes federal and state

Black Law 90 Black's Law Dictionary 1990 p 695

In the United States, government consists of the executive, legislative, and judicial branches in addition to administrative agencies. In a broader sense, includes the federal government and all its agencies and bureaus, state and county governments, and city and township governments.

United States is a collective term – both the federal government and the states

Oakly 9 American Civil Procedure: A Guide to Civil Adjudication in US Courts, Edited by John Bilyeu Oakley, Professor of Law at the University of California, Davis, and Vikram D. Amar, Professor of Law and Associate Dean for Academic Affairs of the School of Law of the University of California at Davis, Kluwer Law International, 2009, page 19

Although it is commonplace today to refer to "the United States" as a single entity and as the subject of statements that grammatically employ singular verbs, it is important to remember that "the United States" remains in many important ways a collective term. The enduring legal significance of the fifty states that together constitute the United States, and their essential dominion over most legal matters affecting day-to-day life within the United States, vastly complicates any attempt to summarize the civil procedures within the United States. Within the community of nations, the United States is a geopolitical superpower that acts through a federal government granted constitutionally specified and limited powers. The organizing principle of the federal Constitution,1 however, is one of popular sovereignty, with governmental powers distributed in the first instance to republican institutions of government organized autonomously and uniquely in each of the fifty states. Although there are substantial similarities in the organization of state governments, idiosyncrasies abound.

The United States is a comprised of 50 states (and Washington DC), overseen legally by federal and state courts, with differences defined by jurisdiction

Michael R. McCurdy, Director, Fairfield and Woods, PC, and Jason B. Robinson, Trial attorney whose practice focuses primarily on complex commercial and environmental litigation, "Tort Law in the United States", December 2010,http://www.fwlaw.com/news/186-tort-law-united-states

The United States of America is unique in that it is *comprised of a federal district and fifty states*. As a result, the legal system in the United States is divided into two separate courts: federal and state

courts. The differences between federal and state courts are defined mainly by jurisdiction, which refers to the types of cases a court is allowed to decide.

A2 Perms

1. Regulation DA – without surveillance, the CP can never regulate drugs, links to the case arguments and NB of the CP

2. The perm links to the (Terror/Cartel) DA(s), without surveillance we cannot prevent a porous border or terror networks

A2 Links to Cartels

1. The 1NC evidence proves that legalization actually decreases violence, whereas the aff makes the business more lucrative

And, more evidence, American illegal drug consumption fuels cartel violence

Muñoz, 2014

(Andrés E., a 2015 JD candidate from Seattle University School of Law, graduated from the University of Washington in 2012 with BAs in History and Latin American & Caribbean Studies, Fall, 2014, "STUDENT SCHOLARSHIP: Blunt the Violence: How Legal Marijuana Regulation in the United States Can Help End the Cartel Violence in Mexico", Seattle Journal for Social Justice, 13 Seattle J. Soc. Just. 691, LexisNexis, Date Accessed 7/26/15, JL @ DDI)

The driving force of cartel power is the demand for drugs in the United States. People in the United States spend approximately $ 65 billion a year on illegal drugs, and drug-related damages amount to about $ 110 billion per year. n40 A report by the US Senate Caucus on International Narcotics Control published in 2012 stated that about 22.6 million people in the United States over the age of 12 were illegal drug users, accounting for almost nine percent of the population and representing the largest proportion in the past decade. n41 Of all illegal drugs used in the United States, marijuana places first, representing over 60 percent of all illegal drug use with 17.4 million users in 2010, followed by 7 million psychotherapeutic users, 1.5 million cocaine users, 1.2 million hallucinogen users, 0.7 million inhalant users, and [*701] 0.2 million heroin users. n42 Thus this article focuses on how current and upand-coming laws that legalize recreational marijuana can be tailored to drive the cartels out of business. The Senate Caucus also found that "[m]ost Americans are unaware of the impact that illegal drug consumption has in fomenting violence in drug trafficking countries in Latin America[,]" citing Mexico as an example. n43 During her term as Secretary of State, Hillary Clinton stated that in the United States, "[o]ur insatiable demand for illegal drugs fuels the drug trade." n44 She also stated, "We know very well that the drug traffickers are motivated by the demand for illegal drugs in the United States and that they are armed by the transport of weapons from the United States." n45 Clinton's comments appear to be the first comments made by a public official of her capacity that admitted that the

United States is largely responsible for the violence in Mexico. It is clear from the abovementioned statistics and the statements made by Hillary Clinton that the enormous demand for illegal drugs in the United States fuels Mexican drug cartels. Although most legal, academic, and media sources differ as to how the drug problem in the United States should be solved, it appears that most sources agree that it is a problem that needs to be resolved, not just by tackling the drug abuse problem in the United States, but also by ending the demand for drugs that provide the cartels with a means to exist.

Politics Links

Marijuana Unpopular

Decriminalization of marijuana is unpopular in Congress, public perception doesn't matter

Will **Oremus**, 2-1-**2012**, "Why Doesn't Anyone in Washington Take Marijuana Legalization Seriously?," Slate Magazine, http://www.slate.com/articles/news_and_politics/politics/2012/02/pot_legalization_why_doesn_t_anyone_in_washington_take_marijuana_policy_seriously_.html, Date Accessed 7/26/15, JL @ DDI

While voters have mellowed out, their representatives in Congress haven't. A legalization bill was introduced in Congress last year for the first time, but few expect it to even come up for a vote. Its sponsors are Barney Frank and Ron Paul, legislators who have built their reputations by taking unpopular stands. Those with something to lose—like, say, an election—still won't touch the issue. When Obama did field a marijuana question in a YouTube chat last year, he laughed at it. "I don't know what this says about the online audience," he chortled. Why won't the president, or anyone else in Washington, take marijuana policy seriously? Pro-legalization types see it as a mere matter of time before the government catches up to the rest of the country. "The conventional wisdom for decades has been that this is a dangerous issue," activist Tom Angell told me. "Behind the scenes people will say, 'I agree, you're totally right, we need to change these laws, but I'm afraid to say so.' For some reason it's still perceived as a political third rail." A primary reason for lawmakers' reticence is that, for decades, the most visible advocates of looser weed laws have been, well, weed smokers—and what serious politician wants to be associated with a bunch of stoners, man? Earlier this decade, wealthy liberals like George Soros and Peter Lewis (once busted for pot-smoking himself) recognized that problem and shifted the debate to medical marijuana, giving the movement a more sympathetic public face: an ailing grandmother rather than a dreadlocked coach potato. Several states have since passed medical marijuana laws, but they don't address the bigger issue at play here. It's recreational users, not glaucoma patients, whose money fuels the illicit drug trade that finances criminal gangs. That's why Angell's group, Law Enforcement Against Prohibition, has taken a different approach. It enlists cops and ex-cops to testify to the societal impacts of the failed drug war, pushing decriminalization and legalization as prudent policy solutions. It's an appeal to reason, not compassion. Downing, the former LAPD cop who asked the YouTube question, is a LEAP board member. The support his video got, from the public if not from Google, testifies to his message's broad appeal. While the tactic seems to be working in some liberal states, it has yet to make pot legalization safe for lawmakers in Washington. Anti-drug leaders see that as evidence that Angell is wrong when he argues that it's just a matter of time. Asa Hutchinson, the former Arkansas congressman who led the Drug Enforcement Administration under George W. Bush, told me he doesn't see a big difference in how the debate is playing out in Washington today as compared to 10 years ago. That may be partly a function of congressional demographics and partly a matter of incentives. Even if 50 percent of the public supports legalization, a pro-pot bill will never pass the Senate if those people are concentrated on the coasts. There's also the fact that potheads tend to be less likely to vote than senior citizens, who came of age in the pre-hippie era and have never inhaled. If legalization opponents are willing to back up their conviction at the ballot box, there's a lot of risk and little reward for a congressman to assume the marijuana mantle. Hutchinson proposed a different explanation for the perceived disconnect between Washington and public opinion: There's not actually a disconnect. Asked by a pollster whether they support legalization, Hutchinson says, voters may shrug and say, "Why not?" But ask them just

how legalized marijuana should be regulated, how it should be taxed, and whether it should be sold at the corner store in their neighborhood, and they'll quickly change their tune. That seemed to happen even in liberal California, where a referendum on legalized marijuana failed in 2010 in part because voters worried about the mechanisms for ensuring proper oversight.

Borders Unpopular

Obama will fight for border control- Recent meeting proves

Wolfgang 14 (Ben Wolfgang: Covers the White House for The Washington Times, "Obama: I've fought against activists who believe there should be open borders", The Washington Times, 12/9/2014, http://www.washingtontimes.com/news/2014/dec/9/obama-ive-fought-against-activists-open-borders/, Accessed: 7/17/15, RRR)

Critics say President Obama went too far with his executive action granting amnesty to more than 4 million illegal immigrants — but behind the scenes, **the president** said he's **pushed back against those who believe the U.S. should have an open border with Mexico**.¶ At a town-hall meeting in Nashville on Tuesday, Mr**. Obama defended the idea of a strong U.S-Mexico border** and said he's had heated debates with activists who want that border to disappear.¶"There have been times, honestly, I've had arguments with immigration rights activists who say, effectively, 'There shouldn't be any rules. These are good people. Why should we have any enforcement like this?' My response is, 'In the eyes of God, everybody is equal … I don't make any claims my child is superior to anybody else's child. But I'm the president of the United States, and nation states have borders,'" the president said. "If we had no system of enforcing our borders and our laws, I promise you, everybody would try to come here."¶ Mr. Obama added that it would be fundamentally unfair to erase the nation's southern border.¶"Sometimes it's just an accident that one person lives in a country that has a border with the U.S. and another person — in Somalia, it's a lot harder to get here," he said.

Changing NSA Surveillance Unpopular

Obama will fight to maintain NSA surveillance – Recent court case proves (links to their DEA solvency evidence)

Ackerman 6/9 (Spencer Ackerman: National security editor for Guardian, "Obama lawyers asked secret court to ignore public court's decision on spying", The Guardian, 6/9/2015, http://www.theguardian.com/world/2015/jun/09/obama-fisa-court-surveillance-phone-records, Accessed: 7/17/15, RRR)

The Obama administration has asked a secret surveillance court to **ignore a federal court that found bulk surveillance illegal** and to once again grant the National Security Agency the power to collect the phone records of millions of Americans for six months.¶ The legal request, filed nearly four hours after Barack Obama vowed to sign a new law banning precisely the bulk collection he asks the secret court to approve, also suggests that the administration may not necessarily comply with any potential court order demanding that the collection stop.¶ US officials confirmed last week that they would ask the Foreign Intelligence Surveillance court – better known as the Fisa court, a panel that meets in secret as a step in the surveillance process and thus far has only ever had the government argue before it – to turn the domestic bulk collection spigot back on.

Schumer Link—Border Surveillance

Schumer supports systematic border surveillance and militarization

On The Issues 14 (On The Issues, "Charles Schumer on Immigration", www.ontheissues.org/International/Charles_Schumer_Immigration.htm, 12/14/2014, sr)

What changes to our current immigration policy do you support? A: I support further securing our borders; prohibiting hiring of undocumented immigrants by requiring job applicants to present a secure Social Security card; creating jobs by attracting the world's best and brightest to America, and keeping them here; requiring undocumented immigrants to register with the government, pay taxes, and earn legal [status or face deportation.] Establishes specified benchmarks which must be met before the guest worker and legalization programs may be initiated: operational control of the border with Mexico; Border Patrol increases; border barriers, including vehicle barriers, fencing, radar, and aerial vehicles; detention capacity for illegal aliens apprehended crossing the US-Mexico border; workplace enforcement, including an electronic employment verification system; and Z-visa alien processing. Within 18 months, achieves operational control over U.S. land and maritime borders, including: **systematic border surveillance through more effective use of personnel and technology; and physical infrastructure enhancements to prevent unlawful border entry Defines "operational control" as the prevention of all unlawful U.S. entries, including entries by terrorists, other unlawful aliens, narcotics, and other contraband.**

Marijuana Popular

Public favors marijuana legalization, significant shifts in state policy prove

Muñoz, 2014

(Andrés E., a 2015 JD candidate from Seattle University School of Law, graduated from the University of Washington in 2012 with BAs in History and Latin American & Caribbean Studies, Fall, 2014, "STUDENT SCHOLARSHIP: Blunt the Violence: How Legal Marijuana Regulation in the United States Can Help End the Cartel Violence in Mexico", Seattle Journal for Social Justice, 13 Seattle J. Soc. Just. 691, LexisNexis, Date Accessed 7/26/15, JL @ DDI)

For the first time in more than 40 years since this issue was first polled, US residents favor legalizing marijuana usage. n113 A national survey found that 52 percent support the legalization of marijuana while 45 percent do not, an increase of 11 percentage points since 2010. n114 This shift in popular opinion regarding marijuana marks a substantial change from 1969, when just 12 percent were in favor of its legalization and 84 percent were opposed. n115 Young voters--those born since 1980, now between the ages of 18 and 34--are the strongest group in favor of its legalization with 65 [*714] percent in favor, n116 reflecting that in the coming years, as younger voters increase in voting turnout, the issue of marijuana legalization will likely shift more rapidly in favor of its legalization. All age groups polled are now more in favor of marijuana's legalization than ever before, including Generation X with 54 percent, the Baby Boomers with 50 percent, and the Silent Generation with 32 percent. n117 The shift in public opinion on marijuana has been so significant that recreational marijuana is now legal in four states and the District of Columbia. Washington and Colorado captured national attention in the 2012 election by legalizing recreational marijuana use. n118 Voters in Washington approved I-502 by 55.7 percent, n119 legalizing possession of up to one ounce of loose leaf marijuana, 16 ounces of a

solid product, and 72 ounces of marijuana infused liquid for adults aged 21 and over. n120 Likewise, 55 percent of Colorado voters approved Amendment 64, the Regulate Marijuana Like Alcohol Act of 2012, legalizing possession of up to one ounce of marijuana and the cultivation of up to six cannabis plants. n121

Drug legalization is becoming more popular

Matthew S. **Jenner,** Articles Editor, Indiana Journal of Global Legal Studies; J.D., 2011, Indiana University Maurer School of Law; B.A. cum laude, 2008, University of Notre Dame, Summer **2011**, "International Drug Trafficking: A Global Problem with a Domestic Solution", Indiana Journal of Global Legal Studies Volume 18, Issue 2, Project Muse, Date Accessed 7/22/15, JL @ DDI

Furthermore, the public perception of legalizing drugs appears to be shifting in the United States. In November 2010, Californians voted on Proposition 19, which was also known as the Regulate, Control and Tax Cannabis Act.143 Proposition 19 would have permitted possession of up to an ounce of marijuana by adults aged twenty-one and older, as well as its consumption in nonpublic places, out of the presence of children.144 Moreover, it would have also allowed the private growing of marijuana in up to twenty-five square foot plots.145 The initiative was narrowly defeated with 46.5% voting in favor of Proposition 19.146 Although the ballot initiative did not pass, experts believe that this issue will be on many states' ballots in the near future, a sign that legalization is a realistic option.147

1NC Cartels Shell

Violence is declining now which gives Mexico time to solve its legitimacy problems and reinforce the rule of law

Gomez 4/30

(Alan Gomez, "After years of drug wars, murders decline in Mexico," USA TODAY. 4-30-2015. http://www.usatoday.com/story/news/world/2015/04/30/mexico-drug-war-homicides-decline/26574309///ghs-kw)

Murders in Mexico fell for a third straight year in 2014 — **the most pronounced declines occurring along the U.S. border** — a sign the country is slowly stabilizing after gruesome drug wars. There were 15,649 people murdered in Mexico in 2014, a 13.8% reduction from the previous year and down from a peak of 22,480 in 2011, according to a report set to be released Thursday by the University of San Diego's Justice in Mexico Project. The reductions were steeper along the U.S.-Mexican border. Five of the six Mexican states that border the USA reported a combined drop of 17.7% in the number of homicides. "These data really help to underscore that we're talking about a sea change in violence," said David Shirk, co-author of the report and director of the Justice in Mexico Project, a U.S.-based initiative to protect human rights south of the border. "You still have elevated levels of

crime, so we still have a long way to go. But there is improvement, and we have to acknowledge that improvement and understand why it's happening so we can try to further it." The reduction in homicides does not mean Mexico has completely solved its security problems. Maureen Meyer, senior associate for Mexico at the Washington Office on Latin America, said Mexicans still face extremely high levels of kidnappings, extortion and other violent crimes. American travelers have also been attacked. The U.S. State Department issued a warning April 13 that said U.S. citizens continue to be victims of carjackings, robberies and other violent crimes. Meyer said the overall reduction in murders is an encouraging trend that allows Mexican officials time to cement improvements in the judicial system, anti-corruption programs and police practices. She said the government must "make sure that the space opened by having less violence leads to structural changes to Mexico's institutions to guarantee a strong rule of law in the future."

Decriminalization would make the drug trade worse

Matthew S. **Jenner,** Articles Editor, Indiana Journal of Global Legal Studies; J.D., 2011, Indiana University Maurer School of Law; B.A. cum laude, 2008, University of Notre Dame, Summer **2011**, "International Drug Trafficking: A Global Problem with a Domestic Solution", Indiana Journal of Global Legal Studies Volume 18, Issue 2, Project Muse, Date Accessed 7/22/15, JL @ DDI

Other scholars propose decriminalization as the answer.132 However, decriminalization would not have the same effect on the market as legalization. In a decriminalized world, production and trafficking would still be illegal, so there would still be the potential for high profits, yielding an incentive for self-help violence, and the drug trade would remain profitable for dangerous criminal organizations. Additionally, under a decriminalization framework, countries would be faced with the same domestic drug problems as legalization.

Drug crime decreases legitimacy of Mexican government – risks collapse

Thoumi et al. 10 (*Francisco E., expert at the Wilson Center, Ph.D., professor of economics and the director of the Research and Minotiring Center on Drugs and Crime at Universidad el Rosario, former research coordinator at the United National Office of Drug Control and Crime Prevention, **Raúl Benitez, public policy scholar at the Wilson Center, researcher at the Center for Interdisciplinary Research in Science and Humanities, professor and researcher at the North America Rsearch Center of UNAM-Mexico, CNAS Senior Fellow, Distinguished Scholar-in-Residence, School of Public Affairs and Washington College of Law, Ph.D in Latin American Studies at UNAM, Master of International Affairs from the Centro de Investigacion y Docencia Economica, ***professor at the University of San Andrés, Ph.D., University of Salvador, political science, Francine, professor of anthropology at the Central University of Venezuela, political science degree, Friedrich, Ebert, and Stiftung Research, "The impact of organized crime on Democratic Governance in Latin America",

Organized crime is a growing problem worldwide. In Latin America and the Caribbean groups of organized crime are undermining the states capacity to govern. In- stitutions of the political system are undercut by the so called »Narcos« or other non state actors. It is obvious that organized crime has adopted mechanisms of the globalized economy such as a high degree of flexibility, the ability to quickly adjust to market changes and the use of socially weak segments of society for their means. While organized crime gets more access to and through politics, already weakened

states in Latin America are put under serious pressure. The impact on recently democratized states like Mexico is severe. The role of or- ganized crime in the erosion of democratic governance is marked by zones of fragile statehood, the undermin- ing of political institutions, the replacement of social pol- icies by non state actors, the bribing of political actors and the illicit financing of political campaigns. But not only has the existence of criminal activities cre- ated a threat to democratic governance. The repressive politics that often respond to organized crime activities further create a spiral of mistrust, corruption and vio- lent reactions. High levels of violence and public inse- curity often justify the popularity of zero tolerance ap- proaches: Politics of the »hard hand« such as in Mexico and Colombia where the military is fighting in »a war on drugs«. These politics often produce human rights abus- es and thus further undermine democratic forms of gov- ernance. The involvement of politicians and police forces or the military in illegal businesses further undermine the trust of civil society into institutions of the state.

State failure destabilizes the globe – results in disease spread, nuclear terrorism, and rogue nations – this guarantees nuclear war

TASC et al 03

(The Transnational Institute, The Center of Social Studies, Coimbra University, and The Peace Research Center – CIP-FUHEM, "Failed and Collapsed States in the International System," December, found at: http://www.globalpolicy.org/nations/sovereign/failed/2003/12failedcollapsedstates.pdf)

In the malign scenario of global developments the number of collapsed states would grow significantly. This would mean that several more countries in the world could not be held to account for respecting international agreements in various fields, be it commercial transactions, debt repayment, the possession and proliferation of weapons of mass destruction and the use of the national territory for criminal or terrorist activities. The increase in failed states would immediately lead to an increase in international migration, which could have a knock-on effect, first in neighbouring countries which, having similar politico-economic structures, could suffer increased destabilization and collapse as well. Developments in West Africa during the last decade may serve as an example. Increased international migration would, secondly, have serious implications for the Western world. In Europe it would put social relations between the population and immigrant communities under further pressure, polarizing politics. An increase in collapsed states would also endanger the security of Western states and societies. Health conditions could deteriorate as contagious diseases like Ebola or Sars would spread because of a lack of measures taken in collapsed areas. Weapons of mass destruction could come into the hands of various sorts of political entities, be they terrorist groups, political factions in control of part of a collapsed state or an aggressive political elite still in control of a national territory and intent on expansion. Not only North Korea springs to mind; one could very well imagine such states in (North) Africa. Since the multilateral system of control of such weapons would have ended in part because of the decision of the United States to try and check their spread through unilateral action - a system that would inherently be more unstable than a multilateral, negotiated regime - one could be faced with an arms race that would sooner or later result in the actual use of these weapons. In the malign scenario, relations between the US and Europe would also further deteriorate, in questions of a military nature as well as trade relations, thus undercutting any possible consensus on stemming the growth of collapsed states and the introduction of stable multilateral regimes towards matters like terrorism, nuclear weapons and international migration. Disagreement is already rife on a host of issues in these

fields. At worst, even the Western members of the Westphalian system - especially those bordering on countries in the former Third World, i.e. the European states - could be faced with direct attacks on their national security.

READ ONLY IF THEY SAY DEA IS CONTINUING SURVEILLANCE IN SQUO ON CASE OR TAKE OUT THE CASE DEFENSE

DEA mass surveillance key to stopping cartels

Brad **Heath**, 4-8-**2015**, "U.S. secretly tracked billions of calls for decades," USA TODAY, http://www.usatoday.com/story/news/2015/04/07/dea-bulk-telephone-surveillance-operation/70808616/, Date Accessed 8/1/15, JL @ DDI

The DEA began assembling a data-gathering program in the 1980s as the government searched for new ways to battle Colombian drug cartels. Neither informants nor undercover agents had been enough to crack the cartels' infrastructure. So the agency's intelligence arm turned its attention to the groups' communication networks. Calling records – often called "toll records" – offered one way to do that. Toll records are comparable to what appears on a phone bill – the numbers a person dialed, the date and time of the call, its duration and how it was paid for. By then, DEA agents had decades of experience gathering toll records of people they suspected were linked to drug trafficking, albeit one person at a time. In the late 1980s and early 1990s, officials said the agency had little way to make sense of the data their agents accumulated and almost no ability to use them to ferret out new cartel connections. Some agents used legal pads. "We were drowning in toll records," a former intelligence official said. The DEA asked the Pentagon for help. The military responded with a pair of supercomputers and intelligence analysts who had experience tracking the communication patterns of Soviet military units. "What they discovered was that the incident of a communication was perhaps as important as the content of a communication," a former Justice Department official said. The military installed the supercomputers on the fifth floor of the DEA's headquarters, across from a shopping mall in Arlington, Va. The system they built ultimately allowed the drug agency to stitch together huge collections of data to map trafficking and money laundering networks both overseas and within the USA. It allowed agents to link the call records its agents gathered domestically with calling data the DEA and intelligence agencies had acquired outside the USA. (In some cases, officials said the DEA paid employees of foreign telecom firms for copies of call logs and subscriber lists.) And it eventually allowed agents to cross-reference all of that against investigative reports from the DEA, FBI and Customs Service.

Unchecked drug violence threatens Mexican government stability

Chase, 12 (Colonel David Chase of the US Army, graduated from the Army War College, in charge of strategy research on the Southern border; "Military Police: Assisting in Securing the United States Southern Border"; 12/3/12; http://www.dtic.mil/cgi-bin/GetTRDoc?Location=U2&doc=GetTRDoc.pdf&AD=ADA561048) KD

In addition to negative economic effects the drug war has an even more serious consequence – the direct threat to the legitimacy of the Mexican government. Violence has created a condition of lawlessness in some parts of the country leading to deteriorating social conditions and an inability for Mexico to police their side of the border. There is no doubt that DTO ideology is all about profit; however their activities are successfully challenging the Mexican government and has raised serious concerns about Mexico's stability and ability to exercise sovereignty. President Calderon himself stated that DTO initiated violence presented, "a challenge to the state, an attempt to replace the state."13 This lack of control is highlighted by several facts. One is that cartels are imposing their influence on local governments throughout the country. A study prepared for the Mexican Senate entitled, "Municipal Government and Organized Crime" released in August 2010 found that 8% of all municipalities are completely under control of organized crime while a further 63% are infiltrated and influenced by organized crime.14 Shockingly the study found these criminal organizations often operated with logistical support from corrupt municipal police and politicians.15 The same report also declared that DTOs have also exerted control over local businesses. A further indication of the erosion of government legitimacy are recent opinion polls showing that public support for the current Mexican government war on drugs is declining.

Terror DA

1NC Terror DA

Terror risk is high- maintaining current surveillance is key

Inserra, 6-8-2015

David Inserra is a Research Associate for Homeland Security and Cyber Security in the Douglas and Sarah Allison Center for Foreign and National Security Policy of the Kathryn and Shelby Cullom Davis Institute for National Security and Foreign Policy, at The Heritage Foundation, 6-8-2015, "69th Islamist Terrorist Plot: Ongoing Spike in Terrorism Should Force Congress to Finally Confront the Terrorist Threat," Heritage Foundation, http://www.heritage.org/research/reports/2015/06/69th-islamist-terrorist-plot-ongoing-spike-in-terrorism-should-force-congress-to-finally-confront-the-terrorist-threat

On June 2 in Boston, Usaamah Abdullah Rahim drew a knife and attacked police officers and FBI agents, who then shot and killed him. Rahim was being watched by Boston's Joint Terrorism Task Force as he had been plotting to behead police officers as part of violent jihad. A conspirator, David Wright or Dawud Sharif Abdul Khaliq, was arrested shortly thereafter for helping Rahim to plan this attack. This plot marks the 69th publicly known Islamist terrorist plot or attack against the U.S. homeland since 9/11, and is part of a recent spike in terrorist activity. The U.S. must redouble its efforts to stop terrorists before they strike, through the use of properly applied intelligence tools. The Plot According to the criminal complaint filed against Wright, Rahim had originally planned to behead an individual outside the state of Massachusetts,[1] which, according to news reports citing anonymous government officials, was Pamela Geller, the organizer of the "draw Mohammed" cartoon contest in Garland, Texas.[2] To this end, Rahim had purchased multiple knives, each over 1 foot long, from Amazon.com. The FBI was listening in on the calls between Rahim and Wright and recorded multiple conversations regarding how these weapons would be used to behead someone. Rahim then changed his plan early on the morning of June 2. He planned to go "on vacation right here in Massachusetts…. I'm just going to, ah, go after them, those boys in blue. Cause, ah, it's the easiest target."[3] Rahim and Wright had used the phrase "going on vacation" repeatedly in their conversations as a euphemism for violent jihad. During this conversation, Rahim told Wright that he planned to attack a police officer on June 2 or June 3. Wright then offered advice on preparing a will and destroying any incriminating evidence. Based on this threat, Boston police officers and FBI agents approached

Rahim to question him, which prompted him to pull out one of his knives. After being told to drop his weapon, Rahim responded with "you drop yours" and moved toward the officers, who then shot and killed him. While Rahim's brother, Ibrahim, initially claimed that Rahim was shot in the back, video surveillance was shown to community leaders and civil rights groups, who have confirmed that Rahim was not shot in the back.[4] Terrorism Not Going Away This 69th Islamist plot is also the seventh in this calendar year. Details on how exactly Rahim was radicalized are still forthcoming, but according to anonymous officials, online propaganda from ISIS and other radical Islamist groups are the source.[5] That would make this attack the 58th homegrown terrorist plot and continue the recent trend of ISIS playing an important role in radicalizing individuals in the United States. It is also the sixth plot or attack targeting law enforcement in the U.S., with a recent uptick in plots aimed at police. While the debate over the PATRIOT Act and the USA FREEDOM Act is taking a break, the terrorists are not. The result of the debate has been the reduction of U.S. intelligence and counterterrorism capabilities, meaning that the U.S. has to do even more with less when it comes to connecting the dots on terrorist plots.[6] Other legitimate intelligence tools and capabilities must be leaned on now even more. Protecting the Homeland To keep the U.S. safe, Congress must take a hard look at the U.S. counterterrorism enterprise and determine other measures that are needed to improve it. Congress should: Emphasize community outreach. Federal grant funds should be used to create robust community-outreach capabilities in higher-risk urban areas. These funds must not be used for political pork, or so broadly that they no longer target those communities at greatest risk. Such capabilities are key to building trust within these communities, and if the United States is to thwart lone-wolf terrorist attacks, it must place effective community outreach operations at the tip of the spear. Prioritize local cyber capabilities. Building cyber-investigation capabilities in the higher-risk urban areas must become a primary focus of Department of Homeland Security grants. With so much terrorism-related activity occurring on the Internet, local law enforcement must have the constitutional ability to monitor and track violent extremist activity on the Web when reasonable suspicion exists to do so. Push the FBI toward being more effectively driven by intelligence. While the FBI has made high-level changes to its mission and organizational structure, the bureau is still working on integrating intelligence and law enforcement activities. Full integration will require overcoming inter-agency cultural barriers and providing FBI intelligence personnel with resources, opportunities, and the stature they need to become a more effective and integral part of the FBI. Maintain essential counterterrorism tools. Support for important investigative tools is essential to maintaining the security of the U.S. and combating terrorist threats. Legitimate government surveillance programs are also a vital component of U.S. national security and should be allowed to continue. The need for effective counterterrorism operations does not relieve the government of its obligation to follow the law and respect individual privacy and liberty. In the American system, the government must do both equally well. Clear-Eyed Vigilance The recent spike in terrorist plots and attacks should finally awaken policymakers—all Americans, for that matter—to the seriousness of the terrorist threat. Neither fearmongering nor willful blindness serves the United States. Congress must recognize and acknowledge the nature and the scope of the Islamist terrorist threat, and take the appropriate action to confront it.

Surveillance is critical to stopping terror threats

Lewis 14 [James Andrew Lewis, Director and Senior Fellow of the Technology and Public Policy Program at the CSIS, December 2014, "Underestimating Risk in the Surveillance Debate", Center for Strategic and International Studies, http://csis.org/files/publication/141209_Lewis_UnderestimatingRisk_Web.pdf pg 10-11 jf]

Assertions that a collection program contributes nothing because it has not singlehandedly prevented an attack reflect an ill-informed understanding of how the United States conducts collection and analysis to prevent harmful acts against itself and its allies. Intelligence does not work as it is portrayed in films—solitary agents do not make startling discoveries that lead to dramatic, last-minute success (nor is technology consistently infallible). Intelligence is a team sport. Perfect knowledge does not exist and success is the product of the efforts of teams of dedicated individuals from many agencies, using many tools and techniques, working together to assemble fragments of data from many sources into a coherent picture. Analysts assemble this mosaic from many different sources and based on experience and intuition. Luck is still more important than anyone would like and the alternative to luck is acquiring more information. This ability to blend different sources of intelligence has improved U.S. intelligence capabilities and gives us an advantage over some opponents. Portrayals of spying in popular culture focus on a central narrative, essential for storytelling but

deeply misleading. In practice, there can be many possible narratives that analysts must explore simultaneously. An analyst might decide, for example, to see if there is additional confirming information that points to which explanation deserves further investigation. Often, the contribution from collection programs comes not from what they tell us, but what they let us reject as false. In the case of the 215 program, its utility was in being able to provide information that allowed analysts to rule out some theories and suspects. This allows analysts to focus on other, more likely, scenarios. In one instance, an attack is detected and stopped before it could be executed. U.S. forces operating in Iraq discover a bomb-making factory. Biometric data found in this factory is correlated with data from other bombings to provide partial identification for several individuals who may be bomb-makers, none of whom are present in Iraq. In looking for these individuals, the United States receives information from another intelligence service that one of the bombers might be living in a neighboring Middle Eastern country. Using communications intercepts, the United States determines that the individual is working on a powerful new weapon. The United States is able to combine the communications intercept from the known bomb maker with information from other sources—battlefield data, information obtained by U.S. agents, collateral information from other nations' intelligence services—and use this to identify others in the bomber's network, understand the plans for bombing, and identify the bomber's target, a major city in the United States. This effort takes place over months and involves multiple intelligence, law enforcement, and military agencies, with more than a dozen individuals from these agencies collaborating to build up a picture of the bomb-maker and his planned attack. When the bomb-maker leaves the Middle East to carry out his attack, he is prevented from entering the United States. An analogy for how this works would be to take a 1,000-piece jigsaw puzzle, randomly select 200 pieces, and provide them to a team of analysts who, using incomplete data, must guess what the entire picture looks like. The likelihood of their success is determined by how much information they receive, how much time they have, and by experience and luck. Their guess can be tested by using a range of collection programs, including communications surveillance programs like the 215 metadata program. What is left out of this picture (and from most fictional portrayals of intelligence analysis) is the number of false leads the analysts must pursue, the number of dead ends they must walk down, and the tools they use to decide that something is a false lead or dead end. Police officers are familiar with how many leads in an investigation must be eliminated through legwork and query before an accurate picture emerges. Most leads are wrong, and much of the work is a process of elimination that eventually focuses in on the most probable threat. If real intelligence work were a film, it would be mostly boring. Where the metadata program contributes is in eliminating possible leads and suspects. This makes the critique of the 215 program like a critique of airbags in a car—you own a car for years, the airbags never deploy, so therefore they are useless and can be removed. The weakness in this argument is that discarding airbags would increase risk. How much risk would increase and whether other considerations outweigh this increased risk are fundamental problems for assessing surveillance programs. With the Section 215 program, Americans gave up a portion of their privacy in exchange for decreased risk. Eliminating 215 collection is like subtracting a few of the random pieces of the jigsaw puzzle. It decreases the chances that the analysts will be able to deduce what is actually going on and may increase the time it takes to do this. That means there is an increase in the risk of a successful attack. How much of an increase in risk is difficult to determine.

Terrorists will use bioweapons- guarantees extinction

Cooper 13

(Joshua, 1/23/13, University of South Carolina, "Bioterrorism and the Fermi Paradox," http://people.math.sc.edu/cooper/fermi.pdf, 7/15/15, SM)

We may conclude that, when a civilization reaches its space-faring age, it∂ will more or less at the same moment (1) contain many individuals who seek to cause large-scale destruction, and (2) acquire the capacity to tinker with its own genetic chemistry. This is a perfect recipe for bioterrorism, and, given the many very natural pathways for its development and the overwhelming∂ evidence that precisely this course has been taken by humanity, it is hard to∂ see how bioterrorism does not provide a neat, if profoundly unsettling, solution∂ to Fermi's paradox. One might object that, if omnicidal **individuals** are∂ successful in releasing **highly virulent** and **deadly genetic malware** into the∂ wild, they are still unlikely to succeed in killing everyone. However, even if∂

every such mass death event results only in a high (i.e., not total) kill rate and there is a large gap between each such event (so that individuals can build up the requisite scientific infrastructure again**), extinction would be inevitable** regardless. Some of the engineered bioweapons will be more successful than others; the inter-apocalyptic eras will vary in length; and post-apocalyptic environments may be so **war-torn, disease-stricken, and impoverished of genetic variation that they may culminate in true extinction events even if the initial cataclysm 'only' results in 90% death rates**, since they may cause the effective population size to dip below the so-called "minimum viable population." This author ran a Monte Carlo simulation using as (admittedly very crude and poorly informed, though arguably conservative) estimates the following Earth-like parameters: bioterrorism event mean death rate 50% and standard deviation 25% (beta distribution), initial population 1010, minimum viable population 4000, individual omnicidal act probability 10−7 per annum, and population growth rate 2% per annum. One thousand trials yielded an average post-space-age time until extinction of less than 8000 years. This is essentially instantaneous on a cosmological scale, and varying the parameters by quite a bit does nothing to make the survival period comparable with the age of the universe.

Link Extensions

1. Extend the 1NC Metadata Link- the NSA metadata surveillance that the aff stops is key to stopping terrorists by identifying entire terrorist networks

2. The Border Link - Border surveillance is key to preventing terrorism, the aff's curtailment of drug surveillance precludes this

Smarick et al. 12 ,(Kathleen Smarick and Gary D. LaFree of the National Consortium for the Study of Terrorism and Responses to Terrorism at the University of Maryland. 11/12 "Border Crossings and Terrorist Attacks in the United States: Lessons for Protecting against Dangerous Entrants" START, http://www.start.umd.edu/sites/default/files/files/publications/START_BorderCrossingsTerroristAttacks.pdf CCC)

An essential step in this project was determining the frequency and dynamics of **border crossings by individuals who conducted or who wanted to conduct terrorism-related activities in the United States**. Towards that goal, the project built upon the existing holdings of the American Terrorism Study (ATS) in this effort. The ATS, housed at the University of Arkansas, catalogs and systematically codes information on more than 300 Federal court cases **involving Federal terrorist charges since 1980 and, following a review of other possible resources, proved to be the most useful starting point for compiling open-source, quantitative data on terrorist border crossings.** Since 1989, the American Terrorism Study (ATS) has received lists of court cases and associated indictees that resulted from an official FBI terrorism investigation spanning 1980 through 2004. Housed at the University of Arkansas' Terrorism Research Center in Fulbright College (TRC), the ATS now includes almost 400 cases from the FBI lists. Of these, approximately 75% of cases have complete court documentation, and almost all of those collected have been coded into the ATS database, while the ATS team continues to track new cases by collecting, reviewing, and coding new and additional court documentation. The ATS includes **terrorism incidents and attacks, thwarted or planned**

terrorism incidents sometimes referred to as preventions, material support cases for terrorism, general terrorism conspiracies, and in some cases, immigration fraud; the common denominator among all ATS events is that the FBI investigated these events as terrorism-related incidents. During preliminary research for this project, court records from 378 terrorism cases found in the ATS dataset were reviewed for information on potential border crossing events related to terrorism cases. The documents for each court case were manually reviewed by researchers to determine whether the collected records reported that one of the defendants or accomplices in a case crossed a U.S. border at some point. Thirty-eight percent of the reviewed cases—145 cases—from 1980 through 2004 were found to either have: • **direct mention of a border crossing in the court documents, or • a link to a terrorism incident that involved a known border crossing, either before or after an incident.** After compiling this list of court cases for inclusion, **each identified court case was then linked to a criminal incident involving terrorism charges. Initial reviews revealed a connection to a border-crossing event in a total of 58 successful terrorist attacks, 51 prevented or thwarted attacks,** 26 material support cases, 33 immigration fraud incidents, **and 4 general terrorism conspiracies**. Additional reviews of relevant information on indictees and their activities resulted in a reduction in the number of successful terrorist attacks associated with these individuals to a total of 43. Appendix 2 provides more details on the data collection process and how a reliable collection methodology was established to create the U.S. Terrorist Border Crossing Dataset (USTBC), using the ATS as a starting point. National Consortium for the Study of Terrorism and Responses to Terrorism A Department of Homeland Security Science and Technology Center of Excellence Border Crossings and Terrorist Attacks in the United States 12 Systematic evaluation by the research team revealed that the American Terrorism Study is a reliable and useful resource for identifying individuals associated with terrorist attacks or terrorist criminal cases (such as conspiracies) and for determining which of these individuals crossed U.S. borders in advance of or in the wake of their terrorism-related behavior. This is largely because the ATS is based on court documents, which among sources of data on terrorism are the most likely to reference relevant border crossing activity. The Global Terrorism Database, which is based primarily on media sources, can serve a supporting role in this research, but the ATS is the primary source allowing for construction of a new, relational database on U.S. Terrorist Border Crossings (USTBCs). That being said, it is important to recognize that the ATS is not a perfect data source. As noted above, its contents are limited to individuals and information related to court cases in which one or more defendant was charged with Federal terrorism charges. As such, the contents of ATS clearly represent a subset of all terrorists or attempted terrorists in the United States, as it systematically omits those who: • were never arrested or faced any charges, • were charged with offenses not directly related to terrorism, • were charged at the non-Federal level, or • were engaged in dangerous activity that does not meet the FBI's definition of a terrorism case. Throughout this project, the research team was careful to respect the limitations of this data collection and to draw conclusions that recognize that the border crossing events included in this project likely represent a non-representative subset of all border crossing attempts by terrorists or intended terrorists. Despite these limitations, though, the data that was built upon the baseline of ATS provides important insights into the nexus between border crossings and terrorism. The U.S. Terrorism Border Crossing Dataset The final versions of the codebooks used to develop the U.S. Terrorist Border Crossing (USTBC) data collection are presented in Appendix 3. Based upon

knowledge gained from pilot efforts (as discussed above and in Appendix 2), the project resulted in two codebooks—one focused on dynamics of a bordercrossing event involving someone associated with a Federal terrorism court case, and another focused on the characteristics of the individuals associated with Federal charges who were involved in the bordercrossing event. Data collection for the USTBC lasted for approximately one year and was primarily conducted by research assistants at the Terrorism Research Center at the University of Arkansas.3 The resultant data that comprise the USTBC are available in Appendix 4. Table 4 provides a snapshot summary of these data, which include detailed information on the location of an attempted crossing, the timing of a crossing relative to attempted or actual terrorist activity, the origin or destination of an attempted crossing, and more. The data also include specific information on border crossers, including their citizenship status, their criminal history, and key demographics (including level of education, marital status, etc.) Appendix 5 provides descriptive statistics from the border-crossing and border-crosser data. 3 Special thanks to Kim Murray and Summer Jackson of the Terrorism Research Center for their efforts in combing through the courtcase material and assembling these data for the USTBC. National Consortium for the Study of Terrorism and Responses to Terrorism A Department of Homeland Security Science and Technology Center of Excellence Border Crossings and Terrorist Attacks in the United States 13 Border Crossings Identified in USTBC Attempts to Enter the United States Of the 221 border crossings identified in this project as involving individuals who were indicted by the U.S. government in terrorism-related cases, the majority (129 crossings) involved an individual attempting to enter the United States, while the remainder (92 crossings) involved an individual attempting to exit the United States. Eighty-seven percent of the attempted border crossings were successful, rather than being thwarted by law enforcement or foiled by some other events or developments. Additional discussion on the nature of successful crossings versus those who were apprehended at the border is presented below. **Among those attempts to enter the United States, the most frequent origin for these crossing efforts was Canada.4 But, as Figure 2 illustrates, such attempted entries originated from all corners of the world.**

(And, more evidence, Border surveillance prevents terrorist groups from attempting attacks)

Willis et al 10 [Henry H. Willis, 2010, director of the RAND Homeland Security and Defense Center, with Joel B. Predd, Paul K. Davis and Wayne P. Brown, RAND.org,

"Measuring the Effectiveness of Border Security Between Ports-of-Entry", http://www.rand.org/content/dam/rand/pubs/technical_reports/2010/RAND_TR837.pdf, pg 19, jf]

The principal contributions that **border security** makes to counterterrorism relate to **prevent**ing certain kinds of **terrorist attacks dependent on flows into the country** of people or materials. These contributions can be illustrated by considering what opportunities exist to disrupt terrorist attacks while they are being planned and orchestrated. Through a number of planning efforts, **DHS and its components have developed detailed planning scenarios of terrorist events** (DHS, 2006). **Each of these scenarios has been deconstructed into attack trees that are useful for considering how DHS border-security programs contribute to terrorism security efforts**. In their most generic form, these attack trees specify dimensions of attack scenarios with respect to building the terrorist team, identifying a target, and acquiring a weapon (see Figure 4.1). This decomposition of attack planning provides a structure around which to consider how interdiction, deterrence, and networked intelligence contribute to preventing terrorist attacks and, thus, why it is relevant to measure these functions. **DHS border-security eff orts focus on interdiction of terrorist**

team members and weapons or weapon components when they cross U.S. borders. Examples of initiatives that are intended to enhance these capabilities include the Secure Border Initiative, the acquisition of Advanced Spectroscopic Portals for nuclear detection, the Secure Communities Initiative, and US-VISIT. In addition, it is often pointed out that, **when border-security measures are perceived to be effective, terrorists groups may be deterred from attacking in particular ways, or** possibly **from attacking at all.** This could result from awareness of what type of surveillance is occurring or the capability of interdiction systems. In either case, **deterrence refers to the judgment of terrorists that they will not be successful**, leading them to choose another course of action. Finally, many **border-security initiatives also contribute information to the national networked-intelligence picture**. For example, the Secure Communities Initiative has implemented new capabilities to allow a single submission of fingerprints as part of the normal criminal arrest and booking process to be queried against both the FBI and DHS immigration and terrorism databases. This effort makes it easier for federal and local law enforcement to share actionable intelligence and makes it more difficult for terrorists to evade border-security efforts.

I-Law DA

1NC I-Law DA

Uniqueness and Link - The US is in a unique position in the international community, breaking treaties ruins reciprocity

Bennett and Walsh, 2014

(Wells Bennett, Fellow in National Security Law at the Brookings Institution and Managing Editor of Lawfare, and John Walsh, Senior Associate at the Washington Office on Latin America (WOLA), focused on drug policy reforms that protect human rights, public health and public safety, October 2014, "Marijuana Legalization is an Opportunity to Modernize International Drug Treaties", Center for Effective Public Management at Brookings, http://www.brookings.edu/~/media/research/files/reports/2014/10/15-marijuana-legalization-modernize-drug-treaties-bennett-walsh/cepmmjlegalizationv4.pdf, Date Accessed 7/26/15, JL @ DDI)

Having that scenario in mind, we lastly emphasize the United States' unique relationship both to the drug treaties and to the wider international community. The United States was a—if not the—key protagonist in developing the 1961, 1971, and 1988 Conventions, as well as the 1972 protocol amending the 1961 Convention; the United States has for decades been widely and correctly viewed as the treaties' chief champion and defender.40 That fact feeds back onto this one: The United States also occupies a singular place in international relations. It can summon powers no other nation can summon, but it also confronts risks no other nation confronts.41 For that oft-cited reason, the United States has a profound interest in ensuring that counterparties perform their treaty obligations. Reciprocity is always a big deal for any nation that trades promises with other ones—but it is perhaps uniquely so for ours. These factors mean that caution is in order regarding international law and the viability of the Cole Memo in the longer run. If the United States can "flexibly interpret" the drug treaties with regard to marijuana, then Mexico is entitled to no less—though it might view the limits of its flexibility differently, or apply it to another controlled substance within the treaties' purview. Or imagine that a foreign nation's controversial policy butts up against seemingly contrary language, in a treaty covering an extremely important global issue other than drug control. Likely the United States will have a tougher time objecting when, rather than conceding the problem or changing course, that nation's

foreign ministry invokes the need to "tolera[te] different national approaches;" or recasts the relevant treaty as a "living document" subject to periodic, unilateral reinterpretation.

Impact - International law is key to solving conflict, terrorism, human rights, poverty, disease and the environment

O'Connell, 2008, The Power & Purpose of International Law, [Research Professor of International Dispute Resolution at the Kroc Institute and the Robert and Marion Short Professor of Law at Notre Dame; Mary Ellen], p.14

It is perhaps not surprising that just at this time a new attempt to undermine the authority of international law has appeared in the form of The Limits of International Law, but if the authors of this and other attacks on international law believe they are acting in the interest of the United States, or any state, they are mistaken. Given the nature of the problems we face in the world, undermining any tool for the maintenance of peace and stability could not be further from any nation's interest. There is a long, proud and continuing history of US support for international law and the common pursuit of global norms. There is no reason to abandon that tradition now, and every reason to redouble our commitment. Even Goldsmith and Posner seem to think that having some rules, like bilateral trade rules, is valuable. Yet, the only way to have viable international law rules on trade, as already mentioned, is through a general system of international law—with theories of obligation, sources, and processes of application and enforcement. Any effort to weaken international law only serves to undermine the prospects for achieving an orderly world and progress toward fulfillment of humanity's shared goals, including prosperity. The rational and moral choice today is to understand how international law actually works and how it can be made to work better. International law has deficits, yet it persists as the single, generally accepted means to solve the world's problems. It is not religion or ideology that the world has in common, but international law. Through international law, diverse cultures can reach consensus about the moral norms that we will commonly live by. As a result, international law is uniquely suited to mitigate the problems of armed conflict, terrorism, human rights abuse, poverty, disease, and the destruction of the natural environment. It is the closest thing we have to a neutral vehicle for taking on the world's most complex issues and pressing problems.

Uniqueness (most link ev is spec enough to have uniqueness on its own)

Link Extension

Decriminalization and legalization violate international law

Reuters Editorial, 11-12-**2014**, "U.S. states' pot legalization not in line with international law: U.N. agency," Reuters, http://www.reuters.com/article/2014/11/12/us-usa-drugs-un-idUSKCN0IW1GV20141112, Date Accessed 7/26/15, JL @ DDI

Moves by some U.S. states to legalize marijuana are not in line with international drugs conventions, the U.N. anti-narcotics chief said on Wednesday, adding he would discuss the issue in Washington next week. Residents of Oregon, Alaska, and the U.S. capital voted this month to allow the use of marijuana, boosting the legalization movement as cannabis usage is increasingly recognized by the American mainstream. "I don't see how (the new laws) can be compatible with existing conventions," Yury Fedotov, executive director of the United Nations Office on Drugs and Crime (UNODC), told reporters. Asked whether there was anything the UNODC could do about it, Fedotov said he would raise the problem next week with the U.S. State Department and other U.N. agencies. The Oregon and Alaska steps would legalize recreational cannabis use and usher in a network of shops similar to those operating in Washington state and Colorado, which

in 2012 voted to become the first U.S. states to allow marijuana use for fun. Marijuana remains classified as an illegal narcotic under federal law, although the Obama administration has said it was giving individual states leeway to carry out their own recreational-use statutes.

Stopping the surveillance of drugs violates international law **be careful the CP probably links harder to this card**

Bennett and Walsh, 2014

(Wells Bennett, Fellow in National Security Law at the Brookings Institution and Managing Editor of Lawfare, and John Walsh, Senior Associate at the Washington Office on Latin America (WOLA), focused on drug policy reforms that protect human rights, public health and public safety, October 2014, "Marijuana Legalization is an Opportunity to Modernize International Drug Treaties", Center for Effective Public Management at Brookings, http://www.brookings.edu/~/media/research/files/reports/2014/10/15-marijuana-legalization-modernize-drug-treaties-bennett-walsh/cepmmjlegalizationv4.pdf, Date Accessed 7/26/15, JL @ DDI)

Marijuana counts as a "drug" for purposes of this language, the interpretation of which depends in part upon the "subject to the provisions" phrase. We thus must look elsewhere in the 1961 Convention to get a sense of how parties must handle drugs like marijuana. Article 36, paragraph one, discusses "penal provisions." Here, subject in part to their "constitutional limitations,"35 parties are required to take steps necessary to make (among other things) the cultivation, sale, purchase, and possession of drugs contrary to the 1961 Convention's provisions into "punishable offenses." The 1988 Convention is more explicit. Its third article requires signatories to "establish as criminal offences under [their] domestic law" the growing, buying, selling or possessing of drugs including marijuana, contrary to the provisions of the 1961 Convention.36 This and similar provisions drive home the point: the drug treaties together countenance medical and scientific uses, but disapprove of nearly all others. And they plainly obligate signatories to enact laws punishing participants in recreational marijuana markets. The CSA does just that, of course, but under the Cole Memo, the statute seemingly will not be enforced against certain persons, who participate in sufficiently rigorous state regulatory schemes allowing for the production, sale, purchase, or possession of recreational marijuana. It is true that the treaties build in policy latitude—but we think even that only goes so far. For example, the 1961 Convention doesn't block parties from allocating enforcement resources. And it says that when "abusers" of drugs commit Convention offenses, states may then provide, as alternatives to conviction or punishment, for certain treatment or rehabilitation measures.37 But this latter arrangement (and similar ones contemplated by related provisions in the drug treaties) most naturally applies to people seeking help to quit marijuana, not to recreational users seeking enjoyment or commercial growers and state regulators seeking revenue. It is one thing to stay enforcement's hand, and instead to invoke alternatives to incarceration; but it is quite another to announce, in so many words, a qualified tolerance of the cultivation, sale, purchase and possession of marijuana, within the confines of a strictly regulated but still legalized market. This brings us to the prosecutorial discretion—something the 1961 Convention didn't take on specifically, but that the 1988 Convention did. As noted above, the following words from the latter treaty may have informed Assistant Secretary Brownfield's appeal to "policy flexibility," with regard to Washington and

Colorado and the United States' enforcement priorities: The Parties shall endeavour to ensure that any discretionary legal powers under their domestic law relating to the prosecution of persons for offences established in accordance with this article are exercised to maximize the effectiveness of law enforcement measures in respect of those offences, and with due regard to the need to deter the commission of such offences. Note the qualification. The decision not to prosecute an otherwise clear-cut marijuana offense cannot be made willy-nilly, but instead should "maximize" the effect of law enforcement activities "in respect" of that offense; the goal of deterrence should be kept in mind, too. The relationship between the two quoted phrases is somewhat hard to parse, though it certainly encompasses at least some authority to allocate resources or set enforcement priorities— much as Brownfield has claimed. Even so, we fail to see how the Cole Memo policy would deter anyone, per the treaty requirements, from growing, selling, buying or possessing marijuana for recreational purposes;38 the memo essentially explains how Coloradans and Washingtonians (and adult visitors to those states) can engage in that very conduct without facing federal prosecution. Wherever the limits of the United States' enforcement discretion under the drug treaties might be drawn precisely, we know that such discretion by definition cannot be an across-the-board, categorical affair, when the issue is federal tolerance of regulated, comprehensive marijuana markets established by state law. And that's just it: if more states take a legalize-and-regulate approach, a federal-level decision not to prosecute similarly situated persons could start to look like blanket non-enforcement of implementing legislation—something that, in our view, the drug treaties do not contemplate.

Decriminalizing drugs violates treaties, collapses entire system

Bewley-Taylor, 2002

(David R., Department of American Studies, University of Wales Swansea, "Challenging the UN drug control conventions: problems and Possibilities", International Journal of Drug Policy 14 (2003) 171/179, December 1, 2002, http://www.unawestminster.org.uk/pdf/drugs/UNdrugsBewley_Taylor_IJDP14.pdf, Date Accessed 7/26/15, JL @ DDI)

Another strategy would be for Parties to simply ignore the treaties or certain parts of them. In this way they could institute any policies deemed to be necessary at the national level, including for example the legalisation of cannabis and the introduction of a licensing system for domestic producers. This option has been gaining support amongst many opponents of the prohibition based international system for some time. Disregarding all or selected components of the treaties, however, raises serious issues beyond the realm of drug control. The possibility of nations unilaterally ignoring drug control treaty commitments could threaten the stability of the entire treaty system. As a consequence states may be wary of opting out. Some international lawyers argue that all treaties can naturally cease to be binding when a fundamental change of circumstances has occurred since the time of signing (Starke, 1989, pp. 473/474). Bearing in mind the dramatic changes in the nature and extent of the drug problem since the 1960s, this doctrine of rebus sic stantibus could probably be applied to the drug treaties. Yet the selective application of such a principle would call into question the validity of many and varied conventions.

Other international treaties stand to fail if the US contravenes drug policies

Bennett and Walsh, 2014

(Wells Bennett, Fellow in National Security Law at the Brookings Institution and Managing Editor of Lawfare, and John Walsh, Senior Associate at the Washington Office on Latin America (WOLA), focused on drug policy reforms that protect human rights, public health and public safety, October 2014, "Marijuana Legalization is an Opportunity to Modernize International Drug Treaties", Center for Effective Public Management at Brookings, http://www.brookings.edu/~/media/research/files/reports/2014/10/15-marijuana-legalization-modernize-drug-treaties-bennett-walsh/cepmmjlegalizationv4.pdf, Date Accessed 7/26/15, JL @ DDI)

**the INCB = The International Narcotics Control Board

The prospect of future marijuana regulation raises a second, more fundamental reason to rethink things: the nation's experiment with legalizing and regulating marijuana might actually go well. Suppose Colorado and Washington both operate their regulated marijuana markets smartly, without offending federal enforcement prerogatives, and—most importantly— without compromising public health and safety. We don't think this is a fanciful or improbable scenario. Our Brookings colleague John Hudak was the first to examine Colorado's implementation effort up close. And he tentatively concluded that so far, the state's initial rollout has been imperfect but quite effective.39 If this path continues or even bends towards improvement, then other states may soon elect to follow Washington and Colorado's lead. And that, in turn, stands to exacerbate an already visible tension between obligations imposed by the drug treaties, and the federal government's enforcement posture towards legalizing states. To put the point another way, if Colorado and Washington augur a real trend, then the costs to the United States of treaty breach could be swiftly ratcheted upwards. The INCB could raise the volume and severity of its criticisms; we wouldn't be surprised to hear protests from more prohibitionist countries about the United States' treaty compliance, or to see other nations start pushing the limits of other no less important treaties to which the United States is party. When some or all of this happens, the United States won't get very far in emphasizing the CSA's theoretical application nationwide, subject to enforcement priorities enunciated in the Cole Memo; or in appealing to larger objectives woven throughout the drug treaties, and their conferral of policy flexibility. What if twenty or thirty states successfully establish, and police, regulated markets for marijuana production and sale?

Not prosecuting drug crimes will break international law and risk the breaking of other treaties

Bennett and Walsh, 2014

(Wells Bennett, Fellow in National Security Law at the Brookings Institution and Managing Editor of Lawfare, and John Walsh, Senior Associate at the Washington Office on Latin America (WOLA), focused on drug policy reforms that protect human rights, public health and public safety, October 2014, "Marijuana Legalization is an Opportunity to Modernize International Drug Treaties", Center for Effective Public Management at Brookings, http://www.brookings.edu/~/media/research/files/reports/2014/10/15-marijuana-legalization-

modernize-drug-treaties-bennett-walsh/cepmmjlegalizationv4.pdf, Date Accessed 7/26/15, JL @ DDI)

If indeed Colorado and Washington do presage fundamental changes in U.S. marijuana law and policy, then the United States' stance regarding its drug-control treaty obligations will need to measure up to the requirements of international law. The U.S. assertion of its treaty compliance on the basis of "flexible interpretation" can be questioned. The International Narcotics Control Board ("INCB" or the "Board")—a body charged with monitoring drug-treaty compliance and assisting governments in upholding their obligations—has already made clear its view that the United States is now in contravention.9 If more U.S. states opt to legalize marijuana, the gap between the facts on the ground in the United States and the treaties' proscriptions will become ever wider. The greater the gap, the greater the risk of sharper condemnation from the INCB; criticism or remedial action by drug-treaty partners and other nations; and rebukes (or, worse, shrugs) from countries that the United States seeks to call out for violating the drug treaties or other international agreements. It is a path the United States—with its strong interest in international institutions and the rule of law—should tread with great caution.

Impact Extension

Strengthening international law is key to solving global problems—trashing it harms everyone

O'Connell, 2008, The Power & Purpose of International Law, [Research Professor of International Dispute Resolution at the Kroc Institute and the Robert and Marion Short Professor of Law at Notre Dame; Mary Ellen], p. 370

International law needs improvement. The new work being done in the areas of natural law and process law theory—and even in rational choice analysis—can improve the system. International law needs improvement, however, not demolition, because it remains the single, generally accepted means to solve the world's problems. These problems will not be solved by armed conflict or the imposition of a single ideology or religion. Through international law diverse cultures can reach consensus about the moral norms that we should commonly live by. People everywhere believe in law, believe in this alternative to force, as they believe in higher things. They want the power of law to be used to achieve the community's most important common goals. International law reflects that the international community's shared goals today are peace, respect for human rights, prosperity, and the protection of the natural environment. Understanding what international law really is and what it is about and promoting acceptance of it should enhance its authority and, thereby, its power to achieve these goals on behalf of us all.

International law & cooperation is key to preventing terrorism

Cortright, 2012, Transnational Law & Contemporary Problems, Winning Without War: Nonmilitary Strategies for Overcoming Violent Extremism, Spring, [Director of Policy Studies at the Kroc Institute for International Peace Studies at the University of Notre Dame; David], p. 215

The alternative to a militarized strategy against terrorism is not inaction or acquiescence; instead, the strategy should focus on the development of rigorous programs for international cooperation in identifying and suppressing criminal conspiracies and ameliorating

the conditions and grievances that give rise to terrorism. John Ikenberry argues that the struggle against terrorism must be based on alliance partnerships and international cooperation, which "entails intelligence, sanctions, diplomacy, financial regulation, development aid, and a multitude of other ongoing efforts - all of which require extensive multilateral cooperation." Security protections are part of the equation, but they must be subordinate to political, economic and social policies that address the root causes of violent extremism. The United States and the international community need a more comprehensive and holistic strategy that balances security concerns with the defense of human rights and prioritizes economic development, good governance programs, conflict transformation, and support for the rule of law. Because al-Qaida's terrorist threat is global in nature, the strategies employed against it must be transnational. Every nation shares a common interest in eliminating the scourge of global terrorism and in working with other nations to eliminate the threat posed by al-Qaida and its associated groups. A broadly collaborative effort involving virtually every nation on earth is necessary to counter this terror threat that is spreading across dozens of countries and that can emerge among self-starter groups. The most effective tools in this fight are not unilateral but cooperative. International law, multilateral institutions, and collaborative action are the essential ingredients of a winning strategy against global terrorism.

DA Turns Case

International law key to solving racial and gender discrimination

Joyner, 2005, International Law in the 21st Century, [Georgetown professor of government; Christopher], p. 4-5

Absent standards of international morality, international law could not exist. Many of its principles—for example, respect for treaties, nonintervention, good neighborliness—remain conditions essential to friendly and stable state relations. Though sometimes used as pretexts, various ideas and sentiments of humanitarian concern constitute the real motives for certain international law—for instance, the legal rules regulating the laws of armed conflict; treatment of prisoners of war; and prohibitions against crimes against humanity, genocide, and acts of torture. While international law might be predicated on a sense of justice and equity, international morality is not synonymous with international law. Still, during the last half of the 20th century, the former moved closer to the latter as numerous international agreements were promulgated concerning the protection of innocent persons and respect for their human rights and personal dignity. These agreements might include the various conventions negotiated in recent decades to condemn and prohibit racial discrimination and apartheid discrimination against women, mistreatment of children, and the abrogation of civil and political rights.

A2 Violated I-Law in the Past

Even though there have been past violations, the US federal government attempted to correct them; the plan's policy is unprecedented **be careful with this card the authors personally agree with the Obama administration's stance, doesn't take out impact though**

Bennett and Walsh, 2014

(Wells Bennett, Fellow in National Security Law at the Brookings Institution and Managing Editor of Lawfare, and John Walsh, Senior Associate at the Washington Office on Latin America (WOLA), focused on drug policy reforms that protect human rights, public health and public safety, October 2014, "Marijuana Legalization is an Opportunity to Modernize International Drug

Treaties", Center for Effective Public Management at Brookings, http://www.brookings.edu/~/media/research/files/reports/2014/10/15-marijuana-legalization-modernize-drug-treaties-bennett-walsh/cepmmjlegalizationv4.pdf, Date Accessed 7/26/15, JL @ DDI)

This is not to suggest that compliance challenges or complexity should always trigger a call to reshape the United States' treaty commitments. Practice and prudence both support a more nuanced, case-specific approach than that. Sometimes the United States has sought to make significant adjustments to multilateral frameworks or even quit them; other times, the United States has weighed costs and benefits, and pressed on within the treaty despite consequential breaches—in situations much more obvious (and less open to reasonable contention) than that regarding marijuana. But in those instances, the United States' compliance failures often have come despite some hard striving by the federal government. The State Department, to name one well known example, tries mightily to make state law enforcement officers aware of the United States' obligations under the Vienna Convention on Consular Relations—notwithstanding some repeated and well-known violations of that treaty by the likes of Texas, Virginia, and Arizona.42 In this case, though, no external factors—federalism, say, or a contrary ruling from the U.S. Supreme Court—have frustrated a strong push by the executive branch to vindicate the drug treaties; the decision not to assert federal supremacy was in fact taken unilaterally by the Obama administration. Given the circumstances, we believe it was the correct decision. The Cole Memo nevertheless establishes at least some friction with a treaty obligation, by holding back on CSA enforcement, so as to accommodate state-level regulation of marijuana. Again, the reasons why are entirely understandable: given the incipient nature of the changes to which the Cole Memo was reacting, the United States essentially opted to take a wait-and-see approach as to how problematic the treaty questions might become. So far as we are aware, this strategy is without precedent in U.S. treaty practice. The United States should approach it carefully and deliberatively, given the country's outsized interest in reciprocal performance of treaty obligations. That depends in part on being able to credibly call out other nations for treaty failings—something which in turn depends on strictly performing our own obligations, or at least making a good show of trying hard to do so before coming up short.

A2 Guantanamo Violates I-Law

Obama has already fought to close Guantanamo Bay and his plan is almost finalized

Toluse **Olorunnipa**, 7-22-**2015**, "Obama's Guantanamo Prison Closing Plan in Final Drafting, Earnest Says," Bloomberg, http://www.bloomberg.com/politics/articles/2015-07-22/guantanamo-prison-closing-plan-in-final-drafting-earnest-says, Date Accessed 7/26/15, JL @ DDI

The Obama administration is nearing completion of a plan to close the U.S. military prison at Guantanamo Bay, Cuba, that it will then send to Congress, White House Press Secretary Josh Earnest said. The plan will shutter the facility in a safe and responsible way, Earnest told reporters on Wednesday. President Barack Obama, who leaves office in less than 18 months, has battled for years with lawmakers over his pledge to close Guantanamo by bringing to trial some detainees and holding others in the U.S. as prisoners of war, while arranging to send the least dangerous ones home or to third countries. In recent months, the administration has sent several detainees from Guantanamo to countries including Oman and Qatar, and the U.S. is seeking additional options for transferring more prisoners, Earnest said at the White House.

Case

Solvency

1NC Solvency Frontline

1. ***Unregulated drugs would cause worse problems than the status quo***

Matthew S. **Jenner,** Articles Editor, Indiana Journal of Global Legal Studies; J.D., 2011, Indiana University Maurer School of Law; B.A. cum laude, 2008, University of Notre Dame, Summer **2011**, "International Drug Trafficking: A Global Problem with a Domestic Solution", Indiana Journal of Global Legal Studies Volume 18, Issue 2, Project Muse, Date Accessed 7/22/15, JL @ DDI

V. The Next Step: Government Regulation

Eradicating the violence associated with drug trafficking is only the first step in successfully containing the global drug problem. After universal legalization one could argue especially after universal legalization drug use and abuse problems would still be prevalent. Drug trafficking violence would subside as the new laws affect the global market, but each nation would still face its own domestic drug problem. Without additional governmental action, legalization could lead to a variety of problems. Manufacturers could produce drugs in more dangerous forms. Street gangs could distribute the drugs legally and then use the profits for other violent activities. Also, consumption in public places and by minors could become prevalent.

2. ***(BE CAREFUL if you want to read this you can't read the extensions on DA link)***

The DEA has already been forced to end its collection of metadata

Drug Policy, 6-3-**2015**, "Congress Votes to End DEA's Invasive Bulk Data Collection Program and Slashes Agency's Budget," Drug Policy, http://www.drugpolicy.org/news/2015/06/congress-votes-end-deas-invasive-bulk-data-collection-program-and-slashes-agencys-budge, Date Accessed 8/1/15, JL @ DDI

WASHINGTON, D.C.—Legislators voted by a simple voice vote last night to end the DEA's controversial bulk data collection programs, as part of the U.S. House of Representatives' consideration of the Fiscal Year 2016 Commerce, Justice, and Science Appropriations bill. The House also passed three amendments that cut $23 million from the DEA's budget, and shifted it to fighting child abuse, processing rape test kits, reducing the deficit, and paying for body cameras on police officers to reduce law enforcement abuses. Representatives debated four amendments to prohibit the DEA and Justice Department from undermining state marijuana laws -- and those votes will happen later today.

"Congress dealt a major blow to the DEA by ending their invasive and offensive bulk data collection programs and by cutting their budget, said Bill Piper, director of national affairs for the Drug Policy Alliance. "The more the DEA ignores commonsense drug policy, the more they will see their agency's power and budget come under deeper scrutiny." Three amendments cutting the DEA's budget passed by voice vote. Rep. Ted Liew's (D-CA) amendment shifted $9 million from the DEA's failed Cannabis Reduction and Eradication program to the VAWA Consolidated Youth Oriented Program ($4 million), Victims of Child Abuse Act ($3 million), and deficit reduction ($2 million). Rep. Steve Cohen's (D-TN) amendment shifted $4 million from the DEA to a program to reduce the nation's backlog in processing of rape test kits. Rep. Joaquin Castro's (D-TX) amendment shifted $9 million from the DEA to body cameras for police officers to reduce police abuse. Last night the House also adopted an amendment preventing DEA and DOJ from using federal funds to engage in bulk

collection of Americans' communications records. It was offered by Representatives Jared Polis (D-CO), Morgan Griffith (R-VA), David Schweikert (R-AZ), and Jerrold Nadler (D-NY).

3. ***Without stopping other racist practices like stop and frisk, the aff cannot solve their impacts***

4. ***The DEA would circumvent surveillance limitations- parallel construction***

Nick **Wing,** writer for the Huffington Post, 10-24-**2014**, "The DEA Once Turned A 14-Year-Old Into A Drug Kingpin. Welcome To The War On Drugs," Huffington Post, http://www.huffingtonpost.com/2014/10/24/dea-war-on-drugs_n_6030920.html, Date Accessed 7/26/15, JL @ DDI

And the DEA instructs agents not to tell the truth about sources of key intelligence. A Reuters report, also from 2013, detailed how the DEA's Special Operations Division, or SOD, teaches agents to cover up vital tips that come from the department. A DEA document obtained by Reuters shows that federal agents are trained in "parallel construction," in which essential intelligence obtained SOD wiretaps, informants or other surveillance methods can be concealed by crediting it to another source. An unnamed former federal agent who received tips from the SOD gave an example of how the process worked: "You'd be told only, 'Be at a certain truck stop at a certain time and look for a certain vehicle.' And so we'd alert the state police to find an excuse to stop that vehicle, and then have a drug dog search it," the agent said. If an arrest was made, agents were instructed to hide the fact that the initial tip had come from SOD, and instead use "normal investigative techniques to recreate the information." This process is sometimes used to hide case details from prosecutors and judges, as well as defense attorneys. Several lawyers told Reuters that the practice could jeopardize a defendant's constitutional right to fair trial and cover up evidence that might otherwise be inadmissible. DEA officials defended the technique, however, calling it a common law enforcement tool that allows the SOD to crack high-profile cases.

5. ***No solvency, the aff doesn't actually end the war on drugs, just makes it harder to catch suspects***

6. ***Forfeiture laws incentivize local police to increase drug policing***

Katherine **Baicker**, UCLA, United States, NBER, United States, **and**, Mireille **Jacobson,** University of California, Irvine, School of Social Ecology I, Irvine, CA, 31 March **2007**, "Finders keepers: Forfeiture laws, policing incentives, and local budgets", Journal of Public Economics 91 (2007) 2113–2136, Elsevier, Date Accessed 7/23/15, JL @ DDI

Because of the many levels of government involved, "asset forfeiture" laws provide a particularly informative example of the implications of using financial incentives to influence the provision of public goods in a federal system. In an effort to induce police to do more anti-drug policing, both the federal government and many state governments introduced laws in the 1980s that allow law

enforcement agencies to keep a substantial fraction of the assets that they seize in drug arrests. This drug-related asset forfeiture is a source of considerable controversy, as the legal hurdles for forfeiture are often lower than for criminal conviction and those subject to seizures can find it difficult to recover their property, even when they are found not guilty of related criminal charges.2 Many claim (and our data confirm) that forfeitures have become a major revenue source for some local police and prosecutors, giving them an incentive not just to deter crime but also to raise funds. The potential response of localities to these laws highlights a fundamental problem in the use of financial incentives to solve agency problems in the provision of public goods in a federal system: different levels of government may have competing goals and constraints. Federal and state governments introduced forfeiture incentives to increase anti-drug policing, but counties can undermine those incentives by adjusting their allocations to police. In fact, some states' laws explicitly acknowledge that local governments could (but should not!) reduce their police allocations in response to seizures.3 Similar agency problems arise in a range of other programs. For example, Baicker and Staiger (2005) show that federal health care funds targeted to poor hospitals are often expropriated by state governments for other uses when the opportunity arises and Duggan (2000) finds that state funds channeled to county and district hospitals treating a"disproportionate share" of publicly insured patients are largely offset by reductions in local spending. Similarly, Gordon (2004) finds that increases in federal spending on low-income school districts are offset by reductions in local spending.

Unregulated Extensions

*****also link on cartels DA** Decriminalization would make the drug trade worse***

Matthew S. **Jenner,** Articles Editor, Indiana Journal of Global Legal Studies; J.D., 2011, Indiana University Maurer School of Law; B.A. cum laude, 2008, University of Notre Dame, Summer **2011**, "International Drug Trafficking: A Global Problem with a Domestic Solution", Indiana Journal of Global Legal Studies Volume 18, Issue 2, Project Muse, Date Accessed 7/22/15, JL @ DDI

Other scholars propose decriminalization as the answer.132 However, decriminalization would not have the same effect on the market as legalization. In a decriminalized world, production and trafficking would still be illegal, so there would still be the potential for high profits, yielding an incentive for self-help violence, and the drug trade would remain profitable for dangerous criminal organizations. Additionally, under a decriminalization framework, countries would be faced with the same domestic drug problems as legalization.

DEA Ended Program Already Extensions

The DEA metadata program has been shut down

Brad **Heath**, 4-8-**2015**, "U.S. secretly tracked billions of calls for decades," USA TODAY, http://www.usatoday.com/story/news/2015/04/07/dea-bulk-telephone-surveillance-operation/70808616/, Date Accessed 8/1/15, JL @ DDI

The Justice Department revealed in January that the DEA had collected data about calls to "designated foreign countries." But the history and vast scale of that operation have not been disclosed until now. The now-discontinued operation, carried out by the DEA's intelligence arm,

was the government's first known effort to gather data on Americans in bulk, sweeping up records of telephone calls made by millions of U.S. citizens regardless of whether they were suspected of a crime. It was a model for the massive phone surveillance system the NSA launched to identify terrorists after the Sept. 11 attacks. That dragnet drew sharp criticism that the government had intruded too deeply into Americans' privacy after former NSA contractor Edward Snowden leaked it to the news media two years ago.

Forfeiture Extensions

Forfeiture policies incentivize anti-drug policing

Katherine **Baicker**, UCLA, United States, NBER, United States, **and**, Mireille **Jacobson,** University of California, Irvine, School of Social Ecology I, Irvine, CA, 31 March **2007**, "Finders keepers: Forfeiture laws, policing incentives, and local budgets", Journal of Public Economics 91 (2007) 2113–2136, Elsevier, Date Accessed 7/23/15, JL @ DDI

Asset forfeiture policies, like performance bonuses for schools, hospitals, or managers, provide financial incentives to align local agents' interests with those of policy-makers. In a federal system, where different intervening levels of government may have competing interests and social goals, such incentive programs may not work as efficiently as intended. Our analysis of asset seizure laws shows that these financial incentives change the behavior of not only police but also county governments. Both respond to the incentives created by seizures laws in a sophisticated way. Local governments capture a significant fraction of the seizures that police make by reducing their other allocations to policing, partially undermining the statutory incentive created by seizure laws. They are more likely to do so in times of fiscal distress. Police, in turn, respond to the real net incentives for seizures once local offsets are taken into account, not simply the incentives set out in statute. When police are really allowed to keep the assets they seize, they increase anti-drug policing. A simple analysis of the effects of asset forfeiture laws, as they appear on the books, would provide a distorted view of their effects. These findings have strong implications for the effectiveness of using financial incentives to solve agency problems in the provision of public goods in a federal system more broadly, from education to health care to welfare. In particular, they suggest that the ability to influence public agents through federal and state laws is limited by the ability of local governments to divert funds to other uses. Ignoring this yields a misleading picture of the responsiveness of local agents to incentives and the effectiveness of federal and state policies. Understanding the financial incentives faced by each agency and each level of government involved in the budget process is a complicated but crucial component of designing policies to affect the provision of public goods. As in private markets, when incentives can be made to reach the agents in question, they can be very effective and powerful tools for influencing behavior. In the case of public goods provided in a federal system, however, optimal policies must account for the responses of intervening levels of governments to incentives as well.

Heg Turn (Can be Impact Scenarios to I-Law)

Breaking drug treaties causes a loss of America's standing

Lopez 9/12/**14**

(German, writer @ Vox, 9/12/14 “How much of the war on drugs is tied to international treaties?”, Vox, http://www.vox.com/cards/war-on-drugs-marijuana-cocaine-heroin-meth/war-on-drugs-international-treaties, Date Accessed 7/27/15, JL @ DDI)

Still, Martin Jelsma, an international drug policy expert at the Transnational Institute, argued that ignoring or pulling out of the international drug conventions could seriously damage America's standing around the world. "Pacta sunt servanda ('agreements must be kept') is the most fundamental principle of international law and it would be very undermining if countries start to take an 'a-la-carte' approach to treaties they have signed; they cannot simply comply with some provisions and ignore others without losing the moral authority to ask other countries to oblige to other treaties," Jelsma wrote in an email. "So our preference is to acknowledge legal tensions with the treaties and try to resolve them." To resolve such issues, many critics of the war on drugs hope to reform international drug laws in 2016 during the next General Assembly Special Session on drugs. "There is tension with the tax-and-regulate approach to marijuana in some jurisdictions," Malinowska-Sempruch said. "But it's all part of a process, and that's why we hope the UN debate in 2016 is as open as possible, so that we can settle some of these questions and, if necessary, modernize the system." Until then, any country taking steps to revamp its drug policy regime could face criticisms and a loss of credibility from its international peers.

Failure to maintain U.S. hegemony would cause global instability—nuclear proliferation, territorial disputes and escalation become inevitable

The Economist, 2013 [“If I ruled the world,” from the print edition, Nov. 23, http://www.economist.com/news/special-report/21590098-being-charge-hard-work-it-has-its-perks-if-i-ruled-world, 7-3-2014, RGorman]
The corollary is that, without the continuing application of American power, the system would begin to fray. If America were to become weaker or to withdraw, its values would erode along with its power. In a recent book Mr Brzezinski set out some of the risks. Regional powers would vie for pre-eminence and assert their historic claims. States such as Georgia, Taiwan and Ukraine, which all live in the shadow of a much bigger neighbour, would be especially vulnerable. Nuclear-threshold powers like Japan and South Korea that today are content to rely on American nuclear protection may proliferate for fear that, in a crisis, its ally would not credibly threaten to push the button. As emerging powers start to feel that institutions such as the UN Security Council no longer reflect the balance of power, they could begin to reject them. The implications are alarming. Autocratic states like China and Russia would not want to see strongmen pushed aside. Coups would be more likely to be defined as internal matters. Territorial disputes in places like the South China Sea, which today America insists must be dealt with diplomatically, may come to be resolved by force. If the Indian and Chinese navies thought that America could no longer guarantee to keep the sea lanes open, they would take the job on themselves, eventually leading to military competition between two nuclear states. Americans have many reasons to feel that primacy benefits them. Being able to set the agenda and shape coalitions is an exorbitant privilege. So is being able to prosper in a system that broadly works according to your own world view. However, world leadership takes constant maintenance. “Democracy and open markets have spread so widely in part because they have been defended by US aircraft-carriers,” notes Charles Kupchan, an American academic. This is especially true when the balance of power is shifting, as it is today. A number of emerging powers are looking at a system made in Washington to see what is in it for them. Ahead of the pack is China.

Heg Turn Extensions

Recent flirtations with retrenchment proves that instability and war will only worsen if heg continues to decline

Hiatt, Editor for the Washington Post, **2014** [Fred, The Washington Post, "Fred Hiatt: Will Obama Rethink his Global Strategy?," March 23, http://www.washingtonpost.com/opinions/fred-hiatt-will-obama-rethink-his-global-strategy/2014/03/23/75ce4eae-af93-11e3-a49e-76adc9210f19_story.html, 8-8-2014, RGorman]

As the United States retrenched, the world became more dangerous. China continued a traditional — 19th-century, Secretary of State John F. Kerry might call it — military buildup, accompanied by aggressive territorial assertions in East and Southeast Asia. Tensions built among Japan, the Koreas and China as all wondered about America's staying power. (The joke was that everyone in the world believed the pivot to Asia was real, except Asian allies, who saw little evidence of it.) North Korea's nuclear buildup proceeded unchecked. Egypt's government is more repressive than in Hosni Mubarak's days — and less friendly to the United States. In 2013, freedom regressed in 54 countries, compared with 40 in which it advanced — the eighth straight year of net decline, according to Freedom House. In Syria, Obama was confident two years ago that Assad's "days are numbered," as he told Jeffrey Goldberg in an interview in the Atlantic. "It's a matter not of if, but when." He periodically promised, but never delivered, substantial arms and training for moderate forces opposed to Assad. Meanwhile, Assad's position strengthened, even as he brought about what a U.N. official calls "the greatest humanitarian disaster since Rwanda." Al-Qaeda forces established havens from which they can threaten the United States and Europe, and they are spreading into Lebanon and Iraq. Now Putin has engineered the baldest violation of state sovereignty since Saddam Hussein invaded Kuwait in 1990. Obama has responded sensibly with sanctions aimed at Putin's inner circle and promises to bolster Ukraine. You can argue whether he has calibrated exactly right, but he has appropriately engaged with and led the United States' European partners. But these are early steps — and they are also only tactical steps. As the administration refashions its policy toward a changed Europe, will it reexamine its broader strategy, too? Will Obama question his confidence that the United States can safely pull back from the world? The instinctive White House response will be to head into the political bunker: to deny that it ever displayed isolationist tendencies while painting critics as wild-eyed warmongers. This reflexive belligerence is understandable given that Obama's political enemies will happily use overseas setbacks to score points. But the stakes are too high to leave the debate in those trenches. Tempting as it may be, the United States doesn't get to choose between nation-building at home and leadership abroad; it has to do both. With almost three years left in his presidency, it's not too late for Obama to change course.

Softpower Turn (Can be Impact Scenarios to I-Law)

Violating treaties collapses US soft power

Koh, 2003

(Harold Hongju, Professor of International Law at Yale Law School, "On American Exceptionalism", Stanford Law Reivew Vol. 55, p. 5000, LexisNexis, Date Accessed 7/27/15, JL @ DDI)

Similarly, the oxymoronic concept of "imposed democracy" authorizes top-down regime change in the name of democracy. Yet the United States has always argued that genuine democracy must flow from the will of the people, not from military occupation. n67 Finally, a policy of strategic unilateralism seems unsustainable in an interdependent world. For over the past two centuries, the United States has become party not just to a few treaties, but to a global network of closely interconnected treaties enmeshed in multiple frameworks of international institutions. Unilateral administration decisions to break or bend one treaty commitment thus rarely end the matter, but more usually trigger vicious cycles of treaty violation. In an interdependent world, [*1501] the United States simply cannot afford to ignore its treaty obligations while at the same time expecting its treaty partners to help it solve the myriad global problems that extend far beyond any one nation's control: the global AIDS and SARS crises, climate change, international debt, drug smuggling, trade imbalances, currency coordination, and trafficking in human beings, to name just a few. Repeated incidents of American treaty-breaking create the damaging impression of a United States contemptuous of both its treaty obligations and treaty partners. That impression undermines American soft power at the exact moment that the United States is trying to use that soft power to mobilize those same partners to help it solve problems it simply cannot solve alone: most obviously, the war against global terrorism, but also the postwar construction of Iraq, the Middle East crisis, or the renewed nuclear militarization of North Korea.

Only soft power solves terrorism – appeals to moderates and public diplomacy

Nye, 04 (Joseph S, Former Dean of Kennedy School of Government at Harvard University and Distinguished Service Professor at Harvard, "The Decline of America's Soft Power: Why Washington Should Worry," Foreign Affairs, Vol. 83, No. 3, May-June 2004, pp. 16-20, JSTOR)

Soft power, therefore, is not just a matter of ephemeral popularity; it is a means of obtaining outcomes the United States wants. When Washington discounts the importance of its attractiveness abroad, it pays a steep price. When the United States becomes so unpopular that being pro-American is a kiss of death in other countries domestic politics, foreign political leaders are unlikely to make helpful concessions (witness the defiance of Chile, Mexico, and Turkey in M arch 2003) And when U.S. policies lose their legitimacy in the eyes of others, distrust grows, reducing U.S. leverage in international affairs. Some hardline skeptics might counter that, whatever its merits, soft power has little importance in the current war against terrorism; after all, Osama bin Laden and his followers are repelled, not attracted, by American culture and values. But this claim ignores the real metric of success in the current war, articulated in Rumsfeld's now-famous memo that was leaked in February 2003: "Are we capturing killing or deterring and dissuading more terrorists every day than the madrassas and the radical clerics are recruiting training and deploying against us?" **The current struggle against Islamist terrorism is not a clash of civilizations**; it is a contest closely tied to the civil war raging within Islamic civilization between moderates and extremists. The United States and its allies will win only if they adopt policies that appeal to those moderates and use public diplomacy effectively to communicate that appeal. Yet the world's only superpower, and the leader in the information revolution, spends as little on public diplomacy as does France or the United Kingdom-and is all too often outgunned in the propaganda war by fundamentalists hiding in caves.

Welfare Northwestern

Virtual Rights CP

1NC

The United States Federal Judiciary should establish an explicit set of virtual rights using information communication technologies

The counterplan solves the welfare surveillance state

Fitzpatrick 2000 (Tony Fitzpatrick University of Nottingham, Tony Fitzpatrick - degree in Literature and Philosophy and a Masters degree in Politics and Political Philosophy -PhD in 1996 from Edinburgh University on the subject of Basic Income "Critical cyberpolicy: network technologies, massless citizens, virtual rights" csp.sagepub.com/content/20/3/375.refs?patientinform-links=yes&legid=spcsp;20/3/375)

How can we formulate alternatives to this kind of approach? The essential point made so far is that cybercriticalism is that which focuses upon (a) the reciprocal interactions of online and offline environments, and (b) the socially damaging results of those interactions due to the virtual reproduction of real inequalities. The job of social policy is to emphasize the influence which deregulatory capitalism is having upon social welfare and collective institutions and values, for if left unchallenged it is the worrying consequences of ICTs [Information and Communication Technologies] that are likely to emerge given the effects of the offline free market environment. The task, then, is to ask the following question: how do we deploy ICTs and how do we reform welfare systems in such a way that cyberpolicies work towards the objective of social justice? This section will provide a preliminary response to this question. We begin with someone whose ideas provide the standard terms of reference: T. H. Marshall.¶ Earlier, I observed that as much attention should be paid to the social rights of cyberusers as to their civil and political rights. The problem is that Marshall provides little guidance in this respect. Many have criticized him for overestimating the extent to which the welfare state had replaced a class society and for ignoring the possibility that the former was itself the latest, though not necessarily the final, stage of class struggle (Turner, 1993). Marshall's conception of a hyphenated citizenship, where market value, democratic value and welfare value are held together in a creative tension, **underestimated the endurance of free market capitalism and the commodifying tendencies of the welfare state itself**. If, by contrast, we interpret the classic welfare state as the bureaucratization and only partly decommodification of market capitalism, then our allegiance to it (as opposed to our allegiance to the principle of social justice) can be profitably weakened. Marshall was on stronger ground when trying to identify entitlements which were 'beyond' social rights, i.e. industrial rights, whereby welfare citizenship could be extended more firmly into the economic sphere. Within the context of market capitalism, however, such industrial rights can never be anything other than an appendage to the other categories of rights (Giddens, 1981) and socialist commentators were correct to point out that the institutional embodiment of industrial rights required another socio-economic context altogether.¶ Yet because of the socio-economic changes that Marshall never lived to fully see I propose an alternative category to that of industrial rights: **virtual rights**, these being rights possessed by massless citizens which overlap with, but are nevertheless distinct from, their civil, political and social rights (see Tambin, 1998: 103–7). In short, we still need a category that is 'beyond' those of the classic triumvirate and which posits a post-capitalistic socio-economic context. (I should add that I regard virtual rights to be a subset of global citizenship alongside 'ecological rights' and 'cultural rights'.) That context, however, has to allow for changes to the nature of production and consumption and so cannot simply refer back to the economistic industrialism of productivist socialism (Fitzpatrick, 1998b). So, the concept of 'virtual rights' has a heuristic intent: to tease out and lead us toward the possible dimensions of that post-productivist context.¶ The 'massless citizen' is the ghostly inhabitant of the information society and the term is meant to conceptualize the fact that with the integration and comparison of computer files we each have an electronic shadow or doppelganger, a 'data-self' (Lacy, 1996: 162–3; Fisher, 1997: 120). Sometimes this virtual self is nothing more than a cyberreflection of the real person; increasingly, though, the flesh and blood person is being treated as an inferior version of their data-shadow, as in the case of a credit check or a CCTV scan. It all depends upon whether we possess our data-selves or whether we are possessed by them. The aim of cybercriticalism is to work out how social policies can be used to ensure that it is individuals who possess their data-selves and not the other way around. So, somebody does not have to be logged into the Internet (a netizen) to become massless: in an information society, even the most computer illiterate person is a massless citizen in that they have an online virtuality which is sometimes a simulation of, and sometimes simulates, their offline realities.¶ We are all massless citizens, then, because we are all caught and implicated within the informational webnet of the state–market nexus. However, and as already argued, some (the wealthy) are more able to control and benefit from this web, evading the predatory dangers within. So, whereas the term 'digital citizen' focuses simply upon online–offline interactions (Morrison, 1999), 'massless citizen' is meant to encompass both digitality and social hierarchy: the 'digital hierarchy' (see Schiller, 1996: 96–107). For masslessness implies both virtuality—streams of data that are without mass (photons)—and post-collectivism—a society where the masses are no longer said

to exist; and it is precisely the shift to an informatic, post-collectivist society that has exacerbated social and class divisions.¶ **Virtual rights can be thought of as the fundamental entitlements of massless citizens: their purpose being to suppress the disempowering tendencies of network technologies by conjoining online and offline environments as a goal of social policy-making and permitting collective forms of identity and association to be reconstructed.** They place the emphasis upon the informatic empowerment of the individual for its own sake (Steele, 1998) rather than upon the competitive needs of the economy (Bangemann, 1994; Moore, 1998). First, they are offline-to-online rights, i.e. possessed by citizens with regard to the accuracy of the information which is held on them by both public and private agencies. Second, they are online-to-offline rights in that they relate to the uses to which that information is put and so to whether it is our virtual selves that do or do not predominate in our social and economic interactions.¶ In many respects, virtual rights have already been placed on the agenda by civil liberties groups campaigning for updated Freedom of Information Acts suited to the cyberage and against proposals such as those for the surrender of encryption keys and those contained in the Communications Decency Act of 1996.13 Equally, we have seen that virtual activity can be unlawful even when no offline effects have been detected. The designers of an anti-abortion website were successfully prosecuted in 1999 for implicitly encouraging violence against doctors and clinics performing abortions; and a male university student was expelled several years earlier for a graphic online description of the rape, mutilation and murder of a female student, even though she never encountered her assailant at all. We can therefore define virtual rights as rights that are concerned (a) with the complex offline–online interfaces which affect all citizens in an information society, and (b) with addressing online and offline inequalities. Virtual rights may be conceived as a fourth right of global citizenship, but perhaps also as a prosthetic addition to the classic triumvirate.14

The discourse of progressivism and reform conceal legacies of oppression – causes war, administrative violence, and turns the case

Dillon 13 (http://www.tandfonline.com/doi/pdf/10.1080/0740770X.2013.786277, "It's here, it's that time:" Race, Queer Futurity, and the temporality of violence in Born in Flames, May 23, 2013, Stephen Dillon, writer and philosopher)

The revolutionary state replicates the past through discourses of reform, progress, and patience. By tracing the debates, tactics, and theories of aboveground and underground feminist revolutionaries organizing for a revolution against the revolution, Born in Flames challenges the imagination and fantasies of the state and labor, and the future such visions instantiate. It also critically intervenes in futures imagined by the national liberation movements of the 1960s and 1970s: futures often normalized and restrained by the heterosexist and patriarchal regulation of gender and sexuality. To the extent that it builds off of the insights and theories of women-of-color feminism, Born in Flames produces a politics of futurity that exceeds the imagination of the state, labor, and the revolutionary Left. Critically, the film produces a theory of the future and time where the continuation of the present as it is means that the future will not come. A critique of the state is central to this politics. If the state organizes populations, institutions, and forms of knowledge through a regulatory imagination and disciplined vision, it also determines the future in the same manner. The state ensures that the future can be extrapolated from the present by managing, contorting, and eradicating the future before it arrives. It uses preemptive action (war, assassination, incarceration, policing, administrative violence, and surveillance) to make its "imagined future come to pass" (Martin 2007, 63). For the Women's Army, in the future that is no future – when "things are better now" but state and non-state violence continue to target racialized and gendered populations in the same way but under a new name – the only way to usher in a future that is not an end is to make the present expire. Hope means that tomorrow (as it is, as it has been, and as it will be) cannot come. As I understand it, the film's critique of the time of reform and progress holds profound implications for how we think about the future. Unlike traditional dystopic science-fiction films that are often set decades (if not centuries) in the future and that attempt to paint a picture of what will be if an aspect of the present is not undone, the dystopia of Born in Flames – one marked by surveillance, assassination, incarceration, state racism and heterosexism, and sexual violence – is the truth of our past and present. In other words, the future within the film is not the future that awaits us, but the present and past we are and have been living. Born in Flames does not show us what is coming, but what is here – what has always been here. This is evident in the ways that the film undoes the fabricated division between fact and fiction. In an interview, director Lizzie Borden describes the film as inhabiting a "border line between what is present and therefore documentary and what would be fiction, and therefore science fiction" (Borden and Sussler 1983, 27). The film is an ostensible documentary of the near future, but also uses fiction to produce forms of knowledge that exceed the epistemological boundaries of the state, the non-profit, the university, and the social order. Indeed, the film was conceived, filmed, and released at the moment when new modes of governance based on the prison, the market, and the non-profit emerged.2 In particular, the urgency and impatience of the Women's Army produces a politics and epistemology that undermines the temporalities of progress and reform central to the state and the heterosexist and

patriarchal regulations of revolutionary nationalisms (Ferguson 2004). The film's critique of the forms of knowledge central to the state, white supremacy, and heteropatriarchy is evident in its engagement with the relationship between time and violence – what I call the temporality of violence. Women & Performance: a journal of feminist theory 39 Downloaded by [Northwestern University] at 17:19 20 July 2015 In this essay, I consider the different temporalities in the film and their relation to state, non-state, and revolutionary forms of violence in order to think through the debate in queer studies concerning hope and the future. This debate has centered on psychoanalysis, popular culture, and the aesthetics of art and literature, yet what is often missing are the theories and histories of radical and revolutionary activists who contested the unbearable weight of the present in the hope of creating something else. While much of this debate has centered on the ideological and libidinal labor of the concept of the future, here I am concerned with theories of time and violence and their relation to the future.3 Even after 30 years, Born in Flames raises pressing questions about the relationship between time, violence, race, sexuality, and gender. I situate the film's engagement with the politics of temporality within the writings of 1970s activists who theorized the relationship between race, time, and violence. In particular, I argue that by showing the continuity between the racialized and gendered violence of the past, present, and future, the film constructs an anticipatory queer politics of urgency and presentism. Additionally, the film gestures toward an anti-social politics that arise out of, not despite, the constitutive violence that produces and regulates race, gender, and sexuality. In other words, the Women's Army does not deny the future and hope for its end because they miscalculated the power of racialized and gendered subjection. Rather, they hope for the end of the future precisely because they understand the power of anti-blackness, white supremacy, and heteropatriarchy.

Reject the system instead of trying to reform it – the plan just perfects the systems of oppression – vote NEG to burn them down

Farley '05 (Anthony Paul, Professor of Law @ Boston College, "Perfecting Slavery", 1/27/2005, http://lawdigitalcommons.bc.edu/cgi/viewcontent.cgi?article=1028&context=lsfp)

VII. **BURN** What is to be done? Two hundred years ago, when the slaves in Haiti rose up, they, of necessity, burned everything: They burned San Domingo flat so that at the end of the war it was a charred desert. Why do you burn everything? asked a French officer of a prisoner. We have a right to burn what we cultivate because a man has a right to dispose of his own labour, was the reply of this unknown anarchist. 48 The slaves burned everything because everything was against them. Everything was against the slaves, the entire order that it was their lot to follow, the entire order in which they were positioned as worse than senseless things, every plantation, everything. 49 "**Leave nothing white behind you**," said Toussaint to those dedicated to the end of white-overblack. 50 "God gave Noah the rainbow sign. No more water, the fire next time." 51 The slaves burned everything, yes, but, unfortunately, they only burned everything in Haiti. 52 Theirs was the **greatest and most successful revolution in the history of the world** but the failure of their fire to cross the waters was the great tragedy of the nineteenth century. 53 At the dawn of the twentieth century, W.E.B. Du Bois wrote, "The colorline belts the world." 54 Du Bois said that the problem of the twentieth century was the problem of the colorline. 55 The problem, now, at the dawn of the twenty-first century is the problem of the colorline. The colorline continues to belt the world. Indeed, the slave power that is the United States now threatens an entire world

with the death that it has become and so the slaves of yesterday, today, and tomorrow, those with nothing but their chains to lose, must, if they would be free, if they would escape slavery, win the entire world. VIII. TRAINING We begin as children. We are called and we become our response to the call. Slaves are not called. What becomes of them? What becomes of the broken-hearted? The slaves are divided souls, they are brokenhearted, the slaves are split asunder by what they are called upon to become. The slaves are called upon to become objects but objecthood is not a calling. The slave, then, during its loneliest loneliness, is divided from itself. This is schizophrenia. The slaves are not called, or, rather, the slaves are called to not be. The slaves are called unfree but this the living can never be and so the slaves burst apart and die. The slaves begin as death, not as children, and death is not a beginning but an end. There is no progress and no exit from the undiscovered country of the slave, or so it seems. We are trained to think through a progress narrative, a grand narrative, the grandest narrative, that takes us up from slavery. **There is no up from slavery**. The progress from slavery to the end of history is the progress from white-over-black to white-over-black to white-overblack. The progress of slavery runs in the opposite direction of the pastpresent-future timeline. The slave only becomes the perfect slave at the end of the timeline, only under conditions of total juridical freedom. It is only under conditions of freedom, of bourgeois legality, that the slave can perfect itself as a slave by freely choosing to bow down before its master. The slave perfects itself as a slave by offering a prayer for equal rights. The system of marks is a plantation. The system of property is a plantation. **The system of law is a plantatio**n. These plantations, all part of the same system, hierarchy, produce white-overblack, white-over-black only, and that continually. The slave perfects itself as a slave through its prayers for equal rights. The plantation system will not commit suicide and the slave, as stated above, has knowing non-knowledge of this fact. The slave finds its **way back from the undiscovered country only by burning down every plantation**. When the slave prays for equal rights it makes the free choice to be dead, and it makes the free choice to not be. Education is the call. We are called to be and then we become something. We become that which we make of ourselves. We follow the call, we pursue a calling. Freedom is the only calling—**it alone contains all possible directions, all of the choices that may later blossom into the fullness of our lives**. We can only be free. Slavery is death. How do slaves die? Slaves are not born, they are made. **The slave must be trained to be that which the living cannot be.** The only thing that the living are not free to be is dead. The slave must be trained to follow the call that is not a call. The slave must be trained to pursue the calling that is not a calling. The slave must be trained to objecthood. The slave must become death. Slavery is white-over-black. White-over-black is death. White-over-black, death, then, is what the slave must become to pursue its calling that is not a calling.

Replace Welfare CP – Neg

1NC

Text: The fifty states should guaranteed a basic income for persons living each respective state without conditions.

The states can guarantee income

Mitchell, 13

(Dan, "Decentralization and Federalism Is the Libertarian Way to Determine Whether a Basic Income Is Practical or Desirable," http://www.libertarianism.org/columns/decentralization-federalism-is-libertarian-way-determine-whether-basic-income-is-practical)

They're right, but there's actually a better way of approaching the issue. Why not take all income-redistribution programs, **put them into a single block grant**, and then transfer the money – and responsibility – to state governments? In an ideal world, the block grant would gradually diminish so that states would be responsible for both the collection and disbursement of all monies related to welfare. But that's a secondary issue. The main benefit of this federalist approach is that you stop the Washington-driven expansion of the welfare state and you trigger the creation of **50 separate experiments on how best to provide a safety net**. Some states might choose a basic income. Others might retain something very similar to the current system. Others might try a workfare-based approach, while some could dream up new ideas that wouldn't stand a chance in a one-size-fits-all system run out of Washington, DC. And as states adopted different systems, they could learn from each other about what works and what doesn't work. And since it's easier to influence decisions that are closer to home, taxpayers at the state level almost certainly would have more ability to impact what happens with their money. Moreover, there's actually some evidence that this **approach is practical**. The 1996 welfare reform legislation isn't a perfect analogy, but the core feature of that law was the elimination of a national entitlement and the provision of a block grant so that states could decide (with some strings attached) **how to deal with poverty.** By most measures, the 1996 reform was a success, with Ron Haskins of the Brookings Institution explaining that it resulted in lower levels of welfare dependency and reductions in child poverty. This isn't to say the 1996 law was ideal. The advantage of a comprehensive federalist approach is that policy experts can push states to experiment with different policies. And given the vast differences between various American states, it's almost guaranteed that there will be lots of diversity. This diversity not only will inform policy makers about what works and what doesn't work. It also will satisfy the libertarian desire to get Washington out of the business of income distribution, while presumably producing a system that actually does a better job of helping the less fortunate escape government dependency. In other words, **all the advantages of the basic income plan without the potential system-wide downsides.**

A guaranteed income would reduce the humiliations of the current welfare system while promoting individual responsibility

Feeney 13 (Matthew Feeney – Before coming back to the U.S. Matthew worked in London for the Institute of Economic Affairs and at the Headquarters of the Liberal Democrats. He moved to Washington, D.C. to take part in the Institute for Humane Studies' journalism program at The American Conservative and was assistant editor of Reason.com – "Scrap the Welfare State and Give People Free Money" – Reason.com – November 26, 2013 – http://reason.com/archives/2013/11/26/scrap-the-welfare-state-give-people-free)

In 2008, Charles Murray wrote that a guaranteed income for all American adults over the age of 21 who are not in prison of $10,000 a year that **would replace all current welfare programs** as well as agricultural subsidies and corporate welfare **would be cheaper than maintaining the current welfare system** in the coming decades. It is important to point out that under Murray's proposal, which is outlined fully in his book In Our Hands: A Plan to Replace the Welfare State, after someone's total annual income reached

$25,000 a 20 percent surtax tax would be imposed on "incremental earned income," capped at $5,000 once someone earns $50,000 a year. Murray's plans also requires that $3,000 of the $10,000 grant be spent on health insurance. Of course giving every non-incarcerated American over the age of 21 $10,000 (or the current poverty line of $11,490) a year with Murray's surtax plan **in place of all corporate welfare and the entirety of the welfare state** (including Social Security, Medicaid, and Medicare) would not be cheap, but it **would be more efficient**, because it is a simple cash transfer, and would be easier to fund were other libertarian budget proposals considered, such as cuts to defense spending. Those who are not fans of Murray's guaranteed income may be more open to Milton Friedman's negative income tax, which would not guarantee a set income for every adult, but would provide payments to Americans based on how much below a certain threshold they earned. Like Murray's guaranteed income, Friedman's negative income tax would be financed through wealth redistribution. Some libertarians may not be fans of a guaranteed or basic income because such a system would, they argue, disincentivize work. Murray believes that **his surtax scheme would incentivize work** after someone began earning over $25,000. Friedman wrote that the **negative income tax** "reduces the incentives of those helped to help themselves, but it **does not eliminate that incentive** entirely, as a system of supplementing incomes up to some fixed minimum would. An extra dollar earned always means more money available for expenditure."

GI solves poverty – even under worst circumstances

Murray 8 (Charles Murray – Charles Murray is a political scientist, author, and libertarian. He first came to national attention in 1984 with the publication of Losing Ground, which has been credited as the intellectual foundation for the Welfare Reform Act of 1996. His 1994 New York Times bestseller, The Bell Curve (Free Press, 1994), coauthored with the late Richard J. Herrnstein, sparked heated controversy for its analysis of the role of IQ in shaping America's class structure. Murray's other books include What It Means to Be a Libertarian (1997), Human Accomplishment (2003), In Our Hands (2006), and Real Education (2008), and Coming Apart (2012). His most recent book, "By the People: Rebuilding Liberty Without Permission" (Crown Forum, 2015) urges Americans to stem governmental overreach and use America's unique civil society to put government back in its place. – "Guaranteed Income as a Replacement for the Welfare State" – The Foundation for Law, Justice and Society – October 30, 2008 – http://www.fljs.org/files/publications/Murray.pdf)

The immediate effect of the GI is to end involuntary poverty among the working-aged as well as the elderly. In a world where every adult starts with US$10,000 a year, no one needs to go without decent food, shelter, clothing, and the amenities of life. This statement holds even after taking the expenses of retirement and medical care into account. To summarize the detailed calculations presented in the book, assuming that US$3000 of the grant is devoted to health care (by requirement) and US$2000 is devoted to a retirement fund (voluntarily), leaving US$5000 per person per year, **surpassing the official poverty line under the GI is easy for people in a wide range of living circumstances, even in a bad economy with substantial periods of unemployment, and even assuming jobs at the minimum wage.**

Poverty kills billions of people

DS 5/23/15 (Do Something .Org – One of the largest global orgs for young people and social change, our 3.9 million members tackle campaigns that impact every cause, from poverty to violence to the environment to literally everything else. – "11 Facts about Global Poverty" – DoSomething.org – May 23 2015 – https://www.dosomething.org/facts/11-facts-about-global-poverty)

Nearly 1/2 of the world's population — **more than 3 billion people** — live on less than $2.50 a day. More than 1.3 billion **live in extreme poverty** — less than $1.25 a day. 1 billion children worldwide are living in poverty. According to UNICEF, **22,000 children die each day due to poverty**. 805 million people worldwide do not have enough food to eat. Food banks are especially important in providing food for people that can't afford it themselves. Run a food drive outside your local grocery store so people in your community have enough to eat. Sign up for

Supermarket Stakeout. More than 750 million people lack adequate access to clean drinking water. Diarrhea caused **by inadequate drinking water, sanitation, and hand hygiene kills an estimated 842,000 people every year globally**, or **approximately 2,300 people per day**. In 2011, 165 million children under the age 5 were stunted (reduced rate of growth and development) due to chronic malnutrition. Preventable diseases like **diarrhea and pneumonia take the lives of 2 million children a year who are too poor to afford proper treatment**. As of 2013, 21.8 million children under 1 year of age worldwide had not received the three recommended doses of vaccine against diphtheria, tetanus and pertussis. 1/4 of all humans live without electricity — approximately 1.6 billion people. 80% of the world population lives on less than $10 a day. Oxfam estimates that it would take $60 billion annually to end extreme global poverty--that's less than 1/4 the income of the top 100 richest billionaires. The World Food Programme says, "The poor are hungry and their hunger traps them in poverty." **Hunger is the number one cause of death in the world, killing more than HIV/AIDS, malaria, and tuberculosis combined**.

2NC – Solvency

States are the ones who implement the surveillance – the CP solves the case

Rachel **Levinson-Waldman, 15** Senior Counsel to the Brennan Center's Liberty and National Security Program, Why the Surveillance State Is Everybody's Problem, https://www.brennancenter.org/blog/why-surveillance-state-everybodys-problem

There's been much controversy around the New York City Police Department's stop and frisk program, which unfairly ensnared tens of thousands of young minority men. But new reports show the NYPD's tactics are evolving. Now, the Department is monitoring Facebook, Twitter, Instagram, and YouTube accounts — particularly those of young African-American men— and residents have pointed to surveillance cameras liberally sprinkled throughout African-American neighborhoods. 8, and now affecting nearly every American in one way or another. We ignore this history at our peril; if we fail to act when one group finds itself targeted by the government, we will soon find we are all under the microscope. The developing welfare state provided the first opportunity to keep tabs on a disfavored community: the poor. Some states require drug tests for aid recipients. Others strictly limit the items that can be purchased with aid dollars. Most recently, Kansas banned welfare recipients from spending aid money at swimming pools, and if the Missouri legislature has its way, those on food stamps will no longer be able to buy canned tuna. Such restrictions are likely to be accompanied by bureaucratic tracking mechanisms as well as limits on using cash to facilitate monitoring of recipients' spending. The information in some welfare databases is shared extensively within the government, and recipients report that caseworkers are using their electronic welfare benefit cards to monitor their activities. These accumulations of data are also inevitably vulnerable to misuse. Cutting-edge technologies are prone to be targeted at communities of color as well. An advocacy group's deep dive into license plate records from Oakland, Calif., revealed that lower-income minority neighborhoods – regardless of their crime rates – were lined with the devices, while white wealthier neighborhoods could count on having their cars snapped with far less frequency. Another study conducted after a Michigan city installed surveillance cameras in residential neighborhoods found that African-American residents were twice as likely to be surveilled as their white neighbors.

Replacing welfare with guaranteed income solves poverty and inequality of welfare recipients

Feinauer 4/7/15 (JJ Feinauer – a writer and web producer for the National Edition of the Deseret News – "Will a guaranteed basic income replace welfare?" – Desert News National Beta – May 7, 2015 –

http://national.deseretnews.com/article/4381/Will-a-guaranteed-basic-income-replace-welfare.html#UIt4WFIlcxdAQ7Bp.99)

The efficiency of the American welfare state is no minor issue of debate. Each year, the president and Congress negotiate the best ways to distribute funds in the federal budget, and each year there are those who call for major reforms to the social safety net, from both the left and the right. Some, typically from the conservatives in Congress, call for reduced spending on welfare initiatives, while others, typically the liberals, call for increases and expansions. But are there any policies that meet in the middle? Replacing current welfare programs with a guaranteed basic income for all citizens is one idea that pops up now and again, precisely because it has supporters on both sides. According to Vox's Dylan Matthews, who highlighted basic income proposals on May 1 as part of International Worker's Day, **the idea of providing a minimum sum of money to all citizens could work to not only minimize poverty, but close or weaken the widening gap of income inequality**. So what, exactly, is a minimum income? According to the Basic Income Earth Network, "A basic income is an income unconditionally granted to all on an individual basis, without means test or work requirement." BIEN explains that basic income differs from more common welfare programs because it pays the individual, not the household, and it is unconditional. According to Matthews, **fears that providing a basic income would eliminate incentives to work** and throw the budget out of whack **may be reasonable, but there is evidence** (through some small-scale experiments) **that it would have little noticeable impact on these factors**. "The scale is likely to be modest," he wrote, "and the form that reduction in work effort takes could very well be good for the economy in the long run." One of the strangest aspects of basic income proposals, which Matthews handles at length, is that there is substantial support for it from both ideological extremes. On the conservative side, for example, libertarian political philosopher Matt Zwolinski joined the likes of economists Milton Friedman and John Kenneth Galbraith when he argued last year that **such a policy could potentially simplify the current federal bureaucracy, lower costs and provide greater protections to individual privacy**.

2NC – Poverty NB

GI is the best and only way to win the war on poverty – eliminating welfare programs key

VINIK 13 (DANNY VINIK – Before joining Business Insider, Danny Vinik wrote for his own blog, Political Algebra, on economics, politics, and occasionally sports. He graduated from Duke in 2013 with degrees in economics and public policy. He is a political reporter at Business Insider. – "Everyone's Talking about This Simple Solution to Ending Poverty by Just Giving People Free Money" – Business Insider – November 12, 2013 – http://www.businessinsider.com/giving-all-americans-a-basic-income-would-end-poverty-2013-11#ixzz3gY2kfYkn

In 2012, there were 179 million Americans between the ages of 21 and 65 (when Social Security would kick in). The poverty line was $11,945. Thus, giving each working-age American a basic income equal to the poverty line would cost $2.14 trillion. For some comparison, U.S. GDP was almost $16 trillion in 2012 and the defense budget was $700 billion. But a minimum income would also allow us to eliminate every government benefit as well. Get rid of SNAP, TANF, housing vouchers, the Earned Income tax credit and many others. Get rid of them all. A 2012 Congressional Research Service report found that **the federal government spends approximately $750 billion each year on benefits for low-income Americans and that rises to a clean trillion when you factor in state programs**. Eliminate all of those and the net figure comes out to $1.2 trillion needed to pay for a universal basic income, still a hefty sum. That doesn't mean there aren't ways to pay for it. The CBO found that a carbon tax would bring in nearly $100 billion a year for instance. Revenue would also increase automatically since everyone would have a basic income on which to pay taxes. The government could also offer a basic income of $6,000 a year instead of up to the poverty line. Funding a basic income for all working-age adults would not be easy and would

require a substantial increase in the size of government, but it's not impossible either. What are the benefits of a basic income? The clear one is that no American would live below the poverty line. **The U.S. has been waging the War on Poverty for a generation now and still nearly 50 million Americans are below the line. This would end that war with a decisive victory**. There are knock on effects as well. Americans would have greater leverage to demand higher wages and better working conditions from their employer thanks to the increased income security. Families could allow one parent to take time off to raise their kids. **Eliminating the numerous different government welfare programs would also lead to efficiency gains** as adults would simply receive their check in the mail and not have to waste time filling out paperwork at numerous different offices.

Poverty kills billions of innocent people – worse and more probable than their impact

EPC 11 (End Poverty Campaign – Hearts & Minds is a clearinghouse of helpful information, motivating people to get involved and showing how to make self-help, volunteering, and donations more effective. We work to reach people nationwide and globally through our website and public education and activism campaigns. – "Facts on World Hunger and Poverty" – Hearts and Minds – July 21, 2011 – http://www.heartsandminds.org/poverty/hungerfacts.htm)

Global Poverty Facts Every day, **poverty kills more than 50,000 innocent people - 18 million every year**. Source: World Health Organization (2004 report, most recent available, current deaths may be far higher due to global economic setbacks and the rising cost of food) These statistics account for one third of all human deaths. More people die as a result of extreme poverty than of any other cause. Source: WHO 2008 1.37 billion people live on less than $1.25 a day, and 2.56 billion live on less than $2 a day. Moreover, 5.05 billion people (**more than 80 percent of the world's population**) **live on less than $10 a day**. Source: World Bank 2005 Because of the global economic slowdown and rising food prices, FAO projects 100 million more people will suffer from poverty and chronic hunger by the end of 2009 - an 11% increase from 2008. Source: World Food Program 2009 Extreme poverty is increasingly concentrated in fragile states and territories, defined as those with very weak institutions and poor policies. These areas are home to 9 percent of the population living in developing countries, but nearly 27 percent of the extreme poor. These places are often sources of war, terrorism and refugee crises. Source: World Bank, Global Monitoring Report 2007 Top of Page Hunger & Poverty **8 million people die from lack of food and nutrition every year - about 24,000 deaths each day.** Source: FAO Hunger Report 2008 Every year, 5.8 million children die from hunger related-causes. Every day, that's 16,000 young lives lost. Source: FAO Hunger Report 2008 For the first time in history, over 1.02 billion people do not have enough to eat. That's one sixth of humanity - more than the population of the United States, Canada and the European Union combined. Source: FAO Hunger Report 2008 There are around one billion hungry people in the world: 642 million live in Asia and the Pacific, 265 million in Sub-Saharan Africa, 53 million in Latin America and the Caribbean, 42 in the Near East and North Africa. Fifteen million people in developed countries go hungry, around 1.5 percent of the total. Source: FAO 2010 The number of undernourished people in the world increased by 75 million in 2007 and 40 million in 2008, largely due to higher food prices. Source: FAO 2008 Top of Page Inequality & Poverty The GDP (Gross Domestic Product, total of everyone's income) in the poorest 48 nations is less than the combined wealth of the world's three richest people. Source: Global Issues Website 20% of the population in developed nations consumes 86% of the world's goods. Source: Global Issues Website Recent studies find that prices paid by the poor in developing countries are much higher than previous thought. They cannot buy as much food with $1 as they can in a country like United States. This shows that they're even poorer than reported in earlier studies. Source: World Bank 2009 The poorest 40% of the world's population accounts for 5% of the global income. The richest 20% of world's population accounts for three-quarters of world income. Source: Global Issues Website The average yearly income of the richest 20% of people in the world is about 50 times greater than the yearly income of the poorest 20% of people. Source: Human Development Report 2005 Top of Page Children & Poverty Photo of Chinese girl with smile is sitting at her deskAll children should have good food, good education, and an active, happy life Of the 2.2 billion children in the world, 600 million are victims of extreme poverty. Source: UNICEF 2008 Each year, over 10 million children in developing countries die before the age of five. More than half of these deaths are attributed to malnutrition, which claims a child's life every 5 seconds. Sources: World Development Indicators 2007, The

United Nations' World Food Program Under nutrition contributes to 53 percent of the 9.7 million* deaths of children under five each year in developing countries. This means that one child dies every six seconds from malnutrition and related causes. *Note that this statistic is different from the bullet point just above, due to different year of study: UNICEF 2005 Every year more than 10 million children die of hunger and preventable diseases - that's over 30,000 per day, or one every 3 seconds. Source: Global Poverty Facts Approximately 146 million children in developing countries, about 1 out of 4, are underweight. Source: The United Nations' World Food Program An estimated 250 million preschool children are vitamin A deficient. An estimated 250,000 to 500,000 vitamin A-deficient children become blind every year. Half of them die within 12 months of losing their sight. This is easily corrected with an inexpensive vitamin supplement. Source: World Health Organization New: It is estimated that 684,000 child deaths worldwide could be prevented by increasing access to vitamin A and zinc Source: World Food Program 2007 Top of Page Clean Water & Sanitation Photo of the water dropWe all need water to live **1.1 billion people don't have safe water and 2.6 billion lack basic sanitation**. Source: Human Development Report 2006 Dirty water and poor sanitation account for the vast majority of 1.8 million child deaths each year from diarrhea - almost 5,000 every day - making it the second largest cause of child mortality. . Source: Human Development Report 2006 Deaths from diarrhea can usually be prevented with very inexpensive oral rehydration salts. Source: Child Health Research Project Poor sanitation and drainage contribute to malaria, **which claims the lives of 1.3 million people a year, 90% of which are children under the age of five**.

Poverty is worse than death

Olson 14 (Samantha Olson – She earned her BA in Professional Writing with a Business Administration minor at King's College, and her MS in Journalism at Stony Brook University. Her graduate work focused on nutrition and exercise science, and continues to cover public health and wellness for women and children. – "Life of Poverty More Common for Children than Becoming Pregnant or Dying, And Possibly A Worse Fate" – Medical Daily – July 22, 2014 – http://www.medicaldaily.com/life-poverty-more-common-children-becoming-pregnant-or-dying-and-possibly-worse-fate-294274)

There are now more children living in poverty than becoming pregnant or dying prematurely, but it may not necessarily be good news considering the trials and tribulations that accompany a life of straits **could be a fate worse than death**. A new report published in the 25th edition of the Annie E. Casey Foundation's KIDS COUNT Data Book has revealed some startling news for the future of America's children and which states are best and worst to raise them in. The report assesses a child state-by-state on four factors: economic well-being, education, health, and their family and community. It found nearly 23 percent of children were living below the poverty line in 2012, and it's hypothesized the reason is behind low-income families' struggles to recover from the recession. Patrick McCarthy, the foundation's president and CEO, pointed out the pros and cons of what their data indicates and said in a press release that the public should be "encouraged" by improvements on several fronts, but "we must do much more." Teen birth rates dropped from 40 per every 1,000 teens in 2005 to 29 per births in 2012, along with the decrease of babies born at low birth weights. Child and teen deaths also dropped from 32 per every 100,000 in 2005 to only 26 in 2010, which shows a clear improvement. But the nagging numbers of poverty rate increases show less promise for the teens and adults these children will grow into one day. In 2012, there were three million more children living in poor families than in 2005. It's not just a life of wanting that could cripple a child's mental and emotional health, but also their physical well-being as well. One of the improvements for children living in low-income families in the past 20 years has been the increased access to health insurance through Medicaid expansions through the State Children's Health Insurance Program implemented in 1997. From 1990 to 2012, there was a four percent increase in the amount of children who were insured. However, McCarthy says the decrease of resource availability from government programs like Medicaid or Medicare will only make things worse for kids in the future and as higher housing and transportation costs increase, poor families stay poor. "We should strengthen our commitment and redouble our efforts until every child in America develops to full potential," McCarthy said. "We simply cannot afford to endanger the futures of the millions of low-income children who don't have the chance to experience high-quality early childhood programs and the thriving neighborhoods that higher-income families take for granted." Children who live in single-parent families are more likely to live below the poverty line, which generally concludes they'll have access to fewer resources. It's no surprise why it would be alarming to find there were 35 percent more children living in single-parent families in 2012 than in 2005. What Is Life Like For Children Who Live In Poverty? **Being poor is a reality too many children face in America today**. It is a frequent misconception many

well-off Americans have, that the poor are lazy or even take advantage of the government systems we have in place. Children do not choose to be raised in poverty and to scoff at a child who may go wanting day-to-day is an arguably shameful opinion to hold.

2NC – Overpopulation NB

GI decreases teenage pregnancies

Murray 8 (Charles Murray – Charles Murray is a political scientist, author, and libertarian. He first came to national attention in 1984 with the publication of Losing Ground, which has been credited as the intellectual foundation for the Welfare Reform Act of 1996. His 1994 New York Times bestseller, The Bell Curve (Free Press, 1994), coauthored with the late Richard J. Herrnstein, sparked heated controversy for its analysis of the role of IQ in shaping America's class structure. Murray's other books include What It Means to Be a Libertarian (1997), Human Accomplishment (2003), In Our Hands (2006), and Real Education (2008), and Coming Apart (2012). His most recent book, "By the People: Rebuilding Liberty Without Permission" (Crown Forum, 2015) urges Americans to stem governmental overreach and use America's unique civil society to put government back in its place. – "Guaranteed Income as a Replacement for the Welfare State" – The Foundation for Law, Justice and Society – October 30, 2008 – http://www.fljs.org/files/publications/Murray.pdf)

The GI obviously increases the economic penalty of having a baby for a single woman under twenty-one, who no longer has access to any of the existing welfare programmes for single mothers. The GI also increases the economic penalty on the parents of a teenaged mother who is still living at home, thereby also increasing their incentives to pressure the daughter to avoid pregnancy or to have an abortion. Under the GI, having a baby no longer triggers a benefits stream to defray their costs. The GI radically increases the economic penalties for fathers who are unemployed or working off the books. Under the current system, a child support law is meaningless because they have no visible income. Under the GI, every man aged twenty-one or older has a known income stream deposited to a known bank account every month that can be tapped by a court order. For teenaged fathers who are not yet old enough to be eligible for the grant, their obligation would accumulate until they turn twentyone, whereupon the child support law would force them to start paying it back.

Teenage pregnancies contribute to overpopulation

FN 8 (Fox News – The Fox News Insider is the official Blog of Fox News Channel. Established in June 2010, Fox News Insider delivers breaking news and show highlights just moments after they air on FNC. – "Expert: Teen Pregnancies Contribute to Overpopulation" – Fox News – March 14, 2008 – http://www.foxnews.com/story/2008/03/14/expert-teen-pregnancies-contribute-to-overpopulation.html)

Unwanted teen pregnancies and bouts of binge drinking are contributing to the world's unsustainable population growth, a World Health Organization academic said. John Gillebaud, a leading academic on birth control, reproductive health and population issues, told a conference in Canberra, Australia, that unprotected sex leading to unwanted pregnancies is the greatest threat to mankind. "Every single week a new city of 1.7 million could be created, and the current global population growth is unsustainable," he said, speaking via satellite from London. "Each year, there are around 80 million unwanted pregnancies and 30 million of these are aborted," he said. "The inconvenient truth is, the world is already overpopulated and soon we may experience shortages of food and water."

Overpopulation causes extinction

Humes no date (Edward Humes – I'm a Pulitzer Prize-winning journalist and author living in Southern California. My latest books are Garbology: Our Dirty Love Affair With Trash, and A Man and His Mountain: The Everyman Who Created Kendall-Jackson and Became America's Greatest Wine Entrepreneur. – "HUMAN

POPULATION GROWTH AND EXTINCTION" – Center for Biological Diversity – no date – http://www.biologicaldiversity.org/programs/population_and_sustainability/extinction/)

We're in the midst of the Earth's sixth mass extinction crisis. Harvard biologist E. O. Wilson estimates that 30,000 species per year (or three species per hour) are being driven to extinction. Compare this to the natural background rate of one extinction per million species per year, and you can see why scientists refer to it as a crisis unparalleled in human history. The current mass extinction differs from all others in being driven by a single species rather than a planetary or galactic physical process. When the human race — Homo sapiens sapiens — migrated out of Africa to the Middle East 90,000 years ago, to Europe and Australia 40,000 years ago, to North America 12,500 years ago, and to the Caribbean 8,000 years ago, waves of extinction soon followed. The colonization-followed-by-extinction pattern can be seen as recently as 2,000 years ago, when humans colonized Madagascar and quickly drove elephant birds, hippos, and large lemurs extinct [1]. Lange's metalmark butterfly from Amy Harwood. The first wave of extinctions targeted large vertebrates hunted by hunter-gatherers. The second, larger wave began 10,000 years ago as the discovery of agriculture caused a population boom and a need to plow wildlife habitats, divert streams, and maintain large herds of domestic cattle. The third and largest wave began in 1800 with the harnessing of fossil fuels. With enormous, cheap energy at its disposal, the human population grew rapidly from 1 billion in 1800 to 2 billion in 1930, 4 billion in 1975, and over 7 billion today. If the current course is not altered, we'll reach 8 billion by 2020 and 9 to 15 billion (likely the former) by 2050. No population of a large vertebrate animal in the history of the planet has grown that much, that fast, or with such devastating consequences to its fellow earthlings. Humans' impact has been so profound that scientists have proposed that the Holocene era be declared over and the current epoch (beginning in about 1900) be called the Anthropocene: the age when the "global environmental effects of increased human population and economic development" dominate planetary physical, chemical, and biological conditions [2]. Humans annually absorb 42 percent of the Earth's terrestrial net primary productivity,30 percent of its marine net primary productivity, and 50 percent of its fresh water [3]. Forty percent of the planet's land is devoted to human food production, up from 7 percent in 1700 [3]. Fifty percent of the planet's land mass has been transformed for human use [3]. More atmospheric nitrogen is now fixed by humans that all other natural processes combined [3]. The authors of Human Domination of Earth's Ecosystems, including the current director of the National Oceanic and Atmospheric Administration, concluded: "[A]ll of these seemingly disparate phenomena trace to a single cause: the growing scale of the human enterprise. The rates, scales, kinds, and combinations of changes occurring now are fundamentally different from those at any other time in history. . . . We live on a human-dominated planet and the momentum of human population growth, together with the imperative for further economic development in most of the world, ensures that our dominance will increase." Predicting local extinction rates is complex due to differences in biological diversity, species distribution, climate, vegetation, habitat threats, invasive species, consumption patterns, and enacted conservation measures. One constant, however, is human population pressure. A study of 114 nations found that human population density predicted with 88-percent accuracy the number of endangered birds and mammals as identified by the International Union for the Conservation of Nature [4]. Current population growth trends indicate that the number of threatened species will increase by 7 percent over the next 20 years and 14 percent by 2050. And that's without the addition of global warming impacts. Edward Humes When the population of a species grows beyond the capacity of its environment to sustain it, it reduces that capacity below the original level, ensuring an eventual population crash. "The density of people is a key factor in species threats," said Jeffrey McKee, one of the study's authors. "If other species follow the same pattern as the mammals and birds... we are facing a serious threat to global biodiversity associated with our growing human population." [5]. So where does wildlife stand today in relation to 7 billion people? Worldwide, 12 percent of mammals, 12 percent of birds, 31 percent of reptiles, 30 percent of amphibians, and 37 percent of fish are threatened with extinction [6]. Not enough plants and invertebrates have been assessed to determine their global threat level, but it is severe.Extinction is the most serious, utterly irreversible effect of unsustainable human population. But unfortunately, many analyses of what a sustainable human population level would look like presume that the goal is simply to keep the human race at a level where it has enough food and clean water to survive. Our notion of sustainability and ecological footprint — indeed, our notion of world worth living in — presumes that humans will allow for, and themselves enjoy, enough room and resources for all species to live.

AT: Perm Do Both

You can't do welfare and GI – it's too expensive and GI is better

Murray 8 (Charles Murray – Charles Murray is a political scientist, author, and libertarian. He first came to national attention in 1984 with the publication of Losing Ground, which has been credited as the intellectual foundation for the Welfare Reform Act of 1996. His 1994 New York Times bestseller, The Bell Curve (Free Press, 1994), coauthored with the late Richard J. Herrnstein, sparked heated controversy for its analysis of the role of IQ in shaping America's class structure. Murray's other books include What It Means to Be a Libertarian (1997), Human Accomplishment (2003), In Our Hands (2006), and Real Education (2008), and Coming Apart (2012). His most recent book, "By the People: Rebuilding Liberty Without Permission" (Crown Forum, 2015) urges Americans to stem governmental overreach and use America's unique civil society to put government back in its place. – "Guaranteed Income as a Replacement for the Welfare State" – The Foundation for Law, Justice and Society – October 30, 2008 – http://www.fljs.org/files/publications/Murray.pdf)

From a practical standpoint, Professor Etzioni's arguments for a GI in addition to the existing benefit system are moot. No matter how theoretically persuasive those arguments might be, **no Western nation can afford to add a significant GI to its existing commitments**. On the contrary, all Western nations need to restructure their existing benefit systems to avoid bankruptcy. **If a GI is to be financially feasible, it must replace existing programmes rather than augment them**. I regard this practical necessity as serendipitous. The real reason to scrap the advanced welfare state is that its apparatus is outmoded, ineffectual, and often counterproductive. Because this view is so central to the Right's potential support for a GI, some explanation of it is in order. The European and American welfare states evolved under the twin assumptions that resources were scarce and that government could allocate them effectively. The first assumption was true during the first half of the twentieth century, in the sense that no country had ever been so rich that its wealth, divided evenly among everyone, would provide everyone with a comfortable living. After World War II, in a few countries, wealth increased so much that, for the first time, there was enough money to go around. It was technically possible for no one to be poor. Much of the energy behind the social turmoil of the 1960s was fuelled by this revolutionary chang

AT: CP Disincentivizes Work

Studies prove GI doesn't decrease incentive to work

Mallett 2/4/15 (WHITNEY MALLETT – Whitney is a writer and video producer, especially interested in how technology intersects with art, privacy, and criminal justice. – Whitney is a writer and video producer, especially interested in how technology intersects with art, privacy, and criminal justice. – "The Town Where Everyone Got Free Money" – Motherboard – February 2, 2015 – http://motherboard.vice.com/read/the-mincome-experiment-dauphin)

Critics of basic income guarantees have insisted that giving the poor money would disincentivize them to work, and point to studies that show a drop in peoples' willingness to work under pilot programs. But in Dauphin—thought to be the largest such experiment conducted in North America—**the experimenters found that the primary breadwinner in the families who received stipends were in fact not less motivated to work than before**. Though there was some reduction in work effort from mothers of young children and teenagers still in high school—mothers wanted to stay at home longer with their newborns and teenagers weren't under as much pressure to support their families—the reduction was not anywhere close to disastrous, as skeptics had predicted.

AT: Aff Solves Poverty

The current welfare system has failed to life people out of poverty

Tanner 14 (Michael D. Tanner – Cato Institute senior fellow, Michael Tanner heads research into a variety of domestic policies with a particular emphasis on poverty and social welfare policy, health care reform, and Social Security. – "The Basic Income Guarantee: Simplicity, but at What Cost?" – CATO Unbound – August 26, 2014 – http://www.cato-unbound.org/2014/08/26/basic-income-guarantee-simplicity-what-cost)

And obviously we should be concerned that **the existing welfare system has utterly failed at its primary mission: lifting people out of poverty** and enabling them and their children to become independent and self-supporting members of society. Last year alone, the federal government spent nearly $700 billion to fund anti-poverty programs. State and local governments kicked in an additional $300 billion, bringing the total to roughly $1 trillion. Since the Start of the War on Poverty in 1965, we have spent nearly $19 trillion. Recent studies suggest that welfare programs did help to reduce the worst deprivations of material poverty, especially in their early years. But they have long since reached a point of diminishing returns. **We may have reduced the discomfort of poverty, but we have failed to truly lift people out of poverty**. Therefore I am sympathetic to the argument that some form of **guaranteed basic income would be an improvement over what we have today**. For example, while I am skeptical of some of the predicted administrative savings, there would be clear advantages to a simplified system. Second, it would treat poor people like adults, expected to save and budget, rather than doling out small allowances for those specific goods and services that the government believes they should have. Third, as Zwolinski notes, it helps break up the entrenched constituencies that support the welfare state.

(__) Status Quo Solves - Mandatory drug testing is already being curtailed in frequency and severity.

Budd 2011 (Jordan, Professor of Law interim dean, "Pledge Your Body for Your Bread: Welfare, Drug Testing, and the Inferior Fourth Amendment", http://scholarship.law.wm.edu/cgi/viewcontent.cgi?article=1576&context=wmborj, pg. 752-753 Last Access 07/18/15 LT)

Following passage of federal welfare reform and its invitation to the states to impose suspicionless drug testing on welfare recipients, several states responded by adopting more limited programs that sought to avoid the most serious constitutional concerns associated with mandatory testing.251 Many of these ongoing programs apply only to convicted drug felons or other individuals for whom the state has some individualized reason to suspect drug abuse.252 Other programs apply generally to the applicant or recipient population but rely on noninvasive screening assessments to identify individuals for whom there is reasonable suspicion to support more invasive drug testing.253 The State of Idaho, for example, "requires substance abuse testing of any [welfare] applicant or recipient, if the [state] has a reasonable suspicion they are engaged in, or at high risk of, substance abuse. Testing will be conducted if screening and assessment give a reasonable suspicion the participant is engaged in substance abuse."254 These programs may exist independently of or in combination with other measures that temporarily or permanently bar the provision of aid to individuals convicted of certain drug-related offenses, as authorized by a separate provision of the 1996 federal statute.255

(__) Dehumanization doesn't outweigh - Life precedes value.

Kateb 1992

George, Professor of Politics at Princeton University, "The Inner Ocean" pg. 141

> But neither of these responses will do in the nuclear situation. To affirm existence as such is to go beyond good and evil; it is to will its perpetual prolongation for no particular reason. To affirm existence is not to praise it or love it or find it good. These responses are no more defensible than their contraries—no more defensible than calling existence absurd, or meaningless, or worthless. All such responses are appropriate only for particulars. Existence does not have systemic attributes amenable to univocal judgments. At least some of us cannot accept the validity of revelation, or play on ourselves

the trick of regarding existence as if it were the designed work of a personal God, or presume to call it good, and bless it as if it were the existence we would have created if we had the power, and think that it therefore deserves to exist and is justifiable just as it is. No: these argumentative moves are bad moves; they are hopeless stratagems. The hope isto go beyond the need for reasons, to go beyond the need for justifying existence, andin doing so tostrengthen,not weaken, one's attachment.Earthly existence must be preservedwhatever we are able or unable to say about it. There is no otherhuman and natural existence. The alternative is earthly nothingness. Things are better than nothing; anything is better than nothing.

(__) Dehumanization is inevitable - Technology.

Shores 11(Michelle, Major at Psychology. University of Maryland University College. "Dehumanization: Is it inevitable or is there room for change?".http://contentdm.umuc.edu/cdm/ref/collection/p15434coll5/id/1021. Accessed 7/31/15)

While reading the TheMcDonaldization of Society 5 (Ritzer, 2008), and Nickel andDimed: On (Not) Getting by in America (Ehrenreich, 2001), I felt as if we as a **society** were**doomed to succumb to dehumanization and** that **there is no turning back**. Although as I thoughtfurther I realized that **there is the possibility of oscillation away from**, although **not fully void of**, dehumanization. In my opinion, **the advancement of technology is a major obstacle in ridding** our society **of dehumanization**. According to Ritzer (2008), **the use of nonhuman technology is a major contributor to the dehumanization** of the worker. Businesses depend on the use ofcomputerized equipment to either replace or control the individual's participation in the workplace. In addition, personal **use of technology** with items such as Blackberries, IPhones, IPads,etc., **allows for what society views as greater efficiency and control**. Many people use scriptedlanguage such as texting as a quick communication compared to face-to-face conversation or atelephone conversation. Society values how quickly things can be accomplished with the use oftechnology, from the scripted texting to the constant contact. Until entire cultures can beconvinced of **the de-humanizing effect that technological advancements has on society**, I fearthat dehumanization **will continue**.In addition, I believe that globalization is another force to be contended with in the fightfor movement away from dehumanization. Globalization refers to how different cultures interactwith one another, whether person to person, politically, or economically. As we need to find acommon ground to work together, it will place more pressure for individuals to become more autonomous in order to survive as a whole (Ritzer, 2008).

(__) Local Fill In DA

(a.) No Solvency - State level surveillance will fill in.

Budd 2011 (Jordan, Professor of Law interim dean, "Pledge Your Body for Your Bread: Welfare, Drug Testing, and the Inferior Fourth Amendment", http://scholarship.law.wm.edu/cgi/viewcontent.cgi?article=1576&context=wmborj, pg. 752-753 Last Access 07/18/15 LT)

The next chapter of this constitutional assault is now being written in legislatures across the country. Over the last three years, over half of the states have considered legislation linking the receipt of public assistance to mandatory screening for drug use.14 Some of the proposals are relatively innocuous, involving written questionnaires and recommended treatment protocols for individuals whose responses suggest the possibility of drug dependence.15 Most of the proposals, however, are far more severe, often requiring that every recipient submit to the invasive extraction of bodily fluids and barring assistance to anyone testing positive.16 Recently, members of the United States Congress have joined the cavalcade and introduced legislation requiring states that administer federal welfare funds to conduct blanket drug testing of all program participants.17

(b.) Turns case - State surveillance is worse.

Budd 2011 (Jordan, Professor of Law interim dean, "Pledge Your Body for Your Bread: Welfare, Drug Testing, and the Inferior Fourth Amendment", http://scholarship.law.wm.edu/cgi/viewcontent.cgi?article=1576&context=wmborj, pg. 752-753 Last Access 07/18/15 LT)

In the wake of federal welfare-reform legislation devolving administrative authority for public assistance to state and local governments,122 many jurisdictions have utilized their new discretion to impose exceptionally harsh verification procedures on aid applicants and recipients.123 Among the requirements is an updated variant of the Wyman home visit that lacks virtually all of its moderating characteristics.124 The prototype for these new home visits is San Diego County's "Project 100%," which employs investigative practices that are among "the most aggressive in the country."125 As a condition of public assistance, all aid applicants in the county must agree to an unscheduled home visit by a sworn law-enforcement investigator from the District Attorney's Public Assistance

Fraud Division.126 Refusal to permit the visit or to accept the scope of the investigator's inspection results in the denial of benefits.127 The visit itself is exclusively for investigatory purposes and has no rehabilitative component.128 Once in the home, the investigator's discretion is unlimited and any area of the home is subject to inspection.129

Investigators accordingly rifle through dresser drawers, medicine cabinets, closets, and refrigerators,130 all in search of evidence of ineligibility or fraud.131

(__) Welfare surveillance is inevitable

(A.) Private companies and industries.

Gary 05(Mark,T. Is a Professor Emeritus from M.I.T. He has worked in the areas of race and ethnicity, collective behavior and social movements, law and society and surveillance studies. Major works in progress are books on new forms of surveillance and social control across borders. He received his Ph.D. from the University of California at Berkeley. Encyclopedia of Social Theory. "Surveillance and Society". http://web.mit.edu/gtmarx/www/surandsoc.html. Accessed 8/1/15)

Several kinds of social structure define surveillance relationships. **There is an important difference between organizational surveillance and the non-organizational surveillance** carried about by individuals. **Large organizations have become ever more important in affecting the life chances of individuals. Organizations are the driving force in the instrumental collection of personal data.** At the organizational level formal **surveillance involves** a constituency. **Constituency** is **used** broadly **to refer to those with some rule-defined relationship or potential connection to the organization, whether** this involves **formal** membership, **or merely** forms of interactionwith it such as renting a video or showing a passport at a border. **All organizations have** varying degrees of **internal and external surveillance.** The many kinds of employee or **inmate monitoring**, such as within the "total institutions" studied by Goffman (1961), are **example**s **of the internal constituency surveillance found in organizations**. Here **individuals "belong" to the organization in a double sense.** They belong **as members**. They **also** in a sense are "belongings" of the organization, being **direct**ly **subject to its control in** ways that non-members are not. There is often a loose **analogy tothe ownership of property. External constituency surveillance involves watching those who have** some **patterned contact with the organization**, e.g., as customers, patients, malefactors or citizens **subject to laws of the state**, but **who do not "belong" to the organization the way that an employee or inmate does**. Credit card **companies and banks for example monitor client transactions and also seek potential clients by mining and combining data bases. Or consider the control activities of a government agency charged with enforcing health and safety regulations. Such an organization is responsible for seeing that categories of person subject to its rules are in compliance**, even though they are not members of the organization. **Non-governmental organizations** that audit, grant ratings, licenses and certifications have the same compliance function. Organizations also **engage in external non-constituency surveillance in monitoring their broader environment in watching other organizations and social trends. The rapidly growing field of business intelligence seeks information about competitors, social conditions and trends that may effect an organization**. **Industrial espionage is one variant. Planning also requires such data**, although it is usually treated in the aggregate rather than in personally identifiable form. **With the widespread accessibility** (democratization?) **of surveillance techniques and the perception that they are needed and justified, whether for protection, strategic or prurient reasons, personal surveillance**, in

which an individual watches another individual apart from an organizational role, is commonplace. This may involve role relationship surveillance as with family members (parents and children, the suspicious spouse) or friends looking out for each other (e.g., monitoring location through a cell phone). Or it can involve non-role relationship surveillance, as with the free-floating activities of the voyeur whose watching is unconnected to a legitimate role.

(B.) Third party surveillance.

Gary 05(Mark,T. Is a Professor Emeritus from M.I.T. He has worked in the areas of race and ethnicity, collective behavior and social movements, law and society and surveillance studies. Major works in progress are books on new forms of surveillance and social control across borders. He received his Ph.D. from the University of California at Berkeley. Encyclopedia of Social Theory. "Surveillance and Society". http://web.mit.edu/gtmarx/www/surandsoc.html. Accessed 8/1/15)

A distinction rich with empirical and ethical implications is whether the situation involves those who are a party to the generation and collection of data (direct participants) or instead involves a third party. **A third party may legitimately obtain personal information through contracting with the surveillance agent** (e.g., **to carry out drug tests or to purchase consumer preference lists**). Or it may be obtained **because confidentiality is violated by the agent, or because an outsider illegitimately obtains it (wiretaps, hacking**). The presence of **third parties raises an important "secondary use" issue –that is can data collected for one purpose be used without an individual's** permission for unrelated purposes? In Europe the answer generally is "no", although that is less the case in the United States where a much freer market in personal information exists**. An important distinction that often involves power differentials is whether the surveillance is non-reciprocal or reciprocal. The former is one-way with personal data going from the watched to the watcher** (e.g., employers, merchants, police, wardens, teachers, parents). **With reciprocal surveillance it is bi-directional** (e.g., many conflicts, contests and recreational games). Surveillance that is reciprocal may be asymmetrical or symmetrical with respect to means and goals. Thus in a democratic society citizens and government engage in reciprocal but distinct forms of mutual surveillance. For example **citizens can watch government through Freedom of Information Requests, open hearings and meetings, and conflict of interest and other disclosures required as a condition for running for office. But citizens can not legally wire tap, carry out Fourth Amendment searches or see others' tax returns**. In bounded settings such as a protest demonstration, there may be greater equivalence with respect to particular means e.g., police and demonstrators videotaping each other. In organizational settings, power is rarely all on one side, whatever the contours of formal authority. Lower status members are not without resources to watch their superiors and to neutralize or limit surveillance. Video and audio monitoring tools are widely available. **Employees may document harassment and discrimination with a hidden recorder and file complaints that will mobilize others to scrutinize a superior. Even with out equipment, being on the scene permits surveillance through the senses**. In spite of the power differences butlers, servants and valets are often believed to know much more about their employers than the reverse, although this is not formally defined by the role. **Many settings of organizational conflict show symmetrical reciprocated surveillance in which the contending partiesare** roughly **equivalent**. Games such as poker involve this, as do some contractual agreements and treaties (e.g., the mutual deterrence of nuclear arms control sought through reciprocal watching).

Privacy Adv Ext - A2 Dehum > Death

(__) Err Negative on Impact Framing - Value to life cannot be measures externally - Saying you know the exact conditions that make someone elses life not worth living is impossible and dehumanizing.

Schwartz 2002

Lisa, Lecturer in Philosophy of Medicine at the Department of General Practice at the University of Glasgow,*Medical Ethic: A case-based approach*, Chapter 6: A Value to Life: Who Decides and How? http://asia.elsevierhealth.com/media/us/samplechapters/9780702025433/9780702025433.pdf

The second assertion made by supporters of the quality of life as a criterion for

decisionmaking is closely related to the first, but with an added dimension. This assertion suggests that the determination of the value of the quality of a given life is a subjective determination to be made by the person experiencing that life. The important addition here is that the decision is a personal one that, ideally, ought not to be made externally by another person but internally by the individual involved. Katherine Lewis made this decision for herself based on a comparison between two stages of her life. So did James Brady. Without this element, decisions based on quality of life criteria lack salient information and the patients concerned cannot give informed consent. Patients must be given the opportunity to decide for themselves whether they think their lives are worth living or not. To ignore or overlook patients' judgement in this matter is to violate their autonomy and their freedom to decide for themselves on the basis of relevant information about their future, and comparative consideration of their past. As the deontological position puts it so well, to do so is to violate the imperative that we must treat persons as rational and as ends in themselves.

A2 Patriarchy Adv

Patriarchy Advantage 1nc Frontline - Negative

(__) No terminal impact - Patriarchy is not the root cause of war.

Hillman 2004

James, psychologist, A Terrible Love of War, pp. 86-87

To imagine war to be a "man's thing," one more example of the abusive, self-inflating activity of "the patriarchy," traps one in the genderist division of the cosmos: all things are either male or female, *tertium non datur*. The genderist division takes on the absolutism of a logical opposition, an either/or which allows no space for the "both" of compromise and ambivalence, and androgyny. This division then influences our fantasies of primordial societies, reducing war to an activity of violent hunter-gatherers versus gentle cultivator-weavers. If, however, we think about war as an emanation of a god, war as an archetypal impulse, then patriarchy does not originate war but serves war to give it form and bring it to order by means of hierarchical control, ritual ceremony, art, and law. Remember Foucault's idea that law is a continuation of war in another form. Patriarchy makes the forms. Rather than the origin of war, patriarchy is its necessary result, preventing Ares from blowing up the world and leaving a few poor remnants a life that is "nasty, brutish, and short." That this hierarchy, these forms can become tyrannical is evident enough, since cruelties of discipline are often secondary consequences of form. Nonetheless, patriarchal tyranny is not the primary cause of war; that cause is the god.

(__) Turn - Privacy increases patriarchy.

Gilman 2001 (Michele Estrin Gilman, Associate Professor and Director, Civil Advocacy Clinic, University of Baltimore School of Law, "WELFARE, PRIVACY, AND FEMINISM", pg 26, http://poseidon01.ssrn.com/delivery.phpID=170124119105000025098127112012072077122024024079020086078020122005121115108105116081017021040022038009060124026101088114013030055090056092048095112100000100026111029086011066090097023072103085089114031103004082015111108004098067117000105121127070&EXT=pdf&TYPE=2 Last Access 7/22/15 L.T*)*

Second-wave feminists attacked the physical privacy and the boundary between public and private that legal systems and social norms historically upheld.83 In the traditional view, the public domain was the world of work and politics, where men dominated and women were excluded.84 By contrast, the private domain was that of home and family, where autonomous individuals lived free from state interference.85 However, feminists made clear that autonomy within families extended only to men, who were free to dominate women and children because of their dependence on men for social goods.86 In turn, this led to the abuse of women within the home and the concomitant failure of the state to intervene.87 Feminists rejected the

view that the government's hands-off approach was neutral, because the state set the legal ground rules that permitted private inequality to flourish unchecked.88 Moreover, feminists argued that the idea of autonomy was a myth for women; they were enmeshed within family relationships of dependency and attachment.89 Catherine MacKinnon raised a radical critique of privacy, arguing that privacy could never be a basis for claiming rights because it is a tool of gender subordination that leaves men alone to oppress women one at a time.90 The feminist critique of the public/private divide had powerful repercussions. For instance, the state today criminalizes domestic violence and provides legal recourse for women demanding equal treatment in the workplace.91

Patriarchy Adv Ext - A2 Patriarchy Causes War

War turns structural violence but not the other way around

Joshua **Goldstein**, Int'l Rel Prof @ American U, **2001**, War and Gender, p. 412

First, peace activists face a dilemma in thinking about causes of war and working for peace. Many peace scholars and activists support the approach, "if you want peace, work for justice." Then, if one believes that sexism contributes to war one can work for gender justice specifically (perhaps among others) in order to pursue peace. This approach brings strategic allies to the peace movement (women, labor, minorities), but rests on the assumption that injustices cause war. The evidence in this book suggeststhat causality runs at least as strongly the other way. War is not a product of capitalism, imperialism, gender, innate aggression, or any other single cause, although all of these influence wars' outbreaks and outcomes. Rather, war has in part fueled and sustained these and other injustices.9 So,"if you want peace, work for peace." Indeed, if you want justice (gender and others),work for peace. Causality does not run just upward through the levels of analysis, from types of individuals, societies, and governments up to war. It runs downward too. Enloe suggests that changes in attitudes towards war and the military may be the most important way to "reverse women's oppression." The dilemma is that peace work focused on justice brings to the peace movement energy, allies, and moral grounding, yet, in light of this book's evidence, the emphasis on injustice as the main cause of war seems to be empirically inadequate.

Counterplans

Congress CP 1nc - Negative

Text - The United States Congress should substantially curtail its welfare surveillance.

Solvency - Congress has the power to curtail executive surveillance programs.

Sethi 2014

Arjun, a writer and lawyer, is legislative counsel for national security and privacy related affairs at the American Civil Liberties Union, A Chance to Limit Spying on Americans, http://www.cnn.com/2014/08/15/opinion/sethi-nsa-surveillance-bill-americans/

For the first time in nearly 40 years, Congress looks poised to limit the powers of the U.S. intelligence community, an opportunity it should seize.¶When Congress returns from its August recess, surveillance reform will be high on the agenda. In May, the House passed the USA Freedom Act, a measure aimed at ending bulk collection of Americans' phone records under the Patriot Act. And in July, a much stronger version of the bill was introduced in the Senate. ¶The Senate version would curb the most egregious abuses of the telephone metadata program and represents a compromise among the White House, civil liberties advocates and private industry.¶ Yet, important work remains.

Courts CP 1nc - Negative

Text - The United States Supreme Court should rule that welfare surveillance is unconstitutional on the grounds that it violates the 4th amendment.

Contention One - Solvency

Supreme Courts solve and will rule on surveillance your court DA's don't apply

CraigTImberg6/25/14 (worked for The Valley News and Concord Monitor, both in New Hampshire, before joining The Baltimore Sun in 1996 and the Post in 1998. He spent three years in Richmond covering Virginia politics and two years in D.C., covering the mayor and city council, before joining the Foreign Staff in 2004. After a stint as Johannesburg Bureau Chief, he became education editor in 2009 and deputy national security editor in 2011Supreme Court cellphone ruling hints at broader curbs on surveillance http://www.washingtonpost.com/business/technology/supreme-court-cellphone-ruling-hints-at-broader-curbs-on-surveillance/2014/06/25/2732b532-fc9b-11e3-8176-f2c941cf35f1_story.html BP)

The words "National Security Agency" appear nowhere in the Supreme Court's opinion Wednesday prohibiting cellphone searches without a warrant. But **the unanimous ruling makes clear that the nation's most important jurists are tuned in to the roiling debate about high-tech surveillance and concerned about government officials going too far.** In broad, passionate language — spiked with the occasional joke — the ruling by Chief Justice John G. Roberts Jr. asserts that the vast troves of information police can find in modern cellphones are no less worthy of constitutional protection than the private papers that Founding Fathers once kept locked in wooden file cabinets inside their homes. Roberts even chides the government for arguing that searching a cellphone is "materially indistinguishable" from searches of other items that can be seized at the scene of an arrest, such as a pack of cigarettes or a handwritten note. "That is like saying a ride on horseback is materially indistinguishable from a flight to the moon. Both are ways of getting from point A to point B, but little else justifies lumping them together," he wrote. **Such declarations, experts said, suggest a willingness to reconsider legal rulings long used to justify modern surveillance tools. That includes some spying technologies that were unimaginable when courts first articulated those arguments but that now are routinely used by a range of government agencies, including the NSA, the FBI and many state and local police forces**. A footnote in Wednesday's ruling cautions against assuming too much about the court's views on data collection "under other circumstances." **But legal experts on both sides of the privacy debate took notice of the unanimity of the ruling and the uncommonly strong language Roberts used when describing the privacy risks in modern technologies. "It's just a big, forceful, bold decision," said Orin S. Kerr, a George Washington University law professor and former Justice Department lawyer specializing in technology issues. "If you're at the [American Civil Liberties Union], you're popping a champagne bottle. If you're at the FBI, you're scratching your head and thinking of what you're going to do next." Many observers date the Supreme Court's reconsideration of high-tech surveillance to the United States v. Jones decision in 2012, which ruled that police had trespassed when placing an electronic tracking device on a suspect's car. In applying a traditional constitutional protection to new technology, the court expressed concerns about the need to update the Fourth Amendment for the modern world**. The ruling on cellphone

searches, experts said, suggested that the court's consensus has grown on such issues over the past two years, a period in which the revelations made by former NSA contractor Edward Snowden have sparked international controversy over the privacy implications of high-tech government spying.

The Supreme Court controls public perception and the direction of the politics link—this is the best comparative evidence

Katerina LInos and Kimberly Twist 10/15/14 (Linos, Professor. UC Berkeley School of Law Twist, Ph.D. from the Travers Department of Political Science at the University of California, Berkeley "The Supreme Court, the Media, and Public Opinion: Comparing Experimental and Observational Methods" https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=1&ved=0CB8QFjAA&url=http%3A%2F%2Fwww.law.uchicago.edu%2Ffiles%2Ffiles **accessed 7/6/15 BP)**

Inturn, public responses depend heavily on the interaction of the choices of the Court andthe media.The Court can often avoid shifting national opinion by refusing to engage with a controversial case, and thus reduce the likelihood that most Americans will hear about the issue.The media can also prevent a shift in opinion by giving their audiences both the Court majority'sframe and powerful competing frames.National opinion changes only when the Court and the media act in concert: when the Court rules on a controversial case, and the media decide to present their audiences with one-sided coverage of the decision.Threeresearchdesign innovations allow us to test our theory, andto build the literature on public opinion formation more generally.First, we surveyed a nationally representative sample of Americans shortly before and shortly after two major and surprisingCourt decisions on healthcare andimmigration.Prior studies of Court decisions in real-life settings have been based on survey questions fielded for other purposes, such as the General Social Survey. They thus share a major limitation: There is a very long time gap, often one or more years, between the "before" and the "after" sample, and events other than the Court decision could influence opinion in this interval (Hoekstra 1995, 112).The scarcity of real-life data shortly before and shortly after majorevents is a more general limitation of publicopinion research, because researchers cannot anticipate occurrences such as terrorist attacks, political scandals or natural disasters.The most extensive before-and-after research to date surroundselection campaigns,butoften these studies report limited opinion move- meant, as surprising events may not occur in the intervals studied. By combining our data with other poll data, we show both that an opinion shift occurred immediately after the Court decision, and that this shift persisted for many months, as no other actor or event was able to draw as much media attention to the issues as did the Court. Second, we combine public opinion data with detailed media coverage data, and connect individuals' opinion shifts with the content of television programs they watched. "Most published work on media effects does not include measures of media content"(BarabasandJerit2009, 74) and"mostresearchersfail to ascertain,let

alone content-analyze, the media information that, they assume,their subjects encountered" (Graber2004, 516). As a result,major propositionsof public opiniontheory, such as the claim that different frames lead to dfferent opinion shifts, have. In turn, public responses depend heavily on the interaction of the choices of the Court and the media. The Court can often avoid shifting national opinion by refusing to engage with a controversial case, and thus reduce the likelihood that most Americans will hear about the issue. The media can also prevent a shift in opinion by giving their audiences both the Court majority's frame and powerful competing frames. National opinion changes only when the Court and the media act in concert: when the Court rules on a controversial case, and the media decide to present their audiences with one-sided coverage of the decision

DA Links

Plan Unpopular - Politics Links

(__) Reductions in welfare surveillance are unpopular - It's opposed by the public and sparks partisan backlash in Congress.

Diamon 2015

Al, Politics And Other Mistakes: Giving the game away, July 22nd, http://www.keepmecurrent.com/current/politics-and-other-mistakes-giving-the-game-away/article_69c7869c-3085-11e5-a5ab-b3faf4e3dc38.html

The reality is that most welfare recipients cheat a little. They occasionally use their benefits to buy stuff that isn't necessary. They might smoke a little pot they got in exchange for goods they purchased with Electronic Benefits Transfer (EBT) cards or general assistance vouchers. They could be spending time they were supposed to be looking for work drinking beer, instead. In other words, they suffer from the same human frailties as political columnists and normal people.

I'm not saying that's right. I'm just saying that's the way the world operates. Like flabby stomachs on middle-aged public servants, there's not a lot that can be done about it.

Both Republicans and Democrats know this. But what the GOP also knows (that Dems can't seem to grasp) is that the average working person is convinced the state can save millions of dollars if it cracks down on welfare fraud. Once the system is cleansed of chronic layabouts, the delusional public insists, there'd be so much extra cash, we could upgrade our schools, gold-plate our highways and still have plenty left for tax cuts.

It's a beautiful fantasy.

It's also a solid political platform.

What makes welfare reform so effective as a Republican campaign tool is that Democrats seem fundamentally incapable of voting for even the most modest of reforms. Take, for example, food stamps, now known as the Supplemental Nutrition Assistance Program. Most fraud involving SNAP is petty stuff. Prosecuting it would cost more than would be saved. But that doesn't mean a sensible tweak might not be warranted.

Republican state Sen. Roger Katz of Augusta introduced a bill to prohibit the use of SNAP to purchase junk food, defined as candy, pastries, soft drinks and similar items. It won approval in the Senate by an overwhelming margin (four Democrats were the only opposition), because who but blithering idiots (Justin Alfond, Chris Johnson, Anne Haskell and Stan Gerzofsky) could be against that. But when the measure reached the House, it was amended by the Dems to require new spending to encourage welfare recipients to eat healthy foods, something the state already spends $4 million a year in federal money doing to no noticeable effect.

The Senate rejected that change, and this mild reform died between the chambers.

Likewise, Democratic maneuvering killed GOP efforts to drug test welfare applicants with histories of abuse, set lifetime limits on certain benefits, bar the use of welfare to pay for tobacco, booze or gambling, and cut off general assistance to asylum seekers. While that last

one is problematic, what excuse could Dems have for not supporting at least some of these ideas?

Welfare Surveillance Case Neg

Strategies written in this File

1. States CP (politics = only net benefit)
2. Politics Links
3. State Budget DA
4. Topicality – Federal Surveillance
5. Case Turns (generally not a standalone strat)

The structure of the aff was really late breaking, so case defense is a little sparse. Sorry ☹ I will try to put a supplement out.

State Budget DA

1NC – Transportation DA

State budgets on Transportation, education and health care are sufficiently funded

CBPP 15 **[Center on budget and policy priorities, 4/14/15, "Policy Basics: Where Do Our State Tax Dollars Go?",** http://www.cbpp.org/research/policy-basics-where-do-our-state-tax-dollars-go**, date accessed: 7/14/15]Kruger**

By far the largest areas of state spending, on average, are education (both K-12 and higher education) and **health care**. But states also fund a wide variety of other services, including **transportation**, corrections, pension and health benefits for public employees, care for persons with mental illness and developmental disabilities, assistance to low-income families, economic development, environmental projects, state police, parks and recreation, housing, and aid to local governments. **Education has stayed a fairly constant share** of state spending in recent decades. The share of state budgets devoted to Medicaid has grown, however, while the shares devoted to transportation and cash assistance to low-income families have declined. Most State Dollars Go Toward Education and Health Care Three areas of spending make up over half of state spending, on average: K-12 education States are one of the main funders of the nation's public elementary and secondary schools, which some 50 million students -- nine out of ten enrolled school-age children -- attend. One-fourth of state spending on average, or about $280 billion, goes toward public education. States generally provide grants to local school districts (or to cities or counties, where those entities are responsible for administering schools) to fund schools, rather than paying teacher salaries and other school costs directly. Local governments are the other primary funder of public schools. The federal government provides only about 10 percent of public school revenues. Higher education States play a large role in funding higher education through their support of public community colleges, university systems, and vocational education institutions. This support accounts for about 13 percent of state spending, or some $145 billion. Health care Along with the federal government, states fund health insurance for low-income families through Medicaid and the Children's Health Insurance Program (CHIP). These programs provide health coverage or coverage for long-term care to roughly 70 million low-income children, parents, elderly people, and people with disabilities in a typical month. Together, they constitute about 16 percent of state budgets, or about $183 billion. States spend the remaining half of their budgets on a wide variety of programs. For example: Transportation State funding for transportation totals some $55 billion, accounting for 5 percent of state spending on average. These funds are used to build and repair roads and bridges and for public transit systems.

Child support funds are key – the plan takes away key budget allocation for states

Baskerville 8 Stephen Baskerville is Ph.D. in Government, London School of Economics & Political Science, Professor of Political Science at Patrick Henry College Pub Date: 01/01/2008 Independent Review Wntr, 2008 Source Volume: 12 Source Issue: 3, http://www.freepatentsonline.com/article/Independent-Review/172775627.html

This massive growth of law-enforcement machinery and reach was federally driven. In 1984, the Child Support Enforcement amendment to the Social Security Act required states to adopt advisory child-support guidelines. The legislation was promoted by OCSE itself and by private collection companies--again, less to help children than to save the government money under the theory that the system would help to get single-mother families off welfare by making fathers pay more. No statistical data were presented then (or have been since) to indicate that the legislation would have the desired effect (Seidenberg 1997, 107-8). Given that most low-income, single-mother families did not and still do not have valid child-support orders, that most unpaid child support is owing to unemployment, and that "most non-custodial parents of AFDC [Aid to Families with Dependent Children] children do not earn enough to pay as much child support as their children are already receiving in AFDC benefits," higher support guidelines could not and cannot help these children (Garfinkel and McLanahan 1986, 24-25). With no explanation or clear constitutional authority, guidelines and criminal-enforcement machinery conceived and created to help the minority of children in poverty were then extended, under pressure from OCSE and other interests, to all child-support orders, even the majority not receiving welfare, by the Family Support Act of 1988. The law also made guidelines mandatory. By one estimate, the new guidelines more than doubled the size of awards (Comanor 2004, 5). All this legal fanfare dramatically enlarged the program and

continues to do so by bringing in millions of middle-class cases, most of which result from divorce, but for which the system was never designed. As a result, "the number of dollars passing through the government collection system exploded" (Comanor 2004, 8). Nonwelfare cases now dwarf welfare cases. Welfare cases, consisting for the most part of unmarried parents, account for only 17 percent of all cases, and the proportion is shrinking. The remaining 83 percent of nonwelfare cases consist largely of previously married fathers who are usually divorced involuntarily. Nonwelfare cases currently account for 92 percent of the monies collected (U.S. HHS 2003, figs. 1 and 2). Despite this growth in collections--and contrary to what was promised when the program was created--the cost to taxpayers increased sharply. Promoted as a program that would reduce government spending, federal child-support enforcement has in fact incurred a continuously increasing deficit. "The overall financial impact of the child support program on taxpayers is negative," the House Ways and Means Committee reports: federal taxpayers lost $2.7 billion in 2002 (U.S. House 2004, 8-69 and table 8-5). This money does not vanish, of course. It provides a revenue stream for state governments that officials may spend however they wish (U.S. House 1998, 596). Though ostensibly revenue neutral, federal subsidies have made child-support collections a source of general funds. "If the state needs more highway funding," writes one commentator, "all they need to do is raise the state's level of child support and they can spend their resulting welfare incentive increases on highway projects and remain in perfect compliance with the relevant programs funding requirements" (Tersak 2007). Moreover, federal taxpayers subsidize not only state government operations through child support, but also family dissolution because every fatherless child is an additional source of revenue for states. In addition to stiff penalties and high interest assessed on alleged arrearages, states profit through federal payments based on the amount collected as well as through the receipt of 66 percent of operating costs and 90 percent of computer costs (U.S. HHS 1997). (When two states collaborate, both states qualify for the incentive payment as if each state had collected 100 percent of the money.) Federal outlays of $3.5 billion in 2002 allowed Ohio to collect $228 million and California to collect more than $640 million (U.S. House 2004, table 8-4). "There is a $200 million per year profit motive driving this system" in Michigan alone, attorney Michael Tindall points out. "It dances at the string of federal money" (Green 2002).

Specifically, funds solve transportation infrastructure, education, and harm reduction

Blatt 13 (David, blogger for the Oklahoma Policy Institute, 4/1/13, "Revisiting TANF," http://okpolicy.org/revisiting-tanf, 7/10/15 ML)

Following May's devastating tornadoes in Moore, the new Director of the Oklahoma Department of Human Services, Ed Lake, suggested the state use $10 million in unspent Temporary Assistance for Needy Families (TANF) funds as emergency relief to tornado victims, as was done in Tennessee following natural disasters when he led that state's human services agency. Governor Fallin rejected the idea, stating that traditional relief organizations were meeting the needs of tornado victims. Director Lake's well-intentioned suggestion did raise an important question: How is it that $10 million in unspent TANF dollars could be available for allocation, particularly given the continuing impacts of the economic downturn on the very low income families that TANF is designed to help? In this post, we look at Oklahoma's TANF program, who it serves and how TANF dollars are currently being spent. We conclude with some recommendations for how available TANF funds might be allocated. Temporary Assistance for Needy Families, or TANF, is the federal program created by Congress in 1996 as the cornerstone of welfare reform. TANF limited cash assistance payments to a lifetime maximum of 60 months and imposed sanctions, including the loss of assistance, on individuals who failed to meet work requirements. Whereas the traditional welfare program, AFDC (Aid to Families with Dependent Children), primarily took the form of monthly cash assistance payments to single parents and their children, under TANF, states now have much greater flexibility in how to spend federal block grant dollars. Federal TANF funding levels stayed consistent even as states reduced cash assistance levels throughout the late 1990s and 2000s, which freed up money for other allowable purposes related to strengthening families and reducing poverty. Oklahoma has seen an especially steep decline in families receiving cash assistance payments under TANF. In 1994, the state had a monthly average of nearly 50,000 cash assistance families; by 2004, there were just 10,000 TANF cash assistance cases. Even during the worst of the Great Recession, TANF caseloads barely increased. As of March 2013, the program serves 7,782 families. Payments go to working-age parents in barely one-third of these cases (2,743); the rest are child-only cases. As TANF caseloads have plummeted – a result of strict work requirements and sanctions, time limits, and other policies that discourage individuals from cash assistance – the program serves a dwindling share of families in poverty. Oklahoma has gone from providing cash assistance to half of all families in poverty in 1996 to just one in ten today. By comparison, about 25 percent of families in poverty nationally receive cash assistance. TANF and Poverty 1979-2010The combination of declining caseloads and frozen benefit levels – the maximum payment a family of three can receive is $292 per month, the same as in 1986 – has meant that cash assistance now makes up a tiny share of total TANF spending in Oklahoma. In FY 2012, OKDHS spent $177.1 million in TANF funds, of which $22.3 million was for cash assistance. The largest share of TANF dollars ($55.6 million) was allocated for child care services. Of the remaining amount, major expenditures included: ▪$14.5 million transferred to the Social Services Block Grant; ▪$21.6 million for work

support activities, including transportation, client assessments, mental health and substance abuse screenings, literacy classes, post-secondary education, and client reimbursement for training; ▪ $9.4 million for family formation and stabilization services, including $7.6 million for programs associated with the Oklahoma Marriage Initiative; ▪ $5.7 million for family support payments to the developmental disabilities services division; ▪ $47.9 million allocated to agency support services and administrative costs. TANF by Spending category In the years following welfare reform, the TANF fund accrued a large unspent balance that at one point exceeded $100 million, but in recent years, the balance has remained between $18 million and $25 million. This creates some opportunity for modest increases in TANF support for families. In a comprehensive review of Oklahoma's TANF program last year, CAP Tulsa made a number of recommendations for meeting the goals of supporting work, protecting children, and promoting self-sufficiency. They recommend increasing the program's cash benefit, allowing TANF recipients to earn more and to keep child support payments without losing benefits, and increasing the benefit in child-only cases. In the area of work support, the state could promote financial stability by creating a matched savings Individual Development Account program and help recipients become more employable by increasing funding for substance abuse treatment. Perhaps the most productive use of TANF funds might be for research to evaluate the effectiveness of the money we are currently spending. The state spends substantial amounts each year trying to help TANF recipients transition into secure jobs and self-sufficiency. However, OKDHS has not conducted a study of welfare leavers since the 1990s. Such a study could provide valuable data on how well the program is meeting its goals and \ how TANF can be better used to promote stronger, financially secure families.

Infrastructure spending prevents a double dip recession

MARHSALL & THOMASSON '11 - president and founder of the Progressive Policy Institute (PPI); found the Democratic Leadership Council, serving as its first policy director; AND*** Scott Thomasson - director of economic and domestic policy for the Progressive Policy Institute and manages PPI's Innovative Economy Project and E3 Initiative (Will, Scott Thomasson, "Sperling on "Deferred Maintenance"", October 7, http://progressivepolicy.org/sperling-on-%E2%80%9Cdeferred-maintenance%E2%80%9D)

It's hard to imagine a more myopic example of the right's determination to impose premature austerity on our frail economy. From Lincoln to Teddy Roosevelt to Eisenhower, the Republicans were once a party dedicated to internal nation building. Today's GOP is gripped by a raging anti-government fever which fails to draw elementary distinctions between consumption and investment, viewing all public spending as equally wasteful. But as the White House's Gene Sperling said yesterday, **Republicans can't claim credit for fiscal discipline by blocking long overdue repairs of in the nation's transport**, energy and water **systems**. **There's nothing fiscally responsible about "deferring maintenance" on the U.S. economy**. Sperling, chairman of the president's National Economic Council, spoke at a PPI forum on Capitol Hill on "Infrastructure and Jobs: A Productive Foundation for Economic Growth." Other featured speakers included Sen. Mark Warner, Rep. Rosa DeLauro, Dan DiMicco, CEO of Nucor Corporation, Daryl Dulaney, CEO of Siemens Industry and Ed Smith, CEO of Ullico Inc., a consortium of union pension funds. **Fiscal prudence means foregoing consumption of things you'd like but could do without if you can't afford them** – a cable TV package, in Sperling's example. **But if a water pipe breaks in your home, deferring maintenance can only lead to greater damage and higher repair costs down the road**. As speaker after speaker emphasized during yesterday's forum, that's precisely what's happening to the U.S. economy. **Thanks to a generation of underinvestment in roads, bridges, waterways, power grids, ports and railways, the United States faces a $2 trillion repair bill. Our inadequate, worn-out infrastructure costs us time and money, lowering the productivity of workers and firms, and discouraging capital investment in the U.S. economy**. Deficient infrastructure, Dulaney noted, has forced Siemens to build its own rail spurs to get goods to market. That's something smaller **companies** can't afford to do. They **will go to countries – like China, India and Brazil – that are investing heavily in building world-class infrastructure** As Nucor's DiMicco noted, a large-scale U.S. infrastructure initiative would create lots of jobs while also abetting the revival of manufacturing in America. He urged the Obama administration to think bigger, noting that a $500 billion annual investment in infrastructure (much of the new money would come from private sources rather than government) could generate 15 million jobs. The enormous opportunities to deploy more private capital were echoed from financial leaders in New York, including Jane Garvey, the North American chairman of Meridiam Infrastructure, a private equity fund specializing in infrastructure investment. Garvey warned that what investors need from government programs is more transparent and consistent decision making, based on clear, merit-based criteria, and noted that an independent national infrastructure bank would be the best way to achieve this. Bryan Grote, former head of the Department of Transportation's TIFIA financing program, which many describe as a forerunner of the bank approach, added that having a dedicated staff of experts in an independent bank is the key to achieving the more rational, predictable project selection that investors need to see to view any government program as a credible partner. Tom Osborne, the head of Americas Infrastructure at UBS Investment Bank, agreed that an independent infrastructure bank like the version proposed by Senators Kerry, Hutchison and Warner, would empower private investors to fund more projects. And contrary to arguments that a national bank would centralize more funding decisions in Washington, Osborne explained that states and local governments would also be more empowered by the bank to pursue new projects with flexible financing options, knowing that the bank will evaluate projects based on its economics, not on the politics of the next election cycle.

Adding urgency to the infrastructure push was Fed Chairman Ben Bernanke's warning this week that **the recovery is "close to faltering."** Unlike

short-term stimulus spending, money invested in modernizing infrastructure would create lasting jobs by expanding our economy's productive base. **Warning that America stands on the precipice of a "double dip" recession, Sperling said it would be "inexcusable" for Congress to fail to act on the president's job plan. He cited estimates by independent economic experts that the plan would boost GDP growth in 2012 from 2.4 to 4.2 percent, and generate over three million more jobs.**

Double-dip risks nuclear war

FORDHAM '10 (Tina Fordham, "Investors can't ignore the rise of geopolitical risk", Financial Times, 7-17-2010, http://www.ft.com/cms/s/0/dc71f272-7a14-11df-9871-00144feabdc0.html)

Geopolitical risk is on the rise after years of relative quiet – potentially creating further headwinds to the global recovery just **as fears of a double-dip recession are growing**, says Tina Fordham, senior political analyst at Citi Private Bank. "Recently, **markets have been focused on problems within the eurozone and not much moved by developments in North Korea, new Iran sanctions, tensions between Turkey and Israel or the unrest in strategically significant Kyrgyzstan**," she says. "But taken together, we don't think investors can afford to ignore the return of geopolitical concerns to the fragile post-financial crisis environment." Ms Fordham argues **the end of post-Cold War US pre-eminence is one of the most important by-products of the financial crisis. "The post-crisis world order is shifting. More players than ever are at the table, and their interests often diverge. Emerging market countries have greater weight in the system, yet many lack experience on the global stage. Addressing the world's challenges in this more crowded environment will be slower and more complex. This increases the potential for proliferating risks: most notably the prospect of politically and/or economically weakened regimes obtaining nuclear weapons; and military action to keep them from doing so. "Left unresolved, these challenges could disrupt global stability and trade. This would be a very unwelcome time to see the return of geopolitical risk."**

Turns Case – Homelessness

Specifically, state TANF funds are used to fight homelessness

Sard '01 (Barbara Sard, Vice President for Housing Policy for Center on Budget and Policy Priorities**, 4/3/01, "USING TANF FUNDS FOR HOUSING-RELATED BENEFITS TO PREVENT HOMELESSNES",** http://www.cbpp.org/archiveSite/4-3-01TANF.pdf**, 7/10/15 ML)**

Under the final regulations for the Temporary Assistance to Needy Families block grant program (TANF), states and counties may use federal TANF funds for short-term homelessness prevention measures without triggering the federal 60-month lifetime time limit on receipt of TANF-funded assistance or other restrictions associated with TANF funds. This is important because many states and counties are not using their full federal TANF block grant1 and may be willing to initiate or expand homelessness prevention programs using TANF funds. In addition, the flexibility afforded by the federal regulations allows states and counties to design such programs to serve a broad range of low-income families, not just families receiving monthly TANF cash benefits. States and counties that are funding homelessness prevention programs in part with state maintenance-of-effort (MOE) funds may wish to replace these MOE funds with TANF funds, thereby freeing up MOE monies they can use to provide other benefits. TANF restrictions like time limits are triggered when states or counties provide housing-related benefits that are not short-term, unless the benefits are provided entirely with MOE funds that are accounted for separately from TANF funds. States and counties that wish to provide such ongoing housing benefits to families that are not receiving monthly TANF cash benefits would be advised to use MOE funds in these cases so the months of assistance do not count against the federal time limit.2 Homelessness Prevention Benefits Are Largely Excluded from the Clarified Definition of TANF "Assistance" TANF requirements such as time limits, work participation, and child support assignment apply to any family receiving TANF "assistance." Because "assistance" was thought to be defined broadly under early TANF regulations, states and counties often were reluctant to use 3 federal TANF funds for initiatives for working families because they wished to avoid triggering these

requirements. Under the final federal regulations issued in April 1999, however, the definition of "assistance" has been clarified.3 It is now clear that homelessness prevention benefits are excluded from the definition of "assistance" if the benefits meet the following three criteria 1) Benefits are designed to deal with a specific crisis situation or episode of need. 2) Benefits are provided on a one-time basis or for a prospective period that does not exceed four months. 3) Benefits are not intended to meet recurrent or ongoing needs.4 If families receive TANF-funded homelessness prevention benefits that are not considered "assistance" but do not receive monthly cash benefits, they are not subject to the 60month time limit, are not counted in the determination of their state's compliance with work participation requirements, and are not required to assign their child support rights to the state. Short-term or one-time benefits to prevent homelessness that do not invoke the federal restrictions on "assistance" include payment for rent, mortgage, or utility arrears (in any amount and for any number of months) and first and last months' rent deposits and security deposits. For example, a state may establish a TANF-funded program to pay overdue rent or mortgage liabilities and set a maximum benefit level of $3,000 or six months, whichever is less. In addition, states and counties can provide emergency shelter, transitional housing, or short-term rent payments for homeless and other needy families for up to four months. Services that help families prevent eviction or locate new housing also are excluded from the definition of "assistance." Moreover, as long as benefits are provided to meet a short-term, non-recurrent need, they may be provided more than once during a year. For example, during a single 12-month period, a state can use TANF funds to provide a family with both a rent arrearage payment and funds to 5. 6 3 repair a car, pay a utility bill, or meet another short-term crisis; this aid would not count against the family's lifetime TANF time limit or trigger the TANF work participation or child support assignment requirements. States and counties also may make several payments of the same type in a single year as long as each payment is made without the expectation of making additional payments. For instance, a state may provide rent arrearage payments twice in a 12-month period if each payment is made with the expectation that it will solve the family's housing problem. Defining benefits as short-term if they cover a period up to four months, and permitting more than one emergency payment in a 12-month period, are significant changes from the rules that applied to Emergency Assistance (EA) programs under the former Aid to Families with Dependent Children program. Generally, EA benefits were restricted to needs that arose over a 90-day period and could be provided only once in a 12-month period. States that have continued to provide the same emergency benefits under TANF as they did under AFDC-EA may wish to reconsider the type, amount, and frequency of benefits they provide. The clarified definition of "assistance" gives states and counties the flexibility to use TANF funds to help needy families that are not receiving monthly cash welfare benefits, in addition to helping their regular TANF caseloads. States and counties can set financial eligibility levels for TANF-funded homelessness prevention programs that are higher than eligibility levels for TANF "assistance." Families that have only a one-time or brief association with the TANF program to receive emergency benefits are not required to assign their child support rights to the state.5 Allowing more families to qualify for these short-term benefits may help working families retain stable housing and employment and reduce the need for more costly services such as homeless shelters. Responding to emergency needs with TANF-only funds may enable states and counties to free up MOE funds for ongoing rental subsidies for families that are not receiving TANF monthly cash assistance. Ongoing subsidies that make housing affordable — funded with MOE or other state, local or federal funds — may be the most effective tool to prevent homelessness. A recent review of a broad range of studies on the prevention of homelessness concludes: "Based on evidence that subsidized housing, with or without supportive services, is sufficient to end homelessness for most families, and given the important role of subsidized housing (everywhere it has been examined) in ending homelessness among people with serious mental illnesses, we propose a shift to selected strategies of prevention, such as providing housing subsidies to those with worst-case housing needs, supporting employment and transitional assistance to poor, young people setting up households for the first time, and focusing efforts on communities from which large proportions of homeless people originate."6 States and counties also may be able to use MOE funds to provide other benefits. Some states have chosen to provide cash income support to certain families — such as those with a parent working in unsubsidized employment or with a disabled child or parent — with separately administered MOE funds so the months of assistance do not count against the federal time limit.7 The final TANF rules also make it easier for states and counties to contract with community agencies to run homelessness prevention programs by eliminating the need to collect or report data on individual families receiving TANF-funded "non-assistance." Because of another requirement in the final TANF regulations, however, states and counties that wish to use TANF funds to provide homelessness prevention benefits that are not considered "assistance" must use TANF block grant funds for the current fiscal year. If states have insufficient current year funds for this purpose but have surplus funds from prior years' block grants, they can use prior year funds to pay for cash assistance and thereby free up current TANF block grant funds for crisis programs. Many States and Counties Provide Benefits to Prevent Homelessness as Part of Their TANF Programs Many states and counties include a variety of homelessness prevention benefits for families with children as part of their TANF programs. The types of emergency assistance states and counties provide include eviction prevention, short-term rental assistance, assistance to prevent utility shut-offs, emergency housing, and temporary shelter for homeless families. In the last few years, a number of states and counties, including Florida, Minnesota, and Washington, have used TANF funds freed up by declining caseloads to initiate or expand homelessness prevention programs. As of June 1999, 34 states provided housing-related benefits as part of their TANF programs to families in situations that meet state-established emergency criteria. Of these 34 states, 31 provided crisis benefits to families that also received monthly cash benefits, 28 provided emergency assistance to families that are eligible for but not receiving TANF monthly cash benefits and 25 provided homelessness prevention benefits to families that are not eligible for monthly TANF benefits.8 The table below indicates the number of states providing different 5 types of housing-related benefits to prevent or alleviate homelessness and the categories of families eligible for each benefit. More detail on individual state

programs is available at the website identified in note 8. These state programs appear to mix TANF and MOE funds to provide homelessness prevention benefits, though some states and counties may have used MOE funds that were accounted for separately to provide emergency benefits to families not receiving TANF monthly cash assistance. Conclusion Using the flexibility afforded by the definition of "assistance" in the final TANF regulations, states and counties may finance homelessness prevention benefits for all families with children with federal TANF funds without adverse effects on working families or others not receiving monthly TANF benefits. It is not necessary either to deny emergency assistance to certain families because they do not receive TANF cash assistance or to run the clock on families' 60-month federal lifetime TANF time limit to provide them with emergency benefits and services. If states and counties fund homelessness prevention benefits provided through the TANF program entirely with federal TANF funds, they may have additional MOE funds available for ongoing housing assistance to working families and other programs for families that states and counties wish to assist without triggering TANF time limits.

States are using TANF funds to fund anti-homelessness initiatives

Wogan '13 (JB Wogan, In 2010, the Washington Newspaper Publishers Association named him "News Writer of the Year", staff writer, 4/29/13, "Why States Are Using Welfare to Pay for Housing", http://www.governing.com/blogs/view/gov-why-states-are-using-TANF-to-pay-for-rapid-rehousing.html**, 7/10/15 ML)**

For the past three years, states used one-time stimulus funds to supercharge a promising anti-homelessness initiative. Now that the money is gone, at least nine states are leveraging welfare cash assistance to keep the program alive, and the federal government hopes more states will follow. The American Recovery and Reinvestment Act (ARRA) of 2009, also known as the economic stimulus, set aside $1.5 billion for the Homelessness Prevention and Rapid Rehousing Program (HPRP) over three years. But in 2013, states are faced with a question of how to cover the loss of that one-time investment. "We're all having an ARRA hangover," said Karla Aguirre, director of workforce development at Utah's Department of Workforce Services. The basic concept of HPRP was to provide short-term assistance to individuals and families who were in danger of becoming homeless or who were already homeless. The program targeted people experiencing some kind of temporary crisis, such as job loss, that made housing unaffordable. Assistance could mean as many as 18 months of rental subsidies, covering the security deposit, paying off outstanding utility bills and even providing hotel vouchers. The program also covered the cost of support services, such as landlord negotiations, legal assistance and credit counseling. Early results from HPRP were promising. In the second year, the program served about 670,000 people, of which 87 percent exited the program and moved into a permanent home (as opposed to living in a shelter, on the streets or doubling up in someone else's home). Local communities in states such as Idaho and Minnesota reported similar success. There's even some evidence that stable housing correlates with better employment outcomes: In Mercer County, New Jersey, 57 families exited the county's rapid rehousing program between 2010 and 2012, with about 91 percent placed in permanent housing and about 75 percent reporting an uptick in employment income by an average of $1,100 a month. "We credit [HPRP funding] with keeping family homelessness about flat for the past few years," says Katharine Gale, a policy director with the U.S. Interagency Council on Homelessness. "That source is now gone." The number of homeless families with children, according to aggregated point-in-time counts across the country, was roughly the same between 2009 and 2012, with 77,157 homeless family households -- totalling 239,403 people in homeless families -- last year.) "If communities want to continue this good work that they did with HPRP, then how are they going to manage to do that? I think one of the answers is TANF," says Steve Berg, vice president for programs and policy at the National Alliance to End Homelessness. Temporary Assistance for Needy Families (TANF) is a federal cash-assistance program for low-income families with children. State agencies in charge of TANF should consider coordinating with local rapid rehousing programs, said the federal Administration for Children and Families in a February memo. Afterall, about a third of homeless families are "extremely poor," the memo said, with an annual median income below $7,500. Roughly 41 percent of homeless families already receive TANF cash assistance, but many more might be eligible, according to an ongoing multi-city study by the U.S. Department of Housing and Urban Development. Berg called the pairing of welfare cash assistance and rapid rehousing a "philosophical good match" because "the whole idea behind TANF and welfare reform is people should get short-term help getting back on their feet and then let them take care of themselves." In combining TANF with rapid rehousing, two silos in human services are coming together, says Alexandra Cawthorne, a senior policy analyst with the National Governors Association. That's important because after people find a permanent dwelling, they still need help stabilizing their lives, which might include finding a job, opening a savings account, enrolling children in school or building good credit. TANF agencies can connect families with case managers trained in coaching people through those latter stages of self-sufficiency, Cawthorne said. Likewise, TANF agencies can benefit from the rapid rehousing model, Gale said, because once families have a permanent home, they're better positioned to tackle other barriers to leaving public assistance, such as

unemployment and lack of childcare. TANF might appeal to housing agencies as a funding source because it's an ongoing program in all states, but as a short-term benefit it does have the drawback of being limited to four months of assistance, Gale said.* Colorado, Idaho, Massachusetts, Minnesota, New Jersey, New York, Ohio, Utah, Vermont and the District of Columbia already use TANF in tandem with rapid rehousing, according to a tally by the National Alliance to End Homelessness. One of the states being touted by federal agencies as a potential model for coupling TANF and rapid rehousing is Utah. The state's largest homeless shelter provider, The Road Home, partnered with the Utah's Department of Workforce Services to implement a rapid rehousing program using TANF funds as well as HPRP money. The Road Home rehoused 1,237 families between 2009 and February of this year, of which 87 percent did not return to homelessness. The nonprofit also reported a shortening of average shelter stays by homeless families (71 days in 2007 vs. 35 days in 2012). Through 2012, funding came from roughly $1 million in annual stimulus dollars and $950,000 from TANF to pay for its rapid rehousing program. Although the stimulus-backed HPRP no longer exists, HUD's Emergency Solutions Grant Program serves a similar purpose, albeit at a diminished level of support. Last year HUD's budget included $314 million in Emergency Solutions grants. The president's budget for 2014 asks for a slight increase, for an annual total of $356 million, with $60 million set aside for rapid rehousing. By comparison, HPRP offered about $500 million per year explicitly for homelessness prevention and rapid rehousing. A few other options exist for replacing HPRP dollars. In Utah, The Road Home is trying to fill the void of stimulus money with two smaller HUD programs: $225,000 in from Emergency Solutions and $400,000 from the HOME Investment Partnerships Program. Other communities are using money from HUD's Continuum of Care competitive grant program, Gale said, to shore up the loss of the stimulus funds. *The story has been updated to clarify that TANF short-term benefits have a four-month limit. Longer term assistance would trigger reporting requirements and administrative oversight that states might prefer to avoid.

TANF funds are used to rehouse families and prevent homelessness

National Alliance to End Homelessness ND, (Organization that fights homelessness, ND, http://webcache.googleusercontent.com/search?q=cache:i6mlimD7hrwJ:b.3cdn.net/naeh/f38e81ed4cfdd20d14_jvm6bhnfn.pdf+&cd=11&hl=en&ct=clnk&gl=us, Using TANF to Support and Improve Efforts to End Family Homelessness, 7/10/15 ML)

In many states and localities, significant TANF resources are already being spent to provide funding for eviction prevention assistance, motels, emergency shelters and transitional housing programs serving homeless families. The TANF resources provide support to programs that are critically needed to provide an emergency response to families in crisis. However, there are often refinements that can be made in how the money is used and new initiatives that can be supported with funds that can improve families' outcomes. While states facing difficult budget deficits may be reluctant to increase spending to expand programs or support new initiatives, they may be responsive to changing how current spending is used. Demonstrate Effectiveness and Cost-Savings The Commonwealth of Massachusetts has been a leader in re-thinking the use of TANF resources to support family shelter. By legislative statute, the Commonwealth is responsible for ensuring that children experiencing homelessness are sheltered. As more and more families were impacted by the recession, emergency shelter and transitional housing options were quickly depleted and the state resorted to sheltering families in motels. Through prior experience and data, the state recognized that motels and shelters are a poor alternative to helping a family return to housing and had already begun work to transform their investments in family homelessness to one focused on achieving permanent housing outcomes. Local studies found that time limited rental assistance reduced reliance on motels and shelters, was effective in ending family homelessness, and was less costly than shelter stays. As a result, the state is funneling more resources into prevention, diversion, and rapid rehousing strategies while working to reduce the length of time families reside in shelter. Communities that have implemented these successful approaches are reducing their dependence on motels for sheltering families and are now moving families out of homelessness faster than families are entering shelter. While they are achieving improved family and program outcomes, they are also reducing costs. Explore Current TANF Spending on Homelessness Local and state homelessness leaders are exploring how TANF funds are now being used to support homeless families. Based on this, they are developing proposals for how the funds can be used more efficiently through better targeting of prevention assistance and through increased funding of rapid re-housing programs. The reduced demand that can result from effective prevention programs and shorter stays in TANF-supported shelter can result in reduced costs and better outcomes for families. To assess the annual costs of the county-funded homelessness system in Mercer County, New Jersey, Mercer Alliance to End Homelessness hired a consultant who had worked with the State's Department of Human Services. She found that the County was spending close to $10 million annually to support the family homelessness service system, much of it with county TANF funds. Mercer Alliance to End Homelessness then brought in national experts to consult with county and state officials, board

members, and homeless service providers to examine how the funds might be more strategically invested to end family homelessness. The state and local government approved a $250,000 Rapid Re-Housing Pilot for Mercer County which more than doubled when the County won funds from HUD's Rapid Re-Housing Demonstration for Homeless Families Initiative and received new HPRP resources.

Uniqueness – State Budgets High

State budgets on Transportation and education are good and increasing

Krehbiel 15 **[Randy-World Staff Writer, 4/20/15, "Tight state budget put education and transportation on the spot",http://www.tulsaworld.com/news/capitol_report/tight-state-budget-put-education-and-transportation-on-the-spot/article_a18375ed-6604-5fd5-a168-08421ea545f5.html, date accessed: 7/14/15]Kruger**

Want more for education? **State funding for transportation has increased 38 percent over the past four years**, while state support of public schools has been more or less unchanged over the past five years. One idea being floated, and apparently the one that prompted the ad campaign, is to take money from the county roads and bridges account to help balance the budget. Want bridges that don't collapse and highways that don't wreck your suspension? The money has to come from somewhere, and nobody gets more state and local dollars than education. Common ed is going to get somewhere around $3.5 billion in state and local tax money for operations this year, compared to $661.8 million for transportation.

States Funding education now

Cuomo 15 **[Andrew-He is the governor of New York, 4/1/15, "Governor Cuomo Announces Highlights from the Passage of the 2015-16 State Budget",** https://www.governor.ny.gov/news/governor-cuomo-announces-highlights-passage-2015-16-state-budget**, date accessed: 7/14/15]Kruger**

"For the fifth year in a row, the State Budget holds spending growth below two percent and continues a record of fiscal discipline that has reversed decades of budgets that increased spending faster than inflation or personal income growth. "This $142 billion budget is the most meaningful that we have agreed to in many years, not because of what we are spending but because of how we are spending it. We are not just maintaining services and the status quo with this budget. We are investing in a new future for our state. "This budget addresses two of the most fundamental and intractable issues that have vexed the state for generations – education and ethics. "**When it comes to education, the budget we approved will transform our school system in comprehensive ways.** The reforms we have included will move us to an education system that rewards results, addresses challenges and demands accountability. "That's why I tied a landmark six percent increase in new school spending – raising state funding of schools to a record-high $23.5 billion in this year's budget – to vital reforms, including improvements to the systems for teacher evaluation, certification and preparation as well as providing new authority to improve failing schools. "This year we are finally ensuring that New York's education system will be about the students it is intended to serve, instead of just perpetuating a bureaucracy. "I described the budget I first proposed just two months ago as an Opportunity Agenda. The importance of education reform that we fought to include in this year's budget shows that we believe there is no greater path to opportunity than a good education.

States funding education now

Campbell 15 **[Jon-State government reporter for Gannett New York, 4/1/15, "State budget's education plan sends shockwaves",** http://www.pressconnects.com/story/news/local/new-york/2015/04/03/ny-teacher-policy/25267789/**, date accessed: 7/14/15]Kruger**

ALBANY – A slate of changes to New York's school system tucked into the state's new $142 billion budget are either a "dramatic shift" or a "sham," depending on your perspective. According to Gov. Andrew Cuomo, the education plan -- which includes a tougher teacher-evaluation system and a plan for taking over long-struggling schools -- will be "one of the greatest legacies" he leaves for the state. The New York State United Teachers union says Cuomo has "refused to consider the educational research" or listen to parents and educators. The union has gone as far to suggest parents should considering opting their children out of state-mandated exams. It's a fight that won't end anytime soon: The ramifications of the education-reform plan spearheaded by Cuomo will play out over years. But the shockwaves are already being felt at the Capitol, where lawmakers in the state Assembly debated the plan for 61/2-hours before approving it Tuesday, which helped push passage of the budget a few hours past a midnight deadline. "We advocated, we agonized, we pushed, we pulled and fought to make a bad situation better," said Assemblyman Ken Zebrowski, D-New City, Rockland County. The state budget includes $23.5 billion in funding for schools, not counting some additional funds that will help expand pre-kindergarten programs and a $75 million fund for 27 struggling schools. It also included a multi-part plan Cuomo says will lead to progress in schools but has led to strife with the teacher's union. That plan deals largely with teachers and "failing schools," including a new process of evaluating educators and a system for appointing a state-approved "receiver" to step in and make changes at schools with poor academic progress.

Link – Ext – Child Support Key to Revenue

Child support used to reimburse states for TANF funds

Solomon-Fears '12 (Carmen, Specialist in social policy for the Congressional Research Service, 7/19/12, "Analysis of Federal-State Financing of the Child Support Enforcement Program" http://greenbook.waysandmeans.house.gov/sites/greenbook.waysandmeans.house.gov/files/2012/documents/RL33422_gb.pdf 7/10/15 **ML)**

Readers should note that the child support payments made on behalf of TANF children are paid to the state for distribution rather than directly to the family. If the child support collected is insufficient to lift the family's income above the state's TANF eligibility limit, the family receives its full TANF grant (i.e., not reduced by the child support payment), and the child support is collected by the state and distributed to the state treasury and the federal government in proportion to their assistance to the family. If the family's income, including the child support payments, exceeds the state's TANF eligibility limit, the family's TANF cash benefits are ended and all current child support payments are then sent directly to the family (via the state's child support disbursement unit). As mentioned above, when the CSE program was first enacted in 1975, one of its primary goals was to recover the costs of providing cash welfare to families with children. To accomplish this cost-recovery goal, child support collected on behalf of families receiving AFDC directly offset AFDC benefit costs, and was shared between the federal and state governments in accordance with the matching formula used for the given state's AFDC program. Under old AFDC law, the rate at which states reimbursed the federal government for child support was the federal matching rate (i.e., the federal medical assistance percentage, or "Medicaid matching rate") for the AFDC program, which varied inversely with state per capita income (i.e., poor states have a high federal matching rate; wealthy states have a lower federal matching rate). In a state that had a 50% matching rate, the federal government was reimbursed $50 for each $100 collected in child support on behalf of an AFDC family, while in a state that had a 70% federal matching rate, the federal government was reimbursed $70 for each $100 collected. In the first example, the state kept $50, and in the second example, the state kept $30. Thus, states with a larger federal medical assistance matching rate kept a smaller portion of the child support collections. The match ranged from a minimum of 50% to a statutory maximum of 83%. Although AFDC was replaced by the TANF block grant under the welfare reform law of 1996, the same matching rate procedure is still used. In terms of CSE collections, this cost-recovery procedure means that poorer states are rewarded less for their CSE efforts than wealthier states. In other words, states that are entitled to a relatively small proportion of child support collections because of paying a smaller share of AFDC benefit costs have to collect more child support payments per administrative dollar than other states to recover their costs (other things being equal). There has been movement away from the cost-recovery goal, in part because of the changing nature of the CSE program. As discussed earlier (in the Caseload section), the component of the caseload that is composed of TANF families is shrinking. Even though overall child support collections increased by 67% over the 11-year period FY1999-FY2010 (see Table A-3), child support collections made on behalf of TANF families decreased by 21% (see Table A-4). In FY2010, only 14% of the CSE caseload was composed of TANF families. Thus, the policy shift—from using the CSE program to recover welfare costs to using it as a mechanism to consistently and reliably get child

support income to families—is not surprising. In FY2009, only 7% of CSE collections ($1.9 billion) were made on behalf of TANF families (see Table A-7); about 12% of that amount went to the families (pursuant to state child support "pass through" provisions), and the rest was divided between the state and federal governments to reimburse them for TANF benefits paid to the families. This meant that in FY2009, 92% of CSE collections Analysis of Federal-State Financing of the Child Support Enforcement Program Congressional Research Service 8 ($24.3 billion) went to the families on the CSE rolls.19 The comparable figure in FY1999 was 85% ($13.5 billion); and the comparable figure in FY1996 was 80% ($9.6 billion). Funding Elements The CSE program is funded with both state and federal dollars. There are five funding streams for the CSE program. First, states spend their own money to operate a CSE program; the level of funding allocated by the state and/or localities determines the amount of resources available to CSE agencies. Second, the federal government reimburses each state 66% of all allowable expenditures on CSE activities.20 The federal government's funding is "open-ended" in that it pays its percentage of expenditures by matching the amounts spent by state and local governments with no upper limit or ceiling. Third, states collect child support on behalf of families receiving TANF to reimburse themselves (and the federal government) for the cost of TANF cash payments to the family. Federal law requires families who receive TANF cash assistance to assign their child support rights to the state in order to receive TANF. In addition, such families must cooperate with the state if necessary to establish paternity and secure child support. Collections on behalf of families receiving TANF cash benefits are used to reimburse state and federal governments for TANF payments made to the family (i.e., child support payments go to the state instead of the family, except for amounts that states choose to "pass through" to the family as additional income that does not affect TANF eligibility or benefit amounts).21 The formula for distributing the child support payments collected by the states on behalf of TANF families between the state and the federal government is still based on the old AFDC federal-state reimbursement rates described earlier, even though the AFDC entitlement program was replaced by the TANF block grant program. Under existing law, states have the option of giving some, all, or none of their share of child support payments collected on behalf of TANF families to the family.22 Pursuant to P.L. 109-171 (effective October 1, 2008), states that choose to pass through some of the collected child support to the TANF family do not have to pay the federal government its share of such collections if the amount passed through to the family and disregarded by the state does not

Link – Ext – Budget Spills Over

Federal welfare spending key to state budgets – spills over to other areas

*specifically education and Drug harm reduction

Schott et al '15 (Liz Schott, LaDonna Pavetti, Ph.D., and Ife Floyd, Schott currently is a Senior Fellow with the Center's Welfare Reform and Income Support Division. Vice President for Family Income Support Policy at the Center on Budget and Policy Priorities, Floyd joined the Center in June 2011 as a Research Associate with the Family Income Support Division. 4/8/15 "How States Use Federal and State Funds Under the TANF Block Grant" http://www.cbpp.org/research/family-income-support/how-states-use-federal-and-state-funds-under-the-tanf-block-grant 7/9/15 ML)

Connecticut In 2013, Connecticut spent over $300 million in "other areas," representing two-thirds of its state and federal TANF spending -- about twice the share of the nation as a whole. It spent 94 percent of its federal TANF funds and 42 percent of its state MOE funds outside of the Department of Social Services, which administers the TANF cash assistance and employment programs. Most of the spending was for child welfare services and early education, using TANF or MOE funds to free up other state funds for uses unrelated to the purposes of TANF: •Child welfare. About $100 million went to the Department of Children and Families for various child welfare-related programs and services. Of this, $56 million was targeted for case management services and $34 million for investigations. Additional programs within DCF accounted for another $10 million. •School readiness. Some $72 million went to the Department of Education for preschool for children ages 3-5 living in economically disadvantaged communities with family incomes below 75 percent of the state median -- that is, below about $65,000 a year for a family of three (more than three times the federal poverty level). Another $30 million went to the Department of Education for other education initiatives. •Other expenditures. Connecticut's remaining spending in "other areas" was spread across numerous programs, mostly outside the state TANF agency. Some $20 million, for example, went to the Department of Corrections for addiction services for non-custodial parents. Another $28 million went to the Department of Mental Health and Addiction Services to serve special populations, targeting young adults (including sex offenders). Connecticut claimed very little in "excess MOE" in 2013, so the spending in other agencies does not reflect "excess MOE." Instead, Connecticut is an example of a state using most of its TANF money for programs and services outside core welfare reform areas. Box 3: Some "Other Areas" Spending May Reflect "Excess" MOE States must spend at least 80 percent of their historic state AFDC spending to meet TANF's MOE requirement or face

a fiscal penalty; the threshold is lowered to 75 percent in a year the state meets its TANF work participation rate. (See Appendix I for additional discussion.) Since the Deficit Reduction Act of 2005 made it harder for states to meet their TANF "work participation rate" requirements -- thereby threatening some states with the loss of some federal TANF funds due to penalties -- a number of states have found it advantageous to claim as MOE certain existing expenditures they hadn't previously claimed. States with MOE spending exceeding their minimum MOE requirement can obtain a "caseload reduction credit" that lowers their work participation rate requirement. Claiming excess MOE also helps a state qualify for additional federal money from the TANF Contingency Fund. Thus, since 2006, total MOE spending across states has risen above the minimum required levels, with 38 states reporting MOE over 80 percent in 2013. This increase does not necessarily represent an increase either in underlying state spending or in benefits or services for low-income families. Some of the reported MOE may represent existing state spending or existing third-party spending (such as by food banks or domestic violence shelters) that the state hadn't previously counted as MOE. Some states have moved aggressively to claim existing expenditures as MOE, whether expenditures in other state agencies or by third parties. In some instances, these expenditures help increase a state's MOE above the minimum requirements. In other instances, they enable states to withdraw substantial state funds they had used for TANF purposes while still meeting their MOE requirement. In analyzing a state's TANF and MOE expenditures, therefore, it is important to understand the extent to which they are part of an "excess MOE" strategy. For example, compare New Jersey, which claimed 197 percent MOE in 2013 ($489 million over its 75 percent MOE requirement), with Louisiana, which claimed 78 percent MOE ($3 million over its 75 percent MOE requirement): •New Jersey spent $558 million in "other areas," representing 43 percent of its TANF/MOE spending. The bulk of this spending was $452 million claimed as MOE for the state's early childhood education program. This is a significant amount, but given the state's $489 million in "excess MOE," it may represent the claiming of existing early childhood education spending as MOE rather than a massive diversion of TANF and MOE funds to other uses. •Louisiana spent $145 million in "other areas," representing two-thirds of its TANF/MOE spending. The bulk went to early education, child welfare, and financial aid. In contrast with New Jersey, only $3 million of this spending can be considered "excess MOE," which means that virtually all of the "other areas" spending represented a diversion of TANF and MOE funds to other uses. Louisiana In 2013, Louisiana spent some $145 million, or two-thirds of its state and federal TANF spending, in "other areas."[18] Most went for child welfare services, early education, and financial aid for college students. Louisiana used TANF funds to supplant state spending or to cover the cost of expansions that otherwise would have required state spending, freeing the up funds for other uses unrelated to the purposes of TANF, including tax cuts. •Child welfare. Some $34 million went for child welfare, including child protective investigations and family services. Another $4.4 million went to providing court-appointed advocates for children placed (or at risk of placement) in foster care. •Early education. Some $34 million went to the state's pre-kindergarten program. •Financial aid. Some $33 million went to the Office of Student Financial Aid Assistance for financial aid to students in post-secondary education. •Other expenditures. Drug courts received $6 million and substance abuse programs received another $3 million. Other programs received smaller amounts. Like Connecticut, Louisiana claimed virtually no "excess MOE" in 2013, so it is another example of a state using most of its TANF funds for programs and services outside core welfare reform areas.

Link – AT: Plan's Effect Is Small

Even if the plan doesn't eliminate budget surpluses, minor changes can force cuts

NYC Independent Budget Office '01 (Provides impartial information on NYC budget statistics, August 2001, "New York's Increasing Dependence on the Welfare Surplus", www.ibo.nyc.ny.us/iboreports/tanf.pdf, 7/10/15 ML

This month marks the fifth anniversary of the 1996 federal welfare reform act. One of the act's sweeping changes was the transformation of the primary federal welfare program from an entitlement with expenditures driven by the size of the caseload to a block grant. The block grant gave the states greater flexibility in running their welfare programs, as well as the opportunity to reap savings if caseloads fell. In New York State, caseloads have fallen far below the levels that had been used to set the state's block grant. With lower spending needed to maintain a baseline level of assistance and a fixed block grant, there has been a surplus of TANF funds in each state fiscal year since 1997-1998. This brief, based largely on information from the New York State Division of the Budget, examines how the surplus has been allocated each year by the state and then reviews how New York City allocated its share of last year's surplus. The brief also addresses some of the implications of the state's and city's dependence on TANF surplus funds. Among the key findings in this fiscal brief: • New York State's TANF surplus has ranged from between $908 million to $1.7 billion, with a cumulative value of $6.7 billion over the last five years. • A major use of TANF surplus funds by the state has been to expand social services, particularly child care and other programs providing welfare-to-work assistance. • The state has also set aside a contingency fund that will grow to nearly $800 million this year to provide a reserve should the caseload begin to grow again, thus shrinking the surplus. • During the city's last fiscal year, $470 million in TANF surplus funds were allocated to provide expanded services that have been baselined in the local budget. • The city's largest use of TANF surplus funds has been for child care, with allocations to support an estimated 26,000 new

slots. • Little of the TANF surplus is used in the city for fiscal relief, replacing local spending with TANF funding. **• With the state and city now both reliant on** the TANF **surplus to help fund baseline services, a smaller surplus in the future would force a choice among reducing services, raising taxes, or shifting budget priorities** • An economic slowdown leading to larger caseloads or a major change in the size of the block grant when TANF is reauthorized next year could reduce—or eliminate—surpluses

Impact – Transportation

AT: No War

Economic decline causes global war – strong stastical support

Royal 10 (Jedediah, Director of Cooperative Threat Reduction – U.S. Department of Defense, "Economic Integration, Economic Signaling and the Problem of Economic Crises", Economics of War and Peace: Economic, Legal and Political Perspectives, Ed. Goldsmith and Brauer, p. 213-215)

Less intuitive is how periods of economic decline may **increase the likelihood of external conflict**. Political science literature has contributed a moderate degree of attention to the impact of economic decline and the security and defence behaviour of interdependent states. Research in this vein has been considered at systemic, dyadic and national levels. Several notable contributions follow. First, on the systemic level, Pollins (2008) advances Modelski and Thompson's (1996) work on leadership cycle theory, finding that rhythms in the global economy are associated with the rise and fall of a pre-eminent power and the often **bloody transition** from one pre-eminent leader to the next. As such, exogenous shocks such as economic crises could usher in a redistribution of relative power (see also Gilpin. 1981) that leads to uncertainty about power balances, **increasing the risk of miscalculation** (Feaver, 1995). Alternatively, even a relatively certain redistribution of power could lead to a **permissive environment for conflict** as a rising power may seek to challenge a declining power (Werner. 1999). Separately, Pollins (1996) also shows that global economic cycles combined with parallel leadership cycles impact the likelihood of conflict among major, medium and small powers, although he suggests that the causes and connections between global economic conditions and security conditions remain unknown. Second, on a dyadic level, Copeland's (1996, 2000) theory of trade expectations suggests that 'future expectation of trade' is a **significant variable** in understanding economic conditions and security behaviour of states. He argues that interdependent states are likely to gain pacific benefits from trade so long as they have an optimistic view of future trade relations. However, if the expectations of future trade decline, particularly for difficult to replace items such as energy resources, **the likelihood for conflict increases**, as states will be inclined to use force to gain access to those resources. Crises could potentially be the trigger for decreased trade expectations either on its own or because it triggers protectionist moves by interdependent states.4 Third, others have considered the link between economic decline and external armed conflict at a national level. Blomberg and Hess (2002) find a s**trong correlat**ion between internal conflict and external conflict, **particularly during** periods of **economic downturn**. They write: The linkages between internal and external conflict and prosperity are strong and mutually reinforcing. Economic conflict tends to spawn internal conflict, which in turn returns the favour. Moreover, the presence of a recession tends to **amplify the extent** to which international and external conflicts self-reinforce each other. (Blomberg & Hess, 2002. p. 89) Economic decline has also been linked with an **increase in the likelihood of terrorism** (Blomberg, Hess, & Weerapana, 2004), which has the capacity to spill across borders and lead to external tensions. Furthermore, crises generally reduce the popularity of a sitting government. "Diversionary theory" suggests **that**, when facing unpopularity arising from economic decline, sitting governments have increased incentives to **fabricate external** military conflicts to create a 'rally around the flag' effect. Wang (1996), DeRouen (1995). and Blomberg, Hess, and Thacker (2006) find supporting evidence showing that economic decline and use of force are at least indirectly correlated. Gelpi (1997), Miller (1999), and Kisangani and Pickering (2009) suggest that the tendency towards diversionary tactics are greater for democratic states than autocratic states, due to the fact that democratic leaders are generally more susceptible to being removed from office due to lack of domestic support. DeRouen (2000) has provided evidence showing that periods of weak economic performance in the **U**nited **S**tates, and thus weak Presidential popularity, **are statistically linked** to an increase in the use of force. In summary, recent economic scholarship positively correlates economic integration with an increase in the frequency of economic crises, whereas political science **scholarship links economic decline with external conflict** at systemic, dyadic and national levels.5 This implied connection between integration, crises and armed conflict has not featured prominently in the economic-security debate and deserves more attention.

Escalates existing crises

Miller 8 – G. Robert M. Miller, journalist for Digital Journal, 10-25, 2008, "Guns vs. Shovels – The Central Question Behind Our Next Economy," online: http://www.digitaljournal.com/article/261595

But before we look at the modern 'Guns versus Butter' model, it first has to be noted that this phrase was originally popularized in a time where securing economic prosperity was a primary concern in nearly every nation. More importantly, when these nations did experience economic collapse, nearly all of them chose Guns. There is no question that Nazi aggression spawned World War II, however, what was happening in Europe became a world war for a purpose as central to the heart of the capitalist as was the instantaneous end of the holocaust to the heart of the compassionate; economic prosperity. Simply said, big wars are big money; and to truly break from the embrace of the Great Depression, a big commitment to the economy was necessary. And due to the leadership that guided the balance between 'Guns and Butter' in the US through World War II, the economy was considerably improved; this was true for many western nations.

Perception alone causes global instability

Harold **James** 7/3/**13** (Professor of History and International Affairs at Princeton University and Professor of History at the European University Institute, Florence, project syndicate, "financial crisis and war" http://www.project-syndicate.org/commentary/financial-crisis-and-war-by-harold-james#6ObpMZcq3uXv7puL.99)

The approach of the hundredth anniversary of the outbreak of World War I in 1914 has jolted politicians and commentators worried by the fragility of current global political and economic arrangements. Indeed, Luxembourg's prime minister, Jean-Claude Juncker, recently argued that Europe's growing north-south polarization has set the continent back by a century. The lessons of 1914 are about more than simply the dangers of national animosities. The origins of the Great War include a fascinating precedent concerning how **financial globalization can become the equivalent of a national arms race**, thereby **increasing the vulnerability of the international order.** In 1907, a major financial crisis emanating from the United States affected the rest of the world and demonstrated the fragility of the entire international financial system. The response to the current financial crisis is replaying a similar dynamic. Walter Bagehot's 1873 classic Lombard Street described the City of London as "the greatest combination of economic power and economic delicacy that the world has ever seen." In one influential interpretation, popularized by the novelist, Labour Party MP, and future Nobel Peace Prize laureate Norman Angell in 1910, the interdependency of the increasingly complex global economy made war impossible. But the opposite conclusion was equally plausible: Given the extent of fragility, a clever twist to the control levers might facilitate a military victory by the economic hegemon. The aftermath of the 1907 crash drove the hegemonic power of the time – Great Britain – to reflect on how it could use its financial clout to enhance its overall strategic capacity. That is the conclusion of an important recent book, Nicholas Lambert's study of British economic planning and the First World War, entitled Planning Armageddon. Lambert demonstrates how, in a grand strategic gamble, Britain began to marry its military – and especially naval – predominance and its global financial leadership. Between 1905 and 1908, the British Admiralty developed the broad outlines of a plan for financial and economic warfare against Europe's rising power, Germany. Economic warfare, if implemented in full, would wreck Germany's financial system and force it out of any military conflict. When Britain's naval visionaries confronted a rival in the form of the Kaiser's Germany, they understood how power could thrive on financial fragility. Pre-1914 Britain anticipated the private-public partnership that today links technology giants such as Google, Apple, or Verizon to US intelligence agencies. London banks underwrote most of the world's trade; Lloyds provided insurance for the world's shipping. These financial networks provided the information that enabled the British government to discover the sensitive strategic vulnerabilities of the opposing alliance. For Britain's rivals, the financial panic of 1907 demonstrated the necessity of mobilizing financial power themselves. The US, for its part, recognized that it needed a central bank analogous to the Bank of England. American financiers were persuaded that New York needed to develop its own commercial trading system to handle bills of exchange in the same way as the London market and arrange their monetization (or "acceptance"). The central figure in pushing for the development of an American acceptance market was Paul Warburg, the immigrant younger brother of a great Hamburg banker who was the personal adviser to Germany's Kaiser Wilhelm II. The Warburg brothers, Max and Paul, were a transatlantic tandem, energetically pushing for German-American institutions that would offer an alternative to British industrial and financial monopoly. They were convinced that Germany and the US were growing stronger year by year, while British power would erode. Some of the dynamics of the pre-1914 financial world are now **reemerging**. In the aftermath of the 2008 financial crisis, financial institutions appear both as dangerous **weapons of mass economic destruction**, but also as potential instruments for the application of national power. In managing the 2008 crisis, foreign banks' dependence on US-dollar funding constituted a major weakness, and required the provision of large swap lines by the Federal Reserve. Addressing that flaw requires renationalization of banking, and breaking up the activities of large financial institutions. For European bankers, and some governments, current efforts by the US to revise its approach to the operation of foreign bank subsidiaries within its territory highlight that imperative. They view the US move as a new sort of financial protectionism and are threatening retaliation. Geopolitics is intruding into banking practice elsewhere as well. Russian banks are trying to acquire assets in Central and Eastern Europe. European banks are playing a much-reduced role in Asian trade finance. Chinese banks are being pushed to expand their role in global commerce. Many countries have begun to look at financial protectionism as a way to increase their political leverage. The next step in this logic is to think about how financial power can be directed to national advantage in the case of a diplomatic conflict. Sanctions are a routine (and not terribly successful) part of the pressure applied to rogue states like Iran and North Korea. But financial pressure can be much more powerfully applied to countries that are deeply embedded in the global economy. In 1907, in the wake of an epochal financial crisis that almost brought a complete global collapse, several countries started to think of finance primarily as an instrument of raw power that could and should be turned to national advantage. That kind of thinking brought **war** in 1914. A century later, in 2007-2008, the world experienced an

even greater financial shock, and nationalistic passions have **flared up** in its wake. **Destructive strategies may not be far behind.**

Failure to act crushes economic leadership which ensures peace – collapse causes war

Posen 9 - deputy director and senior fellow of the Peterson Institute for International Economics (Adam, "Economic leadership beyond the crisis," http://clients.squareeye.com/uploads/foresight/documents/PN%20USA_FINAL_LR_1.pdf)

Thus, the US faces a challenging but not truly threatening global economic situation as a result of the crisis and longer-term financial trends. Failure to act affirmatively to manage the situation, however, bears two significant and related risks: first, that China and perhaps some other rising economic powers will opportunistically divert countries in US-oriented integrated relationships to their economic sphere(s); second, that a leadership vacuum will arise in international financial affairs and in multilateral trade efforts, which will over time erode support for a globally integrated economy. Both of these risks if realised would diminish US foreign policy influence, make the economic system less resilient in response to future shocks (to every country's detriment), reduce economic growth and thus the rate of reduction in global poverty, and conflict with other foreign policy goals like controlling climate change or managing migration and demographic shifts. If the US is to rise to the challenge, it should concentrate on the following priority measures.

A2: No War – A2: No Diversionary Theory

Diversionary theory true

Rothkopf 9 – David Rothkopf, Visiting Scholar at the Carnegie Endowment for International Peace, 3-11, 2009, "Security and the Financial Crisis," Testimony Before the House Armed Services Committee, CQ Congressional Testimony, lexis

--Destabilizing Bilateral or Regional Effects of the Crisis: The weakening of states can produce instability that spills across borders or can produce social pressures that increase migration and create associated tensions along borders. The rise of opposition groups can create an opportunity for like-minded neighbors to support their activities and thus cause rifts and potential conflicts to spread. Political and economic weakness in nations can be **seen by opportunistic neighbors (some wishing to produce distractions from their own crises) as an invitation to intervene in their neighbors politics** or even to step in and take control of neighboring territories **or** to seek to **use force to resolve in their favor long-simmering disputes.** In the same vein, old animosities may be inflamed by the crisis either because they produce tensions that play into the origins of old rivalries or because **political leaders seek to play on those rivalries to produce a distraction from their inability to manage the economic crisis.** Need may enhance tensions and produce conflicts over shared or disputed resources. A desire to preserve national resources, jobs, or capital may produce reactive economic, border or other policies that can increase tension with neighbors. **This can include** both trade and capital markets protectionism (in traditional and new forms see below), closed or more tightly monitored borders, more disputes on cross-border issues and thus both an increase in tensions and **a decreased ability to effectively cooperate with neighbors on issues of common concern.**

A2: No Collapse – Resiliency

Economy not resilient – last line of defense gone

Jon **Nadler**, Senior Investment Products Analyst, Kitco Bullion Dealer, Feb 13, **2009**, "Easy Money. Who Needs It?," http://www.kitco.com/ind/nadler/printerfriendly/feb132009B.html

The first line of defense is gone. The economy is not resilient and is not stable. And the second line of defense is eroding. The Fed already has taken interest rates to zero, and lent out nearly $2 trillion in fruitless attempts to revive demand. In his speech, Bernanke proposed that the central bank "can always generate higher spending and hence positive inflation" by simply printing money as fast as possible. We're nowhere near that point yet. But the Fed hasn't demonstrated convincingly that lowering rates to zero and lending out trillions of dollars has had any impact on increasing final demand. It turns out that the Fed can print all the money it wants, but it can't make anyone spend it."

Economy not resilient – next economic collapse will be permanent

Jan **Lundberg** was previously Senior Vice President, Head of Global Discovery, a position he had since the Astra-Zeneca merger in 1999, June 12, **2006**, "A Call to Action: The Necessity Defense," http://www.culturechange.org/cms/index.php?option=com_content&task=view&id=58&Itemid=65

Let there be a call to action for everyone to consider immediate direct action on behalf of the world's climate. If a small percentage of people actually do it, this would bring the polluting economy to a grinding halt. Due to the nature of our Humpty-Dumpty infrastructure and lack of self-sufficiency, global economic collapse will be permanent. The cheap oil to fuel the scope and levels of today's trade is already mostly gone, and so a new economics and politics will emerge. Granted, a message or goal that would sacrifice industry as we know it - along with the global economy - is an impossible message or goal for the present powers that be. This does not mean the idea is premature, except in terms of widespread acceptance.

Global institutions can't check econ collapse – still too weak and regional financial regimes prevent effective global response to avert crisis

Ngaire **Woods 9/6**/13 (Dean of the Blavatnik School of Government, University of Oxford, project syndicate, "global institutions after the crisis" http://www.project-syndicate.org/commentary/the-empty-promise-of-global-institutions-after-the-crisis-by-ngaire-woods)

When Lehman Brothers collapsed and the global financial crisis erupted five years ago, many glimpsed a silver lining: the promise of more effective global economic governance. But, despite a flurry of early initiatives, **the world remains as far from that goal as ever.** The Financial Stability Board (FSB), established after the G-20 summit in London in April 2009, has no legal mandate or enforcement powers, nor formal processes for including all countries. The **I**nternational **M**onetary **F**und still awaits the doubling of its capital (another early vow), while its existing resources are heavily tied up in Europe and its governance reforms are stalled. The World Bank has received a modest increase in resources, but it has yet to build capacity to lend rapidly and globally beyond existing borrowers and loan arrangements, and its income trajectory is diminishing. Yet the need for effective global economic governance remains more urgent than ever. Banks and other financial firms roam internationally, greatly assisted by market-opening rules embedded in trade and investment treaties, but with no legally enforceable responsibility to provision adequately for their own losses when things go wrong. Instead, massive risks have supposedly been held at bay by voluntary standards promulgated by a patchwork of public and private "standard-setting" organizations. The crisis proved that this was **inadequate**. The titans of Wall Street and the City of London were exposed as hugely over-leveraged. Extraordinary profits when their bets paid off increased their financial and political power – which they still enjoy – with taxpayers left to bail them out when their bets turned bad. The G-20 promised stronger global institutions to prevent this from recurring. But the FSB is not a treaty-based global regulator with enforcement powers. It continues to be a "standard setter" in a world with strong incentives to evade standards and negligible sanctions for doing so. Furthermore, although the FSB's

standards are ostensibly "universal," it does not represent all countries or have formal mechanisms to inform and consult them. Regulators face a **Sisyphean task**, owing to the absence of strong and consistent political support for reining in the financial titans. A well-resourced financial sector intensively lobbies the most influential governments in global finance. The reforms of the IMF, another pillar of global financial management, cannot be implemented until the US Congress approves them – and there is no sign of that. Even the new Basel 3 banking standards have been diluted and postponed. For Brazil, Russia, India, and China, the delay in reforming the IMF is a serious annoyance. They became major contributors to the Fund's emergency loan pool (the New Arrangements to Borrow) immediately after the crisis and now provide 15.5% of the NAB's resources. But the greater voice and voting power that they were promised – commensurate with their status as four of the IMF's top ten shareholders – has not been delivered. Even the selection of the organization's managing director remains a European droit du seigneur. More seriously, an astounding 89.2% of the IMF's General Resources Account is outstanding to European countries, with just three countries (Greece, Portugal, and Ireland) accounting for 68%. The IMF's resources are neither adequate nor available to respond to a crisis elsewhere. Similarly, the G-20's pledge in 2009 to protect the poorest and most fragile countries and communities from the effects of the crisis remains unfulfilled. The World Bank is at the heart of these efforts, because it can pool risks globally and offset the capriciousness of official and private-sector aid flows, which create "donor darlings" (like Rwanda) and "donor orphans." But, while the Bank has more than doubled its lending relative to the four years prior to 2008, this was achieved mostly by front-loading existing loans. Crisis-hit countries that were not already borrowers were largely left out. The Bank's failure to lend to new clients partly reflects its slowness. Even after its loan cycle had been speeded up, the Bank took an average of 13.5 months to approve credits – a long time for a country to await "emergency" help. But the Bank is also hampered by worsening resource constraints, as the biggest post-crisis capital infusions went to regional development banks. The African Development Bank's capital was increased by 200%, as was the Asian Development Bank's. The Inter-American Development Bank got a 70% increase. Meanwhile, the World Bank received an increase of 30%, while its lending arm for the poorest countries, the International Development Association, received an increase of only 18%. Crucially, it is not obvious that the Bank has "buy-in" from emerging economies, with Brazil, Russia, India, and China, which pledged significant resources to the IMF, pledging only about 1% of IDA funding. Further exacerbating the Bank's financial woes, its powerful creditors have opted to "pull back" its lending in order to protect its resources. As a result, compared to the regional development banks, the Bank will be lending less to fee-paying clients, who provide income, and engaging in more "concessional lending," which does not. The 2008 crisis highlighted the need for international cooperation to regulate finance and mitigate the effects of a crisis. Yet the global resources and instruments needed to manage (if not avert) the next crisis have not been secured. Instead, regions and countries are quietly finding their own ways to manage finance, create pooled emergency funds, and strengthen development finance – an outcome that heralds a more fragmented and decentralized set of regulatory regimes and a modest de-globalization of finance and aid.

Global economic recovery is weak and on the brink – global institutions are ineffective and lack of trust between governments prevents effective response to crisis

Harold **James** 8/2/**13** (Professor of History and International Affairs at Princeton University and Professor of History at the European University Institute, Florence, project syndicate, "the snowden time bomb" http://www.project-syndicate.org/commentary/edward-snowden-and-the-end-of-economic-summitry-by-harold-james)

In the aftermath of the global financial crisis, world leaders repeated a soothing mantra. There could be no repeat of the Great Depression, not only because monetary policy was much better (it was), but also because international cooperation was better institutionalized. And yet one man, the American former intelligence contractor Edward Snowden, has shown how far removed from reality that claim remains. Prolonged periods of strain tend to weaken the fabric of institutional cooperation. The two institutions that seemed most dynamic and effective in 2008-2009 were the **I**nternational **M**onetary **F**und and the G-20; the credibility of both has been steadily **eroded** over the long course of the crisis. Because the major industrial economies seem to be on the path to recovery – albeit a **feeble** one – no one seems to care very much that the **mechanisms of cooperation are worn out.** They should. There are likely to be many more **financial fires** in various locations, and the world needs a fire brigade to put them out. The IMF's resources were extended in 2009, and the organization was supposed to be reformed in order to give emerging markets more voice. But little progress has been made. The Fund was the centerpiece of the post-1945 global economic system. It subsequently played a central role in the management of the 1980's debt crisis and in the post-communist economic transition after 1989. But every major international crisis since then has chipped away at its authority. The 1997-1998 Asian financial crisis undermined its legitimacy in Asia, as many governments in the region believed that the crisis was being exploited by the United States and US financial institutions. The post-2007 Great Recession discredited the IMF further for three reasons. First, the initial phase of the crisis looked like an American phenomenon. Second, the IMF's heavy involvement in the prolonged euro crisis looked like preferential treatment of Europe and Europeans. In particular, the demand that, because the world was focused on Europe, another European (and

another French national) should succeed the IMF's then-managing director, Dominique Strauss-Kahn, was incomprehensible to the large emerging-market countries. Eventually, as in the Asian crisis, European governments and the European Commission fell out with the Fund and began to blame its analysis for having confused and unsettled markets. On the big issues underlying the global financial crisis – the problem of current-account imbalances and deciding which countries should adjust, and reconciling financial reform with a pro-growth agenda – the IMF cannot say much more, or say it more effectively, than it could before the crisis. The G-20 was the great winner of the financial crisis. The older summits (the G-7 or, with the addition of Russia, the G-8), as well as the G-7 finance ministers' meetings, were no longer legitimate. They consisted of countries that had actually caused the problems; they were dominated by the US; and they suffered from heavy over-representation of mid-sized European countries. The G-20, by contrast, brought in the big emerging markets, and its initial promise was to provide a way to control and direct the IMF. The new mood of global economic regime change was captured in the official photograph that was widely used in coverage of the most successful of the G-20 summits, held in London in April 2009. In the short term, the London summit mitigated financial contagion emanating from southern Europe; gave the World Bank additional resources to deal with the problem of trade finance for emerging-market exports; appeared to give the IMF more firepower and legitimacy; and seemed to catalyze coordinated fiscal stimulus to restore confidence. But only the more technical of these four achievements – the first two – stood the test of time. Everything else that was agreed at the London summit turned sour. The follow-up summits were lame. The idea of **coordinated fiscal stimulus** became problematic when it became obvious that many European governments could not take on more debt without unsettling markets and pushing themselves into an unsustainable cycle of increasingly expensive borrowing. And yet, however limited the London summit's achievements proved to be, the summit process itself was not fully discredited until Snowden's intelligence revelations. It may be that leaders and their staffs were naive in believing that their communications were really secure. But Snowden's revelations that the London summit's British hosts allegedly monitored the participants' communications make it difficult to imagine that the genuine intimacy of earlier summits can ever be recreated. And, with the espionage apparently directed mostly at representatives of emerging economies, the gulf between the advanced countries and those on the rise has widened further. World leaders appear partly ignorant and partly deceptive in responding to the allegations. They are probably right to emphasize how little they really know about surveillance. It is in the nature of complex data-gathering programs that no one really has an overview. But the lack of transparency surrounding data surveillance and mining means that, when a whistleblower leaks information, everyone can subsequently use it to build their own version of how and why policy is made. The revelations thus encourage wild conspiracy theories. The substantive aftermath of the London summit has already caused widespread disenchantment with the G-20 process. The Snowden affair has blown up any illusion about **trust** between leaders – and also about leaders' competence. By granting Snowden asylum for one year, Russian President Vladimir Putin, will have the bomber in his midst when he hosts this year's summit in Saint Petersburg.

A2: No Impact – Collapse Slow

Nature of international relations means that conflict will arise fast from collase

Craig **Turpin**, Executive editor of New Jersey newspapers, 10/14 **2008**, Critical Mass: Economic leadership or dictatorship, http://www.nj.com/cranford/index.ssf/2008/10/critical_mass_economic_leaders.html

A **global economic collapse will** also increase the chance of global conflict. As economic systems shut down, so will the distribution systems for resources like petroleum and food. It is certainly within the realm of possibility that nations perceiving themselves in peril will, if they have the military capability, use force, just as Japan and Nazi Germany did in the mid-to-late 1930s. Every nation in the world needs access to food and water. Industrial nations -- the world powers of North America, Europe, and Asia -- need access to energy. When the world economy runs smoothly, reciprocal trade meets these needs. If the world economy collapses, the use of military force becomes a more likely alternative. And given the increasingly rapid rate at which world affairs move; the world could devolve to that point very quickly.

Impact – Education

Impact – Education Spending/Heg

State budget crisis forces cuts in technical K-12 and university education

LEACHMAN ET AL '11 – Michael Leachman – Director of State Fiscal Research with the State Fiscal Policy division of the Center; holds a Ph.D. in sociology from Loyola University Chicago; policy analyst for nine years at the Oregon Center for Public Policy; AND*** Nicholas Johnson- graduate degree from Duke University's Terry Sanford Institute of Public Policy, Director of the State Fiscal Project, which works to develop strategies for long-term structural reform of state budget and tax systems, encourage low-income tax relief, and improve the way states prioritize funding, received the Ian Axford Fellowship in Public Policy, a program financed by the New Zealand government and administered by Fulbright New Zealand. Through this fellowship, he spent six months as an advisor to the New Zealand Treasury and the New Zealand Ministry of Social Development; AND*** Erica Williams - M.A. in International Policy the Monterey Institute of International Studies; Policy Analyst with the State Fiscal Project; (Michael, Nicholas Johnson, Erica Williams, "State Budget Cuts in the New Fiscal Year Are Unnecessarily Harmful", July 28, http://www.cbpp.org/cms/index.cfm?fa=view&id=3550)

Since states spend more of their budgets on education and health care than anything else, lawmakers imposing large spending cuts are hard-pressed to avoid cutting back on these essential public services. Many states also will lay off state employees or cut their pay and benefits. These actions, coming on top of deep cuts that states have already made over the last three years, place a drag on the nation's economic recovery. Elementary and Secondary Education At least 23 states have made identifiable cuts in support for public schools. In many cases, these cuts undermine school finance systems that are intended to reduce disparities between high-wealth and low-wealth school districts, so the largest impacts may be felt in communities that are least able to compensate for the loss of funds from their own resources. Arizona is cutting $183 million from K-12 education spending in the coming year and continues another $377 million in cuts that were implemented over the previous three years, bringing the total cut relative to pre-recession levels to $560 million, or $530 per pupil. Colorado is cutting state spending on K-12 education by $347 per pupil compared to last school year. Florida is cutting spending on K-12 education by $542 per pupil compared with last year. The state also has cut $13 million from the state's school readiness program that gives low-income families access to high quality early care for their children. The cut means over 15,000 children currently participating in the program will no longer be served. Florida also reduced by 7 percent the per-student allocation to providers participating in the state's universal prekindergarten program for 4-year-olds, which will mean that classrooms have more children per teacher. Georgia cut state and lottery funds for pre-kindergarten by 15 percent, which will mean shortening the pre-K school year from 180 to 160 days for 86,000 four-year-olds, increasing class sizes from 20 to 22 students per teacher, and reducing teacher salaries by 10 percent. Iowa reduced state funding for its statewide pre-kindergarten program for four-year-olds by 9 percent from last year. Schools serving these children will now receive fewer dollars per child and may have to make up for lost funds with reduced enrollment or higher property taxes. The state is also cutting back support for a community-based early childhood program that provides resources to parents with children from birth to age 5, including a cut of nearly 30 percent to preschool tuition assistance. Illinois is cutting general state aid for public schools by $152 million, on top of a loss of $415 million in expired federal recovery dollars — a total decrease of 11 percent. The budget takes $17 million from the state fund that supports early childhood education efforts, which may result in an estimated 4,000 fewer children receiving preschool services and 1,000 fewer at-risk infants and toddlers receiving developmental services. The budget also eliminates state funding for advanced placement courses in school districts with large concentrations of low-income students, mentoring programs for teachers and principals, and an initiative providing targeted, research-based instruction to students with learning difficulties. Kansas cut the basic funding formula for K-12 schools by $232 per-pupil, bringing this funding nearly 6 percent below fiscal year 2011 budgeted levels. For the third year in a row, Louisiana will fail to fund K-12 education at the minimum amount required to ensure adequate funding for at-risk and special needs students, as determined by the state's education finance formula. Per student spending will be $215 below the level set out by the finance formula for FY12. Michigan is cutting K-12 education spending by $470 per student. Mississippi, for the fourth year in a row, will fail to meet the state's statutory obligation to support K-12 schools, underfunding school districts by 10.5 percent or $236 million. The statutory school funding formula is designed to ensure adequate funding for lower-income and underperforming schools. According to the Mississippi Department of Education, the state's failure to meet that requirement over the past three years has resulted in 2,060 school employee layoffs (704 teachers, 792 teacher assistants, 163 administrators, counselors, and librarians, and 401 bus drivers, custodians, and clerical personnel).[11] Missouri is freezing funding for K-12 education at last year's levels. This means that for the second year in a row, the state has failed to meet the statutory funding formula established to ensure equitable distribution of state dollars to school districts. Nebraska altered its K-12 school aid funding formula to freeze state aid to schools in the coming year and allow very small increases thereafter, resulting in a cut of $410 million over two years. New Mexico cut K-12 spending by $42 million (1.7 percent). The governor is requiring school districts to spare "classroom spending" from the cuts, which means greater proportional cuts to other areas of K-12 education like school libraries and guidance counseling. The operating budget of the state education department is being cut by more than 25 percent. New York cut education aid by $1.3 billion, or 6.1 percent. This cut will delay implementation of a court order to provide additional education funding to under-resourced school districts for the third year in a row. Beyond cutting the level of education aid in FY12, the budget limits the rate at which education spending can grow in future years to the rate of growth in state personal income. North Carolina cut nearly half of a billion dollars from K-12 education in each year of the biennium compared to the amount necessary to provide the same level of K-12 education services in 2012 as in 2011. Both the state-funded prekindergarten program for at risk 4-year-olds and the state's early childhood development network that works to improve the quality of early learning and child outcomes were cut by 20 percent. The budget also reduces by 80 percent funds for textbooks; reduces by 5 percent funds for support positions, like guidance counselors and social workers; reduces by 15 percent funds for non-instructional staff; and cuts by 16 percent salaries and benefits for superintendents, associate and assistant superintendents, finance officers, athletic trainers, and transportation directors, among others. Ohio is cutting state K-12 education funding 7.5 percent this year, a cut of $400 per student and equivalent to nearly 14,000 teachers' salaries. Oklahoma is cutting funding for school districts by 4.5 percent, and makes additional cuts to the Department of Education's budget. The Department of Education has voted to eliminate adult education programs, math labs in middle school, and stipends for certified teachers, among other things. Pennsylvania cut K-12 education aid by $422 million, or 7.3 percent, bringing funding down nearly to FY2009 levels. The budget also cuts $429 million dollars in additional funding that the state provides to school districts to implement effective educational practices (such as high quality pre-kindergarten programs) and maintain tutoring programs, among other purposes. Overall state funding for school districts was cut by $851 million or 13.5 percent, a cut of $485 per student. South Dakota cut K-12 education by 6.4 percent, next year, an amount equal to $416 per student, and 8.8 percent in 2013. Texas eliminated state funding for pre-K programs that serve around 100,000 mostly at-risk children, or more than 40 percent of the state's pre-kindergarten students. The budget also reduces state K-12 funding to 9.4 percent below the minimum amount required by the state law. Texas already has below-average K-12 education funding compared to other states, and this cut would depress that low level even further at a time when the state's school enrollment is growing. This would likely force school districts to lay off large numbers of teachers, increase class sizes, eliminate sports programs and other extracurricular activities, and take other measures that undermine the quality of education. Utah cut K-12 education by 5 percent, or $303, per pupil from the prior year's levels. Washington is taking over $1 billion from state K-12 education funds designed to reduce class size, extend learning time, and provide professional development for teachers — a cut equal to $1,100 per student. Wisconsin reduced state aid designed to equalize funding across school districts by $740 million over the coming two-year budget cycle, a cut of 8 percent. The budget also reduces K-12 funds for services for at-risk children, school nursing, and alternative education. Higher Education At least 25 states have made large, identifiable cuts in funding for state colleges and universities, with direct impacts on students. Arizona cut funding for public universities by nearly one-quarter, or $200 million. This would add to deep previous cuts: from 2008 through 2011, state support for universities fell by $230 million, resulting in the elimination of more than 2,100 positions (an 11 percent reduction in the workforce). Universities have raised tuition significantly, closed eight extended campuses, and merged, consolidated, or disestablished 182 colleges, schools, programs, and departments. Combined with those previous cuts, the FY12 reduction brings per-student state funding down to 50 percent below pre-recession levels.[12] Arizona also cut community college funding for operating expenses by about $73 million. The cut amounts to 6.2 percent of total community college operating revenues and half of all state support for community colleges. California is increasing fees at community colleges starting this fall by 38 percent; for the average student, this means an annual fee increase of $300. The state also is reducing funding for the University of California (UC) and the California State University (CSU) systems by $1.3 billion ($650 million each). Since FY2008 California has cut funding for the UC system by 27 percent and has cut funding for the CSU system by almost 28 percent. In response to cuts in funding, the CSU will increase annual tuition by 29 percent, or $1,242 for full time undergraduate students (relative to the tuition rate that was in place at the beginning of last school year). UC will increase annual tuition by 18 percent, or over $1,800 for resident undergraduate students. UC tuition has grown by more than 80 percent since the 2007-08 academic year. Colorado cut state university spending by 11.5 percent over the prior year, which is expected to be offset with tuition increases of 9 percent, on average. The budget also cuts a means-tested stipend program for undergraduate students by 21 percent from what was budgeted for the current year. Florida cut state higher education spending and raised state university tuition for undergraduates by 8 percent. State universities are increasing tuition by another 7 percent to offset cuts in funding. This comes on the heels of tuition hikes equaling over 30 percent since the 2009-10 school year. The state has also cut a university merit-based scholarship program by 20 percent. Georgia cut funding for a popular merit-based college scholarship program serving hundreds of thousands of students by about one-fifth, university funding by 10 percent, and funding for technical colleges by 4 percent. Iowa is cutting state funding for public universities by $20 million, or around 4 percent. This brings state support below fiscal year 2007 levels. Louisiana enacted a 10 percent tuition increase for the state university system, or an average increase of around $600 more per year per student, in order to make up for the loss of federal and state dollars. Technical colleges will raise tuition by an average of $700 for full-time students. Massachusetts cut funding for higher education by $64 million, or 6.3 percent. Since FY2009, after adjusting for inflation, the state has cut funding by $185 million, or 16.3 percent. Michigan cut by 15 percent state support for public universities, and will increase the cut to about 20 percent for universities that raise tuition by more than 7 percent. Universities are already announcing tuition increases just under that limit, amounting to $600 - $900 tuition increases for in-state undergraduate students. The state also cut funding for community colleges by 4 percent. Minnesota is cutting state funding for higher education 12 percent below 2011 levels. This includes a $194 million cut to the University of Minnesota system and a $170 million cut to the Minnesota State Colleges and Universities system. Missouri cut state support for higher education by 7 percent. The cuts continue a trend of declining state support for Missouri's universities and community colleges; over the last decade, state support for universities has fallen by 28 percent per student and support for community colleges has fallen by 12 percent. Nevada reduced state funding for the higher education system by 15 percent, which will result in an increase in undergraduate tuition of 13 percent in FY12 and an increase in graduate school tuition of 5 percent in FY12 and again in FY13. New Hampshire cut support for the university system almost in half in a single year, from $100 million to $52 million. University officials have announced that they will raise tuition 8.7 - 9.7 percent, eliminate around

200 positions, reduce employee benefits, dip into reserves, and take other measures as a result. Community colleges also face a 37 percent cut and will raise tuition 6.5 percent for the coming year, which will cost full time students up to $360 per year. New Mexico reduced by 8 percent state funding for public universities, which will result in a 5.5 percent tuition increase ($304 per student). New York cut state funding for the State University of New York (SUNY) by 7.6 percent, and reduces state funding for the City University of New York (CUNY) by 4.4 percent. To help them absorb the funding cuts, the legislature passed a bill that allows SUNY and CUNY to raise tuition by about 30 percent over the next five years. These tuition increases would affect 220,000 students in the SUNY system and 137,000 in the CUNY system and come on top of increases already imposed since the recession began. At SUNY, for example, substantial reductions in state support resulted in a 14 percent tuition increase in 2009. North Carolina cut nearly half of a billion dollars from higher education in each year of the biennium compared to the amount necessary to provide the same level of higher education services in 2012 as in 2011. The cuts mean that full-time resident community college students could see their tuition increase to $2,128 in FY12 and $2,208 in FY13 from the current $1,808 per year. Funds for community college basic education courses were cut by 12 percent. North Carolina is also forcing the university system to find more than $330 million in savings in each year of the biennium. The state also is reducing by 59 percent (or $26 million each year) the state subsidy to university hospitals to offset the costs of uncompensated care, which the hospital system estimates at $300 million this year. Oklahoma is cutting state funding for higher education by nearly 6.7 percent. Partially as a result, tuition and fees were increased by an average of 5.9 percent, or about $225 per student. The budget also cuts a career and technical education training program by about 6.5 percent. Ohio cut higher education funding 10 percent for FY12, amounting to $590 per student. Students at public universities face a 7 percent tuition increase as well as an undetermined (and uncapped) amount of fee increases. Pennsylvania cut funding for the state's system of higher education by $91 million, or 18 percent. The budget also cuts funding for the state's four "state related" universities (Penn State, the University of Pittsburgh, Temple, and Lincoln University) by roughly 20 percent. As a result, the University of Pittsburgh will increase in-state tuition by 8.5 percent and Temple University will increase in-state tuition by almost ten percent. Other state universities will see tuition increases of 7.5 percent. South Dakota cut higher education (and most other agencies) by 10 percent. The Board of Regents voted to raise tuition by 6.9 percent, or $490 per student, on average. The tuition increase covers only part of the loss of state funding, and each university has to determine how it will make up for the remaining loss of funds. Tennessee cut funds for the University of Tennessee system by 25 percent compared to 2011. Tuition within the system will rise 6 to 10 percent. Texas reduced general revenue spending on higher education by 9 percent over two years. This includes a cut of 5 percent to college and university formula spending, a cut of 10 percent in formula spending for health institutions, such as nursing schools, and a cut of 25 percent to funds for university research centers, graduate programs, and other non-operations spending. Enrollment growth is not funded for any higher education institution. The budget also cuts by 10 percent financial aid awards under the Texas grant program, which combines state and institutional money to cover tuition and fees for public school students with financial need and good academic records. The cut will likely result in smaller awards. Utah is cutting its higher education budget by about 1 percent below last year's level, bringing the total decline in state spending to 2 percent since 2009. These funding cuts come despite rapidly rising enrollment. For example, enrollment in Utah's system of higher education in the spring 2011 semester was 4 percent above enrollment the previous year. The failure of state funding to keep up with enrollment growth will result in an average tuition increase of 7.5 percent. Washington is cutting state funding for colleges and universities by more than $500 million and raising tuition in the upcoming school year by anywhere from 11 percent to 16 percent compared with last year. Wisconsin is cutting $250 million from the state university system, with nearly $100 million of that cut coming from funds for UW-Madison. The budget freezes financial aid at current levels despite expected tuition increases of 5.5 percent system-wide and a recently approved tuition increase of 8.3 percent for UW-Madison, creating an even larger funding gap that students and their families will have to fill. The budget also cuts state support for technical colleges by about $70 million over the biennium, or 25 percent, and places a two-year freeze on local property tax levies that allow communities to raise funds for technical colleges.

That destroys American primacy

NAS '7 (Committee on Prospering in the Global Economy of the 21st Century: An Agenda for American Science and Technology Committee on Science, Engineering, and Public Policy, "RISING ABOVE THE GATHERING STORM Energizing and Employing America for a Brighter Economic Future", National Academy of Sciences, National Academy of Engineering, Institute of Medicine, July, http://www.nap.edu/catalog/11463.html)

China and India indeed have low wage structures, but the United States has many other advantages. These include a better science and technology infrastructure, stronger venture-capital markets, an ability to attract talent from around the world, and a culture of inventiveness. Comparative advantage shifts from place to place over time and always has; the earth cannot really be flattened. The US response to competition must include proper retraining of those who are disadvantaged and adaptive institutional and policy responses that make the best use of opportunities that arise. India and China will become consumers of those countries' products as well as ours. That same rising middle class will have a stake in the "frictionless" flow of international commerce—and hence in stability, peace, and the rule of law. Such a desirable state, writes Friedman, will not be achieved without problems, and whether global flatness is good for a particular country depends on whether that country is prepared to compete on the global playing field, which is as rough and tumble as it is level. Friedman asks rhetorically whether his own country is proving its readiness by "investing in our future and preparing our children the way we need to for the race ahead." Friedman's answer, not surprisingly, is no. This report addresses the possibility that our lack of preparation will reduce the ability of the United States to compete in such a world. Many underlying issues are technical; some are not. Some are "political"—not in the sense of partisan politics, but in the sense of "bringing the rest of the body politic along." Scientists and engineers often avoid such discussions, but the stakes are too high to keep silent any longer. Friedman's term quiet crisis, which others have called a "creeping crisis," is reminiscent of the folk tale about boiling a frog. If a frog is dropped into boiling water, it will immediately jump out and survive. But a frog placed in cool water that is heated slowly until it boils won't respond until it is too late.Our crisis is not the result of a one-dimensional change; it is more than a simple increase in water temperature. And we have no single awakening event, such as Sputnik. The United States is instead facing problems that are developing slowly but surely, each like a tile in a mosaic. None by itself seems sufficient to provoke action. But the collection of problems reveals a disturbing picture—a recurring pattern of abundant short-term thinking and insufficient long-term investment. Our collective reaction thus far seems to presuppose that the citizens of the United States and their children are entitled to a better quality of life than others, and that all Americans need do is circle the wagons to defend that entitlement. Such a presupposition does not reflect reality and neither

recognizes the dangers nor seizes the opportunities of current circumstances. Furthermore, it won't work. In 2001, the Hart–Rudman Commission on national security, which foresaw large-scale terrorism in America and proposed the establishment of a cabinet-level Homeland Security organization before the terrorist attacks of 9/11, put the matter this way:4 The inadequacies of our system of research and education pose a greater threat to U.S. national security over the next quarter century than any potential conventional war that we might imagine. President George W. Bush has said "Science and technology have never been more essential to the defense of the nation and the health of our economy."5 US Commission on National Security. Road Map for National Security: Imperative for Change. Washington, DC: US Commission on National Security, 2001. A letter from the leadership of the National Science Foundation to the President's Council of Advisors on Science and Technology put the case even more bluntly:6 Civilization is on the brink of a new industrial order. The big winners in the increasingly fierce global scramble for supremacy will not be those who simply make commodities faster and cheaper than the competition. They will be those who develop talent, techniques and tools so advanced that there is no competition.

Great power wars

ZHANG AND SHI 11 - *Yuhan, a researcher at the Carnegie Endowment for International Peace, Washington, D.C. *** AND*** Lin, Columbia University. She also serves as an independent consultant for the Eurasia Group and a consultant for the World Bank in Washington, D.C. "America's decline: A harbinger of conflict and rivalry" http://www.eastasiaforum.org/2011/01/22/americas-decline-a-harbinger-of-conflict-and-rivalry/)

Over the past two decades, no other state has had the ability to seriously challenge the US military. Under these circumstances, motivated by both opportunity and fear, many actors have bandwagoned with US hegemony and accepted a subordinate role. Canada, most of Western Europe, India, Japan, South Korea, Australia, Singapore and the Philippines have all joined the US, creating a status quo that has tended to mute great power conflicts. However, as the hegemony that drew these powers together withers, so will the **pulling power** behind the US alliance. The result will be an international order where power is more diffuse, American interests and influence can be more readily challenged, and conflicts or wars may be harder to avoid. As history attests, power decline and redistribution result in military confrontation. For example, in the late 19th century America's emergence as a regional power saw it launch its first overseas war of conquest towards Spain. By the turn of the 20th century, accompanying the increase in US power and waning of British power, the American Navy had begun to challenge the notion that Britain 'rules the waves.' Such a notion would eventually see the US attain the status of sole guardians of the Western Hemisphere's security to become the order-creating Leviathan shaping the international system with democracy and rule of law. Defining this US-centred system are three key characteristics: enforcement of property rights, constraints on the actions of powerful individuals and groups and some degree of equal opportunities for broad segments of society. As a result of such political stability, free markets, liberal trade and flexible financial mechanisms have appeared. And, with this, many countries have sought opportunities to enter this system, proliferating stable and cooperative relations. However, what will happen to these advances as America's influence declines? Given that America's authority, although sullied at times, has benefited people across much of Latin America, Central and Eastern Europe, the Balkans, as well as parts of Africa and, quite extensively, Asia, the answer to this question could affect global society in a profoundly detrimental way. Public imagination and academia have anticipated that a post-hegemonic world would return to the problems of the 1930s: regional blocs, trade conflicts and strategic rivalry. Furthermore, multilateral institutions such as the IMF, the World Bank or the WTO might give way to regional organisations. For example, Europe and East Asia would each step forward to fill the vacuum left by Washington's withering leadership to pursue their own visions of regional political and economic orders. Free markets would become more politicised — and, well, less free — and major powers would compete for supremacy. Additionally, such power plays have historically possessed a zero-sum element. In the late 1960s and 1970s, US economic power declined relative to the rise of the Japanese and Western European economies, with the US dollar also becoming less attractive. And, as American power eroded, so did international regimes (such as the Bretton Woods System in 1973). A world without American hegemony is one where **great power wars re-emerge**, the liberal international system is supplanted by an authoritarian one, and trade protectionism

devolves into restrictive, anti-globalisation barriers. This, at least, is one possibility we can forecast in a future that will inevitably be devoid of unrivalled US primacy.

AT: Education Won't Get Cut

States slash education spending – 2011 proves

CBPP 11

(Center on budget and Policy Priorities, Think tank specializing in federal and state policies, 10/7/11, "New School Year Brings Steep Cuts in State funding for Schools, http://www.cbpp.org/cms/?fa=view&id=3569)

Elementary and high **schools are receiving less state funding than last year** in at least 37 states, and in at least 30 states school funding now stands below 2008 levels – often far below. **These cuts are attributable**, in part, **to the failure of the** federal **government to extend emergency fiscal aid to states and school districts** and the failure of most **states** to enact needed revenue increases and instead to **balance their budgets solely through spending cuts**. The cuts have significant consequences, both now and in the future: They are causing immediate public- and private-sector job loss, and in the long term are likely to reduce student achievement and economic growth. Our review of budget documents finds that, of 46 states that publish education budget data in a way that allows historic comparisons: 37 **states are providing less funding** per student to local school districts in the new school year **than they provided last year**. 30 states are providing less than they did four years ago.. 17 states have cut per-student funding by more than 10 percent from pre-recession levels. Four states— **South Carolina, Arizona, California, and Hawaii** — each have **reduced** per student funding to K-12 schools **by more than 20 percent.**

Empirically proven – education gets the axe first

CNN 12

(Cable News Network, Major National News Source, 3/27/12, Economic Recovery Skips the Classroom, http://money.cnn.com/2012/03/27/news/economy/education-budget-cuts/index.htm)

More than **eight in 10 districts** say they **are inadequately funded**, **and more than half anticipate a decrease in state** and local **revenues** for the coming school year, according to a recent survey from the American Association of School Administrators. Even in districts where state aid is stabilizing, local funding is shrinking or costs are rising faster than revenues. Many are only now feeling the effects of the housing bust as **towns lower property assessments**, which affects the property tax revenues that many **schools depend on.** A model for addressing college costs Yet another year of cuts is prompting a greater share of districts to slash teachers, classes and more. Two-thirds of districts expect to eliminate positions in 2012-13, while one-quarter are looking at furloughs. Some 57% anticipate having to increase class size. More than 48% say they may have to eliminate or delay instruction improvements, such as updating textbooks, computers and science labs. Nearly three in 10 are considering canceling summer school. "The cuts are so drastic because those who have already made cuts have already made the easy ones," said Noelle Ellerson, the association's assistant director. Tough choices The recovery has yet to come to Wicomico County, a rural area in eastern Maryland. Tax revenue is up only slightly and unemployment remains high. So Superintendent John Fredericksen is struggling to find another way to slash $1.8 million, about 1.5%, out of his district's budget after cutting millions more in recent years. He's trying to do it without affecting the children, who are already packed tighter into classrooms than their peers in neighboring districts. This coming year, Wicomico will charge many kids $2,000 to go to pre-K instead of letting them in for free. It plans to close its buildings on Fridays in the summertime, and it will hold onto its vehicles for up to 15 years instead of 12. The district also hopes to save $900,000 through an early retirement incentive plan. **Fredericksen had hoped the cuts would be over by now**. "I thought I was at the end of my last straw last year," he said. North Penn School District outside of Philadelphia isn't as fortunate. **To reduce its budget by $2.5 million, or about 1.3%,** it will have to make cuts that the students will feel. "We're just starting to see a few months of positive economic data in our community," said Superintendent Curtis Dietrich. "It's too soon to plan it into our budgets." As a result, administrators are targeting elective classes, assistant coaches and

clubs for the coming school year. The district may also cut back on paying for students to travel to debate team, mock trial, music competitions and the like. It could also consolidate certain classes, such as art, and not replace retiring and departing staffers. **The** North Penn **School District already cut 5% of its teachers, 6% of support staff and 14% of its administrators this current school year**. But it's also feeling the pinch from higher pension contribution costs. The story is similar in Seminole County, Fla., which is still reeling from last year's budget slashing. Though the suburban district north of Orlando is getting more money from the state, it still has to cut more than $16 million, or 3.8%, for the coming year. So when kids return in the fall, they'll find fewer elective classes, such as art, music and languages, said Superintendent Bill Vogel. There will be 50 fewer teachers and 20% fewer coaches, which will hit the junior varsity and 9th grade teams particularly hard. Vogel is especially concerned about the district's inability to upgrade its technology due to lack of funds. It needs to do that to better prepare students for the innovation industry jobs in its backyard.

Ext – Heg Impact

Effective power projection stops hotspot escalation to nuclear war

O'Hanlon 7 – Frederick Kagan, Resident Scholar at the American Enterprise Institute, and Michael O'Hanlon, Senior Fellow and Sydney Stein Jr. Chair in Foreign Policy Studies at the Brookings Institution, "The Case for Larger Ground Forces", Stanley Foundation Report, April, http://stanleyfoundation.org/publications/other/Kagan_OHanlon_07.pdf

We live at a time when wars not only rage in nearly every region but threaten to **erupt** in many places where the current relative calm is tenuous. To view this as a strategic military challenge for the United States is not to espouse a specific theory of America's role in the world or a certain political philosophy. Such an assessment flows directly from the basic bipartisan view of American foreign policy makers since World War II that overseas threats must be countered before they can directly threaten this country's shores, that the basic stability of the international system is essential to American peace and prosperity, and that no country besides the United States is in a position to lead the way in countering major challenges to the **global order**. Let us highlight the threats and their consequences with a few concrete examples, emphasizing those that involve key strategic regions of the world such as the **Persian Gulf** and **East Asia**, or key potential threats to American security, such as the spread of **nuclear weapons** and the strengthening of the global Al Qaeda/jihadist movement. The Iranian government has rejected a series of international demands to halt its efforts at enriching uranium and submit to international inspections. What will happen if the US—or Israeli—government becomes convinced that Tehran is on the verge of fielding a nuclear weapon? **North Korea**, of course, has already done so, and the ripple effects are beginning to spread. Japan's recent election to supreme power of a leader who has promised to rewrite that country's constitution to support increased armed forces—and, possibly, even nuclear weapons— may well alter the delicate balance of fear in Northeast Asia fundamentally and rapidly. Also, in the background, at least for now, **Sino- Taiwanese tensions** continue to flare, as do tensions between **India and Pakistan**, Pakistan and Afghanistan, Venezuela and the United States, and so on. Meanwhile, the world's nonintervention in Darfur troubles consciences from Europe to America's Bible Belt to its bastions of liberalism, yet with no serious international forces on offer, the bloodletting will probably, tragically, continue unabated. And as bad as things are in **Iraq** today, they could get worse. What would happen if the key Shiite figure, Ali al Sistani, were to die? If another major attack on the scale of the Golden Mosque bombing hit either side (or, perhaps, both sides at the same time)? Such deterioration might convince many Americans that the war there truly was lost—but the costs of reaching such a conclusion would be enormous. Afghanistan is somewhat more stable for the moment, although a major Taliban offensive appears to be in the offing. Sound US grand strategy must proceed from the recognition that, over the next few years and decades, the world is going to be a very unsettled and quite dangerous place, with Al Qaeda and its associated groups as a subset of a much larger set of worries. The only serious response to this international environment is to develop **armed forces** capable of protecting America's vital interests throughout this dangerous time. Doing so requires a military capable of a wide range of missions—including not only deterrence of **great power conflict** in dealing with potential hotspots in **Korea**, the **Taiwan** Strait, and the Persian **Gulf** but also associated with a variety of Special Forces activities and stabilization operations. For today's US military, which already excels at high technology and is increasingly focused on re-learning the lost art of counterinsurgency, this is first and foremost a question of finding the resources to field a large-enough standing

Army and Marine Corps to handle personnelintensive missions such as the ones now under way in Iraq and Afghanistan. Let us hope there will be no such large-scale missions for a while. But preparing for the possibility, while doing whatever we can at this late hour to relieve the pressure on our soldiers and Marines in ongoing operations, is prudent. At worst, the only potential downside to a major program to strengthen the military is the possibility of spending a bit too much money. Recent history shows no link between having a larger military and its overuse; indeed, Ronald Reagan's time in office was characterized by higher defense budgets and yet much less use of the military, an outcome for which we can hope in the coming years, but hardly guarantee. While the authors disagree between ourselves about proper increases in the size and cost of the military (with O'Hanlon preferring to hold defense to roughly 4 percent of GDP and seeing ground forces increase by a total of perhaps 100,000, and Kagan willing to devote at least 5 percent of GDP to defense as in the Reagan years and increase the Army by at least 250,000), we agree on the need to start expanding ground force capabilities by at least 25,000 a year immediately. Such a measure is not only prudent, it is also badly overdue.

Other Impacts

Impact – Disease

State budget cuts hamper disease prevention

TAH '11 (Trust for America's Health. "Protecting the Public from Diseases, Disasters, and Bioterrorism". December, 2011. http://healthyamericans.org/report/92/)

Ready or Not? Protecting the Public from Diseases, Disasters, and Bioterrorism finds key programs that detect and respond to bioterrorism, new disease outbreaks and natural or accidental disasters are at risk due to federal and state budget cuts. The report, supported by the Robert Wood Johnson Foundation (RWJF), identifies some key programs at risk due to continued cuts to federal public health emergency preparedness funds include: 51 of the 72 cities in the Cities Readiness Initiative are at risk for elimination; the Initiative supports the ability to rapidly distribute and administer vaccines and medications during emergencies; All 10 state labs with "Level 1" chemical testing status are at risk for losing top level capabilities, which could leave the U.S. Centers for Disease Control and Prevention (CDC) with the only public health lab in the country with full ability to test for chemical terrorism and accidents; 24 states are at risk for losing the support of Career Epidemiology Field Officers - CDC experts who supplement state and local gaps to rapidly prevent and respond to outbreaks and disasters, such as during the H1N1 flu pandemic and responding to the health impact of the Gulf Oil Spill in 2010; and The ability for CDC to mount a comprehensive response to nuclear, radiologic and chemical threats as well as natural disasters is at risk due to potential cuts to the National Center for Environmental Health. All 50 states and Washington, D.C. would lose the support CDC provides during these emergencies. "We're seeing a decade's worth of progress eroding in front of our eyes," said Jeff Levi, PhD, Executive Director of TFAH. "Preparedness had been on an upward trajectory, but now some of the most elementary capabilities - including the ability to identify and contain outbreaks, provide vaccines and medications during emergencies, and treat people during mass traumas - are experiencing cuts in every state across the country." Combined federal, state and local budget cuts mean public health departments can no longer sustain a number of basic elements of preparedness. In the past year, 40 states and Washington, D.C. cut state public health funds - with 29 of those states and D.C. cutting their budgets for a second year in a row and 15 states for three years in a row. Federal funds for state and local preparedness declined by 38 percent from fiscal year (FY) 2005 to 2012 (adjusted for inflation) - and additional cuts are expected under budget sequestration. "Americans expect the public health system to have the capability to competently protect their health during emergencies. This is not an optional service," said Mel Kohn, MD, MPH, State Health Officer and Public Health Director of the Oregon Health Authority. "We will be unable to absorb reductions of this magnitude simply by finding efficiencies. We have reached the point where our ability to do this work will be seriously compromised, with life and death consequences." "During the anthrax attacks and Hurricane Katrina, we witnessed what happens when public health doesn't have the technology, resources, workforce or training needed to respond to emergencies," said James S. Marks, Senior Vice President and Director of the Health Group of RWJF. "The old adage is that it's better to be safe than sorry. Unfortunately if we ignore preparedness now, we'll be sorry later when the next emergency strikes."

Mutated disease cause extinction

Discover '00 ("Twenty Ways the World Could End" by Corey Powell in Discover Magazine, October 2000, http://discovermagazine.com/2000/oct/featworld)

If Earth doesn't do us in, our fellow organisms might be up to the task. Germs and people have always coexisted, but occasionally the balance gets out of whack. The Black Plague killed one European in four during the 14th century; influenza took at least 20 million lives between 1918 and 1919; the AIDS epidemic has produced a similar death toll and is still going strong. From 1980 to 1992, reports the Centers for Disease Control and Prevention, mortality from infectious disease in the United States rose 58 percent. Old diseases such as cholera and measles have developed new resistance to antibiotics. Intensive agriculture and land development is bringing humans closer to animal pathogens. International travel means diseases can spread faster than ever. Michael Osterholm, an infectious disease expert who recently left the Minnesota Department of Health, described the situation as "like trying to swim against the current of a raging river." The grimmest possibility would be the emergence of a strain that spreads so fast we are caught off guard or that resists all chemical means of control, perhaps as a result of our stirring of the ecological pot. About 12,000 years ago, a sudden wave of mammal extinctions swept through the Americas. Ross MacPhee of the American Museum of Natural History argues the culprit was extremely virulent disease, which humans helped transport as they migrated into the New World.

Impact – BioDiversity

State Budget Cuts shut down the Biodiversity Program

DeSantis '12 (Nick, DeSantis, January 12, 2012 http://chronicle.com/article/Budget-Cuts-Force-Biodiversity/130331/, "Budget Cuts Force Biodiversity Program to Close")

Budget cuts have forced a key biodiversity database to close, leaving scientists and researchers without a unified tool to access biological data from across state and federal agencies.¶ The U.S. Geological Survey's National Biological Information Infrastructure program and its popular Web site will shut down on Jan. 15 due to the elimination of the program's 2012 federal budget. The program's closure follows a series of drastic cuts that reduced its budget to zero in 2012 from $7 million in 2010.¶ Created in 1994 within what was then the National Biological Service of the Department of the Interior, **the program gives researchers a direct link to biodiversity information** that would otherwise be spread across a range of government agencies. With a few clicks**, researchers can access a variety of environmental data, from taxonomic information about plants and animals to news covering the spread of wildlife diseases.** Experts said the futures of some databases supported by the program are now uncertain, even as efforts are under way to archive the material.¶ **Researchers "could do one-stop shopping with NBII**", according to Henry L. Bart Jr., a professor of ecology, evolution, and organismal biology at Tulane University who directs a biodiversity research institute there. But after the program closes Sunday, he said, "they'll have to use a new resource." Mr. Bart said he expects the closure to have a significant effect on researchers who rely on the site to browse data sets outside their areas of expertise.¶ Maria A. Jankowska, chair of the American Library Association's task force on the environment, said she was "shocked" to learn of the impending closure. By the time she received the news in late December, she said, it was too late to protest**: Her associations's midwinter meeting, at which she could have proposed a resolution on behalf of the closing program, meets five days after it is scheduled to shut down.¶ Frederick W. Stoss, an associate librarian at the University at Buffalo**, said the resource is part of a "soft underbelly" of government programs that is easy for outsiders to criticize, but actually provides vital information on some of the most pressing environmental problems. Mr. Stoss said some institutions are trying to work together to preserve the material, but they are unlikely to match the convenience and breadth of the program's resources. Researchers looking for biodiversity data in the future will likely have to hunt down individual sources instead of visiting a single access point.¶ **"Someone has to go back and essentially reinvent the wheel because somebody has hidden the wheel,"** Mr. Stoss said.¶ Before the closure, the Geological Survey is working with its partner organizations to ensure that some of the data sets available through the program will be maintained, though long-term access remains uncertain, according to Michael McDermott, the agency's deputy director of core science, analytics, and synthesis. But Mr. Stoss said even if the agency's partners are able to sustain the data over the long term, the

information will still be more difficult for scholars to locate.¶ **"It just makes the search for the information and data that much more time-consuming, if it can be done at all,"** he said.

Extinction

Clark 6 (Dana, Adjunct Professor – The American University's Washington College of Law, & David Downes, Senior Trade Advisor in the Office of the Secretary of the United States Department of the Interior, adjunct faculty of the American University's Washington College of Law, 12-29, http://www.ciel.org/Publications/summary.html)

Biodiversity is the diversity of life on earth, **on which we depend for our survival**. The variability of and within species and ecosystems helps provide some of our basic needs: food, shelter, and medicine, as well as recreational, cultural, spiritual and aesthetic benefits. Diverse ecosystems create the air we breathe, enrich the soil we till and purify the water we drink. Ecosystems also regulate local and global climate. No one can seriously argue that biodiversity is not valuable. Nor can anyone seriously argue that biodiversity is not at risk. There are over 900 domestic species listed as threatened or endangered under the Endangered Species Act, and 4,000 additional species are candidates for listing. We are losing species as a result of human activities at hundreds of times the natural rate of extinction. The current rate of extinction is the highest since the mass extinction of species that wiped out the dinosaurs millions of years ago. The Economics of Biodiversity Conservation The question which engenders serious controversy is whether society can afford the costs associated with saving biodiversity. Opponents of biodiversity conservation argue that the costs of protecting endangered species are too high. They complain that the regulatory burden on private landowners is too heavy, and that conservation measures impede development. They seek to override scientific determinations with economic considerations, and to impose cost/benefit analyses on biodiversity policy making. An equally important question, however, is whether we can afford not to save biodiversity. The consequences of losing this critical resource could be devastating. As we destroy species and habitat, we endanger food supplies (such as crop varieties that impart resistance to disease, or the loss of spawning grounds for fish and shellfish); we lose the opportunity to develop new medicines or other chemicals; and we impair critical ecosystem functions that protect our water supplies, create the air we breathe, regulate climate and shelter us from storms. We lose creatures of cultural importance - the bald eagle is an example of the cultural significance of biodiversity and also of the need for strong regulations to protect species from extinction. And, we lose the opportunity for mental or spiritual rejuvenation through contact with nature. There are many other costs associated with the loss of biodiversity, and other values associated with its preservation. Researchers are finding that protection of ecosystems rich in biodiversity can strengthen and diversify regional economies. For example, the estimated economic value of intact natural forests for recreation, production of fish and wildlife, and other benefits, is one-third to three times as much as their value for timber alone, according to the World Resources Institute. These are significant costs and benefits which should be included in any economic analysis of biodiversity conservation. Much of the current controversy stems from private landowners who resent government regulation of their lands. Government regulation is necessary to protect a critical public resource from private destruction. However, individual citizens should not bear the full cost of protecting biodiversity, since their actions benefit society at large. Within the context of a strong regulatory framework with defined conservation goals, economic incentives can help defuse political controversy by providing increased flexibility and rewarding private sector conservation efforts. Conservation strategies must be developed that make private landowners willing partners in biodiversity conservation. This is particularly important given that seventy percent of U.S. land outside of Alaska is privately owned. Even more significantly, more than fifty percent of species listed under the Endangered Species Act are found only on private lands, and many more have substantial parts of their remaining range on private property. In many cases, reforms to benefit biodiversity will require the revision of existing incentives offered to the private sector by government policies. In many cases, economic policies send signals which conflict with the goal of species conservation. If biodiversity considerations are linked to the economic incentive, the signal sent to the private sector is harmonized rather than conflicting. Private landowners benefit from public assistance in many ways. These benefits include subsidized access to vital resources like water and roadways, price supports, and tax breaks, all of which increase the value of property. For example, the American Farm Bureau Federation has estimated that farm support payments have increased the value of farmland in this country by $250 billion. Public support could be conditioned upon requiring recipients to comply with existing laws and to implement management practices that embody sound principles of land stewardship. In order to fully integrate economic and environmental policy, we must also examine the biodiversity impact of government subsidies. Government subsidies often stimulate or encourage activities that damage biodiversity. Tax breaks for extractive industries are a prime example of this problem. In addition, agricultural policies have a dramatic effect on land use in the United States. As currently structured, farm support programs provide perverse incentives that contribute to **soil erosion**, **overuse of agricultural chemicals**, and **loss of** wildlife **habitat**. Commodity price support programs are tied to production levels. At the same time, acreage reduction programs restrict the amount of acreage that can be planted. These policies work together to encourage intensive cropping and high levels of chemical inputs on land that is planted, in order to boost production and maximize the government subsidy. These negative effects of agriculture policy could be ameliorated by removing the perverse incentives, linking support to best management practices and purchasing conservation easements to keep certain lands out of agricultural production.

OED 89 (Oxford English Dictionary, 2ed. XIX, p. 795)

b. Of or pertaining to the **political unity so constituted**, as **distinguished from** the **separate states composing it**.

And, "Its" refers to the United States Federal Government and is possessive

Updegrave 91 (W.C., "Explanation of ZIP Code Address Purpose", 8-19, http://www.supremelaw.org/ref/zipcode/updegrav.htm)

More specifically, looking at the map on page 11 of the National ZIP Code Directory, e.g. at a local post office, one will see that the first digit of a ZIP Code defines an area that includes more than one State. The first sentence of the explanatory paragraph begins: "A ZIP Code is a numerical code that identifies areas within the United States and its territories for purposes of ..." [cf. 26 CFR 1.1-1(c)]. **Note the singular possessive pronoun "its", not "their", therefore carrying the implication that it relates to the "United States" as a corporation domiciled in the District of Columbia (in the singular sense), not in the sense of being the 50 States of the Union (in the plural sense).** The map shows all the States of the Union, but it also shows D.C., Puerto Rico and the Virgin Islands, making the explanatory statement literally correct.

Violation – States run welfare

Rubin 12 (Jennifer Rubin, July 15, 2012, Obama to Clinton welfare reform: Drop dead, She covers a range of domestic and foreign policy issues Prior to her career in journalism, Rubin practiced labor law for two decades. http://www.washingtonpost.com/blogs/right-turn/post/obama-to-clinton-welfare-reform-drop-dead/2012/07/14/gJQAM49XkW_blog.html, DSS)

President Obama is the chief executive, obligated by the Constitution to "take Care that the Laws be faithfully executed." Obama, however, seems to have — by executive order — altered that to read "take Care that the Laws [which he likes or wished Congress had passed] be faithfully executed. The list of laws he won't enforce or is unilaterally amending is getting long: Defense of Marriage Act, immigration laws, voting laws, and anti-terror laws. He won't even enforce all the provisions of his signature legislation as we've seen in the bushels-full of Obamacare waivers. The latest and most inexplicable gambit is his decision to undo bipartisan welfare reform. ABC News explained: "After the Obama administration announced this week that it is opening up waivers to states from the work requirements contained in welfare reform, Republicans began to speak out against the move, complaining it completely undercuts the law. . . . Congressional Republicans decried the move as 'a blatant violation of the law' and contend the waivers will actually cause harm to the impoverished Americans because beneficiaries will come to rely on the handout with little motivation to seek employment." The outrage is bipartisan. Speaker of the House Rep. John Boehner (R-Ohio) released a furious statement : By gutting the work requirements in President Clinton's signature welfare reform law, President Obama is admitting his economic policies have failed. "While President Clinton worked with Congress in a bipartisan way on welfare reform and economic opportunity, President Obama has routinely ignored Republican proposals, rejected House-passed jobs bills, and imposed an agenda that's helped keep the unemployment rate above eight percent for 41 months. Instead of working with Republicans to boost job creation, the president is simply disregarding the requirement that welfare recipients find work. "Welfare reform was an historic, bipartisan success – this move by the Obama administration is a partisan disgrace." Sen. Orrin Hatch (R-Utah), ranking member of the Senate Finance Committee, was likewise incensed, sending a letter together with Rep. Dave Camp (R-Mich.), head of the House Ways and Means Committee, to the Health and Human Services Department demanding an explanation. Hatch also put out a statement that read in part: The 1996 welfare reform bill, otherwise known as the Temporary Assistance for Needy Families (TANF), ended welfare as an entitlement and empowered states with the **authority** to create unique and robust welfare to work programs. A central feature of devolution of federal authority back to the states was a vigorous work requirement for states, including a specific set of activities that qualified as "work."

Voting Issue-

<u>Limits</u>- state and local actions creates infinite affs with no central lit base – wrecks preparedness

<u>Ground</u>- They allow the Aff to defend <u>completely different</u> processes like "oversight" that dodge core DAs and the best counterplan ground.

Ext – Interpretation – Fed=/= State

National government, not states or localities

Black's Law 99 (Dictionary, Seventh Edition, p.703)

<u>A national government that exercises some degree of control over smaller political units that have surrendered</u> some degree of <u>power in exchange for the right to participate in national political matters</u>

Central government

AHD 92 (American Heritage Dictionary of the English Language, p. 647)

federal—3. Of or <u>relating to the central government</u> of a federation as <u>distinct from</u> the governments of <u>its member units</u>.

Ext – Interpretation – Its' = Possessive

'Its' is possessive

English Grammar 5 (Glossary of English Grammar Terms, http://www.usingenglish.com/glossary/possessive-pronoun.html)

Mine, yours, his, hers, <u>its</u>, ours, theirs <u>are</u> the <u>possessive pronouns used to substitute a noun and to show possession or ownership.</u> EG. This is your disk and that's mine. (Mine substitutes the word disk and shows that it belongs to me.)

Grammatically, this refers solely to U.S. policy

Manderino 73 (Justice – Supreme Court of Pennsylvania, "Sigal, Appellant, v. Manufacturers Light and Heat Co"., No. 26, Jan. T., 1972, Supreme Court of Pennsylvania, 450 Pa. 228; 299 A.2d 646; 1973 Pa. LEXIS 600; 44 Oil & Gas Rep. 214, Lexis)

On its face, the written instrument granting easement rights in this case is ambiguous. The same sentence which refers to the right to lay a 14 inch pipeline (singular) has a later reference to "said lines" (plural). The use of the plural "lines" makes no sense because the only previous reference has been to a "line" (singular). <u>The writing is</u> additionally <u>ambiguous because</u> other key words which

are "also may change the size of its pipes" are dangling in that the possessive pronoun "its" before the word "pipes" does not have any subject preceding, to which the possessive pronoun refers. The dangling phrase is the beginning of a sentence, the first word of which does not begin with a capital letter as is customary in normal English [***10] usage. Immediately preceding the "sentence" which does not begin with a capital letter, there appears a dangling [*236] semicolon which makes no sense at the beginning of a sentence and can hardly relate to the preceding sentence which is already properly punctuated by a closing period. The above deviations from accepted grammatical usage **make difficult, if not impossible, a clear understanding** of the words used or the intention of the parties. This is particularly true concerning the meaning of a disputed phrase in the instrument which states that the grantee is to pay damages from ". . . the relaying, maintaining and operating said pipeline. . . ." The instrument is ambiguous as to what the words ". . . relaying . . . said pipeline . . ." were intended to mean.

And it's a term of exclusion

Frey 28 (Judge – Supreme Court of Missouri, Supreme Court of Missouri,

320 Mo. 1058; 10 S.W.2d 47; 1928 Mo. LEXIS 834, Lexis)

In support of this contention appellant again argues that when any ambiguity exists in a will it is the duty of the court to construe the will under guidance of the presumption that the testatrix intended her property to go to her next of kin, unless there is a strong intention to the contrary. Again we say, there is intrinsic proof of a [*1074] strong intention to the contrary. In the first place, testatrix only named two of her blood relatives in the will and had she desired [***37] them to take the residuary estate she doubtless would have mentioned them by name in the residuary clause. In the second place, if she used the word "heirs" in the sense of blood relatives she certainly would have dispelled all ambiguity by stating whose blood relatives were intended. Not only had [**53] she taken pains in the will to identify her own two blood relatives but she had also identified certain blood relatives of her deceased husband. Had it been her intention to vest the residuary estate in her blood relatives **solely**, she would certainly have used the **possessive pronoun** "my" instead of the indefinite article "the" in the clause, "the above heirs."its is geographical.

Ext – Violation – Welfare = State Controlled

Federal involvement is limited to collecting payments, states control paternity monitoring

Baskerville 8 Stephen Baskerville is Ph.D. in Government, London School of Economics & Political Science, Professor of Political Science at Patrick Henry College Pub Date: 01/01/2008 Independent Review Wntr, 2008 Source Volume: 12 Source Issue: 3, http://www.freepatentsonline.com/article/Independent-Review/172775627.html

The federal funding also creates incentives to implicate men who are not even fathers and pull them into the criminal-enforcement machinery. One requirement for collecting federal payments is that states must institute paternity-establishment procedures, and nothing in the federal law prohibits or penalizes designating the wrong man as the father. "Eligibility ... depends only upon tagging the largest possible number of men, and there is no review or requirement that it be the right men," writes Ronald Henry (2006, 54). The result is "paternity fraud," the practice of forcing men to pay support for children who are acknowledged not to be their offspring. Most victims are low-income minority males, and many are young and even underage, with few of the skills or means to defend themselves in what Henry describes as a mass judicial "assembly line" that bears little relation to a hearing. "The paternity fraud victim is hustled through the formality, often in less than five minutes, and may not even realize what has happened until the first garnishment of his paycheck." Henry estimates that the number of such victims may exceed one million. "Every child support agency in America knows that it . .. has worked injustice upon appalling numbers of innocent men." In 2002, California governor Gray Davis vetoed a bill that would have rectified paternity fraud. After registering concern "for the children," Davis revealed his fear that the state would lose $40 million in federal funding. Thus, an elected official openly rationalized imposing criminal penalties on citizens known to be innocent simply in order to avoid losing money. "California has long been notorious for its high rate of 'sewer service,' high rate of default judgments, and high rate of false paternity establishments," notes Henry (2006, 54, 58, 63, 60-62, 66, 76, 55).

The whole aff is about PRWORA – that explicitly gave states power over welfare activities

Mandell 07 (Betty Reid Mandell, summer 2007, is Professor Emerita at Bridgewater State College, expert on welfare, Homeless Shelters: A Feeble Response to Homelessness, http://newpol.org/content/homeless-shelters-feeble-response-homelessness, DSS)

MOST SHELTERS FOR INDIVIDUALS operate on a first-come-first-served basis, although most refuse people who are drunk or abusing drugs. Family shelters have eligibility criteria that vary from agency to agency, and from state to state. In Massachusetts, the eligibility criteria stipulates that a family should have no more income than 130 percent of the federal poverty line ($12,740 for 1; $17,160 for 2; $21,580 for 3). The legislature lowered it to 100 percent a couple of years ago, but advocates lobbied aggressively to bring it back up to 130 percent. If a family has $1 over that amount, they are not eligible. The program is called Emergency Assistance, and is funded by the state Department of Transitional Assistance (DTA, a.k.a. Department of Welfare). Undocumented immigrants are allowed access to shelters only if a child was born in the U.S. and is therefore a citizen. For legal immigrants to be eligible, at least one family member must be a citizen or a legally present immigrant. The Personal Responsibility and Work Opportunity Reconciliation Act of 1996, which turned welfare over to the states and made it no longer an entitlement program, also made sweeping changes in the rules governing immigrants' eligibility for federally funded public benefits. The law denies most immigrants, including lawful permanent residents, access to many federal public benefit programs, and gives states the option to adopt similar restrictions for state-funded benefits. A list of family shelters published by the Massachusetts Coalition for the Homeless9 shows that some family shelters do not accept adolescent boys. The age limits they set vary from 12 to 18. Some accept women and children only. One shelter accepts women and children only, but no boys over age 9. The welfare department accepts men as part of the family only if the man is the father of the children. No boy friends allowed. The application process for admission to a family shelter is grueling. Most family shelters in Massachusetts are funded by the state DTA, and workers are obsessed with documents. Applicants must produce a document to prove they have no place else to stay. The goal is to keep people out, not to let them in. One worker told a mother to look through her high school yearbook and ask anyone she knows to give her a place to stay. Workers ask endless questions, some of them intimate. One of the worst application interviews that I witnessed occurred between a stylishly dressed African-American worker and an African-American mother of five children. I was so outraged by the worker's insensitivity that I wrote a letter to the worker and the director of the homeless unit, also sending a copy to the director of the state DTA. The director of the homeless unit was angry at me for going over his head by sending a copy of the letter to the central office, but shortly afterwards the state director put an article in the workers' internal newsletter urging workers to treat clients with respect. The client thanked me for sending the letter and expressed her disappointment that a fellow African-American had treated her so badly, saying, "We're supposed to stick together." She said her children (who accompanied her to the interview) were shocked to witness such insensitive treatment of their mother.

States run welfare–PRWORA decreases federal spending and gives all the authority to the states

Burke 3 **[Vee-member of CRS, 7/1/03, "The 1996 Welfare Reform Law",** http://royce.house.gov/uploadedfiles/the%201996%20welfare%20reform%20law.pdf**, date accessed: 7/10/15]**Kruger

The Personal Responsibility and Work Opportunity Reconciliation Act (**PRWORA**, P.L. 104-193), signed on August 22, 1996, **dramatically reshaped cash and food welfare programs and helped reduce federal welfare spending**. It replaced the Depression-born program of Aid to Families with Dependent Children (AFDC) **with** fixed annual **grants to states for** Temporary Assistance to Needy Families (**TANF**) for six years, ending on September 30, 2002. It imposed a citizenship requirement for many benefits. It reduced spending on food stamps, Supplemental Security Income (SSI), child nutrition, and the Social Services Block Grant (SSBG). However, it increased funding for child care and created a mandatory block grant for care of children in low-income families. At the time of passage, the Congressional Budget Office (CBO) estimated that the law would cut mandatory federal spending by a net total of $54.1 billion over 6 years. Restrictions on benefits for noncitizens accounted for 44% of this total, and food stamp revisions for 43%. The 105th Congress rescinded and modified some 1996 budget cuts, restoring SSI, Medicaid and food stamp benefits to many aliens at an estimated 5-year cost of $12.3 billion. Further, Congress in 1997 created Welfare-to-Work (WtW) grants ($2.7 billion in estimated outlays for 2 years**) to help states move severely disadvantaged TANF recipients into jobs, and it boosted funding for food stamp employment and training.** Highlights of Program Changes Family Cash Aid. TANF ended unlimited matching funding for family cash welfare (AFDC) and created fixed block grants for **state-designed programs** of time-limited and work-conditioned aid to needy families with children. It broadened the goals of welfare to include reducing non-marital pregnancies and promoting two-parent families. It imposed a 5-year limit on basic ongoing aid paid with federal funds**.** It required states to engage recipients in **state defined** "work" after 24 months of aid, achieve minimum participation rates in federally recognized work activities, and spend on needy families from their own funds at least 75% of the sum they spent in FY1994 on programs replaced by TANF -- maintenance-of-effort (MOE) rule. Current TANF Legislation. Since September 30, 2002, when their original appropriations ended, TANF and related programs of mandatory child care, transitional medicaid, and abstinence education have been operating under quarterly extensions of spending authority, on the same terms as in FY2002. The most recent extension was made June 30, 2003, by P.L. 108-40. In 2002 the House passed a bill (H.R. 4737) to reauthorize TANF, but the Senate did not. Main issues of contention were work rules and child care spending. On February 13, 2003, the House passed a new TANF reauthorization bill (H.R. 4), almost identical to the 2002 bill; and on February 14 the Senate received a very similar bill from the Senate Republican leadership (S. 5). Both H.R. 4 and S. 5 propose to continue TANF basic grants at $16.5 billion annually for 5 years, and to increase work requirements -- imposing a 40 hour work week and an eventual work participation standard of 70%. S. 5 includes some additional changes, notably to the food stamp program. Food Stamps. The 1996 law gave **states** more control over food stamp operations **and coordination with family cash aid**, added work rules for adults without dependents and expanded existing work requirements, cut future benefits, placed greater limits on eligibility, and expanded penalties for violating rules**.** Followup legislation (P.L. 105-18) allowed states to pay for food stamps for persons made ineligible for federally financed stamps by the 1996 law, and P.L. 106-387 increased benefits for those with high shelter costs. The 2002

farm bill (P.L. 107-171) increased food stamp spending by $5.7-$5.9 billion over 10 years. Changes include granting food stamp eligibility to noncitizens after their first 5 years in this county).

2NC/1NR - Limits

They explode the topic – too many mechanisms that lack uniformity

Greenblatt 11 (ALAN GREENBLATT, NOVEMBER 2011, States Cut Welfare Benefits – Again, Alan covers politics as well as policy issues for Governing. He is the coauthor of a standard textbook on state and local governments. He previously worked as a reporter for NPR and CQ and has written about politics and culture for many other outlets, print and online. http://www.governing.com/topics/health-human-services/states-cut-welfare-benefits-again.html, DSS)

States such as New Mexico, South Carolina and Washington have slashed cash payments by 15 to 20 percent. Other states are tightening work requirements, or lowering payments to those who also receive federal disability assistance. And many states are limiting the amount of time people can spend on welfare. "We need to encourage people to say this is truly a temporary program," says Brian Rooney, director of policy and compliance at the Michigan Department of Human Services. Michigan, which had been one of the few states without a time limit on benefits, imposed a four-year lifetime limit on recipients last month. In addition to the desire to push people off the rolls and into the workforce, the state simply could not afford to keep paying benefits indefinitely, according to officials. The federal block grant for TANF has not budged for the past 15 years. "The fiscal reality is that we cannot afford to provide lifetime cash assistance benefits to recipients who are able to work," says Maura Corrigan, the state's Human Services director. Michigan's budget troubles are among the worst in the nation. Obviously, a lot of that has to do with the weakness in its economy. Given the state's growing poverty rates and higher-than-average unemployment, kicking people off welfare due to retroactively applied limits strikes many people as unfair or even callous.

Congressional desire for INCREASED welfare surveillance – the plan draws in huge fights with Obama

Fobes 6-10 **[Aaron-press secretary for Orrin Hatch, 6-10-15, "Hatch Urges Administration to Work with Congress on Child Support Enforcement",** http://www.finance.senate.gov/newsroom/chairman/release/?id=98f2986e-fb54-4d21-aa67-f090533e4fa7**, date accessed: 7/8/15]Kruger**

WASHINGTON – In a speech on the Senate floor today, Finance Committee Chairman Orrin Hatch (R-Utah) **called on the Obama Administration to work with Congress on welfare reform** and child support enforcement. Earlier this week, Hatch, along with Finance Committee member Senator John Cornyn (R-Texas), House Ways and Means Committee Chairman Paul Ryan (R-Wis.) and Ways & Means Committee member Charles Boustany (R-La.) introduced legislation to prevent the Obama Administration from bypassing the Congress on welfare reform policy. "**I firmly believe that there is room for common ground**. In fact, there are a number of features of the administration's **proposed rule that could generate bipartisan support**. But any workable solution would have to include the full participation and ultimate consent of the Legislative Branch. Any changes to the law would have to go through Congress and not simply be dictated by the administration," Hatch said.The complete speech, as prepared for delivery, is below: Mr. President, I'd like to take a few minutes to talk about another matter of great importance. Last year, after the mid-term elections, the Obama Administration – quietly and without much fan-fare – proposed a massive, far-reaching rule that would overturn a number of bedrock principles of child support enforcement and welfare reform. Chief among them being the principle that parents should be financially responsible for their children. This was just the latest attempt on the part of the Obama Administration to bypass Congress in order to enact policies through

executive fiat. And, sadly, it wasn't even the first time this administration has tried to gut welfare reform. Indeed, we all remember a few years back when the administration granted itself the unprecedented authority to waive critical welfare work requirements. Put simply, this latest rule would make it easier for non-custodial parents to evade paying child support. It would undermine a key feature of welfare reform, which is that single mothers can avoid welfare if fathers comply with child support orders. I am **fundamentally opposed** to policies that allow parents to abdicate their responsibilities, which, in turn, results in more families having to go on welfare. I think most Americans would agree with me. That is why I, joined by Senator Cornyn and House Ways and Means Committee Chairman Paul Ryan, have introduced legislation that would prevent the Obama Administration from bypassing Congress in yet another attempt to subvert key features of welfare reform.

2NC Link

Republicans love welfare surveillance –perceived as good for the economy

Seymour 12 **[Don-Reporter for the speaker of the house.gov, 7/13/12, "With No Jobs in Obama Economy, White House Guts Clinton Welfare Work Requirement",http://www.speaker.gov/general/no-jobs-obama-economy-white-house-guts-clinton-welfare-work-requirement, date accessed: 7/8/15]Kruger**

The Heritage Foundation says the "rigorous new federal work standards that state governments were required to implement" were the core of the welfare reform law. Whereas "[i]n the four decades prior to welfare reform, the welfare caseload never experienced a significant decline," the work requirements were "very successful" in reducing welfare rolls and getting Americans back to work. In an op-ed marking welfare reform's 10-year anniversary, President Clinton said the law and its work requirements "create[ed] a new beginning for millions of Americans." Welfare rolls "dropped substantially, from 12.2 million in 1996 to 4.5 million" in 2006, and "more than 20,000 businesses hired 1.1 million former welfare recipients." But with the Obama economy hung over from a failed 'stimulus' spending binge, job creators handcuffed by excessive regulations, and small businesses frightened by the president's tax hike plan, jobs are hard to come by. So the White House simply gutted the work requirements that have been so successful. Instead of creating new jobs, the Obama administration is creating more dependency.

The pursuit of deadbeat dads is massively popular

Baskerville 8 Stephen Baskerville is Ph.D. in Government, London School of Economics & Political Science, Professor of Political Science at Patrick Henry College Pub Date: 01/01/2008 Independent Review Wntr, 2008 Source Volume: 12 Source Issue: 3, http://www.freepatentsonline.com/article/Independent-Review/172775627.html

Child support became politicized by the early 1990s, when parents who allegedly fail to pay--"deadbeat dads'--became the subjects of a national demonology, and child support went from being a minor matter affecting a few people on the margins of society to **a sacred political cow** in the national vocabulary. "**On the left and on the right**, the new phrase to conjure with is 'child support,'" writes Bryce Christensen, who notes that politicians see it as "the best rhetoric in the world": "a rhetoric unifying political figures" from both parties (2001, 63). Although Ronald Reagan seems to have coined the term deadbeat dads, it was Bill Clinton who took it on the campaign trail. "We will find you!" he famously intoned at the 1992 Democratic National Convention. "We will make you pay!" During the debate leading up to welfare reform, George Gilder warned of the **bipartisan bandwagon** being marshaled to punish private citizens who had been pronounced guilty by general acclaim: (Presidential candidate Barack Obama recently revived this political line. "We have too many children in poverty in this country," he told a civil rights group in early 2007. "And don't tell me it doesn't have a little to do with the fact that we got too many daddies not acting like daddies.")

Pursuing dads who don't pay child support has bipartisan support

Baskerville 8 Stephen Baskerville is Ph.D. in Government, London School of Economics & Political Science, Professor of Political Science at Patrick Henry College Pub Date: 01/01/2008 Independent Review Wntr, 2008 Source Volume: 12 Source Issue: 3, http://www.freepatentsonline.com/article/Independent-Review/172775627.html

The campaign escalated dramatically during the Clinton years, especially following PRWORA. In 1998, Clinton signed the Deadbeat Parents Punishment Act, which enjoyed overwhelming bipartisan support. In that same year, U.S. Department of Health and Human Services (HHS) secretary Donna Shalala announced the Federal Case Registry, a massive system of government surveillance that aimed to include 16-19 million citizens, even those current in their payments. "Combined with the National Directory of New Hires," Shalala said, "HHS now has the strongest child support enforcement resource in the history of the program" (U.S. HHS 1998b). Clinton announced soon afterward yet another "new child support crackdown." "This effort will include new investigative teams in five regions of the country to identify, analyze, and investigate cases [that is, parents[for criminal prosecution, and an eightfold increase in legal support personnel to help prosecute these cases" (U.S. HHS 1998a).

AT: Obama Doesn't get the Blame (Also a good link)

Republicans loves welfare reform–removal gets blamed on Obama

Rubin 12 **[Jennifer-opinion writer for the Washington post that is an expert on congressional republicans,7/15/12, "Obama to Clinton welfare reform: Drop dead", The Washington Post,** http://www.washingtonpost.com/blogs/right-turn/post/obama-to-clinton-welfare-reform-drop-dead/2012/07/14/gJQAM49XkW_blog.html**, date accessed: 7/8/15]Kruger**

1NC States CP

States choose their own way to run welfare- Even if the CP doesn't end Government surveillance, it ends all uses of that surveillance

HANSAN 11 Hansan, J.E. (2011) is a career social worker with a doctorate in social welfare policy from Brandeis University. He worked for 45 years in human service programs at the local, state, and national levels. His early career was staffing and directing settlement houses in Kansas

City, MO, Philadelphia, PA, Peoria, IL and Cincinnati, O A brief overview of the state-federal relationship in public welfare programs, 1935-1996 Retrieved 7/9/15from

http://www.socialwelfarehistory.com/programs/public-welfare-state-federal-welfare-relationships/

Under the terms of the Act, each state had to first choose whether or not to participate in one or more of these new public welfare programs. When a state decided to participate in one of the programs, it was then required to submit a plan (i.e., state plan) that demonstrated that its proposed program adhered to the minimal standards in the law. States retained major control over the terms of eligibility and the level of benefits to be paid to recipients. Initially, federal financial participation in the cost of benefits was determined according to a formula that fixed federal reimbursement to the level of benefits established by a state. In addition, the federal government agreed to pay fifty percent of administrative costs, or a greater percentage in what were designated poor states. It is very important to note, these new state-federal welfare programs were "categorical" in nature: It was not enough for an individual/family to be deemed poor or eligible on the basis of not having any income or assets; it was also a condition of eligibility that the individual fit one of the established categories, that is, to be aged, blind, disabled or a child living in a household without a father. For this reason, public welfare programs were often referred to as "means-tested categorical programs."

2NC Solvency

States pay billions for children on welfare and are full responsibility the state -most of these cases being fatherless children

HANSAN 11 Hansan, J.E. (2011) is a career social worker with a doctorate in social welfare policy from Brandeis University. He worked for 45 years in human service programs at the local, state, and national levels. His early career was staffing and directing settlement houses in Kansas City, MO, Philadelphia, PA, Peoria, IL and Cincinnati, O A brief overview of the state-federal relationship in public welfare programs, 1935-1996 Retrieved 7/9/15from

http://www.socialwelfarehistory.com/programs/public-welfare-state-federal-welfare-relationships/

to Families with Dependent Children (AFDC) provided income assistance to families where children lacked adequate parental financial support. Assistance was granted in the form of cash benefits funded through a combination of federal, state and (in several states) local revenues. While federal and state rules jointly govern the determination of eligibility and payment levels, administration is the full responsibility of the states and their political subdivisions. n FY 1982 an average 11.1 million persons per month, of whom 7.5 million were children, received AFDC benefits at a cost for the year of about $13.5 billion, $6 billion of which was paid by the states. Assistance levels were largely determined by the states. As a result, AFDC benefit levels varied widely. In 1980 the average monthly payment per person ranged from $29.83 to $162.61. The actual disparity of these amounts was narrowed by the availability of food stamp benefits for public assistance recipients. Food stamp benefits were inversely related to AFDC income. A basic profile of AFDC mothers, from the 1979 study of AFDC by the Department of Health and Human Services, showed that more than half were over age 30, most had not graduated from high school, and fewer than one in six was employed while on assistance; fathers in the program were generally older than mothers, slightly better educated, and employed. The basic reason for family eligibility in the majority of cases was the absence of a parent–chiefly the father– because of divorce, separation or desertion, or because the parents were never married. (In 1980, families with unemployed fathers were eligible for AFDC in only 27 states.)

Approximately 70 percent of the families in the study had two or fewer children receiving assistance.

The State level is where our welfare programs have been surveyed and oppressed

Heinlein, 14 - ("Snyder OKs rule establishing paternity for welfare" by Gary Heinlein The Detroit News 8:17 p.m. EST December 17, 2014)

http://www.detroitnews.com/story/news/politics/2014/12/17/snyder-oks-rule-establishing-paternity-welfare/20564765/

Gov. Rick Snyder has signed bills into law that lay down new rules aimed at establishing paternity and making fathers more accountable for the support of children on welfare. A key provision in the legislation, which he signed Wednesday, sets up a procedure for determining paternity, including allowing a prosecutor to order genetic testing of a man suspected of fathering or being the father of a child on welfare. Snyder said he approved the package of bills because it "keeps our child support system running efficiently to ensure Michigan children and families have access to the benefits they deserve." One bill amends state law to specify that Family Independence Program benefits could be denied or terminated if a recipient fails, without good cause, to comply with applicable child support requirements that include efforts to establish paternity and assign or obtain child support. The 13 bills also: Declare that a positive genetic test is a conclusive method of determining paternity, if certain conditions are met, and without requiring a court determination. Create a new Summary Support and Paternity Act with streamlined methods for establishing paternity and child support court orders. Give parents who are struggling to make child support payments the ability to apply for alternative court-monitored options for payment. Ensure child support is paid before assistance is granted through the Family Independence Program. Allow prosecution for nonsupport the support payer was aware of the case. Move the authority for child support allocation and determination to the Office of Child Support, instead of the State Court Administrative Office. "Eliminating confusion within the law will help increase the effectiveness of our system while reducing unnecessary court costs," Snyder said.

States solve best–1996 law means they control the majority of welfare

Burke 3 [Vee-member of CRS, 7/1/03, "The 1996 Welfare Reform Law",
http://royce.house.gov/uploadedfiles/the%201996%20welfare%20reform%20law.pdf**, date accessed: 7/10/15]**Kruger

The Personal Responsibility and Work Opportunity Reconciliation Act (**PRWORA**, P.L. 104-193), signed on August 22, 1996, **dramatically reshaped cash and food welfare programs and helped reduce federal welfare spending**. It replaced the Depression-born program of Aid to Families with Dependent Children (AFDC) **with** fixed annual **grants to states for** Temporary Assistance to Needy Families (**TANF**) for six years, ending on September 30, 2002. It imposed a citizenship requirement for many benefits. It reduced spending on food stamps, Supplemental Security Income (SSI), child nutrition, and the Social Services Block Grant (SSBG). However, it increased funding for child care and created a mandatory block grant for care of children in low-income families. At the time of passage, the Congressional Budget Office (CBO) estimated that the law would cut mandatory federal spending by a net total of $54.1 billion over 6 years. Restrictions on benefits for noncitizens accounted for 44% of this total, and food stamp revisions for 43%. The 105th Congress rescinded and modified some 1996 budget cuts, restoring SSI, Medicaid and food stamp benefits to many aliens at an estimated 5-year cost of $12.3 billion. Further, Congress in 1997 created Welfare-to-Work (WtW) grants ($2.7 billion in estimated outlays for 2 years**) to help states move severely disadvantaged TANF recipients into jobs, and it boosted funding for food stamp employment and training.** Highlights of Program Changes Family Cash Aid. TANF ended unlimited matching funding for family cash welfare (AFDC) and created fixed block grants for **state-designed programs** of time-limited and work-conditioned aid to needy families with children. It broadened the goals of welfare to include reducing non-marital pregnancies and promoting two-parent families. It imposed a 5-year limit on basic ongoing aid paid with federal funds**.** It required states to engage recipients in **statedefined** "work" after 24 months of aid, achieve minimum participation rates in federally recognized work activities, and spend on needy families from their own funds at least 75% of the sum they spent in FY1994 on programs replaced by TANF -- maintenance-of-effort (MOE) rule. Current TANF Legislation. Since September 30, 2002, when their original appropriations ended, TANF and related programs of mandatory child care, transitional medicaid, and abstinence education have been operating under quarterly extensions of spending authority, on the same terms as in FY2002. The most recent extension was made June 30, 2003, by P.L. 108-40. In 2002 the House passed a bill (H.R. 4737) to reauthorize TANF, but the Senate did not. Main issues of contention were work rules and child care spending. On February 13, 2003, the House passed a new TANF reauthorization bill (H.R. 4), almost identical to the 2002 bill; and on February 14 the Senate received a very similar bill from the Senate Republican leadership (S. 5). Both H.R. 4 and S. 5 propose to continue TANF basic grants at $16.5 billion annually for 5 years, and to increase work requirements -- imposing a 40 hour work week and an eventual work participation standard of 70%. S. 5 includes some additional changes, notably to the food stamp program. Food Stamps. The 1996 law gave **states** more control over food stamp operations and coordination with family cash aid, added work rules for adults without dependents and expanded existing work requirements, cut future benefits, placed greater limits on eligibility, and expanded penalties for violating rules. Followup legislation (P.L. 105-18) allowed states to pay for food stamps for persons made ineligible for federally

financed stamps by the 1996 law, and P.L. 106-387 increased benefits for those with high shelter costs. The 2002 farm bill (P.L. 107-171) increased food stamp spending by $5.7-$5.9 billion over 10 years. Changes include granting food stamp eligibility to noncitizens after their first 5 years in this county).

AT: Race to the Bottom

States have immediate effects on each other's welfare

Figlio* and Kolpin 99, Department of Economics, University of Florida and Department of Economics, University of Oregon, 1999 (Received May 15, 1998; revised January 1999 Journal of Urban Economics 46, 437]454, 1999 Article ID juec.1999.2131 David N. Figlio, Van W. Kolpin, William E. Reid "Do States Play Welfare Games?"

http://www.sciencedirect.com/science/article/pii/S0094119099921319

This paper uses a panel of state-level annual data from 1983 to 1994 for each of the contiguous United States and the District of Columbia, to explore the degree to which states simultaneously set welfare benefits. Using instrumental variables estimation, we find substantial empirical evidence that is supportive of the notion of welfare competition. Furthermore, we find that state responses to neighbor benefit decreases tend to be significantly larger in magnitude as their responses to neighbor benefit increases. Our results, therefore, have potential implications for public policy in the wake of the increased decentralization of welfare policy associated with the welfare reform of 1996. Q 1999 Academic Press We must insure that Pennsylvania resources are available to Pennsylvania residents. }From U.S. District Court testimony of the state of Pennsylvania, in defense of its new policy to offer different welfare benefit levels to migrants from other states, as reported in the New York Times, October 14, 1997. At least 13 other states have adopted similar policies. Few current public policy issues have received the attention that has been afforded to the decentralization of welfare benefit-setting. The * Corresponding author: David Figlio. An earlier version of this paper appears as Institute for Research on Poverty Discussion Paper 1154-98. We are grateful to Bruce Blonigen, Jan Brueckner, David Card, Julie Berry Cullen, Bill Evans, Jim Hines, Sam Peltzman, David Ribar, Mark Shroder, Joe Stone, Wes Wilson, Jim Ziliak, two anonymous referees, and workshop participants at Indiana University, the Universities of California]San Diego, Ž.Illinois, Maryland, Michigan, Missouri, and Oregon, and Washington University St. Louis for helpful comments and conversation. Thanks also to Mark Shroder for providing us with some of the data for this project. All errors are our own. FIGLIO, KOLPIN, AND REID438 Personal Responsibility and Work Opportunity Reconciliation Act of 1996, passed with bipartisan support, considerably increased individual states' autonomy to supervise their own welfare programs. Specifically, the new law replaced the federally managed Aid to Families with Dependent Ž. Children AFDC program with a system of block grants to states. While hailed by some as efficiency-enhancing} states now have considerably more flexibility to devise their own welfare programs than they did under the previous law} the possibility exists that further-decentralized benefitsetting may exacerbate an interjurisdictional externality. That is, the new law increases the possibility, at least in theory, that states will be affected by their neighbors' welfare benefit policies. We are by no means the first authors to make this argument. For instance, researchers such as Stigler w x w x w x 13 , Gramlich 7 , and Brown and Oates 2 have suggested that decentralized welfare benefit-setting could lead to a ''race to the bottom.'' How do states respond to their neighbors' policies? Several interesting recent papers address the issue of state policy interdependence. Case, wx Hines, and Rosen 5 , for instance, find empirical evidence that state fiscal wx policies are interdependent. Besley and Case 1 also show that a state's tax changes are significantly correlated with those of the state's neighbors. w x w x Brueckner 3 and Brueckner and Saavedra 4 demonstrate that localities set their policies interdependently. All of these papers use different empirical approaches that explicitly model interjurisdictional interactions as simultaneous. The existing evidence on state welfare policy interdependence is much wx less conclusive: while Gramlich and Laren 8 , finds evidence of a positive wx correlation between own-state and neighbor-state benefits, Shroder 12 , estimating a structural model and using a different time period, concludes that there is little evidence to suggest that states set welfare benefit policies interdependently. However, we know of no currently published paper that models state welfare benefit-setting using empirical approaches akin to those used in the literature on other policy interactions.1 This paper makes several key contributions to the published literature on state welfare benefit-setting. First, using annual state-level data from 1983 to 1994, this paper presents estimates of the interrelationship of states' welfare benefits that treat neighbor states' decisions as endogenous, and that implicitly account for spatial correlation in the errors. Second, this paper introduces an additional test for interjurisdictional welfare competition by presenting a theoretical model

suggesting that such compet. 1 Two other current working papers work toward rectifying this shortcoming. Ribar and wx Wilhelm 10 estimate some models in which neighbor benefit-setting is endogenous using instrumental variables estimation, though this is not the main thrust of their paper. Saavedra wx 11 simultaneously estimates state benefit-setting using spatial econometric models. 2. EVIDENCE OF INTERJURISDICTIONAL WELFARE COMPETITION We are interested in estimating the relationship between changes in real own-state welfare benefits and changes in real neighbor welfare benefits,2 in which we treat neighbor benefits as endogenous. Our dependent variŽ. able is the change in the real 1982 dollars combined maximum AFDC and food stamp benefits for a family of three in a state,3 and our explanatory variable of interest is the weighted sum of changes in neighbors' maximum AFDC and food stamp benefits for a family of three.4 These data are published in the ''Green Book,'' Background Material and Data on Programs within the Jurisdiction of the Committee on Ways and Means, for each relevant year. In a handful of cases, these data were clearly miscoded in the Green Book; in the analysis that follows we omit seven suspicious observations from the analysis. However, it turns out that the choice of including or excluding these observations does not fundamentally change our results. Determining Neighborhood One important task in determining the relationship between a state's benefit level and that of its neighbors involves deciding on the appropriate definition of who are the state's neighbors. Our empirical approach requires us to take a stand on how states weight each others' decisionmaking when devising their own policies, but since the decision rules are not observed by the econometrician, we can only speculate to which states actually might look to when determining policy. While there are countless possible ways of identifying which states are neighbors, we propose an admittedly arbitrary measure of ''neighborhood'' based on state to state migration flows from 1985 to 1990, using Census data.5 In this scheme, 2 All dollar values are adjusted to be in constant dollars using the Consumer Price Index. 3 We have also estimated models in which the dependent variable is solely the AFDC benefit, and in each case have obtained similar results to those reported herein. 4 We describe how we derive neighbor weights later in this section. 5 We have also estimated models using proximity-based weighting schemes, as well as wx purely contiguity-based weighting schemes, such as those utilized by Ribar and Wilhelm 10 , and the outcomes tend to be very similar to those reported herein. In addition, our results from the migration-based model are similar if we do not constrain the sum of neighbor weights to equal one. Therefore, our fears that our results might be driven solely by idiosyncracies of our definition are mitigated. FIGLIO, KOLPIN, AND REID440 where res is the number of 1990 residents of state i who resided in state ij j in 1985.6 State i assigns itself a weight of zero, and all weights sum to one. We choose one-way migration inflows, rather than two-way net migration flows, to avoid the possibility of negative neighbor weights, as well as to avoid weighting states with virtually no migration flows in either direction the same as states with large but offsetting population flows in both directions.7 We use total population migration rather than lowincome migration to mitigate the potential endogeneity of the weighting scheme. Empirical Model We seek to relate a state's own benefits to the weighted sum of its neighbors' benefits to determine whether states are engaged in welfare competition. We choose to estimate the model in first-differences, rather than levels, to account for the fact that over this time period, state benefits have been trending downward. To account for the possibility that some states' trends may be sharper than others', we control for a full set of state-specific constants, which in the first-difference context represent state-specific trends. In addition, to account for the possibility that certain common shocks affect all states in the country simultaneously, we control for a set of year effects. Therefore, all of our identification is coming off of de¨iations from state-specific trends in welfare benefits, after netting out de¨iations that are common to all states contemporaneously.8 We adopt the set of control variables used in prior empirical papers on the topic of welfare policy interdependence. Specifically, we control for Ž changes in the ratio of families on AFDC to those not on AFDC the 6 wx Shroder 12 also uses a migration-based neighbor weighting scheme. 7 To illustrate our concerns with using net migration flows as our basis for this weighting scheme, doing so would lead us to the conclusion, for instance, that Oregon weights Vermont higher than it does California when determining its policies. 8 We also experimented with including lagged neighbor benefits in the model, but found that lagged benefits added little in the way of additional explanatory power. DO STATES PLAY WELFARE GAMES? 441 . 9 ''recipiency ratio'' , changes in the Republican share of votes in Congres10 Ž sional elections we also looked at the ''conservativeness'' of voting behavior by the state's congressional contingent, as captured by Americans for Democratic Action voting scores, which led to no real changes in the . results , changes in real per capita state disposable income, changes in the state's federally-set AFDC funds matching rate, changes in the state's percentage of AFDC recipients who are white, changes in the state's percentage of AFDC recipients who are unmarried, changes in the state's female unemployment rate, changes in the state's ratio of females to employed males, and changes in the state's average weekly wages in variety stores.11 The last three variables are intended to represent characteristics of the female and low skill labor market.12 Our results are robust to changes in this control variable set. Specifically, our results hold up qualitatively regardless of the set of control variables employed, at least among the sets of controls that we have tried thus far. Sample means and Ž. standard deviations of all variables measured in first-differences are reported in the first column of Table 1. In order to treat states' benefit policy determination as potentially interdependent, we must model state benefit-setting as simultaneous. To do so, we model neighbor benefit changes as endogenous, using a two-stage instrumental-variables approach similar to that used by Besley and Case wx 1 to capture simultaneity of tax policy

across states. Since our supposition, which we also put forth in our theoretical model introduced later in the paper, is that changes in benefit levels come about because of a change Ž. in one state's or a set of states' primitives, we seek instruments that are likely to reflect these types of changes. We instrument for neighbor benefit

Competition states will never allow the Federal Government to maintain common welfare plans

//SKI Radial concavity holds for a large set of reasonable preferences. To Ž.demonstrate this fact, note that the identity us , s r s s0 implicitlyii yii defines the best reply function b . It is straightforward to implicitly differentiate this identity and establish differential conditions which ensure that b does indeed satisfy radial concavity. As a simple example, i suppose that the number of welfare recipients in a given state is a linear function r : S^{a}R which is increasing in own benefits and decreasing in i the benefits of ''competitor'' states. Suppose also that state i's utility function can be decomposed into the social utility received from own benefits and the social disutility accruing from the total number of recipients, i.e., uss¨ s ycrs. Lastly, assume ¨ is strictly concave, c i i i i i i i ZŽ. 2 ZŽ Y.2is strictly convex, best replies are nonzero, and ¨ c0 yc ¨ - 0 i i i Ž Ž . . Žwhen evaluated at bs , s for any s in S. The latter condition isi yi satisfied if, for instance, the third derivatives of both y¨ and c are ii . everywhere positive. As the reader may verify, such preferences induce strictly radial concave best reply functions, in turn implying that the symmetry bias is as noted in Proposition 2. wx Walker 14 finds very little evidence supporting the existence of welfare benefit-induced migration from state to state. It is important to note, however, that our theoretical results do not actually require the presence of welfare-induced migration. Nor do they require migration, when it occurs, to impose varying costs depending on the state of origin. All that is required is that policy makers are concerned with the benefit levels offered elsewhere. There is plenty of evidence the differential welfare benefit levels pegged to prior residency referred to in the introductory quote of this paper is one example that many policymakers share this concern. This is not to say that a lack of observed migration cannot itself be the result of strategic reaction explicitly designed to mitigate migration.16 Instead, our point is that when modeling this behavior one must recognize that public policy is often founded on the ''reality'' of public opinion as much, if not more so, as on economic fact. Moreover, new evidence Ž wx . Meyer 9 suggests that interstate welfare benefit differentials have a statistically significant, if small in magnitude, effect on migration after all. Our model generates the principal testable implication that states will respond asymmetrically to other states' benefit decreases than to other states' benefit increases. Failure to empirically model this asymmetry Ž . Ž when directed in Proposition 2 might lead to downward-biased in . absolute value estimates of responses to other states' benefit decreases and upward-biased estimates of responses to other states' benefit in 16 One can also think of the phenomenon of Tiebout competition, in which ''foot voting'' need not be observed for its potential presence to have an effect on local government decision making. Both models have coefficients with a negative sign, though this result is not . near statistical significance . On the other hand, the interaction between neighbor benefits and an indicator for whether the neighbor benefits dropped is strongly statistically significant in the OLS model and marginally significant in the instrumental variables specification, suggesting that states tend to respond more to neighbor benefit decreases than to increases. With the notable exception of the possibility that the empirical design of Ž. this test would naturally generate this result discussed immediately below , it is difficult to conceive of factors other than welfare competition that would generate this asymmetry in estimated responses to neighbor benefits. Therefore, these results further support the notion that the welfare competition described above is real, rather than an artifact of the data. Neglect as an Alternative e Hypothesis In any given year, the modal change in nominal AFDC benefits is zero, though nominal food stamp benefits increased somewhat for most states from year to year.17 Since we deflate benefits by the consumer price index, we consider a nominal zero change in benefits as a real decline in benefits. As such, there remains a chance that our results do not really reflect strategic interaction among the states and rather reflect a ''neglect hypothesis.'' Specifically, our

asymmetry results could conceivably be generated if most states simply change their nominal benefits occasionally, and increase their nominal benefits independently. In this case, we would observe little relation between neighboring states' increases in benefits but most states would appear to be moving in lock-step to each others' benefit declines. Of course, this ''neglect hypothesis,'' if true, could very well be a manifestation of strategic behavior, in which states, cognizant of their neighbors' actions, strategically elect not to change their nominal benefits when their neighbors do not change their nominal benefits. Hence, simply not raising benefits and letting real benefits atrophy is consistent with a strategic welfare benefit-setting equilibrium. However, the fact that we cannot distinguish with certainty strategic behavior from non-strategic neglect is somewhat unsatisfying. There are, however, other ways to determine the degree to which our results are merely picking up a general pattern of failure to change nominal benefits, rather than strategic behavior. Specifically, if our results are merely picking up a general pattern of benefit neglect, it would not really matter how we define neighborhood}we should observe the same types of effects as we report above. To explore this possibility, we construct two new types of neighborhood definitions, one based on the relative 17 We note, however, that real combined benefits increased from year to year in 34% of the observations.

Texas and California are imitation states for welfare policies

Figlio* and Kolpin, 99 Department of Economics, University of Florida and Department of Economics, University of Oregon, (Received May 15, 1998; revised January 1999 Journal of Urban Economics 46, 437]454, 1999 Article ID juec.1999.2131 David N. Figlio, Van W. Kolpin, William E. Reid "Do States Play Welfare Games?")

http://www.sciencedirect.com/science/article/pii/S0094119099921319

The results of this exercise are reported in the final four columns of Ž Table 1. We observe that in three of the four regions south, west, and. midwest the estimated response to neighbor benefit changes remains statistically significant {despite the dramatically reduced sample sizes} and is of modestly larger magnitude than that found in the nationwide sample. In the fourth region, the estimated relationship is not statistically significant, though the magnitude of the coefficient remains Ž nontrivial. A coefficient of this magnitude would be strongly statistically significant if the standard error were the same as the national instrumental variables standard error, so part of the insignificance is due to the . increased standard errors associated with small sample size. Therefore, this region-specific analysis helps to further convince us that the results found herein are not due to some unobserved region-specific variable. A second way of testing the veracity of these results would be to abandon altogether the concept of identifying neighbor states and instead look at states' apparent responses to large, politically important states, relative to their apparent responses to the neighbors of these large states. The idea behind this exercise is that if there is some omitted variable correlated with the benefit changes of all states in an area, and this is driving our results, then there should be no real reason, in the absence of strategic interaction, to expect other states' benefits to be differentially correlated with the benefits of the large state, relative to its small neighbors. If, on the other hand, states do engage in welfare competition, then it is reasonable to expect that they would pay more attention to Texas than to, say, Louisiana or Arkansas, because of Texas's magnitude and political clout. To test whether this is the case, we replace our neighbor benefit variables with separate variables reflecting the changes in benefits in the two largest states in the United States, California and Texas, as well as the complete set of these states' neighbors, Oregon, Nevada, Arizona, New Mexico, Oklahoma, Louisiana, and Arkansas, for a total of nine other state variables, in an ordinary least squares regression. Table 2 reports the coefficients on the benefit levels of, in turn, California and Texas, and the a¨erage benefit coefficients for, in turn, California's neighbors and Texas's neighbors. We observe that other states' benefit changes are statistically significantly more correlated with California's benefit changes than with California's neighbors' benefit changes, and while the statistical significance level is lower in the case of Texas, the same qualitative finding holds up for other states' relative correlation with Texas vis-a-vis Texas's neigh` bors. The final column of Table 2 pools California and Texas together. Here, we observe that while state benefit changes tend to be completely uncorrelated

with the average benefit change of California's and Texas's neighbors, state benefit changes are highly correlated with the average

Texas and California have proven to geographically and competitively to affect the welfare plans of all states

Figlio* and Kolpin 99, Department of Economics, University of Florida and Department of Economics, University of Oregon, (Received May 15, 1998; revised January 1999 Journal of Urban Economics 46, 437]454, 1999 Article ID juec.1999.2131 David N. http://www.sciencedirect.com/science/article/pii/S0094119099921319

GLIO, KOLPIN, AND REID446 TABLE 2 Additional Evidence of Simultaneous State Benefit-Setting: Differential Responses to Large States versus their Neighbors Ž. OLS evidence Note: Standard errors, adjusted for statewide clustering of errors, are in parentheses beneath estimated effects. All regressions include the same set of variables in the Table 1 regressions, except that instead of weighted neighbor benefits, the regression includes nine separate variables for the changes in the benefits of California, Oregon, Nevada, Arizona, Texas, New Mexico, Oklahoma, Arkansas, and Louisiana. The average response to large state Ž neighbors averages the coefficients and reports the appropriate standard error of the .Ž average of the coefficients on the benefits of Oregon, Arizona, and Nevada in the case of. Ž .California or New Mexico, Oklahoma, Louisiana, and Arkansas in the case of Texas. The first row of the last column presents the average coefficient on California and Texas benefits, while the second row of the last column presents the average coefficient on the other seven state benefits. Benefit change of California and Texas.15 This difference is statistically significant at the five percent level. In sum, therefore, we observe evidence that state benefit changes tend to be more correlated with the benefit changes of big, influential states than with the benefit changes of small states likely to share common shocks with the influential states. This finding lends additional credence to the notion that our finding of welfare benefit competition is not driven by some omitted geography-specific variable. 3. ASYMMETRIC RESPONSES TO NEIGHBOR BENEFITS This section provides additional evidence that the results presented above are likely due to welfare competition, rather than some geographically-correlated omitted variable. To do so, we present a theoretical model of interstate competition in state welfare benefit-setting that generates the testable prediction that states should tend to differentially respond to decreases in neighbor benefit levels, relative to neighbor benefit increases. We then return to the data to examine the degree to which this conjecture holds up empirically. 15 This result also holds up when we limit the geography of the ''responding'' states to any region of the country, except the southwest and far west, which we exclude for obvious reasons. DO STATES PLAY WELFARE GAMES? 447 Theoretical Model We begin by presenting an abstract framework for analyzing welfare gaming between multiple states. This framework is then used to argue that it is unlikely that states will consistently respond symmetrically to both increases and decreases in the welfare benefits offered by competitors. Moreover, one may well expect the benefit decreases of competitors to have a more pronounced impact than would benefit increases of a comparable magnitude. State governments are the decision makers in our model and will be 4denoted by the set Ns 1,...,n . Each state must select a nonnegative level of welfare benefits to be made available to eligible recipients. Strategy sets are thus characterized by S R for each igN and Ss i q = S represents the space of all collective strategy profilesroutcomes. igNi To complete the specification of our model, we assume each state igN has preferences over the outcome set S which are characterizable by a real valued utility function u :Sª R. These preferences are assumed to thoroughly account for the benefits as well as costs associated with various strategic outcomes. In addition to direct effects from a state's own decision Že.g., benefits of an ''income safety net'' for the state's citizenry and the . financial burdens associated with its provision there are also indirect effects caused by the choices of other states. Examples of the latter include the cost savings from interstate migration induced by interstate benefit differentials. Finally, we note that political pressure on state officials may depend on interstate benefit differentials independently from interstate migration. State utility functions are assumed to capture these incentives as well. We are particularly interested in how the behavior of individual states may be affected by perturbations in the behavior of others. A necessary condition for such comparative

statics to be everywhere well defined is for Ž each state to have a single valued ‘‘best reply’’ correspondence an as. sumption we adopt throughout our analysis . Formally, we assume that for each igN there exists a function b :SªS such that for every sgS, ii Ž Ž . . Ž X . X Ž.4 Ž X ..ubs ,s)us , s for all s gS _ bs; where we let s , sii yi i i yi i i i i yi denote the strategy profile which agrees with sX and s for players i and i yi Ž Ž .j /i respectively. As bsis independent of s our definition is equivaii Ž.lent to the notationally messier, but more natural formulation of ‘‘ bs .’’ . i yi Note also that an equilibrium of our model can be defined as a fixed point Ž . Ž Ž . .of the best reply correspondence, i.e., s*sbs * s bs*. ii gN In a technical sense, there can be no debate about whether or not states ‘‘play welfare games’’ as each state is free to unilaterally modify its benefit levels. What can be questioned, however, is whether or not the game played is in some sense degenerate. For instance, the game may be thought of as degenerate if each state’s optimal benefit levels can be

Case

Case D – Sort

1NC – Solvency

Surveillance is self-correcting – no abuse

Children's Bureau 6/18/**15** ("Monitoring" http://www.acf.hhs.gov/programs/cb/monitoring)

To help states achieve positive outcomes for children and families, the Children's Bureau monitors state child welfare services through the Child and Family Services Reviews (CFSRs), title IV-E foster care eligibility reviews, the Adoption and Foster Care Analysis and Reporting System (AFCARS) assessment reviews, and the Statewide Automated Child Welfare Information System (SACWIS) assessment reviews. AFCARS Assessment Reviews The Adoption and Foster Care Analysis and Reporting System (AFCARS) collects case-level information from state and tribal title IV-E agencies on all children in foster care and those who have been adopted with title IV-E agency involvement. The purpose of the AFCARS assessment reviews is to more fully assess and evaluate how an agency gathers, records, extracts, and submits its AFCARS data. The AFCARS review process is a rigorous evaluation of the agency's information system and allows the review team to identify problems, investigate the causes, and suggest solutions during the review. Child and Family Services Reviews (CFSRs) The CFSRs, which are periodic reviews of state child welfare systems, enable the Children's Bureau to: Ensure conformity with federal child welfare requirements Determine what is actually happening to children and families as they are engaged in child welfare services Assist states in enhancing their capacity to help children and families achieve positive outcomes Our CFSR factsheet explains the history, purpose, and process of the CFSRs. After a CFSR is completed, states develop a Program Improvement Plan (PIP) to address areas in their child welfare services that need improvement. Our PIP instructions and matrix document provides guidance to states about developing their PIPs. SACWIS Assessment Reviews SACWIS is a federally funded, yet voluntary, case management system. SACWIS is the record hub for children and families receiving child welfare support and contains a complete case management history. After a state's automated child welfare system is operational for approximately 1 year, the Division of State Systems (DSS) conducts a review to assess the system's functionality. SACWIS data are used to support the Adoption and Foster Care Analysis and Reporting System (AFCARS) and the Child and Family Services Review (CFSR) process. Title IV-E Reviews The regulatory reviews of the title IV-E Foster Care program determine whether children in foster care meet the federal eligibility requirements for foster care maintenance payments. During these reviews, the Children's Bureau examines child and provider case records, as well as payment documentation, to validate the accuracy of a state's reimbursement claims of foster care payments. Each eligibility review details the strengths and weaknesses of each state's program and identifies technical assistance that may be needed for program improvement.

Modern surveillance targets everyone equally

Personality, 2/11/14, "In the age of mass surveillance, we are all black," http://www.dailydot.com/opinion/surveillance-we-are-all-black-kymone-freeman/ **7/8/15, ML)**

On Oct. 26, 2013, I had the pleasure and honor to host the Stop Watching Us Rally against National Security Agency surveillance on the National Mall. It was an honor to have had an opportunity to speak truth to power on national TV and it was a pleasure to see a massive sea of White faces respond to the provocative assertion that we are all black today. I told them that equality has finally come to the shores of America. It is called surveillance, and it is for everyone. The often-ignored truth is that surveillance is nothing new for black people in America. From the times of slavery that made it illegal for the enslaved to congregate without a white person present to the modern U.S. intelligence agencies who have historically engaged in political repression, black people have always been closely monitored. In 1971, activists burglarized an FBI field office in Media, Pa., taking several dossiers that exposed the existence of COINTELPRO (COunter INTELligence PROgram). They passed the material to news agencies, but many organizations initially refused to publish them. The information documented long-time FBI Director J. Edgar Hoover ordering his agents to "expose, disrupt, misdirect, discredit, or otherwise neutralize" the activities of the civil rights movement and its leaders. COINTELPRO was a series of covert and often illegal projects conducted by the FBI aimed at surveying, infiltrating, discrediting and disrupting domestic political organizations. These actions even included the constant surveillance of Dr. Martin Luther King, Jr. What is surprising and should be most disturbing is that then Attorney General Robert F. Kennedy personally approved the FBI's request to expand its surveillance of Dr. King by tapping his phones, breaking into his home, office, and hotel rooms to plant bugs for electronic monitoring. This was, of course, "justified" to determine if he was under the influence of communists. No such link was ever found, but they did produce evidence of King's extramarital affairs. Following his own dictates of COINTELPRO's mission statement, J. Edgar Hoover moved to exploit this information and had copies of those tapes sent to King's wife, and the FBI drafted a letter encouraging that King commit suicide to avoid national shame and humiliation before being exposed. King refused and the tapes were never made public after determining that it may have backfired and equally have embarrassed the Bureau itself, but the surveillance only intensified after King's acceptance of the Nobel Peace Prize. This resulted in the Bureau convening a meeting of department heads to "examine a complete analysis of the avenues of approach aimed at neutralizing King as an effective Negro leader." It is important to point out that during the Church Committee hearings that examined the COINTELPRO's illegal activities, the FBI's stated motivation was "protecting National Security, preventing violence, and maintaining the existing social and political order." After perfecting the tactics used to pursue this agenda that included psychological warfare; smearing individuals and groups using forged documents and planting false reports in the media; harassment; wrongful imprisonment; and illegal violence, including assassinations, these tactics were all effectively applied to the Black Panther Party and other organizations. Ironically, it was the FBI's own wiretaps that resulted in the late Black Panther Party leader Geronimo "Ji Jaga" Pratt being released from prison after serving 27 years for a murder he did not commit. The FBI surveillance of Geronimo documented he was 350 miles away from the scene of the crime when it occurred. However, COINTELPRO's mandate was to "neutralize Geronimo as an effective BPP functionary," so the FBI purposely withheld this information at his trial. Geronimo's attorney, the late Johnnie Cochran, was later able to obtain his freedom when the tapes were finally released. After 27 years, eight of which were spent in solitary confinement, Geronimo "Ji Jaga" Pratt eventually received $4.5 million as settlement for false imprisonment. This is just a brief snapshot of the history of "surveillance" in the black community. Dr. Cornel West has often used the term "Niggarization of America" to further describe how these tactics developed under COINTELPRO have now been extended to all Americans, regardless of age, race, creed, color, sex, national origin, religion or sexual orientation. Many people who accepted the virtues of surveillance when it targeted primarily Muslims, black people, or activists now understand how disturbing it is to be surveilled as enemies of the state themselves. Equality has finally come to the shores of America in the form of surveillance. We are all in the same boat now, and when the lights go out, we are all black

AT: Welfare Queen Stereotype

The stereotype of the 'welfare queen' will continue past ending welfare surveillance due to its fitting of white American's preconceived notions of poor inner-city people on welfare.

Blake '12 (John, reporter for CNN Politics, 1/23/12, "Return of the 'Welfare Queen'" http://www.cnn.com/2012/01/23/politics/weflare-queen/**, 7/8/15 ML)**

President Reagan's "Welfare Queen" is still shaping U.S. politics, but did she exist and why has her story remained so potent? She's out there, lurking in the 2012 presidential race like a horror movie villain who refuses to die. She has 12 Social Security cards, mooches on benefits from four fake dead husbands, and collects food stamps while driving a Cadillac. She rakes in about $150,000 a year in welfare benefits and, of course, people assume she must be African-American. President Ronald Reagan gave America a sunny "Morning in America" optimism, but he also gave it the "Welfare Queen," an infamous character who has re-emerged in this year's presidential race. Critics have accused the three leading Republican presidential candidates of resurrecting Reagan's Welfare Queen by calling President Obama the "food stamp president," implying that blacks live off other people's money, and by declaring that America is moving toward an "entitlement society." Yet few people have examined the story behind the birth of the Welfare Queen. Did she really exist? Why do people still talk about her when welfare ended 15 years ago? Can her story still swing voters at a time when the great recession has forced more whites to rely on government assistance? For some, the Welfare Queen is an epic political lie. Reagan invented her, and Americans keep buying the lie. "It's one of those persistent symbols that come up every election cycle," says Kaaryn Gustafson, author of "Cheating Welfare: Public Assistance and the Criminalization of Poverty." "This image of the lazy African-American woman who refuses to get a job and keeps having kids is pretty enduring. It's always been a good way to distract the public from any meaningful conversations about poverty and inequality. " For others, the Welfare Queen reveals an uncomfortable truth: More Americans have turned the social safety net into a hammock. "You hear these horror stories going around that people are buying junk food with food stamps and paying cash for vodka and beer and things not covered with food stamps -- that gets people mad," says Steven Hayward, author of "The Age of Reagan: The Fall of the Old Liberal Order: 1964-1980." The Welfare Queen has become such a legendary character in political circles that her existence is treated like Bigfoot. Most scholars say she never existed, while a few insist the truth is out there. Gustafson went in search of the Welfare Queen and discovered something surprising. There wasn't one Welfare Queen, she says. There were three. The birth of the Welfare Queen story Here's how Reagan first told the story when he ran for the Republican presidential nomination in 1976. At virtually every campaign stop, he attacked welfare chiselers by bringing out the same character, according to press accounts. "There's a woman in Chicago," Reagan said, according to an article in the now-defunct Washington Star. "She has 80 names, 30 addresses, 12 Social Security cards. ... She's got Medicaid, getting food stamps and she is collecting welfare under each of her names. Her tax-free cash income alone is over $150,000." It was a powerful story, but reporters investigating it concluded it wasn't quite true. Some said it may have been based on a then-47-year-old woman in Chicago, but that Reagan wildly exaggerated her abuses. In time, though, it didn't matter what reporters said. People started repeating the story as true. "It hangs together as a good story because it's consistent with people's perception of the real world," says Craig R. Smith, who was a speechwriter for former President Gerald Ford and a consulting writer with President George H.W. Bush. "Like in any good mythology, you need heroes and villains and in the Welfare Queen, you had a villain who was taking advantage of the system." Was the Welfare Queen a racist story? Smith doesn't think so. He says Reagan always opposed segregation, and had a "terrific record" combating racism as president of the Screen Actors Guild. "Reagan was very sensitive about being called a racist," says Smith, author of "Rhetoric and Human Consciousness: A History." "The minute anybody would say something about that, he would get upset. He would say fraud is fraud." Others say the Welfare Queen story stuck because it exploited white America's racial fears. Reagan never said the Welfare Queen was black, but he didn't need to. People assumed she was because of rhetorical clues Reagan dropped, says John Hinshaw, a history professor at Lebanon Valley College in Pennsylvania. "The Welfare Queen driving a pink Cadillac to cash her welfare checks at the liquor store fits a narrative that many white, working-class Americans had about inner-city blacks," Hinshaw says. "It doesn't matter if the story was fabricated, it fit the narrative, and so it felt true, and it didn't need to be verified." For at least one woman on welfare at the time, the story was brutal. Madeleine Burbank grew up in the 1950s in a white family in which everybody worked. She says she was forced to go on welfare in the 1970s after her marriage suddenly ended and she had to raise three children alone. She still remembers the humiliation of going into crowded, dirty waiting rooms to answer embarrassingly personal questions posed by welfare screening officials. Reagan's story validated some of the worst assumptions some Americans have about poor people, she says. Burbank escaped welfare after enrolling in a government program that retrained her as a counselor. She eventually retired as a psychology teacher at a community college. Still, she remembers being ashamed to tell people she was on welfare, even those who were close to her. Once, she was standing in a supermarket checkout line when her sister whispered disparaging comments about a woman in front of them who was using food stamps to buy junk food. "When I told her I was on food stamps, she told me that I was different. I wasn't somehow like 'those people,' ' Burbank says. "She couldn't' stand the reality that I really wasn't that different. It's too painful for people to admit that their life can be like that." Resurrection of the Welfare Queen? Are Republican presidential candidates offering voters an updated version of the Welfare Queen? That's the question ricocheting around political circles today as commentators argue over recent comments made by Newt Gingrich, Rick Santorum, and Mitt Romney. Many have heard snippets of them by now: While campaigning in Iowa, Santorum said "I don't want to make black people's lives better by giving them somebody else's money." He later said he didn't mean to say black people, but meant people. Romney has repeatedly said that Obama wants to transform America into an "entitlement society." Gingrich has attracted the most attention for his language. He called Obama a food-stamp president, questioned poor children's work ethic, and said poor people should want paychecks, not handouts. There was nothing racist about any of that language, or the Welfare Queen story, says Hayward, author of "The Age of Reagan," and a fellow at the American Enterprise Institute in Washington, which includes conservative leaders such as Lynne Cheney, wife of former vice president Dick Cheney. Gingrich was simply being factual when he said more Americans are on food stamps under Obama than any other president, he says. He was making a point about an unhealthy economy. "Gingrich would say that if Obama was white," Hayward says. The candidates are using

such language to highlight philosophical differences between liberals and conservatives, Hayward says. Liberals believe that government can offer the best path to advancement. Conservatives believe a growing private economy provides more upward mobility than government. The "entitlement society" phrase has nothing to do with race, either, Hayward says. It reflects the belief that people should create their own opportunities, not government. "Somewhere in the entitlement mentality is the idea of redistribution: You transfer resources from the relatively richer to the poorer," Hayward says. The problem Republicans run into when they talk about race and economics is that most don't know how to talk about race, says Michael Tanner, a senior fellow at the Cato Institute, a libertarian think-tank in Washington. What some people perceive as racism is often just a Republican politician's poor choice of words, he says. "They trip over themselves and it sounds terribly awkward. By and large, they tend to live in white communities, and they don't know how to talk to blacks because they don't do it. " Former Republican presidential candidate Jack Kemp was an exception in Tanner's mind. Kemp sounded comfortable talking to a black audience, Tanner says, noting that he was a former NFL quarterback. "He shared locker rooms with black players. He knew them on a personal level in a way that Romney or Gingrich don't." Demise of the Welfare Queen Candidates will no doubt need to learn how to better communicate with nonwhite voters in the future: They're going to be the majority by 2050, according to the U.S. Census Bureau. Demographic changes will do to the Welfare Queen story what fact-checking couldn't do -- discredit it, says Saladin Ambar, a political scientist at Lehigh University in Pennsylvania. No candidate in the future will be able to win over a majority of voters by spouting racially loaded messages. Ambar says Republican presidential nominee John McCain received about 59% of the white vote in the 2008 presidential election, but still lost. "He got the same percentage of the white vote that Reagan got in 1980, but lost by seven points to Obama," Ambar says. Welfare Queen-like rhetoric won't work anymore, because the face of poverty is no longer dark, others say. Recent census data revealed that a record number of Americans, 48.6%, live in a household receiving some form of government benefits, the Wall Street Journal reported. "The Welfare Queen has lost its potency during this recession because all over this country you see white people lining up to get unemployment, feeding their families at food pantries, sleeping in cars and using food stamps at the local grocery," says Mark Naison, a history professor at Fordham University in New York. Perhaps the Welfare Queen actually should have died a long time ago. President Clinton and a Republican-controlled congress ended welfare in 1996. Its successor is called TANF, or Temporary Assistance for Needy Families. Gustafson, author of "Cheating Welfare," says TANF is not an unconditional entitlement. It comes with time-limits and work requirements and recipients have to go through a bureaucratic gantlet to verify their eligibility. "A lot of poor people are working," she says. "They are the people giving you change when you buy coffee in the morning or handing you your dry cleaning. These are the people who rely on public benefits." Still, an actual Welfare Queen did exist, Gustafson says. A database search of all major newspapers turned up the first use of the term in 1974, when a woman in Chicago was given the label. Two additional women were also dubbed welfare queens in subsequent years by local newspapers. Both were based in Los Angeles. One collected $377,458 in welfare benefits in seven years and lived in a house with a swimming pool. She did drive a Cadillac, along with a Rolls Royce and Mercedes Benz, Gustafson discovered. Reagan merged the identities of all three and exaggerated their abuses, Gustafson says. "Reagan twisted them around and created one character, and tried to leave everyone with the impression that it was happening all over the place," Gustafson says. "It's totally false that these women typified welfare recipients." While others believe the Welfare Queen will be dethroned, Gustafson remains unconvinced. "I would love to think that will happen," she says. "But I'm hearing politicians say poor people need to learn how to work or that we need to drug test welfare recipients -- it makes me think that even if people aren't directly invoking the Welfare Queen stereotype, they are indirectly. "The ghost of the Welfare Queen is still lurking."

Surveillance Good Turn

1NC – Fraud Turn

Welfare surveillance is key to check fraud which disproportionately affects minorities- that link turns the case

Peatling 12 [Stephanie-senior writer for the Sydney Morning Herald, 12/18/12, "Welfare fraud becomes harder", http://www.smh.com.au/federal-politics/political-news/welfare-fraud-becomes-harder-20121217-2bjfk.html**, Date Accessed: 7/9/15]Kruger**

SOPHISTICATED data-mining techniques combined with old-fashioned private detectives and dobbing in wrongdoers are resulting in fewer people being prosecuted for welfare fraud and allowing the federal government to claw back **hundreds of millions of dollars**. But, according to a report to be released on Tuesday, the idea of prevention being better than cure comes at a cost of high levels of government surveillance over the public as it tries to make sure the complicated tax, welfare and payments system pays the correct amount to each recipient. "The overwhelming majority of people are honest in their dealings with the government," Human Services Minister Kim Carr

says. "But responsible custodianship of this money through an e**ffective compliance program means help goes where it should** - to those most in need.

Fed surveillance key – states fudge the data to collect more money *– proves the CP solves the deadbeat dad narrative and the aff can't*

Baskerville 8 Stephen Baskerville is Ph.D. in Government, London School of Economics & Political Science, Professor of Political Science at Patrick Henry College Pub Date: 01/01/2008 Independent Review Wntr, 2008 Source Volume: 12 Source Issue: 3, http://www.freepatentsonline.com/article/Independent-Review/172775627.html

The federal funding also creates incentives to implicate men who are not even fathers and pull them into the criminal-enforcement machinery. One requirement for collecting federal payments is that states must institute paternity-establishment procedures, and nothing in the federal law prohibits or penalizes designating the wrong man as the father. "Eligibility ... depends only upon tagging the largest possible number of men, and there is no review or requirement that it be the right men," writes Ronald Henry (2006, 54). The result is "paternity fraud," the practice of forcing men to pay support for children who are acknowledged not to be their offspring. Most victims are low-income minority males, and many are young and even underage, with few of the skills or means to defend themselves in what Henry describes as a mass judicial "assembly line" that bears little relation to a hearing. "The paternity fraud victim is hustled through the formality, often in less than five minutes, and may not even realize what has happened until the first garnishment of his paycheck." Henry estimates that the number of such victims may exceed one million. "Every child support agency in America knows that it . .. has worked injustice upon appalling numbers of innocent men." In 2002, California governor Gray Davis vetoed a bill that would have rectified paternity fraud. After registering concern "for the children," Davis revealed his fear that the state would lose $40 million in federal funding. Thus, an elected official openly rationalized imposing criminal penalties on citizens known to be innocent simply in order to avoid losing money. "California has long been notorious for its high rate of 'sewer service,' high rate of default judgments, and high rate of false paternity establishments," notes Henry (2006, 54, 58, 63, 60-62, 66, 76, 55).

Ext – Key to Check Fraud

More ev-Surveillance solves fraud

Lichtblau 14 [et al, Eric-writer for NYT, William Arkin-writer for NYT, 11/15/14, "More Federal Agencies Are Using Undercover Operations", http://www.nytimes.com/2014/11/16/us/more-federal-agencies-are-using-undercover-operations.html**, date accessed: 7/9/15]Kruger**

WASHINGTON — The federal government has significantly expanded undercover operations in recent years, with officers from at least 40 agencies posing as business people, **welfare recipients**, political protesters and even doctors or ministers to ferret out wrongdoing, records and interviews show. At the Supreme Court, small teams of undercover officers dress as students at large demonstrations outside the courthouse and join the protests to look for suspicious activity, according to officials familiar with the practice. At the Internal Revenue Service, dozens of undercover agents chase suspected tax evaders worldwide, by posing as tax preparers, accountants drug dealers or yacht buyers and more, court records show. At the Agriculture Department, more than 100 undercover agents pose as food stamp recipients at thousands of neighborhood stores to spot suspicious vendors and fraud, officials said.

Impact – Quality of Life

Welfare money improves quality of life for low income families

Hill 10 **[Eric-Writer for The commonwealth times, 4/19/10,"Shifting the American dream, how social welfare will improve our lives",** http://www.commonwealthtimes.org/2010/04/19/shifting-the-american-dream-how-social-welfare-will-improve-our-lives/**, date accessed: 7/9/15]Kruger**

3. **Social welfare improves quality of life**. Everyone wants to be taken care of in some way or another, but not everyone has that. **Low**er **income families struggle to provide the bare necessities for their children, and because of this they tend to educate and provide only enough for their children to become trapped in the same cycle of destitution**. If there are free community centers, children and parents can provide a safe environment away from negative influences, they can receive free parenting training, use exercise facilities and develop career skills. Lately there has been a move away from community growth because of migration to cities, changes in the American economy to a credit and banking system and financial collapse of community industries. When the government invests in social welfare, it improves community structures for generations to come. For instance, Michelle Obama is working on a program called Let's Move, which is designed to eliminate childhood obesity within one generation. The First Lady has lobbied the food industry to improve the health of their products, and is re-energizing the national lunch program and President Physical fitness award to encourage more physical exercise in schools and more nutritious lunches.

Impact – Economy/Turns Case

Fraud disproportionately affects minorities and prevents economic growth

Roustan 10 **[Wayne-writer for the sun sentential, 11/19/10, "62 charged with welfare fraud totaling nearly $300,000",** http://articles.sun-sentinel.com/2010-11-19/news/fl-public-assistance-fraud-20101118_1_food-stamp-welfare-fraud-housing-fraud**, date accessed: 7/10/15]Kruger**

Boynton Beach — Sixty-one Palm Beach County residents and one from Tampa were charged with welfare fraud after an 18-month investigation dubbed Operation Easy Money, according to the Palm Beach County State Attorney's Office. Investigators have arrested 44 of the food stamp recipients and 18 are still being sought, said the Florida Department of Law Enforcement, which also worked on the case with the Palm Beach County Sheriff's Office and other agencies. The suspects illegally obtained $298,000 in cash from government-issued Electronic Benefit Transfer, or EBT, cards which were supposed to be used to buy food, said FDLE Special Agent in Charge Amos Rojas Jr. "In one egregious case, up to $14,000 [was obtained by one person] along with other prohibited items such as cigarettes, beer and phone calling cards," Rojas said. An earlier investigation, called Operation Money for Nothing, led to the April 2009 arrests of two brothers who ran Billy's Market, at 464 Dr. Martin Luther King Jr. Blvd, in Belle Glade. "Gassan Ali and Imad Ali were accused of trafficking in EBT food stamp benefits to the tune of more than **$1 million**," Rojas said. Both have pleaded guilty to grand theft and public assistance fraud worth $1.5 million between 2008 and 2009, he said. That's when the FDLE, Sheriff's Office and State Attorney launched Operation Easy Money to review EBT transactions at the store dating back to January 2006. Investigators said they found that Billy's Market employees would ring up false food purchases, return the cash to the card holder and keep a cut for the store, sometimes up to 50 percent, with little or no food changing hands. The store itself had "sparsely stocked shelves, sometimes with cans of expired food and no shopping carts or baskets," according to Rojas. Among the 61 accused of food stamp fraud are 16 also facing housing fraud charges for misrepresenting their incomes or employment status to qualify for housing assistance, according to the FDLE. In addition to the housing fraud, current Tampa resident Felicia Miller Johnson, 29, is also accused of lying about working for the Department of Corrections to fraudulently receive subsidized child day care while living in Palm Beach County, according to FDLE investigator Bob Nelson. Some of the 62 suspects were "driving luxury cars and they were in possession of luxury accessories that the working public" could not afford, said prosecutor Angela Miller with the State Attorney's Office. **"It's this type of fraud that not only hurts those who need it most, but it also hinders our nation's economic** recovery **efforts**," Sheriff's Office Chief Deputy Michael Gauger said.

Economic growth prevents extinction

Kemp 10 (Geoffrey Kemp, Director of Regional Strategic Programs at The Nixon Center, served in the White House under Ronald Reagan, special assistant to the president for national security affairs and senior director for Near East and South Asian affairs on the National Security Council Staff, Former Director, Middle East Arms Control Project at the Carnegie Endowment for International Peace, 2010, The East Moves West: India, China, and Asia's Growing Presence in the Middle East, p. 233-4

The second scenario, called Mayhem and Chaos, is the opposite of the first scenario; everything that can go wrong does go wrong. The world economic situation weakens rather than strengthens, and India, China, and Japan suffer a major reduction in their growth rates, further weakening the global economy. As a result, energy demand falls and the price of fossil fuels plummets, leading to a financial crisis for the energy-producing states, which are forced to cut back dramatically on expansion programs and social welfare. That in turn leads to political unrest: and nurtures different radical groups, including, but not limited to, Islamic extremists. The internal stability of some countries is challenged, and there are more "failed states." Most serious is the collapse of the democratic government in Pakistan and its takeover by Muslim extremists, who then take possession of a large number of nuclear weapons. The danger of war between India and Pakistan increases significantly. Iran, always worried about an extremist Pakistan, expands and weaponizes its nuclear program. That further enhances nuclear proliferation in the Middle East, with Saudi Arabia, Turkey, and Egypt joining Israel and Iran as nuclear states. Under these circumstances, the potential for nuclear terrorism increases, and the possibility of a nuclear terrorist attack in either the Western world or in the oil-producing states may lead to a further devastating collapse of the world economic market, with a tsunami-like impact on stability. In this scenario, major disruptions can be expected, with dire consequences for two-thirds of the planet's population.

Ext – Fraud Turns Case

More ev-Fraud disproportionately affects minorities-that turns case

WPXI 12 [WPXI-TV station in Pittsburgh,2/7/12, "Cracking down on welfare fraud: Is it hurting the innocent?", http://www.wpxi.com/news/news/local/cracking-down-welfare-fraud-it-hurting-innocent/nHXBT/**, date accessed: 7/9/15]Kruger**

Another measure requires the use of a fraud detection program that would run welfare applicants' information through an income eligibility verification system before providing benefits. Another reform would prevent "benefit shopping," where people apply for welfare benefits in a county other than the one in which they live in order to receive higher benefit payments. **"If somebody is applying for benefits they don't deserve, then we have a responsibility**, from a governmental perspective and a societal perspective, **to take those benefits away and use the dollars in a better form to help other folks in need**," said Reed.

Surveillance is key to solve fraud which effects people that are inflicted with poverty-turns case

AT: No Link – States Laws Solve Fraud

Maine Proves-States are awful at stopping fraud-prefer specific ev

Covert 14 [Bryce-is the Economic Policy Editor for ThinkProgress. She was previously editor of the Roosevelt Institute's Next New Deal blog and a senior communications officer, 1/8/14, "Governor's Attempt To Find Massive Welfare Fraud Turns Up Next To Nothing", http://thinkprogress.org/economy/2014/01/08/3136631/lepage-welfare/**, date accessed: 7/9/15]Kruger**

On Tuesday, Maine Gov. Paul LePage (R) released data on purchases made with state welfare benefits that he claimed exposed abuse, **but they only add up to less than a percent of all benefit transactions**. The data show that there were more than 3,000 transactions at bars, sports bars, and strip clubs made with EBT (electronic benefit transfer) cards loaded with **TANF** (Temporary Assistance for Needy Families, or welfare) and food stamp **benefits** between January 1, 2011 and November 15, 2013. The state doesn't track what was actually purchased, and some transactions can be withdrawals from ATMs at those locations. Given that there are about 50,000 of these transactions every month, or nearly 1.8 million in that time frame, as the state's Department of Health and Human Services (DHHS) spokesman told the Bangor Daily News, they only make up "about two-tenths of 1 percent of total purchases and ATM withdrawals," the paper calculates.

AT: Surveillance Ineffective/Fraud Inevitable

Fraud will increase in the future only surveillance can detect it and stop it

Wallack 14 [Todd-is a reporter for the Globe's metro section, mainly working on investigative stories. A graduate of Northwestern University, 3/4/14, "Reports of potential EBT fraud increase",
https://www.bostonglobe.com/metro/2014/03/04/state-data-shows-increase-reports-potential-fraud-food-benefits/Tcwb4rnheW1Nhf7Pq9W2XO/story.html**, date accessed: 7/10/15]Kruger**

After widespread complaints about welfare fraud, Governor Deval Patrick's administration appears to be stepping up efforts to reduce abuses of state food benefits, typically distributed through electronic benefit transfer cards, or EBTs. Staff members at the Department of Transitional Assistance reported 14,431 cases of potential fraud or abuse of food benefits to investigators through the first 10 months of 2013, an 87 percent increase over the same period in 2012, according to a report by Inspector General Glenn A. Cunha released Friday. The Supplemental Nutrition Assistance Program (formerly known as food stamps) serves about 880,000 individuals. Department officials attributed most of the increase to a streamlined system to report potential fraud. Transitional Assistance Commissioner Stacey **Monahan said her office more than quadrupled the number of investigators last year to root out fraud and tweaked the computer system to make it much easier for staff to file a report when they find something amiss.**

CASE DEBATE

--- NGO Advantage ---

Atrocities

Int'l law

1NC: NGOs Fail – Laundry List

These NGOs can't solve atrocities or civil society reform – multiple reasons.

- NGOs are one off projects – no sustainable change
- Responsive to donor demands, not local needs
- Flips the aff – makes civil society and governance worse – no checks

Hawthorne 4. [Amy, associate in the Democracy and Rule of Law Project @ Carnegie Endowment for International Peace, specialist on Middle East politics and on democracy promotion and is the editor of the Endowment's Arab Reform Bulletin, "MIDDLE EASTERN DEMOCRACY: Is Civil Society the Answer?" Carnegie -- March -- http://carnegieendowment.org/files/CarnegiePaper44.pdf]

Aid for prodemocracy groups often suffered from the opposite problem: too much informality. This assistance was typically for short-term, one-off projects, with little follow-up. Across the board, the evaluation of civil society projects was superficial, rarely getting past the question of how many activities were completed to probe the deeper issue of whether the assistance contributed to political change. Many civil society assistance programs were also overly instrumental. That is, the United States often looked upon NGOs as instruments to advance its own agenda. The result was that too often civil society assistance was designed around an American agenda of what issues NGOs should focus on and how. Financially strapped NGOs usually try to be responsive to such donor agendas in the hope of receiving funding, even when the recommended activities do not have much local resonance. This phenomenon is evident in the large numbers of Arab NGOs working on the environment and on women's issues, recent donor favorites, as well as in the launching of advocacy campaigns by service NGOs that have never before undertaken such activities. The line between donors' useful suggestion of new ideas and the imposition of an external agenda is a fine one. When the latter takes over, the result is programs that undermine the concept of civil society as a sphere where indigenous citizen groups pursue causes and activities of their own choosing. The second and larger problem was the fact that civil society aid was based on a flawed vision of civil society, its weaknesses, and its role in democratization. The U.S. conception of civil society equated the sectors it considered politically acceptable—service NGOs and certain prodemocracy groups—with civil society writ large. This had the effect of targeting assistance to the groups with the least political influence or the shallowest roots in the community and thus placing unrealistic expectations on them. In adopting such a narrow definition of civil society, assistance providers lacked a full understanding of how these groups fit into the broader sphere of civil society and why some citizens were more drawn to other forms of associative life. Narrowly targeted aid also missed the opportunity to help groups develop links to and build coalitions across sectors. Assistance providers also misdiagnosed the reasons for civil society organizations' weaknesses as agents of democratic change. Too often, NGOs' lack of political influence was attributed mainly to their lack of professionalism—often meaning the ways in which they differed from Western NGOs. Many NGOs do suffer from poor financial management and undemocratic internal practices, and many influential American NGOs are well managed. But there is no proven direct link between stellar accounting procedures and staff management and influence as an agent of democratic change in an authoritarian setting. More often, civil society groups derive political influence from charismatic leadership, activities and messages that appeal to a broad audience, deep community support, and the ability to mobilize diverse followers around their cause. As was explained above, service NGOs were unlikely to become the vanguard of democratic

change or lead governments to relax political controls on civil society, regardless of these groups' professionalism; prodemocracy groups struggled with the problem of isolation as much as they faced management challenges.

1NC: NGOs Fail – Corruption

No Solvency – NGOs are puppets of corrupt regimes.

Godrej 14 (Dinyar,associated with New Internationalist since 1989, but joined as an editor in 2000, "NGOs - do they help?", http://newint.org/features/2014/12/01/ngos-keynote/)

Along with governments and corporations, the two torrents of power in the global landscape, NGOs are seen as a third force. Indeed, the big international ones – the BINGOs – with budgets of hundreds of millions of dollars are pretty powerful. But are they a countervailing force, striving tirelessly for social justice and the underdog? Poverty alleviation may be the rhetoric, critics argue, but in practice little that is lasting has been achieved on this front by NGO activism. There is the compromising nature of their funding to consider – today contributions from governmental and intergovernmental aid agencies and from corporate donors often form the largest chunks of their income. Although some BINGOs will still deny it, this influences their outlook, making them increasingly accommodated to the wishes of their donors. Their language becomes all about forming partnerships with these interests, rather than challenging them. Work within the system, and business will transform the lives of the poor – it's the Bono school of development, but with taxes. In a recent article Dhananjayan Sriskandarajah, the secretary-general of Civicus, a global network of civil society organizations and activists, wrote: 'We have become a part of the problem rather than the solution. Our corporatization has steered us towards activism-lite, a version of our work rendered palatable to big business and capitalist states. Not only does this approach threaten no-one in power, but it stifles grassroots activism with its weighty monoculturalism.'6 In a short educational film called 'Does aid work?' made by Oxfam ('produced with the financial assistance of the European Union') the argument is that increased aid by rich countries will help people lift themselves out of poverty and make it a thing of the past.7 How exactly? By providing health interventions (anti-retroviral drugs for 1.4 million people in the last few years) and education (40 million children being educated). These are excellent things, no doubt about it. But Oxfam fails to mention how a poor, educated person on anti-retrovirals manages to magic themselves out of poverty in a system that is only interested in extracting their labour at the cheapest possible price. On the other hand its latest report, 'Even it Up: time to end extreme inequality', is more to the point, informing us that the world's richest 85 people have grabbed wealth equivalent to the poorest half of the world's population.8 It makes an urgent case for progressive taxation, action on tax evasion and for governments to invest in public services. It details some of the violence inequality does, cautiously praises some countries (Brazil, China – but oddly not the more revolutionary Venezuela) for achieving higher wages for workers, and is a model of reasonableness. It makes a series of excellent recommendations – including telling governments to govern in the public interest – but stops short of calling full out for a redistribution of this obscene wealth. Instead it suggests a cap on the income of the richest 10 per cent equivalent to that of the poorest 40 per cent. A fine advocacy document no doubt, but the coalface is elsewhere. And we have heard such noises before. Indeed, many a campaign to hold transnationals to account has petered out into 'working with business' and corporate social responsibility projects. We are at such a pass that some BINGOS actively seek corporate 'partners' with the promise to make the latter look good by association (see 'The company they keep'). Funding dependency and a hierarchical, corporate culture – many heads of BINGOs come from the business world – are a large part of the problem. According to Sriskandarajah: 'Our conception of what is possible has narrowed dramatically. Since demonstrating bang for your buck has become all-important, we divide our work into neat projects, taking on only those endeavours that can produce easily quantifiable outcomes. Reliant on funding to service our own sizeable organizations, we avoid approaches or issues that might threaten our brand or upset our donors. We trade in incremental change.'6

Ext: NGOs = Corrupt

Corrupt briefcase NGOs just pocket funds.

Lee 13 (Eugenia, ethnographer and qualitative researcher, "Donor funding and briefcase NGOs", http://actlocalfirst.org/2013/12/donor-funding-and-briefcase-ngos/)

What is a briefcase NGO and why do they exist? The term elicits imagery of an impeccably dressed individual holding a well-written proposal in a briefcase. The individual leading the briefcase NGO receives funding for their proposals, but ultimately pockets the money for themselves rather than use it for any programs. The instances of briefcase NGOs are numerous, ranging from Freetown in Sierra Leone to Arusha in Tanzania. In my time working in the informal settlements of Kibera and Mathare in Kenya, I've personally witnessed briefcase NGOs. The reasons for briefcase NGOs are quite complex. To understand the causes further, I spoke with Steve Kariithi, a local community leader who has devoted his life to working in Mathare Valley, the oldest slum in Nairobi, Kenya. Mathare Valley has an estimated population of 600,000 people. The entire community is comparable to the size of Boston in the USA, though it fits into a space 1/30th the latter's size. International organizations such as Médecins Sans Frontières can be found there, along with local organizations like Mathare Youth Sports Association. It's an interesting microcosm of what happens when international ideas meet local priorities. Based on Kariithi's and my own experiences working in local communities with briefcase NGO presence, we identified a number of reasons behind their formation, which we reflect on in this post. We also provide recommendations for funders to involve and understand the local community, as we believe this to be a critical component to prevent the funding and further rise of briefcase NGOs. Why do briefcase NGOs form in the first place? Briefcase NGOs don't always start out that way; some organizations launch with noble intentions. However, international funding agencies and foundations often dictate funding and program priorities, leaving cash-strapped NGOs few options other than to chase funding and adjust their strategic priorities in the process. Throughout the years in Mathare, local organizations have been forced to shift focus in order to obtain funding. As Kariithi says, "About 13 years ago, the big thing was education… all the big NGOs would support anyone doing scholarships… And then the next cycle after that [was] child nutrition. Then you went to HIV and AIDS. This one was humongous. This was probably one of the biggest after education." As a consequence of chasing the funding, organizations shift their focus and expertise to sustain themselves, moving even further from work they do well and making commitments that they can't deliver on; this is how the unintentional briefcase NGO is formed. To prevent unintentional briefcase NGOs, international funding partners need to understand priorities on the ground and solicit meaningful feedback from local partners. Currently, funding priorities are often communicated in a top-down manner, with no indication that feedback from local organizations is being considered. Local First's "Putting Local First into Practice" suggests that organizations stop acting essentially as contractors, but seek funding that stays true to the organization's mission and priorities, and that funders work with local implementing partners to achieve this. Supporting local talent and administrative costs is key to the long-term success of an organization. When the basic needs of employees aren't met, the line between where money should or shouldn't go blurs.

Briefcase NGOs weaken wages and labor protections in the name of good governance.

Carothers 99. [Thomas, Vice President for Global Policy and Co-Director of the Democracy and Rule of Law Project @ the Carnegie Endowment for International Peace, Formerly a Legal Adviser @ the US Department of State, an International Affairs Fellow @ the Council on Foreign Relations, and Guest Scholar @ the Woodrow Wilson Center for Scholars, Aiding Democracy Abroad: The Learning Curve]

As NGO development proceeds in some transitional countries, NGOs representing business interests areclearly becoming more powerful relative to public interest NGOs. The most effective part of the NGO sector in Romania is the growing set of NGOs that represent businesses, such as the National Council of Small and Medium

Enterprises. Unlike the public interest NGOs, these groups have their own domestic sources of funding (membership dues from businesses), a pool of talented, organized, energetic people to carry out their work, and above all, advocacy methods with teeth, such as member businesses pressuring the government on an issue by refusing to pay their taxes. Similarly, in Zambia, the NGOs that have most influence on government policy and the legislative process are not the human rights and democracy NGOs but the National Association of Manufacturers and other business groups. In some countries USAID supports business NGOs as part of civil society programs, in the hope that they will become advocates of anticorruption, governmental reform, and rule-of-law development. The advocacy agenda of business groups in transitional societies is less highminded in many cases, however, concentrating instead on measures specifically favorable to business, such as alow minimum wage, weak environmental laws, and minimal labor rights.

NGOs are massively corrupt – tanks solvency.

Sandbrook-3/11/15- Jeremy Sandbrook is the Ceo of Integritas360,and an Anti-Corruption, Integrity, Governance & International Development Expert "Corruption: What NGOs Don't Want You to Know!" LinkedIn. N.p., 11 Mar. 2015. Web. 22 July 2015 <https%3A%2F%2Fwww.linkedin.com%2Fpulse%2Ftrouble-paradise-ngo-accountability-corruption-part-2-sandbrook>.

Despite the growing level of funds channelled through NGOs (or maybe because of it), fraud and corruption continue to be a highly sensitive topic, with most NGOs reluctant to openly discuss it. This was highlighted a few years ago, when Médecins du Monde initiated a study in an attempt to open up discussion on corruption within the humanitarian aid sector (one of the most corruption prone areas of development). Of the 17 largest French NGOs contacted for a confidential interview, accounting for more than 80% of all French humanitarian aid, 11 refused to participate. Attitudes such as this, a general lack of transparency within the sector, and a scarcity of empirical evidence available on fraud and corruption, has resulted in the topic avoiding appropriate scrutiny.¶ Following on from my article on NGO accountability, this is the second in a series of three blogs examining NGO accountability and corruption. Its focus will be on what we know about actual corruption within the NGOs.¶ 'Rose-tinted' glasses': Corruption only happens in NGOs working in the developing world … or does it!¶ When the topic of corruption is raised, the natural inclination is to point the finger elsewhere. In the case of Northern NGOs, this tends to be at their counter-parts operating in the developing environments of the South. This was brought home to me in a discussion with a CEO & President of a North American based INGO last week, who stated with absolute conviction, that the 'real' need for anti-corruption measures was in Southern NGOs, as those in the North (like his) could safely "rely" on their external auditors and internal risk management systems to prevent it from happening. When I pointed out that the latest ACFE fraud survey showed that he had twice the chance of uncovering a fraud within his INGO by accident (at 6%) then it being uncovered by his external auditors (at 3%), he was a little taken aback. That aside, just how accurate was his assertion that the problem of fraud and corruption within the NGO / non-profit sector is limited to certain parts of the world?¶ While research available on NGO corruption is predominantly drawn from newspaper articles of fraud reported in national NGOs in the North, it represents the tip of the iceberg, as a KPMG survey has found that 77% of all fraud investigations never reach the public domain, and 54% are not even communicated internally. In a 2014 survey into fraud in the Australian NGO sector, 54% of respondents advised that they did not report fraud to the Police because of "concerns relating to the impact of future funding opportunities, and potential damage to the organisation's reputation". While over 90% of respondent's viewed it as a problem for the non-profit sector as a whole (in another show of 'finger pointing'), only 1 in 4 saw it as a problem for their own organisation!

NGOs fail – bureaucratic nightmare.

Bunting 11. [Madeleine, columnist and associate editor, "NGO hopes to benefit from failure" The Guardian -- Jan 17 -- www.theguardian.com/global-development/poverty-matters/2011/jan/17/ngos-failure-mistakes-learn-encourage]

On balance, it's probably a risk worth taking. A more grown-up conversation about NGOs and their work is overdue. BBC Radio 4's Ed Stourton did a very thought-provoking programme last week, arguing that "the aid sector is facing a crisis of identity" over its impact and effectiveness. **In 60 years of aid, it hasn't delivered what people expected,** he said. A range of interviewees pointed out how NGOs have grown into bureaucratic organisations that are often very distant from the people they claim to be empowering. Many have "internalised the logic of the marketplace", keen to get their hands on as much money as possible, creating tensions with their ethical commitments. One of the interviewees was Linda Polman, whose excellent book War Games raises many of these issues, and in particular shows how the media and NGOs use one another – and in the process often disastrously distort the reality on the ground.

Ext: Bureaucracy → Fail

Bureaucratic mismanagement dooms NGO effectiveness.

Wild et al 12 (Leni, Victoria Chambers, Maia King and Dan Harris, expert in political economy and service delivery, accountability and aid, focusing on fragile and post-conflict countries, experienced researcher in the politics of service delivery, with extensive field experience in sub-Saharan Africa, Overseas Development Institute ,Macro-Fiscal Analysis Unit, Ministry of Finance, Liberia ,Ministry of Economy, Trade and Industry, Madagascar, political economist with an interest in the relationship between policy and practice in reform processes, "Common constraints and incentive problems in service delivery", Overseas Development Institute, http://www.odi.org/sites/odi.org.uk/files/odi-assets/publications-opinion-files/7791.pdf)

Common symptoms linked to forms of political market imperfections include the diversion or misuse of resources (e.g. where resources are redirected to the dominant political party or to dominant kin or ethnic groups) and the poor supervision of politically appointed staff, contributing to poor performance or behaviour and undermining organisational accountability relationships. There are various examples of resources for service delivery being misused or diverted, contributing to their inequitable distribution. In Malawi, funds collected for water kiosks were instead kept by chairs of the committees and funnelled to the dominant party. The Water Board often felt unable to press for payment as committees were linked to the ruling party (Cammack, 2012; Cammack and Kanyongolo, 2011). In Zimbabwe, the dominance of elite coalitions reportedly led to a focus on large infrastructure projects, such as the building of a new pipeline to access water from the Pungwe River, rather than addressing the real causes of significant water losses (Gumbo and van der Zaag, 2002). In South Sudan, it meant high salary expenditures and poorly qualified staff in ministries, contributing to shortfalls in other areas, such as capital and operational costs (EuroTrends 2006). In other contexts, poor human resource management has contributed to poor performance and to understaffing. In Nepal, for instance, accountability and performance oversight were limited owing to the political connections of staff and influence of political parties (Jones, 2012). In Niger, 16 problems of political interference with human resources contributed to the frequent understaffing of rural health units (Diarra, 2009).

1NC: NGOs Fail – Neo-Colonialism

Western funded NGOs re-entrench systems of paternalism and neo-colonialism.

Frantzman 13. [Seth, Ph.D from the Hebrew University of Jerusalem in 2010 and is a fellow at the Jerusalem Institute for Market Studies, "Neo-colonialism and the failure of NGO culture" Jerusalem Post -- March 16 -- www.jpost.com/Opinion/Columnists/Neo-colonialism-and-the-failure-of-NGO-culture-309985]

This is part of a wider Russian crackdown on NGOs that receive foreign money. The government has forced them to register as foreign agents, and has raided their offices. This seems to be a one-sided story of thuggish authorities threatening sweet little NGOs that only seek to advance human rights and an open civil society. But there is another question that should be asked. Has all the foreign funding revealed an institutional weakness in the model of advancing the goals NGOs supposedly have? After the fall of the Soviet Union, Westerners flocked to the "new Russia" and donors such as George Soros sought to fund the nascent civil society that was testing the new democracy. The total amount plowed into NGOs in Russia that sought to work on all manner of projects, from gay rights to government transparency, will never be known but the BBC estimated Soros alone gave $1b. over 15 years.∂ Suffice it to say many NGOs in Russia were set up by foreign donors, with foreign advisers, and worked to advance notions common in the West of democracy and human rights.∂ In two decades of foreign-funded activity it seems very little financial support for the work of NGOs like Memorial ever came from local sources. How is it possible that in a country as wealthy as Russia locals didn't support the work of these groups? Why is it that local NGOs never saw this as a fundamental problem, that they didn't seek to wean themselves of foreign donations and survive locally? The major problem is that funding for NGOs is so generous that these local NGOs never feel they need to even bother looking for local sources of cash. In a now infamous leaked 2010 cable from the US embassy in Tel Aviv, it was revealed that Jessica Montell of the Israeli NGO B'Tselem met the American political officer and "estimated her NIS 9 million budget is 95 percent funded abroad." How is it possible that in a country where the GDP is $242b., that $2.4m. could not be found for B'Tselem? There are no wealthy people on the Left in Israel that might donate to this organization? B'Tselem's funding is similar to most of Israel's left-wing NGOs. Almost all of their funding, approaching 100% in many cases, comes from European governments, EU funds or American donors.∂ This gives their work the clear imprimatur of being a foreign influence in Israel.∂ IN MANY cases European countries seek to advance their own political goals in the region, such as monitoring settlements, encouraging Israel to accept asylum seekers, or removing Jewish outposts in the West Bank, by funding Israeli NGOs that hire lawyers to argue cases before the Supreme Court. It is easier for a European country to pretend that "Israelis" took a case against a Jewish outpost in the West Bank to the Supreme Court than for the European country to demand Israel remove the outpost.∂ This provides the veneer of a "local" role in antisettlement activity. Similarly EU countries fear meddling in Israel's sovereignty by saying that the country should provide free land to Beduin or settle foreign migrants who claim to be refugees – but if these same countries provide $200,000 in funding to a group fighting for migrant or Beduin rights, the policy may be achieved without a diplomatic row with Israel.∂ This model of NGO funding has become common throughout the world. The EU and North American funders support most human rights NGOs. Whether it is freeing monkeys from their trainers in India, or fighting female genital mutilation in Africa, the money flows from Europe to help "educate" the locals. In many ways this constitutes part of a neocolonialism that replaces the old-style colonial administration with buying influence through local groups to encourage the spread of certain values.

That turns solvency.

Frantzman 13. [Seth, Ph.D from the Hebrew University of Jerusalem in 2010 and is a fellow at the Jerusalem Institute for Market Studies, "Neo-colonialism and the failure of NGO culture" Jerusalem Post -- March 16 -- www.jpost.com/Opinion/Columnists/Neo-colonialism-and-the-failure-of-NGO-culture-309985]

In general the foreign funding acts not only as a form of neo-colonialism and creates dependency, but it also has the negative side effect of reinforcing local elites and retarding the growth of local civil society. When every NGO working on women's rights in a place like Morocco is funded from abroad, it creates a culture where no NGO that wants to work on women's rights feels the

need to go to locals for funding.∂ For instance, EuropeAid (a part of the European Commission) provided 255,000 euros to the Egyptian Women's Center, funding 80% of a program for women in elections. In another case EuropeAid provided 16m. euros to fund 95% of a Save the Children project in Bangladesh "to promote access and increase basic education outcomes for 160-400 hardest to reach and marginalized children."∂ There is no localization of the skills needed to increase protection of issues like women's rights in society. No broad-based support is created. Instead the result is a local NGO elite that involves several people who have connections to foreign funding and who are able to enrich themselves at the breast of the EU or other Westerner countries.

Ext: Neo-Colonialism Turn

Western supported NGOs fail – true reform only comes from the bottom up.

Frantzman 13. [Seth, Ph.D from the Hebrew University of Jerusalem in 2010 and is a fellow at the Jerusalem Institute for Market Studies, "Neo-colonialism and the failure of NGO culture" Jerusalem Post -- March 16 -- www.jpost.com/Opinion/Columnists/Neo-colonialism-and-the-failure-of-NGO-culture-309985]

Western donors should consider the great ill that their funding policy is creating in the world. Why donors think that throwing money at a "human rights" issue in India or Thailand will help the problem is unclear. Western culture would not change at the behest of Chinese-funded NGOs. Would Germans suddenly stop eating meat just because a Hindu-funded NGO encouraged them to treat cows with respect and stop wearing leather? No. Only indigenous vegetarian activism might encourage a change in such habits.∂ Every human rights achievement that has progressed in the West, such as gay rights, has been at the behest of local changes in attitudes and culture, not because of a few wealthy businessmen from another continent. And yet people somehow assume that throwing hundreds of millions of dollars will change local attitudes. The result is that local attitudes remain unchanged, and the money simply enriches a few people in a foreign country.

1NC: Alt Caus

Multiple Alternate Causalities to NGO Ineffectiveness;

A. Lack of resources.

Johnson 14. [Giff, editor of the Marshall Islands Journal, "Pacific NGOs need government support" Pacific Institute of Public Policy -- September 15 -- pacificpolicy.org/2014/09/pacific-ngos-need-government-support/]

It may seem like an oxymoron to say non-government organizations should receive government funding. But in most Pacific islands, NGOs provide key community-level services yet are notoriously under-funded for the work they do. A key fact exacerbating the difficult financial situation for most NGOs is that foreign donors frequently will provide funding only for activities, but none for employees to carry out the activities. The contribution to national development, and delivery of health, youth and women's services by NGOs around the region is obvious and irrefutable. One outstanding example is Wan Smolbag, a theater company in Vanuatu that recently celebrated its 25th anniversary of operations and now, in addition to engaging drama programs, operates health clinics, youth programs and other community services. Particularly in the smaller islands, though—such as Marshall Islands, Kiribati, Tuvalu, Federated States of Micronesia—there is no corporate funding base for NGOs to gain support. While businesses do contribute to NGOs, these tend to be modest few hundred-dollar donations from time to time. These islands don't have Ford or Rockefeller Foundations waiting to provide grants to worthy organizations. NGOs, meanwhile, are driven by vision, motivation and energy—or they wouldn't exist. These attributes are, sadly, too often missing in government agencies, but fuel NGO work at the grassroots level. It is this very reason why NGOs can do impressive work and provide unmatched services to the community. And the NGOs that have operated for a decade or longer have demonstrated perseverance and, to borrow some jargon from the climate sector, "resilience" in the face of overwhelming funding challenges and odds against their continuing as going concerns. Donors repeatedly flip-flop between directly funding NGOs or channeling grants through government departments as the grant brokers, adding another layer of bureaucracy—and difficulty—for NGOs to overcome. Or international donors stop funding accomplished NGOs altogether, saying they should replace their donor aid with domestic funding. The big question, particularly for small islands, is: are there any non-government sources for core operations funding? NGOs need funding to pay staff to deliver programs, but where can they find it at home?

B. Demands from donors ensure corruption.

Lee 5-2-14- Eugenia Lee worked as an international development worker before becoming a social impact ethnographer. "Does Foreign Aid Make NGOs Corrupt?" The Guardian, 2 May 2014. Web. 22 July 2015. <http%3A%2F%2Fwww.theguardian.com%2Fglobal-development-professionals-network%2F2014%2Fmay%2F01%2Faid-local-ngos-dishonest-development>.

You may never have heard the term "briefcase NGO" but you may well know the type of organisation it describes. A briefcase NGO exists, metaphorically or literally, inside a briefcase. It may have well-written proposals and access to western donors but for one reason or another, any funding it receives for programmes goes into the pockets of those running the NGO. These NGOs can be run by foreigners and local community members alike but here I will focus on the latter.¶ No one knows how prevalent briefcase NGOs are. I've personally come across several while working in Mathare – the oldest slum in Nairobi, Kenya, where international NGOs such as Médecins Sans Frontières mingle with local organisations like Mathare Youth Sports Association.¶ The reasons briefcase NGOs exist are complex but from extensive conversations with Steve Kariithi, a local community leader, I have been able to draw out two key points that can help funders encourage genuine community work: understand local strengths and values and support local capacity.¶ Understand local strengths and values¶ Many briefcase NGOs begin with noble intentions. But international funding agencies often dictate funding and programme priorities, causing cash-strapped NGOs to chase funding and adjust strategic visions.¶ This has happened with local organisations in Mathare. Steve Kariithi says: "13 years ago, the big thing was education. All the big NGOs would support scholarships … after that [came] child nutrition. Then HIV and Aids."¶ As a consequence of chasing funding, organisations shift their focus away from their areas of expertise into where the money is to sustain themselves. This causes them to make commitments they can't deliver on; thus, the briefcase NGO can be unintentionally formed.¶ Funding priorities are often communicated in a top-down manner, with few systems in place for considering feedback from local organisations. To prevent this, major international funders must work to understand the unique expertise local organisations offer.¶ Understanding and acknowledging local values while funding is also important to preventing briefcase NGOs. "We have people who come in to assist without being sure about what dreams, what values people have … I really believe in partnerships where people come alongside [each other]. There's nothing wrong with people giving money. But I think a crucial component is that that money goes in not to fund a western dream, but a local dream," says Kariithi.¶ If a vision is also owned and co-developed with the community, it's more likely to be locally driven and sustainable, not become a briefcase NGO.¶ Support local capacity¶ Supporting local talent and administrative costs is key. Donors generally stipulate that a certain percentage of the budget be allocated to

administrative costs. This is a controversial practice, and unfortunately that percentage sometimes isn't enough to support the entire staff. When the basic needs of employees aren't met, the line between where money should or shouldn't go can start to blur.¶ As the report 'Dishonesty in the Charitable Sector' (pdf) describes, briefcase NGOs spread because of high unemployment and lack of opportunities. Within Mathare, local partners may support change but also see working with NGOs as an opportunity to earn salaries.¶ "A lot of NGOs start out with genuine people," Kariithi says. But when employees cannot pay their bills, they use the funding to pay their salaries first, and then spend the remainder for their programmes. "People sometimes feel like, 'You [the funder] have more than me. Why shouldn't I have some of your money? Let me make my life better in some way.'"¶ Funders should ensure that fair wages are paid – which means allowing an individual to sustain basic living costs with savings left over. This will help funders build stronger local relationships and commitment to project goals. While it's true that many drawn to this work are also motivated by opportunity and entrepreneurship, that and empowering others to do good need not be mutually exclusive.¶ What next?¶ The message here isn't to cut funding of NGOs in the developing world, but to encourage funders to work more with local communities to understand how capabilities, needs, and aspirations can be reflected in NGO presence and funding needs. While community partners sometimes have different priorities, this doesn't inherently have to be in tension with the idea of doing good. Understanding how to develop positive, mutually-beneficial relationships between local organisations and funders is key to preventing briefcase NGOs.

Ext: NGO's Fail

NGOs fail:

A. they ignore atrocities and prop up systems of inequality.

Godrej 14 (Dinyar,associated with New Internationalist since 1989, but joined as an editor in 2000, "NGOs - do they help?", http://newint.org/features/2014/12/01/ngos-keynote/)

We could start with Bangladesh, which has the world's largest national NGOs, effectively operating as a parallel government – they put more money into development activities than the government does. Most of their beneficiaries remain firmly below the poverty line. There is criticism, too, of the market model of development they have followed. This has been over-reliant on microcredit, which produces 'rational profit-seeking individuals' rather than community efforts – to say nothing of the debt traps many have found themselves in. Or we could look at the Philippines, where I had the opportunity to observe first-hand how joined up small radical NGOs were, both with each other and the communities they were reaching out to, unafraid of supporting people's resistance. Successive governments have actively encouraged NGO participation in government departments and on all kinds of local boards. Has this co-opted them? The successes they have achieved remain localized. They have been able to make no dent in the fundamental problem that has plagued the country – the concentration of wealth and land in just a few hands and continued élite governance. The 25 richest Filipinos continue to grow richer, with assets almost equal to the annual income of the country's 55 million poorest citizens.11 It is perhaps unrealistic to expect such large structural changes to be delivered by NGOs when governments don't tackle them either. When it comes to emergency humanitarian assistance, certain specialist NGOs are the first port of call. Criticism often follows later about duplication of efforts, mishandling of the situation or of not being consultative enough in reconstruction efforts. But no assistance is the worse option in this instance. On the environmental front we have some of the most activist large NGOs, whose members are unafraid to put their bodies on the line, as well as some of the most corporate friendly and compromised (read about the latter on page 20). NGOs have achieved much in single-issue campaigning, ranging from the abolition of slavery to the landmines ban and access to HIV medication. When it comes to defending human rights, whether it be espousing the causes of political prisoners or mounting challenges to the persecution of sexual minorities, they have often invited the ire of governments. It is this kind of work that governments want to shut down when they seek to ban NGOs or to stop them receiving foreign funds. Sadly, this is not a disinterested field with universal values. Western NGOs can be quicker to condemn human rights abuses in the Majority World than in their own. Human Rights Watch has come under fire for its revolving door with the US government: in 2009 its advocacy director Tom Malinowski, who had previously served as special assistant to Bill Clinton and

speechwriter to Madeleine Albright, even justified CIA renditions 'under limited circumstances'.12 It has also shown bias in its reporting of war crimes committed by Israel and Palestine.13 Even the clumsy, lumbering BINGOs achieve much in material terms, but will they really put their shoulders to the wheel behind the greatest liberation struggle of our times, the struggle of the 99 per cent for greater equality? If the largest appropriators of the planet's wealth want to pose as grand philanthropists, should NGOs really line up to take their cash? Can they please get beyond donor benevolence – and being delivery vehicles for highly politicized and often harmful aid – to reconnect with people's struggles for justice? NGOs are expected to be non-political, but everything they do, operating within highly skewed systems of power, cannot but be political. They might as well get their hands truly dirty.

NGOs has no significant impact – Diamond mining proves.

Miller 15 (Jeff Miller, 6.26.15, Article writer for Diamonds.net, ∂ "U.S. Human Rights Report Notes Child Labor in Many Diamond Regions," http://www.diamonds.net/News/NewsItem.aspx?ArticleID=52686&ArticleTitle=U.S.+Human+Rights+Report+Notes+Child+Labor+in+Many+Diamond+Regions) J.C

The reported noted that Botswana respected constitutional law regarding freedom of internal movement, foreign travel, emigration and repatriation; however, there were no programs addressing discrimination against Basarwa and with the exception of a 2006 court ruling, there were no demarcated cultural lands -- generally considered to be the Central Kalahari Game Reserve (CKGR). Since 2006, a number of NGOs made efforts to promote the rights of the Basarwa, or to help provide economic opportunities, but such programs had only limited impact, the U.S. concluded. Survival International, along with other independent organizations, continued to criticize the government for allowing diamond mining in the CKGR, arguing that diamond exploration has a significant negative impact on the life and environment of the Basarwa

Ext: Alt Caus – No Funding

Lack of funding causes NGOs to cover up failures – be skeptical of aff claims.

Sullivan 13(Rory, Dr. Rory Sullivan is Strategic Advisor, Ethix SRI Advisers and a Senior Research Fellow at the University of Leeds, and was previously Head of Responsible Investment at Insight Investment, Financial sustainability: why NGOs are failing to engage investors,http://www.theguardian.com/sustainable-business/financial-sustainability-ngos-fail-to-engage-investors)

It is far too common to find an NGO's token "investment campaigner" trying to cover a variety of issues and, importantly, a variety of investors and investor types. This, inevitably, means that the campaigner's efforts are diluted beyond any point of effectiveness. This lack of resources reflects the common lack of understanding within NGOs' senior management teams of the complexity of the investment/finance sector and – not entirely unrelated – the relatively novel nature of capital market campaigning means they are often reluctant to commit significant resources to this area of work.

NGOs suck at fundraising – lack of capital guts their effectiveness.

Sullivan 13(Rory, Dr. Rory Sullivan is Strategic Advisor, Ethix SRI Advisers and a Senior Research Fellow at the University of Leeds, and was previously Head of Responsible Investment at Insight Investment, Financial sustainability: why NGOs are failing to engage investors,http://www.theguardian.com/sustainable-business/financial-sustainability-ngos-fail-to-engage-investors)

It is far too common to find an NGO's token "investment campaigner" trying to cover a variety of issues and, importantly, a variety of investors and investor types. This, inevitably, means that the campaigner's efforts are diluted beyond any point of effectiveness. This lack of resources reflects the common lack of understanding within NGOs' senior management teams of the complexity of the investment/finance sector and – not entirely unrelated – the relatively novel nature of capital market campaigning means they are often reluctant to commit significant resources to this area of work.

NGOs are structurally incapable of maintaining consistent funding.

Sullivan 13(Rory, Dr. Rory Sullivan is Strategic Advisor, Ethix SRI Advisers and a Senior Research Fellow at the University of Leeds, and was previously Head of Responsible Investment at Insight Investment, Financial sustainability: why NGOs are failing to engage investors,http://www.theguardian.com/sustainable-business/financial-sustainability-ngos-fail-to-engage-investors)

Lack of understanding Sometimes an NGO clearly does not understand the basics of the capital markets, assuming that they are a monolithic whole rather than a whole series of actors with different investments and investment timeframes, objectives and interests. To put the point starkly, having to explain the difference between, for example, investment management and retail banking does not engender investor confidence in the credibility of the NGO or the NGO's agenda. Lack of resources It is far too common to find an NGO's token "investment campaigner" trying to cover a variety of issues and, importantly, a variety of investors and investor types. This, inevitably, means that the campaigner's efforts are diluted beyond any point of effectiveness. This lack of resources reflects the common lack of understanding within NGOs' senior management teams of the complexity of the investment/finance sector and – not entirely unrelated – the relatively novel nature of capital market campaigning means they are often reluctant to commit significant resources to this area of work. Short-termism It is rare to see NGOs that are prepared to invest the time in understanding the capital markets, developing relationships and identifying and understanding the potential points of leverage. Far too often, NGOs do some initial work, such as a research report, and start to develop the knowledge and expertise they need to engage effectively. Then, whether because of other internal priorities or a desire to move on, they simply forget about investors and move on to the next issues. This is such a common feature of NGO campaigns that investors know that, when they are approached or targeted by NGOs, the best response in most cases is simply to wait, knowing that the NGO will soon move on to the next issue.

1NC: International Law Defense

Zero impact - International law doesn't prevent conflict

Hiken, 12 (Associate Director Institute for Public Accuracy, 7-17-'12 (Luke, "The Impotence of International Law" http://www.fpif.org/blog/the_impotence_of_international_law)

Whenever a lawyer or historian describes how a particular action "violates international law" many people stop listening or reading further. It is a bit alienating to hear the words "this action constitutes a violation of international law" time and time again – and especially at the end of a debate when a speaker has no other arguments available. The statement is inevitably followed by: "…and it is a war crime and it denies people their human rights." A plethora of international law violations are perpetrated by every major power in the world each day, and thus, the empty invocation of international law does nothing but reinforce our own sense of impotence and helplessness in the face of international lawlessness. **The United States, alone**, and on a daily basis **violates every principle of international law ever envisioned:** unprovoked wars of aggression; unmanned drone attacks; tortures and renditions; assassinations of our alleged "enemies"; sales of nuclear weapons; destabilization of unfriendly governments; creating the largest prison population in the world – the list is virtually endless. Obviously one would wish that there existed a body of international law that could put an end to these abuses, but such laws exist in theory, not in practice. Each time a legal scholar points out the particular treaties being ignored by the superpowers (and everyone else) the only appropriate response is "so what!" or "they always say that." If **there is no enforcement mechanism** to prevent the violations, and no military force with the power to intervene on behalf of those victimized by the violations, what possible good does it do to invoke principles of "truth and justice" that border on fantasy? The assumption is that by invoking human rights principles, legal scholars hope to reinforce the importance of and need for such a body of law. Yet, in reality, the invocation means nothing at the present time, and goes nowhere. In the real world, it would be nice to focus on suggestions that are enforceable, and have some potential to prevent the atrocities taking place around the globe. Scholars who invoke international law principles would do well to add to their analysis, some form of action or conduct at the present time that might prevent such violations from happening. Alternatively, praying for rain sounds as effective and rational as citing international legal principles to a lawless president, and his ruthless military.

Ext: Int'l Law Fails

International law doesn't deter conflict

Wippman 96 (David, Associate Professor – Cornell Law School, Columbia Human Rights Law Review, 27 Colum. Human Rights L. Rev. 435, Spring, Lexis)

What international law has long attempted to prohibit, or at least to regulate, is foreign involvement in internal conflict. 4 Foreign [*436] participation in an internal conflict heightens the risk that the conflict will spread to other states and transform an internal struggle into an interstate war. In addition, foreign involvement may deny the people of the affected state the right to determine their own political future. As a result, foreign involvement in internal conflicts often undermines two of the principal goals of the international legal order: the containment of conflict and the preservation of the internal autonomy of each state. 5 Accordingly, contemporary international law is formally non-interventionist: no state is supposed to interfere in civil strife in another state. [6] Nonetheless, foreign intervention in internal conflicts is more the rule than the exception. 7 In the past, foreign intervention consisted almost exclusively of unilateral acts by individual states. During the Cold War, political polarization between East and West made it virtually impossible to achieve the consensus necessary to support collective interventions. With the end of the Cold War, however, collective interventions have become more common. When individual states intervene unilaterally in internal conflicts, they typically seek to justify their involvement under legal principles deemed consistent with, or in some cases, deemed more important than, the principle of non-intervention. In some cases, states rely

on consent of the affected state, on the theory that the principle of non-intervention only bars conduct that amounts to "dictatorial interference" in a state's internal affairs. 8 States also frequently justify intervention as necessary to insulate a state from the effects of another state's prior, illegal intervention, or as necessary to defend a state from an illegal external attack. 9 On occasion, states rely on international human rights norms or democratic principles to justify their support for one faction or another in a particular conflict.

No enforcement for int'l law.

Posner and Sykes 11 ("Efficient Breach of International Law: Optimal Remedies, 'Legalized Noncompliance,' And Related Issues" Eric A. Posner-Kirkland & Ellis Professor of Law, University of Chicago Law School- and Alan O. Sykes-James & Patricia Kowal Professor of Law, Stanford Law School, November 2011, http://www.michiganlawreview.org/assets/pdfs/110/2/Posner.pdf pg. 257)

For many areas of international law, however, nothing comparable to the WTO dispute settlement system is available. In some contexts, no adjudicative body—or none to which all parties will submit themselves—exists to assess the existence of a breach of international law. In other contexts, even if a ruling on the existence of a violation is obtainable, a mechanism for authorizing sanctions or retaliation is absent. The preeminent international court, the International Court of Justice, has no enforcement mechanism; nations can (and do) defy its rulings and withdraw from it in order to avoid its jurisdiction.48 The International Criminal Court, the most recently established international court, also lacks an enforcement mechanism and must depend on member states to arrest, detain, and imprison defendants.49 As a consequence, formal noncompliance with some aspect of international law may be the best option for addressing violations of international law by other nations. In Part II, we will offer various examples in which this situation arise

--- Court Advantage ---

1NC: Rodriguez Thumper

Rodriguez decision thumps their 4th amendment internal link.

Root 15. [Damon, senior editor and author, "Supreme Court Says Police Violated 4th Amendment When Use of Drug-Sniffing Dog Prolonged Routine Traffic Stop" Reason Magazine -- April 21 -- reason.com/blog/2015/04/21/supreme-court-says-police-violated-4th-a#.fahp0w:xNBY]

In a 6-3 decision issued today in the case of Rodriguez v. United States, the U.S. Supreme Court held that Nebraska police violated the Fourth Amendment by extending an otherwise lawful traffic stop in order to let a drug-sniffing dog investigate the outside of the vehicle.∂ According to the majority opinion of Justice Ruth Bader Ginsburg, which was joined by Chief Justice John Roberts and Justices Antonin Scalia, Stephen Breyer, Sonia Sotomayor, and Elena Kagan, "a police stop exceeding the time needed to handle the matter for which the stop was made violates the Constitution's shield against unreasonable seizures."∂ While "an officer...may conduct certain unrelated checks during an otherwise lawful traffic stop," Ginsburg held, "a dog sniff, unlike the routine measures just mentioned, is not an ordinary incident of a traffic stop."∂ At issue was a 2012 traffic stop conducted by a Nebraska police officer who happened to have his K-9 dog in the cruiser with him. When the stopped driver, Dennys Rodriguez, refused to consent to letting the drug dog walk around the outside of his vehicle, the Nebraska officer called for back-up,

thereby prolonging the stop by an additional eight minutes. According to the Court's ruling today, those extra minutes violated Rodriguez's constitutional rights under the Fourth Amendment.∂ During the January 2015 oral argument in the case, Justice Sonia Sotomayor previewed the Court's skepticism towards the police officer's approach. "We can't keep bending the Fourth Amendment to the resources of law enforcement," Sotomayor declared. "Particularly when this stop is not incidental to the purpose of the stop. It's purely to help the police get more criminals, yes. But then the Fourth Amendment becomes a useless piece of paper."

1NC: Riley Thumper

Squo solves the aff – liberal Court ruling on NSA surveillance inevitable.

Nelson 14. [Steven, "Supreme Court Cellphone Ruling May Tilt NSA Fight" US News and World Report -- July 3 -- www.usnews.com/news/articles/2014/07/03/supreme-court-cellphone-ruling-may-tilt-nsa-fight]

The U.S. Supreme Court declined to hear two challenges to the National Security Agency's dragnet collection of American phone records during its 2013-2014 term, but lawyers challenging the NSA program hope the court's landmark decision on cellphone privacy foreshadows a snooping stomping.∂ In a unanimous June 25 ruling, the court said in Riley v. California and U.S. v. Wurie that police must generally acquire a warrant before searching a person's cellphone.∂ "[I]t is no exaggeration to say that many of the more than 90 [percent] of American adults who own a cellphone keep on their person a digital record of nearly every aspect of their lives – from the mundane to the intimate," Chief Justice John Roberts wrote in the court's majority opinion, finding the Fourth Amendment shields even arrested people from warrantless phone searches.∂ Roberts carved out exceptions when there's an imminent risk of death or injury or when evidence may be lost, but discounted generalized fears of evidence-destruction.∂ [READ: Privacy Watchdog Says NSA Spying Legal, Effective]∂ The cellphone ruling referenced the court's 2012 U.S. v Jones decision, which prohibited warrantless GPS tracking. Surveillance foes hope the Jones ruling will guide a rebuke to the NSA's warehousing of billions of phone records.∂ "Historic location information is a standard feature on many smartphones and can reconstruct someone's specific movements down to the minute, not only around town but also within a particular building," Roberts wrote, quoting Justice Sonia Sotomayor's concurring opinion in Jones that "GPS monitoring generates a precise, comprehensive record of a person's public movements that reflects a wealth of detail about her familial, political, professional, religious and sexual associations."∂ Roberts also noted it's not always clear if content is stored on the phone itself or on the digital cloud. Searching phone content that's stored on remote servers is "like finding a key in a suspect's pocket and arguing that it allowed law enforcement to unlock and search a house," he wrote.∂ Even low-tech flip-phones, he wrote, are protected from warrantless searches because such searches might identify information such as a suspect's home address.∂ [ALSO: White House Ignores Snowden Petition for Full Year]∂ The NSA's bulk collection of U.S. phone records – including numbers dialed, the duration and time of calls and location data – isn't precisely analogous to the cellphone searches proscribed by the court.∂ But Larry Klayman, a conservative legal activist challenging the NSA phone record collection, says the writing is on the wall.∂ "**It pretty much cements victory in our case,"** he says.∂ Attorneys defending the NSA phone program lean heavily on the Supreme Court's 1979 decision in Smith v. Maryland, which allows the warrantless acquisition of third-party-held phone metadata, over which that decision says phone customers lack a reasonable expectation of privacy.∂ **"Smith no longer applies, Smith was basically trashed**," Klayman says. "All of the government's briefs are now null and void."∂ He expects that claim to be validated in future court rulings.

1NC: No Model

No modeling – newest ev.

Law and Versteeg 12. [David, Prof. of Law and Prof of PoliSci @ Washington University, St Louis, PHD @ Stanford, JD @ Harvard Law, Mila, Assoc. Prof, U of Virginia Law, D.Phil @ Oxford, "The Declining Influence of the United States Constitution" New York University Law Review -- Vol 87:762 -- www.law.nyu.edu/ecm_dlv2/groups/public/@nyu_law_website__journals__law_review/documents/documents/ecm_pro_072892.pdf]

There are growing suspicions, however, **that America's days as a¶ constitutional hegemon are coming to an end**. ¶ 12¶ It has been said that **the U**nited **S**tates **is losing constitutional influence because it is¶ increasingly out of sync with an evolving global consensus** on issues of¶ human rights.¶ 13¶ Indeed, **to the extent that other countries still look to¶ the U**nited **S**tates **as an example, their goal may be less to imitate**¶ American constitutionalism **than to avoid its** perceived **flaws** and mistakes.¶ 14¶ Scholarly and popular attention has focused in particular¶ upon the influence of American constitutional jurisprudence. **The¶ reluctance of the U.S. Supreme Court to pay "decent respect to the¶ opinions of mankind" 15 by participating in an ongoing "global judicial¶ dialogue"¶ 16¶ is** supposedly **diminishing the global appeal and influence¶ of American** constitutional **jurisprudence**.¶ 17¶ **Studies conducted by scholars** in other countries have begun to **yield empirical evidence that¶ citation to U.S. Supreme Court decisions by foreign courts is** in fact **on the decline**.¶ 18¶ By contrast, however, the extent to which the U.S.¶ Constitution itself continues to influence the adoption and revision of¶ constitutions in other countries remains a matter of speculation and¶ anecdotal impression.¶ With the help of an extensive data set of our own creation that¶ spans all national constitutions over the last six decades, this¶ Article explores the extent to which various prominent¶ constitutions—including the U.S. Constitution—epitomize generic¶ rights constitutionalism or are, instead, increasingly out of sync with¶ evolving global practice. **A stark contrast can be drawn between the¶ declining attraction of the U.S. Constitution as a model** for other¶ countries **and the increasing attraction of the model provided by**¶ America's neighbor to the north, **Canada**. We also address the possibility that **today's constitution makers look for inspiration not only to¶ other national constitutions, but also to regional and international¶ human rights instruments such as the Universal Declaration of¶ Human Rights and the European Convention on Human Rights**. **Our findings do little to assuage American fears of diminished influence in¶ the constitutional sphere**.

No one models the US anymore.

- Citations declining now.
- New courts are liberal so they don't cite us.
- USSC doesn't cite foreign law
- Prefer our ev – cites legal scholars, foreign legal experts.

Liptak 8. [Adam, JD @ Yale, NYT Supreme Court correspondent, former professor of media law and the Supreme Court at Columbia University Graduate School of Journalism, UCLA School of Law, University of Southern California Gould School of Law and Yale Law School, "US Court is now guiding fewer nations" New York Times -- September 17 -- www.nytimes.com/2008/09/18/us/18legal.html?pagewanted=all&_r=0]

Judges around the world have long looked to the decisions of the United **S**tates **Supreme Court for guidance**, citing and often following them in hundreds of their own rulings since the Second World War. **But now American legal influence is waning**. Even as a debate continues in the court over whether its decisions should ever cite foreign law, **a diminishing number of foreign courts seem to pay attention to the writings of**

American justices.¶ "**One of our great exports used to be constitutional law**," **said** Anne-Marie **Slaughter, the dean of the Woodrow Wilson School of Public and International Affairs at Princeton**. "**We are losing one of the greatest bully pulpits we have ever had."¶ From 1990 through 2002,** for instance, **the Canadian Supreme Court cited decisions** of the United States Supreme Court **about a dozen times a year**, an analysis by The New York Times found. **In the six years since, the annual citation rate has fallen by half,** to about six.¶ **Australian state supreme courts cited American decisions 208 times in 1995,** according to a recent study by Russell Smyth, an Australian economist. **By 2005, the number had fallen to 72.¶ The story is similar around the globe**, legal experts say, particularly in cases involving human rights. **These days**, **foreign courts** in developed democracies **often cite** the rulings of **the European Court** of Human Rights in cases concerning equality, liberty and prohibitions against cruel treatment, said Harold Hongju Koh, the dean of the Yale Law School. In those areas, Dean Koh said, "**they tend not to look to the rulings of the U.S. Supreme Court**."¶ **The rise of new and sophisticated constitutional courts elsewhere is one reason for the Supreme Court's fading influence**, legal experts said. **The new courts are**, moreover, generally **more liberal than the** Rehnquist and **Roberts courts and** for that reason **more inclined to cite one another.**¶ Another reason is the diminished reputation of the United States in some parts of the world, which experts here and abroad said is in part a consequence of the Bush administration's unpopularity around the world. Foreign courts are less apt to justify their decisions with citations to cases from a nation unpopular with their domestic audience.¶ "It's not surprising, given our foreign policy in the last decade or so, that American influence should be declining," said Thomas Ginsburg, who teaches comparative and international law at the University of Chicago.¶ Aversion to Foreign Law¶ **The adamant opposition of some Supreme Court justices to the citation of foreign law in their own opinions also plays a role,** some foreign judges say.¶ "Most **justices of the United States Supreme Court do not cite foreign case law** in their judgments," Aharon Barak, then the chief justice of the Supreme Court of Israel, wrote in the Harvard Law Review in 2002. "They fail to make use of an important source of inspiration, one that enriches legal thinking, makes law more creative, and strengthens the democratic ties and foundations of different legal systems."¶ Partly as a consequence, Chief Justice Barak wrote, **the United States Supreme Court "is losing the central role it once had among courts in modern democracies."¶** Justice Michael Kirby of the High Court of Australia said that his court no longer confined itself to considering English, Canadian and American law. "Now we will take information from the Supreme Court of India, or the Court of Appeal of New Zealand, or the Constitutional Court of South Africa," he said in an interview published in 2001 in The Green Bag, a legal journal. "**America**" he added, "**is in danger of becoming something of a legal backwater."**

2NC: General No Model

Other countries think we're a bad model.

Law and Versteeg 12. [David, Prof. of Law and Prof of PoliSci @ Washington University, St Louis, PHD @ Stanford, JD @ Harvard Law, Mila, Assoc. Prof, U of Virginia Law, D.Phil @ Oxford, "The Declining Influence of the United States Constitution" New York University Law Review -- Vol 87:762 -- www.law.nyu.edu/ecm_dlv2/groups/public/@nyu_law_website__journals__law_review/documents/documents/ecm_pro_072892.pdf]

Part III documents **the growing divergence of the U.S.¶ Constitution from the global mainstream of written constitutionalism**.¶ Whether the analysis is global in scope or focuses more specifically¶ upon countries that share historical, legal, political, or geographic ties¶ to the United States, the conclusion remains the same**: The U.S.¶ Constitution has become an increasingly unpopular model for constitutional framers elsewhere**. **Possible explanations include the sheer¶ brevity of the Constitution, its imperviousness to formal amendment,¶ its omission of some of the world's generic constitutional rights, and¶ its inclusion of certain rights that are increasingly rare by global¶ standards.**

Stats prove the US isn't a model – specifically takes out their Africa internal.

Law and Versteeg 12. [David, Prof. of Law and Prof of PoliSci @ Washington University, St Louis, PHD @ Stanford, JD @ Harvard Law, Mila, Assoc. Prof, U of Virginia Law, D.Phil @ Oxford, "The Declining Influence of the United States Constitution" New York University Law Review -- Vol 87:762 -- www.law.nyu.edu/ecm_dlv2/groups/public/@nyu_law_website__journals__law_review/documents/documents/ecm_pro_072892.pdf]

Whatever the ongoing appeal of American constitutional jurisprudence happens to be,¶ 36¶ **the U.S. Constitution** itself **appears to have¶ lost** at least some of **its attraction as a model for** constitution writers in¶ **other countries**. If the components of the rights index are used as the¶ yardstick, **the world's constitutions have on average become less similar to the U.S. Constitution over the last sixty years**. As Figure 2¶ reveals, **average similarity to the U.S. Constitution was higher in 1946¶ than in 2006**.¶ 37¶ It is an unfortunate irony, moreover, that the onset of¶ this decline roughly coincided with celebration of the Constitution's¶ bicentennial in 1987.¶ 38¶ **Although the 1990s were a period of intense¶ constitution-making activity**¶ 39¶ during which American victory in the¶ Cold War might have been expected to translate into American constitutional influence, **this decade actually saw a noticeable decline in¶ average similarity to the U.S. Constitution**. **During this time, dozens¶ of Central and Eastern European countries overhauled their** Sovietera constitutions,¶ 40¶ **while countries in Africa** and Asia **underwent a contemporaneous wave of constitutional reforms**.¶ 41¶ **Whatever constitutional script prevailed** amidst the ostensible triumph of liberal¶ democracy,¶ 42¶ however, **it was not that of the venerable U.S.¶ Constitution.**

1NC: India Impact Defense

Deterrence checks India-Pakistan war.

Khan 12. (Ikram Ullah, analyst for the South Asian Strategic Stability Institute, "Nuclear Pakistan: Defence Vs Energy Development," 7/26, http://www.eurasiareview.com/26072012-nuclear-pakistan-defence-vs-energy-development-oped/)

We must be clear that nuclear weapons are here to maintain peace and stability between Pakistan and India. Pakistan was forced to run its nuclear weapon program due to India's nuclear weapon program and its hegemonic ambition. Pakistan has long said that its nuclear weapon program is security driven. While on other hand Indian nuclear weapon program is not security driven, rather it is based on its regional and global aspirations.¶ The security threats still exist for Pakistan, but due to its credible nuclear deterrence Pakistan is capable of crushing such threats or plans. In the recent past, the tragedy, which many historians remember as the "Fall of Dhaka", carries some lessons for us to be learnt. If India could intervene at that time, then it is quite possible it could intervene in Baloachistan. Now the nuclear capability of Pakistan deters India from perusing any kind of intervention because of the fear of perceived consequences.¶ It is Pakistan's credible nuclear deterrence capability that effectively neutralizes any ill intent of its opponent against its integrity and sovereignty. It is evident that after the December 13, 2001 terrorists attack on Indian Parliament, India mobilized its armed forces to attack on Pakistan, but refrained from doing so as it realized that any such irrational action would lead to a nuclear war. The same was the case after Mumbai attacks on November 26, 2008 – the nuclear deterrence prevailed and it prevented the likelihood of an all out nuclear war in South Asia.

India-Pakistan tensions will never escalate to the point where nuclear deployments on seriously on the table.

Loudon 8. (Bruce Loudon has worked as a foreign correspondent since 1968. He has been visiting and reporting on Pakistan since the 1970s. He is currently The Australian's South Asia correspondent. The Australian, "Doomsday dread", December 04, 2008, http://www.theaustralian.news.com.au/story/0,25197,24746635-25837,00.html)

THE doomsayers' published assessments tell the grim story: upwards of 12 million people killed on the first day of a nuclear exchange, more than 150 million dead in a longer nuclear conflict. Devastation and destruction on a scale that is almost unimaginable. A catastrophe that would vastly transcend that seen at Hiroshima and Nagasaki at the end of World War II. That is why, as India and Pakistan muscle up to each other after the Mumbai massacre and leaders from across the world hurry to counsel cool heads and caution in New Delhi and Islamabad, the unspoken fear everywhere is that the two South Asian neighbours could be pushed into the unthinkable: their fourth war, and one in which they would mobilise their nuclear arsenals. It is, it must be said, an unlikely prospect. No one in either capital -- **even** among **the hotheads** -- is thinking in those terms. **Experienced strategic analysts rule it out.** "Don't even think about it. It ain't going to happen," one says. But as the crisis over terrorism across South Asia deepens and jihadist groups linked to al-Qa'ida launch devastating attacks such as the one in Mumbai last week -- attacks designed to exacerbate tensions between India and Pakistan -- there is, in the view of most analysts, always the potential for events to tumble out of control and lead to a doomsday nuclear conflagration, with enormous loss of life. "South Asia's a nuclear tinderbox," a leading military analyst in New Delhi tells The Australian. "Yes, of course, I'd just about rule it out in the context of the face-off following the Mumbai attack. "But it's always there, always nagging at the edges of the constant tensions in the subcontinent. And there's no doubt that Osama (bin Laden) is doing his bit to stir the pot and do what he can to increase those tensions, since conflict between India and Pakistan serves the jihadist cause." Yesterday, US military officials in Washington, DC, closely monitoring the situation described the military temperature between the two neighbours as "pretty low right now", adding that although Pakistan has moved some aircraft and air defence units closer to the Indian border since the Mumbai attack, "on the nuclear side there is nothing". Which is hardly surprising, for the political will in both sides, **despite the** muscle-**flexing**, **is overwhelmingly against resort to** their nuclear **arsenals.** India, since it demonstrated its nuclear capability in 1998, has maintained a firm no-first-strike policy and a few days ago Pakistan's President Asif Ali Zardari turned longstanding Pakistani policy on its head (some believe to the annoyance of the country's powerful generals) by articulating a similar stance. On both sides there is a mood of extreme caution on the subject of any possible use of nuclear weapons, matched only by the intense secrecy that surrounds their arsenals.

Ext: No Indo-Pak War

Deterrence checks India-Pakistan war

Tellis '2 (Ashley, Foreign Policy Research Institute, Orbis, Winter, p. 24-5)

In the final analysis, this situation is made objectively "meta-stable" by the fact that neither India, Pakistan, nor China has the strategic capabilities to execute those successful damage-limiting first strikes that might justify initiating nuclear attacks either "out of the blue" or during a crisis. Even China, which of the three comes closest to possessing such capabilities (against India under truly hypothetical scenarios), would find it difficult to conclude that the capacity for "splendid first strikes" lay within reach. Moreover, even if it could arrive at such a determination, the political justification for these actions would be substantially lacking given the nature of its current political disputes with India. **On balance**, therefore, it is reasonable to conclude that a **high degree of deterrence stability**, at least with respect to wars of unlimited aims, exists within the greater South Asian region.

Deterrence prevents war in South Asia – high level of stability

Tellis '2 (Ashley, Foreign Policy Research Institute, Orbis, Winter, p. 23-4)

Where deterrence stability is concerned, both the Indo-Pakistani and the Sino-Indian dyads will likely experience reasonably high levels of stability in the policy-relevant future because the two most important states, China and India, are not currently locked into the pursuit of any reciprocal revisionist objectives. Both India and China have also adopted a pacific posture with respect to their outstanding territorial disputes.35

Pakistan, in contrast, is the most prominent revisionist entity in South Asia, given its commitment to altering the prevailing status quo in Kashmir. But even Islamabad has for all practical purposes ruled out the alternative of securing political change through the pursuit of nuclear or conventional war, though it continues to engage in nuclear coercion at the subconventional level and could occasionally lapse into the temptation of engaging in shallow cross-border operations in order to attract international attention to its claims on Kashmir. 36 These actions, in turn, might provoke comparable Indian counterresponses, but such eventualities probably represent the current limits of premeditated war in South Asia. 37 The prospects for deterrence stability are therefore relatively high, because no South Asian state is currently committed to securing any political objectives through the medium of major conventional, and by implication nuclear, wars of unlimited aims. This condition is only reinforced by the high levels of "defense dominance" obtaining at the military level. Deterrence stability in South Asia today flows from the Indian, Pakistani and Chinese inability to successfully prosecute decisive conventional military operations quickly, especially in the context of wars of unlimited aims. As research elsewhere has demonstrated, India's gross numerical superiorities over Pakistan are misleading and do not enable it to rapidly win a high-intensity land war, even if it acquits itself favorably in the air and naval campaigns occurring in the theater. 38 India and Pakistan can both defend their territorial integrity adequately with the forces they currently have in place, but would be hard pressed to dramatically change the territorial status quo through a quick conventional, or even nuclear, attack. The Sino-Indian balance along the Himalayas is similarly stable for now because the Chinese do not have the logistics capability to sustain any major conventional conflict in support of their more ambitious territorial claims, while the strong and refurbished Indian land defenses, coupled with the Indian superiority in air power, enables New Delhi to adequately defend its existing positions but not to sustain any large-scale acquisition of new territory. Consequently, deterrence stability exists along this frontier as well.

No chance for miscalc.

Tellis 2 (Ashley, Foreign Policy Research Institute, Orbis, Winter, p. 23-4)

Obviously, these judgments say little about inadvertent wars or wars brought about by miscalculation or misperception, the likely causes of any deterrence breakdown in the future.40 It is pertinent to note, however, that historically the subcontinent has not witnessed any conflicts brought about through pure inadvertence or misperception, and while conflicts rooted either in miscalculation or in catalytic causes have indeed occurred, it is not unreasonable to expect that the acknowledged presence of nuclear weapons now on all sides would inhibit any interactive sequences that could lead to the most serious forms of deterrence breakdown in the future. As Avery Goldstein argued, "Indians are likely to refrain from military operations that can escalate to the nuclear incineration of Pakistanis (and vice versa) not because they have mastered Brodie, Schelling, Waltz and Jervis, nor because they care about their neighbors, but rather simply because they care about their own countrymen." 41

Us-China war

1NC: Alt Caus – US Decline

Multiple Alt Causes to US decline.

- Education Gap
- Median household income
- Income inequality

Coplan 7-20. [Jill, writer and editor and regular contributor to Fortune, "12 signs America is on the decline" Fortune -- July 20, 2015 -- fortune.com/author/jill-hamburg-coplan/]

"Capitalism has been amazingly successful," write Friedman and co-author Sarah Hertz of Empire State College. But it has grown so unfettered, predatory, so exclusionary, it's become, in effect, crony capitalism. Now places like Qatar and Romania, "countries you wouldn't expect to be, are doing better than us," said Friedman. "You can become a second-rate power very quickly," added Hertz. To be sure, the debate over whether America is on the decline has raged for years. The US National Intelligence Council said in its global trends report a decade ago American power was on a downward

trajectory. Others making the case say the US is overstretched militarily, ill-prepared technologically, at-risk financially, or lacking dynamism in the face of influential, new competitors. Arguing decline has been exaggerated, others point to a rising US stock market, manufacturing strength, a growing population, and a domestic energy boom. The authors collect many previously published rankings, and the picture that emerges, however, is sobering: 1. Median household income Rank of U.S.: 27th out of 27 high-income countries Americans may feel like global leaders, but Spain, Cyprus and Qatar all have higher median household incomesthan America's (about $54,000). So does much of Europe and the industrialized world. Per capita median income in the US ($18,700) is also relatively low–and unchanged since 2000. A middle-class Canadian's income is now higher. 2. Education and skills Rank of U.S.: 16th out of 23 countries The US ranked near the bottom in a skills survey by the Organization for Economic Co-operation and Development, which examined European and other developed nations. In its Skills Outlook 2013, the US placed 16th in adult literacy, 21st in adult numeracy out of 23, and 14th in problem-solving. Spots in prestigious US universities are highly sought-after. Yet higher education, once an effective way out of poverty in the US, isn't anymore – at least not for lower-income and minority students. The authors quote studies showing, for example, that today 80% of white college students attend Barron's Top 500 schools, while 75% of black and Latino students go to two-year junior colleges or open-admissions (not Top 500) schools. Poor students are also far less likely to complete a degree. 3. Internet speed and access Rank of U.S.: 16th out of 34 countries Broadband access has become essential for industry to grow and flourish. Yet in the US, penetration is low and speed relatively slow versus wealthy nations—thought the cost of internet is among the highest ($0.04 per megabit per second in Japan, for example, versus $0.53 in the US). The problem may be too much concentration and too little competition in the industry, the authors suggest. 4. Health Rank of U.S.: 33rd out of 145 countries When it comes to its citizens' health, in countries that are home to at least one million people, the US ranks below many other wealthy countries. More American women also are dying during pregnancy and childbirth, the authors note, quoting a Lancet study. For every 100,000 births in the United States, 18.5 women die. Saudi Arabia and Canada have half that maternal death rate. 5. People living below the poverty line Rank of U.S.: 36th out of 162 countries, behind Morocco and Albania Officially, 14.5% of Americans are impoverished — 45.3 million people–according to the latest US Census data. That's a larger fraction of the population in poverty than Morocco and Albania (though how nations define poverty varies considerably). The elderly have Social Security, with its automatic cost-of-living adjustments, to thank, the authors say, for doing better: Few seniors (one in 10) are poor today versus 50 years ago (when it was one in three). Poverty is also down among African Americans. Now America's poor are more often in their prime working years, or in households headed by single mothers. 6. Children in poverty Rank of U.S.: 34th out of 35 countries surveyed When UNICEF relative poverty – relative to the average in each society—the US ranked at the bottom, above only Romania, even as Americans are, on average, six times richer than Romanians. Children in all of Europe, Canada, Australia, New Zealand, and Japan fare better. 7. Income inequality Rank of U.S.: Fourth highest inequality in the world. The authors argue that the most severe inequality can be found in Chile, Mexico, Turkey — and the US. Citing the Gini coefficient, a common inequality metric, and data from Wall Street Journal/Mercer Human Resource Consulting, they say this inequality slows economic growth, impedes youths' opportunities, and ultimately threatens the nation's future (an OECD video explains). Worsening income inequality is also evident in the ratio of average CEO earnings to average workers' pay. That ratio went from 24:1 in 1965 to 262:1 in 2005. 8. Prison population Rank of U.S.: First out of 224 countries More than 2.2 million Americans are in jail. Only China comes close, the authors write, with about 1.66 million. 9. Life satisfaction Rank of U.S.: 17th out of 36 countries The authors note Americans' happiness score is only middling, according to the OECD Better Life Index. (The index measures how people evaluate their life as a whole rather than their current feelings.) People in New Zealand, Finland, and Israel rate higher in life satisfaction. A UN report had a similar finding. 10. Corruption Rank of U.S.: 17th out of 175 countries. Barbados and Luxembourg are ahead of the US when it comes to citizens' perceptions of corruption. Americans view their country as "somewhat corrupt," the authors note, according to Transparency International, a Berlin-based nonprofit. In a separate survey of American citizens, many said politicians don't serve the majority's interest, but are biased toward corporate

lobbyists and the super-rich. "Special interest groups are gradually transforming the United States into an oligarchy," the authors argue, "concerned only about the needs of the wealthy." 11. Stability Rank of U.S.: 20th out of 178 countries. The Fragile States Index considers factors such as inequality, corruption, and factionalism. The US lags behind Portugal, Slovenia and Iceland. 12. Social progress index Rank of U.S.: 16th out of 133 countries A broad measure of social well-being, the index comprises 52 economic indicators such as access to clean water and air, access to advanced education, access to basic knowledge, and safety. Countries surpassing the US include Ireland, the UK, Iceland, and Canada. "If America's going to be great again, we've got to start fixing things," Friedman said.

1NC: Cloud Computing Strong Now

Cloud computing industry strong now – multiple warrants.

- Forecasts predict massive growth
- Mass market expansion

McCue-14. consults on content strategy and produce web content for technology companies"Cloud Computing: United States Businesses Will Spend $13 Billion On It." Forbes. Forbes Magazine, 29 Jan. 2014. Web. 19 July 2015. <http://www.forbes.com/sites/tjmccue/2014/01/29/cloud-computing-united-states-businesses-will-spend-13-billion-on-it/>.

Instead of a slow-moving fluffy white cloud image, the cloud computing industry should use a tornado – that might be a better way to visualize how fast cloud computing is growing today. Amazon is dominating, but is followed by the usual suspects: IBM IBM +0.88%, Apple AAPL +0.83%, Cisco, Google GOOG +15.96%, Microsoft MSFT -0.13%, Salesforce, and Rackspace, to name a few. (Disclosure: I am on the paid blogger team for IBM Midsize Insider, which covers technology pertinent to midsize companies, including the cloud, among other topics.)¶ "The cloud" is frequently in the news, but there is also a fair amount of confusion, outside of technology teams. What is cloud computing and why do businesses need to care? IBM published this handy infographic: 5 Reasons Businesses Use The Cloud. Among the reasons: Collaboration, better access to analytics, increasing productivity, reducing costs, and speeding up development cycles.¶ By 2015, end-user spending on cloud services could be more than $180 billion.¶ It is predicted that the global market for cloud equipment will reach $79.1 billion by 2018¶ If given the choice of only being able to move one application to the cloud, 25% of respondents would choose storage¶ By 2014, businesses in the United States will spend more than $13 billion on cloud computing and managed hosting services.¶ IBM 5 Reasons Businesses Use The Cloud¶ According to Jack Woods at Silicon Angle, there's some serious growth forecasted and he lists 20 recent cloud computing statistics you can use to make your case for why you need the cloud or to understand why you should consider it for your business. The above bullet points come from his post.¶ At the simplest level, cloud computing lets you share files and resources via the web. If you run a small business, you read about cloud storage as a way to backup and protect your data. Companies, such as, Google Docs (now Drive), DropBox, Carbonite, Cubby, and a slew of others. If you need to choose an online backup provider, take a look at Tim Fisher's post: 40 Online Backup Services Reviewed.¶ Looking beyond online backup, to understanding where the cloud is going, I look to Louis Columbus who writes extensively about the cloud here on Forbes and elsewhere. After reading Louis' Big Data post a couple of weeks ago, 2014: The Year Big Data Adoption Goes Mainstream In The Enterprise, (linked in left column) it made it clear that big data takes big crunching power and is part of why many midsized and large enterprises are not leveraging in-house servers – there is no leverage. You want to leverage a cloud provider like those listed above that can scale up and down with your computing needs.¶ Well known tech guru, Om Malik, can help you wrap your head around cloud computing and its enormous, rapid growth in his interview with Amazon CTO Werner Vogels. Vogels spells out how the big impact of the cloud will take place overseas, outside the USA, especially for small and midsized businesses. You can read additional 2014 from GigaOm here.¶ Forbes contributor, Joe McKendrick, penned a useful post as I was writing this today: 9 'Worst Practices' To Avoid With Cloud Computing. It includes some great ideas to help you evaluate whether the cloud can help your business or not (listed to the left).¶ From improved collaboration to productivity increases, the cloud has the potential to change your business. The cloud is rapidly growing, moving quickly – if you've been on the fence around investing in new infrastructure, you should look to the cloud. This post from Network Computing lists out a bunch of recent stats around big data and the cloud.

Zero Internal Link – cloud computing companies don't care about surveillance issues – Snowden reaction proves.

Perez -13. Juan Carlos Perez covers e-commerce, Google, Web application development, and cloud applications for the IDG News Service,Perez, Juan Carlos. "Why CIOs Stick with Cloud Computing despite NSA Snooping Scandal." PCWorld. N.p., 5 Dec. 2013. Web. 24 July 2015. <http://www.pcworld.com/article/2069681/why-cios-stick-with-cloud-computing-despite-nsa-snooping-scandal.html>. N.T

Explosive revelations in the past six months about the U.S. government's massive cyber-spying activities have spooked individuals, rankled politicians and enraged privacy watchdogs, but top IT executives aren't panicking—yet.¶ So far, they are monitoring the issue, getting informed and taking steps to mitigate their risk in various ways. But the alarming reports haven't prompted them to roll back their decisions to host applications and data in the cloud.¶ That's the consensus from about 20 high-ranking IT executives interviewed in North America and Europe about the effect that the U.S. National Security Agency's snooping practices have had on their cloud computing strategy. The news broke in June, after former NSA contractor Edward Snowden began leaking the earth-shaking secrets to the media.¶ Many of the IT executives interviewed say that they're not thrilled with the situation, and that it has made them more careful about cloud computing plans and deployments, prompting them to review agreements with vendors, double-check best practices and tighten security controls.¶ However, these IT executives haven't been completely surprised by the revelations. Whether by overt means or through covert operations, it's well known that governments engage in surveillance of telecommunications and Internet traffic.¶ "Government surveillance hasn't changed our opinion about cloud computing. The cloud model is attractive to us, and I was never that naive to think that this type of government monitoring wasn't going on," said Kent Fuller, director of enterprise infrastructure services at BCBG MaxAzria Group, a Los Angeles-based women's fashion designer and seller that uses Microsoft's Office 365 public cloud suite primarily for employee email.¶ Stealthy monitoring of computer systems and communications by governments currently doesn't rank among the top IT security concerns for many IT leaders. "Every CIO will tell you we worry every minute of every day about security, privacy, redundancy, operational continuity, disaster recovery and the like," said Michael Heim, Whirlpool's corporate vice president and global CIO. "We're probably the most paranoid guys on the planet."¶ Jacques Marzin, director of Disic, France's interministerial IT and communications directorate, said the NSA scandal confirmed the known risks associated with the use of public cloud services. "We are of course concerned about any third party access to our data although we have limited usage of public clouds," he said.¶ However, having everything behind the firewall also carries risks. CIOs worry about the cost and complexity of running servers on their own premises and the potential loss of competitiveness if rivals are taking advantage of the benefits of cloud computing.¶ "At the end of the day, the capabilities and economics around the cloud computing model are so compelling that when you artificially try to not take advantage of them you impact your ability to compete, because others will take advantage of them," Heim said. Whirlpool recently decided to move about 30,000 employees from an on premises IBM Lotus Notes system to the Google Apps public cloud email and collaboration suite.¶ "We believe we have a very good plan in place to make sure we're just as compliant and secure, if not more so, than we were before," Heim said.¶ There are ways to mitigate risks associated with cloud computing, as well as precautions, safeguards and best practices that can be adopted, IT executives said. For example, companies should examine what prospective cloud vendors offer in terms of data center redundancy, IT and physical security, risk mitigation, operational practices and government and industry certifications. IT executives can also complement cloud vendor offerings in these areas with best practices and security wares on their end, like systems that encrypt data before it's transmitted to the public cloud servers.¶ More than government snooping, IT chiefs appear to consider insider threats a more concrete and likely danger, including disgruntled employees or contractors like Snowden who out of malice or in retaliation expose confidential data or damage IT systems.¶ In fact, Snowden should serve as a reminder to CIOs to take precautions when hiring IT staffers and to put in place monitoring systems to alert them

about rogue system administrators, said Alex Gorbachev, board member of the Independent Oracle Users Group and CTO of remote database administration company Pythian Group.¶ For example, email administrators may have unfettered, unaudited access to all mailboxes, he said. That means they could potentially browse through the CFO's messages and take a peek at preliminary financial reports. If such information were to leak, it could become a dicey situation for publicly traded companies.¶ Many database administrators have similar power. "Most organizations don't have a mechanism to track their activities 100 percent," Gorbachev said.¶ IT executives also worry about careless employees who may inadvertently compromise company systems in a variety of ways.¶ "Personally, I am more concerned about safe data handling practices by our users—flash drives, use of public Internet access, lost or stolen tablets, phones and laptops, passwords on sticky notes—than I am about the security capabilities of cloud service providers and the intrusion of governments or other entities," Brandon Robinson, network services director at ACES, a power management company in Carmel, Indiana, said via email. ACES uses cloud services for payroll, purchasing, expense reporting and some line-of-business transactional systems.¶ Another risk that shows up prominently on CIOs' radar screens are external threats, like malicious hackers and malware.¶ Government surveillance could become a bigger concern if a large company got burned by it—for example, if a government had surreptitiously collected a considerable amount of confidential data from a company, and a malicious hacker broke into the government's system and exposed the data. But there hasn't been a high-profile case of that sort yet.¶ "If something like that happened, it would change the picture and have a profound impact," said Jay Heiser, a Gartner analyst. "Otherwise, it's premature for organizations to forgo the benefits of cloud computing, but it's also an opportunity to revisit security concerns in general."¶ At Needham Bank in Needham, Massachusetts, IT Vice President James Gordon, said the NSA scandal hasn't horrified enterprise IT leaders because "I don't think there's been a relevant connection to how it impacts an organization yet."¶ "Until they have a material loss or one of their peers has an accidental information disclosure, it won't hit home," Gordon said.¶ The level of concern about leaks due to government spying also hinges on the type, size and industry of a company. "I'm not aware of any instances of this happening to a mid-size wholesale company like us," said Hal Greene, vice president of IS at Composites One, a distributor of plastic and glass products in North America that uses Google Apps.¶ But Paul Grewal, CEO of Sage Human Capital in San Bruno, California, an executive search and recruitment firm, worries about a nightmare scenario in which government snooping on his company's data could result in a leak. "We are definitely concerned. It creates a liability," he said.¶ A leak could be extremely harmful to the candidates seeking jobs, their current employers and the companies that are hiring. "Our data is extremely confidential," he said.¶ The company would find itself potentially liable for breaching confidentiality agreements with clients, and it would also see a major trust breakdown.¶ Sage Human Capital deployed a business intelligence tool from Jaspersoft on the Amazon EC2 cloud service about six months ago to give clients a granular analytics view of how a search is going. "The reason we went to the cloud was ease of implementation and deployment," Grewal said, adding he doesn't plan on rolling back that decision.¶ He's confident Amazon will provide top-notch encryption and security, but he's also aware that "NSA has a heavy hand and can make offers people can't refuse."¶ Analysts say CIOs need to weigh risks and rewards and adhere to best practices, whether the government is snooping on their systems or not.¶ "The answer to whether the risks outweigh the benefits will be different for different companies and CIOs," said Scott Strawn, an IDC analyst.¶ "Our advice to organizations is to recognize the sensitivity of their data, and if it's highly sensitive, they should take very careful precautions about where they put it, and place heroic levels of protection around it," Gartner's Heiser said.¶ For starters, companies need to decide which applications and data can be put in a public cloud service, which can go in a private cloud service and which should remain behind the on premises firewall.¶ "You must be observant and think about data integrity before putting sensitive, mission-critical information in the cloud," said Lars-Göran Eklöf, CIO at construction company Lindab in Sweden.¶ "We only use cloud services on a limited basis, and the information stored in the cloud, including sales statistics, doesn't have a very high security classification," Eklöf said.¶ Criteria that CIOs can use to calculate appropriate levels of security include how critical data is, and what the applicable laws and regulations for privacy and data security in their country and for their industry are.¶ IRB Services, an Ontario, Canada-based company which conducts independent reviews of clinical research involving humans, choose a software-as-a-service product from Intralinks for secure collaboration on review files because Intralinks can house the data outside of the U.S.¶ IRB Services customers in Europe have for some time not wanted their data stored in the U.S., according to Simon Corman, the company's director of business operations. Before the NSA scandal, "we were just getting that question from compliance groups. Now we're getting it more from an operational level," he said.¶ IRB customers have always been concerned about the privacy of their data but the NSA controversy has "absolutely amplified the issue," Corman said.¶ It's also essential for companies to have clear, detailed usage guidelines for employee use of IT systems and handling of data. Companies should use stringent criteria for choosing their cloud computing vendors, examining their track record, security policies, data protection technology and service-level agreements.¶ In particular, CIOs should watch out for opportunistic and hyperbolic claims from vendors claiming to have technology that can completely shield data from government snooping.¶ "Vendors have absolutely no ability to make those claims," IDC's Strawn said. "They can't execute on them. The NSA has a lot of power to do what they do. You can't do much about it."¶ If an agency like the NSA wants to monitor a particular system, it will, and if it can't, it will get a court order to get the access it needs.¶ Also, just because data, systems and applications are hosted on premises doesn't mean that government snoops can't get to them. In fact, it's likely harder for government spies to break into data centers run by Google, Microsoft, IBM, Salesforce.com and Amazon than to tap into the average enterprise network.¶ "I'm more comfortable with Microsoft's security for our email than with handling that internally," BCBG MaxAzria's Fuller said. "We're a fashion company, not a tech company. We need to focus our resources on producing great dresses people want to buy."¶ Still, the NSA scandal worries cloud computing vendors, as they sense concern from current and prospective customers. "It's not having a material impact. But it's certainly causing people to stop and then rethink decisions, and that is, I think, reflected in our results," said Rob Lloyd, Cisco Systems' president of development and sales, during the company's most recent quarterly earnings call.¶ The level of security offered by cloud vendors is mixed; from vendors that are new and inexperienced, to others that are outstanding and provide a better and safer environment than many organizations could afford themselves, according to Jos Creese, head of information, corporate resources, IT services at the Hampshire County Council in the UK.¶ "We need to be prudent as to who we select in cloud providers," said Brian D. Kelley, CIO at Portage County government in Ravenna, Ohio.¶ Portage County is dipping its toes in cloud computing, and the NSA revelations made him and his team more aware of the cloud risks. "In IT, we've always had control of our systems and data, and with the new cloud model, we're now relinquishing that control," Kelley said.¶ "We

certainly need to engage ourselves much more to know where our data is, how it is accessed and who can access it, and what to do when the cloud bursts," he said.

1NC: Innovation

Zero uniqueness – US is crushing everyone – econ is resilient.

Dill 5/26 (Kathryn, writer for Frobes on The workforce, the workplace, and the future of both,http://www.forbes.com/sites/kathryndill/2015/05/26/united-states-leads-ranking-of-the-most-competitive-countries-in-the-world/2/)

In the global race to remain competitive, the U.S. emerges as the strongest contender. Each year, the IMD World Competitiveness Center, a part of Lausanne-based business school IMD, considers the ability of countries around the world to "create and maintain an environment in which enterprises can compete." To determine the countries around the world where competition is thriving, the center looks at data from organizations including the World Bank and IMF , private enterprises like PriceWaterhouseCoopers and Mercer HR Consulting, national data from partner organizations, and survey data collected from executives about circumstances in their country. Countries are evaluated against a host of criteria, including economic performance, government efficiency, business efficiency and infrastructure. At the top of the list for the second consecutive year is the United States, which earns its place at the the head of the line through robust business efficiency, a strong financial sector, innovation and efficient infrastructure. "**The U.S. is a very resilient economy**," said Professor Arturo Bris, the center's director. "It has an amazing financial sector, it provides capital to large, small and medium enterprises. On top of that, it ranks number one in infrastructure. It's a big economy, and it's very difficult to beat." Though some European countries–including Poland, the Czech Republic, and Slovenia–saw improvement, the conflict between Russia and Ukraine took its toll elsewhere in the region. Russia fell seven places in the ranking to to 45th, Ukraine fell a staggering 11 places to 60th. At the end of the day, all of these geopolitical problems in the world have materialized into economic problems," said Bris. "Low oil prices, volatility in commodity prices, exchange rate and currency wars–they've had significant effects in many countries. From Germany to Japan, Russia, the U.A.E.–these are all countries whose competitiveness has declined in 2015." Greece, one of the world's most fraught economies, climbs seven rungs to 50th place in this year's 61-country ranking. "Obviously for example the competitiveness of Greece has increased," said Bris. "In terms of Greece, it was so low, the only way was up. We have seen certain reforms in the business context, business regulation, that have had a positive effect already." Asia also saw inconsistent results. Though Taiwan, South Korea, and the Philippines all improved slightly, the majority of Asian countries fell in the ranking due to worsening infrastructure. Improvements in education and infrastructure bumped China from 23rd place to 22nd, evidence, according to Bris, that the country's once miraculous economy may be approaching equilibrium. Though Chile, Peru and Argentina saw marginal improvement this year, on the whole Latin American countries also lost competitive ground. "We see countries doing the right things–Chile, Mexico, Colombia–implementing the right reforms in education and government, but [the effects] will take time to materialize." Ultimately, said Bris, countries looking to move up in next year's ranking need to take a careful look at government and judicial policy in order to create an environment that fosters competition. "A competitive systems requires a good government that promotes good legal infrastructure. We need to start with that, governments that have the right principles–regulation, infrastructure, education. Whenever we see good governments we see competitiveness."

Innovation isn't key – military developments are inevitable and they're being more efficient.

Sargent, 2013 Anne-Wainscott, forbes citing NSR senior analyst, "Military Bets: Balancing Bandwidth Needs with Increased Efficiency" http://www.satellitetoday.com/publications/2013/11/19/military-betsbalancing-bandwidth-needs-with-increased-efficiency/

"We're focused on how we can be **more efficient with our bandwidth**, how we compress data **more efficiently,** and how we can get access to places that have less-than-adequate infrastructure," says Bruce Bennett, program executive officer for DISA, who oversees the bulk of DoD's strategic satcom transport infrastructure for warfighters. With fewer eyes on the ground, the military will deploy increasingly more sensors. That is especially true as

the U.S. military pivots towards Asia, a far-flown geography six times the size of Europe, and two and a half the expanse of North America. Having a mix of space and terrestrial, access and flexibility are key. "I don't care if you give me another 10 WGSs, it would be doubtful that we could cover all the scenarios in the Pacific," says Bennett. He adds that fewer ground forces and the sheer size of the Asia landscape will increase the government's need to partner with commercial operators. Assessing the Asia region, **NSR senior analyst Claude Rousseau doesn't believe the bandwidth concerns are as dire as some think**, considering the number of Ka-band systems coming online in the next few years. NSR reports that from 2012 to 2022, the global government and military satellite communications **market will grow from 632,000 in-service units to close to 1.1 million by the end of 2021**."There are going to be a lot more sensors on airplanes and UAVs, which will make it much easier for anyone in the region to scan and see who is out there," he notes. Miguel Angel Garcia Primo, chief operating officer of Spanish government satellite operator, HisdeSat, says there has alredy been an increase of activity. "We're seeing more requests for providing connectivity to mobile platforms, be it land, sea or aircraft, and the need to use smaller and smaller terminals with higher and higher data rates," he says. Greater Commercial Collaboration At least one global operator, Astrium Services, personifies the power of a public-private partnership (PPP) model. For the last nine years, the company has operated first the Skynet 4 and then the hardened Skynet 5 constellation for the U.K. Ministry of Defense, an approach that Simon Kershaw, executive director, government communications, Astrium Services, contends has enabled his company to better anticipate and respond to the U.K. military's changing requirements. "The PPP model can often work very well for that because we are able to move much faster or anticipate more than the institutions themselves can. We're able to be very nimble, very flexible and be in front when we see a requirement," says Kershaw. "We're seeing much more rapid deployments around the world," he adds, noting that when something happens in a region, it requires a quick response – one that embodies flexibility. In addition, operators need a complete picture of the situation, which underscores the need for integrating UAV imagery with other sources such as telemetry and communications on the ground. **Multi-band, Smaller Terminals on the Rise** As the demand for bandwidth to support high-definition sensors grows, satellite operators and terminal manufacturers alike are achieving **much greater throughput using much smaller systems.** More rugged, lightweight, high bandwidth satcom on the move can be found in terminals such as Astrium's SCOT Patrol terminals being deployed on six U.K. Royal Navy ships over the next five years, and their smaller airborne equivalent, AIR Patrol, flying with the Canadian Department of National Defense. "It uses the world's first three-Axis carbon fiber antenna – the lightness of it makes it an easy fit for a small vessel," explains Kershaw.

Multiple reasons why the US econ is crushing it – zero uniqueness.

Perlberg 13 (Steven, reporter for Business Insider covering markets and finance, "10 Reasons Why America Will Continue To Dominate The Global Economy For Years", http://www.businessinsider.com/10-ways-us-competitive-advantage-2013-6)

The U.S. economy is in recovery mode right now. Sure, investors have been spooked by Fed taper talks, the Bank of Japan's unprecedented economic experiment, persistent jitters out of Europe, and concerns of a credit crisis in China. But by in large, investors should be pleased with the way things are going domestically, according to a new report from Joseph Quinlan, Chief Market Strategist for U.S. Trust. We walk you through U.S. Trust's 10 theses that show "what's right with America." 1) The U.S. economy is the largest and most productive in the world - The U.S. accounts for one-fifth of global GDP with only 4.5% of the world's population. America's economy is nearly twice the size of China's in nominal dollars. Plus, the U.S. is one of just a few developed countries with real GDP higher than it was before the crisis, according to the report. 2) The U.S. leads the world in manufactured goods - Nominal manufacturing output totaled $1.9 trillion in 2012, a rise of 27% from 2009. Employment in the sector has increased by 500,000 workers since 2010, according to U.S. Trust. 3) The U.S. is among the largest exporters of goods and services - Exports since the recession have taken off. In 2012, total

exports totaled $2.2 trillion, nearly a 40% rise from 2009 levels, according to the report. 4) **Foreign investors still love the U.S.**- U.S. Foreign Direct Investment inflows in the post-crisis years racked up $736 billion. That's 15% of the global total, according to U.S. Trust. And while people talk about investment in China, America is still on top by a landslide. 5) America has the top global brands - In 2008, eight out of 10 of the world's top brands were American. 6) The U.S. is the world leader in technology - **People still flock to America to become tech innovators**. The U.S. is home to the major social media players and beats out other countries in spending levels. 7) America has the world's best colleges - American college kids fill their minds with kegs worth of knowledge at some of the world's best universities. Six out of the top 10 universities in the 2012 Quacquarelli Symonds World Rankings' were American. 8) The U.S. dollar is king - It's the world's reserve currency. From the U.S. Trust report: "The greenback accounted for roughly 62% of global central bank reserves as of the fourth quarter of 2012, according to the IMF, a share down slightly from 2008 but relatively constant over the post-crisis years." It crushed the beleaguered Euro. 9) **The U.S. has one of the most competitive economies** - In the latest competitiveness survey from the World Economic Forum, the U.S. slipped to seventh place, down two spots, according to the report. Still, U.S. Trust guesses America will head north on the list in the future. 10) America is in the middle of an energy Renaissance - Much to the chagrin of some environmentalists, U.S. domestic oil production is in revival mode. It exceeded imports for the first time in 16 years, according to the report. Thanks to "fracking" that unlocked shale in North Dakota, Oklahoma, and Texas, the U.S. has seen a major surge in production, the report notes.

Ext: Econ High (General)

Econ rebounding now – manufacturing, employment, job growth.

CNN-5/8/2015. CNN is among the world's leaders in online news and information delivery. "Good News: U.S. Economy Adds 223,000 Jobs." CNNMoney. Cable News Network, 8 May 2015. Web. 22 July 2015. <http://money.cnn.com/2015/05/08/news/economy/april-jobs-report-economy-pick-up/>.

¶ America can breathe a sigh of relief The economy is improving with the spring weather.¶ The U.S. added 223,000 jobs in April a healthy pick up after a disappointing March and about in line with what economists surveyed by CNNMoney projected.¶ April's strong job gains reflect a trend the country saw last year: job growth cooling in the winter months, then gaining momentum into the spring.¶ "They are good numbers," says Kate Warne, investment strategist at Edward Jones. "It's reassuring that we saw job growth rebound to above 200,000."¶ The good news doesn't stop there. The unemployment rate dropped to 5.4%, its lowest mark since May 2008. This is likely to be helpful to Democratic presidential candidate Hillary Clinton. Many believe she needs the economy to keep growing until Election Day in order for her to win the presidency.¶ Wall Street was very happy with the report. The Dow is soaring over 250 points (nearly 1.5%) in Friday trading, and the yield on the 10-year government bond fell substantially as investors cease worrying so much about a slowdown.¶ dow friday¶ The one thing regular Americans still want is better pay. There are finally signs it's picking up. Wages are now growing at 2.2%, above the expectations from CNNMoney's survey. Experts say pay should continue to bump up if unemployment remains low.¶ Where the jobs are: **Hiring has been strong in many industries** with one big exception: Energy.¶ About 15,000 energy jobs -- oil drillers, coal miners and others -- were lost in April, the worst month for the sector since May 2009. Low gas prices are great for Americans at the pump, but they're causing energy companies to cut jobs.¶ Energy jobs "took it on the chin once again," says Sam Bullard, senior economist at Wells Fargo Securities. "It certainly suggests the stronger dollar and lower oil prices are having a substantial impact."¶ Despite the bad energy news, other industries picked up the slack Construction and health care each added 45,000 jobs Business services -- marketing, accountants, consultants -- was the best performer in April, adding 62,000 jobs.¶ chart jobs report 050815¶ What's ahead: The April jobs report gives more fuel to the optimists who believe the U.S. economy will continue to expand. Last year was the best year for job gains since 1999.¶ Then the winter of 2015 came.¶ The economy barely grew in the first quarter this year. Many experts thought low gas prices would encourage Americans to spend during the winter months. Shoppers stayed home though as retail sales -- computers, clothes and cars -- were negative or near flat.¶ ¶ The cold weather, strong U.S. dollar and West Coast port strike were the culprits for weak economic growth.¶ Although April's job gains were good, they probably aren't enough to convince the Federal Reserve to raise its key interest rate in June, experts say. The Fed hasn't raised rates in almost a decade, and a rate hike would be the bank's two thumbs up for the economy's health. Most economists believe the Fed will raise rates in September or later now.¶ Still, Friday's good job news suggests the tide could be turning in the right direction for the U.S. economy.¶ "This is a net positive," says Bullard.

1NC: Competitiveness Not Key

Competitiveness not key to heg

Wohlforth et al., Dartmouth government professor, 2008

(William, World out of Balance, International Relations and the Challenge of American Primacy, pg 32-5, ldg)

American primacy is also rooted in the county's position as the world's leading technological power. The United States remains dominant globally in overall R&D investments, high-technology production, commercial innovation, and higher education (table 2.3). Despite the weight of this evidence, elite perceptions of U.S. power had shifted toward pessimism by the middle of the first decade of this century. As we noted in chapter 1, this was partly the result of an Iraq-induced doubt about the utility of material predominance, a doubt redolent of the post-Vietnam mood. In retrospect, many assessments of U.S. economic and technological prowess from the 1990s were overly optimistic; by the next decade important potential vulnerabilities were evident. In particular, chronically imbalanced domestic finances and accelerating public debt convinced some analysts that the United States once again confronted a competitiveness crisis.23 If concerns continue to mount, this will count as the fourth such crisis since 1945; the first three occurred during the 1950s (Sputnik), the 1970s (Vietnam and stagflation), and the 1980s (the Soviet threat and Japan's challenge). None of these crises, however, shifted the international system's structure: multipolarity did not return in the 1960s, 1970s, or early 1990s, and each scare over competitiveness ended with the American position of primacy retained or strengthened.24 Our review of the evidence of U.S. predominance is not meant to suggest that the United States lacks vulnerabilities or causes for concern. In fact, it confronts a number of significant vulnerabilities; of course, this is also true of the other major powers.25 The point is that adverse trends for the United States will not cause a polarity shift in the near future. If we take a long view of U.S. competitiveness and the prospects for relative declines in economic and technological dominance, one takeaway stands out: **relative power shifts slowly.** The United States has accounted for a quarter to a third of global output for over a century. No other economy will match its combination of wealth, size, technological capacity, and productivity in the foreseeable future (tables 2.2 and 2.3). The depth, scale, and projected longevity of the U.S. lead in each critical dimension of power are noteworthy. But what truly distinguishes the current distribution of capabilities is American dominance in all of them simultaneously. The chief lesson of Kennedy's 500-year survey of leading powers is that nothing remotely similar ever occurred in the historical experience that informs modern international relations theory. The implication is both simple and underappreciated: the counterbalancing constraint is inoperative and will remain so until the distribution of capabilities changes fundamentally. The next section explains why.

Ext: Competitiveness Not Key

US can absorb innovation from anywhere-ensures competitiveness

Beckley, Harvard International Security Program research fellow, 2012

(Michael, "China's Century? Why America's Edge Will Endure", International Security 36.3, lexis, ldg)

In theory, globalization should help developing countries obtain and absorb advanced technology. In practice, however, this may not occur because some of the knowledge and infrastructure necessary to absorb certain technologies cannot be specified in a blueprint or contained within a machine. Instead they exist in peoples' minds and can be obtained only through "hands-on" experience. The World Bank recently calculated that 80 percent of the wealth of the United States is made up of intangible assets, most notably, its system of property rights, its efficient judicial system, and the skills, knowledge, and trust embedded within its society. If this is the case, then a huge chunk of what separates the United States from China is not for sale and cannot be copied. Economies and militaries used to consist primarily of physical goods (e.g., conveyor belts and tanks), but today they are composed of systems that link physical goods to networks, research clusters, and command centers. 72 Developing countries may be able to purchase or steal certain aspects of these systems from abroad, but many lack the supporting infrastructure, or "absorptive capacity," necessary to integrate them into functioning wholes. 73

For example, in the 1960s, Cummins Engine Company, a U.S. technological leader, formed joint ventures with a Japanese company and an Indian company to produce the same truck engine. The Japanese plant quickly reached U.S. quality and cost levels while the Indian plant turned out second-rate engines at three to four times the cost. The reason, according to Jack Baranson, was the "high degree of technical skill . . . required to convert techniques and produce new technical drawings and manufacturing specifications." 74 This case illustrates how an intangible factor such as skill can lead to significant productivity differences even when two countries have access to identical hardware. Compared to developing countries such as China, the United States is primed for technological absorption. Its property rights, social networks, capital markets, flexible labor laws, and legions of **m**ulti**n**ational **c**ompanies not only help it innovate, but also absorb innovations created elsewhere. Declinists liken the U.S. economic system to a leaky bucket oozing innovations out into the international system. But in the alternative perspective, **the United States is more like a sponge, steadily increasing its mass by soaking up ideas, technology, and people from the rest of the world. If this is the case, then the spread of technology around the globe may paradoxically favor a concentration of technological and military capabilities in the United States.**

1NC: Heg Defense

Stability exists independently of US power – advocates of unipolarity are biased by a superiority complex

Fettweis, 2014 Christopher, Associate Professor of Political Science at Tulane University, former post-doctoral fellow at the Mershon Center for International Security at Ohio State University, Ph.D. in international relations from the University of Maryland, October 7, "Delusions of Danger: Geopolitical Fear and Indispensability in US Foreign Policy," *A Dangerous World?: Threat Perception and U.S. National Security*, Kindle Edition

According to what might be considered the indispensability fallacy, many Americans believe that U.S. actions are primarily responsible for any stability that currently exists. "All that stands between civility and genocide, order and mayhem," explain Lawrence Kaplan and William Kristol, "is American power." 37 That belief is an offshoot, witting or not, of what is known as "hegemonic stability theory," which proposes that international peace is possible only when one country is strong enough to make and enforce a set of rules. 38 Were U.S. leaders to abdicate their responsibilities, that reasoning goes, unchecked conflicts would at the very least bring humanitarian disaster and would quite quickly threaten core U.S. interests. 39 Brzezinski is typical in his belief that "outright chaos" and a string of specific horrors could be expected to follow a loss of hegemony, from renewed attempts to build regional empires (by China, Turkey, Russia, and Brazil) to the collapse of the U.S. relationship with Mexico as emboldened nationalists south of the border reassert 150- year-old territorial claims. Overall, without U.S. dominance, today's relatively peaceful world would turn "violent and bloodthirsty." 40 The liberal world order that is so beneficial to all would come tumbling down. Like many believers, proponents of hegemonic stability theory **base their view on faith alone.** 41 There is precious **little evidence** to suggest that the United States is responsible for the pacific trends that have swept across the system. In fact, the world remained equally peaceful, relatively speaking, while the United States cut its forces throughout the 1990s, as well as while it doubled its military spending in the first decade of the new century. 42 Complex statistical methods should not be needed to demonstrate that levels of U.S. military spending have been essentially **unrelated to global stability.** Hegemonic stability theory's flaws go way beyond the absence of simple correlations to support them, however. The theory's supporters have never been able to explain adequately how precisely 5 percent of the world's population could force peace on the other 95 percent, unless, of course, **the rest of the world was** simply **not intent on fighting.** Most states are quite free to go to war without U.S. involvement but choose not to. The United States can be counted on, especially after Iraq, to steer well clear of most civil wars and ethnic conflicts. It took years, hundreds of thousands of casualties, and the use of chemical weapons to spur even limited interest in the events in Syria, for example; surely internal violence in, say, most of Africa would be unlikely to attract serious attention of the world's policeman, much less intervention. The

continent is, nevertheless, more peaceful today than at any other time in its history, something for which U.S. hegemony cannot take credit. 43 Stability exists today in many such places to which U.S. hegemony simply does not extend. Overall, proponents of the stabilizing power of U.S. hegemony should keep in mind one of the most basic observations from cognitive psychology: rarely are our actions as important to others' calculations as we perceive them to be. 44 The so-called egocentric bias, which is essentially ubiquitous in human interaction, suggests that although it may be natural for **U.S. policymakers** to interpret their role as crucial in the maintenance of world peace, they are almost certainly **overestimating their own importance.** Washington is probably not as central to the myriad decisions in foreign capitals that help maintain international stability as it thinks it is. The indispensability fallacy owes its existence to a couple of factors. First, although all people like to bask in the reflected glory of their country's (or culture's) unique, nonpareil stature, Americans have long been **exceptional in their exceptionalism.** 45 The short history of the United States, which can easily be read as an almost uninterrupted and certainly unlikely story of success, has **led to a** (perhaps natural) **belief that it is morally, culturally, and politically superior to other**, lesser **countries.** It is no coincidence that the exceptional state would be called on by fate to maintain peace and justice in the world. Americans have always combined that feeling of divine providence with a sense of mission to spread their ideals around the world and battle evil wherever it lurks. It is that sense of destiny, of being the object of history's call, that most obviously separates the United States from other countries. Only an American president would claim that by entering World War I, "America had the infinite privilege of fulfilling her destiny and saving the world." 46 Although many states are motivated by humanitarian causes, no other seems to consider promoting its values to be a national duty in quite the same way that Americans do. "I believe that God wants everybody to be free," said George W. Bush in 2004. "That's what I believe. And that's one part of my foreign policy." 47 When Madeleine Albright called the United States the "indispensable nation," she was reflecting a traditional, deeply held belief of the American people. 48 Exceptional nations, like exceptional people, have an obligation to assist the merely average. Many of the factors that contribute to geopolitical fear — Manichaeism, religiosity, various vested interests, and neoconservatism—also help explain American exceptionalism and the indispensability fallacy. And **unipolarity makes hegemonic delusions possible.** With the great power of the United States comes a sense of great responsibility: to serve and protect humanity, to drive history in positive directions. More than any other single factor, the people of the United States tend to believe that they are indispensable because they are powerful, and power tends to blind states to their limitations. "Wealth shapes our international behavior and our image," observed Derek Leebaert. "It brings with it the freedom to make wide-ranging choices **well beyond common sense.**" 49 It is quite likely that **the world does not need the United States to enforce peace.** In fact, if virtually any of the overlapping and mutually reinforcing explanations for the current stability are correct, the trends in international security may well prove difficult to reverse. None of the contributing factors that are commonly suggested (economic development, complex interdependence, nuclear weapons, international institutions, democracy, shifting global norms on war) seem poised to disappear any time soon. 50 The world will probably continue its peaceful ways for the near future, at the very least, **no matter what the United States chooses to do** or not do. As Robert Jervis concluded while pondering the likely effects of U.S. restraint on decisions made in foreign capitals, "It is very unlikely that pulling off the American security blanket would lead to thoughts of war." 51 The United States will remain fundamentally safe no matter what it does—in other words, despite widespread beliefs in its inherent indispensability to the contrary.

Ext: Heg Impact D

Alliances are out dated, multi-polarity is stable and there is no scenario for war in a world of US decline

Friedman et al., MIT political science PhD candidate, 2012

(Benjamin, "Why the U.S. Military Budget is 'Foolish and Sustainable", Orbis, 56.2, Science Direct)

Standard arguments for maintaining the alliances come in two contradictory strains. One, drawn mostly from the run-up to World War II, says that without American protection, the ally would succumb to a rival power, either by force or threat of force, heightening the rival's capability and danger to the United States. The other argument says that without the United States, the ally would enter a spiral of hostility with a neighbor, creating instability or war that disrupts commerce and costs America more than the protection that prevented it. The main problem with the first argument is that no hegemon today threatens to unify Europe or Asia. Europe is troubled by debt, not conquest. Russian GDP is today roughly equivalent to that of Spain and Portugal combined. Whatever Russia's hopes, it has no ability to resurrect its Soviet Empire, beyond perhaps those nations in its near abroad that Americans have no good reason to defend. Even today, the military capabilities of Europe's leading powers are sufficient to defend its eastern flank, and they could increase their martial exertions should a bigger threat arise. Asia is tougher case. South Korea's military superiority over its northern neighbor is sufficient to deter it from an attempt at forcible reunification. By heightening North Korea's security, nuclear weapons may reinforce its capacity for trouble-making, but they do not aid offensive forays. U.S. forces long ago became unnecessary to maintaining the peninsula's territorial status quo. Chinese efforts to engage in old-fashioned conquest are unlikely, at least beyond Taiwan. Its more probable objective is a kind of Asian Monroe doctrine, meant to exclude the United States.6 China naturally prefers not to leave its maritime security at the whim of U.S. policymakers and, thus, has sought to improve its anti-access and area-denial capabilities. In the longer term, China's leaders will likely pursue the ability to secure its trade routes by building up longer-range naval forces. They may also try to leverage military power to extract various concessions from nearby states. Washington's defense analysts typically take those observations as sufficient to establish the necessity that U.S. forces remain in Asia to balance Chinese military power. But to justify a U.S. military presence there, one also needs to show both that Asian nations cannot or will not balance Chinese power themselves and that their failure to do so would greatly harm U.S. security**. Neither is likely**. Geography and economics suggest that the states of the region will successfully balance Chinese power—even if we assume that China's economic growth allows it to continue to increase military spending.7 Bodies of water are natural defenses against offensive military operations. They allow weaker states to achieve security at relatively low cost by investing in naval forces and coastal defenses. That defensive advantage makes balances of power more stable. Not only are several of China's Asian rivals islands, but those states have the wealth to make Chinese landings on their coast prohibitively expensive. India's mountainous northern border creates similar dynamics. **The prospects of Asian states successfully deterring future Chinese aggression will get even better if, as seems likely, threats of aggression provoke more formal security alliances**. Some of that is already occurring. Note for example, the recent joint statement issued by the Philippines and Japan marking a new "strategic partnership" and expressing "common strategic interests" such as "ensuring the safety of sea lines of communication."8 This sort of multilateral cooperation would likely deepen with a more distant U.S. role. Alliances containing disproportionately large states historically produce free-riding; weaker alliance partners lose incentive to shore up their own defenses.9 Even if one assumes that other states in the region would fail to balance China, it is unclear exactly how U.S. citizens would suffer. China's territorial ambitions might grow but are unlikely to span the Pacific. Nor would absorbing a few small export-oriented states slacken China's hunger for the dollars of American consumers. The argument that U.S. alliances are necessary for stability and global commerce is only slightly more credible. One problem with this claim is that U.S. security guarantees can create moral hazard—emboldening weak allies to take risks they would otherwise avoid in their dealings with neighbors. Alliances can then discourage accommodation among neighboring states, heightening instability and threatening to pull the United States into wars facilitated by its benevolence. Another point against this argument is that even if regional balancing did lead to war, it would not obviously be more costly to the U.S. economy than the cost of the alliance said to prevent it. **Neutrality historically pays**.10 The larger problem with the idea that our alliances are justified by the balancing they prevent is that **wars generally require more than the mutual fear that arms competition provokes**. Namely, there is usually a territorial conflict or a state bent on conflict. Historical examples of arms races alone causing wars are few.11 This confusion probably results from misconstruing the causes of World War I—seeing it as a consequence of mutual fear alone rather than fear produced by the proximity of territorially ambitious states.12 Balances of power, as noted, are especially liable to be stable when water separates would-be combatants, as in modern Asia. Japan would likely increase defense spending if U.S. forces left it, and that would likely displease China. But that **tension is very unlikely to provoke a regional conflagration. A**nd even that remote scenario is far more likely than the Rube Goldberg scenario needed to argue that peace in Europe requires U.S. forces stationed there. It is not clear that European states would even increase military

spending should U.S. troops depart. If they did do so, one struggles to imagine a chain of misperceived hostility sufficient to resurrect the bad old days of European history.

No transition wars – interdependence and diplomacy check
Fettweis, Poli Sci Prof @ Tulane University, 10

(Christopher, "Dangerous Times?: The International Politics of Great Power Peace," pp. 173-175)

If the only thing standing between the world and **chaos is the U.S. military presence**, then an adjustment in grand strategy would be exceptionally counter- productive. But it is worth recalling that **none of the other explanations for the decline of war—nuclear weapons**, **complex economic interdependence**, inter- national and domestic political institutions, evolution in ideas and norms— necessitate an activist America to maintain their validity. Were America to be- come more restrained, nuclear weapons would still affect the calculations of the would-be aggressor; the process of globalization would continue, deepening the complexity of economic interdependence; the United Nations could still deploy peacekeepers where necessary; and democracy would not shrivel where it cur- rently exists. Most importantly, **the idea that war is a worthwhile way to resolve conflict would have no reason to return.** As was argued in chapter 2, normative evolution is typically unidirectional. Strategic restraint in such a world would be virtually risk-free.

1NC: US-China War

No US-China War

Roy 12 (Bhaskar, writer for the South Asia Analysis Group, a non-profit, non-commercial think tank, "China Pushing Asia From India To Japan – Analysis," 7/18, http://www.eurasiareview.com/18072012-china-pushing-asia-from-india-to-japan-analysis/)

Militarily, if Russia's lethal strategic strike capability is set aside, China is the second most powerful military power in the world after the USA. Certainly, the military gap between China and the US is very wide and will continue to be so for some more decades. China is aware of this. The recent Chinese foreign policy track is very clear that they do not want to confront the USA, and have refused to be overly provoked by America's Asia 'pivot' or "rebalance". For China's Asian neighbours, especially the South East Asian nations, Beijing's military and economic power are overwhelming. They are also not sure how far they can depend on the US in a military confrontation with China. The ASEAN countries are also not united. China's military strategy vis-a-vis the US is to make it unacceptably costly for the US if it intervenes in China's move to consolidate its territorial claims in the South China Sea and the Sea of Japan, as well as in the Taiwan issue.

War is impossible – Chinese democratization will facilitate cooperation

Friedberg, 05 **(Aaron L. Friedberg, Professor of Politics and International Affairs at Princeton University. International Security, Vol. 30, No. 2 (Fall 2005) http://belfercenter.ksg.harvard.edu/files/is3002_pp007-045_friedberg.pdf)**

Liberal optimists believe that, although it is still far from finished, the process of democratization is already well under way in China.20 This process is being driven largely by economic development, which, in turn, is being accelerated by China's increasing openness to trade. Rising per capita incomes are creating a growing Chinese middle class. In Europe and North America, and more recently in Asia, those whose rising incomes allow them to do more than attend to the struggle for daily existence have been the prime movers behind progress toward democracy, and there is every reason to hope that they will play a similar role in China.21 Liberals also believe that, in addition to stirring the desire for political rights, economic development creates an objective, functional need for political liberalization. Without courts, contracts, and a reliable rule of law, economic progress will surely falter. Moreover, in an era in which sustained growth depends increasingly on free flows of information, regimes that seek to restrict speech and control communications will be at a fatal disadvantage. Over time, if it wishes even to approach the levels of well-being already attained by its advanced industrial counterparts (all of which are democracies), China too must become democratic.22 As it does, the liberal optimists expect that its relations with the United States will stabilize and that, ultimately, it will enter into the democratic "zone of peace." Although the process may take time fully to unfold, before too long open conflict between the United States and a democratic China will be as improbable as war among the members of the European Union appears to be today.

History doesn't matter–nuclear weapons and modern threats make China more likely to rise peacefully

Brzezinski, 05 (Zbigniew, Counselor at CSIS, Foreign Policy, Jan/Feb, http://www.worldthreats.com/Asia/Clash%20of%20Titans.htm)

As an occasional scholar, I am impressed by the power of theory. But theory—at least in international relations—is essentially retrospective. When something happens that does not fit the theory, it gets revised. And I suspect that will happen in the U.S.-China relationship. We live in a very different world than the one in which hegemonic powers could go to war without erasing each other as societies. The nuclear age has altered power politics in a way that was already evident in the U.S.-Soviet competition. The avoidance of direct conflict in that standoff owed much to weaponry that makes the total elimination of societies part of the escalating dynamic of war. It tells you something that the Chinese are not trying to acquire the military capabilities to take on the United States. How great powers behave is not predetermined. If the Germans and the Japanese had not conducted themselves the way they did, their regimes might not have been destroyed. Germany was not required to adopt the policy it did in 1914 (indeed, German Chancellor Otto von Bismarck followed a very different path). The Japanese in 1941 could have directed their expansionism toward Russia

rather than Britain and the United States. For its part, the Chinese leadership appears much more flexible and sophisticated than many previous aspirants to great power status.

AT: Business Perception

Business confidence is high – no unique perception internal.

PCW 15 (PricewaterhouseCoopers, global perspective along with in-depth knowledge of local, state and US issues., "Leading in extraordinary times", http://www.pwc.com/us/en/ceo-survey/index.html)

For the first time in five years in PwC's Annual Global CEO Survey, more business leaders rate the US as their most important market for overseas growth ahead of all others, including China's. As the US recovery gains traction, it is gaining more adherents. Challenges remain, yet key measures of US economic health are improving. Business hopes are building that the American consumer market will start firing on more than one piston in 2015. PwC projects US GDP growth of 3.2% this year. Yet even as US economic indicators recalibrate to a more normal setting, it is likely the business environment will not. If there has been one constant throughout the shifts in risk/rewards over the past five years for US CEOs, it's been this: with every upgrade and new Internet hook-up, devices got smarter, customers got smarter, employees got smarter. Businesses resigned to dealing with the effects of extreme transparency on pricing models at a time of constrained US spending may find a new set of challenges as the US market gains the global leadership spot. CEOs everywhere are forging ahead in an environment they believe is more volatile and unpredictable. Across a number of areas, more CEOs are worried about threats to business growth in 2015 than they were three years ago. Yet 61% of CEOs globally—and this is even more so for US CEOs (67%)—believe there are more growth opportunities today for their companies than three years ago. What's more, 46% of US CEOs are 'very confident' of achieving revenue growth this year, a five-year Survey high. What's changed? Great advances in technology and science are giving us building blocks to solve problems that in turn, are giving rise to new business models that can better meet and even create demand. For CEOs, it means great opportunities to create value in areas they have not gone before by combining the right building blocks together. Michael Dell, Chairman and CEO of Dell Inc., put it this way in an interview with PwC: technology is at the center of all the big changes in business, but the industry's expanding. "Nobody has an enormous lock on the market. The markets are always changing, and it's a great time to be listening, learning, figuring out what problems are unsolved with customers, because there are always emergent problems. And that's how you win." Actions US CEOs are planning for 2015 show how US businesses are being positioned for this new era where growth in their important markets balance more evenly between developed and emerging economies, and where mainstream adoption rates for digital technologies everywhere are surging. PwC surveyed 1,322 business leaders across 77 countries between September 25 and December 9 in 2014, including 103 CEOs in the US, for insights on how businesses are setting a course for growth. PwC also sat down with 28 US CEOs to gain greater context.

Circumvention: 4th Amendment Specific

Ruling on the 4th Amendment fails – multiple loopholes for circumvention.

Arnbak and Goldberg 15 (Axel and Sharon, Arnbak is a Faculty Researcher at the Institute for Information Law, University of Amsterdam and a Research Affiliate at the Berkman Center for Internet & Society, Harvard University,Goldberg is Associate Professor of Computer Science, Boston University and a Research Fellow, Sloan Foundation, "Michigan Telecommunications & Technology Law Review", (Dave didn't give me the original site were this was posted))

Although the string of revelations on surveillance operations conducted by the United States (US) intelligence community has overloaded the general public and the media, we are only beginning the process of precisely describing the legal and technical details behind these operations. This multi-disciplinary Article discusses interdependent legal and technical loopholes that US intelligence agencies could use to circumvent Fourth Amendment protections and statutory safeguards for Americans. There are several loopholes in current US surveillance law that allow for largely unrestrained surveillance on Americans by collecting their network traffic abroad while not intentionally targeting a US person. Because the US legal framework regulating intelligence operations has not been updated to account for new technical realities, the loopholes we identify could leave Americans' Internet traffic as exposed to network surveillance and as unprotected, from a legal perspective, as foreigners' Internet traffic. This Article aims to broaden the understanding of how technical realities of the Internet impact US surveillance law and suggest remedies that can close the loopholes identified. This Article focuses on surveillance operations conducted by US government agencies but does not speculate on the extent to which the intelligence community is exploiting the loopholes identified. This Article also does not address the morality of surveillance based on the (assumed) nationality of Internetusers. This analysis fits into a recurring regulatory conundrum. The application of any law is, ultimately, tied to jurisdiction. For centuries, jurisdiction has been determined primarily by geographic borders, or the physical space that states consider sovereign territory. Because global communication networks do not necessarily respect such borders, regulators and courts across the globe are struggling to adapt law to this new technical reality. Transnational surveillance (i.e., surveillance conducted from one country, directed towards users in another country) on global communications networks presents us with one of the most urgent examples of this conundrum. n1 Although short term technical and legal solutions are available to address some of the issues outlined in this Article, they are no panacea. In the end, safeguarding the privacy of American Internet users requires a reconsideration of three legal principles underlying US surveillance law. First, the geographical point of collection determines which legal regime applies to a surveillance operation. Second, the collection of network traffic, before processing and analysis, is not firmly protected by the Fourth Amendment of [*320] the US Constitution. Third, constitutional protection is limited to "US persons," a term that is not defined uniformly across different regimes of US surveillance laws. These principles emerged in different times than ours. If they are maintained, loopholes in antiquated law - particularly Executive Order (EO) 12333 - will work in conjunction with ever-advancing technical capabilities to enable largely unrestrained surveillance on Americans from abroad.

Circumvention: EO 12333

Plan will be circumvented – EO 12333.

Arnbak and Goldberg 15 (Axel and Sharon, Arnbak is a Faculty Researcher at the Institute for Information Law, University of Amsterdam and a Research Affiliate at the Berkman Center for Internet & Society, Harvard University,Goldberg is Associate Professor of Computer Science, Boston University and a Research Fellow, Sloan Foundation, "Michigan Telecommunications & Technology Law Review", (Dave didn't give me the original site were this was posted))

The legal notion of "targeting a US person" does not rule out bulk collection of Internet traffic, even in situations where the traffic actually contains millions of Americans' communication records. By collecting the traffic abroad, authorities can presume the traffic belongs to foreigners. Any US person's traffic

that happens to be captured during bulk collection is considered "incidentally collected" and may be retained for further processing. Users are only "targeted," in the legal sense, once collection is complete and the surveillance operation moves into its retention and analysis phases. Indeed, documents revealed on August 25, 2014 indicate that metadata from retained traffic can be shared between multiple intelligence agencies, including domestic law enforcement and the Drug Enforcement Agency, and used for purposes that include "target development." n8 [*322] Thus, collecting Americans' network traffic abroad creates a legal loophole for surveillance on them. A surveillance operation acting in a manner consistent with EO 12333 allows foreignness to be presumed for data that is intercepted abroad. This circumvents Americans' Fourth Amendment protections that are assumed (in the legal sense) to be US persons under FISA and § 215 of the Patriot Act during domestic surveillance operations. n9

Circumvention: Obama

Obama will circumvent – previous actions prove.

Heyes- 6/12/15. J.D Heyes is writer for The Centre for Research on Globalization (CRG), an independent research and media organization.Heyes, J. D. "Obama Orders Secret Surveillance Court to Ignore Lower Court Decision and Spy on Americans Illegally." Global Research. N.p., 12 June 2015. Web. 21 July 2015. <http://www.globalresearch.ca/obama-orders-secret-surveillance-court-to-ignore-lower-court-decision-and-spy-on-americans-illegally/5455297>.

Just hours after President Obama said he would sign new federal legislation ostensibly aimed at ending the National Security Agency's bulk collection of Americans' metadata, he instructed his Department of Justice to seek permission from a secret court to continue the program for at least another six months.¶ As reported by the UK's Guardian newspaper, the DOJ essentially asked the Foreign Intelligence Surveillance Court, which considers all government surveillance requests behind closed doors, to ignore an earlier federal appeals court ruling that found the bulk collection of data unconstitutional.¶ The request also suggested that the administration had no intention of complying with a potential court order banning the collection, the paper reported.¶ The paper said U.S. officials had confirmed earlier that the administration intended to seek permission from the FISA court to restart the domestic bulk collection program.¶

Transparency Bad

Transparency allows countries to spot weaknesses- hostility, proliferation and aggression

Lord '6 (Kristin Lord is the president and CEO of IREX, "The Perils and Promise of Global Transparency", http://cryptome.org/2013/01/aaron-swartz/Global-Transparency-Perils-Promise.pdf, accessed: 7/19/15, SP)

Unfortunately, transparency is a double-edged sword. Though transparency does reduce uncertainty, less uncertainty will not always mean more security or peace. Rather, the effects of greater transparency depend on what it shows and how states react. We cannot assume that transparency will show

behavior that supports peace and cooperation or that states will react to information in ways that will lead to a more just or peaceful world. Greater transparency can indeed enhance international peace and security if it shows that other states are genuinely peace-loving, but **transparency can make conflicts worse if it illuminates hostility, aggression, or arms buildups**. By illuminating weakness, transparency can undermine deterrence and encourage aggression. It can alert states to closing windows of opportunities and give them incentives to fight. By taking away strategic ambiguity, transparency can encourage states to find less visible, more pernicious means of defending their interests.

DISAD LINKS

--- Terrorism DA ---

Metadata Links

Mass metadata collection is vital to prevent nuclear terrorism

Yoo '14 (John, a Korean-American attorney, law professor, and author, "THE LEGALITY OF THE NATIONAL SECURITY AGENCY'S BULK DATA SURVEILLANCE PROGRAMS", http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=3432&context=facpubs, Summer '14, accessed 7/22/15, SP)

A. Phone Call Metadata Collection Like business records, phone call metadata falls within Section 215's definition of tangible items. Collection of such metadata relates to an authorized investigation to protect against international terrorism. Several investigations into al Qaeda plots remain open, as shown by the repeated indictments [*908] against bomb plotters in the last five years. The examination of records also helps protect the nation against terrorist attacks. According to the NSA, only the information contained in the billing records is collected; the content of calls is not. n26 There can be no First Amendment violation **if the content of the calls remains untouched**. A critic might argue that the terms of the search are too broad because ninety-nine percent of the calls are unconnected to terrorism. But an intelligence search, as Judge Richard Posner has described it, "is a search for the needle in a haystack." n27 Rather than focus on foreign agents who are already known, counterterrorism agencies must search for clues among millions of potentially innocent connections, communications, and links. "The intelligence services," Posner writes, "must cast a wide net with a fine mesh to catch the clues that may enable the next attack to be prevented." n28 For this reason, the FISC approved the NSA program in 2006 and has continued to renew it since. n29 Members of the al Qaeda network can be detected, with good intelligence work or luck, by examining phone and e-mail communications, as well as evidence of joint travel, shared assets, common histories or families, meetings, and so on. n30As the time for an attack nears, "chatter" on this network will increase as operatives communicate to coordinate plans, move and position assets, and conduct reconnaissance of targets. n31 When our intelligence agents successfully locate or capture an al Qaeda member, they must be able to move quickly to follow new information to other operatives before news of the capture causes them to disappear. The NSA database is particularly [*909] important because it will point the way to al Qaeda agents within the United States, where they are closest to their targets and able to inflict the most harm on civilians. The September 11 hijackers themselves provide an example of the way that the NSA could use business record information to locate an al Qaeda cell. Links suggested by commercially available data might have turned up ties between every single one of the al Qaeda plotters and Khalid al Mihdhar and Nawar al Hazmi, the two hijackers known to the CIA to have been in the country in the summer of 2001. n32 Mihdhar and Hazmi had rented apartments in their own names and were listed in the San Diego phone book. n33 Both Mohammad Atta, the leader of the September 11 al Qaeda cell, and Marwan al-Shehi, who piloted one of the planes into the World Trade Center, had lived there with them. n34 Hijacker Majed Moqed used the same frequent flier number as Mihdhar; five hijackers used the same phone number as Atta when booking their flights; the remaining hijackers shared addresses or phone numbers with one of those hijackers, Ahmed Alghamdi, who was in the United States in violation of his visa at the time. n35 Our intelligence agents, in fact, had strong leads that could conceivably have led them to all of the hijackers before 9/11.n36 CIA agents had identified Mihdhar as a likely al Qaeda operative because he was spotted at a meeting in Kuala Lumpur and mentioned in Middle East intercepts as part of an al Qaeda "cadre." n37 Hazmi too was known as likely to be al Qaeda.n38 But in neither case was there enough evidence for a criminal arrest because they had not violated any American laws. If our intelligence services had been able to track immediately their cell phone calls and e-mail, it is possible that enough of the hijacking team could have been rounded up to avert 9/11. n39 Our task is much more difficult today, because we might not have even [*910] this slender information in hand when the next al Qaeda plot moves toward execution. As the United States fought the Afghanistan and Iraq wars, and as it has continued to pursue al Qaeda groups in the Middle East and Africa, it has captured al Qaeda laptops, cell phones, financial documents, and other instruments of modern high-tech life. This has given intelligence officers information on dozens or hundreds of e-mail addresses, telephone numbers,

bank and credit account numbers, and residential and office addresses used by al Qaeda networks. n40 To exploit this, U.S. intelligence services must follow those leads as fast as possible, before the network of al Qaeda operatives can migrate to a new leader. An e-mail lead can disappear as quickly as it takes someone to open a new e-mail account. **FISA and the law enforcement mentality it embodies create several problems**. FISA requires "probable cause" to believe that someone is an agent of a foreign power before one can get a warrant to collect phone calls and e-mails. n41 An al Qaeda leader could have a cell phone with 100 numbers in its memory, ten of which are in the United States and thus require a warrant. Would a FISA judge have found probable cause to think the users of those ten numbers are al Qaeda too? Probably not. Would our intelligence agencies even immediately know who was using those numbers at the time of the captured al Qaeda leader's calls? The same question can be asked of his e-mail, as it will not be immediately obvious which addresses in his inbox are held by U.S. residents. In our world of rapidly shifting e-mail addresses, multiple cell phone numbers, and internet communications, FISA imposes slow and cumbersome procedures on our intelligence and law enforcement officers. n42 These laborious checks are based on the [*911] assumption that we remain within the criminal justice system, which looks backward at crimes in order to conduct prosecutions, rather than within the national security system, which looks forward in order to prevent attacks on the American people. n43 FISA requires a lengthy review process, in which special FBI and DOJ lawyers prepare an extensive package of facts and law to present to the FISC. n44 The Attorney General must personally sign the application, and another high-ranking national security officer, such as the President's National Security Advisor or the Director of the FBI, must certify that the information sought is for foreign intelligence. n45 Only a quickly searchable database of numbers will allow the government to take advantage of captured al Qaeda numbers abroad, before the cells within the United States break their contacts. A critic, however, might argue that billions of innocent calling records are not "relevant" to a terrorism investigation. n46Even if terrorist communications take place over the phone, that cannot justify the collection of all phone call records in the United States, the vast majority of which have nothing to do with the grounds for the search. The FISC rejected this argument because, to be useful, **a database has to be broad enough to find terrorist calls**. "Because known and unknown international terrorist operatives are using telephone communications, and because it is necessary to obtain the bulk collection of a telephone company's metadata to determine those connections between known and unknown international terrorist operatives as part of authorized investigations," the Court observed, "the production of the information sought meets the standard for relevance under Section 215." n47 Aggregating calling records [*912] into a database, the court found, was necessary to find the terrorist communications and the links between terrorists. n48 It may not even be possible to detect the links unless such a database is created. If a database is not comprehensive, in other words, then the government will only be able to glimpse incomplete patterns of terrorist activity, if it can glimpse any at all.

Metadata collection under the NSA key to prevent terrorism,

Nakashima 13 (Ellen, Reporter — Washington, D.C., June 18, 2013, Officials: Surveillance programs foiled more than 50 terrorist plots, https://www.washingtonpost.com/world/national-security/officials-surveillance-programs-foiled-more-than-50-terrorist-plots/2013/06/18/d657cb56-d83e-11e2-9df4-895344c13c30_story.html)

In testimony last week, Alexander said the surveillance programs had helped prevent an attack on the subway system in New York City and the bombing of a Danish newspaper. Sean Joyce, deputy director of the FBI, described two additional plots Tuesday that he said were stopped through the surveillance — a plan by a Kansas City, Mo., man to bomb the New York Stock Exchange and efforts by a San Diego man to send money to terrorists in Somalia. The officials said repeatedly that the operations were authorized by Congress and subject to oversight through internal mechanisms and the Foreign Intelligence Surveillance Court, whose proceedings are secret. Alexander said that more than 90 percent of the information on the foiled plots came from a program targeting the communications of foreigners, known as PRISM. The program was

authorized under Section 702 of a 2008 law that amended the Foreign Intelligence Surveillance Act (FISA). The law authorizes the NSA to collect e-mails and other Internet communications to and from foreign targets overseas who are thought to be involved in terrorism or nuclear proliferation or who might provide critical foreign intelligence. **No American in the country or abroad can be targeted without a warrant**, and no person inside the United States can be targeted without a warrant. A second program collects all call records from U.S. phone companies. It is authorized under Section 215 of the USA Patriot Act. The records do not include the content of calls, location data, or a subscriber's name or address. That law, passed in 2001 and renewed twice since then, also amended FISA. Snowden, a high school dropout who worked at an NSA operations center in Hawaii for 15 months as a contractor, released highly classified information on both programs, claiming they represent government overreach. He has been in hiding since publicly acknowledging on June 9 that he leaked the material. Several lawmakers pressed for answers on how Snowden, a low-level systems administrator, could have had access to highly classified material such as a court order for phone records . "We need to seal this crack in the system," said Rep. C.A. Dutch Ruppersberger (Md.), the ranking Democrat on the intelligence panel. Alexander said he is working with intelligence officials to come up with a "two-person" rule to ensure that the agency can block unauthorized people from removing information from the system. But Alexander and the other witnesses focused more heavily on justifying the programs and arguing that they operate under legal guidelines. "As Americans, we value our privacy and our civil liberties," Alexander said. "As Americans, we also value our security and our safety. In the 12 years since the attacks on September 11th, we have lived in relative safety and security as a nation. That security is a direct result of the intelligence community's quiet efforts to better connect the dots and learn from the mistakes that permitted those attacks to occur on 9/11."

NSA Links

Unrestricted NSA key to national security.

Shorrock 15 (Tim Shorrock, 5.27.15, "How Private Contractors Have Created a Shadow NSA," Author and publisher of books and articles like Democracy Now! And The Nation, http://www.thenation.com/article/how-private-contractors-have-created-shadow-nsa/) J.C

The keynote speaker was Matthew Olsen, who was then the director of the National Counterterrorism Center (NCTC). He used his talk to bolster the morale of his colleagues, which had recently been stung by the public backlash against the NSA's massive surveillance programs, the extent of which was still com-ing to light in the steady release of Edward Snowden's huge trove of documents. "NSA is a national treasure," Olsen declared. "Our national security depends on NSA's continued capacity to collect this kind of information." There was loud, sustained applause. One of those clapping was a former Navy SEAL named Melchior Baltazar, the CEO of an up-and-coming company called SDL Government. Its niche, an eager young flack explained, is providing software that military agencies can use to translate hundreds of thousands of Twitter and Facebook postings into English and then search them rapidly for potential clues to terrorist plots or cybercrime. It sounded like the ideal tool for the NSA. Just a few months earlier, Snowden had leaked documents revealing a secret program called PRISM, which gave the NSA direct access to the servers of tech firms, including Facebook and Google. He had also revealed that the NSA and its British counterpart, the GCHQ, had special units focused on cracking encryption codes for social media globally. SDL's software is perfectly designed for such a task. It might be useful, say, for a team of SEALs on a covert operation trying to make sure their cover wasn't blown by somebody on social media—something that almost happened when an alert Twitter user in Pakistan picked up early signs of the secret US raid on Osama bin Laden's compound. And, of course, we don't know the extent to which the NSA could deploy it.

Data Mining Link

Data mining is crucial to security efforts.

Glees 13 (Anthony Glees, 6.12.13, Director of the Centre for Security and Intelligence Studies at Buckingham University, Like Assange before him, Snowden is no 'whistleblowing hero,' http://www.publicserviceeurope.com/article/3584/like_assange_before_him_snowden_is_no_whistleblowing_hero) J.C

Secondly, because all western states face a sustained threat from potential terrorists on the right and left as well as others - from organised crime, sex traffickers and child abusers - we need the spooks to protect us. It follows that data mining is essential. Thirdly, to collect data is not to mine it. While everyone's data could in effect be stored, what is important in intelligence terms is to analyse it. Even Snowden accepted it was storing that was going on, not analysis. This is not about 'snooping' or the GCHQ reading everyone's emails or accounts at Amazon. It is about investigating those against whom there are already serious suspicions; it is not about 'everyone' but 'anyone' who is a serious threat. Snowden is no whistleblowing hero. To some, he is allegedly a traitor. He has revealed something that should have stayed secret to keep us safe. Like Julian Assange, he has managed to manipulate public opinion to provide a media story against the spooks. Bletchley's success resided in the fact that those who worked there kept the secret - otherwise the Germans would have changed their codes, as did the Russians in the 1920s. It is a shame Snowden has not understood the importance of secrecy in the 21st century. If he didn't like the job at the NSA, he could have found another one.

--- Politics ---

National Security Link

Surveillance reform causes bipartisan backlash – national security concerns.

Lavander 13 (Paige, senior politics editor at The Huffington Post and a graduate of West Virginia University, Marco Rubio Suggests NSA Surveillance Programs Likely Here To Stay, http://www.huffingtonpost.com/2013/06/08/marco-rubio-nsa_n_3408771.html)

Edited for offensive language

Amid news that the National Security Agency has secretly been collecting the phone records of millions of Americans, Sen. Marco Rubio (R-Fla.) suggested surveillance programs aren't going anywhere anytime soon. "The threat that we face -- largely radical, political ~~Islamists~~ (terrorists)-- is probably a threat that is going to exist for the rest of our lifetimes. It's just the reality. We have to deal with it," Rubio told reporters Thursday, according to the Tampa Bay Times. "The world changed after 9/11, and it changed after Boston. It's just a struggle to try to balance our deeply held convictions of privacy and freedoms and liberties with our need to

provide for national security." Rubio -- a member of the Intelligence Committee -- said the programs are "part of intense congressional oversight" and something Congress "members are aware of." "They get to review from time to time and see how it's being applied," Rubio said. President Barack Obama insisted Friday "that every member of Congress has been briefed" on the programs. "These are programs that have been authored by large bipartisan majorities repeatedly since 2006," Obama said. "Your duly elected representatives have consistently been informed." But revelations of the data mining have prompted a blame game between the White House and Congress, HuffPost's Sam Stein reports: The president made references to congressional oversight 15 times during his remarks. In a separate comment to The Huffington Post, a senior administration official said on the condition of anonymity that the administration has held at least 13 briefing sessions with members of Congress on the Patriot Act and its provisions. While the administration sought to share responsibility for the surveillance -- which reportedly gathered phone records from Verizon, AT&T and Sprint Nextel customers -- lawmakers weren't eager to accept it. Several quickly denied they had been kept apprised of the NSA's actions. "I knew about the program because I specifically sought it out," Sen. Jeff Merkley (D-Ore.) said on MSNBC. "It's not something that's briefed outside the Intelligence Committee. I had to get special permission to find out about the program." Merkley said he was not briefed on the NSA's email surveillance program, PRISM. Rubio said he's "very careful about the comments" he makes on the NSA program. "I think our intelligence community works really hard and does an excellent job of trying to protect Americans," Rubio said. "They won't always get it right. There are always ways to improve programs and ongoing oversight is important. But they have a tough job." As HuffPost's Matt Sledge reported earlier, Rubio refused to comment on Sen. Rand Paul's (R-Ky.) statement that the NSA program was an "assault on the Constitution." Paul introduced legislation Friday that would prevent the government from obtaining the phone records of Americans without "a warrant based on probable cause."

COUNTERPLANS

--- FISA Reform ---

FISA Improvements Act

Nolan and Thompson 14 Andrew and Richard, legislative attorneys, July 19th, "Reform of the Foreign Intelligence Surveillance Courts: Procedural and Operational Changes" (http://digitalcommons.ilr.cornell.edu/cgi/viewcontent.cgi?article=2235&context=key_workplace) ANH

Several have suggested that **Congress should establish a formal mechanism whereby the FISC, in its discretion, could solicit the independent views of an amicus curiae in appropriate cases.**119 For example, the FISA Improvements Act, which was approved by the Senate Select Committee on Intelligence (SSCI) in October of 2013, if enacted would authorize the FISC and the FISA Court of Review to designate, when needed, one or more individuals to serve as amicus curiae "to assist the court in the consideration of" certain government applications made under FISA, such as those that present a "novel or significant interpretation of the law."120 The SSCI bill provides examples of the needed expertise to be an amicus curiae, such as being an "expert on privacy and civil liberties," and outlines the duties for a FISA amicus, in that the FISC's "friend" may assist the court in reviewing "any application, certification, petition, motion, or other submission that the court determines is relevant to the duties assigned by the court."121 Congressional regulation of how the FISA courts hear from amici generally does not appear to raise serious constitutional questions. As noted earlier, the Supreme Court has stated that "Congress has undoubted power to regulate the practice and procedure of federal courts,"122 which would presumably include the power to prescribe regulations with respect to amici that appear before a federal court. Indeed, Congress has in the past enacted several laws that allow courts to hear from a particular amici. 123 Proposals like the FISA Improvements Act, which simply authorizes a court to appoint from a broad range of qualified individuals an amicus to assist in the proceedings, impose no firm mandates on the FISC that would threaten the "essential attributes of the judicial power,"124 the constitutional limit to Congress's broad power to regulate federal practice and procedure.125 **Instead of allowing "encroachment or aggrandizement of one branch at the expense of the other," the hallmark of a separation of powers violation,126 proposals that provide the FISA courts with formal statutory authority to appoint amici arguably enhance the power of the federal courts without simultaneously detracting from the power of the political branches.**127 While providing broad statutory authority to the FISA courts allowing them to appoint amici likely does not raise serious constitutional issues, a question remains as to whether such a statute is needed as a legal matter. As noted above, the ability of a court to appoint an amicus curiae to assist in the judicial proceedings has a long history that predates the Constitution,128 and federal courts have held that they possess inherent authority to appoint amici and permit the filing of briefs by them.129 In this vein, both the FISC130 and the FISA Court of Review131 have accepted amicus briefs during their proceedings. While **formally codifying the FISA courts' authority in statute could arguably clarify the scope of the courts' authority with respect to amici and encourage the courts to exercise that authority more frequently,**132 it is unclear what legal difference a codification of the amicus authority ultimately makes, as the statutory authority is largely duplicative of the authority the FISA courts already possess as a matter of their inherent power.

FISA Reform – General

FISA reform key – solvency advocate *

Goitein and Patel 15 Elizabeth, co-director of the Brennan Center for Justice's Liberty and National Security Program, and Faiza, same, July 19th, "What Went Wrong With the FISA Court" (http://litigation.utahbar.org/assets/materials/2015FedSymposium/3c_What_Went_%20Wrong_With_The_FISA_Court.pdf) ANH

As the above discussion makes clear, **the key to reforming the FISA Court is ending programmatic surveillance.** If such surveillance continues, serious Article III and Fourth Amendment problems will be unavoidable. It is nonetheless worth noting that, as a policy matter, incorporating the reforms set forth in Parts V.B and V.C, above, into programmatic surveillance would enhance privacy and strengthen the judiciary's role. Specifically, if programmatic surveillance continues, **Congress should amend Section 702 to require that the target of surveillance must be a foreign power or its agent**. It should narrow the definition of foreign intelligence as discussed above. **It should require the executive branch to certify that the collection of foreign intelligence is both the primary purpose and the likely outcome** of the programmatic activities, and empower the FISA Court to review that certification on its substance. All of these changes would nudge programmatic surveillance in the right direction on the Fourth Amendment reasonableness spectrum — even if, in our view, they would not go far enough.288 Moreover, additional steps should be taken that would make the court's limited role more meaningful. More specific statutory requirements for targeting and minimization procedures would enhance the FISA Court's ability to ensure that the agencies conducting surveillance are complying with the law. Currently, the criteria for these procedures are so subjective and open-ended, they provide no useful benchmark for the court to apply. They also permit a level of vagueness in the agency's own procedures that renders the court's facial review a hollow exercise.289 Finally, Congress should require the government, on a periodic basis, to submit to the FISA Court for its review a list of the selection terms used to acquire electronic communications under Section 702. For each selection term, the government should summarize succinctly the facts supporting its use. This would provide the FISA Court with a concrete factual basis on which to evaluate the constitutionality of foreign intelligence surveillance activities. The government's determinations should be reviewed by the court for clear error, with the government required to cease collection (and purge any already collected information) in cases that fall below that low bar.290

Section 1803 of FISA creates an imbalance in power, pro-government bias, and homogeneity that is unable to resolve diverse surveillance critiques

Harvard Journal on Legislation 14 legal journal consisting of contributions from scholars and legislators, July 19th, "THE POWER TO APPOINT FISA JUDGES: EVALUATING LEGISLATIVE PROPOSALS TO REFORM 50 U.S.C. § 1803 AND IMPROVE THE SURVEILLANCE COURT" Harvard Journal on Legislation vol. 51, p. 378 – 382 ANH

III. THREE MAJOR CRITICISMS TARGETING § 1803. The central claim of this note is that the modern trio of criticism is credible, and therefore should guide our legislative reform efforts. This credibility is evidenced both by the critiques' endurance—as we have seen, today's arguments mirror those of thirty-five years ago—as well as by the their power to explain aspects of the FISC's empirical record. The three major criticisms while related, are analytically distinct. The criticisms are related because they all target the current structure of § 1803, which vests the power of appointment exclusively in the office of the Chief Justice, subject only to limited geographic conditions. They are distinct because each criticism raises a separate, troubling consequence produced by § 1803: **(1) a gross concentration of power, (2) a powerful pro-government bias, and (3) a homogenous court that poorly reflects our nation's diverse views on privacy and surveillance.** Each criticism is considered in the discussion that follows. A. Concentration of Power: Practical Constraints and Legitimacy Concerns The concentration of power critique includes both a practical and a theoretical element. The practical concern, voiced previously by Dr. Christopher Pyle, argues that § 1803 risks overburdening the Chief Justice, and that the Chief Justice is not particularly well positioned to identify and select a balanced slate of judges. A modern version of this argument asks with trepidation, "whether we

have given the chief justice—any chief justice, not just this one—too much to do?"88 Answering her own question, one scholar notes that, "[t]he office of Chief Justice of the United States has grown enormously in recent decades in responsibility and complexity— not because of power-grabbing chief justices but because Congress has piled into the office a large number of added responsibilities."89 Another writes, "[g]iven the distrust of undue concentrations of power in one person and increased interest in including multiple perspectives in decisionmaking, the recently expanded (but now seen as customary) repertoire of powers of the Chief Justice becomes troubling."90 In my view, this practical concern, however valid, is secondary to the theoretical one: that **§ 1803's concentration of power creates the perception of partiality and impropriety. This perception**, even if never borne out in reality, **undermines the FISC's legitimacy**. As one recent article notes, "the specter of a politicized appointment process will linger as long as the Chief makes the appointments himself."91 This point echoes Professor William Van Alstyne's remarks, discussed in Part II, that such an expansive role for the Chief Justice is simply unseemly. B. Pro-Government Bias: Reviewing Empirical Data on FISC Decisions 92 Contemporary arguments regarding the FISC's pro-government bias find their foundation in the empirical record of the Court's thirty-five year history. From 2008–2012, the government filed 8,388 applications for electronic surveillance.93 Of these, the FISC approved 8,369 applications, which equates to a 99.77% approval rate.94 Separately, from 1979–1983, the government filed 1,984 applications with the FISC, of which 1,973—or 99.45%—were approved.95 The growth in applications to the Court, while gradual and persistent over several decades, increased markedly after the adoption of the Patriot Act in 2001. In 2003 and 2004, the government made 1,727 and 1,758 applications respectively. In contrast, the number of applications for 1999 and 2000 were 886 and 1005 respectively. In one sense, this sharp increase in the volume of surveillance applications strengthens the position of FISC critics: if criticisms of § 1803 are meritorious, then they only become more consequential as the scope and scale of the government's surveillance activities grows. A counterargument to this data points out that, rather than revealing a pro-government court, these high rates of approval may merely reveal an Executive Branch that is finely attuned to the limits of surveillance.96 This point is persuasive, but falls short of fully undermining the allegations of bias. Even if it is presumed that the Executive Branch effectively self-regulates the quality of its surveillance applications, it seems unlikely that our Presidents, operating in a post-9/11 environment that saw a sharp increase in surveillance requests and the initiation of novel surveillance programs pursuant to the Patriot Act, so seldom encroached on legal boundaries to justify such infrequent court intervention. C. Homogeneity: Geographic, Political, and Experiential What I have termed the homogeneity critique is essentially an argument for greater diversity on the FISA Court. Although our earlier discussion focused on geographic diversity, which is, to a certain extent, addressed even in the current language of § 1803, the modern iteration of this critique also encapsulates political and experiential diversity. The lack of diversity is evident when one considers both the current and historical membership of the court. Chief Justice John Roberts has appointed each of the eleven members on the current court.97 Of these eleven members, **nine were nominated to their judgeship by Republican presidents**.98 Moreover, at least half of these judges were themselves former federal prosecutors, while several others held high-ranking positions in the Executive Branch prior to joining the court.99 Since FISA's adoption in 1978, only two other Chief Justices have made appointments to the court: Warren E. Burger and William Rehnquist. Like Roberts, the two men were appointed to the Supreme Court by a Republican president and previously held senior positions in the Executive Branch. Perhaps unsurprisingly, then, the historical makeup of the Court reflects the ideologies of the three Chief Justices who controlled the power of appointment. Of the fifty-five judges that have served on the FISC, just seventeen, or 31%, were appointed by Democratic presidents.100 Viewed in these terms, **the court has grown less diverse over the last ten years**. While one law professor has noted that "critics have suggested that the Chief might use the appointment power to influence policy," others have gone further to argue that, for example, "Chief Justice Rehnquist adopted a partisan approach to his judicial appointments."101 Even this cursory examination of the Court's homogeneity serves to highlight what makes many critics uncomfortable.102

Cyber Warfare Cp

We control all major internal links to solving cyber warfare.

Lord and Sharp 11. [Kristin, Vice President and Director of Studies at the Center for a New American Security, Travis, Bacevich Fellow at the Center for a New American Security, "America's Cyber Future: Security and Prosperity in the Information Age" Center for a New American Security -- June -- www.cnas.org/files/documents/publications/CNAS_Cyber_Volume%20I_0.pdf]

To help American policymakers lead national and international efforts to address cyber insecurity, this report offers detailed recommendations, which are summarized below. Adopt a Comprehensive Strategy for a Safe and Secure Cyberspace: The U.S. government should aim to keep malicious activity in cyberspace below a threshold at which it might imperil general confidence in the security of the Internet. To do this, the Department of Homeland Security (DHS) should strengthen its capacity for risk assessment and incident response. Congress should pass legislation that creates a new quasi-governmental "fusion" center to improve information sharing, clarifies DHS's legal authority to monitor U.S. government networks, enables Internet service providers to better cooperate with the U.S. government, and bolsters cyber security education and recruitment programs. Forge an International Agenda for Cyber Security: The U.S. government should strengthen its international agenda for cyber security. In the near-term, it should foster greater cooperation with U.S. treaty partners to enhance information sharing, crisis response and joint military exercises. In the medium to long term, it should strengthen law enforcement by engaging a variety of international stakeholders to produce multilateral agreements and codes of conduct. The U.S. government should promote key norms in international fora, including protecting innocent civilians and minimizing collateral damage, upholding Internet freedom, and exercising proportionality and restraint in response to cyber attack. Finally, the U.S. government should address cyber security more directly, and if necessary more publicly, with China and Russia; initiate a coordinated cyber security foreign assistance plan; and encourage American companies to participate in international standard-setting organizations related to cyber security. Establish U.S. Declaratory Policy on Cyber Security: The U.S. government should outline the broad contours of a declaratory policy for cyberspace. Doing so will help deter the most threatening actions and strengthen America's role as a shaper, not a victim, of developments in cyberspace. While the policy should remain ambiguous about how the United States might respond in specific situations, it should communicate America's view of which behaviors are acceptable and which behaviors are intolerable. Raise Costs for Cyber Attackers: The U.S. government should increase the economic, political and military costs for cyber attackers while defending against them more effectively. To do this, it should clarify legal authorities related to military and intelligence cyber operations, improve cyber defenses, sustain America's offensive military advantage in cyberspace, implement a crossdomain prevention strategy, ensure that the U.S. military can operate in a command and control environment degraded by cyber attacks, and tap into the National Guard and Reserves for high-tech cyber skills. Prepare for the Future of the Internet: The U.S. government should launch a national commission on the future of the Internet that provides recommendations to the president. It should evaluate the feasibility of changing the underlying architecture of the Internet to increase security and forming separate networks with higher levels of security. The commission should include the science and technology community, private companies and U.S. government representatives. Build the Institutional Capacity Necessary to Coordinate U.S. Government Responsibilities for Cyberspace: The U.S. government should create an Office of Cyber Security Policy, within the Executive Office of the President, headed by a Senate-confirmed chief cyber security advisor to the president and director of cyber security policy. The office should remain small and nimble, maintain close links to the National Security Council (NSC) and National Economic Council, and avoid duplicating functions already performed by other agencies. The U.S. government also should continue to strengthen DHS's cyber security efforts, which are increasingly respected (if still far from sufficient) according to experts in the government, military and private sector. Enhance Oversight of U.S. Government Cyber Security Activities: The U.S. government, particularly Congress, should conduct stronger and more comprehensive oversight of cyber security activities. The U.S. government should maintian command and control procedures for cyber operations by the U.S. military and intelligence community to ensure that senior civilian leaders retain the ability to review and approve significant activities; appoint

two separate leaders for∂ U.S. Cyber Command and the National Security∂ Agency (NSA); create a President's Cyber Security∂ Advisory Board to provide independent advice∂ directly to the president; form a high-level joint∂ contact group for DHS, the Department of Defense∂ (DOD) and the intelligence community; establish∂ a bipartisan, bicameral Cyber Security Task Force∂ in Congress; and create objective cyber security∂ performance metrics.∂ Protect the Nation's Most Critical Infrastructure:∂ The U.S. government should remain proactively∂ and consistently involved in protecting America's∂ critical infrastructure, which includes vital assets∂ such as energy, financial and transportation∂ systems. Government involvement should not∂ be heavy-handed or excessively regulatory, and∂ should favor market solutions whenever possible.∂ Congress should pass legislation that provides∂ DHS with more explicit authority to coordinate the∂ protection of U.S. critical infrastructure in cyberspace,∂ offers tailored regulatory strategies that∂ comport with the needs of specific infrastructure∂ sectors, strengthens the authority and capacity of∂ the Federal Energy Regulatory Commission and∂ DHS, and uses military bases as test beds for cyber∂ security innovation related to the smart grid. Harness the Private Sector's Innovative Power∂ for Cyber Security: The U.S. government should∂ streamline government classification guides to∂ enable better information sharing, protect private∂ companies that cooperate with the U.S. government,∂ extend liability protection to providers of∂ innovative cyber security products and services,∂ prioritize security when writing requirements∂ and awarding contracts for information technology,∂ fund new research on cyber security business∂ models, assign foreign service officers to help U.S.∂ companies partner with responsible cyber security∂ stakeholders abroad, and clarify what support∂ the private sector can and cannot expect from the∂ U.S. government.

2NC: Prefer Our Ev

prefer our ev – based on a longitudinal study involving all experts and relevant agencies in the field.

Lord and Sharp 11. [Kristin, Vice President and Director of Studies at the Center for a New American Security, Travis, Bacevich Fellow at the Center for a New American Security, "America's Cyber Future: Security and Prosperity in the Information Age" Center for a New American Security -- June -- www.cnas.org/files/documents/publications/CNAS_Cyber_Volume%20I_0.pdf]

To help Americans and their government better∂ understand the growing risks posed by cyber∂ threats, the Center for a New American Security∂ (CNAS) conducted a year-long study co-chaired∂ by Robert Kahn, Mike McConnell, Joseph Nye and∂ Peter Schwartz – four esteemed leaders who contributed∂ a wealth of experience and knowledge. We∂ conducted extensive research and commissioned∂ 13 chapters (published in Volume II of this report)∂ from a wide array of experts. We also convened∂ eight working group sessions and interviewed∂ senior leaders from the private sector, academia,∂ civil society, and the U.S. government and military∂ – a total of more than 200 experts.∂ Within the U.S. government, we interviewed representatives∂ from the NSC, DHS, Department of∂ State, Department of Commerce, DOD (including∂ the NSA, Cyber Command, Joint Chiefs of Staff,∂ Office of the Secretary of Defense and the military∂ services), the intelligence community, Federal∂ Communications Commission (FCC), FBI, House∂ of Representatives, and Senate.∂ Within the private sector, we met with representatives∂ from Internet service providers, large and∂ small technology companies, critical infrastructure∂ providers (including from the energy, financial services∂ and defense sectors), Internet entrepreneurs,∂ venture capitalists, and military and intelligence∂ consulting firms. To hear perspectives from outside∂ Washington, we traveled to California in February∂ 2011 to meet with business and technology leaders∂ from Silicon Valley.∂ The intent of this study is threefold. First, we seek∂ to educate the broader national security policy∂ community about cyber security, an issue that is∂ often still relegated to technical experts and highly∂ classified discussions.6∂ It is now too entwined with∂ America's national interests and economic future∂ to be a niche issue. All those who seek to promote∂ American security now must confront the challenge∂ of cyber security. Though many details and∂ operational plans should remain classified, an open∂ national conversation is sorely needed. Second, we seek to advance conceptual understanding∂ of cyber security to aid the United States' decision makers. Cyber threats are evolving

faster∂ than our understanding of them, a frightening∂ circumstance given the consequences of either∂ inaction or mistakes. Cyber security seems so hard∂ to grasp that it is compared endlessly to something∂ else, whether nuclear weapons policy in the∂ 1950s, guerilla warfare or epidemiology.7∂ There are∂ few case studies of cyber conflict, and those that∂ do exist – most notably the cyber attacks against∂ Estonia in 2007 and Georgia in 2008 – are often∂ hyped.8∂ Used excessively, improper comparisons∂ and exaggerated case studies can cloud understanding∂ and oversimplify decision-making rather∂ than clarifying complex issues.9∂ Third, we offer policy recommendations to those∂ who must protect the United States from the many∂ emerging threats in cyberspace. While many actors∂ must contribute to cyber security, this report's∂ recommendations focus on the U.S. federal government.∂ We provide actionable recommendations∂ that, we believe, are in line with CNAS' mission to∂ provide strong, pragmatic and principled national∂ security policies that advance American interests∂ and protect American values.

One off policies like the aff can't solve – prefer the counterplan's multidimensional approach.

Lord and Sharp 11. [Kristin, Vice President and Director of Studies at the Center for a New American Security, Travis, Bacevich Fellow at the Center for a New American Security, "America's Cyber Future: Security and Prosperity in the Information Age" Center for a New American Security -- June -- www.cnas.org/files/documents/publications/CNAS_Cyber_Volume%20I_0.pdf]

Because cyber security is complex, it will require∂ multidimensional solutions.∂ The complexity of cyberspace means that leaders∂ must pursue cyber security policies through multiple∂ channels**. No single policy prescription will provide∂ complete cyber security**, just as no single U.S. government∂ agency on its own can protect the nation.36∂ Technological or organizational "silver bullets" do not∂ exist and efforts to find them will be impractical at∂ best and counterproductive at worst. The U.S. government∂ should employ multidimensional strategies to∂ strengthen its cyber security, including the use of∂ domestic and international law, international diplomacy∂ and cooperation, declaratory policy, strategic∂ research and development, technological advancement,∂ governmental organization and oversight,∂ information sharing, military preparedness and close∂ collaboration with the private sector.

2NC: CP Solves

Lord and Sharp 11. [Kristin, Vice President and Director of Studies at the Center for a New American Security, Travis, Bacevich Fellow at the Center for a New American Security, "America's Cyber Future: Security and Prosperity in the Information Age" Center for a New American Security -- June -- www.cnas.org/files/documents/publications/CNAS_Cyber_Volume%20I_0.pdf]

Pol icy Recommendations∂ The United States must capitalize on the opportunities∂ and diminish the vulnerabilities presented∂ by its growing reliance on cyberspace. This will∂ require the U.S. government to exercise strong∂ leadership, engage the private sector more effectively∂ and develop new strategies, policies and∂ capabilities. The U.S. government must lead internationally∂ and domestically since solutions require∂ focused cooperation among all relevant stakeholders.∂ Based on our assessment of interests and∂ threats, we recommend that the U.S. government∂ implement the following policies.∂ Adopt a Comprehensive Strategy∂ for a Safe and Secure Cyberspace∂ The U.S. government should adopt a strategy that∂ promotes the safety and security of cyberspace∂ and endeavors to stop malicious activity from∂ imperiling general confidence in the security∂ of the Internet.179 The U.S. government should∂ promote safety in cyberspace because, although∂ individuals and organizations have an interest in∂ maintaining security on their own computers and∂ networks, their failure to do so carries risks for all∂ other users. To promote a safe and secure

cyberspace, the U.S. government should adopt a "cyber hygiene" mindset akin to addressing public health challenges.180 (For more on this approach, see the chapter in Volume II by Gregory Rattray and Jason Healey.) Though analogous paradigms should be used with caution, the public health model is useful for approaching cyber security because it implies a persistent level of "infection" that policymakers cannot cure and so must manage. It also links individual actions to the broader health of the Internet; emphasizes reporting, measurement, public education and prevention; demands cooperation among diverse actors; and places responsibility on individuals, private organizations and governments.

Wave Two
--- Privacy Advantage ---

1NC: Storage Restrictions

No Impact - Storage restrictions check privacy violations.

Nakashima 13 (Ellen, Reporter — Washington, D.C., June 18, 2013, Officials: Surveillance programs foiled more than 50 terrorist plots, https://www.washingtonpost.com/world/national-security/officials-surveillance-programs-foiled-more-than-50-terrorist-plots/2013/06/18/d657cb56-d83e-11e2-9df4-895344c13c30_story.html)

The officials described the privacy protections in detail. Under Section 702, the NSA must destroy any data collected about U.S. persons — citizens or lawful permanent residents — that have nothing to do with foreign intelligence, a crime or terrorism, officials said. The agency may keep the data for five years and then must purge it. Phone data are stored in a separate repository at the NSA that can be accessed by only 22 specially trained people, officials said. A query can be made only if the analyst has "reasonable, articulable suspicion" that the phone number to be searched is associated with a specific terrorist organization, they said. Both programs are subject to reporting requirements, though the reports are not public. For instance, if there is a compliance problem — a wrong number is punched in — the error must be reported to the court immediately. In addition, the Justice Department and the Office of the Director of National Intelligence conduct regular reviews and report to Congress and the courts on compliance. Some lawmakers have raised doubts about just how critical Section 215 authority has been to foiling plots and asserted that much the same data may be obtained without amassing a government database of Americans' call records. Alexander said he was reviewing the feasibility of having the companies retain the records and conduct searches at government request. The potential drawback, he said, is loss of agility in a crisis.

1NC: Alt Caus – Private Companies

Alt caus to privacy – private company surveillance.

Shorrock 15 (Tim Shorrock, 5.27.15, "How Private Contractors Have Created a Shadow NSA," Author and publisher of books and articles like Democracy Now! And The Nation, http://www.thenation.com/article/how-private-contractors-have-created-shadow-nsa/) J.C

This small company, and INSA itself, are vivid examples of the rise of a new class in America: the cyberintelligence ruling class. These are the people—often referred to as "intelligence professionals"—who do the actual analytical and targeting work of the NSA and other agencies in America's secret government. Over the last 15 years, thousands of former high-ranking intelligence officials and operatives have left their government posts and taken up senior positions at military contractors, consultancies, law firms, and private-equity firms. In their new jobs, they replicate what they did in government—often for the same agencies they left. But this time, their mission is strictly for-profit. Take Olsen, who served as general counsel for the NSA and as a top lawyer for the Justice Department before joining the NCTC. He is now the president for consulting services of IronNet Cybersecurity, the company founded last year by Army Gen. Keith Alexander, the longest- serving director in the history of the NSA. The firm is paid up to $1 million a month to consult with major banks and financial institutions in a "cyber war council" that will work with the NSA, the Treasury Department, and other agencies to deter cyberattacks that "could trigger financial panic," Bloomberg reported last July. Some members of this unique class are household names. Most cable-news viewers, for example, are familiar with Michael Chertoff and Michael Hayden, two of the top national-security officials in the Bush administration. In 2009, they left their positions at the Justice Department and the NSA, respectively, and created the Chertoff Group, one of Washington's largest consulting firms, with a major emphasis on security

Workplace Raids HSS

Topicality

1NC T – Surveillance

Surveillance" must be systematic---one-shot, random recording isn't topical

Stefanick 11 – Lorna Stefanick, Associate Professor in the Governance, Law, and Management Program in the Centre for State and Legal Studies at Athabasca University, Controlling Knowledge: Freedom of Information and Privacy Protection in a Networked World, p. 129-130

According to the report prepared for the Information Commissioner, **surveillance can be thought of as a set of activities that share certain characteristics:**

Where we find purposeful, routine, systematic and focused attention paid to personal details, for the sake of control, entitlement, management, influence or protection, we are looking at surveillance. To break this down:

■ **The attention is first *purposeful*; the watching has a point that can be justified**, in terms of control, entitlement, or some other publicly agreed goal.

■ **Then it is *routine***; it happens as we all go about our daily business, it's in the weave of life.

■ **But surveillance is also *systematic*; it is planned and carried out according to a schedule that is rational, not merely random**.

■ Lastly, **it is *focused*; surveillance gets down to details**. While some surveillance depends on aggregate data, much refers to identifiable persons, whose data are collected, stored, transmitted, retrieved, compared, mined and traded." (Emphasis in the original.)

What this means is that **walking through a tourist area videotaping** your **surroundings with your Handycam** video recorder **is not considered surveillance because it is a one-off event that records randomly selected things** for your own pleasure. **In contrast, a camera installed at a strategic spot along that same street to film** the **patrons** who routinely come out of a local bar intoxicated and proceed to urinate on the street or vandalize local businesses is purposeful (identifying wrongdoers), routine, systematic, and focused. **Similarly, a** proud **parent videotaping** his child playing with her nanny **in a park** on a sunny Sunday afternoon **would not fit the definition of surveillance. Installing a camera at a daycare** to enable parents **to view** the interaction of their children with their **caregivers on demand would be considered surveillance**. Many parents insert the so-called "nanny cams" surreptitiously in items like teddy bears to ensure that their children are taken care of in a manner that they find appropriate. Instances of abuse caught by this surveillance have been posted to the Internet, creating predictable rage among those viewing the videos — an example of how panopticon surveillance can become synopticon surveillance. While the latter brings with it its own set of problems, it gives hope to those who fear that surveillance will result in the top-down surveillance described by George Orwell.

Voting issue---

1. Limits---they explode the topic to include limited, single-event recording of specific events. Each has distinct advantages and significantly expands the research burden.

2. Ground---our interpretation forces the Aff to defend broad, system-wide changes that force a dramatic departure from the status quo---that's key to unique links on a topic that's contemporary and constantly changing

Semiconductors DA

1NC Semiconductors DA

ICE worksite enforcement effectively preventing counterfeit semiconductors now. Reducing raid ability leads to poor enforcement.

Committee on **H**omeland **S**ecurity 20**11**, HOUSE OF REPRESENTATIVES, ONE HUNDRED TWELFTH CONGRESS, FIRST SESSION, Peter T. King, New York, Chairman, Lamar Smith, Texas, Bennie G. SBL

American innovation is the envy of the world. It is a constant target for competitors, including rogue nations that prefer to steal and copy rather than create. In addition to overcoming a depressed business climate, our Nation's job creators must protect their intellectual property from sophisticated counterfeiters all over the world, make sure their exports do not end up in the wrong hands, and **comply with immigration laws**. The consequences of failure are serious. When counterfeit prescription drugs enter the marketplace or cheap imitation parts breach a semiconductor manufacturing plant, it costs American businesses revenues and jobs. When sensitive equipment manufactured for the Department of Defense falls into the wrong hands of rogue nations, it poses a threat to our National security. And when businesses seek assistance from the Government, it is the responsibility of the Department of Homeland Security to protect intellectual property, safeguard against counterfeit goods, maintain the integrity of export supply chains, and to ensure that businesses are in compliance with immigration laws in order to maintain a high- level playing field. So today we ask these questions: Is the help they receive from DHS, in collaboration with other Government agencies, adequate? What improvements can be made? What more needs to be done? Indeed, several cases in recent years indicate that there is room for improvement in these measures that directly impact the bottom line of businesses and their ability to create jobs. A 2008 investigation by Business Week magazine uncovered a polluted supply chain in some of our Nation's military equipment. According to Business Week, counterfeit products have been linked to the crash of mission-control networks, and they contain hidden back doors enabling network security to be bypassed and sensitive data accessed by hackers, thieves, and spies. The same investigation found that as many as 15 percent of the spare parts and microchips the Pentagon buys are actually counterfeit. Recently, Wired magazine reported that the military purchased 59,000 counterfeit microchips from China in 2010. These chips were to be installed into an array of equipment, including U.S. missile-defense systems. This problem has been highlighted in many Federal prosecutions, including one in Houston where the defendant was sentenced to prison for selling counterfeit network cards to the U.S. Marine

Corps for use in combat in Iraq and Afghanistan. Pharmaceutical companies are seeing more of their products counterfeited. These counterfeits are often ineffective and, in some cases, dangerous. A recent report by CBS News found that the counterfeit drug network is worth an estimated $75 billion per year. This market has produced pharmaceutical drugs that contain little, none, or too much of the drug's active ingredient, and in some cases they contain harmful substances. One recent case involved Mr. Ken Wang, the owner of a Houston-based company, who was convicted of conspiring with individuals in China to traffic in counterfeit and misbranded prescription drugs. ICE began its investigation after CBP seized 6,500 Viagra tablets from a mail facility in San Francisco addressed to Mr. Wang. Pfizer Pharmaceuticals, the manufacturer of Viagra, confirmed that these tablets were counterfeit and contained a substance used to manufacture sheetrock. I am sure some buyers were severely disappointed upon the receipt of these counterfeit Viagra. After being convicted, Mr. Wang fled to China, where he is still in hiding. Such cases often involve a bizarre, multijurisdictional chain supply, making it difficult to prosecute and harder to track. In one instance the supply chain began with the medication being manufactured in mainland China, shipped to Hong Kong, then to the United Arab Emirates, and then, lastly, to the Bahamas. Once in the Bahamas, the individual prescriptions were filled, put into packets, addressed, and sent to the United Kingdom. From the United Kingdom, the drugs were then shipped to the consumers in the United States, who at the time believed--when they placed an order on-line believed they were purchasing them from a Canadian pharmacy. ICE is the only Federal law enforcement entity with full statutory authority to pursue violations of U.S. export laws related to military items and controlled dual-use commodities, which will be another focus of this hearing. These are products that may have a seemingly innocuous civilian use, but also can have a potent military use as well. A glaring example is the triggered spark gap. This device is used legally by doctors to break up kidney stones in patients; however, it can also be used to detonate a nuclear device. In one case, a Pakistani businessman with close ties to Pakistan military and linked to the militant ISBLamic groups attempted to use a third party in South Africa to purchase 200 triggered spark gaps. Under U.S. law, as a dual-use item, it is legal to export the devices to South Africa, but illegal to export them to Pakistan. The third-party buyer was arrested, but the Pakistani businessman has not yet been apprehended. Finally, this subcommittee will examine the issue of worksite enforcement. In 2009, ICE, citing finite resources, instituted a shift in strategy from targeting undocumented employees to the employers that hire them. The results have been striking. According to the Congressional Research Service, since 2008, administrative arrests have declined 77 percent, criminal arrests have declined 59 percent, and criminal convictions have declined 66 percent. These figures strongly suggest that the shift in strategy has led to a scaling back of worksite enforcement efforts that allow bad actors to get away with breaking the law with little or no penalty.

Counterfeit semiconductors install spyware that can shut down weapons systems – specifically anti-ICBM missiles.

John **Reed** 7-22-**13**, national security reporter for Foreign Policy, internally quoting David Shedd, deputy director of the Defense Intelligence Agency, Foreign Policy, "The U.S. Might Be Buying Weapons With Enemy Access Built In," http://foreignpolicy.com/2013/07/22/the-u-s-might-be-buying-weapons-with-enemy-access-built-in/ SBL

It's bad enough that U.S. intelligence officials are constantly discovering new plans to insert spyware and back doors into the Defense Department's supply chain. But what may be worse is

that American analysts are only discovering indirect evidence of this infiltration, according to a senior DOD intelligence official. The back doors themselves remain maddeningly hard to find. "Our adversaries are very active in trying to introduce material into the supply chain in ways that threaten our security from the standpoint of their abilities to collect [intelligence] and disrupt" U.S. military operations, said David Shedd, deputy director of the Defense Intelligence Agency during a speech at the Aspen Security Forum in Colorado on July 19. DIA is finding more and more plots to deliver these parts through front companies that are "the instrument of the hostile service that's guiding and directing them," Shedd told Killer Apps during the forum. "My concern is that our adversaries — and they're multiple in the supply chain context — have been very active for a very long time," David Shedd, deputy director of the Defense Intelligence Agency told Killer Apps at the Aspen Security Forum in Colorado. "We're finding things, not in the supply chain itself but plans and intentions through" front companies posing as legitimate DOD parts suppliers. This is hardly a new threat. (Yours truly has written about the epidemic of counterfeit parts poisoning DOD supply chains since 2008.) A 2011 Senate investigation discovered an unbelievable amount of fake semiconductors in brand new DOD weapons such as the **Navy's P-8 Poseidon sub-killing plane and anti-ICBM missiles** used by the Missile Defense Agency. Perhaps unsurprisingly, the vast majority of the parts were found to come from China. In addition to the obvious safety threat posed by say, fake aircraft bolts or wiring harnesses, one of the main dangers to the supply chain is that spyware or back doors can be built into critical electronic circuits. Spyware and backdoors could allow an enemy to easily monitor U.S. operations or even disable American weapons systems. Israel is rumored to have used digital back doors planted in the software of Syrian air defenses to disable their radars during its 2007 air strike against the Dayr as-Zawr nuclear facility. Just as scary as the fact that this kind of espionage has been going on for years, is the fact that the massive advantage the U.S. military has in hardware and manpower doesn't exist in the digital world. "As we learn more about our own cyber requirements and needs, we have a better understanding that the world is a flatter world in terms of what our adversaries can do in the supply chain," Shedd told Killer Apps. While DOD has poured counterintelligence resources at the problem, "I sense a little bit that it's insufficient" said Shedd during his speech. "I'm generally an optimist, [but] in the supply chain area, I'm very concerned" given the fact that he doesn't truly know the full extent of adversary penetration into DOD weapons systems, said Shedd. "You don't know what you don't know and the old agage of the weakest link is obviouSBLy what we need to be concerned about." Despite all this, there aren't enough people looking at the problem, and sequestration may make this worse. "It's an area where I have a significant number of analytic resources attached to it and [this] is still less than adequate, in my personal view," said Shedd during his speech. "I'm trying to think about that in a time of fiscal austerity and all the rest because I'm trading it off with other missions that are critical." You can bet this issue will see more and more attention as hardware becomes increasingly networked and therefore vulnerable to cyber attack. For all the noise about outsiders hacking American systems, the best way for a foreign adversary to get inside U.S. networks might be to ship some counterfeit parts with the spyware already built in.

Semiconductor spyware installed in missile systems leads to Chinese military modernization

John **Reed** 7-23-**13**, national security reporter for Foreign Policy, internally quoting David Shedd, deputy director of the Defense Intelligence Agency, Foreign Policy, "Here's How Foreign Spies Are Now Getting U.S. Weapons Tech," http://foreignpolicy.com/2013/07/23/heres-how-foreign-spies-are-now-getting-u-s-weapons-tech/ SBL

That's according to a new report by one of Pentagon branches responsible for preventing such spying. Not coincidentally, perhaps, half of all successful incidents in 2012 of espionage against American defense contractors originated in Asia, up from 43 percent the previous year. THis report higlights what plenty of us have come to grasp intuitively, cyber attacks are steadliy replacing — or at least complementing — attempts to flat-out purchase U.S. defense technology or simply ask for more information about it as the top MO of industrial intelligence operators. This shift from overt attempts at collecting information on U.S. weapons to cyber theft means that it may become more difficult to detect when a rival is trying to gain access to America's defense secrets. It also shows why the Obama administration has been in such a tizzy of China's alleged industrial espionage. According to the report from the Defense Security Service, these spies were particularly interested in gathering information on U.S. electronics; worldwide collection attempts in this sector spiked 94 percent from the year before. A "substantial" number of those electronics were radiation-resistant electronics that can be used in nuclear weapons, ballistic missiles, aerospace and space programs, according to the report. "Foreign entities, especially those linked to countries with mature missile programs, increasingly focuses collection efforts on U.S. missile technology, usually aimed at particular missile subsystems," reads the report. Why are nations with mature missile programs trying to steal secrets about American missile parts? To make their missiles even more deadly, of course. "After a country masters the chemistry and physics required to launch a missiles, scientists and engineers can focus on accuracy and lethality, the desired characteristics of modern missiles," the report notes. Getting their hands on U.S. missile parts will also help these countries defend against American weapons. "Reverse-engineering would probably give East Asia and the Pacific scientists and engineers a better understanding of the capabilities of the targeted and acquired technology to develop countermeasures to U.S. weapons systems," reads the document. Overall, foreign spies' top four American targets were "information systems; electronics; lasers, optics and sensors; and aeronautic systems technologies," according to the report. All of these are crucial parts of the weapons that have given the U.S. a clear advantage on battlefields for the last 20 years. Information systems are how the US military passes massive amounts of intelligence and communications data. Meanwhile optics, lasers and sensors are key technologies that help American drones spy on enemies and that guide its smart weapons onto targets. Aeronautic systems technologies, as you know, are the parts that make up the Pentagon's next-generation rockets, stealth drones and fighters — exactly the types of weapons that nations like China are trying to replicate. The report doesn't specifically call out China as the home of these spies. But let's be honest, the vast majority of espionage attempts originating from Asia are likely coming from China. "DSS continues to take the politically correct route and hide China within the 'East Asia and Pacific' category, disappointing," Richard Bejtlich, chief security officer of the cybersecurity firm Mandiant, told Killer Apps after reading the report. The Defense Security Service document was published on July 17, two days before David Shedd, deputy director of the Defense Intelligence Agency told Killer Apps that his agency is constantly finding new attempts by foreign government to install spyware on U.S. weapon systems. (In 2011, a Senate investigation found that tons of counterfeit electronic parts made in China were making their way into U.S. weapons; these parts could hide spyware or 'back doors' allowing enemies to take over or disable the weapons.) Far East countries — who accounted for 54 percent of the interest in American missile tech — targeted everything from the Standard Missiles and Ground Based Interceptors used for missile defense to TOW antitank missiles, Trident Submarine launched nuclear missiles, Tomahawk cruise missiles and Patriot anti-aircraft missiles and Harpoon anti-ship missiles. Unlike overall trends in espionage, spies kept things old fashioned when going after missile tech, trying to either buy it

outright or simply requesting information about such technology. Interestingly, DSS found that successful attempts to get information on missile technology via cyber means are "relatively low." However, because digital espionage allows spies to be even sneakier than outright attempts to steal information, such efforts may go unnoticed. When cyber espionage "goes unrecognized or unreported by cleared contractors, industry does not generate a report, making such instances unavailable for analysis in this data set," reads the DSS report. The DSS report largely confirms what any casual news reader has seen over the last few years — the Far East, led by China, is pushing to build military technology rivaling the U.S.'s by any means necessary.

Chinese modernization causes nuclear war. Causes US draw in and escalation. Other studies don't assume current Chinese military strategy.

Stephen J. **Cimbala** 20**15**, Distinguished Professor of Political Science at Pennsylvania State University Brandywine, Strategic Studies Quarterly, "Chinese Military Modernization Implications for Strategic Nuclear Arms Control," http://www.au.af.mil/au/ssq/digital/pdf/Summer_2015/cimbala.pdf. SBL

China's military modernization is going to change the distribution of power in Asia, including the distribution of nuclear and missile forces. This modernization draws not only on indigenous military culture but also on careful analysis of Western and other experiences. As David Lai has noted, "The Chinese way of war places a strong emphasis on the use of strategy, stratagems, and deception. However, the Chinese understand that their approach will not be effective without the backing of hard military power. China's grand strategy is to take the next 30 years to complete China's modernization mission, which is expected to turn China into a true great power by that time." Chinese military modernization and defense guidance for the use of nuclear and other missile forces hold some important implications for US policy. First, Chinese thinking is apparently quite nuanced about the deterrent and defense uses for nuclear weapons. Despite the accomplishments of modernization thus far, Chinese leaders are aware that their forces are far from nuclear-strategic parity with the United States or Russia. Conversely, China may not aspire to this model of nuclear strategic parity, such as between major nuclear powers, as the key to war avoidance by deterrence or other means. China may prefer to see nuclear weapons as one option among a spectrum of choices available in deterring or fighting wars under exigent conditions and as a means of supporting assertive diplomacy and conventional operations when necessary. Nuclear-strategic parity, as measured by quantitative indicators of relative strength, may be less important to China than the qualitative use of nuclear and other means as part of broader diplomatic-military strategies. Second, China is expanding its portfolio of military preparedness not only in platforms and weapons but also in the realms of command, control, communications, computers, intelligence, surveillance, and reconnaissance (C4ISR) and information technology. Having observed the US success in Operation Desert Storm against Iraq in 1991, Chinese military strategists concluded that the informatization of warfare under all conditions would be a predicate to future deterrence and defense operations.5 As Paul Bracken has noted, the composite effect of China's developments is to make its military more agile—meaning, more rapidly adaptive and flexible.6 The emphasis on agility instead of brute force reinforces traditional Chinese military thinking. Since Sun Tzu, the acme of skill has been winning without fighting, but if war is unavoidable, delivering the first and decisive blows is essential. This thinking also stipulates that one should attack the enemy's strategy and his alliances, making maximum use of deception and basing such attacks on superior intelligence and estimation. The combination of improved platforms and command-control and information warfare should provide options for the selective

use of precision fire strikes and cyberattacks against priority targets while avoiding mass killing and fruitless attacks on enemy strongholds. Another characteristic of the Chinese military modernization that is important for nuclear deterrence and arms control in Asia is the problem of escalation control. Two examples or aspects of this problem might be cited here. First, improving Chinese capabilities for nuclear deterrence and for conventional warfighting increases Chinese leaders' confidence in their ability to carry out an A2/AD strategy against the United States or another power seeking to block Chinese expansion in Asia. This confidence might be misplaced in the case of the United States. The United States is engaged in a "pivot" in its military-strategic planning and deployment to Asia and, toward that end, is developing US doctrine and supporting force structure for "AirSea Battle" countermeasures against Chinese A2/AD strategy. Another problem of escalation control is the question of nuclear crisis management between a more muscular China and its Asian neighbors or others. During the Cold War era, Asia was a comparative nuclear weapons backwater, since the attention of US and allied North Atlantic Treaty Organization policy makers and military strategists was focused on the US-Soviet arms race. However, the world of the twenty-first century is very different. Europe, notwithstanding recent contretemps in Ukraine, is a relatively pacified security zone compared to the Middle East or to South and East Asia, and post–Cold War Asia is marked by five nuclear weapons states: Russia, China, India, Pakistan, and North Korea. The possibility of a nuclear weapon use, growing out of a conventional war between India and Pakistan or China and India, is nontrivial, and North Korea poses a continuing uncertainty of two sorts. This latter nation might start a conventional war on the Korean peninsula, or the Kim Jung-un regime might implode, leaving uncertain the command and control over the nation's armed forces, including nuclear weapons and infrastructure.9 The problem of keeping nuclear-armed states below the threshold of first use or containing escalation afterward was difficult enough to explain within the more simplified Cold War context. **Uncertainties would be even more abundant with respect to escalation control in the aftermath of a regional Asian war**. **There is also the possibility of a US Chinese nuclear incident** at sea or a clash over Taiwan escalating into conventional conflict, accompanied by political misunderstanding and the readying of nuclear forces as a measure of deterrence. The point is US and Chinese forces would not actually have to fire nuclear weapons to use them. **Nuclear weapons would be involved in the conflict from the outset**, as offstage reminders that the two states could stumble into a mutually unintended process of escalation. An important correction or cautionary note must be introduced at this point. Policy makers and strategists have sometimes talked as if nuclear weapons always serve to dampen escalation instead of exacerbating it. This might be a valid theoretical perspective under normal peacetime conditions. However, once a crisis begins—and especially after shooting has started—the other face of nuclear danger will appear. Thereafter, **reassurance based on the assumption that nuclear first use is unthinkable may give way to such an attack becoming very thinkable**. As Michael S. Chase has warned, miscalculation in the middle of a crisis is a "particularly troubling possibility," heightened by uncertainty about messages the sides are sending to one another and/or leaders' overconfidence in their ability to control escalation. Chinese decisions about nuclear force modernization will not take place in a political vacuum. One important issue for US-Chinese strategic planning is whether China and the United States will allow their political relations to fall into the "Thucydides trap," which refers to the relationship between a currently leading or hegemonic military power and a rising challenger—as in the competition between a dominant Athens and a rising Sparta preceding the Peloponnesian War. The Thucydides trap occurs when a leading and rising power sees their competition as a zero-sum game in which any gain for one side automatically results in a commensurate loss in power or prestige for the other

side. It is neither necessary nor obvious that US-Chinese diplomatic-strategic behavior be driven to this end. However, China's challenges in Asia against US or allied Pacific interests might provoke a regional dispute with the potential to escalate into a more dangerous US-Chinese confrontation, including resort to nuclear deterrence or threats of nuclear first use. Even if both Washington and Beijing avoid the Thucydides trap, China has the option of using nuclear weapons for diplomatic or strategic objectives short of war or explicit nuclear threats. We miss important possibilities for the political exploitation of nuclear weapons if we confine our analysis of China's options to threats or acts of nuclear first use or first strike. The following list includes some of the ways China might signal nuclear weapons use to support its foreign policy in possible confrontations with the United States or US Asian allies: • Nuclear tests during a political crisis or confrontation • Military maneuvers with nuclear-capable missile submarines or naval surface forces • Generated alert for air defense forces to reinforce declaration of an expanded air defense identification zone closed to all foreign traffic • Open acknowledgment of hitherto unannounced—and undetected by foreign intelligence—long- and intermediate-range missiles based underground in tunnels on moveable or mobile launchers • Adoption of a launch-on-warning policy in case of apparent enemy preparations for nuclear first use • Cyberattacks against military and critical infrastructure targets in the United States or against a US ally, including important military and command-control networks in Asia, preceded or accompanied by movement of forces to improve first-strike survivability against conventional or nuclear attack • Relocation of People's Liberation Army Second Artillery command centers to more protected sites • Preparation for antisatellite launches against US or other satellites in low earth orbit • Mobilization of reserves for military units that are nuclear capable • Shake-up of the chain of command for political or military control of nuclear forces or force components None of the preceding activities would necessarily be accompanied by explicit threats of nuclear first use or retaliation. Chinese political and military leaders would expect US intelligence to notice the actions and hope for US forbearance. China's expectation might include either a willingness to settle a disagreement based on the status quo or on some newly acceptable terms. Creative analysts or experienced military and intelligence professionals could expand the preceding list; it is neither exhaustive nor definitive of China's options for nuclear-related signaling. Contrary to some expert opinion, the relationship between China's ability to exploit its nuclear arsenal for political or military-deterrent purposes and China's apparent expertise in cyberwar deserves closer scrutiny. It is true nuclear war and cyberwar inhabit separate universes in terms of organization, mission, and technology. Moreover, the consequences of a nuclear war would certainly be more destructive than any cyberwar fought between the same states or coalitions. In addition, deterrence seems easier to apply as a concept to nuclear war, compared to cyberwar. Among other reasons, the problem of attribution in the case of a nuclear attack is simple compared to the case of a cyberattack.12 Notwithstanding the preceding caveats, in the information age it is likely that cyber and nuclear worlds will have overlapping concerns and some mutually supporting technologies. For the foreseeable future, nuclear-strategic command and control, communications, reconnaissance and surveillance, and warning systems—unlike those of the Cold War—will be dependent upon the fault tolerance and fidelity of **information** networks, hardware and software, and security firewalls and encryption. Therefore, these systems and their supporting infrastructures are candidate targets in any enemy version of the US Nuclear Response Plan (formerly Single Integrated Operational Plan). In thinking about this nuclear and cyber nexus, it becomes useful to distinguish between a state's planning for a preventive versus a preemptive attack. During the Cold War, most of the nuclear-deterrence literature was focused on the problem of nuclear preemption, in which a first-strike nuclear attack would be taken under the

assumption that the opponent had already launched its nuclear forces or had made a decision to do so. On the other hand, preventive nuclear war was defined as a premeditated decision by one state to weaken a probable future enemy before that second state could pose an unacceptable threat of attack. Most Cold War political leaders and their military advisors rightly regarded preventive nuclear war as an ethically unacceptable and strategically dysfunctional option.13 In a world in which the day-to-day functioning of military forces and civil society is now dependent upon the Internet and connectivity, the option of a preventive war with two phases now presents itself to nuclear-armed states. In the first phase, selective cyberattacks might disable key parts of the opponent's nuclear response program—especially nuclear-related C4ISR. In the second phase, a nuclear threat of first use or first strike might follow against an enemy partially crippled in its ability to analyze its response options or to order those responses into prompt effect. If this scenario seems improbable in the context of large states like the United States, Russia, and China because of their force and command-control diversity and protection, consider how it might work in the context of confrontations between smaller nuclear armed states, including hypothetical future India-Pakistan or Israel-Iran showdowns.14 Even in the cases of US conflict with China or Russia (or between China and Russia), nuclear crisis management would certainly include preparation for possible cyber attacks preceding or accompanying nuclear first use or first strike.

2nc - ICE k2 semiconductors

ICE operations key to target counterfeit semiconductors – successful now.

DHS 20**14**, Department of Homeland Security, "Written testimony of ICE Homeland Security Investigations, National Intellectual Property Rights Coordination Center Director Lev Kubiak for a Senate Committee on Appropriations, Subcommittee on Homeland Security hearing titled 'Strengthening Trade Enforcement to Protect American Enterprise and Grow American Jobs,'" 7-21-14, http://www.dhs.gov/news/2014/07/16/written-testimony-ice-senate-committee-appropriations-subcommittee-homeland-security. SBL

Operation Chain Reaction (OCR) is an IPR Center initiative that combines the effort of 16 federal law enforcement agencies to target counterfeit items entering the supply chains of the Department of Defense and other U.S. Government agencies. By partnering together, the participants in OCR are coordinating their efforts to more productively protect the U.S. Government supply chain. In a case investigated by ICE, DCIS, and NCIS, a Massachusetts man pleaded guilty in June 2014 to importing thousands of counterfeit integrated circuits (ICs) from China and Hong Kong and then reselling them to U.S. customers, **including contractors supplying them to the U.S. Navy for use in nuclear submarines**. The subject told his customers, many of whom specified in their orders that they would not accept anything but new ICs which were not from China, that the ICs were brand new and manufactured in Europe. Testing by the Navy and one of their contractors revealed the ICs had been resurfaced to change the date code and to affix counterfeit marks, all in order to hide their true pedigree. In order to purchase these ICs, the subject wired nearly $2 million to his suppliers' bank accounts in China and Hong Kong, in violation of federal money laundering laws. This was the second conviction ever under trafficking in counterfeit military goods, a provision in the U.S. criminal code which was enacted as part of the National Defense Authorization Act of 2011. In another case, the former Chief Executive Officer (CEO) of Powerline, Inc., a battery distributor, was found guilty of five counts of wire fraud and one count of conspiracy to defraud the United States by selling more than $2.6 million in cheap, counterfeit batteries to the U.S. Department of Defense. In joint case by ICE and DCIS, with assistance from DLA and the Defense Contract Audit Agency, investigators discovered that Powerline sold more

than 80,000 batteries and battery assemblies that the U.S. Navy used for emergency back-up power on aircraft carriers, minesweepers and ballistic submarines. The company would affix counterfeit labels falsely identifying the batteries as originating from approved manufacturers and used chemicals to remove "Made in China" markings from the batteries. The CEO fled the United States, but was apprehended when undercover HSI special agents hired him to sail his yacht to the U.S. Virgin ISBLands after spending more than two years on the yacht near St. Martin. Once the CEO entered U.S. Territory, he was arrested and his yacht was seized. OCR has resulted in 40 criminal arrests, 70 indictments, 42 convictions, and 1,078 seizures worth $21.2 million (MSRP) in counterfeit parts, currency, and vehicles. Counterfeit items seized through OCR include commercial-grade devices re-marked as military-grade and counterfeit semiconductors intended for use on nuclear submarines.

Counterfeit semiconductors are on the rise – ICE key to prevent intrusion into the supply chain.

RE 20**11**, Rochester Electronics, the world's most comprehensive solution for mature and end-of-life semiconductors, he only manufacturer that is dedicated to ongoing support of critically needed semiconductors for the entire lifecycle, Rochester Electronics, "Counterfeit and Substandard Semiconductors: The Solution to the Threats," https://www.rocelec.com/media/uploads/documents/solution-to-threats.pdf.

It might be interesting to calculate how many semiconductors we rely on during a typical day … coffee maker, radio, TV, cell phone (and the satellite that sends the signal), automobile, traffic lights, airplane, computer, maybe a CT scanner or blood analysis machine. Virtually every industry today uses semiconductors: aerospace, industrial, medical, military, security, contract manufacturing, space, telecom, utilities, transportation, communications, and more. It is estimated that the annual sales of semiconductors increases at a substantial rate each year. It has already exceeded $US300 billion and will approach $US400 billion in the not-too-distant future. Unfortunately, the percentage of sales that involves counterfeit and substandard parts is also expected to increase – exponentially. The U.S. Immigration and Customs Enforcement (ICE) reports that, between November 2007 and May 2010, ICE and U.S. Customs and Border Protection (CBP) made over 1,300 seizures involving 5.6 million counterfeit semiconductors. The counterfeits were marked with the trademarks of nearly 100 North American, Asian, and European semiconductor companies and were destined for importers in the United States and fifteen other countries. Despite the efforts of industry and international government officials, these seized components represent only a small percentage of the parts that actually make their way undetected into the international marketplace. It is difficult to gather exact figures; counterfeiters, of course, will not divulge their success stories. But their victims are also reluctant to admit being caught in the counterfeit trap for fear of degrading customer confidence, lowering stock price, and compromising brand strength. Counterfeit sales of all products (including pharmaceuticals, jewelry, electronics, and other goods) has been estimated to be 7% of total sales. Seven percent of the total projected semiconductor sales for 2010 is over $US20 billion. This represents a considerable number of dangerous parts.

2nc - ICE k2 IPR enforcement

ICE enforcement key to prevent counterfeiting and IPR violations.

JOHN **MORTON** 3-8-**12**, DIRECTOR U.S. IMMIGRATION AND CUSTOMS ENFORCEMENT DEPARTMENT OF HOMELAND SECURITY, American Immigration Lawyers Association, "REGARDING A HEARING ON "U.S. IMMIGRATION AND CUSTOMS ENFORCEMENT FISCAL YEAR 2013 BUDGET REQUEST," http://www.aila.org/File/Related/12031367a.pdf. SBL

Last fiscal year, ICE's criminal investigators in ICE's HSI initiated nearly 45,700 new cases and made over 31,300 criminal arrests. Special agents seized $561 million in currency and negotiable instruments, 2.4 million pounds of narcotics and other dangerous drugs, and $209 million worth of counterfeit goods. ICE's FY 2013 budget request will strengthen efforts to target transnational criminal enterprises seeking to exploit America's legitimate trade, travel, and financial systems, and enforce customs and immigration laws at and beyond our nation's borders. The request includes an enhancement of $17.6 million for the transfer of Visa Overstay Analysis functions from US-VISIT to ICE to consolidate this work under one agency. The request also increases resources dedicated to commercial trade fraud investigations; funds to continue DHS' focus on worksite enforcement (promoting compliance with worksite-related laws through criminal prosecutions of egregious employers, Form I-9 inspections, civil fines, and debarment, as well as education and compliance tools); and continued enforcement of laws against illegal immigration and customs violations and disruption and dismantlement of transnational criminal threats facing the United States. In addition, the Visa Security Program, as part of HSI, will use requested funds to continue to leverage IT solutions to increase ICE's efficiency in screening, vetting, and recording visa applications. ICE aims to have the capability to screen all visa applications and identify patterns and potential national security threats in process through technology and by leveraging the capabilities of our law enforcement and intelligence community partners. National Security ICE leads efforts in national security investigations through five interconnected programs that prevent criminals and terrorists from using our nation's immigration system to gain entry to the United States. Intellectual Property Rights and Commercial Fraud Investigations Through the National Intellectual Property Rights Coordination Center (IPR Center), ICE leads efforts to stop intellectual property rights (IPR) and commercial fraud violations that threaten our economic stability, impact the competitiveness of U.S. industry, and endanger public health and safety. In FY 2011, ICE initiated 1,998 IP and commercial fraud investigations, made 686 arrests, obtained 421 indictments and had 353 convictions. In addition, ICE seized illegal goods with a combined manufacturer's suggested retail price of over $480 million. Commercial fraud investigations resulted in the seizure of illegal goods with a combined domestic value of over $26 million.

ICE enforcement key to prevent IP and counterfeiting violations

DHS 2-27-**14**, Department of Homeland Security, Written testimony of ICE Homeland Security Investigation, National Intellectual Property Rights Coordination Center Director Lev Kubiak for a House Committee on Energy and Commerce, Subcommittee on Oversight and Investigations hearing titled "Counterfeit Drugs: Fighting Illegal Supply Chains," http://testimony163.rssing.com/browser.php?indx=4136680&item=28. SBL

ICE has a legacy of engagement in enforcement against intellectual property (IP) crime that spans from our past as U.S. Customs Service investigators to our present role as Homeland Security

investigators. **ICE is the lead agency in the investigation of intellectual property violations involving the illegal importation and exportation of counterfeit merchandise and pirated works**, as well as associated money laundering violations. In coordination with U.S. Customs and Border Protection (CBP), **we target and investigate counterfeit merchandise and pirated works and we seize and forfeit goods associated with these investigations**, such as those that infringe on trademarks, trade names, and copyrights. Investigating counterfeit pharmaceuticals falls within ICE's broad IP mandate. ICE recognizes that no single U.S. law enforcement agency alone can succeed in the fight against IP crime. Rather it is essential that all relevant federal agencies work together and with IP industry partners to confront this challenge. Furthermore, law enforcement efforts alone will not fully address this growing problem. Indeed, public education, demand reduction, and global collaboration are critical to the success of this effort. To focus government efforts and to enhance efficiency, the former U.S. Customs Service, now known as ICE, formed the National Intellectual Property Rights Coordination Center (IPR Center), which combats violations of intellectual property rights, with a focus on trademark and copyright infringement. Pursuant to the Prioritizing Resources and Organization for Intellectual Property Act of 2008 (Pro-IP Act, Public Law 110-403), U.S. government-wide intellectual property enforcement is coordinated by the White House Office of the U.S. Intellectual Property Enforcement Coordinator (IPEC), which is responsible for strategic planning and coordinating Federal efforts to address IP infringement. The IPR Center collaborates regularly with IPEC on IP policy issues. The IPR Center The former U.S. Customs Service established the IPR Center in 1999, but following the events of 9/11, priorities were necessarily shifted and the IPR Center could not be adequately staffed. ICE rejuvenated the IPR Center in 2008, and it now stands at the forefront of the U.S. Government's law enforcement response to global intellectual property theft. The mission of the IPR Center is to address the theft of innovation that threatens U.S. economic stability and national security, undermines the competitiveness of U.S. industry in world markets, and places the public's health and safety at risk. The IPR Center brings together many of the key domestic and foreign investigative agencies to efficiently and effectively leverage resources, and promotes the skills and authorities to provide a comprehensive response to IP crime. The IPR Center, located in Arlington, Virginia, operates on a task force model and is comprised of 21 relevant federal and international partners. While I serve as the Director of the IPR Center, I work with Deputy Directors from both CBP and the Federal Bureau of Investigation (FBI). The IPR Center includes embedded team members from: HSI, CBP, the Food and Drug Administration (FDA), the FBI, the U.S. Postal Inspection Service (USPIS), the Department of Commerce's International Trade Administration and U.S. Patent and Trademark Office, the Defense Criminal Investigative Service, the U.S. Consumer Product Safety Commission (CPSC), the National Aeronautics and Space Administration (NASA), the Naval Criminal Investigative Service, the Army Criminal Investigative Command Major Procurement Fraud Unit, the U.S. Air Force Office of Special Investigations, the Nuclear Regulatory Commission, the U.S. Department of State's Office of International Intellectual Property Enforcement, the Defense Logistics Agency, and the Inspector General's Office from the General Services Administration. In 2010, the Government of Mexico and INTERPOL joined the IPR Center as our first international partners. Since then, the Royal Canadian Mounted Police and Europol have joined as partners as well. While the Department of Justice (DOJ) is not a formal partner at the IPR Center, trial attorneys from the Computer Crime and Intellectual Property Section (CCIPS) regularly provide input on ongoing enforcement operations and policy. Protecting Health and Safety The illegal importation, distribution and sale of counterfeit pharmaceuticals pose a significant and growing threat to public health and safety. Working collaboratively with our law enforcement partners, the IPR

Center has developed numerous initiatives and interdiction efforts to combat the infiltration of counterfeit, unapproved, and/or adulterated drugs entering the United States through a variety of means, including ports of entry, international mail facilities and express courier hubs. Our strategy is to attack the entire international supply chain, from manufacturer to distribution point and identify, disrupt, and dismantle the international criminal networks responsible for distributing counterfeit pharmaceuticals, by seizing the counterfeit product, criminal proceeds, and assets facilitating the crime, and bringing the individuals responsible for the criminal activity to the justice system to hold them accountable for their actions. This strategy requires a robust collaboration through our Attaché network with foreign counterparts where the majority of counterfeit items are made or through which they are transshipped en route to the United States and all of our trading partners worldwide. Operation Guardian Operation Guardian (Guardian) is the IPR Center's public health and safety initiative. Guardian was initiated in October 2007 in response to the Interagency Working Group on Import Safety and several incidents in which hazardous imports into the United States caused serious public safety concerns. In developing Guardian, HSI, through the IPR Center, solicited the assistance of numerous law enforcement and regulatory agencies, including CBP, FDA , USPIS, DOJ CCIPS, CPSC, and the U.S. Department of Agriculture (USDA). These agencies formed a Headquarters Working Group to target high-risk commodities from foreign sources. The template we use today for surge group operations is based on the findings of this working group. Since the inception of Guardian in FY 2008, HSI has initiated 916 investigations resulting in 334 criminal arrests, obtained 419 indictments, secured 288 convictions, and worked with CBP to make more than 3,000 seizures valued at over $195 million (based on the Manufacturers Suggested Retail Price (MSRP) for the items if genuine). Operation Apothecary Operation Apothecary (Apothecary), which falls under the auspices of Operation Guardian, works to combat the growing use of the Internet in illegal drug distribution. Criminals, posing as legitimate pharmaceutical providers, use the Internet to advertise purportedly FDA-approved prescription drugs, and/or less expensive unapproved foreign alternatives, all without requiring a valid prescription. The consumer purchases the pharmaceutical with the belief that the product advertised is a legitimate product, but in fact, is often purchasing a counterfeit or unapproved version of the drug manufactured under unknown conditions or not subjected to any safeguards or quality control regimes. Apothecary addresses, measures, and attacks potential vulnerabilities in the entry process to attack the smuggling of commercial quantities of counterfeit, unapproved, and/or adulterated drugs through the Internet, international mail facilities, express courier hubs, and land borders. Through Apothecary, participants detect, seize and forfeit commercial shipments of illegally sold, shipped, and/or imported pharmaceuticals and scheduled drugs. The ultimate goal of Apothecary is to identify and dismantle domestic and foreign organizations that illegally sell, ship, import and/or distribute pharmaceuticals and scheduled drugs in the United States. In support of the Apothecary mission, IPR Center personnel coordinated and conducted periodic enforcement surges in conjunction with ICE, CBP, FDA and USPIS at international mail facilities and express courier hubs throughout the United States. Since FY 2010, as part of Apothecary, HSI has arrested 115 individuals and obtained 112 indictments resulting in 99 convictions. There also have been 1,048 seizures worth approximately $20 million (MSRP). Operation Pangea Websites offering counterfeit pharmaceuticals are a growing global phenomenon in the area of IP crime. Patients and consumers around the world are suffering from the negative side effects of counterfeit medications, which often contain unapproved, dangerous, substandard products. In response, Operation Pangea was organized by INTERPOL, with participation by ICE, CBP, FDA, and USPIS, to target the advertisement, sale, and distribution of counterfeit drugs and medical devices

that threaten worldwide public health and safety. Conducted on a yearly basis, the intent of each Pangea operation is to build upon global best practices identified from previous operations and collectively develop a collaborative worldwide approach to combat the illegal trade of counterfeit and illicit medical products, particularly products that represent a serious risk to public health. In addition to the individual countries participating in Pangea, other major international organizations have joined the effort as well, including the Universal Postal Union and the World Customs Organization (WCO). In 2013, nearly 100 countries participated in Pangea VI, which resulted in 213 arrests worldwide and the seizure of more than 10 million potentially dangerous medicines worth approximately $36 million. More than 13,763 websites linked to illicit online pharmacies were identified and shut down, in addition to the suspension of payment facilities of illegitimate pharmacies. Worldwide, approximately 534,562 packages were inspected by customs and regulatory authorities, of which 41,954 were seized. Among the fake medicines seized during Operation Pangea were antibiotics, cancer medication, anti-depression pills, and erectile dysfunction medication, in addition to illegal products labeled as dietary supplements. Other Interagency Efforts ICE shares its border security and trade mission responsibilities with its sister agency, CBP1. Therefore, ICE and CBP work closely to target counterfeit pharmaceuticals and other illicit goods crossing the borders, including through the co-location of personnel at the first Trade Enforcement Coordination Center (TECC). In May 2012, ICE and CBP formed the first TECC in Los Angeles, which services the Ports of Long Beach and Los Angeles. The TECC enhances communication and combines resources to identify and combat trade fraud and IP crime, including counterfeit pharmaceuticals. The TECC proactively identifies, interdicts, and investigates inbound cargo that may enter the U.S. commerce in violation of U.S. customs and trade laws. TECCs ensure joint CBP and ICE oversight and prioritization of the enforcement and interdiction process in the local area, and involve ICE early in the enforcement process. The TECC concept is under development to be expanded to other ports of entry, with the next in Port Elizabeth, New Jersey, which will service ICE and CBP in New York City and Newark. ICE also collaborates closely with personnel at CBP's Centers of Excellence and Expertise (CEE), including their CEE focused on pharmaceuticals, the Commercial Targeting and Analysis Center, and through the creation of the HSI-led National Targeting Center – Investigations (NTC-I). CBP established the CEE as a central point of contact for inquiries and resolution of issues regarding pharmaceutical, health and chemical imports. By having a central point of contact for importer participants at the CEEs, CBP is able to increase uniformity of practices across ports of entry, facilitate the timely resolution of trade compliance issues nationwide, and further strengthen critical agency knowledge on key industry practices. The CTAC is a CBP facility designed to streamline and enhance federal efforts to address import safety issues by improving communication and information-sharing and reducing redundant inspection activities. The NTC-I is a CBP and HSI collaboration to enhance the current partnership with the existing CBP equities at the NTC-Passenger and NTC-Cargo and ICE's Trade Transparency Unit. The cornerstone of the NTC-I is enhance and support ongoing HSI investigations, provide quality investigative referrals and intelligence to HSI field offices, and expand current collaboration with CBP. ICE participates in several other interagency efforts to protect the health and safety of the public, including through initiatives led by the Intellectual Property Enforcement Coordinator (IPEC). For example, ICE played a significant role in helping develop the IPEC's 2013 Joint Strategic Plan on Intellectual Property Enforcement and the Counterfeit Pharmaceutical Inter-agency Working Group Report to the Vice President and Congress, and is carrying out the pertinent recommendations in those report. Through the IPEC, the U.S. Government is pursuing an innovative and multi-pronged strategy to combat infringing foreign-based and foreign-controlled

websites by encouraging cooperation by law enforcement, development of voluntary best practices, and international leadership. The IPR Center shares the investigative outcomes and trend information that we obtain with interagency partners and the IPEC to further inform their policy development, including strategic plans, the U.S. Trade Representative's Special 301 Process and the Administration's legiSBLative recommendations.

2nc – link - interdependence

ICE key to IP enforcement – interdependence means decline of one agency hampers other efforts.

GAO 20**08**, United States Government Accountability Office, Report to the Ranking Member, Subcommittee on Oversight of Government Management, the Federal Workforce, and the District of Columbia, Committee on Homeland Security and Government Affairs, U.S. Senate, GAO, "Intellectual Property: Federal Enforcement Has Generally Increased, but Assessing Performance Could Strengthen Law Enforcement Efforts," March 2008, http://www.gao.gov/assets/280/273601.html,

Based on our prior work and background research, we determined that CBP, ICE, FBI, and DOJ are the four key law enforcement agencies that play an active role in IP enforcement, and that FDA also plays an important role. To examine the key federal agencies' roles and priorities for IP-related enforcement, we met with agency officials in their headquarters and in seven field locations[Footnote 6] and reviewed strategic plans and other agency documents. To examine agencies' resources for IP-related enforcement, we obtained information on staff resources, where available. To evaluate IP-related enforcement trends and achievements, we reviewed agency statistics for fiscal years 2001 through 2006, including IP-related seizures, investigations, and prosecutions. We also reviewed agencies' internal strategic planning documents to determine their priorities, goals, and objectives for IP enforcement and compared them to the types of data agencies collected. To examine the status of the National Intellectual Property Rights Coordination Center, we met with ICE, FBI, DOJ, and FDA officials to discuss its evolution, role, and staffing levels; reviewed agency documents that articulated the center's purpose; and analyzed congressional appropriators' conference reports that directed agencies to staff and fund the center. Some of the information we reviewed was considered sensitive for law enforcement purposes, and our report only discusses publicly available information. We obtained private sector views on federal IP enforcement efforts through interviews with representatives from 22 companies and eight industry associations across eight sectors, such as the entertainment, pharmaceutical, and manufacturing industries. We conducted this performance audit from December 2006 through March 2008 in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives. See appendix I for a more detailed description of our scope and methodology. Results in Brief: For the five key federal agencies that play a role in enforcing IP laws, such enforcement is not a top priority, and determining the resources they have devoted to this function is challenging. IP law enforcement actions consist of three primary functions--seizing goods, investigating crimes, and prosecuting alleged criminals. CBP is responsible for seizing IP-infringing goods at the U.S. border, a function that also includes assessing penalties and excluding--or denying entry to--certain types of IP-infringing goods. ICE

and FBI share responsibility for investigating those suspected of IP crimes, and FDA investigates counterfeit versions of the products it regulates. DOJ is responsible for prosecuting those accused of committing IP crimes. IP enforcement activities are generally a small part of these agencies' much broader missions, and, according to agency officials and documents, IP enforcement is not the top priority for these agencies. However, within their IP enforcement activities, these agencies have given enforcement priority to IP crimes that pose risks to public health and safety, such as counterfeit pharmaceuticals, batteries, and car parts. Determining the federal resources allocated to IP enforcement is challenging because few agency staff are dedicated exclusively to IP enforcement, and only investigative agencies tracked the time spent by non-dedicated staff on IP criminal investigations. The information we obtained shows declining staff resources in some agencies and increases or little change in others. **Because agencies' IP enforcement roles are interdependent, the emphasis one agency places on IP enforcement can affect the actions of others**. For example, officials from several investigative agencies' field offices said their decisions to open IP investigations were influenced in part by the willingness of the local U.S. Attorney's Office to prosecute certain types of IP enforcement cases. Federal IP enforcement activity generally increased from fiscal year 2001 through 2006, but agencies have not taken key steps to assess their IP enforcement achievements. Our review of agencies' enforcement statistics over the 6-year period found that IP enforcement activities generally increased, with fluctuations in activity across fiscal years and type of enforcement action. Specifically, the number of CBP's seizures have steadily increased, but the domestic value of goods seized varied by fiscal year. However, we found that CBP collected less than 1 percent of penalties assessed during 2001 through 2006. We also found a lack of data on CBP's exclusion of imports subject to "exclusion orders" and certain procedural issues, such as delays in creating enforcement guidance and minimal electronic targeting in certain cases.[Footnote 7] The number of IP-related criminal investigations that ICE, FBI, and FDA opened each year fluctuated during 2001 through 2006, but the number of arrests, indictments, and convictions stemming from these investigations generally increased during that time period. The number of IP prosecutions by DOJ for fiscal years 2001 through 2005 hovered around 150 cases before increasing to about 200 cases in fiscal year 2006. Although agencies' enforcement activities show general increases, agencies have not taken key steps to evaluate their own enforcement trends in ways that would better inform management decisions and resource allocation. For example, agencies have generally not conducted systematic analyses of IP-related enforcement activities, such as by field offices or type of violation pursued. Our analysis of agency data shows that a small number of CBP and DOJ field offices are responsible for the majority of these agencies' total IP enforcement activity. Further, all the agencies have given priority within their IP enforcement efforts to IP crimes that affect public health and safety, but most have not clearly identified which IP enforcement actions relate to public health and safety or lack data to track their achievements in this area. Finally, agencies have generally not established performance measures or targets to aid them in assessing their IP enforcement achievements and reporting their progress to Congress and interagency coordinating bodies.

2nc - Malicious insertion

Counterfeits with malicious insertion cause shutdown and illegal intell gathering.

RE 20**11**, Rochester Electronics, the world's most comprehensive solution for mature and end-of-life semiconductors, he only manufacturer that is dedicated to ongoing support of critically needed semiconductors for the entire lifecycle, Rochester Electronics, “Counterfeit and

Substandard Semiconductors: The Solution to the Threats," https://www.rocelec.com/media/uploads/documents/solution-to-threats.pdf.

An even more sinister sideline of the counterfeit industry is a technology known as malicious insertion. In this fairly sophisticated form of counterfeiting, which is usually effected for military and communications applications, components are outfitted with hidden capabilities intended to cause the shutdown or the malfunction of the equipment in which they are installed. Additional capabilities may allow the gathering of sensitive intellectual property or intelligence.

2nc - Electronic failure

Counterfeit semiconductors cause catastrophic electronic failure – 6 reasons.

SIAACTF 20**13**, Semiconductors Industry Association Anti-Counterfeiting Task Force, a trade association and lobbying group at represents the United States semiconductor industry, SIA, "WINNING THE BATTLE AGAINST COUNTERFEIT SEMICONDUCTOR PRODUCTS," August 2013, http://www.semiconductors.org/clientuploads/Anti-Counterfeiting/SIA%20Anti-Counterfeiting%20Whitepaper.pdf

Package cracking, package delamination, and/or die cracking may be induced by component removal from scrap Printed Circuit Boards (PCBs). Counterfeiters rarely take any precautions against package damage during board removal. Flexing of PCBs and removal of components from boards can cause subtle cracking, either on the outside or inside of the package, that is not visible with component inspection. A common form of damage caused by board removal is stress fracturing at the metal pins or metal solder balls on the outside of the package. Components having pins or solder balls with subtle stress fracturing may pass electrical testing after they are re-mounted on new PCBs. However, during customer application, particularly in harsh environments, the stress fracturing can progress to the point that the component fails intermittently or continuously. Components removed from PCBs and re-marked to indicate they are new may fail at the worst possible time. For example, if the flight control system for a jet plane has a counterfeit component with a micron-scale crack in the silicon chip, the mechanical stress on the chip from flight turbulence could cause the crack to propagate, resulting in complete electrical failure of the component. The resulting failure of the flight control system could result in loss of control of the plane, jeopardizing the lives of everyone onboard. 2. "Popcorning" of counterfeit components may occur during PCB assembly since counterfeiters rarely handle or store components properly. Many components, including components with mold compound (plastic) encapsulant, will absorb significant moisture. While OCMs always properly bake and dry-pack moisture-sensitive components, counterfeiters usually skip one or both of these manufacturing operations or take shortcuts to save time and cost. Even if counterfeit components are dry-packed in sealed moisture barrier bags, they may not have been properly baked first. The net result is that during component mounting on PCBs using high-temperature reflow ovens, the moisture in the counterfeit components expands very rapidly (since steam forms above 100 °C = 212 °F), causing the package to "popcorn," which can result in cracking or delamination inside the package. As in the previous case, this internal cracking or delamination can become worse during end-customer use, resulting in total electrical failure of the component. 3. Counterfeit components are often marked to indicate they do not contain the element lead (Pb) or other restricted materials when they in fact do, and this can result in major component reliability risks. Components "harvested" from old scrap PCBs are often years or even decades old, and most of these components contain Pb and/or other materials covered by the Restriction of Hazardous

Substances Directive (RoHS). Often, the Pb was incorporated in the solder used in component packages to reduce the melting point of the solder. For example, tinlead (SnPb) solder was very common until RoHS and other environmental legislation went into effect over the past decade. Since component packages with SnPb solder were generally mounted on PCBs using relatively low peak solder reflow temperatures (typically between 220 °C = 428 °F and 235 °C = 455 °F), the materials in the package did not need to be reliable to particularly high temperatures. However, with the industry transition to Pb-free packages over the past decade, component packages are now usually mounted on PCBs using significantly higher peak reflow temperatures (typically between 240 °C = 464 °F and 260 °C = 500 °F). Semiconductor companies therefore re-engineered component package materials (such as mold compound and die attach) so that they would be reliable at these higher temperatures. Since most of the electronics industry has transitioned to Pb-free packages to meet RoHS requirements, the demand for Pb-bearing packages has dropped precipitously. Thus, counterfeiters usually re-mark old components to indicate they are Pb-free (when they are not). In addition to the use of such counterfeit components causing RoHS compliance issues, PCB manufacturers that assume these components are Pb-free and mount them on PCBs at temperatures of up to 260 °C = 500 °F can unknowingly induce major reliability hazards since the package materials were not designed to handle these high temperatures. For example, counterfeit Pb-bearing packages that are mounted at such high temperatures may "popcorn," resulting in cracking or delamination of the package. As previously detailed, internal package cracking or delamination can worsen during component field use, resulting in a sudden catastrophic failure. In addition to die cracks propagating in the field, delamination can spread to the point that internal bond wires snap, again causing the component to completely stop functioning. While marking Pb-bearing packages as Pb-free is very common, counterfeiters sometimes do the inverse and mark Pb-free packages as Pb-bearing to meet remaining demand for legacy Pb-bearing packages. Due to the lack of controls in "manufacturing" and handling these counterfeits, this results in a different set of reliability risks, such as the potential for tin whisker formation that can result in shorting between electrical terminals on components. 4. Electrostatic discharge (ESD) damage may occur to semiconductors during component removal from scrap PCBs or during subsequent operations such as stripping of original package markings, adding new counterfeit markings, etc. All these "manufacturing" operations for counterfeit components can cause them to become electrically charged, especially since counterfeiters almost never take any precautions against ESD (such as using ESD ground straps and using ionizers to safely discharge components). When the charged components subsequently contact metal surfaces such as a metal storage bins, they will discharge via highcurrent transients that can slightly damage thin dielectric layers in the component circuitry, such as nanometer-scale gate and capacitor dielectrics. These dielectric layers, which are meant to be insulators, then conduct leakage currents. These leakage currents may be too low to result in electrical failures during initial use. However, after weeks or months of operation, the leakage currents can increase to the point that components suddenly fail catastrophically. 5. Chemicals used by counterfeiters to strip original markings and/or to clean component package connections can result in reliability failures due to corrosion. In their effort to make old or used components look new, counterfeiters often use harsh chemicals to "recondition" packages. These chemicals are sometimes incompatible with the package materials, and thus the integrity of the packages will be compromised by these chemicals. Even if the chemicals are compatible with the packages, they may not be fully rinsed off by the counterfeiters. For example, acid used by counterfeiters to clean oxide layers and other contaminants from package pins, pads, and solder balls will initially penetrate only the surfaces of packages. However, weeks, months, or years later, the acid can

work its way to active circuitry on the semiconductor chip, thus corroding away this circuitry and resulting in loss of functionality. This corrosion mechanism is accelerated by temperature and humidity; the time-to-failure of the counterfeit components will decrease as the temperature and/or humidity they are exposed to increases. Even if the PCB manufacturer washes circuit boards and/or applies conformal coatings to circuit boards, any acid that had partially penetrated packages during counterfeiting will be trapped in the packages and can eventually lead to catastrophic failure. Finally, counterfeiters can introduce reliability issues by incorrect laser marking of component packages. As the semiconductor industry has largely transitioned from ink-marked components to laser-marked components, counterfeiters have followed suit. Conducting laser marking on components in plastic packages has become increasingly challenging as these packages have become thinner. More specifically, the laser marking needs to be sufficiently deep into the package to make it legible without reaching bond wires or other critical internal package features. Due to their expertise at developing, characterizing, qualifying, and monitoring laser marking processes, semiconductor companies do not compromise package integrity during laser marking operations. However, counterfeiters usually do not know the depth of bond wires and other critical features on a given component. This is especially the case if counterfeiters have chemically or mechanically removed the original package markings and have thus reduced the thickness of the package. When bond wires or other interconnects inside packages are hit by lasers used by counterfeiters, the current-carrying capability of these interconnects is reduced. This can result in time-dependent failures when the damaged interconnect eventually fuses open during component use. Hermetic packages may likewise have poor reliability due to laser marking by counterfeiters. For example, in the case of iron-based lids that are plated with nickel and/or gold, if laser marking removes the plating, subsequent exposure of the package to moisture will cause the iron to corrode. Prolonged exposure to moisture will cause the iron to corrode away to the point that holes develop in the package lid, resulting in loss of package hermeticity and likely catastrophic failure due to moisture entering the package. The net result of the above issues is that counterfeit components that pass electrical testing after board mounting may still have significant field reliability problems. If even one counterfeit semiconductor component ends up in an electronic system with hundreds or thousands of components, the reliability of the entire system may be greatly compromised by this one bogus component. Classic system-level Mean Time Between Failure (MTBF) reliability calculations, such as those detailed in MIL-HDBK-217, are completely meaningless if one or more components in the system are counterfeit.

2nc - AT: authenticity tests check

Counterfeit semiconductors cannot be identified by manufacturers and purchasers – lack of IP and high costs.

RE 20**11**, Rochester Electronics, the world's most comprehensive solution for mature and end-of-life semiconductors, he only manufacturer that is dedicated to ongoing support of critically needed semiconductors for the entire lifecycle, Rochester Electronics, “Counterfeit and Substandard Semiconductors: The Solution to the Threats,” https://www.rocelec.com/media/uploads/documents/solution-to-threats.pdf.

One of the treacherous aspects of counterfeit and substandard semiconductor devices is that they are not easy to identify, especially as components become smaller and more complex. The smaller the device, the more difficult it is to use sophisticated marking techniques. Inspection

protocols can be applied to determine authenticity; however, because there are so many different counterfeiting methods and variations within those methods, definitive authenticity verification is not easy to achieve. Parts can be tested for quality and reliability; however, there are some caveats. The accuracy and usefulness of test results are dictated by the quality of the test. The only reliable tests are tests done with the exact same test protocols, equipment, and specifications used by the original component manufacturer. Unauthorized distributors and third-party test houses do not have access to this intellectual property (IP). Poorly conceived, inadequate test protocols do not result in accurate results. Only highly trained, experienced engineers have the skill and knowledge necessary to select and implement the proper test methodologies for each component. In addition, there is a difference between quality and reliability testing, though both are important in analyzing and projecting the life cycle performance of a semiconductor. Quality is the ability of the device to perform its specified function under specified conditions when it is first used. Reliability is the ability of the device to perform its specified function under specified conditions for a stated period of time. In most cases, testing adds additional cost to the purchase price of a component. The overall cost of testing must balance with the required quality and reliability level for the end-use of the component. Cost of testing by independent and third-party test labs are frequently dictated by competition and the demand for quick turnaround times; and cost-cutting shortcuts can negatively impact the quality of the test process.

Authenticity determinations are unreliable AND OCM's only limit to their own products.

SIAACTF 20**13**, Semiconductors Industry Association Anti-Counterfeiting Task Force, a trade association and lobbying group at represents the United States semiconductor industry, SIA, "WINNING THE BATTLE AGAINST COUNTERFEIT SEMICONDUCTOR PRODUCTS," August 2013, http://www.semiconductors.org/clientuploads/Anti-Counterfeiting/SIA%20Anti-Counterfeiting%20Whitepaper.pdf

As counterfeiters have refined their "manufacturing" processes, making authenticity determinations has become increasingly difficult for everyone except the Original Component Manufacturer (OCM). Years ago, many counterfeit semiconductors had irregular solder on external package pins, poorly-marked logos, sloppy alphanumeric characters, and/or evidence of package surface sanding or "blacktopping." These and other telltale signs of counterfeiting made it easy for anyone with a good, low-power microscope and some general training to identify the more blatant counterfeits. Some of these older, relatively crude counterfeits are still available through non-authorized purchase sources. More recently, however, counterfeiters have become far more sophisticated. For example, semiconductor package surfaces and external pins/solder balls as well as package markings (including logos) may be essentially identical to those on legitimate products. In addition, tubes, trays, reels, dry-pack bags, desiccants, humidity indicator cards, shipping boxes, shipping labels, certificates of conformance, and other packing materials and documents may be counterfeit or forged and may be indistinguishable from those used for legitimate shipments. Moreover, while very low retail prices were historically an indicator that components were likely bogus, counterfeits now often cost nearly as much as legitimate components, thus boosting the profits for counterfeiters and their supply chains while making retail prices a poor indicator of product authenticity. Many third-party laboratories and some Original Equipment Manufacturers (OEMs) and/or Contract Manufacturers (CMs) claim they can make authenticity determinations with a high degree of accuracy, but this often is not the case. Various standards, including SAE AS5553 and IDEA-STD-1010, provide detailed guidelines on identifying counterfeit components. [References 11-12.] These standards are sometimes helpful in

identifying counterfeits where component packages have obviously been "refurbished" and/or components have been re-marked. However, SIA member companies have numerous examples where third-party laboratories reportedly using these standards have made incorrect authenticity determinations. Moreover, these standards are generally ineffective for identifying the latest forms of counterfeiting. For example, counterfeits where used, low-grade, or second-source die are assembled in new packages and are marked as higher-grade components would likely escape detection. In addition, some of the test techniques used for counterfeit detection that are considered non-destructive can cause subtle damage to components. For example, x-ray inspection can result in shifts in key electrical parameters for components, particularly in the case of high-performance products. Third-party laboratories and OEMs/CMs routinely conclude that components are legitimate based on their own electrical testing, which usually consists of curve tracer testing that measures the current vs. voltage characteristics of component pins. However, while curve tracer testing can identify the most obvious counterfeits, this and other simple bench-top electrical testing cannot begin to replicate OCMs' thorough electrical testing of ICs using expensive Automatic Test Equipment (ATE) running up to thousands of lines of test code as detailed in Section VII. Curve tracing only checks a few transistors connected directly to each IC pin, while ATE testing by OCMs with proprietary test programs assesses the full functionality of even the most complex ICs that can each have millions of transistors. Thus, unless ICs have been tested on OCMs' ATE that is designed to ensure only high quality and reliability products are shipped, conclusions about product authenticity should never be based on ICs "passing" electrical testing. A common problem with authenticity testing is working on the false assumption that testing samples pulled from a population of suspect parts will allow conclusions to be drawn about all the parts. Due to the time and expense of conducting laboratory tests to try to identify counterfeits along with the destructive nature of some tests (e.g., package decapsulation followed by die visual inspection), usually only a small fraction of the parts in a shipment of suspect components is tested. However, counterfeiters are familiar with sampling protocols, and thus they often "seed" legitimate units at the beginning and end of tubes and reels so that if these easily-sampled parts are tested they will pass. Even in cases where good parts are not "seeded" in an otherwise counterfeit reel, tray, or tube of parts, any assumption that a population of parts is homogenous is almost always incorrect in the case of counterfeits. More specifically, due to the variability in the processes used during the "manufacturing" of counterfeits, only some of the parts may be damaged by mechanisms such as ESD, corrosion, die or package cracking, etc. The bottom line on authenticity determinations made by anyone other than the OCM is that they are time-consuming, expensive, and often inaccurate. Moreover, even if testing correctly identifies that components are authentic, there is no way to prove that components outside the authorized supply chain have not been mishandled or improperly stored, thus jeopardizing their quality and reliability. Although counterfeiters have become very sophisticated, OCMs can readily make authenticity determinations on suspect products marked with their logos. OCMs incorporate overt and covert features into semiconductor packages as well as packing materials. In many cases, technical experts at OCMs can quickly make authenticity determinations when provided with high-resolution photos of the top-side and bottom-side of semiconductor packages as well as associated shipping labels and packing materials. OCMs' methodologies for making authenticity determinations are only valuable when they are kept secret, so OCMs do not divulge any details on covert features and authenticity methodologies. In cases where authenticity determinations cannot be made from photos, OCMs can consistently make accurate determinations when provided with physical samples of suspect components marked with their logos. While OCMs are proficient at making authenticity determinations on "their" components, most OCMs limit their

authenticity determination services to suspect products detained by Customs and to suspect products that are the subject of law enforcement investigations. OCMs generally do not provide authenticity determinations as a free service for non-government agencies. This is because many billions of suspect components are available on the open market, and OCMs would need to staff large departments to try to respond to tens of thousands of authenticity requests from independent distributors and brokers as well as individuals or companies buying from these non-authorized sources. OCMs provide extensive post-sales support to customers that buy their products from authorized sources, but, as with other industries, there is no viable business model for OCMs to provide free support on suspect products that may not have been manufactured by the OCM. Again, as with other industries, OCMs support products they sell through authorized channels; OCMs are not in the business of supporting counterfeits and other suspect products available on the open market.

Authenticity tests can't check – don't account for upstream counterfeiting.

SIAACTF 20**13**, Semiconductors Industry Association Anti-Counterfeiting Task Force, a trade association and lobbying group at represents the United States semiconductor industry, SIA, "WINNING THE BATTLE AGAINST COUNTERFEIT SEMICONDUCTOR PRODUCTS," August 2013, http://www.semiconductors.org/clientuploads/Anti-Counterfeiting/SIA%20Anti-Counterfeiting%20Whitepaper.pdf

A major misconception is that if an authenticity determination is made (by whatever means) and the associated semiconductor components are deemed legitimate, then they will have high quality and reliability levels. In many cases, nothing could be farther from the truth. Any components outside the authorized supply chain (whether authentic or not) may not have been handled, stored, and transported properly. Even if a customer buys components from a broker or an independent distributor that has always handled and stored components correctly, the broker/independent distributor may have obtained the components from an "upstream" source that did not do so. Unfortunately, unlike with some other products, semiconductor components can be mishandled or stored improperly yet show little or no physical evidence that they have been abused. Examples of damage that can occur due to improper handling and storage when components are outside the authorized supply chain include: 1. Electrostatic Discharge (ESD) damage due to handling without adequate ESD controls; 2. Bent pins, scratched pads, and deformed solder balls due to rough handling; 3. Solderability issues caused by exposure to excessive temperature and/or humidity; 4. Package contamination due to handling and storage in a dirty environment; 5. Package "popcorning" caused by incorrect or missing dry-packing. Unfortunately, as detailed in Section VIII, some of the above issues do not always result in immediate component failure. Both ESD damage and package contamination can result in time-dependent failures. Since the quality and reliability of components can be severely degraded by improper handling and storage, semiconductor companies do not offer warranties on components that are outside the authorized supply chain. Thus, if components bought on the open market have high fail rates in electronic systems, semiconductor companies have no liability. Although the component purchaser may try to pass warranty costs and other large financial liabilities on to the company they bought the parts from, most open market sources are not in a financial position to pay out large liability claims. For example, fly-by-night operators often "disappear" when faced with liability claims or lawsuits. The net result is that the Original Equipment Manufacturers (OEMs) and/or their Contract Manufacturers (CMs) are saddled with high financial liabilities and in many cases damaged reputations due to selling systems with poor reliability. The OEMs/CMs can avoid all

these problems by buying components directly from OCMs or directly from their Authorized Distributors/Resellers.

2nc - AT: Authorized supply chain

No assurance for non-authorized channels. The military has already purchased counterfeits from such channels.

SIAACTF 20**13**, Semiconductors Industry Association Anti-Counterfeiting Task Force, a trade association and lobbying group at represents the United States semiconductor industry, SIA, "WINNING THE BATTLE AGAINST COUNTERFEIT SEMICONDUCTOR PRODUCTS," August 2013, http://www.semiconductors.org/clientuploads/Anti-Counterfeiting/SIA%20Anti-Counterfeiting%20Whitepaper.pdf

OCMs and their Authorized Distributors have proven systems for ensuring that components bought from them are legitimate and are handled, stored, and transported properly. However, once components are out of the authorized channel there are no assurances that the component is legitimate or functional. Components on the open market often pass through many different hands. For example, during his opening statement at the Senate Armed Services Committee (SASC) Hearing on Counterfeit Electronic Parts in the Department of Defense's Supply Chain, SASC Chairman Senator Carl Levin described how one set of suspect counterfeit parts went through six different brokers/independent distributors in three different countries before they were assembled into an electronic system. [Reference 14.] Given the number of parties involved and the associated extensive shipping and handling operations, there are numerous opportunities for counterfeit components to enter nonauthorized supply chains. In many cases, the majority of parties in the supply chain are unaware that they are dealing with counterfeits. It is not surprising these parties usually plead ignorance if an investigation takes place and civil or criminal charges are filed. However, any individual or company that is knowingly or unknowingly involved in the distribution of counterfeit components can be charged with trafficking in counterfeit goods. While many brokers/independent distributors are diligent about avoiding counterfeits, some open market sources intentionally engage in the distribution and sale of counterfeit components. For example, the SIA Anti-Counterfeiting Task Force worked with US government agencies to analyze suspect components, many of which were determined to be counterfeit, sold by brokers MVP Micro, J.J. Electronics, VisionTech Components, Epic International Electronics, and their affiliated companies. [References 15-18.] The defendants in the MVP Micro case manufactured counterfeit semiconductors in the US, thus illustrating that the manufacturing of counterfeit components is not just limited to countries with a history of providing minimal Intellectual Property (IP) protection. In the J.J. Electronics, MVP Micro, and VisionTech Components cases, the defendants knowingly sold counterfeit electronic components to the US military and other customers via their professional-looking websites. The defendants in these cases later served time in prison for trafficking in counterfeit components and other unlawful activities. The defendant in the Epic International Electronics case was charged in July 2013 with importing counterfeit semiconductors for sale in the US. Some of these counterfeits were intended for use in nuclear submarines, thus underscoring the major risks that counterfeit semiconductors pose to health, safety, and security.

2nc Econ module

Counterfeit semiconductors ruin semiconductor industry competitiveness and electrical grids.

SIAACTF 20**13**, Semiconductors Industry Association Anti-Counterfeiting Task Force, a trade association and lobbying group at represents the United States semiconductor industry, SIA, "WINNING THE BATTLE AGAINST COUNTERFEIT SEMICONDUCTOR PRODUCTS," August 2013, http://www.semiconductors.org/clientuploads/Anti-Counterfeiting/SIA%20Anti-Counterfeiting%20Whitepaper.pdf

In addition to jeopardizing health, safety, and security, counterfeit semiconductors cause significant harm to the economy. Semiconductor companies spend tens of billions of US dollars per year developing, manufacturing, and supporting products that will operate reliably for many years in customer applications. In contrast, counterfeiters spend minimal money developing and "manufacturing" products, and they provide no post-sales customer support. When an Original Component Manufacturers' products are counterfeited, the low quality and poor reliability of the counterfeit components can cause damage to an OCM's reputation, especially if the parties that experience failing components do not realize that these components are counterfeit. This damage to an OCM's reputation can result in loss of business even though the "manufacture" and sale of the counterfeits was completely outside the control of the OCM. Due to their low-cost operations based on theft of OCMs' Intellectual Property (IP), counterfeiters can usually undercut the Average Selling Prices (ASPs) of OCMs and their Authorized Distributors. While component purchasers may think they are getting a good deal in terms of pricing and/or availability by turning to the open market and ordering components based on quick Internet searches, there are no assurances that these components are consistently authentic and reliable. Just one counterfeit semiconductor component in an electronic system can cause the entire system to completely fail unexpectedly during end-customer use. If this system is a video game console or an electronic toy, the economic consequences of failure are minimal. However, if this system is a computer server for financial transactions or a control system for electric power grids, the economic damage from failures can be very substantial. Components bought through the open market carry no factory warranties, and most non-authorized sources are too small to be in a financial position to pay large liability claims stemming from high rates of OEM system failures caused by counterfeit components. Thus, component purchases from the open market that are initially viewed as inexpensive can turn into an extremely costly mistake, particularly if system failures result in millions of dollars in warranty expenses and/or liability claims against the OEM or their CM. Moreover, the cost of high failure rates on electronic systems due to counterfeit components can be even greater if these failures result in major damage to the OEM's/CM's reputation and the loss of future business. The **economic harm can be almost incalculable if counterfeit semiconductors result in critical infrastructure failure or if counterfeits in safety-critical electronic equipment cause loss of life**. The OEMs/CMs can avoid these major risks by always buying components directly from OCMs or directly from their Authorized Distributors/Resellers. By avoiding counterfeits and otherwise inferior products by adopting procurement policies requiring purchases through authorized sources, the OEMs/CMs will protect the health, safety, and security of everyone that depends on reliable electronic products and systems on a daily basis. Individuals and companies involved in the sale of counterfeit components/electronic systems to the US Department of Defense (DoD) can face nearly unlimited financial liabilities along with severe criminal penalties. Section 818 of the National Defense Authorization Act for

Fiscal Year 2012 (NDAA) requires defense contractors to establish effective policies and procedures to detect and avoid counterfeit components. [Reference 3.] Even if defense contractors have implemented comprehensive safeguards against counterfeits, they may be financially liable for all costs associated with completely remediating any issues stemming from counterfeit components in electronic systems. As detailed in Section IX, authentication determinations on suspect components are difficult to make and are often erroneous. Consequently, most counterfeit mitigation programs will not be effective unless they require that component purchases be exclusively through authorized sources. If counterfeit components are incorrectly deemed authentic and integrated into complex military systems deployed worldwide, the financial costs may be enormous to replace suspect or confirmed counterfeits. Thus, any savings that defense OEMs or their CMs may have realized by purchasing semiconductor components from the open market would be dwarfed by the costs of replacing previously-installed counterfeit components in fielded military systems. Moreover, the reputations of defense contractors and their suppliers involved in counterfeit issues can be badly damaged. NDAA Section 818 and subsequent related legislation cover additional provisions including reporting requirements for suspect counterfeit components and criminal penalties for trafficking in counterfeit goods and services. For example, per Section 818, an individual who intentionally traffics in counterfeit goods to the DoD can be fined up to $2 million and/or imprisoned for up to 10 years, double the penalties under previous laws.

Semiconductor industry key to the economy – its key to all major sectors and innovation.

Matti **Parpala** 20**14**, Research Fellow for the Semiconductor Industry Association, Master in Public Policy '15 at Harvard Kennedy School, SIA, "The U.S. Semiconductor Industry: Growing Our Economy through Innovation," August 2014, http://www.semiconductors.org/clientuploads/Industry%20Statistics/141008%20Innovation%20White%20Paper%20Final%20as%20posted.pdf

Semiconductor technology started conquering the world soon after the Second World War. Jorgenson, Ho & Samuels (2011) have done extensive research into information technology's impact on U.S. economic growth from 1960 to 2007. 12 During that period, the U.S. semiconductor industry accounted for as much as 30.3 percent of total economic growth due to innovation (Figure 3). The U.S. semiconductor industry was third to wholesale and retail trade industries, which only had bigger innovation effects because of their massive size relative to the U.S. semiconductor industry. Jorgenson et al. (2011) also calculated the total contribution of different industries to aggregate value added (GDP) growth from 1960-2007, and the U.S. semiconductor industry's share proved to be outsized. The industry accounted for as much as 2.9 percent of the total real GDP growth (i.e. after adjusting for price changes) – seven times more than the industry's share of nominal GDP from 1960 to 2007. Figure 3 illustrates how outsized the U.S. semiconductor industry's contribution to U.S. economic growth and innovation is compared to its share of GDP and to all other U.S. industries, categorized by IT-producing, IT-using, and non-IT-using industry groups Dividing U.S. industries into IT-using, IT-producing, and non-IT-using industry groups provides a striking illustration of the major indirect effect the U.S. semiconductor industry has on the U.S. economy. As Figure 3 shows, IT-producing or IT-using industries – which are all deeply reliant on semiconductor technology – had a 52.7 percent share of nominal GDP (left bar) and accounted for a 59.7 percent share of real GDP growth (middle bar). Importantly, all growth due to innovation occurred due to IT-using and IT-

producing industries (right bar). 15 Even as a direct contributor to real U.S. GDP growth, the U.S. semiconductor industry beats many other major traditional U.S. industries. Table 1 shows the U.S. semiconductor industry's contribution (0.10 percent units of total GDP) in comparison with other selected industries. Innovation and IT Continue to Play a Major Role in U.S. Economic Growth Between 1947-2010, average annual U.S. economic growth was approximately 3.0 percent. Innovation played a major role in this growth, generating nearly a quarter of it, or 23 percent. Amazingly, from 2000-2005, innovation accounted for nearly a half of total economic growth. 17 Figure 4 illustrates, in yellow, the effect of innovation (TFP) as a share of total labor productivity growth from 1990- 2010, and projections for 2010-2020. The base case estimate expects GDP to grow by 1.93 percent annually during this decade, of which productivity growth is estimated to account for roughly 1.1 percentage points, as shown in the graph. According to the estimate, roughly a quarter of the labor productivity growth will be generated by innovation. Importantly, economists also estimate that all productivity growth during the current decade will likely be generated by IT-using and IT-producing industries. The non-IT-using industries are only expected to improve their productivity in the optimistic case, as described in Figure 5**. Given all IT systems' dependence on semiconductor technology, this information indicates that the U.S. semiconductor industry's outsized direct and indirect impact on U.S. economic growth will continue**.

Prefer our statistics—decline causes war

Royal '10

(Jedediah, Director of Cooperative Threat Reduction at the U.S. Department of Defense, 2010, Economic Integration, Economic Signaling and the Problem of Economic Crises, in Economics of War and Peace: Economic, Legal and Political Perspectives, ed. Goldsmith and Brauer, p. 213-215)

Less intuitive is how periods of economic decline may increase the likelihood of external conflict. Political science literature has contributed a moderate degree of attention to the impact of economic decline and the security and defence behaviour of interdependent stales. Research in this vein has been considered at systemic, dyadic and national levels. Several notable contributions follow. First, on the systemic level. Pollins (20081 advances Modclski and Thompson's (1996) work on leadership cycle theory, finding that rhythms in the global economy are associated with the rise and fall of a pre-eminent power and the often bloody transition from one pre-eminent leader to the next. As such, exogenous shocks such as economic crises could usher in a redistribution of relative power (see also Gilpin. 19SJ) that leads to uncertainty about power balances, increasing the risk of miscalculation (Fcaron. 1995). Alternatively, even a relatively certain redistribution of power could lead to a permissive environment for conflict as a rising power may seek to challenge a declining power (Werner. 1999). Separately. Pollins (1996) also shows that global economic cycles combined with parallel leadership cycles impact the likelihood of conflict among major, medium and small powers, although he suggests that the causes and connections between global economic conditions and security conditions remain unknown. Second, on a dyadic level. Copeland's (1996. 2000) theory of trade expectations suggests that 'future expectation of trade' is a significant variable in understanding economic conditions and security behaviour of states. He argues that interdependent states arc likely to gain pacific benefits from trade so long as they have an optimistic view of future trade relations. However, if the expectations of future trade decline, particularly for difficult to replace items such as energy resources, the likelihood for conflict increases, as states will be inclined to use force to gain access to those resources. Crises could potentially be the trigger for decreased trade expectations either on its own or because it triggers protectionist moves by interdependent states.4 Third, others have considered the link between economic decline and external armed conflict at a national level. Momberg and Hess (2002) find a strong correlation between internal conflict and external conflict, particularly during periods of economic downturn. They write. The linkage, between internal and external conflict and prosperity is strong and mutually reinforcing. Economic conflict lends to spawn internal conflict, which in turn returns the favour. Moreover, the presence of a recession tends to amplify the extent to which international and external conflicts self-reinforce each other (Hlomhen? & Hess. 2(102. p. X9> Economic decline has also been linked with an increase in the likelihood of terrorism (Blombcrg. Hess. & Wee ra pan a, 2004). which has the capacity to spill across borders and lead to external tensions. Furthermore, crises generally reduce the popularity of a sitting government. "Diversionary theory" suggests that, when facing unpopularity arising from economic decline, sitting

governments have increased incentives to fabricate external military conflicts to create a 'rally around the flag' effect. Wang (1996), DcRoucn (1995), and Blombcrg. Hess, and Thacker (2006) find supporting evidence showing that economic decline and use of force arc at least indirecti) correlated. Gelpi (1997). Miller (1999). and Kisangani and Pickering (2009) suggest that Ihe tendency towards diversionary tactics arc greater for democratic states than autocratic states, due to the fact that democratic leaders are generally more susceptible to being removed from office due to lack of domestic support. DeRouen (2000) has provided evidence showing that periods of weak economic performance in the United States, and thus weak Presidential popularity, are statistically linked to an increase in the use of force. In summary, rcccni economic scholarship positively correlates economic integration with an increase in the frequency of economic crises, whereas political science scholarship links economic decline with external conflict al systemic, dyadic and national levels.' This implied connection between integration, crises and armed conflict has not featured prominently in the economic-security debate and deserves more attention.

The plan is politically unpopular

Chen 12--Associate Professor, University of Colorado Law School [Ming Hsu, Where You Stand Depends on Where You Sit: Bureaucratic Incorporation of Immigrants in Federal Workplace Agencies (March 9, 2012). Berkeley Journal of Employment and Labor Law, 2012; U of Colorado Law Legal Studies Research Paper No. 12-03. http://ssrn.com/abstract=2019181 or http://dx.doi.org/10.2139/ssrn.2019181]RMT

Notwithstanding President Obama's re-election in 2012, immigration scholars in the legal academy have been exceedingly pessimistic about the federal government's commitment to undocumented1 workers' rights over the last decade. **A majority of the criticisms focus on the need for comprehensive immigration reform in Congress**.2 A considerable number of these critiques focus on Hoffman as case law limiting the protective remedies of undocumented workers against employers who exploit the most vulnerable among their labor force.3 The minority of legal scholars who seriously consider agency actions contend that such actions are insufficient and inadequate, even if well-intended.4 Immigration scholars have especially expressed dismay about the deleterious effects of White House policies relying on the Department of Homeland Security (DHS) worksite enforcement actions as a strategy for immigration control and the inability of workplace agencies to counter these actions.5 The **criticisms extend across Republican and Democratic administrations**.

2NC Politics Link Wall

Plan is tied to Obama

Immigration Impact 11 --Immigration Impact is a project of the American Immigration Council (The American Immigration Council exists to promote the prosperity and cultural richness of our diverse nation by: Educating citizens about the enduring contributions of America's immigrants; Standing up for sensible and humane immigration policies that reflect American values; Insisting that our immigration laws be enacted and implemented in a way that honors fundamental constitutional and human rights; Working tirelessly to achieve justice and fairness for immigrants under the law.) [""Obama Administration Seeks Balance Between Labor and Immigration Law Enforcement" 5/19/11, http://immigrationimpact.com/2015/04/15/ice-director-saldana-faces-critics-in-congress/]RMT

Last week President Obama issued a blueprint for a twenty-first century immigration policy that highlighted, among other things, the need to promote accountability for employers who deliberately hire and exploit undocumented workers. The Administration's recommendations for achieving this goal include a better employment verification system, more comprehensive anti-retaliation protections for workers, and a legalization program that requires the current undocumented population to get right with the law. Pending the success of these ambitious goals, the Administration has taken another important step to prevent unscrupulous employers from retaliating against undocumented workers who seek to assert their labor rights—a revised Memorandum of Understanding (MOU) between the Departments of Homeland Security (DHS) and Labor (DOL). The MOU obligates DHS's enforcement arm (ICE) to refrain from civil immigration enforcement at any worksite that is the subject of an ongoing DOL investigation or any related proceeding. The memorandum supersedes a 1998 agreement with the former Immigration and Naturalization Service and contains detailed

provisions for coordination of ICE and DOL enforcement activities. It provides further that ICE will consider allowing witnesses to remain in the country if they are needed for DOL enforcement efforts. The agreement also acknowledges that effective enforcement of labor and immigration law requires freedom from "inappropriate manipulation," including false representations by ICE agents that they represent DOL. –

Republicans hate the plan – they want more enforcement

Brian **Bennett 11**, Washington Bureau, January 27, 11, 1-27-2011, "Republicans want a return to workplace immigration raids," latimes, http://articles.latimes.com/2011/jan/27/nation/la-na-immigration-raids-20110127 ||RS

Reporting from Washington — Deportations of illegal immigrants have reached new heights for two years running under President Obama, statistics show, but **Republicans** say they'll use their new majority in the House to press for more **aggressive enforcement** without any path to legal status. Republican lawmakers called on the Obama administration to return to the era of workplace raids to arrest illegal employees, an approach that contrasts sharply with the president's continued push to create a path to citizenship for "responsible young people" and deport only those illegal immigrants charged with serious crimes. Deportations under Obama have reached new heights for two years running, statistics show, but Republicans said they would use their new majority in the House to press for more aggressive enforcement without any path to legal status. Large-scale workplace arrests of illegal workers were hallmarks of the George W. Bush administration's approach in its final years. But two years ago Obama decided to shift enforcement efforts to focus on employers who knowingly hire illegal workers. Arrests from worksite raids for immigration-related offenses, such as using a forged driver's license or a fake Social Security number, have dropped by 70% since the end of the Bush administration, when a series of large raids of factories and meatpacking plants received national media attention. Because Democrats hold a Senate majority and Obama has veto power, the GOP cannot force a change in the enforcement policy. But with illegal immigration likely to be a hot-button issue in the 2012 campaign season, House Republicans on the House Judiciary subcommittee on Immigration Policy and Enforcement plan to hold hearings to criticize an administration they claim allows illegal immigrants to take American jobs.

Loose enforcement measure spark political backlash

Stephen **Dinan 15**, writer on Immigration issues, 4-14-2015, "Sarah Saldana, ICE chief, takes heat over agency's record," Washingtion Times, http://www.washingtontimes.com/news/2015/apr/14/sarah-saldana-ice-chief-takes-heat-over-agencys-re/?page=all |RS

The administration released dozens of convicted illegal immigrant murderers and rapists back onto the streets last year, even as it began to hold more women and children, according to the latest statistics that have President Obama and his immigration team **taking fire** from all sides in the debate. **Republicans** said releasing murderers and rapists, as well as thousands of drunken-drivers, drug users, burglars and thieves is the latest step for an administration bent on **ignoring enforcement**, confronting Immigration and Customs Enforcement Director Sarah Saldana over her agency's record. The 30,558 criminal aliens released into the community by ICE in 2014 had amassed 250 homicide convictions, 186 kidnappings and 373 sexual assaults, according to agency statistics put into the official records of the House Judiciary Committee. "The nonsensical actions of this administration demonstrate its lack of desire to enforce the law even against unlawful aliens convicted of serious crimes," said Rep. Robert W. Goodlatte, Virginia Republican and chairman of the committee. Even as she was accused of releasing serious criminals, Ms. Saldana faced charges from the **political left** that she was treating noncriminal refugees too harshly. Illegal immigrant mothers who have fled Central

America as part of the latest surge of border-jumpers said they and their children are being subject to poor treatment and deserve to be set free.

Courts CP

1NC Courts CP

The Supreme Court should rule on the grounds of the fourth amendment that no present statute authorizes workplace raids and investigations by the Immigration and Customs Enforcement agency absent a tailored warrant.

Solves the case – 4th amendment precedent restricts ICE raids - SCOTUS precedent AND ICE standards.

Katherine **Evans** 20**09**, Teaching Fellow at the Center for New Americans at the University of Minnesota Law School, member of the American Immigration Lawyers Association and serves as the federal court liaison for the Minnesota-Dakotas Chapter, NYU School of Law, "THE ICE STORM IN U.S. HOMES: AN URGENT CALL FOR POLICY CHANGE," https://socialchangenyu.files.wordpress.com/2012/09/homes.pdf.

This section argues that the Fourth Amendment protects all individuals lawfully present in the United States as well as many who are present unlawfully, and that the administrative nature of immigration law does not mitigate its protections in the context of home raids. Additionally, this section argues that agency regulations, internal manuals, and official statements recognize the requirements of the Fourth Amendment in immigration enforcement and, therefore, that ICE agents' actions should conform to the Constitution. Finally, this section discusses the limited application of the exclusionary rule in removal proceedings and the calls for the Supreme Court to revisit its decision on this issue. The first question is to whom does the Fourth Amendment apply in the criminal context. If the Fourth Amendment does not apply in the criminal context, it is unlikely to apply in the less demanding context of administrative law. With respect to the application of the Fourth Amendment to noncitizens, the Supreme Court has held that the Fourth Amendment protects a Mexican citizen, lawfully present in the United States, in a criminal proceeding.114 It was left uncertain, however, whether the exclusionary rule would be available in removal proceedings to remedy Fourth Amendment violations. 115 In deciding the reach of the exclusionary rule in INS v. Lopez-Mendoza, the Court assumed that the Fourth Amendment protected illegal aliens." 6 In United States v. VerdugoUrquidez, the Court explained that the assumption made by the LopezMendoza Court was not binding and specifically declined to answer the question of whether the Fourth Amendment protects illegal aliens in criminal investigations." 7 In Verdugo-Urquidez, U.S. officials searched a Mexican national's home in Mexico, confiscated drugs, and brought the Mexican national to the United States to be arraigned on criminal charges. The Court suggested that an individual would be one of "the people" protected by the Fourth Amendment if she were present in the United States voluntarily and had "accepted some societal obligations" or "developed substantial connections with this country."" 8 The precedential value of this portion of the Court's opinion is complicated by the fact that Justice Kennedy concurred in the opinion but rejected the idea that the text "the people" provides any authority for restricting the category of persons protected by the Fourth Amendment.119 Justice Kennedy went on to say that if the search had been conducted in the United States, he had "little doubt that the full protections of the Fourth Amendment would apply., 120 Therefore, despite the Court's holding, it does not appear that there were actually five votes for the proposition that some individuals living in the United States might not be protected by the Fourth Amendment. 2 1 Additionally, the Court stated that the "illegal aliens in Lopez-Mendoza were in the United States voluntarily and presumably had accepted some societal obligations," thereby suggesting that the protections of the Fourth Amendment are not limited to noncitizens who are lawfully present in the United States.122 But the Court did not describe what constitutes sufficient societal obligations. Many of the families described in this article whose homes have been raided are of mixed immigration status, often including U.S. citizen children and some lawful permanent resident members. As such, many occupants of these homes would enjoy the full protection of the Fourth Amendment under Verdugo-Urquidez in the criminal context. Those occupants who are not lawfully in the United States are still here

voluntarily and may have accepted sufficient "societal obligations" to be protected by the Fourth Amendment. As a result, the immigration status of a home's occupants is unlikely to limit the application of the Fourth Amendment in home raids. Also, the immigration status of a home's occupants or the extent of their "societal obligations" is not immediately apparent to ICE agents. This information is only learned later in the encounter. Agents should assume that the Fourth Amendment applies from the outset. Otherwise, agents would be justifying state action that does not conform to the Fourth Amendment with information gathered only after the action was taken. Such ex-post findings cannot be the basis for unconstitutional behavior. In an analogous situation, the Court in Hamdi v. Rumsfeld reasoned that the Due Process Clause applies to a U.S. citizen challenging her status as an enemy combatant and, therefore, only after that status was confirmed could fewer constitutional protections attach.123 The nature of the law being enforced also affects the level of protection afforded by the Fourth Amendment. Probable cause and a warrant, or circumstances that constitute an exception to the warrant requirement, are requirements of criminal law enforcement. However, in civil law enforcement, courts determine whether an administrative search was reasonable by balancing the state interest in the search against the degree of invasion the search entails.'24 In evaluating the level of intrusion, courts have considered the following factors: prior notice of the search,'25 the amount of discretion exercised by the officer in choosing whom to search,126 a diminished expectation of privacy,"7 the location of the search,2l8 the duration of a seizure required to effectuate a search,12 9 and the invasiveness of the search. 30 The government's interest in enforcing immigration laws is certainly legitimate and substantial. On the other hand, all of the factors indicating level of intrusion point toward a severe intrusion of privacy in home raids. In particular, the invasion of privacy in one's own home implicates the core of the Fourth Amendment. The Supreme Court described arbitrary searches of one's home as the "chief evil" against which the Fourth Amendment aims to protect' and has referred to "the Fourth Amendment sanctity of the home."'32 The Court in Camara v. Municipal Court of San Francisco addressed whether probable cause and a warrant were required for entry into a home to conduct an administrative safety inspection in the absence of consent.133 In balancing the competing interests, it determined that probable cause of a safety violation in a specific building was not required, but a warrant was.134 A modified warrant procedure was required because "administrative searches of the kind at issue here are significant intrusions upon the interests protected by the Fourth Amendment."13' 5 Given the significant privacy interests at stake and the Court's previous holding on administrative searches of homes, the administrative nature of immigration law should not reduce the protections afforded by the Fourth Amendment in the context of home raids. ICE's own position has conformed to the doctrinal arguments suggesting that the Fourth Amendment applies in immigration home raid. ICE's regulations,'" internal guidelines,137 and policy statements138 all draw on the standards and requirements of the Fourth Amendment. As a result, the actions of ICE agents when conducting home raids should be judged against the requirements of the Fourth Amendment.

2NC Courts CP

The 4th amendment applies to ICE raids – SCOTUS precedent AND ICE standards.

Katherine **Evans** 20**09**, Teaching Fellow at the Center for New Americans at the University of Minnesota Law School, member of the American Immigration Lawyers Association and serves as the federal court liaison for the Minnesota-Dakotas Chapter, NYU School of Law, "THE ICE STORM IN U.S. HOMES: AN URGENT CALL FOR POLICY CHANGE," https://socialchangenyu.files.wordpress.com/2012/09/homes.pdf.

This section argues that the Fourth Amendment protects all individuals lawfully present in the United States as well as many who are present unlawfully, and that the administrative nature of immigration law does not mitigate its protections in the context of home raids. Additionally, this section argues that agency regulations, internal manuals, and official statements recognize the requirements of the Fourth Amendment in immigration enforcement and, therefore, that ICE agents' actions should conform to the Constitution. Finally, this section discusses the limited application of the exclusionary rule in removal proceedings and the calls for the Supreme Court to revisit its decision on this issue. The first question is to whom does the Fourth Amendment apply in the criminal context. If the Fourth Amendment does not apply in the

criminal context, it is unlikely to apply in the less demanding context of administrative law. With respect to the application of the Fourth Amendment to noncitizens, the Supreme Court has held that the Fourth Amendment protects a Mexican citizen, lawfully present in the United States, in a criminal proceeding.114 It was left uncertain, however, whether the exclusionary rule would be available in removal proceedings to remedy Fourth Amendment violations. 115 In deciding the reach of the exclusionary rule in INS v. Lopez-Mendoza, the Court assumed that the Fourth Amendment protected illegal aliens." 6 In United States v. raids. ICE's own position has conformed to the doctrinal arguments suggesting that the Fourth Amendment applies in immigration home raid. ICE's regulations,"' internal guidelines,137 and policy statements138 all draw on the standards and requirements of the Fourth Amendment. As a result, the actions of ICE agents when conducting home raids should be judged against the requirements of the Fourth Amendment.

ICE uses unconstitutional entry – deception and coercion. Precedent proves.

Katherine **Evans** 20**09**, Teaching Fellow at the Center for New Americans at the University of Minnesota Law School, member of the American Immigration Lawyers Association and serves as the federal court liaison for the Minnesota-Dakotas Chapter, NYU School of Law, "THE ICE STORM IN U.S. HOMES: AN URGENT CALL FOR POLICY CHANGE," https://socialchangenyu.files.wordpress.com/2012/09/homes.pdf.

The legal validity of "consent" for ICE agents to enter a home, if obtained at all, can be challenged on the basis that it is routinely coerced. In a typical home raid, ICE agents violate the Constitution from the minute they enter the premises. The Supreme Court articulated the test for consent in Schneckloth v. Bustamonte, stating that "the question whether a consent to search was in fact 'voluntary' or was the product of duress or coercion, express or implied, is a question of fact to be determined from the totality of all the circumstances."' 83 Although the Court did not articulate all of the factors relevant to assessing the totality of the circumstances in Schneckloth, it acknowledged that knowledge of one's right to refuse is one factor to be taken into account.184 In addition, the Court highlighted "subtly coercive police questions, as well as the possibly vulnerable subjective state of the person who consents" as additional factors to consider.185 Consent cannot be "coerced, by explicit or implicit means, by implied threat or covert force."1'86 The Court has also stated that consent cannot be shown by "no more than acquiescence to a claim of lawful authority."'87 In developing the totality of the circumstances test, the Schneckloth Court relied heavily on the Court's cases analyzing the admissibility of a confession, because these cases balanced similar competing interests: the need for effective law enforcement and protection of individuals against overwhelming police power.18s In order for a confession to be admissible, it must be voluntary. Otherwise "if [the defendant's] will was overborne and his capacity for self-determination critically impaired, the use of his confession offends due process."'89 In cases that assess whether the individual's will was overborne, the Court has looked to (1) the circumstances of the confession, such as the number of interrogators and the length and time of day of the interrogation; (2) the conduct of the officers, such as the use of physical abuse or deceptive tactics; and (3) the characteristics of the individual interrogated, including her level of education and her nationality or experience with U.S. law.190 These factors are instructive in analyzing whether consent is voluntary in a typical home raid.' All of the factors looked to by the court in assessing voluntariness indicate that consent is coerced in a typical home raid. First, **ICE engages in deceptive tactics**. Agents often identify themselves as police, which is misleading at best and false at worst.' 9 2 Agents sometimes state that they have a "warrant," which, in fact, carries no authority to search the home and no authority to enter the premises to effectuate an administrative arrest. This confusing nomenclature affects policymakers as well. In response to criticism of local raids, the mayor of Passaic, New Jersey, stated: "Immigration warrants are warrants. If they came and took them away, they must have had the right to take them."193 Alternatively, agents frequently say that they are looking for a "criminal," either as a pretext or in a misleading manner wherein it refers to a "fugitive alien" who has already been apprehended and convicted of a crime as opposed to someone who is suspected of committing a crime and has not yet been captured.

The person allowing ICE agents to enter her home generally believes that she has no choice because these are police officers with a warrant, or that she is allowing local police to come inside in order to further an ongoing criminal investigation in some way. **ICE's deceptive tactics are combined with coercive circumstances**. Home raids are generally conducted early in the morning when most residents are sleeping, capitalizing on the confusion and disorientation of the home's occupants when they are awoken.194 They involve at least five and as many as twenty-five ICE agents.195 Finally, the residents of the home are often foreign-born with varying levels of education, and many have no knowledge of their right to refuse entry. 96 Together, these factors indicate that consent is typically coerced in home raids. The use of Warrants of Deportation/Removal to gain entry is also problematic in its own right. In Bumper v. North Carolina, the Supreme Court found that consent is rendered involuntary if it is given in response to a false statement of possession of a valid warrant. 97 The "warrant" possessed by ICE agents is not akin to a judicial arrest warrant because it does not confer authority to enter the home in order to effectuate an arrest or conduct a search.1 98 While it may be true that the piece of paper ICE agents carry is nominally a warrant, this piece of paper is a far cry from a judicial warrant. ICE agents know this.1 99 While their statements regarding possession of a "warrant" may not be literally false, they are false in substance, and consent given on this basis should be deemed involuntary under Bumper. The most common practice described in accounts of home raids is ICE agents pushing their way into a home after a resident opens the door to speak with the agents. In discussing a raid on a Nassau County home, Christopher Shanahan, the Director of Deportation and Removal for ICE in the New York region, stated: "Once Erica's grandmother let agents over the threshold, there was no turning back.' 2° Importantly, Mr. Shanahan specified that the agents must be permitted to cross the threshold. Simply opening the door is not the equivalent of consenting to ICE agents' entry.

ICE uses unconstitutional searches – no basis for protective sweeps. Precedent proves.

Katherine **Evans** 20**09**, Teaching Fellow at the Center for New Americans at the University of Minnesota Law School, member of the American Immigration Lawyers Association and serves as the federal court liaison for the Minnesota-Dakotas Chapter, NYU School of Law, "THE ICE STORM IN U.S. HOMES: AN URGENT CALL FOR POLICY CHANGE," https://socialchangenyu.files.wordpress.com/2012/09/homes.pdf.

Protective sweeps are exceptions to the Fourth Amendment's requirement of a warrant and probable cause in order for a search to be reasonable. The Buie Court held that, as a precautionary measure, officers may look in areas immediately adjacent to an arrest "from which an attack could be immediately launched" without reasonable suspicion or probable cause.222 To conduct a protective sweep beyond this area, the Court held that officers must have reasonable suspicion, based on specific and articulable facts, that other people are present and represent a risk of harm to the officers or other individuals in the home. 223 The Court was clear in limiting officers' incident search powers to spaces large enough to contain a person, of which they could perform only a cursory inspection lasting "no longer than is necessary to dispel the reasonable suspicion of danger., 224 In the context of home raids, as illustrated above, a search often occurs before any arrest, if an arrest takes place at all. This practice conflicts with the facts and rationale in Buie, which was based on the Court's decisions in Terry v. Ohic25 and Michigan v. Long."26 These cases did not involve indiscriminate and dragnet-type searches. Instead, officers possessed probable cause and an arrest warrant for Buie,227 reasonable suspicion that Terry was armed and dangerous, 8 and reasonable suspicion that Long was dangerous and might have a weapon in his

adjacent car. 229 The Court in these cases emphasized that the encounter itself might have been dangerous either because the officers had reasonable suspicion that the person could access a weapon or because of the general risk of ambush when arresting someone in her own home for a criminal offense."' This danger justified an incident search to protect officer safety. 3 In contrast, in home raids, ICE agents do not have probable cause to support a criminal arrest and may not even have probable cause that any particular person in the home committed an immigration violation, if they are relying on outdated or incomplete information. Nor do agents generally have a particularized ground to believe that other residents represent a danger when they search all rooms of a home. The Court has been careful to cabin searches justified by officer safety, rather than probable cause and a warrant, in order to prevent fishing expeditions.232 Where agents search first, no formal law enforcement encounter recognized by the Fourth Amendment (e.g., a stop or arrest) has yet occurred. Therefore, at the time of the search in a typical home raid, there is no dangerous event that would justify a search to protect officer safety. **ICE is mischaracterizing its searches**. Searches conducted by ICE agents are not protective sweeps; they are not part of the process of arresting a person for whom the agents possess probable cause and a warrant. Searches by ICE agents are typically roundups that generate the arrests in home raids. As such, the purpose of these searches is investigative, not protective-exactly what the Buie Court rejected in scope and rationale. 33

ICE uses unconstitutional seizures –precedent proves.

Katherine **Evans** 20**09**, Teaching Fellow at the Center for New Americans at the University of Minnesota Law School, member of the American Immigration Lawyers Association and serves as the federal court liaison for the Minnesota-Dakotas Chapter, NYU School of Law, "THE ICE STORM IN U.S. HOMES: AN URGENT CALL FOR POLICY CHANGE," https://socialchangenyu.files.wordpress.com/2012/09/homes.pdf.

In Florida v. Bostick, the Supreme Court recognized that the Fourth Amendment encompasses seizures that fall short of a full arrest and articulated the test for a seizure, stating that "a court must consider all the circumstances surrounding the encounter to determine whether the police conduct would have communicated to a reasonable person that the person was not free to decline the officers' requests or otherwise terminate the encounter. 2 64 In an earlier decision, the Court noted circumstances that might indicate seizure, including "the threatening presence of several officers, the display of a weapon by an officer, some physical touching of the person or the use of language or tone of voice indicating that compliance with the officer's request might be compelled., 265 In California v. Hodari D., the Court required that in cases in which an officer has not physically touched an individual, the individual must actually submit to a show of authority for a seizure to occur. 266 And in INS v. Delgado, the Court made clear that a police officer's request for identification or questioning as to an individual's identity is unlikely, by itself, to constitute a seizure under the Fourth Amendment.267 In a typical home raid, ICE agents seize residents before requesting identification or questioning an individual about her immigration status. Numerous accounts of raids include descriptions of individuals being physically touched by ICE agents and often handcuffed at the start of the encounter, which automatically constitutes a seizure under HodariD. 268 In addition, residents typically report submitting to a show of force. Individuals subjected to raids report being woken by flashlights or shouting and banging, finding numerous ICE agents in their home, and being told either to produce identification at that point or to go to a common area where they are then told to produce identification.269 Individuals invariably report being yelled at by agents and seeing agents block

the doors to the home. 27 ' Numerous individuals report being told they could not put on additional clothes or use the bathroom in private. This last element is particularly indicative of a seizure, because if an agent does not allow an individual to decline the encounter in order to engage in an exceedingly private activity, an individual is reasonable in believing the agents would not permit her to decline a request for identification. If agents gather occupants in a common area before interrogating them, it is common practice for agents to block the exits from that room as well.272 As discussed, many accounts include reports of agents pulling out their guns or motioning at their guns and, because of such conduct, most residents follow the agents' orders. As a result, questioning by ICE officers generally takes place after residents have been seized. For a seizure to be reasonable under the Fourth Amendment, officers must have reasonable suspicion that illegal activity is occurring."3 While reasonable suspicion is a somewhat amorphous concept, the Court in United States v. Cortez articulated the baseline requirement that "[b]ased upon the whole picture the detaining officers must have a particularized and objective basis for suspecting the particular person stopped of criminal activity."2'74 Additionally, the Court held in United States v. BrignoniPonce that race or ethnicity can be a factor that supports reasonable suspicion, but it cannot be the only factor.275 In other words, the fact a home's resident appears Latino is not enough on its own to support her seizure by ICE agents. ICE agents may have reasonable suspicion that an individual named in a Warrant of Deportation/Removal is violating immigration laws. However, it is difficult to imagine how agents would have the necessary reasonable suspicion for each and every person in a home sufficient to justify seizing them. ICE Officer Belluardo's testimony regarding the agency's policy of corralling all residents and holding them for questioning276 lends further support to the conclusion that the seizure of most home raid victims is unconstitutional. The Court in Florida v. Royer held that any consent to being searched which is the product of an illegal seizure is not valid consent.277 While it is possible to give consent voluntarily while being seized,278 that seizure must be lawful. In the context of home raids, residents' responses to ICE agents' demands for identification and immigration status are not voluntary if their seizure is unlawful, which it typically is. As a result, ICE agents are using unconstitutionally-obtained statements as the basis for their arrests.

Reject these policies as a means of protecting individual privacy. Lack of 4th amendment application should not justify invasive policies.

Katherine **Evans** 20**09**, Teaching Fellow at the Center for New Americans at the University of Minnesota Law School, member of the American Immigration Lawyers Association and serves as the federal court liaison for the Minnesota-Dakotas Chapter, NYU School of Law, "THE ICE STORM IN U.S. HOMES: AN URGENT CALL FOR POLICY CHANGE," https://socialchangenyu.files.wordpress.com/2012/09/homes.pdf.

There are strong arguments that ICE's practices in home raids regularly violate the Constitution in numerous ways, and many would agree that home raids involve extremely intrusive actions by the state. Yet, by parsing out each stage of a typical home raid-entry into the home, searching all rooms for individuals, collecting and questioning all individuals-it is also possible to see that what appear to be violations might be deemed constitutional. Nonetheless, the existence of possible obstacles to constitutional claims does not justify ICE's current practice. **Official policy should conform to the foundational principle of the Fourth Amendment: protecting individuals' privacy**. Consent based on deception is not typically considered voluntary. The only reason for ICE agents to call themselves police or say they have a warrant is to encourage

residents to draw the wrong conclusions regarding the agents' authority, since few people would consent to immigration agents entering their homes. Similarly, justifying searches based on safety and then arresting most of the individuals found in the home uses an exception to the Fourth Amendment to swallow the rule itself. Finally, characterizing responses to agents' questions as "voluntary," after residents have been pulled out of bed and held in a room while agents block the exits, defies belief. When taken as a whole, **ICE's current practice seems intuitively wrong**. **The fact that the practice might be upheld as constitutional reflects limitations in the doctrine, not a justification for public policy**. The final section of this article builds on the constitutional arguments to abandon the current policy and examines the broader social costs of home raids in their current form. It concludes with proposals for policymakers in the Obama Administration.

ICE court rulings can challenge the power of the state

Katherine **Evans** 20**09**, Teaching Fellow at the Center for New Americans at the University of Minnesota Law School, member of the American Immigration Lawyers Association and serves as the federal court liaison for the Minnesota-Dakotas Chapter, NYU School of Law, "THE ICE STORM IN U.S. HOMES: AN URGENT CALL FOR POLICY CHANGE," https://socialchangenyu.files.wordpress.com/2012/09/homes.pdf.

More fundamentally, the raids erode the sense that the U.S. government abides by the rule of law and protects everyone equally. In an interview with the ABA Journal, Michael Neifach, ICE's principal legal adviser, discussed the numerous legal challenges brought against ICE related to raids.318 Pointing to the limitations on the exclusionary rule in immigration proceedings established in INS v. Lopez-Mendoza, he stated that "even if agents didn't have the residents' approval [to enter their homes], such searches and any subsequent arrests may not be disqualified in immigration courts." He added: "**Aliens and citizens are protected by the Constitution, but the protections are different**."3'19 Mr. Neifach's statement implies that ICE may be taking advantage of the fact that noncitizens have few remedies available for constitutional violations. This implication was made explicit by Professor Jan Ting from Temple University's Beasley School of Law: "It is well-established in immigration law that you can do a lot of stuff you couldn't if it were concerning American citizens. If the exclusionary rule does not apply, is there anything wrong about law enforcement going in and getting the people they're looking for?, 320 In other words, it is fine for the government to enter homes and arrest individuals in a way that is unconstitutional because there is no penalty for this behavior. This attitude is troubling to say the least. The government should not be testing the line of what is permissible by intruding into a private home and seizing of all of its occupants. An individual has an interest in pushing the bounds of the law in order to have more space to act free from government interference. 32' The state's interest is only the aggressive enforcement of administrative law, which is insufficient to justify the government's practice of pushing, if not crossing, the limits of the Constitution.322 Instead, the government should ensure that its actions conform to the law.323 The absence of effective constraints on ICE's practices in the form of the exclusionary rule does not change the analysis. ICE's current policy in home raids erodes the government's credibility because it disrespects constitutional rights the Executive is charged to protect. The editorial board of the New York Times discussed the question of why ICE's current practice is wrong, regardless of the legal consequences, in an editorial on the "war on illegal immigration." It wrote: "The true cost is to the national identity: the sense of who we are and what we value. It will hit us once the enforcement fever breaks, when we look at what has been done and no longer recognize the

country that did it.' '324 A government policy requiring federal agents, without warrants, to force or manipulate their way into private homes, to search the premises, and to interrogate residents does not respect the country's founding principles of individual liberty and protection from the coercive power of the state.

Bioterror CP

1NC Bioterror CP

Text: The United Nations should use the UNSCR 1540 Framework to create an independent UN body for ad hoc verification of states' implementation of UNSCR 1540's mandates

CP results in an international verification regime to prevent global bioterrorism

Eric **Merriam 14**, Lieutenant Colonel at the United States Air Force, June 2014, The International Legal Regime Affecting Bioterrorism Prevention, National Security Law Journal, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2478444 ||RS

With a routine reporting and verification mechanism politically untenable, recommendations for improvement are modest. Some improvement can be made. The BWC is likely the wrong vehicle; **UNSCR 1540 may be the right one**. Given the gaping holes in verification under the BWC, and its non-application to nonstate actors, the BWC is clearly not the primary legal agreement for preventing bioterrorism. Even as applied to its original purpose -- preventing states from developing, acquiring, and possessing bioweapons -- it is largely considered a failure. In the words of one commentator, "[T]he BWC has been relegated to the status of an infirm elderly relative worthy of affection and respect yet not really expected to provide meaningful answers to current challenges."97 Its primary role now should be, as the United States now advocates, as a mechanism for refining "cooperation, information exchange, and coordination," and as "the premier forum for discussion of the full range of biological threats – including bioterrorism – and mutually agreeable steps States can take for risk management."98 In other words, the BWC will be a forum for discussion, not an instrument of enforcement. Clearly, the BWC does not, and will not in the foreseeable future, contain a verification mechanism. UNSCR 1540, though not focused solely on biological weapons, has served as an important improvement in legal attention to biological weapons proliferation and preventing bioterrorism. The recent developments in state implementation of UNSCR 1540 discussed above are very encouraging. However, as with the BWC before it, UNSCR 1540's verification mechanism is weak, relying on state self-reporting to the 1540 Committee. The creation of the 1540 Committee can be viewed as a first step toward a compliance body. To improve verification, the Security Council should give the 1540 Committee additional authority -- an idea that might be politically viable given the Security Council's recent decision to extend the 1540 Committee's existence for another 10 years -- or create a new body under the auspices of UNSCR 1540. In either case, the primary source of "verification" of compliance with UNSCR 1540 would remain states reporting their implementation efforts, but the new compliance body would have broader capability to assess such reports and, when called upon by the Security Council to do so, investigate suspected non-compliance. Such investigations should be conducted by experienced and preexisting teams, rather than ad hoc teams whose experience investigating compliance with the BWC or UNSCR 1540 may be minimal.

2NC Extension Bioterror CP

CP solves – Multilateral verification system would prevent bioterrorism

Eric **Merriam 14**, Lieutenant Colonel at the United States Air Force, June 2014, The International Legal Regime Affecting Bioterrorism Prevention, National Security Law Journal, http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2478444 ||RS

Though the practical difficulties of inspecting biological weapons production facilities caused by dual use are imposing, UNSCR 1540 could be improved by creating a body for the physical inspection and monitoring of biological weapons development and enforcement in states where specific concerns are raised and the Security Council believes greater attention is required. Though the nuclear and chemical weapons enforcement bodies are created by treaty, there is no legal need to use a treaty to do so. As with UNSCR 1540 itself, Chapter VII of the UN Charter is sufficient authority for the Security Council clearly to create such a body, and imbue it with rights to inspect and gather additional information from without and within states' borders. Additionally, given the lack of enthusiasm for instituting substantive changes to the BWC, and seeming positive contemporary efforts under UNSCR 1540, utilizing the Security Council may be a politically more realistic option. Such a body -- similar to the IAEA or OPCW, though with far less authority --

would be able to provide to the Security Council what is sorely missing from the current regime: data regarding the presence of biological weapons development, production, and storage programs and facilities in states from an experienced and independent inspection team. This proposed independent body would not have authority to inspect absent specific authorization from the Security Council. Dependence on the Security Council for situation-specific inspection authority in specific instances of concern would allow permanent Security Council member states like the United States to control perceived overreaching. Once given authority, it could conduct physical inspections of biological research, development, and production facilities in a way no currently constituted international body can. Unlike the "challenge inspections" of the CWC, these inspections could not be triggered solely by another state's allegations. Further, no routine and reoccurring inspections would be conducted. A multilateral verification body's physical inspection and monitoring activities could themselves serve as a deterrent, both to states who may support or allow biological weapons development by non-state actors, or by the non-state actors themselves. Perhaps more importantly, such a body's reports would offer independent and therefore more credible information upon which the Security Council could take action. Evidence from an independent inspection agency, or even a state's unwillingness to permit such inspections, would surpass the weight of evidence offered only by a state considered a rival of the alleged offending state. At a minimum, if one state were to offer such evidence, an independent body could verify it prior to the Security Council authorizing sanctions or military action against that state. If such a body were already in existence, rather than having to be constituted for the sake of a particular situation, the Security Council would have the information necessary to take or authorize action much more quickly and effectively than otherwise. Finally, such a body could actually investigate and provide additional data and analysis regarding the efficacy of states efforts to implement and enforce prohibitions on biological weapons development by non-state actors, rather than simply cataloging such efforts as is currently the case.

2NC – AT: Commitments/Politics

Commitment are not an issue – Malaysia proves

Chatam House 14, King's College London, 11/5/14, UNSCR 1540 Ten Years On: Challenges and Opportunities, International Security Department Meeting Summary, http://www.chathamhouse.org/sites/files/chathamhouse/field/field_document/UNSCR%201540-summary.pdf ||RS

Despite the challenges associated with the adoption of laws, it was noted that **considerable progress** has been made since UNSCR 1540's adoption in 2004. Notable examples include Malaysia and the UAE, which previously served as key nodes of the AQ Khan proliferation network, and both of which have adopted comprehensive export control laws in the last decade. **The success of countries like Malaysia and the UAE can provide encouragement to and models for other states**, although it is recognized that the laws should be adapted to the specific needs of individual countries.

1NC/2NC Labor Rights

1NC Labor Rights

Developing countries are becoming more stable now

Abiad et al 12 - Deputy Division Chief in the IMF's Research Department, Senior Economist Advanced Economies [Abdul Abiad, John Bluedorn, Jaime Guajardo, and Petia Topalova "The Rising Resilience of Emerging Market and Developing Economies" 2012 International Monetary Fund, http://www.imf.org/external/pubs/ft/wp/2012/wp12300.pdf]RMT

Economic performance in many emerging market and developing economies (EMDEs) improved substantially over the past twenty years. **The past decade was particularly good**— for the first time EMDEs spent more time in expansion and had smaller downturns than advanced economies. In this paper we document the history of EMDEs' resilience over the past sixty years, and investigate what factors have been associated with it. We find that their improved performance in recent years is accounted for by both good policies and a lower incidence of external and domestic shocks—better policies account for about three-fifths of their improved resilience, while less frequent shocks account for the remainder.

No poverty trap and human development is increasing globally

Kenny and Summer 11--Charles Kenny is a research fellow at the Center for Global Development and the author of Getting Better: Why Global Development Is Succeeding - And How We Can Improve the World Even More. • Andy Sumner is a research fellow at the Institute of Development Studies and a visiting fellow at the Center for Global Development [Charles and Andy, "How 28 poor countries escaped the poverty trap", The Guardian, 7/12/11, http://www.theguardian.com/global-development/poverty-matters/2011/jul/12/world-bank-reclassifies-28-poor-countries]RMT

Remember the poverty trap? Countries stuck in destitution because of weak institutions put in place by colonial overlords, or because of climates that foster disease, or geographies that limit access to global markets, or simply by the fact that poverty is overwhelmingly self-perpetuating. Apparently the trap can be escaped. The World Bank did its annual assessment of poor countries last week. Low-income countries are those with average gross national incomes (GNIs) of less than $1,005 per person per year. And there are only 35 of them remaining out of the countries and economies that the World Bank tracks. That's down from 63 in 2000. New middle-income countries this year include Ghana and Zambia. Lower middle-income countries are those with per capita GNIs of between $1,006 and $3,975 per year; while upper middle-income countries are those with per capita GNIs between $3,976 and $12,275. The remaining 35 low-income countries have a combined population of about 800 million. Tanzania, Burma, the Democratic Republic of the Congo, Ethiopia and Bangladesh account for about half of that total, and there are about 350 million people living on under $1.25 a day in the remaining low-income countries. So what's behind all of this sudden income growth? Is it a story about aid? One prominent Zambian, Dambisa Moyo, has written of her country that "a direct consequence of the aid-driven interventions has been a dramatic descent into poverty. Whereas prior to the 1970s, most economic indicators had been on an upward trajectory, a decade later Zambia lay in economic ruin". In the 1980s, aid to Zambia averaged about 14% of the country's GNI. In the 2000s, a decade of strong growth, the same proportion was 17%. If Zambia's ruin in the 1980s was the result of aid, is Zambia's graduation to middle-income status in the new millennium a sign that aid now works really well? Of course both the ideas that previous stagnation was all the fault of aid, or current growth was all the result, are ridiculous. The price of copper (Zambia's major export) was depressed in the 1980s and saw its price rocket in the middle of the last decade as China and India's economies grew and demand for the metal soared. But growth among low-income countries in Africa and elsewhere isn't just limited to big mineral exporters. And the continent is fast drawing in more investment. Foreign direct investment to Africa is projected to rise to $150bn by 2015, reports the Africa Attractiveness Survey (that's more than the total global aid budget) – and domestic resources are being mobilised at a faster rate, too, as the Commission for Africa 2010 report discussed. Even gold and diamond-producing Ghana, which declared itself 63% richer at the end of last year than previously thought, didn't suggest the newfound riches were the result of mineral exports. Instead,

the recalculation was driven by the fact the country's services sector was a lot bigger than previously calculated. Part of that will reflect the incredible success of the telecoms sector - 75% of the country's population are mobile subscribers. And, of course, the expansion of telecoms is a worldwide phenomenon. So a lot of the growth we are seeing in poor countries is broad-based, not just reliant on the current commodity boom – which is good news for the future. Of course there's much to do to translate this growth into better and faster poverty reduction. Looking at the progress data for the millennium development goals (MDGs) for Ghana and Zambia there's nowhere near the kind of progress you would hope to see on income poverty. Twenty years of growth in Ghana has reduced the number of people living on $1.25 or less from just over 7 million to just under 7 million – and inequality (as measured by the Gini coefficient) rose significantly. However, in both Ghana and Zambia, the number of children in primary school has climbed along with literacy rates, and infant mortality has fallen. Even if they're not on track to meet the MDGs, **quality of life is getting much better**.

Increased remittances cause Dutch Disease – appreciation and higher non tradable prices.

Emmanuel K. K. **Lartey**, Federico S. **Mandelman**, **and** Pablo A. **Acosta 2012**, Lartey is an Associate Professor, Department of Economics, Mandelman is a research economist and associate policy adviser on the regional team in the research department of the Federal Reserve Bank of Atlanta, Acosta has a PhD in Economics from the University of Illinois at Urbana-Champaign, Senior Economist at The World Bank, Social Protection and Labor, Review of International Economics, "Remittances, Exchange Rate Regimes and theDutch Disease: A Panel Data Analysis," http://business.fullerton.edu/economics/elartey/dutch_journal_final.pdf

This study has shown that rising levels of remittances in emerging economies potentially possess an important spending effect that culminates in an increase in the relative price of non tradables and real exchange rate appreciation. The results also suggest that a resource movement effect that favors the non tradable sector at the expense of tradable goods follows an increase in remittances. In particular, the evidence shows that the share of services in total output rises while the share of manufacturing declines, these being characteristics of the phenomenon known as the "Dutch disease". These results still hold after dealing with endogeneity issues and controlling for economic growth, terms of trade, trade openness, monetary aggregates and fiscal policy. There is also an indication that resource movement effects that favor the non tradable sector operate stronger under fixed exchange rate regimes. One plausible explanation is that countries with a nominal peg cannot adjust international relative prices after a negative shock to the tradable sector. The inflow of remittances aimed at compensating the resulting decline in households' income may help to sustain the over-appreciated long-run equilibrium for the real exchange rate. These results represent a novel approach in studying real exchange rate effects and resource reallocation of an increase in remittances in particular, and in capital inflows in general under different monetary regimes.

Remittances foster corruption – governments divert spending form welfare.

Faisal Z. **Ahmed** 20**10**, Post-doctoral fellow, Woodrow Wilson School, Professor of political economy and international development at Princeton University, NYU, "Remittances Foster Government Corruption," http://politics.as.nyu.edu/docs/IO/18787/Ahmed.pdf.

The re-allocation of expenditures from welfare payments to increased government patronage in response to higher remittance inflows is not unique to Jordan, nor its high level of aggregate remittance inflows. Small increases in remittances can shift the allocation of government expenditures to patronage.34 For instance, in countries that receive remittances less than 2 percent of GDP, government's on average allocate 27 and 38 percent of their budget to employee compensation and government transfers respectively. As remittance inflows rise, governments tend to allocate a greater share of their budget to employee compensation. In countries that receive moderate

inflows of remittances (between 2 to 4 percent of GDP), for instance, governments allocate 30 percent of their expenditures on employee compensation and 26 percent to government transfers. In countries that receive inflows of remittances exceeding 4 percent of GDP, around 33 percent of government expenditures are spent on patronage and 31 percent is transferred to the population. This re-allocation of government resources to patronage as remittance inflows rise is robust to the inclusion of variables that capture a country's economic growth, average income, population, and underlying degree of autocratic governance. In a 2SLS specification that ontrols for these effects, a one percentage point in remittances reduces the share of expenditures a government allocates to subsidies and transfers by 4.5 percentage point (table 13, column 1). This is consistent with the earlier finding that remittances raise government expenditures on employee compensation (patronage). The ability of governments to reduce expenditures on public goods in response to remittances has tangible harmful effects on the population. For example, remittances reduce childhood immunizations to measles in the population (column 2). This type of health service represents a welfare good a government or household provides on a regular basis (and the class of substitutable welfare goods envisioned in the formal model in Appendix B). The IV coefficient suggests that a 1 percentage point increase in remittances (% GDP) reduces the percentage of infants immunized to measles by 5.7 percentage points. Remittances also tend to shift expenditures on health care between households and the government. Remittance inflows exhibit a negative effect public health care expenditures (column 3), but tend have a positive effect on private health care expenditures (column 4). While these estimated effect on remittances on public and private health care expenditures are not statistically significant at conventional levels, the direction of the effects are informative and provide additional evidence that remittances may re-orient a government's willingness to spend funds on welfare goods. Together, the results in table 13 suggest that governments may reduce the provision of welfare goods in response to remittance inflows.

Corruption is an alt cause and causes poverty, conflict and underdevelopment.

Vincent 9 – Research Institute for Law, Politics and Justice Keele University [Brian, "The Relationship between Poverty, Conflict and Development" March 2009, Vol. 2 No. 1, Journal of Sustainable Development]RMT

This paper establishes the relationship between poverty, conflict and development (PCD) in analysing instability in the African continent. In its analysis, the paper examines several variable factors that can help in the explanations of the relationship between PCD in Africa. These variable factors includes: economic, political, population, climate and environment, ethnic composition, militarization, poor growth and political corruption. None of these varying factors can unilaterally explain the relationship between poverty, conflict and development as issues behind Africa's instability. However, the paper argues that **political corruption stands out as the most persuasive, compelling and primary explanation for the (causal) relationship(s) between PCD**, though, it is not an exclusive one. While, the paper recognises that there are both exogenous and endogenous trends that influence political corruption, the paper adopts the endogenous (domestic political corruption) perspective, because political governance is now more controlled at home. The paper employs the human needs theory for analysis.

Remittances set to rise

World Bank 4/13 [The World Bank, "Remittances growth to slow sharply in 2015, as Europe and Russia stay weak; pick up expected next year" April 13, 2015,

http://www.worldbank.org/en/news/press-release/2015/04/13/remittances-growth-to-slow-sharply-in-2015-as-europe-and-russia-stay-weak-pick-up-expected-next-year]RMT

In line with the expected global economic recovery next year, the global flows of remittances are expected to accelerate by 4.1 percent in 2016, to reach an estimated $610 billion, rising to $636 billion in 2017. Remittance **flows to developing countries are expected to recover in 2016** to reach $459 billion, rising to $479 billion in 2017. The top five migrant destination countries continue to be the United States, Saudi Arabia, Germany, Russia and the United Arab Emirates (UAE). The top five remittance recipient countries, in terms of value of remittances, continue to be India, China, Philippines, Mexico and Nigeria. The global average cost of sending $200 held steady at 8 percent of the value of the transaction, as of the last quarter of 2014. Despite its potential to lower costs, the use of mobile technology in cross-border transactions remains limited, due to the regulatory burden related to combating money laundering and terrorism financing, says the Brief. International remittances sent via mobile technology accounted for less than 2 percent of remittance flows in 2013, according to the latest available data. In addition to sending money to their families, international migrants hold significant savings in their destination countries. 'Diaspora savings' attributed to migrants from developing countries were estimated at $497 billion in 2013, the latest data available.

2NC Extension: Remmitances Rising

Mexico proves remittances rising

Telesur 6/4 – a pan-Latin American terrestrial and satellite television network headquartered in Caracas, Venezuela [TelesurTV, "Rising Remittances Surpass Foreign Investment in Mexico" June 4 2015 http://www.telesurtv.net/english/news/Rising-Remittances-Surpass-Foreign-Investment-in-Mexico-20150604-0013.html]RMT

Remittances have surpassed foreign direct investment as the leading source of foreign exchange in Mexico, according to a report published Wednesday by the country's largest provider of financial services, BBVA Bancomer.

This year, Mexico is expected to receive US$22 billion in foreign direct investment and US$25 billion in remittances, BBVA Bancomer's Chief Economist for Mexico Carlos Serrano estimated. Economist forecasts project that rising remittances will hit levels of US$667 billion by 2017.

2NC Extension – Developing Countries Improving

Pew polls prove, life in developing countries is improving

Pew 14--nonpartisan fact tank that informs the public about the issues, attitudes and trends shaping America and the world. We conduct public opinion polling, demographic research, content analysis and other data-driven social science research. We do not take policy positions. [Pew Research Center, "Emerging and Developing Economies Much More Optimistic than Rich Countries about the Future" OCTOBER 9, 2014, http://www.pewglobal.org/2014/10/09/emerging-and-developing-economies-much-more-optimistic-than-rich-countries-about-the-future/]RMT

Looking ahead, people in the emerging and developing world see better opportunities at home than abroad. Majorities or pluralities in 30 of the 34 emerging and developing nations surveyed say they would tell young people in their country to stay at home in order to lead a good life, instead of moving to another country.

2NC Extension – Corruption Turn

Remittances foster corruption – studies prove.

Faisal Z. **Ahmed** 20**10**, Post-doctoral fellow, Woodrow Wilson School, Professor of political economy and international development at Princeton University, NYU, "Remittances Foster Government Corruption," http://politics.as.nyu.edu/docs/IO/18787/Ahmed.pdf.

Excessive patronage is frequently a tactic governments in many developing countries employ to remain in power. In these countries, this "misuse of government office for private gain" often paves the way for rampant government corruption (Bardhan 1997), lower economic performance (e.g., Mauro 1995; World Bank 2004) and worse social and health conditions (e.g., Gupta et al 2002).1 In light of this, existing studies frequently find that rising household income (e.g., Treisman 2000, 2007), achieved in part through the tremendous growth of remittances, may serve as a conduit for mitigating government excess and improving the quality of governance (e.g., G8 Center 2004; Obama 2009; Pfutze 2009).2 **This sentiment is misguided**. This paper harnesses a natural experiment to demonstrate that remittances foster government corruption in poor countries with weak democratic institutions. The natural experiment uses plausibly exogenous variation in the price of oil interacted with a Muslim country's distance to Mecca as an instrument for remittances received in poor Muslim countries. This instrument allays major worries about endogeneity bias arising from reverse causality and non-random measurement error. The instrumental variables results demonstrate that a one standard deviation increase in remittances corresponds to a more than one standard deviation increase in government corruption. This is equivalent to a 1.5 point jump in the 6-point index of government corruption (which amounts to a $600 decrease in per-capita GDP). The mechanism through which remittances can foster mis-governance is not obvious. While scholars have long recognized that direct financial transfers to governments, such as foreign aid, can generate rent-seeking behavior and fund corruption (e.g., Friedman 1958; Bauer 1972; Alesina and Weder 2002), the relationship between financial transfers to households (e.g., remittances) and government corruption is not so direct. Governments do not directly "observe" these transfers since a large share of remittances are sent through backchannels and via technologies (e.g., automated teller machines) that bypass their tracking by international development agencies and predominantly poor governments. Given these problems, remittances are largely untaxed by governments (de Luna Martinez 2005; Chami et al 2008) and thus cannot directly finance corruption. Instead, given their political incentives, governments in more autocratic polities may harness remittance inflows to substitute resources from the provision of welfare goods (e.g., government transfers, public health care) to the supply of patronage (e.g., corruption).3 This "substitution effect" supports existing theories and empirical evidence that governments in autocracies divert expenditures to engage in corruption to reward key supporters and stay in power (Bueno de Mesquita et al 2003; Acemoglu and Robinson 2006). Gauging the effects of remittances on governance (as well as economic outcomes), however, will suffer from endogeneity bias related to both reverse causality (i.e., countries with more corrupt governments and inferior socio-economic conditions tend to attract higher remittances) and measurement error (i.e., officially recorded flows of remittances tend to under-report actual flows). To combat these concerns, I harness a natural experiment of oil price driven remittance flows from the Persian Gulf to construct an innovative cross-country and time-varying instrument for remittances. < Figure 1 around here > For largely cultural and religious reasons, Gulf oil producers have tended to "import" a large share of their workforce from other Muslim countries (Choucri 1986). As figure 1 shows remittances to these poor, non-oil producing Muslim countries have tracked the price of oil. The price of oil provides plausibly exogenous variation in remittances that is uncorrelated with the internal economic and political conditions in poor, remittance receiving countries. Moreover, Muslim countries closest to oil producers in the Persian Gulf tended to receive more remittances. The inclusion of distance is key in generating a statistically strong instrument, and differentiates this study from Werker et al's (2009) examination of oil price driven foreign aid flows.4 These two facts underlie the instrument. Specifically, I use exogenous variation in the price of oil interacted with a Muslim country's distance from Mecca as a time-varying instrument for remittances. The instrument, therefore, identifies the average treatment effect for poor, non-oil producing Muslim, and predominantly non-democratic countries.5 For a sample of 57 poor, non-oil producing countries between 1984-2004, the instrumental variables (IV) results show that remittances raise government corruption. The results imply that a one standard deviation increase in remittances is equivalent to moving from a low corruption country like Costa Rica (with corruption on par with Germany and the United States) to a moderately corrupt nation, such as Niger or Sri Lanka. These findings are robust to outliers, alternate econometric

specifications, differential trends and potential violations of the exclusion restriction. There are three plausible channels through which oil prices could affect corruption independently of remittance inflows: foreign aid, prices (inflation, exchange rate), and trade flows. The findings are robust to specifications that take these other channels into account. Finally, I provide "micro" evidence from Jordan and cross-national analysis that the link between remittances and corruption plausibly operates through the reduction of welfare goods, such as health care and social spending. This paper's findings counter the prevailing view that remittances are a conduit for improved governance. Many studies tend to focus on the potential democratization effect of remittances in home countries, particularly in Latin America. For instance, Mexican migrants in the United States have had a sizeable impact on the domestic Mexican political process, through home town associations that provide financial assistance to their home communities. Home town associations are often involved in financing public infrastructure activities, such as the construction of roads, schools, and health facilities (Orozco and Lapointe 2003) as well as in political mobilization (de-la Garza and Hazan 2003). Such mobilization may contribute to improved public policies, governance, and the ousting of an incumbent government (Pfutze 2009).6 This sentiment has surfaced at the upper echelons of public policy. Leaders of the G8 countries, for instance, have officially acknowledged that remittances promote development and committed resources to policy initiatives to attract remittance inflows (G8 Centre 2004). More recently, in a speech promoting human rights and democracy in Cuba, President Obama (2009) declared "measures that decrease dependency of the Cuban people on the Castro regime and that promote contacts between Cuban-Americans and their relatives in Cuba are means to encourage positive change in Cuba. The United States can pursue these goals by facilitating greater contact between separated family members in the United States and Cuba and increasing the flow of remittances and information to the Cuban people." These studies and views of policymakers, however, frequently ignore the political incentives faced by public officials in countries with weak democratic institutions to engage in patronage (and out-right theft) that fosters corruption and unaccountable governance. The findings from this paper also introduce a new explanation for cross-national variation in corruption. These studies consistently find that that countries with Protestant traditions, histories of British rule, more developed economies, and (probably) higher imports are less corrupt (for an overview see Treisman 2000, 2007). Scholars have also associated cross-national differences in corruption to economic transactions involving firms engaged in international trade (e.g., Ades and Di Tella 1999) and foreign direct investment (e.g., Wei 2000) and governments receiving foreign aid (e.g., Alesina and Weder 2002). To my knowledge, there are no published works documenting whether international financial transfers to households, in the form of remittances, deteriorate the quality of governance. Thus, this is the first paper to do so.

2NC Extension – Dutch Disease

Increased remittances cause Dutch Disease – appreciation and higher non tradable prices.

Emmanuel K. K. **Lartey**, Federico S. **Mandelman**, **and** Pablo A. **Acosta 2012**, Lartey is an Associate Professor, Department of Economics, Mandelman is a research economist and associate policy adviser on the regional team in the research department of the Federal Reserve Bank of Atlanta, Acosta has a PhD in Economics from the University of Illinois at Urbana-Champaign, Senior Economist at The World Bank, Social Protection and Labor, Review of International Economics, "Remittances, Exchange Rate Regimes and theDutch Disease: A Panel Data Analysis," http://business.fullerton.edu/economics/elartey/dutch_journal_final.pdf

This study has shown that rising levels of remittances in emerging economies potentially possess an important spending effect that culminates in an increase in the relative price of non tradables and real exchange rate appreciation. The results also suggest that a resource movement effect that favors the non tradable sector at the expense of tradable goods follows an increase in remittances. In particular, the evidence shows that the share of services in total output rises while the share of manufacturing declines, these being characteristics of the phenomenon known as the "Dutch disease". These results still hold after dealing with endogeneity issues and controlling for economic growth, terms of trade, trade openness, monetary aggregates and fiscal policy. There is

also an indication that resource movement effects that favor the non tradable sector operate stronger under fixed exchange rate regimes. One plausible explanation is that countries with a nominal peg cannot adjust international relative prices after a negative shock to the tradable sector. The inflow of remittances aimed at compensating the resulting decline in households' income may help to sustain the over-appreciated long-run equilibrium for the real exchange rate. These results represent a novel approach in studying real exchange rate effects and resource reallocation of an increase in remittances in particular, and in capital inflows in general under different monetary regimes.

Increased remittances cause dutch disease - laundry list of effects.

Pablo **Fajnzylber and** J. Humberto **López** 20**08**, Pablo Fajnzylber is a Senior Economist in the Office of the Chief Economist for the Latin America and the Caribbean Region, World Bank, Washington, DC, J. Humberto López is a Senior Economist in the Office of the Chief Economist for the Latin America and the Caribbean Region, World Bank, Washington, DC, The World Bank, "Remittances and Development: LESSONS FROM LATIN AMERICA," http://siteresources.worldbank.org/INTLAC/Resources/Remittances_and_Development_Report.pdf

In the previous chapters, we have argued that remittances may have a number of beneficial effects for the welfare of the receiving countries. The evidence presented so far in this book suggests that at the country level, higher remittances inflows tend to be associated with lower poverty indicators and higher growth rates. Beyond these typical income dimensions of welfare, remittances seem to reduce output volatility (a measure of risk faced by countries1), and at least in some countries and for some socioeconomic groups, lead to improvements in social indicators. Yet the magnitude of these flows relative to the size of the receiving economies2 implies that remittances may also pose an important number of challenges. For while these inflows may ease external financing constraints and therefore hold the potential for higher investment by developing countries, in many circumstances remittances are so large that they can impact macroeconomic stability and more specifically carry the potential for a Dutch disease type of phenomena (see the International Monetary Fund's World Economic Outlook 2005 [IMF 2005], and the Work Bank's Global Economic Prospects 2006 [World Bank 2006]). Workers' remittances can be viewed as a capital inflow, and therefore the theory of the Dutch disease phenomenon associated with a surge in inflows (perhaps because of the discovery of new natural resources) can also be applied in this context. In order to isolate the specific channels transmitting remittances shocks through the economy, consider first a small open economy model with no leisure-consumption trade-off. In this setup, an increase in remittances is equivalent to a (permanent) increase in incomes of the households. Assuming that nontradables are normal goods, this positive income shock results in extra spending on both tradables and nontradables. Because most Latin American countries are price takers in international markets, growing demand does not raise the prices of tradables. However, because the prices of nontradables are determined in the domestic economy, they increase due to additional demand, or the so-called spending effect. There is also a "resource movement effect." The relative price change between tradables and nontradables makes production of the latter more profitable. Output growth in the nontradable sectors will push up factor demands, especially for those factors used intensively in these sectors. Increased factor demand by the expanding sectors will be accommodated by factors released from other sectors (the resource movement effect) and, depending on the behavior of total supply of the factor, will normally result in higher factor returns in the final equilibrium. The

price shift and resource reallocation in favor of nontradables erode the competitiveness of export-oriented sectors and hurt import-competing sectors. The final result of this real exchange rate appreciation is normally increased import flows and lower export sales. When the above assumption of no consumption-leisure trade-off in the household utility function is removed, the above effects are exacerbated. Without this assumption, an increase in nonlabor income, as is the case with remittances, influences household decisions to supply labor—namely, individuals can now consume more of both goods and leisure (that is, the income effect dominates), and thus their labor supply is reduced. In turn, reduced labor supply implies rising wages, and this additional pressure on wages intensifies the effects of real exchange rate appreciation described earlier. Obviously, the pressure on the real exchange rate will be somewhat mitigated if (i) there are productivity gains, particularly in the nontradable sector, that offset the effects of the increasing demand; (ii) governments implement policies that aim at stimulating labor demand by reducing labor costs3; and (iii) a large share of the remittances are channeled to the external sector via additional imports so that the price effect on nontradable goods is limited. Yet, in principle it seems difficult to justify that these effects are enough to mitigate appreciating pressures. In turn, there are a number of connected macroeconomic effects that can result from a real exchange rate appreciation associated with remittances flows. They include: • Adverse effects on the tradable sector of the economy. Although remittances flows are likely to lead to an expansion of the nontradable sector (as a result of the increase experienced in domestic demand), both export- and import-competing industries (that is, the tradable sector of the economy) would be adversely affected by real exchange rate appreciation and the associated loss of international competitiveness. The negative impact of remittances on the tradable sector may be reinforced if they also fuel inflation and higher prices result in higher economywide wages.4 As mentioned above and as was documented in chapter 5, this effect would be further magnified if remittances also reduce the labor supply. In these circumstances, the nontradable sector may be in the position of passing some of the wage pressures on to prices, but this is likely to be much more difficult for a tradable sector facing international competition, which, as a result, will lose competitiveness. • Widening of the current account deficit. In principle, it is difficult to justify that an increase in domestic demand will be passed in full to the nontradable sector. So, to the extent that some of the remittancesinduced consumption is directed toward tradable goods, there will be an increase in the demand for imports. This, coupled with the loss of international competitiveness for domestic firms mentioned in the previous paragraph, would likely result in deteriorations of the external position. For example, according to the World Bank (2003), the surge in remittances observed in El Salvador during the 1990s was the most likely factor behind the worsening of the country's trade deficit, which over the 1990s deteriorated from less than 7 percent of GDP to almost 14 percent of GDP. • Weaker monetary control, inflationary pressures, and the sectoral allocation of investment. If remittances flows do not leave the country (at least in full) through a widening of the current account, large flows will push up monetary aggregates, potentially derailing inflation targets. Experience also indicates that prices of financial assets, and particularly of real estate, can rise rapidly following a surge in remittances, something that in turn may introduce significant distortions in the economy and affect the sectoral allocation of investment and lead to overinvestment in some sectors (for example, real estate).

Remittances cause dutch disease – litany of studies.

Artatrana **Ratha** 20**13**, Professor of Economics at St. Cloud State University, Fulbright Fellow 2010 – 2011, Ph.D. University of Wisconsin, Milwaukee, St. Cloud State University, theRository at St. Cloud State, "Remittances and the Dutch Disease: Evidence from Cointegration and Error-

Correction Modeling,"
http://repository.stcloudstate.edu/cgi/viewcontent.cgi?article=1025&context=econ_wps

Remittances are known to be larger than official aid flows. They are also found to be counter-cyclical and more stable than and for many countries, larger than FDI flows (World Bank, 2003; Frankel, 2011). The migrants' firsthand knowledge of the recipients also mitigates the problems of adverse selection and moral hazards, resulting in better utilization of the scarce foreign exchange in the developing world. Thus, remittances are gaining in importance as an effective tool promoting GDP growth and reducing poverty and inequality (Adams and Page, 2005). However, remittances are essentially inflows of foreign exchange and any large inflow of foreign exchange can potentially cause currency appreciations in the receiving countries and hurt their exports. Known as the Dutch-Disease phenomenon in the literature, this side effect of remittances has received relatively scant empirical attention, partly because remittances' ascendance to the limelight is also relatively recent. This paper investigates the Dutch disease effect for some of the largest destinations of remittances. The Dutch-disease effect of remittances may be attributed to various channels. Being purely income transfers, remittances can lead to a spending effect increasing the consumption of both tradable and non-tradable goods. With prices of tradable goods essentially determined in world markets, the relative prices of the domestic, non-tradable goods, rise and push up the overall price level in the economy. This translates into a higher real exchange rate, both fueling and fueled by a resource movement effect: Rising non-tradable prices divert resources away from the tradable- and toward the non-tradable sector and exert upward pressure on wages and other production costs, prices, and real exchange rate of the domestic currency. Thus, an increase in remittance inflow would lead to the incidence of the Dutch Disease. The increased income of households, as a result of the increased remittances would also increase imports. This, coupled with the decline in the export competitiveness of the tradable sector, would hurt exports and contribute to current account deficits. 2 Remittances may also exert an income effect on the consumption-leisure tradeoff, reducing the overall supply of labor in the economy. At a time when demand is growing (because of increased remittance inflows), this reduction in labor supply will only exacerbate price increases, especially in the non-tradable sector, and cause the domestic currency to appreciate even further. Many of the top remittance destinations being in the developing world (e.g., China, India, Mexico, and Philippines), the applicability of the above channels may be qualified further. For example, if there is surplus labor in the economy (as is the case with most LDCs), at least part of the excess demand for labor in the non-traded sector would be met by the surplus labor and the resource movement effect may not be as pronounced. However, there would still be a spending effect leading to real exchange rate appreciation and hence, a decline in export competitiveness. Also, and more likely perhaps, labor mobility between LDCs' tradable and non-tradable sectors is quite limited (either because of labor market imperfections and/or specific-skills required by these sectors), in which case the relative price of non-tradable goods can still rise and raise the real exchange rate further. As we mentioned earlier, empirical investigations of remittances' Dutch disease effects are still quite few. Rajan and Subramaniam (2005) conducted a large cross-country study and found that foreign aid inflows lead to the Dutch disease, but not remittances. They attributed this finding to remittances drying up as receiving country's currency appreciates (thus, remittances become endogenous). From a panel study of 13 Latin American countries, Ameudo-Dorantes and Pozo (2004), however, find that remittances do lead to the Dutch Disease by lowering export competitiveness. Lopez, Molina, and Bussolo (2008) reconfirmed this findings for a larger sample of countries, followed by Lartey, Mandelman, and Acosta (2012) who also segregated the

resource movement and the spending effects and found remittances to shrink the tradable sector (relative to the non-tradable sector) – a finding consistent with the foregoing discussion.

1NC/2NC Cooperation

1NC Cooperation

Status quo solves - DOD solves and mitigates the impact

Jennifer L. **Robison 12**, LTC in the US Army, Building Civilian-Military Collaboration to Enhance Response Following an Anthrax Release, 4/5/12, US Army College, http://www.dtic.mil/dtic/tr/fulltext/u2/a592823.pdf ||RS

Protecting the Homeland and Defense Support of Civilian Authorities have been longstanding missions for the military and will remain a priority. **DoD is uniquely capable** of augmenting local and state entities in the case of a bioterror event. As local public health departments face the challenges of multiple competing missions and decreasing federal and state funding, they will have to turn to coalition building to augment services and resources, especially in time of disaster. Local DoD installation leadership and personnel are prepared to support the communities in which they are located. Building partnerships and coalitions, forging joint councils, developing mutual aid agreements and MOAs, and providing realistic training exercises will prepare these civilian-military communities to respond to disasters together to decrease the morbidity and mortality from a catastrophic event. The unique challenges of CBRN response, including the timely distribution of medical countermeasures in the event of a deliberate anthrax release, have been addressed by the federal CBRN Response Enterprise. These federal and National Guard units are prepared to rapidly deploy as requested when local and state resources are overwhelmed. Collaborative agreements and synchronizations must continue at local, state and federal level to optimize emergency response plans with regards to CBRN incidents. **DoD capabilities can provide key manpower augmentation, logistical support, and subject matter expertise** especially with bioterror preparedness planning and distribution of MCMs in the event of a deliberate anthrax release. **Mitigation can result from early assistance from DoD partners** at all levels in a truly whole of nation effort. DoD is committed to providing DSCA to save lives and decrease the pain and suffering of American citizens in the case of a catastrophic event. DoD's support to civilian authorities and the ongoing cooperation at the local, state, and federal levels will: improve disaster response plans, bolster homeland defense, support vital national 20 security interests, and increase the publics' trust and confidence in our government, military, and public health agencies.

Alt cause—police misconduct

Williams and Feshir 6/17--Minnesota Public Radio ,General assignment reporter for MPR News. [Bryant, Riyam, "Program aims to boost police-community ties but some doubt it will work", Jun 17 2015, http://www.mprnews.org/story/2015/06/17/national-initiative-for-building-community-trust-justice]RMT

Leaders of a national initiative to promote dialogue after police killings of African-Americans stirred outrage stopped in Minneapolis this week. It was the last stop in a series of meetings across the country. In March, Minneapolis was one of six cities chosen for the $4.75 million program, the National Initiative for Building Community Trust and Justice, in response to the Ferguson, Mo., shooting of Michael Brown by a white police officer. Department of Justice officials are working with researchers from Yale University, UCLA and John Jay College of Criminal Justice to study implicit bias, how law enforcement interactions affect crime rates and racial reconciliation. They held a public forum at the Minneapolis American Indian Center Tuesday night and plan to meet with the Minneapolis City Council Wednesday. Phillip Goff, a social psychology associate professor at UCLA, said the project is not a police-led initiative. "This is an initiative that is based in evidence, based in science with the goal of repairing and improving police-community relations," he said. "The goal is not to be doing something from just the policing side." The three-year program aims to use social psychology research to explore the underlying issues

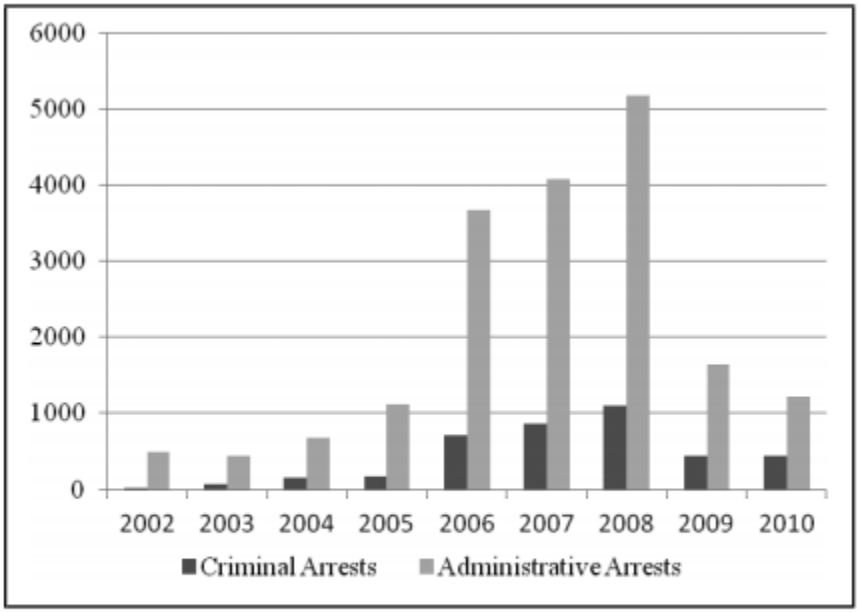
that could lead to police misconduct. Mark Kappelhoff, deputy assistant to the U.S. attorney general, said police are joining in the conversation over conduct. "There has really never been, that I have seen, a time in our country where policing, police reform and community trust has been at the forefront of this conversation that our nation now is having," Kappelhoff said. "The community feels in many ways that the criminal justice system is biased." Some in the diverse audience of about 35 people criticized the timing of the meeting and said it didn't give working families the opportunity to engage. Attendees included the group Communities United Against Police Brutality, who said they don't trust that the program will solve police and community relations. "**The problem is about police conduct," said CUAPB's President Michelle Gross, "I don't want to see that somebody gets beat up while the police smiles. That's not the right idea of procedural justice."**

1AC Uniqueness author concludes NEG—squo levels of workplace raids are going down—lower arrests and better employee protections—MOU proves—we have a graph

Griffith 12 [Kati L., Proskauer Assistant Professor of Employment and Labor Law, Industrial and Labor Relations School, Cornell University, "UNDOCUMENTED WORKERS: CROSSING THE BORDERS OF IMMIGRATION AND WORKPLACE LAW", http://poseidon01.ssrn.com/delivery.php?ID=114069009009103113028023106081001106004049020088012091073071102111009118067008106024018110017063062049097118007105028112120012008043088026052070111121091094004123105027052007111074120005004113001080089005069103077089121071109094029101112100029090029&EXT=pdf&TYPE=2] alla

In contrast to its heightened enforcement focus on employers, **the federal government has recently downplayed workplace-based immigration enforcement measures that target employees**. Homeland Security Secretary Janet Napolitano, for instance, recently stated that workplace immigration raids "made no sense" as an immigration enforcement strategy.36 According to Napolitano, while federal immigration authorities expended considerable time and resources to conduct large-scale workplace immigration raids **during the Bush administration**, too many lawbreaking employers were left unpunished and "criminal aliens were free to roam our streets."37 **As a result of this reduction in workplace immigration raids**, the total number of arrests that result from the federal government's workplace-based immigration efforts has **decreased**. **Table 4 illustrates this trend.**

TABLE 4: WORKSITE IMMIGRATION ENFORCEMENT ARRESTS*



* For 2002–08 data, see Fact Sheet, United States Immigration and Customs Enforcement Agency, Worksite Enforcement Overview (Apr. 30, 2009, http://www.ice.gov/news/library/factsheets/worksite.htm. For 2009–10 data, see ANDORRA BRUNO, CONGRESSIONAL RESEARCH SERVICE, IMMIGRATION-RELATED WORKSITE ENFORCEMENT MEASURES 7, tb. 3 (2011), *available at* http://assets.opencrs.com/rpts/R40002_20110301.pdf.

Federal agencies have acknowledged the interaction between workplace-based immigration enforcement and employees' workplace protections to some extent. The Obama administration's "Comprehensive Worksite Strategy," for instance, proclaims that it "promotes national security, protects critical infrastructure and **targets employers who violate employment laws or engage in abuse or exploitation of workers**."38 Coordination between immigration authorities and the U.S. Department of Labor (DOL) similarly illustrates a kind of immployment law enforcement strategy. Namely, the two agencies have stated that they would like to better coordinate their efforts in order to reduce immigration law's negative effects on workplace protections. For example, the DOL has coordinated with federal immigration authorities to obtain "U" visas for undocumented workers who are victims of workplace crimes.39 Moreover, the DOL and the U.S. Immigration and Customs Enforcement agency (ICE) recently **co-signed a Memorandum of Understanding (MOU)**, which **states that immigration authorities will not misrepresent themselves to workers as DOL agents and will refrain from worksite immigration enforcement when there is an ongoing DOL investigation at that worksite**.40 Among other things, the MOU states that immigration authorities will be cautious of "tips and leads" which "are motivated by an improper desire to manipulate a pending labor dispute, retaliate against employees for exercising labor rights, or otherwise frustrate the enforcement of labor laws."41 Similarly, the MOU clarifies that the DOL will have a chance to interview undocumented workers who are detained as a result of workplace-based immigration enforcement measures but who may have suffered workplace law abuses.42

I'm sorry but you don't have an aff anymore—Latino populations don't like law enforcement now, are not willing to share information regardless of raids, find local law more invasive, and CITIZENSHIP doesn't matter

Theodore 13 [Nik, PhD, Professor at UIC Department of Urban Planning and Policy, BA Macalester College (1986); MUPP, University of Illinois at Chicago (1989); PhD, University of Illinois at Chicago (2000), Insecure Communities: Latino Perceptions of Police Involvement in Immigration Enforcement, May 2013, http://www.policylink.org/sites/default/files/INSECURE_COMMUNITIES_REPORT_FINAL.PDF] alla

This report presents findings from a survey of Latinos regarding their perceptions of law enforcement authorities in light of the greater involvement of police in immigration enforcement. Lake Research Partners designed and administered a randomized telephone survey of 2,004 Latinos living in the counties of Cook (Chicago), Harris (Houston), Los Angeles, and Maricopa (Phoenix). The survey was designed to assess the impact of police involvement in immigration enforcement on Latinos' perceptions of public safety and their **willingness to contact the police when crimes have been committed.** The survey was conducted in English and Spanish by professional interviewers during the period November 17 to December 10, 2012. **Survey results indicate that the increased involvement of police in immigration enforcement has significantly heightened the fears many Latinos have of the police, contributing to their social isolation and exacerbating their mistrust of law enforcement authorities**. Key findings include: • 44 percent of Latinos surveyed reported they are less likely to contact police officers if they have been the victim of a crime because they fear that police officers will use this interaction as an opportunity to inquire into their immigration status or that of people they know. • 45 percent of Latinos stated that they are less likely to voluntarily offer information about crimes, and **45 percent are less likely to report a crime because they are afraid the police will ask them or people they know about their immigration status**. • 70 percent of undocumented immigrants reported they are less likely to contact law enforcement authorities if they were victims of a crime. • **Fear of police contact is not confined to immigrants. For example, 28 percent of US-born Latinos said they are less likely to contact police officers** if they have been the victim of a crime because they fear that police officers will use this interaction as an opportunity to inquire into their immigration status or that of people they know. • 38 percent of Latinos reported they feel like they are under more suspicion now that **local law enforcement authorities** have become involved in immigration enforcement. This figure includes 26 percent of US-born respondents, 40 percent of foreign-born respondents, and 58 percent of undocumented immigrant respondents. • When asked how often police officers stop Latinos without good reason or cause, 62 percent said very or somewhat often, including 58 percent of US-born respondents, 64 percent of foreign-born respondents, and 78 percent of undocumented immigrant respondents.

Majority of terror suspects are US citizens – no reason why racially profiled communities are key to info. Their author.

International Association of Chiefs of Police, **IACP, 14**, a dynamic organization that serves as the professional voice of law enforcement, 2014, Using Community Policing to Counter Violent Extremism, http://www.theiacp.org/Portals/0/documents/pdfs/Final%20Key%20Principles%20Guide.pdf

Homegrown violent extremists, foreign fighters, and domestic extremists continue to evolve and contribute to the threat that faces law enforcement agencies of all sizes . Individuals and groups within each of these categories are extremely diverse, as are their justifications and targets . Homegrown violent extremists are citizens or long-term residents of a Western country who have

rejected Western cultural values, beliefs, and norms in favor of a violent ideology and intend to commit acts of terrorism in Western countries or against their interests overseas .18 Approximately **70 percent of individuals "arrested, indicted, or otherwise identified" as being involved in attempted terrorism plots between 9/11 and 2010 were United States citizens** —either born or naturalized—**and even more were legal permanent residents** .19 Foreign fighters are individuals — especially individuals from Western countries—who are recruited to travel abroad to train and fight with a particular extremist group based on the belief that the conflict is politically, ideologically, or religiously justified and that they have a divine obligation to engage in violence .20 Often, the training and extremist ideology are brought back to the United States to radicalize Americans with similar views and justify acts of violence here . Meanwhile, domestically-radicalized individuals are citizens or long-term residents of a country whose primary social influence has been the cultural values and beliefs of their country of current residence .21 These individuals include anti-federalists, fundamentalists, political extremists, and sovereign citizens .

Status quo solves bioterror - DOD solves and mitigates the impact

Jennifer L. **Robison 12**, LTC in the US Army, Building Civilian-Military Collaboration to Enhance Response Following an Anthrax Release, 4/5/12, US Army College, http://www.dtic.mil/dtic/tr/fulltext/u2/a592823.pdf ||RS

Protecting the Homeland and Defense Support of Civilian Authorities have been longstanding missions for the military and will remain a priority. **DoD is uniquely capable** of augmenting local and state entities in the case of a bioterror event. As local public health departments face the challenges of multiple competing missions and decreasing federal and state funding, they will have to turn to coalition building to augment services and resources, especially in time of disaster. Local DoD installation leadership and personnel are prepared to support the communities in which they are located. Building partnerships and coalitions, forging joint councils, developing mutual aid agreements and MOAs, and providing realistic training exercises will prepare these civilian-military communities to respond to disasters together to decrease the morbidity and mortality from a catastrophic event. The unique challenges of CBRN response, including the timely distribution of medical countermeasures in the event of a deliberate anthrax release, have been addressed by the federal CBRN Response Enterprise. These federal and National Guard units are prepared to rapidly deploy as requested when local and state resources are overwhelmed. Collaborative agreements and synchronizations must continue at local, state and federal level to optimize emergency response plans with regards to CBRN incidents. **DoD capabilities can provide key manpower augmentation, logistical support, and subject matter expertise** especially with bioterror preparedness planning and distribution of MCMs in the event of a deliberate anthrax release. **Mitigation can result from early assistance from DoD partners** at all levels in a truly whole of nation effort. DoD is committed to providing DSCA to save lives and decrease the pain and suffering of American citizens in the case of a catastrophic event. DoD's support to civilian authorities and the ongoing cooperation at the local, state, and federal levels will: improve disaster response plans, bolster homeland defense, support vital national 20 security interests, and increase the publics' trust and confidence in our government, military, and public health agencies.

Technology barriers and distribution fails

Keller 13 – (Rebecca, 7 March 2013, Analyst at Stratfor, "Bioterrorism and the Pandemic Potential," Stratfor, http://www.stratfor.com/weekly/bioterrorism-and-pandemic-potential)

The risk of an accidental release of H5N1 is similar to that of other infectious pathogens currently being studied. Proper safety standards are key, of course, and experts in the field have had a year to determine the best way to proceed, balancing safety and research benefits. Previous work with the virus was conducted at biosafety level three out of four, which requires researchers wearing respirators and disposable gowns to work in pairs in a negative pressure environment. While many of these labs are part of universities, access is controlled either through keyed entry or even palm scanners. There are roughly 40 labs that submitted to the voluntary ban. Those wishing to resume work after the ban was lifted must comply with guidelines requiring strict national oversight and close communication and collaboration with national authorities. The risk of release either through accident or theft cannot be completely eliminated, but given the established parameters **the risk is minimal**. The use of the pathogen as a biological weapon requires an assessment of whether a non-state actor would have the capabilities to isolate the virulent strain, then weaponize and distribute it. Stratfor has long held the position that while terrorist organizations may have rudimentary capabilities regarding biological weapons, the likelihood of a successful attack is very low. Given that the laboratory version of H5N1 – or any influenza virus, for that matter – is a contagious pathogen, there would be two possible modes that a non-state actor would have to instigate an attack. The virus could be refined and then aerosolized and released into a populated area, or an individual could be infected with the virus and sent to freely circulate within a population. There are **severe constraints** that make success using either of these methods unlikely. The technology needed to refine and aerosolize a pathogen for a biological attack is **beyond the capability** of most non-state actors. Even if they were able to develop a weapon, other factors such as wind patterns and humidity can render an attack ineffective. Using a human carrier is a less expensive method, but it requires that the biological agent be a contagion. Additionally, in order to infect the large number of people necessary to start an outbreak, the infected carrier must be mobile while contagious, something that is doubtful with a serious disease like small pox. The carrier also cannot be visibly ill because that would limit the necessary human contact.

There's no motive for bioterror

Mauroni 12 – Al Mauroni, Air Force senior policy analyst, "Nuclear Terrorism: Are We Prepared?", Homeland Security Affairs, http://www.hsaj.org/?fullarticle=8.1.9

The popular assumption is that terrorists are actively working with "rogue nations" to exploit WMD materials and technology, or bidding for materials and technology on some nebulous global black market. They might be buying access to scientists and engineers who used to work on state WMD programs. The historical record doesn't demonstrate that. An examination of any of the past annual reports of the National Counterterrorism Center reveals that the basic modus operandi of terrorists and insurgents is to use conventional military weapons, easily acquired commercial (or improvised) explosives, and knives and machetes.8 It is relatively easy to train laypersons to use military firearms, such as the AK-47 automatic rifle and the RPG-7 rocket launcher. These groups have technical experts who develop improvised explosive devices using available and accessible materials from the local economy. Conventional weapons have known weapon effects and minimal challenges in handling and storing. **Terrorists get their** material and **technology where they can. They don't have the time, funds, or interests to get exotic**. It's what we see, over and over again.

2NC – Alt Cause: Police Conduct

Police misconduct is causing broad anti-police coalitions—destroy cooperation or trust

Obeidallah, '14, (Dean, "Michael Brown, Gaza, and Muslim Americans," The Daily Beast, 08.20.14, http://www.thedailybeast.com/articles/2014/08/20/michael-brown-gaza-and-muslim-americans.html)//erg

The Muslim-American community of which I'm part hasn't been great in standing up with and for African Americans. A lack of empathy and racism are the main culprits. What makes this especially astonishing is that 30 percent of the Muslim-American

population is African-American. You would think that there would be natural alliances, but that hasn't been the case. At least not up until now. The shooting of Michael Brown and the heavy-handed response by the police that followed has struck a nerve among Muslims. It has motivated American-Muslim leaders to speak out publicly in ways we hadn't seen before on police misconduct directed against African Americans. Why? A few reasons. But one that can't be discounted is Gaza. More specifically, young Palestinians who commented on Twitter about the shooting of Michael Brown drew direct connections between the two. For example, Inas Safadi, a Palestinian living in Gaza, tweeted: "Revolution of #Ferguson, can't be prouder of these people who won't let their son's blood go for nothing #MikeBrown." Another tweeted a photo of himself holding a sign that read, "The Palestinian people know what means to be shot while unarmed for your ethnicity" #Ferguson #justice." Other Palestinians, including a doctor, even offered advice via Twitter to the protesters in Ferguson on how to deal with the tear gas being fired at them based on their own experiences with Israeli security forces. Comments included, "Don't keep much distance from the police, if you're close to them they can't tear gas. To #Ferguson from #Palestine." Another tweeted: "Always make sure to run against the wind/to keep calm when you're teargased, the pain will pass, don't rub your eyes! #Ferguson Solidarity." The support by Palestinians for Brown and the protesters is not surprising. Oppressed people often stand together in solidarity. That's why it has amazed me and so many other Muslim Americans that we don't see broad support in our community for the broader struggles of African Americans. Instead, I have personally heard, from Muslim friends who are black, tales of racism directed toward them by other Muslims, such as being made to feel unwelcome when visiting a new mosque or not having more leadership positions in national Muslim organizations. A growing number of Muslim Americans are pushing back against this type of racism. One is Margari Aziza Hill, an African-American Muslim who serves as programming director of the Muslim Anti-Racism Collaborative. Hill told me that after Trayvon Martin was shot in 2012, she called on her fellow Muslims to take a stand demanding justice but was met with silence.

Alt cause to Muslim American/immigrant cooperation—police misconduct and racism

Akbar, '10, (Farah, Teaching Fellow (TESOL). Education, Teaching and Leadership (ETL) University of Edinburgh, "City's Muslims Report Harassment by Police," Gotham Gazette, Jan 04, 2010, http://www.gothamgazette.com/index.php/civil-rights/4276-citys-muslims-report-harassment-by-police)//erg

Coming from a family with members who work in law enforcement, Yasmin Nasser used to look at police officers as honest, upstanding and there to protect all members of society. Today, though, Nasser said, she feels uneasy when she walks by cops and, for a brief period, tried staying away from them altogether. The 20-year-old American citizen who resides in Saudi Arabia had come to New York City to visit family. Her trust in New York City's finest eroded the day she claims a police officer pulled her by the arm, told her to leave Rockefeller Center, where she had gone to see the Christmas tree, and called her a "terrorist." She was asked to provide identification to the officer, was subsequently accused of having phony identification and allegedly told, "Leave you terrorist, you shouldn't be here." "It's so hard for me to believe that a cop could do this," said the Muslim woman who covers her head with the traditional headscarf (hijab) worn by some women who follow the Islamic faith. "I couldn't get over it. I was in shock," she said. Nasser has reported the matter to the Council of American Islamic Relations and plans on filing a report with the city Civilian Complaint Review Board once she returns to Saudi Arabia. She fears that making a complaint prior to her departure could disrupt her travel plans. Advocates say that Nasser's story is not an isolated incident. Monami Maulik, executive director of Desis Rising Up And Moving (DRUM), an immigrants' rights organization in Jackson Heights, said that she has heard many similar stories. Several other organizations say police harassment of Muslims is a genuine problem. Encounters with Police The Council of American Islamic Relations analyzed civil rights cases in 2008 by circumstances of occurrence. The group found encounters with police ranked sixth, following schools and prison. "Underreporting of hate crimes and police misconduct cases remains a real issue with American Muslims," said the council's New York civil rights director Aliya Latif. Since the Sept. 11, 2001 attacks, law enforcement officials have worked on building a cooperative relationship with the American Muslim community in an effort to obtain valuable information related to terrorism and safety issues. Muslim groups worry that allegations of misconduct by law enforcement damage the fragile ties between the two groups. "We are concerned that **incidents like these further alienate community members and contribute to an atmosphere of mistrust with law**

enforcement authorities," Latif said. Edina Lekovic, communications director for the Muslim Public Affairs Council, agrees. "The **evidence of any problem with law enforcement undermines any cooperation they may seek from Muslims**," she said. "Even if there is a perception of harassment, it very naturally leads individuals to be cautious and reluctant to seek help from law enforcement, let alone report any suspicious activity." A police officer, though, may see the situation differently. "Police officers may not always realize how they have come across to a civilian," said Graham Daw, a spokesperson for the Civilian Complaint Review Board, the all-civilian board that investigates civil complaints about alleged misconduct on the part of the New York City Police Department. "Civilians are not always aware of the pressures under which police officers work or the powers with which they are vested in order to do their job." The New York City Police Department was contacted numerous times to comment on this issue but did not respond. According to DRUM, many Muslims have complained about being randomly approached by members of law enforcement in their own neighborhoods and apartment buildings and being asked about their whereabouts and about what they did for a living. Maulik said that her organization has received hundreds of accounts of cases regarding police misconduct since Sept. 11, many from blue-collar workers such as street vendors and taxi drivers. She also hears stories from youth.

Immigrant harassment tanks cooperation

Akbar, '10, (Farah, Teaching Fellow (TESOL). Education, Teaching and Leadership (ETL) University of Edinburgh, "City's Muslims Report Harassment by Police," Gotham Gazette, Jan 04, 2010, http://www.gothamgazette.com/index.php/civil-rights/4276-citys-muslims-report-harassment-by-police)//erg

Slurs and Questions In 2006, DRUM and the Urban Justice Center Community Development Project surveyed 662 South Asian youths living in Queens, most of them Bangladeshi and Pakistani Muslims, about the impact of school safety policies on them. The report revealed that nearly a third of the youths reported having seen harassment by police officers or experienced harassment. The study defined harassment to include "verbal abuse or harassment such as racial slurs and names, yelling and cursing; physical abuse or harassment, including physical harm, grabbing, pushing, forcing to do something the person does not want to do; and intimidation, including asking for identification or calling over for no reason, threatening to report person or their family to immigration and bullying." "Since 9/11, there are a lot more security agents and police," said one young person. "They treat us differently." "There is more hatred against South Asians [post 9/11]. The police pay more attention to you; they think you are suspicious. They wait for you to screw up," said another. DRUM received a report on one incident in which a teenage girl who wore a hijab on the streets of Times Square was allegedly asked by a police officer if she was a terrorist. Ayesha Mahmooda, who works with DRUM, spoke to at least 100 South Asian families in Flushing during an outreach effort and found many reported experiencing harassment by law enforcement. She said that many South Asians described feeling scared while being questioned by officers. She mentioned the case of a Muslim man who was questioned by law enforcement officials inside his own apartment. They asked him numerous personal questions, such as where he was born, what his immigration status was and if he smelled anything funny in his building, an apparent reference to possible bomb-making activities. An alarmed South Asian woman asking Mahmooda why her husband was stopped and questioned by law enforcement on his way home from working the late shift. "I told her that it was because of the color of his skin, he is not white. He is a person of color," Mahmooda said. A Reluctance to Protest Those questioned are often afraid to protest, according to DRUM. Latif of CAIR, though, urges Muslims to exercise their right to have a lawyer present if questioned by the FBI or police. "Refusing to answer questions without an attorney present cannot be held against you and does not imply that you have something to hide," she said. Few Muslims take their cases to the Civilian Complaint Review Board. Of the 14 allegations of offensive language based on religion reported to the board in 2008, only two involved Muslims or Islam, and the board was unable to conduct a full investigation in either case. One complaint was withdrawn by the complainant, and the complainant in the other case did not respond to requests to be interviewed by board. "100 percent of the cases that we've ever gotten, no one has ever called the CCRB," says Maulik. "We really don't have faith in the CCRB. It is not a mechanism that has worked for many years in New York, so for the most part, Muslim immigrants don't call the CCRB and file complaints. People do not think the board will hold police accountable for harassment or profiling, she said adding that **Muslims who are undocumented immigrants are particularly hesitant to report any instances of misconduct to the complaint board**. Instead, she said, **they live their lives in fear.** Daw said the board would be glad to make a presentation to the Muslim community to educate them about its work, but Monami has no plans of reaching out to them. She has been working on a project to create a formal

complaint process with CUNY School of Law. Lekovic of the Muslim Public Affairs Council encourages Muslims to report all instances of misconduct to whomever they feel comfortable with, whether it be to Muslim organizations or city agencies . "Without individuals sharing their experiences, we do not have leverage to make change," she said. Meanwhile, Yasmin Nasser thinks about what happened to her on her most recent visit to New York. "People in Saudi Arabia ask if people discriminate in New York City, and I always say 'people are nice,'" said Yasmin Nasser. When she lands in Saudi Arabia this time, though, she may offer a different answer.

Relations/trust is horrible—especially in the context of ICE

TORRENS, '15, (CLAUDIA, "Immigration officials see danger as local cooperation wanes," Washington Times, Associated Press, March 10, 2015, http://www.washingtontimes.com/news/2015/mar/10/immigration-officials-laws-limiting-detainers-risk/?page=all)//erg

NEW YORK (AP) - Diminished local cooperation is putting federal immigration officers in dangerous situations as they track down foreign-born criminals, Immigration and Customs Enforcement officials say. They say that more of their officers are out on the streets, eating up resources, because cities and states have passed legislation that limits many of the detention requests issued by immigration authorities. For years, ICE has issued the detainers to local and state law enforcement agencies, asking them to hold immigrants for up to 48 hours after they were scheduled for release from jail. Most detainees are then either taken into federal custody to face an immigration judge or be deported. But more than 300 counties and cities, plus California, Connecticut, Illinois, Rhode Island and the District of Columbia, have chosen to release immigrants, claiming too many people who have committed low-level offenses or no crime at all were being deported and unnecessarily separated from their families. Courts have said that honoring detainers without probable cause could result in a civil rights offense. ICE insists that its priorities have changed and it is only focused on foreign-born criminals who are a threat to society. It deported nearly 316,000 people in fiscal year 2014. In the first eight months of 2014, immigration officers filed roughly 105,000 requests for local enforcement agencies to hold immigrants, but local agencies declined 8,800 of the requests, according to data provided by immigration authorities. Officers now face more danger because they can't just pick up foreign-born criminals in a safe environment like the Rikers Island jail, said Christopher Shanahan, field office director for Enforcement and Removal Operations in New York. "We are in a situation in which we have to provide more men, more workers, more manpower in the streets, where it is more dangerous to take custody of somebody," said Shanahan. "On the street, when you go into a house, a place of employment, when you are arresting somebody, you don't know if they have weapons, you don't know the surroundings." Last week, an Associated Press reporter and photographer accompanied officers as they conducted a series of early-morning arrests in the Bronx and Manhattan, part of a nationally-coordinated operation that netted 2,059 people. A half-dozen ICE officers met at 5:30 a.m. in the parking lot of a Bronx coffee shop, put on black bulletproof vests and reviewed the three people they would try to arrest that morning. After driving quickly to each location in unmarked cars with sirens blaring, they made two arrests: a Mexican man and a Dominican man accused of illegally re-entering into the country, which is considered a high priority for ICE. The Mexican man had been arrested 10 times by local police for driving without a license and then deported. The man, who was not identified per Department of Homeland Security policy, re-entered the U.S. illegally and then was accused of menacing a neighbor with a machete. ICE said it had issued a detainer for the man that was not honored by the city.

Aff can't solve police brutality and racial profiling—alt causes to community trust

Nittle, '12, (Nadra Kareem, "Latinos on the Receiving End of Racial Profiling and Police Brutality," Race Relations: The Legal System, 2012, http://racerelations.about.com/od/thelegalsystem/a/Latinos-On-The-Receiving-End-Of-Racial-Profiling-And-Police-Brutality.htm)//erg

In the early 21st century, there have not only been a growing number of hate crimes against Latinos but also a growing number of police misconduct cases involving Latinos. Racism, xenophobia and rising concerns about undocumented immigration have collectively led to greater incidences of law enforcement agents racially profiling, harassing and brutalizing Hispanics. Across the nation, police departments have made headlines for their mistreatment of Latinos. Discrimination Border Patrol Officer Police

Latinos Police Illegal Search Car These cases have not only involved undocumented immigrants but also Hispanic Americans and permanent legal residents. In states as diverse as Connecticut, California and Arizona, Latinos have suffered at the hands of police in egregious manners. Latinos Targeted in Maricopa County Racial profiling. Unlawful detainment. Stalking. These are some of the inappropriate and illegal behaviors that officers in Arizona have allegedly engaged in, according to a 2012 complaint the U.S. Justice Department filed against the Maricopa County Sheriff's Office. MCSO officers stopped Latino drivers anywhere from four to nine times more than other drivers, in some cases only to detain them for long periods. In one instance, MCSCO officers pulled over a car with four Latino men inside. The driver hadn't violated any traffic laws, but the officers proceeded to force him and his passengers out of the car and make them wait on the curb, zip-tied, for an hour. The Justice Department also detailed incidents where the authorities followed Hispanic women to their homes and roughed them up. The federal government also alleges that Maricopa County Sheriff Joe Arpaio **routinely failed to investigate cases of sexual assault against Hispanic women.** The aforementioned cases refer to police interaction with Latinos on the streets of Maricopa County, but inmates in the county jail have also suffered at the hands of law enforcement. Female prisoners have been denied feminine hygiene products and called derogatory names. Hispanic male inmates have been on the receiving end of racial slurs and put downs such as "wetbacks" and "stupid Mexicans."

Withdrawal alt cause—also proves that their "law enforcement" spillover claim is non-unique

Theodore 13 [Nik, PhD, Professor at UIC Department of Urban Planning and Policy, BA Macalester College (1986); MUPP, University of Illinois at Chicago (1989); PhD, University of Illinois at Chicago (2000), Insecure Communities: Latino Perceptions of Police Involvement in Immigration Enforcement, May 2013, http://www.policylink.org/sites/default/files/INSECURE_COMMUNITIES_REPORT_FINAL.PDF] alla

2. Withdrawal: Many Latinos feel isolated and admit to withdrawing from their community. A large share feels under suspicion and is afraid to leave their homes. This sense of withdrawal by a substantial portion of Latinos in the counties surveyed has short- and long-term negative consequences for public safety and community life. **In the short term, crimes become more difficult to solve as the social distance between police and residents increases.** Over the long term, a significant segment of the population may withdraw and develop a fear of law enforcement authorities.

Alt causes – local enforcement, 287(g) program, and SAFE act.

Matthew **Kolodziej** 9-13-20**13**, author for Immigration Impact, Immigration Impact, "Local Immigration Enforcement Harms Community Policing and Public Safety," http://immigrationimpact.com/2013/09/13/local-immigration-enforcement-harms-community-policing-and-public-safety/

The Prince William County study cited by CIS does not conclude that the implementation of the 287(g) program had no chilling effect on crime reporting by immigrants. To the contrary, it concludes that 287(g) "created fear and a sense of being unwelcome among immigrants in general, and it seems to have caused some legal immigrants, or Hispanics generally, to leave or avoid the County". The program created "a serious ethnic gap in perception of the police, ratings of the County as a place to live, and trust in the local government; Hispanic opinions on these matters plunged to unprecedented lows." The study states "police officers express concern that crimes against illegal immigrants are less likely to be reported, and the department knows of

specific crimes in the Hispanic community that were not reported to police." Officers thought that crime reporting was inhibited by the policy and community informants were unanimous in saying that crime victims or witnesses who were not citizens and did not speak English well would not report crimes. (See this documentary for information on the Prince William County experience.) The other studies CIS cites also contradict their own claims, or don't address how fear of police affects crime reporting. The 2001 survey by Davis, Erez and Avitabile (the title is not given but the citation is probably meant to refer to Access to Justice for Immigrants Who are Victimized: The Perspectives of Police and Prosecutors) concludes that fear of deportation does in fact deter immigrants from reporting crimes, but does not claim to measure the effect of enforcement policies. The 2008 Bureau of Justice Statistics data simply provides statistics on crime reporting by different racial groups, and says nothing about how reporting might be affected by fear of police or of immigration enforcement. Academic studies and major police associations agree that that local immigration enforcement programs create fear and distrust between immigrant communities and local police and threaten public safety. Most recently, a 2013 report from the University of Illinois found that more than four in ten Latinos say that they are less likely to volunteer information about crimes because local police have become more involved in immigration enforcement, and they are afraid of immigration consequences for themselves or for family or friends. According to a 2009 report by the Police Foundation, the majority of police executives did not see the benefit of local police participating in immigration enforcement because public safety would suffer due to damage to trust and communication with immigrant communities and would undermine community policing efforts and lead to racial profiling. The Major City Chiefs Association also opposes local immigration enforcement because it undermines the trust and cooperation with immigrant communities which are essential elements of community oriented policing. The enforcement of immigration laws is also very expensive for local communities, contrary to the anecdotal claims by CIS. A report by the Brookings Institute found that Prince William County, Va., had to raise property taxes and take from its "rainy day" fund to implement its 287(g) program. The report found the program cost $6.4 million in its first year and would cost $26 million over five years. A report by the University of North Carolina at Chapel Hill and The Latino Migration Project found the total cost for the first year of operating the 287(g) program in Mecklenburg County, N.C., to be $5.5 million. Meanwhile, costs for the first full year of operation in Alamance County, N.C., were found to be $4.8 million. Increasingly local law enforcement authorities, like those in Chicago, New York, New Jersey and New Orleans, are declining to participate in aspects of immigration enforcement in the interest of strengthening relations with immigrant populations and creating safer communities. They recognize that local immigration enforcement is not just expensive, it encourages racial profiling, undermines community safety, and ultimately contributes little to apprehending violent criminals. Enforcement programs like 287(g) and extreme legislative proposals such as the SAFE act that impose immigration enforcement on local governments divide the communities they claim to protect and work against the law enforcement objectives they claim to pursue.

2NC—No Bioterror Internal Link

No internal link to bioterror – their author is in the context of small attacks.

International Association of Chiefs of Police, **IACP, 14**, a dynamic organization that serves as the professional voice of law enforcement, 2014, Using Community Policing to Counter Violent

Extremism,
http://www.theiacp.org/Portals/0/documents/pdfs/Final%20Key%20Principles%20Guide.pdf

The targets of violent extremist attacks are just as diverse as the ideologies and are not limited to "spectacular," high-casualty attacks . Instead, plotters identify "soft targets" in open areas that offer the ability to get in and out easily . Soft targets are generally fixed locations or structures that hold a large number of unprotected civilians or symbolize economic prosperity, religious freedom, and business .These targets include shopping malls and movie theaters, bars and restaurants, schools, places of worship, office buildings and business districts, stadiums and other large venues, and hotels . From 2001 to 2011, the most common targets of terrorists in the United States were businesses and private citizens and property .24 An increasing number of attacks have also targeted military recruitment centers because they tend to be less secure than military bases . Personnel at these centers and other off-duty military personnel have also become popular targets because they tend to be unarmed and may be less expectant .They also have a symbolic meaning for those groups with anti-American sentiments . By expanding their interests to include smaller-scale attacks against political, economic, symbolic, and infrastructure targets, these individuals and groups have adopted the mentality that staging a successful attack doesn't depend on size .25 This increase in potential targets requires that communities and law enforcement agencies remain vigilant .

The Aff cant solve—too many other things go into prevention AND the aff doesn't focus on how to respond (could be a cp card)

Hamburg 02 [Margaret A. Hamburg, Commissioner of the U.S. Food and Drug Administration, "Preparing for and Preventing Bioterrorism", http://issues.org/18-2/p_hamburg/] JMOV

Developing a response¶ Although there are enormous challenges before us, many of the elements of a comprehensive approach are relatively straightforward. Some of the necessary activities are already under way, though they may need to be expanded or reconfigured; other programs and policies still need to be developed and implemented.¶ Perhaps most fundamental to an effective response is the understanding that public health is an important pillar in the national security framework and that public health professionals must be full partners on the U.S. security team. In fact, the president should appoint a public health expert to the National Security Council, and Governor Ridge must include public health experts among his key staff in his new Office of Homeland Security.¶ Today, experts agree that there is an urgent need to increase the core capacities of the public health system to detect, track, and contain infectious disease. State and local public health departments represent the backbone of our ability to respond effectively to a major outbreak of disease, including a bioterrorist attack. Yet **these public health agencies have never been adequately supported or equipped to fulfill this mission.** In fact, many hesitate to call the array of health structures at the state, county, and local level a public health "system," because years of relative neglect and underfunding have left them undercapitalized, fragmented, and uncoordinated.¶ Upgrading current public health capacities will require significantly increased and sustained new investments. First and foremost, this means providing resources to strengthen and extend effective surveillance systems that can rapidly detect and investigate unusual clusters of symptoms or disease. This will entail expanding and strengthening local epidemiologic capabilities, including trained personnel and increasing laboratory capacity to rapidly analyze and identify biological agents. In addition, communication systems, including computer links, must be improved to facilitate collection, analysis, and sharing of information among public health and other officials at local, state, and federal levels. Beyond these critical domestic needs, successful strategies must also include a renewed commitment to improving **global** public health.¶ To improve detection, it is essential that physicians and other health care workers be trained to recognize unusual

disease or clusters of symptoms that may be manifestations of a bioterroist attack. This must also include strengthening the relationship between medicine and public health so that physicians understand their responsibility to report disease or unusual symptoms to the public health department. Physicians must know whom to call and be confident that their call will contribute to the overall goal of providing information, guidance, and support to the medical community. Health care professional organizations, academic medical institutions, and public health officials must come together to develop appropriate training curricula, informational guidelines, and most important, the working partnerships that are critical to success.¶ Those same partnerships will be very important in addressing another critical concern: the urgent need to develop emergency plans for a surge of patients in the nation's hospitals. We must enhance systems to support mass medical care and develop innovative strategies to deliver both protective and treatment measures under mass casualty and/or exposure conditions, especially when there may be an additional set of very difficult infection-control requirements as well. This will require careful advance planning since most hospitals are operating at or near capacity right now. Systematic examination of local capabilities and how they can be rapidly augmented by state and federal assets must be part of this effort.¶ Federal health leadership will be important in this effort to define needs and provide model guidelines and standards; federal resources may also be essential to support planning efforts and to create the incentives necessary to bring the voluntary and private health care sector fully on board. However, **the final planning process must be undertaken on the local or regional level**, engaging all the essential community partners and capabilities. It is critical to remember that the front line of response, even in a national crisis, is always local. Thus, across all these domains of activity, we must make sure that we have adequate capacity locally and regionally, which can then be supplemented as needed.¶ Another important example of this involves access to essential drugs and vaccines. A large-scale release of a biological weapon may require rapid access to quantities of antibiotics, vaccines, or antidotes that would not be routinely available in the locations affected. Given that such an attack is a low probability and unpredictable event in any given place, it would hardly be sensible or cost effective to stockpile supplies at the local level.¶ The first step in blocking the proliferation and use of biological weapons is to significantly bolster our intelligence.¶ As we ramp up our public health and medical capacity to respond to bioterrorism, we should continue to strengthen our national pharmaceutical stockpile so that vital drugs and equipment can be rapidly mobilized as needed. The federal Centers for Disease Control and Prevention (CDC) has the responsibility to maintain and oversee use of this stockpile, which currently represents a cache of supplies located in strategic locations across the country that can be delivered within 12 hours to any place in the nation. Current concerns make it clear that the nature and quantities of materials maintained in the stockpile must be enhanced, and the stockpile contents should be periodically reviewed and adjusted in response to intelligence about credible threats. New investments in the stockpile should also include contractual agreements with pharmaceutical manufacturer's to ensure extra production capability for drugs and vaccines in a crisis as well as heightened security at the various storage and dispersal sites.¶ Beyond simply having the drugs and vaccines available, we must develop plans for how those critical supplies will be distributed to those who need them. CDC needs to provide strong leadership and support for state and local health departments to undertake contingency planning for distribution. We must also think about the broader mobilization of essential drugs, vaccines, or other materials in the event that they are needed outside the United States. Although this may raise complex diplomatic issues, especially when the necessary pharmaceutical is in short supply, addressing potential global need is essential for political and disease-control reasons.¶ To make sure that the United States can remain strategically poised, further investments must be made in biomedical research to develop new drugs, vaccines, rapid diagnostic tests, and other medical weapons to add to the arsenal against bioterrorism. We must learn more about the fundamental questions of how these organisms cause disease and how the human immune system responds so that we can develop better treatments and disease-containment strategies. It is also essential that we improve technologies to rapidly detect biological agents from environmental samples and develop new strategies and technologies to protect the health of the public.¶ Scientists will need the full support and encouragement of the public and the government confront this threat. Success will entail research endeavors and collaboration involving numerous government agencies, universities, and private companies. Looking to the future, an effective, well-funded research agenda may give us the tools to render the threat of biological weapons obsolete.¶ An ounce of prevention¶ Stopping a biological attack before it happens is obviously the most desirable way to avoid a crisis. The first step in blocking the proliferation and use of biological weapons is to significantly bolster our intelligence. **The intelligence community could use additional scientific and medical expertise to help enhance the quality of data collection and analysis. This will require greater partnership and trust between the intelligence community, law enforcement, and public health and biomedical science.** These disciplines do not routinely work together, and their professional cultures and practices are not easily merged. Nonetheless, greater coordination of effort is very important to our national defense and must be an element of our nation's developing homeland security strategy.¶ Sadly, we must recognize that the possibility of bioweapons threats emerging from legitimate biological research is certainly real and embedded in the very science and technology that we herald in laboratories around the world. Vigilance is needed to ensure that the tools of modern genomic biology are not used to create new and more dangerous organisms. This is a complex challenge, for no one would want to impede the progress of legitimate and important science. However, we also have a responsibility to face up to a very real set of concerns. **With leadership from the scientific community, we must begin to examine what opportunities may exist to constructively reduce this threat.**¶ Related to this, we must continue to reduce access to dangerous pathogens by helping the scientific community improve security and ensure the safe storage and handling of these materials. Over the past five years, new regulations and requirements have tightened access to biological materials from culture collections in the United States and strengthened the government's ability to monitor the shipping and receipt of dangerous pathogens through a registration process, which also requires disclosure of the intended use for the agents. These are important steps, but more can and should be done to assure that our nation's laboratories have adequate oversight of the use and storage of these materials.¶ **International cooperation will be essential to achieving these goals. The safety and control methods developed for domestic must be extended across the globe if they are to make a real and enduring difference.** Coupled with this,

we should enhance efforts to provide socially useful research opportunities to scientists who had been employed in the Soviet Union's bioweapons program. Many of these scientists are under- or unemployed, and it is in our interest to see that economic need does not drive them to peddle their knowledge to potential terrorists. We must also support efforts to help them secure or destroy potentially dangerous materials. The U.S. government has supported such efforts through the Cooperative Threat Reduction (CTR) program, but these programs desperately need to be strengthened and expanded. Opportunities to extend the reach of the program to include university and industry R & D collaborations will also be essential to long-term success.¶ In the final analysis, it may prove impossible to prevent future bioweapons attacks from occurring, but planning and preparation could greatly mitigate the death and suffering that would result. As a nation, we need comprehensive, integrated planning for how we will address the threat of bioterrorism, focusing both on prevention and response. We need to define the relative roles and responsibilities of the different agencies involved, and identify the mechanisms by which the various levels of government will interact and work together. The new Office of Homeland Security is well situated to take on this task. Congress and the president must give this office the resources and authority necessary to develop and implement protective measures. Likewise, federal officials must vigorously pursue interantional cooperation in this effort.¶ The United States has always been willing to meet the requirements and pay the bills when it came to our defense systems and security needs. We must now be willing to do the same when it comes to funding critical public health needs. Public health has too often received short shrift in our planning and public funding. This must change. Congress and the public need to understand that strengthening disease surveillance, improving medical consequence management, and supporting fundamental and applied research will be essential in responding to a biological weapons attack in this nation or anywhere in the world. These investments will also enhance our efforts to protect the health and safety of the public from naturally occurring disease. We have a chance to defend the nation against its adversaries and improve the public health system with the same steps. We cannot afford not to do this.¶

1NC/2NC Solvency

1NC - Solvency

States and local law enforcement can just raid places—MOU doesn't check—plan can't solve

Theodore 13 [Nik, PhD, Professor at UIC Department of Urban Planning and Policy, BA Macalester College (1986); MUPP, University of Illinois at Chicago (1989); PhD, University of Illinois at Chicago (2000), Insecure Communities: Latino Perceptions of Police Involvement in Immigration Enforcement, May 2013, http://www.policylink.org/sites/default/files/INSECURE_COMMUNITIES_REPORT_FINAL.PDF] alla

IIRIRA also revised Section 287(g) of the Immigration and Nationality Act to authorize the U.S. Attorney General to enter into written memoranda of understanding (MOUs) with **state and local law enforcement authorities** to formally involve them in immigration enforcement.3 The IIRIRA states that "the Attorney General may enter into a written agreement with a State, or any political subdivision of a State, pursuant to which an officer or employee of the State or subdivision, who is determined by the Attorney General to be qualified to perform a **function of an immigration officer** in relation to the investigation, apprehension or detention of aliens in the United States …, **may carry out such function at the expense of the State or political subdivision** and to extent consistent with State and local law."4 **Should a state or local law enforcement agency consent to entering into an MOU**, officers must receive training in federal immigration law, the agency must provide written certification that officers are trained in immigration law, and any officer who engages in immigration enforcement is subject to the direction and supervision of the US Department of Homeland Security. **According to US Immigration and Customs Enforcement (ICE), as of December 31, 2012, more than 1,300 state and local law enforcement officers in 19 states have been trained and certified to enforce immigration law, and the budget devoted to 287(g) agreements has increased from $5 million in fiscal year 2006 to $68 million in fiscal year 2012** (ICE, 2013a,b).

DOL won't protect unauthorized workers – empirics

Lee 11 --Acting Professor of Law University of California, Irvine School of La [Stephen, "Monitoring Immigration Enforcement", (December 19, 2011). Arizona Law Review, Vol. 53, 2011; UC Irvine School of Law Research Paper No. 2012-01. Available at SSRN: http://ssrn.com/abstract=1974624 or http://dx.doi.org/10.2139/ssrn.1974624] RS

A question embedded within the interagency monitoring framework is whether an agency like the DOL can be trusted to protect the interests of unauthorized workers. Although the DOL's primary mission is to protect workers against work-related exploitation, **historically, the DOL has privileged the interests of citizen workers over noncitizen workers**. This suggests that DOL officials might be tempted to shirk their monitoring duties to the extent that a particular workplace inspection implicates **unauthorized workers and only unauthorized workers**. Despite the status-neutral nature of U.S. labor laws, the immigration enforcement origins of the DOL do give some traction to the concern that it

maintains a citizen- centric orientation.160 At least three reasons help assure that such a distortion, to the extent it exists, will not be overly pronounced.

DOL fails – changes in political administration

Jayesh M. **Rathod 11**, Assistant Professor of Law at American University Washington College of Law, Arizona Law Review, Protecting Immigrant Workers Through Interagency Cooperation, 2011, http://heinonline.org/HOL/Page?handle=hein.journals/arz53&div=45&g_sent=1&collection=journals ||RS

The proposed interagency monitoring agreement must also consider the **political winds that might dampen the DOL's enthusiasm to embrace an ex ante oversight role**. Unlike some agencies, where bureaucratization has solidified certain core operations, the posture of the DOL has varied dramatically depending on the administration in power. For example, during the George W. Bush administration, the federal government was largely silent about the 1998 Memorandum of Understanding ("MOU") between the DOL and the Immigration and Naturalization Service ("INS"), with advocates questioning its ongoing applicability.14 During the Bush administration, the DOL scaled back its 15 enforcement activities. Within some DOL subagencies, voluntary compliance 16 **Ideally**, any interagency monitoring agreement would be insulated from the political whims of appointees who might choose to let their oversight authority languish. This could be accomplished through the creation of an external advisory committee or by requiring periodic reports-from the DOL and DHS-that assess the effectiveness of the agreement

Interagency monitoring fails – vague language

Jayesh M. **Rathod 11**, Assistant Professor of Law at American University Washington College of Law, Arizona Law Review, Protecting Immigrant Workers Through Interagency Cooperation, 2011, http://heinonline.org/HOL/Page?handle=hein.journals/arz53&div=45&g_sent=1&collection=journals ||RS

Lee's article effectively describes the purpose and broad contours of an interagency monitoring agreement between the DOL and ICE relating to worksite enforcement. One type of arrangement that Lee describes involves "requir[ing] ICE to obtain permission from the DOL before investigating a particular workplace."35 Lee's intriguing proposal invites additional thinking about exactly how such an arrangement would be structured. Below, I share a few initial queries and offer further content to Lee's proposal. Let me begin with a few threshold questions. First, when exercised, what exactly would the DOL "pre-clearance power" look like? Would the DOL be able to prevent ICE enforcement actions from taking place? Or would the DOL's interests simply mean that ICE enforcement actions will be delayed for a fixed period of time? Second, what type of circumstance flagged by the DOL would be sufficient to chill action by ICE? Would a single complaint brought by an individual worker suffice? Would the complaint have to be brought by a worker or workers who are being targeted by ICE in the enforcement action? (And would such information be knowable in most cases?) Or, would the DOL speak with more authority vis-d-vis ICE if the employer had already been found to have violated certain workplace laws?

Plan is ineffective and gets circumvented - the MOU isn't legally binding

Freeman and Rossi 12 - Archibald Cox Professor of Law, Harvard Law School. Professor Freeman worked on a number of policy initiatives described in this Article when she served as Counselor for Energy and Climate Change in the White House in 2009–2010. The discussion of

these examples is based exclusively on documents available to the public. ∗∗ Harry M. Walborsky Professor and Associate Dean for Research, Florida State University College of Law [Jody and Jim, "AGENCY COORDINATION IN SHARED REGULATORY SPACE" VOLUME 125 MARCH 2012 NUMBER 5 http://harvardlawreview.org/wp-content/uploads/pdfs/vol125_freeman_rossi.pdf]RMT

The fourth category of MOU listed above describes agreements that typically involve multiple agencies. A good example is a 2009 MOU among nine federal agencies regarding the siting of electric transmission lines on federal lands.152 The example merits detailed discussion because it suggests how Congress sometimes recognizes coordination problems and how challenging they can be to address. In 2005, frustrated with long delays in siting large transmission projects, Congress instructed DOE to coordinate the federal permitting process.153 DOE and eight other federal agencies signed an MOU in 2006 to clarify their respective roles, with DOE retaining lead authority.154 Yet the collective action problem persisted. **The initial MOU had little effect, and permit applicants continued to proceed sequentially, agency by agency, resulting in considerable delays**. The Obama Administration revisited this state of affairs out of concern that transmission projects on federal lands were still proceeding too slowly. After months of negotiation, the nine key agencies signed a new agreement in which they established a process for integrated rather than sequential review. The new MOU does not retain DOE as the lead coordinator but rather specifies that the major land managers — the Department of the Interior (DOI) and USDA — will be the lead agencies for projects on federal lands.155 For all other applications, the MOU provides that the lead agency will be the primary regulator, FERC. The agreement also establishes clear timelines for agency review and coordination and provides for a single administrative record.156This example illustrates both the benefits and challenges presented by MOUs. By simplifying a multiagency approval process and eliminating needless duplication, interagency agreements can reduce transaction costs for both applicants and agencies.157 And by converting a sequential decisionmaking process into an integrated one with a single record, the agencies can improve the expertise on which their decisions are based. Still, the fact that a new agreement was necessary at all shows that even when Congress recognizes a collective action problem and instructs agencies to coordinate, agencies sometimes fail to do so. **Agencies may negotiate MOUs but then let them languish, sometimes for years**.158 Moreover, despite their often being quite detailed and substantive, **these agreements are generally not legally enforceable**.159 And they may prove unstable across administrations, or even throughout the life of a single administration, since disgruntled agencies can block implementation simply by refusing to cooperate. Thus, while MOUs may be promising instruments, their successful implementation may require a central coordinator, especially where agencies are reluctant to agree.

Agency incompetence is an alt cause OR Obama focus means squo solves

Hylton 11 [Wil S. Hylton, New York Times, October 30, 2011, "How Ready Are We for Bioterrorism?", http://www.nytimes.com/2011/10/30/magazine/how-ready-are-we-for-bioterrorism.html] JMOV

Even if the leadership and financing for biodefense were to shift toward a national-security framework, **the task would still require complex coordination among agencies with expertise in disparate spheres. This challenge is not made easier by the personal hostility that has emerged among many current program heads** — some of whom have close ties to the competing companies they oversee. In the course of several months of reporting, I heard senior officials from each of the major countermeasure agencies question the motives and professional credentials of the others, sometimes in a manner involving spittle. At times it seemed that the most virulent pathogen in biodefense was mutual hostility, and everybody had it.¶ **Senior officials in the Obama administration say that the president is committed to improving coordination on biodefense** and is entering a fourth major overhaul of the countermeasure enterprise. Last year, officials from the countermeasure agencies met weekly with the White House staff to discuss the merits and drawbacks of the current approach. Officials who attended those meetings say the administration hopes to develop a more "nimble, flexible" program, in which a single drug can treat multiple diseases and a single manufacturing plant can produce multiple drugs. If that plan, after 10 years and hundreds of millions of dollars trying to create a new anthrax vaccine that is still not ready, sounds optimistic, it is. Whether it is also realistic, only time will tell. Critics are quick to note that, three years after taking office, the

administration is still holding meetings and announcing bold new plans.¶ A number of former and current officials also point out that no one in the Obama White House is focused exclusively on biodefense. In both the Clinton and Bush administrations, there was a biodefense director whose primary job was to coordinate the agencies. Today, there are four senior White House officials with partial responsibility for biodefense, but each of them is also responsible for a raft of other issues, like natural disasters, terrorism and large-scale accidents like the Deepwater Horizon oil spill. Whatever you think U.S. biodefense policy should be, it is difficult to imagine that it would not benefit from clear, central leadership. Kenneth Bernard, the biodefense czar in both the Clinton and Bush administrations, told me, "The only way that you can get all of those people in the room is to call them into the White House, and to have a coordinating group under a single person." Robert Kadlec, who was the senior official for biodefense in the second Bush term, said, "Unless someone makes this a priority, it's a priority for no one."¶ Randall Larsen, who first smuggled a tube of weaponized powder into the meeting with Dick Cheney 10 years ago — and went on to become the executive director of the Congressional Commission on Weapons of Mass Destruction — said: "Today, there are more than two dozen Senate-confirmed individuals with some responsibility for biodefense. Not one person has it for a full-time job, and no one is in charge."

2NC – Alt Cause: Beauracracy

The aff's only internal link is about Latino Populations—they cannot overcome local law enforcement policies and negative perceptions

Theodore 13 [Nik, PhD, Professor at UIC Department of Urban Planning and Policy, BA Macalester College (1986); MUPP, University of Illinois at Chicago (1989); PhD, University of Illinois at Chicago (2000), Insecure Communities: Latino Perceptions of Police Involvement in Immigration Enforcement, May 2013, http://www.policylink.org/sites/default/files/INSECURE_COMMUNITIES_REPORT_FINAL.PDF] alla

These findings reveal one of the unintended consequences of the involvement of **state and local police in immigration enforcement** – a reduction in public safety as Latinos' mistrust of the police increases as a result of the involvement **of police in immigration enforcement.** The following conclusions can be drawn from the survey findings: **1. Isolation and disconnectedness from police**: Many Latinos feel isolated from the law enforcement officers who are sworn to protect them. More than four in ten say that because police are more involved in enforcing immigration laws they have become less likely to volunteer information about crimes because they fear getting caught in the web of immigration enforcement themselves or bringing unwanted attention to their family or friends.

Tons of alt causes - their 1ac card.

International Association of Chiefs of Police, **IACP, 14**, a dynamic organization that serves as the professional voice of law enforcement, 2014, Using Community Policing to Counter Violent Extremism, http://www.theiacp.org/Portals/0/documents/pdfs/Final%20Key%20Principles%20Guide.pdf

Engaging Immigrant Communities through Community Policing Law enforcement agencies nationwide have used community policing principles to build bridges with immigrant communities that may be wary of law enforcement because of past experiences in their home country .13 Law enforcement agencies have also used these principles, and continue to use them today, to demonstrate their commitment to balancing the needs of protecting their communities while also protecting individuals from hate crimes and civil rights and liberties violations . However, groups that share, or have been perceived to share, the national background or religions of the perpetrators of the 9/11 attacks may still be hesitant to share tips and may be cautious about partnering with law enforcement .This hesitancy can only be overcome by building trusting relationships, being transparent, and communicating with community members, regardless of

their citizenship or immigration status . The principles of community policing extend beyond the residents of a specific community and encompass working in partnership with other government agencies, public and private stakeholders, and faith- and community-based organizations . For example, enhanced information exchange between local, state, tribal, and federal law enforcement and homeland security partners; improved partnerships between federal, state, and local officials; information sharing between law enforcement and private entities; and, advances in communications technology and interoperable databases, can all be used to address terrorism and violent extremism .14 Using interoperable databases and sharing information with nonprofits and the private sector provides law enforcement with additional opportunities to prevent violent attacks by extremist individuals and groups .

2NC- MOU Bad

MOU ineffective – raises costs for agencies

Freeman and Rossi 12 - Archibald Cox Professor of Law, Harvard Law School. Professor Freeman worked on a number of policy initiatives described in this Article when she served as Counselor for Energy and Climate Change in the White House in 2009–2010. The discussion of these examples is based exclusively on documents available to the public. ∗∗ Harry M. Walborsky Professor and Associate Dean for Research, Florida State University College of Law [Jody and Jim, "AGENCY COORDINATION IN SHARED REGULATORY SPACE" VOLUME 125 MARCH 2012 NUMBER 5 http://harvardlawreview.org/wp-content/uploads/pdfs/vol125_freeman_rossi.pdf]RMT

— At first glance, coordination appears to raise agency decision costs. This observation is certainly true compared to a baseline of agencies deciding policy matters independently. But where agencies share regulatory space, the appropriate baseline should include the cost, or at least the risk, of inconsistency, waste, confusion, and systemic failure to deliver on the putative statutory goals. The actual question is whether coordination reduces these cumulative costs, even if it requires a greater up-front investment of resources. These up-front investments in fact might be substantial. For example, even the relatively mild procedural consultation requirements described in Part II require the agency to expend time and staff to process comments — resources that might otherwise be deployed elsewhere. And these costs tend to rise with the burdensomeness of the consultation provisions. At the extreme end, **giving one agency veto power over another's decision has the potential to elevate costs considerably by sometimes requiring extensive negotiations**. Thus, **for example, the joint DOJ-FTC horizontal merger guidelines likely consumed significant staff time and resources**.

The Plan just revises the MOU AGAIN—it failed before—that's a 1AC Uniqueness claim—ICE will just raid regardless of the MOU--here's the Text of the REVISED MOU for contextual proof

Morton and Smith 11 [John Morton: Director U.S. Immigration and Customs Enforcement, M. Patricia Smith: Solicitor of labor at the Department of Labor, "Revised Memorandum of Understanding between the Departments of Homeland Security and Labor Concerning Enforcement Activities at Worksites", December 7, 2011, http://www.dol.gov/asp/media/reports/DHS-DOL-MOU.pdf] alla

D. This MOU is an agreement between DHS and DOL, and does not create or confer any right or benefit on any other person or party, public or private. **Nothing in this MOU or its implementation is intended to restrict the legal authority of ICE or the relevant DOL components in any way.**

2NC—Squo Solves

Police-community relationships are high now – new law enforcement efforts. Their author.

International Association of Chiefs of Police, **IACP, 14**, a dynamic organization that serves as the professional voice of law enforcement, 2014, Using Community Policing to Counter Violent Extremism, http://www.theiacp.org/Portals/0/documents/pdfs/Final%20Key%20Principles%20Guide.pdf

In the years since 9/11, the law enforcement community has been faced with credible threats of violent extremism from an ever-evolving collection of determined enemies from overseas and within the United States .While terrorism remains a real and persistent problem—and the changing nature of the threat has made the chances of a successful attack more likely—law enforcement agencies have continually risen to the challenge .Whether the threats have come from international terrorist organizations, domestic extremist groups, or homegrown violent extremists, law enforcement has made considerable progress in developing methods and strategies for proactively detecting and thwarting new plots . One of the most important strategies has been the repurposing and refining of community oriented policing practices . Law enforcement agencies have used these practices for decades to address other criminal and quality-of-life issues, such as gang violence and vandalism, and are now using them to address CVE . State, local, and tribal law enforcement agencies are focusing on fostering and enhancing partnerships with the community, building trust, using a whole-of-community approach, engaging the community, assisting with the creation of counter-narratives, helping build resilient communities, balancing engagement and information gathering, and training officers with special focus on preventing extremist attacks and reducing the number of individuals who radicalize to violence . The marriage of community policing and countering violent extremism leverages the most valuable resource of each: local communities and their members . Law enforcement is empowering communities to impress upon individuals that everyone has an important role to play in the community .While radicalization to violence is occurring in homes across the country, thanks in large part to the Internet, community policing is being used to reach out to disenfranchised individuals and redirect them from the path of radicalization to violence . Community members are being invited to teach law enforcement about their religion, culture, and beliefs, so that officers are able to identify specific legal or constitutionally protected behaviors and not mistake those practices for criminal behavior . Community members are being encouraged to report suspicious activities, and communities are being empowered to demonstrate that they are stronger than the virtual community and that freedom, justice, and dignity can coexist with religion, culture, and citizenship .

Crack-down on ICE already happening within the government—it's very unpopular

TORRENS, '15, (CLAUDIA, "Immigration officials see danger as local cooperation wanes," Washington Times, Associated Press, March 10, 2015, http://www.washingtontimes.com/news/2015/mar/10/immigration-officials-laws-limiting-detainers-risk/?page=all)//erg

Mayor Bill de Blasio signed the legislation that limited cooperation with ICE in November. The law bars cooperation with detainers unless there's a federal warrant and the person is on the terrorist watch list or committed a serious crime in the past five years. From October 2013 through September 2014, the New York City Police Department received 2,635 immigration detainers. Of those, it held 196 individuals. The city says no ICE detainers have been honored this year. New York City Council Speaker Melissa Mark-Viverito, who proposed the limitations, said ICE officials for years "cast a dragnet at Rikers Island" that resulted in unnecessary deportations. "In addition to being unfair, ICE's policies were an offense to the rule of law and yet another symptom of our broken immigration system," Mark-Viverito said in a statement. In California, only immigrants illegally in the United States who have been convicted of a serious offense are eligible for the 48-hour hold. David Marin, deputy field office director for Enforcement and Removal Operations in Los Angeles, said that of the seven counties that form the Los Angeles area of operation only two honor detainers that meet those standards. More than one-fourth of the people arrested by ICE in the Los Angeles area last week had recently been released onto the street by local authorities despite ICE detainer requests. Fifty-nine of the 218 individuals detained by ICE during the enforcement action had been the subject of immigration detainers, said ICE spokeswoman Virginia Kice. The issue is not black-and-white, says Muzaffar Chishti, New York director of the Migration Policy Institute. "My feeling is that, at some level, both (sides) are right", said Chishti. "This is a classic case of where you stand on issues depends on where you sit. The concerns and the priorities of the city and police are very different from the concerns and priorities of the federal government."

Immigrant communities hate law enforcement—no trust

Nittle, '12, (Nadra Kareem, "Latinos on the Receiving End of Racial Profiling and Police Brutality," Race Relations: The Legal System, 2012, http://racerelations.about.com/od/thelegalsystem/a/Latinos-On-The-Receiving-End-Of-Racial-Profiling-And-Police-Brutality.htm)//erg

Border Patrol Killings It's not just local law enforcement agencies that have been accused of racially profiling Latinos and committing acts of police brutality against them, it's also the U.S. Border Patrol. In April 2012, Latino advocacy group Presente.org launched a petition to raise awareness about the Border Patrol's fatal beating of Anastasio Hernández-Rojas, which took place two years earlier. The group launched the petition after a video of the beating surfaced in hopes of pressuring the Justice Department to take action against the officers involved. "If justice isn't served for Anastasio, even when video clearly shows injustice, Border Patrol agents will continue their pattern of abuse and lethal force," the Presente team said in statement. Between 2010 to 2012, Border Patrol agents were involved in seven killings, according to Presente. LAPD Officer Found Guilty of Profiling Hispanics In an unprecedented move in March 2012, the Los Angeles Police Department determined that one of its officers had engaged in racial profiling. Which group did the officer in question target? Latinos, according to the LAPD. Patrick Smith, a white officer on the job for 15 years, pulled over a disproportionate amount of Latinos during traffic stops, the Los Angeles Times reported. He allegedly tried to conceal the fact that he'd so often targeted Hispanic drivers by misidentifying them as white on paperwork. Smith may be the first LAPD officer found guilty of racial profiling, but he's unlikely the only one engaging in the practice. "A 2008 study of LAPD data by a Yale researcher found blacks and Latinos were subjected to stops, frisks, searches and arrests at significantly higher rates than whites, regardless of whether they lived in high-crime neighborhoods," the Times noted. Moreover, 250 allegations of racial profiling are made against officers annually. East Haven Police Under Fire News broke in January 2012 that federal investigators had charged police in East Haven, Conn., with obstruction of justice, excessive force, conspiracy and other crimes concerning their treatment of Latinos in the city. According to the New York Times, East Haven police officers, "**stopped and detained people, particularly immigrants, without reason...sometimes**

slapping, hitting or kicking them when they were handcuffed, and once smashing a man's head into a wall." They tried to cover up their behavior by targeting bystanders who witnessed and tried to document their illegal acts. They also allegedly tried to recover surveillance tapes from area businesses that captured their abuses on video.

New DHS policy solves the aff—less raids, more focus on workers' rights, investigations before arrests all prove

Fialkowski 10 [Elise, a partner at the Philadelphia office of Klasko, Rulon, Stock & Seltzer, LLP. In addition to employment-based immigration work, she has particular experience in advising employers with regard to compliance with the Immigration Reform and Control Act, including I-9 Employment Eligibility Verification and work site enforcement issues, "The administration's new work site enforcement initiatives", Business Law Today: Volume 19, Number 3 January/February 2010, https://apps.americanbar.org/buslaw/blt/2010-01-02/fialkowski.shtml] alla

The Obama administration has pledged to continue—and in fact increase—vigorous criminal enforcement against employers that employ unauthorized workers. The Bush administration conducted a series of high-profile raids that resulted in criminal charges against employers as well as the apprehension of large numbers of undocumented workers. For example, in 2008 under the Bush administration, Immigration and Customs Enforcement (ICE) made 5,184 administrative arrests of unauthorized alien workers and 1,103 criminal arrests tied to work site enforcement. Of the individuals criminally arrested, however, only 135 were owners, managers, supervisors, or human resource employees. The majority of the remainder were workers charged under identity theft statutes. Janet Napolitano, Obama's secretary of homeland security, has indicated **a shift away from apprehension of the undocumented workers in large-scale raids** to a clear focus on employers including detailed up-front investigation on employer compliance **prior to enforcement** activity. The large-scale raids under the Bush administration enraged the Latino community and religious leaders, immigrant advocates, and civil liberties groups important to the Democratic base and they stepped up pressure on Obama to stop them. In response, Janet Napolitano has charted a middle course, ordering a review of which immigrants will be targeted for arrest and emphasizing that she intends to focus even more on prosecuting criminal cases of wrongdoing by companies. Such action is consistent with her testimony during her confirmation hearing in which she stated that she expects "to increase the focus on ensuring that employers of unlawful workers are prosecuted for their violations." Moreover, she pledged to subject employer violators to "appropriate criminal punishment" and to encourage employers to work with federal immigration agents "to establish sound compliance programs that prevent unlawful hiring." On April 30 of this year, the Department of Homeland Security (DHS) and ICE, the enforcement branch of DHS, issued a new Worksite Enforcement Overview and Worksite Enforcement Strategy Fact Sheet. Consistent with prior statements, both these documents announced that Napolitano has issued a directive "outlining that ICE will focus its resources in the work site enforcement program on the criminal prosecution of employers who knowingly hire illegal workers in order to target the **root cause** of illegal immigration." The Strategy Fact Sheet emphasizes that ICE will aggressively investigate using an array of sources including "tips from the public, reports from a company's current or former employees, even referrals from other law enforcement agencies" as well as a variety of techniques commonly used in criminal prosecutions. The fact sheet emphasizes that, through these methods, ICE will aggressively investigate and pursue trafficking, smuggling, harboring, visa fraud, document fraud, money laundering, and other criminal conduct by employers. It is clear that **the Obama administration is focusing on significant up-front investigation rather than large-scale raids.**

Obama administration solves—Plan also cannot overcome ICE I-9 Audits and Social Security letters—these are different from raids

GARDELLA 11 [ADRIANA , Adriana Gardella is a journalist, writer, and editor. She contributes to publications including The New York Times, Forbes, and Real Simple; and writes marketing materials for an AmLaw 200 law firm, "As Immigration Audits Increase, Some Employers Pay a High Price", New York Times, JULY 13, 2011, http://www.nytimes.com/2011/07/14/business/smallbusiness/how-a-small-business-can-survive-an-immigration-audit.html?_r=0] alla

David Cox was at his desk in September 2009, when his receptionist announced an unexpected visitor, a special agent from Immigration and Customs Enforcement, also known as ICE. Mr. Cox is chief executive of L. E. Cooke Company, a fourth-generation, family-owned nursery in Visalia, Calif., that grows deciduous trees and shrubs. The agent handed Mr. Cox a letter and informed him he had three days to produce I-9 employment-eligibility forms for all current employees. Mr. Cox said the agent was "pleasant and nonthreatening," but he noticed she carried a gun. L. E. Cook was one of 1,444 businesses to receive an introduction to ICE's stepped-up worksite enforcement program in 2009 — almost three times the number audited in 2008. Last year, 2,196 businesses were audited. An ICE representative said the agency did not categorize audits by business type and that the law applied across industries. "Any company is at risk at any given time," said Leon Versfeld, an immigration lawyer in Kansas City, Mo. In one prominent case, American Apparel, the clothing manufacturer, was forced to terminate 1,800 undocumented workers after a 2009 audit. Chipotle Mexican Grill, the restaurant chain, has let go hundreds of workers since its audit began last year. **While the administration of George W. Bush focused on headline-making raids that resulted in arrests of immigrant workers, the Obama administration has gone after employers with ICE's I-9 audits on the theory that employers who hire unauthorized workers create the demand that drives most illegal immigration**. In addition, the Social Security Administration has resumed sending "no-match" letters after a three-year hiatus. The letters, which alert employers that information on an employee's W-2 form does not match information on file with the Social Security Administration, had been halted in 2007. The main purpose is ostensibly to ensure that employee Social Security accounts are credited properly, but the letters can also be used by ICE to show that an employer had reason to believe an employee might not have documentation. "The master narrative of immigration reform is being crafted around the notion of unscrupulous employers seeking cheap labor," said Craig Regelbrugge, a lawyer and lobbyist with the American Nursery and Landscape Association. Unscrupulous employers exist, Mr. Regelbrugge said, but more often he sees business owners who are just trying to follow the law. When a new hire produces seemingly legitimate forms of documentation required by the I-9 form, the employer must accept them. (To refuse could expose the owner to charges of employment discrimination.) "The employer is not required to be a forensics expert," said Monte Lake, an immigration lawyer in Washington. The upshot of the more aggressive enforcement is that even employers who have followed the rules can be devastated by an audit that compels them to fire valuable, long-time employees. The I-9 audit of Mr. Cox's nursery revealed that 26 of his 99 employees were not authorized to work in the United States. Because ICE determined he had acted reasonably in hiring them, Mr. Cox was not fined or held criminally liable. But after confirming that the 26 employees could not produce authentic documents, he was forced to fire them. All had been with him for five to 10 years, and he lost half of his budding crew, a highly specialized team that grafts trees. "Telling them was probably the worst day of my life," he said. "I don't just sit at a desk here, I'm actually out in the field harvesting with them." Mr. Cox said he was lucky the audit hit midrecession, after he had already reduced his work force and inventory. Still, he estimates that his 2009 expenses climbed 10 percent as a result of the terminations. And, despite California's high unemployment rate, finding replacement employees has proved challenging. "I've gone through more workers this year than I have in the past 10 years combined," Mr. Cox said. While most such workers earn the $8-an-hour minimum wage in California, Mr. Cox said he generally paid $8.90 an hour for a 50-hour week. The terminated budding crew workers made $10 an hour. Compensation includes state-mandated overtime of time and a half, health insurance and two weeks' paid vacation. "If I raised the wage," he said, "I'd have to shut my doors." Meanwhile, after an audit, ICE does not round up the affected workers for deportation. That meant Mr. Cox's former workers were free to seek employment elsewhere — including with his competitors. Mr. Cox said that he knew through his remaining workers that the terminated employees were all working in the area. After the audit, Mr. Cox started using E-Verify, a federal program that lets employers confirm the authenticity of a job applicant's Social Security and green card numbers

electronically. Although the program's use is mandatory in some states, its reliability has been debated, and it remains voluntary in California. A bill in Congress that would require all American employers to use the program could go to a vote this month. The owner of another agricultural business, this one on the East Coast, requested anonymity because he was currently undergoing an I-9 audit that had resulted in the loss of half of his work force. He said the employees he was forced to terminate were 25 to 40 years old and had been in the United States for five to 10 years. Many were raising children born here. "They're all staying here and working for someone else," he said. After the terminations, the East Coast owner said he was struggling to get replacement workers up to speed. He has endured a substantial increase in customer complaints — to 30 a week from about three — and has reduced his 2011 sales goals by 15 percent. The terminated employees included members of his management team who earned $12 to $15 an hour. He paid them all their vacation pay, and said he was bothered by the perception that employers like him were unscrupulous and treated undocumented workers unfairly. "We did everything by the book," he said. "There were a lot of tears here." While the human side of the issue is compelling, employers must comply with the law, said Mr. Lake, the immigration lawyer. **There is no way to avoid an ICE audit**, but establishing and maintaining the right procedures can help you survive one. Mr. Lake recommends that employers review their practices and seek professional assistance if they are not knowledgeable about legal requirements. Sloppy record-keeping can lead to fines for technical violations. If a review reveals incomplete I-9 forms, employers should fill in the missing information and initial it with the date and time it was added. Mr. Lake advises random checks to ensure that employees are completing the forms. Be sure to retain I-9 forms for the legally required period of time — the longer of three years or one year after the employee leaves the company. Business owners should understand their obligations upon receiving a no-match letter. Mr. Lake advises employers who receive these letters to meet one-on-one with the designated worker to ensure that a clerical error did not cause the confusion, confirming that names are spelled correctly and no numbers have been transposed. Assuming there is no mistake, Mr. Lake said the owner must instruct the worker to pursue the issue with the Social Security Administration and report back within a "reasonable time." Document your actions and treat all workers the same, Mr. Lake said. If an employee reports that everything is fine, and you get another no-match letter the next year, you know it is not fine. After that, Mr. Lake said, there is no good answer if ICE conducts an audit and asks, "Why didn't you take action the second time?"
