Then there are the dolorous consequences of a potential collapse of the world's financial architecture. For decades now, Americans have enjoyed the advantages of being at the center of that system. The worldwide use of the dollar, and the stability of our economy, among other things, made it easier for us to run huge budget deficits, as we counted on foreigners to pick up the tab by buying dollar-denominated assets as a safe haven. Will this be possible in the future? **Meanwhile, traditional foreign-policy challenges are multiplying. The threat from al Qaeda and**

Islamic terrorist affiliates has not been extinguished. Iran and North Korea are continuing on their bellicose paths, while Pakistan and Afghanistan are progressing smartly down the road to chaos. Russia's new militancy and China's seemingly relentless rise also give cause for concern. If America now tries to pull back from the world stage, it will leave a dangerous power vacuum. The stabilizing effects of our presence in Asia, our continuing commitment to Europe, and our position as defender of last resort for Middle East energy sources and supply lines could all be placed at risk. In such a scenario there are shades of the 1930s, when global trade and finance ground nearly to a halt, the peaceful democracies failed to cooperate, and aggressive powers led by the remorseless fanatics who rose up on the crest of economic disaster exploited their divisions. Today we run the risk that rogue states may choose to become ever more reckless with their nuclear toys, just at our moment of maximum vulnerability. The aftershocks of the financial crisis will almost certainly rock our principal strategic competitors even harder than they will rock us. The dramatic free fall of the Russian stock market has demonstrated the fragility of a state whose economic performance hinges on high oil prices, now driven down by the global slowdown. China is perhaps even more fragile, its economic growth depending heavily on foreign investment and access to foreign markets. Both will now be constricted, inflicting economic pain and perhaps even sparking unrest in a country where political legitimacy rests on progress in the long march to prosperity. None of this is good news if the authoritarian leaders of these countries seek to divert attention from internal travails with external adventures.

Impacts--Clog Internals: Spokeo win necessary to prevent clog

(--) Ruling in favor of Spokeo prevents a proliferation of lawsuits:

Rich **Samp**, 4/15/2015 (staff writer, "Supreme Court Has Opportunity To Halt Lawsuits By Uninjured Plaintiffs," <http://www.forbes.com/sites/wlf/2015/04/15/supreme-court-has-opportunity-to-halt-lawsuits-by-uninjured-plaintiffs/>, Accessed 6/26/2015, rwg)

By granting review in Spokeo and reversing the Ninth Circuit, the Court can bring a halt to the proliferation of lawsuits filed by uninjured plaintiffs who lack the requisite Article III standing to sue for infractions of federal statutes. Such a ruling would remind Congress that it cannot expand federal courts' jurisdiction beyond the limits set out in the Constitution.

(--) Ruling in favor of Spokeo prevents court clog:

Christi A. **Lawson**, 4/28/2015 ("U.S. Supreme Court Accepts Review of Robins v. Spokeo, Inc.," <http://www.foley.com/intelligence/detailpdf.aspx?int=46acc213-4842-4bd9-9c19-8b2dc13e1bcc>, Accessed 6/29/2015, rwg)

Spokeo has the attention of the financial industry. Additionally, several large companies have joined Spokeo in opposing the Ninth Circuit's Ruling, including but not limited to, Facebook Inc., Google Inc., Yahoo Inc. and eBay. In an amicus brief, the companies expressed to the high court that agreeing with the Ninth Circuit's decision would result in a flood of "no-injury" class actions under the Telephone Consumer Protection Act, the Video Privacy Protection Act and similar statutes.

(--) A Spokeo win discourages a wave of lawsuits:

Pamela Q. **Devata**, 4/27/2015 ("U.S. Supreme Court Grants Cert in Spokeo, Inc. v. Robins," <http://www.seyfarth.com/publications/OMM042715-LE>, Accessed 6/29/2015, rwg)

The Supreme Court's decision in Spokeo is likely to dramatically affect employers, consumer reporting agencies, and other corporate defendants. Indeed, ten separate amicus briefs were filed on behalf of seventeen different companies, trade associations, and other organizations in support of Spokeo's petition (including the National Association of Professional Background Screeners, Chamber of Commerce of the United States, eBay, Facebook, Google, Yahoo, and leading consumer reporting agencies). A decision limiting congressional power and providing for actual damages to be alleged would likely discourage the current wave of consumer, workplace, and other class actions seeking millions in statutory damages. A decision allowing individual and class claims to go forward alleging only statutory damages without injury in fact would likely have the opposite outcome. Employers should continue to closely monitor the developments in this case.

(--) Limiting standing is necessary to stop a floodgate of litigation:

MARY MASSARON **ROSS**, 2014 (BRIEF OF DRI - THE VOICE OF THE DEFENSE BAR AS AMICUS CURIAE IN SUPPORT OF PETITIONER, Spokeo v. Robins, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/DRI-Brief-Spokeo-Inc.-v.-Thomas-Robins-SCt-13-1339.pdf>)

DRI's interest in this case stems from its members' extensive involvement in civil litigation. DRI's members are regularly called upon to defend their clients in lawsuits brought merely to pursue public policies rather than to seek redress for a distinct and personalized injury. Left unreviewed by this Court, the Ninth Circuit's decision in this case will have a profound effect on businesses and individuals who may be subject to suits brought under the Fair Credit Reporting Act, 15 U.S.C. § 1681, et seq., and other federal and state statutes providing for statutory damages because it broadens the doctrine of standing to allow the judiciary to resolve disputes in the absence of an actual injury. The Ninth Circuit's decision, which exacerbates an already-existing circuit split, would encourage the filing of lawsuits by non-injured plaintiffs. DRI has a strong interest in assuring that the many federal and state statutes which confer a statutory cause of action do not provide a "back door" for uninjured litigants to obtain

relief in federal court. **The Ninth Circuit's alteration of the standing doctrine opens the floodgates of litigation in derogation of the Framers' intent to limit the jurisdiction of the judicial branch to "cases" and "controversies."** This, in turn, directly affects the fair, efficient, and consistent functioning of our civil justice system and, as such, is of vital interest to the members of DRI.

Impacts--Court Clog Impact Extensions

(--) Court clog hurts small businesses:

Ashley **Post**, 7/22/2011 (staff writer, "Frivolous lawsuits clogging U.S. courts, stalling economic growth," <http://www.insidecounsel.com/2011/07/22/frivolous-lawsuits-clogging-us-courts-stalling-eco>, Accessed 9/16/2014, rwg)

The result is clogged courts and corporate funds that finance defense costs instead of economic investment. Small businesses and startups with less than \$20 million in revenue suffer the most because they pay a higher percentage of their revenues toward tort costs than larger companies do, and therefore they become less able to invest in research and development, create new jobs, and give raises and benefits to employees.

(--) Business confidence key to staving off a recession:

JOHN **BRAITHWAITE**, 2004 (The Annals of The American Academy of Political and Social Science, March; Lexis)

The challenge of designing institutions that simultaneously engender emancipation and hope is addressed within the assumption of economic institutions that are fundamentally capitalist. This contemporary global context gives more force to the hope nexus because we know capitalism thrives on hope. When business confidence collapses, capitalist economies head for recession. This dependence on hope is of quite general import; business leaders must have hope for the future before they will build new factories; consumers need confidence before they will buy what the factories make; investors need confidence before they will buy shares in the company that builds the factory; bankers need confidence to lend money to build the factory; scientists need confidence to innovate with new technologies in the hope that a capitalist will come along and market their invention. Keynes's ([1936]1981) General Theory of Employment, Interest and Money lamented the theoretical neglect of "animal spirits" of hope ("spontaneous optimism rather than . . . mathematical expectation" (p. 161) in the discipline of economics, a neglect that continues to this day (see also Barbalet 1993).

Impacts: DA Turns Case

(--) **Lack of legitimacy means Court can't enforce its decisions:**

Kevin **Burke**, August 23, 20**13** ("How Low Public Trust Threatens the Legitimacy of Court Decisions,"

<http://proceduralfairnessblog.org/2013/08/23/how-low-public-trust-threatens-the-legitimacy-of-court-decisions/>, Accessed 7/8/2015, rwg)

Trust is an essential component of procedural fairness, which, in turn, has been shown to be **a key source of legitimacy for decision-makers**. All public institutions now face serious skepticism from the public about their trustworthiness. **However, a trust deficit – and the resulting lack of legitimacy – are of particular threat to the judiciary. Legitimacy is essential if courts are to be respected and, indeed, if court orders are to be obeyed.** Simply put, **failure to maintain and enhance the legitimacy of court decisions imperils the judiciary as an institution and the vital role assigned to the judiciary in our Constitutional tradition.**

Impacts: Disease

A) Technology key to solve disease:

Charles **Stokes**, 6/11/2013 (“Technology is key to CDC’s Public Health Defense of Our Country,” <http://www.cdcfoundation.org/blog-entry/technology-cdc-public-health-defense>, Accessed 7/10/2015, rwg)

The U.S. Centers for Disease Control and Prevention (CDC) has a long history of using technology and data to solve public health mysteries surrounding both chronic and contagious diseases. Just as diseases advance, however, so do the ways that technology and data can address them. Looking forward, it is vital to America’s health and national security for our nation to continue making investments in technology at CDC. That is the core message I take from a new op-ed in The Hill’s Congress blog today.

B) Diseases cause extinction

Guterl ’12 [Fred, award-winning journalist and executive editor of Scientific American, worked for ten years at Newsweek, has taught science at Princeton University, *The Fate of the Species: Why the Human Race May Cause Its Own Extinction and How We Can Stop It*, 1-2, Google Books, online]

Over the next few years, the bigger story turned out not to be SARS, which trailed off quickly, but avian influenza, or bird flu. It had been making the rounds among birds in Southeast Asia for years. An outbreak in 1997 Hong Kong and another in 2003 each called for the culling of thousands of birds and put virologists and health workers into a tizzy. Although the virus wasn’t much of a threat to humans, scientists fretted over the possibility of a horrifying pandemic. Relatively few people caught the virus, but more than half of them died. What would happen if this bird flu virus made the jump to humans? What if it mutated in a way that allowed it to spread from one person to another, through tiny droplets of saliva in the air? **One bad spin of the genetic roulette wheel and a deadly new human pathogen would spread across the globe in a matter of days.** With a kill rate of 60 percent, such a pandemic would be devastating, to say the least. Scientists were worried, all right, but the object of their worry was somewhat theoretical. Nobody knew for certain if such a supervirus was even possible. To cause that kind of damage to the human population, a flu virus has to combine two traits: lethality and transmissibility. The more optimistically minded scientists argued that one trait precluded the other, that if the bird flu acquired the ability to spread like wildfire, it would lose its ability to kill with terrifying efficiency. The virus would spread, cause some fever and sniffles, and take its place among the pantheon of ordinary flu viruses that come and go each season. The optimists, we found out last fall, were wrong. Two groups of scientists working independently managed to create bird flu viruses in the lab that had that killer combination of lethality and transmissibility among humans. They did it for the best reasons, of course—to find vaccines and medicines to treat a pandemic should one occur, and more generally to understand how influenza viruses work. If we’re lucky, the scientists will get there before nature manages to come up with the virus herself, or before someone steals the genetic blueprints and turns this knowledge against us. Influenza is a natural killer, but we have made it our own. **We have created the conditions for new viruses to flourish—among pigs in factory farms and live animal markets and a connected world of international trade and travel—and we’ve gone so far as to fabricate the virus ourselves.** Flu is an excellent example of how we have, through our technologies and our dominant presence on the planet, begun to multiply the risks to our own survival.

Continued technological advancements key to solve disease:

Charles **Stokes**, 6/11/2013 (“Technology is key to CDC’s Public Health Defense of Our Country,” <http://www.cdcfoundation.org/blog-entry/technology-cdc-public-health-defense>, Accessed 7/10/2015, rwg)

While these developments are impressive, Carlos stresses the urgent need for CDC to continue to grow its capacity for advanced science and technology, particularly in light of several recent developments—five new drug-resistant microbes and a new coronavirus in the Middle East, to name a few. Carlos offers, “In these times of shrinking federal budgets we can’t afford to give the advantage to life-threatening diseases.” One way he says that CDC can make significant strides forward is through “whole genome sequencing of bacteria and viruses to understand how disease spreads.”

But there's more to the story. Carlos relates how several years ago when a cholera epidemic hit Haiti CDC could sequence the genome but couldn't interpret the results because it didn't have sufficient bioinformatics capacity. That worries Carlos, and he's not alone. In fact, CDC Director Tom Frieden conveyed the same concern in a recent [Huffington Post](#) blog.

Impacts: Economy

A) Relaxed standing requirement will cause untold economic damage:

MARY MASSARON ROSS, 2014 (BRIEF OF DRI - THE VOICE OF THE DEFENSE BAR AS AMICUS CURIAE IN SUPPORT OF PETITIONER, Spokeo v. Robins, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/DRI-Brief-Spokeo-Inc.-v.-Thomas-Robins-Sct-13-1339.pdf>)

Relaxation of the standing requirement will broaden dramatically the composition of a class litigating a violation of the FCRA or other similar “no harm” statute. This, in turn, **will dramatically increase the expense of defending a class action**. Even before the Ninth Circuit’s decision in this case, **the attendant costs of a major lawsuit could sound the death knell for new companies and those suffering under today’s current economic climate**. Bradley J. Bondi, Facilitating Economic Recovery and Sustainable Growth Through Reform of the Securities Class-Action System: Exploring Arbitration as an Alternative to Litigation, 33 Harv. J. L. & Pub. Pol’y, 607, 612 (Spring 2010). **With the new lax standing requirement** announced by the Ninth Circuit, **defendants may be forced to make payouts to hundreds or even thousand of unharmed class members**. In addition, due to the violation of some statutory standard, a non-injured plaintiff might be deemed a “prevailing party” entitled to attorney fees. **The unwarranted economic burden this imposes on defendants cannot be overstated**. As one legal scholar noted, **“aggregated statutory damages claims can result in absurd liability exposure in the hundreds of millions – or even billions – of dollars on behalf of a class whose actual damages are often nonexistent”**. Sheila B. Scheuerman, Due Process Forgotten: The Problem of Statutory Damages and Class Actions, 74 Mo. L. Rev. 103, 104 (Winter 2009). Stated another way, **a class judgment based on a statutory damages claim can have an “annihilating effect” on a defendant**. O’Neil, supra, at *6. Defendants, unwilling to roll the dice, are placed under intense pressure to settle, even if an adverse judgment seems “improbable.” See Thorogood v. Sears, Roebuck and Co., 547 F.3d 42, 745 (7th Cir. 2008); Matter of Rhone-Poulenc Rorer, Inc., 51 F.3d 1293, 1298 (7th Cir. 1995). See also Barry F. McNiel, et. al., Mass Torts and Class Actions: Facing Increased Scrutiny, 167 F.R.D. 483, 489-90 (updated 8/5/96). The Ninth Circuit’s holding in this case, if left uncorrected by this Court, will only exacerbate these problems and proliferate more of these “blackmail settlements.” Rhone, supra at 1298, citing Henry J. Friendly, Federal Jurisdiction: A General View 120 (1973).

B) U.S. economic failure risks multiple scenarios for nuclear war

Khalilzad ’11 Zalmay was the United States ambassador to Afghanistan, Iraq, and the United Nations during the presidency of George W. Bush and the director of policy planning at the Defense Department from 1990 to 1992, “The Economy and National Security”, 2-8-11, <http://www.nationalreview.com/articles/print/259024>, MCR

Today, **economic** and fiscal **trends pose the most severe** long-term **threat to the United States’ position as global leader**. While the United States suffers from fiscal imbalances and low economic growth, the economies of rival powers are developing rapidly. The **continuation of these two trends could lead to a shift from American primacy toward a multi-polar global system, leading in turn to increased geopolitical rivalry and even war among the great powers**. The current recession is the result of a deep financial crisis, not a mere fluctuation in the business cycle. Recovery is likely to be protracted. The crisis was preceded by the buildup over two decades of enormous amounts of debt throughout the U.S. economy — ultimately totaling almost 350 percent of GDP — and the development of credit-fueled asset bubbles, particularly in the housing sector. When the bubbles burst, huge amounts of wealth were destroyed, and unemployment rose to over 10 percent. The decline of tax revenues and massive countercyclical spending put the U.S. government on an unsustainable fiscal path. Publicly held national debt rose from 38 to over 60 percent of GDP in three years. Without faster economic growth and actions to reduce deficits, publicly held national debt is projected to reach dangerous proportions. If interest rates were to rise significantly, annual interest payments — which already are larger than the defense budget — would crowd out other spending or require substantial tax increases that would undercut economic growth. Even worse, if unanticipated events trigger what economists call a “sudden stop” in credit markets for U.S. debt, the United States would be unable to roll over its outstanding obligations, precipitating a sovereign-debt crisis that would almost certainly compel a **radical retrenchment of the United States internationally**. Such scenarios **would reshape the international order. It was the economic devastation of Britain and France during World War II**, as well as the rise of other powers, that **led both countries to relinquish their empires**. In the late 1960s, British leaders concluded that they

lacked the economic capacity to maintain a presence "east of Suez." Soviet economic weakness, which crystallized under Gorbachev, contributed to their decisions to withdraw from Afghanistan, abandon Communist regimes in Eastern Europe, and allow the Soviet Union to fragment. If the U.S. debt problem goes critical, the United States would be compelled to retrench, reducing its military spending and shedding international commitments. We face this domestic challenge while other major powers are experiencing rapid economic growth. Even though countries such as China, India, and Brazil have profound political, social, demographic, and economic problems, their economies are growing faster than ours, and this could alter the global distribution of power. These trends could in the long term produce a multi-polar world. If U.S. policymakers fail to act and other powers continue to grow, it is not a question of whether but when a new international order will emerge. The closing of the gap between the United States and its rivals could intensify geopolitical competition among major powers, increase incentives for local powers to play major powers against one another, and undercut our will to preclude or respond to international crises because of the higher risk of escalation. The stakes are high. In modern history, the longest period of peace among the great powers has been the era of U.S. leadership. By contrast, multi-polar systems have been unstable, with their competitive dynamics resulting in frequent crises and major wars among the great powers. Failures of multi-polar international systems produced both world wars. American retrenchment could have devastating consequences. Without an American security blanket, regional powers could rearm in an attempt to balance against emerging threats. Under this scenario, there would be a heightened possibility of arms races, miscalculation, or other crises spiraling into all-out conflict. Alternatively, in seeking to accommodate the stronger powers, weaker powers may shift their geopolitical posture away from the United States. Either way, hostile states would be emboldened to make aggressive moves in their regions

(--) Ruling for Spokeo necessary to stop billions of dollars in damage:

FELICIA H. ELLSWORTH, 2014 (BRIEF FOR AMICI CURIAE EBAY INC., FACEBOOK, INC., GOOGLE INC., AND YAHOO! INC. IN SUPPORT OF PETITIONER, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/13-1339-Spokeo-Inc.-v.-Robins-Br.-for-Amici-eBay-Inc.-et-al.-Jun....pdf>, Accessed 6/29/2015, rwg)

Amici are concerned that this decision will substantially and improperly lower the bar for invoking the jurisdiction of federal courts, inviting abusive and costly litigation, including class actions seeking millions or even billions of dollars in statutory damages under FCRA and similar statutes. Amici are members of a rapidly growing and transforming technology industry that provides services to hundreds of millions of individuals each day. Users of amici's services routinely conduct financial transactions, share information and content, and interact with people all over the world on platforms offered by amici. The services amici provide, the information they collect, and the interactions they facilitate arguably could be subject to laws that contain private rights of action and allow for statutory damages.

(--) Limiting standing to actual injury key to the collection industry—key to the national economy:

BRIAN MELENDEZ, 6/13/2014 (BRIEF OF ACA INTERNATIONAL AS AMICUS CURIAE IN SUPPORT OF PETITIONER, Spokeo v. Robins, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/13-1339-tsac-ACA.pdf>, Accessed 6/29/2015, rwg)

Through their attempts to recover outstanding accounts, ACA's members act as an extension of every community's businesses. ACA's members represent the local hardware store, the retailer down the street, and the family doctor. They work with these businesses, large and small, to obtain payment for the goods and services received by consumers, and each year, their combined effort results in the recovery of billions of dollars that are returned to businesses and reinvested in local communities. Without an effective collection process, these businesses' economic viability — and, by extension, the local and national economies in general — are threatened. At the very least, absent effective collections, consumers would be forced to pay more for their

purchases to compensate for uncollected debts. 3 Finally, ACA's members also help governments in recovering unpaid obligations — a function that is increasingly important as many governments face record budget deficits. _____ Summary of Argument Standing is a fixed constitutional principle that Congress cannot expand by statute. Congress can enact statutes that create new rights, and Congress can create remedies for those rights. But Congress cannot abrogate the constitutional principle of standing altogether: “broadening the categories of injury that may be alleged in support of standing is a different matter from abandoning the requirement that the party seeking review must himself have suffered an injury.” That requirement of injury in fact — “that the party seeking review be himself among the injured” — is an “irreducible constitutional minimum” without which a federal court lacks jurisdiction. The statute at issue is one of a class of statutes that creates liability without requiring injury in fact. Consumer credit protection is a field that Congress has regulated extensively in the last several decades, beginning with the Consumer Credit Protection Act in 1968. Many consumer-credit statutes created private rights of action to redress injuries for which there was no adequate remedy at common law. But sometimes the remedies that Congress devised for the practices that it prohibited have gone beyond the harms that Congress was trying to address. More to the point, Congress sometimes devised remedies that offered relief even to plaintiffs who were never harmed at all. Several federal courts of appeals have allowed plaintiffs to recover statutory damages under consumer-protection statutes without any proof of actual damages — that is, they have let the plaintiffs recover for an injury in law without having suffered an injury in fact. A statute may be “blind when it comes to distinguishing between plaintiffs who have suffered actual damages and those who have not,” but the Constitution is not. Most courts of appeals that have upheld liability against a defendant without injury to the plaintiff did not even consider the standing requirement’s constitutional dimensions. Other courts of appeals that have considered the constitutional issue have concluded that a statutory violation confers constitutional standing. Yet other courts of appeals have delved adequately in to this Court’s standing jurisprudence and correctly held that an uninjured plaintiff lacks constitutional standing. This Court should resolve the various approaches that the courts of appeals have taken, and insist upon consideration of the standing requirement’s constitutional dimensions. This case is the right medium for that message. **This case’s implications go beyond the statute at issue, and affect the credit-and-collection industry at every level.** The Fair Credit Reporting Act is far from the only consumer-protection statute that provides for statutory damages independent of whether the plaintiff suffered actual damages. **These statutes affect the credit-and-collection industry, daily, and at every level, from the issuance of credit to the collection of debt in default.** ACA therefore joins the Petitioner in asking that this Court grant the petition for a writ of certiorari.

(--) Victory for Spokeo key to the consumer credit agency—key to economy:

STEPHEN J. **NEWMAN, 2014** (BRIEF OF TRANS UNION LLC AS AMICUS CURIAE IN SUPPORT OF PETITIONER, Spokeo v. Robins, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/13-1339acTransUnionLLC-Ok-to-Print.pdf>, Accessed 6/29/2015, rwg)

Trans Union LLC (“TransUnion”) is a “consumer reporting agency that compiles and maintains files on consumers on a nationwide basis,” as defined in Section 603(p) of the Fair Credit Reporting Act (the “FCRA” or the “Act”), 15 U.S. C. § 1681a(p). As one of the nation’s three major credit bureaus, **TransUnion maintains billions of pieces of information about United States consumers, and issues millions of consumer reports every month. Given these functions and the consumer credit reporting system’s critical importance to the national economy,** TransUnion is regulated comprehensively as a “consumer reporting agency” by the FCRA, as well as by certain state mini-FCRAs and the Dodd-Frank Wall Street Reform and Consumer Protection Act, 12 U.S.C. § 5301 (the “Dodd-Frank Act”). 1 TransUnion has a strong interest in ensuring that the Act is applied in accordance with Constitutional requirements and is properly construed. It expends millions of dollars annually to ensure compliance with credit reporting laws, regulations and relevant judicial decisions. **The opinion below threatens to greatly expand FCRA liability beyond its intended scope** of consumer protection, **thereby exposing TransUnion, other credit bureaus, data furnishers and users of credit reports to potentially massive class action cases brought by persons without any real-world harm. If this Court does not** grant the petition for certiorari and **correct the Ninth Circuit’s error,** then the immediate result will be more “bet the company” litigation filed under the Act. The consequent defense costs and inevitable corporate skittishness with respect to offering new data services will reduce the scope of predictive information available to credit grantors to manage risk. Moreover, it will increase the expense of delivering such new information services that survive legal challenge. Ultimately, **consumers will bear the brunt of these effects in the form of diminished access to credit,** delays in obtaining credit and/or higher costs of obtaining it.

(--) Failure to maintain an injury standard for standing does severe damage to the economic system:

STEPHEN J. **NEWMAN, 2014** (BRIEF OF TRANS UNION LLC AS AMICUS CURIAE IN SUPPORT OF PETITIONER, Spokeo v. Robins, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/13-1339acTransUnionLLC-Ok-to-Print.pdf>, Accessed 6/29/2015, rwg)

In various circumstances, the Justices of this Court and other members of the federal judiciary have expressed concern about **the rising tide of massive class action cases, and the harm they may pose to the economic system**, and principles of sound policymaking. **To keep the class action in its appropriate procedural place, this Court should recognize an inherent constitutional limitation** under Article III. A class action violates the Constitution **unless the proposed class representative and each member of the proposed class sustained an injury in fact.**

Impacts—First Amendment

(--) Actual injury requirement key to the First Amendment:

STEPHEN J. **NEWMAN, 2014** (BRIEF OF TRANS UNION LLC AS AMICUS CURIAE IN SUPPORT OF PETITIONER, Spokeo v. Robins, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/13-1339acTransUnionLLC-Ok-to-Print.pdf>, Accessed 6/29/2015, rwg)

Few defendants faced with a claim that seeks statutory damages under a law for which there is a “dearth of guidance and [] less-than-pellucid statutory text,” *Safeco Ins. Co. v. Burr*, 551 U.S. 47, 70 (2007), will roll the dice in litigation when the result of losing the case is the total loss of their business. **The issue inherent in all class actions—that class certification itself often places defendants in a must-settle position—is more pernicious under the FCRA, due to the Act’s regulation of commercial speech.** See *Sorrell v. IMS Health, Inc.*, 564 U.S. ___, 131 S. Ct. 2653, 2667 (2011) (credit report is “speech”) (citing *Dun & Bradstreet, Inc. v. Greenmoss Builders, Inc.*, 472 U.S. 749, 759 (1985)). **There are grave First Amendment implications when the procedural device of the class action threatens, as a practical matter, to restrict innovation and limit the free flow of information critical to economic decision-making.** The FCRA, properly construed, allows only consumers with true injury in fact to receive statutory damages. **Technical violations that do not actually harm the vast majority of consumers should not threaten the destruction, through private litigation, of vital components of America’s economic and informational systems.**

(--) Injury in fact standard necessary to preserve the First Amendment:

STEPHEN J. **NEWMAN, 2014** (BRIEF OF TRANS UNION LLC AS AMICUS CURIAE IN SUPPORT OF PETITIONER, Spokeo v. Robins, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/13-1339acTransUnionLLC-Ok-to-Print.pdf>, Accessed 6/29/2015, rwg)

Much of the FCRA attempts to protect the same interests protected by the common law of defamation or invasion of privacy. **The opinion below, however, would vastly expand FCRA liability to circumstances where no plaintiff or any putative class member suffered any actual impairment to his reputation or any other traditional tort-like injury. Here, sound Article III jurisprudence will help protect important First Amendment values. To allow uninjured consumers to participate in FCRA class actions “works speech-related harm that is out of proportion to” the statute’s goals.** See *United States v. Alvarez*, 567 U.S. ___, 132 S. Ct. 2537, 2551 (2012) (Breyer, J., concurring). **This Court recognizes that “the creation and dissemination of information are speech within the meaning of the First Amendment.** . . . Facts, after all, are the beginning point for much of the speech that is most essential to advance human knowledge and to conduct human affairs.” *Sorrell*, 131 S. Ct. at 2667 (citing *Bartnicki v. Vopper*, 532 U.S. 514, 527 (2001)) (stating that “if the acts of ‘disclosing’ and ‘publishing’ information do not constitute speech, it is hard to imagine what does fall within that category, as distinct from the category of expressive conduct”) (internal quotation marks and alterations omitted).

(--) Huge class action lawsuits will chill the First Amendment:

STEPHEN J. **NEWMAN, 2014** (BRIEF OF TRANS UNION LLC AS AMICUS CURIAE IN SUPPORT OF PETITIONER, Spokeo v. Robins, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/13-1339acTransUnionLLC-Ok-to-Print.pdf>, Accessed 6/29/2015, rwg)

Rapid advances in technology will continue to lead to new and different methods of distributing information, unless legal risk interferes. **The First Amendment, however, protects the transmission of information even if transmission occurs by means other than traditional print media.** E.g., *Lovell v. City of Griffin*, 303 U.S. 444, 452 (1938) (“every sort of publication which affords a vehicle of information and opinion”). The First Amendment also protects for-profit ventures. E.g., *Citizens United v. Fed. Election Comm’n*, 558 U.S. 310, 351-52 (2010). **The threat of a class action**

litigation seeking millions or even billions of dollars in FCRA statutory damages will have an **extraordinary chilling effect** on companies that otherwise would **expand access to publicly available information**. See *New York Times Co. v. Sullivan*, 376 U.S. 254, 294-95 (1964) (discussing how civil litigation may impair protected First Amendment activity; “public feelings may make local as well as out-of-state newspapers easy prey for libel verdict seekers”) (Black, J., concurring).

Impacts: Internet Scenario

A) Ruling for Spokeo key to the Internet:

FELICIA H. ELLSWORTH, 2014 (BRIEF FOR AMICI CURIAE EBAY INC., FACEBOOK, INC., GOOGLE INC., AND YAHOO! INC. IN SUPPORT OF PETITIONER, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/13-1339-Spokeo-Inc.-v.-Robins-Br.-for-Amici-eBay-Inc.-et-al.-Jun....pdf>, Accessed 6/29/2015, rwg)

The services offered by amici have created or transformed a wide range of industries, including electronic communications of all forms; financial transactions and online commerce; social networking; delivery of video, television, music and other media content; and the organization and accessibility of information. **Amici are proven innovators that continue to cultivate valuable technology through significant investments in research and development.** However, due to the nature of their businesses, amici engage in many activities that may be subject to federal and state laws that contain private causes of action and statutory damages provisions similar to the provisions contained in the Fair Credit Reporting Act (FCRA). Many of these laws, like FCRA, provide a private right of action for alleged violations and statutory damages. **If the Ninth Circuit's rule stands, plaintiffs may pursue suits against amici even where they are not actually harmed by an alleged statutory violation, and in certain circumstances, seek class action damages that could run into the billions of dollars. Permitting such "no-injury" lawsuits to proceed has an increasingly negative impact** on amici due to the broad-scale nature of their operations. **Amici interact with hundreds of millions of users each day, using highly efficient automated mechanisms to process and facilitate billions of transactions and interactions. These mechanisms enable amici to unlock the power of the Internet and to deliver immense value to users.** But this structure also makes amici vulnerable to the untoward consequences of the Ninth Circuit's misreading of Article III and this Court's precedent.

B) The internet solves multiple scenarios for extinction:

David Eagleman, 11/9/2010 (Neuroscientist at Baylor College of Medicine, "Six ways the internet will save civilization," <http://www.wired.co.uk/magazine/archive/2010/12/start/apocalypse-no>, Accessed 6/24/2015, rwg)

Many great civilisations have fallen, leaving nothing but cracked ruins and scattered genetics. Usually this results from: natural disasters, resource depletion, economic meltdown, disease, poor information flow and corruption. **But we're luckier than our predecessors because we command a technology that no one else possessed: a rapid communication network that finds its highest expression in the internet.** I propose that **there are six ways in which the net has vastly reduced the threat of societal collapse.** Epidemics can be deflected by telepresence **One of our more dire prospects for collapse is an infectious-disease epidemic.** Viral and bacterial epidemics precipitated the fall of the Golden Age of Athens, the Roman Empire and most of the empires of the Native Americans. **The internet can be our key to survival because the ability to work telepresently can inhibit microbial transmission by reducing human-to-human contact.** In the face of an otherwise devastating epidemic, businesses can keep supply chains running with the maximum number of employees working from home. This can reduce host density below the tipping point required for an epidemic. If we are well prepared when an epidemic arrives, we can fluidly shift into a self-quarantined society in which microbes fail due to host scarcity. Whatever the social ills of isolation, they are worse for the microbes than for us. **The internet will predict natural disasters.** We are witnessing the downfall of slow central control in the media: news stories are increasingly becoming user-generated nets of up-to-the-minute information. During the recent California wildfires, locals went to the TV stations to learn whether their neighbourhoods were in danger. But the news stations appeared most concerned with the fate of celebrity mansions, so Californians changed their tack: they uploaded geotagged mobile-phone pictures, updated Facebook statuses and tweeted. The balance tipped: **the internet carried news about the fire more quickly and accurately than any news station could.** In this grass-roots, decentralised scheme, there were embedded reporters on every block, and the news shockwave kept ahead of the fire. **This head start**

could provide the extra hours that save us. If the Pompeians had had the internet in 79AD, they could have easily marched 10km to safety, well ahead of the pyroclastic flow from Mount Vesuvius. If the Indian Ocean had the Pacific's networked tsunami-warning system, South-East Asia would look quite different today. Discoveries are retained and shared. Historically, critical information has required constant rediscovery. Collections of learning -- from the library at Alexandria to the entire Minoan civilisation -- have fallen to the bonfires of invaders or the wrecking ball of natural disaster. Knowledge is hard won but easily lost. And information that survives often does not spread. Consider smallpox inoculation: this was under way in India, China and Africa centuries before it made its way to Europe. By the time the idea reached North America, native civilisations who needed it had already collapsed. The net solved the problem. New discoveries catch on immediately; information spreads widely. In this way, societies can optimally ratchet up, using the latest bricks of knowledge in their fortification against risk. Tyranny is mitigated. Censorship of ideas was a familiar spectre in the last century, with state-approved news outlets ruling the press, airwaves and copying machines in the USSR, Romania, Cuba, China, Iraq and elsewhere. In many cases, such as Lysenko's agricultural despotism in the USSR, it directly contributed to the collapse of the nation. Historically, a more successful strategy has been to confront free speech with free speech -- and the internet allows this in a natural way. It democratises the flow of information by offering access to the newspapers of the world, the photographers of every nation, the bloggers of every political stripe. Some posts are full of doctoring and dishonesty whereas others strive for independence and impartiality -- but all are available to us to sift through. Given the attempts by some governments to build firewalls, it's clear that this benefit of the net requires constant vigilance. Human capital is vastly increased. Crowdsourcing brings people together to solve problems. Yet far fewer than one per cent of the world's population is involved. **We need expand human capital. Most of the world not have access to the education afforded a small minority. For every Albert Einstein, Yo-Yo Ma or Barack Obama who has educational opportunities, uncountable others do not. This squandering of talent translates into reduced economic output and a smaller pool of problem solvers.** The net opens the gates education to anyone with a computer. A motivated teen anywhere on the planet can walk through the world's knowledge -- from the webs of Wikipedia to the curriculum of MIT's OpenCourseWare. **The new human capital will serve us well when we confront existential threats we've never imagined before.** Energy expenditure is reduced. Societal collapse can often be understood in terms of an energy budget: when energy spend outweighs energy return, collapse ensues. This has taken the form of deforestation or soil erosion; currently, the worry involves fossil-fuel depletion. The internet addresses the energy problem with a natural ease. Consider the massive energy savings inherent in the shift from paper to electrons -- as seen in the transition from the post to email. Ecommerce reduces the need to drive long distances to purchase products. Delivery trucks are more eco-friendly than individuals driving around, not least because of tight packaging and optimisation algorithms for driving routes. Of course, there are energy costs to the banks of computers that underpin the internet -- but these costs are less than the wood, coal and oil that would be expended for the same quantity of information flow. The tangle of events that triggers societal collapse can be complex, and there are several threats the net does not address. But **vast, networked communication can be an antidote to several of the most deadly diseases threatening civilisation.** The next time your coworker laments internet addiction, the banality of tweeting or the decline of face-to-face conversation, you may want to suggest that the net may just be the technology that saves us.

Impacts: Judicial Independence

(--) **Strong legitimacy is key to judicial independence:**

Tom S. **Clark, 2011** (The Limits of Judicial Independence, pg. 7, accessed via google books, 7/10/2015, rwg)

The intent of the current project is to examine the conditions under which one should expect to see protections of judicial independence break down. I show that waning public support for the Court manifests itself in the form of institutional signals from the elected branches of government—specifically, Congress—to the Court about the Court’s standing with the public. Because the Court relies on public support in order to be an efficacious policy maker, upon observing signals of waning public support, the Court is more likely to lose judicial independence and make a decision constrained by the preferences of the elected majority.

Impacts: Manufacturing Scenario

A) A ruling for Spokeo is necessary for a healthy manufacturing sector:

National Law Review, 5/31/2015 (“No Injury? No Problem. - Spokeo v. Robins,”

<http://www.natlawreview.com/article/no-injury-no-problem-spokeo-v-robins>, Accessed 6/26/2015, rwg)

The Supreme Court recently granted certiorari in Spokeo v. Robins, a case that has the potential to redefine standing in federal court. The Ninth Circuit’s February 2014 decision permitted plaintiff Thomas Robins to establish standing under the Fair Credit Reporting Act (“FCRA”) with nothing more than a speculative injury. This contravenes Supreme Court precedent, which finds standing when a plaintiff suffers a harm that is actual, distinct, palpable, and concrete; attenuated and hypothetical injuries do not constitute an injury-in-fact. **The implications of the Ninth Circuit’s holding in Spokeo v. Robins has grabbed the attention of companies in nearly every industry. Their concern**, as expressed by the U.S. Chamber of Commerce – **granting standing to plaintiffs who have not suffered an injury-in-fact will open the flood gates to no-injury class actions** brought under statutes that authorize a private right of action. **But, in truth, the implications to businesses could extend beyond this.** Robins initiated a putative class action against Spokeo for violating the FCRA. Spokeo aggregates data from phone books, social networks, marketing surveys, real estate listings, business websites, and other sources into an online database. The FCRA regulates consumer information – including consumer credit information – that is collected, disseminated, and used in consumer reports. Spokeo allegedly posted false information about Robins’ wealth, education, and marital status. Robins claims that these misrepresentations will negatively affect his credit, insurance and employment prospects. While the Ninth Circuit found that Robins had not suffered actual damages, it ultimately held that the statutory FCRA violation satisfied Article III’s injury-in-fact requirement. The Supreme Court has granted cert to determine “[w]hether Congress can create Article III standing by authorizing a remedy for a bare statutory violation.” The FCRA engenders dozens of federal class actions each year. That number has jumped since the Ninth Circuit’s decision — 29 FCRA class actions were filed in the first four months of 2014. Many federal statutes authorize a private right of action. For example, internet firms interact with millions of individuals and are subject to numerous federal statutes with private rights of action. Facebook, eBay, Google, and Yahoo! expressed concern in their amicus brief that, under the Ninth Circuit’s holding, if any of these users was “willing (or enticed by a plaintiff’s attorney) to allege that a generalized practice or act violated a law providing a private cause of action and statutory damages, then she could launch a putative class action on behalf of herself and millions of other ‘similarly situated’ users . . . [and] pursue a multi-billion dollar statutory damages claim despite the lack of injury . . .” **What do no-injury class actions mean for manufacturers? It could mean lawsuits based on “defective products” that allegedly violate a state or federal statute but have not caused any harm.** For example, the food and beverage and cosmetic industries are often accused of misleading consumers through false advertising, labeling, and packaging. ConAgra was sued under the Magnuson-Moss Warranty Act and state consumer protection laws for advertising its cooking oils, which were made from GMOs, were 100% natural. And Maybelline was sued under state consumer fraud and consumer protection acts because its “Super Stay” lipstick allegedly didn’t stay on the advertised 10-14 hours. Under Robins, plaintiffs in these no-injury, statutory-based class actions would not need to establish that they were physically injured to survive a standing challenge. Will creative plaintiff lawyers be able to craft an argument that extends the no-injury standing rule in Robins to non-statutory violations?

B) Strong manufacturing sector key to hegemony:

Alliance for American Manufacturing, 5/7/2013 (“Report Says U.S. Military Dangerously Dependent on Foreign Suppliers,” <http://www.americanmanufacturing.org/blog/entry/report-says-u.s.-military-dangerously-dependent-on-foreign-suppliers>, Accessed 6/26/2015, rwg)

New Report Calls for Stronger U.S. Manufacturing Sector to Protect National Security Urgent action is needed to reduce the U.S. military’s dangerous dependence on foreign suppliers for the raw materials, parts, and finished products needed to defend America, according to a new study prepared by Brigadier General John Adams (U.S. Army, Retired). Remaking American Security: Supply Chain Vulnerabilities & National Security Risks Across the U.S. Defense Industrial Base was authored by Guardian Six Consulting President Brigadier General John Adams and released today at a Capitol Hill event led by Sen. Chris Murphy (D-Conn.), Rep. Mo Brooks (R-Ala.), and Rep. Tim Ryan (D-Ohio). (Watch videos from the event.) **The report finds that U.S. national security and the health of the nation’s defense industrial base are in jeopardy because of an over-reliance on foreign suppliers for critical defense materials.** Foreign sourcing puts America’s military readiness in the hands of potentially unreliable supplier nations and undermines the ability to develop capabilities needed to win on future battlefields. The report calls for action to

increase domestic production of the natural resources and manufactured goods necessary to equip our military. "**America's vulnerability today is frightening**," said General Adams. "This report is a wake-up call for America to pay attention to the growing threat posed by the steady deterioration of our defense industrial base. **Excessive and unwise outsourcing of American manufacturing to other nations weakens America's military capability**. As a soldier, I've witnessed firsthand the importance of our nation's ability to rapidly produce and field a sophisticated array of capabilities. There is a real risk that supply chain vulnerabilities will hamper our response to future threats."

C) US leadership is essential to prevent global nuclear exchange.

Zalmay Khalilzad, 1995 RAND, The Washington Quarterly, Spring 1995

Under the third option, the United States would seek to retain global leadership and to preclude the rise of a global rival or a return to multipolarity for the indefinite future. On balance, this is the best long-term guiding principle and vision. Such a vision is desirable not as an end in itself, but because **a world in which the United States exercises leadership would have tremendous advantages**. First, the global environment would be more open and more receptive to American values -- democracy, free markets, and the rule of law. Second, **such a world would have a better chance of dealing cooperatively with** the world's major problems, such as **nuclear proliferation, threats of regional hegemony by renegade states, and low-level conflicts**. Finally, **U.S. leadership would help preclude the rise of another hostile global rival, enabling** the United States and **the world to avoid another global cold or hot war and all the attendant dangers, including a global nuclear exchange**. U.S. leadership would therefore be more conducive to global stability than a bipolar or a multipolar balance of power system.

Impacts: Manufacturing Key to Economy

(--) Manufacturing sector independently key to economic health

Adrienne **Selko – 2012** (Senior Editor; Industry Week, "What Makes a Manufacturing Company Competitive? Labor Productivity," 8/6/2014, <http://www.industryweek.com/labor-employment-policy/what-makes-manufacturing-company-competitive-labor-productivity?page=2>, Accessed 9/12/2014, WSH)

With manufacturing cited (70%) as the single most important industry for a country's economic health, a recent survey asked global manufacturers which factors are necessary for achieving success in the segment. ¶ ¶ Manufacturers in Australia, Brazil, Canada, China, France, Germany, India, Mexico, Spain, the U.K., and U.S. ranked labor productivity (74%) at the top. ¶ ¶ The study, by Kronos Incorporated and conducted by IDC Manufacturing Insights, reported that while emerging nations rated the need for modern infrastructure higher than mature economies, labor productivity still topped as the main driver of success among all countries. ¶ ¶ Brazil, Mexico, and Spain scored the highest regarding labor productivity, with 82% in all three countries noting it to be very or extremely important. China, France, India, and Germany scored relatively low, with 66%, 66%, 68% and 68%. ¶ ¶ "Manufacturers today are judged on A world stage and their TREATMENT of labor is under the scrutiny of governments, downstream supply chain partners, and end consumers," explained Gregg Gordon, senior director, manufacturing practice group, Kronos and author of Lean Labor. ¶ ¶ "With developed countries facing high levels of un-employment and falling wages, emerging nations can no longer rely on low cost labor as A growth strategy," he added. "They will need to develop a skilled, productive workforce to compete globally. Also, as manufacturers seek growth internationally, they are required to invest in economic development by foreign governments; specifically good paying, local jobs. With increased global scrutiny, competition, and supply chain complexities, the workforce is becoming a competitive differentiator for manufacturers everywhere."

(--) U.S. economic failure risks multiple scenarios for nuclear war

Khalilzad '11 Zalmay was the United States ambassador to Afghanistan, Iraq, and the United Nations during the presidency of George W. Bush and the director of policy planning at the Defense Department from 1990 to 1992, "The Economy and National Security", 2-8-11, <http://www.nationalreview.com/articles/print/259024>, MCR

Today, economic and fiscal trends pose the most severe long-term threat to the United States' position as global leader. While the United States suffers from fiscal imbalances and low economic growth, the economies of rival powers are developing rapidly. The continuation of these two trends could lead to a shift from American primacy toward a multi-polar global system, leading in turn to increased geopolitical rivalry and even war among the great powers. The current recession is the result of a deep financial crisis, not a mere fluctuation in the business cycle. Recovery is likely to be protracted. The crisis was preceded by the buildup over two decades of enormous amounts of debt throughout the U.S. economy — ultimately totaling almost 350 percent of GDP — and the development of credit-fueled asset bubbles, particularly in the housing sector. When the bubbles burst, huge amounts of wealth were destroyed, and unemployment rose to over 10 percent. The decline of tax revenues and massive countercyclical spending put the U.S. government on an unsustainable fiscal path. Publicly held national debt rose from 38 to over 60 percent of GDP in three years. Without faster economic growth and actions to reduce deficits, publicly held national debt is projected to reach dangerous proportions. If interest rates were to rise significantly, annual interest payments — which already are larger than the defense budget — would crowd out other spending or require substantial tax increases that would undercut economic growth. Even worse, if unanticipated events trigger what economists call a "sudden stop" in credit markets for U.S. debt, the United States would be unable to roll over its outstanding obligations, precipitating a sovereign-debt crisis that would almost certainly compel a radical retrenchment of the United States internationally. Such scenarios would reshape the international order. It was the economic devastation of Britain and France during World War II, as well as the rise of other powers, that led both countries to relinquish their empires. In the late 1960s, British leaders concluded that they lacked the economic capacity to maintain a presence "east of Suez." Soviet economic weakness, which crystallized under Gorbachev, contributed to their decisions to withdraw from Afghanistan, abandon Communist regimes in Eastern Europe, and allow the Soviet Union to fragment. If the U.S. debt problem goes critical, the United States would be compelled to retrench, reducing its military spending and shedding international commitments. We face this domestic challenge while other major powers are experiencing rapid economic growth. Even

though countries such as China, India, and Brazil have profound political, social, demographic, and economic problems, their economies are growing faster than ours, and this could alter the global distribution of power. These trends could in the long term produce a multi-polar world. If U.S. policymakers fail to act and other powers continue to grow, it is not a question of whether but when a new international order will emerge. The closing of the gap between the United States and its rivals could intensify geopolitical competition among major powers, increase incentives for local powers to play major powers against one another, and undercut our will to preclude or respond to international crises because of the higher risk of escalation. The stakes are high. In modern history, the longest period of peace among the great powers has been the era of U.S. leadership. By contrast, multi-polar systems have been unstable, with their competitive dynamics resulting in frequent crises and major wars among the great powers. Failures of multi-polar international systems produced both world wars. American retrenchment could have devastating consequences. Without an American security blanket, regional powers could rearm in an attempt to balance against emerging threats. Under this scenario, there would be a heightened possibility of arms races, miscalculation, or other crises spiraling into all-out conflict. Alternatively, in seeking to accommodate the stronger powers, weaker powers may shift their geopolitical posture away from the United States. Either way, hostile states would be emboldened to make aggressive moves in their regions

Impacts: Manufacturing Key to Readiness

(--) Domestic steel manufacturing key to overall hegemony

AISI et al. 7- (*American Iron and Steel Institute, **Specialty Steel Industry of North America, ***Steel Manufacturers Association, ****Steel Manufacturer's Association, *****United Steel Workers, "Steel and the National Defense", http://www.ssina.com/news/releases/pdf_releases/steel_and_national_defense_0107.pdf)/WK

This analysis presented by the U.S. steel industry addresses the importance of domestically-produced steel to our nation's overall national defense objectives and the increased need for steel to bolster our economic and military security. The President and other U.S. government leaders have recognized repeatedly the critical interdependence of steel and national security. The American steel industry and the thousands of skilled men and women who comprise its workforce produce high quality, cost-competitive steel products for military use in applications ranging from aircraft carriers and nuclear submarines to Patriot and Stinger missiles, armor plate for tanks and field artillery pieces, as well as every major military aircraft in production today. These critical applications require consistent, high quality on-shore supply sources. While leading-edge defense applications represent only a small portion of overall domestic sales of steel products, defense-related materials are produced on the same equipment, using some of the same technology, and are developed by the same engineers who support the larger commercial businesses of steel companies in the U.S. Thus, the companies are not typical defense contractors who derive the majority of their sales and profits from their defense business. It is the overall financial health of U.S. steel producers, and not simply the profitability of their defense business, that is essential to their ability to be reliable defense suppliers. The domestic steel industry also believes that, over an extended period of time, the United States could lose much of its steel-related manufacturing base if U.S. steel consumers continue to move production offshore due to market-distorting foreign government incentives and due to unsound economic policies at home. If we continue to lose our manufacturing base due to market-distorting foreign competition or U.S. economic policies that are hostile to domestic investment and U.S.-based manufacturing, it could become impossible to produce here; the U.S. military would lose its principal source of strategic metals; and we as a nation would become dangerously dependent upon unreliable foreign sources of supply. The U.S. steel industry, consisting of all carbon and alloy steel producers and specialty metal producers, employs more than 160,000 highly skilled workers who produce over \$60 billion of high quality steel and high-technology specialty alloy products annually. The industry includes state-of-the-art, large and small electric arc furnace producers (or "mini mills") that make steel from recycled scrap, and highly efficient large "integrated" steel producers who make steel from virgin materials and recycled steel. Steel is produced in many forms, including flat-rolled and long products, carbon pipe and tube products, wire and other fabricated products. Carbon and alloy steel is used in all major end-use markets, including construction, automotive, machinery, appliance and containers. Specialty steels are high technology, high value materials, produced by small and medium-sized companies. These specialty metals are used in extreme environments that demand exceptional hardness, toughness, strength and resistance to heat, corrosion and abrasion, such as in the aerospace and chemical processing industries. All segments of the domestic steel industry contribute directly or indirectly to the defense industrial base. The U.S. carbon/alloy and specialty steel industries are vital partners to American defense contractors and to the DOD. Domestic and specialty metals are found in virtually every military platform. Whether it is missiles, jet aircraft, submarines, helicopters, Humvees® or munitions, American-made steels and specialty metals are crucial components of U.S. military strength. A few examples follow: 1. The Joint Strike fighter F135 engine, the gears, bearings, and the body itself, will use high performance specialty steels and superalloys produced by U.S. specialty steel companies. 2. Land based vehicles such as the Bradley Fighting Vehicle, Abrams Tank, and the family of Light Armored Vehicles use significant tonnage of steel plate per vehicle. 3. Steel plate is used in the bodies and propulsion systems of the naval fleet. 4. The control cables on virtually all military aircraft, including fighter jets and military transport planes, are produced from steel wire rope. Numerous additional examples illustrating how steel and specialty metals directly support the U.S. defense industrial base are provided in Appendices 1 and 2. These materials are an integral part of many diversified military applications and, as such, are in a continuing state of technological development. Steel's importance to the military must also be looked at in a broader context to include both direct and indirect steel shipments to the military infrastructure that are needed to support our defense efforts, both at home and overseas -- e.g., all of the steel that goes into the rails, rail cars, ground vehicles, tanks, ships, military barracks, fences and bases, which are not classified as shipments to ordinance, aircraft, shipbuilding or other military uses. The September 11 attacks on the United States made it clear that (1) steel will be needed to "harden" existing U.S. infrastructure and installations and (2) a strong and viable domestic steel industry will be needed to provide immediate steel deliveries when and where required. Consider the potential difficulties the U.S. would face in defending, maintaining and rebuilding infrastructure in an environment where our nation is largely dependent upon foreign steel. By becoming even more dangerously dependent upon offshore sources of steel, the United States would experience sharply reduced security preparedness in the face of: • Highly variable, and certainly higher, costs; • Uncertain supply, impacted by unsettled foreign economies and politics; • Quality, design and performance problems; • Inventory problems, long lead times and extended construction schedules.

(--) Military readiness prevents great power war

Spencer, 2000 – Research Fellow at Thomas A. Roe Institute for Economic Policy Studies (Jack, "The Facts About Military Readiness", Heritage Foundation, 9/15/00, <http://www.heritage.org/Research/Reports/2000/09/BG1394-The-Facts-About-Military-Readiness>)

America's national security requirements dictate that the armed forces must be prepared to defeat groups of adversaries in a given war. America, as the sole remaining superpower, has many enemies. Because attacking America or its interests alone would surely end in defeat for a single nation, these enemies are likely to form alliances. Therefore, basing readiness on American military superiority over any single nation has little saliency. The evidence indicates that the U.S. armed forces are not ready to support America's national security requirements. Moreover, regarding the broader capability to defeat groups of enemies, **military**

readiness has been declining.

The National Security Strategy, the U.S. official statement of national security objectives,¹ concludes that the United States "must have the capability to deter and, if deterrence fails, defeat large-scale, cross-border aggression in two distant theaters in overlapping time frames." According to some of the military's highest-ranking officials, however, the United States cannot achieve this goal. Commandant of the Marine Corps General James Jones, former Chief of Naval Operations Admiral Jay Johnson, and Air Force Chief of Staff General Michael Ryan have all expressed serious concerns about their respective services' ability to carry out a two major theater war strategy.² Recently retired Generals Anthony

Zinni of the U.S. Marine Corps and George Joulwan of the U.S. Army have even questioned America's ability to conduct one major theater war the size of the 1991 Gulf War.³

Military readiness is vital because declines in America's military readiness signal to the rest of the world that the United States is not prepared to defend its interests. Therefore, **potentially hostile nations will be more likely to lash out against American allies and interests, inevitably leading to U.S. involvement in combat. A high state of military readiness is more likely to deter potentially hostile nations from acting aggressively in regions of vital national interest,** thereby **preserving peace.**

Impacts: Military Readiness

(--) Tech key to military readiness:

Harrison **Donnelly**, 5/26/2015 (staff writer, “Training Technology for Readiness,” <http://www.kmimediagroup.com/mtt/articles/440-articles-mtt/training-technology-for-readiness>, Accessed 7/10/2015, rwg)

The United States faces a looming crisis of military readiness, and new training technologies could play a key role in the remedy, according to panelists at a recent government/industry event focused on the nation’s preparedness for future conflicts.

(--) Readiness is weakening now—tech is key to solve the problem:

Harrison **Donnelly**, 5/26/2015 (staff writer, “Training Technology for Readiness,” <http://www.kmimediagroup.com/mtt/articles/440-articles-mtt/training-technology-for-readiness>, Accessed 7/10/2015, rwg)

For participants in the daylong summit, concerns about readiness status have grown both because of and in spite of the past decade of conflict. Operations in Iraq and Afghanistan have created a large cadre of exceptionally skilled military personnel but also left potential gaps in the future supply, particularly of those prepared for major state-to-state combat rather than counterinsurgency. To respond to those needs, members of the panel identified a variety of “game-changing” technologies applicable to training, including social media, big data analytics, advanced metrics, digital tutoring and the latest in neuroscience research.

Impacts: Separation of Powers

A) Limited standing requirements key to Separation of Powers:

DEBORAH J. LA FETRA, 5/29/2014 (Pacific Legal Foundation, Amicus Brief, Spokeo v. Robins, <http://blog.pacificlegal.org/wp/wp-content/uploads/2014/06/AC-Brief-final-5-29-14.pdf>, Accessed 6/29/2015, rwg)

Article III standing requirements ensure that federal courts do not provide a vehicle for these types of abusive, non-injury class action lawsuits. See Lujan, 504 U.S. at 559-77 (Article III standing doctrine includes a concrete injury requirement to prevent citizen bystanders from suing about an alleged statutory violation that does not affect them personally and could be addressed by the political branches instead.). **The Constitution was designed to protect the people from governmental overreach by curtailing the orbit of all three branches.** American Federation of Labor v. American Sash and Door Co., 335 U.S. 538, 545 (1949) ("[T]he Government—the organ of the whole people—is restricted by the system of checks and balances established by our Constitution."). Federal courts must act within the constraints of Article III, resolving only the true cases and controversies presented to them. See Antonin Scalia, The Doctrine of Standing as an Essential Element of the Separation of Powers, 17 Suffolk U. L. Rev. 881, 881 (1983) (**The "judicial doctrine of standing is a crucial and inseparable element" of separation of powers principles required by the structure and original intent of the Constitution,** "which successively describes where the legislative, executive and judicial powers, respectively, shall reside."). **The decision of the court below, and several other circuits, significantly weakens these constitutional constraints.**

B) Flawed model of separation of powers causes global wars

Zakaria, 1997 editor of Newsweek International, '97 (Fareed, Foreign Affairs, November, LN)

When divining the cause behind this correlation, one thing becomes clear: the **democratic peace is actually the liberal peace.** Writing in the eighteenth century, Kant believed that democracies were tyrannical, and he specifically excluded them from his conception of "republican" governments, which lived in a zone of peace. **Republicanism, for Kant, meant a separation of powers, checks and balances, the rule of law, protection of individual rights, and some level of representation in government** (though nothing close to universal suffrage). Kant's other explanations for the "perpetual peace" between republics are all closely linked to their constitutional and liberal character: a mutual respect for the rights of each other's citizens, a system of checks and balances assuring that no single leader can drag his country into war, and classical liberal economic policies -- most importantly, free trade -- which create an interdependence that makes war costly and cooperation useful. Michael Doyle, the leading scholar on the subject, confirms in his 1997 book *Ways of War and Peace* that without constitutional liberalism, democracy itself has no peace-inducing qualities: Kant distrusted unfettered, democratic majoritarianism, and his argument offers no support for a claim that all participatory polities -- democracies -- should be peaceful, either in general or between fellow democracies. Many participatory polities have been non-liberal. For two thousand years before the modern age, popular rule was widely associated with aggressiveness (by Thucydides) or imperial success (by Machiavelli) . . . The decisive preference of [the] median voter might well include "ethnic cleansing" against other democratic polities. The distinction between liberal and illiberal democracies sheds light on another striking statistical correlation. Political scientists Jack Snyder and Edward Mansfield contend, using an impressive data set, that over the last 200 years democratizing states went to war significantly more often than either stable autocracies or liberal democracies. **In countries not grounded in constitutional liberalism, the rise of democracy often brings with it hyper-nationalism and war-mongering.** When the political system is opened up, diverse groups with incompatible interests gain access to power and press their demands. Political and military leaders, who are often embattled remnants of the old authoritarian order, realize that to succeed that they must rally the masses behind a national cause. **The result is invariably aggressive rhetoric and policies, which often drag countries into confrontation and war.** Noteworthy examples range from Napoleon III's France, Wilhelmine Germany, and Taisho Japan to those in today's newspapers, like Armenia and Azerbaijan and Milosevic's Serbia. The democratic peace, it turns out, has little to do with democracy.

(--) Must reverse the Ninth Court's decision to maintain Separation of Powers:

MARY MASSARON **ROSS, 2014** (BRIEF OF DRI - THE VOICE OF THE DEFENSE BAR AS AMICUS CURIAE IN SUPPORT OF PETITIONER, Spokeo v. Robins, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/DRI-Brief-Spokeo-Inc.-v.-Thomas-Robins-SCt-13-1339.pdf>)

Failure to address and reverse the Ninth Circuit's decision will not only provide a vehicle for individuals with no actual injury to seek and possibly obtain relief, it will also result in the increase of costly litigation against businesses and individuals that was not intended by the Framers of the United States Constitution. Additionally, the Ninth Circuit's decision to excuse plaintiffs from showing Article III injury-in- fact **undermines class certification standards and thereby encourages forum shopping**. DRI believes that **preserving the Legislature's right to create a statutory cause of action while simultaneously requiring a plaintiff to allege actual injury will safeguard the constitutionally-derived balance of powers between and among the three branches of government**, by maintaining the longstanding doctrine of standing, which is an indispensable element in our separation of powers.

(--) Standing doctrine key to separation of powers:

MARY MASSARON **ROSS, 2014** (BRIEF OF DRI - THE VOICE OF THE DEFENSE BAR AS AMICUS CURIAE IN SUPPORT OF PETITIONER, Spokeo v. Robins, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/DRI-Brief-Spokeo-Inc.-v.-Thomas-Robins-SCt-13-1339.pdf>)

The standing doctrine is a critical element of the separation-of-powers principle and the separation of powers is a fundamental method of protecting liberty. *DaimlerChrysler Corp. v. Cuno*, 547 U.S. 332, 340-342 (2006). **Under the doctrine of the separation of powers, each branch of government has powers that belong to it and cannot be transferred to another branch of government. The doctrine of standing recognizes and honors those bounds**. When a court encroaches on Article III's standing requirement by permitting a suit to proceed based on a bare statutory violation – even though the plaintiff does not have an actual injury, on the theory that the statutory violation alone confers standing, it strips Article III of its power. That is exactly what the Ninth Circuit did in this case when it held that standing is demonstrated whenever there is a “violation of a statutory right[.]” 742 F.3d at 412. This holding not only undermines respect for the law, and particularly, our federal Constitution, it also renders it difficult for DRI's members to adequately represent their clients' interests. As a result of the Ninth Circuit's decision, DRI's members are unable to predict with any accuracy the outcome of suits brought by uninjured plaintiffs under the FCRA and other similar no-harm statutes. The current circuit split further exacerbates this problem.

(--) Ruling against Robins necessary for separation of powers doctrine:

FELICIA H. **ELLSWORTH, 2014** (BRIEF FOR AMICI CURIAE EBAY INC., FACEBOOK, INC., GOOGLE INC., AND YAHOO! INC. IN SUPPORT OF PETITIONER, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/13-1339-Spokeo-Inc.-v.-Robins-Br.-for-Amici-eBay-Inc.-et-al.-Jun....pdf>, Accessed 6/29/2015, rwg)

When a statutory violation causes no actual harm, enforcement is properly left to the executive branch, not to unharmed individual plaintiffs functioning as private attorneys general. **This basic principle flows from the separation of powers, which is the foundation for Article III's standing requirement**. *Allen v. Wright*, 468 U.S. 737, 752 (1984) (“Art. III standing is built on a single basic idea—the idea of separation of powers.”); see also *Lexmark Int'l, Inc. v. Static Control Components, Inc.*, 134 S. Ct. 1377, 1386 (2014) (standing doctrine derives from “separation-of-powers principles”). **The “federal courts may exercise power only ‘in the last resort, and as a necessity,’ and only when adjudication is ‘consistent with a system of separated powers and [the dispute is one] traditionally thought to be capable of resolution through the judicial process.’** *Allen*, 468 U.S. at 752 (citation omitted); *Steel Co. v. Citizens for a Better Env't*, 523 U.S. 83, 102 (1998) (standing doctrine ensures that federal courts adjudicate only disputes “traditionally amenable to, and resolved by, the judicial process”).

Thus, only plaintiffs who can demonstrate actual harm sufficient to meet the Article III standing requirement may invoke the jurisdiction of the federal courts.

(-- Limits on standing key to Separation of Powers:

STEPHEN J. **NEWMAN, 2014** (BRIEF OF TRANS UNION LLC AS AMICUS CURIAE IN SUPPORT OF PETITIONER, Spokeo v. Robins, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/13-1339acTransUnionLLC-Ok-to-Print.pdf>, Accessed 6/29/2015, rwg)

In the present litigation (like in so many others) **a private attorney is simply seeking to collect a bounty,**

not to improve the consumer reporting system. As a practical matter, no-injury statutory damages cases impose overshadowing regulation independent of any “rational, overall agenda” for achieving an appropriate balance between innovation and consumer protection. See STEPHEN B REYER, BREAKING THE VICIOUS CYCLE: TOWARD EFFECTIVE RISK REGULATION 20 (Harvard University Press 1993). **Recognizing an Article III limit on such litigation is therefore essential to**

“prevent the judicial process from being used to usurp the powers of the political branches,”

which include assessing new technologies and their social implications, and (when necessary) taking appropriate, measured enforcement actions on behalf of the general public. See Clapper v. Amnesty Int’l USA, 568 U.S. ___, 133 S. Ct. 1138, 1146 (2013).

(-- Injury in fact requirement necessary for Separation of Powers:

STEPHEN J. **NEWMAN, 2014** (BRIEF OF TRANS UNION LLC AS AMICUS CURIAE IN SUPPORT OF PETITIONER, Spokeo v. Robins, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/13-1339acTransUnionLLC-Ok-to-Print.pdf>, Accessed 6/29/2015, rwg)

Article III’s injury-in-fact requirement “is founded in concern about the proper—and properly limited— role of the courts in a democratic society.” Summers v. Earth Island Inst., 555 U.S. 488, 492-93 (2009)

(quoting Warth v. Seldin, 422 U.S. 490, 498 (1975)). **Congress may not “transfer from the President to the courts the Chief Executive’s most important constitutional duty, to ‘take Care that the Laws be faithfully executed.’ . . .”** Lujan v. Defenders of Wildlife, 504 U.S. 555, 577 (1992) (quoting U.S. Const. art. II, § 3). Congress, of course, has the power to legislate a private remedy for an actual harm, assuming Congress is otherwise acting within the scope of its Constitutional powers. See Lujan, 504 U.S. at 578. But Article III is offended when Congress attempts to grant judicial recourse to those who have not suffered any injury in fact. Wallace v. ConAgra Foods, Inc., 747 F.3d 1025, 1030 (8th Cir. 2014). This principle applies in both individual and class cases. See Simon v. E. Kentucky Welfare Rights Org., 426 U.S. 26, 40 (1976). The procedural device of a class action may not be used to enlarge, abridge or modify any substantive right, and Congress disclaims any intent to do so. See 28 U.S.C. § 2072(b); Wal-Mart Stores, Inc. v. Dukes, 564 U.S. ___, 131 S. Ct. 2541, 2561 (2011). Thus, in a class case, the plaintiff must “demonstrate that the class members ‘have suffered the same injury,’ . . . This does not mean merely that they have all suffered a violation of the same provision of law.” Wal-Mart, 131 S. Ct. at 2551 (quoting Gen. Tel. Co. of Southwest v. Falcon, 457 U.S. 147, 157 (1982)). A class action based solely on injury in law, but with no rigorous analysis of whether the proposed class representative or any members of the proposed class suffered injury in fact (and if so, which ones), is anathema to these principles.

(-- Ninth Circuit decision undermines Separation of Powers:

STEPHEN J. **NEWMAN, 2014** (BRIEF OF TRANS UNION LLC AS AMICUS CURIAE IN SUPPORT OF PETITIONER, Spokeo v. Robins, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/13-1339acTransUnionLLC-Ok-to-Print.pdf>, Accessed 6/29/2015, rwg)

This Court has long recognized that just as Article III protects the courts from infringements on their Constitutional powers, Article III also prohibits Congress from expanding the judicial power beyond its Constitutional limits. See Marbury v. Madison, 5 U.S. (1 Cranch.) 137, 176-77 (1803). **By allowing standing for pure injury in law, with no corresponding injury in fact, the Ninth Circuit has improperly expanded the court system’s “constitutionally limited role of adjudicating actual and concrete disputes,** the resolutions of which have direct consequences on the parties involved.” See Genesis Healthcare Corp. v. Symczyk, 569 U.S. ___, 133 S. Ct. 1523, 1528 (2013).

(--) Ninth Circuit decision undermines the core of Separation of Powers:

STEPHEN J. **NEWMAN, 2014** (BRIEF OF TRANS UNION LLC AS AMICUS CURIAE IN SUPPORT OF PETITIONER, Spokeo v. Robins, <http://sblog.s3.amazonaws.com/wp-content/uploads/2014/06/13-1339acTransUnionLLC-Ok-to-Print.pdf>, Accessed 6/29/2015, rwg)

“No principle is more fundamental to the judiciary’s proper role in our system of government than the constitutional limitation of federal-court jurisdiction to actual cases or controversies.”

Simon , 426 U.S. at 37. “One essential aspect of this requirement is that any person invoking the power of a federal court must demonstrate standing to do so.” Hollingworth , 133 S. Ct. at 2660. **“The constitutional requirements for federal-court jurisdiction—including the standing requirements and Article III—‘are an essential ingredient of separation and equilibrium of powers.’”** Hein v. Freedom From Religion Found. , 551 U.S. 587, 611 (2007) (quoting Steel Co. v. Citizens for a Better Env’t , 523 U.S. 83, 101 (1998)). **The Ninth Circuit’s opinion improperly departs from the above principles.** Article III does not authorize a court to hear a dispute brought by a plaintiff who suffered no injury in fact, and Congress may not legislate through legislation what the Constitution prohibits. Certiorari should be granted so that this Court may explain how these limits should be defined and applied.

Court Politics DA Northwestern

Notes

If you're reading the Iran impact, we did not turn out additional deal good impacts – use the politics file.

Interesting visual on how the outcome of the ruling could cause significant re-districting:
<https://www.brennancenter.org/blog/supreme-court-hear-case-could-radically-change-redistricting>

The Court will rule against the plaintiffs in *Evenwel vs. Abbott* but it's not on lock – ruling for *Evenwel* ensures a Republican president in 2016 due to re-districting.

Sean **Trende, 6/3** (Sean Trende, senior elections analyst, “The Most Important Redistricting Case in 50 Years,” June 3, 2015
http://www.realclearpolitics.com/articles/2015/06/03/the_most_important_redistricting_case_in_50_years_126831.html) K.Gekker

In a pair of cases decided in 1964, the Supreme Court of the United States famously established the “one person, one vote” test. This meant that all congressional districts would be required to have the same number of people, while state legislative districts must have roughly the same number. The consequences of those decisions were both immediate and far-reaching. A wave of mid-decade redistricting swept the country, as virtually every congressional and legislative district had to be, at a minimum, tweaked to account for population discrepancies. Rural districts in particular lost representation, while the depopulation of urban centers helped usher in the rise of the suburbs in Congress.^a Last week, the Supreme Court shocked watchers by agreeing to hear a case that could have consequences of a similar magnitude. In 1966, in a follow-up to the Reynolds v. Sims decision, the court had held that states did not necessarily need to use persons as the basis for their representation schemes. Since then the court has at times been asked to adopt various different metrics. It generally resisted these entreaties, although Justice Clarence Thomas has, at times, urged the court to take up these cases.^a So most were caught off guard when the court decided to take up *Evenwel v. Abbott*. The plaintiffs in that case asked the court to clarify that only citizens should be counted for purposes of drawing legislative districts. The “why” of this is a bit complex, but it grows out of a (superficial, in my mind) tension between the 14th Amendment, which apportions voting districts on the basis of population, and the Voting Rights Act, which requires that states ensure there are a sufficient number of citizens of voting age in a given group to enable that group to elect a candidate of its choice.^d If the court were to find for the plaintiffs – and it seems unlikely that the court would have gratuitously taken up this case, absent a circuit split, if there weren't some substantial support for the plaintiffs' position – it would mean that, once again, virtually every legislative and congressional district in the country would have to be redrawn (although this would not, as some have suggested, affect apportionment – i.e. the number of seats allocated to each state). This would occur at a time when Republicans control a record-high number of state legislatures and a majority of state governments. Republicans would be able to update their maps to account for changes in political orientations in their states since the previous round of redistricting.^a But this would have implications for Democratic-controlled states as well. Consider

that in 2012, counties with high citizen populations were more likely to vote for Mitt Romney (the t-stat is 9.047). Of the 35 states with four or more congressional districts, there was a statistically significant, positive correlation between the share of county residents who were citizens and the share of voters who cast ballots for Mitt Romney in 18 of the states, most of which are among our largest: California, Colorado, Florida, Illinois, Indiana, Kentucky, Maryland, Michigan, Minnesota, Missouri, Nevada, New York, Ohio, Oregon, Pennsylvania, Texas, Virginia and Wisconsin.^a By ruling that states had to ensure an equal number of eligible voters in districts -- rather than persons -- the court would force even Democratic map makers to push districts out of heavily Democratic areas and into Republican areas. Just 78 percent of the residents of heavily Democratic Queens County are citizens, and 83 percent of similarly Democratic Kings County residents are citizens. In neighboring Nassau County, however, 91 percent of residents are citizens. In other words, 20 percent of the population in districts in Queens and Brooklyn would no longer count. To populate these districts, line drawers would be forced to push districts into Nassau County. Democrats would have a choice between weakening the Queens/Brooklyn districts, or making the remaining Nassau County districts more Republican.^a To see how this plays out in practice, consider the lawsuit brought in 2012 challenging the apportionment of the New York State Senate. The current map places nine senate districts on Long Island, 26 districts in New York City, and 28 districts upstate. These districts are of similar populations.^a But if we look at citizens of voting age (or CVAP), we see some pretty wide disparities. The average CVAP for the Long Island districts is 215,436 persons. The average CVAP for the New York districts is 191,133 persons. The average CVAP for the upstate districts is 217,759 persons. There are other ways to look at the data, but the upshot is that a successful lawsuit would probably move two senate seats out of reliably Democratic New York City and into upstate New York. New York's congressional districts are similarly apportioned between New York City, Long Island, and Upstate, so adopting CVAP would likely move a congressional district out of the city and into the swing areas upstate.^a There are other examples here: Harry Enten and Dave Wasserman note that only 41 percent of the residents of California's 34th District (downtown Los Angeles) are adult citizens; this district would probably have to be combined with most of a neighboring district (probably the 40th, where only about 40 percent of the population is adult citizens) to generate a full Hispanic-majority district. This would probably result in a new district placed in swingier areas of the state. Republican David Valadao's Central Valley district is majority non-adult citizen; Democrats would love to weaken him but would have a hard time doing so while also protecting Jim Costa's Fresno-based district. Weakening Loretta Sanchez's district would be almost unavoidable. The five districts that abut the Rio Grande River in Texas have high non-citizen populations; one would likely be eliminated and, if Republicans have their way, transferred to the heavily Republican suburbs of one of the major cities.^a You get the point. As Enten and Wasserman point out, of the 50 districts with the lowest share of adult citizens, 82 percent are represented by Democrats, while Republicans represent 38 of the 50 districts with the highest share of adult citizens. Redistricting would probably move five or 10 House seats toward the Republicans, with proportional gains likely in the state legislatures.^a I do think it is unlikely that the court will rule for the plaintiffs, but then again, I wouldn't have thought that it would take this case up without a lower court forcing its hand. If it does take the case up, **it could have serious consequences for the next president's term.**

Plan is controversial – forces the Court to reverse its Flyover Exception to the Fourth Amendment.

Guerin 15 [Gimbel, Lawyer at Gimbel, Reilly, Guerin, Brown LPP, “Drones for Aerial Surveillance by Police” 1/8/15, <http://www.grgblaw.com/wisconsin-trial-lawyers/2015/01/08/drones-for-aerial-surveillance-police/>] Reynoso

Technology’s forward progress is usually reason for celebration. New technologies can cure disease, make work easier, or improve people’s quality of life. Still, new technology can also breed controversy, and one of the most controversial pieces of new technology to appear lately has been unmanned aerial vehicles, or drones. Much of the controversy has centered on drones as used by the military, but as the technology has become cheaper, local police forces have begun to invest in drones for aerial surveillance. This raises new concerns about people’s privacy and their right to be protected from unreasonable searches under the Fourth Amendment. Aerial Surveillance and the Fourth Amendment The limits of the rights of citizens under the Fourth Amendment are often determined by cases that go before the U.S. Supreme Court. That Court has yet to hear a case about drone surveillance, but it has heard multiple cases on aerial surveillance and manned aircraft. The cases on searches by manned aircraft have tended to center on cases in which the police flew over a person’s land and spotted marijuana plants from above. In response to these cases, the Supreme Court created the Flyover Exception to the Fourth Amendment. The Flyover Exception states that a person cannot have a “reasonable expectation of privacy” with regard to things that are clearly visible to anyone flying over in a plane. Without a reasonable expectation of privacy, the Fourth Amendment does not apply, so the police do not need a warrant to perform aerial surveillance. This same argument may extend to drone searches, but it is not clear that it would. The Supreme Court has been sensitive to changes in surveillance technology in the past, and updated its doctrines to help protect people’s privacy. The fact that drones make aerial surveillance so much easier and cheaper may cause the Supreme Court to change its thinking on the issue. Wisconsin’s New Law Regardless of where the Supreme Court comes down on the ultimate limits of the Fourth Amendment, the Wisconsin legislature has already passed a law to protect its citizens. The law, 2013 Wisconsin Act 213, went into effect in April of 2014 and it requires the police to have a warrant before they use a drone to gather evidence. This protection mimics the protection that would be provided if the Fourth Amendment were extended to drone searches. However, it is important to remember that state laws are much easier to change than the Constitution, so the Supreme Court’s ultimate decision on this issue may still come to matter in Wisconsin. The law provides a variety of rights and protections to people who have been charged with a crime. If you are facing criminal charges, contact an experienced Milwaukee criminal defense attorney today to learn more about what those rights are.

Plan forces a Kennedy flip flop – past 5-4 rulings on surveillance prove.

Barnes ’13 (Robert, Supreme Court Reporter, and National Politics Editor for the Washington Post, “The supreme court dismisses Challenge to Surveillance Law”, http://www.washingtonpost.com/politics/supreme-court-dismisses-challenge-to-surveillance-law/2013/02/26/ce04b364-8042-11e2-b99e-6baf4ebe42df_story.html) Chowdhury

The Supreme Court split along ideological lines Tuesday in dismissing a challenge to an expanded federal law that allows the interception of electronic communications between foreign targets and people in the United States. Justice Samuel A. Alito Jr. wrote for the conservative majority in saying that the lawyers, journalists and human rights organizations that brought the suit cannot prove they have been caught up in the surveillance and thus may not challenge the law’s 2008 expansion. The 5 to 4 ruling did not touch on the constitutionality of the law, and challengers said it will be almost impossible now to get that issue before a court. The amendments, passed to bolster national security in the wake of terrorism threats, carry “far-reaching implications for Americans’ privacy,” said Jameel Jaffer,

deputy legal director of the American Civil Liberties Union, one of the groups that sued. “This ruling insulates the statute from meaningful judicial review and leaves Americans’ privacy rights to the mercy of the political branches.” After the Sept. 11 attacks, President George W. Bush authorized the National Security Agency to conduct warrantless wiretapping of telephone and e-mail communications in which one party was outside the U.S. and was “reasonably believed to be a member or agent of al Qaeda” or other terrorist organization. When the program came to light, the administration asked Congress to amend the Foreign Intelligence Surveillance Act to include broader powers. It allows national security officials to obtain authorization from the Foreign Intelligence Surveillance Court to track suspects for up to one year. The requests are almost never denied. In 2011, all but two of the 1,676 were approved, and those two were withdrawn by the government. Lawyers, journalists and human rights groups challenged the 2008 amendments on the day they took effect. They said some of the people they represent or those with whom they exchange information are likely targets of the surveillance, and thus their communications were being monitored as well. A panel of the U.S. Court of Appeals for the 2nd Circuit said that was enough for the lawsuit to proceed. But the Supreme Court majority Tuesday said it was not. Because information about targets is secret, there is no way for challengers to prove they are caught up in the surveillance, Alito wrote, so they have no legal grounds to challenge the law. “Simply put, [the challengers] can only speculate as to how the attorney general and the director of national intelligence will exercise their discretion in determining which communications to target,” **Alito wrote. In addition, he said it was not enough that the individuals had taken precautions to protect the confidentiality of their communications,** such as visiting their contacts rather than relying on phone calls or e-mails, Alito said. Otherwise, he said, it would be enough to get into court “simply by making an expenditure based on a nonparanoid fear.” **He was joined by Chief Justice John G. Roberts Jr. and Justices Antonin Scalia, Anthony M. Kennedy and Clarence Thomas. Justice Stephen G. Breyer said the majority was ignoring precedent — and the obvious.** He said the challengers’ fears were not speculative, but common sense. “We need only assume that the government is doing its job (to find out about, and combat, terrorism) in order to conclude that there is a high probability that the government will intercept at least some electronic communication to which at least some of the plaintiffs are parties,” Breyer wrote. **He said the court had found standing for parties in the past in which injury was “far less certain than here.” He was joined by Justices Ruth Bader Ginsburg, Sonia Sotomayor and Elena Kagan.**

Kennedy is the swing vote on *Evenwel* – empirics and data on our side.

Harold **Cook**, 5/26/15 (Harold Cook, writer and journalist who covers the supreme court, “SCOTUS taking Texas redistricting case is potentially bad news for minorities, Democrats,” Lettersfromtexas.com, <http://www.lettersfromtexas.com/2015/05/scotus-taking-texas-redistricting-case-is-potentially-bad-news-for-minorities-democrats.html>, accessed date: 7/31/15) Salehitezangi

This morning, the U.S. Supreme Court agreed to hear an obscure redistricting challenge to Texas Senate districts that, frankly, most court watchers have not paid much attention to. The case, *Evenwel v. Abbott*, had been dismissed at the trial court level. If the Supreme Court revives this case, it has the potential to turn what’s left of the Voting Rights Act on its ear, and devastate minority representation in Texas. Here’s how: currently, districts (Congressional, state House, state Senate, city council, etc.) are drawn based on total population. The plaintiffs in *Evenwel* want those districts to be drawn based only on citizen voting age population. Under their scenario, people under the age of 18

don't exist, and non-citizens don't exist. From a public policy standpoint, this flies in the face of reality, and of why governments exist and who governments serve. Children count; governments serve them in many ways, from health care to public education. And even non-citizens count – can you imagine firefighters not bothering to put out a house fire because an immigrant lives in the house? Governments serve everybody living within its geographic boundaries in some way, and they collect taxes from everybody living within those boundaries in some way – not just those who are citizens of voting age. Politically, the case has potential serious ramifications for the current make-up of the Senate, and if the plaintiffs prevailed, it would almost certainly mean fewer minority Senators holding office. The current map was drawn using total population. Under the plaintiff's scheme, the state would be required to draw maps using only citizen voting age population, not total population. Thrown out of the count would be everybody under the age of 18, and everybody who isn't a citizen. The Hispanic population in Texas is very young (in fact, Texas in general is very young – more than 25% of Texans are children). And Texas had an estimated 1.7 million non-citizen residents as of 2010. These residents are counted in the census (as they should be, even redistricting aside, since the funding for many federal programs depends on it). These residents also live disproportionately in the Senate districts of current minority Senators and/or Senators of minority voters' choice – mostly in urban and South Texas. if these children and non-citizens suddenly didn't count toward the totals in map-drawing, the districts of most if not all of the racial minorities currently in the Texas Senate would necessarily become much larger, since the one man-one vote principle dictates that districts be roughly the same population. Since there are only so many minority Texans to go around, plus other Texans who ally themselves with minorities, it is entirely possible that these larger districts would elect fewer minority Senators, or Senators of minority Texans' choice regardless of the Senator's ethnicity. Senator Sylvia Garcia's urban and Hispanic-heavy Houston district, for example, was drawn based on its total population of 812,881 people, but only contains 383,985 citizens of voting age. Meanwhile, quick-and-dirty math dictates that the new ideal citizen age voting population of any Senate district would be 522,508. Her district would have to be re-drawn to be significantly larger if the plaintiffs prevailed. While other districts' mileage may vary, this scenario would be the rule, not the exception, in other Senate districts currently holding a significant minority population. **If the plaintiffs prevailed, the net result would be less minority representation, and presumably less Democratic representation,** since all current Senate officeholders who represent a definitive minority population are Democrats, and with the exception of Senators Watson and Whitmire, are themselves racial minorities. The bottom line is that if the plaintiffs prevail, **it's devastating news for minorities, Democrats, and progressives.** Which is one key reason why conservative organizations support the lawsuit. **The good news: just because the Supreme Court opted to hear this case doesn't mean the plaintiffs will prevail.** Accepting a case only requires that four justices want it. But **for a plaintiff to win a case requires that five justices agree with the plaintiff's argument.** **As is usual in voting rights and redistricting litigation, all eyes will be on Justice Kennedy – the perennial swing vote on such matters.** The court will take up the case in its next session, which begins in October. Keep your seat belts fastened.

Irrespective of the primary outcome, a Republican president will rollback the Iran deal.

Jackson 7/14/15 [David Jackson has been a reporter for more than three decades, and now covers the White House for USA TODAY. "Republican presidential candidates slam Iran deal" [usatoday.org](http://onpolitics.usatoday.com/2015/07/14/republican-2016-candidates-iran-deal/) (July 17, 2015)<http://onpolitics.usatoday.com/2015/07/14/republican-2016-candidates-iran-deal/>] sheikh

Republican presidential candidates have found a new election issue: Iran. Members of the large Republican field raced Tuesday to denounce the nuclear agreement with Iran, saying the Islamic government cannot be trusted to give up the means to make nuclear weapons. Former Florida governor Jeb Bush called it a “dangerous, deeply flawed, and short-sighted” package. “A comprehensive agreement should require Iran to verifiably abandon – not simply delay – its pursuit of a nuclear weapons capability,” he said. Sen. Lindsey Graham, R-S.C., called the agreement a “nightmare” for Israel, the Middle East, and the world. Marco Rubio, a Florida senator who will be in a position to vote on the deal, said the Obama administration made too many concessions. He also suggested it would be difficult for Congress to override a presidential veto of a resolution of disapproval. Said Rubio: “It will then be left to the next President to return us to a position of American strength and re-impose sanctions on this despicable regime until it is truly willing to abandon its nuclear ambitions and is no longer a threat to international security.” Wisconsin Gov. Scott Walker, who kicked off his campaign yesterday, blasted the agreement as well. “President Obama’s nuclear agreement with Iran will be remembered as one of America’s worst diplomatic failures.” He again pledged to kill it if he wins office. Hillary Clinton the Democratic presidential front-runner and former secretary of State who criticized Obama’s pledge to explore diplomacy with Iran during their 2008 Democratic primary battle, expressed tentative support Tuesday for the new accord “Based on what I know now, this is an important step in putting a lid on Iran’s nuclear program,” she told reporters on Capitol Hill Tuesday. She added, however, that “this agreement will have to be enforced relentlessly.” Others in the Democratic field were also supportive Vermont Sen. Bernie Sanders called it “a victory for diplomacy over saber-rattling and could keep the United States from being drawn into another never-ending war in the Middle East.” Former Virginia senator Jim Webb said: “This is an important moment in terms of the future of American foreign policy. I look forward to reading and examining the agreement.” The GOP field, on the other hand, was unanimous in their criticism. “Shame on the Obama administration for agreeing to a deal that empowers an evil Iranian regime to carry out its threat to ‘wipe Israel off the map’ and bring ‘death to America,’” former Arkansas governor Mike Huckabee said in a statement. Donald Trump called it “very dangerous.” Kentucky Sen. Rand Paul tweeted that the agreement was “unacceptable” and that he planned to vote against it. Retired neurosurgeon Ben Carson said the agreement was “almost certain to prove an historic mistake with potentially deadly consequences.” Another Republican senator, Ted Cruz of Texas, called it a “staggeringly bad deal” that he would try to thwart. “It is a fundamental betrayal of the security of the United States and of our closest allies, first and foremost Israel,” Cruz said. Carly Fiorina cited opposition from U.S. allies to dispute Obama’s claim that the deal reduces the chances of a nuclear arms race in the Middle East. “Our Arab allies have said just the opposite, so has Israel, so there is reason for suspicion here that’s not partisan,” Fiorina said on CBS This Morning. Louisiana Gov. Bobby Jindal focused his criticism not only on Obama but also Clinton. “If Secretary Clinton goes along with President Obama’s efforts to appease Iran, it will make our enemies stronger,” Jindal said in a statement. Former Texas governor Rick Perry took a similar tack. “Secretary Clinton, who played a significant role in initiating these negotiations with Iran, will have to justify to the American people why she supports allowing a known state sponsor of terrorism to move toward obtaining a nuclear weapon,” Perry said. Obama said earlier he welcomed “scrutiny” of the agreement. “I am confident that this deal will meet the national security interests of the United States and our allies,” Obama said at the White House. White House officials have questioned whether any Republican president would actually gut the agreement because it would undercut allies who signed into it. Former Obama senior adviser Dan Pfeiffer tweeted Tuesday that “none of these GOP contenders would end this Iran Deal if they got to the White House” because it would “massively damage US in the world.”

Deal necessary to prevent nuclear annihilation—get the foot in the door for future reforms

Cirincione, president of the Ploughshares Fund, **7/9/2015**

(Joe, “What You Need to Know About the Coming Deal With Iran,”

http://www.huffingtonpost.com/joe-cirincione/what-you-need-to-know-abo_b_7763516.html)

What about Iran's support for terrorism, human rights record, it's recognition of Israel? Is that in any way part of these negotiations?¶ These are deeply troubling aspects of Iran's regional behavior. This is not a pleasant regime. Iran executes about a thousand people a year, more than any other country in the world. They support Hamas and Hezbollah, who are foes of our ally, Israel. We disapprove of a lot of Iran's behavior in the region, but that's not what this negotiation is about.¶ As I wrote earlier this year, "Iran's deplorable record is not a reason to walk away. It is the very reason we must hammer out an iron-clad agreement to ensure Iran cannot get its hands on a nuclear bomb."¶ We negotiate with untrustworthy or "evil" governments all of the time. One of the greatest achievements of the 20th century was our ability to work with the Soviet Union, a country that Reagan called an "evil empire," **to avoid nuclear annihilation**. That moniker was well deserved. Stalin's purges murdered millions of Russians. Political opponents were rounded up, given show trials and executed. They were sent to gulags where they were worked to death or simply disappeared. His successors supported scores of groups fighting against America and our allies.¶ But cooperation with the Soviets not only prevented a nuclear war, it also led to a series of security, economic and political agreements that helped stabilize the world and led to the gradual demise of the Soviet empire.¶ When Nixon toasted Mao in Beijing in 1972, the Chinese Communist Party was arming the North Vietnamese, who had killed over 2,000 American soldiers in Vietnam the previous year. But the relationship they brokered shifted global relations and resulted in dramatic changes in China that have made better lives for hundreds of millions of Chinese.¶ Negotiating with corrupt, brutal and often despicable governments is necessary to prevent even greater evils. This time, we are doing it to make sure that a dangerous regime does not get the bomb. Certainly that is an endeavor that is worth our effort.¶ If we try to load every single one of our concerns into this negotiation, we will break the table. You can't possibly resolve all those issues at once, so we are taking care of the most threatening, which is the nuclear program. As bad as Iran's behavior is, it might be worse if they actually got a nuclear weapon. And then we'll see if this opens up new channels of communication, and avenues for addressing these other issues.¶ If there is a good deal, or a good enough deal, over time that will have some kind of moderating influence on the Iranian government, on its behavior in its neighborhood and also on domestic issues as well?¶ I do think that, and I'm informed by human rights activists and civic activists inside Iran.¶ Research conducted by experts from the International Campaign for Human Rights in Iran, has shown that Iranians themselves believe that a nuclear agreement between Iran and world powers will lead to internal political and cultural reforms in Iran. A recent report shows that "sixty-one percent [of Iranians] believe a deal would enable political and cultural reforms, as a politically strengthened Rouhani administration could now turn its focus to such issues."¶ The Executive Director of the Campaign, Hadi Ghaemi, believes that the nuclear agreement will "will have the potential to validate voices of moderation and embolden those who have called for a loosening of the political and cultural environment in Iran." Indeed, the Campaign asserts that, "every poll undertaken has confirmed Iranian society's strong support for the nuclear negotiations, and the resounding electoral win of the centrist Hassan Rouhani reflects society's desire for greater political and social freedoms."¶ Activists inside Iran see it as a beginning. As a way to empower Rouhani, who campaigned not just on economic stimulation, but on opening up freedoms for the Iranian people, and establishing a more moderate government. They think this will empower him and could be the opening that they're looking for.¶ That's why you saw these massive

crowds greet even the interim agreement in April. Foreign Minister Zarif was mobbed on the way home from the airport not because they reached some complicated agreement on inspections and the nuclear program, but because they see this as a ray of hope, the beginning of change in the regime. Whether that will happen, we don't know. That will require a lot of struggle. But yes, I think this deal could be the beginning of big change inside Iran, and in Iran's relationship with us and its neighbors, including Israel.¶ Are the U.S. and its negotiating partners hypocrites in these negotiations? In that all of them possess nuclear weapons, and no one has called Israel on their nuclear arsenal?¶ This is a point the Iranians make quite often. The five permanent members of the Security Council all have nuclear weapons. The U.S. and Russia have thousands of nuclear weapons, about ninety six percent of all the weapons in the world. So this is a point.¶ Israel has somewhere around one hundred weapons in an undeclared arsenal. This is also a point.¶ But there are other means of addressing these arsenals, in the United Nations and in the Nonproliferation Treaty process, but we're not talking about those now, we're talking about the Iranian program. The Iranians swore when they signed the Nonproliferation Treaty, that they would not undertake nuclear weapons research. We caught them building secret facilities, in violation of the treaty. That's why sanctions were imposed, that's why we are talking about it now.¶ Is it an hypocrisy problem? Do we have a problem, as long as we are maintaining thousands of weapons and telling Iran they can't have one? Yes, but the legal and diplomatic arguments outweigh that at this point, and they're on our side. We are going to stop this program -- and that may create the diplomatic and political space for us to further reduce our own obsolete nuclear arsenal.

2NC Uniqueness

Will rule against plaintiffs.

The new look at "one person, one vote," made simple, SCOTUSblog (Jul. 27, 2015, 12:01 AM),
<http://www.scotusblog.com/2015/07/the-new-look-at-one-person-one-vote-made-simple/>]
sheikh

The Constitution's text, of course, is not much help: it just insists on equality, period. And the constitutional doctrine of "one person, one vote" is not self-defining, so the Court has to make it functional. Those two cases will come up for hearings at the Court's next Term, and will be decided by next summer. Probably the more important of the two, in terms of constitutional meaning, is the case over the maps drawn up by the Texas state legislature in 2013, for filling the thirty-one seats in the state senate. Its starting point was total population, divided by thirty-one. It came close to equality: the largest-to-smallest numbers gap was 8.04 percent, definitely within the ten percent the Court has allowed. But those maps were challenged by two voters, Sue Evenwel and Edward Pfenninger, who regularly exercise their right to vote. They interpret "one person, one vote" to require equality of voters, so they argue that the Constitution requires voting-age population to be the starting point. Each of them lives in a district where the voting-age population is considerably larger than in some other districts, so they argue that their votes are diluted, comparatively. In other words, it takes more of them to decide an election in their district, so their votes are less weighty. If there is an "ideal" district in terms of numbers, Evenwel says, her district is thirty-one percent larger, and Pfenninger says that his is forty-nine percent larger. They sued in a three-judge federal district court, but lost. The judges ruled that the choice of the population starting point is one for the legislature to make. The starting point, that court said, goes directly to "the nature of representation," and that should be a choice made by the elected representatives of the people. The other case the Court will take up has a curious twist to it. It involves a decision by the voters of Arizona in 2000 to take away from its legislature the power to redistrict, and give it to an independent commission, with the specific aim of taking the process out of partisan maneuvering. And yet the case as it reached the Court is based upon an accusation that the redistricting commission itself yielded to partisan preferences, in a way that contradicts "one person, one vote." Another curious facet of that case is that the challengers are not asking the Court to rule that "partisan gerrymandering" is itself unconstitutional, only that it cannot be used when the result is unequal districts. (The Court has never ruled against partisan gerrymandering, as such, concluding that it has no idea how to judge when there has been too much partisanship.) By the way, this case involves the same Arizona redistricting commission that the Court examined last Term, ruling that it did not violate the Constitution or federal law for the voters to assign the task of redistricting congressional seats to a body other than the legislature. The new case is focused on the commission's separate power to redistrict the state legislature — a power that no one questions was a valid choice for Arizona voters to make. It is the result of the commission's work in 2012, following the 2010 census, that produced the challenge. A group of voters sued in a three-judge district court, claiming that the maps were unconstitutional because the commission packed more non-minority voters into Republican-dominated districts, making them larger, and put

minority voters into smaller, normally Democratic districts, with the result of voter dilution in the GOP districts and a violation of “one person, one vote.” Although the district court found that partisan considerations had played some role, it ruled that those efforts were not responsible for the numbers gaps in the resulting districts. The main motivation of the legislature, that court found, was to enhance the prospect that the maps would get official approval from the U.S. Department of Justice, under the federal Voting Rights Act. The intent, the court found, was to enhance minority voting influence across the state, in a bid for federal government acceptance at a time when that acceptance was necessary for a state like Arizona; it is no longer necessary because the Supreme Court has since put an end to the need for some states to get federal approval. When the Supreme Court accepted the Arizona case for review, it said it would confront two questions: whether a desire for partisan advantage justified the packing plan that distorted voters’ influence between districts, in violation of “one person, one vote” principles, and whether a desire to get Justice Department endorsement justified the creation of unequally sized districts in violation of those same principles. The commission tried to persuade the Justices to simply uphold the district court’s rejection of the challenge, arguing that any partisan influence was minimal, and that the need to satisfy the Justice Department was a valid justification for the maps that resulted. The Court took on the case, anyway. One of the complications of this case is that there is a clear disagreement between the two sides on just what was done, and why, raising the prospect that the case may not turn out to be a particularly good test case on the larger constitutional issues that the voters’ appeal insisted are at stake. Incidentally, the Arizona case does not involve the issue of the population metric to be used under the “one person, one vote” doctrine. The commission began with total population. It is likely that, as the two cases develop further, the Justice Department will decide to take a part in them — especially to offer its views on what population starting point map-drafters should use.

Court empirically split on constitutionality of broad-sweeping surveillance – 5-4 decisions prove and Kennedy is the swing.

Barnes '13 (Robert, Supreme Court Reporter, and National Politics Editor for the Washington Post, "The supreme court dismisses Challenge to Surveillance Law", http://www.washingtonpost.com/politics/supreme-court-dismisses-challenge-to-surveillance-law/2013/02/26/ce04b364-8042-11e2-b99e-6baf4ebe42df_story.html) Chowdhury

The Supreme Court split along ideological lines Tuesday in dismissing a challenge to an expanded federal law that allows the interception of electronic communications between foreign targets and people in the United States. Justice Samuel A. Alito Jr. wrote for the conservative majority in saying that the lawyers, journalists and human rights organizations that brought the suit cannot prove they have been caught up in the surveillance and thus may not challenge the law's 2008 expansion. The 5 to 4 ruling did not touch on the constitutionality of the law, and challengers said it will be almost impossible now to get that issue before a court. The amendments, passed to bolster national security in the wake of terrorism threats, carry "far-reaching implications for Americans' privacy," said Jameel Jaffer, deputy legal director of the American Civil Liberties Union, one of the groups that sued. "This ruling insulates the statute from meaningful judicial review and leaves Americans' privacy rights to the mercy of the political branches." After the Sept. 11 attacks, President George W. Bush authorized the National Security Agency to conduct warrantless wiretapping of telephone and e-mail communications in which one party was outside the U.S. and was "reasonably believed to be a member or agent of al Qaeda" or other terrorist organization. When the program came to light, the administration asked Congress to amend the Foreign Intelligence Surveillance Act to include broader powers. It allows national security officials to obtain authorization from the Foreign Intelligence Surveillance Court to track suspects for up to one year. The requests are almost never denied. In 2011, all but two of the 1,676 were approved, and those two were withdrawn by the government. Lawyers, journalists and human rights groups challenged the 2008 amendments on the day they took effect. They said some of the people they represent or those with whom they exchange information are likely targets of the surveillance, and thus their communications were being monitored as well. A panel of the U.S. Court of Appeals for the 2nd Circuit said that was enough for the lawsuit to proceed. But the Supreme Court majority Tuesday said it was not. Because information about targets is secret, there is no way for challengers to prove they are caught up in the surveillance, Alito wrote, so they have no legal grounds to challenge the law. "Simply put, [the challengers] can only speculate as to how the attorney general and the director of national intelligence will exercise their discretion in determining which communications to target," Alito wrote. In addition, he said it was not enough that the individuals had taken precautions to protect the confidentiality of their communications, such as visiting their contacts rather than relying on phone calls or e-mails, Alito said. Otherwise, he said, it would be enough to get into court "simply by making an expenditure based on a nonparanoid fear." He was joined by Chief Justice John G. Roberts Jr. and Justices Antonin Scalia, Anthony M. Kennedy and Clarence Thomas. Justice Stephen G. Breyer said the majority was ignoring precedent — and the obvious. He said the challengers' fears were not speculative, but common sense. "We need only assume that the government is doing its job (to find out about, and combat, terrorism) in order to conclude that there is a high probability that the government will intercept at least some electronic communication to which at least some of the plaintiffs are parties," Breyer wrote. He said the court had found

standing for parties in the past in which injury was "far less certain than here." He was joined by Justices Ruth Bader Ginsburg, Sonia Sotomayor and Elena Kagan.

Kennedy is pro-surveillance – him changing his vote would cause a loss of court capitol

Matt **Berman, '13** (Matt Berman, Assistant Editor, "How Justice Anthony Kennedy Helped Bring You the Surveillance State," July 9, 2013, <http://www.nationaljournal.com/nationalsecurity/how-justice-anthony-kennedy-helped-bring-you-the-surveillance-state-20130709>) K.Gekker

In 1989, the Supreme Court ruled 7-2 in *Skinner v. Railway Labor Executives*, a decision that upheld drug-testing programs for the railroad industry. The majority opinion, written by Justice Anthony Kennedy, gave the government broad power to drug-test public workers as a means of protecting public safety. Back then, the ruling was a big deal for those concerned about drug use in the workplace. But now it has become a major part of the legal basis for the recently unveiled National Security Agency surveillance programs. On Sunday, The New York Times' Eric Lichtblau reported that the secret FISA court that oversees intelligence operations and surveillance issues uses the doctrine of "special needs" established in Skinner as a means of justifying increased government surveillance without overriding the Fourth Amendment right to a warrant for searches and seizures. As Lichtblau writes, this applies to the mountains of metadata collected by the NSA. In *Skinner*, that doctrine meant that taking blood and urine samples in a drug test was minimal enough of a privacy invasion—with large enough of a public-safety benefit—that it fit a "special needs" exception to the Fourth Amendment. In his majority opinion, Justice Kennedy, who was also joined by Justice Antonin Scalia, explained why this exception made sense: In most criminal cases, we strike this balance in favor of the procedures described by the Warrant Clause of the Fourth Amendment.... Except in certain well-defined circumstances, a search or seizure in such a case is not reasonable unless it is accomplished pursuant to a judicial warrant issued upon probable cause.... We have recognized exceptions to this rule, however, "when 'special needs, beyond the normal need for law enforcement, make the warrant and probable cause requirement impracticable.' " (*Griffin v. Wisconsin*) When faced with such special needs, we have not hesitated to balance the governmental and privacy interests to assess the practicality of the warrant and probable cause requirements in the particular context. In his dissent in *Skinner*, Justice Thurgood Marshall (joined by Justice William Brennan) was none-too-pleased with the idea of a "special needs" exception to the right to a warrant. "The process by which a constitutional 'requirement' can be dispensed with as 'impracticable' is an elusive one to me," he wrote. The entire dissent is an incredibly strong argument against the idea of a flexible Fourth Amendment. While it obviously applied to the case at hand, Marshall's argument is broad enough to reflect on Fourth Amendment issues that could come in the future. Excerpts here, with our emphasis: Constitutional requirements like probable cause are not fair-weather friends, present when advantageous, conveniently absent when "special needs" make them seem not. In widening the "special needs" exception to probable cause to authorize searches of the human body unsupported by any evidence of wrongdoing, the majority today completes the process begun in [*New Jersey v. T. L. O.*] of eliminating altogether the probable-cause requirement for civil searches--those undertaken for reasons "beyond the

normal need for law enforcement." Ante, at 619 (citations omitted). In its place, the majority substitutes a manipulable balancing inquiry under which, upon the mere assertion of a "special need," even the deepest dignitary and privacy interests become vulnerable to governmental incursion. . . . The fact is that the malleable "special needs" balancing approach can be justified only on the basis of the policy results it allows the majority to reach. The majority's concern with the railroad safety problems caused by drug and alcohol abuse is laudable; its cavalier disregard for the text of the Constitution is not. There is no drug exception to the Constitution, any more than there is a communism exception or an exception for other real or imagined sources of domestic unrest. . . . Because abandoning the explicit protections of the Fourth Amendment seriously imperils "the right to be let alone--the most comprehensive of rights and the right most valued by civilized men," *Olmstead v. United States*, 277 U. S. 438, 478 (1928)[***676] (Brandeis, J., dissenting), I reject the majority's "special needs" rationale as unprincipled and dangerous. . . . I believe the Framers would be appalled by the vision of mass governmental intrusions upon the integrity of the human body that the majority allows to become reality. The immediate victims of the majority's constitutional timorousness will be those railroad workers whose bodily fluids the Government may now forcibly collect and analyze. But ultimately, today's decision will reduce the privacy all citizens may enjoy, for, as Justice Holmes understood, principles of law, once bent, do not snap back easily. . . . It's reasonably crazy to imagine that Justice Marshall saw the government collection of metadata coming, or that he even had any idea that in the future "metadata" would be a thing. But it's not too crazy to think that this exact same constitutional argument and rationale could be used to protest NSA surveillance today.

Kennedy supports unlimited surveillance now – studies prove National Journal, Berman, 15

Berman, 7/9/2013, "A decades-old, relatively obscure Supreme Court decision is now the basis for the NSA's collection of metadata.", National Journal, July 9, 2013, <http://www.nationaljournal.com/nationalsecurity/how-justice-anthony-kennedy-helped-bring-you-the-surveillance-state-20130709>, Hsiao

Link – Surveillance

Court action concerning surveillance gets messy – court action with ACLU v. Clapper prove

Graham 15 (David, staff writer at *The Atlantic* where he covers US politics and global news

“Does The PATRIOT Act Allow Bulk Surveillance? 5/7/15

<http://www.theatlantic.com/politics/archive/2015/05/does-the-patriot-act-allow-bulk-surveillance/392651/>) Foronda

There are two concurrent debates about the National Security Agency's bulk collection of telephone metadata. One is whether the program violates the Fourth Amendment because it's a warrantless search or seizure. The second is a statutory question: Does the law Congress passed authorize it in the first place? A panel of federal judges on the Second Circuit Court of Appeals ruled Thursday morning in ACLU v. Clapper that the collection program isn't authorized by Section 215 of the PATRIOT Act, which the government has cited to justify the program. In short, the judges ruled that the law doesn't allow the government to collect domestic phone records, because that's not what Congress authorized in the first place. The ACLU brought the lawsuit against James Clapper, the director of national intelligence, less than a week after Edward Snowden revealed the NSA surveillance programs in 2013. One of Snowden's first disclosures was a federal surveillance-court order for Verizon to hand over all of its domestic telephone metadata records to the NSA for a three-month period. That included records from the ACLU and its New York state chapter, both of which were Verizon customers at the time. The Second Circuit's decision only partially addresses the lower court's ruling. While the ACLU asked the appeals court to rule on the constitutional aspect, Judge Gerard Lynch, who wrote the opinion for the panel, ruled that the fact that the program wasn't allowed by Section 215 meant the broader Fourth Amendment questions didn't need to be answered. At the same time, he acknowledged serious questions about its constitutionality: "Because we conclude that the challenged program was not authorized by the statute on which the government bases its claim of legal authority, we need not and do not reach these weighty constitutional issues." The opinion by Lynch—who was appointed to the federal bench by Bill Clinton and elevated to the Second Circuit by President Obama—reads as a strong rebuke of the government's arguments. (As Orin Kerr noted at the time of oral arguments, the panel was a good draw for the ACLU.) "[Section] 215 does not permit an investigative demand for any information relevant to fighting the war on terror, or anything relevant to whatever the government might want to know. It permits demands for documents 'relevant to an authorized investigation,'" Lynch wrote. "We agree with appellants that the government's argument is 'irreconcilable with the statute's plain text.'" The panel also rejected the argument, successfully advanced by the government at the lower court, that people contesting the bulk collection don't have standing to challenge the law. The Supreme Court rejected a similar suit in 2013 because the plaintiffs could not prove they were affected by a bulk-collection program. On Thursday, the panel that the ACLU had met that threshold: "The government's own orders demonstrate that appellants' call records are indeed among those collected as part of the telephone metadata program. Nor has the government disputed that claim." Citing the debate since Edward Snowden revealed the bulk-collection program, Lynch also rejected the idea that legislators might have justified the program without entirely understanding it. "Congress cannot reasonably be said to have ratified a program of

which many members of Congress—and all members of the public—were not aware," he wrote. "The widespread controversy that developed, in and out of Congress, upon the public disclosure of the program makes clear that this is not a situation in which Congress quietly but knowingly adopted the FISC's interpretation of [Section] 215 because there was no real opposition to that interpretation." The circuit-court decision vacates the district-court ruling and sends it back to be reheard. In the lower court, Judge William Pauley ruled against the ACLU on constitutional grounds in December 2013. The metadata program doesn't violate the Constitution, he said, because citizens were handing their information over to a third party—their phone companies—which then gave it to the federal government. Under the Supreme Court's 1979 decision in Smith v. Maryland, Judge William Pauley said there was no expectation of privacy for information given to third parties. But that doctrine is now disputed. The very same month, a federal judge in the D.C. District said that Smith wasn't really relevant, due to advances in communication technology. As such, Judge Richard Leon ruled against the program on constitutional grounds. Of course, just as the Second Circuit overturned the district judge, Leon could see his decision reversed or vacated by the D.C. Circuit. There's been no decision yet; oral arguments took place in November. Meanwhile, the Ninth Circuit has also heard a case about NSA collection. In short: **It's all a big mess, with various courts siding with both the government and plaintiffs, on both statutory and constitutional grounds.** If the circuits end up with conflicting decisions, the Supreme Court could be forced to weigh in on the surveillance program. But there's a good chance it won't come to that. The Second Circuit didn't order collection be stopped, noting that Section 215 expires on June 1. There's a fight going on in Congress about how to best handle the expiration, with cleavages among Democrats and Republican and between the House and Senate. Civil-liberties-focused lawmakers want to constrain the program, while Senate Majority Leader Mitch McConnell favors a simple extension. And if Congress can't reach a deal and the law expires, that would resolve the issue as well.

Supreme Court considers ruling NSA programs – support from only two justices means the rest are unsure – can damage Court's jurisdiction to protect the 4th Amendment

Hurley, 14 (Lawrence, editor for Huffington Post, "Supreme Court Will Likely Rule On NSA Programs, Antonin Scalia And Ruth Bader Ginsburg Suggest," The Huffington Post, 4/17/14, http://www.huffingtonpost.com/2014/04/17/supreme-court-nsa_n_5170559.html) Zhang

Two members of the U.S. Supreme Court indicated on Thursday night that the court will ultimately have to decide the legality of National Security Agency surveillance activities. The two justices, Antonin Scalia and Ruth Bader Ginsburg, made the comments during a public event at the National Press Club in Washington. They were responding to questions posed by journalist Marvin Kalb about whether the court would take up cases arising from the recent disclosures about NSA surveillance, most notably by former NSA contractor Edward Snowden. The justices did not discuss specific NSA programs. There are various lawsuits pending around the country challenging the government's widespread collection of telephone records. A federal judge in Washington, D.C., ruled in December that the program was probably unlawful, while a judge in New York held later that month that it was not. Both cases are now on appeal. Scalia, a

leading conservative justice, said the court was not the best body to decide major national security issues because of its lack of expertise. But he indicated that the court would likely decide the issue of whether widespread gathering of telecommunications data violates the Fourth Amendment, which bars unlawful searches and seizures.”The institution that will decide that is the institution least qualified to decide it,” Scalia said. The legal question is about “balancing the emergency against the intrusion” on the individual, he said. Ginsburg, one of the court's liberal members, said the justices would have little choice but to decide the matter should it come before them.”We can't run away and say, 'Well, we don't know much about that subject so we won't decide it,'” she said.

Unanimous ruling on cellphones suggest a consensus on privacy protection – accusing pro-surveillance arguments and creates split

Timberg, 14 (Craig, a national technology reporter for The Washington Post, specializing in privacy, security and surveillance. Since joining The Post in 1998, he has been a reporter, editor and foreign correspondent and has co-authored a book, “Tinderbox: How the West Sparked the AIDS Epidemic and How the World Can Finally Overcome It.” He contributed to the Post’s Pulitzer Prize-winning coverage of the NSA, “Supreme Court cellphone ruling hints at broader curbs on surveillance,” Washington Post, 6/25/14, http://www.washingtonpost.com/business/technology/supreme-court-cellphone-ruling-hints-at-broader-curbs-on-surveillance/2014/06/25/2732b532-fc9b-11e3-8176-f2c941cf35f1_story.html) Zhang

The words “National Security Agency” appear nowhere in the Supreme Court’s opinion Wednesday prohibiting cellphone searches without a warrant. But the unanimous ruling makes clear that the nation’s most important jurists are tuned in to the roiling debate about high-tech surveillance and concerned about government officials going too far.”In broad, passionate language — spiked with the occasional joke — the ruling by Chief Justice John G. Roberts Jr. asserts that the vast troves of information police can find in modern cellphones are no less worthy of constitutional protection than the private papers that Founding Fathers once kept locked in wooden file cabinets inside their homes.”Roberts even chides the government for arguing that searching a cellphone is “materially indistinguishable” from searches of other items that can be seized at the scene of an arrest, such as a pack of cigarettes or a handwritten note. “That is like saying a ride on horseback is materially indistinguishable from a flight to the moon. Both are ways of getting from point A to point B, but little else justifies lumping them together,” he wrote. Such declarations, experts said, suggest a willingness to reconsider legal rulings long used to justify modern surveillance tools. A footnote in Wednesday’s ruling cautions against assuming too much about the court’s views on data collection “under other circumstances.” But legal experts on both sides of the privacy debate took notice of the unanimity of the ruling and the uncommonly strong language Roberts used when describing the privacy risks in modern technologies. The ruling on cellphone searches, experts said, suggested that the court’s consensus has grown on such issues over the past two years, a period in which the revelations made by former NSA contractor Edward Snowden have sparked international controversy over the privacy implications of high-tech government spying.”The Supreme Court ruling, said former NSA general counsel Stewart A. Baker, “shows that the judges have the same technology panic that the rest of us do.” More than anything, legal experts said, the ruling offers a reminder that

Supreme Court justices live in the real world and almost certainly use cellphones in ways that make them aware of their privacy risks.

Court going against the government is tough – there's been little policy change since Snowden.

Williams, 14 (Lauren, tech reporter for ThinkProgress with an affinity for consumer privacy, cybersecurity, tech culture and the intersection of civil liberties and tech policy. Before joining the ThinkProgress team, she wrote about health care policy and regulation for B2B publications, and had a brief stint at The Seattle Times, "How The Supreme Court Could Decide The Fate Of NSA Surveillance," ThinkProgress, 12/10/14, <http://thinkprogress.org/justice/2014/12/10/3601363/nsa-surveillance-ninth-circuit/>) Zhang

With legal help from the American Civil Liberties Union and the Electronic Frontier Foundation, neonatal intensive care nurse Anna Smith contested the government's spy programs Monday in the U.S. Court of Appeals for the Ninth Circuit. In Monday's oral argument for *Smith v. Obama*, Smith's attorney and husband, Peter Smith, asserted the government violated Smith's privacy by searching and collecting data that reveals intimate details about her and her family without her permission. Smith argued that each time the NSA's database was queried or restocked with new information violated the Fourth Amendment. Smith built his case's standing on the fact Verizon is America's top telecommunications provider and the NSA's program indiscriminately swept up swaths of customer data, which included and potentially revealed personal information about his wife's business and life. These cases have yet to be finalized, but depending on their outcome, the Supreme Court could end up deciding the constitutionality of the NSA's phone surveillance program. The Supreme Court tends to get involved in cases mainly where there's a split decision among federal appeals courts — in this case with some courts ruling in the government's favor and others against. But challenging the government has proven to be an uphill legal battle. Civil liberties activists' biggest obstacle is decades-old legal precedent. *Smith v. Maryland* established that law enforcement could collect the call records of an individual or small group of individuals suspected of a crime. The question is whether the sheer scale and volume of the NSA's metadata program, which was technologically impossible in 1979, is protected under that same ruling. Even if the legal standard wins out, the publicity of challenging the government's actions could have a positive effect down the line; showing that taking the government to task can be done. There have been past cases where despite proof of being targeted for surveillance, courts have ruled in favor of the government. The Al-Haramain Islamic Foundation sued the Bush Administration for illegally wiretapping the charity's leaders and lawyers based on a classified document accidentally disclosed in court documents. The court ruled in favor of the government because the information was classified. Snowden's revelations inspired public calls to action for comprehensive reform of U.S. intelligence programs. But in the year since, there's been little movement toward policy changes. Obama rolled back some of the NSA's spying power earlier this year saying intelligence agencies could still collect phone records but couldn't store them, and accessing the database would be subject to a judge's approval.

Supreme Court doesn't like taking surveillance cases—U.S. v. Jones 2012 decision proves

Fisher 15 [Daniel, Senior Editor at Forbes, "Court Rules NSA Phone Surveillance Illegal, But Saves Bigger Questions For Later," 5/7/15,

<http://www.forbes.com/sites/danielfisher/2015/05/07/court-rules-nsa-phone-surveillance-illegal-but-saves-bigger-questions-for-later/>] Reynoso

The Second Circuit Court of Appeals in New York declared the government's sweeping collection of "metadata" on domestic phone calls is illegal, but held off enjoining the practice or ruling on weightier constitutional challenges until Congress decides whether to revise the program. Deep in its 97-page ruling issued today the court discusses, but does not resolve, the big question looming over the practice of Hoovering up vast amounts of digital data that citizens produce as they navigate through the physical world and cyberspace: At some point does the mere collection of that data violate the Fourth Amendment prohibition on unreasonable searches? The National Security Agency program of collecting the details of millions of domestic phone calls every day raises "one of the most difficult issues in Fourth Amendment jurisprudence," the Second Circuit said, which is the extent to which digital technology alters expectations of privacy. The appeals court never got to that question because it ruled that the NSA had exceeded its congressional mandate by demanding Verizon and other telecommunications companies turn over records on virtually all calls, on a daily basis, for years. Section 215 of the Patriot Act limits such searches to data that are relevant to a pending investigation of foreign terrorism and could be obtained in an equivalent grand jury proceeding, the court ruled, not the wholesale collection of information so it can be warehoused for future searches. The government argued the law allows it to collect business records or any other information relevant to an investigation into terrorist acts by a foreign entity. But the three-judge panel on the Second Circuit said that stretched the meaning of "relevant" past the breaking point: The sheer volume of information sought is staggering; while search warrants and subpoenas for business records may encompass large volumes of paper documents or electronic data, the most expansive of such evidentiary demands are dwarfed by the volume of records obtained pursuant to the orders in question here. It reversed a lower court decision dismissing the case, but refused to issue an injunction halting the collection of the data, saying Congress may soon modify the Patriot Act to eliminate the problems. A bill that cleared the House Judiciary Committee on April 30 would end the wholesale collection of metadata, instead requiring telecoms carriers to keep it for 18 months in case the government seeks it for specific investigations. The Second Circuit opinion speaks at length about the bigger questions of whether Fourth Amendment law must be expanded to include protections against such snooping. The government argued successfully at the trial court level that U.S. Supreme Court rulings have limited Fourth Amendment challenges to cases where citizens have a reasonable expectation of privacy, and phone records don't fall within that circle of protection. One of the key decisions is Smith v. Maryland, a 1979 case rejecting upholding the police use of a "pen register" to collect the numbers dialed by a suspected drug dealer. In that and other cases, the court has determined that people don't have a constitutional right to privacy when it involves information they've willingly given to a third party, such as a phone company that uses that information for other purposes like billing. Grand juries frequently subpoena phone records without a warrant on this basis, the Second Circuit said. Thinking on this subject is changing, however. The Supreme Court was forced to consider the question of digital surveillance in U.S. v. Jones, a 2012 decision that found illegal the use of a GPS device surreptitiously attached to another suspected drug dealer's car. But Justice Antonin Scalia invoked a sort of property right to hold the attachment of the device was illegal, not the collecting of the information it transmitted. Five of the justices made arguments closer to a reasonableness standard in that case, however. Justice Sonia Sotomayor, in a concurrence, said: "it may be necessary to reconsider the premise that an individual has no reasonable expectation of privacy in information voluntarily disclosed to third parties," noting that such an approach is "ill suited to the digital age, in which people reveal a great deal of information about themselves to third parties in the course of carrying out mundane tasks."

Supreme Court doesn't like surveillance cases—didn't want to challenge government's terrorist surveillance programs

Robillard 13 [Kevin, Reporter at Politico, "Supreme Court dismisses surveillance case," 2/26/13, <http://www.politico.com/story/2013/02/supreme-court-dismisses-surveillance-case-88097.html>] Reynoso

A closely divided Supreme Court threw out a challenge to the government's terrorist surveillance programs, arguing journalists, human rights groups and lawyers could not prove they had been harmed by a government program monitoring foreign communications. In the 5-4 ruling, the court's conservatives sided with President Barack Obama's administration in arguing that the groups could not prove the program had harmed them, Reuters reports. The court's liberals disagreed. The 2008 law challenged in the case authorized mass spying, without specific targets, on foreigners living outside the country. The plaintiffs had argued the law had created a burden by forcing them to meet with sources and clients living outside the country in person rather than emailing or calling them. Associate Justice Samuel Alito, writing for the majority, dismissed their concerns as a "highly speculative fear." The American Civil Liberties Union blasted the decision in a statement. "It's a disturbing decision," said the group's deputy legal director, Jameel Jaffer, who argued the case. "The FISA Amendments Act is a sweeping surveillance statute with far-reaching implications for Americans' privacy. This ruling insulates the statute from meaningful judicial review and leaves Americans' privacy rights to the mercy of the political branches. Justice Alito's opinion for the court seems to be based on the theory that the FISA Court may one day, in some as-yet unimagined case, subject the law to constitutional review, but that day may never come. And if it does, the proceeding will take place in a court that meets in secret, doesn't ordinarily publish its decisions, and has limited authority to consider constitutional arguments. This theory is foreign to the Constitution and inconsistent with fundamental democratic values."

Link – Soft on Terror Perception

The “ratchet effect” makes it difficult for SCOTUS to rule on precautionary surveillance cases because no one wants the blame for a terrorist attack – PATRIOT controversies prove

Givens ’13 (Austin, PhD student in the Department of Political Economy at King’s College London “The NSA Surveillance Controversy: How the Ratchet Effect Can Impact Anti-Terrorism Laws” Harvard Law School National Security Journal 7/21/13
<http://harvardnsj.org/2013/07/the-nsa-surveillance-controversy-how-the-ratchet-effect-can-impact-anti-terrorism-laws/>) Foronda

On June 5, 2013, the world learned that the National Security Agency (NSA), America’s largest intelligence-gathering organization, had been gathering the metadata of all the phone calls made by Verizon customers since early April 2013. The next day, two prominent newspapers reported that PRISM, a top secret NSA program, had been vacuuming up customer data from some of the world’s largest and best known information technology (IT) firms—including Google, Apple, Facebook, and Microsoft—directly from their servers. Director of National Intelligence James Clapper later clarified that specific requests for customer data from these IT firms were subject to tight legal controls and only targeted non-US citizens. But Clapper’s comments did little to calm frayed nerves. A public outcry ensued, with some loudly opposing the NSA’s surveillance programs and others forcefully defending them. The New York Times condemned the NSA surveillance in an editorial and the American Civil Liberties Union (ACLU) filed a lawsuit against the NSA, challenging the constitutionality of the NSA telephone call metadata collection program. Former Vice President Al Gore called the surveillance “obscenely outrageous” on Twitter. But others came out in support of the NSA’s efforts. Senator Lindsay Graham said “I am a Verizon customer...it doesn’t bother me one bit for the NSA to have my phone number.” Max Boot, a senior fellow with the think tank Council on Foreign Relations, credited the NSA surveillance with helping to reduce the number of terrorist incidents on US soil since the attacks of September 11, 2001. A Pew Research Center poll suggested that there was significant support among the American public for the NSA’s surveillance efforts. Despite the heated rhetoric on both sides of the surveillance debate, the NSA’s collection of telephone call metadata appears to be legal based upon the Foreign Intelligence Surveillance Court’s (FISC) interpretation of section 215 of the USA PATRIOT Act. Perhaps the most interesting remarks about the NSA controversy thus far came from Representative Jim Sensenbrenner, one of the original authors of the USA PATRIOT Act. He wrote that when the Act was first drafted, one of the most controversial provisions concerned the process by which government agencies obtain business records for intelligence or law enforcement purposes. Sensenbrenner stated that particular provision of the Act requires government lawyers to prove to the FISC that a request for specific business records is linked to an “authorized investigation” and further stated that “targeting US citizens is prohibited” as part of the request. Sensenbrenner argued that the NSA telephone metadata collection is a bridge too far and falls well outside the original intended scope of the Act: “[t]he administration claims authority to sift through details of our private lives because the Patriot Act says that it can. I disagree. I authored the Patriot Act, and this [NSA surveillance] is an abuse of that law.” Acknowledging that Sensenbrenner’s statements may have been motivated in part by political interests, the perceived creeping expansion of the USA PATRIOT Act—the “abuse” that Sensenbrenner describes in the context of the NSA surveillance controversy—is consistent with what is known as the “ratchet effect” in legal scholarship. The ratchet effect is a unidirectional change in some legal variable that can become entrenched over time, setting in motion a process that can then repeat itself indefinitely.[1] For example, some scholars argued that anti-terrorism laws tend to erode civil liberties and establish a new baseline of legal “normalcy” from which further extraordinary measures spring in future crises.[2] This process is consistent with the ratchet effect, for it suggests a “stickiness” in anti-terrorism laws that makes it harder to scale back or reverse their provisions. Each new baseline of legal normalcy represents a new launching pad for additional future anti-terrorism measures. There is not universal consensus on whether or not the ratchet effect is real, nor on how powerful it may be. Posner and Vermeule call ratchet effect explanations “methodologically suspect.”[3] They note that accounts of the ratchet effect often ring hollow, for they “fail to supply an explanation of such a process...and if there is such a mechanism [to cause the ratchet effect], it is not clear that the resulting ratchet process is bad.”[4] I argue that the recent controversy

surrounding the NSA's intelligence collection efforts underscores the relevance of the ratchet effect to scholarly discussions of anti-terrorism laws. I do not seek to prove or disprove that the recent NSA surveillance controversy illustrates the ratchet effect at work, nor do I debate the potential strength or weakness of the ratchet effect as an explanation for the staying power or growth of anti-terrorism laws. As Sensenbrenner's recent comments make clear, part of the original intent of the USA PATRIOT Act appears to have been lost in interpretation. It is reasonable to suggest that future anti-terrorism laws may suffer a similar fate. Scholars can therefore benefit from exploring how the USA PATRIOT Act took shape and evolved, and why anti-terrorism laws can be difficult to unwind.

The USA PATRIOT Act: a Sticky History A brief survey of the history of the USA PATRIOT Act provides a glimpse of how anti-terrorism laws can form after terrorist attacks, how the effects of these laws can quickly expand, and how efforts to modify or repeal portions can prove challenging. An initial draft of the Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism (USA PATRIOT) Act of 2001 developed within a week of the September 11th terrorist attacks.[5] At approximately the same time, government officials' and popular media outlets' offices nationwide received anonymous letters containing weapons-grade anthrax. After then-President George W. Bush signed the Act, it increased law enforcement powers within the United States, began to break down historical barriers against information sharing between police and intelligence agencies, and expanded the definition of terrorism in 18 USC § 2331.[6] Moreover, the Act assigned lead investigative authority in terrorism cases to the U.S. Department of Justice (DOJ). Previously, this responsibility was spread among a number of agencies, including the Department of the Treasury (DOT), the Department of Defense (DOD), and the DOJ.[7] The Act provoked controversy after it was passed and, as the recent NSA surveillance revelations make clear, it continues to do so today. Putting aside section 215 of the Act, which relates directly to the NSA's collection of telephone call metadata from Verizon, another contentious area is the Act's permitting searches of personal library records and other organizational files via issuance of National Security Letters (NSLs). Federal agencies use NSLs to demand disclosure of certain records from an organization; they are a form of administrative subpoena that can be issued without judicial review.[8] The number of NSLs drastically increased after the Act took effect. In 2000, the Federal Bureau of Investigation issued approximately 8,000 NSLs. In 2004, by contrast, the FBI issued 56,000 NSLs. IT firms like Google, Twitter, and Yahoo have also been issued NSLs, though secrecy rules bar their lawyers from discussing the nature of these NSLs openly. In the twelve years since the Act's entrance into use, governments, civic organizations, and citizens sought repeatedly to modify and repeal portions of the Act without success. Two years after the Act became law, local governments in Ann Arbor, Oklahoma City, New York, and Philadelphia passed resolutions against it.[9] Members of the U.S. Senate and U.S. House of Representatives introduced separate pieces of legislation seeking to scale back the Act's original scope. The American Library Association (ALA) and American Civil Liberties Union (ACLU) lobbied against provisions of the Act. Doe v. Gonzales—a case that reached the U.S. Supreme Court—raised serious questions about the Act's constitutionality. Yet despite this steady drumbeat of concern around the Act's expansion of government power, both Republican and Democratic administrations renewed provisions of the Act that had been set to expire. This brief history reflects the difficulties governments, civic groups, and citizens face in attempting to modify or repeal portions of the USA PATRIOT Act. This difficulty is for good reason. Al-Qaeda has been degraded significantly since 9/11, but terrorism remains a significant threat to the United States, as the April 2013 Boston Marathon bombing vividly illustrates. In light of the continuing threat of terrorism in the United States, it is worth exploring the reasons why anti-terrorism laws like the USA PATRIOT Act can prove difficult to scale back. The list of causes below is not meant to be exhaustive, but to show how a constellation of variables can help to cement anti-terrorism laws in place. The ratchet effect can occur because anti-terrorism laws are effective. Anti-terrorism laws may stick simply because they work. If so, then scaling back or reversing an effective anti-terrorism law would increase a nation's vulnerability to terrorism, pulling it back toward a condition that existed before the law initially went into effect. This goes against national security interests, so it makes sense to leave these laws on the books. The ratchet effect can occur because anti-terrorism laws may address multiple threats. Anti-terrorism laws may come about because of a particular terrorist group or incident. But that does not necessarily mean the laws will work only for that group, or apply only to similar types of terrorist attacks. Al-Qaeda's attack on 9/11 spurred the creation of the USA PATRIOT Act. Yet today the Act's provisions can also impede domestic terrorist organizations like the Animal Liberation Front (ALF) and Earth Liberation Front (ELF) by facilitating intelligence sharing for law enforcement purposes. The ratchet effect can occur because it is challenging to repeal laws in democracies. Absent "sunset" provisions, which force certain portions of a law to expire after a pre-determined amount of time, it can be difficult to repeal a law under normal circumstances—let alone when that law concerns something as serious as terrorism. It requires careful political maneuvering to reverse an anti-terrorism law because the law itself may enjoy popular support, be seen as effective, or be linked to vested economic interests. These obstacles can promote a legal inertia that resists

efforts to scale back or reverse the law.^{δ δ} The ratchet effect can occur because elected officials do not want to risk repealing anti-terrorism laws.^δ Here is a political nightmare: for whatever reason, a legislator or government executive spearheads an effort to reverse an anti-terrorism law. The anti-terrorism law is repealed. Within a week, a terrorist attack occurs. **Being wrong about terrorism can carry devastating political consequences** for incumbents. But being specifically identified as the one who “turned off the alarm system” is a political death sentence. Under this scenario, even if there is no direct causal link between the law’s repeal and the attack, the two are easily correlated because of their temporal proximity to each other. It makes no sense for an elected official to open herself to the possibility of this scenario without a clear, compelling reason—and, even then, scaling back an anti-terrorism law may still be too politically risky a proposition to entertain seriously. For these reasons, anti-terrorism laws can remain in effect beyond the end of the crisis that brought them into existence.

AT: Surveillance Rulings Thump

Courts refuse cases on surveillance- NSA scandal proves

Daily News, 4/7/14 (Daily News, News channel, "Supreme Court refuses case on controversial NSA phone surveillance," nydailynews.com, <http://www.nydailynews.com/news/politics/supreme-court-refuses-case-controversial-nsa-phone-surveillance-article-1.1748552>, accessed date: 7/31/15) Salehitezangi

The Supreme Court on Monday declined an early look at a constitutional challenge to the National Security Agency's bulk collection of millions of Americans' telephone records, instead allowing the dispute to work its way through the usual lower-court process. The decision means the high court will not take the unusual step of short-circuiting appeals courts as they consider contrary opinions over the legitimacy of the agency's vast surveillance program. Conservative lawyer Larry Klayman had persuaded a federal judge in December to rule that the agency's activities likely violate the Constitution's ban on unreasonable searches. The judge in Washington, D.C., put his decision on hold pending a government appeal. The justices rejected without comment Klayman's long-shot request to bypass the appeals process and hear the case immediately. Klayman argued that the constitutional questions raised were too important to wait for the U.S. Court of Appeals for the D.C. Circuit to reach a decision. But the Supreme Court rarely grants such requests. It could take many months before the justices consider any legal challenge to the controversial collection program disclosed by former NSA systems analyst Edward Snowden. Klayman's lawsuit is one of two dueling NSA cases currently winding their way through the federal appeals system. Just days after Klayman won his case, a federal judge in New York reached the opposite conclusion in rejecting a similar challenge to the NSA program from the American Civil Liberties Union. U.S. District Judge William H. Pauley III validated the NSA operation as an effective "counterpunch" to terrorist acts.

Kennedy = Swing – Evenwel

Kennedy key to passing one voter one vote

Balloon Juice, Tim, 15

Tim, 5/27/2015, “Evenwel v. Abbott could have some pretty ugly stakes”, Balloon Juice, May 27, 2015, <http://www.balloon-juice.com/2015/05/27/evenwel-v-abbott-will-have-some-pretty-ugly-stakes/>, Hsiao

¶ Most people talking about Anthony Kennedy re-evaluating the principle of one-person-one-vote have covered how it will diminish Congressional representation from districts that have a lot of immigrants in them.¶ However, I don't think that immigrants will be the thing we talk about in the years after Kennedy changes the rules, if he decides to do that. A lot of states take away the right to vote from anyone convicted of a felony. Many of those same states stand out, one could say, when it comes to treating black people fairly. The result is some Congressional districts, often but not exclusively in the South, where a whole lot of residents are black non-voters either in prison or recently released from it.¶ Will Justice Kennedy let former voters count as citizens? I would strongly hope so. I mean I hope that he puts the whole idea of changing the law to bed, but if he does go the other way then he really needs to at least include citizen non-voters. The alternative would give Republican states an even greater incentive than they already have to move as many black people through the prison system as they possibly can. Under new rules they could not only eliminate Democratic voters, but Democratic Congressmen and Congresswomen as well.¶ Just a little palate cleanser while we wait for the wreckage of King v. Burwell.

Kennedy = Swing – General

Justice Kennedy is the key swing vote

Elizabeth **Slattery 6/26** (Elizabeth Slattery, The Daily Signal Correspondent, “Is Kennedy Still the Swing Vote on the Supreme Court?” <http://dailysignal.com/2015/06/26/is-kennedy-still-the-swing-vote-on-the-supreme-court/>, June 26, 2015) K.GEKKER

For many of the highest-profile U.S. Supreme Court cases, it all comes down to one man.^a Though only 20 percent of cases each term are decided by one vote and 65 percent in the last term were unanimous decisions, litigants often craft arguments aimed at capturing his vote and pander to him at oral argument. Anthony Kennedy runs the court, according to conventional wisdom.^a But is his time on top coming to an end?^a Kennedy was appointed to the Supreme Court by President Ronald Reagan in 1987 after spending more than a decade on the U.S. Court of Appeals for the 9th Circuit. A California native with ties to Reagan from his days as governor, Kennedy was the third choice to replace Justice Lewis Powell Jr. after the failed nominations of the late Robert Bork and Douglas Ginsburg. Known for his affinity for foreign cultures, Kennedy spends his summers teaching in Austria, travels annually to China with the American Bar Association and has advised nascent democracies on their constitutions.^a On occasion—for good or ill—this affinity for foreign mores creeps into his work at the court. Chief Justice Roberts and others have described citing foreign law as “looking out over a crowd and picking out your friends” (meaning, it’s a way to find support for just about any legal argument).^a But Kennedy approvingly cited European courts in his majority opinion in Lawrence v. Texas (2003), striking down the state’s ban on sodomy, as well as in Boumediene v. Bush (2008), extending the writ of habeas corpus to detainees held at Guantanamo Bay. Likewise, he pointed to the “climate of international opinion” as not dispositive but instructive in limiting the availability of life-without-parole sentences for juvenile offenders in *Graham v. Florida* (2010).^a Hailed “King Kennedy,” his ideology places him squarely in the middle of the two wings of the court. He often sides with the conservative justices in civil rights and campaign finance cases (e.g., *Fisher v. University of Texas*, *Shelby County v. Holder*, and *Citizens United v. FEC*), but he frequently casts the deciding vote in cases advancing socially liberal causes (*Miller v. Alabama*, *United States v. Windsor*, *Romer v. Evans*, and *Obergefell v. Hodges*).^a Last term, Kennedy was in the majority in all 10 of the cases decided by one vote. So far this term, Kennedy was been in the majority in 10 of 15 decisions. It may have been Kennedy’s COURT, at least for a time, but increasingly Roberts is gaining on Kennedy, leading some to suggest he is attempting to wrest control of the court away from his colleague.^a Roberts is known as a judicial minimalist, favoring narrow decisions and large majorities. During his Senate confirmation, he likened the role of a judge to an umpire—it’s his job to “call balls and strikes and not to pitch or bat.”^a Appointed to the Supreme Court by President George W. Bush in 2005, Roberts previously served as a judge on the U.S. Court of Appeals for the D.C. Circuit. His career before joining the bench paints the picture of a poster child for the Federalist Society (full disclosure: I’m a member): law clerk to Chief Justice William Rehnquist, associate counsel in the White House counsel’s office during the Reagan administration and a stint in the solicitor general’s office.^a But since he voted to uphold Obamacare in 2012, conservatives no longer consider Roberts a guaranteed vote in many cases. Since that decision, Roberts has broken with the conservative wing in a string of cases, such as *McCullen v. Coakley* (although a unanimous decision, Kennedy and the conservatives disagreed with Roberts’ reasoning), *Williams-Yulee v. Florida Bar*, *Yates v. United States*, *Young v. United Parcel Service*, and *North Carolina Board of Dental Examiners v. Federal Trade Commission*.^a With the decision this week in *King v. Burwell*, Roberts further distanced himself from the conservatives—although Kennedy joined in the majority as well.^a It’s fair to say Roberts acted less like an umpire and more like a player on Team Obamacare—willing to save the law at any cost. In his majority opinion, Roberts looked for ways to obscure the plain meaning of the statutory text to repair a law that simply wouldn’t work.^a Dubious though his methods were, perhaps in Roberts’ mind he was limiting the damage (“jumping on the grenade”) of a potential decision written by one of the liberal justices. Maybe he fell prey to liberals’ admonitions that he safeguard the court’s reputation; or it might even have been an attempt to remove the temptation for people to resort to the court to settle purported political differences. Whatever his reason for deciding *King v. Burwell*, the chief justice is now in the running with Kennedy for the “swing vote.”^a As the 2014-15 term wraps up, a clearer picture will emerge of this court and who’s truly in charge..

Kennedy is a key swing vote

Siddiqui and Roberts 6/26/15 [Dan Roberts is the Guardian's Washington Bureau chief, covering politics and US national affairs. Sabrina Siddiqui is a political reporter for Guardian US based in Washington DC. She previously covered US politics for the Huffington Post and worked with the White House team at Bloomberg News, “Anthony Kennedy: how one man's evolution

legalized marriage for millions” June 26 <http://www.theguardian.com/us-news/2015/jun/26/kennedy-ruling-gay-marriage-supreme-court>] Sheikh

Kennedy, the 78-year-old former lawyer from California appointed to the bench by Republican president Ronald Reagan a generation ago, is seen – in theory – as one of the conservative majority. But in practice, he has long been the most enigmatic of the swing voters on some of the most defining stories in American history. On Thursday, he had joined Roberts in defending Barack Obama’s healthcare reforms from yet another legal onslaught by conservative critics. But on Friday, the day same-sex marriage became the law of the land, Roberts had decided to stay firmly in the conservative camp. And so Kennedy became the one man to effectively determine a decision that will directly affect millions of Americans in love – and redefine a core legal and social bedrock for all of them, perhaps forever. Gay marriage bans struck down by US supreme court – read the ruling [Read more](#) For a while, it looked as if the swing voters might have coalesced around a compromise on marriage equality, forcing all states to recognise same-sex marriages carried out elsewhere but still shying away from forcing them to carry it out themselves against the wishes of their voters.

Justice Kennedy’s vote counts- he’s the swing voter

Supreme Court Review, 7/27/15 (Supreme Court Review, “THE JUSTICES OF THE UNITED STATES SUPREME COURT”, [Supremecourtreview.com](http://supremecourtreview.com), <http://supremecourtreview.com/default/justice/index/id/40>, accessed date 07/27/15) Salehitezangi

Justice Kennedy is the court's most moderate vote and, therefore, its swing vote. Kennedy's judicial philosophy is at the intersection of the liberal court and conservative court; however, although he occasionally sides with the more liberal justices in close cases he is considered to be a member of the more conservative wing of the Court. Justice Kennedy was nominated to the bench by President Ronald Reagan and took office on February 18, 1998. As the current court's swing vote, Justice Kennedy has decided many of the court's most controversial cases. Recently, Justice Kennedy provided the fifth vote in *Florence v. Board of Chosen Freeholders of the County of Burlington* where the majority held that jail strip searches prior to admission into the general prison population for a person convicted of a minor offense does not require reasonable suspicion. He also provided the fifth vote in: *District of Columbia v. Heller*, which struck down DC's ban on handguns, *Citizens United v. FEC*, which struck down portions of the McCain-Feingold Act that limited corporate funding of political broadcasts within 60 days of a general election or 30 days of a primary, and *Boumediene v. Bush*, a ruling that permitted terrorism suspects at Guantanamo Bay to have a right to challenge their detentions in federal courts. On the few occasions when Kennedy sides with the liberals on the court, he is assailed by conservatives. Kennedy receives such attention only because he is the swing justice and is regarded as more responsible for outcomes in controversial cases than the other justices. Justice Kennedy is not always the swing vote, however, and occasionally finds himself in the dissent even where the court largely divides along liberal and conservative lines (the recent Obamacare decision in *National Federation of Independent Business v. Sebelius* is an example).

Kennedy is perceived as an important swing voter—gay rights ruling proves

AFP 7/1 [Reporter at Manila Bulletin, “Anthony Kennedy: One justice makes big difference in US gay marriage ruling” Manila Bulletin, 7/1/15, <http://mb.com.ph/anthony-kennedy-one-justice-makes-big-difference-in-us-gay-marriage-ruling/>] Reynoso

Washington, DC, United States — He was appointed in the 1980s under the conservative presidency of Ronald Reagan, but Supreme Court Justice Anthony Kennedy has gone on to become perhaps the most important gay rights supporter in the American legal system. The gray-haired 78-year-old cemented that position Friday when he wrote the majority opinion for the five judges — or justices as they are known — who ruled to allow gay marriage across the United States. “No union is more profound than marriage for it embodies the highest ideals of love, fidelity, devotion, sacrifice, and family,” Kennedy said, his deep voice resonating around the solemn surroundings of the Supreme Court. “In forming a marital union, two people become something greater than once they were.” All eyes were fixed on him. Without Kennedy — who soon found himself trending on Twitter — gay marriage

would not have been legalized at the federal level. That's because Kennedy is seen as an important "swing vote," siding with the court's four liberal judges instead of the conservative bloc on some issues — including gay marriage. Friday's momentous ruling was met with jubilation by many same-sex couples, including those who had been living in the 13 states that banned gay marriage. "Their hope is not to be condemned to live in loneliness, excluded from one of civilization's oldest institutions," Kennedy said in his ruling. "They ask for equal dignity in the eyes of the law. The Constitution grants them that right." "Justice Kennedy has become probably the most powerful jurist in the entire world because he's the point on so many issues before the Supreme Court of the US, and though he only has one vote, his vote literally changes most cases," said Mary Margaret Penrose, law professor at Texas A&M University. David Cruz, an expert from the University of Southern California Gould law school, said that without Kennedy's vote, states would have remained free to exclude same-sex couples from civil marriage. Kennedy was the "favorite to write the decision that extends same-sex marriage nationwide," Cruz said. In the past, Kennedy — who is considered moderate — has taken positions on civil rights that demonstrate his "flexibility" in interpreting the Constitution, lawyer Lisa Linsky said. "His positions and decisions in major civil rights cases over the years demonstrate that he is a humanitarian," she said. "His constitutional scholarship is rooted in common sense and the recognition that societies, attitudes and institutions change and evolve." Legal analyst Elizabeth Wydra told AFP that Kennedy's words would be immortalized in the "Obergefell v. Hodges" ruling, as the case is known. "With this ruling, Justice Kennedy has ensured that his name will be forever linked with the recognition of equal rights for gay men and lesbians," Wydra said. "He has used language so sweeping and powerful to describe the desire for equal dignity that it brings a tear to the eye." Kennedy had already authored three major decisions affecting gay rights in America, each a significant step towards Friday's historic ruling. In 1996, Kennedy wrote the decision in the landmark "Romer v. Evans" case on the protection of civil rights for gays and lesbians. In 2003, the court struck down anti-sodomy laws in "Lawrence v. Texas." And in 2013 in "United States v. Windsor," Kennedy wrote the majority opinion against the Defense of Marriage Act. The decision to hand down the ruling in the "Obergefell" case Friday was likely no accident, as June 26 was also the date in the years when Kennedy and the court released the rulings in "Lawrence" and "Windsor."

Kennedy's views matter—he's the swing vote almost every time

Hasen 6/27 [Richard, professor of law and political science at University of California Irvine, "More than ever, it's a Kennedy court" Mccall.com, 6/27/15 , <http://www.mcall.com/opinion/mc-supreme-court-justice-kennedy-influence-yv-0708-20150707-story.html>]

Forget the debate over whether the Supreme Court has taken a liberal turn. It is not a liberal court or a conservative court. It's a Kennedy court. On major constitutional and statutory questions, Justice Anthony M. Kennedy's views matter more than anything else. Liberals do have more to celebrate this term than in the recent past, from the same-sex marriage and Obamacare decisions, to a major housing discrimination case, to a surprising win for minority plaintiffs in a voting rights lawsuit. In those cases, Kennedy was in the majority, and all but one — Obamacare — were decided 5 to 4. But there were some victories for conservatives as well. The court blocked a key environmental rule on mercury pollution. It upheld Oklahoma's lethal injection method. And it rejected an attempt to put a Texas voter identification law on hold, even though a federal court found that the legislature intended to discriminate against minority voters. Kennedy was in the majority in these rulings. Indeed, there were only a handful of important cases this term in which Kennedy was on the losing side of a 5-4 split, such as the Williams-Yulee case, in which Chief Justice John G. Roberts Jr. sided with the four liberals against Kennedy and three conservatives to uphold Florida's ban on judicial candidates personally soliciting campaign contributions. Looked at over the long run, Kennedy's influence seems even greater. Think of the Supreme Court's 5-4 decision in the 2010 Citizens United case striking down the ban on corporate spending in elections, which has opened the floodgates to super PACs and big money in politics. Or consider the court's 5-4 decision in the 2013 Shelby County case, which eviscerated a key provision of the Voting Rights Act. Kennedy was in the majority in each instance. His power won't lessen any time soon. Last week, the court said it would

review a case that could kill public sector unions, overturning long-standing precedent. Kennedy will probably cast the crucial fifth vote. And, no doubt, the court's upcoming decision on how far states can go in restricting abortion will depend on Kennedy's view of what constitutes an "undue burden" on a woman's right to choose. It is no surprise, as professor Nan Hunter of Georgetown Law School remarked, that Supreme Court advocates often write their briefs for an audience of one: Kennedy. How does the court's swing voter choose sides? The evidence suggests that Kennedy goes with his gut and personal sense of morality rather than a well-thought-out and consistent jurisprudential theory. Consider, for example, the contrast between the court's decision last term in an affirmative action case called Schuette and its recent decision in the Obergefell case finding a constitutional right to same-sex marriage. In Schuette, Kennedy wrote that Michigan voters could pass a ballot measure banning the use of affirmative action in college admissions. Arguing in favor of judicial restraint, he said the decision was best left to the democratic process. Kennedy wrote: "Were the court to rule that the question addressed by Michigan voters is too sensitive or complex to be within the grasp of the electorate ... or that these matters are so arcane that the electorate's power must be limited because the people cannot prudently exercise that power even after a full debate, that holding would be an unprecedented restriction on the exercise of a fundamental right held not just by one person but by all in common." Yet when it came to same-sex marriage, Kennedy was just as content to take the question away from the voters. He wrote for a different 5-4 majority in Obergefell: "It is of no moment whether advocates of same-sex marriage now enjoy or lack momentum in the democratic process. The issue before the court here is the legal question whether the Constitution protects the right of same-sex couples to marry." How to reconcile the two cases? The answer seems to lie in Kennedy's psychology. He is skeptical of race-based preferences but not of gay rights. When to trust the voters? When they are likely to agree with Kennedy. Driven by feeling over theory, Kennedy also has the frustrating habit of taking nondefinitive positions as he makes up his mind. He's skeptical of racial preferences but not so skeptical that he's willing to completely jettison affirmative action. And so the law remains uncertain. He's troubled by partisan gerrymandering but is reluctant to police legislatures. And so the law remains uncertain. It's crazy to have major social and public policy questions depend so much on Kennedy's whim, not to say what he had for breakfast. But it could be worse. As much as liberals would love to see Kennedy retire and be replaced by another Elena Kagan or Sonia Sotomayor, depending on the next election, we could get another Samuel A. Alito Jr. or Antonin Scalia. Then we'll be pining for the days when Kennedy ruled America.

AT: Court Capital Infinite

Court capital is finite – past actions affect their credibility and force them to pick and choose the issues they deal with

Young 99 (Ernest, Assistant Professor at the University of Texas School of Law “State Sovereign Immunity and the Future of Federalism” The University of Chicago: The Supreme Court Review <http://www.lexisnexis.com.turing.library.northwestern.edu/hottopics/Inacademic/>) Foronda

I argued in the preceding section that immunity federalism does little to promote the states' core interest in maintaining a robust authority over private conduct and benefits. In this sense, the Court's aggressive development of the immunity model may not be worth the candle. One might, however, view the Court's efforts to develop a model of immunity federalism as largely unhelpful to state interests without condemning them as counterproductive. It is not obvious, after all, that the Court must choose one model of federalism to the exclusion of the others. n260 I have already suggested some reasons to view the Court's state sovereign immunity jurisprudence as counterproductive. In this section, I want to focus on three more specific ways in which the Court's pursuit of immunity federalism risks actual harm to state governments.^a 1. The opportunity cost of immunity rulings. The first reason, and the simplest, is that the Court has limited political capital. n261 As Dean Choper has argued, "**the federal judiciary's ability to persuade the populace and public leaders that it is right and they are wrong is determined by the number and frequency of its attempts** [^{*59}] to do so, the felt importance of the policies it disapproves, and the perceived substantive correctness of its decisions." n262 **There is** thus likely to be, at some point, **a limit on the Court's ability to continue striking down federal statutes in the name of** states' **rights.** n263 To the extent that this limit exists, then the Court's extended adventure in aggressive enforcement of state sovereign immunity will trade off with its ability to develop a meaningful jurisprudence of process or power federalism. If protecting state authority to regulate private conduct is the key to a viable state/federal balance, then a considered reaffirmation, explanation, or extension of Lopez may do more good than another expansion of Seminole Tribe.^a "Political capital," of course, is a pretty vague concept. It might be that the Court's ability to enforce federalism limits is more like muscles than money: it atrophies unless it is exercised regularly. n264 The National League of Cities story arguably illustrates this phenomenon, in that the Court's failure to apply the doctrine to check federal power in a series of subsequent cases may have helped lead to the outright rejection of the doctrine in Garcia. n265 **The important point,** however, **is that the Justices who matter most** on these issues tend to **think in terms of limited capital and worry about judicial actions that may draw down the reserves.** n266 **Political capital** [^{*60}] is thus likely to function as an internal constraint on the Court's willingness repeatedly to confront Congress.

2NC Elections Impacts

Ext – Elections Internal Link

Ruling for the plaintiffs will cause an immediate electoral shift towards the GOP in the 2016 election.

Reifowitz 6/1 [Ian, author for Huffington Post, "When It Comes to Voting, Conservatives Want Some People to Count More Than Others. Sound Familiar?" *Huffington Post*, 6/1/15, http://www.huffingtonpost.com/ian-reifowitz/when-it-comes-to-voting-c_b_7485910.html] **Reynoso**

The case of *Evenwel v. Abbott* centers on the question of how legislative districts should be drawn, given that a number of Supreme Court decisions in the mid-1960s established the principle of equal representation, i.e., one person, one vote. In *Reynolds v. Sims*, the court found that districts in the U.S. House of Representatives as well as in all houses of a state legislature must "be apportioned substantially on a population basis," and that districts must "be of equal population." Seems pretty straightforward. However, the plaintiffs in *Evenwel* claim that using population as the measure actually dilutes the vote of eligible voters in districts where there are proportionately fewer non-eligible voters, which includes anyone from disenfranchised felons, non-citizen but legal residents, undocumented immigrants, and, of course, children. Democratic districts are more likely to contain a disproportionate number of people who fall into those categories. That's why, explained election law guru Richard Hasen, **a victory for the plaintiffs in this case will likely result in more electoral clout for Republican voters. If they win, FiveThirtyEight found the likely net outcome would be a shift of eight seats in the House of Representatives to the GOP.** The plaintiffs want the court to require states to ensure that every district has an equal number of eligible voters rather than an equal number of people (even though figuring that out is likely impossible, because, according to the folks at FiveThirtyEight, doing so "relies on statistics that nobody has"). If the plaintiffs win, states will be forced literally to count some people more than others. I told you there was something about this case that sounds familiar to anyone who knows our country's, er, problematic history on voting and discrimination. Nina Perales is the vice president of litigation at the Mexican American Legal Defense and Educational Fund, an organization that opposed the *Evenwel* plaintiffs. She called their effort "an attempt to cut back on growing Latino political strength in [Texas] by packing Latinos into a smaller number of districts." There is a lot to unpack in this case, in terms of constitutionality and legal principles. Although the issues are complex, the aforementioned Hasen nonetheless characterized the Court's decision to take it "a surprise move." He added that he had "considered the issue fairly settled by the Supreme Court that states have the power to decide whether to use total population or another measure for drawing district lines." At this point, nothing surprises me when it comes to conservative attempts to win elections by changing the rules of the voting process rather than actually trying to, you know, win votes. On the matter of it sounding familiar, one thing that stuck in my mind as I was reading about this case was how much it reminded me of something from the time of America's founding, a morally suspect deal struck in order to keep slave-owning states in the union as the Constitution came together. The specific circumstances of the *Evenwel* case certainly differ from those surrounding the Three-Fifths Compromise. However, the fundamental parallel remains. Even leaving aside the question of undocumented immigrants, if the conservative plaintiffs in *Evenwel* triumph, some Americans will count and others will not in determining the very same question at the heart of that debate from over two centuries ago, namely how to draw legislative districts of equal size. Ultimately, the Three-Fifths Compromise allowed Southern white conservatives to gain greater representation in the House of Representatives than they deserved, at least so long as they denied citizenship, freedom, and equal rights to those Americans of African descent whom they enslaved in such large numbers. After slavery was outlawed, the South got an even greater unearned benefit in representation because -- under Jim Crow -- they denied black men the right to vote while counting 100 percent (as opposed to three-fifths) of Southern blacks in their states' population. This discrepancy only grew wider after women won the right to vote in 1920 -- except in the South, where, until 1965, whites continued to disenfranchise black women as well as men while happily counting their numbers for purposes of representation. This case is by no means the equivalent of slavery, or of Jim Crow. But that is a very low bar to clear in 2015. The *Evenwel* case is, without question, part of a long-term, multi-pronged effort by conservative activists and Republican officials to alter election and voting rules in a way that enhances their electoral prospects. In other words, they want to fix the game. Having already achieved much, they certainly aren't going to allow something like counting a person as a person stand in their way. Will the Supreme Court see this scheme for what it is and rule in favor of not counting some Americans more than others? Or, on the other hand, will the five conservatives on the Court see it for what it is and give the conservative plaintiffs exactly what they want, knowing full well the purpose behind their push? Given how the court ruled on the Voting Rights Act, we need to be prepared for

the worst. If that indeed comes to pass, the next question will be: What are we who believe that voting rights and equality are sacrosanct going to do about it?

Ruling for Evenwel demolishes the Democratic Voting base by shifting power from Cities to Rural areas

Liptak 5/26 (Adam, New York Times Correspondent of the Supreme Court, “Supreme court agrees to Settle meaning of ‘One person one vote’” http://www.nytimes.com/2015/05/27/us/supreme-court-to-weigh-meaning-of-one-person-one-vote.html?smid=tw-share&_r=1) Chowdhury

WASHINGTON — The Supreme Court agreed on Tuesday to hear a case that will answer a long-contested question about a bedrock principle of the American political system: the meaning of “one person one vote.” The court’s ruling, expected in 2016, could be immensely consequential. Should the court agree with the two Texas voters who brought the case, its ruling would shift political power from cities to rural areas, a move that would benefit Republicans. The court has never resolved whether voting districts should have the same number of people, or the same number of eligible voters. Counting all people amplifies the voting power of places with large numbers of residents who cannot vote legally, including immigrants who are here legally but are not citizens, illegal immigrants, children and prisoners. Those places tend to be urban and to vote Democratic. A ruling that districts must be based on equal numbers of voters would move political power away from cities, with their many immigrants and children, and toward older and more homogeneous rural areas. Such a decision, said Richard H. Pildes, a law professor at New York University, “would be most significant in border states, like California, Texas, Arizona and Nevada, that have the largest proportions of noncitizens.” The Supreme Court over the past nearly 25 years has turned away at least three similar challenges, and many election law experts expressed surprise that the justices agreed to hear this one. But since Chief Justice John G. Roberts has led the court, it has been active in other voting cases. In 2013, in *Shelby County v. Holder*, a closely divided court effectively struck down the heart of the Voting Rights Act. The new case, *Evenwel v. Abbott*, No. 14-940, concerns state and local voting districts. But “the logic of the decision in *Evenwel* will likely carry over to congressional redistricting,” said Richard L. Hasen, a law professor at the University of California, Irvine. The case, a challenge to voting districts for the Texas Senate, was brought by two voters, Sue Evenwel and Edward Pfenninger. They are represented by the Project on Fair Representation, the small conservative advocacy group that successfully mounted the earlier challenge to the Voting Rights Act. It is also behind a pending challenge to affirmative action in admissions at the University of Texas at Austin. In the new case, the challengers said their voting power had been diluted. “There are voters or potential voters in Texas whose Senate votes are worth approximately one and one-half times that of appellants,” their brief said. In a statement issued after the Supreme Court accepted their case, Ms. Evenwel and Mr. Pfenninger said they “hoped that the outcome of our lawsuit will compel Texas to equalize the number of eligible voters in each district.” Professor Hasen said their lawsuit was in tension with some conservative principles. “It is highly ironic that conservatives, who usually support respect for precedents and states’ rights, are bringing a case that if successful will not only upset decades-old case law but also restrict the kind of representation states may choose,” he said. In November, a three-judge panel of the Federal District Court in Austin dismissed the case, saying that “the Supreme Court has generally used total population as the metric of comparison.” At the same time, the panel said, the Supreme Court has never required any particular standard. The choice, the panel said, belongs to the

states. A 1964 Supreme Court decision, *Reynolds v. Sims*, ruled that voting districts must contain very close to the same number of people. But the court did not say which people count. Most state and local governments draw districts based on total population. If people who were ineligible to vote were evenly distributed, the difference between counting all people or counting only eligible voters would not matter. But demographic patterns vary widely. Federal appeals courts have uniformly ruled that counting everyone is permissible, and one court has indicated that it is required. In the process, though, several judges have acknowledged that the Supreme Court's decisions provide support for both approaches. The federal appeals court in New Orleans said the issue "presents a close question," partly because the Supreme Court had been "somewhat evasive in regard to which population must be equalized." Judge Alex Kozinski, in a partial dissent from a decision of the federal appeals court in San Francisco, said there were respectable arguments on both sides. On one theory, he said, counting everyone ensures "representational equality," with elected officials tending to the interests of the same number of people, whether they are voters or not. On the other hand, he said, counting only eligible voters vindicates the principle that voters "hold the ultimate political power in our democracy." He concluded that the Supreme Court's decisions generally supported the second view. Even if counting only adult citizens is the correct approach, there are practical obstacles. "A constitutional rule requiring equal numbers of citizens would necessitate a different kind of census than the one currently conducted," Nathaniel Persily, a law professor at Stanford, wrote in 2011 in the *Cardozo Law Review*. For now, he said, "the only relevant data available from the census gives ballpark figures, at best, and misleading and confusing estimates at worst." In 2001, the Supreme Court turned down an opportunity to decide the question, in another case from Texas. Justice Clarence Thomas objected. "We have never determined the relevant 'population' that states and localities must equally distribute among their districts," he wrote. "The one-person-one-vote principle may, in the end, be of little consequence if we decide that each jurisdiction can choose its own measure of population," Justice Thomas added. "But as long as we sustain the one-person-one-vote principle, we have an obligation to explain to states and localities what it actually means." In the new case, the Supreme Court may decide that states can determine for themselves which standard to use. Even such a ruling could have a major impact, Professor Pildes said. "If the court leaves it to states to decide, we could see the politics of immigration come to affect the politics of redistricting even more," he said. "State legislatures would be given a green light to locate more power or less power in areas that have large geographic concentrations of noncitizens. Those areas would have more power if the rule is equality of residents and less power if it's equality of eligible voters."

The Evenwell Case destroys the Democratic voter base, and gives an unfair advantage to the Republicans

Cohn 6/4 (Nate, Staff Writer for The New York Times and the New Republic, " Voting Case Has Potential to Put House Further Out of Reach for the Democrats", www.nytimes.com/2015/06/04/upshot/court-case-can-put-house-further-out-of-reach-for-democrats.html?abt=0002&abg=1) Chowdhury

In 2012, Republicans won a majority of seats in the House even though more people voted for Democratic candidates over all. This is because of structural biases, factors that allow a party to outperform its share of the popular vote. The Republicans are expected to again have a big advantage in 2016 because of such factors, which include gerrymandering and the tendency of

Democratic voters to be concentrated in cities. But not all structural biases favor Republicans, and one that doesn't will be the subject of a Supreme Court case connected to the question of what "one person, one vote" really should mean. If the court overturns current law, it will probably make the composition of Congress even more biased and lengthen the odds for Democrats to retake the House. Last week, the Supreme Court agreed to hear the case, *Evenwel v. Abbott*. It's about whether voting districts need to have equal populations (as they do today), or whether they need to have equal numbers of eligible voters: adults who are citizens and who haven't been disenfranchised as a result of imprisonment or felony convictions. Equal population districts have been taken for granted; every state draws its districts in this way, and it was surprising to see the court even consider the question. But it's a system that has been an advantage for Democrats for a long time. If the court requires that districts have equal numbers of eligible voters, it will make the elections of representatives to Congress even more biased toward Republicans. It's useful to think about bias in Congress in terms of "wasted votes." Votes are said to be wasted when a party uses more votes than the other party to win its safe districts. When a party wins a district by 90 percent to 10 percent, its strength seems impressive. But in reality, it is increasing its popular vote margin without getting any additional members of Congress. All those extra votes are, effectively, wasted. The party that wastes fewer votes in its safe districts is generally well positioned to do better in more competitive areas than one would expect from the statewide popular vote. Take the best-known "wasted vote" case: Democrats in cities. Democrats tend to have large majorities in cities, and so it is common for them to do better (that is, win by a wider margin) in places like Philadelphia, Chicago and Detroit than Republicans do in equally populated stretches of suburbs and countryside. It is a big part of the Republican advantage in the House. Suppose there's a state that is, over all, evenly split between Republicans or Democrats. Let's give it three congressional districts, with one district for a hypothetical city that voted, 80-20, for Obama, and another district for a Republican stretch of countryside that voted, 70-30, for Romney. This is a bad deal for Democratic House candidates. The party wasted more votes in its heavily Democratic district. The remaining district leans Republican, 60-40, giving the Republicans a safe 2-to-1 seat edge in a 50-50 state. This same phenomenon gives the Republicans an advantage in many states. Republican gerrymandering exploits this pattern well; even Democratic gerrymanders, like those in Illinois or Maryland, struggle to overcome it. But the Republicans have a wasted vote problem, too, although of a different kind, and it's the basis of the lawsuit. In the Southwest, it has to do with higher turnout in the areas that Republicans tend to win. A big part of the reason turnout is higher in those areas is simply that there are more eligible voters. Democrats, on the other hand, tend to do well in Hispanic areas with large numbers of ineligible voters, like those with immigrants who have not yet become citizens. A result is that Democrats can win their districts with fewer voters than the Republicans can in non-Hispanic areas with higher numbers of eligible voters. Imagine, again, a 50-50 state of 700,000 voters with three districts. First, a majority Hispanic district votes 70-30 Democratic, and a majority white district votes 70-30 Republican. Each district has an equal population, but unequal numbers of voters. In our admittedly extreme example, the Hispanic district has just 150,000 voters, versus 300,000 in the non-Hispanic district. So the third district, with 250,000 votes, winds up leaning Democratic, 62 to 38 percent, and the Democrats hold two of the state's three seats. This phenomenon helps Democrats in states like Texas and Arizona. The turnout in the heavily Hispanic districts in these

states is so low that Democrats waste fewer voters winning safe districts than the Republicans. The easiest way to detect this type of bias is to look at the average congressional district. In the low-turnout state example, the average district was 54 percent Democratic ($70 + 30 + 62 \div 3$), and the Democrats won 50 percent of the vote in our hypothetical state. Nationally, the average congressional district voted for Obama by 4.6 points in the two-party-vote, even though he won by only 4 points. This reflects that the Democrats tended to have slightly lower turnout in their districts than the Republicans (because of Hispanic districts that brought down the average). Take Arizona, where Mitt Romney won by nine percentage points in 2012. The Democrats have a pretty solid congressional map there. Arizona's heaviest Democratic district — Phoenix's Seventh Congressional District — had just 141,357 voters. No Republican district had fewer than 259,113 voters. The average congressional district in Arizona favored Mr. Romney by just 4.5 points. Not all of the turnout bias is a result of ineligible voters. The turnout rate among adult citizen Hispanics in these same areas is quite low. Even if the court required equal numbers of eligible voters, the Democrats would still retain an edge because of lower turnout among those voters who are eligible. But if the court requires equal eligible-voter districts, the size of this bias would basically be cut in half. Here's one way to think about it: If districts are redrawn with equal numbers of eligible voters, today's heavily Republican, white, non-Hispanic districts will have to give up excess voters to less Republican districts, reducing their wasted vote problem and making other districts more conservative. The idea that equal population districts are "biased" is sure to rankle those who argue that the current system reflects democratic values, particularly the notion that members of Congress represent all of the people of their district, not just eligible voters. It would decrease Hispanic or Latino representation in Congress as well. But if the principal concern is to make sure that the composition of elected bodies most closely reflects the popular vote, then this case is a difficult one: Although the Supreme Court could remove one source of bias, it would leave elections to the chamber even more biased than before.

Ruling in favor of plaintiffs is bad for Democrats—they'll lose key districts.

Kennedy 6/1 [Sheila, Professor of Law and Policy in the School of Public and Environmental Affairs (SPEA) at Indiana University Purdue University Indianapolis, "An Attack on Cities," 6/1/15, <http://sheilakennedy.net/2015/06/an-attack-on-cities/>] Reynoso

It is not news that demographic data poses long-term problems for the GOP—at least unless the party returns to its more responsible roots. For a decade or more, pundits have pointed to the disaffection of Latinos and other immigrant populations, the continuing Democratic self-identification of African-Americans, and the reduced religiosity and increasing social liberalism of younger Americans—characteristics that correlate with voting Democratic. What has been less remarked-upon is the widening urban/rural political divide. In our familiar red/blue political map, cities are dots of blue in even the reddest states. And in America, as elsewhere, people are increasingly moving to the cities. The political dilemma this poses for Republicans is obvious. Thus far, the party has responded with efforts to make it more difficult for poor people and minorities to cast their ballots, and (in states they control) with aggressive gerrymandering aimed at diluting urban political power. (And yes, Democrats, in states they control, gerrymander too.) Now, Ed Blum—who brought *Shelby County v. Holder*, the case that resulted in the gutting of the Voting Rights Act—is asking the Court to redefine "one person, one vote." Is Congress's job to represent people, or just voters? Currently, all states are required to redraw their political boundaries based on the Census's official count of total population every 10 years, which includes minors and noncitizen immigrants. But the Texas plaintiffs argue that states should be allowed to apportion seats based on where only U.S. citizens

over 18 years of age livegv..... A move toward counting only eligible voters, as logistically difficult as it may be, would drastically shift political power away from the urban environs with minorities and noncitizens, and toward whiter areas with larger native-born populations. That's bad news for Democrats: Of the 50 congressional districts with the lowest shares of eligible voters, 41 are occupied by Democrats (nearly all are Latino-majority seats). Meanwhile, of the 50 districts with the highest shares of eligible voters, 38 are represented by the GOP. Those "logistic difficulties" would be substantial, with opportunities for all sorts of mischief; the blog FiveThirtyEight notes that calculating the number of eligible voters would "require statistics that no one has." (In a rational world, *Evenwel v. Abbott* would never have made it to the Supreme Court for that reason alone.) What this lawsuit really highlights is that the partisan division between today's Republicans and Democrats is also geographic, with Republicans primarily rural and Democrats, urban. (Of course there are Republicans in cities and Democrats on farms, but they are the outliers.) The problem for the GOP is that the U.S. population is increasingly urban—city dwellers vastly outnumber rural folks, and movement into metropolitan areas continues to accelerate. The problem for Democrats (and city dwellers) is that state governments are still largely controlled by rural interests, thanks to legal structures originally created for an agrarian nation. There are plenty of flaws in the arguments advanced in *Evenwel*—practical, democratic and legal—and election law experts are quite properly focusing on those flaws. But at its root—and at the root of the increasingly hysterical attacks on "elitists" and "intellectuals" and "progressives"—is rejection of the values and diversity and complexity that characterize modern urban life. That hysteria may attract insecure folks for a while, but over the long haul, resentment isn't a viable political strategy.

A ruling in favor of changing district lines would only benefit the GOP—keeps their power in the House

Hasen 15 [Richard, professor of law and political science at the UC–Irvine School of Law, "Only Voters Count? Conservatives ask the Supreme Court to restrict states' rights and overturn precedent" 5/26/15, http://www.slate.com/articles/news_and_politics/jurisprudence/2015/05/evenwel_v_abbott_supreme_court_case_state_districts_count_voters_or_total.html] Reynoso

For the second time in a year, the Supreme Court has agreed to wade into an election case at the urging of conservatives. In both cases it has done so despite the issue appearing to be settled by long-standing precedent. In a case expected to be decided next month, *Arizona State Legislature v. Arizona Independent Redistricting Commission*, conservatives asked the court to bar states from using independent redistricting commissions to draw congressional lines. In a case the court agreed to hear Tuesday, *Evenwel v. Abbott*, conservatives asked the court to require states to draw their legislative district lines in a particular way: Rather than considering the total population in each district, conservatives argue, the lines should instead divide districts according to the number of people registered or eligible to vote. Most states use total population for drawing districts, which includes noncitizens, children, felons, and others ineligible to vote. In both Supreme Court cases, there is great irony in the fact that they are being brought by conservatives, who usually claim to respect precedents and states' rights. The challengers are not only asking the court to revisit issues that seemed to be settled by decades-old precedent. If successful, these cases will undermine federalism by limiting states' rights to design their own political systems. A ruling favorable to conservatives in the *Evenwel* case, especially if extended to congressional redistricting, could shift more power to Republicans, who are more likely to live in areas with high concentrations of voters. The *Arizona State Legislature* case concerns the question of who gets to set the rules for congressional redistricting. The Constitution's election clause gives that power to state "legislatures," subject to be overridden by Congress. The question is how literally to take the word legislature and whether only the state legislature qualifies. Supreme Court precedents going back to the beginning of the 20th century read the term broadly to include, for instance, redistricting plans approved by the voters. Although the issue looked settled before the Supreme Court took the *Arizona* case, there is now a real chance the court will hold that removing the legislature from redistricting decisions is unconstitutional. That decision would be unfortunate. In places like California, for example, voters approved independent redistricting commissions as a way to take self-interest and partisanship out of the redistricting process. This should be a legitimate choice for states to make, especially in the eyes of those committed to states' rights. Yet the court may soon take this important option off the table for congressional districts. It may also bar the use of voter initiatives to make other changes in congressional elections, such as mandating open primaries. Perhaps even more is at stake in the *Evenwel* case, from Texas. A ruling that states may not draw legislative district lines taking total population into account will benefit rural voters over urban voters, and that will benefit Republicans over Democrats. Urban

areas are much more likely to be filled with people who cannot vote: noncitizens (especially Latinos), released felons whose voting rights have not been restored, and children. With districts redrawn using only voters rather than all people, there will be more Republican districts. Evenwel involves the issue of state legislature redistricting, but you can bet that if the challengers are successful in this case, they will argue for the same principle to be applied to the drawing of national congressional districts. It is not clear whether the ruling would apply to congressional districts, because the one-person, one-vote principle for congressional districts has a different source in the Constitution (Article I) than the 14th Amendment's Equal Protection Clause, which applies to state legislatures. But logically, the two cases are likely to be treated the same, and the result could be more congressional districts tending Republican, helping Republicans keep their advantage in the U.S. House of Representatives. In Evenwel, once again, the issue appeared to be settled. Back in 1966 the Supreme Court considered the issue in a case called *Burns v. Richardson*, holding that Hawaii could choose total population or total voters as its method of drawing district lines. The court's point about why this was the state's decision celebrated the values of federalism: "The decision to include or exclude any such group involves choices about the nature of representation with which we have been shown no constitutionally founded reason to interfere." Although courts have periodically been asked to revisit the question, Adam Liptak reports that all the courts of appeal to consider the question have ruled that total population is a permissible basis for drawing district lines. And it is not even clear we have good measures of citizen population, meaning there could be great errors in how newly ordered redistricting following Evenwel would be conducted. We are also not sure if district lines would be based on the number of actual or eligible voters, and that alone could make a big difference. The conservatives behind Evenwel don't seem bothered much by the intrusion on states' rights that a decision in their favor would engender. That's because they are motivated more by the fact that noncitizens are getting representation, and in their belief that this is "diluting" the voting power of citizens. They are the same people who backed attacks on affirmative action at the Supreme Court in the *Fisher v. University of Texas at Austin* case and successfully got the Supreme Court to strike down a key portion of the Voting Rights Act in the *Shelby County v. Holder* case. It is an agenda not about states' rights but about getting the Supreme Court to force states to empower conservatives and force onto all of us the theories of representation and power they envision.

2NC Ext – Kills Deal

The Iran deal would put a Republican president in a bind– a commander in chief from the GOP would spell destruction of the agreement

Toosi 15 (Nahal, foreign affairs correspondent at POLITICO "How a Republican president could kill the Iran deal" 7/14/15 www.politico.com/story/2015/07/gop-president-iran-deal-kill-120077.html) Foronda ***edited for gendered language

If the next president hates the nuclear deal with Iran, he (or she) they can undo it after taking office. The dilemma: Use blunt force? Or go for a soft kill? The accord reached this week in Vienna promises broad sanctions relief to Iran in exchange for significant curbs on its nuclear program. The agreement has taken years to negotiate, involves seven countries as well as the European Union and the United Nations, and relies upon the expertise of scientists as well as diplomats. But **at the end of the day, the “deal” is at most a political arrangement — not a treaty** or other form of signed legal document. That means that the presidential candidates who have threatened to cancel the deal — so far all of them Republicans — can keep their promise by using the presidency’s executive authority to reimpose suspended U.S. sanctions on Iran and withdrawing from panels involved in implementing the accord. That abrupt approach may be quick, but it also carries risks. For one thing, a sudden U.S. withdrawal could anger the European and Asian countries also involved in the deal, making them less inclined to reimpose their own sanctions on a country they consider an alluring trading partner. The international business community may resist efforts to once again seal off a youthful, well-educated nation with vast energy reserves. And Iran could respond to the U.S. move by resuming elements of its nuclear program, which the West has long suspected is aimed at making weapons. **“If we try to reimpose sanctions on Iran and no one follows, then we have the worst of all worlds,”** said Robert Einhorn, a former Iran nuclear negotiator at the State Department.

A GOP controlled government would send the country’s progress rolling back – their political power now sets the momentum for 2016

Cassidy 15 (John, staff writer at The New Yorker with a column focusing on politics and economics “Why 2016 is so very important” 5/19/15 <http://www.newyorker.com/news/john-cassidy/why-2016-is-so-very-important>) Foronda

But before you think of moving to Canada for a year and a half, or tuning out and reading Tolstoy and Dickens, take a peek at a new analysis of the American political firmament by Sean Trende and David Byler, of the Web site Real Clear Politics. It’s a data-driven article that examines what’s happening not only in Washington but in legislatures and statehouses around the country, which also have a significant impact on people’s lives. Trende and Byler conclude that the Republican Party is already stronger than it has been for many decades. With a good result in 2016, including a takeover of the White House, it could virtually sweep the board. Indeed, Trende and Byler say, the **Republicans could end up in their strongest position since 1920**, the year women got the vote. If the spectre of today’s Republican Party monopolizing most of the levers of power at the federal, congressional, and state levels isn’t enough to get people exercised about 2016, I don’t know what is. **From tax and spending policy to health insurance, foreign policy, and social issues like gun control and gay marriage, the country would be subjected to a concerted effort to roll**

back time. While the Senate filibuster and the courts might exercise some restraint on the G.O.P. victors, many members of the Party would be determined to use their position of dominance to set the country on a regressive, rightward path.^a Is this too alarmist? One can quibble with the power index that Trende and Byler constructed to gauge the political influence of each party, which consists of five equally weighted parts: Presidential performance, House of Representatives performance, U.S. Senate performance, gubernatorial performance, and state legislative performance. ("Performance" refers to measures of electoral performance, rather than of governance.) Perhaps the Presidency should be assigned more importance than the national and local legislatures. Another pertinent criticism is that the two analysts don't weight state governorships by population, which means, for example, that the victory of a Republican governor in Arkansas counts for as much as that of a Democratic governor in California.^a Still, the Trende and Byler power index has the merit of being straightforward, and it enables the analysis to be taken all the way back to the Civil War. In 1866, Lincoln's G.O.P. scored a hundred and eight, a number it has never again attained. The Republicans' worst ever score was recorded after the Roosevelt landslide of 1936: minus a hundred and nineteen. (A negative score for one party implies a positive score for the other.)^a For much of the postwar period, the Democrats held a narrow lead over the Republicans on the power index, but this changed after the 2014 midterms, when the G.O.P. score jumped up to 33.8. The fifty-four seats the Republicans won in the Senate was their second-best result since 1928, and the two hundred and forty-seven seats they hold in the House is the highest since after the 1928 election, when Herbert Hoover trounced Al Smith. At the local level, the G.O.P. now has thirty-one governors, and it controls sixty-eight of ninety-eight partisan state legislatures, its best showing since 1920.^a Trende and Byler concede that their portrait of Republican dominance "is at odds with the prevailing theme of a Republican Party with serious demographic problems," which "make it difficult for the GOP to win the presidency." But they also point out that "those same shifts have strengthened it in the states, which is where most lawmaking takes place." (In an earlier article, Byler pointed out how partisan redistricting has also helped Republicans at the local level.) The two analysts conclude: "None of this is to say that Republicans are building a permanent majority of any sort. It is simply to say that **when one takes account of the full political picture, the Republican Party is stronger than it has been** in most of our readers' lifetimes. This is important, and more analysis should take account of this fact."^a It should—and indignant voters should pay attention, too. At this stage, Democratic control of the White House is about the only thing holding the Republicans back, but they are far from invulnerable. Thanks to the big gains they made in the midterms of 2010 and 2014, they will be defending a lot of seats at the national and state level that are potentially up for grabs. Indeed, Trende and Byler note that, "a bad Republican year could place the party 'in the red,' with its share of the presidential vote, Senate, House and state legislatures falling precipitously." In short, the 2016 election could bring a quick end to Republican gains, or it could assign the G.O.P. a position of dominance. It matters; it matters enormously.

Impact – Climate Change

GOP takeover guts climate adaptation policies.

Steven **Rosenfeld**, 5/8/15, (Steven Rosenfeld, covers national political issues for AlterNet, including America's retirement crisis, democracy and voting rights, and campaigns and elections. Author of "Count My Vote: A Citizen's Guide to Voting", "12 Ways the GOP Would Destroy the Country If They Controlled Washington After 2016", alternet.org, <http://www.alternet.org/election-2016/12-ways-gop-would-destroy-country-if-they-controlled-washington-after-2016>, accessed date: 7/31/15) Salehitezangi

The GOP controls the House and Senate and last week passed a federal budget slashing virtually every social program from pre-school to senior safety nets. Democrats, responded by accurately calling it "a recipe for national decline," as it goes after health care, anti-poverty programs, schools and student loans and Social Security, all while raising taxes on the middle-class, breaking promises to veterans and boosting military spending. Meanwhile, in red states where Republicans control the Legislature and executive branches, the rampage has exceeded even this Congress' wildest dreams. In Kansas, the GOP rewrote laws for their welfare programs, turning assistance from a safety net into a barbed-wire fence, treating recipients—mostly single parents and children—like paroled convicts. In 11 red states, 37 new rules have been adopted this year creating more barriers to abortion—from requiring parental consent, to mandatory waiting periods, to falsely telling women that some procedures can be reversed. It doesn't stop there. As a June 30th deadline approaches for states to expand Medicaid— state-run health care for the poor—by using Obamacare's federal subsidies, 21 red states are still refusing to do so. According to Henry J. Kaiser Family Foundation's statistics, 960,000 adults and 2.52 million children are being deliberately denied access to care. In a handful of other red states, the right-wing war on labor grinds on by repealing prevailing wage laws for construction jobs, which academics found cuts union wages by 10 percent and non-union construction pay by two-to-four percent. **What would Republicans try to do if they controlled Congress and the White House after the 2016 election?** It's not a far-fetched question. The presidency has swung between the two major parties after each two-term president since 1992. The GOP's just-passed 2016 budget in Congress may be heading for President Obama's veto pen, but it signals what they'd do—justified by hyped fears about retiring the federal debt. In red states, social conservatives are going after abortion rights, opposing LGBT equality, and punishing welfare recipients. Meanwhile, business conservatives are following the template from the pro-corporate American Legislative Exchange Council (ALEC) and going after unions, opposing living wages, denying climate change and more.

Adaptation key to avoid climactic impacts.

Feldman and Kahan 8 [Ira Feldman is the president and senior counsel of Greentrack Strategies, an independent think tank focusing on strategic environmental management and sustainability policy issues, he is also a professor at Washington College of Law, teaching environmental regulatory innovation, Joshua Kahan is an environmental consultant and researcher of ecosystem services, M.S. in Environmental Studies at the University of Pennsylvania, "Preparing for the Day After Tomorrow: Frameworks for Climate Change Adaptation," *Sustainable Development Law & Policy*, 2008, <http://heinonline.org/HOL/LandingPage?handle=hein.journals/sd1p8&div=16&id=&page=>]

To date, **the international community has dealt with climate change**, the quintessential sustainability issue of our time, **principally by promoting the mitigation of greenhouse gases** (GHGs). The rationale for such mitigation efforts, simply stated, is that if GHG concentrations are stabilized or reduced, ultimately the severity of climate change can be alleviated. While there is no doubt that mitigation activities are necessary to the long-term well-being and stability of the global environment, the level of attention paid to mitigation-oriented science, technology, methodology, and policy serves to obscure the pressing need to seriously address the inevitable question of adaptation to climate change.

The overwhelming focus on GHG mitigation overshadows the adaptation half of the climate change equation. The reality is that, **even if the most optimistic mitigation plans are adopted and all**

GHGs are stabilized immediately, residual GHG concentrations within the atmosphere **will continue to create adverse consequences well into the future. The challenge is** not successfully “managing a transition from one equilibrium to another,” as mitigation does, “but rather, **adapting to a far more uncertain climatic future.**” **At best, mitigation of anthropogenic sources of GHGs can attempt to minimize long-term climate change impacts, but cannot** half or **avoid** all **impacts**. Therefore, **adapting** to the adverse impacts of climate change **is a reality, and** in some instances **the need is immediate**.

The Intergovernmental Panel on Climate Change (IPCC) defines climate change adaptation as “an adjustment in ecological, social, or economic systems in response to actual or expected climatic stimuli and their effects or impacts.” Adaptive measures are needed because adverse consequences are expected to occur globally on unprecedented levels. The IPCC states with high confidence that many **natural systems are being affected by regional climate changes**, particularly temperature increases. **Global data** assessments **show** that it is likely that **anthropogenic warming impacts many physical and biological systems**, and other effects of regional climate change on natural and human environments are emerging. **The current knowledge of climate change associated impacts has** led the global community **to the conclusion that “adaptation will be necessary to address impacts from the warming which is already unavoidable due to past emissions.”**

Warming is the largest risk of extinction

Deibel 07 – professor of IR at National War College (Terry L. Deibel, Foreign Affairs Strategy, “Conclusion: American Foreign Affairs Strategy Today Anthropogenic – caused by CO2”)

Finally, **there is one major existential threat** to American security (as well as prosperity) of a nonviolent nature, **which**, though far in the future, **demands urgent action. It is the threat of global warming to the stability of the climate upon which all earthly life depends. Scientists** worldwide have **been observing** the gathering of this threat **for three decades now, and what was once a mere possibility has passed through probability to near certainty**. Indeed **not one of more than 900 articles** on climate change published in refereed scientific journals from 1993 to 2003 doubted that anthropogenic warming is occurring. “In legitimate scientific circles,” writes Elizabeth Kolbert, **“it is virtually impossible to find evidence of disagreement over the fundamentals of global warming.”** Evidence from a vast international scientific monitoring effort accumulates almost weekly, as this sample of newspaper reports shows: an international panel predicts “brutal droughts, floods and violent storms across the planet over the next century”; climate change could “literally alter ocean currents, wipe away huge portions of Alpine Snowcaps and aid the spread of cholera and malaria”; “glaciers in the Antarctic and in Greenland are melting much faster than expected, and...worldwide, plants are blooming several days earlier than a decade ago”; “rising sea temperatures have been accompanied by a significant global increase in the most destructive hurricanes”; “NASA scientists have concluded from direct temperature measurements that 2005 was the hottest year on record, with 1998 a close second”; **“Earth’s warming climate is estimated to contribute to more than 150,000 deaths and 5 million illnesses each year” as disease spreads;** “widespread bleaching from Texas to Trinidad...killed broad swaths of corals” due to a 2-degree rise in sea temperatures. **“The world is slowly disintegrating”** concluded Inuit hunter Noah Metuq, who lives 30 miles from the Arctic Circle. “They call it climate change...but we just call it breaking up.” From the founding of the first cities some 6,000 years ago until the beginning of the industrial revolution, carbon dioxide levels in the atmosphere remained relatively constant at about 280 parts per million (ppm). At present they are accelerating toward 400 ppm, and by 2050 they will reach 500 ppm, about double pre-industrial levels. **Unfortunately, atmospheric CO2 lasts about a century, so there is no way immediately to reduce levels, only to slow their increase, we are thus in for significant global warming; the only debate is how much and how serious the effects will be.** As the newspaper stories quoted above show, **we are already experiencing** the effects of 1-2 degree warming in more **violent storms, spread of disease, mass die offs of plants and animals, species extinction, and** threatened **inundation of low-lying countries** like the Pacific nation of Kiribati and the Netherlands at a warming of 5 degrees or less **the Greenland and West Antarctic ice sheets could disintegrate, leading to a sea level of rise of 20 feet** that would cover North Carolina’s outer banks, swamp the southern third of Florida, and inundate Manhattan up to the middle of Greenwich Village. **Another catastrophic effect would be the collapse of the Atlantic thermohaline circulation that keeps the winter weather in Europe far warmer than its latitude would otherwise allow.** Economist William Cline once estimated the damage to the United States alone from moderate levels of warming at 1-6 percent of GDP annually; severe warming could cost 13-26 percent of GDP. But **the most frightening scenario is runaway greenhouse warming, based on positive feedback from the buildup of water vapor in the atmosphere** that is both caused by and causes hotter surface temperatures. Past ice age transitions, associated with only 5-10 degree changes in average global temperatures, took place in

just decades, even though no one was then pouring ever-increasing amounts of carbon into the atmosphere. Faced with this specter, the best one can conclude is that "humankind's continuing enhancement of the natural greenhouse effect is akin to playing Russian roulette with the earth's climate and humanity's life support system. At worst, says physics professor Marty Hoffert of New York University, "we're just going to burn everything up; we're going to heat the atmosphere to the temperature it was in the Cretaceous when there were crocodiles at the poles, and then everything will collapse." During the Cold War, astronomer Carl Sagan popularized a theory of nuclear winter to describe how a thermonuclear war between the United States and the Soviet Union would not only destroy both countries but possibly end life on this planet. Global warming is the post-Cold War era's equivalent of nuclear winter at least as serious and considerably better supported scientifically. Over the long run it puts dangers form terrorism and traditional military challenges to shame. It is a threat not only to the security and prosperity to the United States, but potentially to the continued existence of life on this planet.

Impact – Hegemony

GOP majority indicates more friction – may not last or disable them from passing legislation

Milligan, 15 (Susan, a political and foreign affairs writer and contributed to a biography of the late Sen. Edward M. Kennedy, "Last Lion: The Fall and Rise of Ted Kennedy," "The Pitfalls of a New Majority," US News, 2/7/15, <http://www.usnews.com/news/articles/2015/02/02/the-pitfalls-of-a-new-republican-majority-in-congress>) Zhang

With a more muscular majority in the House and a new majority in the Senate, Republicans were ideally poised to pass legislation, dare Obama to veto it and cast the Democrats as the obstructionists who couldn't manage to get things done when they were in power. Less than a month into the 114th Congress, the reality is: not so much. House Republican leadership is finding that it's a mixed bag, having an expanded majority. A bigger caucus naturally tends to create more factions within that group, and those minority-within-the-majority factions themselves feel more empowered to make demands. In the Senate, Republicans are reminded that they are subject to the same frustrations and political pressures Democrats had when they were in power. Now, it's the Republicans (with 54 seats) who need to muster the 60 votes needed to stop a Democratic filibuster. Several blue-state Republicans are facing the same landscape in 2016 as red-state Democrats did last year, and know they will be called to account for a party-line vote that doesn't please their less-than-conservative constituents. "at the end of the day, you need collaboration," Graham adds, or the Senate will remain as Democrats complained it operated when they were in the chair – paralyzed by a minority that won't allow votes on bills that would pass with a simple majority. The measure was symbolic anyway: Democrats almost certainly would have filibustered it in the Senate, Obama would presumably veto it and it's unclear whether it would have passed court scrutiny. In the end, House Republican leadership pulled the bill, leaving the party with no message at all, save a talking point for 2016 Democratic candidates eager to make women's issues a bigger deal. Immigration, too, was meant to be a rallying point for the newly empowered Republicans. But GOP leaders pulled consideration of a measure that would require the Department of Homeland Security to have "operational control" over the border to prevent illegal crossings. The Senate, too, has gotten off to a rocky start. New Majority Leader Mitch McConnell, R-Ky., points out that the Senate has had more roll-call votes on amendments in the first few weeks than it did in the whole of last year. But Democrats are also complaining that McConnell shut down members of their party seeking to offer amendments on the floor (ironically the same charge Republicans levied against Democrats when they ran the Senate). The GOP has another wrinkle, as well – Republican senators up for re-election in 2016 may need to display their moderate sides. Unlike their last election cycle, the GOP wave of 2010, these senators will be running in a presidential year, possibly with a Democratic nominee who could galvanize female voters and Democrats overall.

Gridlock will crush u.s. foreign policy credibility and destroy u.s. leadership

Biden 98 (Senator Joseph R. Biden, Jr. Bipartisan Foreign Policy at a Time of Crisis http://www.nuclearfiles.org/menu/key-issues/nuclear-weapons/history/post-cold-war/biden_bipartisan-foreign-policy-crisis.htm.)

That's true now more than ever. The good news is we are the world's only remaining superpower. The bad news is, we are the world's only remaining superpower. Unless we lead, no one will. The dangers we face are many: Financial crises in Russia and Asia; Humanitarian disaster in Kosovo; Weapons of mass destruction in Iraq; Nuclear weapons in North Korea, India, and Pakistan; Missile programs in North Korea and Iran; Fragile peace in the Middle East; And continuing threats from international terrorism. The risks of not acting are obvious. There is real potential for foreign policy paralysis. In my view American foreign policy, which has already fallen victim to the antics of the Republicans in the House of Representatives, has been further harmed by this growing domestic crisis. In the face of major world problems, we cannot be distracted from our task of maintaining America's security, leadership, and credibility abroad. As I see it, the problem breaks down into two areas. In some key instances Congress is not doing its job. The need for IMF funding, payment of our UN arrearages, and sanctions flexibility regarding India and Pakistan are just three examples. I will mention others later in my remarks. In other areas, the President is limited in doing his job by the uncertainty of Congressional support. As President he has the power to act, but he has to ask himself in this political climate whether he will be cut adrift by a Congress that will not back him up. And foreign leaders, knowing of the President's difficulties, wonder whether the President can deliver on his commitments. The two most immediate cases in point are Iraq and Kosovo. In Kosovo, the Serbian special police and Yugoslav Army continue a terrorist policy that has destroyed more than two hundred villages, driven more than 300,000 ethnic Albanians from their homes, with an estimated 50,000 forced into the forests and mountains. With the onset of winter only weeks away, a humanitarian catastrophe looms. The stability of the entire southern Balkans hangs in the balance. I believe the United States and its NATO allies should give President Milosevic a date certain to cease military operations. If he fails to do so, then NATO should undertake an air campaign, whose preparations were agreed upon by the Alliance in Portugal last week. But for the President to be able to act he needs to have the support of the Congress. If that support is not asked for - or given - because of the growing chasm created by the impeachment debate, United States leadership will be forfeited, and the Balkan tragedy will continue.

Hegemony key to solve extinction

Thomas P.M. **Barnett 11** Former Senior Strategic Researcher and Professor in the Warfare Analysis & Research Department, Center for Naval Warfare Studies, U.S. Naval War College American military geostrategist and Chief Analyst at Wikistrat., worked as the Assistant for Strategic Futures in the Office of Force Transformation in the Department of Defense, "The New Rules: Leadership Fatigue Puts U.S., and Globalization, at Crossroads," March 7 <http://www.worldpoliticsreview.com/articles/8099/the-new-rules-leadership-fatigue-puts-u-s-and-globalization-at-crossroads>

It is worth first examining the larger picture: We live in a time of arguably the greatest structural change in the global order yet endured with this historical moment's most amazing feature being its ^{relative and absolute} lack of mass violence That is something to consider when Americans contemplate military intervention in Libya, because if we do take the step to prevent larger-scale killing by engaging in some killing of our own, we will not be adding to some fantastically imagined global death count stemming from the ongoing "megalomania" and "evil" of American "empire. We'll be engaging in ^{the same sort of} system-administering activity that has marked our stunningly successful stewardship of global order ^{since World War II. Let me be more blunt:} As the guardian of globalization the U.S. military has been the greatest force for peace the world has ever known. Had America been removed from the global dynamics that governed the 20th century, the mass murder never would have ended. Indeed, it's entirely conceivable there would now be no identifiable human civilization left, once nuclear weapons entered the killing equation. But the world did not keep sliding down that path of perpetual war. Instead, America stepped up and changed everything by ushering in our now-perpetual great-power peace We introduced the international liberal trade order known as globalization and played loyal Leviathan over its spread What resulted was the collapse of empires, an explosion of democracy, the persistent spread of human rights the liberation of women, the doubling of life expectancy a roughly 10-fold

increase in adjusted global GDP and a profound and persistent **reduction in** battle deaths from **state-based conflicts**. That is what American "hubris" actually delivered. Please remember that the next time some TV pundit sells you the image of "unbridled" American military power as the cause of global disorder instead of its cure. With self-deprecation bordering on self-loathing, we now imagine a post-American world that is anything but. Just watch who scatters and who steps up as the Facebook revolutions erupt across the Arab world. While we might imagine ourselves the status quo power, we remain the world's most vigorously revisionist force. **As for the sheer "evil" that is our military-industrial complex**, again, **let's examine what the world looked like before that establishment reared its ugly head**. The last great period of global structural change was the first half of **the 20th century**, a period that **saw a death toll of about 100 million** across two world wars. That comes to an average of 2 million deaths a year in a world of approximately 2 billion souls. Today, with far more comprehensive worldwide reporting, researchers report an average of less than 100,000 battle deaths annually in a world fast approaching 7 billion people. Though admittedly crude, these **calculations suggest a 90 percent absolute drop and a 99 percent relative drop in deaths due to war**. We are clearly **headed for a world order characterized by multipolarity**, something the American-birthing system was designed to both encourage and accommodate. **But given how things turned out the last time we** collectively faced such a fluid structure, **we would do well to keep U.S. power**, in all of its forms, deeply embedded in the geometry to come. To continue the historical survey, after salvaging Western Europe from its half-century of civil war, **the U.S. emerged as the progenitor of a new, far more just form of globalization -- one based on actual free trade rather than colonialism**. America then successfully **replicated globalization** further **in East Asia** over the second half of the 20th century, **setting the stage for the Pacific Century now unfolding**.

Impact – Economy

Economy performs better under Democratic presidents – overall stock returns were significantly higher

Lund, 14 (Brian, a freelance writer, author, and financial executive with almost 30 years of market experience. He writes prose about the markets and finance with an occasional poetic slice of pop culture. He is the author of *Trading: The Best of the Best - Top Trading Tips For Our Times*, and has made numerous appearances on CNBC, “Republican or Democrat Presidents: Which Are Better for the Stock Market?” *DailyFinance*, 3/5/14, <http://www.dailyfinance.com/2014/03/05/republican-democrat-presidents-better-stock-market-performance/>) Zhang

In 2012, a report titled "US Market Performance Since 1900: Republicans Versus Democrats" was released by CMC Markets, a major financial research company -- ironically, based in Canada -- which attempted to answer the question once and for all.^a The report has a number of surprises in it, including the fact that although Ronald Reagan and Franklin Roosevelt had impressive overall returns over the course of their terms -- 125 percent and 201 percent respectively -- it's actually Calvin Coolidge, a Republican, who comes in at the top spot with a total return of 269 percent during his time in office. However, on the whole, the stock market has performed better under Democratic presidents than under Republicans. Much, much better. The average monthly return under Democrats was 0.73 percent versus 0.38 percent for Republicans, and Democrats posted an average yearly return of 15.31 percent against 5.47 percent for their political counterparts.^d In fact, there's a school of thought that says the best time for the market is when there's conflict between Congress and the presidency, which renders them both impotent, and allows private industry to innovate free from government intervention.^a A classic example of this was the economic boom of the mid- to late- '90s when the markets hit record highs. That includes the Nasdaq composite (^IXIC), which more than quadrupled in two years, then plummeted by the same amount in the next two. To this day, it has not reached that high water mark again (though it has more than tripled from its post-bubble low).^a Democrat Bill Clinton was president then, and the stock market had overall returns of 227 percent. But Clinton's two terms were also known for intractable conflict between the Republican-majority Congress and the office of the president. Some will assert that this allowed a new technology, the Internet, to grow unobstructed and unregulated by a government that was too busy beating up on itself.

Growth prevents nuclear warfare – history proves

Mead 9 [Walter Russell Mead, the Henry A. Kissinger Senior Fellow in U.S. Foreign Policy at the Council on Foreign Relations, 2-4, “Only Makes You Stronger,” *The New Republic*, <http://www.tnr.com/politics/story.html?id=571cbbb9-2887-4d81-8542-92e83915f5f8&p=2>]

If current market turmoil seriously damaged the performance and prospects of India and China, the current crisis could join the Great Depression in the list of economic events that changed history, even if the recessions in the West are relatively short and mild. The United States should stand ready to assist Chinese and Indian financial authorities on an emergency basis--and work very hard to help both countries escape or at least weather any economic downturn. It may test the political will of the Obama administration, but the United States must avoid a protectionist response to the economic slowdown. U.S. moves to limit market access for Chinese and Indian producers could poison relations for years. For billions of people in nuclear-armed countries to emerge from this crisis believing either that the United States was indifferent to their well-being or that it had profited from their distress could damage U.S. foreign policy far more severely than any mistake made by George W. Bush. It's not just the great powers whose trajectories have

been affected by the crash. Lesser powers like Saudi Arabia and Iran also face new constraints. The crisis has strengthened the U.S. position in the Middle East as falling oil prices reduce Iranian influence and increase the dependence of the oil sheikdoms on U.S. protection. Success in Iraq—however late, however undeserved, however limited—had already improved the Obama administration’s prospects for addressing regional crises. Now, the collapse in oil prices has put the Iranian regime on the defensive. The annual inflation rate rose above 29 percent last September, up from about 17 percent in 2007, according to Iran’s Bank Markazi. Economists forecast that Iran’s real GDP growth will drop markedly in the coming months as stagnating oil revenues and the continued global economic downturn force the government to rein in its expansionary fiscal policy. All this has weakened Ahmadinejad at home and Iran abroad. Iranian officials must balance the relative merits of support for allies like Hamas, Hezbollah, and Syria against domestic needs, while international sanctions and other diplomatic sticks have been made more painful and Western carrots (like trade opportunities) have become more attractive. Meanwhile, Saudi Arabia and other oil states have become more dependent on the United States for protection against Iran, and they have fewer resources to fund religious extremism as they use diminished oil revenues to support basic domestic spending and development goals. None of this makes the Middle East an easy target for U.S. diplomacy, but thanks in part to the economic crisis, the incoming administration has the chance to try some new ideas and to enter negotiations with Iran (and Syria) from a position of enhanced strength. Every crisis is different, but there seem to be reasons why, over time, financial crises on balance reinforce rather than undermine the world position of the leading capitalist countries. Since capitalism first emerged in early modern Europe, the ability to exploit the advantages of rapid economic development has been a key factor in international competition. Countries that can encourage—or at least allow and sustain—the change, dislocation, upheaval, and pain that capitalism often involves, while providing their tumultuous market societies with appropriate regulatory and legal frameworks, grow swiftly. They produce cutting-edge technologies that translate into military and economic power. They are able to invest in education, making their workforces ever more productive. They typically develop liberal political institutions and cultural norms that value, or at least tolerate, dissent and that allow people of different political and religious viewpoints to collaborate on a vast social project of modernization—and to maintain political stability in the face of accelerating social and economic change. The vast productive capacity of leading capitalist powers gives them the ability to project influence around the world and, to some degree, to remake the world to suit their own interests and preferences. This is what the United Kingdom and the United States have done in past centuries, and what other capitalist powers like France, Germany, and Japan have done to a lesser extent. In these countries, the social forces that support the idea of a competitive market economy within an appropriately liberal legal and political framework are relatively strong. But, in many other countries where capitalism rubs people the wrong way, this is not the case. On either side of the Atlantic, for example, the Latin world is often drawn to anti-capitalist movements and rulers on both the right and the left. Russia, too, has never really taken to capitalism and liberal society—whether during the time of the czars, the commissars, or the post-cold war leaders who so signally failed to build a stable, open system of liberal democratic capitalism even as many former Warsaw Pact nations were making rapid transitions. Partly as a result of these internal cultural pressures, and partly because, in much of the world, capitalism has appeared as an unwelcome interloper, imposed by foreign forces and shaped to fit foreign rather than domestic interests and preferences, many countries are only half-heartedly capitalist. When crisis strikes, they are quick to decide that capitalism is a failure and look for alternatives. So far, such half-hearted experiments not only have failed to work; they have left the societies that have tried them in a progressively worse position, farther behind the front-runners as time goes by. Argentina has lost ground to Chile; Russian development has fallen farther behind that of the Baltic states and Central Europe. Frequently, the crisis has weakened the power of the merchants, industrialists, financiers, and professionals who want to develop a liberal capitalist society integrated into the world. **Crisis can also strengthen the hand of religious extremists, populist radicals, or authoritarian traditionalists** who are determined to resist liberal capitalist society for a variety of reasons. Meanwhile, the companies and banks based in these societies are often less established and more vulnerable to the consequences of a financial crisis than more established firms in wealthier societies. As a result, developing countries and **countries where capitalism has relatively recent and shallow roots tend to suffer greater economic and political damage when crisis strikes**—as, inevitably, it does. And, consequently, financial crises often reinforce rather than challenge the global distribution of power and wealth. This may be happening yet again. None of which means that we can just sit back and enjoy the recession. History may suggest that financial crises actually help capitalist great powers maintain their leads—but it has other, less reassuring messages as well. **If financial crises have been a normal part of life during the 300-year rise of the liberal capitalist system under the Anglophone powers, so has war. The wars of the League of Augsburg and the Spanish Succession; the Seven Years War; the American Revolution; the Napoleonic Wars; the two World Wars; the cold war: The list of wars is almost as long as the list of financial crises. Bad economic times can breed wars** Europe was a pretty peaceful place in 1928, but the Depression poisoned German public opinion and helped bring Adolf Hitler to power. If the current crisis turns into a depression, what rough beasts might start slouching toward Moscow, Karachi, Beijing, or New Delhi to be born? The United States may not, yet, decline, but **if we can't get the world economy back on track, we may still have to fight.**

Impact – GOP Bad – Laundry List

The GOP would kill Social Security

Waldman 1/26/15 [Paul Waldman is a senior writer with the American Prospect magazine and a blogger for the Washington Post, “ Why is GOP going after Social Security?” Cnn.com (January 26, 2015)<http://www.cnn.com/2015/01/26/opinion/waldman-social-security/>] sheikh

(CNN)Social Security is often described as "the third rail of American politics" -- touch it and you'll get zapped. So why do Republicans keep sidling up to it and sticking their fingers out? Paul Waldman Paul Waldman There's a brewing controversy in Congress over a small part of the program, which is just the latest version of an old routine that goes like this: Republicans say Social Security is going broke, and they propose changes that would cut benefits or otherwise undermine the program. Democrats shout "Republicans are trying to cut Social Security!" Then the Republicans, scared of a backlash from older voters, back off. And why do we keep going through this? Republicans will tell you it's because the program is in peril, and if we don't cut it back, it won't be there at all for future generations. Democrats will tell you it's because Republicans never liked the program in the first place, and would love to kill it. That may be an exaggeration, but the fact is that Republicans hate big government, and government doesn't come any bigger than Social Security. It's also the most successful and beloved social program in American history. Most of us are too young to remember when growing old in America almost inevitably meant a miserable descent into poverty, but until the middle of the 20th century, that's what it was. The current controversy revolves around a rule change Republicans made as soon as the new Congress was sworn in this month. Social Security is actually two separate programs, Old Age and Survivors Insurance (OASI), and the much smaller Disability Insurance program (DI). The disability program will be facing a funding shortfall next year, and to ensure that disabled people continue to get all their benefits, Congress would have to move some money from OASI into DI. This isn't anything new -- it's been done many times in recent years.

But House Republicans adopted a parliamentary rule barring the House from allowing that transfer unless it was accompanied by benefit cuts or tax increases. If it can't get worked out, people on DI could see their benefits cut substantially. The next generation and Social Security The next generation and Social Security 01:17 PLAY VIDEO So why would Republicans insist on this? My guess is that they think forcing a mini-crisis over the Disability Insurance program's finances will allow for a debate on the program that will make it easier to do what they've wanted to do for a long time: cut it back somehow, either by reducing benefits, increasing the retirement age, or even partially privatizing it. The justification is always that the program is "going broke." But that's just not true. When people say that, what they're usually referring to is that, according to the projections in the Social Security Trustees' latest report, in 2033 the program's trust fund will be exhausted. But even if there are no changes between now and then, the program would not be "broke." That's because it would still be taking in billions of dollars in taxes every day and paying them out in benefits. Even under this scenario, the program will still pay 77% of recipient's benefits after 2033, according to the report. Which would be awful. That would be a large reduction in income for millions of seniors. But 77% is not nothing. The people who tell you that the program will be "broke" are hoping that, faced with that (fictional) nightmare, you might be willing to accept steep benefit cuts now. But we don't have to -- the

projected shortfall can be fixed with some very modest changes, like raising the payroll tax cap (right now you only pay payroll taxes on the first \$117,000 of your wages, which means that the wealthy actually pay less as a proportion of their income than the rest of us) or gradually raising the payroll tax by a point in tiny increments over an extended period. The point is, it wouldn't be hard to come up with some combination of changes that could take care of the shortfall without cutting benefits. But for that to happen, both parties would have to agree on that goal. And there's reason to wonder whether Republicans really want a Social Security that's strong and stable. Programs like Social Security and Medicare -- which provide vital benefits to millions of Americans and are hugely popular -- stand as a living rebuke to conservatives' small-government philosophy. When Republicans tell voters that government can't do anything right, they hope that the voters don't respond, "Well, the government is doing a good job keeping my grandma from having to eat cat food." The idea that the program is perennially in crisis, on the other hand, validates everything else that Republicans say. Congress will probably work out the issue with Disability Insurance funding, just like they have in the past -- once the GOP starts feeling some political heat over it. But Republicans will be back for another attack on Social Security soon enough.

Impact – Poverty

Gop will decrease food stamps therefore increasing poverty

Hines 14 [Joseph hines was a Democratic Party politician and one of the most powerful leaders of Tammany Hall in New York City, “The House GOP’s Insane Plan To Increase Record Poverty” (September 18)<http://www.demos.org/blog/9/18/13/house-gop%E2%80%99s-insane-plan-increase-record-poverty>] sheikh

Washington's set to go from not doing enough to actively adding to our unconscionable poverty rate, slashing food stamps as poverty languishes. That's because the House Republicans have a plan to double-down in their cuts to the Supplemental Assistance for Needy Families (SNAP), commonly known as food stamps. Meanwhile, new Census data shows that record poverty rates, which rose sharply during the recession, have not been helped by our milquetoast recovery. They stayed flat at an historic high of 15 percent in 2012. That isn't to say that government policy doesn't work. Conservatives love to point to rising food stamp enrollment as evidence of social insurance fraud, or to argue that simultaneously rising poverty and rising food stamp enrollment are evidence of the program's failure. The Census numbers tell another story: in 2012, current SNAP enrollment lifted four million Americans above the poverty line. That makes it our third most effective poverty relief program, after the Earned Income Tax Credit and Social Security, at a fraction of the cost. If the goal is to maximize our impact in reducing poverty, food stamps are an overwhelming success. And they've been growing in importance in accordance to the weakening economy. The issue, then, lies not in overuse of food stamps but in the declining economic prospects for the poor and middle-classes overall. Stagnating income, which directly correlates to increasing poverty, hasn't rebounded from its steep decline since the recession. Median income also failed to rebound in 2012, the third year of the recovery, following five years of decline. Yet despite weak economic prospects and a successful food stamp program, today House Republicans are set to vote on a bill as early as Thursday to double down their June proposal to gut SNAP. The House already set the stage for such cuts, separating SNAP into a stand-alone piece of legislation from its usual place as a part of the comprehensive farm bill. So what would the House GOP plan do to one of our most essential poverty-prevention programs? The bill would add an additional \$19 billion dollars in cuts to a proposal in June to cut \$20.5 billion over ten years. The Center on Budget Policy Priorities finds that the bill will cut SNAP benefits to nearly four million people in 2014 and to an average of nearly three million people each year over the coming decade. Robert Greenstein, the CBPP's president, summarizes why the bill is so draconian: The so-called “work requirement” provision of the June farm bill would let states cut off non-elderly adults, including parents with children as young as 1, who are not working at least 20 hours a week or enrolled in a work or training program for at least 20 hours a week, even if they want to work and are looking hard for a job but can't find one—regardless of local labor market conditions And that's just the twenty billion in cuts from June. The current proposal contains twice the economic pain. There are many, many other cruel aspects in the House GOP's current bill, that the CBPP details exhaustively, but the broader point is clear: as a result of an ideology that blames recipients of food stamps for an inability to find work, the House GOP will increase the ranks of the poor. Demonizing the poor is insane at a time of record poverty and stagnant incomes. A War on Poverty (not to mention the renewed

War on Poverty we need) can only succeed if it's funded. In the end, a just polity would be expanding SNAP, not cutting it down.

2NC Minority Disenfranchisement

Impact Module

SCOTUS is set to hear *Evenwel v. Abbott* – racial issues cause concern and mean this case is imperative

Epps 15 (Garrett, Professor of Law at University of Baltimore “One Person, One Vote?” 5/31/15 <http://www.theatlantic.com/politics/archive/2015/05/one-person-one-vote/394502/>) Foronda

“Equality of representation in the legislature is a first principle of liberty,” John Adams wrote in 1776. ∂ Most Americans would agree. But does “equality of representation” mean equal numbers of people—or equal numbers of voters? ∂ That question is raised by the Court’s decision Monday to hear the case of *Evenwel v. Abbott*. *Evenwel* is a challenge to the Texas Legislature’s plan for state Senate districts. The appellants are registered voters from Senate districts that have significantly more eligible voters than some others. The legislature’s districts vary from each other in raw population by less than 10 percent; but in their “citizen voting-age population,” or CVAP, the variation can be as high as 50 percent. ∂ In their appeal to the Court, the aggrieved voters note that “in Texas, large numbers of non-voters swell the population of certain geographic locations.” The Cato Institute, in a brief urging the Court to take the case, is more specific: **Evenwel is about race and national origin.** Under the current basis, the Cato brief says, “a relatively small constituency of eligible Hispanic voters ... have their votes ‘over-weighted’ and ‘over-valuated,’ effectively diluting the votes of eligible voters” in districts with fewer Latinos. Latino voters thus have “disproportionate power.” Though the brief doesn’t mention this, redrawing lines on CVAP would produce districts that are older, whiter, richer, and more likely to vote Republican. ∂ Throughout much of our history, states got to apportion their legislatures any way they wanted. But in a 1964 case called *Reynolds v. Sims*, the Warren Court proclaimed that “as a basic constitutional standard, the Equal Protection Clause requires that the seats in both houses of a bicameral state legislature must be apportioned on a population basis.” The Court’s explanation, however, created a lasting confusion between population and voters; “an individual’s right to vote for state legislators,” it said, “is unconstitutionally impaired when its weight is in a substantial fashion diluted when compared with votes of citizens living in other parts of the State.” This and later decisions spawned the shorthand phrase, “one person one vote.” ∂ In a 1966 case called *Burns v. Richardson*, the Court approved a temporary Hawaii districting plan based on the number of eligible voters; the state argued it needed to use that basis, rather than population, because of the large number of military personnel moving in and out of the state. Justice William Brennan’s majority opinion approved Hawaii’s temporary plan “only because” it “produced a distribution of legislators not substantially different from that which would have resulted from the use of a permissible population basis.” ∂ Since then, the Court has formally left the population-basis decision to each individual state. In 2001, the Court denied review in a case presenting this issue. Justice Clarence Thomas dissented from that denial, arguing that the Court should decide the issue rather than leaving it to states. “The one-person, one-vote principle may, in the end, be of little consequence if we decide that each jurisdiction can choose its own measure of population,” he wrote. ∂ As the Cato brief makes clear, the hidden issue in *Evenwel* is Section 2 of the Voting Rights Act. It forbids a state from adopting any “standard, practice, or procedure” that offers racial minorities “less opportunity than other members of the

electorate to participate in the political process and to elect representatives of their choice.” It’s hard to generalize, but states with large Latino populations use census figures on raw population—including racial makeup—to draw districts, and then look at the voting-age population (including non-citizens) and CVAP to ensure they are not “diluting” Latino political power. As Professor Nathaniel Persily of Stanford pointed out in 2010, current census data on citizenship is less reliable than the census’ raw population counts. ∂ A constitutional rule requiring that districts must be drawn on CVAP alone thus would likely lead to fewer districts in which a majority of voters are Latino. ∂ The voters’ argument is mostly based on phrases taken from the Court’s earlier decisions. The text and history of the Constitution itself don’t offer much support for the idea that voters, not population, should be counted as the basis of representation. ∂ In Article I Section 2, the framers provided that seats the U.S. House of Representatives would be awarded to states “according to their respective numbers.” The “numbers” included immigrants, women, children, and other people ineligible to vote—lumped together as “free persons.” There were two exceptions to the rule: “Indians not taxed” (meaning those living under independent tribal governments) were not counted; and “other persons” (meaning slaves) were counted as three-fifths of “free persons.” ∂ After Emancipation, there were no more “other persons.” Section Two of the Fourteenth Amendment, approved in 1868, now provides that apportionment is to be based on “the whole number of persons in each State, excluding Indians not taxed.” Population, not voting rights, again. (In 1924, Congress granted citizenship to Native people under tribal government; there are no more “Indians not taxed.”) ∂ Voting rights do appear in the Fourteenth Amendment, however. Immediately after the Civil War, Southern states were happy to have representation apportioned on the basis of the whole population of freed slaves, and not just at three-fifths of that sum, because it would have increased their number of House seats and electoral votes. They also planned to keep the franchise all white, thereby inflating the power of white, southern voters. The framers of the Fourteenth Amendment tried to forestall that, without using racial terms, by providing that when the right to vote “is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime,” the states would lose representation for the entire excluded group. (That language has never really been tested; by 1870, the Fifteenth Amendment formally barred racial discrimination in voting altogether.) ∂ Taken together, these provisions suggest that the basic constitutional rule of apportionment is, as the Reynolds v. Sims Court said, raw population. The three-fifths clause in 1787 and the “male inhabitants” clause in 1868 are phrased as extraordinary departures from that rule. ∂ These provisions, of course, do not directly govern the issue in Evenwel. They apply to federal apportionment; the districts in this case are state legislative ones. The relevant constitutional provision, then is, the equal protection clause of the Fourteenth Amendment: “No state shall ... deny to any person within its jurisdiction the equal protection of the laws.” The privileges and immunities clause appears in the same section; it applies to “citizens of the United States”; equal protection, however, explicitly applies to every “person”—white and non-white, immigrant and native-born, citizen and non-citizen. ∂ What right are we talking about? Is it the individual person’s right to representation? In a democratic system, leaders are elected by voters, but once elected, they represent all the people. Those too young to vote, those excluded

because of criminal records, and those who are not citizens are “persons” for equal-protection purposes. Is it the individual voter’s right to an equal vote? Then voting-age population or something like it would be the correct basis for apportionment. ∂ It’s not an easy question; but I think the theory, the text, and the history favor raw population. ∂ The real issue, though, is VRA Section Two. It impels some states with large Latino populations to draw districts that empower Latino voters—so that Latinos will have the “opportunity” to elect candidates of their choice. That requirement was added after congressional hearings in 1982, to provide a remedy to minority voters against voting procedures and districting that had the effect of reducing their influence, whether or not they can prove that the states intended to do so. As a young lawyer in the Reagan administration, Chief Justice John Roberts expressed his dismay at this “effects test.” In a 2006 case about “vote dilution,” Roberts wrote a separate opinion that said, “It is a sordid business, this divvying us up by race.” This case might offer a chance to reduce Section Two’s impact.

Ext – Race Internal Link

Redistricting based on eligible voters cast minorities aside – court struggling to uphold equal protection for all

B, 5/26 (Adam, Daily Kos Member, Member, Netroots Nation Bd of Dirs (Chair 2008-14), and contributing writer to the Daily Kos front page on legal and campaign finance issues, “One person, one vote,’ but which persons?” Daily Kos, 5/26/15, <http://www.dailykos.com/story/2015/05/26/1387893/--One-Person-One-Vote-but-which-persons#>) Zhang

The Justices’ move into the Texas Senate redistricting case comes fourteen years after Justice Clarence Thomas, in *Chen v. City of Houston* in May 2001, was the sole member of the Court who went on record in favor of sorting out “what measure of population should be used for determining whether the population is equally distributed among the districts.”^a The usual choice considered by legislatures is to make districts more or less equal by dividing up shares of the state’s total population, or, as an alternative, to draw lines based upon some measure of the voting members of the population — such as the numbers actually registered to vote.^a Two Texas voters, who wound up in state Senate districts where they say their votes will count less than the votes in another district even though each of those districts has about the same total number of people, argued that this contradicts the “one-person, one-vote” guarantee of voter equality. Their votes would have counted equally, they contended, if the legislature instead had used voting-age population as the measure. Other, more urban districts have proportionally fewer registered voters, so the redistricting plan based on actual population is said to give those who do vote more weight — that is, fewer of them can control the outcome.^a Neither in *Reynolds v. Sims* nor in any other decision has this Court suggested that the States are required to include aliens, transients, short-term or temporary residents, or persons denied the vote for conviction of crime, in the apportionment base by which their legislators are distributed and against which compliance with the Equal Protection Clause is to be measured. The decision to include or exclude any such group involves choices about the nature of representation with which we have been shown no constitutionally founded reason to interfere.^a Almost all state and local governments draw districts based on total population. If people who were ineligible to vote were evenly distributed, the difference between counting all people or counting only eligible voters would not matter. But demographic patterns vary widely.[∂] As long as the baseline remains constitutionally undefined, states can manipulate the districting system by choosing one baseline over another in order to achieve various partisan or political ends. The difference can be significant, especially in areas of the country with large numbers of non-citizen residents.^a To ensure political equality in this arena, the baseline for drawing districts has been voters — not residents. Thus, to decide whether a district provides an “equality opportunity to elect” for minority voters, the courts do not look at the total number of minority residents — they look to the total number of voting-age eligible residents.^a the Court ought to adopt a clear, uniform standard to end uncertainty and potential manipulation regarding what counts as the baseline for the requirement of equality between election districts.

Redistricting causes disenfranchisement of the Latino populations – Republican majority – causes racial and systemic violence

Hans von **Spakovsky 7/28** (Hans von Spakovsky, Senior Fellow, "Symposium: Does "one person, one vote" really mean what it says?" July 28, 2015, <http://www.scotusblog.com/2015/07/does-one-person-one-vote-really-mean-what-it-says/>)
K.GEKKER

Evenwel v. Abbott may wind up being the most important voting case in sixty years. Its political ramifications could rival those of Reynolds v. Sims, the 1964 case that established the principle of "one person, one vote" under the Equal Protection Clause of the Fourteenth Amendment. The key question in Evenwel is what population does that principle require legislatures to use when they are redrawing legislative districts? Prior to Reynolds, states like Alabama and Tennessee had refused to redistrict for more than half a century, despite a dramatic, nationwide population shift from rural to urban areas. These state legislatures were dominated by rural legislators, who were not willing to reapportion and lose their power and control. Under the principle established in Reynolds, districts have to be drawn "on a basis that will insure, as far as is practicable, that equal numbers of voters can vote for proportionally equal numbers of officials." Within two years of the Reynolds decision, legislative districts had been redrawn in almost every state, and urban areas gained a substantial number of legislative seats. Today, lawmakers from urban areas dominate many state legislatures because of the huge influx of non-citizens, both legal and illegal, into predominantly urban settings. This greatly increases the population of non-voters who can be and are used to fill in urban legislative districts. If the Court rules for the plaintiffs, there could be a similar loss of clout by urban areas that rural districts experienced after Reynolds. In this case, Sue Evenwel and Edward Pfenninger are contesting the state senate districts drawn by the Texas legislature in 2013. The legislature used total population in determining whether the population of each senate district met equal protection requirements. Evenwel, a registered voter in Senate District 1, and Pfenninger, a registered voter in Senate District 4, filed suit because both the number of citizens of voting age and the number of registered voters in these two districts deviate substantially – between thirty-one and forty-nine percent – from the "ideal" population of a Texas senate district. Evenwel and Pfenninger argue that this disparity significantly dilutes their votes in comparison to those of voters who live in districts with large numbers of non-voters, particularly districts with large numbers of non-citizens who are ineligible to vote and may not even be in the country legally. According to this logic, their votes were worth roughly half that of voters in other districts. Evenwel and Pfenninger lost their constitutional challenge before a three-judge panel, however, and appealed directly to the Supreme Court. The plaintiffs argue that the "one-person, one-vote principle protects the rights of voters to an equal vote." They contend that a "statewide districting plan that distributes voters or potential votes in a grossly uneven way, therefore, is patently unconstitutional under Reynolds and its progeny." The Supreme Court has left unresolved the issue of what is the appropriate population to use for redistricting, whether it is total population, voting age population, citizen voting-age population, citizen-eligible voting-age population, or some variant thereof. In Burns v. Richardson (1966), the Court said it was up to states to choose what population to use "unless a choice is one the Constitution forbids." They did warn in Burns about using registered voters or "actual voter basis," because that population

is “susceptible to improper influences by which those in political power might be able to perpetuate underrepresentation of groups constitutionally entitled to participate in the electoral process.”^a But the Court also said states are not “required to include aliens, transients, short-term or temporary residents, or persons denied the vote for conviction of crime.”

Additionally, while absolute parity of population is not required, the Court has established that a state legislative redistricting plan with a population deviation that exceeds ten percent creates a prima facie case of discrimination.^a In 2001 the Court denied certiorari in another case out of Texas that raised this same issue, *Chen v. City of Houston*. Justice Clarence Thomas dissented from the denial in that case, saying the Court should have taken up the case because it had “left a critical variable in the [“one person, one vote”] requirement undefined. We have never determined the relevant ‘population’ that States and localities must equally distribute among their district.” According to Thomas, this failure means that the “one-person, one-vote principle may, in the end, be of little consequence if we decide that each jurisdiction can choose its own measure of population.”^a The plaintiffs obviously agree. In their “Jurisdictional Statement” they point out that, absent such a determination, the legislature could have drawn a senate districting plan with thirty-one districts of equal population without violating the “one person, one vote” principle “even if 30 of the districts each contained one voter and the 31st district contained all other voters in the State.” As they argue, “That cannot be correct.”^a The plaintiffs also cite Judge Alex Kozinski’s partial dissent in *Garza v. County of Los Angeles* (1991), in which the Ninth Circuit held that total population was the correct population to use regardless of voters because “the people, including those who are ineligible to vote, form the basis for representative government.” However, Kozinski disagreed, because the theory “at the core of one person one vote is the principle of electoral equality, not that of equality of representation.”^a Kozinski added that a “districting plan that gives different voting power to voters in different parts of the county . . . even though raw population figures are roughly equal. . . certainly seems in conflict with what the Supreme Court has said repeatedly” with regard to equal protection and “one person, one vote.” Equal protection “protects a right belonging to the individual elector and the key question is whether the votes of some electors are materially undercounted because of the manner in which districts are apportioned.”^a Groups claiming to represent the interests of Hispanics are upset that the Supreme Court took this case. Nina Perales of the Mexican American Legal Defense and Education Fund claims this is “an attempt to cut back on growing Latino political strength in [Texas] by packing Latinos into a smaller number of districts.” But those groups and the U.S. Justice Department, with whom they are almost always allied in lawsuits filed under the Voting Rights Act, will have a tough time making these arguments. In redistricting suits that it brings under Section 2 of the VRA, the department almost always bases its claims on citizen voting-age population rather than total population.^a That policy is plain on the face of the lawsuits the Justice Department filed in cases ranging from Lake Park, Florida, to Boston, Massachusetts. In its complaint against the School Board of Osceola County, Florida, for example, on behalf of Hispanic voters, the department made it very clear that it was suing under Section 2 in order to obtain a school board district in which “Hispanic persons would constitute a majority of the citizen voting-age population in one out of five districts.”^a Conservatives are being faulted in this case for supposedly wanting some people to count more than others. That is categorically untrue. What is true is that if the Supreme Court really meant what it said when it established the “one person, one vote” principle, then the

votes of voters must be valued the same as other voters. That can't happen when you included millions of non-citizens in the populations you use to determine legislative districts. In fact, as Sue Evenwel and Edward Pfenninger demonstrate, their votes were diluted to make them less valuable than those of other voters. So, in fact, those who support what Texas did here do want some people's votes to count more than others – specifically, they want the votes of certain groups to count more than those of other voters. If the Supreme Court rules in favor of the plaintiffs, what effect could it have? Democratically controlled legislative seats tend to have larger numbers of non-citizens than do Republican seats. Sean Trend, the senior elections analyst at RealClearPolitics, points out for example that in the heavily Democratic areas of Queens and Kings County, New York, only seventy-eight percent of the residents are citizens. Compare this to more Republican Nassau County, where ninety-one percent of the residents are citizens. Similarly, in the 2012 election, "counties with high citizen populations were more likely to vote for Mitt Romney" than Barack Obama. Legislative districts would probably get redrawn in parts of the country with large non-citizen populations, with a noticeable shift towards Republicans. But in the final analysis, it is not the potential political effects that make this case important. What makes it important is the principle of "one person, one vote." While states have a great deal of leeway under our federalist system, the Supreme Court determined sixty years ago that they have to apply equal protection to the election process, particularly when determining the districts in which voters exercise their basic right to choose their representatives. As Judge Kozinski said, that principle protects the value of the vote of individual voters. When the value of the vote of Sue Evenwel and Edward Pfenninger is half the value of their neighbor's vote, it seems pretty clear that principle has been violated.

Evenwel v. Abbott rides on inaccurate population statistics – groups such as felons, children, and noncitizens mean that redrawing districts would require major upheaval

Libresco 15 (Leah, FiveThirtyEight news writer “The ‘One Person, One Vote’ Case Relies On Statistics That Nobody Has” 5/27/15 <http://fivethirtyeight.com/datalab/one-person-one-vote-case-relies-on-statistics-that-nobody-has/>) Foronda

“One person, one vote” is a deceptively simple promise, but a Texas woman wants to clarify which persons count. On Tuesday the U.S. Supreme Court agreed to hear *Evenwel v. Abbott*, a suit that challenges exactly who should be counted as a person when states draw their district boundaries in pursuit of proportional representation.^a The plaintiffs are challenging the usual method (counting total number of people living in a district) and are asking that states use the total number of eligible voters instead. The trouble is, we don’t have robust statistics on the number of eligible voters. If the Supreme Court were to set new standards for districting, we would need to overhaul the nation’s statistics and surveys.^a Electoral College votes and congressional district boundaries are determined based on Census figures for population. Those numbers include noncitizens, prisoners, felons, children and other people barred from voting. To get from the Census numbers to an eligible voter estimate, a district-drawer would need to make a lot of slightly suspect adjustments.^a From the Census numbers alone, it’s possible to calculate the voting-age population (VAP) as a crude approximation of the total number of eligible voters. VAP is just the Census tally, minus everyone under the age of 18. This adjustment wouldn’t placate the plaintiffs of *Evenwel v. Abbott*, who are more concerned about noncitizens who, provided they’re of age, would still be included in VAP figures. (Sue Evenwel is the plaintiff, and the case is filed against Texas Gov. Greg Abbott.)^b But the Census doesn’t ask respondents about their immigration status. In order to get an accurate count of the population, the Census form has to be short and relatively uncontroversial. This encourages people to fill it out without too much inconvenience or fear of the consequences.^c To get a sense of the geographic distribution of citizens, the Census numbers have to be adjusted again using statistics from a different Census Bureau project, the American Community Survey (ACS), which does ask about citizenship. The ACS’s citizenship questions make it possible to change the Census’s count of the voting-age population into an estimate of the voting age citizen population.^a Unlike the Census, the ACS is not a complete count of the country. The goal of the Census is to reach everyone; the ACS uses a representative sample of the nation. Sampling can be more accurate than counting, but efforts to use sampling to allow the Census to account for people it misses were blocked by the Supreme Court in 1999, on the grounds that the Constitution requires a traditional, full-count Census.^a Relying on the ACS for this adjustment may be harder to do in the future because the ACS has struggled to get support from Congress. In 2012, the House of Representatives passed a bill that would have eliminated the ACS. Although that proposal did not become law, ACS funding has been cut to the point where the Census Bureau can no longer provide three-year rolling averages of its figures. Provided the ACS continues to exist, it’s the best option available for calculating the citizen voting-age population. But that’s still not enough to estimate how many eligible voters live in a district.^a At the end of 2013, the Bureau of Justice Statistics estimated that 2,220,300 people were incarcerated in the United States. Nearly all of these prisoners are barred from voting. Every state but Vermont and Maine denies voting rights to people in jail. So one more adjustment needs to be added to the eligible voter calculation.^a Districting based on total population, rather than eligible voters, usually favors urban areas, but prisoners are an exception to this tendency. Prisoners are sometimes incarcerated far from where they live, usually in rural areas, boosting the electoral clout of a district in which they have never been eligible to vote. The Prison Policy Initiative has identified 21 counties in the United States where at least 20 percent of residents are prisoners.^a There’s still one more big adjustment to make. People who have been convicted of felonies are frequently ineligible to

vote, even after they've been released from jail, but the restrictions vary by state. Some states strip felons of their votes permanently, others have a waiting period, and some require felons to apply for restoration of their rights on a case-by-case basis. This hodgepodge of restrictions makes it hard to adjust the numbers, especially because states may not release detailed data on where these former felons live now.^a In a 2001 paper in the American Political Science Review, Michael McDonald and Samuel Popkin suggested two other possible factors to consider when estimating the total number of eligible voters. First, some states have residency requirements that might make people who have recently moved ineligible. Second, citizens can lose their voting rights if they are ruled mentally incompetent. McDonald and Popkin thought both of these factors were more trouble than they were worth to model: The researchers estimated that only 1 percent of the voting-age population failed to meet residency requirements and that only 0.1 percent were mentally incompetent to vote.^a **If the Supreme Court requires eligible voter estimates for districting, they may need to rule on whether McDonald and Popkin were right to exclude those groups — and on a host of other methodological questions — as the states scramble to commission constitutionally compatible surveys.**

Denninston 4/19/15 [Lyle Denniston, the National Constitution Center's constitutional literacy adviser, "Constitution Check: How can voter equality be made a reality?" (May 19, 2015)]

<http://blog.constitutioncenter.org/2015/05/constitution-check-how-can-voter-equality-be-made-a-reality/>] sheikh

"The one-person, one-vote principle protects the rights of voters to an equal vote. A statewide districting plan that distributes voters or potential voters in a grossly uneven way is therefore patently unconstitutional under Supreme Court precedent....The one-person, one-vote principle may, in the end, be of little consequence if we decide that each jurisdiction can choose its own measure of population....At the core of one-person, one-vote is the principle of electoral equality, not that of equality of representation." – Excerpts from an appeal filed in the Supreme Court, urging the Justices to adopt the theory that the allocation of power to elect public officials must be based on equality among the voters who will be represented, not on equality in the number of people in each election district. The case is titled Evenwel v. Abbott. WE CHECKED THE CONSTITUTION, AND... One of the most basic aspirations of the American Constitution is the principle of equality, the notion that in a free and democratic society, no person or class of persons is to be favored over another. But to achieve equality, one has to know how to measure that: to what does one compare a person's situation to know if that person is being treated equally? That is easy if, for example, one is talking about racial equality. If one race is given special advantages, but others are not, that is a condition of inequality among the races. The same is true if one is talking about gender equality: men cannot be treated better than women. But that is not so easy when one is talking about equality among those who will be given the opportunity to choose government leaders, through elections. At America's founding, the vote was held by those who were male and owned property. Within that group, one could say those voters were equal. But people not in that category – women, or the property-less — obviously were not treated equally; they simply did not share in the sovereign act of voting. Over the decades that came later, that sovereignty was spread around more widely, though not universally, and one could say with more accuracy that there ultimately was something close to an equal right to vote. The Supreme Court made that broader equality a constitutional mandate in the 1964 decision in Reynolds v. Sims, establishing the concept of "one-person, one-vote." When legislatures created districts for electing public officials, that mandate required, the vote of each person should count as fully, in determining election outcomes, as that of any other person. In other words, the weight of one's vote should not depend upon what district each person called home; districts had to be equal, or close to equal, in the people represented. But it is a historic curiosity that, a full half-century later, the Supreme Court has yet to spell out just how the one-person, one-vote goal is to be achieved in drawing up new election districts. Should the basis of comparison be actual population, the total number of people in each district? Should it, instead, be how many voters are in each district? And who is to decide on which measure is to be used? The Supreme Court has now been asked

to answer those questions. Lawyers who filed a test case that now awaits the Justices' attention make the bold argument that one-person, one-vote means equality among voters; it is their right to equal electoral opportunity that is said to be constitutionally mandated. The target of this complaint is a redistricting plan that the Texas legislature drafted in 2013, creating new districts for electing the 31 members of the state senate. The legislature decided that it would proceed on a theory of equal representation by actual population. It came very close to achieving absolute equality among the 31 districts using that measure: between the largest and the smallest, there was only a mere 8.04 percent difference. But because some of the districts actually had many more registered voters in them than were in other districts, using voting age population as the decider, the difference between the largest and the smallest rose to as much as 49 percent. That meant, when it came to election time, that voters in districts with the lowest proportions of voters would cast votes that were about one and a half times more powerful than in the other districts. The smaller the number of voters, the more power they had in voting. The challenge to that situation was based directly on the one-person, one-vote principle, with equality of voting power as the aspiration. That challenge failed in lower federal courts, however, in a decision that it is up to the state legislature to decide what theory of representation it wants to follow, and thus what population metric to use in striving for near-equality. Taking their complaint to the Supreme Court, two Texas voters who live in districts where voters will have much less than equal voting power, comparatively, asked the Justices to declare for the first time that one-person, one-vote doctrine requires a legislature to use voting population numbers – at least when using total population numbers would cause serious disparities in the strength of the votes that will be cast. Total population as the metric could be valid, the argument goes, but only when it does not produce the kind of skewed results that it has in Texas for state senate elections. The challengers to the Texas districting plan would concede, of course, that the senators who get elected would actually be representing everyone in their districts, and not just the voters who sent them to Austin. But it is the constitutional legitimacy of their election, the challengers suggest, that is what actually is at stake. The Texas case reached the Supreme Court in a procedural form that may require the Justices to decide, one way or the other, whether the use of the total population metric can become unconstitutional when it has such a negative impact on voter equality. That could be a formidable task if for no other reason than that it would require the Justices to decide if the answer is in the Constitution, or should be left to elected representatives.

AT: Doesn't Affect House

Plaintiffs ruling will spill up to the House.

Steve **Huntly, 5/27** (Steve Huntly, Correspondent, "One-person-one-vote is a complicated concept," May 27, 2015 (<http://chicago.suntimes.com/opinion/7/71/640438/steve-huntley-one-person-one-vote-complicated-concept>) K.Gekker

Does your vote count the same as the ballot of someone living in another part of the state, or elsewhere in the country? The U.S. Supreme Court's one-person-one-vote ruling says it must. But a new case before the high court demonstrates that issue is not as simple as it seems. In deciding this week to take a lawsuit from Texas, the justices will elaborate on the court's historic 1964 decision that legislative districts must have, as close as possible, the same number of people. The question comes down to the meaning of people. Does that describe all persons, just citizens or only the voting age population? Obviously the issue is fraught with overtones of the illegal immigration issue but raises legitimate questions about citizenship and representation in a democratic republic. The stakes are huge for states with big immigrant populations, such as Texas, California and Illinois among others. While the case involves legislative representation in a state government, any decision would surely apply to determining districts for the U.S. House of Representatives, too. Representation traditionally has been based on the census of the general population, meaning everybody. That standard has been challenged in the past but until now the Supreme Court has refused to take it up. Justice Clarence Thomas in 2001 unsuccessfully argued, "As long as we sustain the one-person-one-vote principle, we have an obligation to explain to states and localities what it actually means." It looks like he finally won that argument. In the new case, Evenwel v. Abbott, the Project for Fair Representation, a conservative advocacy group representing Texas voters Sue Evenwel and Edward Pfenninger, asserts that the total-population standard means they have seen their votes in their Texas state senate districts "diluted" compared to other jurisdictions. Large urban districts can have big immigrant populations and significant numbers of disqualified felons, as well as a lot of children. Such districts enjoy the same representation in the legislature although they may be home to fewer actual voters than other districts that have much smaller non-citizen populations, the suit says. It cites Evenwel's rural East Texas district with 533,000 citizens of voting age and a nearby Houston urban district with 372,000 eligible voters. Each elects one senator to the 31-member Texas Senate. Defenders of the status quo worry that any change could benefit rural and suburban districts over urban ones, favor the Republican Party over Democrats, be detrimental to Latinos, and deny big cities the clout they need to deal with their particular problems. They further argue that since the national census counts everyone, any ruling overturning tradition would have legislative apportionment based more on an estimate than an actual count of citizens or eligible voters, whichever was the new standard. The legal fight may boil down to whether the word "persons" in the Constitution's phrase "counting the whole number of persons in each state" means citizens or every one. A plain reading of that text would seem to favor the total population argument. But certainly the Founders never envisioned an America with such a large illegal immigrant population, 11 million, as now exists. Texas asserts state's rights in saying it and other states should have the authority to set the standards. Justice Thomas has said, "The one-person-one-vote principle may, in the end, be of little consequence if we decide that each jurisdiction can choose its own measure of population." This case poses a

huge challenge for the court: The Constitution is a contract between the government and the nation's citizens, and if one person, one vote means anything, that should be equality among citizens in the responsibility of electing our legislatures. But any change from the current standard might deprive immigrant-heavy cities the legislative influence to address the unique problems of their communities. One person, one vote — what does it mean? We'll have to wait until 2016 to find out what the court thinks.

1nc Cuba Embargo

Obama has PC—key to lifting the Cuban embargo

Milbank 7/1 – Washington Post

Dana, In his presidential homestretch, Obama regains the momentum, 7/1/15,
http://www.washingtonpost.com/opinions/obama-regains-the-momentum/2015/07/01/43a6b932-203c-11e5-aeb9-a411a84c9d55_story.html

This echo of his 2008 campaign theme was self-congratulatory but deserved, coming at a time of unexpected hope late in his presidency. In the space of just over a week, Obama's tired tenure came back to life. He bested congressional Democrats and got trade legislation on his desk. The Supreme Court upheld the signature achievement of his presidency — Obamacare — and thereby cemented his legacy. The high court also made same-sex marriage legal across the land following a tidal change in public opinion that Obama's own conversion accelerated. Had the court's decisions not dominated the nation's attention, Obama's eulogy Friday for those slain in a South Carolina church, and his extraordinary rendition of "Amazing Grace," would have itself been one of the most powerful moments of his presidency. It is little surprise, then, that this lame duck's job approval rating hit a respectable 50 percent this week for the first time in two years in a CNN poll, and his disapproval rating dropped to 47. The good tidings of the past week have been arguably more luck than achievement for Obama, but he deserves credit for his effort to use the momentum of his victories to revive what had been a moribund presidency. When you earn political capital, as George W. Bush liked to say, you spend it. This is why it was shrewd of the surging Obama to be in the Rose Garden on Wednesday morning, demanding new action from Congress on Cuba. "Americans and Cubans alike are ready to move forward; I believe it's time for Congress to do the same," he said, renewing his call to lift the travel and trade embargo. ". . . Yes, there are those who want to turn back the clock and double down on a policy of isolation, but it's long past time for us to realize that this approach doesn't work. It hasn't worked for 50 years. . . . So I'd ask Congress to listen to the Cuban people, listen to the American people, listen to the words of a proud Cuban American, [former Bush commerce secretary] Carlos Gutierrez, who recently came out against the policy of the past." Fifteen minutes later, Obama lifted off from the South Lawn in Marine One on his way to Nashville, where he tried to use the momentum generated by the Supreme Court Obamacare victory to spread the program to states where Republican governors have resisted. "What I'm hoping is that with the Supreme Court case now behind us, what we can do is . . . now focus on how we can make it even better," he said, adding, "My hope is that on a bipartisan basis, in places like Tennessee but all across the country, we can now focus on . . . what have we learned? What's working? What's not working?" He said that "because of politics, not all states have taken advantage of the options that are out there. Our hope is, is that more of them do." He urged people to "think about this in a practical American way instead of a partisan, political way." This probably won't happen, but it's refreshing to see Obama, too often passive, regaining vigor as he approaches the final 18 months of his presidency. The energy had, at least for the moment, returned to the White House, where no fewer than six network correspondents were doing live stand-ups before Obama's appearance Wednesday morning. There was a spring in the president's step, if not a swagger, as he emerged from the Oval Office trailed by Vice President Biden. Republican

presidential candidates were nearly unanimous in denouncing the plan to open a U.S. embassy in Havana. But Obama, squinting in the sunlight as he read from his teleprompters, welcomed the fight. “The progress that we mark today is yet another demonstration that we don’t have to be imprisoned by the past,” he said. Quoting a Cuban American’s view that “you can’t hold the future of Cuba hostage to what happened in the past,” Obama added, “That’s what this is about: a choice between the future and the past.” Obama turned to go back inside, ignoring the question shouted by Bloomberg’s Margaret Talev: “How will you get an ambassador confirmed?” That will indeed be tricky. But **momentum is everything in politics — and for the moment, Obama has it again.**

Lifting the embargo is key to successful cooperative engagement strategies in the Middle East and Asia

Sergio **Dickerson**, Lieutenant Colonel in the US Army, 2010 (UNITED STATES SECURITY STRATEGY TOWARDS CUBA, www.dtic.mil/cgi-bin/GetTRDoc?Location=U2&doc=GetTRDoc.pdf&AD=ADA518053)

Today, 20 years have passed since the fall of the Berlin Wall – it’s time to chip away at the diplomatic wall that still remains between U.S. and Cuba. As we seek a new foreign policy with Cuba it is imperative that we take into consideration that distrust will characterize negotiations with the Cuban government. On the other hand, consider that loosening or **lifting the embargo could also be mutually beneficial.** Cuba’s need and America’s surplus capability to provide goods and services could be profitable and eventually addictive to Cuba. Under these conditions, diplomacy has a better chance to flourish. If the Cuban model succeeds President **Obama will be seen as a true leader for multilateralism. Success in Cuba could afford the international momentum and credibility to solve other seemingly “wicked problems” like the Middle East and Kashmir.** President **Obama could leverage this international reputation with other rogue nations like Iran and North Korea who might associate their plight with Cuba. The U.S. could begin to lead again and reverse its perceived decline in the greater global order bringing true peace for years to come.**

Engagement prevents Asian nuclear conflict – the impact is extinction

Hamel-Green, Executive Dean at Victoria, 1/5/10

(The Path Not Taken, the Way Still Open: Denuclearizing the Korean Peninsula and Northeast Asia, www.nautilus.org/fora/security/10001HayesHamelGreen.pdf)

The international community is increasingly aware that cooperative diplomacy is the most productive way to tackle the multiple, interconnected global challenges facing humanity, not least of which is the increasing proliferation of nuclear and other weapons of mass destruction. **Korea and Northeast Asia are instances where risks of nuclear proliferation and actual nuclear use** arguably **have increased** in recent years. This negative trend is a product of continued US nuclear threat projection against the DPRK as part of a general program of coercive diplomacy in this region, North Korea’s nuclear weapons programme, the breakdown in the Chinese-hosted

Six Party Talks towards the end of the Bush Administration, regional concerns over China's increasing military power, and concerns within some quarters in regional states (Japan, South Korea, Taiwan) about whether US extended deterrence ("nuclear umbrella") afforded under bilateral security treaties can be relied upon for protection. The consequences of failing to address the proliferation threat posed by the North Korea developments, and related political and economic issues, are serious, not only for the Northeast Asian region but for the whole international community. At worst, there is the possibility of nuclear attack, whether by intention, miscalculation, or merely accident, leading to the resumption of Korean War hostilities. On the Korean Peninsula itself, key population centres are well within short or medium range missiles. The whole of Japan is likely to come within North Korean missile range. Pyongyang has a population of over 2 million, Seoul (close to the North Korean border) 11 million, and Tokyo over 20 million. Even a limited nuclear exchange would result in a holocaust of unprecedented proportions. But the catastrophe within the region would not be the only outcome. New research indicates that even a limited nuclear war in the region would rearrange our global climate far more quickly than global warming. Westberg draws attention to new studies modelling the effects of even a limited nuclear exchange involving approximately 100 Hiroshima-sized 15 kt bombs² (by comparison it should be noted that the United States currently deploys warheads in the range 100 to 477 kt, that is, individual warheads equivalent in yield to a range of 6 to 32 Hiroshimas). The studies indicate that the soot from the fires produced would lead to a decrease in global temperature by 1.25 degrees Celsius for a period of 6-8 years.³ In Westberg's view: That is not global winter, but the nuclear darkness will cause a deeper drop in temperature than at any time during the last 1000 years. The temperature over the continents would decrease substantially more than the global average. A decrease in rainfall over the continents would also follow...The period of nuclear darkness will cause much greater decrease in grain production than 5% and it will continue for many years...hundreds of millions of people will die from hunger...To make matters even worse, such amounts of smoke injected into the stratosphere would cause a huge reduction in the Earth's protective.

Uniqueness

Will Pass

Obama is pushing for the Cuban embargo to be lifted—has the political capital and public support, but it's close

Talev and Lakshmanan 7/1 – Bloomberg

Margaret and Indira, Obama Wants Travel to Cuba to Resume and Embargo to End, 7/1/15, <http://skift.com/2015/07/01/obama-wants-travel-to-cuba-to-resume-and-embargo-to-end/>

President Barack Obama urged Congress to follow his decision to reopen the American embassy in Havana by lifting the U.S. trade embargo on Cuba. “The best way to support our values is through engagement,” Obama said at the White House. “Americans and Cubans alike are looking to move forward. I believe it’s time for Congress to do the same.” The embassy will reopen on July 20 and Cuba will reopen its embassy in Washington. Secretary of State John Kerry intends to go to Havana for the occasion and he will “proudly raise the American flag” over the embassy, Obama said. Jeffrey DeLaurentis, who heads the U.S. Interests Section in Havana and would be the initial envoy heading the reopened embassy, delivered a letter from Obama confirming the plans addressed to Cuba President Raul Castro, according to the Foreign Ministry. The president hasn’t decided on who might be nominated as ambassador or whether he would make the nomination in the immediate future, according to an administration official. The question for Obama is whether he has the political momentum to get a U.S. ambassador to Cuba confirmed by the Republican-controlled Senate or get the embargo lifted. Florida Senator Marco Rubio, who is seeking the Republican presidential nomination, has said he would block any ambassador nominee offered by the White House. Ted Cruz, a Texas senator also seeking the party’s nomination, has echoed that threat. Obama’s Victories Obama is coming off of series of high-profile legislative and political victories. Congress last month gave him expanded authority to negotiate trade deals and the U.S. Supreme Court upheld a key portion of his signature health care law and legalized same-sex marriage nationwide. During a White House press conference Tuesday, Obama said he’d use the political capital he had built up on a long list of priorities. “We are going to squeeze every last ounce of progress that we can make as long as I have the privilege of holding this office,” he said. Word of the embassy reopenings brought renewed criticism from a U.S. lawmaker who’s among those opposed to normalizing ties with Cuba’s Communist regime, citing its poor record on human rights. “Opening the American embassy in Cuba will do nothing to help the Cuban people and is just another trivial attempt for President Obama to go legacy shopping,” said Representative Ileana Ros-Lehtinen, a Cuban-American Republican from Florida. Public Sentiment Obama said the U.S. must not be “imprisoned by the past.” He said there are tourists who want to travel to Cuba and businesses that want to invest there. Public sentiment may be moving Obama’s way. A Pew Research poll released in January, one month after the president first announced plans to reestablish diplomatic ties, found that 63 percent of Americans favored re-establishing diplomatic relations, while 28 percent disapproved. Two-thirds of respondents favored ending the trade embargo.

Obama will win on Cuba policy—GOP will be forced to get on board

Maloy 7/2 – Salon

Simon, GOP's dead-end Cuba gamble: Republicans' Cold War-era tough talk won't come to anything, 7/2/15,

http://www.salon.com/2015/07/02/gops_dead_end_cuba_gamble_republicans_cold_war_era_tough_talk_wont_come_to_anything/

After winning a great victory for communism with the Supreme Court decision upholding the Affordable Care Act's subsidies, Barack Obama went for broke this week and surrendered to Cuba, thus ending the Cold War in a crippling defeat for global capitalism. ¡Que viva la gran revolución! ¡Venceremos! Okay, maybe that's not precisely what happened. But what did happen is that the White House followed through on a key portion of the president's plan to normalize relations with our tiny communist island neighbor. In a Rose Garden ceremony yesterday, Obama officially announced that the United States and Cuba would open embassies in Havana and Washington, DC. That announcement came just over a month after Cuba was removed from the State Department's list of state sponsors of terrorism. That's two big changes to the United States' Cuba policy, which had remained essentially unchanged for 50 years and made precisely zero progress towards its goal of dislodging the Castro regime. But Republicans in Congress and the 2016 presidential field are, as is their wont, pushing back on the president and insisting that we stick with what hasn't been working. The two Cuban-American Republican presidential candidates, Marco Rubio and Ted Cruz, vowed to block Senate confirmation of any ambassador to Cuba. House Speaker John Boehner said "relations with the Castro regime should not be revisited, let alone normalized, until Cubans enjoy freedom – and not one second sooner." 2016 hopeful Carly Fiorina outdid everyone, promising to Hugh Hewitt that as president she would close the U.S. embassy in Cuba. I guess it's not entirely surprising that the GOP would still be so gung-ho about fighting the Cold War more than two decades after it ended. But **there's no real reason to think that all this tough talk and posturing on Cuba will amount to anything**, even if a Republican wins the White House in 2016. The reason is simple: corporate America very strongly approves of Obama's plans to open up Cuba, and Republicans try very hard to not piss off the business community too much. For half a century the island has just been sitting there off the Florida coast, a market completely shut off from thorough exploitation by American business interests. Those same business interests would love nothing more than to see the 50-year trade embargo come crashing down, but Obama can't unilaterally end it because Bill Clinton stupidly gave up the executive branch's authority over the embargo back in 1996. The only way to end the Cuba embargo is for Congress to vote to kill it, and statements like the one from the House Speaker quoted above don't lead one to believe that that will happen any time soon. But America's corporate masters are apparently massing their armies of lobbyists to try and convince enough Republicans in Congress to give up on this obsolete relic from the Kennedy administration. There's also some political blowback to be had for advocating a hardline Cuba posture. Polling over the past few months has shown that Americans are ready to abandon the embargo and generally approve of Obama's moves to normalize diplomatic relations with Cuba. Even majorities of the Cuban-American population favor a less antagonistic posture towards Cuba. Carlos Gutierrez, the Cuban-born commerce secretary under George W. Bush, just recently wrote an op-ed for the New York Times explaining how he'd overcome his skepticism of the Obama administration's Cuba policy, arguing that "it is now time for Republicans and the wider American business community to stop fixating on the past and embrace a new approach to Cuba." Obviously Republicans have

legitimate concerns about the Castro regime's human rights abuses and longstanding policies of censorship and repression. But none have, as yet, offered a compelling rationale for why diplomatic rapprochement should be abandoned and the longstanding and wildly ineffective policies of isolation and embargo should snap back into place, given that they did nothing to stop those abuses in the first place. But they've promised to do it anyway, and in doing so they're putting themselves into a box politically. Obama's already set the country on the path to normalized relations with Cuba, and it's tough to roll back that progress, especially when it is strongly supported by the public and all-powerful business interests. Any Republican who may feel impelled by ideological conviction to once again sever diplomatic ties and return to the Cold War days of total isolation will have to convince their corporate financial backers to sacrifice their bottom lines so that we can resume the dead-end fight against the Red Menace. Seems like it would be a lot more trouble than it's worth.

Embassy creates momentum

Spencer 7/1 – Star Tribune

Jim, Embassy reopening could help efforts to end Cuban trade embargo, 7/1/15,
<http://www.startribune.com/embassy-reopening-could-help-efforts-to-end-cuban-trade-embargo/311225501/>

The reopening of the U.S. embassy in Cuba on July 20 pushes the United States a giant step closer to ending a long-standing trade embargo and travel restrictions that some Minnesota politicians and businesses have been lobbying hard to remove. "You can't get rid of a trade embargo without first having an embassy," Sen. Amy Klobuchar D-Minn., told the Star Tribune.

Lifting the embargo will pass—Obama will overcome GOP opposition

Prensa Latina 7/2

Battle in Congress Against Blockade of Cuba Advocated in USA, 7/2/15,
http://www.plenglish.com/index.php?option=com_content&task=view&id=3947081&Itemid=1

"We need to talk with the Congress to lift the embargo, it will not be easy, but we have to do it," he said in an interview with Prensa Latina in connection with the announcement on the eve of the restoration of diplomatic relations between Havana and Washington and the opening of embassies, to from 20 July. According to Smith, who headed the American section in the years from 1979 to 1982, one can not speak yet of normal ties between the two nations, "because the embargo still remains." Having become law, it is up to the US Congress to pass a resolution on the end of the economic, commercial, and financial blockade in effect for more than half a century, but the Republican Party, which controls both houses, seems intent on using the Cuban issue in its pulse with President Barack Obama, who called for an end to the blockade. Despite the aggressive discourse of some sectors stuck in the past, especially the Cuban-American legislators, the former diplomat was optimistic about the future of bilateral scene. In his view, it will be difficult to jeopardize Obama's decisions to boost the approach, approved by the majority of Americans and with growing support among businessmen[persons]. Regarding the presidential elections next year, he predicted a Democratic victory, which would maintain the

current line to pursue normal ties with the Caribbean country after decades of hostility, which also include the blockade and subversive plans to impose a regime change.

Yes PC

Yes PC

Miller 6/30 – Roll Call

Jonathan, Democrats Pursue a No-Veto Strategy on Spending Bills, 6/30/15,
http://www.rollcall.com/news/democrats_pursue_a_no_veto_strategy_on_spending_bills-242605-1.html

Allowing Obama to issue vetoes would seem to make sense. The president is a lame duck with an approval rating that hit 50 percent in a CNN poll for the first time in more than two years as he enjoys one of the best periods of his presidency, so **he's got some political capital to spend.** At just four vetoes, his record doesn't come close to that of other recent presidents, though of course there's many months left in his tenure.

AT Gun Control

Won't cost PC—received positively

Kumar 7/2 – International Business Times

Kalyan, Obama Turns Gaze On Gun Control Reforms: Survey Shows Slimming Support For Obama Line On Guns, 7/2/15, <http://www.ibtimes.com.au/obama-turns-gaze-gun-control-reforms-survey-shows-slimming-support-obama-line-guns-1454168>

Mr Obama's speech at the Charleston homage ceremony, with a "call to action" on gun control and race -- the thorniest and most divisive problems of his presidency, found a **positive acceptance**. The aftermath of Charleston shootings gave the President the moral authority to pursue his reform plans on gun control. Bruce Buchanan, a specialist in presidential politics said, "It remains to be seen if he can use either as leverage to press his remaining policy ambitions."

New surveillance restrictions will cost PC—politically controversial

Gross 15 - covers technology and telecom policy in the U.S. government for the IDG News Service

Grant, Don't expect major changes to NSA surveillance from Congress, 6/5/15,
<http://www.pcworld.com/article/2932337/dont-expect-major-changes-to-nsa-surveillance-from-congress.html>

After the U.S. Congress approved what critics have called modest limits on the National Security Agency's collection of domestic telephone records, many lawmakers may be reluctant to further change the government's surveillance programs. The Senate this week passed the USA Freedom Act, which aims to end the NSA's mass collection of domestic phone records, and President Barack Obama signed the bill hours later. After that action, expect Republican leaders in both the Senate and the House of Representatives to resist further calls for surveillance reform. That resistance is at odds with many rank-and-file lawmakers, including many House Republicans, who want to further limit NSA programs brought to light by former agency contractor Edward Snowden. Civil liberties groups and privacy advocates also promise to push for more changes. It may be difficult to get "broad, sweeping reform" through Congress, but many lawmakers seem ready to push for more changes, said Adam Eisgrau, managing director of the office of government relations for the American Library Association. The ALA has charged the NSA surveillance programs violate the Fourth Amendment of the U.S. Constitution, which prohibits unreasonable searches and seizures. "Congress is not allowed to be tired of surveillance reform unless it's prepared to say it's tired of the Fourth Amendment," Eisgrau said. "The American public will not accept that." Other activists are less optimistic about more congressional action. "It will a long slog getting more restraints," J. Kirk Wiebe, a former NSA analyst and whistleblower said by email. "The length of that journey will depend on public outcry—that is the one thing that is hard to gauge." With the USA Freedom Act, "elected officials have opted to reach for low-hanging fruit," said Bill Blunden, a cybersecurity researcher and surveillance critic. "The theater we've just witnessed allows decision makers to boast to their constituents about reforming mass surveillance while spies understand that what's actually transpired is hardly major change." The "actual physical mechanisms" of surveillance programs remain largely intact. Blunden added by email. "Politicians may dither around the periphery but they are unlikely to institute fundamental changes." What's in the USA Freedom Act? Some critics have blasted the USA Freedom Act as fake reform, while supporters have called it the biggest overhaul of U.S. surveillance program in decades. Many civil liberties and privacy groups have come down in the middle of those two views, calling it modest reform of the counterterrorism Patriot Act. The law aims to end the NSA's decade-plus practice of collecting U.S. telephone records in bulk, while allowing the agency to search those records in a more targeted manner. The law also moves the phone records database from the NSA to telecom carriers, and requires the U.S. Foreign Intelligence Surveillance Court (FISC) to consult with tech and privacy experts when ruling on major new data collection requests from the NSA. It also requires all significant FISC orders from the last 12 years to be released to the public. The new law limits bulk collection of U.S. telephone and business records by requiring the FBI, the agency

that applies for data collection, to use a “specific selection term” when asking the surveillance court to authorize records searches. The law prohibits the FBI and NSA from using a “broad geographic region,” including a city, county, state or zip code, as a search term, but it doesn’t otherwise define “specific search term.” That’s a problem, according to critics. The surveillance court could allow, for example, “AT&T” as a specific search term and give the NSA the authority to collect all of the carrier’s customer records. Such a ruling from FISC would seem to run counter to congressional intent, but this is the same court that defined all U.S. phone records as “relevant” to a counterterrorism investigation under the old version of the Patriot Act’s Section 215. The USA Freedom Act also does nothing to limit the NSA’s surveillance of overseas Internet traffic, including the content of emails and IP voice calls. Significantly limiting that NSA program, called Prism in 2013 Snowden leaks, will be a difficult task in Congress, with many lawmakers unconcerned about the privacy rights of people who don’t vote in U.S. elections. Still, the section of the Foreign Intelligence Surveillance Act that authorizes those NSA foreign surveillance programs sunsets in 2017, and that deadline will force Congress to look at FISA, although lawmakers may wait until the last minute, as they did with the expiring sections of the Patriot Act covered in the USA Freedom Act. The House Judiciary Committee will continue its oversight of U.S. surveillance programs, and the committee will address FISA before its provisions expire, an aide to the committee said. Republican leaders opposed to more changes Supporters of new reforms will have to bypass congressional leadership, however. Senate Republican leaders attempted to derail even the USA Freedom Act and refused to allow amendments that would require further changes at the NSA. In the House, Republican leaders threatened to kill the USA Freedom Act if the Judiciary Committee amended the bill to address other surveillance programs. Still, many House members, both Republicans and Democrats, have pushed for new surveillance limits, with lawmakers adding an amendment to end so-called backdoor government searches of domestic communications to a large appropriations bill this week.

NSA

Reforming the NSA costs political capital

Burnett 14 – retired Silicon Valley executive

Bob, Why Hasn't Obama Reined in NSA?, Huffington Post, 1/10/14,
http://www.huffingtonpost.com/bob-burnett/obama-nsa_b_4574910.html

1. Obama decided not to expend political capital changing it. Given the economic problems he inherited from George Bush, plus the difficulty of working with a divided Congress, Obama may have decided it was not worth the effort to rein in the NSA. That's been true of national security in general. Obama had increased defense spending, expanded the national-security state, and maintained the hundreds of US military bases that dot the globe. Obama tried to shut down Guantanamo but was thwarted by Congress.

Yes Spillover

Domestic policies spillover—drain Obama’s ability to modify Cuba policy

Lee 7/2 – Wall Street Journal

Carol, White House Gears Up for Domestic-Policy Offensive, 7/2/15,
<http://blogs.wsj.com/washwire/2015/07/02/white-house-gears-up-for-domestic-policy-offensive/>

The challenge for Mr. Obama will be in the places where his domestic and foreign policy agendas intersect. The president has limited political capital in Congress. And he needs lawmakers to back—or at least not amass a veto-proof majority opposition to—a nuclear deal with Iran if one is finalized in coming days. He’ll also need to generate enough support among Republican and Democratic lawmakers for lifting the embargo on Cuba, which on Wednesday he again called on Congress to do as he announced finalized plans to open an American embassy in Havana.

Issues spillover – horse-trading occurs on unrelated issues

Beckman 10 – Professor of Political Science

Matthew N. Beckman, Professor of Political Science @ UC-Irvine, 2010, “Pushing the Agenda: Presidential Leadership in U.S. Lawmaking, 1953-2004,” pg. 59

This key point about agenda-centered lobbying leads to the final insight: because the president seeks a "deal" that is worse for leading opponents than what they could get by challenging him, the administration must compensate these leading opponents to offset the difference. This "horse-trading" can be on exogenous issues - for example, a different bill, an executive or judicial nomination, or some other executive-controlled offering - but often occurs within the confines of the same bill. Typically, the president's part of the logroll is included as the bill's first title, leading opponents' part as its second.

PC Theory True

Political capital key to the agenda

Hill '10

Dell [<http://www.uncoverage.net/2010/05/obama-political-capital-tank-running-on-empty/>]
Obama's Political Capital Tank Running On Empty/May 2)

Basically, **political capital is the currency of politics**. It's what one politician uses to convince another politician to support a particular piece of legislation. **Some would call it "one hand washing the other" and that's a fair analogy. For the President to advance a political agenda, political capital is his fuel tank to get things done. He wheels and deals – all the while using that political fuel tank to get what he ultimately wants, and some agendas consume incredible amounts of that fuel. ObamaCare, for instance, required an enormous amount of political capital to get enacted.** It has become the centerpiece of the Obama administration and is, quite frankly, about the only real victory the President can claim, but **it came at a tremendous cost, literally and figuratively.**

Political capital key and finite

McClellan '9 – Professor of Political Science at Elizabethtown College

E. Fletcher McClellan is professor and Chair of the political science department at Elizabethtown College, Checking In, Patriot News, April 26, 2009, LN

Presidents make decisions, and it will soon be time for Obama to choose. So far he has had the luxury, if it can be called that, of justifying his actions as responses to economic crisis and the failed policies of his opponents. For their part, the Republicans have played the role of Washington Generals to Obama's Globetrotters, providing little in the way of credible alternatives to the president's plans. **As Obama's predecessors discovered, political capital and time are finite resources.** These are anxious times, and the public does not have unlimited patience. Though ridiculed for their manufactured character, the recent "tea party" protests, estimated to involve more than 300,000 participants nationwide, indicate that there are political boundaries to government spending and public debt. The same phenomenon is happening in Washington. **Powerful lobbies and their Congressional allies are lining up to block the president's proposals** to cut costly defense projects and curb corporate subsidies. Obama's plans for raising revenue, including his "cap and trade" proposal to reduce reliance on fossil fuels, are meeting stiff resistance. Taking a different approach, traditional opponents of health care reform such as the pharmaceutical industry are advocating expansion of the existing Medicaid program so as to prevent the adoption of a new public health insurance option. The unanswered question of the first 100 days is what is Obama willing to fight for? Is it health care? Energy independence? Tax cuts for the middle class? If the history of recent presidents is any guide, **there will come a time when Obama must shed his cool demeanor, abandon the soothing rhetoric, and draw a line in the sand.** You don't have to believe in global warming to know that it will be a hot summer in the nation's capitol.

PC Theory True—Studies

Academic studies go our way

Schier 9

Professor of Political Science at Carleton, (Steven, "Understanding the Obama Presidency," The Forum: Vol. 7: Iss. 1, Berkely Electronic Press, <http://www.bepress.com/forum/vol7/iss1/art10>)

In addition to formal powers, a president's informal power is situationally derived and highly variable. Informal power is a function of the "political capital" presidents amass and deplete as they operate in office. Paul Light defines several components of political capital: party support of the president in Congress, public approval of the presidential conduct of his job, the President's electoral margin and patronage appointments (Light 1983, 15). Richard Neustadt's concept of a president's "professional reputation" likewise figures into his political capital. Neustadt defines this as the "impressions in the Washington community about the skill and will with which he puts [his formal powers] to use" (Neustadt 1990, 185). In the wake of 9/11, George W. Bush's political capital surged, and both the public and Washington elites granted him a broad ability to prosecute the war on terror. By the later stages of Bush's troubled second term, beset by a lengthy and unpopular occupation of Iraq and an aggressive Democratic Congress, he found that his political capital had shrunk. Obama's informal powers will prove variable, not stable, as is always the case for presidents. Nevertheless, he entered office with a formidable store of political capital. His solid electoral victory means he initially will receive high public support and strong backing from fellow Congressional partisans, a combination that will allow him much leeway in his presidential appointments and with his policy agenda. Obama probably enjoys the prospect of a happier honeymoon during his first year than did George W. Bush, who entered office amidst continuing controversy over the 2000 election outcome. Presidents usually employ power to disrupt the political order they inherit in order to reshape it according to their own agendas. Stephen Skowronek argues that "presidents disrupt systems, reshape political landscapes, and pass to successors leadership challenges that are different from the ones just faced" (Skowronek 1997, 6). Given their limited time in office and the hostile political alignments often present in Washington policymaking networks and among the electorate, presidents must force political change if they are to enact their agendas. In recent decades, Washington power structures have become more entrenched and elaborate (Drucker 1995) while presidential powers – through increased use of executive orders and legislative delegation (Howell 2003) – have also grown. The presidency has more powers in the early 21st century but also faces more entrenched coalitions of interests, lawmakers, and bureaucrats whose agendas often differ from that of the president. This is an invitation for an energetic president – and that seems to describe Barack Obama – to engage in major ongoing battles to impose his preferences.

AT Hirsh

Hirsh concedes political capital matters

Hirsh 13

Michael, chief correspondent, There's No Such Thing as Political Capital, 2/7/13,
<http://www.nationaljournal.com/magazine/there-s-no-such-thing-as-political-capital-20130207>

The point is not that “political capital” is a meaningless term. Often it is a synonym for “mandate” or “momentum” in the aftermath of a decisive election—and just about every politician ever elected has tried to claim more of a mandate than he actually has. Certainly, Obama can say that because he was elected and Romney wasn't, he has a better claim on the country's mood and direction. **Many pundits still defend political capital as a useful metaphor** at least. **It's an unquantifiable but meaningful concept.** says Norman **Ornstein** of the American Enterprise Institute. “You can't really look at a president and say he's got 37 ounces of political capital. But the fact is, **it's a concept that matters, if you have popularity and some momentum on your side.**”

AT Winners Win

Winner's don't win and PC is finite – empirics prove and especially true in the context of Obama

Eberly 13 – political science assistant professor @ St. Mary's College

Todd, "The presidential power trap" [http://articles.baltimoresun.com/2013-01-21/news/bs-ed-political-capital-20130121_1_political-system-george-hw-bush-party-support/2] January 21 //mtc

As Barack Obama prepares to be sworn in for the second time as president of the United States, he faces the stark reality that little of what he hopes to accomplish in a second term will likely come to pass. Mr. Obama occupies an office that many assume to be all powerful, but like so many of his recent predecessors, the president knows better. He faces a political capital problem and a power trap.¶ In the post-1960s American political system, presidents have found the exercise of effective leadership a difficult task. To lead well, a president needs support – or at least permission – from federal courts and Congress; steady allegiance from public opinion and fellow partisans in the electorate; backing from powerful, entrenched interest groups; and accordance with contemporary public opinion about the proper size and scope of government. This is a long list of requirements. If presidents fail to satisfy these requirements, they face the prospect of inadequate political support or political capital to back their power assertions.¶ What was so crucial about the 1960s? We can trace so much of what defines contemporary politics to trends that emerged then. Americans' confidence in government began a precipitous decline as the tumult and tragedies of the 1960s gave way to the scandals and economic uncertainties of the 1970s. Long-standing party coalitions began to fray as the New Deal coalition, which had elected Franklin Roosevelt to four terms and made Democrats the indisputable majority party, faded into history. The election of Richard Nixon in 1968 marked the beginning of an unprecedented era of divided government. Finally, the two parties began ideologically divergent journeys that resulted in intense polarization in Congress, diminishing the possibility of bipartisan compromise. These changes, combined with the growing influence of money and interest groups and the steady "thickening" of the federal bureaucracy, introduced significant challenges to presidential leadership.¶ Political capital can best be understood as a combination of the president's party support in Congress, public approval of his job performance, and the president's electoral victory margin. The components of political capital are central to the fate of presidencies. It is difficult to claim warrants for leadership in an era when job approval, congressional support and partisan affiliation provide less backing for a president than in times past. In recent years, presidents' political capital has shrunk while their power assertions have grown, making the president a volatile player in the national political system.¶ Jimmy Carter and George H.W. Bush joined the small ranks of incumbents defeated while seeking a second term. Ronald Reagan was elected in two landslides, yet his most successful year for domestic policy was his first year in office. Bill Clinton was twice elected by a comfortable margin, but with less than majority support, and despite a strong economy during his second term, his greatest legislative successes came during his first year with the passage of a controversial but crucial budget bill, the Family and Medical Leave Act, and the North American Free Trade Agreement. George W. Bush won election in 2000 having lost the popular vote, and though his impact on national security policy after the Sept. 11 attacks was far reaching, his greatest domestic policy successes came during 2001. Ambitious plans for Social Security reform, following his narrow re-election in 2004, went nowhere.¶ Faced with obstacles to successful leadership, recent presidents have come to rely more on their formal powers. The number of important executive orders has increased significantly since the 1960s, as have the

issuance of presidential signing statements. Both are used by presidents in an attempt to shape and direct policy on their terms. Presidents have had to rely more on recess appointments as well, appointing individuals to important positions during a congressional recess (even a weekend recess) to avoid delays and obstruction often encountered in the Senate. Such power assertions typically elicit close media scrutiny and often further erode political capital.¶ Barack Obama's election in 2008 seemed to signal a change. Mr. Obama's popular vote majority was the largest for any president since 1988, and he was the first Democrat to clear the 50 percent mark since Lyndon Johnson. The president initially enjoyed strong public approval and, with a Democratic Congress, was able to produce an impressive string of legislative accomplishments during his first year and early into his second, capped by enactment of the Patient Protection and Affordable Care Act. **But with each legislative battle and success, his political capital waned.** His impressive successes with Congress in 2009 and 2010 were accompanied by a shift in the public mood against him, evident in the rise of the tea party movement, the collapse in his approval rating, and the large GOP gains in the 2010 elections, which brought a return to divided government.¶ By mid-2011, Mr. Obama's job approval had slipped well below its initial levels, and Congress was proving increasingly intransigent. In the face of declining public support and rising congressional opposition, Mr. Obama, like his predecessors, looked to the energetic use of executive power. In 2012, the president relied on executive discretion and legal ambiguity to allow homeowners to more easily refinance federally backed mortgages, to help veterans find employment and to make it easier for college graduates to consolidate federal student loan debt. He issued several executive orders effecting change in the nation's enforcement of existing immigration laws. He used an executive order to authorize the Department of Education to grant states waivers from the requirements of the No Child Left Behind Act — though the enacting legislation makes no accommodation for such waivers. Contrary to the outcry from partisan opponents, Mr. Obama's actions were hardly unprecedented or imperial. Rather, they represented a rather typical power assertion from a contemporary president.¶ Many looked to the 2012 election as a means to break present trends. But Barack Obama's narrow re-election victory, coupled with the re-election of a somewhat-diminished Republican majority House and Democratic majority Senate, hardly signals a grand resurgence of his political capital. The president's recent issuance of multiple executive orders to deal with the issue of gun violence is further evidence of his power trap. Faced with the likelihood of legislative defeat in Congress, the president must rely on claims of unilateral power. But such claims are not without limit or cost and will likely further erode his political capital.¶ Only by solving the problem of political capital is a president likely to avoid a power trap. **Presidents in recent years have been unable to prevent their political capital from eroding.** When it did, their power assertions often got them into further political trouble. Through leveraging public support, presidents have at times been able to overcome contemporary leadership challenges by adopting as their own issues that the public already supports. Bill Clinton's centrist "triangulation" and George W. Bush's careful issue selection early in his presidency allowed them to secure important policy changes — in Mr. Clinton's case, welfare reform and budget balance, in Mr. Bush's tax cuts and education reform — that at the time received popular approval.¶ However, short-term legislative strategies may win policy success for a president but do not serve as an antidote to declining political capital over time, as the difficult final years of both the Bill Clinton and George W. Bush presidencies demonstrate. None of Barack Obama's recent predecessors solved the political capital problem or avoided the power trap. It is the central political challenge confronted by modern presidents and one that will likely weigh heavily on the current president's mind today as he takes his second oath of office.

Health care and energy prove winners don't win – capital is finite

Lashof '10

Dan Lashof, director of the National Resource Defense Council's climate center, Ph.D. from the Energy and Resources Group at UC-Berkeley, 7-28-2010, NRDC Switchboard Blog, "Coulda, Shoulda, Woulda: Lessons from Senate Climate Fail," http://switchboard.nrdc.org/blogs/dlashof/coulda_shoulda_woulda_lessons.html

Lesson 2: **Political capital is not necessarily a renewable resource**. Perhaps the most fateful decision the Obama administration made early on was to move **healthcare** reform **before energy** and climate legislation. I'm sure this **seemed like a good idea** at the time. Healthcare reform was popular, was seen as an issue that the public cared about on a personal level, and was expected to unite Democrats from all regions. White House officials and Congressional leaders reassured environmentalists with their theory that success breeds success. A quick victory on healthcare reform would renew Obama's political capital, some of which had to be spent early on to push the economic stimulus bill through Congress with no Republican help. **Healthcare** reform **was** eventually **enacted**, but **only after an exhausting battle that eroded public support, drained political capital and created the Tea Party movement**. **Public support** for healthcare reform **is slowly rebounding** as some of the early benefits kick in and people realize that the forecasted Armageddon is not happening. **But this is occurring too slowly to rebuild Obama's political capital in time to help push climate legislation across the finish line.**

Impacts

Engagement—Embargo Key

Lifting the embargo boosts international engagement – that increases our negotiating leverage with regimes like Iran and North Korea

Klaas **Hinderdael**, Associate Case Manager at Kroll risk management, 6/11/11

(Breaking the Logjam: Obama's Cuba Policy and a Guideline for Improved Leadership, <http://bcjournal.org/volume-14/breaking-the-logjam.html?printerFriendly=true>)

In the context of Raúl shifting course in Cuba, the Obama administration has the opportunity to highlight the benefits of both the use of soft power and a foreign policy of engagement. As evidence mounts that the United States is ready to engage countries that enact domestic reforms, its legitimacy and influence will grow. Perhaps future **political leaders, in Iran or North Korea** for example, **will be more willing to make concessions knowing that the United States will return in kind.** The United States should not wait for extensive democratization before further engaging Cuba, however. One legacy of the Cold War is that Communism has succeeded only where it grew out of its own, often nationalistic, revolutions. As it has with China and Vietnam, the United States should look closely at the high payoffs stemming from engagement. By improving relations, America can enhance its own influence on the island's political structure and human rights policies. At home, with the trade deficit and national debt rising, the economic costs of the embargo are amplified. Recent studies estimate that the US economy foregoes up to \$4.84 billion a year and the Cuban economy up to \$685 million a year.⁵⁰ While US-Cuban economic interests align, political considerations inside America have shifted, as "commerce seems to be trumping anti-Communism and Florida ideologues."⁵¹ Clearly, public opinion also favors a new Cuba policy, with 65 percent of Americans now ready for a shift in the country's approach to its neighboring island.⁵² At this particular moment in the history of US-Cuban relations, there is tremendous promise for a breakthrough in relations. In a post-Cold War world, Cuba no longer presents a security threat to the United States, but instead provides it with economic potential. American leaders cannot forget the fact that an economic embargo, combined with diplomatic isolation, has failed to bring democracy to Cuba for over 50 years. American policymakers should see Cuba as an opportunity to reap the political, economic, and strategic rewards of shifting its own policies toward engagement. By ending the economic embargo and normalizing diplomatic relations with the island, President Obama would indicate that he is truly willing to extend his hand once America's traditional adversaries unclench their fists.

Engagement—Yes Asia War

Asia outweighs all other impacts—It has the greatest risk of nuclear war that involves the superpowers with the most nuclear weapons, is key to the global economy, is key to global democracy

Mead 10

Mead, senior fellow @ the Council on Foreign Relations, 2010 Walter, American Interest, "Obama in Asia", <http://blogs.the-american-interest.com/wrm/2010/11/09/obama-in-asia/>

The decision to go to Asia is one that all thinking Americans can and should support regardless of either party or ideological affiliation. **East and South Asia are the places where the 21st century, for better or for worse, will most likely be shaped; economic growth, environmental progress, the destiny of democracy and success against terror are all at stake here.** American objectives in this region are clear. While convincing China that its best interests are not served by a rash, Kaiser Wilhelm-like dash for supremacy in the region, the US does not want either to isolate or contain China. We want a strong, rich, open and free China in an Asia that is also strong, rich, open and free. **Our destiny is inextricably linked with Asia's; Asian success will make America stronger, richer and more secure. Asia's failures will reverberate over here, threatening our prosperity, our security and perhaps even our survival. The world's two most mutually hostile nuclear states, India and Pakistan, are in Asia.** The two states most likely to threaten others with nukes, North Korea and aspiring rogue nuclear power Iran, are there. **The two superpowers with a billion plus people are in Asia as well. This is where the world's fastest growing economies are. It is where the worst environmental problems exist. It is the home of the world's largest democracy,** the world's most populous Islamic country (Indonesia — which is also among the most democratic and pluralistic of Islamic countries), and the world's most rapidly rising non-democratic power as well. Asia holds more oil resources than any other continent; the world's most important and most threatened trade routes lie off its shores. East Asia, South Asia, Central Asia (where American and NATO forces are fighting the Taliban) and West Asia (home among others to Saudi Arabia, Israel, Turkey and Iraq) are the theaters in the world today that most directly engage America's vital interests and where our armed forces are most directly involved. **The world's most explosive territorial disputes are in Asia** as well, with islands (and the surrounding mineral and fishery resources) bitterly disputed between countries like Russia, the two Koreas, Japan, China (both from Beijing and Taipei), and Vietnam. From the streets of Jerusalem to the beaches of Taiwan **the world's most intractable political problems are found on the Asian landmass and its surrounding seas. Whether you view the world in terms of geopolitical security, environmental sustainability, economic growth or the march of democracy, Asia is at the center of your concerns.** That is the overwhelming reality of world politics today, and that reality is what President Obama's trip is intended to address

Conflict in Asia goes nuclear

Chakraborty 10

United Service Institution of India "The Initiation & Outlook of ASEAN Defence Ministers Meeting (ADMM) Plus Eight,"

<http://www.usiofindia.org/Article/?pub=Strategic%20Perspective&pubno=20&ano=739>

The first ASEAN Defence Ministers Meeting Plus Eight (China, India, Japan, South Korea, Australia, New Zealand, Russia and the USA) was held on the 12th of October. When this

frame work of ADMM Plus Eight came into news for the first time it was seen as a development which could be the initiating step to a much needed security architecture in the Asia Pacific. Asia Pacific is fast emerging as the economic center of the world, consequently securing of vulnerable economic assets has becomes mandatory. The source of threat to economic assets is basically unconventional in nature like natural disasters, terrorism and maritime piracy. This coupled with the conventional security threats and flashpoints based on territorial disputes and political differences are very much a part of the region posing a major security challenge. As mentioned ADMM Plus Eight can be seen as the first initiative on such a large scale where the security concerns of the region can be discussed and areas of cooperation can be explored to keep the threats at bay. The defence ministers of the ten ASEAN nations and the eight extra regional countries (Plus Eight) during the meeting have committed to cooperation and dialogue to counter insecurity in the region. One of the major reasons for initiation of such a framework has been the new face of threat which is non-conventional and transnational which makes it very difficult for an actor to deal with it in isolation. Threats related to violent extremism, maritime security, vulnerability of SLOCs, transnational crimes have a direct and indirect bearing on the path of economic growth. Apart from this the existence of territorial disputes especially on the maritime front plus the issues related to political differences, rise of China and dispute on the Korean Peninsula has aggravated the security dilemma in the region giving rise to areas of potential conflict. This can be seen as a more of a conventional threat to the region. The question here is that how far this ADMM Plus Eight can go to address the conventional security threats or is it an initiative which would be confined to meetings and passing resolution and playing second fiddle to the ASEAN summit. It is very important to realize that when one is talking about effective security architecture for the Asia Pacific one has to talk in terms of addressing the conventional issues like the territorial and political disputes. These issues serve as bigger flashpoint which can snowball into a major conflict which has the possibility of turning into a nuclear conflict.

1nc Cuba Relations

Ending the embargo is key to US/Latin American relations

Robert **White**, Senior fellow at the Center for International Policy, 3/7/13

(After Chávez, a Chance to Rethink Relations With Cuba,

www.nytimes.com/2013/03/08/opinion/after-chavez-hope-for-good-neighbors-in-latin-america.html?pagewanted=all&_r=1&)

An end to the Cuba embargo would send a powerful signal to all of Latin America that the United States wants a new, warmer relationship with democratic forces seeking social change throughout the Americas. I joined the State Department as a Foreign Service officer in the 1950s and chose to serve in Latin America in the 1960s. I was

inspired by President John F. Kennedy's creative response to the revolutionary fervor then sweeping Latin America. The 1959 Cuban revolution, led by the charismatic Fidel Castro, had inspired revolts against the cruel dictatorships and corrupt pseudodemocracies that had dominated the region since the end of Spanish and Portuguese rule in the 19th century. Kennedy had a charisma of his own, and it captured the imaginations of leaders who wanted democratic change, not violent revolution. Kennedy reacted to the threat of continental insurrection by creating the Alliance for Progress, a kind of Marshall Plan for the hemisphere that was calculated to achieve the same kind of results that saved Western Europe from Communism. He pledged billions of dollars to this effort. In hindsight, it may have been overly ambitious, even naïve, but Kennedy's focus on Latin America rekindled the promise of the Good Neighbor Policy of Franklin D. Roosevelt and transformed the whole concept of inter-American relations. Tragically, after Kennedy's assassination in 1963, the ideal of the Alliance for Progress crumbled and "la noche mas larga" — "the longest night" — began for the proponents of Latin American democracy. Military regimes flourished, democratic governments withered, moderate political and civil leaders were labeled Communists, rights of free speech and assembly were curtailed and human dignity crushed, largely because the United States abandoned all standards save that of anti-Communism. During my Foreign Service career, I did what I could to oppose policies that supported dictators and closed off democratic alternatives. In 1981, as the ambassador to El Salvador, I refused a demand by the secretary of state, Alexander M. Haig Jr., that I use official channels to cover up the Salvadoran military's responsibility for the murders of four American churchwomen. I was fired and forced out of the Foreign Service. The Reagan administration, under the illusion that Cuba was the power driving the Salvadoran revolution, turned its policy over to the Pentagon and C.I.A., with predictable results. During the 1980s the United States helped expand the Salvadoran military, which was dominated by uniformed assassins. We armed them, trained them and covered up their crimes. After our counterrevolutionary efforts failed to end the Salvadoran conflict, the Defense Department asked its research institute, the RAND Corporation, what had gone wrong. RAND analysts found that United States policy makers had refused to accept the obvious truth that the insurgents were rebelling against social injustice and state terror. As a result, "we pursued a policy unsettling to ourselves, for ends humiliating to the Salvadorans and at a cost disproportionate to any conventional conception of the national interest." Over the subsequent quarter-century, a series of profound political, social and economic changes have undermined the traditional power bases in Latin America and, with them, longstanding regional institutions like the Organization of American States. The organization, which is headquartered in Washington and which excluded Cuba in 1962, was seen as irrelevant by Mr. Chávez. He promoted the creation of the Community of Latin American and Caribbean States — which excludes the United States and Canada — as an alternative. At a regional meeting that included Cuba and excluded the United States, Mr. Chávez said that "the most positive thing for the independence of our continent is that we meet alone without the hegemony of empire." Mr. Chávez was masterful at manipulating America's antagonism toward Fidel Castro as a rhetorical stick with which to attack the United States as an imperialist aggressor, an enemy of progressive change, interested mainly in treating Latin America as a vassal continent, a source of cheap commodities and labor. Like its predecessors, the Obama administration has given few signs that it has grasped the magnitude of these changes or cares about their consequences. After President Obama took office in 2009, Latin America's leading statesman at the time, Luiz Inácio Lula da Silva, then

the president of Brazil, urged Mr. Obama to normalize relations with Cuba. Lula, as he is universally known, correctly identified our Cuba policy as the chief stumbling block to renewed ties with Latin America, as it had been since the very early years of the Castro regime. After the failure of the 1961 Bay of Pigs invasion, Washington set out

to accomplish by stealth and economic strangulation what it had failed to do by frontal attack. But the clumsy mix of covert action and porous boycott succeeded primarily in bringing shame on the United States and turning Mr. Castro into a folk hero. And even now, despite the relaxing of travel restrictions and Raúl Castro's announcement that he will retire in 2018, the implacable hatred of many within the Cuban exile community continues. The fact that two of the three Cuban-American members of the Senate — Marco Rubio of Florida and Ted Cruz of Texas — are rising stars in the Republican Party complicates further the potential for a recalibration of Cuban-American relations. (The third member, Senator Robert Menendez, Democrat of New Jersey, is the new chairman of the Senate Foreign Relations Committee, but his power has been weakened by a continuing ethics controversy.) Are there any other examples in the history of diplomacy where the leaders of a small, weak nation can prevent a great power from acting in its own best interest merely by staying alive? The re-election of President Obama, and the death of Mr. Chávez, give America a chance to reassess the irrational hold on our imaginations that Fidel Castro has exerted for five decades. The president and his new secretary of state, John Kerry, should quietly reach out to Latin American leaders like President Juan Manuel Santos of Colombia and José Miguel Insulza, secretary general of the Organization of American States. The message should be simple: The president is prepared to show some flexibility on Cuba and asks your help. Such a simple request could transform the Cuban issue from a bilateral problem into a multilateral challenge. It would then be up to Latin Americans to devise a policy that would help Cuba achieve a sufficient measure of democratic change to justify its reintegration into a hemisphere composed entirely of elected governments. **If, however, our present policy paralysis continues, we will soon see the**

emergence of two rival camps, the United States versus Latin America. While Washington would continue to enjoy friendly relations with individual countries like Brazil, Mexico and Colombia, **the vision of** Roosevelt and Kennedy of **a hemisphere of partners** cooperating in matters of common concern **would be reduced to a historical footnote.**

Relations are key to solve proliferation

IAD '12 [Inter-American Dialogue, research organization with majority of Board of Directors from Latin American and Caribbean nations, "Remaking the Relationship: The United States and Latin America," April,

<http://www.thedialogue.org/PublicationFiles/IAD2012PolicyReportFINAL.pdf>]

Many of the **issues on the hemispheric agenda carry critical global dimensions**. Because of this, **the United States should seek greater cooperation** and consultation **with** Brazil, Mexico, and other **countries of the region** in world forums addressing shared interests. Brazil has the broadest international presence and influence of any Latin American nation. In recent years it has become far more active on global issues of concern to the United States. The United States and Brazil have clashed over such issues as Iran's nuclear program, non-proliferation, and the Middle East uprisings, but they have cooperated when their interests converged, such as in the World Trade Organization and the G-20 (Mexico, Argentina, and Canada also participate in the G-20), and in efforts to rebuild and provide security for Haiti. **Washington has worked with** Brazil and other **Latin American countries to raise the profile of emerging economies** in various international financial agencies, including the World Bank and the International Monetary Fund. In addition to economic and financial matters, Brazil and other **Latin American nations are assuming enhanced roles on an array of global political, environmental, and security issues**. Several for which US and Latin American cooperation could become increasingly important include:

- **As the world's lone nuclear-weapons-free region, Latin America has the opportunity to participate more actively in non-proliferation efforts**.

Although US and Latin American interests do not always converge on non-proliferation questions, they align on some related goals. For example, **the main proliferation challenges today are found in developing and unstable parts of the world, as well as in the leakage—or transfer of nuclear materials—to terrorists**. In that context, **south-south connections are crucial**. Brazil could play a pivotal role.

Proliferation causes extinction

Utgoff 2'

Utgoff, 2002 (Deputy Director of the Strategy Forces, and Resources Division of the Institute for Defense Analyses, Victor, "Proliferation, Missile Defence, and American Ambitions," Survival, Volume 44, Number 2, Summer)

First, the dynamics of getting to **a highly proliferated world could be very dangerous**. Proliferating **states will feel great pressures to obtain nuclear weapons** and delivery systems **before any potential opponent does**. Those who succeed in outracing an opponent may consider **preemptive nuclear war before the opponent becomes capable of nuclear retaliation**. Those who lag behind might try to preempt their opponent's nuclear programme or defeat the opponent using conventional forces. And those who feel threatened but are incapable of building nuclear weapons may still be able to join in this arms race by building other types of weapons of mass destruction, such as biological weapons. Second, as the world approaches complete proliferation, the hazards posed by nuclear weapons today will be magnified many times over. Fifty or more nations capable of launching nuclear weapons means that **the risk of nuclear accidents** that could cause serious damage not only to their own populations and environments, but those of others, **is hugely increased**. The chances of such weapons falling into the hands of renegade military units or terrorists is far greater, as is the number of nations carrying out hazardous manufacturing and storage activities. Worse still, in a highly proliferated world there would be more frequent opportunities for the use of nuclear weapons. And more

frequent opportunities means shorter expected times between conflicts in which nuclear weapons get used, unless the probability of use at any opportunity is actually zero. To be sure, some theorists on nuclear deterrence appear to think that in any confrontation between two states known to have reliable nuclear capabilities, the probability of nuclear weapons being used is zero.³ These theorists think that such states will be so fearful of escalation to nuclear war that they would always avoid or terminate confrontations between them, short of even conventional war. They believe this to be true even if the two states have different cultures or leaders with very eccentric personalities. History and human nature, however, suggest that they are almost surely wrong. History includes instances in which states known to possess nuclear weapons did engage in direct conventional conflict. China and Russia fought battles along their common border even after both had nuclear weapons. Moreover, logic suggests that if states with nuclear weapons always avoided conflict with one another, surely states without nuclear weapons would avoid conflict with states that had them. Again, history provides counter-examples. Egypt attacked Israel in 1973 even though it saw Israel as a nuclear power at the time. Argentina invaded the Falkland Islands and fought Britain's efforts to take them back, even though Britain had nuclear weapons. Those who claim that two states with reliable nuclear capabilities to devastate each other will not engage in conventional conflict risking nuclear war also assume that any leader from any culture would not choose suicide for his nation. But history provides unhappy examples of states whose leaders were ready to choose suicide for themselves and their fellow citizens. Hitler tried to impose a 'victory or destruction' policy on his people as Nazi Germany was going down to defeat.⁴ And Japan's war minister, during debates on how to respond to the American atomic bombing, suggested 'Would it not be wondrous for the whole nation to be destroyed like a beautiful flower?'⁵ If leaders are willing to engage in conflict with nuclear-armed nations, use of nuclear weapons in any particular instance may not be likely, but its probability would still be dangerously significant. In particular, human nature suggests that the threat of retaliation with nuclear weapons is not a reliable guarantee against a disastrous first use of these weapons. While national leaders and their advisors everywhere are usually talented and experienced people, even their most important decisions cannot be counted on to be the product of well-informed and thorough assessments of all options from all relevant points of view. This is especially so when the stakes are so large as to defy assessment and there are substantial pressures to act quickly, as could be expected in intense and fast-moving crises between nuclear-armed states.' Instead, like other human beings, national leaders can be seduced by wishful thinking. They can misinterpret the words or actions of opposing leaders. Their advisors may produce answers that they think the leader wants to hear, or coalesce around what they know is an inferior decision because the group urgently needs the confidence or the sharing of responsibility that results from settling on something. Thus, both history and human nature suggest that nuclear deterrence can be expected to fail from time to time, and we are fortunate it has not happened yet. But the threat of nuclear war is not just a matter of a few weapons being used. It could get much worse. Once a conflict reaches the point where nuclear weapons are employed, the stresses felt by the leaderships would rise enormously. These stresses can be expected to further degrade their decision-making. The pressures to force the enemy to stop fighting or to surrender could argue for more forceful and decisive military action, which might be the right thing to do in the circumstances, but maybe not. And the horrors of the carnage already suffered may be: seen as, justification for visiting

the most devastating punishment possible on the enemy.' Again, history demonstrates how intense conflict can lead the combatants to escalate violence to the maximum possible levels. In the Second World War, early promises not to bomb cities soon gave way to essentially indiscriminate bombing of civilians. The war between Iran and Iraq during the 1980s led to the use of chemical weapons on both sides and exchanges of missiles against each other's cities. And more recently, violence in the Middle East escalated in a few months from rocks and small arms to heavy weapons on one side, and from police actions to air strikes and armoured attacks on the other. Escalation of violence is also basic human nature. Once the violence starts, retaliatory exchanges of violent acts can escalate to levels unimagined by the participants beforehand. Intense and blinding anger is a common response to fear or humiliation or abuse. And such anger can lead us to impose on our opponents whatever levels of violence are readily accessible. In sum, widespread proliferation is likely to lead to an occasional shoot-out with nuclear weapons, and that such shoot-outs will have a substantial probability of escalating to the maximum destruction possible with the weapons at hand. Unless nuclear proliferation is stopped, we are headed toward a world that will mirror the American Wild West of the late 1800s. With most, if not all, nations wearing nuclear 'six-shooters' on their hips, the world may even be a more polite place than it is today, but every once in a while we will all gather on a hill to bury the bodies of dead cities or even whole nations

Relations—Embargo Key

Failing to lift the embargo now dooms relations forever

White, '13 [3/7/13, Robert E. White, a senior fellow at the Center for International Policy, was the United States ambassador to Paraguay from 1977 to 1979 and to El Salvador from 1980 to 1981, “After Chávez, a Chance to Rethink Relations With Cuba”, <http://www.nytimes.com/2013/03/08/opinion/after-chavez-hope-for-good-neighbors-in-latin-america.html?pagewanted=all>]

FOR most of our history, the United States assumed that its security was inextricably linked to a partnership with Latin America. This legacy dates from the Monroe Doctrine, articulated in 1823, through the Rio pact, the postwar treaty that pledged the United States to come to the defense of its allies in Central and South America. Yet for a half-century, our policies toward our southern neighbors have alternated between intervention and neglect, inappropriate meddling and missed opportunities. The death this week of President Hugo Chávez of Venezuela — who along with Fidel Castro of Cuba was perhaps the most vociferous critic of the United States among the political leaders of the Western Hemisphere in recent decades — offers an opportunity to restore bonds with potential allies who share the American goal of prosperity. Throughout his career, the autocratic Mr. Chávez used our embargo as a wedge with which to antagonize the United States and alienate its supporters. His fuel helped prop up the rule of Mr. Castro and his brother Raúl, Cuba’s current president. The embargo no longer serves any useful purpose (if it ever did at all); President Obama should end it, though it would mean overcoming powerful opposition from Cuban-American lawmakers in Congress. An end to the Cuba embargo would send a powerful signal to all of Latin America that the United States wants a new, warmer relationship with democratic forces seeking social change throughout the Americas. I joined the State Department as a Foreign Service officer in the 1950s and chose to serve in Latin America in the 1960s. I was inspired by President John F. Kennedy’s creative response to the revolutionary fervor then sweeping Latin America. The 1959 Cuban revolution, led by the charismatic Fidel Castro, had inspired revolts against the cruel dictatorships and corrupt pseudodemocracies that had dominated the region since the end of Spanish and Portuguese rule in the 19th century. Kennedy had a charisma of his own, and it captured the imaginations of leaders who wanted democratic change, not violent revolution. Kennedy reacted to the threat of continental insurrection by creating the Alliance for Progress, a kind of Marshall Plan for the hemisphere that was calculated to achieve the same kind of results that saved Western Europe from Communism. He pledged billions of dollars to this effort. In hindsight, it may have been overly ambitious, even naïve, but Kennedy’s focus on Latin America rekindled the promise of the Good Neighbor Policy of Franklin D. Roosevelt and transformed the whole concept of inter-American relations. Tragically, after Kennedy’s assassination in 1963, the ideal of the Alliance for Progress crumbled and “la noche mas larga” — “the longest night” — began for the proponents of Latin American democracy. Military regimes flourished, democratic governments withered, moderate political and civil leaders were labeled Communists, rights of free speech and assembly were curtailed and human dignity crushed, largely because the United States abandoned all standards save that of anti-Communism. During my Foreign Service career, I did what I could to oppose policies that supported dictators and closed off democratic alternatives. In 1981, as the ambassador to El Salvador, I refused a demand by the secretary of

state, Alexander M. Haig Jr., that I use official channels to cover up the Salvadoran military's responsibility for the murders of four American churchwomen. I was fired and forced out of the Foreign Service. The Reagan administration, under the illusion that Cuba was the power driving the Salvadoran revolution, turned its policy over to the Pentagon and C.I.A., with predictable results. During the 1980s the United States helped expand the Salvadoran military, which was dominated by uniformed assassins. We armed them, trained them and covered up their crimes. After our counterrevolutionary efforts failed to end the Salvadoran conflict, the Defense Department asked its research institute, the RAND Corporation, what had gone wrong. RAND analysts found that United States policy makers had refused to accept the obvious truth that the insurgents were rebelling against social injustice and state terror. As a result, "we pursued a policy unsettling to ourselves, for ends humiliating to the Salvadorans and at a cost disproportionate to any conventional conception of the national interest." Over the subsequent quarter-century, a series of profound political, social and economic changes have undermined the traditional power bases in Latin America and, with them, longstanding regional institutions like the Organization of American States. The organization, which is headquartered in Washington and which excluded Cuba in 1962, was seen as irrelevant by Mr. Chávez. He promoted the creation of the Community of Latin American and Caribbean States — which excludes the United States and Canada — as an alternative. At a regional meeting that included Cuba and excluded the United States, Mr. Chávez said that "the most positive thing for the independence of our continent is that we meet alone without the hegemony of empire." Mr. Chávez was masterful at manipulating America's antagonism toward Fidel Castro as a rhetorical stick with which to attack the United States as an imperialist aggressor, an enemy of progressive change, interested mainly in treating Latin America as a vassal continent, a source of cheap commodities and labor. Like its predecessors, the Obama administration has given few signs that it has grasped the magnitude of these changes or cares about their consequences. After President Obama took office in 2009, Latin America's leading statesman at the time, Luiz Inácio Lula da Silva, then the president of Brazil, urged Mr. Obama to normalize relations with Cuba. Lula, as he is universally known, correctly identified our Cuba policy as the chief stumbling block to renewed ties with Latin America, as it had been since the very early years of the Castro regime. After the failure of the 1961 Bay of Pigs invasion, Washington set out to accomplish by stealth and economic strangulation what it had failed to do by frontal attack. But the clumsy mix of covert action and porous boycott succeeded primarily in bringing shame on the United States and turning Mr. Castro into a folk hero. Are there any other examples in the history of diplomacy where the leaders of a small, weak nation can prevent a great power from acting in its own best interest merely by staying alive? The re-election of President Obama, and the death of Mr. Chávez, give America a chance to reassess the irrational hold on our imaginations that Fidel Castro has exerted for five decades. The president and his new secretary of state, John Kerry,

should quietly reach out to Latin American leaders like President Juan Manuel Santos of Colombia and José Miguel Insulza, secretary general of the Organization of American States. The message should be simple: The president is prepared to show some flexibility on Cuba and asks your help. Such a simple request could transform the Cuban issue from a bilateral problem into a multilateral challenge. It would then be up to Latin Americans to devise a policy that would help Cuba achieve a sufficient measure of democratic change to justify its reintegration into a hemisphere composed entirely of elected governments. If, however, our present policy paralysis continues, we will soon see the emergence of two rival camps, the United States versus Latin America. While Washington would continue to enjoy friendly relations with individual countries like Brazil, Mexico and Colombia, the vision of Roosevelt and Kennedy of a hemisphere of partners cooperating in matters of common concern would be reduced to a historical footnote.

Relations—Solves Prolif

Relations are key to preventing Latin American proliferation and nuclear terrorism

Ferkaluk, Executive Officer to the Commander at 88 Air Base Wing

Logistics Readiness Officer at United States Air Force, **10**

(Brian, Fall 2010, Global Security Studies, "Latin America: Terrorist Actors on a Nuclear Stage," pg 12, ACCESSED June 29, 2013, RJ)

The policy implications for the United States are to maintain the role of a guiding figure in Latin American developments. The stakes for the US have never been higher. In a region that has a strong history of domestic terrorism and stratocracy, strong oversight is warranted. The current US administration's policy on nuclear deterrence is that the threat of a nuclear attack from a sovereign state has gone down, but the threat of nuclear weapons falling into the hands of terrorists has gone up. No region of the world is closer to the US or has a greater ease of access to the US border than Latin America. Therefore, it is vital that the US continue providing antiterrorism training to key Latin American states, offer economic assistance and encourage mutual cooperation and information sharing among allied states. Once this is accomplished, Latin American nuclear proliferation will cease to be a factor in the terrorist activity that threatens each state to this day. The mutual cooperation will help to diminish the activities of groups like the FARC and the AUC. Furthermore, international groups such as Al Qaida and Hezbollah will not be able to acquire nuclear weapons should they develop a stronger presence in the region. A blind eye should also not be turned towards states that overtly refuse to cooperate in the GWOT. States like Venezuela and Nicaragua should not be left to their own devices. The relationships that are being built with Russia and Iran must also be carefully monitored. Venezuela may not be very close to a nuclear weapon, but the technology and applied sciences it receives from both Iran and Russia has the potential to speed up its development. It has already failed to acquire technology from its neighbors, so the US must continue to solidify its relations with states like Brazil and Argentina and discourage any relations with Iran. If its leaders and diplomats can continue to press that issue, it can curb the increase in trade between Latin America and Iran and end the political and diplomatic connections Iran has been forming in recent years. Above any other measure, the US must ensure that every Latin American nation knows that it cares about the development and defense of the region. If that region is secure, the US is secure; and as long as the region struggles with terrorism and nuclear proliferation, the US will be there to support it in every way possible.

Relations—Prolif Bad

Proliferation increases the risk of nuclear war

CFR 9'

http://www.cfr.org/publication/19226/us_nuclear_weapons_policy. "US Nuclear Weapons Policy." Council on Foreign Relations April 2009.

Increasing global access to weapons-usable nuclear materials, and the technologies used to make them, has substantially challenged the United States in its mission of preventing nuclear weapons acquisition and use. Further proliferation will likely raise the risks of strategic miscalculation and increase the probability of nuclear use, particularly if it happens quickly and involves actors that oppose the mainstream international order. Presently, seven states—China, France, India, Pakistan, Russia, the United Kingdom, and the United States—have demonstrated the capability to make nuclear weapons; Israel is widely believed to have the capability but has not explicitly acknowledged this status as a matter of policy; and though North Korea detonated a low-yield nuclear device in October 2006, it may not yet have the ability to deploy nuclear weapons.

Proliferation won't be stable – intentional or accidental use becomes likely

Ong 2000

Graham Gerard Ong, officer with the Ministry of Information and the Arts (Singapore), 2000, http://www.mindef.gov.sg/safti/pointer/Vol27_2/Denying%20Armageddon.htm

Military analyst Roger Hilsman in his recent book, From Nuclear Military Strategy to a World Without War, draws up six possible scenarios of "Armageddon" or nuclear war of a global scale that mankind can face in the near future:

- Scenario 1: Group sponsored nuclear terrorism. A terrorist organisation might smuggle a small suitcase type nuclear bomb in a city of a major power and set it off to dramatise its demands.
- Scenario 2: State sponsored nuclear terrorism. An "outlaw" state that acquires or manufactures nuclear weapons may try to provoke a war between the US and Russia or the US and China by sending agents to set off nuclear devices in the capitols of these countries.
- Scenario 3: Nuclear war between third and fourth countries. A good possibility is India and Pakistan. Both have tested nuclear weapons, and in the case of war are very likely to use them.
- Scenario 4: A war between Israel and a Muslim state in the Middle East. Israel is known to have built a stockpile of nuclear weapons. Countries such as Iraq and Iran have engaged in nuclear weapons activities before. If any of these or other Muslim states acquire such weapons, a war with Israel could easily escalate into nuclear warfare.
- Scenario 5: Nuclear war between nuclear powers purely by accident. Hilsman predicts that the number of states possessing nuclear weapons will rise such that in a decade or two, several dozen countries will have such weapons. The chances for miscalculation will be proportionately higher in launching such weapons.
- Scenario 6: The "bolt from the blue" scenario. This is a war that starts when one nuclear state attacks an adversary without warning during a period of low international tension and succeeds in achieving surprise. Countries that have autocratic governments allow an irrational leader to carry out such attacks based on hatred and anger without much opposition.

AT Embargo Good

No offense – the embargo has repeatedly failed to liberalize Cuban governance and solidifies support for regime hardliners

Bandow 12 (Doug Bandow is a senior fellow at the Cato Institute and a former special assistant to former US president Ronald Reagan. December 11, 2012, “Time to End the Cuba Embargo”, <http://www.cato.org/publications/commentary/time-end-cuba-embargo>

The U.S. government has waged economic war against the Castro regime for half a century. The policy may have been worth a try during the Cold War, but the embargo has failed to liberate the Cuban people. It is time to end sanctions against Havana. Decades ago the Castro brothers lead a revolt against a nasty authoritarian, Fulgencio Batista. After coming to power in 1959, they created a police state, targeted U.S. commerce, nationalized American assets, and allied with the Soviet Union. Although Cuba was but a small island nation, the Cold War magnified its perceived importance. Washington reduced Cuban sugar import quotas in July 1960. Subsequently U.S. exports were limited, diplomatic ties were severed, travel was restricted, Cuban imports were banned, Havana’s American assets were frozen, and almost all travel to Cuba was banned. Washington also pressed its allies to impose sanctions. These various measures had no evident effect, other than to intensify Cuba’s reliance on the Soviet Union. Yet the collapse of the latter nation had no impact on U.S. policy. In 1992, Congress banned American subsidiaries from doing business in Cuba and in 1996, it penalized foreign firms that trafficked in expropriated U.S. property. Executives from such companies even were banned from traveling to America. On occasion Washington relaxed one aspect or another of the embargo, but in general continued to tighten restrictions, even over Cuban Americans. Enforcement is not easy, but Uncle Sam tries his best. For instance, according to the Government Accountability Office, Customs and Border Protection increased its secondary inspection of passengers arriving from Cuba to reflect an increased risk of embargo violations after the 2004 rule changes, which, among other things,

eliminated the allowance for travelers to import a small amount of Cuban products for personal consumption. Three years ago, President Barack Obama loosened regulations on Cuban Americans, as well as telecommunications between the United States and Cuba. However, the law sharply constrains the president’s discretion. Moreover, UN Ambassador Susan Rice said that the embargo will continue until Cuba is free. It is far past time to end the embargo. During the Cold War, Cuba offered a potential advanced military outpost for the Soviet Union. Indeed, that role led to the Cuban missile crisis. With the failure of the U.S.-supported Bay of Pigs invasion, economic pressure appeared to be Washington’s best strategy for ousting the Castro dictatorship. However, the end of the Cold War left Cuba strategically irrelevant. It is a poor country with little ability to harm the United States. The Castro regime might still encourage unrest, but its survival has no measurable impact on any important U.S. interest. The regime remains a humanitarian travesty, of course.

Nor are Cubans the only victims: three years ago the regime jailed a State Department contractor for distributing satellite telephone equipment in Cuba. But Havana is not the only regime to violate human rights. Moreover, experience has long demonstrated that it is virtually impossible for outsiders to force democracy. Washington often has used sanctions and the Office of Foreign Assets Control currently is enforcing around 20 such programs, mostly to little effect. The policy in Cuba obviously has failed. The regime remains in power. Indeed, it has consistently used the embargo to justify its own mismanagement, blaming poverty on America. Observed Secretary of State Hillary Clinton: “It is my personal belief that the Castros do not want to see an end to the embargo and do not want to see normalization with the United States, because they would lose all of their excuses for what hasn’t happened in Cuba in the last 50 years.” Similarly, Cuban exile

Carlos Saladrigas of the Cuba Study Group argued that keeping the “embargo, maintaining this hostility, all it does is strengthen and embolden the hardliners.” Cuban human rights activists also generally oppose sanctions. A decade ago I (legally) visited Havana, where I met Elizardo Sanchez Santa Cruz, who suffered in communist prisons for eight years. He told me that the “sanctions policy gives the government a good alibi to justify the failure of the totalitarian model in Cuba.”

Indeed, it is only by posing as an opponent of Yanqui Imperialism that Fidel Castro has achieved an international reputation. If he had been ignored by Washington, he never would have been anything other than an obscure authoritarian windbag. Unfortunately, embargo supporters never let reality get in the way of their arguments. In 1994, John Sweeney of the Heritage Foundation declared that “the embargo remains the only effective instrument available to the U.S. government in trying to force the economic and democratic concessions it has been demanding of Castro for over three decades. Maintaining the embargo will help end the Castro regime more quickly.” The latter’s collapse, he wrote, is more likely in the near term than ever before. Almost two decades later, Rep. Ileana Ros-Lehtinen, chairwoman of the House Foreign Relations Committee, retains faith in the embargo: “The sanctions on the regime must remain in place and, in fact, should be strengthened, and not be altered.” One of the best definitions of insanity is continuing to do the same thing while expecting to achieve different results. The embargo survives largely because of Florida’s political importance. Every presidential candidate wants to win the Sunshine State’s electoral votes, and the Cuban American community is a significant voting bloc. But the political environment is changing. A younger, more liberal generation of Cuban Americans with no memory of life in Cuba is coming to the fore. Said Wayne Smith, a diplomat who served in Havana: “for the first time in years, maybe there is some chance for a change in policy.” And there are now many more new young Cuban Americans who support a more sensible approach to Cuba. Support for the Republican Party also is falling. According to some exit polls Barack Obama narrowly carried the Cuban American community in November, after receiving little more than a third of the vote four years ago. He received 60 percent of the votes of Cuban Americans born in the United States. Barack Obama increased his votes among Cuban Americans after liberalizing contacts with the island. He also would have won the presidency without Florida, demonstrating that the state may not be essential politically. Today even the GOP is no longer reliable. For instance, though Republican vice-presidential nominee Paul Ryan has defended the embargo in recent years, that appears to reflect ambition rather than conviction. Over the years he voted at least three times to lift the embargo, explaining: “The embargo doesn’t work. It is a failed policy. It was probably justified when the Soviet Union existed and posed a threat through Cuba. I think its become more of a crutch for Castro to use to repress his people. All the problems he has, he blames the American embargo.” There is essentially no international support for

continuing the embargo. For instance, the European Union plans to explore improving relations with Havana. Spain’s Deputy Foreign Minister Gonzalo de Benito explained that the EU saw a positive evolution in Cuba. The hope, then, is to move forward in the relationship between the European Union and Cuba. The administration should move now, before congressmen are focused on the next election. President Obama should propose legislation to drop (or at least significantly loosen) the embargo. He also could use his authority to relax sanctions by, for instance, granting more licenses to visit the island. Ending the embargo would have obvious economic benefits for both Cubans and Americans.

The U.S. International Trade Commission estimates American losses alone from the embargo as much as \$1.2 billion annually. Expanding economic opportunities also might increase pressure within Cuba for further economic reform. So far the regime has taken small steps, but rejected significant change. Moreover, thrusting more Americans into Cuban society could help undermine the ruling system. Despite Fidel Castro's decline, Cuban politics remains largely static. A few human rights activists have been released, while Raul Castro has used party purges to entrench loyal elites. Lifting the embargo would be no panacea. Other countries invest in and trade with Cuba to no obvious political impact. And the lack of widespread economic reform makes it easier for the regime rather than the people to collect the benefits of trade, in contrast to China. Still, more U.S. contact would have an impact. Argued trade specialist Dan Griswold, "American tourists would boost the earnings of Cubans who rent rooms, drive taxis, sell art, and operate restaurants in their homes. Those dollars would then find their way to the hundreds of freely priced farmers markets, to carpenters, repairmen, tutors, food vendors, and other entrepreneurs." The Castro dictatorship ultimately will end up in history's dustbin. But it will continue to cause much human hardship along the way. The Heritage Foundation's John Sweeney complained nearly two decades ago that "the United States must not abandon the Cuban people by relaxing or lifting the trade embargo against the communist regime." But the dead hand of half a century of failed policy is the worst breach of faith with the Cuban people. Lifting sanctions would be a victory not for Fidel Castro, but for the power of free people to spread liberty. As Griswold argued, "commercial engagement is the best way to encourage more open societies abroad." Of course, there are no guarantees. But lifting the embargo would have a greater likelihood of success than continuing a policy which has failed. Some day the Cuban people will be free. Allowing more contact with Americans likely would make that day come sooner.

Cuba embargo fails to create reform—lifting it unilaterally key to create prerequisite conditions

Birns and Mills 13—director and senior research fellow @ Council on Hemispheric Affairs

Larry and Frederick "Best Time for U.S.—Cuba Rapprochement Is Now"
[<http://www.coha.org/best-time-for-u-s-cuba-rapprochement-is-now/>]

The anti-Castro lobby and their allies in the US Congress argue that the reforms coming out of Havana are too little too late and that political repression continues unabated. They continue to see the embargo as a tool for coercing either more dramatic reforms or regime change. It is true that the reformist tendency in Cuba does not include a qualitative move from a one party system to political pluralism. Lamentably, Cuba reportedly continues to use temporary detentions and the occasional jailing of non-violent dissidents to limit the parameters of political debate and total freedom of association. The authors agree that no non-violent Cuban dissident should be intimidated, detained or jailed. But continuing to maliciously turn the screws on Havana has never provided an incentive for more democracy in any sense of the word nor has it created a political opening into which Cuba, with confidence, could enter. The easing of tensions between Washington and Havana is more likely to contribute to the evolution of a more democratic form of socialism on the island, the early stages of which we may presently be witnessing. In any case the precise form of such change inevitably should and will be decided in Cuba, not in Washington or Miami.

Cyber security is a top priority now – new programs ensure safety from attack

Shavit **Matias**, 3-5-2015, research fellow at the Hoover Institution and a member of the Jean Perkins Task Force on National Security and Law. , "Combating Cyberattacks In The Age Of Globalization," Hoover Institution, <http://www.hoover.org/research/combating-cyberattacks-age-globalization>

Over the past decade, facing the alarming growth of cyberattacks on industry, media, banks, infrastructure and state institutions, there has been an increasing focus of industry and states on building tools to enhance capabilities to combat cybercrime, cyber espionage, cyberterrorism and cyberwarfare, and there is a major shift of funds, efforts, and focus to these areas. Many countries are creating cyber defense institutions within their national security establishments and enhancing their cyber capabilities, including through the creation of dedicated cyberwarfare units within their defense forces. Others are beginning to be aware of the necessity. According to Director of National Intelligence James R. Clapper in a January 29, 2014 Statement for the Record before the Senate Select Committee on Intelligence, the United States estimates that several of the cyber defense institutions created by states will likely be responsible for offensive cyber operations as well. The cyber arena is complex and continuously evolving. Recognizing the critical interlink between the various actors and the need for cooperation and innovation, states are increasingly trying to build cooperation between domestic state cyber institutions and industry and academia, and devise mechanisms for internal cooperation between different state units and agencies. While in the past states kept many of these efforts — including information on the formation of military cyber units — relatively secret, today they increasingly publicize their efforts both nationally and internationally. “Be an Army hacker: This top secret cyber unit wants you” shouts the headline of an April 6, 2013 article in the Military Times, explaining that the US Army is looking for computer-savvy American troops to “turn into crack cyberwarriors” for both offensive and defensive purposes. The United States Cyber Command has already announced that over the next few years it intends to recruit 6,000 cyber experts and create teams of soldiers and civilians to assist the Pentagon in defending US national infrastructure.

Strong NSA Surveillance necessary to stop cyberattacks

Jack **Goldsmith**, 2013 “We Need an Invasive NSA”, October 10, 2013, <http://www.newrepublic.com/article/115002/invasive-nsa-will-protect-us-cyber-attacks>,

Ever since stories about the National Security Agency’s (NSA) electronic intelligence-gathering capabilities began tumbling out last June, The New York Times has published more than a dozen editorials excoriating the “national surveillance state.” It wants the NSA to end the “mass warehousing of everyone’s data” and the use of “back doors” to break encrypted communications. A major element of the Times’ critique is that the NSA’s domestic sweeps are not justified by the terrorist threat they aim to prevent.¶ At the end of August, in the midst of the Times’ assault on the NSA, the newspaper suffered what it described as a “malicious external attack” on its domain name registrar at the hands of the Syrian Electronic Army, a group of hackers who support Syrian President Bashar Al Assad. The paper’s website was down

for several hours and, for some people, much longer. “In terms of the sophistication of the attack, this is a big deal,” said Marc Frons, the Times’ chief information officer. Ten months earlier, hackers stole the corporate passwords for every employee at the Times, accessed the computers of 53 employees, and breached the e-mail accounts of two reporters who cover China. “We brought in the FBI, and the FBI said this had all the hallmarks of hacking by the Chinese military,” Frons said at the time. He also acknowledged that the hackers were in the Times system on election night in 2012 and could have “wreaked havoc” on its coverage if they wanted. ¶ Illustration by Harry Campbell ¶ Such cyber-intrusions threaten corporate America and the U.S. government every day. “Relentless assaults on America’s computer networks by China and other foreign governments, hackers and criminals have created an urgent need for safeguards to protect these vital systems,” the Times editorial page noted last year while supporting legislation encouraging the private sector to share cybersecurity information with the government. It cited General Keith Alexander, the director of the NSA, who had noted a 17-fold increase in cyber-intrusions on critical infrastructure from 2009 to 2011 and who described the losses in the United States from cyber-theft as “the greatest transfer of wealth in history.” If a “catastrophic cyber-attack occurs,” the Times concluded, “Americans will be justified in asking why their lawmakers ... failed to protect them.” ¶ When catastrophe strikes, the public will adjust its tolerance for intrusive government measures. ¶ The Times editorial board is quite right about the seriousness of the cyber- threat and the federal government’s responsibility to redress it. What it does not appear to realize is the connection between the domestic NSA surveillance it detests and the governmental assistance with cybersecurity it cherishes. To keep our computer and telecommunication networks secure, the government will eventually need to monitor and collect intelligence on those networks using techniques similar to ones the Times and many others find reprehensible when done for counterterrorism ends. ¶ The fate of domestic surveillance is today being fought around the topic of whether it is needed to stop Al Qaeda from blowing things up. But the fight tomorrow, and the more important fight, will be about whether it is necessary to protect our ways of life embedded in computer networks. ¶ Anyone anywhere with a connection to the Internet can engage in cyber-operations within the United States. Most truly harmful cyber-operations, however, require group effort and significant skill. The attacking group or nation must have clever hackers, significant computing power, and the sophisticated software—known as “malware”—that enables the monitoring, exfiltration, or destruction of information inside a computer. The supply of all of these resources has been growing fast for many years—in governmental labs devoted to developing these tools and on sprawling black markets on the Internet. ¶ Telecommunication networks are the channels through which malware typically travels, often anonymized or encrypted, and buried in the billions of communications that traverse the globe each day. The targets are the communications networks themselves as well as the computers they connect—things like the Times’ servers, the computer systems that monitor nuclear plants, classified documents on computers in the Pentagon, the nasdaq exchange, your local bank, and your social-network providers. ¶ To keep these computers and networks secure, the government needs powerful intelligence capabilities abroad so that it can learn about planned cyber-intrusions. It also needs to raise defenses at home. An important first step is to correct the market failures that plague cybersecurity. Through law or regulation, the government must improve incentives for individuals to use security software, for private firms to harden their defenses and share

information with one another, and for Internet service providers to crack down on the botnets—networks of compromised zombie computers—that underlie many cyber-attacks. More, too, must be done to prevent insider threats like Edward Snowden’s, and to control the stealth introduction of vulnerabilities during the manufacture of computer components—vulnerabilities that can later be used as windows for cyber-attacks.¶ And yet that’s still not enough. The U.S. government can fully monitor air, space, and sea for potential attacks from abroad. But it has limited access to the channels of cyber-attack and cyber-theft, because they are owned by private telecommunication firms, and because Congress strictly limits government access to private communications. “I can’t defend the country until I’m into all the networks,” General Alexander reportedly told senior government officials a few months ago.¶ For Alexander, being in the network means having government computers scan the content and metadata of Internet communications in the United States and store some of these communications for extended periods. Such access, he thinks, will give the government a fighting chance to find the needle of known malware in the haystack of communications so that it can block or degrade the attack or exploitation. It will also allow it to discern patterns of malicious activity in the swarm of communications, even when it doesn’t possess the malware’s signature. And it will better enable the government to trace back an attack’s trajectory so that it can discover the identity and geographical origin of the threat.¶ Alexander’s domestic cybersecurity plans look like pumped-up versions of the NSA’s counterterrorism-related homeland surveillance that has sparked so much controversy in recent months. That is why so many people in Washington think that Alexander’s vision has “virtually no chance of moving forward,” as the Times recently reported. “Whatever trust was there is now gone,” a senior intelligence official told Times.¶ There are two reasons to think that these predictions are wrong and that the government, with extensive assistance from the NSA, will one day intimately monitor private networks.¶ The first is that the cybersecurity threat is more pervasive and severe than the terrorism threat and is somewhat easier to see. If the Times’ website goes down a few more times and for longer periods, and if the next penetration of its computer systems causes large intellectual property losses or a compromise in its reporting, even the editorial page would rethink the proper balance of privacy and security. The point generalizes: As cyber-theft and cyber-attacks continue to spread (and they will), and especially when they result in a catastrophic disaster (like a banking compromise that destroys market confidence, or a successful attack on an electrical grid), the public will demand government action to remedy the problem and will adjust its tolerance for intrusive government measures.¶ At that point, the nation’s willingness to adopt some version of Alexander’s vision will depend on the possibility of credible restraints on the NSA’s activities and credible ways for the public to monitor, debate, and approve what the NSA is doing over time.¶ Which leads to the second reason why skeptics about enhanced government involvement in the network might be wrong. The public mistrusts the NSA not just because of what it does, but also because of its extraordinary secrecy. To obtain the credibility it needs to secure permission from the American people to protect our networks, the NSA and the intelligence community must fundamentally recalibrate their attitude toward disclosure and scrutiny. There are signs that this is happening—and that, despite the undoubted damage he inflicted on our national security in other respects, we have Edward Snowden to thank.¶ “Before the unauthorized disclosures, we were always conservative about discussing specifics of our collection programs, based on the truism that the more

adversaries know about what we're doing, the more they can avoid our surveillance," testified Director of National Intelligence James Clapper last month. "But the disclosures, for better or worse, have lowered the threshold for discussing these matters in public."¶ In the last few weeks, the NSA has done the unthinkable in releasing dozens of documents that implicitly confirm general elements of its collection capabilities. These revelations are bewildering to most people in the intelligence community and no doubt hurt some elements of collection. But they are justified by the countervailing need for public debate about, and public confidence in, NSA activities that had run ahead of what the public expected. And they suggest that secrecy about collection capacities is one value, but not the only or even the most important one. They also show that not all revelations of NSA capabilities are equally harmful. Disclosure that it sweeps up metadata is less damaging to its mission than disclosure of the fine-grained details about how it collects and analyzes that metadata.¶ It is unclear whether the government's new attitude toward secrecy is merely a somewhat panicked reaction to Snowden, or if it's also part of a larger rethinking about the need for greater tactical openness to secure strategic political legitimacy. Let us hope, for the sake of our cybersecurity, that it is the latter.

Cyber-attacks will cause extinction – outweighs all other concerns

Visha Thamboo, 2014—, citing Richard Clarke, a former White House staffer in charge of counter-terrorism and cyber-security, "Cyber Security: The world's greatest threat," 11-25, <https://blogs.ubc.ca/vishathamboo/2014/11/25/cyber-security-the-worlds-greatest-threat/>

After land, sea, air and space, **warfare had entered the fifth domain: cyberspace**. Cyberspace is arguably **the most dangerous of all warfares** because of the amount of damage that can be done, whilst remaining completely immobile and anonymous. In a new book **Richard Clarke**, a former White House staffer in charge of counter-terrorism and cyber-security, **envisages a catastrophic breakdown within 15 minutes. Computer bugs bring down military e-mail systems; oil refineries and pipelines explode; air-traffic-control systems collapse; freight and metro trains derail; financial data are scrambled; the electrical grid goes down** in the eastern United States; **orbiting satellites spin out of control. Society soon breaks down as food becomes scarce and money runs out**. Worst of all, the identity of the attacker may remain a mystery. Other dangers are coming: weakly governed swathes of Africa are being connected up to fibre-optic cables, potentially creating new havens for cyber-criminals and the spread of mobile internet will bring new means of attack. **The internet was designed for convenience and reliability, not security. Yet in wiring together the globe, it has merged the garden and the wilderness. No passport is required in cyberspace. And although police are constrained by national borders, criminals roam freely. Enemy states are no longer on the other side of the ocean, but just behind the firewall.** The ill-intentioned can mask their identity and location, impersonate others and con their way into the buildings that hold the digitised wealth of the electronic age: money, personal data and intellectual property. **Deterrence in cyber-warfare is more uncertain than, say, in nuclear strategy: there is no mutually assured destruction, the dividing line between criminality and war is blurred and identifying attacking computers**, let alone the fingers on the keyboards, **is difficult**. Retaliation need not be confined to cyberspace; the one system that is certainly not linked to the public internet is America's nuclear firing chain. **Although for now, cyber warfare**

has not spiralled out of control, it is only a matter of time, before cyber warfare becomes the most prominent type of attack, and the most deadly because of its scope and anonymity.

Uniqueness ext

Preventing cyber terror is a top priority now – by 2018 there will be total security

Institute for Critical Infrastructure Technology, April 18, 2015, Critical infrastructure Alliance – public private partnership for the advancement of digital security in the United States, "Pentagon drafting civilians into Cyber Mission Force to combat cyber terrorism national emergency," <http://criticalinfrastructurealliance.com/pentagon-drafting-civilians-into-cyber-mission-force-to-combat-cyber-terrorism-national-emergency/>

By 2018, there will be 133 teams consisting of almost 6,200 military and civilian personnel who have been trained and equipped with the tools and infrastructure to defend US cyber space. The DoD wants its civilian personnel to come from “the most talented experts in both the uniformed and civilian workforce, as well as a close partnership with the private sector”. The US government has been struggling to find enough cyber security experts to join its ranks over the past 12 months. In May 2014, the FBI even went so far as to admit it was considering relaxing its No Weed policy in order to attract more hackers, as it had 2,000 jobs it needed to fill for its cybercrime unit. By asking IT and cybersecurity professionals to serve as reserve forces and let them keep their day jobs, the DoD is hoping to harness the power of the US cybersecurity industry in case cyberterrorism incidents escalate even further. Rosenbach concluded in his testimony to the Senate: “Cyber threats are real, serious and urgent, and we can only overcome them with a cohesive, whole-of-government approach. We have made significant strides but there is still more work to be done. “I look forward to working with this Committee and the Congress to ensure that DoD has the necessary capabilities to keep our country safe and our forces strong.

Current intel gathering is key to continued security from cyber attack

Jude Abeler, 2-10-2015, Independent Researcher, Journalist The Daily Caller, Thoughtree Previous Young Americans for Liberty, Abeler for U.S. Senate Education Washington Journalism Center, "White House Announces Urgent Cyber Terror Agency," Daily Caller, <http://dailycaller.com/2015/02/10/white-house-announces-urgent-cyber-terror-agency/>

The Obama administration announced the creation of a new executive agency on Tuesday that will cooperate with the private sector along with other agencies and countries to try and disrupt cyber criminals. “Those who do harm should know that they can be found, and held to account,” said Lisa Monaco, chief counterterrorism advisor to the president. The announcement is largely a response to the rise in cyber-terrorism activity, such as North Korea’s recent attacks on Sony. Monaco also cited last week’s data breach at Anthem insurance, which contains sensitive information for up to 80 million identities. The new Cyber Threat Intelligence Integration Center will employ what Monaco said are lessons we have learned in combating other forms of terrorism that need to be applied to the realm of cyber threats – namely coordinating all of the government’s tools to respond at the highest level. “Currently no single government entity is responsible for producing coordinated cyber-threat assessments ensuring that information is shared rapidly among existing cyber centers and other elements within our government,” she

explained. “We need to build up the muscle memory for our cyber-response capabilities, as we have on the terrorism side.” Monaco said the new entity will not collect new intelligence, but analyze data already collected by other relevant agencies, such as the Department for Homeland Security, to enable it to do its job more effectively. According to Monaco, 85 percent of the country’s critical infrastructure such as hospitals, banks and water grids are in private sector (.com) hands. “You are vulnerable if you are hooked up to the internet,” she said. Therefore the system is designed to work in lockstep with the private sector, and encourages companies that are victims to do the patriotic thing and report the details to DHS, where it can then be passed on to CTIIC — which will use all of the government’s tools and unique capacity to integrate information about threats, and make the best possible assessment. She claimed that the government will not bottle up intelligence, but will do its utmost to share it, and used the Sony attack as an example. “Within 24 hours of learning about the Sony Pictures Entertainment attack, the U.S. government pushed out information and malware signatures to the private sector to update their cyber defenses so they could take action,” Monaco said. Officials said the new agency will begin with a staff of about 50 people and a budget of \$35 million. Monaco made a gentle pitch to Congress, pointing out that cyber security should not be a partisan issue, and asked Congress to pass a budget with funding for it. Some, however, question the need for a new agency when there are already several that have cyber-operations centers. “We should not be creating more organizations and bureaucracy,” argued Melissa Hathaway, president of Hathaway Global Strategies and former White House cybersecurity coordinator. “We need to be forcing the existing organizations to become more effective – hold them accountable,” she said.

Cyber security is a top national security priority – successful now

Robert S. **Mueller**, Director Federal Bureau of Investigation, 3-1-2012, "Combating Threats in the Cyber World: Outsmarting Terrorists, Hackers, and Spies," FBI, <https://www.fbi.gov/news/speeches/combating-threats-in-the-cyber-world-outsmarting-terrorists-hackers-and-spies>

Terrorists are increasingly cyber savvy. Much like every other multi-national organization, they are using the Internet to grow their business and to connect with like-minded individuals. And they are not hiding in the shadows of cyber space. Al Qaeda in the Arabian Peninsula has produced a full-color, English-language online magazine. They are not only sharing ideas, they are soliciting information and inviting recruits to join al Qaeda. Al Shabaab—the al Qaeda affiliate in Somalia—has its own Twitter account. Al Shabaab uses it to taunt its enemies—in English—and to encourage terrorist activity. Extremists are not merely making use of the Internet for propaganda and recruitment. They are also using cyber space to conduct operations. The individuals who planned the attempted Times Square bombing in May 2010 used public web cameras for reconnaissance. They used file-sharing sites to share sensitive operational details. They deployed remote conferencing software to communicate. They used a proxy server to avoid being tracked by an IP address. And they claimed responsibility for the attempted attack—on YouTube. To date, terrorists have not used the Internet to launch a full-scale cyber attack. But we cannot underestimate their intent. In one hacker recruiting video, a terrorist proclaims that cyber warfare will be the warfare of the future. Terrorist use of the Internet is not our only national security concern. As we know, state-sponsored computer hacking and economic espionage pose significant challenges. Just as traditional crime has migrated online, so, too, has espionage. Hostile foreign nations seek our intellectual property and our trade secrets for military and competitive advantage. State-sponsored hackers are patient and calculating. They have the time, the money, and the resources to burrow in, and to wait. They may come and go, conducting reconnaissance and exfiltrating bits of seemingly innocuous information—information that in the aggregate may be of high value. You may discover one breach, only to find that the real damage has been done at a much higher level. Unlike state-sponsored intruders, hackers for profit do not seek information for political power—they seek information for sale to the highest bidder. These once-isolated hackers have joined forces to create criminal syndicates. Organized crime in cyber space offers a higher profit with a lower probability of being identified and prosecuted. Unlike traditional crime families, these hackers may never meet, but they possess specialized skills in high demand. They exploit routine vulnerabilities. They move in quickly, make their money, and disappear. No company is immune, from the Fortune 500 corporation to the neighborhood “mom and pop” business. We are also worried about trusted insiders who may be lured into selling secrets for monetary gain. Perimeter defense may not matter if the enemy is inside the gates.

The end result of these developments is that we are losing data. We are losing money. We are losing ideas and we are losing innovation. And as citizens, we are increasingly vulnerable to losing our information. Together we must find a way to stop the bleeding. We in the FBI have built up a substantial expertise to address these threats, both here at home and abroad. We have cyber squads in each of our 56 field offices, with more than 1,000 specially trained agents, analysts, and forensic specialists. Given the FBI’s dual role in law enforcement and national security, we are uniquely positioned to collect the intelligence we

need to take down criminal networks, prosecute those responsible, and protect our national security. But we cannot confront cyber crime on our own. Borders and boundaries pose no obstacles for hackers. But they continue to pose obstacles for global law enforcement, with conflicting laws, different priorities, and diverse criminal justice systems. With each passing day, the need for a collective approach—for true collaboration and timely information sharing—becomes more pressing. **The FBI has 63 legal attaché offices that cover the globe.** Together with our international counterparts, **we are sharing information and coordinating investigations.** We have special agents embedded with police departments in Romania, Estonia, Ukraine, and the Netherlands, working to identify emerging trends and key players. Here at home, **the National Cyber Investigative Joint Task Force brings together 18 law enforcement, military, and intelligence agencies to stop current and predict future attacks.** With our partners at **DHS, CIA, NSA, and the Secret Service,** **we are targeting cyber threats** facing our nation. **The task force operates through Threat Focus Cells—specialized groups of agents, officers, and analysts that are focused on particular threats,** such as botnets. Together we are making progress. **Last April, with our private sector and law enforcement partners, the FBI dismantled the Coreflood botnet. This botnet infected an estimated two million computers** with malware that enabled hackers to seize control of zombie computers to steal personal and financial information. With court approval, the FBI seized domain names and re-routed the botnet to FBI-controlled servers. The servers directed the zombie computers to stop the Coreflood software, preventing potential harm to hundreds of thousands of users. **In another case, just a few months ago, we worked with NASA’s Inspector General and our partners** in Estonia, Denmark, Germany, and the Netherlands **to shut down a criminal network operated by** an Estonian company by the name of **Rove Digital.** The investigation, called Operation Ghost Click, targeted a ring of criminals who manipulated Internet “click” advertising. They re-directed users to their own advertisements and generated more than \$14 million in illegal fees. This “click” scheme impacted more than 100 countries and infected four million computers, half-a-million of which were here in the United States. We seized and disabled computers, froze the defendants’ bank accounts, and replaced rogue servers with legitimate ones to minimize service disruptions. With our Estonian partners, we arrested and charged six Estonian nationals for their participation in the scheme. And again, we must continue to push forward together. **Terrorism remains the FBI’s top priority.** But in the not too distant future, we anticipate that the cyber threat will pose the number one threat to our country. We need to take lessons learned from fighting terrorism and apply them to cyber crime. We will ensure that all of our special agents have the fundamental skills to operate in this cyber environment. Those agents specializing in cyber matters will have the greatest possible skill set. We are creating a structure whereby a cyber agent in San Francisco can work in a virtual environment with an agent in Texas, an analyst in Virginia, and a forensic specialist in New York to solve a computer intrusion that emanated from Eastern Europe. At the same time, we must rely on the traditional capabilities of the Bureau: sources and wires. We must cultivate the sources necessary to infiltrate criminal online networks, to collect the intelligence to prevent the next attack, and to topple the network from the inside. We must ensure that our ability to intercept communications—pursuant to court order—is not eroded by advances in technology. These include wireless technology and peer-to-peer networks, as well as social media.

L – Surveillance key to stop cyberattacks

Intelligence gathering provisions are critical to halting catastrophic cyberattacks

Lev-Ram, 1-21—citing DeWalt, CEO of FireEye, a leader in cyber security, protecting organizations from advanced malware, zero-day exploits, APTs, and other cyberattacks. “Does President Obama's bid to bolster cyber security go far enough?” Forbes, http://fortune.com/2015/01/21/obama-state-union-cybersecurity/?icid=maing-grid7|ie8-unsupported-browser|dl31|sec3_Ink3%26pLid%3D602263

Sharing real-time threat intelligence and indicators of compromise—both between the private sector and the government and among the private sector—is a critical component of a pro-active security strategy. The timely sharing of threat intelligence improves detection and prevention capabilities and provides organizations with the ability to mitigate and minimize the adverse consequences of a breach. Sharing also provides enhanced situational awareness for the community at large. FireEye research demonstrates that over 70% of malware is highly targeted and used only once. To better manage risk stemming from this continuously evolving threat environment, FireEye recommends that organizations conduct robust compromise risk assessments, adopt behavioral based tools and techniques such as detonation chambers, actively monitor their networks for advanced cyber threats, stand ready to rapidly respond in the event of a breach and share threat intelligence and lessons learned through active engagement in information sharing organizations. As a final preventative measure, organization should obtain a cyber insurance policy to help with catastrophic repercussions of a breach.

Surveillance is helping us predict and prevent cyber-attacks now

James B. **Comey** Director Federal Bureau of Investigation Statement Before the Senate Judiciary Committee Washington, D.C. May 21, **2014**

<https://www.fbi.gov/news/testimony/oversight-of-the-federal-bureau-of-investigation-5>

We face sophisticated cyber threats from state-sponsored hackers, hackers for hire, organized cyber syndicates, and terrorists. They seek our state secrets, our trade secrets, our technology, and our ideas—things of incredible value to all of us. They may seek to strike our critical infrastructure and our economy. The threat is so dire that cyber security has topped the Director of National Intelligence list of global threats for the second consecutive year. Given the scope of the cyber threat, agencies across the federal government are making cyber security a top priority. Within the FBI, we are targeting high-level intrusions—the biggest and most dangerous botnets, state-sponsored hackers, and global cyber syndicates. We want to predict and prevent attacks, rather than reacting after the fact. FBI agents, analysts, and computer scientists are using technical capabilities and traditional investigative techniques—such as sources and wires, surveillance, and forensics—to fight cyber crime. We are working side by side with our federal, state, and local partners on Cyber Task Forces in each of our 56 field offices and through the National Cyber Investigative Joint Task Force (NCIJTF). Through our 24-hour cyber command center, CyWatch, we combine the resources of the FBI and NCIJTF, allowing us to provide connectivity to federal cyber centers, government agencies, FBI field offices and legal attachés, and the private sector in the event of a cyber intrusion. We also work with the private sector

through partnerships such as the Domestic Security Alliance Council, InfraGard, and the National Cyber Forensics and Training Alliance. And we are training our state and local counterparts to triage local cyber matters, so that we can focus on national security issues. Our legal attaché offices overseas work to coordinate cyber investigations and address jurisdictional hurdles and differences in the law from country to country. We are supporting partners at Interpol and The Hague as they work to establish international cyber crime centers. **We continue to assess other locations to ensure that our cyber personnel are in the most appropriate locations across the globe. Cyber threats to critical infrastructure require a layered approach to cyber security,** including partnerships with private sector owners and operators, and with Federal partners including the Department of Homeland Security (DHS). We have been successful in a joint campaign to combat a campaign of cyber intrusions targeting natural gas pipeline sector companies, in which the FBI and DHS's Industrial Control Systems-CERT Cyber Emergency Response Team deployed onsite assistance to some of the organizations targeted, and provided 14 briefings in major cities throughout the United States to over 750 personnel involved in the protection of energy assets and critical infrastructure. **We have also successfully worked with DHS in to empower the U.S. banking system to better defend against cyber attacks.** As powerful distributed denial of service (DDoS) incidents impacting leading U.S. banking institutions in 2012 have persisted through 2014, the FBI has worked with DHS's US-CERT United States Computer Emergency Readiness Team to identify 600,000 DDoS-related IP addresses and contextual information, to better equip banks to defend themselves. **We know that to be successful in the fight against cyber crime, we must continue to recruit, develop, and retain a highly skilled workforce.** To that end, we have developed a number of creative staffing programs and collaborative private industry partnerships to ensure that over the long term we remain focused on our most vital resource—our people.

Expanded NSA domestic surveillance protects against cyber-attack.

Jonathan **Mayer**, a computer scientist + lawyer at Stanford Web Policy June 4, **2015** The NSA's Domestic Cybersecurity Surveillance <http://webpolicy.org/2015/06/04/nsa-cybersecurity/>

Earlier today, the New York Times reported that **the National Security Agency has secretly expanded its role in domestic cybersecurity.** In short, **the NSA believes it has authority to operate** a warrantless, signature-based intrusion detection system—**on the Internet backbone.**¹ Owing to the program's technical and legal intricacies, the Times-ProPublica team sought my explanation of related primary documents.² I **have high confidence in the report's factual accuracy.**³ Since this morning's coverage is calibrated for a general audience, I'd like to provide some additional detail. I'd also like to explain why, in my view, the news is a game-changer for information sharing legislation. The Facts Despite nearly two years of disclosures, the NSA's domestic Internet surveillance remains shrouded in secrecy. To borrow Donald Rumsfeld's infamous turn of phrase, it remains one of the greatest known unknowns surrounding the agency. The following facts are already public. **The NSA maintains "upstream" interception equipment at many points on the global telecommunications backbone.** One of the primary legal authorities for domestic upstream surveillance is Section 702 of the FISA Amendments Act (FAA). The Foreign Intelligence Surveillance Court (FISC) has authorized warrantless FAA

surveillance in connection with foreign governments, counterterrorism, and counterproliferation. Each of these topics has an associated “certification,” establishing procedures for targeting and minimization. **The NSA can use FAA upstream Internet surveillance to collect⁴ traffic that is “to,” “from,” or “about”⁵ a “selector.”** Prior disclosures have emphasized email addresses as FAA upstream Internet selectors. In order for a selector to be eligible for FAA surveillance, it must be used by a foreign person or entity outside the United States. Intelligence community⁶ NSA analysts can search FAA surveillance data for information involving Americans. Senator Wyden has been a particularly persistent critic of these queries, dubbing them “backdoor searches.” The primary documents associated with today’s report confirm the following additional facts.⁶ **The NSA can use FAA upstream Internet surveillance for cybersecurity purposes,** so long as there is a nexus with one of the three prior certifications. The most common scenario is where the NSA can attribute a cybersecurity threat to another nation, enabling it to rely on the foreign government certification. Internet protocol (IP) addresses and ranges are eligible as FAA upstream surveillance selectors. The Department of Justice approved this practice in July 2012.⁷ Cybersecurity threat signatures are also eligible as FAA upstream surveillance selectors. This adds a de facto fourth category of FAA interceptions, since a threat signature cannot reasonably be categorized as “to,” “from,” or “about” a particular address.⁸ DOJ appears to have approved the practice in May 2012. The NSA has acted upon the above legal interpretations. The primary documents make reference to particular FAA cybersecurity operations. Those operations relied on the foreign government certification, and they used IP addresses as selectors. Since 2012, if not earlier, the NSA has prioritized obtaining an FAA “cyber threat” certification. From the agency’s perspective, a cyber certification has two desirable properties. First, it would eliminate the nexus requirement. The NSA would be able to intercept traffic associated with a cybersecurity threat, regardless of whether the threat originates with a foreign government. Second, a cyber certification would codify procedures for IP address and signature targeting. The present status of the cyber certification is not apparent; it may have been approved, have been bundled into another certification, still be in progress, or have been set aside.⁹ It is also not apparent how FAA’s foreignness requirement would be implemented under the certification.¹⁰ When data is exfiltrated in the course of an attack, it often includes sensitive information about Americans. The NSA believes that this exfiltrated data should be considered “incidental” collection, rendering it eligible for backdoor searches. Put differently: when a data breach occurs on American soil, and the NSA intercepts stolen data about Americans, it believes it can use that data for intelligence purposes. **The NSA collaborates with the Department of Homeland Security and the Federal Bureau of Investigation on cybersecurity matters. It receives and shares cybersecurity threat signatures with both agencies.** When the NSA wishes to disclose a threat signature to the private sector, it usually routes that information through DHS or the FBI. The NSA is not attributed as the source of the threat signature. The FBI does not have its own national security surveillance equipment installed on the domestic Internet backbone. It can borrow the NSA’s equipment, though, by having the NSA execute surveillance on its behalf. In my view, the key takeaway is this: for over a decade, there has been a public policy debate about what role the NSA should play in domestic cybersecurity. The debate has largely presupposed that the NSA’s domestic authority is narrowly circumscribed, and that DHS and DOJ play a far greater role. Today, we learn that assumption is incorrect. **The**

NSA already asserts broad domestic cybersecurity powers. Recognizing the scope of the NSA's authority is particularly critical for pending legislation.

NSA surveillance is critical to help deter against successful cyber attacks

Jack **Goldsmith**, Henry L. Shattuck Professor at Harvard Law School, **2012**

http://www.brookings.edu/~media/research/files/papers/2010/12/08-4th-amendment-goldsmith/1208_4th_amendment_goldsmith.pdf

The National Security Agency ("NSA") plays an important role in the EINSTEIN projects. NSA is America's signals-intelligence and government information assurance agency. It is technically a component of the Department of Defense ("DoD"), and it is typically headed by a lieutenant general or vice admiral. While the NSA's collection capabilities are mostly directed outside the United

States, NSA also has domestic responsibilities. It was the operator of the Terrorist Surveillance Program (TSP) that involved warrantless wiretapping of certain terrorist communications with one end in the United States. And it has been heavily involved in the development of the EINSTEIN systems. The Department of Homeland Security ("DHS") has stated that EINSTEIN 3 capabilities are "based on technologies developed by the NSA."⁸ According to the government, the "threat signatures determined by NSA in the course of its foreign intelligence and DoD information assurance missions" will be used in the EINSTEIN system.⁹ And based on threats identified by EINSTEIN 3, "alerts that do not contain the content of communications" will be sent to NSA, which will use the information to check cyber attacks in unknown ways that the government assures us are consistent with NSA's "lawfully authorized missions."¹⁰ NSA also has the lead in the recently established Cyber Command, which is headed by NSA Director General Keith Alexander. Cyber Command is charged with coordinating US offensive cyber activities and U.S. defensive efforts in protecting the .mil network. Consistent with the above analysis, Cyber Command is also in tasked with the responsibility of providing "support to civil authorities" in their cybersecurity efforts. ¹¹ In addition, Deputy Secretary of Defense William Lynn recently stated that Cyber Command "works closely with private industry to share information about [cybersecurity] threats and to address shared vulnerabilities."¹² NSA is involved with domestic cybersecurity in these and doubtlessly other ways because it possesses extraordinary technical expertise and experience, unmatched in the government, in exploring and exploiting computer and telecommunication systems. NSA also has close relationships with private telecommunications firms and other firms central to national cybersecurity.¹³ These relationships are important because cybersecurity requires the government to work closely with the telecommunication firms whose hardware and software constitute the Internet's backbone and Internet connection points. These firms already have enormous experience and expertise identifying and eliminating certain types of bad actors and agents on their systems that the government leverages in stopping threats that concern it.

Broad NSA surveillance power ensures ability to prevent cyber attacks.

Russell **Brandom** on June 4, **2015** 01:17 pm Email @russellbrandom The NSA is still conducting mass surveillance of the US internet to find cyberattacks

<http://www.theverge.com/2015/6/4/8729155/snowden-nsa-internet-cyber-surveillance-cyberattack>

The NSA is scanning US web traffic for specific malware signatures, according to new Snowden documents published by The New York Times and ProPublica. Previous documents have shown the NSA and GCHQ collecting data from undersea data cables, but this is the most comprehensive look at how the NSA uses that data to zero in on specific activities or actors on the web. According to the new documents, **the scanning is enabled by broad legal powers**, granted by the Department of Justice and FISA court in 2012. An initial Justice Department order (interpreting Section 702 of the FISA Amendments Act) authorized the NSA to target data based on specific IP addresses or threat signatures that were linked to foreign nations. **In addition to its surveillance operations, the NSA is tasked with defending official US networks from digital intrusions**, a task that's grown increasingly difficult as states like China have grown more sophisticated. But according to the documents, limiting the scans to foreign states was too restrictive for the NSA. Over the course of 2012, NSA director Keith Alexander lobbied the Justice Department to extend the signature-based scans to malware that hadn't been linked to state actors, but his efforts were unsuccessful. Still, the agency Specific malware programs are often reused, even between criminals and governments, so it's notoriously difficult for researchers to connect a tactic to a specific actor. Experts are comparing the resulting system to the network intrusion detection systems (or NIDS) that are deployed on many private networks. Given a top-down view of the network, **NIDS systems monitor for malware traveling between points on the network**, rather than catching the bad actors as they infect individual machines. Those systems have also been proposed at a national level, although they've rarely been deployed publicly due to the privacy issues involved.

Current surveillance techniques are effective and disrupt/deter terrorist attacks

David Rothkopf 2014 a visiting scholar at the Carnegie Endowment as well as CEO and editor of Foreign Policy. "National Insecurity: American Leadership in an Age of Fear," PublicAffairs, p. 337-8

For all of the questions raised by some of the sweeping programs revealed by Snowden, **the surveillance programs of the US government include some targeted efforts that are widely regarded within the intelligence and policy communities as extremely helpful**. And new capabilities are emerging daily. Although these will require vigilance to avoid future violations of civil liberties, there is also a sense that on the cyber side, **as with drones and the development of light-footprint approaches for combating terror, important steps have been taken that actually enhance the security of the American people and reduce the likelihood of future attacks** like those that ushered in this era. **Those tools have made such a marked difference in US counterterrorism efforts that intelligence community leaders are becoming comfortable with the idea of relaxing other controversial practices**. Mike Hayden noted that one reason he was willing to "empty the prisons" and "scale back on the authorized

interrogation techniques” is that he was not “nearly as desperate as [Director of Central Intelligence] George [Tenet] was back in 2002, 2003. I’ve got agent networks. I’ve got penetrations. I’ve built up a strong human intelligence collection efforts. [sic] I’m less dependent on capturing and questioning than I was in 2002. More sources. Better electronic intelligence. You’re hitting on all cylinders now. And with the requisite intelligence, it enables your orthoscopic stuff” (meaning “surgical” or “light-footprint activities”).¶ Lisa Monaco asserts, “I think the US government has done a good job of creating a counterterrorism structure and apparatus- operationally and policy-wise – to learn the lessons of 9/11 and have an ability to meet the threats that we face, share information, apply the right kind of military, intelligence, diplomatic, and law enforcement tools today... As an example, say we know a terrorist is transiting Germany. We have an apparatus to reach out: The FBI will talk to its German counterparts, share information, get their assistance within the bounds of the rule of law to try and detail that person. so, we have a process. We share intelligence. We try and disrupt that threat.” Although she acknowledges the systems are not quite as evolved on the cybersecurity side, the point is that – despite metastasizing terror threats worldwide, and confusion and ill-conceived programs of the US government is in a number of important ways fulfilling its core mission of helping to make America and Americans safer.

NSA surveillance is critical to protecting us against cyber attacks

Michelle **Van Cleave** What It Takes: In Defense of the NSA NOVEMBER/DECEMBER 2013

<http://www.worldaffairsjournal.org/article/what-it-takes-defense-nsa>

For my old business of US counterintelligence, the Snowden case is something of an unraveling nightmare. At this stage, there is no telling whether or not he acted alone, or what he compromised. Four months isn’t much time on-site, yet he used his access to identify and download highly classified information that would be of particular use to him. How did he decide what was of value to snatch? Where did he find it? How did he take it without getting caught? He admitted that he took the NSA contractor job in March of this year in order to gain access to this material, so his preparations had been under way for quite a while. The deeper question is at what point along the way he started to get outside help and direction, and from whom. At a minimum, the press leaks were very well scripted to provide cover for the rest of the operation, which has received far less attention. Snowden passed documents allegedly showing US and UK surveillance of Russian and Turkish representatives at a Group of 20 meeting. He passed ostensible records of US signals intelligence operations in Hong Kong and elsewhere, as well as Britain’s signals intelligence arm, GCHQ. He passed information about top-secret plans to counter Chinese cyber-attack capabilities, and about joint intelligence undertakings among Western allies, including US and German cooperation. That’s just what has been reported publicly. Then of course there is whatever else he stole. Whether or not there are audit trails for IT administrators like Snowden we can only guess. If not, there may be no way of bounding the potential damage. And since we don’t know what secrets may have been lost, we won’t know what or who may now be at risk. That uncertainty alone is an intelligence bonanza for our adversaries. Whatever else Snowden may be, he has been a voice of disinformation. For example, here’s an excerpt from his Guardian interview: “Any analyst at any time can target anyone, any selector, anywhere. . . I sitting at my desk certainly had the authorities to wiretap anyone from you or your accountant to a federal judge to even the president if I had a personal

e-mail.” If that were true, it would be an outrageous abuse of authority. But it is not true, not a whit. Now maybe Snowden is just delusional. Or maybe someone is coaching him a little, the better to inflame public opinion. But who would know, when there is an immediate rush to judgment to pronounce the man a “hero” or a “conscientious objector” or “deeply idealistic” or whatever other bouquets of virtue were thrown his way. By such means, some of the West’s best and brightest (looking less bright all the time) become part of the disinformation campaign directed against America’s moral standing in the world. That campaign has a long history. **Two inherent qualities make US intelligence unique among the world’s intelligence services. The first is its accountability and unparalleled openness to public scrutiny and the rigorous oversight of the political process.** The fact that we measure these things against civil liberties, and bring them under the careful checks and balances of our Constitution, is the bedrock of their strength. Even more fundamentally, US intelligence is part of the great experiment in governance that is our democratic republic. Beginning with George Washington’s first State of the Union Address, in which he requested a secret fund for clandestine activities, **intelligence has been an instrument to achieve the broad goals of the American people** and the policies advanced by their duly elected representatives. **That is why any rupture between public confidence and the US intelligence enterprise is so destructive.** It is also why America’s adversaries have long sought to provoke one. During the Cold War, the KGB expended a great deal of energy and treasure in undermining the credibility and effectiveness of US intelligence in general and the CIA in particular. Soviet disinformation campaigns included some breathtaking lies, deceptions, and fantastic tales (e.g., forged documents, planted news reports, and grotesque accusations that the CIA was responsible for trafficking in baby parts, assassinating President Kennedy, and inventing AIDS). It took decades for the CIA to recover from the Church Committee investigations of the 1970s—years that the Soviets used to advantage in undermining pro-Western governments, supporting insurgencies, and implanting spies. And here we go again. Whatever Snowden may have had in mind when he decided to break his oath, the secrets he disclosed have been used to discredit US intelligence among the very democratic populations that depend most on the American defense umbrella. Across Europe, there have been lawsuits to stop NSA operations. Round two of Snowden’s leaks included purported US collection activities directed against members of the European Union, so the EU, the French, the Germans, and others lodged diplomatic complaints and suspended trade and other talks and loudly proclaimed their indignation. (This is more than a little hypocritical, given their own intelligence activities against one another—not to mention the value they derive from ours.) To make matters worse, a whole series of damaging leaks in recent years, ranging from WikiLeaks to include some from the highest levels of the US government, have called into question America’s reliability as an intelligence partner. For friendly intelligence services, trusting the Americans to keep secrets secret has become a far riskier proposition. In fact, our stock as an intelligence partner has never been lower, which is exceedingly worrisome in an era when we rely so heavily on liaison services for essential intelligence about terrorist targets. For American intelligence personnel, doing their jobs has become that much more difficult and that much more thankless. You can be sure that the Russians, the Chinese, and others, knowing about the demoralizing effects of the Snowden leaks, are working overtime pursuing new recruitment prospects within US intelligence ranks. They know from long experience that low morale is a key factor in persuading Americans to spy on their own country. Today, there are more Russian intelligence

personnel operating in the United States than there were at the height of the Cold War, and they are far from alone. By some counts, China is here in even greater numbers, and even more active against us through cyber means. Add to that the Cubans, the Iranians, and most of the rest of the world's governments—plus some thirty-five suspected terrorist organizations—all here, taking advantage of the freedom of movement, access, and anonymity afforded by American society. And then there is the phenomenon of the hacker culture and virtual anarchists like “Anonymous,” which is hard at work to set the conditions for what it calls a “global secrets meltdown.” Their ostensible plan is to recruit individuals to infiltrate governments to steal classified information or enable Anonymous hackers to steal it. Then, when the message “do it now” goes out, they will simultaneously reveal all of the world's secrets (but of course mostly concentrated in the West because that's where the access is). It may sound ridiculous until you realize just how many disaffected, cynical youth like Snowden are drawn to these circles to find some sense of belonging and self-importance. The United States has built a global intelligence apparatus because it has global interests and global responsibilities. We have taken seriously the duties of leader of the free world, as two world wars, Korea, Vietnam, Afghanistan, Iraq, and freedom fighters in many parts of the world can attest. None of these duties in the last sixty years could have been met without the exceptional resources of NSA. Successive presidents and Congresses, entrusted with preserving and defending our freedom, have judged these investments to be vital to our nation's security. They have protected the core secrets that enable collection programs to succeed, as have those in US business and industry who have been integral to their success. The unquestioned qualitative edge of US intelligence has been as essential to defending this country and preserving our freedom as have the forces we have built to arm and equip our military. But time has not stood still. China is attacking computer systems throughout the world, stealing information and implanting features to enable future control. China's prominence in IT commercial markets means that they are in the supply chain, and their market share is growing as part of a purposeful, state-run program for strategic position. A long roll call of spies from Russia, China, Cuba, and other nations have targeted the essential secrets of US intelligence capabilities in order to be able to defeat them. And now they have the Snowdens and the WikiLeaksers of the world helping them out. Interconnected global networks of digital data have become the single most important source of intelligence warning of threats, enabling our defense at home and the advancement of freedom abroad. To say “hands off,” as some shortsighted privacy advocates have been doing, will not preserve our liberties, it will endanger them. It should be possible for an enlightened citizenry to empower government action in that sphere without forfeiting the very rights that our government exists to secure. That challenge is, at the very least, a part of the continuing experiment that is our democracy.

Surveillance efforts are expanding and deterring cyber attacks

Frank **Konkel** 9/10/2014 (writer for NextGov, IS THERE ANY PART OF GOVERNMENT THAT HASN'T BEEN HACKED YET?, <http://www.nextgov.com/cybersecurity/2014/09/there-any-part-government-hasnt-been-hacked-yet/93704/>)

Feds Cite ‘Unprecedented’ Collaboration with Industry The only way to stay ahead of the evolving threats is to collaborate and share information with the private sector, officials testified. “We’re engaging in an unprecedented level of collaboration” with industry,

international law organizations and other bodies, Anderson said, and those partnerships will continue to expand. For example, the FBI released 40 near real-time alerts on “current and emerging threat trends and technical indicators,” to the private sector – with 21 of those alerts sent to the financial industry. The agency is now engaging in a more back-and-forth dialogue as opposed to the FBI listening and rarely sharing – which used to be the case. Anderson also vowed harsher deterrents for malicious actors, referencing the recent indictments of Chinese citizens who were caught hacking the networks of American companies. Sen. Tom Coburn, R-Okla., said he was pleased with FBI’s get-tough approach. “I’m happy to see the FBI being aggressive on deterrence,” said Coburn, the committee’s ranking Republican. “For so long, we thought building a higher wall was [the way to protect], but people are going to climb over any wall we have. We need prosecutorial deterrence. I’m thankful of that attitude from FBI both domestically and internationally.”

NSA surveillance prevents cyber attack

Jonathan **Mayer**, a computer scientist + lawyer at Stanford Web Policy June 4, **2015** The NSA’s Domestic Cybersecurity Surveillance <http://webpolicy.org/2015/06/04/nsa-cybersecurity/>

This much is certain about FAA cybersecurity surveillance: If the NSA snoops on hackers as they move stolen data over the Internet backbone, agency analysts can sift through that information—other than with explicit U.S. person queries. If the NSA, FBI, or CIA snoops on hackers as they move stolen data through a cloud service, such as Dropbox or Gmail, analysts can sift through that information—including with explicit U.S. person queries.

I - Cyber threat is high

Cyber-threat risk is high – prefer consensus

Jordain **Carney 14**, Staff @ National Journal, "Defense Leaders Say Cyber is Top Terror Threat," 1-6-14, <http://www.nationaljournal.com/defense/defense-leaders-say-cyber-is-top-terror-threat-20140106>, DOA: 8-13-14,

Defense officials see cyberattacks as the greatest threat to U.S. national security according to a survey released Monday. Forty-five percent of **respondents to the** Defense News Leadership **Poll** named a cyberattack as the single greatest threat—nearly 20 percentage points above terrorism, which ranked second. **The** Defense News Leadership **Poll**, underwritten by United Technologies, **surveyed 352** Defense News **subscribers, based on job seniority**, between Nov. 14 and Nov. 28, 2013. **The poll targeted senior employees within the White House, Pentagon, Congress, and the defense industry.** "The magnitude of the cyber problem, combined with declining budgets, **will challenge the nation for years to come**," said Vago Muradian, the editor of Defense News. It's not the first time cyber has ranked at or near the top of a list of security concerns. Seventy percent of Americans called a cyberattack from another country a major threat in a Pew Research Center survey released last month. Defense Department officials, for their part, have warned about the increasing threat. **FBI Director James Comey, Rand Beers, the then-acting secretary for the Homeland Security Department, and Gen. Keith Alexander, director of the National Security Agency, each voiced their concerns** before Congress last year. And **House Intelligence Committee Chairman Mike Rogers, R-Mich., called it the "largest national security threat** to face the U.S. that we are not even close to being prepared to handle as a country."

Threat of cyber-attack real and growing; most serious economic and national security challenge in 2015.

DUSTIN **VOLZ**, April 1 **2015** <http://www.nationaljournal.com/tech/obama-declares-cyber-attacks-a-national-emergency-20150401>

April 1, 2015 President Obama on Wednesday signed an executive order expanding his administration's ability to respond to malicious cyberattacks by allowing financial penalties to be inflicted on foreign actors who engage in destructive hacking campaigns. "**Cyberthreats pose one of the most serious economic and national security challenges to the United States**, and my administration is pursuing a comprehensive strategy to confront them," Obama said in a statement. "As we have seen in recent months, **these threats can emanate from a range of sources and target our critical infrastructure, our companies, and our citizens**. This executive order offers a targeted tool for countering the most significant cyberthreats that we face." The order allows the Treasury secretary, in consultation with the attorney general and the secretary of State, to impose financial sanctions—such as freezing of assets or prohibition of commercial trade—on individuals or groups responsible for **malicious cyberattacks that "create a significant threat to U.S. national security, foreign policy, or economic health or financial stability of the United States."** Obama said. Administration officials have long indicated a desire to strengthen the government's ability to respond to and penalize those engaging in cyberattacks. The massive hit on Sony Pictures last Thanksgiving—which the White House publicly blamed on North Korea—increased the urgency to bolster the nation's cyberdefenses. In January, Obama signed a separate executive order allowing for further sanctions against designated North Korean targets, but that action was limited solely to government officials in that country and not tethered directly to the Sony cyberattack. Wednesday's order will broaden the government's authority to permit the levying of sanctions against those directly responsible for hacking activities—and

officials will not need to acquire a discrete order to respond to each attack. Data breaches in recent years at places like Target, Home Depot, and Anthem Insurance have resulted in the heist of the personal data of millions of consumers, ranging from credit-card information to Social Security numbers and health information. But hundreds, if not thousands, of cyberattacks are waged daily against the United States, officials have said, and many of them originate overseas. China and Russia have been identified as particularly aggressive and adept at cyberintrusion and cyberespionage.

Cyberattacks are currently the biggest threat to US national security

Council on foreign relations 3/15, “Cyberattacks on US Infrastructure”,
<http://www.cfr.org/global/global-conflict-tracker/p32137#!/?marker=2>

In March 2013, Director of National Intelligence James Clapper identified cyberattacks as the greatest threat to U.S. national security. Critical infrastructure—the physical and virtual assets, systems, and networks vital to national and economic security, health, and safety—is vulnerable to cyberattacks by foreign governments, criminal entities, and lone actors. Due to the increasingly sophisticated, frequent, and disruptive nature of cyberattacks, such an attack on critical infrastructure could be significantly disruptive or potentially devastating. Policymakers and cybersecurity experts contend that energy is the most vulnerable industry; a large-scale attack could temporarily halt the supply of water, electricity, and gas, hinder transportation and communication, and cripple financial institutions. The rising prevalence of cyberattacks was detailed in a 2013 report by the U.S. security firm Mandiant that linked the Chinese military to 140 cyberattacks against U.S. and foreign corporations. The same year, major U.S. banks called on policymakers for assistance after experiencing cyberattacks emanating from Iran. The Obama administration has emphasized the importance of cybersecurity—its fiscal year 2014 budget requested a 20 percent increase in funding, and in February the White House announced the establishment of a new Cyber Threat Initiative Integration Center (CTIIC) to provide analysis and support to U.S. government agencies in response to cyber threats. The United States has strengthened its offensive strategies by developing rules of engagement for cyber warfare and cyber weapons capabilities. However, cyberspace policymaking remains decentralized with authority shared among the White House and five executive departments, resulting in gaps in U.S. cyber policy that leave vulnerabilities unaddressed.

Cyber threat is high---tech advancement

Josephine **Wolff 13** is a Ph.D. candidate at MIT and a fellow at Harvard’s Berkman Center for Internet and Society, “Great, Now Malware Can Jump the “Air Gap” Between Computers,” 12-3-2013, Slate Magazine, http://www.slate.com/blogs/future_tense/2013/12/03/researchers_michael_hanspach_michael_goetz_prove_malware_can_jump_air_gap.html, DOA: 3-15-2015, y2k

The gold standard for protecting computer systems—as everyone from the U.S. military to Osama Bin Laden’s ghost well knows—is disconnecting them from the Internet. Called an “air gap,” because prior to wireless networking it literally meant making sure there was no cable physically connecting a computer to the public Internet, this is one of the most drastic, inconvenient, and difficult-to-maintain computer security measures out there. It’s usually reserved for systems that require the very highest levels of security, because it leaves you with a

computer system that may be limited in what it can do, but at least it's absolutely safe. But according to a recent paper by researchers at the Fraunhofer Institute for Communication, Information Processing, and Ergonomics, that [air]gap can be bridged by high-frequency audio signals.

The researchers, Michael Hanspach and Michael Goetz, were able to transmit data between air-gapped laptops up to 19.7 meters (more than 60 feet) apart at a rate of approximately 20 bits per second by using acoustic methods originally developed for underwater communications. In other words, the computers communicated via their built-in speakers and microphones by transmitting inaudible acoustic waves. The paper announcing this prototype comes just weeks after security consultant Dragos Ruiu hypothesized that the "badBIOS" malware he was studying was able to penetrate air-gapped machines in the same manner. Even without Hanspach and Goetz's confirmation of its feasibility, Ruiu's claim was enough to unsettle some. At the Defense One conference last month, United States Naval Academy cyber security professor and retired Navy captain Mark Hagerott said the discovery of air-gap jumping technology would "disrupt the world balance of power."

The basic idea underlying an air gap is that we want to cut off all access to a computer system to the outside world but, as it turns out, there are lots of ways to access computers even through the air. The name itself is deeply misleading, and it reflects a certain kind of misguided thinking about computer security that comes from carelessly applying the language of physical security to the virtual world. It's not just that the things we can't see—the electromagnetic and acoustic waves—can serve as access points for attackers. It's that we don't yet have any thorough understanding of what all the possible access points to computer systems are, or what their complete "attack surface" looks like.

Hanspach and Goetz's research, and Ruiu's warning, will likely mean that the definition of "air-gapped" is extended yet again—this time so that its implementation includes shutting off audio input and output devices. In the long tradition of mixing archaic physical security metaphors with modern cybersecurity efforts, you can think of it as a sort of modern-day version of Odysseus telling his sailors to plug their ears as they sail past the sirens. Hanspach and Goetz also suggest as possible defenses against acoustic malware high-frequency audio filtering and audio intrusion detection systems, but these solutions are more complicated to implement and may be less effective.

This isn't the first time we've discovered that the machines we thought were protected by an impermeable air gap were, in fact, vulnerable. Stuxnet made headlines in 2010 when it was spread to the air-gapped machines in the Iranian Natanz nuclear facilities using infected USB drives. The realization (or reminder, really) that USB drives could carry malware meant that the notion of air-gapping computer systems was extended to include banning removable media, or filling USB ports with superglue.

Of course, with each such addition to the protocol for thorough air gapping, the practice becomes more and more difficult to maintain. This summer, for instance, it was revealed that Edward Snowden used a flash drive to copy the classified materials he later leaked to the press. Turns out the Department of Defense may have granted thousands of exceptions to its nominal ban on removable media devices. A mandate to shut off all computer audio input and output

devices could meet a similar fate, with organizations finding that these tools are necessary for certain important tasks—or employees finding safety measures to be a hassle. More **stringent requirements for air-gapping** almost **inevitably lead to less rigorous implementation** and, as the new acoustic malware prototype suggests, **we don't even know** yet all of **the possible attack vectors** for computer systems, or what other basic functions they will mean shutting off and deactivating in the name of greater security.

Trends in social engineering and phishing attacks **show that** the human users of computer systems **are** often crucial (and very vulnerable) **attack vectors**, while research in side-channel attacks on cryptosystems has shown that the power used by computers, as well as the sounds they make, can be used to target encrypted information. In short, audio input and output devices are only the latest in a long list of computer features that turn out to be vulnerable to attack—that doesn't make the researchers' discovery any less important or significant, but it does mean that it's probably far from the final word in air-gap-jumping technology. **New attacks will** continue to **emerge alongside technological improvements**—dark reflections of our ingenuity. **The security vulnerabilities of computers extend across every dimension**, including several we likely haven't thought of yet, and it would be unwise to rely too heavily on the wax in your ears, or the glue in your computer ports—or the protective cushion of the air.

Prefer qualified evidence---9/11 commission concludes aff

Melissa **Clyne 2014**, Staff Writer @ News Max, "9/11 Commission: Cyberattack on US Is Imminent Threat," 7-22-14, <http://www.newsmax.com/Newsfront/911-terrorism-cyberattack-power-grid/2014/07/22/id/584093/#ixzz3Ala4AZSB>, DOA: 8-13-14, y2k

Terrorists are plotting a cyberattack against the United States that is tantamount to 9/11, and the American public is acutely uninformed about the grave danger, according to The Wall Street Journal. **Members of the former 9/11 Commission, formed to investigate and analyze the terrorist attacks, will release a report today stating a growing complacency** has set in since 2001, despite heightened threats facing the country. For the 10th anniversary of the release of the 9/11 report, the National Commission on Terrorist Attacks met to assess the current national security climate and how the government is handling it. As part of their undertaking, **the panel interviewed current and former intelligence officials**, the Journal reports. In the report, **most top spy officials pointed to cyberattacks as a "growing danger** that the government has yet to adequately address," according to the Journal. The Washington Post reports that **the panel's most recent findings indicate that cyberspace is the "battlefield of the future"** and advocate for cybersecurity legislation allowing private companies to work with the government to counter the threat. National security is tantamount to privacy protection. Additionally, the public should be made aware of the seriousness of the looming threat, according to the panel. "Platitudes will not persuade the public," the authors wrote. In 2012, then Defense Secretary Leon Panetta warned that terrorists were targeting computer control systems that operate chemical, electricity, and water plants, and those that guide transportation throughout the country, Bloomberg reported at the time. **"We know of specific instances where intruders have successfully gained access to these control systems,"** Panetta said. "We also know **they are seeking to create advanced tools to attack these systems and cause** panic, destruction, and even **the loss of life.**" He explained that **an attacker could** derail trains, contaminate the water supply, or **shut down power** grids across the country by gaining access to control switches. It's important, according to the report's authors, that Americans learn of the threats before it's too late. **"History may be repeating itself in the cyber realm,"** the report states. "Complacency is setting in. There is a danger that this waning sense of urgency will divert attention and needed resources from counterterrorism efforts."

Cyber attacks are possible, likely, and will escalate

Bucci 9, Dr. Steven P. Bucci is IBM's Issue Lead for Cyber Security Programs and a part of the Global Leadership Initiative, the in-house think tank for IBM's public-sector practice. He most recently served as Deputy Assistant Secretary of Defense, Homeland Defense and Defense Support to Civil Authorities. Dr. Bucci delivered these remarks at a meeting of The Heritage Foundation's Cyber Security Working Group, The Confluence of Cyber Crime and Terrorism, <http://www.heritage.org/research/lecture/the-confluence-of-cyber-crime-and-terrorism>

If a cash-rich terrorist group would use its wealth to hire cyber criminal botnets for their own use, **we would have a major problem.** A terrorist group so enabled could begin **to overwhelm the cyber defenses** of a specific **corporation, government organization, or infrastructure sector and do much damage.** **They could destroy** or corrupt **vital data in the financial sector communications over a wide area to spread panic and uncertainty.**

Similar to the nation-state attack scenarios discussed earlier, terrorists could use botnet-driven DDoS attacks to blind security forces at a border crossing point as a means of facilitating an infiltration operation, or a cyber attack in one area of a country to act as a diversion so a "conventional" kinetic terrorist attack can occur elsewhere. They could even conduct SCADA attacks on specific sites and use the system to create kinetic-like effects without the kinetic component. A good example would be to open the valves at a chemical plant near a population center, creating a Bhopal-like event.

The **permutations are as endless as one's imagination**. The **cyber capabilities** that the **criminals could provide** would **in short order make any terrorist organization infinitely more dangerous and effective.**

Some have **opined** that **cyber attacks are not suitable as terror tactics because they lack the drama and spectacular effect of**, say, a suicide bomber. **This does not take into account the ability of the terrorists to adapt.** As our intelligence and law enforcement agencies continue to effectively combat the terrorists, they will continue to evolve. The terrorists' old methods will be augmented and improved. They will need to develop more imagination and versatility if they are to conduct successful operations.

This evolutionary capability has not been in short supply among the terrorist leadership. They will not define "spectacular" so narrowly. **Imagine** the **operational elegance of simply hitting the return key and seeing thousands of enemies die a continent away, or watching a bank go under due to the destruction of all its data by an unknown force**. This will be enormously attractive to terrorist groups. Additionally, the **combination of cyber methods and kinetic strikes could be spectacular regardless of one's definition.**

Criminals, for their part, **are motivated by greed and power.** **Few** of the **leaders of the enormous cyber organized crime world would hesitate** at selling their capabilities to a terrorist loaded with cash. **That** fact, **combined with** the **ever-growing terrorist awareness of cyber vulnerabilities, makes this set of scenarios not just likely, but nearly inevitable.**

I – War/Escalation

Cyber attacks escalate to nuclear war

Jason Fritz 2009, Former Captain of the U.S. Army, Jason, July, Hacking Nuclear Command and Control, www.icnnd.org/Documents/Jason_Fritz_Hacking_NC2.doc

The US uses the two-man rule to achieve a higher level of security in nuclear affairs. Under this rule two authorized personnel must be present and in agreement during critical stages of nuclear command and control. The President must jointly issue a launch order with the Secretary of Defense; Minuteman missile operators must agree that the launch order is valid; and on a submarine, both the commanding officer and executive officer must agree that the order to launch is valid. In the US, in order to execute a nuclear launch, an Emergency Action Message (EAM) is needed. This is a preformatted message that directs nuclear forces to execute a specific attack. The contents of an EAM change daily and consist of a complex code read by a human voice. Regular monitoring by shortwave listeners and videos posted to YouTube provide insight into how these work. These are issued from the NMCC, or in the event of destruction, from the designated hierarchy of command and control centres. Once a command centre has confirmed the EAM, using the two-man rule, the Permissive Action Link (PAL) codes are entered to arm the weapons and the message is sent out. These messages are sent in digital format via the secure Automatic Digital Network and then relayed to aircraft via single-sideband radio transmitters of the High Frequency Global Communications System, and, at least in the past, sent to nuclear capable submarines via Very Low Frequency (Greenemeier 2008, Hardisty 1985). The technical details of VLF submarine communication methods can be found online, including PC-based VLF

reception. Some reports have noted a Pentagon review, which showed **a potential “electronic back door into the US Navy’s system for broadcasting nuclear launch orders to Trident submarines”** (Peterson 2004). The investigation showed that **cyber terrorists could potentially infiltrate this network and insert false orders for launch.** The investigation led to “elaborate new instructions for validating launch orders” (Blair 2003). Adding further to the concern of cyber terrorists seizing control over submarine launched nuclear missiles; The Royal Navy announced in 2008 that it would be installing a Microsoft Windows operating system on its nuclear submarines (Page 2008). The choice of operating system, apparently based on Windows XP, is not as alarming as the advertising of such a system is. **This may attract hackers and narrow the necessary reconnaissance to learning its details and potential exploits.** It is unlikely that the operating system would play a direct role in the signal to launch, although this is far from certain. **Knowledge of the operating system may lead to the insertion of malicious code, which could be used to gain accelerating privileges, tracking, valuable information, and deception that could subsequently be used to initiate a launch.** Remember from Chapter 2 that the UK’s nuclear submarines have the authority to launch if they believe the central command has been destroyed. **Attempts by cyber terrorists to create the illusion of a decapitating strike could also be used to engage fail-deadly systems. Open source knowledge is scarce as to whether Russia continues to operate such a system** However evidence suggests that they have in the past. Perimetr, also known as **Dead Hand**, was an automated system set **to launch a mass scale nuclear attack** in the event of a decapitation strike against Soviet leadership and military. **In a crisis, military officials would send a coded message to the bunkers, switching on the dead hand. If nearby ground-level sensors detected a nuclear attack on Moscow, and if a break was detected in communications links with top military commanders, the system would send low-frequency signals over underground antennas to special rockets. Flying high over missile fields and other military sites, these rockets in turn would broadcast attack orders to missiles, bombers and, via radio relays, submarines at sea. Contrary to some Western beliefs, Dr. Blair says, many of Russia’s nuclear-armed missiles in underground silos and on mobile launchers can be fired automatically. (Broad 1993)** Assuming such a system is still active, **cyber terrorists would need to create a crisis situation in order to activate Perimetr, and then fool it into believing a decapitating strike had taken place.** While this is not an easy task, the information age makes it easier. **Cyber reconnaissance could help locate the machine and learn its inner workings. This could be done by targeting the computers high of level official’s**—anyone who has reportedly worked on such a project, or individuals involved in military operations at underground facilities, such as those reported to be located at Yamantau and Kosvinsky mountains in the central southern Urals (Rosenbaum 2007, Blair 2008) **Indirect Control of Launch** **Cyber terrorists could cause incorrect information to be transmitted, received, or displayed at nuclear command and control centres, or shut down these centres’ computer networks completely.** In 1995, a Norwegian scientific sounding rocket was mistaken by Russian early warning systems as a nuclear missile launched from a US submarine. A radar operator used Krokus to notify a general on duty who decided to alert the highest levels. Kavkaz was implemented, all three chegets activated, and the countdown for a nuclear decision began. It took eight minutes before the missile was properly identified—a considerable amount of time considering the speed with which a nuclear response must be decided upon (Aftergood 2000). **Creating a false signal in these early warning systems would be relatively easy using computer network operations.** The real difficulty would be gaining access to these systems as they are most likely on a closed network. However, **if they are transmitting wirelessly, that may provide an entry point, and information gained through the internet may reveal the details, such as passwords and software, for gaining entrance to the closed network.** If access was obtained, **a false alarm could be followed by something like a DDoS attack,** so the operators believe an attack may be imminent, yet they can no longer verify it. **This could add pressure to the decision making process, and if coordinated precisely, could appear as a first round EMP burst. Terrorist groups**

could also attempt to launch a non-nuclear missile, such as the one used by Norway, **in an attempt to fool the system**.

The number of states who possess such technology is far greater than the number of states who possess nuclear weapons. Obtaining them would be considerably easier, especially when enhancing operations through computer network operations.

Combining traditional terrorist methods with cyber techniques opens opportunities neither could accomplish on their own. For example, **radar stations might be more vulnerable to a computer attack, while satellites are more vulnerable to jamming from a laser beam, thus together they deny dual phenomenology. Mapping communications networks through cyber reconnaissance may expose weaknesses, and automated scanning devices created by more experienced hackers can be readily found on the internet.**

¹¹ Intercepting or spoofing communications is a highly complex science. These systems are designed to protect against the world's most powerful and well funded militaries. Yet, there are recurring gaffes, and the very nature of asymmetric warfare is to bypass complexities by finding simple loopholes. For example, commercially available software for voice-morphing could be used to capture voice commands within the command and control structure, cut these sound bytes into phonemes, and splice it back together in order to issue false voice commands (Andersen 2001, Chapter 16). Spoofing could also be used to escalate a volatile situation in the hopes of starting a nuclear war. " [they cut off the paragraph] "In June 1998, a group of international hackers calling themselves

Milw0rm hacked the web site of India's Bhabha Atomic Research Center (BARC) and put up a spoofed web page showing a mushroom cloud and the text "If **a nuclear war does**

start, you will be the first to scream" (Denning 1999). Hacker web-page defacements like these are often derided by critics of cyber terrorism as simply being a nuisance which causes no significant harm. However, web-page defacements are becoming more common, and they point towards alarming possibilities in subversion. During the 2007 cyber attacks against Estonia, a counterfeit letter of apology from Prime Minister Andrus Ansip was planted on his political party website (Grant 2007). This took place amid the confusion of mass DDoS attacks, real world protests, and accusations between governments.

Cyberattacks cause great power wars

Habiger 2010 [Eugue – Retired Air Force General, Cyberwarfare and Cyberterrorism, The Cyber Security Institute, Feb 2010. p. 11-19]

However, there are reasons to believe that what is going on now amounts to a fundamental shift as opposed to business as usual. Today's network exploitation or information operation trespasses possess a number of characteristics that suggest that the line between espionage and conflict has been, or is close to being, crossed. (What that suggests for the proper response is a different matter.) First, the number of cyberattacks we are facing is growing significantly. Andrew Palowitch, a former CIA official now consulting with the US Strategic Command (STRATCOM), which oversees the Defense Department's Joint Task Force-Global Network Operations, recently told a meeting of experts that the Defense Department has experienced almost 80,000 computer attacks, and some number of these assaults have actually "reduced" the military's "operational capabilities."²⁰ Second, the nature of these attacks is starting to shift from penetration attempts aimed at gathering intelligence (cyber spying) to offensive efforts aimed at taking down systems (cyberattacks). Palowitch put this in stark terms last November, "We are currently in a cyberwar and war is going on today."²¹ Third, these recent attacks need to be taken in a broader strategic context. Both Russia and China have stepped up their offensive efforts and taken a much more aggressive cyberwarfare posture. The Chinese have developed an openly discussed cyberwar strategy aimed at achieving electronic dominance over the U.S. and its allies by 2050. In 2007 the Department of Defense reported that for the first time China has developed first strike viruses, marking a major shift from prior investments in defensive measures.²² And in the intervening period China has launched a series of offensive cyber operations against U.S. government and private sector networks and infrastructure. In 2007, Gen. James Cartwright, the former head of STRATCOM and now the Vice Chairman of the Joint Chiefs of Staff, told the US-China Economic and Security Review Commission that China's ability to launch "denial of service" attacks to overwhelm an IT system is of particular concern. ²³ Russia also has already begun to wage offensive cyberwar. At the outset of the recent

hostilities with Georgia, Russian assets launched a series of cyberattacks against the Georgian government and its critical infrastructure systems, including media, banking and transportation sites.²⁴ In 2007, cyberattacks that many experts attribute, directly or indirectly, to Russia shut down the Estonia government's IT systems. Fourth, the current geopolitical context must also be factored into any effort to gauge the degree of threat of cyberwar. The start of the new Obama Administration has begun to help reduce tensions between the United States and other nations. And, the new administration has taken initial steps to improve bilateral relations specifically with both China and Russia. However, it must be said that over the last few years the posture of both the Chinese and Russian governments toward America has clearly become more assertive, and at times even aggressive. Some commentators have talked about the prospects of a cyber Pearl Harbor, and the pattern of Chinese and Russian behavior to date gives reason for concern along these lines: both nations have offensive cyberwarfare strategies in place; both nations have taken the cyber equivalent of building up their forces; both nations now regularly probe our cyber defenses looking for gaps to be exploited; both nations have begun taking actions that cross the line from cyberespionage to cyberaggression; and, our bilateral relations with both nations are increasingly fractious and complicated by areas of marked, direct competition. Clearly, there are sharp differences between current U.S. relations with these two nations and relations between the US and Japan just prior to World War II. However, from a strategic defense perspective, there are enough warning signs to warrant preparation. In addition to the threat of cyberwar, the limited resources required to carry out even a large scale cyberattack also makes likely the potential for a significant cyberterror attack against the United States. However, the lack of a long list of specific incidences of cyberterrorism should provide no comfort. There is strong evidence to suggest that al Qaeda has the ability to conduct cyberterror attacks against the United States and its allies. Al Qaeda and other terrorist organizations are extremely active in cyberspace, using these technologies to communicate among themselves and others, carry out logistics, recruit members, and wage information warfare. For example, al Qaeda leaders used email to communicate with the 9-11 terrorists and the 9-11 terrorists used the Internet to make travel plans and book flights. Osama bin Laden and other al Qaeda members routinely post videos and other messages to online sites to communicate. Moreover, there is evidence of efforts that al Qaeda and other terrorist organizations are actively developing cyberterrorism capabilities and seeking to carry out cyberterrorist attacks. For example, the Washington Post has reported that "U.S. investigators have found evidence in the logs that mark a browser's path through the Internet that al Qaeda operators spent time on sites that offer software and programming instructions for the digital switches that run power, water, transport and communications grids. In some interrogations . . . al Qaeda prisoners have described intentions, in general terms, to use those tools."²⁵ Similarly, a 2002 CIA report on the cyberterror threat to a member of the Senate stated that al Qaeda and Hezbollah have become "more adept at using the internet and computer technologies."²⁶ The FBI has issued bulletins stating that, "U. S. law enforcement and intelligence agencies have received indications that Al Qaeda members have sought information on Supervisory Control And Data Acquisition (SCADA) systems available on multiple SCADA-related web sites."²⁷ In addition a number of jihadist websites, such as 7hj.7hj.com, teach computer attack and hacking skills in the service of Islam.²⁸ While al Qaeda may lack the cyber-attack capability of nations like Russia and China, there is every reason to believe its operatives, and those of its ilk, are as capable as the cyber

criminals and hackers who routinely effect great harm on the world's digital infrastructure generally and American assets specifically. In fact, perhaps, the most troubling indication of the level of the cyberterrorist threat is the countless, serious non-terrorist cyberattacks routinely carried out by criminals, hackers, disgruntled insiders, crime syndicates and the like. If run-of-the-mill criminals and hackers can threaten powergrids, hack vital military networks, steal vast sums of money, take down a city's traffic lights, compromise the Federal Aviation Administration's air traffic control systems, among other attacks, it is overwhelmingly likely that terrorists can carry out similar, if not more malicious attacks. Moreover, even if the world's terrorists are unable to breed these skills, they can certainly buy them. There are untold numbers of cybermercenaries around the world—sophisticated hackers with advanced training who would be willing to offer their services for the right price. Finally, given the nature of our understanding of cyber threats, there is always the possibility that we have already been the victim or a cyberterrorist attack, or such an attack has already been set but not yet effectuated, and we don't know it yet. Instead, a well-designed cyberattack has the capacity cause widespread chaos, sow societal unrest, undermine national governments, spread paralyzing fear and anxiety, and create a state of utter turmoil, all without taking a single life. A sophisticated cyberattack could throw a nation's banking and finance system into chaos causing markets to crash, prompting runs on banks, degrading confidence in markets, perhaps even putting the nation's currency in play and making the government look helpless and hapless. In today's difficult economy, imagine how Americans would react if vast sums of money were taken from their accounts and their supporting financial records were destroyed. A truly nefarious cyberattacker could carry out an attack in such a way (akin to Robin Hood) as to engender populist support and deepen rifts within our society, thereby making efforts to restore the system all the more difficult. A modestly advanced enemy could use a cyberattack to shut down (if not physically damage) one or more regional power grids. An entire region could be cast into total darkness, power-dependent systems could be shutdown. An attack on one or more regional power grids could also cause cascading effects that could jeopardize our entire national grid. When word leaks that the blackout was caused by a cyberattack, the specter of a foreign enemy capable of sending the entire nation into darkness would only increase the fear, turmoil and unrest. While the finance and energy sectors are considered prime targets for a cyberattack, an attack on any of the 17 delineated critical infrastructure sectors could have a major impact on the United States. For example, our healthcare system is already technologically driven and the Obama Administration's e-health efforts will only increase that dependency. A cyberattack on the U.S. e-health infrastructure could send our healthcare system into chaos and put countless of lives at risk. Imagine if emergency room physicians and surgeons were suddenly no longer able to access vital patient information. A cyberattack on our nation's water systems could likewise cause widespread disruption. An attack on the control systems for one or more dams could put entire communities at risk of being inundated, and could create ripple effects across the water, agriculture, and energy sectors. Similar water control system attacks could be used to at least temporarily deny water to otherwise arid regions, impacting everything from the quality of life in these areas to agriculture. In 2007, the U.S. Cyber Consequences Unit determined that the destruction from a single wave of cyberattacks on critical infrastructures

could exceed \$700 billion, which would be the rough equivalent of 50 Katrina-esque hurricanes hitting the United States all at the same time.²⁹ Similarly, one IT security source has estimated that the impact of a single day cyberwar attack that focused on and disrupted U.S. credit and debit card transactions would be approximately \$35 billion.³⁰ Another way to gauge the potential for harm is in comparison to other similar noncyberattack infrastructure failures. For example, the August 2003 regional power grid blackout is estimated to have cost the U.S. economy up to \$10 billion, or roughly .1 percent of the nation's GDP. ³¹ That said, a cyberattack of the exact same magnitude would most certainly have a much larger impact. The origin of the 2003 blackout was almost immediately disclosed as an atypical system failure having nothing to do with terrorism. This made the event both less threatening and likely a single time occurrence. Had it been disclosed that the event was the result of an attack that could readily be repeated the impacts would likely have grown substantially, if not exponentially. Additionally, a cyberattack could also be used to disrupt our nation's defenses or distract our national leaders in advance of a more traditional conventional or strategic attack. Many military leaders actually believe that such a disruptive cyber pre-offensive is the most effective use of offensive cyber capabilities. This is, in fact, the way Russia utilized cyberattackers—whether government assets, governmentdirected/ coordinated assets, or allied cyber irregulars—in advance of the invasion of Georgia. Widespread distributed denial of service (DDOS) attacks were launched on the Georgian governments IT systems. Roughly a day later Russian armor rolled into Georgian territory. The cyberattacks were used to prepare the battlefield; they denied the Georgian government a critical communications tool isolating it from its citizens and degrading its command and control capabilities precisely at the time of attack. In this way, these attacks were the functional equivalent of conventional air and/or missile strikes on a nation's communications infrastructure.³² One interesting element of the Georgian cyberattacks has been generally overlooked: On July 20th, weeks before the August cyberattack, the website of Georgian President Mikheil Saakashvili was overwhelmed by a more narrowly focused, but technologically similar DDOS attack.³³ This should be particularly chilling to American national security experts as our systems undergo the same sorts of focused, probing attacks on a constant basis. The ability of an enemy to use a cyberattack to counter our offensive capabilities or soften our defenses for a wider offensive against the United States is much more than mere speculation. In fact, in Iraq it is already happening. Iraq insurgents are now using off-the-shelf software (costing just \$26) to hack U.S. drones (costing \$4.5 million each), allowing them to intercept the video feed from these drones.³⁴ By hacking these drones the insurgents have succeeded in greatly reducing one of our most valuable sources of real-time intelligence and situational awareness. If our enemies in Iraq are capable of such an effective cyberattack against one of our more sophisticated systems, consider what a more technologically advanced enemy could do. At the strategic level, in 2008, as the United States Central Command was leading wars in both Iraq and Afghanistan, a cyber intruder compromised the security of the Command and sat within its IT systems, monitoring everything the Command was doing. ³⁵ This time the attacker simply gathered vast amounts of intelligence. However, it is clear that the attacker could have used this access to wage cyberwar—altering information, disrupting the flow of information, destroying information, taking down systems—against the United States forces already at war. Similarly, during 2003 as the United States prepared for and began the War in

Iraq, the IT networks of the Department of Defense were hacked 294 times.³⁶ By August of 2004, with America at war, these ongoing attacks compelled then-Deputy Secretary of Defense Paul Wolfowitz to write in a memo that, "Recent exploits have reduced operational capabilities on our networks."³⁷ This wasn't the first time that our national security IT infrastructure was penetrated immediately in advance of a U.S. military option.³⁸ In February of 1998 the Solar Sunrise attacks systematically compromised a series of Department of Defense networks. What is often overlooked is that these attacks occurred during the ramp up period ahead of potential military action against Iraq. The attackers were able to obtain vast amounts of sensitive information—information that would have certainly been of value to an enemy's military leaders. There is no way to prove that these actions were purposefully launched with the specific intent to distract American military assets or degrade our capabilities. However, such ambiguities—the inability to specifically attribute actions and motives to actors—are the very nature of cyberspace. Perhaps, these repeated patterns of behavior were mere coincidence, or perhaps they weren't. The potential that an enemy might use a cyberattack to soften physical defenses, increase the gravity of harms from kinetic attacks, or both, significantly increases the potential harms from a cyberattack. Consider the gravity of the threat and risk if an enemy, rightly or wrongly, believed that it could use a cyberattack to degrade our strategic weapons capabilities. Such an enemy might be convinced that it could win a war—conventional or **even nuclear**—against the United States. The effect of this would be to undermine our deterrence-based defenses, making us significantly more at risk of a major war.

The cyber arms race is accelerating — the best data proves; involves countries like Iran and at least 12 of the world's 15 largest nuclear powers.

Goldman 2013, CNN Writer, Nations Prepare for Cyberwar,

<http://money.cnn.com/2013/01/07/technology/security/cyber-war/index.html>

In 2012, large-scale cyberattacks targeted at the Iranian government were uncovered, and in return, Iran is believed to have launched massive attacks aimed at U.S. banks and Saudi oil companies. At least 12 of the world's 15 largest military powers are currently building cyberwarfare programs, according to James Lewis, a cybersecurity expert at the Center for Strategic and International Studies.

So a cyber Cold War is already in progress. But some security companies believe that battle will become even more heated this year.

"Nation states and armies will be more frequent actors and victims of cyberthreats," a team of researchers at McAfee Labs, an Intel (INTC, Fortune 500) subsidiary, wrote in a recent report.

Michael Sutton, head of security research at cloud security company Zscaler, said he expects governments to spend furiously on building up their cyber arsenals. Some may even outsource attacks to online hackers.

The Obama administration and many in Congress have been more vocal about how an enemy nation or a terrorist cell could target the country's critical infrastructure in a cyberattack. Banks, stock exchanges, nuclear power plants and water purification systems are particularly vulnerable, according to numerous assessments delivered to Congress last year.

Escalation likely – comparative to nuclear weapons

Stephen Dycus, 2010, Professor of national security law at Vermont Law School, former member of the National Academies committee on cyber warfare, LL.M., Harvard University, LL.B., BA, Southern Methodist University, “Congress’ Role in Cyber Warfare,” *Journal of National Security Law & Policy*, 4(1), 2010, p.161-164, http://www.jnslp.com/read/vol4no1/11_Dycus.pdf

In other words, **cyber weapons are critically different from their nuclear counterparts.** For one thing, **the time frame for response to a cyber attack might be much narrower. A nuclear weapon delivered by a land-based ICBM could take 30 minutes to reach its target. An electronic attack would arrive instantaneously, and leave no time to consult with or even inform anyone outside the executive branch before launching a counterstrike,** if that were U.S. policy.

Cyber attacks escalate

Sean Lawson 2009 assistant professor in the Department of Communication at the University of Utah, *Cross-Domain Response to Cyber Attacks and the Threat of Conflict*, <http://www.seanlawson.net/?p=47>

At a time when it seems impossible to avoid the seemingly growing hysteria over the threat of cyber war,[1] network security expert Marcus Ranum delivered a refreshing talk recently, “The Problem with Cyber War,” that took a critical look at a number of the assumptions underlying contemporary cybersecurity discourse in the United States. He addressed one issue in particular that I would like to riff on here, the issue of conflict escalation—i.e. the possibility that offensive use of cyber attacks could escalate to the use of physical force. As I will show, his concerns are entirely legitimate as current U.S. military cyber doctrine assumes the possibility of what I call “cross-domain responses” to cyberattacks. *Backing Your Adversary (Mentally) into a Corner* Based on the premise that completely blinding a potential adversary is a good indicator to that adversary that an attack is imminent, Ranum has argued that “**The best thing** that you could possibly do if you want **to start World War III is launch a cyber attack.** [...] When people talk about cyber war like it’s a practical thing, what they’re really doing is messing with the OK button for starting World War III. We need to get them to sit the f-k down and shut the f-k up.” [2] He is making a point similar to one that I have made in the past: Taking away an adversary’s ability to make rational decisions could backfire. [3] For example, Gregory Witol cautions that “attacking the decision maker’s ability to perform rational calculations may cause more problems than it hopes to resolve.” Removing the capacity for rational action may result in completely unforeseen consequences, including longer and bloodier battles than may otherwise have been.” [4] Cross-Domain Response So, from a theoretical standpoint, I think his concerns are well founded. But the current state of U.S. policy may be cause for even greater concern. It’s not just worrisome that a hypothetical blinding attack via cyberspace could send a signal of imminent attack and therefore trigger an irrational response from the adversary. What is also cause for concern is that current U.S. **policy indicates that “kinetic attacks”** (i.e. physical use of force) **are seen as potentially legitimate responses to cyber**

attacks. Most worrisome is that current U.S. policy implies that a nuclear response is possible, something that policy makers have not denied in recent press reports. The reason, in part, is that the U.S. defense community has increasingly come to see cyberspace as a “domain of warfare” equivalent to air, land, sea, and space. The definition of cyberspace as its own domain of warfare helps in its own right to blur the online/offline, physical-space/cyberspace boundary. But thinking logically about the potential consequences of this framing leads to some disconcerting conclusions. If cyberspace is a domain of warfare, then it becomes possible to define “cyber attacks” (whatever those may be said to entail) as acts of war. But what happens if the U.S. is attacked in any of the other domains? It retaliates. But it usually does not respond only within the domain in which it was attacked. Rather, responses are typically “cross-domain responses”—i.e. a massive bombing on U.S. soil or vital U.S. interests abroad (e.g. think 9/11 or Pearl Harbor) might lead to air strikes against the attacker. Even more likely given a U.S. military “way of warfare” that emphasizes multidimensional, “joint” operations is a massive conventional (i.e. non-nuclear) response against the attacker in all domains (air, land, sea, space), simultaneously. The possibility of “kinetic action” in response to cyber attack, or as part of offensive U.S. cyber operations, is part of the current (2006) National Military Strategy for Cyberspace Operations [5]: (U) Kinetic Actions. DOD will conduct kinetic missions to preserve freedom of action and strategic advantage in cyberspace. Kinetic actions can be either offensive or defensive and used in conjunction with other mission areas to achieve optimal military effects. Of course, the possibility that a cyber attack on the U.S. could lead to a U.S. nuclear reply constitutes possibly the ultimate in “cross-domain response.” And while this may seem far fetched, it has not been ruled out by U.S. defense policy makers and is, in fact, implied in current U.S. defense policy documents. From the National Military Strategy of the United States (2004): “The term WMD/E relates to a broad range of adversary capabilities that pose potentially devastating impacts. WMD/E includes chemical, biological, radiological, nuclear, and enhanced high explosive weapons as well as other, more asymmetrical ‘weapons’. They may rely more on disruptive impact than destructive kinetic effects. For example, cyber attacks on US commercial information systems or attacks against transportation networks may have a greater economic or psychological effect than a relatively small release of a lethal agent.” [6] The authors of a 2009 National Academies of Science report on cyberwarfare respond to this by saying, **“Coupled with the declaratory policy on nuclear weapons described earlier, this statement implies that the United States will regard certain kinds of cyberattacks against the United States as being in the same category as nuclear, biological, and chemical weapons, and thus that a nuclear response to certain kinds of cyberattacks (namely, cyberattacks with devastating impacts) may be possible.** It also sets a relevant scale—a cyberattack that has an impact larger than that associated with a relatively small release of a lethal agent is regarded with the same or greater seriousness.” [7]

I - Cyber attacks on the grid

Grid is vulnerable now and an attack on the grid by terrorists would cripple society

Stuart **Poole-Robb**, 7-4-2015, "National power grids hit by cyber terrorist onslaught," ITProPortal, <http://www.itproportal.com/2015/04/07/cyber-terrorists-target-national-power-grids/>

An analysis of federal energy records has revealed that parts of **the US power grid are attacked online or in person every few days. This threat is now also looming over major cities outside the US** such as London.

After analysing federal data and surveying more than 50 electric utilities, *USA Today* **described the power grid as vulnerable to a major outage that could affect millions.** Although a cyberattack has not yet caused a major loss of power, the mechanisms guarding the grid undergo small hacks multiple times a week. The Department of Homeland Security was alerted to 151 energy-related "cyber incidents" in 2013, up from 111 in 2012. But, since 2013, **the attacks have escalated hugely with probes now continuously taking place**, according to the Edison Electric Institute. The massive power outage that occurred across the US NorthEast in 2003 is evidence that **national power grids in even the most developed countries are vulnerable to cyber attacks.** While no one at the time thought of attributing the widespread outage to a cyber attack, investigations revealed that the outage was originally caused by a software bug in the alarm system at a control room of the FirstEnergy Corporation, located in Ohio. The failed alarm left operators unaware of the need to re-distribute power after overloaded transmission lines hit some trees. This triggered a race condition in the control software and the local blackout cascaded into a widespread power outage. There are now growing fears on both sides of the Atlantic that terrorist groups or hostile governments might be behind the repeated attempts to hack into the power grids' control systems. Other possibilities include that of an organised criminal gang (OCG) using the threat of repeated power outages to hold a city such as New York or London to ransom. **A group of terrorist hackers located in Iran called Parastoo is already known to be actively recruiting software engineers with precisely those skills needed to bring down the power supply in a major city such as New York or London.** Parastoo has already been linked to a military-style attack on an electric power station, the PG&E Metcalf substation in California on 16 April 2013. Parastoo now claims it has been testing national critical infrastructure using cyber vectors. **Although cities in the US and Europe appear equally vulnerable to a determined cyber attack, the US national grid is particularly at risk.** Jon Wellinghoff, former chairman of the Federal Energy Regulatory Commission warns that the power grid is currently "too susceptible to a cascading outage" because of its reliance on a small number of critical substations and other physical equipment. **Such an attack could leave areas populated by millions of Americans without power.** The US national grid operates as an interdependent network and, if one element fails, energy must be drawn from other geographical areas. It is an essentially old-fashioned system which predates the era of cyber terrorism. A determined cyber attack by a group such as Parastoo would involve ensuring that multiple parts of the US Grid failed at the same time. If successful, this type of attack would result in what has been called "a cascading effect" that could rob millions of people of power for weeks, perhaps even longer. According to Wellinghoff, "Those critical nodes can, in fact, be attacked in one way or another. You have a very vulnerable system that will continue to be vulnerable until we figure out a way to break it out into more distributed systems." **It is easy to underestimate the potentially devastating effect that a major power outage lasting weeks might have on a city such as London or New York.** It would not merely be a question of lost production and a rush in the shops for torches as happened in the UK during the energy workers' strikes in the early 1970s. **Today's economy and society is far more electronic and computerised than that of four decades ago.** Our financial systems are powered by highly-sophisticated real time computer systems, as are all the cash dispensers. **A major power outage could also cripple shop tills and retail security systems**, meaning that most shops and stores would be forced to close until the power was restored.

Cyber attack on the grid would cause death and collapse the economy; all infrastructure at risk.

Kevin **Mandi**, 2-19-2013, "Successful hacker attack could cripple U.S. infrastructure, experts say," NBC News, http://usnews.nbcnews.com/_news/2013/02/19/17019005-successful-hacker-attack-could-cripple-us-infrastructure-experts-say?lite

A report tying the Chinese military to computer attacks against American interests has sent a chill through cyber-security experts, who worry that the very lifelines of the United States — its energy pipelines, its water supply, its banks — are increasingly at risk. The experts say that a successful hacker attack taking out just a part of the nation's electrical grid, or crippling financial institutions for several days, could sow panic or even lead to loss of life. "I call it cyberterrorism that makes 9/11 pale in comparison," Rep. Mike Rogers, a Michigan Republican and chair of the House Intelligence Committee, told NBC News on Tuesday. An American computer security company, Mandiant, reported with near certainty that members of a sophisticated Chinese hacking group work out of the headquarters of a unit of the Chinese army outside Shanghai. The report was first detailed in The New York Times, which said that the hacking group's focus was increasingly on companies that work with American infrastructure, including the power grid, gas lines and waterworks. The Chinese embassy in Washington told The Times that its government does not engage in computer hacking. As reported, the Chinese attacks constitute a sort of asymmetrical cyberwarfare, analysts said, because they bring the force of the Chinese government and military against private companies. "To us that's crossing a line into a class of victim that's not prepared to withstand that type of attack," Grady Summers, a Mandiant vice president, said on the MSNBC program "Andrea Mitchell Reports." The report comes as government officials and outside security experts alike are sounding ever-louder alarms about the vulnerability of the systems that make everyday life in the United States possible.

Power grid super vulnerable – empirics prove risk

Pierluigi **Paganini**, 7-4-2015, Works as a director at European Union Agency for Network and Information Security and is a fellow at the EUROPEAN CENTRE FOR INFORMATION POLICY & SECURITY, "US power grid vulnerable to cyber-attacks," Security Affairs, <http://securityaffairs.co/wordpress/38296/security/us-power-grid-vulnerable.html>

Security experts and US politicians are aware that the power grid is vulnerable to a terrorist attack. Nation's power grid is a privileged target for terrorists as explained by the former Secretary of Defense William Cohen: "It's possible and whether it's likely to happen soon remains to be seen," said Cohen on Monday on "The Steve Malzberg Show." A major attack on the power grid would cause chaos in the country by interrupting vital services for the population, the former government official said. Not only cyber attacks are threatening the vulnerable power grid, natural disasters, such as the solar storm known as the Carrington Event, could also interfere or disrupt the power delivery system nationwide. Terrorists have several options to hit a power grid, from a cyber attack on SCADA systems to an EMP attack, according to Cohen. "You can do it through cyber attacks, and that's the real threat coming up as well. We have to look at cyber attacks being able to shut down our power grid, which you have to remember is in the private sector's hands, not the government's. And we're vulnerable," Cohen added. "It's possible and whether it's likely to happen soon remains to be seen." "That's because the technology continues to expand and terrorism has become democratized. Many, many people across the globe now have access to information which allows them to be able to put together a very destructive means of carrying out their terrorist plans. We're better at

detecting than we were in the past. We're much more focused in integrating and sharing the information that we have, but we're still vulnerable and we'll continue to be vulnerable as long as groups can operate either on the margins or covertly to build these kind of campaigns of terror." said Cohen. Former Department of Homeland Security Secretary Janet Napolitano shared the same Cohen's concerns, a major cyber attack the power grid was a matter of "when," not "if." State-sponsored hackers, cyber terrorists are the main threat actors, but as confirmed by a recent research conducted by TrendMicro, also the cybercrime represents a serious menace. Former senior CIA analyst and EMP Task Force On National Homeland Security Director, Dr. Peter Vincent Pry, told Newsmax TV that that a cyber attack against the power grid could cause serious destruction and losses of lives. Not only US power grid are under attack, In January 2015 the British Parliament revealed that UK Power Grid is under cyber attack from foreign hackers, but the emergency is for critical infrastructure worldwide.

Attacks on the grid would be devastating

Tara **Dodrill**, 06-30-2015, "Power Grid Vulnerable To Cyber Attack, Former Defense Secretary Says," Inquisitr News, <http://www.inquisitr.com/2213678/power-grid-vulnerable-to-cyber-attack-former-defense-secretary-says/>
Read more at <http://www.inquisitr.com/2213678/power-grid-vulnerable-to-cyber-attack-former-defense-secretary-says/#fqS9YG7EpwxldHox.99>

The power grid is vulnerable to a terrorist attack, former Secretary of Defense William Cohen said. A direct assault on the electrical system would cause chaos and civil unrest throughout the country, the former government official said. Natural disasters, such as Carrington Event-level solar flares, could also take down the power delivery system nationwide. William Cohen was a Republican Senator from Maine and is currently serving as the CEO and chairman of The Cohen Group. Cohen recently released a new thriller, Collision, which is published by Forge Books. Cohen served as Secretary of Defense under President Bill Clinton from 1997-2001. The destruction of the power grid by terrorists would not necessarily have to involve an EMP attack, according to Cohen. You can do it through cyber attacks, and that's the real threat coming up as well. We have to look at cyber attacks being able to shut down our power grid, which you have to remember is in the private sector's hands, not the government's. And we're vulnerable," the former Secretary of Defense added. "It's possible and whether it's likely to happen soon remains to be seen." As previously reported by the Inquisitr, former Department of Homeland Security Secretary Janet Napolitano said that a cyber attack on the power grid was a matter of "when," not "if." Former senior CIA analyst and EMP Task Force On National Homeland Security Director, Dr. Peter Vincent Pry, told Newsmax TV that that America is a "sitting duck" for a terror attack that could completely destroy the power grid and take the lives of every nine out of ten Americans in the process. William Cohen detailed the power grid threats and what role modern technology could play in a terror attack that would leave all of America sitting in the dark. That's because the technology continues to expand and terrorism has become democratized. Many, many people across the globe now have access to information which allows them to be able to put together a very destructive means of carrying out their terrorist plans. We're better at detecting than we were in the past. We're much more focused in integrating and sharing the information that we have, but we're still vulnerable and we'll continue to be vulnerable as long as groups can operate either on the margins or covertly to build these kind of campaigns of terror." The American Society of Civil Engineers (ASCE) reviewed the soundness and functionality of the power grid, and gave the vital piece of infrastructure a barely passing grade of "D+." The rating means the power grid is in "poor to fair condition and mostly below standard, with many elements approaching the end of their service life." The ASCE review also revealed that a "large portion of the system exhibits significant deterioration" with a "strong risk of failure."

I - Grid attacks escalate

Grid attacks cause nuclear war

Robert **Tilford 12**, Graduate US Army Airborne School, Ft. Benning, Georgia, "Cyber attackers could shut down the electric grid for the entire east coast" 2012, <http://www.examiner.com/article/cyber-attackers-could-easily-shut-down-the-electric-grid-for-the-entire-east-coa> ***we don't agree with the albeist language

To make matters worse **a cyber attack that can take out a civilian power grid**, for example **could** also **cripple destroy the U.S. military**.[¶] The senator notes that is that **the same power grids that supply cities and towns, stores and gas stations, cell towers and heart monitors also power "every military base in our country."**[¶] "Although **bases would be prepared to weather a short power outage with backup diesel generators, within hours, not days, fuel supplies would run out**", he said.[¶] Which means **military command and control centers could go dark**.[¶] **Radar systems that detect air threats to our country would shut Down** completely.[¶] **Communication between commanders and their troops would also go silent.** And **many weapons systems would be left without either fuel or electric power**", said Senator Grassley.[¶] "So **in a few short hours** or days, **the mightiest military in the world would be left scrambling to maintain base functions**", he said.[¶] **We contacted the Pentagon and officials confirmed the threat of a cyber attack is something very real.**[¶] **Top national security officials**—including the Chairman of the Joint Chiefs, the Director of the National Security Agency, the Secretary of Defense, and the CIA Director—**have said, "preventing a cyber attack and improving the nation's electric grids is among the most urgent priorities of our country"** (source: Congressional Record).[¶] So how serious is the Pentagon taking all this?[¶] Enough to start, or end a war over it, for sure.[¶] **A cyber attack today against the US could very well be seen as an "Act of War" and could be met with a "full scale" US military response.**[¶] That could **include the use of "nuclear weapons"**, if authorized by the President.

Blackouts escalate to nuke war

Andres and Breetz 11 Richard B, Professor of National Security Strategy at the National War College and a Senior Fellow and Energy and Environmental Security and Policy Chair in the Center for Strategic Research, Institute for National Strategic Studies, at the National Defense University and Hanna L, doctoral candidate in the Department of Political Science at The Massachusetts Institute of Technology, February, "Small Nuclear Reactors for Military Installations: Capabilities, Costs, and Technological Implications", www.ndu.edu/press/lib/pdf/StrForum/SF-262.pdf

Government and private organizations are currently working to secure the grid against attacks; however, it is not clear that they will be successful. Most military **bases currently have backup power that allows them to function for a period of hours** or, at most, a few days on their own. **If power were not restored after this amount of time, the results could be disastrous.** First, military assets taken **offline** by the crisis **would not be available to help with disaster relief.** Second, during an extended blackout, **global military operations could be seriously compromised**; this disruption would be particularly serious if the blackout was induced during major **combat operations.** During the Cold War, this type of event was far less likely because the United States and Soviet Union shared the common understanding that **blinding an opponent with a grid blackout could escalate to nuclear**

war America's current **opponents** however, **may not** share this fear or **be deterred** by this possibility.¹¹ In 2008, the Defense Science Board stressed that DOD should mitigate the electrical grid's vulnerabilities by turning military installations into "islands" of energy self-sufficiency.¹⁰ The department has made efforts to do so by promoting efficiency programs that lower power consumption on bases and by constructing renewable power generation facilities on selected bases. Unfortunately, these **programs will not come close to reaching the goal** of islanding the vast majority of bases. **Even with massive investment in efficiency and renewables, most bases would not be able to function for more than a few days after the civilian grid went offline.**

Cyber attack hurts economy

Cyber-attacks are the biggest threat to our economy

Ed Moy, 7-6-2015, "Cyber Attacks Pose Biggest Unrecognized Threat to Economy," Newsmax, <http://www.newsmax.com/Finance/Ed-Moy/cyber-attack-terrorism-economy/2015/05/07/id/643241/>

There is no shortage of threats to the U.S. economy: fragile growth, increasing regulation, the timing of the Fed's raising interest rates, White House and congressional inaction, out-of-control entitlements, and a punitive and complicated tax system. Yet the biggest threat may be one that is least mentioned: cyber attacks. Cyber attacks have been expanding quickly from criminal gain to corporate espionage to ideological warfare. And these attacks have been increasing in frequency, scale, sophistication and severity. The primary reason for cyber attacks has been financial gain. Criminals go where the money is and there is easy money using personal data to commit fraud. Credit card data are sold to other criminals who use them to make purchases. Medical data are used to create new personal identities for credit card and bank fraud. Health insurance information is used to make false claims, access addictive prescription drugs and get free medical treatment. As a result, stealing personal data has reached epidemic proportions. The numbers from recent data breaches are staggering: credit card information from 56 million Home Depot and 70 million Target customers, 145 million login credentials from eBay, contact information for 76 million J.P. Morgan Chase customers and 80 million Anthem customers. Even small companies are not immune to these cyber attacks. From card skimmers to point-of-sale intrusions, data theft rings have targeted relatively unprotected small businesses as a new and vast profit center. The economic costs are monumental. It costs the breached organization an average of \$200 per compromised record, mostly from business disruption and revenue loss. That does not include intangible costs like losing customer loyalty or hurting a company's brand. To add insult to injury, corporate espionage attacks are increasing. Stealing intellectual property and spying on competitors comprises a growing number of attacks and come at huge costs to the company that has been hacked. And the big difference with corporate spying is that the attacker usually does not give up until they are successful. Finally, and most dangerous, are ideologically and politically motivated attacks. Cyber attacks have proven that computers are very vulnerable. But like any profit-driven enterprise, criminals and corporations are adverse to killing the goose that lays their golden eggs. Even nation states like China and Russia may be too co-dependent on the U.S. But the growth of ideologically driven movements is changing the risk. It is not a huge leap of imagination to envision a radical environmental group hacking into our energy infrastructure. Or terrorist groups like ISIS, Boko Haram and al Qaeda wanting to bring down our banking system. Ideological or political enemies can exploit the same vulnerabilities but have no remorse about maiming or killing the goose. In the recent annual threat assessment delivered to Congress, the National Director of Intelligence said that cyber attacks by politically and criminally motivated actors are the biggest threat to U.S. national security. In this brave new world, the good guys are playing catch up to the bad guys, who seem to always be one step ahead.

Cyberterrorism turns both the economy and surveillance

Patrick Tucker 2014 [Patrick - technology editor for Defense One. He's also the author of The Naked Future: What Happens in a World That Anticipates Your Every Move? "Major Cyber Attack Will Cause Significant Loss of Life By 2025, Experts Predict", Defense One, 10/29/14,

<http://www.defenseone.com/threats/2014/10/cyber-attack-will-cause-significant-loss-life-2025-experts-predict/97688/>

Signals Intelligence, CyberWar and You You may believe that a major cyber attack is likely to occur between now and 2025, or you may view the entire cyber menace as a scheme by security software companies. (The truth may be a mixture of both.) However, one thing that the threat of cyberwar will certainly do is increase the amount of computer, and particularly network government, surveillance to detect “anomalous behaviors,” possibly related to cyber attacks. The same recently released Pentagon paper on offensive cyber operations made a pointed mention of networks and the cloud as a potential source of signals intelligence of relevance to cyber-operators. Networks were “a primary target for signals intelligence (SIGINT), including computer network exploitation (CNE), measurement and signature intelligence, open source intelligence, and human intelligence.” Make no mistake, signals intelligence collection means watching how individuals behave online. As for the Pew’s 2025 date, Jason Healey, director of the Cyber Statecraft Initiative of the Atlantic Council, told Defense One that he considered it to be arbitrary. “We just don’t have a clue when it’s going to happen,” he said, adding that a single cyber attack on the scale of Pearl Harbor frightened him less than the prospect of a massive cyber failure, absent of malice but with real-time market implications. “I’m less concerned about attacks and more about a shock” of the size of a major market collapse, he said and argued that pre-occupation with a “cyber Pearl Harbor” ignores the “larger complexity” of the issue. “What do we do if one of these IT companies that’s too big to fail has a Lehman Brother’s moment? The data was there on Monday and is gone on Friday? If a major cloud provider fails, how do we get our data back?” While Healey was incredulous that a country like Russia would launch a cyber attack resulting in loss of life, he acknowledged that much has changed between today and 1991 when the electronic Pearl Harbor concept first emerged. And the changes are coming only more rapidly, as are potential vulnerabilities. “The more that we plug things to the Internet, things of concrete and steel and connect them to the Internet, the more likely we are to get ourselves into the state where this will happen in 2025. The dynamic that will make that more and more true is the Internet of Things,” he said

Cyber attacks could potentially cause millions in damage. Next 3 years are critical.

Patricia **Burke 7/1/15** Burke is a writer for CEO Insight “CIOs Need to Address Growing Cyber-Crime Threats” <http://www.cioinsight.com/security/cios-need-to-address-growing-cyber-crime-threats.html> / EM

Aside from a communications gap, increased **cyber-attacks will cost enterprises millions, and not just because of down time and lost productivity.** Within three years, due to the increase in cyber-attacks and cyber-terrorism, **organizations will be facing the need to invest more in compliance with mandates on critical infrastructure protection and national cyber-defense strategies,** according to the report. The study, titled “The Global Megatrends in Cybersecurity 2015,” questioned 1,006 cyber security CIOs, CISOs and senior IT leaders. It revealed that within the current state of cyber-security across surveyed organizations: * Less than one-half of respondents (47 percent) believe their organizations take appropriate steps to comply with the leading cyber-security standards. *Only one-third of those surveyed believe their organizations are prepared to deal with the cyber-security risks associated with the Internet of things (IoT) and the proliferation of IoT devices. *Fewer than half of all respondents (47 percent) said their organizations have sufficient

resources to meet cyber-security requirements. *Two-thirds (66 percent) of those surveyed indicated their organizations need more knowledgeable and experienced cyber-security practitioners. "You don't have to wait until you're attacked to take cyber-security seriously," said Jack Harrington, vice president of cyber-security and special missions at Raytheon Intelligence, Information and Services. "Rallying around the cyber-security issue is critical to address the real threats we face as a global society." Many security leaders believe the next three years will determine if organizations can win the cyber-war, according to the study. Understanding the trends that will impact organizations will help IT leaders make more informed decisions about investments in people, processes and technologies.

Cyber-attacks will destroy the economy

Carter **Dougherty**, 8-30-2014, "Next Big Bailout for U.S. Banks Could Be Forced by Cyber-Attack," Bloomberg,

<http://www.bloomberg.com/news/articles/2014-08-29/next-u-s-bank-bailout-could-come-after-a-cyber-terror-attack>

Bankers and U.S. officials have warned that cyber-terrorists will try to wreck the financial system's computer networks. What they aren't saying publicly is that taxpayers will probably have to cover much of the damage. Even if customers don't lose money from a hacking assault on JPMorgan Chase & Co., the episode is a reminder that banks with the most sophisticated defenses are vulnerable. Treasury Department officials have quietly told bank insurers that in the event of a cataclysmic attack, they would activate a government backstop that doesn't explicitly cover electronic intrusions, two people briefed on the talks said. "I can't foresee a situation where the president wouldn't do something via executive order," said Edward DeMarco, general counsel of the Risk Management Association, a professional group of the banking industry. "All we're talking about is the difference between the destruction of tangible property and intangible property." The attack on New York-based JPMorgan, though limited in scope, underscored how cyber assaults are evolving in ferocity and sophistication, and turning more political, possibly as a prelude to the sort of event DeMarco describes. Not simply an effort to steal money, the attack looted the bank of gigabytes of data from deep within JPMorgan's network. And bank security officials believe the hackers may have been aided by the Russian government, possibly as retribution for U.S. sanctions over the Ukraine war.

Cyber-crime will collapse the economy

Matt **Egan**, 7-22-2013, "Report: Cyber Crime Costs Global Economy Up to \$500B a Year," Fox Business, <http://www.foxbusiness.com/technology/2013/07/22/report-cyber-crime-costs-global-economy-up-to-1-trillion-year/>

Cyber evildoers are inflicting serious damage to the world's already-sluggish economy. According to a newly-released report sponsored by McAfee, global cyber activity is costing up to \$500 billion each year, which is almost as much as the estimated cost of drug trafficking. In the U.S. alone, the report estimates that cyber crime is the catalyst behind the loss of as many as 500,000 jobs as companies grapple with the loss of coveted intellectual property, confidential strategies that are snooped on, and suffer reputational harm. "Extracting value from the computers of unsuspecting companies and government agencies is a big business," the 20-page report from McAfee and the Center for Strategic and International Studies says. "These losses could just be the cost of doing business or they could be a major new risk for companies and

nations as these illicit acquisitions damage global economic competitiveness and undermine technological advantage," the report said.

Biggest threat

Cyberwarfare is a bigger threat than terrorism- Experts agree

Michael Pizzi January 7,, 1-7-2014, "Cyberwarfare greater threat to US than terrorism, say security experts," No Publication, <http://america.aljazeera.com/articles/2014/1/7/defense-leaders-saycyberwarfaregreatestthreattous.html>

Cyberwarfare is the greatest threat facing the United States – outstripping even terrorism – according to defense, military, and national security leaders in a Defense News poll, a sign that hawkish warnings about an imminent “cyber Pearl Harbor” have been absorbed in defense circles. That warning, issued by then Secretary of Defense Leon Panetta in Oct. 2012, struck many as a fear-mongering plug for defense and intelligence funding at a moment when many in the United States, including 32 percent of those polled by the same Defense News Leadership Poll, believe the government spends too much on defense. But 45 percent of the 352 industry leaders polled said cyberwarfare is the gravest danger to the U.S., underlining the government’s shift in priority – and resources – towards the burgeoning digital arena of warfare. In 2010, the Pentagon created the U.S. Cyber Command, under the helm of NSA director Gen. Keith Alexander, to better prepare the U.S. for a potential attack on digital infrastructure. Later that year, U.S. Deputy Secretary of Defense William Lynn said cyberspace had become “just as critical to military operations as land, sea, air, and space.” The nebulous term “cyberwarfare” refers to full-on conflict between countries or terror groups featuring digital attacks on computer systems. But its more devastating, violent impacts are considered by many analysts to be largely theoretical at this point. Looming fears of cyber attacks on pacemakers of world leaders, for instance, have inspired movie plots and television shows but are not known to have occurred, noted Morgan Marquis-Boire, a security researcher at the University of Toronto's Citizen Lab. “At the moment, this is all set in the realm of science fiction.” Marquis-Boire said the most kinetic cyberattack to date was probably the Stuxnet worm that attacked Iran’s Natanz nuclear enrichment facility in 2010, stoking fears of a cyber-triggered nuclear terror attack. In the U.S., the most prominent cyber attacks have targeted websites, including the Syrian Electronic Army’s infamous White House bomb hoax that briefly caused a 140-point drop in the Dow Jones Industrial Average. But the classic fear is that enemy hackers – from countries like Iran, China, or Russia – could infiltrate the U.S. power grid, shutting down government agencies, crashing planes into buildings, and grinding the economy to a halt. And though it has yet to happen, security experts say a large-scale attack on the U.S. power grid that could inflict mass casualties is within the realm of possibility. The North American Electric Reliability Corporation reported in 2009 that the U.S. grid remains susceptible to infiltration despite substantial government investment in securing it. “We do have a security problem whereby life is rushing towards the Internet faster than we’re developing Internet security,” said Marquis-Boire. “Many of these systems weren’t built in a cyberwarfare age. We weren’t worried about cyberwarfare when we built the national power grid, and it’s difficult to retrofit security.” The impact of such an attack could be devastating. Massive power outages could not only unleash chaos, they could also distract from a simultaneous military – or terrorist – attack. That latter concern – that cyber war tactics might blur with traditional terrorism – were underlined in June 2012, when information security expert Eugene Kaspersky announced his lab’s discovery of the Flame virus that targeted computers in Iran. “It’s not cyber war, its cyber terrorism and I’m afraid it’s just the beginning of the game,” Kaspersky said at a conference in Tel Aviv. “I’m afraid it will be the end of the world as we know it.” A few months later, Panetta compounded fears when he warned of a “new, profound sense of vulnerability” in the U.S. due to the prospect of cyberwarfare. But with the exception of several high-profile hacking incidents of websites, the American public has yet to experience any sort of large-scale attack on U.S. infrastructure, let alone American lives. Despite the improbability of a full-on cyber conflict, analysts say they are not surprised the nebulous threat posed by cyberwarfare has struck fear in American hearts. “The capability is out there to launch a large-scale cyberattack resulting in loss of life or property damage, and potential targets are in some sense infinite, because everything is connected to computers in one way or the other,” said Tara Maller, a research fellow with the National Security Studies program at the New America Foundation and a former military analyst for the CIA. “But do I think it is very likely another country would launch a cyber attack of this type on the U.S. right now?” No, because I think

there is some level of cyber deterrence that exists between states," she said. The prospect of cyberwarfare between world powers might be compared to a nuclear standoff: Unless geopolitical dynamics shift, it's difficult to envision a viable scenario whereby any state's capacity to wreak havoc and mass casualties is actually deployed. A "cyber" Pearl Harbor – like the real one – could spark a world war. "I don't think there's any country right now where tensions are high enough for the state to essentially carry out an act of war against the U.S.," added Maller. "It could make more sense for a terrorist group, but they have more limited capabilities."

Drones Terror DA Northwestern

1NC Shell

Border Security has more funding but it's on the brink

O'Toole 14 – (Molly, politics reporter for Defense One, covered national and international politics for Reuters, The Nation, the Associated Press and Newsweek International, among others, "Top General Says Mexico Border Security Now 'Existential' Threat to U.S.", 7/5/14, <http://www.defenseone.com/threats/2014/07/top-general-says-mexico-border-security-now-existential-threat-us/87958/>, AB)

A top United States general in charge of protecting the southern border says he's been unable to combat the steady flow of illegal drugs, weapons and people from Central America, and is looking to Congress for urgent help. Marine Corps Gen. John Kelly, commander of U.S. Southern Command, has asked Congress this year for more money, drones and ships for his mission – a request unlikely to be met. Since October, an influx of nearly 100,000 migrants has made the dangerous journey north from Latin America to the United States border. Most are children, and three-quarters of the unaccompanied minors have traveled thousands of miles from El Salvador, Guatemala and Honduras. "In comparison to other global threats, the near collapse of societies in the hemisphere with the associated drug and [undocumented immigrant] flow are frequently viewed to be of low importance," Kelly told Defense One. "Many argue these threats are not existential and do not challenge our national security. I disagree." In spring hearings before the Senate and House Armed Services Committees, Kelly said that budgets cuts are "severely degrading" the military's ability to defend southern approaches to the U.S. border. Last year, he said, his task force was unable to act on nearly 75 percent of illicit trafficking events. "I simply sit and watch it go by," he said. But the potential threats are even greater. Kelly warned that neglect has created vulnerabilities that can be exploited by terrorist groups, describing a "crime-terror convergence" already seen in Lebanese Hezbollah's involvement in the region. "All this corruption and violence is directly or indirectly due to the insatiable U.S. demand for drugs, particularly cocaine, heroin and now methamphetamines," Kelly told Defense One, "all of which are produced in Latin America and smuggled into the U.S. along an incredibly efficient network along which anything – hundreds of tons of drugs, people, terrorists, potentially weapons of mass destruction or children – can travel, so long as they can pay the fare." With the Obama administration calling the flow of children in the U.S. a humanitarian crisis, even some of the most outspoken proponents of immigration reform in Congress are calling for a greater focus on security. At the same time, they demand a long-term strategy from the State Department and U.S. Agency for International Development, which manages foreign aid and assistance. "While the deployment of U.S. military assets and personnel rightfully prioritizes national security challenges in the Middle East and Central Asia, U.S. Southern Command (SOUTHCOM) is only sourced at five percent of the capacity it needs," Senate Foreign Relations Committee Chair Sen. Bob Menendez, D-N.J., and other leading reform Democrats said in a statement last month, introducing a 20-point plan to address the crisis. "This is a humanitarian and refugee crisis. It's being caused in large measure by thousands in Central America who believe it is better to run for their lives and risk dying, than stay and die for sure," Menendez said. "The bottom line is that we must attack this problem from a foreign policy perspective, a humanitarian perspective, a criminal perspective, immigration perspective, and a national security perspective." The Democratic coalition wants increased funding and resources for SOUTHCOM and the State Department's Central American Regional Security Initiative. For fiscal 2015, the Obama administration requested \$130 million for the program, which covers seven countries, but that ask is a decrease of \$30 million from the current year, the senators noted. Homeland Security Secretary Jeh Johnson has said an additional \$161.5 million will be provided for CARSI programs to "respond to the region's most pressing security and governance challenges" – but the administration has made no mention of additional resources for the U.S. military.

Drones key to deter terrorists on border

Patrick **Svitek 13**, covers Texas state government and politics, August 13, 2014 “FAA, Perry apparently at odds over border drones”, <http://www.houstonchronicle.com/politics/texas-take/article/FAA-Perry-apparently-at-odds-over-border-drones-5687716.php>, AB)

For years, Gov. Rick Perry has been calling for drones to monitor the Texas-Mexico border as a way to fight the influx of illegal immigrants and the crime that he says accompanies it. More recently, he has used the issue to rail against the federal government, calling out the Federal Aviation Administration for refusing to allow Texas to use unmanned aircraft. Perry on Wednesday raised the demand for drones twice, first during a news conference at a National Guard training center in Bastrop and then an interview on Fox News in which host Neil Cavuto asked Perry what it will take to secure the border. “That’s going to require boots on the ground, it’s going to require strategic fencing in the metropolitan areas and it’s going to require a substantial number of aviation assets, which by the way, the FAA will not let us use drones at this particular point in time for looking down – unarmed drones to look down twenty-four seven in all types of weather so that we can have these fast-response forces move in and make apprehensions,” Perry answered. “If the FAA would allow that, it would be substantial help. Those are the three things that need to happen for the American people to be comfortable that this country is being secured on the southern border.” Using unmanned aircraft in an effort to secure the border is not a novel idea. Customs and Border Protection already operates hundreds of drones in the region, and President Barack Obama has asked Congress to approve \$39.4 million for what the White House calls “air surveillance capabilities” along the border.

ISIS currently has nuclear weapons and could supply them through the border without protection

Edwin **Mora 13**, BreitbartNews Staff Writer: Primarily covers defense and national security, “DABIQ: ISIS COULD TRANSPORT NUKE FROM NIGERIA INTO U.S. THROUGH MEXICO”, 6/3/15, <http://www.breitbart.com/national-security/2015/06/03/dabiq-isis-could-transport-nuke-from-nigeria-into-u-s-through-mexico/http://www.breitbart.com/national-security/2015/06/03/dabiq-isis-could-transport-nuke-from-nigeria-into-u-s-through-mexico/>, AB)

The Islamic State (ISIS/ISIL), in the latest edition of its propaganda magazine, indicated that it could purchase a nuclear weapon in Pakistan, take it to Nigeria, and then smuggle it into the U.S. through Mexico by using existing trafficking networks in Latin America. In an op-ed article published in the ninth edition of ISIS’ Dabiq magazine released in late May, the jihadist group claims it could transport a nuclear device in the same way illicit drugs are smuggled into Europe through West Africa, adding that Boko Haram’s presence in Nigeria could facilitate the transaction. The Nigeria-based Islamic terrorist group, Boko Haram, pledged allegiance to ISIS in March. In March, Gen. John Kelly, commander of U.S. Southern Command (Southcom), warned that Islamic terrorist groups such as ISIS could exploit the capabilities and knowledge of Latin American smuggling networks to infiltrate the U.S. through Mexico and possibly bring in weapons of mass destruction. The general, in October 2014, acknowledged that illegal drugs from South America move “through West Africa, up the Maghreb and into Western Europe,” adding that ISIS enemy al Qaeda and its affiliates take “a lot of money to allow it to flow.” According to the alleged author of the Dabiq op-ed article, kidnapped British photojournalist John Cantlie, ISIS could smuggle a nuke into the U.S. by using the same route and reversing the flow—moving the nuke from West Africa into South America, from where it could be transported into the United States through Mexico. “Let me throw a hypothetical operation onto the table,” Cantlie wrote in the article

entitled "The Perfect Storm." "The Islamic State has billions of dollars in the bank, so they call on their wilayah [province] in Pakistan to purchase a nuclear device through weapons dealers with links to corrupt officials in the region." He added: The weapon is then transported over land until it makes it to Libya, where the mujāhidīn [fighters] move it south to Nigeria. Drug shipments from Columbia bound for Europe pass through West Africa, so moving other types of contraband from East to West is just as possible. The nuke and accompanying mujāhidīn arrive on the shorelines of South America and are transported through the porous borders of Central America before arriving in Mexico and up to the border with the United States. "From there it's just a quick hop through a smuggling tunnel and hey presto, they're mingling with another 12 million 'illegal' aliens in America with a nuclear bomb in the trunk of their car," he also wrote. If not a nuke, ISIS could easily smuggle in "a few thousand tons of ammonium nitrate explosive" that is easy to manufacture, said the article. Cantlie wrote that ISIS, which started as a movement in Iraq, has suddenly morphed into a global phenomenon that the West and the democratic world as a whole is ill-prepared to handle. He said that Boko Haram controls most of Nigeria, home to "an exhausted and smashed national army that is now in a virtual state of collapse". While testifying before the Senate Armed Services Committee in March, Gen. Kelly noted, "Last year, ISIS adherents posted discussions on social media calling for the infiltration of the U.S. southern border. Thankfully, we have not yet seen evidence of this occurring, but I am deeply concerned that smuggling networks are a vulnerability that terrorists could seek to exploit." "While there is not yet any indication that the criminal networks involved in human and drug trafficking are interested in supporting the efforts of terrorist groups, these networks could unwittingly, or even wittingly, facilitate the movement of terrorist operatives or weapons of mass destruction toward our borders, potentially undetected and almost completely unrestricted," he added. The general, speaking at the National Defense University in Washington, D.C. in October 2014, warned that Latin American drug cartels were working with jihadist groups in West Africa, namely Sunni group Al Qaeda in the Islamic Maghreb and its affiliates.

An ISIS attack through the border causes extinction

Jon **Austin 6/11**, reporter for express, "Is Chuck Norris right about 'ISIS 'smuggling nuke into US for 9/11 anniversary strike?'" , 6/11/15, <http://www.express.co.uk/news/world/583537/Chuck-Norris-Islamic-State-ISIS-nuclear-weapons-US-attack-9-11-September-11-anniversary>, AB)

Norris said he believes the reason the US army is mysteriously amassing in seven southern states is to prevent ISIS smuggling a dirty bomb into the country and destroying cities. He pointed to how ISIS sources have already claimed the group has obtained the 40kg of uranium compounds seized from Mosul University last July. Norris said will \$2 billion in seized assets they had the buying power to bribe corrupt officials in Pakistan for the remaining equipment and know how to build a bomb, which could then be exported to Libya, onto Nigera, South American and into the US. Last night, after www.express.co.uk exclusively revealed the martial arts experts' theory, it emerged Ms Bishop was saying Nato members are growing increasingly worried about radioactive material seized by the terror group, with fears that it could be turned into a nuclear weapon. She fears ISIS fighters have stolen or captured the toxic loot from government-controlled research centres and hospitals across the region. The radioactive matter is thought to have been destined for use by authorities for health and science research - but it has now fallen into the hands of ISIS radicals. The most likely place to get it from is Pakistan, she said. Ms Bishop claimed the jihadi organisation had recruited "highly technically trained professionals" and was already using chlorine as a weapon She added that ISIS was "prepared to use any and all means, any and all forms of violence they can think of, to advance their demented cause. "That includes use of chemical weapon." A former commander of the British army's chemical weapons unit has also spoken out in support of the Australian foreign minister and Chuck Norris' comments, calling the development of a dirty bomb by ISIS a "very real threat". Hamish de Bretton-Gordon also described as "worrying" reports that ISIS fighters had got hold of chemical weapons previously controlled by Syrian president Bashar al-Assad's troops. Middle East expert Afzal Ashraf told Express.co.uk that the group's long-term plan hinged on obtaining the deadly weapon. He said: "The most likely place to get it from is Pakistan." There are fears the group's campaign of terror could escalate in the coming month to mark the start of Ramadan on June 18. ISIS has in the past carried out major operations to coincide with the Islamic holy month. Express.co.uk last night revealed Norris wanted more action from US President Obama and joked the solution to defeating ISIS is to "send 'em all to Mars" The US Air-force vet-turned martial arts expert went public with his theory following questions about the mysterious Jade Helm15 US military operation in seven southern US states which

begins next month and lasts until the end of September. The 75-year-old, now a Christian evangelist, believes it is a show of strength and a bid to stop the world's deadliest Jihadist movement smuggling nuclear arms into the states to set it off around the anniversary of 9/11. We reported this week how conspiracist website Whistleblower800 believed to have cracked what Jade Helm was all about - suggesting it was to get troops ready to deal with predicted anarchy in the days before an asteroid that would wipe out the world was about to hit from September 22 to 28. Other conspiracists have said Jade Helm is about bringing martial law in or seizing guns from the public. Norris agrees the world is at risk in September, but does not agree with the asteroid theory, or any of the other Jade Helm predictions. He instead fears it could be the onset of a global nuclear war. After serving in the air force, Norris became a martial arts expert, before starring in a slew of kung fu and action movies from 1968 onwards. He starred alongside Bruce Lee in Way of the Dragon and the Missing in Action trilogy. More recently, the actor who holds "conservative political views", had a starring role in the TV series Walker, Texas Ranger from 1993 until 2001. Writing on the WND Commentary website, he said: "I believe Jade Helm 15 is more than 'just a training exercise,' and I think ISIS just gave us the clue. "I do believe, in addition to the largest domestic military training, it is also a display of power intended for deterrence of enemies like ISIS, whom the FBI has already said have tentacles in all 50 states. "And guess who just released its intent to smuggle nuclear weapons across the U.S.-Mexico border? You guessed it. ISIS. "ISIS even has a nuclear plan." Norris went on to describe a theory, based on international news and website reports and ISIS' own propaganda, which claims how the terrorist could smuggle a warhead into America. He explained how Nigerian newspaper Premium Times reported that Nigerian Jihadists Boko Haram, which has pledged allegiance to ISIS, could carry out the nuclear bomb import into the US as easy as smugglers use drug routes from east to west. He added the extremists and "the nuke" could move through south America's porous borders to Mexico - just a short hop into the states with a "nuclear bomb in the trunk of their car." He added: "This isn't fiction, fairytale or conspiracy. I'm talking about the US government not sticking its heads in the sand or at least asking us to stick ours in it. Washington needs to quit downplaying or minimising the nuclear risk, lest we find ourselves right back in the unprepared era of pre-9/11."

UQ: Border Security Effective

Drone border security is effective at facilitating security now

Andrew **O'Reilly 14**, reporter for Fox News Latino “Drones Get More Space To Roam Over Texas: FAA Approves Runway For Unmanned Aircrafts”, 9/12/14, <http://latino.foxnews.com/latino/money/2014/09/12/drones-get-more-space-to-roam-over-south-texas-faa-approves-extended-range/>, AB)

In 2012, Congress passed legislation directing the FAA to integrate unmanned aerial systems into the nation's airspace by 2015. The test sites, like the one in South Texas, are the FAA's way of gathering data to deal with privacy and safety issues, like how to keep the drones from flying into other objects. The military and some law enforcement agencies already employ the devices, but the FAA doesn't currently allow commercial use of drones. While the FAA is working to develop the guidelines for use by the end of 2015, officials concede the project may take longer. The agency projects some 7,500 commercial drones could be aloft within five years of getting widespread access to the skies above America. Texas is also one of the front lines for military and law enforcement drone use, as the Department of Homeland Security and Immigration and Customs Enforcement uses drones to patrol for undocumented immigrants and drug traffickers illegally crossing the border between the Lone Star state and Mexico. The federal government also uses Texas as a jump-off point for drones used in drug interdictions throughout the Caribbean. Texas Gov. Rick Perry has called on the administration of President Barack Obama saying it needs to get much tougher on the U.S.-Mexico border by putting more drones in the air to secure it. The use of drones along the U.S. borders with Canada and Mexico began several years ago. The U.S. Customs and Border Protection currently has eight Predators in the skies along the northern and southern borders with an additional two drones patrolling the Caribbean.

Link: Border Security k2 stop Terror

Border security is key to stop ISIS

Trujillo 14 – (Mario, reporter for The Hill, “Paul: Secure border to prevent ISIS ‘infiltration’”, 9/6/14, The Hill, <http://thehill.com/policy/defense/216652-paul-warns-of-possible-isis-infiltration-through-us-border>. AB)

Sen. Rand Paul (R-Ky.) on Thursday warned that **terrorists from the Islamic State in Iraq and Syria could infiltrate the United States through the southern border. "We must also secure our own borders and immigration policy from ISIS infiltration."** Paul said in an op-ed in Time magazine that outlined his strategy for dealing with the group. **"Our border is porous, and the administration, rather than acting to protect it, instead ponders unconstitutional executive action,** legalizing millions of illegal immigrants," he added. Paul, a potential presidential candidate, said the immigration system needs a full-scale review, pointing to a recent ABC report that found more than 6,000 foreign nationals in the country had disappeared on expired student visas. **"This is inexcusable** over a decade after we were attacked on 9/11 by hijackers including one Saudi student who overstayed his student visa," he said. Paul called for revoking the visas of any U.S. citizens fighting with ISIS overseas. His comments echo a warning from another potential GOP presidential contender, Texas Gov. Rick Perry. Perry went further last month, saying that **ISIS militants might have already crossed the border** though he acknowledged there is no evidence of that. The Pentagon has said **ISIS has aspirations to hit Western targets**, but the military has "seen no indication that they are coming across the border with Mexico. We have no information that leads us to believe that," Rear Adm. John Kirby said last month.

Drones are key to solve illegal border crossings

CBS 14, CBS DC, “Gov. Perry Wants Drones To Be Used Along US-Mexico Border”, July 7, 2014, <http://washington.cbslocal.com/2014/07/07/gov-perry-wants-drones-to-be-used-along-us-mexico-border/>, AB)

Texas Gov. Rick Perry is **calling for drones to be used along the U.S.-Mexico border in an effort to deter immigrants from illegally crossing into the U.S.** “So the issue is, this president understands now that **we have a huge problem on our southern border. We have to deal with it,**” Perry told ABC News. “And **I don’t think you’re going to be able to address it until you put the resources there, and that’s boots on the ground. We’re asking for the FAA to allow for drones to be used.”** More than 50,000 unaccompanied minors have been caught on the U.S.-Mexico border this year. Most are from Guatemala, Honduras and El Salvador, where a spike in violence and poverty are prompting parents to send their children on difficult and dangerous journeys north. Perry pointed the blame at President Barack Obama, calling it **a “failure of leadership from the administration.” “The federal government is just absolutely failing.** We either have an incredibly inept administration, or they’re in on this somehow or another,” Perry told ABC News. “I mean I hate to be conspiratorial, but I mean how do you move that many people from Central America across Mexico and then into the United States without there being a fairly coordinated effort?” Perry stated that he personally warned the White House years ago about a potential border crisis. “We have been bringing to the attention of President Obama and his administration since 2010,” Perry detailed to ABC News. “... **Unless we secure our southern border, this is going to continue to be a massive amount of individuals that are coming to the United States.** And, frankly, we don’t have a place to house them as it is. And if we have a major event, a hurricane that comes in to the Gulf Coast, I don’t have a place to be housing people who are displaced.” Perry also claimed that Obama doesn’t care whether or not the border is secure. “I don’t believe he particularly cares whether or not the border of the United States is secure. And that’s the reason there’s been this lack of effort, this lack of focus, this lack of resources,” Perry told ABC News. Homeland Security Secretary Jeh Johnson said Sunday the administration has dramatically sped up the processing of adults who enter the country illegally, and it is opening more detention facilities. He acknowledged that the unaccompanied children from Central America, some 9,700 taken into custody in May alone, pose the most vexing problem. All persons, regardless of age, face “a deportation proceeding” if they are caught entering the country illegally, Johnson said. The administration, he said, is “looking at ways to create additional options for dealing with the children in particular, consistent with our laws and our values.” Repeatedly pressed to say whether thousands of Central American children will be deported promptly, Johnson said, “we need to find more efficient, effective ways to turn this tide around generally, and we’ve already begun to do that.” On June 18, Perry announced that **the state would steer another \$1.3 million per week to the**

Department of Public Safety to assist in border security through at least the end of the year. He followed that two days later with a letter inviting Obama to see the crisis firsthand.

Drones solve drug trafficking and check cartels

Spencer **Ackerman 11**, reporter for Wired, “U.S. Drones Are Now Sniffing Mexican Drugs”, 3.6.11, <http://www.wired.com/2011/03/u-s-drones-are-now-sniffing-mexican-drugs/>, (AB)

But now the drones are taking on a new mission: hunting drug gangs in Mexico. According to a previously undisclosed agreement between President Barack Obama and his Mexican counterpart, Felipe Calderon, the Pentagon is authorized to fly unmanned surveillance flights over Mexico, a big expansion of U.S.-Mexico information-sharing on counternarcotics. One of the drones used for the mission is the Air Force’s Global Hawk, reports The New York Times. The drone soars at up to 60,000 feet with a multitude of sensors. (Calm down, it’s unarmed.) It’s not known how many flights the Global Hawk has made above Mexico. But the Times reports that the drones helped catch the killers of Jaime Zapata. He was one of two special agents of the U.S. Immigration and Customs Enforcement service who were shot on the road between Mexico City and Monterrey. The drone flights are part of an expansion of U.S.-Mexican antidrug cooperation that’s risen to match the furious violence brought by the drug cartels. (Violence, the Mexican government is quick to point out, that relies on trafficked American guns.) In the heart of Mexico City, at 265 Paseo de la Reforma, an office building is stacked with U.S. intelligence, law enforcement and military officials from the FBI, CIA, NSA and many other agencies. According to the Times, a second “fusion center” to merge U.S. and Mexican intel will soon open. It’s not clear if that center, the previous one or a different facility receives data swooped up by the Global Hawks. Nor is it clear what role if any the Mexican government plays in directing the drone flights. An anonymous U.S. official quoted by the Times’ Ginger Thompson and Mark Mazzetti asserts that “counternarcotics activities [are] conducted at the request and direction of the Mexican government.” Still, welcome to yet another civilian mission for the drones. A much smaller unmanned spy vehicle, colloquially known as the Flying Beer Keg, is now in the hands of Miami-Dade police (who, it should be noted, also hunt for drugs, if Rick Ross is to be believed). And, while the Department of Homeland Security isn’t so enthusiastic about using drones for bomb detection inside the United States, the Federal Aviation Administration is slowly warming to the idea of remotely piloted planes inside U.S. airspace. There are also Global Hawks flying in support of Japan’s earthquake- and tsunami-relief efforts. No wonder Defense Secretary Robert Gates told the Air Force that the era of the drone will outlast the Iraq and Afghanistan wars. Terrorists and insurgents have already had to make adjustments to the drones hunting them overhead. Now it’s the cartel’s turn to adjust.

I/L: ISIS slips through border

ISIS can cross border, leads to WMD use

Inquisitr 14, cites several border reports and Sen. Jim Inhofe, "ISIS Terrorist Group Developing WMD Bomb To Blow Up U.S. Cities, Claims Senator Jim Inhofe", August 22, 2014, <http://www.inquisitr.com/1427802/isis-terrorist-group-developing-wmd-bomb-to-blow-up-u-s-cities-claims-senator-jim-inhofe/>, AB)

The possibility of the **ISIS terrorist group attacking America** has Senator Jim Inhofe claiming that **ISIS' WMD capabilities may include developing a bomb big enough to destroy a U.S. city**. In a related report by The Inquisitr, even Osama bin Laden and al Qaeda apparently think ISIS is too wicked and before the infamous al Qaeda leader was killed he was discussing disavowing any ties with the ISIS terrorist group. **The Islamic terrorist group is now the richest in the world and apparently the best organized** since it's believed that ISIS sleeper cells are **allegedly planning a large scale terror attack within the United States**. The full extent of ISIS' WMD capabilities have been debated by the experts ever since it was revealed that the ISIS in Iraq had uncovered Saddam Hussein's WMD stockpiles. The **ISIS terrorist group even managed to recover nuclear materials in addition to chemical weapons** secreted in different locations throughout Iraq. But many experts concluded that ISIS should not have the expertise necessary to create even a dirty bomb, never mind a full functioning WMD like a nuclear weapon. It was even believed that finding Iraq's WMD stockpiles may actually pose more of a danger to the Islamic fighters themselves since it was assumed they could hurt themselves in the process of attempting to make a functioning WMD. Regardless, the ISIS terrorist group **has begun making threats targeted at America**, even going so far as to claim they'll plant their black flag on the White House and issuing bomb threats against President Obama. Oklahoma Republican Sen. Jim Inhofe is warning that the **ISIS terrorist group may be attempting to develop a weapon capable of blowing up a major city in the United States: "We're in the most dangerous position we've ever been in as a nation.** They're crazy out there, and **they're rapidly developing a method of blowing up a major U.S. city**, and people just can't believe that's happening. [President Obama is] going to have to come up with something that we're going to do because they're holding another hostage in place and the problem is, the president says all these things and he never does them." The Department of Homeland Security also recently issued a statement discussing the possibility of an ISIS terrorist attack in America: "ISIL members and supporters will almost certainly continue to use social media platforms to disseminate their English-language violent extremist messages. Although we remind first responders that content not explicitly calling for violence may be constitutionally protected, we encourage awareness of media advocating violent extremist acts in particular locations or naming particular targets, to increase our ability to identify and disrupt potential Homeland threats. We urge state and local authorities to promptly report suspicious activities related to homeland plotting and individuals interested in traveling to overseas conflict zones, such as Syria or Iraq, to fight with foreign terrorist organizations." Texas Governor Rick Perry has also been warning the nation that **members of the ISIS terrorist group could sneak across the Mexican border** because the illegal immigrant crisis has kept so many border patrol agents busy. An Osama bin Laden impersonator recently made that point by making a video showing himself sneaking across the U.S. border undetected while dressed as a terrorist. Both the Pentagon and Mexican authorities dismissed the possibility that ISIS agents are operating inside of Mexico.

ISIS and terrorists are here now

Monica **Cantilero 7/1**, "ISIS could smuggle fighters, weapons into US via Mexican tunnels, says ex-FBI agent", July 1 2015, <http://www.christiantoday.com/article/isis.could.smuggle.fighters.weapons.into.us.via.mexican.tunnels.says.ex.fbi.agent/57653.htm>, AB)

A former FBI agent has warned that **tunnels used by drug dealers to smuggle drugs and cash into the US from Mexico could be used by the Islamic State to move its jihadist fighters, including suicide bombers and even a nuclear warhead, into the United States.** "Drug dealers have **found a way to move money without it being followed**," said former FBI agent Tyrone Powers during a recent remark on national television. "**They found a way to move people in and out and they found a way to move product.**"

ISIS agents may find a way to enter the US and "may be, at some point, suicide bombers, which is really scary, and then weapons of mass destruction," said Powers. Two major drug cartels that could be involved are the Sinaloa Federation, which controls western Mexico's borders from Texas to California, and the Los Zetas, which occupies eastern Mexico. Experts say al-Qaeda once tried to establish links with Mexican drug lords, Newsmax reported. "It makes logical sense for ISIS to do this," said Powers. "But I do not think they'll be catching the intelligence agencies off guard, because this has been a persistent problem whether it was al-Qaeda or any other group." Mexico's unstable leadership mixed with drug cartels can create a dangerous concoction that could be used by ISIS, according to experts. "What's been going on in Mexico creates an opportunity for any organisation to try to take advantage of it, whether it's ISIS or Al Shabbab," said Brandon Behlendorf, a terrorist targeting strategist. The jihadist group claimed earlier this month that it plans to acquire a nuclear weapon from Pakistan and to sneak it into US territory using drug and human smuggling routes. Judicial Watch reported in April that ISIS is managing a camp in northern Mexico just a few miles from El Paso, Texas, and that "coyotes" of the Juarez Cartel are helping to "move ISIS terrorists through the desert and across the border between Santa Teresa and Sunland Park, New Mexico." ISIS fighters are also being smuggled "through the porous border between Acala and Fort Hancock, Texas." The locations are being eyed by ISIS "because of their understaffed municipal and county police forces, and the relative safe-havens the areas provide for the unchecked large-scale drug smuggling that was already ongoing." In a related development, the CIA is now reassessing the view that the ISIS is mostly a "regional threat" following the "Bloody Friday" attacks that covered three countries on different continents. The group is transforming into a global threat because of its ability to "evangelise followers," said retired Army Col. Peter Mansoor, who helped create the US military campaign against al-Qaeda.

Impact UQ: ISIS has nukes

They have nukes

Eben **Blake 6/3**, covering general affairs at IBTimes in New York City, previously worked at The Brown Daily Herald as the Arts and Culture Editor, June 03 2015 "Islamic State Nuclear Weapons: ISIS Claims It Can Smuggle Devices Through Nigeria, Mexico To The United States", <http://www.ibtimes.com/islamic-state-nuclear-weapons-isis-claims-it-can-smuggle-devices-through-nigeria-1950280>, AB)

The Islamic State group claims it could purchase a nuclear device from Pakistan and transport it to the United States through drug-smuggling channels. The group, also known as ISIS and ISIL, would transfer the nuclear weapon from Pakistan to Nigeria or Mexico, where it could be brought to South America and then up to the U.S., according to an op-ed allegedly written by kidnapped British photojournalist John Cantlie and published in Dabiq, the group's propaganda magazine. The op-ed said that Boko Haram, the Nigerian jihadist group that announced its formal allegiance to ISIS in March, would make their efforts to transport a weapon to the U.S. much easier, reported Nigerian newspaper Premium Times. ISIS claims the Nigerian army is in a "virtual state of collapse" because of its war against Boko Haram. While U.S. officials have dismissed the ability of the group to acquire or transport a nuclear weapon, Indian Minister of State Defense Rao Inderjit Singh said at the Shangri-La regional security conference in Singapore last weekend that "[w]ith the rise of ISIL in West Asia, one is afraid to an extent that perhaps they might get access to a nuclear arsenal from states like Pakistan," Bloomberg reported. Cantlie describes how ISIL would hypothetically call on supporters in Pakistan to "purchase a nuclear device through weapons dealers with links to corrupt officials in the region," after which it would be "transported overland until it makes it to Libya" when "the mujahedeen move it south to Nigeria." It would then be moved to South America in the same method that "drug shipments bound for Europe pass through West Africa," according to Premium Times. After transporting the device through the "porous borders of South America" to Mexico, it would be "just a quick hop through a smuggling tunnel" to bring the nuclear bomb into America.

Impact Module: Grid

They'd attack the grid from the border – best statistics, this card is great

-9/55,000 is enough for a long-term wipeout

-blackout is widespread

-causes 90% deaths in the US

-could happen tomorrow

-has connection with cartels and other groups to get in

Aaron **Klein 4/19**, weekend radio talk show host, author, and staffer for WorldNetDaily, and columnist for The Jewish Press and Jerusalem Post, "INSIDE THE ISIS-U.S. BORDER SCARE", 04/19/2015, <http://www.wnd.com/2015/04/the-deadly-truth-isis-and-mexican-drug-gangs/>, AB)

ISIS terrorists pose an "imminent" threat to the U.S. electric grid with the capacity to coordinate a devastating assault on our nation's infrastructure, warned a leading homeland security and terrorism expert in a radio interview Sunday. Dr. Peter Pry, a former CIA officer, is executive director of the Task Force on National and Homeland Security and director of the U.S. Nuclear Strategy Forum, both congressional advisory boards. He also served on the Congressional EMP Commission, the Congressional Strategic Posture Commission, and the House Armed Services Committee. "There is an imminent threat from ISIS to the national electric grid and not just to a single U.S. city," said Pry. Pry was speaking on "Aaron Klein Investigative Radio" on New York's AM 970 The Answer. Outlining the threat, Pry recalled a leaked U.S. Federal Energy Regulatory Commission report divulged this past March that coordinated terrorist attacks on just nine of the nation's 55,000 electrical power substations could provoke coast-to-coast blackouts for up to 18 months. Such an attack would mirror the devastating impact of an electromagnetic pulse (EMP) attack without the need for any nuclear device or delivery system. The chances of a major electrical outage across America are now surging. Get your autographed copy of "A Nation Forsaken" which probes this crucial issue. The congressional EMP Commission previously estimated that within 12 months of a nationwide blackout, upwards of 90 percent of the U.S. population could possibly die from disease, lack of food and resources and larger societal breakdown. Speaking to Klein's audience, Pry pointed specifically to the possibility of ISIS immediately hiring Mexican extremists such as the Knights Templar drug cartel, which last year successfully utilized guns and Molotov cocktails to attack numerous Mexican power stations, leaving 11 towns without electricity. "Now those guys are just across our southern border," stated Pry. Pry continued: "That means that ISIS doesn't have to actually come to the United States on those U.S. passports. You know, Obama is always talking about how he's got a phone. Well, ISIS has got a telephone, too. All they've got to do is contact the Knights Templar, wire these guys \$10 million, I mean they'll do anything for money. And say, 'Hey, go across that open U.S. border and take out the electric grid in Arizona, or New Mexico, or Minnesota or New York. Or the entire nation.'" Pry surmised such an attack on the U.S. power grid "wouldn't be difficult for them." "There are ... open-source computer models where you can figure out which are those nine critical transformer substations where if attacked would take down the whole national power grid," he said. "So something like that could be arranged. It could happen tomorrow. It could happen next week." Pry pointed out ISIS allies in al-Qaida last June attacked power lines in Yemen that left the entire nation without power for a day. He took issue with a statement last week from former deputy director of the CIA Mike Morell who said it would take ISIS two to three years to develop the capacity to carry out a 9/11-style attack. Morell stated that "over the long term – two and a half, three years – we need to worry about a 9/11-style attack by ISIS." Countered Pry: "I don't think that's true at all. You know, because they can hire these criminal gangs that are south of our porous border. Or criminal gangs that are already present here." "We also have Muslim terror

cells already in this country that would be willing to do anything for money and it's very easy to attack the electrical grid," he added. Pry also warned of rogue nations such as Iran and North Korea passing ISIS a nuclear device and delivery system, such as a SCUD missile, to launch an actual EMP attack.

A long-term loss of electrical power would cause nuclear reactor meltdowns— guarantees extinction

Hodges 14

Dave, an established award winning psychology, statistics and research professor as he teaches college and university classes at both the undergraduate and graduate level, an established author as his articles are published on many major websites, citing Judy Haar, a recognized expert in nuclear plant failure analyses, "Nuclear Power Plants Will Become America's Extinction Level Event", April 18 2014, www.thelibertybeacon.com/2014/04/18/nuclear-power-plants-will-become-americas-extinction-level-event/

Fukushima is often spoken of by many, as a possible extinction level event because of the radiation threat. Fukushima continues to wreak havoc upon the world and in the United States as we are being bathed in deadly radiation from this event. Because of Fukushima, fish are becoming inedible and the ocean currents as well as the prevailing ocean winds are carrying deadly radiation. Undoubtedly, by this time, the radioactivity has made its way into the transpiration cycle which means that crops are being dowsed with deadly radiation. The radiation has undoubtedly made its way into the water table in many areas and impacts every aspect of the food supply. The health costs to human beings is incalculable. However, this article is not about the devastation at Fukushima, instead, this article focuses on the fact that North America could have a total of 124 Fukushima events if the necessary conditions were present. A Festering Problem Long before Fukushima, American regulators knew that a power failure lasting for days involving the power grid connected to a nuclear plant, regardless of the cause, would most likely lead to a dangerous radioactive leak in at least several nuclear power plants. A complete loss of electrical power poses a major problem for nuclear power plants because the reactor core must be kept cool as well as the back-up cooling systems, all of which require massive amounts of power to work. Heretofore, all the NERC drills which test the readiness of a nuclear power plant are predicated on the notion that a blackout will only last 24 hours or less. Amazingly, this is the sum total of a NERC litmus test. Although we have the technology needed to harden and protect our grid from an EMP event, whether natural or man-made, we have failed to do so. The cost for protecting the entire grid is placed at about the cost for one B-1 Stealth Bomber. Yet, as a nation, we have done nothing. This is inexplicable and inexcusable. Our collective inaction against protecting the grid prompted Congressman Franks to write a scathing letter to the top officials of NERC. However, the good Congressman failed to mention the most important aspect of this problem. The problem is entirely fixable and NERC and the US government are leaving the American people and its infrastructure totally unprotected from a total meltdown of nuclear power plants as a result of a prolonged power failure. Critical Analyses According to Judy Haar, a recognized expert in nuclear plant failure analyses, when a nuclear power plant loses access to off-grid electricity, the event is referred to as a "station blackout". Haar states that all 104 US nuclear power plants are built to withstand electrical outages without experiencing any core damage, through the activation of an automatic start up of emergency generators powered by diesel. Further, when emergency power kicks in, an automatic shutdown of the nuclear power plant commences. The dangerous control rods are dropped into the core, while water is pumped by the diesel power generators into the reactor to reduce the heat and thus, prevent a meltdown. Here is the catch in this process, the spent fuel rods are encased in both a primary and

secondary containment structure which is designed to withstand a core meltdown. However, **should the pumps stop because either the generators fail or diesel fuel is not available, the fuel rods are subsequently uncovered and a Fukushima type of core meltdown commences immediately.** At this point, I took Judy Haar's comments to a source of mine at the Palo Verde Nuclear power plant. My source informed me that as per NERC policy, nuclear power plants are required to have enough diesel fuel to run for a period of seven days. Some plants have thirty days of diesel. This is the good news, but it is all downhill from here. The Unresolved Power Blackout Problem **A long-term loss of outside electrical power will most certainly interrupt the circulation of cooling water to the pools.** Another one of my Palo Verde nuclear power plant sources informed me that there is no long term solution to a power blackout and that all bets are off if the blackout is due to an EMP attack. A more detailed analysis reveals that **the spent fuel pools carry depleted fuel for the reactor. Normally, this spent fuel has had time to considerably decay and therefore, reducing radioactivity and heat. However, the newer discharged fuel still produces heat and needs cooling. Housed in high density storage racks, contained in buildings that vent directly into the atmosphere, radiation containment is not accounted for with regard to the spent fuel racks. In other words, there is no capture mechanism. In this scenario, accompanied by a lengthy electrical outage, and with the emergency power waning due to either generator failure or a lack of diesel needed to power the generators, the plant could lose the ability to provide cooling.** The water will subsequently heat up, boil away and uncover the spent fuel rods which required being covered in at least 25 feet of water to remain benign from any deleterious effects. Ultimately, this would lead to fires as well and the release of radioactivity into the atmosphere. This would be the beginning of another Fukushima event right here on American soil. Both my source and Haar shared exactly the same scenario about how a meltdown would occur. Subsequently, I spoke with Roger Landry who worked for Raytheon in various Department of Defense projects for 28 years, many of them in this arena and Roger also confirmed this information and that the above information is well known in the industry. When I examine Congressman Franks letter to NERC and I read between the lines, it is clear that Franks knows of this risk as well, he just stops short of specifically mentioning it in his letter. Placing Odds On a Failure Is a Fool's Errand An analysis of individual plant risks released in 2003 by the Nuclear Regulatory Commission shows that **for 39 of the 104 nuclear reactors, the risk of core damage from a blackout was greater than 1 in 100,000.** At 45 other plants the risk is greater than 1 in 1 million, the threshold NRC is using to determine which severe accidents should be evaluated in its latest analysis. According to the Nuclear Regulatory Commission, the Beaver Valley Power Station, Unit 1, in Pennsylvania has the greatest risk of experiencing a core meltdown, 6.5 in 100,000, according to the analysis. **These odds don't sound like much until you consider that we have 124 nuclear power generating plants in the US and Canada and when we consider each individual facility, the odds of failure climb. How many meltdowns would it take in this country before our citizens would be condemned to the hellish nightmare,** or worse, being experienced by the Japanese? The Question That's Not Being Asked **None of the NERC, or the Nuclear Regulatory tests of handling a prolonged blackout at a nuclear power plant has answered two critical questions, "What happens when these nuclear power plants run out of diesel fuel needed to run the generators", and "What happens when some of these generators fail"?** In the event of an EMP attack, can tanker trucks with diesel fuel get to all of the nuclear power plants in the US in time to re-fuel them before they stop running? Will tanker trucks even be running themselves in the aftermath of an EMP attack? And in the event of an EMP attack, it is not likely that any plant which runs low on fuel, or has a generator malfunctions, will ever get any help to mitigate the crisis prior to a plethora of meltdowns occurring. Thus, every nuclear power plant in the country has the potential to cause a Chernobyl or Fukushima type accident if our country is hit by an EMP attack. **CAN YOU EVEN IMAGINE 124 FUKUSHIMA EVENTS IN NORTH AMERICA HAPPENING AT THE SAME TIME? THIS WOULD CONSTITUTE THE ULTIMATE DEPOPULATION EVENT.** ...And There Is More... The ramifications raised in the previous paragraphs are significant. What **if the blackout lasts longer than 24 hours?** What if the reason for the blackout is an EMP burst caused by a high altitude nuclear blast and transportation comes to a standstill? **In this instance, the cavalry is not coming.** Adding fuel to the fire lies in the fact that the

power transformers presently take at least one year to replace. Today, there is a three year backlog on ordering because so many have been ordered by China. This makes one wonder what the Chinese are preparing for with these multiple orders for both transformers and generators. In short, our unpreparedness is a prescription for disaster. As a byproduct of my investigation, I have discovered that most, if not all, of the nuclear power plants are on known earthquake fault lines. All of California's nuclear power plants are located on an earthquake fault line. Can anyone tell me why would anyone in their right mind build a nuclear power plant on a fault line? To see the depth of this threat you can visit an interactive, overlay map at this site. Conclusion I have studied this issue for almost nine months and this is the most elusive topic that I have ever investigated. The more facts I gather about the threat of a mass nuclear meltdown in this country, the more questions I realize that are going unanswered. With regard to the nuclear power industry we have the proverbial tiger by the tail. Last August, Big Sis stated that **it is not matter of if we have a mass power grid take down, but it is a matter of when.** I would echo her concerns and apply the "not if, but when" admonition to the possibility of a mass meltdown in this country. **It is only a matter of time until this scenario for disaster comes to fruition.** Our collective negligence and high level of extreme depraved indifference on the part of NERC is criminal because **this is indeed an Extinction Level Event.** At the end of the day, can anyone tell me why would any country be so negligent as to not provide its nuclear plants a fool proof method to cool the secondary processes of its nuclear materials at all of its plants? Why would ANY nuclear power plant be built on an earthquake fault line? Why are we even using nuclear energy under these circumstances? And why are we allowing the Chinese to park right next door to so many nuclear power plants?

AT: Drones are Ineffective

That's a poor reading of the situation – your evidence is based on old metrics, and new policy decisions make funding sustainable

Joshua **Breisblatt 7/8**, Manager of Policy and Advocacy at the National Immigration Forum, "WE ARE MEASURING BORDER SECURITY ALL WRONG", July 8, 2015

<https://immigrationforum.org/blog/we-are-measuring-border-security-all-wrong/>, AB)

There's a better way to define and measure border security, and that's important. Many members of Congress say the border must be secure before Congress addresses other parts of the broken immigration system, but they do not define what that means. But the Bipartisan Policy Center released a report earlier this year that should be a starting point. The report, "Measuring the Metrics: Grading the Government on Immigration Enforcement," examines already available data and identifies additional data that should be used to create an objective set of comprehensive, outcome-based border security performance measures. The report points out we must move away from measures such as how many agents are stationed on the border or how many people are detained and instead adopt output measures that assess achievement and progress. The report includes analysis of some existing output measures, such as whether CBP's consequence delivery system, where individuals are assigned various consequences for crossing the border, actually deters attempts to cross the border, and it offers a critique of how CBP currently measures deterrence. These types of outputs need to be examined when assessing border security. In addition, the Department of Homeland Security (DHS) needs to provide the public with transparent and consistent measures. Currently, DHS does not release many of its measures and uses different metrics from year to year, which makes comparisons very difficult. The lack of publicly available and consistent metrics has contributed greatly to the public's lack of clarity surrounding our nation's border security. It has also made it difficult for members of Congress to hold the agency accountable and to know what additional resources are necessary to secure our border. Any additional increases in border security should be implemented in a smart and conscientious manner. Millions of dollars have been spent in the last decade as more and more money has been poured into border technology, all without metrics to show how truly effective these investments have been. In a positive development, it appears that Congress might be listening. The Department of Homeland Security appropriations bill for fiscal year 2016 the Senate Appropriations Committee approved this month included report language requiring CBP to keep, maintain and publish consistent metrics related to border security. Hopefully, the inclusion of this report language signals the beginning of a shift on how policymakers think about measuring border security.

Prisons Aff Specific

Link: Terror

Abolishing federal prisons would let out a loooooooot of terrorists

Scott **Shane 11**, reporter for the New York Times, “Beyond Guantánamo, a Web of Prisons for Terrorism Inmates”, December 10, 2011, <http://www.nytimes.com/2011/12/11/us/beyond-guantanamo-bay-a-web-of-federal-prisons.html?pagewanted=all>

It is the other Guantánamo, an archipelago of federal prisons that stretches across the country, hidden away on back roads. Today, it houses far more men convicted in terrorism cases than the shrunken population of the prison in Cuba that has generated so much debate. An aggressive prosecution strategy, aimed at prevention as much as punishment, has sent away scores of people. They serve long sentences, often in restrictive, Muslim-majority units, under intensive monitoring by prison officers. Their world is spare. Among them is Ismail Royer, serving 20 years for helping friends go to an extremist training camp in Pakistan. In a letter from the highest-security prison in the United States, Mr. Royer describes his remarkable neighbors at twice-a-week outdoor exercise sessions, each prisoner alone in his own wire cage under the Colorado sky. “That’s really the only interaction I have with other inmates,” he wrote from the federal Supermax, 100 miles south of Denver. There is Richard Reid, the shoe bomber, Mr. Royer wrote. Terry Nichols, who conspired to blow up the Oklahoma City federal building. Ahmed Ressam, the would-be “millennium bomber,” who plotted to attack Los Angeles International Airport. And Eric Rudolph, who bombed abortion clinics and the 1996 Summer Olympics in Atlanta. In recent weeks, Congress has reignited an old debate, with some arguing that only military justice is appropriate for terrorist suspects. But military tribunals have proved excruciatingly slow and imprisonment at Guantánamo hugely costly — \$800,000 per inmate a year, compared with \$25,000 in federal prison. The criminal justice system, meanwhile, has absorbed the surge of terrorism cases since 2001 without calamity, and without the international criticism that Guantánamo has attracted for holding prisoners without trial. A decade after the Sept. 11 attacks, an examination of how the prisons have handled the challenge of extremist violence reveals some striking facts: Big numbers. Today, 171 prisoners remain at Guantánamo. As of Oct. 1, the federal Bureau of Prisons reported that it was holding 362 people convicted in terrorism-related cases, 269 with what the bureau calls a connection to international terrorism — up from just 50 in 2000. An additional 93 inmates have a connection to domestic terrorism.

Most terrorists end up in prison and prisons actually rehabilitate them

Andrew **Silke 14**, Head of Criminology and Director for Terrorism Studies at the University of East London. He is inter- nationally recognized as a leading expert on terrorism in general and terrorist psychology in particular. He has a background in forensic psychology and criminology and has worked both in academia and for government. He has written extensively on terrorism and counter-terrorism and is frequently invited to give talks at international conferences and universities throughout the world. “PRISONS, TERRORISM AND EXTREMISM Critical issues in management, radicalization and reform”, 2014, AB)

Although many if not most terrorists eventually end up in prison, there has been surprisingly little research on what happens to them while in prison and after they have been released. This volume, edited by a prominent expert in the field, makes an important contribution to fill this gap in our knowledge. Several of the chapters challenge the conventional wisdom that prisons are universities of terror . Prisons may also provide opportunities for disengagement, deradicalisation and rehabilitation. Wise policies may contribute constructively to facilitate these processes. To achieve this, Professor Silke and his colleagues provide indispensable insights.

Terror Reps Good

Terror Reps True

Terrorism is a real threat – ignoring that reality risks annihilation.

Ralph Peters, 6 (Ralph, retired Army Officer, The Weekly Standard, "The Counterrevolution in Military Affairs; Fashionable thinking about defense ignores the great threats of our time," 2-6-2006, <http://www.weeklystandard.com/Content/Public/Articles/000/000/006/649qrsob.asp>, BP)

Living in unprecedented safety within our borders and lacking firsthand knowledge of the decay beyond, honorable men and women have convinced themselves that Osama bin Laden's professed goals of driving the United States from the Middle East and removing corrupt regional governments are what global terror is all about. They gloss over his ambition of reestablishing the caliphate and his calls for the destruction of Israel as rhetorical effects--when they address them at all. Yet, Islamist fanatics are more deeply committed to their maximalist goals than to their lesser ones--and their unspoken ambitions soar beyond logic's realm. Religious terrorists are committed to an apocalypse they sense within striking distance. Their longing for union with god is inseparable from their impulse toward annihilation. They seek their god in carnage, and will go on slaughtering until he appears to pat them on the back. A dangerous asymmetry exists in the type of minds working the problem of Islamist terrorism in our government and society. On average, the "experts" to whom we are conditioned to listen have a secular mentality (even if they go to church or synagogue from habit). And it is a very rare secular mind that can comprehend religious passion--it's like asking a blind man to describe the colors of fire. One suspects that our own fiercest believers are best equipped to penetrate the mentality--the souls--of our Islamist enemies, although those believers may not be as articulate as the secular intellectuals who anxiously dismiss all possibilities that lie outside their theoretical constructs.

Terrorism is inherently evil—the war on terror is correct

William F. Schultz 04 (executive director of Amnesty International USA, "Human rights and the evil of terrorism", UU World, February, http://findarticles.com/p/articles/mi_qa4071/is_200402/ai_n9347594/?tag=content;col1 BP)

Nothing can excuse atrocities such as these. No appeal to cultural differences can excuse the husband. No pursuit of a political agenda can explain away the actions of the minister. Evil is real, and it is very important to call it by its name. When President Bush labeled those who terrorized Americans on September 11, 2001, "evildoers," he was absolutely right, and his instinct to avenge their deaths was, too. Human rights are designed to make the world a safer place and to help stop people from doing evil things. Terrorists may sincerely think that what they are doing is good, but advocates of human rights have no problem agreeing with the president: Terrorist acts are evil, and terrorists must be punished.

Terrorist ideology is the root cause, not language—only the war on terror solves.

Alex Epstein 05 (, analyst at the **Ayn Rand Institute**, BA in Philosophy from Duke University, "Fight the Root of Terrorism With Bombs, Not Bread", San Francisco Chronicle, 8/14, http://www.aynrand.org/site/News2?page=NewsArticle&id=11243&news_iv_ctrl=1021 BP)

In light of the recent suicide bombings in London, and the general inability of the West to prevent terrorist attacks, there is much talk about fighting the "root cause" of terrorism. The most popular argument is that terrorism is caused by poverty. The United Nations and our European and Arab "allies" repeatedly tell us to minimize our military operations and instead dole out more foreign aid to poor countries--to put down our guns and pick up our checkbook. Only by fighting poverty, the refrain goes, can we address the "root cause" of terrorism. The pernicious idea that poverty causes terrorism has been a popular claim since the attacks of September 11. U.N. Secretary General Kofi Annan has repeatedly asked wealthy nations to double their foreign aid, naming as a cause of terrorism "that far too many people are condemned to lives of extreme poverty and degradation." Former Secretary of State Colin Powell agrees: "We have to put hope back in the hearts of people. We have to show people who might move in the direction of terrorism that there is a better way." Businessman Ted Turner also concurs: "The reason that the World Trade Center got hit is because there are a lot of people living in abject poverty out there who don't have any hope for a better life." Indeed, the argument that poverty causes terrorism has been central to America's botched war in Iraq--which has focused, not on quickly ending any threat the country posed and moving on to other crucial targets, but on bringing the good life to the Iraqi people. Eliminating the root of terrorism is indeed a valid goal--but properly targeted military action, not welfare handouts, is the means of doing so. Terrorism is not caused by poverty. The terrorists of September 11 did not attack America in order to make the Middle East richer. To the contrary, their stated goal was to repel any penetration of the prosperous culture of the industrialized "infidels" into their world. The wealthy Osama bin Laden was not using his millions to build electric power plants or irrigation canals. If he and his terrorist minions wanted prosperity, they would seek to emulate the United States--not to destroy it. More fundamental, poverty as such cannot determine anyone's code of morality. It is the ideas that individuals choose to adopt which make them pursue certain goals and values. A desire to destroy wealth and to slaughter innocent, productive human beings cannot be explained by a lack of money or a poor quality of life--only by anti-wealth, anti-life ideas. These terrorists are motivated by the ideology of Islamic Fundamentalism. This other-worldly, authoritarian doctrine views America's freedom, prosperity, and pursuit of worldly pleasures as the height of depravity. Its adherents resent America's success, along with the appeal its culture has to many Middle Eastern youths. To the fundamentalists, Americans are "infidels" who should be killed. As a former Taliban official said, "The Americans are fighting so they can live and enjoy the material things in life. But we are fighting so we can die in the cause of God." The terrorists hate us because of their ideology--a fact that filling up the coffers of Third World governments will do nothing to change. What then, can our government do? It cannot directly eradicate the deepest, philosophical roots of terrorism; but by using military force, it can eliminate the only "root cause" relevant in a political context: state sponsorship of terrorism. The fundamentalists' hostility toward America can translate into international terrorism only via the governments that employ, finance, train, and provide refuge to terrorist networks. Such assistance is the cause of the terrorist threat--and America has the military might to remove that cause. It is precisely in the name of fighting terrorism at its root that America must extend its fist, not its hand. Whatever other areas of the world may require U.S. troops to stop terrorist operations, we must above all go after the single main source of the threat--Iran. This theocratic nation is both the birthplace of the Islamic Fundamentalist revolution and, as a consequence, a leading sponsor of terrorism. Removing that government from power would be a potent blow against Islamic terrorism. It would destroy the political embodiment of the terrorists' cause. It would declare America's intolerance of support for terrorists. It would be an unequivocal lesson, showing what will happen to other countries if they fail to crack down on terrorists within their borders. And it would acknowledge the fact that dropping bombs, not food packages, is the only way for our government to attack terrorism at its root.

Money Laundering DA Georgetown

1NC

Generic Link-Data collection and linkage of databases is key to combating and dealing with fraud issues

House of Lords 09 (Surveillance: Citizens and the State - Constitution Committee <http://www.publications.parliament.uk/pa/ld200809/ldselect/ldconst/18/1805.htm>), MJ

Combating fraud is a law enforcement activity which uses data collection and processing. Evidence from the Government's Fraud Review described a policy development to combat fraud, which would include extensive information sharing and the linkage of databases. Success is already claimed in respect of NHS savings of £189 million in 2005, the National Fraud Initiative's savings of £111 million in 2005-06, and £10 million saved in respect of cheque and plastic card fraud. The Department for Business, Enterprise and Regulatory Reform (BERR) is authorised to carry out covert or other non-intrusive forms of surveillance. It regards these powers and methods as "fundamental, basic and crucial utensils of any investigative toolbox" in pursuit of, for example, company and insolvency fraud, and suspected fraud of health-related compensation schemes. (pp 324-26) The Department for Work and Pensions (DWP) gathers personal data from a range of other departments and local authorities, in part "to prevent and detect fraudulent claims, for example by matching death information from the General Register Office with our customer records". (p 340) Benefit fraud control at the local authority level also involves the matching of personal data files. Professor Morphet described how recent improvements in IT systems had led to data matching being used to identify people committing benefit fraud.

Current Money Laundering efforts are succeeding, but if they decline money laundering will threaten the global economy

McDowell and Novis, 2001 (John McDowell, Senior Policy Adviser of the Bureau of International Narcotics and Law Enforcement Affairs, U.S. Department of State. Gary Novis, Program Analyst of the Bureau of International Narcotics and Law Enforcement Affairs, U.S. Department of State. "THE CONSEQUENCES OF MONEY LAUNDERING AND FINANCIAL CRIME" <https://www.hsd.org/?view&did=3549>) // IL

Money laundering is the criminal's way of trying to ensure that, in the end, crime pays. It is necessitated by the requirement that criminals — be they drug traffickers, organized criminals, terrorists, arms traffickers, blackmailers, or credit card swindlers — disguise the origin of their criminal money so they can avoid detection and the risk of prosecution when they use it. Money laundering is critical to the effective operation of virtually every form of transnational and organized crime. Anti-money-laundering efforts, which are designed to prevent or limit the ability of criminals to use their ill-gotten gains, are both a critical and effective component of anti-crime programs. Money laundering generally involves a series of multiple transactions used to disguise the source of financial assets so that those assets may be used without compromising the criminals who are seeking to use them. These transactions typically fall into three stages: (1) placement — the process of placing unlawful proceeds into financial institutions through deposits, wire transfers, or other means; (2) layering — the process of separating the proceeds of criminal activity from their origin through the use of layers of complex financial transactions; and (3) integration — the process of using an apparently legitimate transaction to disguise illicit proceeds. Through these processes, a criminal tries to transform the monetary proceeds derived from illicit activities into funds with an apparently legal source. Money laundering has potentially devastating economic, security, and social consequences. It provides the fuel for drug dealers, terrorists, illegal arms dealers, corrupt public officials, and others to operate and expand their criminal enterprises. Crime has become increasingly international in scope, and the financial aspects of crime have become more complex due to rapid advances in technology and the globalization of the

financial services industry. Modern financial systems, in addition to facilitating legitimate commerce, also allow criminals to order the transfer of millions of dollars instantly using personal computers and satellite dishes. Because money laundering relies to some extent on existing financial systems and operations, the criminal's choice of money laundering vehicles is limited only by his or her creativity. Money is laundered through currency exchange houses, stock brokerage houses, gold dealers, casinos, automobile dealerships, insurance companies, and trading companies. Private banking facilities, offshore banking, shell corporations, free trade zones, wire systems, and trade financing all can mask illegal activities. In doing so, criminals manipulate financial systems in the United States and abroad. Unchecked, money laundering can erode the integrity of a nation's financial institutions. Due to the high integration of capital markets, money laundering can also adversely affect currencies and interest rates. Ultimately, laundered money flows into global financial systems, where it can undermine national economies and currencies. Money laundering is thus not only a law enforcement problem; it poses a serious national and international security threat as well.

This poses an existential threat

Luna 12 (David, October/26/2012, Director for Anticrime Programs, Bureau of International Narcotics and Law Enforcement Affairs, The Destructive Impact of Illicit Trade and the Illegal Economy on Economic Growth, Sustainable Development, and Global Security, US Department of State, <http://www.state.gov/j/inl/rls/rm/199808.htm//ghs-SG>)

The illegal economy poses an existential threat when it begins to create criminalized markets and captured states, which launches a downward, entropic spiral towards greater insecurity and instability. In economies that have been corrupted by criminal networks, market- and state-building become more unattainable, economic growth is stunted, efforts towards development and poverty eradication are stifled, and foreign direct investment is deterred.

Links

Anti-money laundering program still in effect under Section 352

Goodrich, 2015 (Amber Goodrich, serves as a compliance strategist for CSI Regulatory Compliance, and has more than 10 years of financial industry experience. She is a Certified Regulatory Compliance Manager (CRCM) and Certified Bank Secrecy Act (BSA) Professional (CBAP), and holds a wealth of knowledge in bank operations, compliance and enterprise risk management. "What the USA PATRIOT Act Expiration and the USA Freedom Act Mean to Your Financial Institution" <http://www.csiweb.com/resources/blog/post/2015/06/03/what-the-usa-patriot-act-expiration-and-the-usa-freedom-act-mean-to-your-financial-institution>) // IL

This lesser-known provision is leading to the misconception that the entire PATRIOT Act has expired. And that's simply not true. The vast majority of the act, including Title III (the International Money Laundering Abatement and Anti-Terrorist Financing Act of 2001), which carries the vast majority of requirements for financial institutions, is still in effect. Financial institutions are still required to monitor for customers and transactions that could be related to terrorist activities through Section 314(a) and (b). You're still required to verify the identity of customers through a customer identification program under Section 326. And you're still required to have an established anti-money laundering program under Section 352.

Justice Department and DEA allow mapping of trafficking and money laundering within the US and overseas

Heath, 2015 (Brad Heath, investigative reporter at USA TODAY, writing primarily about law and criminal justice. His work includes award-winning series on misconduct by federal prosecutors and air pollution outside schools. He has a law degree from Georgetown University. "U.S. secretly tracked billions of calls for decades" <http://www.wtsp.com/story/news/2015/04/07/us-secretly-tracked-billions-of-calls-for-decades/25434673/>) // IL

The system they built ultimately allowed the drug agency to stitch together huge collections of data to map trafficking and money laundering networks both overseas and within the USA. It allowed agents to link the call records its agents gathered domestically with calling data the DEA and intelligence agencies had acquired outside the USA. (In some cases, officials said the DEA paid employees of foreign telecom firms for copies of call logs and subscriber lists.) And it eventually allowed agents to cross-reference all of that against investigative reports from the DEA, FBI and Customs Service.

Data collection and linkage of databases is key to combating and dealing with fraud issues

House of Lords 09 (Surveillance: Citizens and the State - Constitution Committee <http://www.publications.parliament.uk/pa/ld200809/ldselect/ldconst/18/1805.htm>), MJ

Combating fraud is a law enforcement activity which uses data collection and processing. Evidence from the Government's Fraud Review described a policy development to combat fraud, which would include extensive information sharing and the linkage of databases. Success is already claimed in respect of NHS savings of £189 million in 2005, the National Fraud Initiative's savings of £111 million in 2005-06, and £10 million saved in respect of cheque and plastic card fraud. The Department for Business, Enterprise

and Regulatory Reform (BERR) is authorised to carry out covert or other non-intrusive forms of surveillance. It regards these powers and methods as "fundamental, basic and crucial utensils of any investigative toolbox" in pursuit of, for example, company and insolvency fraud, and suspected fraud of health-related compensation schemes. (pp 324-26) The Department for Work and Pensions (DWP) gathers personal data from a range of other departments and local authorities, in part "to prevent and detect fraudulent claims, for example by matching death information from the General Register Office with our customer records". (p 340) Benefit fraud control at the local authority level also involves the matching of personal data files. Professor Morphet described how recent improvements in IT systems had led to data matching being used to identify people committing benefit fraud.

AML/ CFT with the Fund are successful in combating money laundering and terrorist financing

Public Information Notice, 2011 (Public Information Notice (PIN) No. 11/74 form part of the IMF's efforts to promote transparency of the IMF's views and analysis of economic developments and policies. With the consent of the country (or countries) concerned, PINs are issued after Executive Board discussions of Article IV consultations with member countries, of its surveillance of developments at the regional level, of post-program monitoring, and of ex post assessments of member countries with longer-term program engagements. PINs are also issued after Executive Board discussions of general policy matters, unless otherwise decided by the Executive Board in a particular case. "IMF Executive Board Reviews Efforts in Anti-Money Laundering and Combating the Financing of Terrorism" <http://www.imf.org/external/np/sec/pn/2011/pn1174.htm>) // IL

Over the past 10 years the Fund has contributed significantly to the efforts of the international community to combat money laundering and terrorist financing. The Fund's AML/CFT program encompasses (i) assessments of countries' compliance with the AML/CFT standard established by the Financial Action Task Force (FATF); (ii) the examination of AML/CFT issues in the context of Article IV surveillance; (iii) the provision of technical assistance; and (iv) research and policy development. The AML/CFT program has experienced a number of successes and changes over the past years, particularly in the areas of assessments and technical assistance. AML/CFT assessments are integrated into the joint IMF/World Bank financial sector assessment program (FSAP) and forms part of a broader effort within the international community to combat money laundering and terrorist financing. Since 2004, the Fund has conducted 34 assessments; these form part of a body of 186 assessments conducted by 11 assessor bodies, including the FATF and the World Bank, based on a comprehensive, uniform methodology. Many of the assessor bodies have benefitted from the Fund's assistance in strengthening the quality of their assessments. The Fund has provided AML/CFT technical assistance on topics such as financial sector regulatory issues, law reform, good governance and institution building. Since 2008 the Fund's technical assistance program is almost completely financed with external resources. The central pillar of this new approach was the establishment of the AML/CFT multi-donor trust fund which provides the Fund with approximately USD 25 million for the FY2010-2014 period. Donor states that support the trust fund are Canada, France, Japan, Korea, Kuwait, Luxembourg, the Netherlands, Norway, Qatar, Saudi Arabia, Switzerland, and the United Kingdom. The establishment and governance of the trust fund helps ensure that the AML/CFT technical assistance program focuses on areas where the Fund's comparative advantage results in specific, value-adding contributions to global AML/CFT efforts. Five years since the last review, the current review of the Fund's AML/CFT program pointed to a way forward in several areas. This includes moving towards a targeted, risk-focused approach to AML/CFT assessments, revisiting the mandatory coverage of AML/CFT in all FSAP assessments, and providing clearer guidance on the circumstances where AML/CFT should be examined in the context of the Fund's bilateral surveillance or financial sector work. Executive Board Assessment Executive Directors welcomed the opportunity to discuss the effectiveness of the AML/CFT program. They noted that the Fund's work has significantly

contributed to the international community's response to money laundering and the financing of terrorism.

AML Surveillance protects against money laundering, if unmaintained, will lead to drift

Sabatini, Choi, and Agarwal, 2013 (John Sabatini, Advanced Risk and Compliance Analytics Leader; David Choi, Advanced Risk and Compliance Analytics Principal; Vikas Agarwal, Advanced Risk and Compliance Analytics Managing Director. "Avoiding the drift Optimizing and maintaining AML surveillance programs" http://www.pwc.com/en_US/us/risk-assurance-services/publications/assets/pwc-avoiding-the-drift.pdf) // IL

Enacted in October 2001, the International Money Laundering Abatement and Financial Anti-Terrorism Act (an element of the USA PATRIOT Act) was designed to strengthen US measures to prevent, detect, and prosecute international money laundering and the financing of terrorism. The act built on existing requirements under the Bank Secrecy Act of 1970 (BSA), increasing criminal and civil penalties around money laundering and terrorist financing, widening the population of financial institutions to which anti-money laundering (AML) regulations apply, and significantly expanding the AML obligations incumbent upon those institutions. Faced with these new requirements, financial sector companies poured billions into AML compliance efforts. They instituted new or upgraded due-diligence policies, procedures, and controls and built transaction surveillance systems able to detect patterns indicative of criminal money laundering and terrorist financing. They created new departments to manage these systems and conduct investigations and hired new compliance officers to oversee them. They instituted training programs to mainstream and maintain AML practices across the enterprise and began conducting regular independent audits to test their controls. Yet despite this enormous investment in systems, training, and assurance, the AML ship has lately begun springing leaks. Since 2008, US regulators have imposed substantial fines and issued a large number of cease-and-desist consent orders against US and foreign banks, citing lax AML compliance. Between 2008 and early 2013, the Federal Reserve issued 113 enforcement actions relating to compliance with the BSA and with economic sanctions administered by the Treasury's Office of Foreign Assets Control (OFAC).¹ Why, with all the efforts put into AML across the financial services community, are these problems occurring? In some instances, banks have been aware of specific AML risks but failed to take corrective action. One of the banks noted above, for example, failed to address significant AML compliance problems in its operations, which allowed drug cartels to launder—approximately \$881 million. While the magnitude of both the failure and the resulting \$1.9 billion fine make this a particularly marquee-worthy example, it serves as a warning to all financial institutions: A company need not intend to launder money to be found guilty of laundering money. "Willful blindness" is enough—and that includes failing to maintain adequate systems, oversight, and controls. The more complex a system, the more opportunities for breakdown, a fact that leaves the financial industry vulnerable to AML compliance risk. At many financial institutions, inadequate attention and resources have been dedicated to maintaining and sustaining the core components of AML programs that may now have been in place for more than a decade, leading to gaps in AML compliance. We call this gradual process of inadvertent noncompliance "AML drift," and it occurs because AML systems are reliant on numerous variables across the organization, including where transaction information is stored, changes to financial products and services (and the introduction of new products and services), and changes in customer behavior. To account for changing conditions, AML systems need to be constantly monitored, updated, maintained, and repaired. When they're not, drift is inevitable. Drift happens in three places: processes and updates, technology, and organization. To protect against drift and keep their AML programs up to date, companies need to do better, more data-based testing. They need to think about the type of metrics they're using to monitor their program. They need to uplift the technology they use for monitoring. And they need to make sure their organization is aligned correctly to ensure that AML programs are kept updated and functioning at peak efficiency. If companies get this right, they will protect themselves not only from regulatory fine and censure, but from the potentially costlier reputational risks that could follow. How AML programs work and how they can break down All anti-money laundering programs share similar structures and processes:¹. Know your customer procedures are the tools that help financial institutions gain a detailed understanding of their customers, including their identity, citizenship status, occupation, source of funds, volume and type of expected activity, countries with which they do business, etc. By collecting this information and keeping it continually updated via transaction monitoring, companies are able to assign their customers into high-, medium-, and low-risk categories and apply further due-diligence as appropriate.² Surveillance processes allow banks to monitor for money laundering typologies: people moving money inside and outside the bank very quickly; a pattern of "structuring," in which a customer continually makes deposits just below the reporting threshold; a single beneficiary receiving money from multiple originators; customers who are depositing large sums and making wire transfers to high-risk countries; and so on. Surveillance also

typically includes Office of Foreign Assets Control (OFAC) screening, in which bank customers' names are compared against lists of known terrorists and other high-risk individuals.

AML is more accepted, more technologically sophisticated, and better funded than other anti-corruption programs

Sklar, 2012 (Howard Sklar, compliance officer with over 17 years of experience. He has also been a prosecutor, regulator, compliance officer, and in-house counsel. Sklar ran an anti-corruption programs for American Express and for Hewlett-Packard, and was head of compliance for three operating divisions at American Express (wearing a second hat). He is currently a Senior Counsel with eDiscovery software company Recommind. "Six Reasons Why You're Going To Get Caught" <http://www.forbes.com/sites/howardsklar/2012/10/31/six-reasons-why-youre-going-to-get-caught/>) // IL

Your bank. Bribes are paid, generally, with money. Money goes through banks. Banks are required to monitor their transactions to catch money laundering. Banks, in fact, spend hundreds of millions of dollars on their anti-money laundering programs. Anti-corruption compliance is like the country cousin to AML compliance. AML compliance is more mature, more accepted, more well-funded than any anti-corruption program. And much, much more sophisticated technologically. If a bank finds evidence of a bribery transaction, it will file a Suspicious Activity Report (SAR). In the UK, and in other places around the world, reporting is a regulatory requirement. So unless your bribe is paid with money you keep under your mattress, you stand a fair chance of being caught. Roger Cook from the City of London Police gave a presentation recently about the prosecution of a Ugandan official and a local UK company where the entire bribery prosecution started with a SAR filing.

Impacts

This poses an existential threat

Luna 12 (David, October/26/2012, Director for Anticrime Programs, Bureau of International Narcotics and Law Enforcement Affairs, The Destructive Impact of Illicit Trade and the Illegal Economy on Economic Growth, Sustainable Development, and Global Security, US Department of State, <http://www.state.gov/j/inl/rls/rm/199808.htm//ghs-SG>)

The illegal economy poses an existential threat when it begins to create criminalized markets and captured states, which launches a downward, entropic spiral towards greater insecurity and instability. In economies that have been corrupted by criminal networks, market- and state-building become more unattainable, economic growth is stunted, efforts towards development and poverty eradication are stifled, and foreign direct investment is deterred.

Money Laundering threatens the stability of government and the economy

Luna 12 (David, October/26/2012, Director for Anticrime Programs, Bureau of International Narcotics and Law Enforcement Affairs, The Destructive Impact of Illicit Trade and the Illegal Economy on Economic Growth, Sustainable Development, and Global Security, US Department of State, <http://www.state.gov/j/inl/rls/rm/199808.htm//ghs-SG>)

From an economic perspective, all of these illicit activities divert money from the balance sheets of legitimate businesses and put cash in the hands of criminals, who build larger and larger illicit networks. These networks threaten the stability of governments and the prosperity of our economies. National revenue and assets intended to finance the future are instead embezzled and stashed away for private gain, impairing the ability of communities and businesses to make the investments necessary to create resilient pathways for economic growth and give people hope for a brighter tomorrow. Illicit trade and the illegal economy also undermine the social stability and socioeconomic welfare of our communities. Illicit enterprises not only divert opportunities from the legal economy, they also divert revenue threatening economic growth and development and preventing the equitable distribution of public goods. But this goes beyond just the economic harm. The illegal economy also incurs a significant negative social cost. Consider how criminals undermine fair labor conditions through exploitation of persons in the illegal economy such as coca and heroin cultivation and in industries as varied as manufacturing counterfeits, agriculture, tourism, and elder hostels. Equally damaging is the environmental damage resulting from criminals' penetration into illegal logging, wildlife trafficking, waste hauling, and fishing. Instead of producing wage earners for tomorrow's markets and investments, the communities most at risk of exploitation by illicit networks are saddled with the negative externalities of the illicit economy. The grim reality is that revenue that could be used to build roads to facilitate commerce, hospitals to save lives, homes to raise and protect families, or schools to educate our future leaders are lost to kleptocrats, criminals, and terrorists whose only interest in the future may be to destroy it.

Money laundering destroys the economy, encourages crime and corruption, and distorts the economy's external sector – effective AML key

Bartlett, 2002 (Brent L. Bartlett, International Economics Group, Dewey Ballantine LLP. "The negative effects of money laundering on economic development" <http://www.afp.gov.au/~media/afp/pdf/m/money-laundering-02.pdf>) // IL

The negative economic effects of money laundering on economic development are difficult to quantify. It is clear that such activity damages the financial-sector institutions that are critical to economic growth, reduces productivity in the economy's real sector by diverting resources and encouraging crime and corruption, which slow economic growth, and can distort the economy's external sector – international trade and capital flows – to the detriment of long-term economic development. Developing countries' strategies to establish off-shore financial centres (OFCs) as vehicles for economic development are also impaired by significant money-laundering activity through OFC channels. Effective anti-money-laundering policies, on the other hand, reinforce a variety of other good-governance policies that help sustain economic development, particularly through the strengthening of the financial sector. The financial sector A broad range of recent economic analyses points to the conclusion that strong developing-country financial institutions – such as banks, non-bank financial institutions (NBFIs) and equity markets – are critical to economic growth. Such institutions allow for the concentration of capital resources from domestic savings – and perhaps even funds from abroad – and the efficient allocation of such resources to investment projects that generate sustained economic

development. Money laundering impairs the development of these important financial institutions for two reasons. First, it erodes financial institutions themselves. Within these institutions, there is often a correlation between money laundering and fraudulent activities undertaken by employees. At higher volumes of money-laundering activity, entire financial institutions in developing countries are vulnerable to corruption by criminal elements seeking to gain further influence over their money-laundering channels. Second, particularly in developing countries, customer trust is fundamental to the growth of sound financial institutions, and the perceived risk to depositors and investors from institutional fraud and corruption is an obstacle to such trust. By contrast, beyond protecting such institutions from the negative effects of money laundering itself, the adoption of anti-money-laundering policies by government financial supervisors and regulators, as well as by banks, NBFIs, and equity markets themselves, reinforce the other good-governance practices that are important to the development of these economically critical institutions. Indeed, several of the basic anti-money-laundering policies – such as know-your-customer rules and strong internal controls – are also fundamental, long-standing principles of prudential banking operation, supervision, and regulation.

Money laundering poses a serious threat to nation and international security and unchecked will undermine national economies and currencies

McDowell and Novis, 2001 (John McDowell, Senior Policy Adviser of the Bureau of International Narcotics and Law Enforcement Affairs, U.S. Department of State. Gary Novis, Program Analyst of the Bureau of International Narcotics and Law Enforcement Affairs, U.S. Department of State. “THE CONSEQUENCES OF MONEY LAUNDERING AND FINANCIAL CRIME” <https://www.hsd1.org/?view&did=3549>) // IL

Money laundering is the criminal’s way of trying to ensure that, in the end, crime pays. It is necessitated by the requirement that criminals — be they drug traffickers, organized criminals, terrorists, arms traffickers, blackmailers, or credit card swindlers — disguise the origin of their criminal money so they can avoid detection and the risk of prosecution when they use it. Money laundering is critical to the effective operation of virtually every form of transnational and organized crime. Anti-money-laundering efforts, which are designed to prevent or limit the ability of criminals to use their ill-gotten gains, are both a critical and effective component of anti-crime programs. Money laundering generally involves a series of multiple transactions used to disguise the source of financial assets so that those assets may be used without compromising the criminals who are seeking to use them. These transactions typically fall into three stages: (1) placement — the process of placing unlawful proceeds into financial institutions through deposits, wire transfers, or other means; (2) layering — the process of separating the proceeds of criminal activity from their origin through the use of layers of complex financial transactions; and (3) integration — the process of using an apparently legitimate transaction to disguise illicit proceeds. Through these processes, a criminal tries to transform the monetary proceeds derived from illicit activities into funds with an apparently legal source. Money laundering has potentially devastating economic, security, and social consequences. It provides the fuel for drug dealers, terrorists, illegal arms dealers, corrupt public officials, and others to operate and expand their criminal enterprises. Crime has become increasingly international in scope, and the financial aspects of crime have become more complex due to rapid advances in technology and the globalization of the financial services industry. Modern financial systems, in addition to facilitating legitimate commerce, also allow criminals to order the transfer of millions of dollars instantly using personal computers and satellite dishes. Because money laundering relies to some extent on existing financial systems and operations, the criminal’s choice of money laundering vehicles is limited only by his or her creativity. Money is laundered through currency exchange houses, stock brokerage houses, gold dealers, casinos, automobile dealerships, insurance companies, and trading companies. Private banking facilities, offshore banking, shell corporations, free trade zones, wire systems, and trade financing all can mask illegal activities. In doing so, criminals manipulate financial systems in the United States and abroad. Unchecked, money laundering can erode the integrity of a nation’s financial institutions. Due to the high integration of capital markets, money laundering can also adversely affect currencies and interest rates. Ultimately, laundered money flows into global financial systems, where it can undermine national economies and currencies. Money laundering is thus

not only a law enforcement problem; it poses a serious national and international security threat as well.

Money laundering is a threat to the economic and political stability of international security, affecting all countries regardless of their level of development

France Diplomatie, 2014 (France Diplomatie, French Ministry of Foreign Affairs and International Development. "France and the fight against money-laundering, financing of terrorism and corruption" <http://www.diplomatie.gouv.fr/en/french-foreign-policy/defence-security/money-laundering-and-corruption>) // IL

The fight against illicit financial flows is a priority for the French authorities. Money laundering is central to criminal activities and is a threat to the economic and political stability of countries and international security. The rise of terrorism has made it necessary to strengthen the surveillance of financial circuits that could fund it. To address these facts, France has adopted a considerable legal arsenal and actively participates in improving standards in this field, both at international level, through its contribution to the work of the Financial Action Task Force (FATF) and at regional level, as a contributor to the legislative work carried out by the European Commission and to the conventions of the Council of Europe. Corruption affects all countries, regardless of their level of development. It is a barrier to sustainable economic development and an obstacle to good governance and strengthening the rule of law, especially when it affects sectors such as policing, justice and prison administration. Corruption also provides fertile ground for the development of criminal and/or terrorist activities in certain vulnerable countries. The poorest people are those most affected by its consequences. According to a World Bank study, the sum of bribes paid each year amounts to \$1000 billion, representing 9% of global trade.

Money laundering is identified as a threat to global peace and freedom – it undermines political stability, increases crime, encourages corruption

Schroeder, 2001 (William R. Schroeder, Associate Professor of Philosophy at the University of Illinois at Urbana-Champaign. He is the author of Sartre and His Predecessors (1984) and co-editor, with Simon Critchley, of A Companion to Continental Philosophy (Blackwell, 1998).

"Money Laundering"

<https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=1&ved=0CB4QFjAA&url=http%3A%2F%2Fwww.unl.edu%2Feskridge%2Fcj394laundering.doc&ei=RbmZVZrQGmb6-AGvrYLICw&usg=AFQjCNFZVdsCNkiPQIS2IOGICAb4W3wDNQ&bvm=bv.96952980,d.cWw&cad=rja> // IL

Money laundering has become a global problem as a result of the confluence of several remarkable changes in world markets (i.e., the globalization of markets). The growth in international trade, the expansion of the global financial system, the lowering of barriers to international travel, and the surge in the internalization of organized crime have combined to provide the source, opportunity, and means for converting illegal proceeds into what appears to be legitimate funds. Money laundering can have devastating effects on the soundness of financial institutions and undermine the political stability of democratic nations. Criminals quickly transfer large

sums of money to and from countries through financial systems by wire and personal computers.⁵ Such transfers can distort the demand for money on a macroeconomic level and produce an unhealthy volatility in international capital flows and exchange rates.⁶ A recent and highly publicized case prosecuted in New York provides an example of the ease with which criminals can launder large amounts of money in a short time period.⁷ Several individuals and three companies pleaded guilty to federal money laundering charges in that case in connection with a scheme that funneled more than \$7 billion from the Russian through a bank in New York over a 2-year period. The laundering scheme involved the transfer of funds by wire from Moscow to the United States and then to offshore financial institutions. Additionally, in 1998, federal authorities in Florida announced arrests in an international fraud and money laundering scheme involving victims from 10 countries, with losses up to \$60 million laundered through two banks on the Caribbean island of Antigua.⁸ Emerging market countries⁹ are particularly vulnerable to laundering as they begin to open their financial sectors, sell government owned assets, and establish fledgling securities markets.¹⁰ The economic changes taking place in the former Soviet States in Eastern Europe create opportunities for unscrupulous individuals where money laundering detection, investigation, and prosecution tools slowly take shape. Indeed, as most emerging markets began the process of privatizing public monopolies, the scope of money laundering increased dramatically. The international community of governments and organizations that have studied money laundering recognize it as a serious international threat.¹¹ The United Nations and the Organization of American States (OAS) have determined that the laundering of money derived from serious crime represents a threat to the integrity, reliability, and stability of financial, as well as government, structures around the world.¹² In October 1995, the President of the United States, in an address to the United Nations General Assembly, identified money laundering, along with drug trafficking and terrorism, as a threat to global peace and freedom. Immediately thereafter, he signed Presidential Directive 42, ordering U.S. law enforcement agencies and the intelligence community to increase and integrate their efforts against international crime syndicates in general and against money laundering in particular.¹³ The U.S. Department of the Treasury Deputy Secretary summed up the seriousness of the domestic and international threat when he testified before the U.S. Congress on March 9, 2000. During his testimony before the House Committee on Banking and Financial Services, he advised that money laundering encouraged corruption in foreign governments, risked undermined the integrity of the U.S. financial system, weakened the effects of U.S. diplomatic efforts, and facilitated the growth of serious crime.¹⁴ These assessments make it clear that money laundering presents not only a formidable law enforcement problem, but also a serious national and international security threat as well. Money laundering threatens jurisdictions from three related perspectives. First, on the enforcement level, laundering increases the threat posed by serious crime, such as drug trafficking, racketeering, and smuggling, by facilitating the underlying crime and providing funds for reinvestment that allow the criminal enterprise to continue its operations. Second, laundering poses a threat from an economic perspective by reducing tax revenues and establishing substantial underground economies, which often stifle legitimate businesses and destabilize financial sectors and institutions.¹⁵ Finally, money laundering undermines democratic institutions and threatens good governance by promoting public corruption through kickbacks, bribery, illegal campaign contributions, collection of referral fees, and misappropriation of corporate taxes and license fees.¹⁶

Money Laundering Kills the economy-hampers government revenue, erodes the economy and funds criminals

FIU No Date (Financial Intelligence Unit of the Republic of Mauritius, It is the central Mauritian agency for the request, receipt, analysis and dissemination of financial information regarding suspected proceeds of crime and alleged money laundering offences as well as the financing of any activities or transactions related to terrorism to relevant authorities, Consequences of Money Laundering, Financial Intelligence Unit Mauritius, http://www.fiumauritius.org/index.php?option=com_content&view=article&id=18%3Amoney-laundering&catid=3&lang=en&limitstart=3//ghs-SG)

Money laundering impairs the development of the legitimate private sector through the supply of products priced below production cost, making it therefore difficult for legitimate activities to compete. Criminals may also turn enterprises which were initially productive into sterile ones to launder their funds leading ultimately to a decrease in the overall productivity of the economy. Furthermore, the laundering of money can also cause unpredictable changes in money

demand as well as great volatility in international capital flows and exchange rates. While the financial sector is an essential constituent in the financing of the legitimate economy, it can be a low-cost vehicle for criminals wishing to launder their funds. Consequently, the flows of large sums of laundered funds poured in or out of financial institutions might undermine the stability of financial markets. In addition, money laundering may damage the reputation of financial institutions involved in the scheming resulting to a loss in trust and goodwill with stakeholders. In worst case scenarios, money laundering may also result in bank failures and financial crises. Money laundering also reduces tax revenue as it becomes difficult for the government to collect revenue from related transactions which frequently take place in the underground economy. The socio-economic effects of money laundering are various because as dirty money generated from criminal activities are laundered into legitimate funds; they are used to expand existing criminal operations and finance new ones. Further to that money laundering may lead to the transfer of economic power from the market, the government and the citizens to criminals, abetting therefore crimes and corruption.

US winning the drug war now

Kerlikowske 12 (Gil Kerlikowske, the direction of the White House's National Drug Control Policy. 11/05/2012.

"Successfully Fighting the War on Drugs". http://www.washingtonpost.com/opinions/successfully-fighting-the-war-on-drugs/2012/11/05/676c969c-273e-11e2-ac64-5d52a2c5953e_story.html) AP

Since March 2009, the Obama administration has placed an unprecedented amount of personnel, infrastructure and **tech** technology **along the** southwest **border**. The U.S. Border Patrol has doubled in size, **we've** **bolstered operations at our ports of entry** and we've expanded successful partnerships with the Mexican government that are cracking down on cross-border crime. **these actions have improved our ability to disrupt drug-trafficking across the United States.** As **drug seizures have increased due to smarter enforcement, the U.S. consumption of cocaine and methamphetamine** **has** also **plummeted.** **Since 2006, cocaine use has dropped by more than 40 percent, and meth use has fallen by a third.** The demand for these drugs in the United States has fallen substantially, and the market for cocaine in particular is in disarray. While serious challenges remain, we recognize that no single nation is exclusively a producer of illegal drugs, a transit country or a consumer country. We are all in this together, and **by working to reduce both the demand and supply of drugs, we can continue to make progress in making our communities safer and healthier.**

Generic Link-NSA bulk phone surveillance that the aff limits more than the current USA FREEDOM Act would severely limit the ability of the NSA to detect drug trafficking networks

Heath, staff writer about law and criminal justice, 4/8/15

(Brad, "U.S. secretly tracked billions of phone calls for decades", USA TODAY, 4/8/15, <http://www.usatoday.com/story/news/2015/04/07/dea-bulk-telephone-surveillance-operation/70808616/>, accessed 6/23/15, ZW)

WASHINGTON — The U.S. government started keeping secret records of Americans' international telephone calls nearly a decade before the Sept. 11 terrorist attacks, harvesting billions of calls in a program that provided a blueprint for the far broader National Security Agency surveillance that followed. For more than two decades, the Justice Department and the Drug Enforcement Administration amassed logs of virtually all telephone calls from the USA to as many as 116 countries linked to drug trafficking, current and former officials involved with the operation said. The targeted countries changed over time but included Canada, Mexico and most of Central and South America. Federal investigators used the call records to track drug cartels' distribution networks in the USA, allowing agents to detect previously unknown trafficking rings and money handlers. They also used the records to help rule out foreign ties to the bombing in 1995 of a federal building in Oklahoma City and to identify U.S. suspects in a wide range of other investigations.

Drugs Hurt economic development and cause decline

UN 12 (United Nations, International Assembly of Nations who move to solve the problems of the world, 6/26/2012, United Nations Website,

<http://www.un.org/en/ga/president/66/Issues/drugs/drugs-crime.shtml//ghs-SG>)

As economic development is threatened by transnational organized crime and illicit drugs, countering crime must form part of the development agenda, and social and economic development approaches need to form part of our response to organized crime. If we are to ensure that the MDGs are achieved, we must strengthen strategies to deliver these goals, including stepping up efforts to address issues such as money laundering, corruption and trafficking in wildlife, people and arms, and drugs. Organized crime and drugs impact every economy, in every country, but they are particularly devastating in weak and vulnerable countries. Weak and fragile countries are particularly vulnerable to the effects of transnational organized crime. These countries, some devastated by war, others making the complex journey towards democracy, are preyed upon by crime. As a result, organized crime flourishes, successes in development are reversed, and opportunities for social and economic advancement are lost. Corruption, a facilitator of organized crime and drug trafficking, is a serious impediment to the rule of law and sustainable development. It can be a dominant factor driving fragile countries towards failure. It is estimated that up to US\$40 billion annually is lost through corruption in developing countries. Drugs and crime undermine development by eroding social and human capital. This degrades quality of life and can force skilled workers to leave, while the direct impacts of victimisation, as well as fear of crime, may impede the development of those that remain. By limiting movement, crime impedes access to possible employment and educational opportunities, and it discourages the accumulation of assets. Crime is also more "expensive" for poor people in poor countries, and disadvantaged households may struggle to cope with the shock of victimisation. Drugs and crime also undermine development by driving away business. Both foreign and domestic investors see crime as a sign of social instability, and crime drives up the cost of doing business. Tourism is a sector especially sensitive to crime issues. Drugs and crime, moreover, undermine the ability of the state to promote development by destroying the trust relationship between the people and the state, and undermining democracy and confidence in the criminal justice system. When people lose confidence in the criminal justice system, they may engage in vigilantism, which further undermines the state.

Econ decline goes nuclear and escalates

Auslin 9 (Michael, Resident Scholar – American Enterprise Institute, and Desmond Lachman – Resident Fellow – American Enterprise Institute, "The Global Economy Unravels", Forbes, 3-6, <http://www.aei.org/article/100187>)

What do these trends mean in the short and medium term? The Great Depression showed how social and global chaos followed hard on economic collapse. The mere fact that parliaments across the globe, from America to Japan, are unable to make responsible, economically sound recovery plans suggests that they do not know what to do and are simply hoping for the least disruption. Equally worrisome is the adoption of more statist economic programs around the globe, and the concurrent decline of trust in free-market systems. The threat of instability is a pressing concern. China, until last year the world's fastest growing economy, just reported that 20 million migrant laborers lost their jobs. Even in the flush times of recent years, China faced upward of 70,000 labor uprisings a year. A sustained downturn poses grave and possibly immediate threats to Chinese internal stability. The regime in Beijing may be faced with a choice of repressing its own people or diverting their energies outward, leading to conflict with China's neighbors. Russia, an oil state completely dependent on energy sales, has had to put down riots in its Far East as well as in downtown Moscow. Vladimir Putin's rule has been predicated on squeezing civil liberties while providing economic largesse. If that devil's bargain falls apart, then wide-scale repression inside Russia, along with a continuing threatening posture toward Russia's neighbors, is likely. Even apparently stable societies face increasing risk and the threat of internal or possibly external conflict. As Japan's exports have plummeted by nearly 50%, one-third of the country's prefectures have passed emergency economic stabilization plans. Hundreds of thousands of temporary employees hired during the first part of this decade are being laid off. Spain's unemployment rate is expected to climb to nearly 20% by the end of 2010; Spanish unions are already protesting the lack of jobs, and the specter of violence, as occurred in the 1980s, is haunting the country. Meanwhile, in Greece, workers have already taken to the streets. Europe as a whole will face dangerously increasing tensions

between native citizens and immigrants, largely from poorer Muslim nations, who have increased the labor pool in the past several decades. Spain has absorbed five million immigrants since 1999, while nearly 9% of Germany's residents have foreign citizenship, including almost 2 million Turks. The xenophobic labor strikes in the U.K. do not bode well for the rest of Europe. A prolonged global downturn, let alone a collapse, would dramatically raise tensions inside these countries. Couple that with possible protectionist legislation in the United States, unresolved ethnic and territorial disputes in all regions of the globe and a loss of confidence that world leaders actually know what they are doing. The result may be a series of small explosions that coalesce into a big bang.

Uniqueness

Uniqueness – currently, marijuana legalization has caused foreign trafficking of the drug to plummet, reducing cartel violence as well

Grillo, staff writer, 4/8/15

(Ioan, “U.S. Legalization of Marijuana Has Hit Mexican Cartels’ Cross-Border Trade”, TIME, 4/8/15, <http://time.com/3801889/us-legalization-marijuana-trade/>, accessed 7/6/15, ZW)

Agents on the 2,000 mile-U.S. border have wrestled with these smuggling techniques for decades, seemingly unable to stop the northward flow of drugs and southward flow of dollars and guns. But the amount of one drug — marijuana — seems to have finally fallen. U.S. Border Patrol has been seizing steadily smaller quantities of the drug, from 2.5 million pounds in 2011 to 1.9 million pounds in 2014. Mexico’s army has noted an even steeper decline, confiscating 664 tons of cannabis in 2014, a drop of 32% compared to year before. This fall appears to have little to do with law enforcement, however, and all to do with the wave of U.S. marijuana legalization. The votes by Colorado and Washington State to legalize marijuana in 2012, followed by Alaska, Oregon and D.C. last year have created a budding industry. U.S. growers produce gourmet products with exotic names such as White Widow, Golden Goat and Oaktown Crippler as opposed to the bog-standard Mexican “mota.” American dispensaries even label their drugs, showing how strong they are, measured in THC (tetrahydrocannabinol, the main psychoactive ingredient), and grade their mix of sativa, which gets people stoned in a psychedelic way and indica, which has a more knock-out effect. Drug policy reformists tout this market shift from Mexican gangsters to American licensed growers as a reason to spread legalization. “It is no surprise to me that marijuana consumers choose to buy their product from a legal tax-paying business as opposed to a black market product that is not tested or regulated,” says Tom Angell, chairman of Marijuana Majority. “When you go to a legal store, you know what you are getting, and that is not going to be contaminated.” A group called Marijuana Doctors elaborate the point in this comical online ad. Analysts are still trying to work out the long-term effect this shift will have on Mexican cartel finances and violence. The legal marijuana industry could be the fastest growing sector of the U.S. economy. It grew 74% in 2014 to \$2.7 billion, according to the ArcView group, a cannabis investment and research firm. This includes revenue from both recreational drug stores and from medical marijuana, which has been legalized in 23 states. The group predicts the industry will top \$4 billion by 2016. This means less cash for Mexican cartels to buy guns, bribe police and pay assassins. Coinciding with legalization, violence has decreased in Mexico. Homicides hit a high in 2011, with Mexican police departments reporting almost 23,000 murders. Last year, they reported 15,649.

Uniqueness – marijuana legalization reduces the power and influences of drug cartels in the status quo

Bricken, attorney and chair of the Canna Law Group in Harris Moure, PLLC in Seattle, 6/29/15

(Hilary, “Marijuana Legalization: Bad For The Cartels, Better For All”, Above The Law, 6/29/15, <http://abovethelaw.com/2015/06/marijuana-legalization-bad-for-the-cartels-better-for-all/>, accessed 7/6/15, ZW)

So, what does legalization of cannabis in the United States have to do with helping Mexico eliminate its cartels? The more cannabis Americans buy from state-licensed operations, the less cannabis they buy from the drug cartels. This will have positive long-term effects for pretty much everyone except the cartels themselves. A few years ago, our law firm represented a medical marijuana dispensary against a city attempting to shut it down. A city police officer took the stand to explain why this city was so eager to shut down our client’s dispensary. Among the reasons he expressed was a concern about Mexican drug cartels. On cross-examination, we asked this police officer

whether he was aware of any Mexican drug cartel links to legal medical marijuana in his city or anywhere else in the United States. He answered truthfully with a “no.” We then asked if he was aware of Mexican drug cartel links to illegal drugs in the United States and he, of course, answered with a “yes.” Needless to say, our closing argument included us talking about how having legal marijuana in this city would, if anything, help drive out or at least reduce criminal gang influences. According to Mexican security analyst Alejandro Hope, “approximately 30 percent of cartels’ drug export revenues come from marijuana.” Though on one level marijuana legalization has little effect on the cartels’ ability to smuggle hard drugs like heroin into the United States, just reducing the cartels’ marijuana sales will reduce their power, influence, and wealth and should correspondingly reduce their ability to move heroin and other hard drugs across borders. Standing alone, any reduction in the drug cartels’ power and presence in Mexico and in Colombia would be a great achievement.

NSA Surveillance stops a number of violent crimes

Falkvinge 13 (Rickard Falkvinge, Founder of a Swiss IT entrepreneur, NSA Mass Surveillance Has Already Been Used for Ordinary Police Work, Falkvinge.Net, <http://falkvinge.net/2013/11/24/nsa-mass-surveillance-has-already-been-used-for-ordinary-police-work///ghs-SG>)

The NSA has used its ubiquitous wiretapping for ordinary police work. It used mass surveillance to prevent the murder of an eccentric artist, ACCORDING to the New York Times. This means that the final line has been crossed; once mass surveillance of ordinary people is used for everyday police work, we are past the EVENT horizon to a surveillance dystopia. In an article outlining the vast capabilities of the NSA, the New York Times drops this tidbit: The spy agency's station in Texas intercepted 478 emails while helping to foil a jihadist plot to kill a Swedish artist who had drawn pictures of the Prophet Muhammad. However, the New York Times fails to elaborate on the immense importance of this fact. This means that the NSA went far, far beyond its mandate of "national SECURITY", and used its mass surveillance – ubiquitous wiretapping, really – for ordinary police work. The Swedish artist in question is Lars Vilks, known for making outlandish art statements like putting images of the prophet Muhammed on crude dog sculptures in everyday traffic roundabouts. (It's particularly unclear how the Islamic prophet's likeness was created, as he is traditionally imaged faceless.) While preventing the murder of a highly eccentric artist may be admirable in its own right, it does not nearly qualify for national SECURITY concerns, nor for preventing terrorism. So why is this important? It's important because it crosses the line we were promised would never, ever, be crossed – that the ubiquitous wiretapping would only be used for national security, and never for ordinary police work against citizens. Once that line is crossed, the wiretapping is used against the country's own citizens. For once you have prevented a murder, it's easy to justify that you should be able to use the ubiquitous wiretapping to also prevent, say, rape and aggravated assault. No policymaker will protest that. Once you are preventing serious violent crimes, it's easy to justify that the NSA and the Police should use the ubiquitous wiretapping to prevent all violent crimes. People who protest that in the name of civil liberties will be shot down; "it's a fundamental civil liberty to not be a victim of a violent crime". And so, surveillance will be Newspeaked into civil liberties in televised debates by Big Brother hawks. Once the wiretapping is preventing all violent crime, it will be repurposed to prevent all prison-time crime (described as "serious crime"), and from there, to prevent all crime. And those who speak up against this will be accused of "siding with criminals". I have seen each of these steps happen in the past decade in various stages of policymaking. Yes, I'm presenting a slippery slope argument, but these STEPS are typically just 3-4 years apart, and I'm speaking from first-hand experience with this development. Then, once you have the ability to enforce all laws, out come the moral laws – typically first banning all kinds of sex that aren't intended for reproduction, then everyday drugs, life-saving pharmaceuticals, and anything else that the regime du jour considers immoral for whatever reason. The crucial line to never be crossed is that wiretapping of PRIVATE communications must never be used for ordinary police work against people who aren't under formal, individual, and prior suspicion of an identified and already-committed crime. And that line has now been crossed. This means that we can unfortunately predict that the United States will take a very dark turn toward purebred fascism for a couple of decades, until it collapses under its own weight. We are now past the event horizon for that development. The focus must now lie on isolating this development to the United States to prevent contagion to the rest of the world.

Surveillance of telephone calls was originally used to prevent the spread of drugs

Shackford 15 (Editor and Journalist for Reason.com The Drug War, Not Terrorism, Brought Us Mass Surveillance <http://reason.com/blog/2015/04/07/the-drug-war-not-terrorism-brought-us-ma>), MJ

For more than two decades, the Justice Department and the Drug Enforcement Administration amassed logs of virtually all telephone calls from the USA to as many as 116 countries linked to drug trafficking, current and former officials involved with the operation said. The targeted countries changed over time

but included Canada, Mexico and most of Central and South America. Federal investigators used the call records to track drug cartels' distribution networks in the USA, allowing agents to detect previously unknown trafficking rings and money handlers. They also used the records to help rule out foreign ties to the bombing in 1995 of a federal building in Oklahoma City and to identify U.S. suspects in a wide range of other investigations. The Justice Department revealed in January that the DEA had collected data about calls to "designated foreign countries." But the history and vast scale of that operation have not been disclosed until now. The program was discontinued in 2013 after the outrage of Edward Snowden's revelations. According to Heath, the program was also "suffering from diminishing returns," as there were now so many different ways for drug smugglers to communicate outside of the telephone.

Bulk collection of telephone calls catch drug related crimes, bombings, and participants in 9/11

Heath, investigative reporter at USA TODAY, writing primarily about law and criminal justice, 4/8/15

(Brad, His work includes award-winning series on misconduct by federal prosecutors and air pollution outside schools. He has a law degree from Georgetown University., U.S. secretly tracked billions of calls for decades, USA Today, <http://www.usatoday.com/story/news/2015/04/07/dea-bulk-telephone-surveillance-operation/70808616/>),MJ

For more than two decades, the Justice Department and the Drug Enforcement Administration amassed logs of virtually all telephone calls from the USA to as many as 116 countries linked to drug trafficking, current and former officials involved with the operation said. The targeted countries changed over time but included Canada, Mexico and most of Central and South America. Federal investigators used the call records to track drug cartels' distribution networks in the USA, allowing agents to detect previously unknown trafficking rings and money handlers. They also used the records to help rule out foreign ties to the bombing in 1995 of a federal building in Oklahoma City and to identify U.S. suspects in a wide range of other investigations. The Justice Department revealed in January that the DEA had collected data about calls to "designated foreign countries." But the history and vast scale of that operation have not been disclosed until now. The now-discontinued operation, carried out by the DEA's intelligence arm, was the government's first known effort to gather data on Americans in bulk, sweeping up records of telephone calls made by millions of U.S. citizens regardless of whether they were suspected of a crime. It was a model for the massive phone surveillance system the NSA launched to identify terrorists after the Sept. 11 attacks. That dragnet drew sharp criticism that the government had intruded too deeply into Americans' privacy after former NSA contractor Edward Snowden leaked it to the news media two years ago. More than a dozen current and former law enforcement and intelligence officials described the details of the Justice Department operation to USA TODAY. Most did so on the condition of anonymity because they were not authorized to publicly discuss the intelligence program, part of which remains classified.

60 percent of electronic surveillance is used to prevent the war on drugs
Stanley, Senior Policy Analyst JUNE 6, 2011

(Jay, ACLU Speech, Privacy & Technology Project, The American Civil Liberties, The War on Drugs and the Surveillance Society, <https://www.aclu.org/blog/war-drugs-and-surveillance-society>),MJ

These wars have transformed America from a place where most people's interactions with employees of the federal government was limited to their postmaster, into one in which millions of citizens routinely face sometimes intimidating government agents checking their papers, ordering them about, searching them, groping their genitals, and putting their hands down their pants, as in today's airline security lines. The so-called "war on drugs" is no exception to this pattern. Future generations will look back on the "war on drugs" as a crude, barbaric and inhumane response to the social and public health problem of drug abuse. And they'll look back with dismay at how our primitive "drug war" had ugly repercussions in so many areas. One of those areas is the growth of government surveillance. The "war on terror" has been the primary driver of expanded surveillance in the past decade — but the "war on drugs" is sometimes overlooked as also having played a key role in eroding our privacy rights. It is a "war" that takes place not on some foreign battlefield, but in the lives of Americans — their homes, cars, phones, purses and bodies — and in fighting this war the authorities have found justification for extending their power into all such realms. The result has been a ferocious assault on American's privacy rights: Electronic surveillance. The drug war has always been a central justification for more surveillance powers, from traditionally wiretapping through modern laws such as the 1990s telecom spying law CALEA. Sometimes government agencies also seek new powers by citing terrorism but mainly use those powers in attempts to wage the war against drugs. As researcher Chris Soghoian has pointed out, if you look at the latest (2009) government reports, more than 86 percent of law enforcement wiretaps were used as part of narcotics investigations. And after 9/11, the government insisted that it needed new powers to carry out "sneak and peek" searches to "avoid tipping off terrorists" — and was granted those powers by the Patriot Act. However, records show that only 3 of the 763 "sneak and peek" warrants obtained in 2009 were for terrorism probes, while over 60 percent were for drug investigations.

Prescription Databases help battle against drug abuse **Stanley, Senior Policy Analyst JUNE 6, 2011**

(Jay, ACLU Speech, Privacy & Technology Project, The American Civil Liberties, The War on Drugs and the Surveillance Society, <https://www.aclu.org/blog/war-drugs-and-surveillance-society>), MJ

The so-called "war on drugs" is no exception to this pattern. However, records show that only 3 of the 763 "sneak and peek" warrants obtained in 2009 were for terrorism probes, while over 60 percent were for drug investigations. Prescription databases. As part of the battle against prescription drug abuse, most states have created prescription drug monitoring databases that collect and store the details of individuals' medical prescriptions, which can then be checked by police, pharmacies and doctors for "suspicious" patterns. These databases are funded by the federal government which is also

“prodding” them into linking the state databases together into a single distributed national database.

System for Government surveillance financially monitors to alleviate war on drugs

Stanley, Senior Policy Analyst JUNE 6, 2011

(Jay, ACLU Speech, Privacy & Technology Project, The American Civil Liberties, The War on Drugs and the Surveillance Society, <https://www.aclu.org/blog/war-drugs-and-surveillance-society>),MJ

These wars have transformed America from a place where most people’s interactions with employees of the federal government was limited to their postmaster, into one in which millions of citizens routinely face sometimes intimidating government agents checking their papers, ordering them about, searching them, groping their genitals, and putting their hands down their pants, as in today’s airline security lines. The so-called “war on drugs” is no exception to this pattern. Future generations will look back on the “war on drugs” as a crude, barbaric and inhumane response to the social and public health problem of drug abuse. And they’ll look back with dismay at how our primitive “drug war” had ugly repercussions in so many areas. One of those areas is the growth of government surveillance. The “war on terror” has been the primary driver of expanded surveillance in the past decade — but the “war on drugs” is sometimes overlooked as also having played a key role in eroding our privacy rights. It is a “war” that takes place not on some foreign battlefield, but in the lives of Americans — their homes, cars, phones, purses and bodies — and in fighting this war the authorities have found justification for extending their power into all such realms. The result has been a ferocious assault on American’s privacy rights: Electronic surveillance. The drug war has always been a central justification for more surveillance powers, from traditionally wiretapping through modern laws such as the 1990s telecom spying law CALEA. Sometimes government agencies also seek new powers by citing terrorism but mainly use those powers in attempts to wage the war against drugs. As researcher Chris Soghoian has pointed out, if you look at the latest (2009) government reports, more than 86 percent of law enforcement wiretaps were used as part of narcotics investigations. And after 9/11, the government insisted that it needed new powers to carry out “sneak and peek” searches to “avoid tipping off terrorists” — and was granted those powers by the Patriot Act. However, records show that only 3 of the 763 “sneak and peek” warrants obtained in 2009 were for terrorism probes, while over 60 percent were for drug investigations. Prescription databases. As part of the battle against prescription drug abuse, most states have created prescription drug monitoring databases that collect and store the details of individuals’ medical prescriptions, which can then be checked by police, pharmacies and doctors for “suspicious” patterns. These databases are funded by the federal government which is also “prodding” them into linking the state databases together into a single distributed national database. Financial monitoring. The war on drugs led to the creation of a sophisticated government surveillance system for the monitoring of financial activities — which was later expanded dramatically on the rationale of detecting terrorist financing. Laws require any business or tradesperson to report large cash transactions as well as a variety of other “suspicious” transactions to the government, which maintains a database of those transactions. As we detailed in this 2004 ACLU report, the government can also issue sweeping orders requiring financial institutions to check for records of particular individuals or organizations, and requires a broad array of businesses to check government financial black lists before doing business with anyone.

Most intercepting of phone calls attempts to catch drug offenses

(Civil and Human Rights, and the Impact of the War on Drugs, http://www.drugwarfacts.org/cms/Civil_Rights#Domestic),MJ

Drug offenses were the most prevalent type of criminal offense investigated using wiretaps. Table 3 indicates that 87 percent of all applications for intercepts (3,115 wiretaps) in 2013 cited illegal drugs as the most serious offense under investigation. 'Other major offenses,' a category that includes smuggling and money laundering, was the second-largest category and was specified as the

most serious offense in approximately 4 percent of applications. Homicide, the third-most frequently cited crime, was specified in less than 4 percent of applications. Many applications for court orders revealed that multiple criminal offenses were under investigation, but Table 3 includes only the most serious criminal offense listed on an application.

Increase in government surveillance related to drug war prevention Privacy SOS 14

(Wiretap report shows explosion in government surveillance, nearly all drug war related, Privacy SOS Sunlight on Surveillance, <https://privacysos.org/node/1456>), MJ

Although the war on drugs is increasingly politically unpopular across the political spectrum, the US courts wiretap report for 2013 provides yet more evidence that both federal and state government are doubling down on the ruinous policy. The 2013 wiretap report—which does not include figures pertaining to Foreign Intelligence Surveillance Act (FISA) wiretaps—shows that a whopping 87% of authorized intercepts, 93% of which were phone taps, were executed in drug cases. The figures show that courts granted 3,576 wiretap authorizations in 2013 in the 27 states that reported. Courts denied only one wiretap application in the United States in 2013. Coming the same week as new hints about the FBI's expansive tapping of NSA data troves—empirical figures for which the public remains ignorant to this day—the wiretap data show that the government's appetite for spying on Americans has strengthened over the past decade. And instead of moving away from failed drug war enforcement, the government has focused with laser precision on tapping the phones of suspected dealers. If anyone is confused about the relationship between the drug war and the surveillance state, let the following put to rest their doubts: 87 percent of all applications for intercepts (3,115 wiretaps) in 2013 cited illegal drugs as the most serious offense under investigation... Authorized intercept applications reported by year increased 100 percent from 1,789 in 2003 to 3,576 in 2013 (the total for 2003 was revised after initial publication). The majority of wiretaps have consistently been used for narcotics investigations, which accounted for 77 percent of intercepts in 2003 (1,104 applications) and 87 percent in 2013 (3,115 applications). Other notable data from the report include: 97% of wiretaps were targeted at portable devices (presumably mostly cell phones); 100% of wiretaps in Massachusetts were for narcotics investigations (6 federal and 11 local, with 1 from Middlesex County and 10 from Berkshire County); In the Northern District of Illinois, investigators conducted the most expansive federal wiretap in 2013, intercepting "136,378 messages over 90 days, including 36,244 incriminating interceptions" in a narcotics case; The most expansive state wiretap occurred in Gwinnett County, Georgia, where police working a narcotics case intercepted 187,091 calls and messages over a 194-day wiretap—13 percent of which were incriminating; Edward Snowden's revelations appear to have had a significant impact on state wiretap investigations: "The number of state wiretaps in which encryption was encountered increased from 15 in 2012 to 41 in 2013." In nine of those cases, the encryption worked, and officials were unable to decipher the targeted communications; Wiretaps cost taxpayers quite a chunk of change, but overall the price of surveillance is plummeting. "For federal wiretaps for which expenses were reported in 2013, the average cost was \$43,361, a 25 percent decrease from 2012."

Federal agencies partner with phone companies to get data on possible drug dealers

Gregorian 13

(Dareh, writer for Daily News, AT&T helps DEA track suspected drug dealers with phone call data The phone company has been helping the agency's Hemisphere Project by providing access to a database with 26 years of information that tracks 4 billion calls a day,

<http://www.nydailynews.com/news/national/t-helps-government-track-suspected-drug-dealers-article-1.1443707>), **MJ**

The feds have partnered with AT&T to reach out and touch alleged drug dealers. The phone company has been helping the Drug Enforcement Agency's "Hemisphere Project" by providing easy access to its massive database, which contains 26 years of information and tracks 4 billion calls a day, records show. The government also pays AT&T to embed employees alongside DEA agents and investigators in locations around the country. The employees can quickly supply the investigators with subpoenaed phone data and help them track down dealers, the report said, adding that the project has been highly successful in following suspects who frequently switch cellphones. Some of the subpoenas are issued by the DEA itself — it's one of a handful of government agencies that can issue its own "administrative subpoenas." The sought-after information — which can include the location of callers — "can be returned via email within an hour," Hemisphere training documents crow. A law enforcement source said the program is far different from the National Security Agency's controversial phone data collection program, which was revealed by leaker Edward Snowden earlier this year. "It's not a surveillance program," the source said of Hemisphere, but a mechanism to speed up access to information about specific phone numbers. "We're trying to keep up with the drug dealers," the source said. While the AT&T data goes back 26 years, the source said, that's not much of a help to the feds. Wiretaps are key to stopping drug trafficking

Greenberg 4/10/15 (Andrew, Andy Greenberg is a senior writer for WIRED, covering security, privacy, information freedom, and hacker culture, WANT TO SEE DOMESTIC SPYING'S FUTURE? FOLLOW THE DRUG WAR, Wired, <http://www.wired.com/2015/04/want-see-domestic-spyings-future-follow-drug-war///ghs-SG>)

It's no secret that drug cases overwhelmingly dominate American law enforcement's use of surveillance techniques. The Department of Justice annually reports to the judiciary how many wiretaps it seeks warrants for, broken down by the type of crime being investigated. In 2013, the last such report, a staggering 88 percent of the 3,576 reported wiretaps were for narcotics. That's compared to just 132 wiretaps for homicide and assault combined, for instance, and a mere eight for corruption cases.

DEA Wire taps have increased over the past decade and are critical to counter-drug operations

Heath 6/2/15 (Brad, Brad Heath is an investigative reporter at USA TODAY, writing primarily about law and criminal justice. His work includes award-winning series on misconduct by federal prosecutors and air pollution outside schools. He has a law degree from Georgetown University, DEA eavesdropping tripled, bypassed federal courts, <http://www.wtsp.com/story/news/2015/06/02/dea-wiretap-surveillance-tripled-in-state-courts/28383107///ghs-SG>)

WASHINGTON — The U.S. Drug Enforcement Administration more than tripled its use of wiretaps and other types of electronic eavesdropping over the past decade, largely bypassing federal courts and Justice Department lawyers in the process, newly obtained records show. The DEA conducted 11,681 electronic intercepts in the fiscal year that ended in September, 2014 Ten years earlier, the drug agency conducted 3,394. Most of that ramped-up surveillance was never reviewed by federal judges or Justice Department lawyers, who typically are responsible for examining federal agents' eavesdropping requests. Instead, DEA agents now take 60% of those requests directly to local prosecutors and judges from New York to California, who current and former officials say often approve them more quickly and easily. Drug investigations account for the vast majority of U.S. wiretaps, and much of that surveillance is carried out by the DEA. Privacy advocates expressed concern that the drug agency had expanded its surveillance without going through internal Justice Department reviews, which often are more demanding than federal law requires. Wiretaps — which allow the police to listen in on phone calls and other electronic communications — are considered so sensitive that federal law requires approval from a senior Justice Department official before agents can even ask a federal court for permission to conduct one. The law imposes no such restriction on state court wiretaps, even when they are

sought by federal agents. "That law exists to make sure that wiretap authority is not abused, that it's only used when totally appropriate," said Hanni Fakhoury, an attorney with the Electronic Frontier Foundation. "That's a burden. And if there's a way to get around that burden, the agents are going to try to get around it." USA TODAY obtained the DEA's wiretapping statistics under the Freedom of Information Act. The figures include every order authorizing or extending electronic eavesdropping. Some orders could be counted more than once, if they include the collection of both voice calls and text messages, for example. DEA Spokesman Joseph Moses said agents' increased use of wiretaps reflects "the proliferation of communication devices and methods" used by the drug traffickers. He said the wiretaps have been critical for agents to penetrate the networks high-level traffickers use to control their operations.

NSA bulk phone surveillance that the aff limits more than the current USA FREEDOM Act would severely limit the ability of the NSA to detect drug trafficking networks

Heath, staff writer about law and criminal justice, 4/8/15

(Brad, "U.S. secretly tracked billions of phone calls for decades", USA TODAY, 4/8/15, <http://www.usatoday.com/story/news/2015/04/07/dea-bulk-telephone-surveillance-operation/70808616/>, accessed 6/23/15, ZW)

WASHINGTON — The U.S. government started keeping secret records of Americans' international telephone calls nearly a decade before the Sept. 11 terrorist attacks, harvesting billions of calls in a program that provided a blueprint for the far broader National Security Agency surveillance that followed. For more than two decades, the Justice Department and the Drug Enforcement Administration amassed logs of virtually all telephone calls from the USA to as many as 116 countries linked to drug trafficking, current and former officials involved with the operation said. The targeted countries changed over time but included Canada, Mexico and most of Central and South America. Federal investigators used the call records to track drug cartels' distribution networks in the USA, allowing agents to detect previously unknown trafficking rings and money handlers. They also used the records to help rule out foreign ties to the bombing in 1995 of a federal building in Oklahoma City and to identify U.S. suspects in a wide range of other investigations.

The SOD uses bulk surveillance to fight the war on drugs daily

Shiffman and Cooke, staff writers, 8/5/13

(John, Reuters enterprise correspondent, co-author of *Priceless*, and author of *Operation Shakespeare*, and Kristina, investigative reporter and former student in International Relations and History at the London School of Economics, "Secretive Drug Enforcement Agency (DEA) unit told to cover-up massive spy program used to investigate Americans", Reuters, 8/5/13, <http://www.rawstory.com/2013/08/secretive-drug-enforcement-agency-dea-unit-told-to-cover-up-massive-spy-program-used-to-investigate-americans/>, accessed 7/3/15, ZW)

WASHINGTON (Reuters) — A secretive U.S. Drug Enforcement Administration unit is funneling information from intelligence intercepts, wiretaps, informants and a massive database of telephone records to authorities across the nation to help them launch criminal investigations of Americans. Although these cases rarely involve national security issues, documents reviewed by Reuters show that law enforcement agents have been directed to conceal how such investigations truly begin — not only from defense lawyers but also sometimes from prosecutors and judges. The undated documents show that federal agents are trained to "recreate" the investigative trail to

effectively cover up where the information originated, a practice that some experts say violates a defendant's Constitutional right to a fair trial. If defendants don't know how an investigation began, they cannot know to ask to review potential sources of exculpatory evidence – information that could reveal entrapment, mistakes or biased witnesses. "I have never heard of anything like this at all," said Nancy Gertner, a Harvard Law School professor who served as a federal judge from 1994 to 2011. Gertner and other legal experts said the program sounds more troubling than recent disclosures that the National Security Agency has been collecting domestic phone records. The NSA effort is geared toward stopping terrorists; the DEA program targets common criminals, primarily drug dealers. "It is one thing to create special rules for national security," Gertner said. "Ordinary crime is entirely different. It sounds like they are phonying up investigations." THE SPECIAL OPERATIONS DIVISION The unit of the DEA that distributes the information is called the Special Operations Division, or SOD. Two dozen partner agencies comprise the unit, including the FBI, CIA, NSA, Internal Revenue Service and the Department of Homeland Security. It was created in 1994 to combat Latin American drug cartels and has grown from several dozen employees to several hundred. Today, much of the SOD's work is classified, and officials asked that its precise location in Virginia not be revealed. The documents reviewed by Reuters are marked "Law Enforcement Sensitive," a government categorization that is meant to keep them confidential. "Remember that the utilization of SOD cannot be revealed or discussed in any investigative function," a document presented to agents reads. The document specifically directs agents to omit the SOD's involvement from investigative reports, affidavits, discussions with prosecutors and courtroom testimony. Agents are instructed to then use "normal investigative techniques to recreate the information provided by SOD." A spokesman with the Department of Justice, which oversees the DEA, declined to comment. But two senior DEA officials defended the program, and said trying to "recreate" an investigative trail is not only legal but a technique that is used almost daily. A former federal agent in the northeastern United States who received such tips from SOD described the process. "You'd be told only, 'Be at a certain truck stop at a certain time and look for a certain vehicle.' And so we'd alert the state police to find an excuse to stop that vehicle, and then have a drug dog search it," the agent said. "PARALLEL CONSTRUCTION" After an arrest was made, agents then pretended that their investigation began with the traffic stop, not with the SOD tip, the former agent said. The training document reviewed by Reuters refers to this process as "parallel construction." The two senior DEA officials, who spoke on behalf of the agency but only on condition of anonymity, said the process is kept secret to protect sources and investigative methods. "Parallel construction is a law enforcement technique we use every day," one official said. "It's decades old, a bedrock concept."

The DHS uses underground robots to fight the war on drugs

Fox News Latino, 1/15/14

(Fox News Latino, "Drug War Underground: Homeland Security Department Unveils Tunnel-Detecting Robots", Fox News, 1/15/14, <http://latino.foxnews.com/latino/news/2014/01/15/drug-war-underground-homeland-security-department-unveils-tunnel-detecting-robots/>, accessed 7/3/15, ZW)

NOGALES, ARIZ. (AP) – The U.S. Border Patrol unveiled one of its weapons Tuesday in the war on drugs: Three wireless camera-equipped robots that let border agents remotely navigate the tunnels

and storm drainage systems that smugglers use to sneak drugs, guns and people across the border. The agency is using the devices to keep agents out of harm's way as many tunnels can be poorly built and possibly collapse and lack proper ventilation. The 12-pound robots also let agents navigate an underground labyrinth in a fraction of the time it would take an agent to

explore the tunnel. And the devices can be used in tunnels and pipes where agents can't fit. "If we find a tunnel, we like to send a robot into clear the tunnel and identify any threats, contraband, potential people with weapons, and let the agent know ahead of time if the tunnel is structurally sound," said Border Patrol Agent Kevin Hecht, an agency tunnel expert. The Border Patrol held a demonstration of the devices Tuesday in the southern Arizona border city of Nogales, where dozens of crude tunnels have been discovered over the years. The tunnels discovered in Nogales have generally begun in Mexico and have tied into the Arizona city's storm drainage system. Nearly 170 tunnels have been found nationwide since 1990, most along the Arizona and California border with Mexico. The tunnel robots have been in use by Border Patrol for several years. But the agency recently paid \$109,000 for the three new cameras with money from an asset forfeiture fund, which comes from the seizure of property in criminal cases, including drug cases involving cartel members, the Border Patrol said. Two of the three robots will remain in southern Arizona, while the third is headed to southern California, where immigration authorities have used a tunnel robot for a number of years. Tunnel construction ranges from extremely rudimentary, a small burrow dug by hand sometimes only large enough for a person to crawl through, to very sophisticated, including lights, supports to hold up the ceiling and ventilation. They can range from just a few feet stretching from one side of the border to the other, to up to a quarter mile long. Some tunnels merely go from one side of the border to the other with the contraband being off loaded in a field or on public land, while others exit into warehouses or homes along the border.

Miners and other laborers hired by cartels use hoes, jackhammers, shovels and picks to gouge out soil and load the dirt into buckets that are brought back out of the tunnel's starting point in Mexico. Their tools are old-fashioned and can be bought at home improvement stores. Miners, for instance, must use compasses because GPS devices don't work underground. Smugglers have dug dozens of crude tunnels in Nogales, Ariz., that begin in Mexico and tie into the Arizona city's storm drainage system. For sophisticated tunnels, such as those found near San Diego, cartels will hire engineers and miners to build the tunnels. A cartel will have a financier or a cell that reports to the cartel bosses and runs the construction. U.S. border officials estimate that the more sophisticated tunnels probably cost between \$2 million to \$3 million to build. Smuggling groups use tunnels to move drugs, guns and people who want to sneak across the U.S. border, though traffickers are sometimes selective about what they will move through their tunnels. Experts say sophisticated tunnels are used for mostly drug and gun smuggling, though people who don't want to risk traveling above ground will occasionally be sneaked through those tunnels. Cocaine and methamphetamine are brought in through the tunnels, but marijuana — which is big and bulky and therefore difficult to move — is the most prevalent drug transported

through the tunnels. Authorities found a 600-yard tunnel in Southern California during November 2011 that resulted in seizures of 32 tons of marijuana on both sides of the border, with 26 tons found on the U.S. side, accounting for one of the largest marijuana busts in U.S. history. That tunnel was equipped with electric railcars, lighting and ventilation while wooden planks lined the floor. Immigrant smugglers use "gopher hole" tunnels made up of huge PVC pipes that are buried underground and span the border, providing enough space through which a person can barely squeeze. The storm-drain tunnels in places like Nogales are used for both immigrant and drug smuggling.

Small, coastal vessels key and ideal for smuggling drugs into the US **DHS Science and Technology Directorate, 10/31/14**

(DHS Science and Technology Directorate, "Coastal Surveillance System", 10/31/14, <http://www.dhs.gov/sites/default/files/publications/Coastal%20Surveillance%20Systems.pdf>, accessed 7/3/15, ZW)

Increasingly, criminals use small vessels to smuggle illicit materials into the United States (U.S.). Transnational criminal organizations design and build these vessels, including go-fasts, pangas, and self-propelled semi-submersibles, for stealth. Although primarily used for drug smuggling at present, these vessels could also be used for a variety of threats. Small vessels are an ideal platform for smuggling—they are difficult to detect with existing sensors, and it is challenging to distinguish between the bad actors and those engaged in legitimate pleasure and commercial boating. Another challenge for the agencies responsible for guarding our maritime borders is how to effectively patrol the vast shorelines of the U.S. using limited resources (ships, boats, planes, helicopters). To do this more efficiently and effectively requires an enhanced situational awareness of the maritime domain. Agencies need reliable, timely, and actionable law enforcement information in order to cue limited interdiction assets.

CSS key to check maritime drug smuggling practices **DHS Science and Technology Directorate, 10/31/14**

(DHS Science and Technology Directorate, "Coastal Surveillance System", 10/31/14, <http://www.dhs.gov/sites/default/files/publications/Coastal%20Surveillance%20Systems.pdf>, accessed 7/3/15, ZW)

The Department of Homeland Security (DHS) Science and Technology Directorate is improving the ability of the U.S. Coast Guard (USCG), U.S. Customs and Border Protection (CBP), and other DHS operational components to interdict small vessels by developing a Coastal Surveillance System (CSS) with an open, Web-based architecture for rapid technology insertion and agile information sharing. The CSS integrates data feeds from existing local and regional sensors. An unclassified data fusion engine then analyzes the data and provides law enforcement agencies with realtime actionable information, including vessel tracking information. The CSS also provides a secure, service-based framework that can integrate into existing user networks without requiring a re-design of hardware infrastructure. The CSS houses multiple tools that provide users with different capabilities. One CSS tool in development, the Smart Chart Automatic Identification System (AIS), is a smartphone app that provides boat owners with free access to maritime safety and security information and tools, such as nautical charts, weather overlays, cruising guidance, vessel locations, and more. In return, users

voluntarily report the location of their boats, thereby helping law enforcement officials to differentiate between potential smugglers and legitimate boating traffic. A more secure maritime border The CSS will provide a more complete national maritime picture and enable users to more efficiently use and preposition law enforcement assets, both on and offshore, resulting in increased apprehensions and seizures. USCG and CBP will benefit from reduced aircraft and vessel operating hours, which will save valuable fuel, manpower, and maintenance resources.

DEA license plate surveillance used to catch a myriad of criminals, especially drug cartels

Barrett, staff writer, 1/26/15

(Devlin, "U.S. Spies on Millions of Drivers: DEA Uses License-Plate Readers to Build Database for Federal, Local Authorities", Wall Street Journal, 1/26/15, <http://www.wsj.com/articles/u-s-spies-on-millions-of-cars-1422314779>, accessed 7/4/15, ZW)

WASHINGTON—The Justice Department has been building a national database to track in real time the movement of vehicles around the U.S., a secret domestic intelligence-gathering program that scans and stores hundreds of millions of records about motorists, according to current and former officials and government documents. The primary goal of the license-plate tracking program, run by the Drug Enforcement Administration, is to seize cars, cash and other assets to combat drug trafficking, according to one government document. But the database's use has expanded to hunt for vehicles associated with numerous other potential crimes, from kidnappings to killings to rape suspects, say people familiar with the matter. Officials have publicly said that they track vehicles near the border with Mexico to help fight drug cartels. What hasn't been previously disclosed is that the DEA has spent years working to expand the database "throughout the United States," according to one email reviewed by The Wall Street Journal. Many state and local law-enforcement agencies are accessing the database for a variety of investigations, according to people familiar with the program, putting a wealth of information in the hands of local officials who can track vehicles in real time on major roadways. The database raises new questions about privacy and the scope of government surveillance. The existence of the program and its expansion were described in interviews with current and former government officials, and in documents obtained by the American Civil Liberties Union through a Freedom of Information Act request and reviewed by The Wall Street Journal. It is unclear if any court oversees or approves the intelligence-gathering. A spokesman for Justice Department, which includes the DEA, said the program complies with federal law. "It is not new that the DEA uses the license-plate reader program to arrest criminals and stop the flow of drugs in areas of high trafficking intensity," the spokesman said.

Drugs Hurt economic development

UN 12 (United Nations, International Assembly of Nations who move to solve the problems of the world, 6/26/2012, United Nations Website,

<http://www.un.org/en/ga/president/66/Issues/drugs/drugs-crime.shtml//ghs-SG>)

As economic development is threatened by transnational organized crime and illicit drugs, countering crime must form part of the development agenda, and social and economic development approaches need to form part of our response to organized crime. If we are to ensure that the MDGs are achieved, we must strengthen strategies to deliver these goals, including stepping up efforts to address issues such as money laundering, corruption and trafficking in wildlife, people and arms, and drugs. Organized crime and drugs impact every economy, in every country, but they are particularly devastating in weak and vulnerable countries. Weak and fragile countries are particularly vulnerable to the effects of transnational organized crime.

These countries, some devastated by war, others making the complex journey towards democracy, are preyed upon by crime. As a result, organized crime flourishes, successes in development are reversed, and opportunities for social and economic advancement are lost. Corruption, a facilitator of organized crime and drug trafficking, is a serious impediment to the rule of law and sustainable development. It can be a dominant factor driving fragile countries towards failure. It is estimated that up to US\$40 billion annually is lost through corruption in developing countries. Drugs and crime undermine development by eroding social and human capital. This degrades quality of life and can force skilled workers to leave, while the direct impacts of victimisation, as well as fear of crime, may impede the development of those that remain. By limiting movement, crime impedes access to possible employment and educational opportunities, and it discourages the accumulation of assets. Crime is also more "expensive" for poor people in poor countries, and disadvantaged households may struggle to cope with the shock of victimisation. Drugs and crime also undermine development by driving away business. Both foreign and domestic investors see crime as a sign of social instability, and crime drives up the cost of doing business. Tourism is a sector especially sensitive to crime issues. Drugs and crime, moreover, undermine the ability of the state to promote development by destroying the trust relationship between the people and the state, and undermining democracy and confidence in the criminal justice system. When people lose confidence in the criminal justice system, they may engage in vigilantism, which further undermines the state.

Impacts

Impact – The heinously violent practices of drug cartels parallels those of the Islamic State in Iraq and Syria

Gordon, author of *Mainstreaming Torture: Ethical Approaches in the Post-9/11 United States*, 3/23/15

(Rebecca, teacher in the philosophy department at the University of San Francisco and a member of the War Times/Tiempo de Guerras collective, “When the War on Drugs in Mexico Comes Back Home to the U.S.: Like the Islamic State, the Mexican drug cartels’ power has increased as the result of disastrous U.S. policies.”, In These Times, 3/23/15, <http://inthesetimes.com/article/17782/when-the-war-on-drugs-in-mexico-comes-back-home-to-the-u.s>, accessed 7/6/15, ZW)

They behead people by the hundreds. They heap headless, handless bodies along roadsides as warnings to those who would resist their power. They have penetrated the local, state, and national governments and control entire sections of the country. They provide employment and services to an impoverished public, which distrusts their actual government with its bitter record of corruption, repression, and torture. They seduce young people from several countries, including the United States, into their murderous activities. Is this a description of the heinous practices of the Islamic State (IS) in Iraq and Syria? It could be, but as a matter of fact it’s not. These particular thugs exist a lot closer to home. They are part of the multi-billion-dollar industry known as the drug cartels of Mexico. Like the Islamic State, the cartels' power has increased as the result of disastrous policies born in the U.S.A.

War on drugs threatens human life by jeopardizing health and security

(Civil and Human Rights, and the Impact of the War on Drugs, http://www.drugwarfacts.org/cms/Civil_Rights#Domestic),MJ

Like the war on terror, the war on drugs is framed as a response to an exceptional, existential threat to our health, our security, and indeed the very fabric of society. The 'Addiction to narcotic drugs' is portrayed as an 'evil' the international community has a moral duty to 'combat' because it is a 'danger of incalculable gravity' that warrants a series of (otherwise publicly unacceptable) extraordinary measures. This is not an exaggeration of the political rhetoric. This crusading language has created a political climate in which drug war policy and enforcement are not required to meet human rights norms.

The majority of wiretapping is used for narcotics and preventing other crimes that stem from narcotics

Greenberg 15

(Andy, Andy Greenberg is a senior writer for WIRED, covering security, privacy, information freedom, and hacker culture, [WANT TO SEE DOMESTIC SPYING’S FUTURE? FOLLOW THE Drug War](http://www.wired.com/2015/04/want-see-domestic-spyings-future-follow-drug-war/), <http://www.wired.com/2015/04/want-see-domestic-spyings-future-follow-drug-war/>),MJ

It’s no secret that drug cases overwhelmingly dominate American law enforcement’s use of surveillance techniques. The Department of Justice annually reports to the judiciary how many wiretaps it seeks warrants

for, broken down by the type of crime being investigated. In 2013, the last such report, a staggering 88 percent of the 3,576 reported wiretaps were for narcotics. That's compared to just 132 wiretaps for homicide and assault combined, for instance, and a mere eight for corruption cases. 2013 Wiretaps [Click to Open Overlay Gallery](#) A chart of reported law enforcement wiretaps from 2013, showing that wiretaps for suspected narcotics trafficking dwarfed all other crimes. One reason drug cases dwarf other crimes in terms of law enforcement's surveillance, Soghoian says, is that narcotics sales require long-term conspiring within criminal organizations. That provides plenty of internal communications to tap compared to a one-off murder or robbery. But Soghoian also argues that the use of surveillance to bust drug dealers feeds on itself. Cops or DEA agents who take down a narcotics trafficking group often seize millions of dollars in assets. "When agencies bust a drug dealer and get \$5 million and a kilo of coke, they keep the money," Soghoian says. "Surveillance is expensive...In many ways, the drug cases subsidize the surveillance technology used by law enforcement."

The war on drugs is extremely expensive and negatively affects US economy

(The War on Drugs: Wasting billions and undermining economies, The costs of the war on drugs to the economy Billions spent on drug law enforcement Global spending on drug law enforcement, <http://www.countthecosts.org/sites/default/files/Economics-briefing.pdf>), MJ

In order to accurately assess the level of expenditure on drug law enforcement, it is important to recognise the difference between proactive and reactive spending. The former is spending on supply-side drug law enforcement, which has its own discrete, labelled budget allocation; while the latter is expenditure across the criminal justice system, used to deal with drug offenders and drug-related crime. While this distinction – in addition to other factors – poses difficulties in calculating levels of drug-related

expenditure (see box, p. 4 for more detail), some tentative estimates and comparisons can be made: **Total expenditure on drug law enforcement by the US has been estimated at over \$1 trillion during the last 40 years. Federal spending on drug control in the US is around \$15 billion annually, according to official figures.** (However, it is unclear how much reactive spending is included in this figure, of which roughly 35% is on treatment and prevention, and 50% on domestic law enforcement and interdiction. It is much more difficult to attain accurate data regarding state and local government expenditure, though one estimate of drug-related criminal justice expenditure alone is \$25.7 billion. **Cartel violence leads to**

the mutilation of innocent people and the corruption of law enforcement agencies through fear

Perkins, associate deputy director of the FBI, AND Placido, assistant administrator for intelligence of the DEA, 05/05/10

(Kevin L, previous assistant director of the FBI's Criminal Investigative Division, previous assistant director of the FBI's Criminal Investigative Division, previous special agent in charge of the Baltimore Field Office, bachelor's degree in business administration from Baylor University, AND Anthony P, "U.S. Senate Caucus on International Narcotics Control", Federal Bureau of Investigation, 05/05/10, <https://www.fbi.gov/news/testimony/drug-trafficking-violence-in-mexico-implications-for-the-united-states>, accessed 7/5/15, ZW)

The drug trade in Mexico has been rife with violence for decades, though the level and the severity of violence we are seeing today is unprecedented. Without minimizing the severity of the problems we are confronted with today, it is nonetheless critical to understand the background of the “culture of violence” associated with Mexican DTOs and the cyclical nature of the “violence epidemics” with which Mexico is periodically beset. We do not have to go very far back in history to recall the cross-border killing spree engaged in by Los Zetas operatives in the Laredo-Nuevo Laredo area during 2004-05. But one thing must remain clear in any discussion of violence in Mexico, or violence practiced by Mexican traffickers operating in the United States: drug gangs are inherently violent, and nowhere is this more true than in Mexico, where Wild West-style shootouts between the criminals and the cops, and/or elements of opposing trafficking groups is far too common. Since 2007, there have been over 22,000 drug-related murders in Mexico, as reported by the Mexican Attorney General’s Office. We cringe at news stories detailing the arrest of a “pozolero” (stew-maker), a killer who disposes of his victims’ body parts in barrels of acid, or the discovery of a mass grave containing the remains of countless victims decomposing under a layer of lime. But these and other gruesome tactics are not new. What is both new and disturbing are the sustained efforts of Mexican DTOs to use violence as a tool to undermine public support for the government’s counter-drug efforts. Traffickers have made a concerted effort to send a public message through their bloody campaign of violence. They now often resort to leaving the beheaded and mutilated bodies of their tortured victims out for public display with the intent of intimidating government officials and the public alike. Particularly worrisome are those tactics intended to intimidate police and public officials, and law-abiding citizens. The intimidation of public and police officials through violence or the threat of violence has a more insidious side. Not all corruption is a clear cut, money-for-cooperation, negotiation: the intimidation of officials, threats against their lives or their families’ lives, is a much more widespread and effective tactic, and likely accounts for a plurality of corrupt law enforcement officials in Mexico.

Excessive violence by junior drug cartel members spills over to the US – high-risk national security issue

Perkins, associate deputy director of the FBI, AND Placido, assistant administrator for intelligence of the DEA, 05/05/10

(Kevin L, previous assistant director of the FBI’s Criminal Investigative Division, previous assistant director of the FBI’s Criminal Investigative Division, previous special agent in charge of the Baltimore Field Office, bachelor’s degree in business administration from Baylor University, AND Anthony P, “U.S. Senate Caucus on International Narcotics Control”, Federal Bureau of Investigation, 05/05/10, <https://www.fbi.gov/news/testimony/drug-trafficking-violence-in-mexico-implications-for-the-united-states>, accessed 7/5/15, ZW)

Excessive violence by the cartels is a national security problem for Mexico, and—as our close neighbor and political ally—presents high stakes for the United States. In the past year, U.S. intelligence and law enforcement agencies have worked diligently to reach a consensus view on “spillover” violence and on U.S. vulnerability to the Mexican cartels’ violent tactics. These discussions required the interagency to define “spillover” in practical terms. As agreed to by the interagency community, spillover violence entails deliberate, planned attacks by the cartels on U.S. assets, including civilian, military, or law enforcement officials, innocent U.S. citizens, or physical institutions such as government buildings, consulates, or businesses. This definition does not include trafficker on trafficker violence, whether perpetrated in Mexico or the U.S. Spillover violence is a complicated issue. It is crucial, in order to address the problem with the appropriate programs, resources, and operations, that we understand the difference between the intentional targeting of innocent civilians in the United States, or official U.S. government interests in Mexico or the United States, and actions that are characteristic of violent drug

culture, such as the killing of an individual who owes a drug debt to the organization. Certain isolated incidents in the United States, such as the torture by a Mexican trafficker of a Dominican drug customer in Atlanta, are frightening, but do not represent a dramatic departure from the violence that has always been associated with the drug trade. Much of the risk of spillover violence is posed by younger-generation traffickers whose approach to the drug trade is less rational and profit-minded than that of their "elders," or by multi-national street and prison gangs working in concert with Mexican cartels as enforcers and street-level drug distributors. As the GOM has continuously and successfully disrupted the cartels' command and control structure through operations against their leaders, less-experienced "junior" cartel members are inhabiting roles formerly held by traffickers of long standing who, while violent, tended to be more deliberate and cautious in their actions. In Ciudad Juarez, where three individuals associated with the U.S. consulate were killed in March, the Barrio Azteca (BA) street gang is the best known of several gangs being used as enforcers by La Linea, gatekeepers for the Juarez Cartel. The BA has been linked to drug trafficking, prostitution, extortion, assaults, murder, and the retail sale of drugs obtained by Mexican DTOs. Elsewhere in Mexico, the link between street gangs and the Mexican cartels is more fluid and tenuous, with gang members typically filling retail drug sales roles rather than providing enforcement.

Drug cartels carry out violent acts in their pursuit of payment, injuring and killing even those not associated with drugs

Archibold, staff writer, 3/23/09

(Randal C., New York Times bureau chief for Mexico, Central America and the Caribbean, former national correspondent, and former Los Angeles Times reporter and editor, "Drug Cartel Violence Spills Over From Mexico, Alarming U.S.", The New York Times, 3/23/09, LexisNexis, accessed 7/5/15, ZW)

TUCSON -- Sgt. David Azuelo stepped gingerly over the specks of blood on the floor, took note of the bullet hole through the bedroom skylight, raised an eyebrow at the lack of furniture in the ranch-style house and turned to his squad of detectives investigating one of the latest home invasions in this southern Arizona city. A 21-year-old man had been pistol-whipped throughout the house, the gun discharging at one point, as the attackers demanded money, the victim reported. His wife had been bathing their 3-month-old son when the intruders arrived. "At least they didn't put the gun in the baby's mouth like we've seen before," Sergeant Azuelo said. That same afternoon this month, his squad was called to the scene of another home invasion, one involving the abduction of a 14-year-old boy. This city, an hour's drive north of the Mexican border, is coping with a wave of drug crime the police suspect is tied to the bloody battles between Mexico's drug cartels and the efforts to stamp them out. Since officials here formed a special squad last year to deal with home invasions, they have counted more than 200 of them, with more than three-quarters linked to the drug trade. In one case, the intruders burst into the wrong house, shooting and injuring a woman watching television on her couch. In another, in a nearby suburb, a man the police described as a drug dealer was taken from his home at gunpoint and is still missing. Tucson is hardly alone in feeling the impact of Mexico's drug cartels and their trade. In the past few years, the cartels and other drug trafficking organizations have extended their reach across the United States and into Canada. Law enforcement authorities say they believe traffickers distributing the cartels' marijuana, cocaine, heroin, methamphetamine and other drugs are responsible for a rash of shootings in Vancouver, British Columbia, kidnappings in Phoenix, brutal assaults in Birmingham, Ala., and much more. United States law enforcement officials have identified 230 cities, including Anchorage, Atlanta, Boston and Billings, Mont., where Mexican cartels and their affiliates "maintain drug distribution networks or supply drugs to distributors," as a Justice Department report put it in December. The figure rose from 100 cities reported three years earlier, though Justice Department officials said that may be because of better data collection methods as well as the spread of the organizations.

Drug cartels use children to do their dirty work for them, distracting authorities from the cartel leaders directing them

The Associated Press, 3/14/12

(Associated Press, "Mexico drug gangs using more children as "mules"", Associated Press, 3/14/12, <http://www.cbsnews.com/news/mexico-drug-gangs-using-more-children-as-mules/>, accessed 7/5/15, ZW)

(AP) TIJUANA, Mexico - Luis Alberto is only 14 but has the wizened gaze of a grown-up hardened by life. He never met his father, worked as a child, was hired by a gang to sell drugs and then got addicted to them. In October he checked into Cirad, a rehab center west of this border city that handles about 500 drug addicts at a time, a fifth of them younger than 17. "They brought me here because I was using and selling 'cri loco,'" Luis Alberto said, referring to methamphetamine, the drug of choice for 90 percent of adolescents in detox because of its low cost and easy availability. Luis Alberto is just one of an increasing number of young people being used as "mules" to ferry drugs across the border into the U.S. or sell them in nearby Mexican towns, said Victor Clark, an anthropologist who studies drug trafficking. "Minors are cheap labor and expendable for organized crime in an area where there are few job opportunities or places for recreation, and where the distribution and consumption of drugs have grown fast," Clark said. Mexican authorities say they are aware of the problem, but there are no official figures on the number of adolescents detained for selling or distributing drugs because the law forbids keeping criminal records for minors. The U.S. Immigration and Customs Enforcement says that between 2008 and 2011, the number of youths aged 14 to 18 caught trying to cross the border between Tijuana and San Diego to sell drugs has grown tenfold. Lauren Mack, spokeswoman for ICE in San Diego, said 19 minors were arrested in 2008, 165 in 2009, 190 in 2010 and 190 again last year. Most of them were high school students who carried drugs, usually methamphetamine or cocaine, hidden in their bodies or in their cars, Mack said. Clark said similar things are being seen all along the border, at Mexican cities like Nogales, Ciudad Juarez and Reynosa. "It's growing at a worrying pace," he said. Officials at drug rehab centers across Tijuana estimate that of the approximately 500 adolescents now undergoing treatment, about a tenth of them are like Luis Alberto, not only addicted to a drug but also used by cartels to sell it. Luis Alberto, whose last name cannot be published because he is a minor, said he started selling drugs about two years ago in a neighborhood of east Tijuana along with other minors who were hired by "a boss." He made about 200 pesos (\$16) a day, which he says he spent on food and drugs. "Between me and my friends we sold about 40 packets a day. My boss kept 1,100 pesos (about \$88) per packet and the rest was for us. Sometimes there were about three or four packets left over and we just divided them among ourselves," he said. Sometimes the drug bosses used the children as lookouts in case police or soldiers approached, he added. Mexico's cartels have also employed children for their hit squads. In what may be the most shocking case involving a youth in Mexico's drug war, a 14-year-old boy born in San Diego and known only as "El Ponchis" was arrested in December 2010 in central Mexico and told reporters he had been kidnapped at age 11 and forced to work for a cartel. He said he participated in at least four beheadings.

The utilization of children by drug cartels is a unique form of abuse exacerbated by the affirmative

Montalvo, staff writer, 1/19/12

(Tania L, "Children in Mexico: Criminals or victims?", CNNMexico, 1/19/12, <http://www.cnn.com/2012/01/17/world/americas/mexico-children-crime/index.html>, accessed 7/5/15, ZW)

At least 30,000 children in Mexico are involved in some sort of organized crime, according to a nationwide alliance of civic and social organizations. The Child Rights Network in Mexico says many of these children are taking part because of death threats or because of economic and social necessity. It is urging the government to start recognizing them as victims of child abuse. "The drug cartels are

not training them to be ringleaders," spokeswoman Veronica Morales said. "It is a new form of abuse in which they are being used to commit an offense, to violate the law and to deceive authorities." In the past year, there have been numerous headlines of children being arrested in Mexico. Perhaps the most high-profile case involved a 14-year-old boy known as "El Ponchis" ("The Cloak"). He was found guilty of torturing and beheading at least four people for the South Pacific drug cartel. A month after the boy was sentenced to three years in a correctional facility, a 13-year-old girl was captured in the state of Jalisco and accused of being part of the Zetas drug cartel. Authorities said the girl was receiving 8,000 pesos a month -- almost \$800 -- for being a lookout. She would let gang members know who was entering and who was leaving Luis Moya, a municipality in north-central Mexico. In January of last year, a 15-year-old boy was captured in Jiutepec, just outside of Mexico City. During an impromptu news conference on the street, the child confessed that he was a lookout for the South Pacific cartel. He said he was collaborating with the cartel because of death threats. Children are easy prey for organized crime because they lack opportunities, said José Luis Cisneros, a sociologist at the Metropolitan Autonomous University in Mexico City. "Socially, (the children) see the violence as the only way to make people respect them -- and as a way to exercise certain power, something that has been denied to their families," Cisneros said.

I Don't Know where these go

Drug cartels assist Hezbollah

The Commentator 12 (The Commentator, a group of editors founded and legally incorporated by journalist, author, and political analyst Robin Sheperd, 12/30/2012, Cooked Up: How Hezbollah is fundraising with Mexican drug cartels" http://www.thecommentator.com/article/2332/coked_up_how_hezbollah_is_fundraising_with_mexican_drug_cartels). AP

A beleaguered **Hezbollah is partnering with** brutal Mexican **drug gangs in order to raise cash and further** its **aspirations for attacks on the United States**, it has been reported today. Recent US intelligence has suggested however, that **Mexico is home to some 200,000 illegal** Lebanese and Syrian **immigrants, many** of which **have established links with Mexican drug cartels**. Ynet reports: **Western intelligence agencies have been able to gather** ample **evidence suggesting that the drug cartels** in Mexico – which are **the** de facto **rulers of the northern districts bordering the US – are in cahoots with Islamic terror** organizations, **which are eager to execute attacks** against American, Israeli, Jewish and western targets; but most of all, the Islamic terror groups are **eager to make money, so they can fund their** nefarious **aspirations**. Hezbollah has previously been implicated with the Los Zetas cartel, the most advanced and dangerous drug cartel in Mexico. The Zetas are known for their brutality which has recently included public beheadings, torture and mass slaughter.

Cartels fund terror groups to fight US

The Commentator 12 (The Commentator, a group of editors founded and legally incorporated by journalist, author, and political analyst Robin Sheperd, 12/30/2012, Cooked Up: How Hezbollah is fundraising with Mexican drug cartels" http://www.thecommentator.com/article/2332/coked_up_how_hezbollah_is_fundraising_with_mexican_drug_cartels). AP

Hezbollah is thought to be **using Mexican drug money to fill the gap created by the recent sanctions on Tehran which** has **caused Ahmadinejad's regime to** seriously **cut back in its funding to the terrorist** outfit. In return for access, **Hezbollah stands accused of helping drug cartels with establishing underground tunnel networks, assisting with logistics and improving cartel weapons and explosives production. Hezbollah is** said to be **interested in utilising the tunnels into the U**nited **S**tates **for its** own **terrorist activities**.

US-Mexico border easy access point – insiders prove

The Commentator 12 (The Commentator, a group of editors founded and legally incorporated by journalist, author, and political analyst Robin Sheperd, 12/30/2012, Cooked Up: How Hezbollah is fundraising with Mexican drug cartels" http://www.thecommentator.com/article/2332/coked_up_how_hezbollah_is_fundraising_with_mexican_drug_cartels). AP

In 2009, a Department **of H**omeland **S**ecurity **wiretap derived a recording of Professor Abdallah Nafisi**, a Kuwaiti clergyman and **a known al-Qaeda recruiter, boasting about the ease by which** nonconventional warfare and **weapons of mass destruction can be smuggled into the US**, through the Mexican drug tunnels. He said, **"Ten pounds of anthrax in a medium-size suitcase, carried by a Jihad warrior through the tunnels can kill 300,000 Americans in one hour," he said. "It will make 9/11 look like peanuts. There's no need for plans**... Just one courageous man, to spread this confetti on the White House lawn. Then we will really be able to celebrate."

Cartels close to reaching a tipping point

Russia Today 13 (RT News, The first Russian 24/7 English-language news channel with award winning, Editor-in-Chief Margarita Simonyan, 4/01/2013, "Mexican drug cartels: 'The most serious threat the US has faced from organized crime'". <http://rt.com/usa/drug-us-mexican-cartels-177/>). AP

Mexican drug cartels — the same groups credited with taking tens of thousands of innocent

lives through brutal murders during the last few years — **have infiltrated the United States**. In an exposé published by The Associated Press this week, reporter Michael Tarm cites an extensive review of federal court cases, government drug-enforcement data and interviews with top law enforcement officials to back up the claim that violent drug lords from south of the border have established bases within the US that are now working as remote hubs for international narcotics rings. These groups, writes Tarm, once rarely journeyed out of Mexico or, if that, far beyond the nation's border with the US. In recent years, however, Mexican cartels like **the infamous Zetas have extended their reach into the US by literally deploying entire units to oversee domestic operations**. It isn't amateur drug mules or wannabe gangsters that are being sent abroad either. The **AP says some of the most trusted agents** aligned with Mexican drug militias **now operate out of the US "to tighten their grip on the world's most lucrative narcotics market and maximize profits."** **Should the expansion continue at its current rate, US authorities warn that it could eventually become harder if not impossible to extradite the cartels to outside of the US**. Soon, says Tarm, **drug smugglers may expand into other ventures, like prostitution, kidnapping-and-extortion rackets and even money laundering**. "It's probably the most serious threat the United States has faced from organized crime," Jack Riley of the US Drug Enforcement Administration explains to the AP. Southern California, Texas and Arizona aren't the new homes of these groups, either. Nine non-border states across the US now have a documented Mexican cartel presence, with the AP claiming that these collectives have expanded as far north as Pennsylvania, roughly 1,500 miles away. In Chicago, Illinois, the cartels have even become the new kings. In the Windy City, the Chicago Crime Commission now considers Joaquin "El Chapo" Guzman, the leader of the Sinaloa cartel, as Public Enemy No. 1 — the same title once bestowed on gangster kingpin Al Capone. Unlike his prohibition era counterpart, though, Guzman has never once set foot in the eastern Illinois town. "People think, 'The border's 1,700 miles away. This isn't our problem.' Well, it is. These days, we operate as if Chicago is on the border," Riley tells the AP. But if **geographical boundaries no longer apply in terms of the growing drug trade**, will the same trends found in Mexico make their way up north too? The Houston Chronicle reported over the weekend that 3,000 drug-cartel murders have been carried during just the first 100 days since the country's president, Enrique Peña Nieto, took office in December. And since 2006, **the death toll is thought to exceed 70,000 — or nearly 20 times more than NATO combat deaths in Afghanistan**, adds the paper. As recently as last Friday, seven people were killed in Ciudad Juarez, Mexico after a gunman opened fire in a bar using an AK-45 assault rifle. "It has not been determined whether the attack is connected to drug trafficking, but by the type of weapon involved, it is to be assumed," police spokesman Carlos Gonzalez told Reuters. But given the documented expansion of the drug gangs into locales like Chicago — where crime states have skyrocketed in recent months — the surge in cartel presence in the US is likely already being accompanied by a wave of violence as well. The Texas Department of Public Safety cites 22 killings and five kidnappings in Texas due to cartel activity from 2010 through mid- 2011, but as gangs penetrate further into the mainland, those numbers are expected to only grow.

Cartels in Mexico infiltrate the US

Zuckerman 9 (Mortimer Zuckerman, the chairman and editor-in-chief of U.S. News & World Report and the publisher of the New York Daily News. 3/09/2009. "Mexican Drug Cartels Threaten American National Security ". <http://www.usnews.com/opinion/mzuckerman/articles/2009/03/09/mexican-drug-cartels-threaten-american-national-security>).AP

The American media have finally caught up to the mounting danger of the violent internal struggle in our southern neighbor, Mexico. **Heavily armed narco-criminal cartels financed by billions of dollars of drug money have engaged in murders, kidnappings, and assassinations, terrifying the Mexican population**. These **gangs have brought chaos to a number of cities and states along our border and destroyed trust in law enforcement there**. Mexican academic Edgardo Buscaglia estimates that there are some 200 counties in Mexico, roughly 8 percent of the total, where drug gangs wield more influence than the authorities. They are concentrated in the northern areas adjacent to the United States. **The cartels are better armed than the police—and even the military—with arms and weapons purchased in the United States**. They are able to field as many as 10,000-plus gunmen in regions where police don't earn enough to resist being corrupted or to live with the constant danger of being killed. This is a mortal threat to the rule of law in large areas of Mexico, raising the risk that the country may become a failed state.

Or, as retired Gen. Barry McCaffrey, former U.S. drug czar, suggested, Mexico "might well become a narco state within a decade." This is no small matter for the United States. Should Mexico fail to restore control, millions of refugees could join their other economically motivated countrymen in trying to cross the U.S. border. There are already a million legal border crossings every day along our mostly unfenced and unmarked 2,000-mile frontier, which, alas, lends itself to as many as a million illegal border crossings a year. Mexico is also a substantial business partner. As just one example of the trade ties, Mexico provides one third of our imported oil. The only good news is that Mexico's leaders—President Felipe Calderón, the attorney general, and the head of the federal police—are facing up to the threat. Given the unreliability of the civilian law enforcement agencies and the police, the president has bravely deployed the armed forces in violence-plagued cities in the north. America must support these efforts. Because it has long been stable and friendly, we have paid slight attention to Mexico's strategic significance. But we cannot afford to let Mexico become a failed state. We must support its efforts in ways that are acceptable to the Mexican political structure and take into account Mexican national sensitivities about its sovereignty. **The Bush administration began with the U.S.-Mérida initiative that is funding about \$400 million annually for special weapons and technology, such as satellite surveillance, to monitor the drug routes into our country. We must accept a double responsibility here.** We are the source of the drug cartels' guns—some 2,000 daily make their way across our border into Mexico daily—and we also are the source of their revenue from those here who buy drugs. **This is not just a Mexican matter. The drug gangs are described by the Justice Department as "the biggest organized crime threat to the U.S."** Crimes connected to these cartels are spreading across the Southwest, especially in Phoenix, where most of murders and kidnappings are believed to be linked to the drug trade. The cartels are also increasing their relationship with prison and street gangs in the United States to facilitate drug trafficking, according to a congressional report. This cooperation enables the traffickers to excavate cross-border tunnels and install ramp-assisted smuggling roads over the border fence between the countries, in order to get their cargoes into the United States. Mexico's efforts to wage a more effective war against these cartels is inhibited by the vast amounts of money the drug lords are able to pay politicians who protect them, private judges who will not convict them, and unregulated financial institutions that make big profits laundering the money. This will be a long-term struggle. The problem of rooting out the domestic corruption that supports the cartels in Mexico is too large to be solved anytime soon. Mexico has begun the long struggle to develop an independent judiciary and a powerful and incorruptible police force to cope with the well-financed, burgeoning cartels. America cannot afford to take the risk of a continued deterioration in the legitimacy and effectiveness of the Mexican government.

Drones Terror DA Northwestern

Border Security has more funding but it's on the brink

O'Toole 14 – (Molly, politics reporter for Defense One, covered national and international politics for Reuters, The Nation, the Associated Press and Newsweek International, among others, "Top General Says Mexico Border Security Now 'Existential' Threat to U.S.", 7/5/14, <http://www.defenseone.com/threats/2014/07/top-general-says-mexico-border-security-now-existential-threat-us/87958/>, AB)

A top United States general in charge of protecting the southern border says he's been unable to combat the steady flow of illegal drugs, weapons and people from Central America, and is looking to Congress for urgent help. Marine Corps Gen. John Kelly, commander of U.S. Southern Command, has asked Congress this year for more money, drones and ships for his mission – a request unlikely to be met. Since October, an influx of nearly 100,000 migrants has made the dangerous journey north from Latin America to the United States border. Most are children, and three-quarters of the unaccompanied minors have traveled thousands of miles from El Salvador, Guatemala and Honduras. "In comparison to other global threats, the near collapse of societies in the hemisphere with the associated drug and [undocumented immigrant] flow are frequently viewed to be of low importance," Kelly told Defense One. "Many argue these threats are not existential and do not challenge our national security. I disagree." In spring hearings before the Senate and House Armed Services Committees, Kelly said that budgets cuts are "severely degrading" the military's ability to defend southern approaches to the U.S. border. Last year, he said, his task force was unable to act on nearly 75 percent of illicit trafficking events. "I simply sit and watch it go by," he said. But the potential threats are even greater. Kelly warned that neglect has created vulnerabilities that can be exploited by terrorist groups, describing a "crime-terror convergence" already seen in Lebanese Hezbollah's involvement in the region. "All this corruption and violence is directly or indirectly due to the insatiable U.S. demand for drugs, particularly cocaine, heroin and now methamphetamines," Kelly told Defense One, "all of which are produced in Latin America and smuggled into the U.S. along an incredibly efficient network along which anything – hundreds of tons of drugs, people, terrorists, potentially weapons of mass destruction or children – can travel, so long as they can pay the fare." With the Obama administration calling the flow of children in the U.S. a humanitarian crisis, even some of the most outspoken proponents of immigration reform in Congress are calling for a greater focus on security. At the same time, they demand a long-term strategy from the State Department and U.S. Agency for International Development, which manages foreign aid and assistance. "While the deployment of U.S. military assets and personnel rightfully prioritizes national security challenges in the Middle East and Central Asia, U.S. Southern Command (SOUTHCOM) is only sourced at five percent of the capacity it needs," Senate Foreign Relations Committee Chair Sen. Bob Menendez, D-N.J., and other leading reform Democrats said in a statement last month, introducing a 20-point plan to address the crisis. "This is a humanitarian and refugee crisis. It's being caused in large measure by thousands in Central America who believe it is better to run for their lives and risk dying, than stay and die for sure," Menendez said. "The bottom line is that we must attack this problem from a foreign policy perspective, a humanitarian perspective, a criminal perspective, immigration perspective, and a national security perspective." The Democratic coalition wants increased funding and resources for SOUTHCOM and the State Department's Central American Regional Security Initiative. For fiscal 2015, the Obama administration requested \$130 million for the program, which covers seven countries, but that ask is a decrease of \$30 million from the current year, the senators noted. Homeland Security Secretary Jeh Johnson has said an additional \$161.5 million will be provided for CARSI programs to "respond to the region's most pressing security and governance challenges" – but the administration has made no mention of additional resources for the U.S. military.

Drones key to deter terrorists on border

Patrick **Svitek 13**, covers Texas state government and politics, August 13, 2014 “FAA, Perry apparently at odds over border drones”, <http://www.houstonchronicle.com/politics/texas-take/article/FAA-Perry-apparently-at-odds-over-border-drones-5687716.php>, AB)

For years, Gov. Rick Perry has been calling for drones to monitor the Texas-Mexico border as a way to fight the influx of illegal immigrants and the crime that he says accompanies it. More recently, he has used the issue to rail against the federal government, calling out the Federal Aviation Administration for refusing to allow Texas to use unmanned aircraft. Perry on Wednesday raised the demand for drones twice, first during a news conference at a National Guard training center in Bastrop and then an interview on Fox News in which host Neil Cavuto asked Perry what it will take to secure the border. “That’s going to require boots on the ground, it’s going to require strategic fencing in the metropolitan areas and it’s going to require a substantial number of aviation assets, which by the way, the FAA will not let us use drones at this particular point in time for looking down – unarmed drones to look down twenty-four seven in all types of weather so that we can have these fast-response forces move in and make apprehensions,” Perry answered. “If the FAA would allow that, it would be substantial help. Those are the three things that need to happen for the American people to be comfortable that this country is being secured on the southern border.” Using unmanned aircraft in an effort to secure the border is not a novel idea. Customs and Border Protection already operates hundreds of drones in the region, and President Barack Obama has asked Congress to approve \$39.4 million for what the White House calls “air surveillance capabilities” along the border.

ISIS currently has nuclear weapons and could supply them through the border without protection

Edwin **Mora 13**, BreitbartNews Staff Writer: Primarily covers defense and national security, “DABIQ: ISIS COULD TRANSPORT NUKE FROM NIGERIA INTO U.S. THROUGH MEXICO”, 6/3/15, [http://www.breitbart.com/national-security/2015/06/03/dabiq-isis-could-transport-nuke-from-nigeria-into-u-s-through-mexico/](http://www.breitbart.com/national-security/2015/06/03/dabiq-isis-could-transport-nuke-from-nigeria-into-u-s-through-mexico/http://www.breitbart.com/national-security/2015/06/03/dabiq-isis-could-transport-nuke-from-nigeria-into-u-s-through-mexico/), AB)

The Islamic State (ISIS/ISIL), in the latest edition of its propaganda magazine, indicated that it could purchase a nuclear weapon in Pakistan, take it to Nigeria, and then smuggle it into the U.S. through Mexico by using existing trafficking networks in Latin America. In an op-ed article published in the ninth edition of ISIS’ Dabiq magazine released in late May, the jihadist group claims it could transport a nuclear device in the same way illicit drugs are smuggled into Europe through West Africa, adding that Boko Haram’s presence in Nigeria could facilitate the transaction. The Nigeria-based Islamic terrorist group, Boko Haram, pledged allegiance to ISIS in March. In March, Gen. John Kelly, commander of U.S. Southern Command (Southcom), warned that Islamic terrorist groups such as ISIS could exploit the capabilities and knowledge of Latin American smuggling networks to infiltrate the U.S. through Mexico and possibly bring in weapons of mass destruction. The general, in October 2014, acknowledged that illegal drugs from South America move “through West Africa, up the Maghreb and into Western Europe,” adding that ISIS enemy al Qaeda and its affiliates take “a lot of money to allow it to flow.” According to the alleged author of the Dabiq op-ed article, kidnapped British photojournalist John Cantlie, ISIS could smuggle a nuke into the U.S. by using the same route and reversing the flow—moving the nuke from West Africa into South America, from where it could be transported into the United States through Mexico. “Let me throw a hypothetical operation onto the table,” Cantlie wrote in the article

entitled "The Perfect Storm." "The Islamic State has billions of dollars in the bank, so they call on their wilayah [province] in Pakistan to purchase a nuclear device through weapons dealers with links to corrupt officials in the region." He added: The weapon is then transported over land until it makes it to Libya, where the mujāhidīn [fighters] move it south to Nigeria. Drug shipments from Columbia bound for Europe pass through West Africa, so moving other types of contraband from East to West is just as possible. The nuke and accompanying mujāhidīn arrive on the shorelines of South America and are transported through the porous borders of Central America before arriving in Mexico and up to the border with the United States. "From there it's just a quick hop through a smuggling tunnel and hey presto, they're mingling with another 12 million 'illegal' aliens in America with a nuclear bomb in the trunk of their car," he also wrote. If not a nuke, ISIS could easily smuggle in "a few thousand tons of ammonium nitrate explosive" that is easy to manufacture, said the article. Cantlie wrote that ISIS, which started as a movement in Iraq, has suddenly morphed into a global phenomenon that the West and the democratic world as a whole is ill-prepared to handle. He said that Boko Haram controls most of Nigeria, home to "an exhausted and smashed national army that is now in a virtual state of collapse". While testifying before the Senate Armed Services Committee in March, Gen. Kelly noted, "Last year, ISIS adherents posted discussions on social media calling for the infiltration of the U.S. southern border. Thankfully, we have not yet seen evidence of this occurring, but I am deeply concerned that smuggling networks are a vulnerability that terrorists could seek to exploit." "While there is not yet any indication that the criminal networks involved in human and drug trafficking are interested in supporting the efforts of terrorist groups, these networks could unwittingly, or even wittingly, facilitate the movement of terrorist operatives or weapons of mass destruction toward our borders, potentially undetected and almost completely unrestricted," he added. The general, speaking at the National Defense University in Washington, D.C. in October 2014, warned that Latin American drug cartels were working with jihadist groups in West Africa, namely Sunni group Al Qaeda in the Islamic Maghreb and its affiliates.

An ISIS attack through the border causes extinction

Jon **Austin 6/11**, reporter for express, "Is Chuck Norris right about 'ISIS 'smuggling nuke into US for 9/11 anniversary strike?'" , 6/11/15, <http://www.express.co.uk/news/world/583537/Chuck-Norris-Islamic-State-ISIS-nuclear-weapons-US-attack-9-11-September-11-anniversary>, AB)

Norris said he believes the reason the US army is mysteriously amassing in seven southern states is to prevent ISIS smuggling a dirty bomb into the country and destroying cities. He pointed to how ISIS sources have already claimed the group has obtained the 40kg of uranium compounds seized from Mosul University last July. Norris said will \$2 billion in seized assets they had the buying power to bribe corrupt officials in Pakistan for the remaining equipment and know how to build a bomb, which could then be exported to Libya, onto Nigera, South American and into the US. Last night, after www.express.co.uk exclusively revealed the martial arts experts' theory, it emerged Ms Bishop was saying Nato members are growing increasingly worried about radioactive material seized by the terror group, with fears that it could be turned into a nuclear weapon. She fears ISIS fighters have stolen or captured the toxic loot from government-controlled research centres and hospitals across the region. The radioactive matter is thought to have been destined for use by authorities for health and science research - but it has now fallen into the hands of ISIS radicals. The most likely place to get it from is Pakistan, she said. Ms Bishop claimed the jihadi organisation had recruited "highly technically trained professionals" and was already using chlorine as a weapon She added that ISIS was "prepared to use any and all means, any and all forms of violence they can think of, to advance their demented cause. "That includes use of chemical weapon." A former commander of the British army's chemical weapons unit has also spoken out in support of the Australian foreign minister and Chuck Norris' comments, calling the development of a dirty bomb by ISIS a "very real threat". Hamish de Bretton-Gordon also described as "worrying" reports that ISIS fighters had got hold of chemical weapons previously controlled by Syrian president Bashar al-Assad's troops. Middle East expert Afzal Ashraf told Express.co.uk that the group's long-term plan hinged on obtaining the deadly weapon. He said: "The most likely place to get it from is Pakistan." There are fears the group's campaign of terror could escalate in the coming month to mark the start of Ramadan on June 18. ISIS has in the past carried out major operations to coincide with the Islamic holy month. Express.co.uk last night revealed Norris wanted more action from US President Obama and joked the solution to defeating ISIS is to "send 'em all to Mars" The US Air-force vet-turned martial arts expert went public with his theory following questions about the mysterious Jade Helm15 US military operation in seven southern US states which

begins next month and lasts until the end of September. The 75-year-old, now a Christian evangelist, believes it is a show of strength and a bid to stop the world's deadliest Jihadist movement smuggling nuclear arms into the states to set it off around the anniversary of 9/11. We reported this week how conspiracist website Whistleblower800 believed to have cracked what Jade Helm was all about - suggesting it was to get troops ready to deal with predicted anarchy in the days before an asteroid that would wipe out the world was about to hit from September 22 to 28. Other conspiracists have said Jade Helm is about bringing martial law in or seizing guns from the public. Norris agrees the world is at risk in September, but does not agree with the asteroid theory, or any of the other Jade Helm predictions. He instead fears it could be the onset of a global nuclear war. After serving in the air force, Norris became a martial arts expert, before starring in a slew of kung fu and action movies from 1968 onwards. He starred alongside Bruce Lee in Way of the Dragon and the Missing in Action trilogy. More recently, the actor who holds "conservative political views", had a starring role in the TV series Walker, Texas Ranger from 1993 until 2001. Writing on the WND Commentary website, he said: "I believe Jade Helm 15 is more than 'just a training exercise,' and I think ISIS just gave us the clue. "I do believe, in addition to the largest domestic military training, it is also a display of power intended for deterrence of enemies like ISIS, whom the FBI has already said have tentacles in all 50 states. "And guess who just released its intent to smuggle nuclear weapons across the U.S.-Mexico border? You guessed it. ISIS. "ISIS even has a nuclear plan." Norris went on to describe a theory, based on international news and website reports and ISIS' own propaganda, which claims how the terrorist could smuggle a warhead into America. He explained how Nigerian newspaper Premium Times reported that Nigerian Jihadists Boko Haram, which has pledged allegiance to ISIS, could carry out the nuclear bomb import into the US as easy as smugglers use drug routes from east to west. He added the extremists and "the nuke" could move through south America's porous borders to Mexico - just a short hop into the states with a "nuclear bomb in the trunk of their car." He added: "This isn't fiction, fairytale or conspiracy. I'm talking about the US government not sticking its heads in the sand or at least asking us to stick ours in it. Washington needs to quit downplaying or minimising the nuclear risk, lest we find ourselves right back in the unprepared era of pre-9/11.

UQ: Border Security Effective

Drone border security is effective at facilitating security now

Andrew **O'Reilly 14**, reporter for Fox News Latino “Drones Get More Space To Roam Over Texas: FAA Approves Runway For Unmanned Aircrafts”, 9/12/14, <http://latino.foxnews.com/latino/money/2014/09/12/drones-get-more-space-to-roam-over-south-texas-faa-approves-extended-range/>, AB)

In 2012, Congress passed legislation directing the FAA to integrate unmanned aerial systems into the nation's airspace by 2015. The test sites, like the one in South Texas, are the FAA's way of gathering data to deal with privacy and safety issues, like how to keep the drones from flying into other objects. The military and some law enforcement agencies already employ the devices, but the FAA doesn't currently allow commercial use of drones. While the FAA is working to develop the guidelines for use by the end of 2015, officials concede the project may take longer. The agency projects some 7,500 commercial drones could be aloft within five years of getting widespread access to the skies above America. Texas is also one of the front lines for military and law enforcement drone use, as the Department of Homeland Security and Immigration and Customs Enforcement uses drones to patrol for undocumented immigrants and drug traffickers illegally crossing the border between the Lone Star state and Mexico. The federal government also uses Texas as a jump-off point for drones used in drug interdictions throughout the Caribbean. Texas Gov. Rick Perry has called on the administration of President Barack Obama saying it needs to get much tougher on the U.S.-Mexico border by putting more drones in the air to secure it. The use of drones along the U.S. borders with Canada and Mexico began several years ago. The U.S. Customs and Border Protection currently has eight Predators in the skies along the northern and southern borders with an additional two drones patrolling the Caribbean.

Link: Border Security k2 stop Terror

Border security is key to stop ISIS

Trujillo 14 – (Mario, reporter for The Hill, “Paul: Secure border to prevent ISIS ‘infiltration’”, 9/6/14, The Hill, <http://thehill.com/policy/defense/216652-paul-warns-of-possible-isis-infiltration-through-us-border>. AB)

Sen. Rand Paul (R-Ky.) on Thursday warned that **terrorists from the Islamic State in Iraq and Syria could infiltrate the United States through the southern border. "We must also secure our own borders and immigration policy from ISIS infiltration."** Paul said in an op-ed in Time magazine that outlined his strategy for dealing with the group. **"Our border is porous, and the administration, rather than acting to protect it, instead ponders unconstitutional executive action,** legalizing millions of illegal immigrants," he added. Paul, a potential presidential candidate, said the immigration system needs a full-scale review, pointing to a recent ABC report that found more than 6,000 foreign nationals in the country had disappeared on expired student visas. **"This is inexcusable** over a decade after we were attacked on 9/11 by hijackers including one Saudi student who overstayed his student visa," he said. Paul called for revoking the visas of any U.S. citizens fighting with ISIS overseas. His comments echo a warning from another potential GOP presidential contender, Texas Gov. Rick Perry. Perry went further last month, saying that **ISIS militants might have already crossed the border** though he acknowledged there is no evidence of that. The Pentagon has said **ISIS has aspirations to hit Western targets**, but the military has "seen no indication that they are coming across the border with Mexico. We have no information that leads us to believe that," Rear Adm. John Kirby said last month.

Drones are key to solve illegal border crossings

CBS 14, CBS DC, “Gov. Perry Wants Drones To Be Used Along US-Mexico Border”, July 7, 2014, <http://washington.cbslocal.com/2014/07/07/gov-perry-wants-drones-to-be-used-along-us-mexico-border/>, AB)

Texas Gov. Rick Perry is **calling for drones to be used along the U.S.-Mexico border in an effort to deter immigrants from illegally crossing into the U.S.** “So the issue is, this president understands now that **we have a huge problem on our southern border. We have to deal with it,**” Perry told ABC News. “And **I don’t think you’re going to be able to address it until you put the resources there, and that’s boots on the ground. We’re asking for the FAA to allow for drones to be used.”** More than 50,000 unaccompanied minors have been caught on the U.S.-Mexico border this year. Most are from Guatemala, Honduras and El Salvador, where a spike in violence and poverty are prompting parents to send their children on difficult and dangerous journeys north. Perry pointed the blame at President Barack Obama, calling it **a “failure of leadership from the administration.” “The federal government is just absolutely failing.** We either have an incredibly inept administration, or they’re in on this somehow or another,” Perry told ABC News. “I mean I hate to be conspiratorial, but I mean how do you move that many people from Central America across Mexico and then into the United States without there being a fairly coordinated effort?” Perry stated that he personally warned the White House years ago about a potential border crisis. “We have been bringing to the attention of President Obama and his administration since 2010,” Perry detailed to ABC News. “... **Unless we secure our southern border, this is going to continue to be a massive amount of individuals that are coming to the United States.** And, frankly, we don’t have a place to house them as it is. And if we have a major event, a hurricane that comes in to the Gulf Coast, I don’t have a place to be housing people who are displaced.” Perry also claimed that Obama doesn’t care whether or not the border is secure. “I don’t believe he particularly cares whether or not the border of the United States is secure. And that’s the reason there’s been this lack of effort, this lack of focus, this lack of resources,” Perry told ABC News. Homeland Security Secretary Jeh Johnson said Sunday the administration has dramatically sped up the processing of adults who enter the country illegally, and it is opening more detention facilities. He acknowledged that the unaccompanied children from Central America, some 9,700 taken into custody in May alone, pose the most vexing problem. All persons, regardless of age, face “a deportation proceeding” if they are caught entering the country illegally, Johnson said. The administration, he said, is “looking at ways to create additional options for dealing with the children in particular, consistent with our laws and our values.” Repeatedly pressed to say whether thousands of Central American children will be deported promptly, Johnson said, “we need to find more efficient, effective ways to turn this tide around generally, and we’ve already begun to do that.” On June 18, Perry announced that **the state would steer another \$1.3 million per week to the**

Department of Public Safety to assist in border security through at least the end of the year. He followed that two days later with a letter inviting Obama to see the crisis firsthand.

Drones solve drug trafficking and check cartels

Spencer **Ackerman 11**, reporter for Wired, “U.S. Drones Are Now Sniffing Mexican Drugs”, 3.6.11, <http://www.wired.com/2011/03/u-s-drones-are-now-sniffing-mexican-drugs/>, AB)

But now the drones are taking on a new mission: hunting drug gangs in Mexico. According to a previously undisclosed agreement between President Barack Obama and his Mexican counterpart, Felipe Calderon, the Pentagon is authorized to fly unmanned surveillance flights over Mexico, a big expansion of U.S.-Mexico information-sharing on counternarcotics. One of the drones used for the mission is the Air Force’s Global Hawk, reports The New York Times. The drone soars at up to 60,000 feet with a multitude of sensors. (Calm down, it’s unarmed.) It’s not known how many flights the Global Hawk has made above Mexico. But the Times reports that the drones helped catch the killers of Jaime Zapata. He was one of two special agents of the U.S. Immigration and Customs Enforcement service who were shot on the road between Mexico City and Monterrey. The drone flights are part of an expansion of U.S.-Mexican antidrug cooperation that’s risen to match the furious violence brought by the drug cartels. (Violence, the Mexican government is quick to point out, that relies on trafficked American guns.) In the heart of Mexico City, at 265 Paseo de la Reforma, an office building is stacked with U.S. intelligence, law enforcement and military officials from the FBI, CIA, NSA and many other agencies. According to the Times, a second “fusion center” to merge U.S. and Mexican intel will soon open. It’s not clear if that center, the previous one or a different facility receives data swooped up by the Global Hawks. Nor is it clear what role if any the Mexican government plays in directing the drone flights. An anonymous U.S. official quoted by the Times’ Ginger Thompson and Mark Mazzetti asserts that “counternarcotics activities [are] conducted at the request and direction of the Mexican government.” Still, welcome to yet another civilian mission for the drones. A much smaller unmanned spy vehicle, colloquially known as the Flying Beer Keg, is now in the hands of Miami-Dade police (who, it should be noted, also hunt for drugs, if Rick Ross is to be believed). And, while the Department of Homeland Security isn’t so enthusiastic about using drones for bomb detection inside the United States, the Federal Aviation Administration is slowly warming to the idea of remotely piloted planes inside U.S. airspace. There are also Global Hawks flying in support of Japan’s earthquake- and tsunami-relief efforts. No wonder Defense Secretary Robert Gates told the Air Force that the era of the drone will outlast the Iraq and Afghanistan wars. Terrorists and insurgents have already had to make adjustments to the drones hunting them overhead. Now it’s the cartel’s turn to adjust.

I/L: ISIS slips through border

ISIS can cross border, leads to WMD use

Inquisitr 14, cites several border reports and Sen. Jim Inhofe, "ISIS Terrorist Group Developing WMD Bomb To Blow Up U.S. Cities, Claims Senator Jim Inhofe", August 22, 2014, <http://www.inquisitr.com/1427802/isis-terrorist-group-developing-wmd-bomb-to-blow-up-u-s-cities-claims-senator-jim-inhofe/>, AB)

The possibility of the **ISIS terrorist group attacking America** has Senator Jim Inhofe claiming that **ISIS' WMD capabilities may include developing a bomb big enough to destroy a U.S. city**. In a related report by The Inquisitr, even Osama bin Laden and al Qaeda apparently think ISIS is too wicked and before the infamous al Qaeda leader was killed he was discussing disavowing any ties with the ISIS terrorist group. **The Islamic terrorist group is now the richest in the world and apparently the best organized** since it's believed that ISIS sleeper cells are **allegedly planning a large scale terror attack within the United States**. The full extent of ISIS' WMD capabilities have been debated by the experts ever since it was revealed that the ISIS in Iraq had uncovered Saddam Hussein's WMD stockpiles. The **ISIS terrorist group even managed to recover nuclear materials in addition to chemical weapons** secreted in different locations throughout Iraq. But many experts concluded that ISIS should not have the expertise necessary to create even a dirty bomb, never mind a full functioning WMD like a nuclear weapon. It was even believed that finding Iraq's WMD stockpiles may actually pose more of a danger to the Islamic fighters themselves since it was assumed they could hurt themselves in the process of attempting to make a functioning WMD. Regardless, the ISIS terrorist group **has begun making threats targeted at America**, even going so far as to claim they'll plant their black flag on the White House and issuing bomb threats against President Obama. Oklahoma Republican Sen. Jim Inhofe is warning that the **ISIS terrorist group may be attempting to develop a weapon capable of blowing up a major city in the United States: "We're in the most dangerous position we've ever been in as a nation.** They're crazy out there, and **they're rapidly developing a method of blowing up a major U.S. city**, and people just can't believe that's happening. [President Obama is] going to have to come up with something that we're going to do because they're holding another hostage in place and the problem is, the president says all these things and he never does them." The Department of Homeland Security also recently issued a statement discussing the possibility of an ISIS terrorist attack in America: "ISIL members and supporters will almost certainly continue to use social media platforms to disseminate their English-language violent extremist messages. Although we remind first responders that content not explicitly calling for violence may be constitutionally protected, we encourage awareness of media advocating violent extremist acts in particular locations or naming particular targets, to increase our ability to identify and disrupt potential Homeland threats. We urge state and local authorities to promptly report suspicious activities related to homeland plotting and individuals interested in traveling to overseas conflict zones, such as Syria or Iraq, to fight with foreign terrorist organizations." Texas Governor Rick Perry has also been warning the nation that **members of the ISIS terrorist group could sneak across the Mexican border** because the illegal immigrant crisis has kept so many border patrol agents busy. An Osama bin Laden impersonator recently made that point by making a video showing himself sneaking across the U.S. border undetected while dressed as a terrorist. Both the Pentagon and Mexican authorities dismissed the possibility that ISIS agents are operating inside of Mexico.

ISIS and terrorists are here now

Monica **Cantilero 7/1**, "ISIS could smuggle fighters, weapons into US via Mexican tunnels, says ex-FBI agent", July 1 2015, <http://www.christiantoday.com/article/isis.could.smuggle.fighters.weapons.into.us.via.mexican.tunnels.says.ex.fbi.agent/57653.htm>, AB)

A former FBI agent has warned that **tunnels used by drug dealers to smuggle drugs and cash into the US from Mexico could be used by the Islamic State to move its jihadist fighters, including suicide bombers and even a nuclear warhead, into the United States.** "Drug dealers have **found a way to move money without it being followed**," said former FBI agent Tyrone Powers during a recent remark on national television. "**They found a way to move people in and out and they found a way to move product.**"

ISIS agents may find a way to enter the US and "may be, at some point, suicide bombers, which is really scary, and then weapons of mass destruction," said Powers. Two major drug cartels that could be involved are the Sinaloa Federation, which controls western Mexico's borders from Texas to California, and the Los Zetas, which occupies eastern Mexico. Experts say al-Qaeda once tried to establish links with Mexican drug lords, Newsmax reported. "It makes logical sense for ISIS to do this," said Powers. "But I do not think they'll be catching the intelligence agencies off guard, because this has been a persistent problem whether it was al-Qaeda or any other group." Mexico's unstable leadership mixed with drug cartels can create a dangerous concoction that could be used by ISIS, according to experts. "What's been going on in Mexico creates an opportunity for any organisation to try to take advantage of it, whether it's ISIS or Al Shabbab," said Brandon Behlendorf, a terrorist targeting strategist. The jihadist group claimed earlier this month that it plans to acquire a nuclear weapon from Pakistan and to sneak it into US territory using drug and human smuggling routes. Judicial Watch reported in April that ISIS is managing a camp in northern Mexico just a few miles from El Paso, Texas, and that "coyotes" of the Juarez Cartel are helping to "move ISIS terrorists through the desert and across the border between Santa Teresa and Sunland Park, New Mexico." ISIS fighters are also being smuggled "through the porous border between Acala and Fort Hancock, Texas." The locations are being eyed by ISIS "because of their understaffed municipal and county police forces, and the relative safe-havens the areas provide for the unchecked large-scale drug smuggling that was already ongoing." In a related development, the CIA is now reassessing the view that the ISIS is mostly a "regional threat" following the "Bloody Friday" attacks that covered three countries on different continents. The group is transforming into a global threat because of its ability to "evangelise followers," said retired Army Col. Peter Mansoor, who helped create the US military campaign against al-Qaeda.

Impact UQ: ISIS has nukes

They have nukes

Eben **Blake 6/3**, covering general affairs at IBTimes in New York City, previously worked at The Brown Daily Herald as the Arts and Culture Editor, June 03 2015 "Islamic State Nuclear Weapons: ISIS Claims It Can Smuggle Devices Through Nigeria, Mexico To The United States", <http://www.ibtimes.com/islamic-state-nuclear-weapons-isis-claims-it-can-smuggle-devices-through-nigeria-1950280>, AB)

The Islamic State group claims it could purchase a nuclear device from Pakistan and transport it to the United States through drug-smuggling channels. The group, also known as ISIS and ISIL, would transfer the nuclear weapon from Pakistan to Nigeria or Mexico, where it could be brought to South America and then up to the U.S., according to an op-ed allegedly written by kidnapped British photojournalist John Cantlie and published in Dabiq, the group's propaganda magazine. The op-ed said that Boko Haram, the Nigerian jihadist group that announced its formal allegiance to ISIS in March, would make their efforts to transport a weapon to the U.S. much easier, reported Nigerian newspaper Premium Times. ISIS claims the Nigerian army is in a "virtual state of collapse" because of its war against Boko Haram. While U.S. officials have dismissed the ability of the group to acquire or transport a nuclear weapon, Indian Minister of State Defense Rao Inderjit Singh said at the Shangri-La regional security conference in Singapore last weekend that "[w]ith the rise of ISIL in West Asia, one is afraid to an extent that perhaps they might get access to a nuclear arsenal from states like Pakistan," Bloomberg reported. Cantlie describes how ISIL would hypothetically call on supporters in Pakistan to "purchase a nuclear device through weapons dealers with links to corrupt officials in the region," after which it would be "transported overland until it makes it to Libya" when "the mujahedeen move it south to Nigeria." It would then be moved to South America in the same method that "drug shipments bound for Europe pass through West Africa," according to Premium Times. After transporting the device through the "porous borders of South America" to Mexico, it would be "just a quick hop through a smuggling tunnel" to bring the nuclear bomb into America.

Impact Module: Grid

They'd attack the grid from the border – best statistics, this card is great

-9/55,000 is enough for a long-term wipeout

-blackout is widespread

-causes 90% deaths in the US

-could happen tomorrow

-has connection with cartels and other groups to get in

Aaron **Klein 4/19**, weekend radio talk show host, author, and staffer for WorldNetDaily, and columnist for The Jewish Press and Jerusalem Post, "INSIDE THE ISIS-U.S. BORDER SCARE", 04/19/2015, <http://www.wnd.com/2015/04/the-deadly-truth-isis-and-mexican-drug-gangs/>, AB)

ISIS terrorists pose an "imminent" threat to the U.S. electric grid with the capacity to coordinate a devastating assault on our nation's infrastructure, warned a leading homeland security and terrorism expert in a radio interview Sunday. Dr. Peter Pry, a former CIA officer, is executive director of the Task Force on National and Homeland Security and director of the U.S. Nuclear Strategy Forum, both congressional advisory boards. He also served on the Congressional EMP Commission, the Congressional Strategic Posture Commission, and the House Armed Services Committee. "There is an imminent threat from ISIS to the national electric grid and not just to a single U.S. city," said Pry. Pry was speaking on "Aaron Klein Investigative Radio" on New York's AM 970 The Answer. Outlining the threat, Pry recalled a leaked U.S. Federal Energy Regulatory Commission report divulged this past March that coordinated terrorist attacks on just nine of the nation's 55,000 electrical power substations could provoke coast-to-coast blackouts for up to 18 months. Such an attack would mirror the devastating impact of an electromagnetic pulse (EMP) attack without the need for any nuclear device or delivery system. The chances of a major electrical outage across America are now surging. Get your autographed copy of "A Nation Forsaken" which probes this crucial issue. The congressional EMP Commission previously estimated that within 12 months of a nationwide blackout, upwards of 90 percent of the U.S. population could possibly die from disease, lack of food and resources and larger societal breakdown. Speaking to Klein's audience, Pry pointed specifically to the possibility of ISIS immediately hiring Mexican extremists such as the Knights Templar drug cartel, which last year successfully utilized guns and Molotov cocktails to attack numerous Mexican power stations, leaving 11 towns without electricity. "Now those guys are just across our southern border," stated Pry. Pry continued: "That means that ISIS doesn't have to actually come to the United States on those U.S. passports. You know, Obama is always talking about how he's got a phone. Well, ISIS has got a telephone, too. All they've got to do is contact the Knights Templar, wire these guys \$10 million, I mean they'll do anything for money. And say, 'Hey, go across that open U.S. border and take out the electric grid in Arizona, or New Mexico, or Minnesota or New York. Or the entire nation.'" Pry surmised such an attack on the U.S. power grid "wouldn't be difficult for them." "There are ... open-source computer models where you can figure out which are those nine critical transformer substations where if attacked would take down the whole national power grid," he said. "So something like that could be arranged. It could happen tomorrow. It could happen next week." Pry pointed out ISIS allies in al-Qaida last June attacked power lines in Yemen that left the entire nation without power for a day. He took issue with a statement last week from former deputy director of the CIA Mike Morell who said it would take ISIS two to three years to develop the capacity to carry out a 9/11-style attack. Morell stated that "over the long term – two and a half, three years – we need to worry about a 9/11-style attack by ISIS." Countered Pry: "I don't think that's true at all. You know, because they can hire these criminal gangs that are south of our porous border. Or criminal gangs that are already present here." "We also have Muslim terror

cells already in this country that would be willing to do anything for money and it's very easy to attack the electrical grid," he added. Pry also warned of rogue nations such as Iran and North Korea passing ISIS a nuclear device and delivery system, such as a SCUD missile, to launch an actual EMP attack.

A long-term loss of electrical power would cause nuclear reactor meltdowns— guarantees extinction

Hodges 14

Dave, an established award winning psychology, statistics and research professor as he teaches college and university classes at both the undergraduate and graduate level, an established author as his articles are published on many major websites, citing Judy Haar, a recognized expert in nuclear plant failure analyses, "Nuclear Power Plants Will Become America's Extinction Level Event", April 18 2014, www.thelibertybeacon.com/2014/04/18/nuclear-power-plants-will-become-americas-extinction-level-event/

Fukushima is often spoken of by many, as a possible extinction level event because of the radiation threat. Fukushima continues to wreak havoc upon the world and in the United States as we are being bathed in deadly radiation from this event. Because of Fukushima, fish are becoming inedible and the ocean currents as well as the prevailing ocean winds are carrying deadly radiation. Undoubtedly, by this time, the radioactivity has made its way into the transpiration cycle which means that crops are being dowsed with deadly radiation. The radiation has undoubtedly made its way into the water table in many areas and impacts every aspect of the food supply. The health costs to human beings is incalculable. However, this article is not about the devastation at Fukushima, instead, this article focuses on the fact that North America could have a total of 124 Fukushima events if the necessary conditions were present. A Festering Problem Long before Fukushima, American regulators knew that a power failure lasting for days involving the power grid connected to a nuclear plant, regardless of the cause, would most likely lead to a dangerous radioactive leak in at least several nuclear power plants. A complete loss of electrical power poses a major problem for nuclear power plants because the reactor core must be kept cool as well as the back-up cooling systems, all of which require massive amounts of power to work. Heretofore, all the NERC drills which test the readiness of a nuclear power plant are predicated on the notion that a blackout will only last 24 hours or less. Amazingly, this is the sum total of a NERC litmus test. Although we have the technology needed to harden and protect our grid from an EMP event, whether natural or man-made, we have failed to do so. The cost for protecting the entire grid is placed at about the cost for one B-1 Stealth Bomber. Yet, as a nation, we have done nothing. This is inexplicable and inexcusable. Our collective inaction against protecting the grid prompted Congressman Franks to write a scathing letter to the top officials of NERC. However, the good Congressman failed to mention the most important aspect of this problem. The problem is entirely fixable and NERC and the US government are leaving the American people and its infrastructure totally unprotected from a total meltdown of nuclear power plants as a result of a prolonged power failure. Critical Analyses According to Judy Haar, a recognized expert in nuclear plant failure analyses, when a nuclear power plant loses access to off-grid electricity, the event is referred to as a "station blackout". Haar states that all 104 US nuclear power plants are built to withstand electrical outages without experiencing any core damage, through the activation of an automatic start up of emergency generators powered by diesel. Further, when emergency power kicks in, an automatic shutdown of the nuclear power plant commences. The dangerous control rods are dropped into the core, while water is pumped by the diesel power generators into the reactor to reduce the heat and thus, prevent a meltdown. Here is the catch in this process, the spent fuel rods are encased in both a primary and

secondary containment structure which is designed to withstand a core meltdown. However, **should the pumps stop because either the generators fail or diesel fuel is not available, the fuel rods are subsequently uncovered and a Fukushima type of core meltdown commences immediately.** At this point, I took Judy Haar's comments to a source of mine at the Palo Verde Nuclear power plant. My source informed me that as per NERC policy, nuclear power plants are required to have enough diesel fuel to run for a period of seven days. Some plants have thirty days of diesel. This is the good news, but it is all downhill from here. The Unresolved Power Blackout Problem **A long-term loss of outside electrical power will most certainly interrupt the circulation of cooling water to the pools.** Another one of my Palo Verde nuclear power plant sources informed me that there is no long term solution to a power blackout and that all bets are off if the blackout is due to an EMP attack. A more detailed analysis reveals that the spent fuel pools carry depleted fuel for the reactor. Normally, this spent fuel has had time to considerably decay and therefore, reducing radioactivity and heat. However, the newer discharged fuel still produces heat and needs cooling. Housed in high density storage racks, contained in buildings that vent directly into the atmosphere, radiation containment is not accounted for with regard to the spent fuel racks. In other words, there is no capture mechanism. In this scenario, accompanied by a lengthy electrical outage, and with the emergency power waning due to either generator failure or a lack of diesel needed to power the generators, the plant could lose the ability to provide cooling. The water will subsequently heat up, boil away and uncover the spent fuel rods which required being covered in at least 25 feet of water to remain benign from any deleterious effects. Ultimately, this would lead to fires as well and the release of radioactivity into the atmosphere. This would be the beginning of another Fukushima event right here on American soil. Both my source and Haar shared exactly the same scenario about how a meltdown would occur. Subsequently, I spoke with Roger Landry who worked for Raytheon in various Department of Defense projects for 28 years, many of them in this arena and Roger also confirmed this information and that the above information is well known in the industry. When I examine Congressman Franks letter to NERC and I read between the lines, it is clear that Franks knows of this risk as well, he just stops short of specifically mentioning it in his letter. Placing Odds On a Failure Is a Fool's Errand An analysis of individual plant risks released in 2003 by the Nuclear Regulatory Commission shows that for 39 of the 104 nuclear reactors, the risk of core damage from a blackout was greater than 1 in 100,000. At 45 other plants the risk is greater than 1 in 1 million, the threshold NRC is using to determine which severe accidents should be evaluated in its latest analysis. According to the Nuclear Regulatory Commission, the Beaver Valley Power Station, Unit 1, in Pennsylvania has the greatest risk of experiencing a core meltdown, 6.5 in 100,000, according to the analysis. **These odds don't sound like much until you consider that we have 124 nuclear power generating plants in the US and Canada and when we consider each individual facility, the odds of failure climb. How many meltdowns would it take in this country before our citizens would be condemned to the hellish nightmare,** or worse, being experienced by the Japanese? The Question That's Not Being Asked **None of the NERC, or the Nuclear Regulatory tests of handling a prolonged blackout at a nuclear power plant has answered two critical questions, "What happens when these nuclear power plants run out of diesel fuel needed to run the generators", and "What happens when some of these generators fail"?** In the event of an EMP attack, can tanker trucks with diesel fuel get to all of the nuclear power plants in the US in time to re-fuel them before they stop running? Will tanker trucks even be running themselves in the aftermath of an EMP attack? And in the event of an EMP attack, it is not likely that any plant which runs low on fuel, or has a generator malfunctions, will ever get any help to mitigate the crisis prior to a plethora of meltdowns occurring. Thus, every nuclear power plant in the country has the potential to cause a Chernobyl or Fukushima type accident if our country is hit by an EMP attack. **CAN YOU EVEN IMAGINE 124 FUKUSHIMA EVENTS IN NORTH AMERICA HAPPENING AT THE SAME TIME? THIS WOULD CONSTITUTE THE ULTIMATE DEPOPULATION EVENT.** ...And There Is More... The ramifications raised in the previous paragraphs are significant. What **if the blackout lasts longer than 24 hours?** What if the reason for the blackout is an EMP burst caused by a high altitude nuclear blast and transportation comes to a standstill? In this instance, the cavalry is not coming. Adding fuel to the fire lies in the fact that the

power transformers presently take at least one year to replace. Today, there is a three year backlog on ordering because so many have been ordered by China. This makes one wonder what the Chinese are preparing for with these multiple orders for both transformers and generators. In short, our unpreparedness is a prescription for disaster. As a byproduct of my investigation, I have discovered that most, if not all, of the nuclear power plants are on known earthquake fault lines. All of California's nuclear power plants are located on an earthquake fault line. Can anyone tell me why would anyone in their right mind build a nuclear power plant on a fault line? To see the depth of this threat you can visit an interactive, overlay map at this site. Conclusion I have studied this issue for almost nine months and this is the most elusive topic that I have ever investigated. The more facts I gather about the threat of a mass nuclear meltdown in this country, the more questions I realize that are going unanswered. With regard to the nuclear power industry we have the proverbial tiger by the tail. Last August, Big Sis stated that **it is not matter of if we have a mass power grid take down, but it is a matter of when.** I would echo her concerns and apply the "not if, but when" admonition to the possibility of a mass meltdown in this country. **It is only a matter of time until this scenario for disaster comes to fruition.** Our collective negligence and high level of extreme depraved indifference on the part of NERC is criminal because **this is indeed an Extinction Level Event.** At the end of the day, can anyone tell me why would any country be so negligent as to not provide its nuclear plants a fool proof method to cool the secondary processes of its nuclear materials at all of its plants? Why would ANY nuclear power plant be built on an earthquake fault line? Why are we even using nuclear energy under these circumstances? And why are we allowing the Chinese to park right next door to so many nuclear power plants?

AT: Drones are Ineffective

That's a poor reading of the situation – your evidence is based on old metrics, and new policy decisions make funding sustainable

Joshua **Breisblatt 7/8**, Manager of Policy and Advocacy at the National Immigration Forum, "WE ARE MEASURING BORDER SECURITY ALL WRONG", July 8, 2015

<https://immigrationforum.org/blog/we-are-measuring-border-security-all-wrong/>, AB)

There's a better way to define and measure border security, and that's important. Many members of Congress say the border must be secure before Congress addresses other parts of the broken immigration system, but they do not define what that means. But the Bipartisan Policy Center released a report earlier this year that should be a starting point. The report, "Measuring the Metrics: Grading the Government on Immigration Enforcement," examines already available data and identifies additional data that should be used to create an objective set of comprehensive, outcome-based border security performance measures. The report points out we must move away from measures such as how many agents are stationed on the border or how many people are detained and instead adopt output measures that assess achievement and progress. The report includes analysis of some existing output measures, such as whether CBP's consequence delivery system, where individuals are assigned various consequences for crossing the border, actually deters attempts to cross the border, and it offers a critique of how CBP currently measures deterrence. These types of outputs need to be examined when assessing border security. In addition, the Department of Homeland Security (DHS) needs to provide the public with transparent and consistent measures. Currently, DHS does not release many of its measures and uses different metrics from year to year, which makes comparisons very difficult. The lack of publicly available and consistent metrics has contributed greatly to the public's lack of clarity surrounding our nation's border security. It has also made it difficult for members of Congress to hold the agency accountable and to know what additional resources are necessary to secure our border. Any additional increases in border security should be implemented in a smart and conscientious manner. Millions of dollars have been spent in the last decade as more and more money has been poured into border technology, all without metrics to show how truly effective these investments have been. In a positive development, it appears that Congress might be listening. The Department of Homeland Security appropriations bill for fiscal year 2016 the Senate Appropriations Committee approved this month included report language requiring CBP to keep, maintain and publish consistent metrics related to border security. Hopefully, the inclusion of this report language signals the beginning of a shift on how policymakers think about measuring border security.

Prisons Aff Specific

Link: Terror

Abolishing federal prisons would let out a loooooooot of terrorists

Scott **Shane 11**, reporter for the New York Times, “Beyond Guantánamo, a Web of Prisons for Terrorism Inmates”, December 10, 2011, <http://www.nytimes.com/2011/12/11/us/beyond-guantanamo-bay-a-web-of-federal-prisons.html?pagewanted=all>

It is the other Guantánamo, an archipelago of federal prisons that stretches across the country, hidden away on back roads. Today, it houses far more men convicted in terrorism cases than the shrunken population of the prison in Cuba that has generated so much debate. An aggressive prosecution strategy, aimed at prevention as much as punishment, has sent away scores of people. They serve long sentences, often in restrictive, Muslim-majority units, under intensive monitoring by prison officers. Their world is spare. Among them is Ismail Royer, serving 20 years for helping friends go to an extremist training camp in Pakistan. In a letter from the highest-security prison in the United States, Mr. Royer describes his remarkable neighbors at twice-a-week outdoor exercise sessions, each prisoner alone in his own wire cage under the Colorado sky. “That’s really the only interaction I have with other inmates,” he wrote from the federal Supermax, 100 miles south of Denver. There is Richard Reid, the shoe bomber, Mr. Royer wrote. Terry Nichols, who conspired to blow up the Oklahoma City federal building. Ahmed Ressam, the would-be “millennium bomber,” who plotted to attack Los Angeles International Airport. And Eric Rudolph, who bombed abortion clinics and the 1996 Summer Olympics in Atlanta. In recent weeks, Congress has reignited an old debate, with some arguing that only military justice is appropriate for terrorist suspects. But military tribunals have proved excruciatingly slow and imprisonment at Guantánamo hugely costly — \$800,000 per inmate a year, compared with \$25,000 in federal prison. The criminal justice system, meanwhile, has absorbed the surge of terrorism cases since 2001 without calamity, and without the international criticism that Guantánamo has attracted for holding prisoners without trial. A decade after the Sept. 11 attacks, an examination of how the prisons have handled the challenge of extremist violence reveals some striking facts: Big numbers. Today, 171 prisoners remain at Guantánamo. As of Oct. 1, the federal Bureau of Prisons reported that it was holding 362 people convicted in terrorism-related cases, 269 with what the bureau calls a connection to international terrorism — up from just 50 in 2000. An additional 93 inmates have a connection to domestic terrorism.

Most terrorists end up in prison and prisons actually rehabilitate them

Andrew **Silke 14**, Head of Criminology and Director for Terrorism Studies at the University of East London. He is inter- nationally recognized as a leading expert on terrorism in general and terrorist psychology in particular. He has a background in forensic psychology and criminology and has worked both in academia and for government. He has written extensively on terrorism and counter-terrorism and is frequently invited to give talks at international conferences and universities throughout the world. “PRISONS, TERRORISM AND EXTREMISM Critical issues in management, radicalization and reform”, 2014, AB)

Although many if not most terrorists eventually end up in prison, there has been surprisingly little research on what happens to them while in prison and after they have been released. This volume, edited by a prominent expert in the field, makes an important contribution to fill this gap in our knowledge. Several of the chapters challenge the conventional wisdom that prisons are universities of terror . Prisons may also provide opportunities for disengagement, deradicalisation and rehabilitation. Wise policies may contribute constructively to facilitate these processes. To achieve this, Professor Silke and his colleagues provide indispensable insights.

Terror Reps Good

Terror Reps True

Terrorism is a real threat – ignoring that reality risks annihilation.

Ralph Peters, 6 (Ralph, retired Army Officer, The Weekly Standard, "The Counterrevolution in Military Affairs; Fashionable thinking about defense ignores the great threats of our time," 2-6-2006, <http://www.weeklystandard.com/Content/Public/Articles/000/000/006/649qrsob.asp>, BP)

Living in unprecedented safety within our borders and lacking firsthand knowledge of the decay beyond, honorable men and women have convinced themselves that Osama bin Laden's professed goals of driving the United States from the Middle East and removing corrupt regional governments are what global terror is all about. They gloss over his ambition of reestablishing the caliphate and his calls for the destruction of Israel as rhetorical effects--when they address them at all. Yet, Islamist fanatics are more deeply committed to their maximalist goals than to their lesser ones--and their unspoken ambitions soar beyond logic's realm. Religious terrorists are committed to an apocalypse they sense within striking distance. Their longing for union with god is inseparable from their impulse toward annihilation. They seek their god in carnage, and will go on slaughtering until he appears to pat them on the back. A dangerous asymmetry exists in the type of minds working the problem of Islamist terrorism in our government and society. On average, the "experts" to whom we are conditioned to listen have a secular mentality (even if they go to church or synagogue from habit). And it is a very rare secular mind that can comprehend religious passion--it's like asking a blind man to describe the colors of fire. One suspects that our own fiercest believers are best equipped to penetrate the mentality--the souls--of our Islamist enemies, although those believers may not be as articulate as the secular intellectuals who anxiously dismiss all possibilities that lie outside their theoretical constructs.

Terrorism is inherently evil—the war on terror is correct

William F. Schultz 04 (executive director of Amnesty International USA, "Human rights and the evil of terrorism", UU World, February, http://findarticles.com/p/articles/mi_qa4071/is_200402/ai_n9347594/?tag=content;col1 BP)

Nothing can excuse atrocities such as these. No appeal to cultural differences can excuse the husband. No pursuit of a political agenda can explain away the actions of the minister. Evil is real, and it is very important to call it by its name. When President Bush labeled those who terrorized Americans on September 11, 2001, "evildoers," he was absolutely right, and his instinct to avenge their deaths was, too. Human rights are designed to make the world a safer place and to help stop people from doing evil things. Terrorists may sincerely think that what they are doing is good, but advocates of human rights have no problem agreeing with the president: Terrorist acts are evil, and terrorists must be punished.

Terrorist ideology is the root cause, not language—only the war on terror solves.

Alex Epstein 05 (, analyst at the **Ayn Rand Institute**, BA in Philosophy from Duke University, "Fight the Root of Terrorism With Bombs, Not Bread", San Francisco Chronicle, 8/14, http://www.aynrand.org/site/News2?page=NewsArticle&id=11243&news_iv_ctrl=1021 BP)

In light of the recent suicide bombings in London, and the general inability of the West to prevent terrorist attacks, there is much talk about fighting the "root cause" of terrorism. The most popular argument is that terrorism is caused by poverty. The United Nations and our European and Arab "allies" repeatedly tell us to minimize our military operations and instead dole out more foreign aid to poor countries--to put down our guns and pick up our checkbook. Only by fighting poverty, the refrain goes, can we address the "root cause" of terrorism. The pernicious idea that poverty causes terrorism has been a popular claim since the attacks of September 11. U.N. Secretary General Kofi Annan has repeatedly asked wealthy nations to double their foreign aid, naming as a cause of terrorism "that far too many people are condemned to lives of extreme poverty and degradation." Former Secretary of State Colin Powell agrees: "We have to put hope back in the hearts of people. We have to show people who might move in the direction of terrorism that there is a better way." Businessman Ted Turner also concurs: "The reason that the World Trade Center got hit is because there are a lot of people living in abject poverty out there who don't have any hope for a better life." Indeed, the argument that poverty causes terrorism has been central to America's botched war in Iraq--which has focused, not on quickly ending any threat the country posed and moving on to other crucial targets, but on bringing the good life to the Iraqi people. Eliminating the root of terrorism is indeed a valid goal--but properly targeted military action, not welfare handouts, is the means of doing so. Terrorism is not caused by poverty. The terrorists of September 11 did not attack America in order to make the Middle East richer. To the contrary, their stated goal was to repel any penetration of the prosperous culture of the industrialized "infidels" into their world. The wealthy Osama bin Laden was not using his millions to build electric power plants or irrigation canals. If he and his terrorist minions wanted prosperity, they would seek to emulate the United States--not to destroy it. More fundamental, poverty as such cannot determine anyone's code of morality. It is the ideas that individuals choose to adopt which make them pursue certain goals and values. A desire to destroy wealth and to slaughter innocent, productive human beings cannot be explained by a lack of money or a poor quality of life--only by anti-wealth, anti-life ideas. These terrorists are motivated by the ideology of Islamic Fundamentalism. This other-worldly, authoritarian doctrine views America's freedom, prosperity, and pursuit of worldly pleasures as the height of depravity. Its adherents resent America's success, along with the appeal its culture has to many Middle Eastern youths. To the fundamentalists, Americans are "infidels" who should be killed. As a former Taliban official said, "The Americans are fighting so they can live and enjoy the material things in life. But we are fighting so we can die in the cause of God." The terrorists hate us because of their ideology--a fact that filling up the coffers of Third World governments will do nothing to change. What then, can our government do? It cannot directly eradicate the deepest, philosophical roots of terrorism; but by using military force, it can eliminate the only "root cause" relevant in a political context: state sponsorship of terrorism. The fundamentalists' hostility toward America can translate into international terrorism only via the governments that employ, finance, train, and provide refuge to terrorist networks. Such assistance is the cause of the terrorist threat--and America has the military might to remove that cause. It is precisely in the name of fighting terrorism at its root that America must extend its fist, not its hand. Whatever other areas of the world may require U.S. troops to stop terrorist operations, we must above all go after the single main source of the threat--Iran. This theocratic nation is both the birthplace of the Islamic Fundamentalist revolution and, as a consequence, a leading sponsor of terrorism. Removing that government from power would be a potent blow against Islamic terrorism. It would destroy the political embodiment of the terrorists' cause. It would declare America's intolerance of support for terrorists. It would be an unequivocal lesson, showing what will happen to other countries if they fail to crack down on terrorists within their borders. And it would acknowledge the fact that dropping bombs, not food packages, is the only way for our government to

US-EU Relations Core – SDI

NEG

A2: US-EU Rels

1NC – No Impact

No impact to US/European relations

Haas 11—president of the CFR Lecturer in public policy, Harvard. DPhil, Oxford (17 June 2011, Richard, Why Europe No Longer Matters, <http://www.cfr.org/europerussia/why-europe-no-longer-matters/p25308>)

Gates sounded a pessimistic note, warning of "the real possibility for a dim if not dismal future for the transatlantic alliance." Yet, the outgoing Pentagon chief may not have been pessimistic enough. **The U.S.-European partnership** that proved so central to managing and winning the Cold War **will inevitably play a far diminished role in the years to come**. To some extent, we're already there: If NATO didn't exist today, would anyone feel compelled to create it? The honest, if awkward, answer is no. In the coming decades, **Europe's influence on affairs beyond its borders will be sharply limited**, and it is in other regions, not Europe, that the 21st century will be most clearly forged and defined. Certainly, one reason for NATO's increasing marginalization stems from the behavior of its European members. The problem is not the number of European troops (there are 2 million) nor what Europeans collectively spend on defense (\$300 billion a year), but rather how those troops are organized and how that money is spent. **With NATO, the whole is far less than the sum of its parts. Critical decisions are still made nationally;** much of the **talk about a common defense policy remains just that -- talk**. There is little specialization or coordination. **Missing as well are many of the logistical and intelligence assets needed to project military force** on distant battlefields. **The alliance's effort in Libya -- the poorly conceived intervention, the widespread refusal or inability to participate in actual strike missions, the obvious difficulties in sustaining intense operations -- is a daily reminder of what the world's most powerful military organization cannot accomplish.** **With the Cold War** and the Soviet threat **a distant memory, there is little political willingness**, on a country-by-country basis, **to provide adequate public funds to the military**. (Britain and France, which each spend more than 2 percent of their gross domestic products on defense, are two of the exceptions here.) Even where a willingness to intervene with military force exists, such as in Afghanistan, where upward of 35,000 European troops are deployed, there are severe constraints. Some governments, such as Germany, have historically limited their participation in combat operations, while **the cultural acceptance of casualties is fading in many European nations**. But it would be wrong, not to mention fruitless, to blame the Europeans and their choices alone. There are larger historical forces contributing to the continent's increasing irrelevance to world affairs. Ironically, Europe's own notable successes are an important reason that transatlantic ties will matter less in the future. The current euro zone financial crisis should not obscure the historic accomplishment that was the building of an integrated Europe over the past half-century. The continent is largely whole and free and stable. Europe, the principal arena of much 20th-century geopolitical competition, will be spared such a role in the new century -- and this is a good thing. The contrast with Asia could hardly be more dramatic. Asia is increasingly the center of gravity of the world economy; the historic question is whether this dynamism can be managed peacefully. The major powers of Europe -- Germany, France and Great Britain -- have reconciled, and the regional arrangements there are broad and deep. In Asia, however, China, Japan, India, Vietnam, the two Koreas, Indonesia and others eye one another warily. Regional pacts and arrangements, especially in the political and security realms, are thin. Political and economic competition is unavoidable; military conflict cannot be ruled out. Europeans will play a modest role, at best, in influencing these developments. If Asia, with its dynamism and power struggles, in some ways resembles the Europe of 100 years ago, the Middle East is more reminiscent of the Europe of several centuries before: a patchwork of top-heavy monarchies, internal turbulence, unresolved conflicts, and nationalities that cross and contest boundaries. Europe's ability to influence the course of this region, too, will be sharply limited. **Political and demographic changes within Europe, as well as the U_{nited} States, also ensure that the transatlantic alliance will lose prominence.** In Europe, **the E.U. project still consumes the attention of many, but for others, especially those in southern Europe facing unsustainable fiscal shortfalls, domestic economic turmoil takes precedence**. No doubt, Europe's security challenges are geographically, politically and psychologically less immediate to the population than its economic ones. Mounting financial problems and the imperative to cut deficits are sure to limit what Europeans can do militarily beyond their continent. Moreover, intimate **ties across the Atlantic were forged at a time when** American political and economic **power was largely in the hands of Northeastern elites**, many of whom traced their ancestry to Europe and who were most interested in developments there. **Today's U_{nited} States -- featuring the rise of the South and the West along with an increasing percentage of Americans who trace their roots to Africa, Latin America or Asia -- could hardly be more different. American and European preferences will increasingly diverge as a result.** Finally, the very nature of international relations has also undergone a transformation. **Alliances**, whether NATO during the Cold War or the U.S.-South Korean partnership now, **do best in settings that are highly inflexible and predictable**, where foes and friends are easily identified, potential battlefields are obvious, and contingencies can be anticipated. Almost **none of this is true in our current historical moment**. Threats are many and diffuse. Relationships seem situational, increasingly dependent on evolving and unpredictable circumstances. Countries can be friends, foes or both, depending on the day of the week -- just look at the United States and Pakistan. **Alliances tend to require shared assessments and explicit obligations; they are much more difficult to operate when worldviews diverge and commitments are discretionary. But as the conflicts in Iraq, Afghanistan and now Libya all demonstrate, this is precisely the world we inhabit.** For the United States, the conclusions are simple. First, **no amount of harping on what European governments are failing to do will push them toward what some in Washington want them to do**. They have changed. We have changed. The world has changed. Second, NATO as a whole will count for much less. Instead, the United States will need to maintain or build bilateral relations with those few countries in Europe willing and able to act in the world, including with military force. Third, **other allies are likely to become more relevant partners in the regions that present the greatest potential challenges**. In Asia, this might mean Australia, India, South Korea, Japan and Vietnam, especially if U.S.-China relations were to deteriorate; in the greater Middle East, it could again be India in addition to Turkey, Israel, Saudi Arabia and others.

US-European relations are irrelevant in solving global problems

Wright 8 [Thomas, executive director of studies at the Chicago Council on Global Affairs, 12/4, pg. <http://www.thestar.com/News/World/article/548178>]

Europe is no longer at the centre of gravity for many of the biggest difficulties facing the United States. Pakistan is indispensable in the fight against Al Qaeda. The Middle East peace process can't move without Israel and Saudi Arabia. Success or failure on climate change will turn on America's relations with China and India. Today, **the European Union** often matters in international affairs in the way the U.S. mattered in the first half of the 20th century: **a wealthy power with tremendous potential that could choose to engage or, instead, hang back and focus on the home front.**

1NC - Inevitable

Relations will stay low, but cooperation is inevitable

Walt 11, IR - Harvard, [The coming erosion of the European Union Posted By Stephen M. Walt Thursday, August 18, 2011 - 11:19 AM Share
[http://walt.foreignpolicy.com/posts/2011/08/18/the_coming_erosion_of_the_european_u
nion](http://walt.foreignpolicy.com/posts/2011/08/18/the_coming_erosion_of_the_european_union)]

Third, I argued that the glory days of transatlantic security cooperation also lie in the past, and **we will see less cooperative and intimate security partnership** between Europe and America in the future. Why do I think so? **One obvious reason is the lack of common external enemy.** Historically, that is the only reason why the United States was willing to commit troops to Europe, and it is therefore no surprise that America's military presence in Europe has declined steadily ever since the Soviet Union broke up. Simply put: there is no threat to Europe that the Europeans cannot cope with on their own, and thus little role for Americans to play. In addition, the various imperial adventures that NATO has engaged in since 1992 haven't worked out that well. It was said in the 1990s that NATO had to "go out of area or out of business," which is one reason it started planning for these operations, but most of the missions NATO has taken on since then have been something of a bust. Intervention in the Balkans eventually ended the fighting there, but it took longer and cost more than anyone expected and it's not even clear that it really worked (i.e., if NATO peacekeepers withdrew from Kosovo tomorrow, fighting might start up again quite soon). NATO was divided over the war in Iraq, and ISAF's disjointed effort in Afghanistan just reminds us why Napoleon always said he liked to fight against coalitions. The war in Libya could produce another disappointing result, depending on how it plays out. Transatlantic security cooperation might have received a new lease on life if all these adventures had gone swimmingly; unfortunately, that did not prove to be the case. But this raises the obvious question: If the United States isn't needed to protect Europe and there's little positive that the alliance can accomplish anywhere else, then what's it for? Lastly, transatlantic security **cooperation will decline because the United States will be shifting its strategic focus to Asia.** The central goal of US grand strategy is to maintain hegemony in the Western hemisphere and to prevent other great powers from achieving hegemony in their regions. For the foreseeable future, the only potential regional hegemon is China. There will probably be an intense security competition there, and the United States will therefore be deepening its security ties with a variety of Asian partners. Europe has little role to play in this competition, however, and little or no incentive to get involved. Over time, Asia will get more and more attention from the U.S. foreign policy establishment, and Europe will get less. This trend will be reinforced by demographic and generational changes on both sides of the Atlantic, **as the percentage of Americans with strong ancestral connections to Europe declines** and as the generation that waged the Cold War leaves the stage. So in addition to shifting strategic interests, some of **the social glue** that held Europe and America together **is likely to weaken as well.** It is important not to overstate this trend -- **Europe and America won't become enemies**, and I don't think intense security competition is going to break out within Europe anytime soon. **Europe and the United States will continue to trade** and invest with each other, **and** we will continue to **collaborate on a number of security issues (counter-terrorism, intelligence sharing, counter-proliferation, etc.). But Europe won't be America's "go-to" partner** in the decades ahead, at least not the way it once was. This will be a rather different world than the one we've been accustomed to for the past 60 years, but that's not necessarily a bad thing. Moreover, **because it reflects powerful structural forces, there's** probably **little we can do to prevent it.** Instead, the smart response -- for both Americans and Europeans -- is to acknowledge these tendencies and adapt to them, instead of engaging in a futile effort to hold back the tides of history

1NC – Resilient

US-EU free trade agreement proves relations resiliency The Hill 12/9/14

Breathing new life into the US-EU trade talks <http://thehill.com/blogs/congress-blog/foreign-policy/226358-breathing-new-life-into-the-us-eu-trade-talks//sd>

While much of the **trade focus in Washington will center on** the Trans-Pacific Partnership talks taking place around the city, this week will be at least equally important for the Transatlantic Trade and Investment **Partnership TTIP**. The proposed agreement **between the US and European Union would create the world's largest free trade area**—covering almost half of global GDP and two-thirds of foreign investment. Monday, U.S. Trade Representative Michael Froman met with his European counterpart Trade Commissioner Cecilia Malmström who is travelling to Washington for the first time in her new position overseeing international commerce for the EU. Monday's meeting is a key part of the larger effort to give **the TTIP negotiations a fresh start** after a challenging first year. As Ambassador Froman recently underlined, **"we have an opportunity to work together for a fresh start to the negotiations. The United States is committed to moving forward with TTIP as soon as we can and as fast as we're able."** But what does this "fresh start" actually entail, and what role should today's meeting play? To answer these questions, we need to take a look at the broader political picture on both sides of the Atlantic. On the European side, a new European Parliament has been elected along with a new European Commission. New Commission President Juncker's "Agenda for Jobs, Growth, Fairness and Democratic Change" outlines that completing an ambitious TTIP agreement is among Europe's top economic and strategic priorities. Similarly, last month's US mid-term elections have shifted the balance of power in both

houses of Congress firmly towards the Republicans who are eager to demonstrate their ability to govern. **Trade policy provides fertile ground for bipartisan cooperation**: according to the incoming Senate Majority Leader Mitch McConnell (R-Ky.), trade is one of the few issues where congressional leaders see room for cooperation with President Obama. Given the number of jobs that

TTIP (and TPP) could create, **Congress should work closely with the White House to move the trade agenda forward**. Of course, there is still the question of whether Congress will grant the President Trade Promotion Authority (TPA)—which would allow Congress up-or-down votes on both TPP and TTIP without amendments that could scupper both deals. However, considerable progress can be made even before the passage of TPA—and that is where Ambassador Froman and Commissioner Malmström's "fresh start" comes in. For Commissioner Malmström, there is a need for more clarity, debate, and realism to more effectively communicate to citizens what is actually being negotiated, and how TTIP would help them. Other important goals of the fresh start include increasing civil society involvement in the negotiations and outlining ambitious and realistic goals for European access to the large US goods, services, and public procurement markets. After less than a month in office, Malmström has already started publishing previously restricted TTIP documents and hosted numerous meetings with legislators and NGOs as part of a broad transparency initiative. This is an important effort as the public debate in Europe turns increasingly hostile towards globalization and international trade. Fostering an informed and enlightened public debate on TTIP is of paramount importance on both sides of the Atlantic. One of the main myths about the agreement is that it will primarily help large corporations, leaving the small ones on the sidelines. According to a recent Atlantic Council study, however, the exact opposite is the case: SMEs stand to gain exponentially from a transatlantic agreement that streamlines regulatory and customs processes. More than 99 percent of all businesses in both the United States and European Union are SMEs with less than 500 employees. These small companies account for the vast majority of employment and have contributed almost two-thirds of all net new private sector job creation in the United States over the past twenty years, adding more than 14.3 million new jobs to the US economy. In her first official meeting before the European Parliament's Trade Committee, Commissioner Malmström confirmed that she wants "[a] TTIP that works for small and medium enterprises." Ambassador Froman agrees, calling small businesses "the backbone of economic growth, job creation, and a stronger middle class in communities across America." During a time where the Internet and free movement of data are powerful drivers of economic growth, jobs, and welfare, SMEs have more opportunities than ever before to connect to potential customers across the world. To unlock the full potential of TTIP for businesses of all sizes, the US and EU need to work to establish a truly transatlantic digital marketplace with reliable, secure, and safe information flowing online as easily as goods and services do in planes or ships. As the world's two largest economies, any transatlantic agreement on cross-border data flows should shape a future global agreement. Coming

back to our initial question—how can today's meeting give **TTIP a fresh start**? The second meeting of the lead negotiators from both sides of the Atlantic in less than a month's time (they also met in Brussels in November) **shows the deep commitment of both sides to give the negotiations new impetus**. As the two sides prepare to reconvene in February, political leadership from Froman and Malmström is needed to develop a common transatlantic public relations strategy that promotes clarity of TTIP's purpose and its benefits while encouraging an open and informed public debate on the **true potential of building a more-integrated transatlantic market**.

2NC – Resilient

EU/US relations resilient

Joynner 11—editor of the Atlantic Council. PhD in pol sci (James, Death of Transatlantic Relationship Wildly Exaggerated, 14 June 2011, www.acus.org/new_atlanticist/death-transatlantic-relationship-wildly-exaggerated)

The blistering farewell speech to NATO by U.S. defense secretary Robert Gates warning of a "dim, if not dismal" future for the Alliance drew the Western public's attention to a longstanding debate about the state of the transatlantic relationship. With prominent commenters voicing concern about much more than just a two-tiered defensive alliance, questioning whether the U.S.-Europe relationship itself is past its prime, doubts that the Western alliance that has dominated the post-Cold War world are reaching a new high. But those **fears are overblown, and may be mistaking short-term bumps in the relationship for proof of a long-term decline that isn't there.** Gates' frustration with the fact that only five of the 28 NATO allies are living up to their commitment to devote 2 percent of GDP to defense, which has hindered their ability to take on even the likes of Muammar Qaddafi's puny force without American assistance is certainly legitimate and worrying. Though **the U.S.-Europe partnership** may not be living up to its potential, **is not worthless, and that relationship continues to be one of the strongest and most important in the world.** Gates is an Atlanticist whose speech was, as he put it, "in the spirit of solidarity and friendship, with the understanding that true friends occasionally must speak bluntly with one another for the sake of those greater interests and values that bind us together." He wants the Europeans, Germany in particular, to understand what a tragedy it would be if NATO were to go away. Most **Europeans** don't see their security as being in jeopardy and political leaders **are hard pressed to divert scarce resources away from social spending** -- especially in the current economic climate -- **a dynamic that has weakened NATO but, despite fears to the contrary, not the greater Transatlantic partnership.** It would obviously have been a great relief to the U.S. if European governments had shouldered more of the burden in Afghanistan. This disparity, which has only increased as the war has dragged on and the European economies suffered, is driving both Gates' warning and broader fears about the declining relationship. But it was our fight, not theirs; they were there, in most cases against the strong wishes of the people who elected them to office, because we asked. We'd have fought it exactly the same way in their absence. In that light, every European and Canadian soldier was a bonus. Libya, however, is a different story. The Obama administration clearly had limited interest in entering that fight - Gates himself warned against it -- and our involvement is due in part to coaxing by our French and British allies. The hope was to take the lead in the early days, providing "unique assets" at America's disposal, and then turn the fight over to the Europeans. But, as Gates' predecessor noted not long after the ill-fated 2003 invasion of Iraq, you go to war with the army you have, not the one you wish you had. The diminished capabilities of European militaries, spent by nearly a decade in Afghanistan, should be of no surprise. NATO entered into Libya with no real plan for an end game beyond hoping the rebels would somehow win or that Qaddafi would somehow fall. That failure, to be fair, is a collective responsibility, not the fault of European militaries alone. But the concern goes deeper than different defensive priorities. Many Europeans worry that the United States takes the relationship for granted, and that the Obama administration in particular puts a much higher priority on the Pacific and on the emerging BRICS (Brazil, Russia, India, China, and South Africa) economies. New York Times columnist Roger Cohen recently wrote that this is as it should be: "In so far as the United States is interested in Europe it is interested in what can be done together in the rest of the world." In Der Spiegel, Roland Nelles and Gregor Peter Schmitz lamented, "we live in a G-20 world instead of one led by a G-2." It's certainly true that, if it ever existed, the Unipolar Moment that Charles Krauthammer and others saw in the aftermath of the Soviet collapse is over. But that multipolar dynamic actually makes transatlantic cooperation more, not less, important. A hegemon needs much less help than one of many great powers, even if it remains the biggest. Take the G-20. Seven of the members are NATO Allies: the US, Canada, France, Germany, Italy, the UK, and Turkey. Toss in the EU, and you have 40 percent of the delegation. If they can form a united front at G-20 summits, they are much more powerful than if each stands alone. Add in four NATO Partner countries (Russia, Japan, Australia, and South Korea) and you're up to 60 percent of the delegation -- a comfortable majority for the U.S.-European partnership and its circle of closest allies. Granted, it's unlikely that we'll achieve consensus among all 12 states on any one issue, let alone most issues. But constantly working together toward shared goals and values expands a sense of commonality. And, like so many things, projects end. Indeed, that's generally the goal. The transatlantic military alliance that formed to defeat fascism remained intact after victory; indeed, it expanded to include its former German and Italian adversaries.

NATO outlasted the demise of its raison d'être, the Soviet threat, and went on to fight together --along with many of its former adversaries -- in Bosnia, Kosovo, Afghanistan, and Libya. Is there seriously any doubt that other challenges will emerge in the future in which the Americans and its European allies might benefit from working together?

Conflicts over surveillance won't collapse relations – it's all for show, strategic interests prevail

Mix 15 (Derek E. Mix, Analyst in European Affairs, "The United States and Europe: Current Issues," Feb 3, <http://fas.org/sgp/crs/row/RS22163.pdf>, DAH)

Other analysts argue that the purported U.S. surveillance operations remain a point of friction but that tensions have proven manageable and do not pose a sustained threat to the overall transatlantic relationship. Those holding this view contend that much of the outrage expressed by European leaders has been for domestic public consumption. They also note that while senior European officials may not have been familiar with the details of U.S. surveillance activities, many were well aware that their own security services conduct various surveillance operations and often work closely with U.S. intelligence services to help prevent terrorist attacks and other serious crimes in Europe. In addition, especially given the potential threat posed by the Islamic State and returning foreign fighters, officials indicate that cooperation between U.S.

and European intelligence and security services has continued **uninterrupted** despite any loss of trust at the political level. 35

Relations resilient – any conflict is self-correcting

Mix 15 (Derek E. Mix, Analyst in European Affairs, “The United States and Europe: Current Issues,” Feb 3, <http://fas.org:8080/sgp/crs/row/RS22163.pdf>, DAH)

Polls show that European perceptions of U.S. foreign policy under the Obama Administration remain relatively favorable and considerably more positive compared to the years of the George W. Bush Administration. 3 The overall tone of transatlantic relations has been mostly constructive over the past six years, and many of the broad global challenges faced by the United States and Europe have pushed the two sides toward common or cooperative approaches. In attempting to deal jointly with the daunting list of challenges they face, however, both sides have also encountered frustrations and reality checks that have reminded each side to be realistic about what it can expect from the other.

Prefer consensus

Mix 15 (Derek E. Mix, Analyst in European Affairs, “The United States and Europe: Current Issues,” Feb 3, <http://fas.org:8080/sgp/crs/row/RS22163.pdf>, DAH)

As the United States and Europe face a changing geopolitical environment, **some observers assert** that the global influence of the Euro-Atlantic partnership is in decline. In addition, the Obama Administration’s announced intention of “re-balancing” U.S. foreign policy toward Asia has caused some anxiety among Europeans. Overall, however, most analysts maintain that the United States and Europe are likely to remain one another’s closest partner, and that U.S.-European cooperation is likely to remain the foundation of international action on a wide range of critical issues.

Cooperation is resilient- shared values, economic ties, and issue specific cooperation

McCormick ‘6 (The War on Terror and Contemporary U.S.-European Relations James M. McCormick 1 1 Iowa State University ABSTRACT AU: James M. McCormick TI: The War on Terror and Contemporary U.S.-European Relations SO: Politics & Policy VL: 34 NO: 2 PG: 426-450 YR: 2006

Even if the conceptual gap were to narrow only slightly over U.S. foreign policy generally and terrorism particularly, **powerful international and domestic constraints remain, which may motivate both** the United States and Europe **to close the action gap.** In other words, certain existing constraints may actually serve as incentives to close the action gap between these two global actors in the near term. Some of these constraints result from the common ties that already exist, but others are unique to the United States and Europe. First, of course, the United States and Europe are **still bound together by a set of underlying common values and beliefs that brought them together during the Cold War** after World War II, albeit no longer with the Soviet Union acting as a lone star guiding policy formulation. Those common values and beliefs are **hardly empty notions to the vast majority** of

Europeans and Americans, particularly not to the new European states that have escaped communist rule since the fall of the Berlin Wall. How those values should be advanced will surely remain as a source of disagreement both within and between Europe and America, but those values will undoubtedly continue to serve as incentives for all parties to seek some policy accommodations. Second, Europe and America are fundamentally tied by the significant economic links that serve as the "sticky power" (Mead 2004, 46-53; Mead 2005, 29-36) between them. Indeed, economic ties remain very strong, despite recent political differences and lingering disputes over access to both participants' markets (Drozdiak 2005). Third, the often unspoken levels of cooperation on terrorism—for example, in the areas of law enforcement, intelligence matters, or the tracking of financial matters—remain in place, even in the face of more visible political differences over Iraq and the wider war on terrorism. Moreover, the events of 3/11/04 in Madrid and 7/7/05 in London continue to provide very powerful incentives for this kind of transatlantic cooperation. In this sense, these different kinds of "ties that bind"—and continue to bind—should not be forgotten as important sources of momentum to seek common ground between America and Europe.

1NC – Alt Cause – Court Ruling

Alt cause – court case

Williams 6/24

(Lauren, tech reporter for ThinkProgress with an affinity for consumer privacy, cybersecurity, tech culture and the intersection of civil liberties and tech policy, French Anger Over NSA Spying Further Strains Europe-U.S. Relations, June 24th, 2015, <http://thinkprogress.org/world/2015/06/24/3673403/french-anger-nsa-spying-strains-europe-us-relations/>)

Negative global perception of the NSA's actions could also affect how the U.S. does business overseas. European regulators have already begun investigating tech companies' potential wrongdoing by participating in NSA surveillance programs. The Court of Justice of the European Union is hearing a case involving Apple, Facebook, Microsoft, and Yahoo, for potential privacy law violations. The decision could seriously damage the U.S.-European relationship by deterring companies from doing business through stricter regulations. Facebook's European public policy director Richard Allan warned legislators in April that imposing stringent regulations on tech companies would be bad for business stateside and abroad: National regulators in a number of countries, including Belgium and the Netherlands, appear to be initiating multiple, overlapping investigations of Facebook, revisiting basic questions about how our services work.

1NC – Alt Cause – Energy

The plan is a drop in the bucket – energy is the litmus test to relations Koryani, 11—Hungarian diplomat, former Undersecretary of State, foreign policy and energy expert. He is also the Deputy Director of the Dinu Patriciu Eurasia Center of the Atlantic Council of the United State (David [Editor], Transatlantic Energy Futures, 2011, http://transatlantic.sais-jhu.edu/publications/books/Transatlantic_Energy_Futures/Transatlantic_Energy_Futures.pdf)

Critical factors of divergence cannot be discounted either, as they have an almost equally strong pull. Differing climate change perceptions and the lack of U.S. commitment and action is extremely dangerous, as it alienates Europeans, both policymakers and the wider public alike. These differences, if not solved, could drive a wedge for decades between the partners, undermine trust, create a value gap and hinder cooperation not only in climate change and energy issues but in all other aspects as well. There is in fact a chance that U.S. and European energy markets could largely decouple in coming years, due in part to differences regarding the need to tackle climate change, and in part to diverging geopolitical and domestic trends. The U.S. has edged closer to self sufficiency with respect to fossil fuels, with the extensive development of its vast unconventional gas resources and increasing reliance on Canadian oil sands. This could lead to a more isolationist stance in U.S. policy. Meanwhile unconventional gas faces mixed reactions in Europe; the EU, for example, plans to shun oil shales and tar sands in its impending Fuel Quality Directive. Friction in transatlantic perceptions on energy security and divergences over preferred courses of action are real dangers that must be addressed head on. Towards a Transatlantic Energy Alliance The systemic transformation of the world of energy, triggered by climate change and powered by new technologies, will likely cause the reorganization of our societies. The benefits and pitfalls of transatlantic cooperation are beyond doubt. Renewing the transatlantic community's leadership is essential to lead the world to a sustainable, low carbon future. Transatlantic cooperation can contribute to provide secure and affordable energy to people in the EU and the U.S., foster economic prosperity and create jobs. Current cooperation on a wide range of subjects is encouraging but inadequate. What we need is a new impetus, genuine political will, adequate resources and enhanced cooperation to advance a transatlantic green economy. Joint efforts in addressing climate change, innovation and investment into clean energy technologies, risk sharing and cost reduction, joint RD&D and harmonized energy diplomacy must be the cornerstones of a Transatlantic Energy Alliance. A Transatlantic Energy Alliance is desirable and feasible, but not self-evident. Climate change and energy cooperation will be the litmus test of converging or diverging European and American norms, values and interests in the 21st century. We have to bridge our differences and we have to do that quickly in order to remain in the driving seat. To amend Robert Kagan's famous line, Americans may be from Mars and Europeans from Venus, but we shall all soon need to move to some other planet if we do not adjust course. Transatlantic Energy Futures endeavors to give you a taste of the intricate and multifaceted energy challenges facing our communities. It aims to do so with a strong conviction in the enduring prominence and necessity of the transatlantic partnership.

2NC - Alt Cause - Energy

Renewable energy is the cornerstone to the transatlantic alliance

Stori '14 (January 27, 2014 | by Val Stori, OWAP Project Director Trade Missions Critical in Building an Offshore Wind Industry)

Perhaps one of the most cost-effective measures US developers can take to reduce project risk and installation costs is partnership with experienced developers. Reducing risks and construction time can have a significant impact on overall project costs. In Europe, growing professionalism in the industry—mainly market entry by large construction companies and major utilities, has led to faster installation times and improved methods. These major players have developed and improved techniques and equipment specific to offshore wind development, which has led to speedier installations and thus, reduced costs. In fact, leading utility and major offshore wind developer DONG Energy predicts that a cost reduction of 10-20% by 2017 is realistic; companies like these are focused on streamlining, improving efficiencies, and incentivizing OEMs and suppliers to reduce costs. **Through partnerships, a US developer can gain valuable experience and tap the wealth of knowledge that European developers have already amassed.** To spur the development of offshore wind in the US and to gain public acceptance through more acceptable power prices, the US must take advantage not only of European know-how, but also of the European supply chain. State renewable energy agencies and local economic development councils who already are heavily invested in offshore wind-related infrastructure and who are looking to position themselves as **leading US offshore wind players, are engaging with key European developers and political leaders through international trade missions.** In 2013, two CESA members travelled to Germany and Denmark along with a contingent from economic development councils and port authorities as part of international trade missions. Both contingents returned to the US cognizant of the major challenges that lie ahead in building a domestic industry, yet aware of the tremendous opportunities for growth. After touring some of the world's largest wind farms, visiting offshore wind-dedicated ports, and speaking with turbine OEMs, the US representatives returned home to champion for offshore wind. In the words of New Bedford Mayor Jon Mitchell, who travelled to Europe with the Massachusetts Clean Energy Center, "it is hard to avoid the adage that seeing is believing." But what other than awe at the industry's huge potential is to be gleaned from these international missions? **Beyond the fact finding and knowledge sharing lies an integral component of these trade missions—the opportunity to build relationships and establish joint ventures.** Dedicated matchmaking sessions and networking opportunities are critical to kick-starting efficient development off US shores. The opportunity to partner—whether a US contractor partners to operate in Europe and brings the experience back or a US project partners with an experienced European contractor—enables us to benefit from Europe's learning curve. We do not have to reinvent the wheel every step of the way. In fact, to do so would likely be cost prohibitive at this point in the game. The US currently does not have the volume or the guaranteed market to develop a robust supply chain or to justify investment in domestic ventures that would support the nascent-at-best industry. Even in Germany, where nearly 400MW of offshore wind were installed in 2013, factories sit idle when demand is low despite investment of an estimated \$1.3 billion for specialized ports and factories. Even though economic development and job creation are key goals for the states interested in building an offshore wind industry, until a sufficient pipeline of projects is established along the US Atlantic coast, the first few projects will be supplied by European manufacturers. **European developers and manufacturers are eager to work on this side of the Atlantic.** Recently, the Maryland Energy Administration was invited to attend the annual European Wind Energy Association's conference at the request of European turbine manufacturers who recognize that Maryland may be the first state to deploy a large-scale project in the US. And in late December, Cape Wind contracted with Siemens to supply the project with Siemens' 3.6MW turbines and an electrical services platform. The platform, in fact, has been contracted out by Siemens to Cianbro Corp.—a Massachusetts-based company, that will construct the offshore substation at its manufacturing facility in Brewer, Maine. While it may be too early for European developers to establish significant facilities in the US at this stage, they are looking for project partners and prime locations to invest—especially if states set offshore wind targets. **It could be a win-win situation.** Local content is lacking and would be a substantial hurdle causing major bottlenecks if US offshore developers chose

to go "local only." Overseas cooperation with local industry will be key in getting the US offshore wind industry up and running, while providing a large opportunity for the established European players to get involved in US developments.

1NC – Alt Cause – Trade

Expanding economic and trade ties are the only way to sustain the relationship

Brattberg '13 (By Erik Brattberg. Published 8 November 2013. Erik Brattberg is Analyst at The Swedish Institute of International Affairs, and currently Visiting Fellow at the Atlantic Council of the United States and a Non-Resident Fellow at the Paul H. Nitze School of Advanced International Studies (SAIS) at Johns Hopkins University in Washington DC.

If so, this could be the start of a recreated and re-invented transatlantic relationship. The development of a more **strategic EU-US relationship** could also **help allay fears regarding the US 'abandonment' of Europe**. While US strategic thinking is changing – and fast (the so-called 'Asian pivot' is only the beginning) – a more strategic transatlantic relationship would still serve a critical function for Washington, and not just on the security side of things. The drawdown of the military mission in Afghanistan means that the US will have less need for Europe in coming years. Focusing more on global **economic and trade issues could constitute a new strategic imperative for closer EU-US ties.**

Uniqueness

Rels High Now

US-EU united on foreign policy with M.E and Russian

Mason '15

(Jeff Mason covers the White House for Reuters. He was the lead correspondent for President Barack Obama's 2012 campaign and has been posted in Washington since 2008, when he covered the historic race between Obama, Hillary Clinton and John McCain, traveling with all three candidates. Jeff has also been posted in Frankfurt, Germany, where he covered the airline industry and Brussels, Belgium, where he covered climate change and the European Union. He has appeared on MSNBC, CNN, BBC, and NPR. Jeff is a graduate of Northwestern University and a former Fulbright scholar, <http://www.reuters.com/article/2015/06/06/us-g7-summit-obama-idUSKBN00M00J20150606>

When President Barack Obama attends the Group of Seven summit in Germany on Sunday, he will join **fellow leaders who are growing accustomed to a new dynamic in the transatlantic relationship: less direction from Washington, more demands on Europe.** In responding to Russia's intervention in Ukraine, the crisis in Libya and efforts to advance Middle East peace, European leaders have stepped up their role after a real or perceived sense that the United States was drawing back. The shift has created both annoyance and satisfaction among European officials. Some privately express frustration at what they view as reluctance by the Obama administration to get involved. They contrast a "leading from behind" strategy in the Middle East and Europe with the more proactive U.S. stance in Asia, where Obama is acting diplomatically and militarily to counter growing Chinese influence. France has publicly berated the U.S. administration for not launching air strikes in 2013 against Syrian President Bashar al-Assad. It said that the decision caused irreparable damage to the Syrian opposition on the ground and emboldened Russian President Vladimir Putin on the international scene. "At the heart of what's going on is that the Americans themselves don't want to be on the front line in this region" a senior French official said. The phrase "leading from behind" grew out of the 2011 NATO intervention in Libya when Washington let France and Britain do most of the heavy military lifting. DIVISION OF LABOR Other diplomats **and U.S. officials say France and Germany's leading role in talks between Moscow and Kiev,** which led to a shaky ceasefire deal in eastern Ukraine, **was appropriate for a crisis that hits them closer to home.** "It's not a question of ceding responsibility, it's the natural division of labor between us," said David O'Sullivan, the European Union's ambassador to the United States. Other areas, however, have been hurt by a lack of U.S. leadership, foreign policy analysts said. Stephen Hadley, Republican President George W. Bush's national security adviser, said it was very attractive to Russia not to have the United States at the table in the Ukraine ceasefire talks. He noted that Europeans were eyeing a new approach to peace between Israelis and Palestinians by potentially backing a U.N. resolution for a Palestinian state. "Overhanging this, of course, is this perception of American disengagement and stepping back from leadership on a lot of problems in the world, which is a perception that our Arab friends and allies have in the Middle East and, you know, I think is very much prevalent in Europe," he said. "STRONG ALIGNMENT" The White House rejects that charge, which is voiced by many Republican critics. It **points to U.S.-European unity on Iran's nuclear program, global climate change negotiations, strikes against Islamic State militants, and sanctions against Russia.** "If you look at the president's key foreign policy priorities, every single one of them, just about, is supported by these key European partners," **Obama's deputy national security adviser Ben Rhodes said. "I think this is a moment of very strong alignment with Europe."** That alignment has not translated into pro-American sentiment in Germany, which is hosting the G7 summit. Germans remain angry at U.S. spying practices, an issue German Chancellor Angela Merkel has raised repeatedly with Obama. In an effort to set a more positive tone, Obama and Merkel will spend some public time together before the summit on Sunday, walking around a small village and sampling local food. The

United States has openly talked about the need for Europe to step up militarily and has recently reiterated a long-standing message that its NATO partners must boost their military spending.

US-EU Relations strong for the future

Hughes '14

US, EU and trade <http://thehill.com/opinion/op-ed/238633-us-eu-and-trade>

(Julia K. Hughes, President of International Development Systems, Inc., which has a proven international reputation as the resource for companies, trade associations and countries when they need the latest information regarding trade statistics and government regulation of textile and apparel products. Additionally, Ms. Hughes serves as Vice President, International Trade and Government Relations for the United States Association of Textiles and Apparel (USA-ITA), where she leads the development of new strategies to liberalize trade in textiles and apparel. Prior to joining IDS, Ms. Hughes was Divisional Vice President of Government Relations for the Associated Merchandising Corporation (AMC), the largest retail merchandising, marketing and consulting organization in the world.)

TPA, TPP, AGOA, and TESA are just a few of the trade policy acronyms we've heard on Capitol Hill lately, but this week, the trade community is focusing on yet another acronym that could have an enormous benefit for both companies and consumers: TTIP, or the Transatlantic Trade & Investment Partnership. **Trade negotiators from the United States and European Union are currently meeting** in New York City **for** the ninth round of TTIP negotiations in hopes of **strengthening the important partnership between the United States and Europe, which already supports 13 million jobs on both sides of the Atlantic.** While the **U.S.-EU relationship is already quite strong**, many obstacles to trade remain in place. This is why our organizations—representing American and European brands, retailers, and importers in a variety of industries, including the fashion industry—urge the negotiation of an ambitious, high-standard agreement that recognizes the way companies do business in the 21st century. This means that the agreement should include the elimination of all tariffs as well as the reduction and harmonization of product-related regulations. For companies, the benefits are clear. The United States and European Union have higher tariffs and more restrictive practices on textile, leather, and fashion products than most consumer goods. **By eliminating tariffs and reducing technical barriers, companies** would **experience greater efficiencies and reduced costs of doing business, allowing them to sell more products globally, expand their operations, and create more high quality jobs**, including design, compliance, retail, and marketing jobs in the fashion industry. Such an agreement would also benefit the consumers those companies serve. Studies show an ambitious agreement could create as many as 750,000 new jobs in the United States, while the expansion of transatlantic commerce would add approximately €95 billion to the United States' economy and approximately €119 billion to Europe's economy and each year. Families will reap the benefits, as the average American household could gain approximately \$865 annually while European households could gain approximately \$720 annually. An ambitious agreement would also have a positive impact on global trade. By instituting uniform, high-standard regulations on everything from product labeling and testing, to sustainability and safety in the global value chain, the United States and Europe could set the global standard. TTIP would serve as a model for future trade agreements when other nations see the widespread benefits of an ambitious elimination of tariffs and reduction of trade barriers—as well as the cost savings and efficiencies that result when they need to follow only one set of regulations for exporting to the United States and Europe. We strongly urge the negotiators to take a fresh look at the proposals, and take a new, 21st-century approach to trade policy. If they do, TTIP won't just be another acronym—but will be a landmark agreement that changes the future of business and trade for the better.

US-EU Communication never been higher EU 2006

(http://eeas.europa.eu/us/docs/infopack_06_en.pdf)

Enhanced EU–US communication has been essential in developing a closer understanding of respective policy positions and a better coordination of activities. The 1990 Transatlantic Declaration introduced structured political dialogues to allow for EU–US discussion on a great variety of regional and horizontal themes. The New Transatlantic Agenda (NTA) which followed in 1995 now governs the relationship. This ambitious agenda of **cooperation between the EU and the USA** in a large number of areas requires intensive dialogue. The **yearly summits between the Presidents of the European Commission and the European Council and the President of the United States** are the apex of an intensive dialogue. The summits are prepared by senior level representatives from the EEAS, the European Commission, the Council Secretariat and the US State Department. Implementation of summit decisions is taken forward via regular working level contacts. Under the EU’s Industrialised Countries Instrument for 2007-2013, over € 20 million are earmarked for cooperation with the United States under three focal areas: dialogues, people to people and cooperation. Following an Annual Work Programme, tenders or calls for proposals for the various instruments (EU Centres of Excellence, people to people actions, dialogues and outreach activities) are published on that same website and are opened to EU and US participants. Such activities should be eligible for support as of 2014 under the new Partnership Instrument proposed by the European Commission under the Multi-Annual Financial framework for the period 2014- 2020. In recent years, the development of more informal and operational ad hoc contacts have allowed for a more detailed understanding of our respective priorities and policies, provided early warning of potential problems and improved the coordination of policy planning and assistance. **The EU and the US have continued to work together in the field of both civilian and military crisis management and conflict prevention.** In March 2008, both sides concluded a work plan on crisis management and conflict prevention, setting out the concrete steps to operationalise co-operation in a number of areas, with specific elements on conflict prevention and early warning. In May 2011, the EU and the US formalised an agreement to allow US civilians to participate in EU CSDP operations. **Close cooperation continues in stabilization efforts, for example in the Balkans,** concerning the EULEX Kosovo rule of law mission.

French Anger Over NSA Spying Further Strains Europe-U.S. Relations,

Williams ’15 BY LAUREN C. WILLIAMS JUN 24, 2015 1:06PM,

<http://thinkprogress.org/world/2015/06/24/3673403/french-anger-nsa-spying-strains-europe-us-relations/>, Lauren C. Williams is the tech reporter for ThinkProgress with an affinity for consumer privacy, cybersecurity, tech culture and the intersection of civil liberties and tech policy. Before joining the ThinkProgress team, she wrote about health care policy and regulation for B2B publications, and had a brief stint at The Seattle Times. Lauren is a native Washingtonian and holds a master’s in journalism from the University of Maryland and a bachelor’s of science in dietetics from the University of Delaware.

New WikiLeaks documents show the U.S. **National Security Agency spied on the private communications of three French presidents, angering the French government and adding strain to an already tenuous Europe-American relationship.** French news site Mediapart first published the documents Tuesday, which cover NSA activity from 2006 to 2012, and were part of the original

WikiLeaks provided by former NSA contractor Edward Snowden. That **news quickly drew the ire of French President François Hollande, who called an emergency meeting Wednesday with the U.S. ambassador and government attorneys. “France will not tolerate actions that threaten its security and the protection of its interests.”** Hollande said in a statement Wednesday. **“These are unacceptable facts that have already**

been the subject of clarification between the US and France, notably at the end of 2013 when the first revelations were made and during a state visit by the president of the Republic to the United States in February 2014. Commitments were made by the US authorities. **They need to be recalled and strictly respected.**"

US-EU relations High Now—Key to counteracting terrorism Archick '14

("U.S.-EU Cooperation Against Terrorism", Kristin Archick, Specialist in European Affairs, December 1, 2014, <https://www.fas.org/sgp/crs/row/RS22030.pdf> Congressional Research Service, 7-5700 www.crs.gov RS22030)

U.S.-EU cooperation against terrorism has led to a new dynamic in U.S.-EU relations by fostering dialogue on law enforcement and homeland security issues previously reserved for bilateral discussions with individual EU member states. Despite some frictions, **most U.S. policy makers and analysts view the developing partnership with the EU** in these areas **as positive**. Like its predecessor, the **Obama Administration has supported U.S. cooperation with the EU in the fields of counterterrorism, border controls, and transport security.** At the November 2009 U.S.-EU Summit in Washington, DC, the two sides reaffirmed their commitment to work together to combat terrorism and enhance cooperation in the broader JHA field. In June 2010, the United States and the EU adopted a "Declaration on Counterterrorism" aimed at deepening the already close U.S.-EU relationship and highlighting the commitment of both sides to combat terrorism within the rule of law. In June 2011, President Obama's National Strategy for Counterterrorism asserted that in addition to working with European allies bilaterally, **the United States will continue to partner with the European Parliament and European Union to maintain and advance CT efforts that provide mutual security and protection to citizens of all nations while also upholding individual rights.** The EU has also been a key U.S. partner in the **30-member Global Counterterrorism Forum**, founded in September 2011 as a multilateral body aimed at mobilizing resources and expertise to counter violent extremism, strengthen criminal justice and rule of law capacities, and enhance international counterterrorism cooperation.

US EU Relations Tense- Asia risks souring relations

Esther Brimmer, 2015, 6-22-15 "Why rising Asia risks souring U.S.-EU relations," Europe's World, <http://europesworld.org/2015/06/22/why-rising-asia-risks-souring-u-s-eu-relations/#.VZ7SuvIVgaB>

Asia's rise is going to **need careful management by the U.S. and the EU**. The U.S. and EU must manage their reactions to the rise of Asia **because** this transition for **it has the potential to deepen existing strains in the transatlantic relationship**. The need for America and Europe to manage cope with such external influences is hardly new. **Transatlantic relations have been buffeted over the years** by trends ranging from Europe's process of de-colonisation to America's Vietnam War, and from conflict in the Middle East to war in Afghanistan. **Global changes affect North**

America and Europe differently, **and** so **can lead to misunderstandings** because the long-term rise of Asia will change the world. Europeans and Americans need to build a more nuanced understanding of their shared interests. There are different interpretations of the rise of Asia, but five aspects are particularly interesting. It can be seen as an economic phenomenon, a strategic challenge, a global power shift, a recognition of the re-emergence of China and India, and an acknowledgement of the many "middle powers" in the region. All five interpretations are likely to influence the views from North America and Europe. "The biggest transatlantic divergence over Asia's rise is the strategic outlook now that many Asian countries are greatly increasing their military spending" Asia contains a number of the largest economies in the world. China last year accounted for over 16% of global GNP, as measured by purchasing power parity. Japan for 5.4%, India 5.8% and the U.S. 16.3%. Although trade is important, investment flows show a more complex relationship. International capital is taking a renewed interest in stable, established markets now the sparkle of emerging ones is being dimmed by slower growth. For European countries, Asia and especially China has become a source of investment income. The economic crisis has ushered in an era of inadequate intra-European investment, creating a profound need for investment in Europe just at a time when China wanted to invest its huge surpluses internationally. Chinese investors and others found bargains in Europe. The result is that Chinese foreign direct investment (FDI) into the EU grew a whopping 338% between 2010-2012. UNCTAD reports that Chinese investment in the United Kingdom doubled from \$1.4bn, it was \$2.8bn during that period, and the overall value of Chinese investment stock in the EU rose to \$31.5bn from a mere \$1.3bn in 2006. Chinese investment in the U.S. reached \$17bn in 2012, up from a similarly low level of \$1.2bn in 2006. Yet, despite this dramatic increase in Chinese investment, the U.S. and Europe are still by far each other's most significant economic partners. In 2012, the U.S. accounted for about a quarter of the EU's foreign investments, with China trailing far behind at 6.1%, Hong Kong at 5.9% and India only 2.1%. As to U.S. foreign investment, Europe received \$2.7 trillion in 2013, almost a fifth of which went to the UK alone. Asia as a whole was of far less interest than Europe to American investors, getting \$695bn in 2013, of which \$61.5bn went to China. "The rise of Asia is creating opportunities, but is also opening new areas for politically charged debate" The transatlantic partners know well that increased investment brings deeper social engagement. But corporate investors' decisions can also affect local labour conditions, and now some of the most difficult negotiations over TTIP relate to investment disputes. The perception that other countries' standards are not as high as your own creates a politically charged climate for negotiations. Europe has agreed investment provisions with Canada, but is still debating them with the U.S. in the TTIP negotiations. Europeans worry that American companies will use the investor state dispute mechanisms to circumvent the EU's labour, health and safety standards. For their part, the Europeans want such mechanisms to be included in the pending EU-China bilateral investment treaty precisely to protect them from local actions in the less transparent Chinese dispute resolution system. Different types of investors in China enjoy different degrees of market access, with the state-owned enterprises there controlling an important segment of Chinese international investment., although they are less transparent than many commercial investors yet wield political clout. Europe arguably needs this investment agreement more than China as it wants greater access to Chinese markets, while China already benefits from access to Europe's open economies. One possible source of transatlantic tension is that the U.S., and but only some EU countries, requires a security review of investments by foreign government entities. This raises questions about whether NATO-member the EU countries will be able to develop acceptable investment rules with some Asian countries from a security perspective. The rise of Asia is creating opportunities, but is also opening new areas for politically charged debate. The biggest transatlantic divergence over Asia's rise is the strategic outlook now that many Asian countries are greatly increasing their military spending. China last year spent \$216.4bn, triple its 2006 defence budget of \$71.4bn. While the U.S. accounts for over a third of global military spending, China's share has risen to 12.25%. Part of the heralded U.S. "rebalance" to Asia reflects Washington's efforts to revitalise transpacific political and security relationships as Asia raises strategic and political issues for America as well as economic ones. Europeans may speak of Asia as a neighbouring region, but for many Americans the U.S. is part of the Asia/Pacific region. Fifty million Americans live in the five states that border the Pacific Ocean. The United States is not alone among the countries of the Asia/Pacific region to have been alarmed by China's adventurism in the East China and the South China Seas. Yet from a U.S. perspective the rise of Asia in strategic terms means not only the challenge of a more assertive China but also the benefit of more capable regional partners for Washington. America and Japan have been allies for over 60 years, and Australia and New Zealand have been bound by the ANZUS treaty for as long. The U.S. and India have moved closer together over the past decade in a stronger security relationship, with their 2008 agreement and subsequent work to bring India closer to international nuclear weapons control regimes having removed barriers to more widespread co-operation. **The re-**

emergence of Asia is recalibrating global power balances. These changes are **likely to have a particular impact on Europe, whose** leaders may **feel they need to ingratiate** themselves **with the emerging Asian powers** to stay in the game. While the United States will be a large and powerful country for decades to come, **Europe** may feel disadvantaged in its relations with Asia, and that **could cause tensions with the U.S.**

US-EU will continue to work together

O'Sullivan '15 (22 June 2015, "HENRY GRATTAN LECTURE: EU-US RELATIONS IN A CHANGING WORLD SPEECH BY DAVID O'SULLIVAN EU AMBASSADOR TO THE UNITED STATES", <http://www.euintheus.org/press-media/henry-grattan-lecture-eu-us-relations-in-a-changing-world-speech-by-david-osullivan-eu-ambassador-to-the-united-states/>, David O'Sullivan is an Irish civil servant who serves as the Ambassador of the European Union to the United States and the Head of the Delegation of the European Union to the United States. He has held a number of high level positions including Head of Cabinet to Romano Prodi and Secretary-General of the European Commission)

Working increasingly with what I call 'institutional Europe' has rendered **the EU-US relationship** much more **effective. Without a program of joint EU-US wide sanctions, we would not have brought Iran back to the table and** we **would** certainly **have had** a lot **less leverage on** Mr. **Putin**. So far, despite the drag of these sanctions on the European economy, we have managed to maintain unity, and as long as attempts to divide us fail, the **EU will continue to work hand-in-glove with the United States on these complicated issues. Washington increasingly sees Europe as having an important role to play** also in our southern neighbourhood and Federica Mogherini has been tireless in her attempts to contribute to

Rels Low Now

U.S- E.U. relations are becoming increasingly strained as the U.S. continues with international spying

Gramer, 14

(Robert Gramer, Gramer staffs the Atlantic Council's Transatlantic Security Initiative, Collateral damage: US spy scandals endanger the world's largest trade deal, 7/22/14, URL, LJG)

After two German officials were arrested on charges of spying for the United States, Germany ordered the CIA station chief in Berlin to leave the country. This story ripped open painful wounds from the NSA-spying scandal that had barely begun to scab over, when leaked documents revealed that the United States had spied on German citizens and tapped German Chancellor Angela Merkel's personal phone. According to U.S. officials, this scandal is simply a crisis du jour spurred primarily by naivety and hypocrisy from an ally who spies right back on the United States. But to German officials, it's the latest example of overreaching U.S. intelligence practices that irrevocably damage the U.S.-German relationship and deeply undermine the sanctity of allies' trust — to the point where the German committee investigating the NSA has considered switching to typewriters.

In this politically charged climate, German and EU leaders may find a new political lightning rod for rising frustration toward the U.S. in the Transatlantic Trade and Investment Partnership (TTIP), an ambitious trade deal between the United States and the European Union slated to add \$280 billion and 13 million jobs to the transatlantic economy. Germany is the EU's economic center of gravity, making it the United States' most important bilateral partner in the TTIP negotiations. German and EU politicians will have to sell TTIP to their people for it to pass. This will be much more difficult with citizens furious at the country on the other side of the negotiating table. As one German official told The New York Times, the latest scandal "overshadows everything we do," including TTIP negotiations (complicated by the fact that the next round of TTIP negotiations started this week with the spy scandal still saturating headlines). Indeed, the chair of the European Parliament's Committee on Foreign Affairs, Elmar Brok, hinted in an interview after the Edward Snowden scandal first broke that TTIP could be leveraged against the United States: "the European Union is in charge of all the trade negotiations, all the rules and regulations on data protection, on the new transatlantic marketplace agreement. ... I think the Americans should see that it is in their interests to find a solution to this question." While few European officials have explicitly stated that the spy scandal will slow TTIP talks, it will undoubtedly be the elephant in the negotiating room. How can the United States salvage TTIP's prospects before political pressures grind the trade negotiators' efforts to a halt? First, **American officials need to acknowledge the full scale of damage to U.S.-**

German relations. Right now, American officials appear to be more annoyed than concerned, neither comprehending how deeply the multiple spy scandals scarred the German public nor how it could hinder TTIP negotiations.

White House Press Secretary Josh Earnest said Germany should understand what allies' "intelligence relationships and activities entail" and Rep. Mike Rogers (R-Mich.), chairman of the U.S. House Committee on Intelligence, accused Germany of throwing a "political temper tantrum." Intelligence, especially surveillance, is a deeply personal and contentious subject for the German people, inextricably rooted in the country's painful and infamous past. That makes this scandal disastrous for U.S.-German relations, but this fact falls on deaf ears in the White House. Second, the U.S. government must demonstrate that it will exert additional oversight on overly broad intelligence collection practices. Even if the government didn't substantially alter U.S. intelligence policy (something even Angela Merkel conceded is tough), it would demonstrate to allies that at least publicly elected bodies were sufficiently "watching the watchmen." Lastly, the United States should include language in TTIP that explicitly signals a commitment to agreeable civil liberty protection for both American and EU citizens, while still effectively protecting national security interests. European officials can brandish this as a victory, and the United States can link TTIP's success with policies on curbing broad surveillance it should have implemented in the first place. **The NSA spy scandal unleashed a political firestorm in Europe,** and this most recent scandal further fanned the flames. **American policymakers must realize that this will not simply blow**

over with the right mixture of time, a few quotes about being "great friends," or a nice photo-op. **This is a disastrous turning point for U.S.-German relations, and potentially TTIP, but few Americans seem to notice.**

The United States has shown it's more than capable of eavesdropping on allies, but now it's time to listen to them.

U.S. - E.U. relations are becoming increasingly strained as businesses in the E.U. realize that U.S. privacy policies are mostly false.

Bernard, 14

(Doug Bernard, Bernard covers cyber issues for Voice of America News, "EU Data Retention Ruling May Roil US-European Relations", 4/8/14, <http://www.voanews.com/content/eu-data-retention-ruling-may-roil-us-european-relations/1888781.html>, LJG)

Before any data can leave an EU member nation, U.S. telecommunications firms must certify they follow privacy policies and programs similar to the more stringent EU protections, creating a "safe harbor" for data privacy. However, Kelley said, **regulators on both sides of the Atlantic have long known that many U.S. safe harbor certifications are actually false, creating a serious potential problem for U.S. companies doing business in the EU.** This week's court ruling, he said, will only make commerce more difficult. "Even before Snowden, there were concerns about the EU Safe Harbor," Kelley said. **"There's already skepticism in Europe because of that, and then you throw in Snowden, it creates more distrust. Having one more element of differentiation between the U.S. and EU is just not helpful."**

Rise of Asia is likely to deepen problems with U.S. – E.U. relations

Brimmer, 6/22/15

(Esther Brimmer, Former U.S. Assistant Secretary of State for International Organisation Affairs (2009-2013) and Professor of International Affairs at the George Washington University's Elliott School of International Affairs, "Why rising Asia risks souring U.S.-EU relations", 6/22/15, <http://europesworld.org/2015/06/22/why-rising-asia-risks-souring-u-s-eu-relations/#.VZ06wflVikp>, LJG)

Asia's rise is going to need careful management by the U.S. and the EU, **The U.S. and EU must manage their reactions to the rise of Asia because this transition for it has the potential to deepen existing strains in the transatlantic relationship.** The need for America and Europe to manage cope with such external influences is hardly new. Transatlantic relations have been buffeted over the years by trends ranging from Europe's process of de-colonisation to America's Vietnam War, and from conflict in the Middle East to war in Afghanistan. **Global changes affect North America and Europe differently, and so can lead to misunderstandings because the long-term rise of Asia will change the world.** Europeans and Americans need to build a more nuanced understanding of their shared interests. There are different interpretations of the rise of Asia, but five aspects are particularly interesting. It can be seen as an economic phenomenon, a strategic challenge, a global power shift, a recognition of the re-emergence of China and India, and an acknowledgement of the many "middle powers" in the region. All five interpretations are likely to influence the views from North America and Europe.

EU US Relations Falling Apart- Obama Administration to Blame

Sputnik, 4-2-15, By, 7-9-2015, "What transatlantic renaissance? US-EU relations falling apart at the seams," SOTT.net, <http://www.sott.net/article/294681-What-transatlantic-renaissance-US-EU-relations-falling-apart-at-the-seams>

While the US President urges his Western allies to rally support for Washington's stance on the most burning international issues, he should not be surprised that consensus is hard to come by, notes David J. Karl, pointing to the fact Barack **Obama has repeatedly snubbed the continent's leaders.** The **"continuing ructions" in the US relations with its Western allies** caused by Obama's failure to develop strong ties with European leaders **have ultimately overshadowed Washington's plan of a "transatlantic renaissance,"** David J. Karl, president of the Asia Strategy Initiative, an analysis and advisory firm, pointed out. "[In 2008] speaking before a massive crowd assembled in Berlin's "Tiergarten", [President Obama] grandly vowed to "remake the world once

again," this time in a way that allies would "listen to each other, learn from each other and, most of all, trust each other." That pledge is now so yesterday that Mrs. Merkel is reportedly longing for the days of George W. Bush," the expert emphasized. Barack Obama has repeatedly snubbed the European leaders, Mr. Karl pointed out. Instead of taking a chance to demonstrate to the world US-NATO solidarity, Barack Obama "in fact deliberately" missed an opportunity to meet with the new NATO Chief, Jens Stoltenberg, in Washington last week. Stoltenberg requested a meeting with the US President "well in advance," the expert underscored. Obama's move could only be considered as an obvious slight to Jens Stoltenberg: the US President is one of a few Western leaders who have yet to with the NATO chief, who assumed the position almost six months ago. However, Obama has demonstrated disinterest in the US' European allies many times before. For instance, in November 2009, Barack Obama opted out of holding a meeting with European Union leaders at the White House sparking speculations that British Prime Minister Gordon Brown and French President Nicolas Sarkozy, one of the most pro-American French leaders, felt like they were being ignored. Remarkably, a year later the American President once again missed a summit with the EU leaders. In September 2009, during a so-called "reset" of relations with Moscow, Barack Obama changed his plans of deploying a missile defense system in Poland and the Czech Republic, but did not bother to inform his eastern European counterparts about his decision. David J. Karl cited a top Polish security official who said that Warsaw heard Obama had shifted the plan though the media. Another European security official complained that US President Obama "does not do consultation, and he doesn't do discussion with allies. He reports, and he describes his analytical process," as quoted by the expert. Curiously, the members of the Obama administration also demonstrated little if any respect to the US' continental allies. A senior German official close to Chancellor Angela Merkel remarked that Susan Rice, the US National Security Adviser, in 2013, pressed the German team to adopt the US approach to the Syrian crisis openly demonstrating that she was not interested in the EU view, David J. Karl noted. The expert added that Rice even used the hardly diplomatic term "mother**ker," causing outrage among German politicians. The leaked phone conversation of Victoria Nuland, the Assistant Secretary of State for European Affairs, who graphically cursed the EU, once again demonstrated the Obama cabinet's attitude towards its European allies. While Obama is urging the EU to rally common Western positions on such issues as the Ukrainian conflict, Iran's nuclear program and the rise of China, he should not be surprised that consensus is hard to come by, the expert underscored. Instead of repairing ties with Europe, Barack Obama has evidently mismanaged relations with the continent, David J. Karl stated.

Despite Stress over Surveillance- US EU Relations Still High

John Curran,, 6-16-2014, "EU AMBASSADOR NOTES EU-U.S. 'STRESS' OVER SURVEILLANCE, PRIVACY," No Publication, <http://search.proquest.com.proxy2.cl.msu.edu/docview/1541351319?pq-origsite=summon>

Joao Vale de Almeida, the European Union ambassador to the U.S., this week called for a renewal of a more trusting relationship between the EU and the U.S. following the past year's discord between the two over disclosures of National Security Agency surveillance programs,

which he said have constituted a "stress test" of the relationship. Speaking at a cloud computing policy conference organized by Forum Global, Mr. de Almeida said the EU and the U.S. need to "cultivate, nurture, protect, and promote" a more trusted relationship. "In Europe, this is a serious issue," he said. "We should not underestimate the importance of trust." "If trust does not exist...then the whole concept is not sustainable," he said, speaking of agreements on cross-border data flows that are involved in cloud computing and other communications services. Along those lines, he said the future may hold "severe weather alerts" over security and policy differences. "Some clouds bring storms . . . some storms can be linked to cybersecurity - this is the most obvious problem," he said. On the policy front, he said NSA program revelations constitute a "political" storm, with the "capacity to pollute policy making." He said, for example, that transatlantic trade talks now underway between the EU and U.S. do not involve surveillance issues, but that those issues "are having an impact on the negotiations. I don't think we should ignore this." Mr. de Almeida offered that it was difficult to find the right balance between security and privacy, but that the EU and the U.S. nonetheless have to attempt to "square the circle" on that issue. At the same event, Federal Trade Commissioner Maureen Ohlhausen emphasized the importance of cross-border data flows to economic growth, and said they constitute "the purest form of a broadband bonus - nobody loses, and everybody wins." She also offered that the relationship between the U.S. and the EU has been improving in recent times following the NSA surveillance program disclosures. "Despite some of the storms, it's getting stronger because it needs to get stronger," she said. "It triggered a discussion, but I think we'll come out stronger." Cameron Kerry, a former Department of Commerce general counsel and now a fellow at the Brookings Institution, said that NSA surveillance "revelations have fueled the worst fears" that some Europeans have about U.S. policy, and that some European institutions have tried to move forward on their own with data privacy reforms as a result. "But at the end of the day, I don't think either side of the Atlantic can afford that," he said. "Trade is too important, and the Internet is too important." He said the U.S. and the EU need to affirm the continuing validity of their existing Safe Harbor framework for cross-border data flows, and improve the "interoperability" of the exchange. "We need to dial back some of the regulatory friction so we can focus on regulatory outcomes, not process." - John Curran, john.curran@wolterskluwer.com

US Spying on French Presidents Strain Relations

Khabar.Eu, 6-24-2015, "US must work to repair relations after spy claims, says French PM," Khabar.eu, <http://www.khabar.eu/france-summons-us-ambassador-over-spying-claims-diplomatic-source/>

PARIS: The United States must "do everything in its power" to repair relations after reports emerged that it spied on French President Francois Hollande and two of his predecessors, Prime Minister Manuel Valls said Wednesday. "The US should recognise not only the danger that such actions represent for our freedom, but should also do everything in its power – and quickly – to repair the damage they have done to relations... between the United States and France," Valls told parliament. France earlier summoned the US ambassador to complain about the "unacceptable" spying that was apparently revealed in leaked documents. Hollande was due to

discuss the documents released by WikiLeaks with US President Barack Obama in the coming hours. **France “will not tolerate any acts that threaten its security”** the presidency said, after a meeting between Hollande and his top intelligence officials and cabinet ministers. US Ambassador Jane Hartley has also been summoned to meet French Foreign Minister Laurent Fabius, diplomatic sources told AFP. The United States wiretapped France’s former presidents Jacques Chirac (L) and Nicolas Sarkozy (C), as well as current leader Francois Hollande (R), French media report - AFP/File The United States wiretapped France’s former presidents Jacques Chirac (L) and Nicolas Sarkozy (C), as well as current leader Francois Hollande (R), French media report – AFP/File The documents – labelled “Top Secret” and appearing to reveal spying on Jacques Chirac, Nicolas Sarkozy and Hollande from 2006 to 2012 – were published by WikiLeaks in partnership with French newspaper Liberation and the Mediapart website. The leak coincides with a vote later on Wednesday in the French parliament on a controversial new law granting the state sweeping powers to spy on its citizens. The White House said it was not targeting Hollande’s communications and will not do so in the future, but it did not comment on past activities. “We are not targeting and will not target the communications of President Hollande,” said National Security Council spokesman Ned Price late Tuesday, calling the US partnership with France “indispensable”. French Foreign Minister Laurent Fabius (pictured) on Wednesday summoned the US ambassador over leaked documents that suggest her government spied on President Francois Hollande and two predecessors - AFP/File / Francois Guillot French Foreign Minister Laurent Fabius (pictured) on Wednesday summoned the US ambassador over leaked documents that suggest her government spied on **President Francois Hollande and two predecessors** – AFP/File / Francois Guillot **Hollande’s office recalled US promises in late 2013 not to spy on French leaders following accusations that the US National Security Agency (NSA) had wiretapped German Chancellor Angela Merkel.** “Commitments were made by the US authorities,” the Elysee Palace said in a statement. **“They must be remembered and strictly respected.”**

New Leaks show US Surveillance of German Officials- Further Strains Relations

Guardian, 7-1-2015, "WikiLeaks: US spied on Angela Merkel's ministers too, says German newspaper,"

<http://www.theguardian.com/media/2015/jul/02/wikileaks-us-spied-on-angela-merkels-ministers-too-says-german-newspaper>

The United States did not just tap chancellor Angela Merkel’s phone but also eavesdropped on several of her ministers, the German daily Sueddeutsche Zeitung has reported, citing documents from WikiLeaks. **German-US relations were badly strained after fugitive US intelligence contractor Edward Snowden in 2013 revealed widespread US foreign surveillance**, although a probe into the alleged tapping of Merkel’s mobile phone was dropped in June over a lack of evidence. But according to the latest revelations **the US National Security Agency did not limit its snooping activities to Merkel and showed particular interest in the activities of the ministries of finance, economy and agriculture**, Sueddeutsche Zeitung reported. It said WikiLeaks had shown **it a list of 69 phone numbers belonging to ministers and senior officials that were reportedly targeted**. The list appears to date back to between 2010 and 2012. The current economy minister and vice-chancellor, Sigmar Gabriel, was among those spied on by the NSA, the report

said, although it noted he had been in the opposition at the time. The list also features the number of former finance minister Oskar Lafontaine, who left the job in 1999. But the number was “still active” according to Sueddeutsche Zeitung, ringing through to the secretariat of the current finance minister, Wolfgang Schaeuble. While Snowden alleged US spying on many European governments, his disclosures triggered particular anger in Germany where bitterness lingers over mass state spying on citizens by the Stasi secret police in former communist East Germany where Merkel grew up. Merkel herself phoned the US president, Barack Obama, over the revelations and in public told Germany’s traditional post-war ally and Nato partner that “spying between friends just isn’t on”. Washington appeared to confirm her phone had previously been tapped when US officials said the cellphone was “no longer” a target.

NSA Foreign Surveillance Strains European-US Relations

Lauren C. **Williams, 6-24-2015**, "French Anger Over NSA Spying Further Strains Europe-U.S. Relations," ThinkProgress, <http://thinkprogress.org/world/2015/06/24/3673403/french-anger-nsa-spying-strains-europe-us-relations/>

New WikiLeaks documents show the U.S. National Security Agency spied on the private communications of three French presidents, angering the French government and adding strain to an already tenuous Europe-American relationship. French news site Mediapart first published the documents Tuesday, which cover NSA activity from 2006 to 2012, and were part of the original WikiLeaks provided by former NSA contractor Edward Snowden. That news quickly drew the ire of French President François Hollande, who called an emergency meeting Wednesday with the U.S. ambassador and government attorneys. “France will not tolerate actions that threaten its security and the protection of its interests,” Hollande said in a statement Wednesday. “These are unacceptable facts that have already been the subject of clarification between the US and France, notably at the end of 2013 when the first revelations were made and during a state visit by the president of the Republic to the United States in February 2014. Commitments were made by the US authorities. They need to be recalled and strictly respected.” The White House has denied the spying allegations, saying via a statement Wednesday: We are not targeting and will not target the communications of President Hollande. Indeed, as we have said previously, we do not conduct any foreign intelligence surveillance activities unless there is a specific and validated national security purpose. This applies to ordinary citizens and world leaders alike. We work closely with France on all matters of international concern, and the French are indispensable partners. Spying on friendly and enemy governments alike isn’t a new occurrence and is widely practiced, the U.S. is generally more brazen about it. German lawmakers accused its own intelligence agencies earlier this year of violating German regulations and gathering information in European targets for the NSA. The new Snowden-derived information comes as trust in U.S. government wanes domestically and overseas. Only a quarter of Americans trust the government always or most of the time, according to a 2014 Pew Research survey. When it comes to foreign relations, only 43 percent are at least fairly confident in how the U.S. handles international matters, Gallup found. This week’s WikiLeaks also follows news that Germany folded its investigation into the NSA’s spying practices after documents surfaced in 2013 indicating the agency spied on Chancellor Angela

Merkel's personal communications. But public disclosing of what should be clandestine movements fuels international sentiment of American government's disregard for civilian privacy. "We find it hard to understand or imagine what motivates an ally to spy on allies who are often on the same strategic positions in world affairs," Stéphane Le Foll, a French government spokesman told iTELE television. Negative global perception of the NSA's actions could also affect how the U.S. does business overseas. European regulators have already begun investigating tech companies' potential wrongdoing by participating in NSA surveillance programs. The Court of Justice of the European Union is hearing a case involving Apple, Facebook, Microsoft, and Yahoo, for potential privacy law violations. The decision could seriously damage the U.S.-European relationship by deterring companies from doing business through stricter regulations. Facebook's European public policy director Richard Allan warned legislators in April that imposing stringent regulations on tech companies would be bad for business stateside and abroad: National regulators in a number of countries, including Belgium and the Netherlands, appear to be initiating multiple, overlapping investigations of Facebook, revisiting basic questions about how our services work. In effect, this would mark a return to national regulation. If it is allowed to stand, complying with EU law will no longer be enough; businesses will instead have to comply with 28 independently shifting national variants. They would have to predict the enforcement agenda in each country... Facebook's costs would increase, and people in Europe would notice new features arriving more slowly, or not at all. The biggest victims would be smaller European companies. The next big thing might never see the light of day.

Impact Turns

1NC – China/EU Rels

US-EU relations trade off with China-EU relations

Small 7 (Andrew, transatlantic fellow with the Asia program at the German Marshall Fund - previously worked as the director of the Foreign Policy Centre's Beijing office; as a visiting fellow at the Chinese Academy of Social Sciences, and was an ESU scholar in the office of Senator Edward M. Kennedy. Graduated from Oxford. "China-Eu: A Common Future" edited by Stanley Crossick (Founding Chairman, European Policy Centre, Brussels) & Etienne Reuter (European Commission, Belgium), World Scientific Publishing Co., Chapter 6, p. 73-80)

For Europe and China alike, the most important bilateral relationship is with the **United States**. Although often described as a '**strategic triangle**', **neither the Chinese impact on the transatlantic relationship nor Europe's role in the Sino-US relationship is remotely comparable to the significance of the United States for the Sino-European relationship**. Describing the **United States as the elephant in the room does not even begin to do it justice: the size and shape of the room are themselves shaped by the US factor**.[¶] To start with the Sino-European relationship and then look at the US influence is to look in the wrong place. **It is the structure and dynamics of the other two relationships — the underlying tensions in the Sino-US relationship and the underlying strength of transatlantic ties — that provide the critical frame**. The Primacy of the Transatlantic Relationship It is not much of an exaggeration to suggest that **major developments in EU-China relations over the past few years have been a subsidiary consequence of the fraying and strengthening again of the transatlantic relationship**. The 2003-2004 "**honeymoon**" period in EU-China relations, **during which the two sides launched the "strategic partnership" concept and agreed, in principle, to lift the arms embargo, was substantially driven by a major transatlantic falling-out over Iraq**. It was led, moreover, **by two European political leaders — Jacques Chirac and Gerhard Schroeder — who were simultaneously burning their bridges with the Bush administration**. **The end of the honeymoon, in 2005, coincided with Schroeder's fading the scene, and the efforts of both Europe and the United States, largely successful at an elite (if not a popular) level, to put transatlantic relations back on track**.

EU-China relations dampen global conflict and solve everything US-china rels do better

Geiger 3 ("China and the European Union: A Strategic Partnership for the Future"[¶] Presentation made by Henriette Geiger,[¶] China Desk, DG External Relations, Unit H2 (China, Hong Kong, Macau, Taiwan, Mongolia), European Commission[¶] 5 September 2003 <http://www.ceibs.edu/ase/Documents/EuroChinaForum/henriette.htm#i3>

The spectre of international **terrorism, as well as** growing concerns over the **proliferation of weapons of mass destruction, have brought new types of international security concerns to the top of the global agenda**. The **sluggish world economy and** concomitant **negative trends in**

protectionism and regionalism also **loom as** potential **threats to global trade** and development.[¶]
¶ **Faced with these** common **concerns**, it is in the clear and ever-greater **interest of the EU and China to work together** as strategic partners on the international scene **to safeguard** and promote development, **peace and stability**.[¶] ¶ Both **EU and Chinese interests converge on** many issues, particularly in their appreciation of **the key role of multilateral organisations and systems in global governance**. Through **further reinforcement of their co-operation**, the EU and China will be better able to promote these **shared visions and interests**, and to **shore up** their joint **security** and other interests, both **in the Asian region and elsewhere** in the world.[¶] ¶ Given China's rapid emergence as a key global player, it must be recognised that **Europe has a major political and economic stake in supporting China's successful transition process and full engagement in the international community**. At the same time China has a considerable interest in strengthening its ties with a larger and stronger European Union.

1NC – Heg Collapse

US-EU relations constrain US leadership

John Van **Oudenaren 2005**, Chief of the European Division of the Library of Congress, Summer [National Interest]

A partnership on terms likely to be acceptable to the EU would have significant economic disadvantages for the United States and would complicate the ability of the United States to meet its global commitments. The United States would remain the target of revisionist forces elsewhere in the world--whether Islamic radicalism or a rising China--but it would be forced to defer to a greater extent to European views and interests with regard to these areas. While those who favor partnership argue that one of its main advantages would be to provide the United States with added resources to deal with precisely these challenges, it is not clear that the phasing-in of European contributions would keep pace with the decreased freedom of action that partnership on European terms might entail.

Leadership prevents nuclear war and ensures great power peace **Barnett, Professor of Warfare Analysis and Research Dept U.S. Naval War College, 2011**

(Thomas Barnett, Professor, Warfare Analysis and Research Dept – U.S. Naval War College, 3/7/11, “The New Rules: Leadership Fatigue Puts U.S., and Globalization, at Crossroads,” <http://www.worldpoliticsreview.com/articles/8099/the-new-rules-leadership-fatigue-puts-u-s-and-globalization-at-crossroads>)

Events in Libya are a further reminder for Americans that we stand at a crossroads in our continuing evolution as the world's sole full-service superpower. Unfortunately, we are increasingly seeking change without cost, and shirking from risk because we are tired of the responsibility. We don't know who we are anymore, and our president is a big part of that problem. Instead of leading us, he explains to us. Barack Obama would have us believe that he is practicing strategic patience. But many experts and ordinary citizens alike have concluded that he is actually beset by strategic incoherence -- in effect, a man overmatched by the job. It is worth first examining the larger picture: We live in a time of arguably the greatest structural change in the global order yet endured, with this historical moment's most amazing feature being its relative and absolute lack of mass violence. That is something to consider when Americans contemplate military intervention in Libya, because if we do take the step to prevent larger-scale killing by engaging in some killing of our own, we will not be adding to some fantastically imagined global death count stemming from the ongoing "megalomania" and "evil" of American "empire." We'll be engaging in the same sort of system-administering activity that has marked our stunningly successful stewardship of global order since World War II. Let me be more blunt: As the guardian of globalization, the U.S. military has been the greatest force for peace the world has ever known. Had America been removed from the global dynamics that governed the 20th century, the mass murder never would have ended. Indeed, it's entirely conceivable there would now be no identifiable human civilization left, once nuclear weapons entered the killing equation. But the world did not keep sliding down that path of perpetual war. Instead, America stepped up and changed everything by ushering in our now-perpetual great-power peace. We introduced the international liberal trade order known as globalization and played loyal Leviathan over its spread. What resulted was the collapse of empires, an explosion of democracy, the persistent spread of human rights, the liberation of women, the doubling of life expectancy, a roughly 10-fold increase in adjusted global GDP and a profound and persistent reduction in battle deaths from state-based conflicts. That is what American "hubris" actually delivered. Please remember that the next time some TV pundit sells you the image of "unbridled" American military power as the cause of global disorder instead of its cure. With self-deprecation bordering on self-loathing, we now imagine a post-American world that is anything but. Just watch who scatters and who steps up as the Facebook revolutions erupt across the Arab world. While we might imagine ourselves the status quo power, we remain the world's most vigorously revisionist force. As for the sheer "evil" that is our military-industrial complex, again, let's examine what the world looked like before that establishment reared its ugly head. The last great period of global structural change was the first half of the 20th century, a period that saw a death toll of about 100 million across two world wars. That comes to an average of 2 million deaths a year in a world of approximately 2 billion souls. Today, with far more comprehensive worldwide reporting, researchers report an average of less than 100,000 battle deaths annually in a world fast approaching 7 billion people. Though admittedly crude, these calculations suggest a 90 percent absolute drop and a 99 percent relative drop in deaths due to war. We are clearly headed for a world order characterized by multipolarity, something the American-birthed system was designed to both encourage and accommodate. But given how things turned out the last time we collectively faced such a fluid structure, we would do well to keep U.S. power, in all of its forms, deeply embedded in the geometry to come. To continue the historical survey, after salvaging Western Europe from its half-century of civil war, the U.S. emerged as the progenitor of a new, far more just form of globalization -- one based on actual free trade rather than colonialism. America then successfully replicated globalization further in East Asia over the second half of the 20th century, setting the stage for the Pacific Century now unfolding.

1NC – NATO Collapse

Ties with EU trades off with NATO

International Herald Tribune 2005 – 2-18

On the face of it, the issue is about how **NATO and the European Union** can discuss sensitive security issues when some EU countries have not received security clearance from NATO to attend these meetings. In essence, however, diplomats say, it is about how the two organizations **are vying with each other to set the agenda for the trans-Atlantic relationship.** "There is now a **competition between both organizations** where member countries try to play off their interests either against the EU or NATO," said a senior NATO official who, like most officials interviewed for this article, requested anonymity. "The relationship between **the EU and NATO** is in flux because both **are jockeying for influence on the international stage,**" he added. "As **the EU** moves slowly along the road toward doing more defense and security, it **is seen as threatening to NATO. NATO knows it is no longer Washington's first port of call** for its military missions. **It is becoming a toolbox for the U.S.**"

Collapse of NATO causes multiple escalatory nuclear wars

John **Duffield 1994**, Assistant Professor of Government and Foreign Affairs at the University of Virginia,

[Political Science Quarterly 109:5, p. 766-7]

Initial analyses of NATO's future prospects overlooked at least three important factors that have helped to ensure the alliance's enduring relevance. First, they underestimated the extent to which external threats sufficient to help justify the preservation of the alliance would continue to exist. In fact, NATO still serves to secure its members against a number of actual or potential dangers emanating from outside their territory. These include not only the residual threat posed by Russian military power, but also the relatively new concerns raised by conflicts in neighboring regions. Second, the pessimists failed to consider NATO's capacity for institutional adaptation. Since the end of the cold war, the alliance has begun to develop two important new functions. NATO is increasingly seen as having a significant role to play in containing and controlling militarized conflicts in Central and Eastern Europe. And, at a deeper level, it works to prevent such conflicts from arising, at all by actively promoting stability within the former Soviet bloc. Above all, NATO pessimists overlooked the valuable intra-alliance functions that the alliance has always performed and that remain relevant after the cold war. Most importantly, NATO has helped stabilize Western Europe, whose states had often been bitter rivals in the past. By damping the security dilemma and providing an institutional mechanism for the development of common security policies, NATO has contributed to making the use of force in relations among the countries of the region virtually inconceivable. In all these ways, NATO clearly serves the interests of its European members. But even the United States has a significant stake in preserving a peaceful and prosperous Europe. In addition to strong transatlantic historical and cultural ties, American economic interests in Europe— as a leading market for U.S. products, as a source of valuable imports, and as the host for considerable direct foreign investment by American companies — remain substantial. If history is any guide, moreover, the United States could easily be drawn into a future major war in Europe, the consequences of which would likely be even more devastating than those of the past, given the existence of nuclear weapons.¹¹

2NC – NATO Collapse

Heightened US-EU cooperation will tradeoff with NATO and other regional alliances

John Van **Oudenaren 2005**, Chief of the European Division of the Library of Congress, Summer [National Interest]

Two elements are important for a new U.S. strategy. First, a renewed attention to liberal multilateralism should make clear the direction that U.S. policy should not take. The United States should not pursue with the EU the kinds of charters, compacts, partnerships and other bilateral arrangements currently being promoted in Atlanticist circles. However well intentioned, this kind of U.S.-EU bilateralism moves away from a more plural and open international order. Within Europe, it cannot help but promote the further centralization of policymaking in and through Brussels that shifts power to the European Commission and member states such as France and Germany, even as it helps to marginalize the contributions of more liberal outliers such as the UK, the Scandinavian countries and the new member states to the east. In the wider world, it increases the likelihood that U.S.-EU understandings will be imposed worldwide, thereby marginalizing the influence of third countries that tend to be closer to U.S. positions. The result is a double loss for international pluralism, both within Europe and at the global level. For the United States, such a loss might be worth paying if it meant "pinning the EU down", both with regard to substantive principles (concerning regulation, global governance and so forth) and procedural norms to ensure that these principles would be universalized in a cooperative rather than competitive manner. This is unlikely to happen, however: Any bilateral U.S.-EU understanding is certain to be ambiguous enough to preserve both the EU's internal autonomy and external freedom of action, even as it diminishes the importance of other mechanisms (such as NATO or the U.S.-Japanese relationship) that are valuable in their own right and that give the United States levers of influence over the EU.

1NC – NMD

US-EU relations enable NMD

Malone and Thakur 1, (David, president of the International Peace Academy, Ramesh- vice Director of the United Nations University, The Japan Times March 11,

There can be little doubt that the Bush administration does not incline naturally toward multilateral diplomacy and a treaty-based international security system. Nevertheless, it will not wish to alienate close allies on more than one or two issues at a time and may soon find itself engaged in give-and-take with them. Its top priority appears to be the further development and eventual deployment of a national missile defense system, a U.S. idea that has long unsettled not only Russia and China, but also key European allies and Canada. It could well decide, among other measures, that ratification of the CTBT had become useful to reassure allies and foes alike. Regardless of their views on NMD, U.S. allies and foes now need to consider their own strategies. Indefinitely stamping their feet on an issue that may be nonnegotiable in essence but negotiable in specifics and at the margins, would be self-defeating. NMD is not something the allies Moscow or Beijing can stop. However, they could well influence the context within which NMD will be developed, its ultimate scope and its detailed aims. Their eventual consent can also be exchanged against concessions from Washington on related or different issues.

NMD is a pretext for space militarization that results in global NBC war and destruction.

Mitchell and Helwich 1, Gordon- Associate Professor of Communication, Kevin- Teaching Fellows in the Department of Communication at the University of Pittsburgh, <http://www.isisuk.demon.co.uk/0811/isis/uk/bmd/no6.html>

Since any US attempt to overtly seize military control of outer space would likely stir up massive political opposition both home and abroad, defence analyst James Oberg anticipates that 'the means by which the placement of space-based weapons will likely occur is under a second US space policy directive — that of ballistic missile defense... This could preempt any political umbrage from most of the world's influential nations while positioning the US as a guarantor of defense from a universally acclaimed threat'.³² In this scenario, ABM Treaty breakout, conducted under the guise of missile defence, functions as a tripwire for unilateral US military domination of the heavens. A buildup of space weapons might begin with noble intentions of 'peace through strength' deterrence, but this rationale glosses over the tendency that '... the presence of space weapons...will result in the increased likelihood of their use'.³³ This drift toward usage is strengthened by a strategic fact elucidated by Frank Barnaby: when it comes to arming the heavens, 'anti-ballistic missiles and anti-satellite warfare technologies go hand-in-hand'.³⁴ The interlocking nature of offense and defense in military space technology stems from the inherent 'dual capability' of spaceborne weapon components. As Marc Vidricaire, Delegation of Canada to the UN Conference on Disarmament, explains: 'If you want to intercept something in space, you could use the same capability to target something on land'.³⁵ To the extent that ballistic missile interceptors based in space can knock out enemy missiles in mid-flight, such interceptors can also be used as orbiting 'Death Stars', capable of sending munitions hurtling through the Earth's atmosphere. The dizzying speed of space warfare would introduce intense 'use or lose' pressure into strategic calculations, with the spectre of split-second attacks creating incentives to rig orbiting Death Stars with automated 'hair trigger' devices. In theory, this automation would enhance survivability of vulnerable space weapon platforms. However, by taking the decision to commit violence out of human hands and endowing computers with authority to make war,

military planners could sow insidious seeds of accidental conflict. Yale sociologist Charles Perrow has analyzed 'complexly interactive, tightly coupled' industrial systems such as space weapons, which have many sophisticated components that all depend on each other's flawless performance. According to Perrow, this interlocking complexity makes it impossible to foresee all the different ways such systems could fail. As Perrow explains, '[t]he odd term "normal accident" is meant to signal that, given the system characteristics, multiple and unexpected interactions of failures are inevitable'.³⁶ Deployment of space weapons with pre-delegated authority to fire death rays or unleash killer projectiles would likely make war itself inevitable, given the susceptibility of such systems to 'normal accidents'. It is chilling to contemplate the possible effects of a space war. According to retired Lt. Col. Robert M. Bowman, even a tiny projectile reentering from space strikes the earth with such high velocity that it can do enormous damage — even more than would be done by a nuclear weapon of the same size!'.³⁷ In the same Star Wars technology touted as a quintessential tool of peace, defence analyst David Langford sees one of the most destabilizing offensive weapons ever conceived: 'One imagines dead cities of microwave-grilled people'.³⁸ Given this unique potential for destruction, it is not hard to imagine that any nation subjected to space weapon attack would retaliate with maximum force, including use of nuclear, biological, and/or chemical weapons. An accidental war sparked by a computer glitch in space could plunge the world into the most destructive military conflict ever seen.

1NC – Precautionary Principle

US-EU partnership forces adoption of the precautionary principle by the U.S.

John Van **Oudenaren 2005**, Chief of the European Division of the Library of Congress, Summer [National Interest]

Furthermore, an institutionalized partnership acceptable to Brussels and the member states probably would have to be a kind of "partnership plus" in which the United States would cede a great deal more influence than U.S. policymakers are likely to regard as reasonable. It would mean more than improved consultation and a reining-in of what Europeans see as U.S. unilateralism. From the EU perspective, a satisfactory partnership that would qualify as "equal" and "balanced" would be an acknowledgment of a new order in which the EU would play an increased--and the United States a correspondingly decreased--role in setting the global "rules of the game." The EU would expect to call the tune in multilateral settings, much the way it already does in forums such as the Kyoto Protocol and the International Criminal Court (ICC). In the trade area, such EU-pioneered concepts as the precautionary principle, the cultural exception and the multifunctional role of agriculture would have to be accommodated in some form.

The Precautionary Principle forces compliance with internationally binding mechanisms that curtail nanotechnology development

Ronald **Bailey 2004**, Science Correspondent for *Reason* and former FERC analyst, 12-1

To address the social and economic effects of nanotechnology, the ETC Group is proposing a sweeping international effort to regulate and control its development. "Extreme care should be taken that, unlike with biotech, society does not lose control of this technology," warns Mooney. For the ETC Group, raising health and environmental concerns about nanomaterials and nanobots is mainly a delaying tactic. "The biggest concern really is that with a technology as powerful as this one, society has a role in deciding how it can and will be used," says Mooney. "This is going to have a profound effect on people's lives. Let people know that their jobs are going to be taken away." In an April report on nanotechnology, the ETC Group declares: "The international community must begin work on a legally binding mechanism to govern atomotechnology, based on the Precautionary Principle, one that will look beyond laboratory research to consider the wider health, socioeconomic and environmental implications of nanoscale technologies... This protocol should be embedded in one or more of the relevant United Nations agencies... Ultimately, ETC Group believes that the international regulations for atomotechnology should be incorporated under a new International Convention for the Evaluation of New Technologies (ICENT)." The framework for ICENT's evaluation of new technologies would be the Precautionary Principle. As the ETC Group explains, "The Precautionary Principle says that governments have a responsibility to take preventive action to avoid harm to human health or the environment, even before scientific certainty of the harm has been established. Under the Precautionary Principle it is the proponent of a new technology, rather than the public, that bears the burden of proof." Greenpeace's Douglas Parr also advocates using the Precautionary Principle to regulate the development of nanotechnology. The Precautionary Principle can be summarized as "never do anything for the first time." (See "Precautionary Tale," April 1999.) The chief problem with the Precautionary Principle is that it encourages the natural conservatism of our species. People far more easily imagine the harms new developments might bring than the benefits. But history clearly demonstrates that the benefits of modern technology have far outweighed the harms. "Basically, people who support the strong Precautionary Principle say, 'We don't care if we throw the baby out with the bathwater,'" says the Foresight Institute's Peterson. "They don't want any risks, so they are willing to forgo the benefits."

This precautionary approach to nanotechnology causes extinction

Ronald **Bailey 2004**, Science Correspondent for *Reason* and former FERC analyst, 12-1

The ETC Group's ICENT proposal is starting to be taken seriously. Committees of both the European Parliament and the United Nations' Food and Agriculture Organization have called for the adoption of an ICENT. "ICENT would have the power to conduct analyses of the economic impacts, the effects on labor, on restructuring society," says Mooney. "ICENT would examine all scientific, economic and social issues of any new technology." Mooney argues that ICENT would improve our ability to forecast the effects of new technologies. The track record for social, economic, and technological forecasting by experts is not very encouraging. Consider the notorious 1972 Club of Rome study *The Limits to Growth* and President Carter's *Global 2000* report, both of which predicted that humanity would run out of a wide variety of natural resources by now. Or take Stanford University biologist Paul Ehrlich's prediction that hundreds of millions of people would starve to death in massive famines in the 1970s. Such forecasts are not harmless. The predictions in the 1970s that the world would soon run out of oil, for instance, resulted in the creation of the expensive and polluting Synfuels program. Corporations aren't any better at forecasting than government agencies. In 1876 a Western Union internal memo concluded, "This 'telephone' has too many shortcomings to be seriously considered as a means of communication. The device is inherently of no value to us." In 1943 IBM CEO Thomas Watson famously predicted there would be a global demand for perhaps five computers. Over the short term, nanotechnology will seem less odd than the telephone or the computer did. It will simply be incorporated into products that we already know how to use: computers, cameras, clothing, cars. It will make them function better and more cheaply. By contrast, a full-fledged nanotechnology, especially if molecular assemblers can be built, will disrupt all kinds of social and economic processes. Yet there is no reason to believe that humanity will be unable to cope with what is coming. As for unintended consequences, someday something will go wrong with nanotechnology, as it has with electricity, cars, and computers. But we shouldn't deny ourselves the benefits of a new technology just because we cannot foresee every consequence. We should proceed by trial and error and ameliorate problems as they arise. That's how the dramatic progress humanity has seen during the last two centuries was accomplished. If an ICENT had existed in the 19th century, we probably would still be riding horses, using candles for lighting, cooking on wood stoves, and gulping whiskey for anesthesia. Mooney comes close to celebrating the emancipating possibilities offered by the new technologies he fears. Yet he seems almost wistful for a time when he and many others believed ecological and economic collapse was imminent. "We have lived so long by the assumptions of *The Limits to Growth*, it is hard to contemplate alternative possibilities" he writes. "If nanotech does work, we might console ourselves with the knowledge that we were not really wrong all this time, it is just that *The Limits to Growth* have been postponed a few billion years... If nanotechnology is commercialized successfully, Armageddon may have to be put on the back burner." Armageddon may indeed be postponed indefinitely, but only if, with due caution, we leave human genius free to harvest the fruits of technological progress.

1NC – Russian/EU Rels

U.S. – E.U. relations trades off with EU-Russian relations – Key to regional stability. Recent events mean now is key.

Shapiro and Witney, 9 [TOWARDS A POST-AMERICAN EUROPE: A POWER AUDIT OF EU-US RELATIONS, Jeremy Shapiro and Nick Witney, The European Council on Foreign Relations]

Relations with Russia are of intrinsic and self-evident importance to all the states of Europe and, for sound historical reasons, the subject of a near obsession for some. A schism has long been evident between the “old Europe” led by Germany, which is pursuing engagement (and gas), and the “new Europe” of ex-Communist member states which have an altogether tougher attitude towards Russia. But, in fact, things are even more complex than that schism suggests. History, geography, and culture have all played a part in generating a patchwork of views among the EU’s 27 member states. For example, there is a discernible bond of sympathy between Russia and its Orthodox co-religionists in Bulgaria, Cyprus, and Greece. On the other hand, a significant number of West European member states incline towards a “frosty pragmatism” in dealing with Russia, rather than any enthusiastic pursuit of partnership. However, as the Bush presidency faded away in 2008, European attitudes began noticeably to converge. A number of factors contributed. First, as the dust settled on the Georgia crisis, the extent of Georgian President Mikhail Sakashvili’s contribution to the debacle became clearer, while the effectiveness of French President Nicolas Sarkozy’s intervention on behalf of the EU encouraged a degree of European self-confidence. Second, Russia had, like everyone else, been humbled by the financial crisis – indeed, exceptional pride had gone before an unusually large fall. Third, the gas crisis of early 2009 brought home to many Europeans that the problem is less energy dependency on Russia per se than the murky issues involved in transiting Ukraine, and the lack of the right networks and markets to distribute gas effectively within Europe. Against this background, it became easier for “old” and “new” Europe to find common ground. With hindsight, German-French opposition to setting Ukraine and Georgia on the path to NATO membership at the Bucharest summit of 2008 seemed smart. Member states began to agree that the right way to protect European interests in the Eastern neighbourhood was through the EU (specifically, the new Eastern Partnership initiative), not NATO. Shortly before the 2009 NATO summit, the Polish foreign minister even endorsed the idea of Russia one day joining the alliance – exemplifying both a new conciliation towards Russia and a reluctance to use NATO as a weapon against it. Then, however, the Obama administration announced a “reset” of relations with Moscow. Although most Europeans welcomed the US move, old anxieties about “condominium” – in other words, the idea that Europe could end up sandwiched between converging US and Russian interests – also re-emerged. In the wake of the June 2009 US-Russia summit in Moscow, these anxieties found striking expression in the open letter signed by 22 leading Central and Eastern European figures that urged the US not to take the region for granted.³⁷ The US was deeply irritated – its immediate reaction was, according to one Washington insider, “a very, very angry push-back”. The Obama administration had, after all, done its utmost to reassure the new EU member states that it was committed to their security and to ensure that Russia did not misinterpret “reset” as tacit permission to claim a new sphere of influence in the former Soviet space. The episode illustrates that nothing so confuses and divides Europeans as an active US policy, whether the president behind it is George W. Bush or Barack Obama. Our audit suggests that the key reason is that Eastern Europeans simply do not trust their European partners and allies, even through NATO, to guarantee their security against Russia. They look only to the US for that security. Neither EU solidarity nor NATO’s mutual security guarantees can compensate for the fear that they might be betrayed by the US. Although the historic roots of this view are clear, it would seem to be anachronistic. After all, the US effectively had no Russia policy during the last year of the Bush administration and did little when Russia invaded its neighbour. Meanwhile, with the US effectively absent during the interregnum between the old and new administrations, Europe worked through the Georgia and gas crises with a quite untypical degree of cohesion and self-confidence. This analysis suggests that Europeans might have more success if they worry a little less about what the US is up to and a little more about defining and asserting their own common interests in relation to Russia. Having launched their new Eastern Partnership initiative – albeit with German Chancellor Angela Merkel as the sole EU head of government in attendance – they now need to devote the necessary attention and resources to making it a success. They need to make it harder for the Russians to play on their divisions by presenting a more united front to Moscow, not just on issues such as energy but also on the wider economic relationship that is waiting to be developed to mutual benefit. Europeans should also debate Moscow’s ideas on a “new security architecture” rather than just waiting to see what the US thinks about them. Europe’s interests in relation to Russia are not identical with those of the US. Nor is it paranoid to believe that the Obama administration would like to see the Europeans taking rather more responsibility for themselves and indeed for the post-Soviet states covered by the Eastern Partnership. As a global power, the US cannot afford to assign disproportionate time and attention to a region of the world that does not, or at least should not, need it. The US wants the EU to be a more effective player on its own continent. From a

European point of view, this would not only be a more effective way of dealing with Russia, but also would prevent Washington and Moscow doing deals over querulous European heads. From an American point of view, a Europe that acted in this way would be the sort of partner that it wants at the other end of an effective transatlantic relationship.

And, Effective EU- Russian relations are key to stabilize Europe and prevent war.

Anderson 7, Russian-EU relations: Leaders, Present Conflicts, and Future Policies, Brussels Research Project, Andrea, Fall

This is a crucial time in EU-Russian relations because, not only is Putin up for reelection in a few months, but his predecessor will most likely be someone he approves of. Will Putin try to use his influence with the EU to promote economic stability in Russia? Or is socialism with a semi-dictatorship back on the table? Even though anything is possible with elections just around the corner, the EU must decide now if close ties with Russia will promote its agenda, as well as advance the EU's and Russia's reputation as global actors ("Agreement on Partnership and Cooperation"). Even though anything is possible with presidential elections just around the corner, this paper shows that because EU-Russian relations are still important. Thus, it is in Russia's best interests to stay tied politically and economically to the EU. The EU needs to stay on good terms and in a relationship with Russia during this Kosovo crisis so that Javier Solana, who assists with the EU's foreign policy matters, can influence Russia to put pressure on Serbia to not act violently while the international community attempts to help Serbia with Kosovo's declaration of independence. The EU must decide if close ties with Russia will promote its agenda, as well as advance its reputation as a global actor ("EU, Russia signal closer ties at Portugal summit"). This is more likely because parting ways is not the best option for either of them right now. With yesterday's signing of the Reform Treaty, the EU is rising on the global scene. As becoming a global actor is also Russia's intention, the two are going in the same direction just with a few kinks in their relationship. As far as human rights violations are concerned, the EU needs to start discussing these with Russia; human rights need to be back on the table if Russia wishes to be taken seriously. Most countries have domestic problems, but the (in some cases, mass) displacement of citizens by authorities and unrepresentative voting arrangements make Russia's problems more than just domestic conflicts that can be overlooked by the international community.

1NC – Unity

US-EU relations kill EU unity

Marquand 9 By Robert Marquand | Staff writer of The Christian Science Monitor from the April 2, 2009 edition

Strasbourg, France - As Barack Obama leaves London and heads to a key NATO gathering here Friday, he steps onto the European continent as new, fresh – an urban guy, a 21st century American, someone Europeans understand and admire. Yet that may be part of the problem. President **Obama**, the new US face and policy, represents an inherent challenge to Europe: It is not just that Obama drips soft power from every pore, is a listener, a Democrat, "sympathetic," and a hero for immigrant populations in Europe's suburbs that have yet to achieve political power. More deeply, the popular young American president is stirring basic questions here over how to coordinate and respond to a chief ally that is suddenly sending all the signals Europe asked for. In London, in a last-minute compromise that many called historic, the White House got far more stimulus to relight the global trade economy than many thought possible. However, at NATO's 60th anniversary here in Strasbourg, he may not get more troops for Afghanistan – though the new "Afpak" review indicates such troops are needed even for the civil building that Europeans say will aid in "mission accomplished" there. But the "Obama in Europe" storyline runs deeper than a difficult diplomatic checklist that includes Russia, Iran, North Korea, and the global crisis, say political thinkers here. It has to do with a Europe that, for 40 years, and in significant strides, has sought to speak with one voice. For almost a decade, Europe and America, tied by history, drifted apart in terms of stated values and policy. But with an avowedly liberal internationalist at the US helm, Europe has less to complain about. Ahead of his visit, in inconclusive meetings in Brussels, there was uncertainty and bickering. What's causing stress in the European Union is not US badgering and unilateralism, but the Obama dynamic of moving toward agreement, consensus, and multilateralism, say some economists and political scientists. "President Bush was an extraordinary catalyst for Europe, a bogeyman. Even people with diverging views on economic and foreign policy were united against the US policy," says Karim Bitar, a Paris consultant and scholar at the Institute for International and Strategic Relations. "But now the US can no longer be accused of all the world's ills. The truth is, Europeans now think more about America than about Europe. There is no European consensus on the most basic questions of our future, what we should be. Under Bush, we could evade them. Not now." Europe's internal conflict over the Russian war in Georgia last summer, and the crisis over interrupted oil and gas supplies to Europe this winter, were indicators of division in what is still an economic union struggling to achieve political solidarity. The question is whether Europe can find its voice when there is basic agreement with Washington. "When the Europeans

agree with the US, they often disagree with each other," as a European diplomat puts it.

Unified Europe solves hotspots, growth and global war

STABILITY, GROWTH AND PROSPECT – A REVIEW OF CHINA-EU RELATIONS IN 2010 Ambassador SONG **Zhe** December, □ □ Mr SONG Zhe is the Ambassador of the People's Republic of China's Mission to the European Union. Issue 6, December 2010 2010 eu china observer

Europe is a major power in the international community. Europe plays an important role in upholding world peace, promoting common development, tackling global challenges, and resolving regional and hotspot issues. Europe is a strong force in building a fair and just international political and economic order. The EU's integration process is the most viable choice for European countries in order to develop strength through unity. For decades, the European Union has demonstrated admirable determination and resolve in overcoming all difficulties and hardships and in establishing from scratch an otherwise **highly integrated** union today. We firmly believe that the European integration process will continue to enjoy a promising prospect in the future. Europe is the world's most important economy. As the world's largest bloc of developed countries, the EU is a leading player in terms of foreign trade, innovation, brand marketing, and economy of scale. We have full Issue 6, 2010 4 confidence that the euro will emerge from the current crisis and contribute to the stability and diversity of the international monetary regime. Europe enjoy

s strong influence over international public opinion and agenda-setting. Europe is the birthplace of Western civilization and modern philosophy and a supporter and practitioner of multilateralism, global governance, and of peaceful resolutions to international disputes. We believe that thanks to the many active minds present in Europe and thanks to the strength of its media, Europe is in a position to contribute more forcefully to the prosperous development of a more diverse world.

Impact Defense

A2: Afghanistan

1NC – Stable Now

Afghanistan stability now

PressTV, “US withdrawal brings stability to Afghanistan: Officials”, **Feb 14**, 2015, <http://www.presstv.ir/Detail/2015/02/14/397602/US-pullout-brings-peace-to-Afghanistan>

The security situation across Afghanistan is gradually improving following the partial withdrawal of US-led forces from the war-ravaged country, officials say, Press TV reports. Local residents and security officials in Afghanistan say order has significantly improved in the volatile southern and eastern provinces, which were once the epicenters of the Taliban militancy. US-led forces have closed most of their military facilities in the southern, eastern and central regions of the violence-torn country. Thousands of Afghan troops have assumed full responsibility for the security of several provinces. Maidan Wardak Police Chief Khalil Andarab has recently said attacks have decreased drastically in the past few months. Attacks and insecurities in Maidan Wardak Province, especially on Kabul-Kandahar highway, have decreased by around 95 percent in the past 8 months,” he told Press TV.

Even if they win that Afghan is unstable now ---

Solving Afghan Instability requires increasing ground forces --- they don't do that

Faizi and Roufi 15 (Abdul Rashid Faizi graduated from the United Arab Emirates University, in the UAE. Abdul is a researcher at the UAE University focusing on political economy, international economic, economics of development, and foreign direct investment. Shahabuddin Roufi is a research assistant at the College of Business and Economics, UAE University. His research interests include economics and political economy focusing in Islamic countries. “Three Factors Contributing to Afghanistan's Instability” January 13 2015 accessed 7/9/15 <http://www.sharnoffsglobalviews.com/rural-population-afghanistan-476/>) DAH

Political scientists believe that higher population size and concentration raises the risk of civil conflict. It could also lead to higher probability of revolutions to overthrow governing elites in non-democratic countries. This claim, supported by political scientists, does not refer to the number of people that eventually join an insurgency, but only the number of people that start one. They constitute enough rebels to pose a serious threat. In Afghanistan the rural population is an important determinant of political stability. Now and in the past, the political stability in Afghanistan has been threatened mainly by rural residents. Currently almost all insurgent groups such as the Taliban are based in rural areas. From those safe heavens they recruit insurgents and manage all of their destructive activities against the government. As a footnote in history, most resistance groups were based in rural areas during Afghanistan's fight against the Soviet Union. In 1996 when the Taliban conquered Kabul, almost all of their fighters were recruited from rural communities. The reasons are very obvious: rural areas are safe havens where insurgents could easily and freely plan their destructive activities. Moreover, the threat of rural populations to political stability of Afghanistan results from the interconnection of the following well-known facts: Geography Insurgency is closely related to the geography of the country. The presence of rough terrain, poorly served by roads and at a distance from the centers of state power, favors insurgents. This is fostered by the availability of cross-border sanctuaries inhabited by people that can be easily manipulated by local insurgents. In this scenario it is not

uncommon that these local populations get trapped between their responsibilities as citizens of the country and their cultural loyalty to the local insurgent groups. Moreover, the government does not have a permanent control over these areas, which nurtures a decent atmosphere for insurgent groups. Poverty People feel that their government has abandoned them and failed to provide financial means to elevate their living standards. This problem is enhanced by the fact that the country has a large percentage of young men who cannot find enough employment opportunities. Their contribution to economic development and their participation in the political process is highly underexploited. Afghan young men tend to participate in activities that are either economically unproductive, such as joining gangs and drug cartels or politically destructive, such as organizing resistance groups under leadership of insurgents. Extremism It is a well known fact that religious extremism has become the core of much of Afghanistan's violence. Extremists justify their version of Islam to force people to accept their Islamic interpretation. This problem is further exacerbated by the fact that almost all of the rural residents are uneducated. The presence of madrasas (Islamic schools) works in their favor. In these schools they mainly spread their radical political thinking to the public. The products of madrasas are radical Muslims who play key roles in destabilizing activities. Recently, there has been a dramatic increase in insurgent attacks in the country. Security handovers from NATO to Afghan forces, and the American pullout have motivated the Taliban to increase their destructive activities. The threat might strongly resurface yet again. Based on these three reasons, the rural population has a strong impact on the political stability of Afghanistan. Unfortunately, it seems that the government is not taking this problem very seriously. This threat is becoming very grave by the reduction and withdrawal of American and NATO forces from the country. History might repeat itself again if the government fails to tackle the challenges.

1NC – No Spillover

Afghanistan won't spillover

Kazemi, Afghanistan Analysts Network, 2012

(S. Reza, "A Potential Afghan Spill-Over: How Real Are Central Asian Fears?", <http://aan-afghanistan.com/index.asp?id=3152,ldg>)

A spill-over of the Afghan conflict or aspects of it like the drug trade into Central Asia is realistic, but it need not be as threatening and disastrous as the region's governmental officials depict it. It also may differ for particular Central Asian countries. Tajikistan and Uzbekistan – of Afghanistan's three direct Central Asian neighbours (with the third being Turkmenistan) – are likely to continue to be most affected. A spill-over of Islamist terrorism from Afghanistan seems unlikely, however, at least for the time being. The leadership of the IMU, regarded as the most serious militant threat against the region, has been largely dismantled. Although a 2011 AAN report identified some IMU presence in Afghanistan's Balkh, Faryab and Kunduz provinces bordering Central Asia, the bulk of the IMU fighters are based in Pakistan's Waziristan, far away from any shared Afghanistan-Central Asia frontier. It is unclear, therefore, if the movement can re-group to organise and carry out attacks in Central Asian territory, apart from causing localised instability and violence on Afghan soil.(9) And even if so, terrorist and extremist threats facing Central Asia (and particularly Tajikistan and Uzbekistan) are more home-grown than what would originate from Afghanistan, as, for example, Christian Bleuer argues (read, for example, here), although others like Ahmed Rashid have, both in the past and recently, talked about larger regional networks of militants. If there is any actual spill-over of the Afghan conflict into Central Asia, it is more likely to continue to be drug trafficking. Afghanistan is by far the largest global producer of poppy and hashish and increasingly of derivatives produced from them. As the recent fighting in Tajikistan's Gorno-Badakhshan Autonomous Oblast (GBAO) has shown, there are cross-border networks functioning and corrupt government officials both in Afghanistan and Central Asia can hugely benefit from their trafficking (for a UN report on drug trafficking from Afghanistan through Central Asia and onwards, see here). In a reverse way, Uzbekistan has engaged to influence Afghanistan's socio-political developments more seriously than any other Central Asian government. It has supported the Uzbek commander-turned-politician Abdul Rashid Dostum and his party Jombesh-e Mellī-ye Islami-ye Afghanistan (Afghanistan's National Islamic Movement) (for latest developments in the party, read a recent AAN paper). Tajikistan and Uzbekistan also have large numbers of co-ethnics inside Afghanistan, but Afghan Tajiks and Uzbeks are very different from their ethnic kin in Tajikistan and Uzbekistan, mainly because of Central Asia's Sovietisation, despite speaking almost similar languages (see, for example, here).(10) It also needs to be recalled that conflicts in Afghanistan and Tajikistan have had mutual spill-over effects. During the 1992-97 Tajik civil war, parts of the Tajik opposition fled to Afghanistan, were supported by Afghan mujahedin and used Afghanistan as a safe haven and base to carry out attacks in Tajikistan. During the conflict between the Northern Alliance and the Taleban, Tajikistan had provided, among other things, an airbase to the Northern Alliance in Kulyab in southern Tajikistan for them to use to mobilise and organise the resistance against the Taleban's advance towards northern Afghanistan (read, for example, here). In addition, the civil war in Tajikistan drove tens of thousands of people out of Tajikistan to the northern Afghan provinces of Balkh, Kunduz and Takhar (read here). Judging by recent contemporary precedents, an American Central Asia researcher, who requested not to be named, wrote to AAN that 'the previous experience in the mid- to late 1990s of having a civil war in northern Afghanistan and a Taleban government controlling much of the north was not particularly traumatic'. Whatever the speculations about the Afghan conflict going northwards may be, Central Asia plus Afghanistan is one of the world's least integrated regions. To subsume the five former Central Asian Soviet republics under one term – 'the -stans' – reflects an un-informed and superficial look at this region. Considering the growing number of bilateral and intra-regional conflicts and competing attempts to achieve regional leadership, this perception is everything but justified.

A2: Asian

1NC – No Asia War

No Asia war

Nick **Bisley 14**, Professor of IR @ La Trobe University (Australia) and Executive Director of La Trobe Asia, “It’s not 1914 all over again: Asia is preparing to avoid war”, 3/10, <http://theconversation.com/its-not-1914-all-over-again-asia-is-preparing-to-avoid-war-22875>

Asia is cast as a region as complacent about the risks of war as Europe was in its belle époque. Analogies are an understandable way of trying to make sense of unfamiliar circumstances. In this case, however, **the historical parallel is deeply misleading**. Asia is experiencing a period of uncertainty and strategic risk unseen since the US and China reconciled their differences in the mid-1970s. Tensions among key powers are at very high levels: Japanese prime minister Shinzo Abe recently invoked the 1914 analogy. But **there are very good reasons, notwithstanding these issues, why Asia is not about to tumble into a great power war. China is America’s second most important trading partner**. Conversely, the US is by far the most important country with which China trades. **Trade and investment’s “golden straitjacket” is a basic reason to be optimistic**. Why should this be seen as being more effective than the high levels of interdependence between Britain and Germany before World War One? Because Beijing and Washington are not content to rely on markets alone to keep the peace. **They are acutely aware of how much they have at stake**. Diplomatic infrastructure for peace **The two powers have established a wide range of institutional links to manage their relations**. These are designed to improve the level and quality of their communication, to **lower the risks of misunderstanding spiralling out of control and to manage the trajectory of their relationship**. Every year, around 1000 officials from all ministries led by the top political figures in each country meet under the auspices of the Strategic and Economic Dialogue. The dialogue has demonstrably improved US-China relations across the policy spectrum, leading to collaboration in a wide range of areas. These range from disaster relief to humanitarian aid exercises, from joint training of Afghan diplomats to marine conservation efforts, in which Chinese law enforcement officials are hosted on US Coast Guard vessels to enforce maritime legal regimes. **Unlike the near total absence of diplomatic engagement by Germany and Britain in the lead-up to 1914, today’s two would-be combatants have a deep level of interaction** and practical co-operation. **Just as the extensive array of common interests has led Beijing and Washington to do a lot of bilateral work, Asian states have been busy the past 15 years. These nations have created a broad range of multilateral institutions and mechanisms intended to improve trust** generate a sense of common cause **and promote regional prosperity**. Some organisations, like the Asia-Pacific Economic Cooperation (APEC), have a high profile with its annual leaders’ meeting involving, as it often does, the common embarrassment of heads of government dressing up in national garb. Others like the ASEAN Regional Forum and the ASEAN Defence Ministers’ Meeting Plus Process are less in the public eye. But **there are more than 15 separate multilateral bodies that have a focus on regional security concerns**. All these organisations are trying to **build what might be described as an infrastructure for peace in the region**. While **these mechanisms** are not flawless, and many have rightly been criticised for being long on dialogue and short on action, they **have been crucial in managing specific crises** and allowing countries to clearly state their commitments and priorities.

A2: Asia Pivot

1NC – Fails/False

Asia pivot fails

Auslin, scholar at the American Enterprise Institute, 2012

(Michael, and columnist at wsj “America Doesn’t Need a Pivot to Asia,” 8/27, http://online.wsj.com/article/SB10000872396390444506004577614941100974630.html?mod=goetlenews_wsj)

It is time to bury the Obama administration's pivot to Asia. This reallocation of military and diplomatic resources was supposed to guarantee stability in a region seeking to balance China's rise. In reality, this strategic shift is less than it appears. It won't solve Asia's problems and may even add to the region's uncertainty by over-promising and under-delivering. Everything wrong with the pivot can be summed up by Four R's: rhetoric; reality; resourcing; and raising expectations and then doubts. So far, the first and perhaps biggest problem with the idea of the pivot—or, as the Defense Department calls it, the rebalancing—is that it remains largely rhetorical, vague and aspirational. True, there are some laudable moves, such as basing U.S. Marines in northern Australia and agreeing to port new U.S. warships in Singapore. These, however, hardly add up to a breakthrough. The world still wonders what the purpose is: to contain China, to promote democracy, to make the United States the de facto hegemon of Asia, or simply to reassure nervous nations about China's rise? The reality is that not much will change in America's actions. The pivot says nothing about taking on new commitments, for example toward the Association of Southeast Asian Nations or to countries with whom America does not currently have formal alliances. Just as importantly, Washington has made clear in recent months that it will not take sides in the territorial disputes that have roiled the East and South China Seas, even when allies like Tokyo and Manila are involved. Further evidence for this reality comes from the resource constraints imposed on this grand project. The Obama administration is trying to do it on the cheap. Pivot funding is in danger from sequestration—forced budget cuts resulting from larger budget politicking in Washington—that, if allowed to proceed, will cut another \$500 billion from a defense budget already reduced by \$900 billion since 2009. The administration claims that America's military presence in Asia will not be affected by these budget cuts. If that is so, then U.S. military posture in the rest of the world will be cut back. More likely, any buildup will be difficult to sustain. The shifting of more planes and ships to the Pacific will soon slow down, as the size of the Air Force and Navy shrink, and as other world problems such as Iran and Syria continue to dominate the attention of American policy makers. This, in turn, is raising doubts about the pivot in Asia, so soon after the rhetoric from Washington had raised expectations. Countries such as Vietnam and the Philippines led themselves to believe that the pivot would have concrete results, such as quickly increasing American presence in the region and perhaps even American support in their maritime territorial disputes with China. Both accordingly reached out to Washington, holding new military exercises or discussing greater security cooperation. Yet this enthusiasm makes it all the worse when those hopes turn out to be dashed by Washington's failure to act. As one Philippines senator asked during his country's standoff this spring with China over the Scarborough Shoal, what good is the alliance with the U.S. if America refuses to back up its partners in times of need? By appearing to make unrealistic promises, the Obama administration has created new diplomatic headaches for itself in managing the fall-out from its failure to deliver. What then is the point of the pivot? By not getting involved in maritime disputes, other than rhetorically, Washington is actually taking the most realistic approach possible. No administration, Republican or Democratic, is going to risk a crisis with China short of any overt attempt by Beijing to take over territory clearly controlled by other nations. Building up U.S. forces in Asia, were it even possible, would not change that political calculation. The current American military posture can be diversified to a few more countries, but essentially, Washington has had the right balance for the past several decades. While it would be a mistake to shrink the U.S. air and naval presence in Asia, all Washington could do is slightly increase it, and that will change nothing in the region. Moreover, there are few realistic options for new partners in Asia, especially ones such as Japan and Australia that can provide some level of regional security cooperation. That means America's current grouping of allies and partners is right-sized for the political and security realities of the Asia-Pacific for the foreseeable future.

Asia pivot is inflated- the status quo solves literally every impact Innocent, foreign policy analyst at Cato, 2012

(Malou Innocent, "Talk of a U.S.-Asia 'Pivot' Is Overblown,"

<http://www.usnews.com/opinion/blogs/world-report/2012/12/13/talk-of-a-us-asia-pivot-is-overblown>)

The greatest misperception surrounding Washington's "pivot" to Asia is that America's dominant presence is not already felt there on a regular basis. It is. The United States plays a considerable role in the Far East, despite the Obama administration's proclamations last autumn that it would "pivot" or "rebalance" there in the future. For one, the United States maintains forward-deployed forces in South Korea, with 28,500 U.S. troops; Guam, with 4,500 U.S. troops; and Japan, with 40,000 U.S. troops. Guam, of course, is part of America as a non-self-governing, unincorporated territory. South Korea and Japan, however, after decades of proven internal stability and peaceful democratic transitions, are equipped to defend themselves. [See a collection of political cartoons on defense spending.] Once upon a time, South Korea was incapable of surviving without America's support. That began to change in the 1980s. Today, its economy ranks around 13th in the world, it has twice the North's population, and, if South Korea's leaders chose to, could be spending on defense the equivalent of the North's entire annual GDP. As for Japan, despite its recent economic woes, it had the fifth highest defense budget in the world in 2011, according to the International Institute for Strategic Studies. Japan surpassed Russia, India, and Brazil, and fell only behind the United States, China, the United Kingdom, and France. Moreover, as scholars Shinichi Ogawa and Michael Schiffer have pointed out, in criticism of its policy, Japan possesses a nuclear "breakout" capacity, meaning its civilian nuclear fuel cycle is so advanced "that, at the flip of the switch, [it] could be militarized." Save for a planned contingent of 2,500 U.S. Marines in Australia, four littoral combat ships stationed in Singapore, and rotating troops and surveillance aircraft in the Philippines, it is unclear whether U.S. troop deployments will grow more robust in Japan and South Korea. They should not. Such prosperous allies can live without the generous welfare of American taxpayers. [Read the U.S. News Debate: Should Cuts Be Made to Domestic Social Programs to Protect the Defense Budget?] Aside from these forward-deployed forces, the Far East feels Washington's constant presence with the United States Pacific Command. This regional unified military structure consists of about one-fifth of total U.S. military strength. It includes six aircraft carrier strike groups, about two-thirds of U.S. Marine Corps combat strength, and the U.S. Pacific Fleet, which goes on frequent patrols conducting joint, military-training exercises with America's allies and partners. Talking about partners, Uncle Sam has a lot of them in a region home to over 50 percent of the world's population. The United States has been cultivating warmer relations with India, most especially after accommodating New Delhi's nuclear expansion with a symbolic, 2008 agreement facilitating civilian nuclear cooperation between them. Moreover, despite recent hand wringing over U.S.-Russia relations, Washington's so-called "reset" has rebounded ties from their 2008 low, particularly with regard to Moscow's help supplying NATO's war effort in Afghanistan. [Read the U.S. News Debate: Are Cuts to the Defense Budget Necessary?] Elsewhere, the United States has forged better relations with Vietnam, Myanmar, Indonesia, Singapore, and the Philippines, and has embraced existing multilateral organizations and trade agreements, like the East Asia Summit, the Trans-Pacific Partnership, and the Association of Southeast Asian Nations. In the end, Washington's obsessive fixation on the Middle East and North Africa should warrant serious reconsideration. More of America's attention should be paid to the future of the Asia-Pacific, since maintaining peace in that region will be the challenge of the 21st century. However, what foreign policy planners in Washington should be asking themselves is what the United States should be willing to defend in this region, and at what cost? What implicit commitments should Washington make to prosperous, populous countries eminently capable of defending themselves? Allies are intended to supplement a nation-state's power, not hinder or jeopardize it. [See a collection of political cartoons on the Middle East.] Primarily, America's deepening involvement in Asia is meant to reassure allies nervous over China's growing assertiveness and increased military spending. However, the United States can both value being a strong military power and allow other countries in the Far East to assert a greater leadership role. These policies are neither zero-sum nor mutually exclusive. For more than half a century, the United States has played a prominent military and economic role in the Asia-Pacific. The American people should not be led to believe that their country was a never a force to be reckoned with there. Indeed, the

biggest tale proponents of U.S. prominence in Asia ever sold was the intimation that we do not already have it.

A2: Bioweapons

1NC – I/L D

EU is not willing to upgrade security to help bioterrorism

Stokes, 15- Director of Global Economic Attitudes

5 key takeaways about the U.S.-German relationship <http://www.pewresearch.org/fact-tank/2015/05/07/5-key-takeaways-about-the-u-s-german-relationship/>

Half (50%) of both Germans and Americans say their country should deal with its own problems and let other countries deal with their own challenges. Roughly comparable proportions of Germans (43%) and Americans (39%) believe their nation should help other countries deal with their difficulties. Younger Germans and Americans in particular are more inward-looking than their older counterparts. More than half of Americans (57%) and Germans (54%) ages 18 to 29 hold the view that their country should deal with its own problems and let others deal with theirs. And only 36% of that age group in Germany and 31% in the U.S. believe that their country should assist other nations. This stands in sharp contrast with the attitudes of their older countrymen: 46% of both Americans and Germans ages 65 and older say their countries should do more to help others.

1NC – No Bioweapons

No risk of bioterror

Rebecca **Keller 13**, Analyst at Stratfor, 7 March 2013, “Bioterrorism and the Pandemic Potential,” Stratfor, <http://www.stratfor.com/weekly/bioterrorism-and-pandemic-potential>)

The risk of an accidental release of H5N1 is similar to that of other infectious pathogens currently being studied. Proper safety standards are key, of course, and experts in the field have had a year to determine the best way to proceed, balancing safety and research benefits. Previous work with the virus was conducted at biosafety level three out of four, which requires researchers wearing respirators and disposable gowns to work in pairs in a negative pressure environment. While many of these labs are part of universities, access is controlled either through keyed entry or even palm scanners. There are roughly 40 labs that submitted to the voluntary ban. Those wishing to resume work after the ban was lifted must comply with guidelines requiring strict national oversight and close communication and collaboration with national authorities. The risk of release either through accident or theft cannot be completely eliminated, but given the established parameters the risk is minimal. The use of the pathogen as a biological weapon requires an assessment of whether a non-state actor would have the capabilities to isolate the virulent strain, then weaponize and distribute it. Stratfor has long held the position that while terrorist organizations may have rudimentary capabilities regarding biological weapons, the likelihood of a successful attack is very low. Given that the laboratory version of H5N1 -- or any influenza virus, for that matter -- is a contagious pathogen, there would be two possible modes that a non-state actor would have to instigate an attack. The virus could be refined and then aerosolized and released into a populated area, or an individual could be infected with the virus and sent to freely circulate within a population. There are severe constraints that make success using either of these methods unlikely. The technology needed to refine and aerosolize a pathogen for a biological attack is beyond the capability of most non-state actors. Even if they were able to develop a weapon, other factors such as wind patterns and humidity can render an attack ineffective. Using a human carrier is a less expensive method, but it requires that the biological agent be a contagion. Additionally, in order to infect the large number of people necessary to start an outbreak, the infected carrier must be mobile while contagious, something that is doubtful with a serious disease like small pox. The carrier also cannot be visibly ill because that would limit the necessary human contact.

A2: European War

1NC – Europe War

European war is impossible

Karaganov 11

et al – head of the Russian Group of the Valdai International Discussion Club. Dean of the School of the World Economy and International Affairs at the National Research University–Higher School of Economics (NRU-HSE); Chairman of the Presidium, the Council on Foreign and Defense Policy (CFDP); Chairman of the Editorial Board, Russia in Global Affairs journal. -- Report by the Russian Participants of the Working Group on the Future of the Russian—U.S. Relations, The U.S.—Russia Relations after the «Reset»: Building a New Agenda. A View from Russia, http://vid-1.rian.ru/ig/valdai/US-Russia%20relations_eng.pdf

This short list of challenges shows that the main threats to Russia and the U.S. in the world of today and tomorrow stem not from each other's policies but from external global and regional factors. Russia and the U.S. do not pose direct military threats to each other, either in the field of conventional forces in Europe, or in the strategic sphere. **A conventional «big war» in Europe is physically impossible. The preservation by Russia and the U.S. of their ability to physically destroy each other while maintaining appropriate confidence-building measures and strategic stability, has a stabilizing effect both on their own policies and the policies of other nuclear and nonnuclear countries.**

No European war and no escalation

John J. **Mearsheimer 10**, PROF OF POLITICAL SCIENCE --- University of Chicago, “why is europe peaceful today?,” ECPR KEYNOTE LECTURE, european political science: 9 2010, <http://www.palgrave-journals.com/eps/journal/v9/n3/pdf/eps201024a.pdf>

Much has happened since then, including the dire economic crisis that we are now experiencing. It promises to have farreaching effects on European life.

Nevertheless, I think that **the most important development of the past two decades is the fact that Europe remains at peace.** Of course, **there were a handful of small wars** in the Balkans during the 1990s, **but the major European powers did not start them, did not exploit them for national gain, and with the help of the United States ultimately managed to shut them down.** Very importantly **there has been no war between any of the major powers.** Indeed, **there has been little security competition** among them. **Given Europe's tumultuous history, this is quite remarkable.** Remember that from 1900 to 1990 Europe was the site of two of the deadliest wars in recorded history followed by the Cold War. The broad sweep of European history certainly looks very different from the past two decades.

A2: Institutions

1NC – Coop Fails

Cooperation internationally is terminally ineffective and small measures like the aff can't save it

Hellmann, 13 (Gunther Hellmann is a senior fellow at the Transatlantic Academy, an initiative of the German Marshall Fund, "The Decline of Multilateralism," May 2, German Marshall Fund Blog, <http://blog.gmfus.org/2013/05/02/the-decline-of-multilateralism/>)

WASHINGTON—It is becoming increasingly difficult to argue against retrenchment in Europe and North America. Economic crises and domestic political stagnation absorb energy and financial resources. Global military engagements in faraway places cost lives and treasure and often yield limited success. There is growing disillusionment with democracy promotion. Coalitions of sovereign state defenders like the BRICS (Brazil, Russia, India, China, and South Africa) make life for the guardians of the liberal world order ever more challenging. The upshot is multilateral fatigue in both Europe and North America. This is a perilous state of affairs because state-transcending global problems are proliferating. "Global Trends 2030," a study published by the U.S. National Intelligence Council last December, predicts that "the current, largely Western dominance of global structures ... will have been transformed by 2030 to be more in line with the changing hierarchy of new economic players." Yet even if this were to happen, the report argues, it remains unclear to what degree new or reformed institutions "will have tackled growing global challenges." One might be forgiven for taking this to be an overly optimistic projection. Based on current trends, the outlook is much gloomier, due mainly to the political contagion effects of sovereigntism, the fixation on state sovereignty as an absolute value, and minilateralism. Moisés Naim, who initially coined the term, defined minilateralism as getting together the "smallest possible number of countries needed to have the largest possible impact on solving a particular problem." The problem is that the smallest possible number may quickly grow very large; Naim's own book, *The End of Power*, provides ample evidence that this is so. Consider, for instance, the number and political weight of countries needed to address the problems in the aftermath of a military escalation in the Middle East and Persian Gulf. The minimum number of countries required to effectively regulate global warming does not look any more encouraging. In other words, sovereigntism and minilateralism are symptoms of the crisis of liberal world order — manifestations of The Democratic Disconnect — and not a recipe for curing its ills. In the old days when multilateralism was not yet qualified politically with such adjectives as "assertive" (Madeleine Albright) or "effective" (EU), it served as a descriptor for a fundamental transformation of interstate collaboration in the second half of the 20th century. In an influential article, John Ruggie, a Harvard professor and former high-ranking UN official, showed that the actual practice of multilateralism by the liberal democracies of North America and Europe after World War II was based on a set of generalized principles of conduct. These principles rendered segments of the post-war international order into more reliable cooperative settings, such as the United Nations, or islands of peaceful change, such as the zone of European integration. A readiness to give up sovereignty or, at least to cooperate on the basis of reciprocity, were characteristic elements of multilateralism and what came to be called the "liberal world order." This liberal order is under strain today because its creators and guardians have themselves strayed from these principles. In the security field, "coalitions of the willing" have undermined multilateralism not only in the UN context, but also in NATO. In economic and financial matters, the politics of European sovereign debt crisis management illustrates both the dangers of executive federalism and the limits of diffuse reciprocity among Europe's nation states in the world's most integrated region. "Responsible stakeholders," the former Deputy Secretary of State Robert Zoellick once said, do more than merely "conduct diplomacy to promote their national interests...They recognize that the international system sustains their peaceful prosperity, so they work to sustain that system." What was meant as advice to China when Zoellick gave that speech in 2005 can easily be redirected at the liberal democracies of North America and Europe today. There are no easy ways out. Even if the slide toward retrenchment can be stopped, the prospects do not seem bright for the kind of bold new initiatives for global institutional reform that are required. It is debatable whether calls for "democratic internationalism" or a new alignment among "like-minded democracies" can do the trick, but Europe and North America need to realize that their stakes in the liberal order are much higher than those of relative newcomers. Indeed, overcoming crises at home hinges at least in part on sustaining a conducive global environment. Readjusting the balance between minilateralism and multilateralism will help.

A2: Iran Prolif

1NC – I/L

US would prefer more EU involvement than there is in the squo

Adebahr, 6/8 (Cornelius, Adebahr is an associate in the Europe Program at the Carnegie Endowment for International Peace in Washington, DC. His research focuses on European foreign policy, “Leave It to Europe: Why Iran Is Not (Solely) America’s Responsibility”, <http://carnegieendowment.org/2015/06/08/leave-it-to-europe-why-iran-is-not-solely-america-s-responsibility/i9I7>)

Even before a nuclear deal with Iran has been signed, the debate in Washington has shifted to the regional implications of a possible accord. But lessons learned from the success of the nuclear negotiations so far help explain why the **United States should not lead international efforts to bring about regional cooperation with Iran. Instead, Washington should let its European allies take the initiative.** After all, it was **the European Union**—particularly France, Germany and Britain—that **laid the diplomatic groundwork since 2003.** **They** brought China, Russia and the United States on board and, in close transatlantic coordination, **pursued a two-track approach of sanctions and diplomacy that led to the current nuclear talks. Secondly, both sides have accepted the other’s domestic discourse. For Iran, the narrative is about how the international community is ready to accept its demands to keep** what Tehran insists is a peaceful nuclear program, while dropping its sanctions and also helping to modernize this program. **In the United States, the narrative is that considerable concessions have been extracted from Iran, which agreed to substantial program limitations, both of proportions and duration. The third success factor of the talks lies in compartmentalization and de-politicization. By focusing on the nuclear issue—and excluding everything from human rights to terrorism from the negotiations—the aim is to find creative, but sustainable technical solutions that dodge the broader political questions.** However, certainly the first two ingredients are not yet there when it comes to regional cooperation. **Washington’s major accommodation would be to accept that Iran has a (legitimate) role to play in the region, while Iran would have to overcome its refusal even to talk to Saudi Arabia—its regional rival—based on sectarian as much as on geopolitical grounds. Both sides would have to be ready to ignore fundamentally different viewpoints on regional order,** not least because the power competition between them—with Israel and the Arab Gulf states each playing their part—does not lend itself to the (comparatively easy) “no bomb” compromise in the nuclear field. **Moreover, simply getting the nuclear deal through will likely exhaust the necessary willingness—both in Tehran and Washington—to accommodate the other side.**

EU Unilateralism supported by the US

Adebahr, 6/8 (Cornelius, Adebahr is an associate in the Europe Program at the Carnegie Endowment for International Peace in Washington, DC. His research focuses on European foreign policy, “Leave It to Europe: Why Iran Is Not (Solely) America’s Responsibility”, <http://carnegieendowment.org/2015/06/08/leave-it-to-europe-why-iran-is-not-solely-america-s-responsibility/i9I7>)

This is where the EU comes in. Establishing a multilateral framework, the EU's focus should be on the third ingredient, i.e. to de-politicize and compartmentalize possible areas of cooperation.

Maritime security in the Gulf and the situation in Gaza are two such practical issues on which the European Union could engage Iran. A regional maritime-security regime would broadly be based on the United Nations Convention of the Law of the Seas (which neither Iran nor the United States have ratified) that regulates nonmilitary fields of cooperation such as maritime safety, fisheries protection, marine-environment protection and port security. Such an approach would also dovetail with the G7 declaration last month to strengthen maritime governance in a cooperative, rules-based approach at the regional and global level. Addressing the Gaza conflicts means involving Iran in the international efforts to implement the unity government that the Palestinians agreed on, but so far failed to put in place. Even such narrow and technical cooperation can be a difficult hurdle to jump, even before one could start thinking about conflict resolution in Yemen or Syria. Given the Old Continent's internal and external woes, it may seem naïve to expect Brussels to provide a framework for regional cooperation with Iran. However, **with clear signals from Washington that it would support such a European lead in the aftermath of a nuclear agreement, the EU and its member states should be happy to oblige.** Previous European initiatives with strong U.S. backing include the Helsinki Accords of 1975, which helped establish security cooperation between the Cold War superpowers (the United States and the Soviet Union) and the Madrid and Oslo talks leading to the Israeli-Palestinian accords of the early 1990s. While these cases also show that agreement cannot guarantee lasting success, the diplomatic opening that a deal can create in its wake is what counts. Such momentum, however, needs to be given a direction. A single nuclear deal cannot bring fundamental change to a region torn by religious strife, sectarian rivalry and weak governance. Add to this the fact that the United States has now entered the pre-election season, and it becomes clear that it is up to the European Union as the often-overlooked mediator of the nuclear talks to make a push for regional cooperation after a possible deal. The United States, happy to direct its top-level diplomatic resources to other burning crises, should welcome and support such an initiative of its European partners.

1NC – No Escalation

No proliif and long timeframe

Kahl '12 (Colin H. Kahl 12, security studies prof at Georgetown, senior fellow at the Center for a New American Security, was Deputy Assistant Secretary of Defense for the Middle East, "Not Time to Attack Iran", January 17, <http://www.foreignaffairs.com/articles/137031/colin-h-kahl/not-time-to-attack-iran?page=show>)

Kroenig argues that there is an urgent need to attack Iran's nuclear infrastructure soon, since Tehran could "produce its first nuclear weapon within six months of deciding to do so." Yet that last phrase is crucial. The International Atomic Energy Agency (IAEA) has documented Iranian efforts to achieve the capacity to develop nuclear weapons at some point, but **there is no hard evidence that Supreme Leader Ayatollah Ali Khamenei has yet made the final decision to develop** them. In arguing for a six-month horizon, Kroenig also misleadingly conflates hypothetical timelines to produce weapons-grade uranium with the time actually required to construct a bomb. According to 2010 Senate testimony by James Cartwright, then vice chairman of the U.S. Joint Chiefs of Staff, and recent statements by the former heads of Israel's national intelligence and defense intelligence agencies, even if Iran could produce enough weapons-grade uranium for a bomb in six months, **it would take it at least a year to produce a testable nuclear device** and considerably longer to make a deliverable weapon. And David Albright, president of the Institute for Science and International Security (and the source of Kroenig's six-month estimate), recently told Agence France-Presse **that there is a "low probability" that the Iranians would actually develop a bomb over the next year even if they had the capability to do so. Because there is no evidence that Iran has built additional covert enrichment plants since the Natanz and Qom sites were outed in 2002 and 2009, respectively, any near-term move by Tehran to produce weapons-grade uranium would have to rely on its declared facilities. The IAEA would thus detect such activity with sufficient time** for the international community to mount a forceful response. As a result, the Iranians are unlikely to commit to building nuclear weapons until they can do so much more quickly or out of sight, which could be years off.

A2: ISIS

1NC – I/L D

ISIS distinct from terrorist organizations--- traditional EU-US coop is insufficient

Cronin 15 (AUDREY KURTH CRONIN is Distinguished Professor and Director of the International Security Program at George Mason University and the author of *How Terrorism Ends: Understanding the Decline and Demise of Terrorist Campaigns*. "ISIS Is Not a Terrorist Group: Why Counterterrorism Won't Stop the Latest Jihadist Threat" *Foreign Affairs* 94.2 (Mar/Apr 2015): 87-98.)

After 9/11, many within the U.S. national security establishment worried that, following decades of preparation for confronting conventional enemies, Washington was unready for the challenge posed by an unconventional adversary such as al Qaeda. So over the next decade, the United States built an elaborate bureaucratic structure to fight the jihadist organization, adapting its military and its intelligence and law enforcement agencies to the tasks of counterterrorism and counterinsurgency. Now, however, a different group, the Islamic State of Iraq and alSham (isis), which also calls itself the Islamic State, has supplanted al Qaeda as the jihadist threat of greatest concern. Isis' ideology, rhetoric, and long-term goals are similar to al Qaeda's, and the two groups were once formally allied. So many observers assume that the current challenge is simply to refocus Washington's now-formidable counterterrorism apparatus on a new target. But isis is not al Qaeda. It is not an outgrowth or a part of the older radical Islamist organization, nor does it represent the next phase in its evolution. Although al Qaeda remains dangerous-especially its affiliates in North Africa and Yemen-isis is its successor. Isis represents the post-al Qaeda jihadist threat. In a nationally televised speech last September explaining his plan to "degrade and ultimately destroy" isis, U.S. President Barack Obama drew a straight line between the group and al Qaeda and claimed that isis is "a terrorist organization, pure and simple." This was mistaken; isis hardly fits that description, and indeed, although it uses terrorism as a tactic, it is not really a terrorist organization at all. Terrorist networks, such as al Qaeda, generally have only dozens or hundreds of members, attack civilians, do not hold territory, and cannot directly confront military forces. Isis, on the other hand, boasts some 30,000 fighters, holds territory in both Iraq and Syria, maintains extensive military capabilities, controls lines of communication, commands infrastructure, funds itself, and engages in sophisticated military operations. If isis is purely and simply anything, it is a pseudo-state led by a conventional army. And that is why the counterterrorism and counterinsurgency strategies that greatly diminished the threat from al Qaeda will not work against isis. Washington has been slow to adapt its policies in Iraq and Syria to the true nature of the threat from isis. In Syria, U.S. counterterrorism has mostly prioritized the bombing of al Qaeda affiliates, which has given an edge to isis and has also provided the Assad regime with the opportunity to crush U.S.-allied moderate Syrian rebels. In Iraq, Washington continues to rely on a form of counterinsurgency, depending on the central government in Baghdad to regain its lost legitimacy, unite the country, and build indigenous forces to defeat isis. These approaches were developed to meet a different threat, and they have been overtaken by events. What's needed now is a strategy of "offensive containment": a combination of limited military tactics and a broad diplomatic strategy to halt isis' expansion, isolate the group, and degrade its capabilities.

1NC – Not a Threat

ISIS isn't a threat—they can't execute outside attacks or kill more than a dozen people

Benjamin 8/17 (Daniel, "Hawks exaggerate Islamic State threat to the United States," Boston Globe, <http://www.bostonglobe.com/opinion/2014/08/17/hawks-exaggerate-isis-threat-united-states/yICJ0bpzRhoK88GtauyHLO/story.html>)

To judge by the doom-laden prophecies cascading in from Washington, the United States faces a towering and imminent threat in the form of the militant group calling itself the Islamic State, or ISIS.

"They are coming here," Republican Senator Lindsey Graham of South Carolina intoned on Fox News Sunday. "I think of an American city in flames because of the terrorists' ability to operate in Syria and Iraq." Senator Graham's friend Senator John McCain is no less alarmist. Calling for immediate air strikes in Iraq and Syria, he declared, "They are getting stronger all the time . . . And their goal . . . is destruction of the United States of America." Stoking the panic has been a very excitable press. On CNN last week, I was asked if Islamic State fighters represented an "existential threat" to the United States. **Set aside that absurdity; no terrorist group threatens our**

existence. (America has faced one existential threat in modern times — the Soviet nuclear arsenal — and that is it.) But **is the Islamic State (IS) a huge and menacing terrorist threat? Certainly not to the**

United States today. The danger to Iraq and its neighbors is real. The Islamic State has shown itself to be a formidable insurgency. Its focus is on ripping apart Iraq and Syria, sowing sectarian conflict, and creating in its midst a new jihadist state or caliphate. (That very word seems to incite fearmongers: "Every day that goes by, ISIS builds up its caliphate, and it becomes a direct threat to the United States," said New York Representative Peter King, conjuring an image of a new Golden Horde with nuclear-tipped scimitars.) If the insurgency grows, and the threat to Jordan or Lebanon increases, we may have to act. But, for now, it's important to understand that **even if marauding operatives in Land Cruisers may be**

humiliating Iraq's hollowed-out military, that doesn't mean they have genuine terrorist skills. Consider the details: **The Islamic State has never carried out a significant**

attack outside of its neighborhood. In 2005, when its operatives were still part of Al Qaeda in Iraq, operatives carried out hotel bombings in Jordan and tried and failed to attack an American warship in the Red Sea. More recently, four people were killed in an apparent lone-wolf attack at the Jewish museum in Brussels by a young man trained in Syria. In other words, **we've seen no demonstrated ability to carry out the kind of complex international strike that kills dozens or hundreds, let alone engulfs a US city in flames.**

A2: Middle East War

1NC - I/L D

Alliance doesn't solve foreign policy challenges

Techau 2011

(Jan, director of Carnegie Europe, the European centre of the Carnegie Endowment for International Peace, 10/6/11, "The Dirty Secret of US European relations"

<http://carnegieendowment.org/2011/10/06/dirty-secret-of-u-s-european-relations/811h>)

For the internal psychology of the transatlantic relationship, this is undoubtedly good news. The more interesting question, however, seems to be **whether all this new love translates into a more meaningful partnership on shared foreign-policy challenges.** Here the answer is less clear.

While cooperation on issues such as the Middle East, Iran and terrorism was and is constructive, one of **the most crucial items** on the Euro-American agenda **remains untouched** by the improved atmosphere: **transatlantic burden sharing in the field of security and defense.** Here, **Europeans have** for the last sixty years **been in a position of utter dependence** on the Washington's willingness and ability to guarantee their security. And even though the global strategic framework has drastically changed since the beginning of this transatlantic bargain in the 1950s, Europeans still conduct their defense planning as if American generosity were the most naturally abundant and easily accessible political commodity. By doing so, they increase their reliance on U.S. guarantees, and they become less and less interesting as an ally for their American counterparts. All attempts to wake Europeans up and make them rethink their priorities have died away without much impact. ¶ It would be easy to blame President Obama for not using his popularity with allies intelligently enough to induce them to get their act together. But the European passivity on security and defense issues goes far beyond the reach of even the most popular American president. By and large, Europeans are unaware of their utter dependency; they don't feel particularly threatened, they hold a deep mistrust in all things military, and they have learned to look at the world without regard to strategic considerations. Despite Libya, their willingness for an active approach to the world around them and for intervention on behalf of values and interests is small. **Their political leaders**—to the extent that they are aware of today's realities—**shy away from the enormous** budgetary and political **costs that a realistic security and defense posture would create.** The dirty little secret of transatlantic relations is that, under these circumstances, they will undoubtedly become a whole lot less boring very soon. **Both America and Europe are broke. Their ability to shape the world around them is getting weaker.** The global center of gravity is shifting towards the Pacific. Americans are ultimately better suited to master this process of relative decline. But it is in Washington's fundamental interest to keep Europe safe and stable, to keep its best allies strong and to defend the enormous economic investments it has placed in the old world. Obsessing about perceptions and sympathy ratings will soon look like frivolous luxury. The ball is in the European court. For Americans, a Europe with a grown-up strategic culture will be more important than one that produces high approval ratings for the United States. For Europeans, investing in a relevant and workable transatlantic future will be more important than an American president they find easy to like.

1NC – No Escalation

No escalation

Fettweis 7, Asst Prof Poli Sci – Tulane, Asst Prof National Security Affairs – US Naval War College, (Christopher, “On the Consequences of Failure in Iraq,” *Survival*, Vol. 49, Iss. 4, December, p. 83 – 98)

Without the US presence, a second argument goes, nothing would prevent Sunni-Shia violence from sweeping into every country where the religious divide exists. A Sunni bloc with centres in Riyadh and Cairo might face a Shia bloc headquartered in Tehran, both of which would face enormous pressure from their own people to fight proxy wars across the region. In addition to intra-Muslim civil war, cross-border warfare could not be ruled out. Jordan might be the first to send troops into Iraq to secure its own border; once the dam breaks, Iran, Turkey, Syria and Saudi Arabia might follow suit. The Middle East has no shortage of rivalries, any of which might descend into direct conflict after a destabilising US withdrawal. In the worst case, Iran might emerge as the regional hegemon, able to bully and blackmail its neighbours with its new nuclear arsenal. Saudi Arabia and Egypt would soon demand suitable deterrents of their own, and a nuclear arms race would envelop the region. Once again, however, none of these outcomes is particularly likely. Wider war No matter what the outcome in Iraq, the region is not likely to devolve into chaos. Although it might seem counter-intuitive, by most traditional measures the Middle East is very stable. Continuous, uninterrupted governance is the norm, not the exception; most Middle East regimes have been in power for decades. Its monarchies, from Morocco to Jordan to every Gulf state, have generally been in power since these countries gained independence. In Egypt Hosni Mubarak has ruled for almost three decades, and Muammar Gadhafi in Libya for almost four. The region's autocrats have been more likely to die quiet, natural deaths than meet the hangman or post-coup firing squads. Saddam's rather unpredictable regime, which attacked its neighbours twice, was one of the few exceptions to this pattern of stability, and he met an end unusual for the modern Middle East. Its regimes have survived potentially destabilising shocks before, and they would be likely to do so again. The region actually experiences very little cross-border warfare, and even less since the end of the Cold War. Saddam again provided an exception, as did the Israelis, with their adventures in Lebanon. Israel fought four wars with neighbouring states in the first 25 years of its existence, but none in the 34 years since. Vicious civil wars that once engulfed Lebanon and Algeria have gone quiet, and its ethnic conflicts do not make the region particularly unique. The biggest risk of an American withdrawal is intensified civil war in Iraq rather than regional conflagration. Iraq's neighbours will likely not prove eager to fight each other to determine who gets to be the next country to spend itself into penury propping up an unpopular puppet regime next door. As much as the Saudis and Iranians may threaten to intervene on behalf of their co-religionists, they have shown no eagerness to replace the counter-insurgency role that American troops play today. If the United States, with its remarkable military and unlimited resources, could not bring about its desired solutions in Iraq, why would any other country think it could do so?¹⁷ Common interest, not the presence of the US military, provides the ultimate foundation for stability. All ruling regimes in the Middle East share a common (and understandable) fear of instability. It is the interest of every actor - the Iraqis, their neighbours and the rest of the world - to see a stable, functioning government emerge in Iraq. If the United States were to withdraw, increased regional cooperation to address that common interest is far more likely than outright warfare.

A2: Multilat

1NC – I/L D

The EU itself is a terrible model for multilat

Van Schaik and Ter Haar 2013 (Louise van Schaik is Senior Research Fellow at the Clingendael Institute. She has extensively analysed the EU's international activities in the fields of health (WHO), climate change (UNFCCC) and food standards (Codex Alimentarius). She has also worked on related research areas such as EU external affairs and the Lisbon Treaty, EU development cooperation and trade policy, scarcity of natural resources, global public goods, and sustainable development, Barend (Bas) ter Haar is Senior Visiting Research Fellow at the Clingendael Institute. During his career at the Netherlands' Ministry of Foreign Affairs he took part in many multilateral negotiations, inter alia on chemical weapons and within the EU, NATO, OSCE, IAEA and UNESCO. At the ministry he served as Director of the Policy Planning Staff. As Ambassador for International Security Affairs he represented the European Union at the ASEAN Regional Forum, "Why the EU is not promoting effective Multilateralism", <http://www.clingendael.nl/sites/default/files/Why%20the%20EU%20is%20not%20promoting%20effective%20multilateralism.pdf>)

However, in the decade since 2003 the EU has become increasingly quiet about this objective. Paradoxically (but logical in view of the explanation given below) the only field where the EU has been partly successful is the field of classic security, a field where feelings of national sovereignty are usually strongest. In other fields **the support of the EU for effective multilateralism has, for the most part, been fragmented and weak. The experts who represented EU countries in international talks** on issues such as the environment, health, food, water, education and transport, **often seemed hardly aware of the existence of a European strategy** to strengthen an effective multilateral system. And the diplomats who were aware of this strategy usually rather concentrated on the promotion of their national priorities. This, **in combination with the Eurocrisis and the threat of the UK to leave the EU reinforced the impression that the EU is a power in decline, better known for its rhetoric than for its action.** At the UN Climate Summit **in Copenhagen in 2009 the EU was rudely confronted with a new world order** in which emerging economies use their increased power to further their interests. **Despite tenacious efforts to promote a new international climate treaty** to succeed the Kyoto Protocol and a detailed 'leadership by example' strategy, **the EU found itself sidelined, partly because of its inability to speak with a strong single voice.** The case also illustrates the EU's lack of sensitivity to its negotiating environment. **Promoting effective multilateralism is not the same as simply expecting others to adopt European views and standards.** **An ongoing study of the way the EU has operated in a large number of multilateral forums has led us to the conclusion that the fiasco at Copenhagen is not an exceptional case, but is symptomatic.**¹ We were struck by the lack of a European strategy in most forums. We found some instances where the EU supported a multilateral approach, e.g. in the G20. However, in most cases the EU did not promote strategic goals, but concentrated instead on administrative reforms. In larger debates the EU was sometimes conspicuously absent due to its inability to come to a joint position, or because nobody felt responsible to cover the topic. Furthermore, many of the representatives of the EU were unaware of the positions of EU member states and EU institutions in other relevant forums. This made issue linkage difficult and could lead to contradictory positions (e.g. on intellectual property rights).

1NC – Multilat Fails

Multilateral coop will always structurally fail regardless of their internal link

Barma et al., 13 (Naazneen, assistant professor of national-security affairs at the Naval Postgraduate School; Ely Ratner, a fellow at the Center for a New American Security; and Steven Weber, professor of political science and at the School of Information at the University of California, Berkeley, March/April 2013, “The Mythical Liberal Order,” The National Interest, <http://nationalinterest.org/print/article/the-mythical-liberal-order-8146>)

Assessed against its ability to solve global problems, **the current system is falling progressively further behind on the most important challenges, including** financial stability, the “responsibility to protect,” and coordinated action on **climate change, nuclear proliferation, cyberwarfare and maritime security.** The **authority, legitimacy and capacity of multilateral institutions dissolve when the going gets tough** when member **countries have meaningfully different interests** (as in currency manipulations), **when** the distribution of **costs is large enough to matter** (as in humanitarian crises in sub-Saharan Africa) **or when** the shadow of **future uncertainties looms large** (as in carbon reduction). **Like a sports team that perfects** exquisite **plays during practice but fails to execute against an actual opponent** **global-governance institutions have sputtered precisely when their supposed skills and multilateral capital are needed most.** WHY HAS this happened? **The hopeful liberal notion that these failures** of global governance are merely reflections of organizational dysfunction that **can be fixed** by reforming or “reengineering” the institutions themselves, as if this were a job for management consultants fiddling with organization charts, **is a costly distraction from the real challenge.** A decade-long effort to revive the dead-on-arrival Doha Development Round in international trade is the sharpest example of the cost of such a tinkering-around-the-edges approach and its ultimate futility. Equally distracting and wrong is the notion held by neoconservatives and others that global governance is inherently a bad idea and that its institutions are ineffective and undesirable simply by virtue of being supranational. **The root cause of stalled global governance is** simpler and more straightforward. **“Multipolarization” has come faster and more forcefully than expected.** Relatively **authoritarian and postcolonial emerging powers** have become leading voices that **undermine anything approaching international consensus** and, with that, multilateral institutions. It’s not just the reasonable demand for more seats at the table. That might have caused something of a decline in effectiveness but also an increase in legitimacy that on balance could have rendered it a net positive. Instead, global governance has gotten the worst of both worlds: a decline in both effectiveness and legitimacy. **The problem is not** one of **a few rogue states acting badly** in an otherwise coherent system. There has been no real breakdown per se. There just wasn’t all that much liberal world order to break down in the first place. **The new voices are more than just numerous and powerful. They are truly distinct** from the voices of an old era, **and they approach the global system in a meaningfully different way.**

A2: NATO

1NC - I/L D

EU doesn't solve - NATO is redundant and other international organizations fill the gap

Hartung 13 (Farina Hartung, Master Thesis International and European Relations, Linköping University, "Case-study of NATO: Is NATO a redundant international organization or not?",

<http://www.liu.se/utbildning/pabyggnad/F7MME/student/courses/733a27masterthesis/filarkiv/spring-2013/theses-june/1.464731/MasterThesisFinalVersionFarinaHartung.pdf>

Just as mentioned above, NATO has gone through a process of changes since it was first established. It can be said that the changes were necessary or as a matter of fact that they were not - it always depends on the view one takes. The position of this paper has been stated before that it is going to investigate the question if **NATO** is redundant and to show proof that it is. As history has shown, it can be argued that the organization **is redundant and has survived much longer passed its due time**. From this point of view, it can be argued that **this is what hurts the**

organization: they need to reform before they have a chance to act. It is quite difficult to claim that NATO is not redundant, but as mentioned before, this Thesis will take a look at the opposite side of this claim.

Instead of trying to prove that **NATO** is needed, I will try to show that it **is not needed and has long**

surpassed its duty. That has become clear over the past years. **NATO has reformed**

itself in order to ensure that it will stay relevant enough in order to play an impacting role in politics

and international relations. **Although they have taken the initiative to stay relevant, they**

seem to have failed. There have been different voices, such as Theo Sommer and Kenneth Waltz, who claim and

argue that NATO is as a matter of fact redundant. One could always ask what is redundancy and how can it be measured. Redundancy is not self-evident, and it also cannot really be defined. Neither can redundancy be measured. Redundancy is what one makes out of it and what others understand of redundancy is left open for discussion. But in regards to this paper, redundancy is just the fact that **NATO is not really needed any longer. The task it is currently**

doing, such as the peacekeeping, can be done by other international

organizations, such as the United Nations There is no longer the need for just one international organization to have its sole focus and propose on collective security.

Security is something that is desired by so many countries and there is no need that NATO needs to be the one organization that will provide this to all the countries in the world. And as mentioned before, NATO already goes outside its territorial borders in

order to provide security to the world ("NATO in the 21st Century). **NATO is a redundant**

international organization simply **because it has lost its endeavor**. It strives to do so

much in order to provide its member states with the necessary certainty that in case of a threat, there is a whole community that will act and protect each member state. But how should NATO really do that in reality?

The member states have cut down their size of military they have. In time of great danger, one country might not want to act because there could be a conflict of

interests. Currently, **there is just not such a big threat as the Soviet Union** was that there needs

to be a military alliance. **In case that such a great threat rises to the surface again, it is just**

simply as easy to create a new international military organization which can then function according to the actual needs, because it is always during the time of threat that new alliances are created. As mentioned above, the main purpose of NATO has vanished when the Cold War was over and the Soviet Union ceased to exist. Since the Cold War and the threat that the Soviet Union posed so close to European borders dissolved in the beginning of the 1990s, NATO just has lost its main function. According to Theo Sommer, NATO has ever since then been in a constant stage of "transformation", never really knowing what it should achieve and what its goal is (17). In addition to that, one could argue that NATO is facing more problems that seem to have come along with the problem of the lacking threat. This Thesis argues that NATO is neither necessary to fulfill a defensive function or that of providing security for its members. NATO is an international organization that is in fact no longer permissible. It has surpassed its life expectancy by many years. Moreover, it can be said that since it has surpassed its reason of existence, it will step down from the position it holds in regards of an international security organization. It is no longer the main focus of the member states. NATO should also no longer be the main focus. Other organizations have emerged over the past decades that show that they are able to do the necessary work without having to go through a process of transformation. For example regional international organization, such as the European Union could take over this task, since most of the members are located on the European continent to begin with. Furthermore, it can be claimed that NATO should be able to see that they are no longer fit for modern times. Before NATO is able to act on any kind of problem or concern, it has to go through a process of transforming itself; otherwise, it might not be able to act. This point of view may seem a bit exaggerated; however, it is suitable for NATO since it is pragmatic. NATO is not the same since the end of the Cold War. It can be said that the main reason why the NATO was established was to be able to encounter the Soviet Union in a time of crisis. According to Lindley-French, NATO today is a strategic and defensive focal point that can project both military and partnership power worldwide (89). She continues her argument by noting that the job the alliance has to do is the same as ever and has not changed (Ibid). The job of the alliance has always been to safeguard the freedom and security of its member nations through political and security needs, instituted by the values of "democracy, liberty, rule of law and the peaceful resolution to disputes" (Ibid). Yet another point he claims is that NATO provides a strategic forum for consultation between North Americans and Europeans on security issues of common concern and the facility for taking joint action to deal with them (Ibid). To repeat, NATO has lost its power and maybe even its standpoint in the modern day time politics. There are many different international organizations that all could take over the work of NATO or even could continue it in a better manner than NATO is currently doing. Claiming that NATO is not redundant just does not seem to follow the actual fact of the position that NATO is currently in. They have missed indeed the point where it was time to either dissolve the whole international organization or the time to reform which would have actually created positive outcomes. The latter point, however, seems impossible now. It just is impossible for NATO to change yet again. In the time of its existence, NATO has undergone so many different changes and reforms, altogether a total of six. There is just no logical reason why NATO is able to successfully undergo another process of changes and transformation. New reforms always bring changes and if they actually will help NATO is left in the open. As Theo Sommer puts it, NATO has served its time simply because the world has changed (9). The threats are no longer the same and to some extent may not even exist anymore. There are of course new threats, such as terrorism, piracy, and cyber-attacks, now that have emerged and rose to the surface of international politics. However, those are not really the same as they were when NATO was created. Hence, NATO is not suitable to tackle new issues and problems. They can try to reform, but it will never be the same because NATO itself will have to adjust to the new situation. But this is not what this once great military alliance was intended to do.

1NC – Collapse Inev

NATO collapse inevitable—no purpose and shrinking force-structure

Granatstein 13 (Jack, has held the Canada Council's Killam senior fellowship twice, was editor of the Canadian Historical Review, and was a founder of the Organization for the History of Canada. Fellow of the Royal Society of Canada, awarded the Society's J.B. Tyrrell Historical Gold Medal. He has been awarded honorary doctorates by Memorial University of Newfoundland, the University of Calgary, Ryerson Polytechnic University, the University of Western Ontario, McMaster University, and Niagara University. Senior Fellow of Massey College. Officer of the Order of Canada Member of the Advisory Committee of the Dominion Institute, an adjunct fellow of the University of Calgary's Centre for Military and Strategic Studies and Chair of the Council for Canadian Security in the 21st Century. Board member and the Chair of the Advisory Council of the Canadian Defence and Foreign Affairs Institute. "J.L. Granatstein: The end of NATO?" 3/13, <http://fullcomment.nationalpost.com/2013/03/04/j-l-granatstein-the-end-of-nato/>)

Perhaps it might have been better if **NATO** had wound itself up at the end of the Cold War. The alliance instead **sought for a new role, a new strategic purpose, and it found it outside the boundaries of the alliance.** Provoked by ethnic slaughter in Bosnia-Herzegovina, **it conducted operations in** the former **Yugoslavia**, involving air attacks against Serbia and the deployment of troops in Kosovo. Then came 9/11 and a long war against al-Qaeda and the Taliban in **Afghanistan**, followed by an air campaign that brought down the Gaddafi regime in **Libya.** **None of these operations were notable successes.** In June 2011, then U.S. secretary of defence, Robert **Gates, stated** in public **what many had** privately **acknowledged:** NATO, the linchpin of European security and transatlantic relations, **faced "the real possibility [of] a dim, if not dismal future ... While every alliance member voted for the Libya mission, less than half have participated at all, and fewer than a third have been willing to participate in the strike mission.** Frankly, **many of those allies sitting on the sidelines do so not because they do not want to participate, but simply because they can't. The military capabilities simply aren't there."** This was an **affirmation of the ineffectiveness of the alliance after six decades of existence.** **Matters have since worsened. NATO members have begun pulling combat troops out of Afghanistan on their own timetables,** and all the troops, except an undisclosed number of Americans, **are scheduled to depart by 2014. The global economic crisis has led members to cut back on defence spending.** And faced with the increasing power of China, the Obama administration indicated that it was **rebalancing its forces toward Asia.** **The NATO alliance seemed completely unprepared for this new uncertainty.** As secretary Gates stated, "the U.S. share of NATO defence spending has now risen to more than 75% — at a time when politically painful budget and benefit cuts are being considered at home." **The U.S., in other words, won't pay the bills much longer. We know Canada won't, and the Europeans don't seem willing to do so, either.** If this continues, **NATO may not be long for this world.**

Alliance doesn't solve foreign policy challenges

Techau 2011

(Jan, director of Carnegie Europe, the European centre of the Carnegie Endowment for International Peace, 10/6/11, "The Dirty Secret of US European relations"

<http://carnegieendowment.org/2011/10/06/dirty-secret-of-u-s-european-relations/811h>)

For the internal psychology of the transatlantic relationship, this is undoubtedly good news. The more interesting question, however, seems to be **whether all this new love translates into a more meaningful partnership on shared foreign-policy challenges.** Here the answer is less clear.

While cooperation on issues such as the Middle East, Iran and terrorism was and is constructive, one of **the most crucial items** on the Euro-American agenda **remains untouched** by the improved atmosphere: **transatlantic burden sharing in the field of security and defense.** Here, **Europeans have** for the last sixty years **been in a position of utter dependence** on the Washington's willingness and ability to guarantee their security. And even though the global strategic framework has drastically changed since the beginning of this transatlantic bargain in the 1950s, Europeans still conduct their defense planning as if American generosity were the most naturally abundant and easily accessible political commodity. By doing so, they increase their reliance on U.S. guarantees, and they become less and less interesting as an ally for their American counterparts. All attempts to wake Europeans up and make them rethink their priorities have died away without much impact. ¶ It would be easy to blame President Obama for not using his popularity with allies intelligently enough to induce them to get their act together. But the European passivity on security and defense issues goes far beyond the reach of even the most popular American president. By and large, Europeans are unaware of their utter dependency; they don't feel particularly threatened, they hold a deep mistrust in all things military, and they have learned to look at the world without regard to strategic considerations. Despite Libya, their willingness for an active approach to the world around them and for intervention on behalf of values and interests is small. **Their political leaders**—to the extent that they are aware of today's realities—**shy away from the enormous** budgetary and political **costs that a realistic security and defense posture would create.** The dirty little secret of transatlantic relations is that, under these circumstances, they will undoubtedly become a whole lot less boring very soon. **Both America and Europe are broke. Their ability to shape the world around them is getting weaker.** The global center of gravity is shifting towards the Pacific. Americans are ultimately better suited to master this process of relative decline. But it is in Washington's fundamental interest to keep Europe safe and stable, to keep its best allies strong and to defend the enormous economic investments it has placed in the old world. Obsessing about perceptions and sympathy ratings will soon look like frivolous luxury. The ball is in the European court. For Americans, a Europe with a grown-up strategic culture will be more important than one that produces high approval ratings for the United States. For Europeans, investing in a relevant and workable transatlantic future will be more important than an American president they find easy to like.

North Korea can't proliferate Hymans '12

[Jacques E. C. Hymans, PhD from Harvard, Associate Professor of International Relations at the University of Southern California, his most recent book is Achieving Nuclear Ambitions: Scientists, Politicians, and Proliferation, "Botching the Bomb: Why Nuclear Weapons Programs Often Fail on Their Own-and Why Iran's Might, Too," Foreign Affairs 91. 3 (May/June 2012): 44-53, Proquest]

The third lesson is that **states** that **poorly manage their** nuclear **programs can bungle** even **the** supposedly **easy steps of the process**. For instance, **based on estimates of** the size of **North Korea's** plutonium **stockpile and the** presumed **ease of weapons fabrication**, **U.S. intelligence agencies thought that by the** 19**90s**, North **Korea had built** one or two **nuclear weapons. But in** 20**06**, North **Korea's first nuclear test** essentially **fizzled**, **making it clear that the "hermit kingdom" did not have any working weapons at all. Even its second try, in** 20**09**, **did not work properly. Similarly, if Iran eventually does acquire a significant quantity of weapons-grade highly enriched uranium, this should not be equated with the possession of a nuclear weapon.**

Extra I/L D

The U.S. is known to be unfit to deal with North Korean policies. They have disagreed with the EU on related policy in the past.

Wagner 01

Alex Wagner is an Adjunct Professor of Law at Georgetown University, Special Assistant to the Assistant Secretary of Defense for Global Strategic Affairs, Nonproliferation Reporter/Analyst at the Arms Control Association, and many other professional occupations involving governmental law affairs. His extensive education includes a degree from the Department of War Studies at King's College London, U. of London, a B.A. in political science at Brown University, and a law degree from the Georgetown Law Center in which he had the role as the executive editor of the Georgetown Journal of Legal Ethics, "Bush Puts N. Korea Negotiations On Hold, Stresses Verification", ACA, April 1, 2001

Adopting a harder line toward North Korea than that of his predecessor, President George W. said March 7 that his administration would not immediately resume missile negotiations with Pyongyang left unfinished by the Clinton administration. The announcement differed from previous statements by Secretary of State Colin Powell, who had indicated that the administration planned to pursue what appears to have been a nearly complete deal by the Clinton administration to end North Korea's missile development and exports. Bush, who made his remarks during a joint press conference with visiting South Korean President Kim Dae Jung, expressed "skepticism" about North Korean leader Kim Jong-Il and said that he has concerns about the ability to verify any agreement with a closed society like North Korea. Bush said he "look[s] forward to, at some point in the future, having a dialogue with the North Koreans, but that any potential negotiation would require complete verification of the terms of a potential

agreement." During the press conference **Bush** also **said that the United States is "not certain as to whether or not [the North Koreans] are keeping all terms of all agreements."**

The statement sparked some confusion because the United States has only one agreement with North Korea: the 1994 Agreed Framework, which ended Pyongyang's nuclear weapons program.

In a briefing following the conference, a senior administration official explained that, despite his phrasing, the president was referring to the potential verifiability of a future missile deal with North Korea. The official said that there are no indications North Korea is violating the Agreed Framework. Bush's decision to put off negotiations contrasted with statements Powell had previously made on the administration's approach to North Korea. On March 6, Powell told reporters that "we do plan to engage with North Korea and pick up where President Clinton and his administration left off." Powell went on to say that "some promising elements were left on the table" and that the United States has "a lot to offer that regime if they will act in ways that we think are constructive." However, **emerging from**

the March 7 meeting between Bush and Kim, Powell shifted gears, emphasizing that there is "no hurry" to engage Pyongyang.

He said that the administration is conducting a comprehensive review of U.S. policy toward North Korea and that it would, "in due course, decide at what pace and when we engage." Amending his remarks from March 6, Powell said that if "there was some suggestion that imminent negotiations are about to begin—that is not the case." According to a former senior U.S. official, North Korea had been prepared at the end of the Clinton administration to stop its missile development and missile exports in exchange for international satellite launch services and nonmonetary compensation, respectively. Writing in The New York Times March 7, Ambassador Wendy Sherman, Clinton's special adviser on North Korea, characterized such an agreement as "tantalizingly close." The former senior official noted, however, that the problem of how to verify and monitor an agreement, in addition to the status of Pyongyang's current missile inventory, had remained unresolved. Powell indicated this was one reason the Bush administration was reviewing its options before proceeding. "What was missing in what had been done was how one would put in place any kind of monitoring or verification regime. And the North Koreans had not engaged on that in any serious way in the period of the Clinton administration," he said in March 8 testimony to the Senate Foreign Relations Committee. Powell also said that the administration would consider issues beyond missile negotiations in its policy review, including whether the conventional military balance on the Korean Peninsula should be considered simultaneously with missile talks—a course the Clinton administration had avoided. "There's a huge army poised on the demilitarized zone, pointing south, that is probably as great a threat to South Korea and Seoul and regional stability as are weapons of mass destruction. Should that be included in a negotiation with the North Koreans?" Powell asked. In what may have been a reaction to Bush's

comments, on March 13 Pyongyang canceled cabinet-level discussions with Seoul hours before they were set to begin. On March 15, **North Korea threatened to "take thousand-fold revenge" on the United States "and its black-hearted intention to torpedo the dialogue between North and South [Korea]."** The statement issued by the state-run Korean Central News Agency, **called Washington's new**

policies "hostile" and noted that Pyongyang remains "fully prepared for both dialogue and war."

Congress Reacts Following Bush's demand for verification in dealings with North Korea, Republican leaders in the House and Senate urged the administration to reconsider the terms of the Agreed Framework, under which North Korea is to be provided with two light-water reactors. On March 9, Chairman of the Senate Foreign Relations Committee Jesse Helms (R-NC), along with Senators Mike DeWine (R-OH) and Bob Smith (R-NH), sent a letter to Bush calling for the administration to abandon the reactor project in favor of "several clean-burning, coal-fired power plants to meet North Korea's civilian energy needs." The letter called into question Pyongyang's "track record" and said that "North Korea's regime hardly can be trusted with [light-water reactor] technology, or with fissile material." In a March 13 speech to the American Enterprise Institute, Henry Hyde (R-IL), chairman of the House International Relations Committee, also championed replacing the light-water reactors with conventional power plants while stressing the need for comprehensive verification in light of past actions by North Korea. Congressional Democrats urged Bush to continue to pursue a negotiated solution to U.S. concerns over Pyongyang's nuclear and missile capabilities. In a March 6 letter to Bush before his meeting with Kim, the Democratic leadership of the House and Senate, as well as the ranking members of the International Relations and Foreign Relations committees, encouraged the president to work with South Korea to address North Korea's nuclear and missile programs and said that, if he does so, they "stand ready to support" him. EU to Send Delegation to Korean Peninsula Following President George W. Bush's decision to put off missile negotiations with North Korea, the European Union (EU) announced it would send a high-level delegation to the Korean Peninsula. Speaking at the EU summit in Stockholm, President of the European Council and Swedish Prime Minister Göran Persson said March 24 that he, EU Secretary-General Javier Solana, and EU External Affairs Commissioner Christopher Patten hope to visit Seoul and Pyongyang before the end of May. Persson said he planned to broach "a broad agenda" with North Korean leader Kim Jong-Il, including discussions on missiles. Sweden currently holds the six-month rotating presidency of the EU and has had diplomatic relations with Pyongyang for the past 26 years. According to a senior Swedish official, **the**

EU discussion is intended to be "complementary" to both the North-South peace process and any further U.S.-North Korean security negotiations.

The official stressed that it is "important that the U.S.-North Korean discussions resume" and **said that the dialogue on missile negotiations "cannot and should not" be taken up without the United States.** However, **in a March 24 interview on Swedish television, Swedish Foreign Minister Anna Lindh reportedly stated that the unanimous decision by the 15 EU leaders to send the delegation came about because "it's becoming clear that the new U.S. administration wants to take a more hard-line approach toward North Korea."** Lindh went on to say that such a policy "means that Europe must step in to help reduce tension between the two Koreas, not least because the outside world is so worried about North Korean missiles." —A.W.a

U.S. and EU collaborative sanctions against North Korea don't work

Bajpai 15

Prablen Bajpai is the Founder and Director at FinFix Advisors & Planners Pvt. Ltd., a financial planning and investment advisory firm. Prablen contributes for The Tribune (India), IndiaNotes.com and has authored a section of the Equity Research Module by the National Stock Exchange (NSE). She has also taught Investment Analysis and Macroeconomics to business students at the Royal Thimphu College (RTC), Bhutan. She is a Chartered Financial Analyst (CFA) from ICFAI, holds a masters degree in Economics and is pursuing her CFP® certification, "US And EU Sanctions Against North Korea", February 18, 2015

The dynasty regime in North Korea continues to splurge and squander its resources towards nuclear armament and military expansion, while its people suffer from food deprivation and continue to be fed by aid. The secretive totalitarian economy has increasingly isolated itself from the world except for a few allies. Its activities and actions have time and again violated international agreements, thus inviting sanctions against it. However, while the Democratic People's Republic of Korea (DPRK) has been repeatedly sanctioned by the United Nations (UN), the US, Japan, Canada, Australia, and European Union, the regime has shown little inclination to comply with international agreements. (For more, see: How the North Korea Economy Works) Relations: The European Union & The United States The European Union (EU) and most of its constituent countries have bilateral diplomatic relationships with North Korea and maintain embassies in Pyongyang, and the EU indulges in annual talks with North Korea. The European Union's stance regarding North Korea is based on a few key issues, including peace and stability in the region, non-proliferation of nuclear weapons, aid (and cooperation), and human rights. According to the European Commission External Action Service, "Since 1995, over €366 million in aid has been provided in the form of food aid, medical, water and sanitation assistance and agricultural support. In 2011, the EU provided €10 million in emergency aid following a severe food crisis." The total trade between DPRK and the European Union was €144 million or about 2.09 percent of North Korea's trade volume. Though there is no direct involvement by the EU in North Korea's economic reforms, Brussels is supportive of any initiatives toward reform. The European Union (through a few member countries) provides education and training in economic policy making and business to North Korean officials. The United States does not have any diplomatic relations with DPRK, thus neither has an embassy in the other's country. The US operates through the Swedish embassy in North Korea for any services for US citizens in DPRK. While economic interaction between the two countries is minimal, the US is concerned with issues like human rights and food deprivation in North Korea. The only form of US economic assistance to North Korea is humanitarian during times of natural calamities or emergencies.

Sanctions **The US and EU** comply by the UN Resolution 2094 (2013) and earlier resolutions regarding **restrict** ions (and bans) against **North Korea** on the following: Travel and asset freezes **on** certain individuals involved in arms dealing and exports of goods and equipment related to **ballistic missiles and other weapons**. Asset freezes of certain organizations involved in supporting activities towards arms and weapon dealings, as well as illegal trading activities. Items, Materials, Equipment, Goods, and Technology (nuclear items, missile items, and chemical weapons list). Luxury goods (jewelry, pearls, gems, precious, and semi-precious stones and precious metal, as well as transportation items like yachts, racing cars, and luxury automobiles). The first EU sanction was imposed in

2006 in reaction to North Korea's first test of a nuclear device. Currently, the European Union has autonomously banned provision of new DPRK bank notes and coins, any financial support which could be used for nuclear-related or weapons of mass destruction (WMD) program, and any new commitment towards DPRK in the form of concessional loans and financial assistance. There is a restriction on the issue and trade in certain bonds, use of EU airports, and establishment of subsidiaries or branches of DPRK banks. Moreover, there will be enhanced monitoring of banks in DPRK that work with EU financial institutions, as well as increased scrutiny of DPRK diplomats. In addition to supporting the UN resolutions, the US has time and again imposed sanctions on North. The US, which has backed South Korea since the start of the Korean War, first imposed an economic embargo on the North in 1950. Over the years, the US and EU Sanctions Against North Korea By Prableen Bajpai, CFA (ICFAI) | February 18, 2015 7/9/2015 US And EU Sanctions Against North Korea <http://www.investopedia.com/articles/investing/021815/us-and-eu-sanctions-against-north-korea.asp?view=print> 2/2 © 2015, Investopedia, LLC. has levied additional sanctions against North Korea, especially in the wake of its nuclear tests and provoking episodes against South Korea. Broadly, the US prohibits any foreign and military aid, government-backed credits, agricultural credits or financing, US commercial bank financing, export licenses and imports into the US for certain goods and services, export-import bank financing, any support for energy-related programs, cultural exchanges, and support in international institutions and banks. Under the Bush administration in 2008 (Executive Order 13466), the US ended the Trading With the Enemy Act but continued with certain restrictions on North Korea and a few individuals. In 2010 (Executive Order 13551), the US blocked three North Korean entities and one individual from property and interests in property that were under US jurisdiction. In 2011 (Executive Order 13570), direct and indirect import of goods, services and technology was prohibited. The most recent sanctions (Executive Order 13687) were triggered by the cyber-attacking incident on Sony Pictures Entertainment and affect three North Korean entities, including including a government intelligence agency and a North Korean arms dealer, as well as 10 individuals employed by those entities or by the North Korean government. They have been barred from the US financial system; any assets under US jurisdiction have been blocked. (Related reading, see: How US & European Union Sanctions Impact Russia) Since From 1988 to 2008, the US designated the DPRK government as state sponsor of terrorism. Though there are many sanctions in place against North Korea, the US has not levied any travel ban for US citizens, nor is there a ban on trade of basic goods (the trade volume is negligible though). The sanctions imposed by the US on North Korea have resulted in minimal trade limited to medicines and food. The US also prohibits any cultural exchange with DPRK. The limited engagement of Washington with Pyongyang on the diplomatic, political, and economic fronts gives it less leverage over North Korea. On the other hand, the European Union's focus on backing any economic reform in DPRK but wanting to put a stop to the proliferation of WMD has created a quandary over what is the right balance of "pressure" and "support." If the European Union exerts pressure without any economic engagement, the effectiveness could be minimal. While if there is no constructive pressure while it offers some economic backing, the EU stance on DPRK becomes questionable and opposed to its own stated policies. Thus, the European Union's sanctions are aimed at blocking any direct or indirect help in North Korea's nuclear armament program, while trying to maintain basic economic engagement in the form of trade, aid, and assistance that might improve North Korea's economic development, human rights, and its citizen's standard of living. (Related

reading, see: Socialist Economies: How China, Cuba And North Korea Work) Bottom Line **There many opinions about the effectiveness of the sanctions. It seems that North Korea is able to get access to almost everything it requires whether it is for a luxury project or nuclear program through a back channel via its allies from the time of the Cold War. Another reason for the limited effectiveness of both EU and US sanctions is the fact that North Korea does not depend greatly on the West; its main trading partner and benefactor is China. Strings can be pulled when they are attached.**

EU defenses solve - Alliance isn't key Bandow 2013

(Doug, senior fellow at the Cato Institute, specializing in foreign policy and civil liberties, 4-22, "NATO's Lack Of Any Serious Purpose Means It Should Retire", <http://www.forbes.com/sites/dougbandow/2013/04/22/natos-lack-of-any-serious-purpose-means-it-should-retire/>)

Alliances should be based on international circumstance. Rasmussen recently argued that "The need for a strong military alliance between Europe and North America has never been stronger." That is nonsense. **Neither continent faces an existential military threat.** Neither faces a significant global competitor. Neither has a compelling interest to meddle in regional conflicts. **While there is much about which the U.S. and Europe should cooperate there is no need for an** American-dominated **transatlantic military alliance.** Thus, what is needed is U.S. burden-shedding rather than allied burden-sharing. **Europeans could provide forces sufficient to defend themselves, patrol the Mediterranean, aid the Central Asia states, and protect their interests in North Africa and the Middle East.** If they chose not to do so, no worries for America. But they shouldn't expect Washington to step in. And U.S. officials then could stop their unproductive whining about Europe's defense choices.

1NC – No Prolif

No impact – takes too long and too many disincentives – reversal of the program is more likely

Kahl et al., Georgetown Security Studies professor, 2013

(Colin, “If Iran Builds the Bomb, Will Saudi Arabia Be Next?”

http://www.cnas.org/files/documents/publications/CNAS_AtomicKingdom_Kahl.pdf, ldg)

111 . LESSONS FROM HISTORY Concerns over “regional proliferation chains,” “falling nuclear dominos” and “nuclear tipping points” are nothing new; indeed, reactive proliferation fears date back to the dawn of the nuclear age.¹⁴ Warnings of an inevitable deluge of proliferation were commonplace from the 1950s to the 1970s, resurfaced during the discussion of “rogue states” in the 1990s and became even more ominous after 9/11.¹⁵ In 2004, for example, Mitchell Reiss warned that “in ways both fast and slow, we may very soon be approaching a nuclear ‘tipping point,’ where many countries may decide to acquire nuclear arsenals on short notice, thereby triggering a proliferation epidemic.” Given the presumed fragility of the nuclear nonproliferation regime and the ready supply of nuclear expertise, technology and material, Reiss argued, “a single new entrant into the nuclear club could catalyze similar responses by others in the region, with the Middle East and Northeast Asia the most

likely candidates.”¹⁶ Nevertheless, **predictions of inevitable proliferation cascades have historically proven false** (see The Proliferation Cascade Myth text box). In the six decades since atomic weapons were first developed, nuclear restraint has proven far more common than nuclear

proliferation, and cases of reactive proliferation have been exceedingly rare. Moreover, most **countries that have started down the nuclear path** have **found the road more difficult than imagined**, both

technologically and bureaucratically, **leading the majority** of nuclear-weapons aspirants **to reverse course**. Thus, despite frequent warnings of an unstoppable “nuclear express,”¹⁷ William Potter and Gaukhar Mukhatzhanova astutely note that the “train to date has been slow to pick up steam, has made fewer stops than anticipated, and usually has arrived much later than expected.”¹⁸ None of this means that additional proliferation in response to Iran’s nuclear ambitions is inconceivable, but the empirical record does suggest that regional chain reactions are not inevitable. Instead, only certain countries are candidates for reactive proliferation. Determining the risk that any given country in the Middle East will proliferate in response to Iranian nuclearization requires an assessment of the incentives and disincentives for acquiring a nuclear deterrent, the technical and bureaucratic constraints and the available strategic alternatives. Incentives and Disincentives to Proliferate Security considerations, status and reputational concerns and the prospect of sanctions combine to shape the incentives and

disincentives for states to pursue nuclear weapons. **Analysts predicting proliferation cascades tend to**

emphasize the incentives for reactive proliferation while ignoring or downplaying the disincentives. Yet as it turns out, **instances of nuclear proliferation (including reactive proliferation) have**

been so rare because going down **this road** often **risks insecurity, reputational damage and economic costs that outweigh** the

potential benefits.¹⁹ Security and regime survival are especially important motivations driving state decisions to proliferate. All else being equal, if a state’s

leadership believes that a nuclear deterrent is required to address an acute security challenge, proliferation is more likely.²⁰ Countries in conflict-prone neighborhoods facing an “enduring rival” – especially countries with inferior conventional military capabilities vis-à-vis their opponents or those that face an adversary that possesses or is seeking nuclear weapons – may be particularly prone to seeking a nuclear deterrent to avert aggression.²¹ A recent quantitative study by Philipp Bleek, for example, found that security threats, as measured by the frequency and intensity of conventional militarized disputes, were highly correlated with decisions to launch nuclear weapons programs and eventually acquire the bomb.²² The Proliferation Cascade Myth Despite repeated warnings since the dawn of the nuclear age of an inevitable deluge of nuclear proliferation, such fears have thus far proven largely unfounded. Historically, nuclear restraint is the rule, not the exception – and the degree of restraint has actually increased over time. In the first two decades of the nuclear age, five nuclear-weapons states emerged: the United States (1945), the Soviet Union (1949), the United Kingdom (1952), France (1960) and China (1964). However, in the nearly 50 years since China developed nuclear weapons, only four additional countries have entered (and remained in) the nuclear club: Israel (allegedly in 1967), India (“peaceful” nuclear test in 1974, acquisition in late-1980s, test in 1998), Pakistan (acquisition in late-1980s, test in 1998) and North Korea (test in 2006).²³ This significant slowdown in the pace of proliferation occurred despite the widespread dissemination of nuclear know-how and the fact that the number of states with the technical and industrial capability to pursue nuclear weapons programs has significantly increased over time.²⁴ Moreover, in the past 20 years, several states have either given up their nuclear weapons (South Africa and the Soviet successor states Belarus, Kazakhstan and Ukraine) or ended their highly developed nuclear weapons programs (e.g., Argentina, Brazil and Libya).²⁵ Indeed, by one estimate, 37 countries have pursued nuclear programs with

possible weapons-related dimensions since 1945, yet the overwhelming number chose to abandon these activities before they produced a bomb. Over time, **the number of nuclear reversals has grown while the number of states initiating programs** with

possible military dimensions **has markedly declined**.²⁶ Furthermore – especially since the Nuclear Non-Proliferation Treaty (NPT) went into force in 1970 – reactive proliferation has been exceedingly rare. The NPT has near-universal membership among the community of nations; only India, Israel, Pakistan and North Korea currently stand outside the treaty. Yet the actual and suspected acquisition of nuclear weapons by these outliers has not triggered widespread reactive proliferation in their respective neighborhoods. Pakistan followed India into the nuclear club, and the two have engaged in a vigorous arms race, but Pakistani nuclearization did not spark additional South Asian states to acquire nuclear weapons. Similarly, the North Korean bomb did not lead South Korea, Japan or other regional states to follow suit.²⁷ In the Middle East, no country has successfully built a nuclear weapon in the four decades since Israel allegedly built its first nuclear weapons. Egypt took initial steps toward nuclearization in the 1950s and then expanded these efforts in the late 1960s and 1970s in response to Israel’s presumed capabilities. However, Cairo then ratified the NPT in 1981 and abandoned its program.²⁸ Libya, Iraq and Iran all pursued nuclear weapons capabilities, but only Iran’s program persists and none of these states initiated their efforts primarily as a defensive response to Israel’s presumed arsenal.²⁹ Sometime in the 2000s, Syria also appears to have initiated nuclear activities with possible military dimensions, including construction of a covert nuclear reactor near al-Kibar, likely enabled by North Korean assistance.³⁰ (An Israeli airstrike destroyed the facility in 2007.³¹) The motivations for Syria’s activities remain murky, but the nearly 40-year lag between Israel’s alleged development of the bomb and Syria’s actions suggests that reactive proliferation was not the most likely cause. Finally, even countries that start on the nuclear path have found it very difficult, and exceedingly time consuming, to reach the end. Of the 10 countries that launched nuclear weapons projects after 1970, only three (Pakistan, North Korea and South Africa) succeeded; one (Iran) remains in progress, and the rest failed or were reversed.³² The successful projects have also generally needed much more time than expected to finish. According to Jacques Hymans,

the average time required to complete a nuclear weapons program has increased from seven years prior to 1970 to about 17 years after 1970, even as the hardware, knowledge and industrial base required for proliferation has expanded to more and more countries.³³ Yet throughout the nuclear age, many states with potential security incentives to develop

nuclear weapons have nevertheless abstained from doing so.³⁴ Moreover, contrary to common expectations, recent statistical research shows that states with an enduring rival that possesses or is pursuing nuclear weapons are not more likely than other states to launch nuclear weapons programs or go all the way to acquiring the bomb, although they do seem more likely to explore nuclear weapons options.³⁵ This suggests that a rival's acquisition of nuclear weapons does not inevitably drive proliferation decisions. One reason that reactive proliferation is not an automatic response to a

rival's acquisition of nuclear arms is the fact that security calculations can cut in both directions. Nuclear weapons might deter outside threats, but **leaders have to weigh these potential gains against the possibility that seeking nuclear weapons would trigger a regional arms race or a preventive attack by outside powers.** Countries also have to consider the possibility that **pursuing nuclear weapons will produce strain in strategic relationships with**

allies and security patrons. If a state's leaders conclude that their overall security would decrease by building a bomb, they are not likely to do so.³⁶ Moreover, although security considerations are often central, they are rarely sufficient to motivate states to develop nuclear weapons. Scholars have noted the importance of other factors, most notably the perceived effects of nuclear weapons on a country's relative status and influence.³⁷ Empirically, the most highly motivated states seem to be those with leaders that simultaneously believe a nuclear deterrent is essential to counter an existential threat and view nuclear weapons as crucial for maintaining or enhancing their international status and influence. Leaders that see their country as naturally at odds with, and naturally equal or superior to, a threatening external foe appear to be especially prone to pursuing nuclear weapons.³⁸ Thus, as Jacques Hymans argues, extreme levels of fear and pride often "combine to produce a very strong tendency to reach for the bomb."³⁹ Yet here too, leaders contemplating acquiring nuclear weapons have to balance the possible increase to their prestige and influence against the normative and reputational costs associated with violating the Nuclear Non-Proliferation Treaty (NPT). If a country's leaders fully embrace the principles and norms embodied in the NPT, highly value positive diplomatic relations with Western countries and see membership in the "community of nations" as central to their national interests and identity, they are likely to worry that developing nuclear weapons would damage (rather than bolster) their reputation and influence, and thus they will be less likely to go for the bomb.⁴⁰ In contrast, countries with regimes or ruling coalitions that embrace an ideology that rejects the Western dominated international order and prioritizes national self-reliance and autonomy from outside interference seem more inclined toward proliferation regardless of whether they are signatories to the NPT.⁴¹ Most countries appear to fall in the former category, whereas only a small number of "rogue" states fit the latter. According to one count, before the NPT went into effect, more than 40 percent of states with the economic resources to pursue nuclear programs with potential military applications did so, and very few renounced those programs. Since the inception of the nonproliferation norm in 1970, however, only 15 percent of economically capable states have started such programs, and nearly 70 percent of all states that had engaged in such activities gave them up.⁴² The prospect of being targeted with economic sanctions by powerful states is also likely to factor into the decisions of would-be proliferators. Although sanctions alone proved insufficient to dissuade Iraq, North Korea and (thus far) Iran from violating their nonproliferation obligations under the NPT, this does not necessarily indicate that sanctions are irrelevant. A potential proliferator's vulnerability to sanctions must be considered. All else being equal, the more vulnerable a state's economy is to external pressure, the less likely it is to pursue nuclear weapons. A comparison of states in East Asia and the Middle East that have pursued nuclear weapons with those that have not done so suggests that countries with economies that are highly integrated into the international economic system – especially those dominated by ruling coalitions that seek further integration – have historically been less inclined to pursue nuclear weapons than those with inward-oriented economies and ruling coalitions.⁴³ A state's vulnerability to sanctions matters, but so too does the leadership's assessment regarding the probability that outside powers would actually be willing to impose sanctions. Some would-be proliferators can be easily sanctioned because their exclusion from international economic transactions creates few downsides for sanctioning states. In other instances, however, a state may be so vital to outside powers – economically or geopolitically – that it is unlikely to be sanctioned regardless of NPT violations. Technical and Bureaucratic Constraints In addition to motivation to pursue the bomb, a state must have the technical and bureaucratic wherewithal to do so. This capability is partly a function of wealth. Richer and more industrialized states can develop nuclear weapons more easily than poorer and less industrial ones can; although as Pakistan and North Korea demonstrate, cash-strapped states can sometimes succeed in developing nuclear weapons if they are willing to make enormous sacrifices.⁴⁴ A country's technical know-how and the sophistication of its civilian nuclear program also help determine the ease and speed with which it can potentially pursue the bomb. The existence of uranium deposits and related mining activity, civilian nuclear power plants, nuclear research reactors and laboratories and a large cadre of scientists and engineers trained in relevant areas of chemistry and nuclear physics may give a country some "latent" capability to eventually produce nuclear weapons. Mastery of the fuel-cycle – the ability to enrich uranium or produce, separate and reprocess plutonium – is particularly important because this is the essential pathway whereby states can indigenously produce the fissile material required to make a nuclear explosive device.⁴⁵ States must also possess the bureaucratic capacity and managerial culture to successfully complete a nuclear weapons program. Hymans convincingly argues that many recent

would-be proliferators have weak state institutions that permit, or even encourage, **rulers to take a coercive** authoritarian

management approach to their nuclear programs. This approach, in

turn, politicizes and ultimately **undermines nuclear projects by gutting the autonomy** and

professionalism **of the very scientists, experts and organizations needed**

to successfully build the bomb.⁴⁶ Alternative Sources of Nuclear Deterrence Historically, the availability of credible security guarantees by outside nuclear

powers has provided a potential alternative means for acquiring a nuclear deterrent without many of the risks and costs associated with developing an indigenous nuclear weapons capability. As Bruno Tertrais argues, nearly all the states that developed nuclear weapons since 1949 either lacked a strong guarantee from a superpower (India, Pakistan and South Africa) or did not consider the superpower's protection to be credible (China, France, Israel and North Korea). Many other countries known to have pursued nuclear weapons programs also lacked security guarantees (e.g., Argentina, Brazil, Egypt, Indonesia, Iraq, Libya, Switzerland and Yugoslavia) or thought they were unreliable at the time they embarked on their programs (e.g., Taiwan). In contrast, several

potential proliferation candidates appear to have abstained from developing the bomb at least partly because of formal or informal extended deterrence guarantees from the United States (e.g., Australia, Germany, Japan, Norway, South Korea and Sweden).⁴⁷ All

told, a recent quantitative assessment by Bleek finds that **security assurances have empirically** significantly

reduced proliferation proclivity among recipient countries.⁴⁸ Therefore, if a country perceives that a security guarantee by the United States or another nuclear power is both available and credible, it is less likely to pursue nuclear weapons in reaction to a rival developing them. This option is likely to be particularly attractive to states that lack the indigenous capability to develop nuclear weapons, as well as states that are primarily motivated to acquire a nuclear deterrent by security factors (as opposed to status-related motivations) but are wary of the negative consequences of proliferation.

A2: Russian War

1NC – I/L D

Alliance fails to deter Russia – Europe alone solves Bandow 2012

(Doug, senior fellow at the Cato Institute, 8-12, "How NATO Expansion Makes America Less Safe", <http://www.cato.org/publications/commentary/how-nato-expansion-makes-america-less-safe>)

With the end of the Cold War the justification for NATO disappeared. The Soviet Union split, the Warsaw Pact dissolved, the global communist menace vanished. There no longer was any there there, as Gertrude Stein said of Oakland. President Putin is no friend of liberty, but he evidences no design – and possesses no capability – to recreate a global empire. Under him Russia has reverted to a pre-World War I great power, focused on winning respect and protecting its borders. A Russian invasion of Eastern Europe, let alone the core western members of NATO, is but a paranoid fantasy. Anyway, the Europeans are able to defend themselves. Today the European Union has ten times the GDP and three times the population of Russia. Despite their ongoing economic crises, EU members together still spend far more than Moscow on the military. There is no prospect of Russia dominating Eurasia. Unfortunately, expanding NATO over the last two decades has turned what once was a military alliance into an international social club. Other than Poland, the post-1989 NATO entrants have been military midgets, security black holes requiring the U.S. to pay to rearm and retrain militaries which remain too small to do anything useful in a real war. Yes, the new members contributed small contingents in America's other conflicts; President Saakashvili similarly sent Georgian troops to Afghanistan and Iraq to win American support. But the U.S. has paid mightily for de minimis benefits. Still, alliance advocates claim that NATO could at least protect countries at Europe's periphery. For instance, had Georgia been a member, they argue, Moscow would not have attacked. Lithuanian Foreign Minister Petras Vaitiekunas contended that including Tbilisi would "clearly show to Russia how unhelpful it is to even try flexing its muscles." Yet history is full of examples of alliances which failed to deter powers from acting when they believed their vital interests to be at stake. In World War I most of the continent plunged into bloody conflict despite competing military leagues. In World War II Germany ignored British and French commitments to Poland. Today Moscow might not believe that Americans and Europeans with little at stake would be so foolish as to confront a nuclear armed power over interests it viewed as vital. Moreover, the Russians are not likely to be any more inclined toward "appeasement" than would the U.S. in a comparable situation. Indeed, given the West's consistent policy of ignoring Russian interests, Moscow likely would insist even more strongly that concessions not be made and humiliations not be countenanced. Attempting to establish friendly, democratic regimes along Russia's borders, and turn them into military outposts as members of the historic American-led, anti-Soviet alliance, is geopolitically aggressive. As America developed, Washington demonstrated little patience for European "meddling" in Central and even South America, which it considered to be America's backyard. Perhaps U.S. intentions were better, though the Latin Americans might not agree. Nevertheless, European security guarantees for America's neighbors would have made Washington less rather than more tractable. Worse, NATO expansion brings the political and territorial disputes of new members with each other and Russia into the alliance. The organization then threatens to act as a transmission belt of rather than firebreak to war. Countries reliant on their own resources are more likely to compromise. In contrast, having a superpower in their corner makes them more likely to be intransigent. Although most of the new NATO members, and especially the most recent additions like Albania and Croatia, are money pits for American aid, at least these nations are geopolitically irrelevant. Moscow has no reason to pay them any mind.

1NC – No Russian War

No Russia war – no motive or capability

Betts, Columbia war and peace studies professor, 2013

(Richard, "The Lost Logic of Deterrence", Foreign Affairs, March/April, ebsco, ldg)

These continuities with the Cold War would make sense only between intense adversaries. Washington and Moscow remain in an adversarial relationship, but not an intense one. If the Cold War is really over, and the West really won, then continuing implicit deterrence does less to protect against a negligible threat from Russia than to feed suspicions that aggravate political friction. In contrast to during the Cold War, it is now hard to make the case that Russia is more a threat to NATO than the reverse. First, the East-West balance of military capabilities, which at the height of the Cold War was favorable to the Warsaw Pact or at best even, has not only shifted to NATO's advantage; it has become utterly lopsided. Russia is now a lonely fraction of what the old Warsaw Pact was. It not only lost its old eastern European allies; those allies are now arrayed on the other side, as members of NATO. By every significant measure of power -- military spending, men under arms, population, economic strength, control of territory -- NATO enjoys massive advantages over Russia. The only capability that keeps Russia militarily potent is its nuclear arsenal. There is no plausible way, however, that Moscow's nuclear weapons could be used for aggression, except as a backstop for a conventional offensive -- for which NATO's capabilities are now far greater. Russia's intentions constitute no more of a threat than its capabilities. Although Moscow's ruling elites push distasteful policies, there is no plausible way they could think a military attack on the West would serve their interests. During the twentieth century, there were intense territorial conflicts between the two sides and a titanic struggle between them over whose ideology would dominate the world. Vladimir Putin's Russia is authoritarian, but unlike the Soviet Union, it is not the vanguard of a globe-spanning revolutionary ideal.

A2: Terrorism

1NC - I/L D

Terror coop is strong and resilient

Mix 15 (Derek E. Mix, Analyst in European Affairs, "The United States and Europe: Current Issues," Feb 3, <http://fas.org:8080/sgp/crs/row/RS22163.pdf>, DAH)

Overall, in the years since the 9/11 attacks, transatlantic cooperation on counterterrorism has been strong. U.S. and European officials from the cabinet level down maintain regular dialogues on issues related to homeland security and counterterrorism. In 2010, new U.S.-EU treaties on extradition and mutual legal assistance entered into force. The United States and the EU have also reached agreements on container security and sharing airline passenger data as part of their efforts to strengthen aviation, transport, and border security. In addition, the United States and the EU actively work together to track and counter the financing of terrorism, in forums such as the Financial Action Task Force and through information sharing deals such as the U.S.-EU "SWIFT agreement," which allows U.S. authorities access to financial data held by a Belgium-based consortium of international banks as part of the U.S. Treasury Department's Terrorist Finance Tracking Program (TFTP). While the EU has been increasing its relevance in this area, bilateral intelligence sharing and law enforcement cooperation between the United States and individual European countries also remains key to disrupting terrorist plots and apprehending those involved.

1NC – No Terror

No risk of nuclear terrorism – too many obstacles Mearsheimer, Distinguished Professor of Political Science at the University of Chicago, 2014

(John J. “America Unhinged”, January 2, nationalinterest.org/article/america-unhinged-9639?page=show)

Am I overlooking the obvious threat that strikes fear into the hearts of so many Americans, which is terrorism? Not at all. Sure, the United States has a terrorism problem. But it is a minor threat. There is no question we fell victim to a spectacular attack on September 11, but it did not cripple the United States in any meaningful way and another attack of that magnitude is highly unlikely in the foreseeable future. Indeed, there has not been a single instance over the past twelve years of a terrorist organization exploding a primitive bomb on American soil, much less striking a major blow. Terrorism—most of it arising from domestic groups—was a much bigger problem in the United States during the 1970s than it has been since the Twin Towers were toppled. What about the possibility that a terrorist group might obtain a nuclear weapon? Such an occurrence would be a game changer, but the chances of that happening are virtually nil. No nuclear-armed state is going to supply terrorists with a nuclear weapon because it would have no control over how the recipients might use that weapon. Political turmoil in a nuclear-armed state could in theory allow terrorists to grab a loose nuclear weapon, but the United States already has detailed plans to deal with that highly unlikely contingency. Terrorists might also try to acquire fissile material and build their own bomb. But that scenario is extremely unlikely as well: there are significant obstacles to getting enough material and even bigger obstacles to building a bomb and then delivering it. More generally, virtually every country has a profound interest in making sure no terrorist group acquires a nuclear weapon, because they cannot be sure they will not be the target of a nuclear attack, either by the terrorists or another country the terrorists strike. Nuclear terrorism, in short, is not a serious threat. And to the extent that we should worry about it, the main remedy is to encourage and help other states to place nuclear materials in highly secure custody.

A2: Trade

1NC - I/L D

*Read generic take-outs to relations (resiliency, inevitable, alt causes, etc)

1NC – No Trade Wars

Trade is strong and resilient

Ikenson, 9 – associate director of the Center for Trade Policy Studies at the Cato Institute

[Daniel, “ A Protectionism Fling: Why Tariff Hikes and Other Trade Barriers Will Be Short-Lived,” March 12, 2009, http://www.cato.org/pub_display.php?pub_id=10651]

Although some governments will dabble in some degree of protectionism, the combination of a sturdy rules-based system of trade and the economic self interest in being open to participation in the global economy will limit the risk of a protectionist pandemic. According to recent estimates from the International Food Policy Research Institute, if all WTO members were to raise all of their applied tariffs to the maximum bound rates, the average global rate of duty would double and the value of global trade would decline by 7.7 percent over five years.⁸ That would be a substantial decline relative to the 5.5 percent annual rate of trade growth experienced this decade.⁹ But, to put that 7.7 percent decline in historical perspective, the value of global trade declined by 66 percent between 1929 and 1934, a period mostly in the wake of Smoot Hawley's passage in 1930.¹⁰ So the potential downside today from what Bergsten calls "legal protectionism" is actually not that "massive," even if all WTO members raised all of their tariffs to the highest permissible rates. If most developing countries raised their tariffs to their bound rates, there would be an adverse impact on the countries that raise barriers and on their most important trade partners. But most developing countries that have room to backslide (i.e., not China) are not major importers, and thus the impact on global trade flows would not be that significant. OECD countries and China account for the top two-thirds of global import value.¹¹ Backsliding from India, Indonesia, and Argentina (who collectively account for 2.4 percent of global imports) is not going to be the spark that ignites a global trade war. Nevertheless, governments are keenly aware of the events that transpired in the 1930s, and have made various pledges to avoid protectionist measures in combating the current economic situation. In the United States, after President Obama publicly registered his concern that the "Buy American" provision in the American Recovery and Reinvestment Act might be perceived as protectionist or could incite a trade war, Congress agreed to revise the legislation to stipulate that the Buy American provision "be applied in a manner consistent with United States obligations under international agreements." In early February, China's vice commerce minister, Jiang Zengwei, announced that China would not include "Buy China" provisions in its own \$586 billion stimulus bill.¹² But even more promising than pledges to avoid trade provocations are actions taken to reduce existing trade barriers. In an effort to "reduce business operating costs, attract and retain foreign investment, raise business productivity, and provide consumers a greater variety and better quality of goods and services at competitive prices," the Mexican government initiated a plan in January to unilaterally reduce tariffs on about 70 percent of the items on its tariff schedule. Those 8,000 items, comprising 20 different industrial sectors, accounted for about half of all Mexican import value in 2007. When the final phase of the plan is implemented on January 1, 2013, the average industrial tariff rate in Mexico will have fallen from 10.4 percent to 4.3 percent.^{13v} And Mexico is not alone. In February, the Brazilian government suspended tariffs entirely on some capital goods imports and reduced to 2 percent duties on a wide variety of machinery and other capital equipment, and on communications and information technology products.¹⁴ That decision came on the heels of late-January decision in Brazil to scrap plans for an import licensing program that would have affected 60 percent of the country's imports.¹⁵ Meanwhile, on February 27, a new free trade agreement was signed between Australia, New Zealand, and the 10 member countries of the Association of Southeast Asian Nations to reduce and ultimately eliminate tariffs on 96 percent of all goods by 2020. While the media and members of the trade policy community fixate on how various protectionist measures around the world might foreshadow a plunge into the abyss,

there is plenty of evidence that **governments remain interested in removing barriers to trade**. Despite the occasional temptation to indulge discredited policies, there is a growing **body of institutional knowledge** that when people are free to engage in commerce with one another as they choose, regardless of the nationality or location of the other parties, they can leverage that freedom to accomplish economic outcomes far more impressive than when governments attempt to limit choices through policy constraints.

Funding proves EU committed to cloud computing—key to EU-led innovation

Computer Weekly 14 Archana Venkatraman, Datacentre Editor - Computer Weekly, "EU

funds project to boost European cloud computing market," 21 Jul 2014

<http://www.computerweekly.com/news/2240225047/New-EU-funded-project-to-boost-European-cloud-computing-market>

A European Union-funded project called Cloudcatalyst has been set up to assess the current cloud computing market in Europe, identify barriers to cloud adoption and provide tools to boost its growth in the region. The project aims to instill confidence in European businesses, public entities, ICT providers and other cloud stakeholders eager to develop and use cloud services. **It will create "a strong and enthusiastic community of cloud adopters and supporters in Europe"**, according to Cordis, the European Commission's project funding arm. According to the EC, cloud computing is a "revolution" but its providers are still struggling to captivate and build trust among businesses and everyday citizens. **"Cloud-sceptics" are concerned over data security and legal exposure and a lack of information around cloud is hindering its adoption.** The Cloudcatalyst project will tackle this issue by providing useful tools to foster the adoption of cloud computing in Europe and to boost the European cloud market, according to Cordis, the European Commission's primary public repository that gives information about EU-funded projects. The project, which is funded by FP7 – the 7th Framework Programme for Research and Technological Development – will target all cloud players. These include software developers, members of the scientific community developing and deploying cloud computing services, incubators at the local, national and European levels, large industries, SMEs, startups and entrepreneurs. With a total budget of over €50bn, the project will primarily analyse practices across Europe and identify the conditions for a successful adoption. "We will cover all the main issues around cloud and give a clear overview on a number of topics, such as current cloud trends, critical success factors to overcome major technical barriers, data privacy and compliance requirements, and recommendations for quality of service and cloud SLA," said Dalibor Baskovc, vice-president at EuroCloud Europe, one of the project partners. We see cloud as an engine of change and a central ingredient for innovation in Europe Francisco Medeiros, European Commission The project will also create a series of tools to help stakeholders create value-added cloud products and services. These consist of the Cloud Accelerator Toolbox and the Go-to-the-Cloud service platform – a collection of management tools bundling together trend analysis, use cases and practical recommendations in the form of printable report templates and instructional videos. "The tools we are developing will help companies adopt and deploy cloud solutions, whatever their different needs and requirements are," said Baskovc. The project will also carry out a number of market surveys to gather key information and produce an overview of the cloud adoption status, such as why companies should develop cloud services, the main internal problems in adopting a cloud product, the associated risks and how these issues can be addressed. According to the European Commission, **cloud computing has the potential to employ millions in Europe by 2020. "We see cloud as an engine of change and a central ingredient for innovation in Europe,"** Francisco Medeiros, deputy head of unit, software and services, cloud computing at the European Commission told the Datacentres Europe 2014 audience in May this year. **"Cloud is one of the fastest-growing markets in Europe."**

PRISM is essential to development of EU leadership in cloud computing

Reuters 13 "Analysis: European cloud computing firms see silver lining in PRISM scandal,"

PARIS/LONDON | BY LEILA ABOUD AND PAUL SANDLE, Jun 17, 2013,

<http://www.reuters.com/article/2013/06/17/us-cloud-europe-spying-analysis-idUSBRE95G0FK20130617>

France has its "Sovereign Cloud" project while across the Rhine data firms have created the label "Cloud Services: Made in Germany", all trying to reassure big companies that their information is stored away from the prying eyes of U.S. spies. European firms believe revelations that the U.S. National Security Agency (NSA) has secretly gathered user data from nine big U.S. Internet companies, including Microsoft and Google, **will hand them a competitive advantage as they play catch-up with the dominant American players in "cloud computing".** Yet companies and individuals may have to accept that while storing and processing their most sensitive information on servers owned by Europeans and located

in Europe could keep it from the NSA's eyes, intelligence agencies closer to home may be looking anyway. "If you are going to have a Big Brother, I'd much rather have a domestic Big Brother than a foreign Big Brother," said Mikko Hypponen, chief research officer at internet security company F-Secure, which also offers cloud services with data stored in the Nordic countries. Cloud computing - an umbrella term for everything from web-based email to business software that is run remotely via the Internet instead of on-site - is being adopted by big companies and governments globally to cut costs and add flexibility to their IT departments. In a Normandy town nestled in a loop of the Seine river lies a huge new data centre, a part of France's Sovereign Cloud project that some in the industry once poked fun at as being out of step with the realities of the borderless Internet. Last year the French government ploughed 150 million euros (\$200 million) into two start-ups, including the data centre's owner Cloudwatt, to equip the country with infrastructure independent of U.S. cloud computing giants. Following the revelations that the NSA's PRISM program collected user data from the nine companies that also include Yahoo and Facebook, the French position now seems prescient to some people. "People are being spied on without their knowledge, and non-U.S. residents have no legal rights," said Philippe Tavernier of Numergy, another cloud-computing group that got state help. "We feel vindicated that our strategy is right." As European Union officials seek answers from the U.S. government on PRISM, technology executives, data protection regulators and analysts told Reuters the scandal may prove a turning point for the region's young cloud computing industry. European companies such as telecoms groups Orange and Deutsche Telekom are trying to exploit the concerns as they build their own cloud businesses. Government agencies and municipalities, especially in more privacy-conscious countries such as Germany, are more likely to turn to local alternatives for cloud services. Sweden recently banned Google Apps - cloud-based email, calendar and storage - in the public sector over concerns that Google had too much leeway over how the data was used and stored. "SOMEONE IS ALWAYS WATCHING" Similar changes could also gather pace in Asia where companies and regulators were already concerned about data security in the cloud before PRISM. A source at a major Chinese company that provides cloud infrastructure said governments were likely to impose stricter controls on where data was stored, although this would not be a panacea. "Frankly, wherever you put your data, someone is always watching. It could be the U.S., it could be China," he said. Some lawmakers in the European Parliament also want rules requiring companies undertaking cloud projects to protect European users' data better, and are using concerns around PRISM to lobby for their cause. They want supervisors or judges to oversee the transfer of personal data to overseas security services, and for customers of cloud companies to be able to opt out of their data being stored in the United States. Caspar Bowden, an independent privacy advocate and Microsoft's chief privacy adviser from 2002-2011, said that before the PRISM revelations the big U.S. cloud companies had been largely able to quell fears about data security with savvy public relations. "The headlines this past week will change all that. The nationality of the company and the location of the data do make a difference," he said. Even before PRISM, some companies abroad planning cloud computing projects were concerned about the powers given to U.S. intelligence agencies by anti-terrorism laws enacted after the September 11 attacks on the country: the 2001 Patriot Act and the 2008 Foreign Intelligence Surveillance Amendments Act (FISAA). A European Parliament body said in a report last year that FISAA granted the U.S. "heavy-caliber mass surveillance fire-power aimed at the cloud" and had "very strong implications on EU data sovereignty and the protection of its citizens' rights".

That revitalizes Europe's economy—endogenous cloud computing is comparatively better

Etro 11 Federico Etro is a Full Professor of Economics at the University of Venice, Ca' Foscari, where he teaches Macroeconomics. He previously taught at the University of Edinburgh and the University of Milan, Bicocca, "Understanding Cloud Computing Competition, Environment and Finance," November 24, 2011, <http://www.europeanbusinessreview.com/?p=3140>

Cloud computing is going to reshape business in Europe and worldwide. It has been defined by the US National Institute for Standards and Technology as "a model for enabling convenient, on-demand network access to a shared pool of configurable computing resources (e.g., networks, servers, applications and services) that can be rapidly provisioned and released with minimal management effort or service provider interaction." It is a general purpose technology able to improve productivity in all sectors and, at the same time, to have a positive environmental impact. Through cloud computing, firms will be able to rent computing power and storage from

a service provider, and to pay on demand, as they already do for other inputs such as energy and electricity

(the price of using a computer for a thousand hours is the same as that of using a thousand computers for one hour). This article examines some issues related to the diffusion of cloud computing: its general role in section 1, competition policy issues in section 2, environmental issues in section 3 and macroeconomic issues in section 4. Introduction A new general purpose technology such as cloud computing can provide huge cost savings and more efficiency in large areas of the private sector (especially in fields such as services and selected manufacturing sectors where ICT costs are relevant), and also of the public sector, including hospitals and healthcare, education and the activity of government agencies with periodic spikes in usage. Case studies in the private and public sectors suggest that cost advantages can be substantial. A few examples from a specific sector, the health sector, can exemplify the point (let us start from the most simple applications to move toward more relevant ones). One of the leading Italian hospitals, the Children's Hospital of Bambin Gesù in Rome, has recently switched to an online solution for the email services of its 2500 employees (the switch took place in 2010 in less than four months, created large cost savings and allowed IT specialists to focus on other more relevant tasks for the hospital). Similar experiences are planned by the USL of Asolo in Veneto, which is also trying to use cloud computing to help operative tasks. The Swedish Red Cross has improved the coordination of its intervention by adopting a cloud computing solution, which has reduced costs of about 20 % and enhanced communication in real time between its employers. A Russian cardiovascular centre, Penza, has adopted a cloud computing solution to coordinate activities, diagnosis and decisions on treatment and surgery between doctors around the country, with crucial gains for the patients. During the H1N1 pandemic, a global cloud computing tool was build and made available in a few days (based on the Microsoft's Windows Azure platform) to centralize and provide information on the diffusion of the flu. Cloud computing is currently developing along side few different concepts, focused on the provision of Infrastructure as a Service (IaaS: renting virtual machines), Platform as a Service (PaaS, on which software applications can run) or Software as a Service (SaaS: renting the full service, as for email). In preparation for its development, many hardware and software companies are investing to create new platforms that are able to attract customers "on the clouds". Cloud platforms provide services to create applications in competition with or in alternative to on-premise platforms, the traditional platforms based on an operating system as a foundation, on a group of infrastructure services and on a set of packaged and custom applications. The crucial difference between the two platforms is that, while on-premises platforms are designed to support consumer-scale or enterprise-scale applications, cloud platforms can potentially support multiple users at a wider scale, namely at the Internet scale. The introduction of cloud computing is going to be gradual. Currently, we are still in the middle of a phase of preparation with a few services that can be regarded as belonging to cloud computing, often derived from internal solutions (turning private clouds into public ones). Amazon Cloud Computing was launched in October 2006, IBM's Blue Cloud in November 2007, followed by cloud solutions by Google and Microsoft. Meanwhile, many large high-tech companies as Amazon, Google, Microsoft, Salesforce.com, Oracle and other CCP (Cloud Computing Providers) keep building huge data centres loaded with hundreds and thousands of servers to be made available for customer needs in the near future. Competition issues emerging from cloud computing Competition between CCPs is probably going to reshape the ICT market structure as PC distribution did in the 80s, with consequences also at the downstream level, that of the ISPs (Internet Service Providers). This may raise some concern for competition and for the consequences on the users of cloud services. Let us look at the upstream level. Notice that here, antitrust evaluation may concern a market definition ranging from the three separate aspects of cloud computing (IaaS, PaaS or SaaS) at national levels up to the general market for IT services at the global level, but we believe that the most relevant market definition would probably include the three forms of clouds at a supra-national level. Notice however, that in case of antitrust issues involving downstream companies, namely ISPs, market definition could be restricted to the national level, which is still the relevant one in each EU country for competition between telecommunication providers – see Sluijs, Larouche and Sauter (2011) for a detailed discussion. On one side, the strength of competition for the provision of cloud services suggests that multiple players (as those mentioned above and, possibly, others) would probably share the market for a while, avoiding excessive concentration. The importance of cloud computing in changing the prevailing business model in ICT is determining wide investments in innovation by these same players, therefore the ultimate success in the cloud business will be associated with the creation of superior technologies rather than with the exploitation of network effects or barriers to entry. On the other side, the development of alternative cloud computing solutions could create the risk of being locked-in for potential customers. To avoid this, it is important to promote, especially in this initial phase, agreements between public authorities and industry leaders on a minimum set of technological standards and process standards to be respected in the provision of cloud services to guarantee data security, privacy and portability.

However, the lack of scenarios with low concentration or dominance by a single CCP makes it difficult for interoperability problems to become crucial: a CCP offering services that have limited interoperability with the services of other CCPs would easily lose market shares. The environmental impact of cloud computing Besides economic gains, substantial positive externalities are expected from cloud computing because of energy savings: the improvement of energy efficiency may contribute to the reduction of total carbon emissions in a substantial way (currently, ICT contributes to 2 % of global CO₂ emissions). The costs savings associated with the new technology can improve the PUE (power usage effectiveness) of the datacenters, which is the ratio between the power drawn by the datacenter facility and the power delivered to hardware (the difference being used for cooling the IT equipment). This ratio is around PUE = 2 in the average datacenters (for every kWh of energy which is used to operate hardware, there is another kWh of energy used to cool the same hardware)¹, but it could go down to PUE = 1.1/1.2 with the outsourcing of certain activities to cloud computing solutions in separate datacenters, which can be built in colder regions (as they currently are in Ireland, Scotland and other cold EU regions) and with more efficient cooling systems (as in the Google's project of a submarine datacenter). In a recent

study on the environmental aspects of the move to cloud computing, Accenture (2010) estimates energy savings that are variable with the size of the organizations: up to 90 % for small ones with less than 100 users, between 60 % and 90 % for medium size organizations with up to 1000 users and 30-60 % for larger organizations with up to 10 thousand users: clearly this corresponds to large reductions in carbon emissions (by a third on average). Larger cost savings and environmental gains are expected from the adoption of cloud computing in SMEs. Beyond this, datacenters can be located in regions with low carbon emission factors. The gains can be larger (in terms of per-user energy use and carbon footprint) in case of small deployments, since these currently operate at low utilization levels (being idle during most of the day). Of course, cloud computing can also contribute to reduce the emissions of non-ICT processes through its indirect impact. Therefore, larger cost savings and environmental gains are expected from the adoption of cloud computing in SMEs, and the coordination of policies for accelerating its adoption could be fruitful.² The macroeconomic impact of cloud computing The first and most relevant benefit of cloud computing is associated with a generalized reduction of the fixed costs of entry and production, in terms of shifting fixed capital expenditure from IT into operative costs depending on the size of demand and production. This contributes to reducing the barriers to entry especially for SMEs, as the provider owns infrastructure, it does not need to be purchased for one-time or infrequent intensive computing tasks, and it generates quick scalability and growth. The consequences on the endogenous structure of the markets with largest cost savings will be wide, with entry of new companies, a reduction of the mark ups, and an increase in average and total production. In recent research (Etro 2009; Etro and Colciago, 2010), we have adopted a macroeconomic approach emphasizing the effects that this innovation has on the cost structure of the firms investing in IT and consequently the incentives to create and expand new businesses, on the market structure, on the level of competition in their sectors, and ultimately on the effects for aggregate production, employment and other macroeconomic variables.³ The diffusion of cloud computing could provide a substantial contribution to the annual growth rate, helping to create more than a million new permanent jobs. Our methodology is based on a DSGE calibrated model augmented with endogenous market structures in line with recent developments in the macroeconomic literature. This model includes a realistic structural change to the cost structure with the purpose of studying the short- and long-term reactions of the economy. Starting from conservative assumptions on the cost reduction process associated with the diffusion of cloud computing over five years, we have estimated that the diffusion of cloud computing could provide a positive and substantial additional contribution to the annual growth rate (up to a few decimal points), helping to create more than a million new permanent jobs through the development of a few hundred thousand new small- and medium-sized enterprises across the EU. Empirical exercises under different scenarios show a strong impact on the creation of new businesses, in the magnitude of a few hundred thousand within the EU. Moreover, the effect is expected to be deeper in countries where the diffusion of smaller companies is particularly strong or where IT adoption has been generally rapid.

Absent growth, euro falls apart

Economist 10/25 "The world's biggest economic problem," Oct 25th 2014,

<http://www.economist.com/news/leaders/21627620-deflation-euro-zone-all-too-close-and-extremely-dangerous-worlds-biggest-economic>

Now that German growth has stumbled, the euro area is on the verge of tipping into its third recession in six years. Its leaders have squandered two years of respite, granted by the pledge of Mario Draghi, the European Central Bank's president, to do "whatever it takes" to save the single currency. The French and the Italians have dodged structural reforms, while the Germans have insisted on too much austerity. Prices are falling in eight European countries. The zone's overall inflation rate has slipped to 0.3% and may well go into outright decline next year. A region that makes up almost a fifth of world output is marching towards stagnation and deflation. In this section The world's biggest economic problem Many winners, a few bad losers Call for help A light unto the Arab nations Keep open the gates Reprints Related topics Monetary Policy Recessions and depressions Economic policy Domestic policy United States Optimists, both inside and outside Europe, often cite the example of Japan. It fell into deflation in the late-1990s, with unpleasant but not apocalyptic consequences for both itself and the world economy. But the euro zone poses far greater risks. Unlike Japan, the euro zone is not an isolated case: from China to America inflation is worryingly low, and slipping. And, unlike Japan, which has a homogenous, stoic society, the euro

area cannot hang together through years of economic sclerosis and falling prices. As debt burdens soar from Italy to Greece, investors will take fright, populist politicians will gain ground, and—sooner rather than later—the euro will collapse. This parrot has ceased to be. Although many Europeans, especially the Germans, have been brought up to fear inflation, deflation can be still more savage (see article). If people and firms expect prices to fall, they stop spending, and as demand sinks, loan defaults rise. That was what happened in the Great Depression, with especially dire consequences in Germany in the early 1930s. So it is worrying that, of the 46 countries whose central banks target inflation, 30 are below their target. Some price falls are welcome. Tumbling oil prices, in particular, have given consumers' incomes a boost (see article). But slowing prices and stagnant wages owe more to weak demand in the economy and roughly 45m workers are jobless in the rich OECD countries. Investors are starting to expect lower inflation even in economies, such as America's, that are growing at reasonable rates. Worse, short-term interest rates are close to zero in many economies, so central banks cannot cut them to boost spending. The only ammunition comes from quantitative easing and other forms of printing money. The global lowinflation threat is a good reason for most central banks to keep monetary policy loose. It is also, in the longer term, a prompt to look at revising inflation targets a shade upwards. But the immediate problem is the euro area. Continental Europe's economy has plenty of big underlying weaknesses, from poor demography to heavy debt and sclerotic labour markets. But it has also made enormous policy mistakes. France, Italy and Germany have all eschewed growth-enhancing structural reforms. The euro zone is particularly vulnerable to deflation because of Germany's insistence on too much fiscal austerity and the ECB's timidity. Even now, with economies contracting, Germany is still obsessed with deficit reduction for all governments, while its opposition to monetary easing has meant that the ECB, to the obvious despair of Mr Draghi, has done far less than other big central banks in terms of quantitative easing (notwithstanding this week's move to start buying "covered bonds"). If there was ever logic to this incrementalism, it has run out. As budgets shrink and the ECB struggles to convince people that it can stop prices slipping, a descent into deflation seems all too probable. Signs of stress are beginning to appear in both the markets and politics. Bond yields in Greece have risen sharply, as support for the left-wing Syriza party has surged (see article). France and Germany are trading rhetorical blows over a new budget proposal coming out of Paris.

Eurozone collapse causes World War III

Gommes, 11 -- former Columbia Law Review senior editor Thomas Gommes, publisher of Periscope Post, former corporate lawyer, "Eurozone in crisis: The death of the euro could trigger World War III," 12-9-11, www.periscopepost.com/2011/12/eurozone-in-crisis-the-death-of-the-euro-could-trigger-world-war-iii/

Eurozone in crisis: The death of the euro could trigger World War III The slow-motion demise of the euro isn't just financial Armageddon – it could just be one step down the slippery path to World War III. At the risk of being accused of scaremongering, I'll state my point simply and up front: Things in Europe are not as bad as they seem – they're worse. And though the commentariat is queuing up to predict the imminent demise of the euro currency and to lament the ongoing recession, that's not even the half of it: We're looking at World War III. As major corporations start drawing up contingency plans for a world without the euro and as weaknesses in government finances become ever more glaring, the end of the euro currency becomes an increasingly realistic prospect. Related, the total absence of business growth, or trading among European nations raises the question of what benefits a unified trading block offers. The driving motive behind the original Coal and Steel alliance that ultimately became today's European Union was a desire among nations, traumatised by the worst war in their collective history, to provide a deterrent against another war. My concern is that that trauma has faded, and that the fear of war has been replaced by the fear of recession. As anyone with even a fleeting familiarity with European history can confirm, ours is not exactly a history of love and peace. In fact, the period since the end of World War II has been probably the longest period of relative peace the region has ever known. Arguably, it's no coincidence that that period of peace has coincided exactly with the ever strengthening ties that have been forged between European nations over these past 60 years. If the bonds that tie Europe an nations together are weakened, the incentives to avoid total war dwindle. And its not as dramatic or far fetched a theory as it may at first sound. The end of the euro currency and a reversion to national currencies could quite possibly provide the impetus for a further dissolution of the union. The unraveling of painstakingly negotiated ties becomes easier and easier as each strand frays and breaks. Combine this unraveling with an ongoing or even deepening recession, and it all makes for a combustible atmosphere. Unfortunately, it is human nature to blame others for our woes. In an environment of unemployment, austerity, and general resentment, it is not difficult to imagine

nations starting to point the finger at their neighbours. And without the unifying effect of a common currency, thriving trading relations, free movement of peoples, and common interests, Europe would find itself increasingly susceptible to war. Moreover, as so few Europeans in my generation, let alone subsequent generations, have even the slightest inkling about how horrific war is, it may be tempting to consider it as a solution to problems, or at minimum an acceptable response to perceived slights.

The EU is committed to cloud computing

Europa 2/27, (the official web portal of the European Union. It is intended to improve the public's interaction with EU institutions, "European Cloud Computing Strategy", Europa, 2/27/2015, <http://ec.europa.eu/digital-agenda/en/european-cloud-computing-strategy>) BBER

In September 2012, **the European Commission adopted a strategy for "Unleashing the Potential of Cloud Computing in Europe". The strategy outlines actions to deliver a net gain of 2.5 million new European jobs, and an annual boost of €160 billion to the European Union GDP** (around 1%), by 2020. **The strategy is designed to speed up and increase the use of cloud computing across all economic sectors. This strategy is the result of an analysis of the overall policy, regulatory and technology landscapes and of a wide consultation with stakeholders, to identify ways to maximise the potential offered by the cloud.** This document sets out the most important and urgent additional actions. It represents a political commitment of the Commission and serves as a call on all stakeholders to participate in implementing these actions. Working groups are already engaged on this. Cloud Computing Working Groups The strategy includes three key actions: Safe and Fair Contract Terms and Conditions The Commission's proposal for a Regulation on a Common European Sales Law addresses many of the obstacles stemming from diverging national sales law rules by providing contractual parties with a uniform set of rules. The proposal includes rules adapted to the supply of "digital content" that cover some aspects of cloud computing. **The aim of the cloud computing strategy is to develop model contract terms that would regulate issues not covered by the Common European Sales Law such as: data preservation after termination of the contract, data disclosure and integrity, data location and transfer, ownership of the data, direct and indirect liability change of service by cloud providers and subcontracting.** Identifying and disseminating best practices in respect of model contract terms will accelerate the take-up of cloud computing by increasing the trust of prospective consumers. Cutting through the jungle of Standards Cutting through the jungle of technical standards so that cloud users enjoy interoperability, data portability and reversibility is one of the aims of the strategy. **The Commission will work with the support of European Union Agency for Network and Information Security (ENISA) and other relevant bodies to assist the development of EU-wide voluntary certification schemes and establish a list of such schemes by 2014. The Cloud Standards Coordination holds regular meetings to support the cloud standardisation roadmap.** Establishing a European Cloud Partnership **The European Cloud Partnership (ECP) brings together industry and the public sector to work on common procurement requirements for cloud computing in an open and fully transparent way. The ECP Steering Board provided advice to the Commission on strategic options to turn cloud computing into an engine for sustainable economic growth, innovation and cost-efficient public and private services.** The public sector has a key role to play in shaping the cloud computing market. But with the public sector market fragmented, its requirements have little impact, services integration is low and citizens do not get the best value for money. Part of the ECP is the Cloud-for-Europe (C4E) initiative, aiming at helping Europe's public authorities procure cloud products and services, so as to build trust in European cloud computing. Find out more about the scope and aims of the European Cloud Partnership.

European Commission has commitment to developing cloud

Computer Weekly 13 "EC: Europe should become a 'trusted cloud region' in the post-Prism age," Archana Venkatraman, Datacentre Editor, 18 Oct 2013,

<http://www.computerweekly.com/news/2240207456/EC-Europe-should-become-a-trusted-cloud-region-in-the-post-Prism-age>

European cloud providers must turn the Prism surveillance revelations into a Europe-wide opportunity to build trusted cloud services for customers globally, the European Commission (EC) has said. According to the EC, Prism revelations could slow down the adoption of cloud computing services and Europe should build on its “relatively high standards” of data protection, security, interoperability and transparency of cloud services to become the world’s trusted cloud region. Earlier this year it was revealed that Prism is a programme that allows the US intelligence community to gain access from nine internet companies to a wide range of digital information on foreign targets operating outside the US. Its existence was revealed by whistleblower Edward Snowden. At that time, EC vice-president Neelie Kroes said US cloud service providers could suffer loss of business in light of revelations about the US National Security Agency’s (NSA) Prism surveillance system. In its latest memo, the EC said that as cloud users become more conscious of the need for cheap, flexible IT services, without wanting to compromise privacy, Europe should ride on its relatively higher standards of security and transparency to develop cloud services. Regional cloud providers to use the security, privacy and transparency standards to their competitive advantage and aim to make Europe the world’s most secure and trusted region for cloud computing European Commission The EC’s call for Europe to become a global cloud hub comes after it established a European Cloud Partnership steering board and discussed the possible fall-out of Prism revelations. The board members concluded that post-Prism, two issues must be addressed. One is that trust in cloud is suffering, which affects cloud uptake and results in Europe lagging behind in cloud computing adoption. Second, the Prism revelations have led to calls for national or regional cloud computing initiatives. Such fragmentation or segmentation of the cloud computing market along national or regional lines could unfortunately hold back the development of cloud computing in Europe, the EC warned. Addressing the concerns of European citizens, businesses and public administrations should be seen as an opportunity for the development of cloud computing in Europe. Tackling the current lack of regulatory consistency in particular could boost the competitiveness of the European economy.

AT: Squo solves Euro

Euro long-term trends show decline—12 year low

BBC News, '15, ("Euro hits 12-year low against dollar," BBC News, Business, 11 March 2015, <http://www.bbc.com/news/business-31833200>)/erg

The euro has fallen to its lowest level against the US dollar in 12 years after the European Central Bank (ECB) began its government bond buying programme. It fell as low as \$1.0560, before recovering a little. But many traders expect it may soon be worth the same as a dollar. The ECB began its latest round of quantitative easing (QE) on Monday. It will buy bonds worth €1.14tn over the next 18 months, flooding the market with euros. Traders have reacted to the ECB's latest round of QE by selling euros and buying other currencies such as US dollars. The US currency is appealing because the Federal Reserve looks to have completed its bond-buying programme. The euro started its slide against the dollar in July last year as traders reacted to the divergence in policy between the ECB and the Fed. The value of the euro has fallen 22.4% since 1 July, when a euro was worth \$1.37. Positive US data An upbeat US jobs survey released on Friday provided an additional boost to the dollar. "This opened up speculation again that the US will raise interest rates in June," says Jane Foley, senior currency strategist at Rabobank. This would attract foreign capital and boost the dollar. In the eurozone Greece's economic woes continue to put downward pressure on the euro, bringing it closer to dollar parity. The eurozone's growing current account surplus is encouraging Europeans to invest abroad causing the euro to weaken further, according to Deutsche Bank. Analysis: Andrew Walker, BBC Economics Correspondent It's what you expect when the economic performance of two currency blocs diverge in the way that the eurozone and the US have. The stronger growth in the US means higher interest rates, because the Federal Reserve will raise its own rates, perhaps later this year, and also because there is more demand for cash to fund investment. In Europe by contrast, the quantitative easing that is finally underway is driving down borrowing costs in the financial markets even further. The weaker euro is also what you want, at least if you are at the eurozone end of this exchange rate. Part of Europe's problem is weak demand for goods and services at home and the cheaper currency will make it a little easier to compensate for that by selling more abroad. null "The momentum is certainly building and there's a lot of talk of parity," says Ms Foley. "We now see euro-dollar moving down to \$1.00 by year-end, \$0.90 by 2016 and down to a trough of \$0.85 by 2017," said Deutsche Bank in a report published on Tuesday. While further devaluation of the euro should give businesses in the eurozone a boost, the pace of change may pose challenges for companies that need to plan ahead.

AT: Greece

Cloud computing solves the Greek crisis—revitalizes growth—that's Etro

Grexit doesn't matter—4 reasons

Financial Times 6/30/15 "Explainer: Why is the euro resilient?"

<http://www.ft.com/intl/cms/s/0/dc33777c-1e7e-11e5-ab0f-6bb9974f25d0.html#axzz3eZQseaHX>

How much of a threat does this all pose to the single currency? This is a club whose members are not meant to be able to leave. But those euro doom-mongers who expected the Greek crisis to send the single currency into freefall have (thus far) been brought up short. The euro may have dropped 1.5 per cent in Monday's initial reaction to the Greek banks shutting, but that loss was wiped out. So the currency market has come over all sensible, has it? There's a first time for everything (though this is not necessarily it). But what plausible explanations are there for the market's muted reaction? Lots of theories. One — Greece makes up only 1-2 per cent of the eurozone's gross domestic product and most of Greece's debt is borne by institutions, not private banks. So Greece's problems need to be put in perspective. Two — polls suggest Greece will vote on Sunday to accept the creditors' terms, pulling the country back from the brink. Three — even if the country votes "no", a deal could still be reached. Four — some traders think the single currency would be strengthened by Grexit, although that might put an unwelcome spotlight on so-called "periphery" eurozone members, such as Spain, Portugal and Italy. Those are the Greek-related theories.

No spillover—no downgrading and IPS are fine

*Italy, Portugal, Spain

The Australian 6/30/15—Australian paper of record. "Greek default won't hurt much despite market jitters," <http://www.theaustralian.com.au/business/opinion/greek-default-wont-hurt-much-despite-market-jitters/story-e6frg9wx-1227420724265>

Markets were roiled yesterday as Greece edged towards a financial abyss, but the truth is that the financial system is much better prepared to handle a Greek exit from the euro than it was five years ago when the eurozone crisis first hit. As the country prepares for a long economic winter, and a likely currency devaluation of 40-50 per cent that will trigger inflation and decimate savings, the spillover effects to other countries will be more limited than many fear. For a start, the structure of the country's debt has changed fundamentally. In 2010, 85 per cent of Greek debt was in private hands. The ratio has flipped since then, with governments and other institutions such as the International Monetary Fund and the European Central Bank holding 80 per cent of the debt as a result of massive bond purchases. Foreign banks, furthermore, held only \$US46bn (\$60.2bn) of Greek debt at the end of last year compared to \$US300bn in 2010, according to the central banks' club, the Bank for International Settlements. The prospect of those lenders suffering a wave of credit losses has been contained because the global credit rating agencies have confirmed they won't downgrade Greece to "selective default" if the government fails to meet its obligations in relation to €6.7bn in bonds with July and August maturities that are held by the ECB. That's because sovereign ratings relate to commercial creditors, not entities such as the ECB. Finally, the other troubled eurozone countries of Portugal, Italy and Spain are in much better shape than five years ago.

Market shifting away from US now – EU fill in is inevitable absent surveillance reform

Castro 13 (DANIEL CASTRO; Vice President of the Information Technology and Innovation Foundation and Director of the Center for Data Innovation; “How Much Will PRISM Cost the U.S. Cloud Computing Industry?” ITIF – Information Technology and Innovation Foundation; AUGUST 2013)

The recent revelations about the extent to which the National Security Agency (NSA) and other U.S. law enforcement and national security agencies have used provisions in the Foreign Intelligence Surveillance Act (FISA) and USA PATRIOT Act to obtain electronic data from thirdparties will likely have an immediate and lasting impact on the competitiveness of the U.S. cloud computing industry if foreign customers decide the risks of storing data with a U.S. company outweigh the benefits. The United States has been the leader in providing cloud computing services not just domestically, but also abroad where it dominates every segment of the market. In the 2013 Informa Cloud World Global Insights survey, 71 percent of respondents (of which only 9 percent were from North America) ranked the United States as the leader in cloud computing usage and innovation.¹ In this same survey, nine out of ten respondents linked cloud computing to their country’s economic competitiveness. But other countries are trying to play catch-up to the United States’ early success. Of the \$13.5 billion in investments that cloud computing service providers made in 2011, \$5.6 billion came from companies outside North America. ² Even national governments are helping to bankroll these efforts to combat U.S. market leadership—France, for example, invested €135 million in a joint venture in cloud computing.³ At stake is a significant amount of revenue. As shown in figure 1, the global enterprise public cloud computing market will be a \$207 billion industry by 2016.⁴ Europeans in particular are trying to edge out their American competitors, and they are enlisting their governments to help. Jean-Francois Audenard, the cloud security advisor to France Telecom, said with no small amount of nationalistic hyperbole, “It’s extremely important to have the governments of Europe take care of this issue because if all the data of enterprises were going to be under the control of the U.S., it’s not really good for the future of the European people.”⁵ And governments have begun to respond. In a 2012 policy document titled “Unleashing the Potential of Cloud Computing in Europe,” the European Commission (EC) called for a number of steps to promote cloud computing adoption in Europe, including creating pan-European technical standards, EU-wide certification for cloud computing providers, and model contract language.⁷ The Europeans are quite frank about their intentions. The EC notes “this strategy is about building a new industry, and better competing against the United States in particular.”⁸ Gartner estimates that in Western Europe alone the cloud computing market will be \$47 billion by 2015, and the EC estimates that European cloud computing providers stand to gain €80 billion in revenue by 2020.⁹ While much of this projected growth was until recently up for grabs by U.S. companies, the disclosures of the NSA’s electronic surveillance may fundamentally alter the market dynamics. Neelie Kroes, European Commissioner for Digital Affairs, stated the problem quite succinctly, “If European cloud customers cannot trust the United States government, then maybe they won’t trust U.S. cloud providers either. If I am right, there are

multibillion-euro consequences for American companies. If I were an American cloud provider, I would be quite frustrated with my government right now.”¹⁰ The impact of PRISM on U.S. companies may be particularly acute because cloud computing is a rapidly growing industry. This means that cloud computing vendors not only have to retain existing customers, they must actively recruit new customers to retain market share. Global spending on cloud computing is expected to grow by as much as 100 percent between 2012 and 2016, whereas the global IT market will only grow by 3 percent.¹¹ If U.S. companies lose market share in the short term, this will have long-term implications on their competitive advantage in this new industry. Rival countries have noted this opportunity and will try to exploit it. One tactic they used before the PRISM disclosures was to stoke fear and uncertainty about the USA PATRIOT Act to argue that European businesses should store data locally to protect domestic data from the U.S. government.¹² Reinhard Clemens, CEO of Deutsche Telekom’s T-systems group, argued in 2011 that creating a German or European cloud computing certification could advantage domestic cloud computing providers. He stated, “The Americans say that no matter what happens I’ll release the data to the government if I’m forced to do so, from anywhere in the world. Certain German companies don’t want others to access their systems. That’s why we’re well-positioned if we can say we’re a European provider in a European legal sphere and no American can get to them.”¹³ And after the recent PRISM leaks, German Interior Minister Hans-Peter Friedrich declared publicly, “whoever fears their communication is being intercepted in any way should use services that don't go through American servers.”¹⁴ Similarly, Jörg-Uwe Hahn, a German Justice Minister, called for a boycott of U.S. companies.¹⁵ After PRISM, the case for national clouds or other protectionist measures is even easier to make.

PRISM is accelerating the fracturing of the globalized internet—EU leadership

AWP 1/24 “More Cowbells: new NSA leaks reveal extent of spying tactics,” Associated Whistleblowing Press, January 24, 2015, AWP is a nonprofit organization dedicated to the defense of human rights by promoting transparency, freedom of information and speech, whistleblowing and investigative journalism, <http://roarmag.org/2015/01/nsa-leak-domain-name-system/>

Because of this, and thanks to the reckless exploitation of the network as a spying machine, the trend towards an Internet divided according to national interests is accelerating. In the future **there might not be one Internet, but many strategically separated internets.** Something similar is already a reality in countries like China and Iran, which have isolated their networks in order to control the flow of information and exercise censorship according to their own specific interests. Towards greater decentralization However, since the Snowden revelations caused a huge stir in international politics, the debate has opened up completely. “Brazil is in favor of greater decentralization: Internet governance must be multilateral and multisectoral with a broader participation,” Communications Minister Paulo Bernardo told a congressional panel in 2013, and other BRICS countries such as Russia have openly declared that they will start laying their own fiber optic cables. At the same time, Germany has proposed a closed system that protects European communications roughly along the lines of the Schengen agreement. Their argument is very logical: why does an email sent from Berlin to Paris have to pass through New York or London?

PRISM program is fracturing the globalized internet

Extreme Tech 13 “The NSA’s Prism leak could fundamentally change or break the entire internet,” Joel Hruska on June 10, 2013, <http://www.extremetech.com/computing/157761-the-nsas-prism-leak-could-fundamentally-change-or-break-the-entire-internet>

Most of the discussion of the NSA’s Prism program has focused on the domestic fallout, with some spillover into the question of what Google, Microsoft, Facebook and Apple did (or didn’t) do to safeguard user data when the NSA came knocking. There’s another facet to the issue that’s worth discussing, I think, even though it’s going to take months or even years to play out. The Prism leak could lead to fundamental changes in how the internet is controlled, administered, and routed. Despite the focus on domestic implications, Prism is a system specifically designed to eavesdrop on foreign Internet traffic flowing through the United States — the NSA even says so. Prism This leak is a colossal embarrassment for the United States. Every time the UN-backed ITU has raised the issue of a more global approach to internet governance, the United States has fired back with both barrels and a tactical nuke. Last December, the House of Representatives passed S. Con Res 50 by a vote of 397-0. The opening paragraph of that resolution declared it vital that the internet “remain stable, secure, and free from government control” and stated that the structure of internet governance “has profound implications for competition and trade, democratization, free expression, and access to information.” For a decade, the United States has fought to position itself as a neutral party that could be trusted to administer the internet in a manner that was beneficial to all parties. Now, the NSA has been caught gloating over the fact that internet traffic routing rules drive foreign data directly into its data centers by the truckload. Latin America, China, and to a much smaller extent, Europe, have precious little reason to trust the NSA and now, a great many reasons to guard their own digital borders. The question of whether the NSA actually did anything inappropriate is remarkably unimportant when there’s political hay to be made. So what happens next? Not every sea change kicks off with a trumpet fanfare and international brouhaha. If this had happened seven months ago, in the run up to the ITU’s latest vote on internet governance, it might have been a different story. As things stand, the short-term impact may be minor. Long-term, however, I think things will change. Internet routing map This slide shows the amount of internet traffic that passes through the United States or Canada from other major regions. The percentage of worldwide Internet traffic routed through the US has been falling for years as nations have brought their own IXPs (Internet Exchange Points) online – African traffic, for example, routes almost entirely through Europe. These trends could accelerate sharply now that Prism is in the limelight, either out of a genuine fear of US spying or because politicians see a handy opportunity to launch their own regional efforts and projects. Either way, the total amount of traffic routed through US servers is likely to decrease at an accelerating rate. The Prism disclosure could cause problems for the United States’ diplomatic efforts in other, seemingly unrelated areas. The ACTA (Anti-Counterfeiting Trade Agreement) treaty was narrowly defeated at the last minute, after the various member states of the EU raised concerns regarding the treaty’s negotiation process and copyright strong-arming. There’s a philosophical link between the idea that the NSA has the right to spy on foreign internet traffic and the treaty’s requirement that various EU member states agree to US-mandated copyright laws and the enforcement mechanisms those laws promote. Both the spy program and the treaty implicitly position the United States as the arbiter of legal rights in a manner that’s not subject to oversight from member states or its own citizenry. I wouldn’t be surprised to see foreign nations simultaneously boosting their own regional networks and tightening their data protection laws. The long-term impact on companies like Google or Facebook is unclear. It’s one thing to require Google Germany to comply with German privacy laws, but how would Google go about isolating email sent from a German user to a US citizen? Prism is designed to theoretically intercept such a missive — so what happens if Germany decides it doesn’t like that possibility? I honestly don’t know. It seems unlikely, however, that the status quo will continue. Nations that want to build their own spy systems and carry more traffic internally now have political cover to build the networks and blame Prism as the reason. Countries that were genuinely concerned about US overreach now have a concrete system to point to rather than a vague fear. Regardless of underlying motivation, there are precious few arguments for funneling traffic through the US.

Legal/structural constraints are NOT an issue—this ev addresses everything

O'Donoghue and Brimsted, '14, (Cynthia, leads the International Information Technology, Privacy & Data Security team and is a partner in the IP, Information & Innovation group and Kate, Counsel in the Data Privacy, Management and Security team and has more than 15 years' experience in commercial and contentious data privacy acquired at a major global law firm, where she led the global information governance practice, "European Union: European Commission Releases Cloud Computing Service Level Agreement," Mondaq, 23 July 2014, [//erg">http://www.mondaq.com/x/329758/Data+Protection+Privacy/European+Commission+Releases+Cloud+Computing+Service+Level+Agreements\)//erg](http://www.mondaq.com/x/329758/Data+Protection+Privacy/European+Commission+Releases+Cloud+Computing+Service+Level+Agreements)

Back in 2012, the European Commission ('Commission') adopted the Cloud Computing Strategy to promote the adoption of cloud computing and ultimately boost productivity. In June 2014, the Cloud Select Industry Group – Subgroup on Service Legal Agreements published Standardisation Guidelines for Cloud Service Level Agreements ('Guidelines') as part of this strategy. To achieve standardisation of Service Level Agreements ('SLAs'), the Guidelines call for action "at an international level, rather than at national or regional level", and cite three main concerns. Firstly, SLAs are usually applied over multiple jurisdictions, and this can result in the application of differing legal requirements. Secondly, the variety of cloud services and potential deployment models necessitate different approaches to SLAs. Finally, the terminology used is highly variable between different service providers, presenting a difficulty for cloud customers when trying to compare products. A number of principles are put forward to assist organisations through the development of standard agreements, including technical neutrality, business model neutrality, world-wide applicability, the use of unambiguous definitions and comparable service level objectives, standards and guidelines that span customer types, and the use of proof points to ensure the viability of concepts. The Guidelines also cover the common categories of service level objectives ('SLOs') typically covered by SLAs relating to performance, security data management and data protection. In particular, SLOs cover availability, response time, capacity, support, and end-of-service data migration, as well as authentication and authorization, cryptography, security incident management and reporting, monitoring, and vulnerability management. Some of the important data-management SLOs cover data classification, business continuity and disaster recovery, as well as data portability. The personal data protection SLOs address codes of conduct, standards and certification, purpose specification, data minimization, use, retention and disclosure, transparency and accountability, location of the personal data, and the customer's ability to intervene. The Commission hopes the Guidelines will facilitate relationships between service providers and customers, and encourage the adoption of cloud computing and related technologies.

Cloud computing offers huge gains—strategies can tackle legal standards

European Commission, '15, ("Cloud computing," DIGITAL AGENDA FOR EUROPE, February 27, 2015, [//erg">http://ec.europa.eu/digital-agenda/en/cloud#Article\)//erg](http://ec.europa.eu/digital-agenda/en/cloud#Article)

The next big evolution for the internet is cloud computing, where everyone from individuals to major corporations and governments move their data storage and processing into remote data centres. Cloud computing is where IT infrastructures, platforms and software are provided centrally and distributed to end users over a network. Centralising data storage and processing offers economies

of scale even the largest organisations cannot achieve by themselves. Cloud computing therefore represents considerable savings in IT budgets, and the end of headaches linked to older computing methods. Private sector businesses using cloud computing report 10-20% lower IT costs, while cloud computing can also help the public sector improve efficiencies and lower costs. Innovation would get a major boost, too, by offering research institutions much faster access to more data. Unsurprisingly, therefore, cloud computing is developing rapidly, from individuals using the cloud to store personal data to major companies who have moved much of their IT services into it. Recent estimates are that these developments could double the EU cloud sector's current revenues to nearly €80 billion by 2020. However, obstacles exist. The EU has therefore launched a three-pronged cloud computing strategy aiming to: cut through the jungle of different standards; identify safe and fair contract terms and conditions; establish a European Cloud Partnership, with the participation of public authorities and industry, to stimulate the take-up and effective use of cloud computing, particularly by Europe's public sector. Cloud computing can only work at EU-scale or greater, and demand for it will drive further investments in better networks. The cloud is the "killer app" for superfast broadband. On 11 September 2013 (calendar), we adopted a legislative package for a "Connected Continent: Building a Telecoms Single Market". The package could boost the cloud computing market in Europe, as, among others, it aims at improving the quality of service that new services (such as cloud computing, videoconferencing, 3D printing) can offer.

EC push solves

Reding, '13, (Viviane, Member of the European Commission responsible for Justice, Fundamental Rights and Citizenship, "Implementing the EU-Wide Cloud

Computing Strategy," Implementing the EU-Wide Cloud Computing Strategy, Government Gazette, March, 2013, http://governmentgazette.eu/wp-content/uploads/2013/GGMar13_CloudComputing.pdf//erg

Today, almost unlimited computing power is available on demand. Companies no longer need to make significant investments to meet their data storage needs. The Cloud is transforming business. **The Cloud is reality**. The Cloud forms an incredibly important part of the digital single market policy, one which will help to create growth and jobs. Europe needs to think big when it comes to cloud computing and the most efficient way to grow the market for everybody's benefit is through pan-European action. The actions proposed by Vice-President Neelie Kroes and myself in our Communication on Cloud Computing in September could mean an additional EUR 45 billion of direct spending on Cloud Computing in the EU. The cumulative impact on GDP could be EUR 957 billion and 3.8 million jobs could be created by 2020. The cloud strategy will create a friendlier environment for 24/7 access to computing power and content and boost a competitive digital single market where Europeans feel safe. The **Commission has thus proposed actions to cut through the jungle of technical standards so that cloud users enjoy interoperability, data portability and reversibility; develop an EU-wide certification scheme for trustworthy cloud services; and develop safe and fair contract terms and conditions in line with the Common European Sales Law. Consistent solutions will enhance trust and encourage a wide take up of cloud computing services. The lack of trust is indeed the biggest challenge today and we intend to tackle this problem above all with the ongoing reform of the EU's data protection rules**. The current data protection laws date back to 1995. The Internet stone age. Only 1% of Europe's population was using the internet and clouds were about saturated air. Since 1995, a new economy has emerged including innovative new services like the Cloud, and personal data has become a highly valuable asset. The data protection reform will allow this new economy to flourish. It establishes a single set of rules for the internal market. Companies will be able to do business in Europe's Single Market on the basis of just one law, instead of 27 different and often

contradictory ones. This will save companies around EUR 2.3 billion per year. Besides, the reform regulates transfers beyond the borders of the Union. Any data controller that offers goods or services to an individual residing in the EU will have to comply with EU rules, no matter where he is established in the world: the same rules will apply irrespective of where the data is stored and will thus facilitate the flow of data within the Cloud. The data protection reform also strengthens citizens' rights and puts people in control of their data: the new rules clarify the notion of consent and have introduced a general transparency principle. There is an obligation to notify clients of data breaches, which will apply to all sectors. The "Right to be forgotten" is an important pillar of the proposals. It empowers users, under certain well defined conditions, to ask a company to delete personal data they have given to it. And in case the rules are not enforced, we have introduced a one-stop-shop system. For the consumer, this means that they will always turn to their national data protection authority when they have a problem with a company – no matter where the company is based. They will not have to fight through the process of contacting authorities in different EU countries, riddled as it is with problems of different languages or procedures. We will make things easy for the consumer. The same un-bureaucratic one-stop-shop exists for companies as well. They will only have to deal with one data protection authority: in the country in which they have their main establishment. This cuts costs while increasing legal certainty. And we went even further in scrapping administrative ballast: no more obligations for companies to notify each and every time data is processed. Indeed, the key aim of our data protection reform proposals is to reduce administrative burden while increasing protection for individuals. It all does make economic sense. The Cloud will allow companies to cut costs. But the Cloud will not prosper if consumers do not want businesses to use it. Reliable, consistently applied rules make data processing safer, cheaper and inspire users' confidence. Confidence in turn drives growth. We want to bring Cloud services to new levels of competitiveness, performance and security, and a strong set of data protection rules is key. The rules we have proposed reflect the reality of the Cloud and cloud computing is an opportunity our economy cannot miss. We in Europe will harness the potential of the Cloud by taking the lead.

AT: Culture Alt Cause

Cloud computing overcomes small privacy concerns

O'Brien, '10, (Kevin J, Professor of Asian Studies and Professor of Political Science, Department of Political Science, "Cloud Computing Hits Snag in Europe," New York Times, SEPT. 19, 2010, [//erg](http://www.nytimes.com/2010/09/20/technology/20cloud.html?_r=0)

Facing legal obstacles in Europe, the U.S. businesses with the greatest stake in cloud computing — primarily Microsoft, Google, H.P. and Oracle — are lobbying lawmakers to loosen restrictions on cross-border data transfers. Alternatively, **some are developing new methods to make cloud computing work within Europe's complicated legal landscape.** Advertisement Continue reading the main story At the H.P. Labs in Bristol, England, researchers are devising ways to encrypt data before it is sent into a cloud computing center and then decrypt it after it leaves the cloud, thus addressing the privacy concerns of many European governments. Another solution being studied is to give individuals the ability in advance to set the degree of privacy control on each part of their personal information in the cloud by digitally tagging bits of the data. Under this model, a person could make an e-mail address available to marketers, while shielding a phone number and street address from unwanted solicitations. In that aim, H.P. plans to begin testing new software that complies with European privacy laws this year. Called H.P. Privacy Advisor, the software will handle the transfer of data between H.P. offices within Europe as well as to those outside of the Union. "The benefits and impact of the cloud are so great, and the legislative and technical issues are what they are at the moment," said Siani Pearson, one of H.P.'s lead researchers on cloud computing technologies at its laboratory in Bristol. **"But we can make sure that the benefits of the cloud come even within the existing framework."**

AT: Impossible

Cloud negotiations for Europe are already underway—huge potential and capability

MHP, '13, (“European Cloud Computing: Too Big To Fail?” MHP Communications, March 14, 2013, <http://www.mhpc.com/blog/european-cloud-computing-too-big-to-fail/>)///erg

Last week, representatives of the technology industry and European regulators (and this public affairs consultant) met in Brussels for the annual European Cloud Computing Conference. Among the discussion topics were entrepreneurship, digital skills, the internationalisation of the cloud and sustainability. Underpinning it all was a concern for privacy and data protection. This should not come as a surprise: the European Commission released its cloud computing strategy last year, and members of the European Parliament –as well as individual Member States- are debating the breadth and implementation of the long awaited reforms of EU data protection laws, which have not been changed since 1995. Officials and businesses agreed on the tremendous economic and productivity benefits cloud computing can bring to Europe (some experts have predicted that the diffusion of cloud computing will create up to a million new jobs in the coming years). But it seems that the EU also has too many barriers to cloud adoption, and needs to make a bigger effort to promote cloud knowledge generally and digital skills in particular. (The European Commission –having pre-empted these criticisms- launched its Grand Coalition for Digital Jobs three days before the conference) The importance of cloud computing in Europe was summed up by a Dutch panellist: “We all know that some banks are too big to fail. But are some cloud providers too big to fail?” Some participants at the Cloud Conference called for better international standards to regulate the cloud on a broad scale, whilst others argued that Europe needs to model itself on Japan if it wants to become a respected tech market. With EU-US trade negotiations due to kick off soon, both have been developing parallel policies to strengthen not just the cloud, but also privacy and cybersecurity. The OECD believes that the EU’s data protection legislation will provide impetus to the trade deal (although one can also argue that the reverse is true: that the prospect of a US trade deal will motivate European politicians to quickly revise and adopt the data protection reforms).

EU collapse causes global war

Adams 3/23, (Mike, expert on technology – background in science and software technology, Adams is the original founder of the email newsletter technology Arial Software- founding editor of NaturalNews.com - executive director of the non-profit Consumer Wellness Center, “Why Greece is the lynchpin that could unleash economic collapse, domestic martial law and global war”, Natural News, 3/23/2015,

http://www.naturalnews.com/049094_Greece_European_Union_economic_collapse.html#)

BBer

I wish I could download to your brain everything you need to know about the European Crisis unfolding right now. **The possibility of the breakup of the European Union could be the spark that sets off the global debt implosion that leads to violent conflict across the globe**. The actions of Greece, it turns out, could set off a chain reaction that leads directly to a Wall Street panic and the "bail-in" seizure of your savings accounts at your favorite hometown bank. **It could also radically destabilize Eastern Europe, heightening the risk for conflict between Russia and Western European nations** (including NATO members like the United States). To understand why this is, we first need to grasp the basics of European history. The average American, unfortunately, knows virtually nothing about European history. But that might be asking too much, since the average American also knows nothing about American history, either. Fortunately, this article is written for exceptional Americans who are far better informed than the average Joe. What most Americans don't realize is that **Europeans have very long memories of crimes against their people. These memories are passed down from generation to generation and can't simply be greenwashed out of the history books.** The European Union was formed on the hope and assumption that people from an incredibly diverse array of cultural backgrounds might forgive the past and surrender to cultural homogenization as "Europeans." But the hope turned out to be false. **The people of Greece in 2015 still remember the crimes of Nazi Germany from 1943, even long after they have been officially absorbed into the European Union. And now that memory may very well result in the shattering of the European Union itself. If the European Union crumbles, Europe will see a wave of regional wars breaking out over so-called "borderlands" and strategic nations like Ukraine. The fall of the European Union, in fact, would likely embolden Russia to be even more assertive in the Ukraine as it attempts to defend itself from America's ever-encroaching military bases which now occupy most of Russia's border states.** (Why did Putin put his country so darn close to all our military bases? Geesh...) **Russia, you see, must maintain strategic control over these border states in order to export its primary resource: energy. Germany, meanwhile, must maintain strong economic ties with wealthy nations that can afford to import Germany's high cost value added exports -- the backbone of the German economy. A shattering of the European Union would destabilize both Germany and Russia for these two reasons (exports of energy and exports of manufactured goods), reigniting the same sort of fears and insecurities that drove the German invasion of Russia in World War II. That invasion was a strategic move to occupy Stalingrad not for the city itself, but because the city was a gateway to the enormous energy and strategic resources of Mother Russia, which Hitler needed to fuel his thirsty war machine. NATO and Germany are militarily weak Today, Germany has no military to speak of. Russia, on the other hand, is re-emerging as a very powerful military force with considerable leverage throughout Western Europe due to its energy pipelines.** NATO, meanwhile, exists in name only and is primarily backed by the threat of military force from America, a nation bogged down in endless (and pointless) military action in the Middle East. While America was defusing roadside bombs

in Afghanistan, Russia was busy occupying the "strategic high ground" of the North Pole, as described in this article by Dave Hodges. **This places Russia in a position where it can credibly threaten all of Western Europe and North America with nuclear strikes** (if it ever comes to that). Russia, too, is populated by strong, rugged, durable people who are used to surviving with little in the way of material goods. They can endure war far more readily than wealthy, pampered nations like America or the UK. As a matter of record, young Americans are now so obese that even the U.S. military must reject almost a quarter of all applicants due to excessive body weight. **Economic warfare will likely precede military warfare** On the economic side, Russia has joined forces with China to erect its own alternative to the SWIFT inter-bank money transfer system. China has been accumulating a massive amount of gold reserves to back its currency, while Russia has been selling off the U.S. dollar and bypassing western sanctions in creative ways by selling energy in exchange for physical gold. The dollar itself is headed for a global collapse for the simple reason that it isn't backed by anything other than (dwindling) faith. President Nixon removed the gold backing of the dollar in 1971, and ever since, America has been headed toward a day of reckoning where the dollar would eventually collapse as all fiat currencies do. Faith in the dollar is eroding by the day as the Fed keeps printing more money, diluting the existing money supply and silently stealing wealth from those people foolish enough to still be holding dollars when the music stops (i.e. all U.S. wage earners and taxpayers). Fort Knox, meanwhile, isn't filled with gold but rather IOUs. Most of the physical gold has been quietly but diligently accumulated by China over the last two decades. **The stage is now set for a global economic war aimed at America and the dollar hegemony** I'm barely touching the highlights of the global dynamics at play here, but what's really taking shape is a global economic and military war, waged by China and Russia against the Western powers of the United States, NATO, the European Union and Germany in particular. Greece now plays the role of the lynchpin in all this, as its exit from the European Union could loosen the knot that unravels the empire of debt upon which Western nations are now based. **An economic implosion leads to systemic weakness which invites more aggressive economic warfare actions on the part of Russia and China.** If a combined economic action by Russia and China were to take place -- for example, China announcing a fire sale of U.S. debt while Russia cuts off energy supplies to Western Europe -- **the economic implications for Europe and America would be beyond catastrophic. They might be terminal.** We would see the U.S. government, for example, instantly unable to sell any new debt to foreign nations. The only option is to print more money to finance the debt -- a form of economic suicide -- and with the loss of the dollar's global currency reserve status, this would lead very quickly to accelerating money debasement and price hyperinflation in consumer goods. Think Venezuela: price controls, biometric scanning requirements to purchase groceries. Armed guards at grocery stores. Food shortages, street riots, etc. It wouldn't be long before the U.S. government would be forced to stop funding entitlement programs such as EBT cards and pensions. This would almost immediately lead to massive riots in the streets and the wholesale destruction of large cities such as St. Louis and Chicago. From here, it gets even uglier with declarations of Martial Law, the suspension of the Bill of Rights, and the military occupation of America's cities in order to maintain order. The problem with all entitlement-based Western nations (including America) is that sooner or later you run out of other people's money. When that day of reckoning comes, the population that has come to depend on entitlements for day-to-day existence finds itself abandoned by the very government that promised to take care of them. Chaos ensues. This all explains why Germany and the United States are desperate to prevent the breakup of the European Union and the continued illusion of economic stability. As Germany is now discovering to its horror, the problem with debt is that sooner or later you have to repay it. But all **the Western governments of the world have accrued far more debt than they can ever repay, and the collapse of the European Union would savagely reveal those debts.** If there's one thing America, the UK and the

European Union cannot handle right now, it's debt transparency. The day the truth about debt and spending becomes widely acknowledged, faith in the dollar collapses and the world nosedives into a tailspin. Watch Greece carefully, for your own future depends strongly on what happens there.

Euro collapse causes EU collapse – ensures war – their defense doesn't apply

Van de Velde and Wadhwa 13 (Antonia van de Velde; journalist at CNBC; and Silvia Wadhwa; German financial journalist currently working for CNBC Europe; "Euro Collapse Could Lead to War: Polish FinMin" CNBC; September 16, 2011; <http://www.cnbc.com/id/44535393>)

A collapse of Europe's monetary union would likely lead to a breakup of the European Union as a whole, posing significant risks to the region and even raising the possibility of war in the long term, Poland's Finance Minister told CNBC late on Thursday. "If the euro zone were to fall apart then it's hard to exclude the possibility of EU falling apart as well," Polish finance minister Jacek Rostowski said in an interview. "The EU has been one of the two great pillars of European peace and security of the past 60 years," he said. "Therefore the danger in a longer-time horizon, in 10-20 years, in the absence of one of the key elements of our security system and one of the key elements of our political system, which ensures we deal with problems in this peaceful, democratic way we've developed, the risk of all sorts of authoritarian political movements, and therefore even war, in the long horizon, rises," he said. On Friday, Treasury Secretary Timothy Geithner will join EU finance ministers at a meeting in Poland, which holds the rotating EU presidency, to urge them to take decisive action in response to the euro zone debt crisis. Poland joined the European Union in 2004, but has not adopted the euro. "I think a lot has been done and a lot is on its way," Rostowski said of the meeting of EU finance ministers on Friday and Saturday. He said the intervention on Italian and Spanish bond markets by the European Central Bank had been "very courageous but also necessary and essential and correct."

AT: Euro Resilient

Not resilient – collapse spreads through strong economies – ensures bank failure

Praet 13 (Peter Praet; executive board member and chief economist of the European Central Bank; “Economic, financial and monetary stability in Europe: reinforcing our policy instruments” Bank for International Settlements; BIS Paper No 59. Dec 9, 2011)

The impact of a banking crisis – even of a large, cross-border nature – ultimately has to be absorbed by national budgets. The euro area has so far lacked integrated regulatory, supervisory and resolution institutions for the financial sector at European level. Such Europe-wide institutions could mitigate the risks of the link between multinational banking systems and public finances by closer and better regulation and supervision of systemically important financial institutions. More fundamentally, there is an urgent need for a European resolution framework. Fragile public finances can also have serious implications for the stability of the financial sector. Public debt is commonly held as a low-risk asset by financial institutions and it is also used as collateral in refinancing operations, for example. When the financial markets doubt the sustainability of public debt, the liquidity and even the solvency of financial institutions can deteriorate, in turn potentially destabilising the financial sector. Operating under such forms of “fiscal stress” can also put a central bank in a difficult position. If in a situation of sustained financial instabilities stemming from distressed financial institutions or sovereigns, **the delegation of fiscal tasks to monetary policy endangers the central bank’s primary mandate of ensuring price stability. A central bank may find itself overburdened with the task of providing sufficient liquidity to the financial sector on the one hand, and maintaining sufficient independence and operational capability to ensure price stability on the other hand.** In the long run, the credibility of the central bank’s commitment to price stability may be called into question. Thus, to avoid the build-up of excessive risks on the central bank’s balance sheet and to avoid the creation of adverse incentives in the financial markets, all non-standard measures by a central bank must remain exceptional and temporary. Moreover, the support of insolvent financial institutions or sovereigns is clearly a task for fiscal authorities, not the central bank. In the euro area, the ECB accordingly lends to its counterparties against “adequate collateral” in accordance with Article 18.1 of its Statute in order to ensure protection of the Eurosystem from losses in the conduct of credit operations. If the adequacy of the sovereign collateral is called into question, however, this would make it difficult for the central bank to perform its role of providing sufficient liquidity to the financial sector.

Turns US Econ

European econ k2 us econ

Beck 8 (Rachel, staff writer, "Slowing European economy could dent U.S. corporate profits", New York Times, 6/2/2008, http://www.nytimes.com/2008/06/02/business/worldbusiness/02iht-euecon.4.13403659.html?_r=0) BBer

U.S. corporate profits fueled by international sales could quickly disappear if the European economy begins to falter, stripping many multinational companies of a huge source of earnings growth. **Europe accounts for almost half of U.S. companies' foreign sales**, according to Citigroup. "Investors tend to think of China and India when they hear about international sales," said Tobias Levkovich, chief U.S. equity strategist for Citigroup. "They don't recognize how much comes from Europe." This is where the popular "decoupling" investment strategy starts to show some cracks. **In recent years, investors have been attracted to companies with ties to faster-growing global markets, because they think their performance will hold up even if the U.S. economy does not.** That effort has paid off: Corporate profits earned abroad jumped 45 percent in 2007 and were expected to climb another 25 percent this year, Citigroup predicted. At the same time, U.S. profits earned domestically turned negative in the third quarter of 2007. McDonald's international operations, for example, drove a 24 percent rise in the company's quarterly operating profit. Sales at European restaurants open at least a year were up 11.1 percent, compared with a 2.9 percent gain in the quarter in same-store sales for the chain's U.S. operations. **U.S. companies with big foreign exposure are also more likely to surpass their earnings estimates.** About 57 percent of a sample of 450 companies from the Russell 1000 stock index exceeded earnings-per-share estimates. Of that group, the 95 companies deriving more than half their revenues outside the United States exceeded estimates about 68 percent of the time, compared with a 46 percent rate for those with no international sales, according to Bespoke Investment Group. **With the European economy possibly slowing, those kind of results could be under threat.** Citigroup economists expect 1.4 percent growth in European gross domestic product in 2008, down from 2.6 percent in 2007. The bank says European earnings growth expectations have shifted from gains of about 9 percent in October to under 2 percent today. That deceleration could come should the euro - **the currency for 13 European countries - retreat against the dollar because its relative strength has pressured European exports. In recent years, the weak dollar has helped the earnings of exporters and U.S. multinational companies because their goods are less expensive abroad.** At the same time, credit conditions have begun to tighten in Europe just as they have in the United States, and the European Commission's monthly survey of economic sentiment dropped unexpectedly in April to its lowest level since August 2005. Inflation levels are also mounting, with European consumers, like their U.S. counterparts, feeling particularly pressed by the rising costs for oil and food. But unlike the U.S. Federal Reserve, the European Central Bank is refusing to lower interest rates amid mounting inflationary pressures. **If European economic conditions do falter**, Citigroup estimates that the **large- and mid-cap stock sectors hardest hit will be household and personal products, autos and components, and consumer durables and apparel, which each derive more than 20 percent of their sales from Europe.** Those are many of the sectors already suffering from sliding consumer confidence at home. **A pullback would also affect already battered large financial services companies**, including Morgan Stanley and Merrill Lynch, which have been plagued over the past year by large losses in their debt-related assets. **Technology firms**, including Sun Microsystems, Apple, Microsoft and Yahoo, **also have significant European exposure**, Citigroup said.

Turns Global Econ

An economic collapse in Europe would destroy the EU and disrupt the global economy

Buiter 11, (Willem, chief economist – Ph.D. in economics with distinction dissertation, “The terrible consequences of a eurozone collapse”, Financial times, 12/7/2011, <http://www.ft.com/cms/s/0/6cf8ce18-2042-11e1-9878-00144feabdc0.html#axzz3eVzTK000>)
BBer

What happens if the euro collapses? **A euro area breakup, even a partial one involving the exit of one or more fiscally and competitively weak countries, would be chaotic. A full or comprehensive break-up, with the euro area splintering into a Greater Deutschmark zone and about 10 national currencies would create pandemonium. It would not be a planned, orderly, gradual unwinding of existing political, economic and legal commitments.** Exit, partial or full, would likely be precipitated by disorderly sovereign defaults in the fiscally and competitively weak member states, whose currencies would weaken dramatically and whose banks would fail. If Spain and Italy were to exit, there would be a collapse of systemically important financial institutions throughout the European Union and North America and years of global depression. Consider the exit of a fiscally and competitively weak country, such as Greece – an event to which I assign a probability of about 20-25 per cent. Most contracts, including bank deposits, sovereign debt, pensions and wages would be redenominated in new Drachma and a sharp devaluation, say 65 per cent, of the new currency would follow. As soon as an exit was anticipated, depositors would flee Greek banks and all new lending governed by Greek law would effectively cease. Even before the exit, the sovereign and the banking system would fail because of a lack of funding. Following the exit, contracts and financial instruments written under foreign law would likely remain euro-denominated. Balance sheets would become unbalanced and widespread default, insolvency and bankruptcy would result. Greek output would collapse. FirstFT is our new essential daily email briefing of the best stories from across the web Greece would temporarily gain a competitive advantage from the sharp decline in the new Drachma’s value, but like Portugal, Spain and Italy, Greece does not have the persistent nominal rigidities to make it a lasting competitive advantage. **Soaring wage and price inflation would restore the uncompetitive status quo. Without external funding, imports would collapse, disrupting domestic production. Aggregate demand and aggregate supply would chase each other downwards.** If Greece storms out of the eurozone there might be little fear other countries would follow suit. However, if Greece is pushed out of the eurozone because other member states refuse to fund the Greek sovereign and the European Central Bank refuses to fund Greek banks, the markets could beam in on the next most likely country to go. This could prompt a run on that country’s banks and stop funding for its sovereign, financial institutions and companies. Fear might actually then force the departure of the afflicted country. Exit contagion might sweep right through the rest of the eurozone periphery – Portugal, Ireland, Spain and Italy – and then begin to infect the “soft core” of Belgium, Austria and France. A disorderly sovereign default and eurozone exit by Greece alone would be manageable. Greece accounts for only 2.2 per cent of eurozone area GDP and 4 per cent of public debt. However, a disorderly sovereign default and eurozone exit by Italy would bring down much of the European banking sector. Disorderly sovereign defaults and eurozone exits by all five periphery states – an event to which I attach a probability of no more than 5 per cent – would drag down not just the European banking system but also the north Atlantic financial system and the internationally exposed parts of the rest of the global banking system. **The resulting financial crisis would trigger a global depression that would last for years, with GDP likely falling by more than 10 per cent and unemployment in the West reaching 20 per cent or more. Emerging markets would be dragged down too. Exits by** Germany and other fiscally and competitively **strong countries could be even more disruptive.** This might occur amid attempts to introduce a one-sided fiscal union with open-ended and uncapped euro-bonds or other transfers from the strong to the weak without a corresponding surrender of fiscal sovereignty to prevent future crises or if the ECB were to “go Weimar”. I consider this highly unlikely, with a probability of less than 3 per cent. Following such an

exit, Germany and the other core eurozone member states (perhaps excluding France) would introduce a new Deutschmark. The sovereigns in the periphery would default. The new Deutschmark would appreciate sharply. Financial institutions in the new area would have to be bailed out because of losses from exposure to the old periphery and the soft core. As nothing would be holding the remaining eurozone countries together, the rump would split into perhaps 11 national currencies. The legal meaning and validity of all euro-denominated contracts and instruments would be up for grabs. Everyone, except lawyers specialising in the Lex Monetæ, would become much poorer. Even if a break-up of the eurozone does not destroy the EU completely and **precipitate the kind of conflicts that disfigured the continent in the past, the case for keeping the show on the road seems rather robust.**

Elections DA JDI

1NC

Despite recent dips in polling, Hillary still positioned to win.

Bouie, 6/4. Janelle, Slate, 2015. "Democrats, Don't Freak Out! Hillary [Clinton's poll numbers were always going to fall a little. That doesn't change anything.](#)"

http://www.slate.com/articles/news_and_politics/politics/2015/06/hillary_clinton_s_poll_numbers_have_fallen_democrats_should_n_t_be_worried.html

George W. Bush is popular again. According to a new poll from CNN, the majority of Americans—52 percent—have a "favorable" view of Bush, versus 43 percent who still aren't keen on the former president. And while he isn't as popular as his post-presidential peers—including his father—he's in far better shape than he was during his final days in office, when most Americans disliked and disapproved of his administration. But more striking than this is his stature versus the current president, Barack Obama. In addition to their survey on Bush, CNN also finds that the 43rd president is more popular than the 44th, who is as liked (49 percent approval) as he is disliked (49 percent disapproval). Conservatives, no surprise, are thrilled. But before touting these numbers as proof of Bush's ultimate success—and Obama's clear failure—they should consider this fact of public opinion: Richard Nixon and Lyndon Johnson aside, every president becomes popular, or at least more popular, out of office. Jimmy Carter was so unpopular he faced a powerful Democratic opponent to his re-election campaign and lost the general election in a popular and electoral vote landslide. But 35 years later, his favorable/unfavorable spread is also better than Obama's. The other one-term president of the past generation, George H.W. Bush, has also recovered from his prior unpopularity. On the eve of the 1992 election, his approval rating was 43 percent. Today, 63 percent of Americans have a favorable view of the elder Bush, versus 31 percent who still aren't convinced. Likewise, Bill Clinton was popular throughout his eight years—with an average approval rating of 55 percent—and has become more popular as his tenure has moved to memory. According to Gallup, he has an average post-presidential rating of 60 percent. Put bluntly, George W. Bush's popularity isn't news, although it would be if, after seven years of a quiet post-presidency, Bush was still as hated as he was at the end of 2008. With that said, what's striking about the rehabilitation of Bush is that it's concurrent with Hillary Clinton's return from the stratosphere of public opinion. At this time four years ago—when she was chief diplomat and the 2012 election was still in the distance—Clinton was among the most popular figures in the country with a favorable rating of 60 percent. Indeed, just 31 percent of Americans held an unfavorable view of her. She was less popular in 2012, but not by much; the atmosphere was partisan, but not so much that it hurt her standing. That changed in 2013, as she slid from a 56 percent favorability rating in January to 48 percent one in December. And her numbers fell further in 2014, from a high of 50 percent to just under 47 percent at the end of the year. Her recent decline—as well as her higher unfavorables—are part of the same trend. Through 2012, less than one-third of respondents had a poor view of Hillary Clinton. By last month, the anti-Hillary crowd had grown to almost 47 percent of Americans, inching out her supporters. For the media, this reflects scandal. Between the email controversy, foreign donors, and the Clinton

Foundation, the public is already weary from Hillary's baggage. At the same time, those are relatively young stories—they've only been in the news a few months. [If you want to understand the broad trend of Clinton's decline, you have to look at her position: She was outside of politics.](#) As she's gone from a

potential candidate to a live one, Clinton's popularity has climbed down from the stratosphere. By leaving domestic politics after the 2008 election, Clinton entered a sort of post-presidency, not dissimilar to Bill Clinton's or even George W. Bush's. In public life, but out of the spotlight, she was no longer a partisan figure, which—for Democrats, Republicans, and independents alike—made her palatable. She wasn't, to borrow from the New Republic's Rebecca Traister, asking for anything. Now she is. And as she's gone from a potential candidate to a live one, her popularity has climbed down from the stratosphere. Now, she's back to where she was in 2007—a well-known and polarized politician with tremendous opposition on the right and substantial support on the left. Like Bush, her journey through public opinion has less to do with her and everything to do with her place in the political firmament. There is one difference. When he left office, Bush was genuinely unpopular, so much so that—four years later—a majority of voters still blamed him for the country's poor economic conditions. For as much as Republicans might celebrate his present standing, I'd be shocked if they asked him to campaign for the eventual nominee. Americans have warm feelings for the former president, but that sentiment wouldn't survive the scrutiny of a campaign. She never has been all that likable. Take a look at that recent video of her telling an autograph seeker to get in the back of the line. Her husband would never have done that. More... Clinton didn't leave on a high, but she didn't leave on a low either.

[When Obama claimed victory in the Democratic primary, 48 percent of Americans had a favorable view of Clinton. Which means that, with her current ratings, she's returned to her norm as a partisan figure. And it's a good one.](#) By 2009, that 48 percent had become 50 percent as Democrats forgave and forgot the combat of the previous year. In the same

way, the secret of her present decline is that it's driven by Democrats, who will return to the "team" as the country enters election season. [Despite everything, Hillary is in good shape](#) if you aren't convinced, consider the reverse scenario. Imagine that the Republican Party had a former senator turned presidential candidate turned secretary of state, who at best pulled a plurality of all voters, and who at best pulled a firm majority. Would the GOP reject her, or would they immediately embrace her standard, confident that—even with the inevitable scandals and criticism—[they're still positioned for victory.](#)

Issues get spun as "Obama part 3"

Jackson 4/10 (David Jackson, "Hillary Clinton's test: A third straight Democratic term," 4/10/15, <http://www.usatoday.com/story/news/politics/elections/2015/04/10/hillary-clinton-third-democratic-term/25512195/>)/JHH

Starting in 1896, three Republicans — William McKinley, Theodore Roosevelt and William Howard Taft — won four straight presidential elections. Democrat Woodrow Wilson ended that string of GOP dominance by winning the election of 1912, a race that included both Taft and the by-then independent Roosevelt. ¶ Americans went back with the Republicans after eight years of Wilson. The Roaring Twenties saw three more consecutive GOP wins: Warren Harding in 1920, Calvin Coolidge in 1924 and Herbert Hoover in 1928. ¶ [Not unlike Nixon and Eisenhower, Humphrey and Johnson, Gore and Bill Clinton, and McCain and Bush, Hillary Clinton will be linked with President Obama if she runs in 2016, for better or for worse.](#) ¶ Some [Republican candidates are already arguing that a Clinton victory would mean a "third Obama term."](#)

Hillary only wins if she avoids controversial issues- the plan forces her out of the political center.

Grunwald, 6/22. Michael, Politico, 2015. "Hillary the populist." <http://www.politico.com/agenda/story/2015/06/hillary-the-populist-000085>

[One thing to remember about populism: It's popular.](#) It tends to go over well with the populace. So while Hillary Clinton's first big campaign speech Saturday could be accurately described as liberal populism, she wasn't exactly veering to the left or simply pandering to her base. The liberal policies that she championed on Roosevelt Island were the liberal policies with broad appeal to the center as well, the liberal policies that Americans tend to like more than they like "liberalism." That's certainly not true of all liberal policies, but Clinton mostly ignored the less popular ones. At times, she sounded left-leaning general themes that have come to poll well across the political spectrum: shared prosperity, economic fairness, investments in people, aid for distressed communities, equality for gays and lesbians, the unfairness of overpaid CEOs and Wall Street malfeasance and billionaires buying elections. She name-checked the Children's Defense Fund, renewable power, Franklin D. Roosevelt and other leftist things that evoke positive reactions in focus groups. But [Clinton also pledged to champion a slew of specific left-](#)

leaning policies, including universal pre-kindergarten, paid family leave, an infrastructure bank, universal voting registration, a higher minimum wage, equal pay for women, tax penalties for companies that “stash profits overseas,” more government spending—well, “public investments”—on science and research, and increased aid for the mentally ill. **None of those were exceptionally bold stands to take. Most Americans like that stuff. They like the goodies that big government provides,** even if they don't like big government, and they like the idea of taxing and regulating what FDR would have called “malefactors of great wealth,” even if they don't like the idea of taxes and regulations. It's true that there was no Sister Souljah moment, no rebuke to the left. She did not echo her husband's warning that “the era of big government is over.” **She did not embrace** President **Obama's** education reforms, which Democratic teacher's unions hate, and she certainly did not embrace Obama's crusade for a free-trade deal with Asia, which progressive activists of all stripes have been fighting. **Then again, she didn't denounce Obama's** education **reforms** or free-trade push, either. She just didn't discuss them. **She didn't discuss NSA surveillance or gun control or welfare or carbon regulations, either. What she did discuss were the least popular elements of the modern Republican agenda:** tax cuts for the rich, climate change denial, opposition to gay marriage and Wall Street reform. She didn't mention Obamacare, which polls badly, but she did attack Republicans for trying to take away health insurance from newly covered Americans, which polls even worse. It was telling that Clinton talked much more about FDR than she talked about Obama or even her husband. Everyone likes FDR! Even Ronald Reagan used to speechify about FDR. It's modern politicians who are polarizing. Obviously, **Clinton is a modern politician. She would like to excite her base and appeal to the center. She endorsed nice-sounding things** important to the labor movement, like the right to know your work schedule in advance, **but omitted controversial things important** to the labor movement, like “card check” for union **elections**. She took aim at overpaid Wall Street executives for focusing on short-term profits, but she didn't propose to break up megabanks or raise the top income tax bracket above 50 percent, as her primary opponent Bernie Sanders has.

Clinton key to maintain global leadership – the impact is global war, Middle East conflict, Iran nuclear program, Chinese economy, and a slew of other things

Hodes and Emerson, writers for the Concord Monitor, **2/22/2015**

(Paul W. and Peter V., “My Turn: Who else but Hillary can manage world's problems?,” <http://www.concordmonitor.com/news/politicalmonitor/15722816-95/my-turn-who-else-but-hillary-can-manage-worlds-problems>)

The **world is** becoming **increasingly unstable** and unpredictable, and therefore often far more threatening and dangerous to America and to American citizens at home and abroad. Looking but a few years down the road, **there will be less food, less** potable **water** and fewer basic human necessities for most of the world's exponentially expanding population. **Consequently, there will be more** violence, civil strife and **war**. Unfortunately, many Americans are geographically and geopolitically challenged. Many **still believe** that America dominates the world and that **we are neither dependent upon the international community nor subject to events occurring outside our borders**. In short, many still hold opinions based on a world order long ago dismantled. We are now interconnected and interdependent upon every region of the world. Thus **international stability** and **our continued prosperity are under attack** in our shrinking world: ■ the continued advance of **the Islamic State** has already further **destabilized** an already precarious order in **the unstable Middle East**. The **escalation of the Israeli-Palestinian stalemate** with almost daily outbreaks of killings and retaliation. ■ **Iran's** continued **nuclear program**. The **slowing of the Chinese economy** and the potential **head-on conflict over** the Diaoyu Islands in China and **the Senkaku islands** in Japan. ■ The postponement of the election in Africa's largest democracy, Nigeria, a success for Boko Haram ■ **Greece's** possible default on its debt and the impact on the **European Union** ■ **North Korea's** continued militaristic posture and **nuclear capabilities**. **Declining crop production** in critical areas around the world And the list goes on and on and on. So what do these events mean to a waitress in New Hampshire, a farmer in Iowa, a rancher in Montana, an avocado grower in California, a high-tech entrepreneur in Massachusetts, a fisherman in Maine, a single mother in Harlem, a pensioner in Phoenix, a widower in Washington, our neighbors, family and friends? It means that events in other countries, often far away, spill into and through our borders. Americans are part of a new global order – or too frequently **global disorder** – that **challenges** our traditional **notions of American exceptionalism and leadership**. International crises that emerge anew each day directly affect the prices of our food, gas, health care, etc. – our domestic tranquility and our national security. All these events affect the bottom-line of all American households. So when we cut through the clutter of **lies and gross distortions of the facts** – all meant to create fear – **to weigh and examine who's capable of making a dent in these seemingly intractable problems** and challenges, **there is only one person who is capable of managing them**. Please note that we did not say solve these intractable problems because that would be impossible. But managing problems and challenges, that's possible. Although we promised not to join the chorus of those asking Secretary Clinton to run for president, **we have taken a sober look at the world's condition, the prognosis for the future and America's position in the world and, Hillary Clinton is the only one who can manage the problems** that others see as unmanageable.

Uniqueness

Hillary wins-GOP chaos

Favorability polls don't translate to votes and GOP chaos ensures Hillary wins.

Robinson, 6/10. Eugene, Mercury News, 2015. "Republicans might as well pound sand." http://www.mercurynews.com/opinion/ci_28289013/eugene-robinson-republicans-might-well-pound-sand

After months of trying to weaken Hillary Clinton by pounding her with everything they've got, the amount of progress Republicans have made is pretty close to zero. The GOP seems to have forgotten the central fact about the Clintons: That which does not kill them makes them stronger. Yes, it's true that a Washington Post-ABC News poll reported last week that Hillary Clinton's favorability rating has dipped to 45 percent. Yes, people seem to disapprove of the way she handled her personal emails while she was secretary of state, wonder about all the money sloshing around the Clinton Foundation and question how she handled the Benghazi tragedy. And yes, the poll found that in a hypothetical matchup against Jeb Bush, her lead has shrunk from 12 points to just three. All of this should certainly cause the Clinton campaign to pay attention. But when asked who they thought would win the election, 55 percent said Clinton while only 39 percent said Bush. Meanwhile, it is anything but certain that Bush will win the nomination, given the general chaos in the GOP. The Republican field is so big that the networks scheduled to air the first debates have had to establish rules to determine who can participate. Fox News has said its Aug. 6 debate will include the 10 candidates scoring highest in an average of polls. CNN, for the Sept. 16 debate, announced it will also invite the top 10, but then hold a second debate for those who failed to make the cut. It sounds like Thanksgiving -- an adults table and a kids table. Since getting to the big table is probably the difference between a viable candidacy and a futile one, there is a powerful incentive for GOP hopefuls to do anything they can to attract attention. If a debate were held tomorrow, two contenders best known for saying ridiculously outrageous and incendiary things -- Donald Trump and Ben Carson -- would be in the top 10. Several experienced current and former office holders -- Sen. Lindsey Graham from South Carolina, Gov. Bobby Jindal of Louisiana, former Govs. Rick Perry of Texas and George Pataki of New York -- would not. Neither would businesswoman Carly Fiorina, the only woman in the Republican race. On the Democratic side, meanwhile, those who were hoping that Clinton would be challenged, if only to hone her skills for the general election, are getting their wish. Sen. Bernie Sanders, the Vermont independent, promises to get more traction with the party's liberal base than former Maryland Gov. Martin O'Malley, former Virginia Sen. Jim Webb or former Rhode Island Sen. Lincoln Chafee. But only in relative terms: Clinton has the support of nearly two-thirds of Democrats, according to the Post-ABC poll, leaving the rest to share the remaining third. We'll have a better idea of how Clinton will perform on the stump this time around following her big kickoff rally, scheduled for Saturday on New York's Roosevelt Island. So far, I'd say she's doing quite well. Her fiery speech last week in defense of voting rights was her campaign's best moment so far, but the big question about Clinton's candidacy is whether she can inspire the coalition that twice elected President Obama -- young people, minorities, women. Voting rights is an issue that reliably sends African-Americans to the polls in large numbers. I'll be surprised if Clinton doesn't soon have major messages for Latinos on immigration policy and women on reproductive rights. So far, Clinton has done any number of

things right -- and, by my count, nothing wrong. Next year's election is still hers to lose, and she doesn't seem inclined to do anything of the sort.

Hillary wins – GOP is too split

Floyd 5/21 (David Floyd, "Tea Party Vs. Republican Party: Who Will Win In 2016?" May 21, 2015, <http://www.investopedia.com/articles/personal-finance/052115/tea-party-vs-republican-party-who-will-win-2016.asp>)//JHH

On social issues, the Tea Party is also split. For some, opposition to same-sex marriage, abortion, and other targets of evangelical and social conservative ire is muted, either because it distracts from fiscal priorities, or it leads to government overreach. On the other hand, many, perhaps most, Tea Partiers reconcile social conservative and libertarian priorities easily. Ted Cruz, for example, sees the role of the federal government as being "to defend the sanctity of human life, and to uphold the sacrament of marriage."¶ The Tea Party attitude to business is also conflicted. An emphasis on self-reliance, fiscal responsibility, and personal freedom, along with a suspicion of government environmental regulation, aligns with the traditional conservative pro-business agenda. Yet many Tea Partiers fundamentally distrust the wealthy establishment on Wall Street and Capitol Hill. The movement in large part coalesced around opposition to golden parachutes and TARP bailouts.¶ WHO WILL WIN IN 2016?¶ The Republicans face a dilemma. Especially after the government shutdown, many voters doubt the Tea Party can govern, but Republican candidates still must win Tea Party-dominated primaries. House Majority Leader Eric Cantor's "operatic" defeat by a primary challenger in June is the textbook example of this danger. Mitch McConnell escaped the same fate through a tense détente with Rand Paul.¶ In the 2016 presidential primary, Cruz and Paul may force Jeb Bush out of his element, attacking him as a quintessential establishment politician and dredging up his surname's worst associations, so he is lucky to be facing a Clinton. Paul will force him to contend with the Tea Party's libertarian wing, Cruz with its evangelical wing. He will have to lurch to the right and then back to the center without careening off course. If he fails and loses the nomination, the Republicans are unlikely to win the White House.¶ Whoever wins the Republican nomination faces the fundamental challenge of changing demographics. So long as conservatives depend on the white vote, they will have more trouble winning with every election cycle. The next nominee will need one of two things: almost double the share of the non-white vote Romney earned in 2012, or a greater share of the white vote than Reagan got in 1984.¶ Assuming the economy improves, the Tea Party will probably fade in importance. Yet its ideas, in tamer forms, are here to stay. Evangelical Christians were a minor political force until the 1970s; now we can't imagine a Republican constituency without them. The Tea Party's radical commitment to small government will leave a lasting mark on the American right. As this commitment achieves a stable synthesis with the conservative establishment's agenda, the Republicans' crisis of identity will become less acute.¶ The question is, will the Democrats also tear in two over along the establishment/anti-establishment axis? A loss by establishment-as-can-be Hilary Clinton could be a rallying cry for the Elizabeth Warren left. Perhaps in 2020 it'll be the Democrats fretting over primaries.¶ THE BOTTOM LINE¶ The financial crisis led to a rift in the Republican Party, splitting it between the old guard establishment and the anti-establishment Tea Party. The Tea Party's ideas have made it into the Republican mainstream, but they are not tame yet, and primary voters are still a threat. When it comes to a national election, however, the Tea Party probably cannot win. If Jeb Bush is the nominee, the Republicans may have a shot at the White House. If not, they'll probably have to wait for 2020.

Hillary Wins- Independent

Hillary win inevitable – independents vote democrat and the GOP is dying

Leo 5/18 (Jacqueline Leo, “A Demographic Edge for Hillary Clinton in 2016” 5/18/15,
<http://www.thefiscaltimes.com/2015/05/18/Demographic-Edge-Hillary-Clinton-2016>)//JHH

No matter how many GOP candidates enter the 2016 presidential sweepstakes, **it will be an uphill climb for any Republican to secure the White House.** That’s not simply because **Democratic voters outpace Republicans by a four-point edge**, according to Gallup. **It’s because the GOP is dying — literally** — according to an analysis published Sunday in Politico. ¶ **Seems 2.75 million Republican voters will be dead by** the time the **2016** election rolls around, Daniel J. McGraw claims in what he calls his “back-of-the-napkin” math. By comparison, roughly 2.3 million Obama supporters will have died by the time the 2016 election rolls around. McGraw is right, of course, that **Republicans tend to be older than Democrats**, and that the surge of millennials (about 78 million) tends to vote Democratic. They’re young, energetic, tilt left on social issues like gay marriage and believe women are underrepresented in the boardroom as well as the White House. ¶ Republicans could still connect with millennial voters on economic issues, but on the whole, **the demographic trends will only make it harder for the GOP’s eventual nominee.** ¶ McGraw’s estimates can only go so far, though. They can’t fully account for state-by-state differences that could tilt the Electoral College, and they don’t factor in specific candidates and how they might appeal to various age groups, or not. Can a youthful Marco Rubio, for example, find a way to draw younger voters? Will Hillary Clinton trip over her political baggage, packed in part by her husband? ¶ In the end, regardless of who is nominated by the GOP, **the election will rest on the 43 percent of Americans who identify themselves as independents.** Including independents, **Democrats had a three-point edge** as of last year. But if McGraw is right, **that edge could widen before long.**

Wins—General

Hilary will win – leading polls against GOP frontrunners **Washington Times 6/23**

By David Sherfinski - The Washington Times - Tuesday, June 23, 2015 Hillary Clinton leads Jeb Bush, Marco Rubio, Scott Walker in head-to-head matchups: poll
<http://www.washingtontimes.com/news/2015/jun/23/hillary-clinton-leads-jeb-bush-marco-rubio-scott-w/>

Former Secretary of State **Hillary Rodham Clinton leads a trio of Republican heavyweights in head-to-head 2016 matchups**, according to a new poll.¶ Mrs. **Clinton**, the 2016 Democratic presidential frontrunner, **leads** former Florida Gov. Jeb **Bush by 8 points**, 48 percent to 40 percent, she leads Sen. Marco **Rubio** of Florida **by 10 points**, 50 percent to 40 percent, **and** she leads Wisconsin Gov. Scott **Walker by 14 points**, 51 percent to 37 percent, a new NBC News/Wall Street Journal poll said.¶ In an NBC/WSJ survey released in April, she had led Mr. Bush, Mr. Rubio and Mr. Walker by 6, 6, and 10 points, respectively.¶ **In a “generic” presidential preference question**, however, **39 percent of registered voters said they think it would be better to have a Democrat** as the next president, **compared to 36 percent who said a Republican would be better**.¶ Mrs. **Clinton has a tight grip on the Democratic nomination**, the poll said; she’s the first choice of 75 percent of Democrats and **leads** her next-closest rival, Sen. Bernie **Sanders** of Vermont, **by 60 points**.¶ More than 6 in 10 Democrats still prefer that she have a challenging primary so she is tested for the general election, compared to 35 percent who want an easy primary so the party is united ahead of the general election.

Hillary Clinton will win the 2016 presidential election now

Espuelas 15’ Fernando Espuelas (Contributor, a political analyst, host and manager of political talk show) March 12th, 2015. The Hill. “Ignore the Noise – Clinton will win in 2016” <http://thehill.com/blogs/pundits-blog/presidential-campaign/235507-ignore-the-noise-clinton-will-win-in-2016>

Hillary Clinton will be the Democratic Party's nominee, and she will win the 2016 election.¶ When you **analyze the objective conditions of the Republican Party today and** most likely over the next two years and **compare them to Clinton's strengths, it's hard not to make such a prediction with confidence.**¶ The email flap will be gone soon enough. Short of the State Department finding some grenade of an email, **the release of some 55,000 Clinton emails from the government archives is more likely to reinforce Clinton's formidable leadership and executive abilities** than subtract from her decades-old image of an American Iron Lady.¶ Republicans will wait at her desire for privacy in not turning over her personal emails, but **look at America's angst on this very topic Many citizens feel that our privacy has been compromised, by everyone from the government to Russian hackers; that our private stuff is under threat Hard to imagine that the citizenry will begrudge Clinton's desire for some modicum of privacy** even as her official emails are published on a State Department website.¶ The Washington press corps has been foaming at the mouth, an expected reaction. At a recent networking event of political reporters, one 2016 campaign beat journalist, writing for a major national paper, was almost salivating. “It’s just like the Clintons!” he cried. “So typical! This is huge!”¶ This would be his meal ticket for the next few weeks, and I could not help but feel happy for him. Washington journalists need scandal to thrive. The routine reporting of the minor personalities who haunt the halls of Congress or of obscure second-rank Cabinet secretaries makes for poor copy.¶ And while the Benghazi Brigade in the GOP is still marching along in the desert, hoping to stumble on to a smoking gun, their political shenanigans in not releasing the voluminous collection of Clinton’s email that they possess will only further tarnish their credibility. And there is no polling that I’ve seen that shows that Benghazi is even a remotely relevant issue for the non-Tea Party majority of the electorate.¶ It’s no wonder, then, that the 2016 GOP pre-candidates have stayed largely silent on the Clinton email brouhaha. First, you can bet that more than one of those candidates has used multiple email accounts themselves while in office. The widespread ownership of email glass houses makes it awkward, if not outright dangerous, for these candidates to throw rocks at Clinton. Second, if any of these candidates think that Clinton’s email flap will both endure and be a factor in 2016, they are getting bad advice.¶ As nonpartisan Charlie Cook in National Journal pointed out, there are much more real, politically relevant and resonant issues that will either result in Clinton presidency or an upset.¶ **Clinton has a built-in advantage — her gender. It now looks that she will use the glass-ceiling theme to connect with millions of people who think that the disparities in opportunity, income and talent-based achievement between men and women is not only unfair, but damaging to all women, two-income families and the economy in general. Some percentage**

of Americans, likely a large one, would like to cast a historic vote. When polling points to Americans wanting "change," what bigger change than a woman as president? Clinton is white. Yes, President Obama was elected twice, with millions of votes over the 50 percent victory threshold. But looking at the election data that show a precipitous drop in his support among white voters, relative to past Democratic candidates, one can infer some racial bias in a sliver of the electorate. Clinton will be able to attract those voters simply because she is not an African-American man. In terms of the Latino vote, even though many Republicans are counting on him, Sen. Marco Rubio's (Fla.) craven flip-flopping is not likely to endear him to many Hispanics outside of Miami. Conversely, Clinton is hugely popular among Hispanics, as is her husband. She's been a steadfast supporter of immigrant rights and was Latino voters' favorite during the 2008 primaries. She will sweep the Hispanic vote. Lastly, the first couple of months of Republican congressional hegemony has been an exercise in immigrant-baiting. Republicans seem to have a visceral need to attack undocumented immigrants. It's an article of faith among the majority of Republicans who voted in both chambers of Congress several times that Obama's immigration actions must be destroyed — even if young people like the Dreamers are deported. In a recent Latino Decisions poll, 89 percent of American Latinos favored Obama's executive actions. I learned my lesson about predictions when I projected former Speaker Newt Gingrich (R-Ga.) as the 2012 GOP nominee. But in this case, short of a serious health crisis holding her back, it's a good bet that Hillary Clinton will next occupy the White House.

Hillary Will Win Glenza 6/23

(Jessica Glenza is a breaking news reporter at the Guardian US, 15 “Hillary Clinton on course to win presidential election, poll says”, <http://www.theguardian.com/us-news/2015/jun/23/hillary-clinton-presidential-election-poll>)

Hillary Clinton is on course to win the Democratic primary and would go on to trounce her Republican opponents, according to a new poll. The NBC News/Wall Street Journal poll found that the former secretary of state was the first choice for nominee of 75% of her party, with Vermont socialist Bernie Sanders far behind on 15%. Martin O'Malley, the former Maryland governor, was on 2%, while Lincoln Chafee, the former governor of Rhode Island, polled less than 1%. Former Virginia senator Jim Webb, who has not yet formally declared he is running, was on 4%. According to the poll, **92% of likely Democratic voters said they could see themselves supporting Clinton.** The poll asked 1,000 likely voters about their opinions on potential presidential candidates, both Republican and Democrat. It showed Clinton polling at 48% to 40% against her closest Republican contender, former Florida governor Jeb Bush, the brother of former president George W Bush and son of former president George HW Bush. Against the Florida senator Marco Rubio, Clinton polled 50% against 40%. And against Wisconsin governor Scott Walker she polled 51% to 37%. Among Republican primary voters, the poll showed Bush ahead with 22% of the vote. Walker was next with 17% and Rubio third with 14%. Retired neurosurgeon Ben Carson had 11%, while former Arkansas governor Mike Huckabee (9%), libertarian senator Rand Paul (7%), former Texas governor Rick Perry (5%), New Jersey governor Chris Christie (4%) and Texas senator Ted Cruz (4%) were all in single figures. **The poll is likely to encourage the Clinton camp,** whose campaign got off to a rough start when questions arose about Clinton's use of personal email as secretary of state, this spring. But it is possible that early polls may not reflect the true strength of Clinton's challengers. Republican pollster Bill McInturff told the Wall Street Journal that Clinton had “the strongest and most advantageous” standing among Democrats he had seen in 35 years of campaign polling. “She starts with advantages among very important groups,” he said. McInturff conducted the poll with Democrat Fred Yang. Clinton's high rankings could be buoyed by increasingly positive support numbers for her 2008 rival Barack Obama, whose approval rating is up by 8 percentage points to 48% since September 2014, when it hit an all-time low of 40% according to the same polls. Among Republican candidates, Bush and Rubio remain neck and neck, with 75% and 74% of respondents saying they could see themselves supporting the candidates in a Republican primary. Bush pulls away slightly in favorability rankings, pulling 5% ahead of Walker with 22%, and 8% ahead of Rubio. Most see Clinton as a moderate candidate (58%) who is trustworthy because of her “experience and background” (59%). Respondents were fairly split over which party the next president should be from, with Republicans scoring 36% and Democrats 39%. Ongoing concerns going into the election could set the mood for the campaign. A “decline in traditional moral values” was rated as the most alarming trend in America of all respondents (25%), seconded by possible terrorist attacks on the US (18%), while corporate and wealthy individuals' influence over elections was rated as the most disconcerting facet of the upcoming campaign (33%).

Foreign Policy gives Hillary leg up Rothenberg 6/23

(Stuart Rothenberg is a writer for Roll Call a political news website, 15, “Rand Paul, Hillary Clinton Face Foreign Policy Challenges in 2016”, <http://blogs.rollcall.com/rothenblog/rand-paul-hillary-clinton-face-foreign-policy-challenges-in-2016/?dcz=>), <http://theweek.com/articles/559639/why-economy-almost-guarantees-hillary-win-almost>)

if **foreign policy and national security** become increasingly salient to voters before the 2016 election, those issues **will also have a significant impact on the general election**. On one hand, former Secretary of State Hillary Clinton should benefit from that, given her time as the nation's chief diplomat. She is knowledgeable about international issues and she has dealt with world leaders. Moreover, while Obama is seen by some as indecisive and even timid when it comes to projecting American military power and standing up to those threatening international stability, Clinton has a very different image. She is widely regarded as tougher than the president. But as the administration's former top foreign policy voice, Clinton will have to defend, or at least explain, U.S. policy and answer questions about the nation's security and influence. No doubt she'll have to separate herself from Obama on some foreign policy matters, creating some awkward moments and possible problems for her campaign.

Economy makes Hillary win Pethokoukis 6/10

James Pethokoukis is the DeWitt Wallace Fellow at the American Enterprise Institute where he runs the AEIdeas blog. He has also written for The New York Times, National Review, Commentary, The Weekly Standard, and other places." Why the economy almost guarantees Hillary will win. Almost."

if **Mitt Romney couldn't beat President Obama in 2012 when the jobless rate was almost 8 percent, how can the next Republican nominee beat Hillary Clinton in 2016 when the unemployment rate could be under 5 percent?** That's the big question Republican presidential candidates must ask

themselves. And **the unpleasant political possibility for the GOP's White House hopefuls is that the improving U.S. economy is, well, "likeable enough" for voters to give Democrats four more years in the Oval Office.** At the very least, **the economy might be such a strong tailwind for Democrats that Jeb Bush, Marco Rubio, or whoever else the GOP puts up would need to run a near-flawless campaign to win.** Now, there are no economic guarantees here. Maybe the Yellen Fed will start reading too much Austrian economics, freak out about inflation, and crank up interest rates so high that it causes a recession. Of course, that's unlikely. **The more likely scenario is more of the same, and the slow-but-steady Obama-era recovery keeps chugging along.** Sure, the Fed probably will raise rates sometime this year. With inflation low, however, the pace of tightening should be gradual. And even if economic growth doesn't accelerate much, it seems good enough to keep generating gobs of jobs and a much lower unemployment rate. In a new analysis, for instance, Goldman Sachs says the U.S. economy will add another 3.5 million net new jobs over the next year and half — on top of the 12 million created since the recovery began — bringing the jobless rate to 4.8 percent by Election Day 2016. Compare that to the Great Recession peak of 10 percent. **Even a wooden politician like Clinton should be able to run a successful "stay the course" campaign on those numbers. Many Republicans will surely disagree** with this thesis. **They see the "failure" of Obamanomics as self-evident, and seem certain that it will be a big plus for their nominee. Among their arguments: Sure, the "official" unemployment rate is way down, but that's only because so many discouraged potential workers have left the labor force. Also, what kind of jobs are being created anyway? Isn't wage growth stagnant? And remember that a strong economy back in 2000 didn't help Vice President Al Gore, another wooden, uncharismatic Democrat running for a predecessor's de facto third term. These counters are hardly persuasive. First, Romney also tried the labor force participation argument to prove the economy was far worse than the headline jobless numbers suggested. Not a game changer. What matters to voters is that they have a job and aren't scared about losing it — not the fate of "discouraged" workers as defined by the Bureau of Labor Statistics.** That's a little abstract. Second, while wage growth isn't roaring, lower energy prices and low inflation overall means take-home pay is rising at a pretty good clip for consumers. Third, Gore really didn't run on the Bill Clinton economic boom. At the Democratic National Convention that year, he said, "This election is not an award for past performance. I'm not asking you to vote for me on the basis of the economy we

have." (Well, he should have! Talk about campaign malpractice.) And finally, it's hard for Republicans to ding the "Obama-Hillary" economy when the the financial system nearly collapsed under the watch of the last Republican president.

Hillary will win- GOP will tear themselves apart

Noonan 6/19

(Peggy Noonan is a columnist for The Wall Street Journal whose work appears weekly in the Journal's Weekend Edition and on OpinionJournal.com., 15 "Hillary Will Glide Above It All", <http://www.wsj.com/articles/hillary-will-glide-above-it-all-1434667768>)

Mrs. Clinton is almost certainly about to glide to her party's nomination. There will be a few bumps. She will occasionally be pressed and challenged on various questions. There will be back and forth. But **her Democratic opponents will not attack her** character, her history, her financial decisions, her scandals. They will not go at her personally. **She will emerge dinged but not damaged. No one will ravage the queen. The Republican primary, on the other hand, will be all hell bursting loose. The candidates will spend the next year tearing each other apart on everything and anything. Super PACs are furiously raising money, some of which will be used to take down and slam GOP opponents in negative ads and videos.** At least a few of them will do what Newt Gingrich so effectively did to Mitt Romney in South Carolina in 2012. Mr. Gingrich hit hard on Mr. Romney's investment firm, Bain Capital, and his tax returns. He painted Mr. Romney as a cold, rapacious capitalist who'll close your factory and take your jobs. Mr. Gingrich described Mr. Romney's line of work as "rich people figuring out clever legal ways to loot a company." Mr. Romney's South Carolina numbers began to sink in the last days of the campaign. Mr. Gingrich enjoyed a surprise win. The Obama re-election campaign was of course watching the fun, and went on to kill Mr. Romney with Mr. Gingrich's themes. They'd likely have done it anyway but the attacks were given added legitimacy by GOP provenance. **The Democrats have an enforcement mechanism to keep all their candidates in line. Bernie Sanders and Martin O'Malley know without being told that the party will kill them if they tear apart the assumed nominee. Their careers will be over if they go at her personally.** A GOP opposition-research veteran said of the Democrats' enforcement mechanism, "As an upstairs-downstairs party, the upstairs is a fairly concentrated place. **The Democrats as the 'in' party—the party of Silicon Valley and academia—has interlocking pools of money, brains and talent.**" **When they turn on you, it is like facing "the Death Star." And "on top of that, you have the Clintonian tropism toward score settling and vengeance.** What you have in the end is discipline." The Republicans? "They stand to beat the hell out of each other for months to come." The GOP is not concentrated but spread out, geographically and culturally—"everything from establishment types to evangelicals to hedge-fund gods and farmers." Candidates reflect diverse denominations: "It's a party of dissenters" and operatives who have no motive to avoid hurting another group's favorite.

Hillary Becomes President

Poor 6/12

(Brett Poor is a political writer for the news website Breitbart, 15 "HUGH HEWITT: HILLARY CLINTON WILL WIN THE PRESIDENCY", <http://www.breitbart.com/video/2015/06/12/hugh-hewitt-hillary-clinton-will-win-the-presidency/>)

During that appearance, **Carolla asked Hewitt about his thoughts on Democratic presidential hopeful Hillary Clinton and if at this stage in her career it was possible for her to put off a better "vibe" to make her more appealing to the public.** Hewitt acknowledged Clinton's age, but added **that he thought she would win the presidency in 2016. "She's 67," Hewitt said. "She'll be 69 if she wins and I think she will – the presidency."** Later in that segment, **Hewitt, who is slated to be a moderator in one of the upcoming Republican presidential primary debates,** elaborated on why took that position. According to Hewitt, **the deck is stacked against the Republican candidate because of the Electoral College and Clinton he said was "awfully smart" and would formidable financially.** "I wrote 'The Queen' because the advice, if she takes it, she'll win," he explained. "So if I put it on the table, maybe she won't take it because the Electoral College is so freaking against the Republicans. And so, we have to nominate the perfect ticket. They have to make a lot of mistakes. The Jets did beat the Colts, right – in Super Bowl III. So, it's possible. The heavy underdog can win. We are the heavy underdog. But **if she does the right thing and she's awfully smart, and she's got a lot of money, and the Republicans are going to carve each other up.**

Sen. Ted Cruz (R-TX) 96% today – he’s terrific and I write in ‘The Queen’ he could win, or he could lose 44 states. It’s more likely he’s going to lose 44 states because she is good and disciplined and does her work. So I am not an optimist, but that’s why I wrote the book – to increase our chances that much.”

Hillary wins Wilkinson 6/22

(Shannon Wilkinson is a political analyst for Forbes, 15 “Hillary’s Race For 2016: Turning Followers Into Votes”, <http://www.forbes.com/sites/elleivate/2015/06/22/hillarys-race-for-2016-turning-followers-into-votes/>)

As GOP candidates launch their White House bids, the main contest isn’t for prime-time TV appearances and massive money streams from SuperPACs. It’s to **win the support of 18 to 24 year olds.** That group has the lowest voting rate. **Any candidate that can find a way to get them to the polls will have a tremendous advantage.** Also important are **single women.** Women as a whole have voted at higher rates than men for many years—but single women lag behind. All votes matter. But **younger citizens and single women have the power to tip the scales in 2016. Those are also the two demographic groups that make the most use of the Internet.** So the war for the next presidency will be fought online. State of the art digital analytics, strategic outreach and social media engagement won the election for President Obama. It will determine who wins in 2016, too. How are the candidates doing so far? **CNN recently aired a segment on a Harvard University Institute of Politics poll showing that “83 percent of 18 to 29 year-olds are on Facebook, 44 percent are on Instagram and 39 percent are on Twitter TWTR +0.26%.** After Facebook, **Instagram is the most popular social media tool for millennials.** The poll also shows that 55 percent of all young adults, ages 18 to 29, would rather see a Democrat in the White House in 2016.” Last week The New York Times reported that after the 2012 presidential election, “Democrats were light years ahead of Republicans when it came to digital strategy and tactics, and Republicans had serious work to do on the technology front if they ever hoped to win back the White House.” According to the article, they still do. **Hillary Clinton is currently the dominant player in the online space.** Here are five reasons why: 1. **She has the most control over her online image: if anyone enters a Google search for “Hillary Clinton,” much of the first two pages of results will be sites she manages.** That is no easy feat. 2. Facebook. **She has almost one million likes on Facebook, where women aged 18 to 29 are the majority of users.** According to Vox, **in the 24 hours surrounding Clinton’s announcement on April 12, 4.7 million people on Facebook produced 10.1 million interactions pertaining to the announcement. That far outranks any other presidential contender.**

Links

National Security

National security is key issue-

Kuttner, 2/22. Robert, Huffington Post, 2015. "National Security and the 2016 Election."

http://www.huffingtonpost.com/robert-kuttner/national-security-and-the-2016-election_b_6732076.html

Today, however, there are people out there who feel that western civilization really does have to go -- not the courses but the thing itself. And they seem to be gaining. Call me sentimental, call me privileged, but I have a certain fondness for western civilization. Let me count the ways. I like the rule of law. I like the Enlightenment sensibility that a wide variety of religions and viewpoints must be accommodated. I like the connection of free speech and free inquiry to the scientific method -- giving reason, logic and evidence priority over faith. I like letting political opposition flourish without fear of life and limb. These were radical ideas -- they still are -- and to the Islamic State they are intolerable ones. I like not just the political democracy, but the fact that over the centuries the values of western civ have allowed democracy to be expanded to formerly excluded groups -- women, the descendants of slaves, religious minorities -- despite the resistance of elites. It was the values of western civ, after all, that accommodated those demands for a broader college curriculum, rather than cutting off the hands of the protestors in the name of some received wisdom. I say all this, knowing that western civ has often not lived up to its promise. Indeed, some of the very people who most fervently oppose radical Islam are trashing the values of western civ -- the science deniers; the democracy destroyers; those who would make America a theocracy; the haters. Yet with all of its failings and the oddity of some of its alleged champions, the Enlightenment is looking better and better. The alternatives now on the march around the world are hideous. At least, that's how most

Americans see it. So, like it or not, **the 2016 presidential election will be about national security. And most**

Americans and most voters will be very fearful

of the threat that the Islamic State represents and confused about how we should respond. In its lifetime, the United States has faced countless threats, and it has overreacted to many. Often in the 20th century, the U.S. government acted as an agent of U.S. corporate interests, wrapping them in the broader rhetoric of the Cold War. And the Cold War itself led to policies that were often excessive and self-defeating, not the least of which was Vietnam. That said, the Islamic State is a true threat, and one that presents difficult if not impossible choices. It is hydra-headed. Lop off one leader and 10 others appear. **The threat of al-Qaeda and the Taliban was easy**

compared to this new one. These organizations actually had a command structure that could be monitored and disrupted.

The Islamic State and kindred groups represent a throwback to barbarism, yet because of the broad unrest of hundreds of millions of people, their cause has appeal on the ground. **And the West has precious few allies in the region that can plausibly serve as either**

ideological or military counterweights.

Even if the West had the stomach for ground warfare in a war of civilizations, it is not clear where the theatres of operation would be. There is potentially a band that stretches all the way from Boko Haram in Northern Nigeria, through Libya and Somalia, into the region of Jordan, Syria, Iraq, Afghanistan and Pakistan, that is vulnerable to the most brutal sort of Islamist fundamentalism. There are three broad strands of thinking on how the United States ought to respond. One is basically isolationist. Let them stew in their own juices. My wife taught me a terrific Polish proverb that translates, "Not my circus, not my monkeys." There are some conservatives who espouse this view, such as Rand Paul and the Cato Institute, some lefties like Noam Chomsky who think this retribution is the West's just dessert for its past sins, as well as such centrist foreign policy scholars as John Mearsheimer and Stephen Walt. I am a little queasy about such views because I find the prospect of the Islamic State taking over much of the world frightening. Even if you write off the fates of hundreds of millions of people (half them women by the way), the march of the Islamic State really does increase the chances of nuclear weapons falling into the hands of people who don't mind blowing up the world, because they are certain that they are bound for glory. The second strand of thinking might be called Wilsonian. The U.S., in this view, has a duty to intervene because of the need to bring true Enlightenment democracy to regions that are otherwise vulnerable to the appeal of al-Qaeda and the Islamic State. Well, based on the events of the past 15 years, good luck to that. The third viewpoint we might call realpolitik. It argues that the West needs to act against the threat of the Islamic State, even if that means getting into bed with some unsavory people -- the very people whose dominance in the region helped seed the unrest that led to fundamentalist Islam. Are we to say that the Saudi monarchy is the lesser evil? How about Bashar al-Assad? There have been times in American history when we sided with lesser evils against greater ones, our wartime alliance with Stalin against Hitler being the epic case. Henry Kissinger, the ultimate foreign policy realist, persuaded Richard Nixon to embrace Red China as a counterweight to the USSR, back in an era when China really was ferociously communist as well as brutal. The problem is that President Obama has vacillated between wanting to be Wilson and wanting to be Kissinger. Whatever the policy, it needs to be coherent. So we will go into the 2016 election with the electorate feeling very uneasy about our national security, and with Democrats somewhat on the defensive. Normally, that would help the Republicans. Except that no Republican first-tier presidential candidate has foreign policy experience. Let's see. Chris Christie can see the World Trade Center from his window. Scott Walker led wars -- on unions and on the University of Wisconsin. Marco Rubio sees national security through the prism of immigration and Cuba. And Jeb Bush has only the proxy foreign policy expertise of his family connections -- which did not perform so well. Which brings us to Hillary Clinton. On the plus side, she was Secretary of State. On the minus side, she was Secretary of State. She is also female, which some retrograde voters associate with weak -- and she has bent over backwards to be the most hawkish of the Democrats, a posture that could wear better than expected as more threats unfold. But whatever you think of her views, Clinton does have more national security chops than anyone else in the field. There are other forms of security, of course. One is economic security. By all rights, this election should be about ordinary Americans getting shafted, about the rules being rigged, about the One Percent getting all the gains. If those phrases sound familiar, this is the fervent hope of admirers of Elizabeth Warren. It would be fitting if 2016 were about the economy, stupid, as the 1992 election was. But in those triumphalist days, the foreign policy scene was relatively calm. Pocketbook issues can and should be brought to bear. Warren can help assure that, whether or not she chooses to run. The economy is a travesty, and this should be Warren's moment. Even so, 2016 is likely to be an audition for the role of commander-in-chief. Note, however, that neither Barack Obama nor George W. Bush, nor for that matter Bill Clinton nor Ronald Reagan had foreign policy experience. The first George Bush did, and he couldn't win re-election. So yes, national security will be front and center in 2016 -- and it's anybody's guess how that will play out.

National security energizes the GOP base and key issue-

Mascaro 5/13

By LISA MASCARO May 13, 2015 As voters fret over national security, GOP candidates seek right message <http://www.latimes.com/nation/politics/politicsnow/la-pn-republicans-national-security-20150513-story.html#page=1>

The increasingly aggressive national security stance of Republican candidates was on full display this week, for example in former Florida Gov. Jeb Bush's misstep over questions about whether he would have invaded Iraq in 2003, and in Florida Sen. Marco Rubio's policy speech Wednesday, which was long on promises but short on specific policies.¶ In

many ways, **Republicans should welcome a discussion on national security, particularly because they are the party that voters frequently have depended upon to confront America's enemies.** At

the same time, the U.S. economy, as a campaign issue, has slipped as a top concern among many voters amid an improving job market.¶ **Polls show that for Republican voters, national security ranks higher than pocketbook issues.**¶ **"There's no doubt national security has risen on the most-important-issues list,"** said Whit

Ayres, a Republican strategist who has worked with Rubio's campaign. **"It's very clear that America wants a more muscular foreign policy than it has seen in the Obama years, and that's particularly true of**

Republican voters.”

National security blame get attached to Clinton because she isn't prioritizing the risk

Kraushaar 6/16/15 – Political Analyst

(Josh, “Hillary Clinton's Identity Crisis”, National Journal, <http://www.nationaljournal.com/against-the-grain/hillary-clinton-s-identity-crisis-20150616>)

Hillary Clinton belatedly offered her rationale running for president last weekend, making the case that she's an experienced fighter who will forcefully advocate progressive-minded policies to raise the fortunes of disaffected Americans. It was a well-delivered and necessary speech to counter the endless reminders about her entitled status—from her secretive home-brew email server as secretary of State to the avoidance of the press and regular voters during her initial presidential launch. **But at the same time, the speech underscored what will make Clinton's campaign a challenging endeavor—it was detached from the political realities of the moment. She assiduously sidestepped controversial issues** dividing her party, avoided others entirely, and sounded like a born-again populist despite being one of the wealthiest women in the country. She barely mentioned her role as secretary of State or her service as a senator from New York. Far from being confident that the country has moved sharply to the left, as one of her super PAC's top advisers pronounced, **Clinton sounded as if she was hedging her bets, sprinkling liberal shout-outs over taking firm positions on specific issues** in classic Clinton fashion, she railed against income inequality while arguing that a growing economy will lift all boats. She tweaked Wall Street for excess, while praising other companies' long-term investment in benefits. She referenced progressive priorities, like climate change and expanded voting rights, without

making them the core of her address. **This is a candidate in the middle of an identity crisis**, trying to appeal to the Democratic Party's myriad constituencies while forging an overall message that can appeal to “all Americans,” as she put it. It will be awfully tricky for her to triangulate all the way through a lengthy campaign without suffering through the inconsistencies in her message. In Clinton's world, President Obama isn't responsible for any of the economic maladies she outlined. Only Republicans are. Her speech takes an all-too convenient detour from her last presidential campaign to the present day, entirely sidestepping the current president's role in the growing gap between rich and poor, and why his policies haven't created enough opportunities for the growing number of Americans left behind. **In Clinton's thinking, the world is a pretty safe place. She**

sparingly mentioned national security in her 45-minute address, focusing more on the “good news” from abroad than the growing threat that terrorist groups are posing. She spoke as much about her Nixon-era work as an attorney at the Children's Defense Fund as she did about her leadership as secretary of State. **It's becoming increasingly clear that foreign policy is a serious vulnerability for her** campaign, even as growing numbers of voters rank it as a top priority for **the next president** (it's telling that Clinton's advisers don't think foreign policy will play much of a role at all in the general election.) In Clinton's perspective, the debate over free trade that's dividing her party in Washington is totally irrelevant to her campaign. She didn't reference it at all in New York, and gave a tortured response in Iowa and New Hampshire. Her campaign has made an art form out of avoiding the question of whether she supports the president on one of his legacy-making initiatives. For a candidate positioning herself as a fighter, her fear of tackling the issue directly runs against that carefully-crafted image. All this issue avoidance badly undermines her campaign's argument, pithily framed by Priorities USA pollster Geoff Garin, that “the center of US politics has moved left on many key issues.” That's certainly true on gay marriage. But on trade, it's the liberal base that's becoming out of step with public opinion. Last month's NBC/Wall Street Journal poll showed that, for the first time in 15 years, more Americans believe that free trade helps the United States rather than hurts it. On national security, a recent Pew Research Center survey showed Republicans with a double-digit lead over Democrats as the party viewed as best-equipped to deal with terrorism. The same survey showed Republicans with a narrow three-point lead over Democrats on who's best equipped to handle the economy, and—contrary to conventional wisdom—barely behind on immigration (2 points). That's hardly an endorsement for an aggressively liberal campaign. There's also an opportunity cost in tackling secondary, base-ginning issues at the expense of an overall message on the economy and national security.

Obama's security issues specifically get tied to Hillary

Dilanian 15 (Steve Peoples and Ken Dilanian, writers on presidential politics for AP, 5-18-2015, “Republicans clash over NSA surveillance powers”, Associated Press, http://hosted.ap.org/dynamic/stories/U/US_GOP_2016_NSA_SURVEILLANCE, DA: 5-30-2015)

PHILADELPHIA (AP) — **Republicans clashed over** the future of government **surveillance programs** on Monday, **highlighting a deep divide among the GOP's 2016 presidential class over** whether the **National Security Agency should be collecting** American citizens' **phone records** in the name of preventing terrorism. Republican White House hopeful Rand Paul decried the phone data program and other post-9-11 domestic surveillance as unconstitutional at a Monday event outside Philadelphia's Independence Hall. “We will do everything possible — including filibustering the Patriot Act — to stop them,” the Kentucky senator charged in front of the building where the Declaration of Independence was signed. Three hundred miles to the north, New Jersey Gov. **Chris Christie offered an unapologetic defense of NSA phone records collection** as he faced voters in the first-in-the-nation primary state of New Hampshire. **Christie**, who said he used the Patriot Act as a federal prosecutor, **argued that government surveillance powers should be strengthened**, not weakened. “When it comes to fighting terrorism, our government is not the enemy,” Christie declared. “Absolutely no one has a single real example of our intelligence services misusing this program for political or other nefarious purposes.” The revelation that the NSA had for years been secretly collecting all records of U.S. landline phone calls was among the most controversial disclosures by Snowden, a former NSA systems administrator who in 2013 leaked thousands of secret documents to journalists. The program collects the number called, along with the date, time and duration of call, but not the content or people's names. It stores the information in an NSA database that a small number of analysts query for matches against the phone numbers of known terrorists abroad, hunting for

domestic connections to plots. Intelligence officials call the program useful, but can point to no single terrorist plot uncovered because of it. Monday's **clash comes** just **as Congress debates the future of the Patriot Act**, which authorizes the phone records program. The law will expire on June 1 unless Congress acts. The House has passed a bill that would end the NSA's collection and storage of the phone records, but would allow the agency to gather them from the phone companies on a case-by-case basis. **Some in the Senate, including** Republican leader Mitch **McConnell, want to continue the program as is**, with the NSA keeping all the records. **Christie and** another presidential candidate, Sen. Marco **Rubio**, R-Fla., **are** in McConnell's camp, **arguing that it's critical to extend the provision to fight terrorism. So is** former Florida Gov. **Jeb Bush**, whose aides addressed the issue head on for the first time Monday. "In light of the growing terrorist threat to the United States, Governor **Bush supports extending** responsible intelligence and law enforcement authorities—including **the NSA metadata program**—in order to help keep us safe against the asymmetric terrorist threats facing our country," Bush spokeswoman Kristy Campbell said. During an interview with The Associated Press, Wisconsin Gov. **Scott Walker** three times declined to say whether he supported reauthorizing the program. He **said it was "important to be able to collect information like that,"** as long as there were unspecified privacy safeguards. After the interview, a spokesman emailed to say that **Walker supported continuing the program as it exists**, with the NSA storing American phone records. Sen. Ted Cruz, R-Texas, strikes a middle ground, supporting a Senate version of the House bill that preserves the program while ending NSA bulk collection and storage. Paul goes the furthest, arguing that the Patriot Act should expire. That would end the phone records program and also other unrelated counter terrorism provisions, including a provision that makes it easier for the FBI to track "lone wolf" terror suspects. The House bill would transfer too much power to telephone companies, he said. **"They have the votes inside the Beltway,"** he said. **"But we have the votes outside the Beltway. And we'll have that fight."** **Obama supports** the House legislation, known as **the USA Freedom Act**, **which is in line with a proposal he made** last March. **So, too, does** Democratic presidential candidate **Hillary Rodham Clinton, who** on Twitter recently **endorsed the House plan**. Overall, however, **Clinton has been vague on her position on the surveillance program**. The former secretary of state has also been critical of Snowden, whom she says could have acted as a whistleblower without damaging national security. He leaked thousands of top secret NSA documents and fled to Russia to escape prosecution. Christie took aim at Snowden during a full-throated defense of American intelligence gathering. "When Edward Snowden revealed our intelligence secrets to the world in 2013, civil liberties extremists seized that moment to advance their very own narrow agenda," Christie said. "They want you to think that there's a government agent listening in every time you pick up the phone or Skype with your grandkids." He called that notion "exaggerated and ridiculous." Paul, meanwhile, has been less critical of Snowden. He declined Monday to say whether, if elected, he would pardon the former government contractor. But he equated Snowden and Director of National Intelligence James Clapper, whom some say misled Congress about NSA surveillance. "It would probably be just and informative to put Clapper and Snowden in the same cell for the same period of time," Paul said.

Clinton gets attached to national security policy

Stewart 6/13/15

(Joshua, "Rand Paul: Snowden led to spying reforms", Union Tribune, <http://www.utsandiego.com/news/2015/jun/13/rand-paul-snowden-triggered-surveillance-reforms/>)

Surveillance reform and its implications on personal privacy are major components of Paul's bid for the GOP nomination. His policies on this issue are unique among more than a dozen potential Republican opponents. He said it gives him "a distinctive spot as the person championing personal privacy." During his speech, Paul criticized **former Secretary of State Hillary Clinton** over the deadly 2012 attacks on the U.S. diplomatic compound in Benghazi, Libya. He said the State Department **repeatedly ignored warnings that tensions and dangers were growing there before the facility was overrun. He said the Democratic presidential candidate's management of security at the compound should disqualify her for the presidency.** **"When you add it up, month after month, I say that Hillary Clinton, by not providing adequate security, by pulling the security out, by making decision after decision that made our people vulnerable, it should forever preclude her from becoming commander in chief,"** he said. U.S. Ambassador Christopher Stevens was killed in the attack along with two former Navy SEALs from San Diego County — Tyrone Woods of Imperial Beach and Glen Doherty of Encinitas — and State Department information management specialist and San Diego native Sean Smith. Paul also was critical of federal spending and government shutdowns. And, as he has before, he said the Republican Party needs to be more inclusive, adding that it needs people with and without tattoos. "We've got to be a party that looks like America," he said.

GOP voters see curbing surveillance as a national security issue – the plan would motivate their vote

Arom 6/10

Voter Views on USA Freedom Act Bode Well for Graham and Rubio, Not Cruz and Paul

EITAN AROM | JUNE 10, 2015 <http://morningconsult.com/2015/06/voter-views-on-usa-freedom-act-bode-well-for-graham-and-rubio-not-cruz-and-paul/>

In a recent Morning Consult poll, 37 percent of Republican voters said the new law curtailing the NSA's spying powers will have a negative effect on national security. That's compared to 14 percent who said it would improve security and 29 percent who said it would just maintain the status quo. Republicans were 9 percentage points more likely than the average registered voter to predict a negative national security impact from the law. And security is the second-most important voting issue for Republicans: 22 percent said it's their top set of priorities when casting votes, compared with 16 percent of registered voters and 9 percent of Democrats. Economic issues are the most important for GOP voters, at 41 percent. In addition, Republicans aren't convinced the USA Freedom Act will keep their personal information away from prying eyes. Fewer than one in five said it would have a positive impact on protecting personal information. Twenty percent said the law will decrease individual data security, while 19 percent said it will help safeguard such info. Among all registered voters polled, 18 percent predicted increased data security, compared with 15 percent who said protections would be weakened. Among GOP voters and the general population, pluralities of 43 percent and 45 percent, respectively, said there would be no impact at all on personal info. Skepticism about the effects of the law augurs poorly not only for Cruz, but also for fellow GOP presidential candidate Sen. Rand Paul (Ky.), even though he voted against the measure, saying it didn't go far enough to protect civil liberties. Paul also wanted to do away with the surveillance provisions altogether, a less popular option among Republicans than extending modified versions, according to a Morning Consult poll in May. Twenty-six percent of Republicans favored allowing the provisions to lapse while 43 percent said Congress should renew them with some modifications, which is what happened under the USA Freedom Act. Sen. Marco Rubio, however, is one GOP presidential candidate in the chamber who stands to gain from voter dissatisfaction with the law. The Florida lawmaker favored a clean reauthorization of the Patriot Act surveillance authorities and voted against the USA Freedom Act. "Weak presidential leadership combined with a politically motivated misinformation campaign have now left the American people less safe than we've been at any point since the 9/11 attacks," Rubio said in a statement on June 2, the day President Obama signed the bill into law. Fourteen percent of Republicans favored a clean renewal of the authorities, compared with 12 percent of all registered voters, according to the May poll.

GOP Links

GOP voters losing confidence in surveillance – plan would be a win for them Rainie and Madden 3/16

MARCH 16, 2015¶ Americans' Privacy Strategies Post-Snowden¶ BY LEE RAINIE AND MARY MADDEN¶ <http://www.pewinternet.org/2015/03/16/Americans-Privacy-Strategies-Post-Snowden/>

This survey asked the 87% of respondents who had heard about the surveillance programs: “As you have watched the developments in news stories about government monitoring programs over recent months, would you say that you have become more confident or less confident that the programs are serving the public interest?” Some 61% of them say they have become less confident the surveillance efforts are serving the public interest after they have watched news and other developments in recent months and 37% say they have become more confident the programs serve the public interest. Republicans and those leaning Republican are more likely than Democrats and those leaning Democratic to say they are losing confidence (70% vs. 55%).

Restricting data collection has massive public support - especially among Republicans

Gao 5/29

GEORGE GAO MAY 29, 2015 What Americans think about NSA surveillance, national security and privacy <http://www.pewresearch.org/fact-tank/2015/05/29/what-americans-think-about-nsa-surveillance-national-security-and-privacy/>

A majority of Americans (54%) disapprove of the U.S. government's collection of telephone and internet data as part of anti-terrorism efforts, while 42% approve of the program. Democrats are divided on the program, while Republicans and independents are more likely to disapprove than approve, according to a survey we conducted last spring.¶ 2More broadly, most Americans don't see a need to sacrifice civil liberties to be safe from terrorism: In spring 2014, 74% said they should not give up privacy and freedom for the sake of safety, while just 22% said the opposite. This view had hardened since December 2004, when 60% said they should not have to give up more privacy and freedom to be safe from terrorism.¶ While they have concerns about government surveillance, Americans also say anti-terrorism policies have not gone far enough to adequately protect them. More (49%) say this is their bigger concern than say they are concerned that policies have gone too far in restricting the average person's civil liberties (37%), according to a January survey. While Americans held this view between 2004 and 2010, they briefly held the opposite view in July 2013, shortly after the Snowden leaks.¶ 4At the same time, Americans want to control their personal information, but few feel like they are able to. Most say it is important to control who can get their information (93%), as well as what information about them is collected (90%). But only 9% say they have a lot of control over how much information is collected about them, and 38% say they have some control, according to our survey conducted August-September 2014.¶ Just 6% of Americans say they are very confident that government agencies can keep their records private and secure, while 25% are somewhat confident. Similar shares express those views about their landline and cellular telephone companies. Most Americans have heard about the U.S. government's surveillance programs, and some have changed their behavior because of it. Fully 87% are aware of the federal surveillance programs; among those aware of the programs, 25% – and 22% of adults overall – say they have changed the way they use technology at least somewhat after the Snowden revelations, according to our November 2014-January 2015 survey. Additionally, 61% of those aware of the programs say they have become less confident that the programs are serving the public interest.¶ 6The view from abroad is mostly one of disapproval. In most countries we surveyed in 2014, majorities opposed U.S. government monitoring of emails and phone calls of foreign leaders or their citizens. And a median of 62% in 43 countries also

oppose U.S. monitoring of American citizens. In contrast, Americans tilt toward the view that eavesdropping on foreign leaders is an acceptable practice, though they are divided over using this technique on average people in other countries. But six-in-ten Americans (61%) also oppose the government monitoring communications of U.S. citizens.

Obama

The Obama Presidency is over—it's Hillary's party now

Rothman 6/12 [Noah Rothman, Political Analyst, "The Democratic Party is Officially Leaderless," <https://www.commentarymagazine.com/2015/06/12/how-obama-presidency-ends/>; June 12, 2015; JW]

President Barack **Obama** wanted Congress to pass a variety of trade-related proposals, and he didn't want to have to rely on Republican votes in order to see that happen. He **lobbied his fellow Democrats in favor of trade, and he lobbied them hard. In the end, it wasn't enough.** On Friday, the president endured a stern censure from the very member of the party for whom he once served as a savior. **Barack Obama's presidency is all but over. It's Hillary Clinton's party now, but she does not seem inclined to lead it so much as to emerge as its supervisor by default and through a process of attrition. She is not in a hurry to rush that process, and there is no alternative Democratic leader waiting in the wings.** Inadvertently, **what House Democrats did on Friday was to decapitate their own party.** By a **hair's margin, the** GOP-dominated House passed fast-track trade promotional authority (TPA) that will allow the president to prioritize trade negotiations and conclude the terms of a free trade deal with 11 Pacific Rim countries. But by a resounding 302 to 126-vote margin, however, the House resoundingly rejected a Trade Adjustment Assistance (TAA) proposal passed in the Senate. The TAA, a giveaway to unions and other labor interests that will potentially be negatively impacted as a result of the passage of the Trans-Pacific Partnership, was soundly rejected. Obama was not merely supportive of the passage of both TPA and TAA; he pressed his fellow Democrats in the House to pass both proposals. During the annual indulgence that is the Congressional baseball game at Nationals Park on Thursday, the president surprised the press when made an impromptu visit to the Democratic dugout. **He smiled and waved to the adoring crowds, but Obama wasn't there merely to soak in the applause; he was there to work House Minority Leader Nancy Pelosi. It was clear that his cajoling was unsuccessful** on Friday morning when the president made another surprise visit to the Capitol Building to implore his fellow Democrats not to abandon him. **None of this extraordinary effort was enough.** ¶ "[A] president who has long kept Congress at arm's length may have paid a price," the New York Times reported. **And Democrats were not shy about scolding the president's approach to lobbying his fellow Democrats in the press and on the record. "I wish there had been much better outreach,"** Texas Democratic Representative Henry Cuellar lamented. ¶ Other anonymous Democrats were even sterner in their rebukes of Obama, according to the background quotes they gave CNN host Jake Tapper. **"Pelosi sealed the deal to vote no." "Democrats believe they often are taken [for] granted and not appreciated." "[Obama] was fine until he turned it at the end and became indignant and alienated some folks."** ¶ "Democrats desert their president," screamed an apoplectic New York Times headline. "As they return to their home districts for the weekend, Democrats will now have the distinct pleasure of experiencing what Republicans have undergone for the last few years – a narrative of their party in disarray and divided." **The Obama presidency is over. For Democrats, the transition into the era of Hillary Clinton began in earnest on Friday,** but it did so without her participation. On the issue of trade, as well as a whole host of pressing matters related to public policy, **Hillary Clinton has chosen to keep quiet.**

Obama's actions get attached—current support for Hillary proves

Pindell 6/27 [James Pindell; Political Analyst for the Boston Globe; "In Unity, N.H., Obama-Clinton bond was born"; <https://www.bostonglobe.com/metro/2015/06/26/unity-obama-clinton-bond-was-born/ytbkcLJhmdMZxoS0F1GCLP/story.html>; June 27, 2015; JW]

Seven years ago, on an elementary school soccer field, **Hillary Rodham Clinton started on a path to become the most dominant nonincumbent candidate for president in American history.** On July 27, 2008, **thousands came to** a rural town of 1,700, miles from interstates and airports, to **witness the first joint campaign appearance between Clinton and her rival** for the previous 16 months, Barack **Obama.** **Clinton had conceded the race just days earlier, and now she found herself trying to bring unity to the party in a town**

by that name. "We may have started on separate paths," Clinton said onstage that day, "but today our paths have merged." **The message was encouraging to supporters of Obama** — and in New Hampshire, those good feelings have lingered. **I don't think there is any doubt that the reason a big chunk of the Obama coalition is with Hillary today is because Hillary was with Obama in unity and afterward**" said Jim Demers, Obama's most prominent supporter in New Hampshire. "I see it in the phone calls to Obama supporters I make every day." "It was one of the biggest days in New Hampshire politics," Sullivan said. **That event really set a tone that helped Obama win two general elections in the state and is helping Hillary today**. Past presidential primaries in the state have ended with a rift, but this prevented that. Everyone was just happy." **It was a very symbolic moment.**" Demers said recalling the day. **When Hillary stood there and told her supporters she was on the same team, it was a moment that Obama supporters began to see Hillary in an entirely different light.** "Without Unity, Clinton may not have even been secretary of state, and who knows if she would even be running for president today, much less in the strong position she is in."

Obama's actions get attached to Hillary—ACA proves

Wald 6/25 [Alex Seitz-Wald; Political Analyst for MSCNB; "Hillary Clinton won't have to fight Obama's battles on health care"; <http://www.msnbc.com/msnbc/clinton-wont-have-fight-obamas-battles-health-care>; June 25, 2015; JW]

If Hillary Clinton takes the oath of office on January 20, 2017, she'll inherit a health care reform law that will be already seven years old and likely deeply entrenched, thanks in part to Thursday's Supreme Court ruling upholding the subsidy system for state-based exchanges. **Health care has been one of the defining issues of Clinton's long career in public life**, capped by an ambitious but ultimately doomed effort to create a universal health care system under her husband's administration in 1993. **By securing the future of the Affordable Care Act, the court's ruling could allow Clinton to complete one of the biggest unfinished goals of her career by building on the law that bears her one-time rival's name.** "This morning, the Supreme Court sided with common sense and America's families, and confirmed again that the Affordable Care Act is the law of land — and it's here to stay," **Clinton said in an email to supporters.** **The next president will either protect and expand health care for every American, or undo the progress we've made.** Politically, the ruling preserves the status quo. While Republicans will keep talking about repealing Obamacare as long as it motivates their base, most probably know it's now practically infeasible. And the GOP remains deeply divided on how to replace the law, making it unlikely the party will unite behind an alternative. Clinton will likely not feel much pressure to endorse major changes to the law. While only eight percent of Americans think the Affordable Care Act is working well, according to a new NBC News/Wall Street Journal poll, most say they want the law preserved and improved rather than nixed. **Among Democrats, whom Clinton will need to win over in the primary election and turnout in the general election, more than three-quarters think the law is working.** Obamacare didn't sink Obama in 2012 and will likely be even less of an issue in 2016, when repealing it would mean actively taking away healthcare from millions of Americans. In his remarks in the Rose Garden Thursday, Obama said it was time to switch from defense to offense on health care. After five years of relentless attacks, three elections, a mismanaged roll out, and two legal challenges that went all the way to the Supreme Court, the existence of the law is finally secure. "The Affordable Care Act is here to stay," he said. "There will be parts of the law that will still need to be improved. And if we can stop re-fighting old political battles that keep us gridlocked, then we could actually make the law work even better for everybody." White House Press Secretary Josh Earnest said that in its waning days, the Obama administration will focus on implementing the law to maximize its impact. That will include pushing more governors to expand Medicaid and create their own exchanges. **But improvements on top of the existing statute will likely have to wait until the next presidency. When asked Obama, Clinton has often spoken of her potential presidency as finishing some of the big projects Obama started,** noting that his administration had to prioritize saving the country from the Great Recession. **I think the president has done an extraordinary job in dealing with a terrible set of issues he inherited," Clinton said** in a response to a question from msnbc on the economy in New Hampshire last week. **"There's a lot more work still to be done, but boy am I glad where we are now than where we were."** During the 2008 Democratic presidential primary, **it was Clinton who pushed the other candidates to come up with comprehensive health reform plans.** And hers included the controversial mandate for individuals to hold health care, which Barack

Obama slammed then before ultimately making it a cornerstone of his own health law. **Now, she might finally have the chance to not only defend a national health law that strives for universal health access, but to expand it.**

Obama's actions are directly tied to Hillary's success in the upcoming election

Dickerson Nov 24th 2014

(John Dickerson: a Slate political columnist and author of On Her Trail, NOV. 24 2014, Slate: "Go Ahead, Blame Me", http://www.slate.com/articles/news_and_politics/politics/2014/11/president_obama_says_voters_want_that_new_car_smell_can_he_take_criticism.html)

President Obama expects to get a few dings from his successor and he doesn't mind it. He told ABC's George Stephanopoulos he understands that the next Democratic presidential nominee will need to distance herself from him. The next candidate will want an opportunity to describe what he or she believes in and the public wants to inhale what Obama called "that new car smell." Let the Olfactory Primary begin! **The public certainly likes a new new thing, though after trying out a one-term senator with no executive experience, the voters in 2016 might be looking for more time-tested qualities. But whatever the waft of the Hillary mobile, it will be hitched to the Obama wagon. That's true of any Democratic nominee, but particularly true for Clinton, who served as his secretary of state.** President Obama and any Democratic successor will be closely connected for all of the obvious reasons—they will share roughly the same philosophy; they will have both fought Republican opponents—but also because of the growth of the imperial presidency. **The more presidents act alone, the more their policies live or die depending on the views of the next president. The president's recent decision not to deport millions of undocumented immigrants could be undone by the next president. So too could some of his environmental regulations. Both of those issues are important to key constituencies in the Obama coalition—Latinos and younger voters—so the next Democratic nominee will promise to uphold them.** Though the Affordable Care Act is a piece of legislation, the president has shown how it can be protected through executive modifications, a tradition his successor could continue. Plus, the law will continue to face existential threats from Republicans, which means its survival may also be dependent on the shield of the presidential veto. Willfully dressing up in the lame-duck costume every day to sit mute at 1600 Pennsylvania Ave. is very hard. **Each Democratic candidate who hopes to have a chance will run supporting Obama's positions on health care, immigration, and climate change. Given those positions on the big things, any move to distance themselves from Obama will seem puny by comparison.** In newsrooms, editors will monitor the micrometers between the faintest policy differences, and they will shout emergency orders to make a big deal about it. But despite all the talk about distancing, candidates will learn what Democratic senators up for re-election learned this fall: **Resistance is futile. If there is a D next to your name, you can't really get that far from the president. Over the next two years, if you could capture the relative political distance between Barack Obama and Hillary Clinton in Hyperlapse, it would look like two figures standing in place with a blast from the flash cameras every time one or the other made the smallest wiggle** but retaining their essential original posture. Even if they are not trying to distance themselves from an unpopular incumbent, candidates do sometimes have different views and whether by design or accident they will define themselves as what the president is not. Obama's aides say the president understands this: He is supposedly prepared to endure some criticism and even the occasional blow or two to his ego because the best way to lock in his legacy is if a Democrat is elected. As Taylor Branch wrote in *The Clinton Tapes*, Bill Clinton once told Al Gore, "Al, I would let you flog me at noon right on the doorstep of the Washington Post." That equanimity sounds good now, but it might be hard to sustain that Zen posture. In the end, what makes it hard for presidents is not just enduring the abuse but the idea that the current nominee could be running a better campaign. However much Gore's distancing might have hurt Clinton personally, he also thought the Gore team was politically stupid to run away from the president and he imagined he could do some good out there campaigning for Gore on the campaign trail. Obama may feel the same way; he may stay mum, but his loyal aides will provide the anonymous quotes. It will also be hard for Obama to sit still. During the final months of the 2014 races, Obama could barely move without it becoming a campaign story. That will kick in even faster before 2016. Taking abuse is easy; willfully dressing up in the lame-duck costume every day to sit mute at 1600 Pennsylvania Ave. is much harder.

Empirics proves Obama's actions are tied to Hillary's campaign

Judis Nov 17th 2014

(History Shows That Hillary Clinton Is Unlikely to Win in 2016, NOVEMBER 17, 2014 By John B. Judis an American journalist, is a senior writer at The National Journal and a former senior editor at The New Republic, New Republic, <http://www.newrepublic.com/article/120303/democrats-hillary-clinton-could-lose-2016-presidential-election>)

Republicans did well in the midterm elections, but there is widespread agreement that they face a demographic disadvantage in the 2016 presidential election, when many of the predominately Democratic

younger and minority voters, who stayed home in 2014, will return to the polls. It's true that an expected increase in turnout will benefit the Democrats, but may not be enough to elect another Democratic president. The chief obstacle that any Democratic nominee will face is public resistance to installing a president from the same party in the White House for three terms in a row. If you look at the presidents since World War II, when the same party occupied the White House for two terms in a row, that party's candidate lost in the next election six out of seven times. The one exception was George H.W. Bush's 1988 victory after two terms of Ronald Reagan, but Bush, who was seventeen points behind Democratic nominee Michael Dukakis at the Republican convention, was only able to win because his campaign manager Lee Atwater ran a brilliant campaign against an extraordinarily weak opponent. (Democrats might also insist that Al Gore really won in 2000, but even if he had, he would have done so very narrowly with unemployment at 4.0 percent.) There are three reasons why the three-term obstacle has prevailed. The first and most obvious has been because the incumbent has become unpopular during his second term, and his unpopularity has carried over to the nominee. That was certainly the case with Harry Truman and Adlai Stevenson in 1952, Lyndon Johnson and Hubert Humphrey in 1968, Gerald Ford (who had succeeded Richard Nixon) in 1976, and George W. Bush and John McCain in 2008. The second reason has to do with an accumulation over eight years of small or medium-sized grievances that, while not

affecting the incumbent's overall popularity, still weighed down the candidate who hoped to succeed him.

Dwight Eisenhower remained highly popular in 1960, but some voters worried about repeated recessions during his presidency, or about his support for school integration; Bill Clinton remained popular, and unemployment low, in 2000, but his second term had been marred by the Monica Lewinsky scandal, and coal-state voters worried about Democrats' support for Kyoto

while white Southern voters worried about the administration's support for African American causes. The third reason has to do with the voters' blaming party gridlock between the president and congress partly on the president and his party. That was a factor in 1960—James McGregor Burns was inspired to write The Deadlock of Democracy by the Eisenhower years—and it was also a factor in the 2000

elections. In the 2016 election, not just one, but all three of these factors will be in play and will jeopardize the Democratic nominee. Obama and his administration are likely to remain unpopular among voters. There is already an accretion of grievances among Obama and the Democrats that will carry over to the nominee. These include the Affordable Care Act, which, whatever benefits it has brought to many Americans, has alienated many senior citizens (who see the bill as undermining Medicare), small business owners and employees, and union leaders and workers whose benefits will now be taxed. Add to these the grievances around the

administration's stands on coal, immigration, guns, and civil rights, including most recently its support for the protestors in Ferguson. There are, of course, many voters who would vote for a Republican regardless

of who had been in office, but there are many voters in the middle (especially in presidential years) whose vote, or failure to vote at all, will be swayed by a particular grievance. That certainly hurt Al Gore in 2000, McCain in 2008, and could hurt the Democratic nominee in 2016. It's a very rough measure, but you can look at the shift in the independent vote in 1960, 1968, 1976, 2000, and 2008 to see how the accretion of grievances can sway voters in the middle. There are, of course, mitigating factors that could help a Democrat to succeed in 2016. Demography and turnout are important, although not decisive. (A Democrat still has to win over 40 percent of the white vote to succeed, as well as nearly 70 percent of the Hispanic vote.) The quality of the candidate is also important. If the opposition party nominates candidates who are ineffective, as Dukakis was, or are incapable of moving to the center (either temperamentally or because of party pressures), then the candidate of the party in the White House can win. Equally, if the party in the White House nominates someone who is greatly admired (as Herbert Hoover was in 1928), or runs a terrific campaign (as Bush-Atwater did in 1988), they can win. Can the Democrats overcome the third-term hitch in 2016? If the nominee is Hillary Clinton, as now appears likely, she should be able to command significant support among women and minorities—two key Democratic constituencies. Her experience gives her credibility as a candidate (the dynastic factor is primarily of interest to the press). And she is not positioned too far to the left. But in her 2008 run, neither she nor her campaign managers displayed the political skill of the last presidential victors. And she will have difficulty dissociating herself from the voters' disapproval of Obama's

administration. The Democrats could benefit if the Republicans nominate a relatively inexperienced right-winger or someone who possesses the temperament of a high school football coach rather than a president. But in the last elections, they opted for the more centrist contenders who had some credibility as presidential candidates. If they opt for an experienced centrist in 2016—Florida's Jeb Bush is the obvious example—and if the party's right wing doesn't demand he toe the line, they could stand a good chance of reclaiming the White House and of confirming Americans' reluctance to keeping the same party in the White House three terms in a row.

Courts Link

Court activism a key issue in the election

LA Times 6/10

By DAVID G. SAVAGE AND MICHAEL A. MEMOLI June 10, 2015 How will history judge Obama? Courts may decide <http://www.latimes.com/nation/la-na-obama-courts-legacy-20150610-story.html#page=1>

A decade ago, Democrats cheered court decisions that tried to rein in the National Security Agency or the Guantanamo prison. Republicans complained of “activist” judges who sought to “legislate from the bench.” Now it is Republicans who are turning to the courts and accusing the president of abusing his authority. Last year, the House under Republican control voted for the first time to sue a president for exceeding his authority. Jonathan Turley, a George Washington University law professor who said he voted for Obama, signed on as the lead lawyer for the House. His suit says Obama chose to extend several deadlines set in the healthcare law and opted to spend money that was not appropriated by the House. For Democrats, **alleged conservative court activism has emerged as a key issue in the early stages of the 2016 presidential campaign.** Hillary Rodham Clinton has turned a spotlight on decisions that limited voting rights and opened the door for more money in politics.

Empirics prove – Republicans will stick court decisions on Hillary

Bush 6/25

Jeb Bush June 25, 2015 Jeb 2016! Mass email

<https://twitter.com/derekwillis/status/614094116075520001/photo/1>

The Supreme Court just upheld Obamacare yet again. This is the direct result of President Obama. He deliberately forced ObamaCare on the American people in a partisan and toxic way. And **we both know that Hillary Clinton will be more of the same. We cannot let this happen.** That is why I need you to make a one time – emergency contribution of \$50, \$25, or \$10 to my campaign to ensure that NEVER happens. Friend, you know in your heart that **we cannot afford four more years of the same policies, which will be the case under a Clinton White House.** But the only way to prevent that is to make the most generous contribution you can afford right now to stop her. And here is my promise to you. As President, I will uphold our Constitution, I will not compromise my duty to you or the American people. We need a President who will repeal and replace ObamaCare with a conservative solution. **So join me today, and ensure we put a stop to Hillary Clinton and the overreaches of the last six years.**

No Stance

Empirics prove- Hillary was too issue specific and policy focused in 2008

Encarnacao, 6/14. Jack, Boston Herald, 2015. "'Sheer force' could be enough to propel Hillary Clinton, Jeb Bush to 2016."

http://www.bostonherald.com/news_opinion/us_politics/2015/06/sheer_force_could_be_enough_to_propel_hillary_clinton_jeb_bush_to

Presidential front-runners Hillary Clinton and Jeb Bush will struggle to convince skeptical voters in New Hampshire appearances this week that they're fresh and invigorating candidates, but "sheer force" and "dynasty" may yet prove their winning hands in 2016, political operatives say. "It's going to be about the dynasty," said Andrew Hemingway, who ran Newt Gingrich's New Hampshire campaign in 2012. "It's going to be about the amount of money I can raise, the size of my organization, and, 'I don't care, I can wait everybody out.' It's just going to be sheer force. It's really boring." Boston-based Democratic operative Scott Ferson said it all adds up to the kind of clash of political royalty that voters profess to disdain — but which he believes they'll end up choosing. "How does the royal family in England keep fresh? They give us new royalty, same family, new players," Ferson said. "So we've got Charles and George, maybe that's Hillary and Jeb. And we've got a kingmaker, Mitt Romney. And we've got a court jester, Donald Trump." But GOP strategist Ford O'Connell, who advised John McCain's 2008 campaign, countered that the key to clinching New Hampshire for Bush is "to convince people that he's Jeb the former conservative governor from Florida and not the third Bush." "It's a record that, honestly, if you remove the last name, everyone would be going gaga over," O'Connell said, citing reduced taxes and improved education. Bush is expected to formally announce today in Florida, then travel to the Granite State. Clinton today will attend an early education forum in Rochester, a launch party in Concord and a Democratic dinner in Manchester. Real estate mogul Trump is expected to announce tomorrow and then hit the

Granite State Wednesday, Ferson said Clinton needs to revive the solution-oriented rhetoric of her 2008 bid to counter feelings of inevitability and questioned the strategy behind Clinton framing herself as a champion of the middle class. In '08, she was very pointed about what we need to do and how we're going to get it done. It wasn't an, 'I feel your pain' kind of thing," Ferson said. She's trying to be fresh like Barack Obama was in '08 and like Bill Clinton was in '92. And the reality is she's not new, she's not like them, but she's the most qualified person in the race. ... It's a mistake for her to try to switch up who she is and reinvent herself."

Clinton won't take a stance on surveillance – the plan and a narrowing race would force her hand Friedersdorf 15

CONOR FRIEDERSDORF FEB 25, 2015 Hillary's Evasive Views on the NSA

<http://www.theatlantic.com/politics/archive/2015/02/hillary-clintons-evasive-position-on-nsa-spying/386024/>

Hillary Clinton is almost certain to launch a bid for the presidency. But at least for now, she's determined to keep the public guessing about her stance on NSA spying. As Edward Snowden's revelations forced the issue to the fore of national debate, she kept mum, even as other prospective candidates staked out

positions. ¶ On Tuesday, the technology journalist Kara Swisher raised the subject of surveillance while questioning the former Secretary of State. "Would you throttle back the NSA in the ways that President Obama has promised but that haven't come to pass?" she asked. Clinton's successfully evasive answer unfolded as follows: ¶ Clinton: Well, I think the NSA needs to be more transparent about what it is doing, sharing with the American people, which it wasn't. And I think a lot of the reaction about the NSA, people felt betrayed. They felt, wait, you didn't tell us you were doing this. And all of a sudden now, we're reading about it on the front page... ¶ So when you say, "Would you throttle it back?" Well, the NSA has to act lawfully. And we as a country have to decide what the rules are. And then we have to make it absolutely clear that we're going to hold them accountable. What we had because of post-9/11 legislation was a lot more flexibility than I think people really understood, and was not explained to them. I voted against the FISA Amendments in 2008 because I didn't think they went far enough to kind of hold us accountable in the Congress for what was going on. ¶ Swisher: By flexibility you mean too much spying power, really. ¶ Clinton: Well yeah but how much is too much? And how much is not enough? That's the hard part. I think if Americans felt like, number one, you're not going after my personal information, the content of my personal information. But I do want you to get the bad guys, because I don't want them to use social media, to use communications devices invented right here to plot against us. So let's draw the line. And I think it's hard if everybody's in their corner. So I resist saying it has to be this or that. I want us to come to a better balance. ¶ This will not do. The answer elides the fact that Clinton has not been a passive actor in surveillance policy. "What the rules are" is something that she was responsible for helping to decide. She served in the United States Senate from 2001 to 2009. She cast votes that enabled the very NSA spying that many now regard as a betrayal. And she knew all about what the NSA wasn't telling the public. To say now that the NSA should've been more transparent raises this question: Why wasn't Clinton among the Democrats working for more transparency? Clinton may resist "saying" that surveillance policy "has to be this or that," but it must be something specific. "Let's draw the line" and "I want us to come to a better balance" are shameless weasel phrases when you're vying to call the shots. What is being balanced in her view? What should the NSA have revealed earlier? How much transparency should it provide going forward? What does the law require of the NSA? Since 9/11, when has the NSA transgressed against the law as Clinton sees it? Those

questions hint at the many ways that her position is evasive. So long as no one else contests her party's nomination, she can get away with it.

Clinton guilty of shifting positions

Tobin 2015, Jonathan S. Tobin (Senior Online Editor of Commentary magazine), 15 June 2015, The "New Hillary" Reboot Changes Nothing, <https://www.commentarymagazine.com/2015/06/15/the-new-hillary-clinton-reboot/>. PE

Like past attempts by politicians to re-imagine themselves ("new Nixon"), Hillary's second start to her campaign was to a large degree a sleight of hand maneuver. Her problems stemmed from blows to her reputation from revelations about her bizarre use of private emails and the ethical questions that arose once the press began scrutinizing the Clinton Family Foundation. Clinton's inability or unwillingness to candidly address these issues dovetailed with her refusal to speak to the press after she began her campaign to give her the impression of a woman trying to run for president in a bubble. Clinton is supposed to start giving interviews to local press outlets this week while still shunning more aggressive national reporters. But the problem goes deeper than whether she's dodging the press altogether as opposed to giving canned and evasive answers to questions. If Clinton's trust and favorability ratings are under water, it's not because she hasn't given interviews. It's because the public understands that she is a chameleon who will change her positions as often as she changes her accent. Her willingness to adopt a southern drawl in the south and then drop it when north of the Mason-Dixon line is one of the most obvious and shameless bits of pandering by a politician since Thomas Edison first recorded sound. But while that might be forgiven, the country has also noticed that Clinton has made a hard left turn on both foreign and domestic issues that gives the lie to her pose as a "fighter." The most obvious instance this past week was her steadfast refusal to take a stand one way or the other on the trade bill that failed in the House last Friday because rank and file Democrats opposed President Obama. Clinton had been on record supporting this concept throughout her time as secretary of state and before that in the Senate. But she stayed silent as Obama went down to a humiliating defeat and then said nothing about it the next day in her speech. Subsequently, she tried to play both ends against the middle by saying she wanted a modified trade bill. This does nothing to further the cause she once supported and also fails to satisfy the unions that flexed their muscles last week on the vote. That her reboot that aims to show her as a "fighter" happened on the very days that her backers were busy rather fruitlessly trying to spin her cowardice as principle on the cable news shows was bad luck. But the new emphasis on personal biography isn't likely to help her overcome that setback. ¶ We're told we're going to hear a lot about how Mrs. Clinton's mother's humble beginnings and struggles influenced her. But Clinton's decision to run against the same Wall Street that backed her in 2008 by slamming the chutzpah of hedge fund managers making more than kindergarten teachers also opens the former First Lady up to the same sort of scrutiny. The problem with the Clinton Cash scandal is not just that it raised serious conflict-of-interest questions that haven't been answered. It's that it reminded voters that the Clintons have grown wealthy by giving speeches and profited handsomely from a foundation that is more a political slush fund than anything else. ¶ The left loves Clinton's new emphasis on soaking the rich. But this is the same Hillary who claimed to be "dead broke" the year she and her husband received \$18 million in book advances. It's the same Hillary who made hundreds of thousands of dollars per speech. This marks her as a hypocrite on income inequality. The biography she wants to run on tells us the only operating principle in her political career is opportunism. That's why she changed positions on foreign policy (Iraq, Cuba); social issues like gay marriage, immigration, abandoning her husband's stances on crime and, of course, trade. ¶ The new Hillary is talking more like a left-winger to ensure that no one gets to her left in the next year as she waltzes to the Democratic nomination. But she's still the same politician that voters view with unease even if they'd like a woman to be president and are unsure about her potential GOP rivals. This is a dilemma no amount of repackaging can fix and in fact efforts to do so only remind us of her former stances. Clinton's shady ethics and shifting positions indelibly mark her as a politician no one outside of her party base can trust. Just as Republicans were rightly chided for forcing Mitt Romney so far to the right that it hurt him in the general election in 2012, the new Hillary is an unforced error that may come back to haunt the candidate in the fall of 2016.

Clinton refuses to take stance on foreign policy

Fahy & Fahy 15', Brian and Garrett Fahy (attorneys from Los Angeles who previously worked in the White House and Senate Republican Conference), Hillary's Backward Avoidance Campaign, 15 June 2015, <http://townhall.com/columnists/brianandgarrettfahy/2015/06/15/hillarys-backward-avoidance-campaign-n2012022/page/full>. PE

Greece's continuing economic woes threaten to send the European Union into chaos. China creates islands in the South China Sea on which to build military bases to threaten our allies. ISIS claims more of Iraq and the White House contemplates another influx – don't call it surge – of "military advisors" and bases to counter the threat. The Russia/Ukraine conflict festers.¶ The presumptive Democratic nominee for the White House, Hillary Clinton, spent four years globetrotting and meeting foreign heads of state, ostensibly in service of the country. Based on this experience, one would assume she has something constructive to say about these issues. Yet she apparently does not, and she has assiduously avoided wading into foreign policy issues since declaring her candidacy for the presidency.¶ Instead, after she overcame the early scandals of private email usage at the State Department, and reemergence of Sidney Blumenthal, she has been spending her time talking about prison overcrowding, racial strife, and now, in her latest effort to avoid the realm she supposedly mastered, she is talking about the story of her own mother, Dorothy Howell. This latest, shall we call it reset, of her campaign is evidence that she has no idea what her campaign is about.

Hilary Clinton refuses to take partisan position on issues – Obama's trade bill shows.

Ehrenfreund 6/19 Max Ehrenfreund (Political Reporter who has written for The Huffington Post, Los Angeles Times, and other publications,) Washington Post, "Hillary Clinton takes a stand on trade," <http://www.washingtonpost.com/blogs/wonkblog/wp/2015/06/19/wonkbook-hillary-clinton-takes-a-stand-on-trade/>

In a televised interview with Jon Ralston for KNPB in Reno, Hillary Rodham Clinton said she'd vote against the procedural bill on trade that President Obama, her old boss, and congressional Republicans have spent months working to pass. Clinton's statement Thursday contrasts sharply with her previous support for Obama's trade agenda. After all, as his secretary of state, she helped negotiate the deal in the Pacific that Obama hopes to conclude. Clinton seems to worry that the struggle in Congress has weakened the bill. With Democrats opposed in the House, the GOP leadership separated the bill into two parts to try to guarantee that their caucus would support the legislation. One piece would give the president broader authority to negotiate a trade deal with foreign countries, and another would protect workers and firms here displaced by global commerce. With no assurance that the second part of the legislation will pass, Clinton is now formally opposed. Clinton's comments might be seen as a victory for Sen. Bernie Sanders (I-Vt.), her rival for the Democratic presidential nomination. Sanders has spent weeks criticizing Clinton for "fence-sitting" on the trade issue, as he told CNN's "State of the Union." A few days ago, Clinton had said she thought Obama should "listen to and work with his allies in Congress, starting with Nancy Pelosi," the House minority leader who had voted against the legislation, but Clinton also implied that Obama could use congressional Democrats' opposition to bargain with other countries for a better deal. Clinton's campaign has reason to be concerned about Sanders's challenge, Jonathan Easley writes in The Hill. Sanders is polling well in New Hampshire, and Clinton has performed poorly in Iowa in the past. With a strong showing in either of the two early primary states, Sanders could win the attention of the media, donors and voters.

Hillary refuses to take stance on issues to silence GOP critics

Jonah Goldberg 15[fellow at the American Enterprise Institute, contributor to Fox News, LA Times, editor of National Review Online], 3-9-2015, "Where's Hillary? Avoiding the issues, again," latimes, <http://www.latimes.com/opinion/op-ed/la-oe-0310-goldberg-hillary-clinton-emails-20150310-column.html>

The drumbeat for **Hillary Rodham Clinton** to exit her bunker and answer questions about her “home-brewed” email system **has been** growing louder by the day, **prompting people to ask, “Where's Hillary?”** But if you think about it (or search the Internet or Lexis-Nexis), you'll realize that “Where's Hillary?” is one of the most frequently asked questions of her long career in public life. Hillary Clinton's strategy on those missing emails: Ignore her critics Hillary Clinton's strategy on those missing emails: Ignore her critics Sometimes it's asked figuratively. **Clinton has a tendency to sit out many public controversies**, refusing to take a stand. Last December, **for instance**, as **the issues of race and police conduct** were tearing apart the country over killings in Missouri and New York, CNN's Jason Johnson asked, “Where's Hillary Clinton?” According to Johnson, a political science professor and political consultant, the “most serious problem for **Hillary** 2016 is the perception that she's an overly cautious politician who **is afraid to take tough stances on anything, especially** those **issues the Democratic base might be passionate about**. And nowhere is this more evident than in her almost utter silence on the recent protest marches across the nation.” I Related Clinton's miscalculation on her private email account EDITORIAL Clinton's miscalculation on her private email account SEE ALL RELATED 8 That same month, MSNBC.com ran a piece by Alex Seitz-Wald headlined, “Where is Hillary on Torture?” Just last week, Breitbart.com asked, “Where's Hillary?” with regard to the controversy over Israeli Prime Minister Benjamin Netanyahu's address to Congress. **She's been similarly coy about gay marriage and countless other issues**. For one of America's most knowledgeable and controversial political leaders, **she** sure **stays on the sidelines** a lot. Perhaps because the first advice lawyers give their clients is to clam up, **one of Clinton's preferred tactics is to slow-walk her response to investigators**. - At this point, it's fair to say this is simply who she is. She and Bill Clinton have law degrees, but only Hillary was ever a real, practicing lawyer. And though she made the transition to full-time politician long ago, she never lost her lawyerly persona or worldview. Bill works by the seat of his pants (well, usually it's the seat). He's probably the greatest extemporaneous political talker in America, with the possible exception of Newt Gingrich. Clinton, meanwhile, does her homework. She puts together huge, sprawling task forces. That's how she crafted her failed “HillaryCare” proposal in the early 1990s, and it's how she's setting up her presidential campaign (she reportedly has 200 policy advisors already). cComments @trudeman neither ridicule nor argumentative JERRY W. LEWIS AT 6:06 PM MARCH 12, 2015 ADD A COMMENTSEE ALL COMMENTS 85 Perhaps because the first advice lawyers give their clients is to clam up, one of Clinton's preferred tactics is to slow-walk her response to investigators. To pick just the most famous example, in 1994, special counsel Robert Fiske subpoenaed all papers related to an allegedly shady land deal, to be delivered within 30 days. The Clintons claimed the billing records from her law firm were lost. Almost two years later, they magically appeared in the White House residence. Will Clinton let email issue mushroom into a major problem? Will Clinton let email issue mushroom into a major problem? Just because she's served as her own lawyer doesn't mean Clinton has a fool for a client. **Her passive-aggressive approach to politics** often serves her well. By waiting long stretches of time, she **encourages her political enemies to get ever more shrill** or conspiratorial, **even as the mainstream media grow weary of the story, particularly if it lends aid and comfort to GOP critics**.

Hillary won't focus on controversial issues-

Paul Mirengoff 15, lawyer, attended Dartmouth College and Stanford Law School. 6-15-2015, “Hillary Clinton: launched but not engaged,” Power Line, <http://www.powerlineblog.com/archives/2015/06/hillary-clinton-launched-but-not-engaged.php>

The **Hillary Clinton** campaign, twice launched, **still doesn't** meet the traditional criteria for a political campaign. Real presidential candidates have always **take positions on key issues**, especially those current enough to be voted on by Congress. Hillary Clinton refuses. Judged conventionally, **she's** still in exploratory mode. What is she **exploring**? Two things. The political winds and **how much** (or little) **she can get away with**. The mainstream media, it appears, will let her get away with plenty. **Republican contenders**, be they governors or neurosurgeons, **are expected to opine** on a wide range of **foreign policy topics. If they trip up even slightly, they are said to be unready** for the Oval Office. **Meanwhile, Clinton**, who as Secretary of State helped formulate current U.S. foreign policy, **opines little. And** the MSM **makes little complaint**.

Internal Link

I/L – momentum

Obama’s momentum determines the success of the Hilary campaign

Weber et al. 4/7 (Lauren Weber, Jason Linkins, Howard Fineman, “Trail To The Chief: The 2016 State Of The Race Edition” 4/7/2015, http://www.huffingtonpost.com/2015/04/02/trail-to-the-chief-2016-state-of-race_n_6994690.html)//JHH

It’s spring, and it’s time for the quadrennial launching of presidential campaigns.¶ “Launching” used to be exclusively a live theatrical moment, akin to smashing a bottle of Dom Perignon against a battleship or raising the curtain on a one-man (or one-woman) Broadway play.¶ But this year the live, in-person launch is merely the excuse for as big a social media supernova as the candidate can muster. The aim is not so much to advertise the candidate to the entire world as to vacuum up contact info about potential supporters, donors and volunteers.¶ The candidates this year need all the socialization they can get, for different reasons. Hillary Clinton wants to convert all those Obama lists and all that Obama energy into something of her own. The others just desire some momentum any way they can get it.

Losing momentum during the announcement decimates Hilary

Gerber 3/31 (Scott Gerber, “Opening Day optimism” 3/31/2015, [//JHH](http://thehill.com/blogs/congress-blog/presidential-campaign/237256-opening-day-optimism))

Second, you can’t win the pennant race in April and May, but you sure can lose it. So it’s so important to come out of the gate strong, define yourself and your candidacy, show momentum and inevitability. That’s why the Hillary Clinton email brouhaha matters. It’s not that people really care what server she kept her public and private correspondence on. They really don’t. But the issue diminishes her ability to present herself anew to the American people, and it has the potential to undermine one of her chief arguments – that she is more competent than the sitting president and the diverse field of Republican wannabes. Similarly, reports that Ted Cruz is signing up for Obamacare hints at the worst political trait of them all – hypocrisy.¶ Third, pitching wins championships, especially in the post-steroid era. The Giants have Matt Cain and Madison Bumgarner. The Dodgers have Clayton Kershaw. The Nationals have Stephen Strassburg, Jordan Zimmermann, and Max Scherzer.¶ So what’s the equivalent in politics. It’s message, message, message. Finding the right message defines the Why of the campaign. Why are you running? Why are you better than the other candidates? Why now?¶

I/L – turnout

The plan kills voter turnout and perceptions of a strong Hillary, now is key Reich 4/10 (Robert Reich, “The Defining Moment, and Hillary Rodham Clinton,” 4/10/15, http://www.huffingtonpost.com/robert-reich/the-defining-moment-and-h_b_7042646.html)//JHH

It's a paradox. ¶ Almost all the economic gains are still going to the top, leaving America's vast middle class with stagnant wages and little or no job security. Two-thirds of Americans are working paycheck to paycheck. ¶ Meanwhile, big money is taking over our democracy. ¶ If there were ever a time for a bold Democratic voice on behalf of hardworking Americans, it is now. ¶ Yet I don't recall a time when the Democratic Party's most prominent office holders sounded as meek. With the exception of Elizabeth Warren, they're pussycats. If Paul Wellstone, Teddy Kennedy, Robert Kennedy, or Ann Richards were still with us, they'd be hollering. ¶ The fire now is on the right, stoked by the Koch brothers, Rupert Murdoch, and a pocketful of hedge-fund billionaires. ¶ Today's Republican firebrands, beginning with Ted Cruz, blame the poor, blacks, Latinos, and immigrants for what's been happening. They avoid any mention of wealth and power. ¶ Which brings me to Hillary Rodham Clinton. ¶ Some wonder about the strength of her values and ideals. I don't. I've known her since she was 19 years old, and have no doubt where her heart is. For her entire career she's been deeply committed to equal opportunity and upward mobility. ¶ Some worry she's been too compromised by big money - that the circle of wealthy donors she and her husband have cultivated over the years has dulled her sensitivity to the struggling middle class and poor. ¶ But it's wrong to assume great wealth, or even a social circle of the wealthy, is incompatible with a deep commitment to reform - as Teddy Roosevelt and his fifth-cousin Franklin clearly demonstrated. ¶ The more relevant concern is Hillary Clinton's willingness to fight. ¶ Politicians usually seek to appeal to as many voters as possible, eschewing controversy. After a devastating first midterm election, her husband famously "triangulated" between Democrats and Republicans, seeking to find a middle position above the fray. ¶ But these times are different. Not in ninety years has America harbored a greater concentration of wealth at the very top. Not since the Gilded Age of the 1890s has American politics been as corrupted by big money as it is today. ¶ If Hillary Clinton is to get the mandate she needs for America to get back on track, she will have to be clear with the American people about what is happening and why - and what must be done. ¶ For example: Wall Street is still running the economy, and still out of control. ¶ So we must resurrect the Glass-Steagall Act and bust up the biggest banks, so millions of Americans don't ever again lose their homes, jobs, and savings because of Wall Street's excesses. ¶ Also: Increase taxes on the rich in order to finance the investments in schools and infrastructure the nation desperately needs. ¶ Strengthen unions so working Americans have the bargaining power to get a fair share of the gains from economic growth. ¶ Limit the deductibility of executive pay, and raise the minimum wage to \$15 an hour. ¶ Oppose trade agreements like the Trans Pacific Partnership designed to protect corporate property but not American jobs. ¶ And nominate Supreme Court justices who will reverse "Citizens United." ¶ I'm not suggesting a long list. Democratic candidates too often offer mind-numbing policy proposals without explaining why they're important. ¶ She should use such policies to illustrate the problem, and make a vivid moral case for why such policies are necessary. ¶ In recent decades Republicans have made a moral case for less government and lower taxes on the rich, based on their idea of "freedom." ¶ They talk endlessly about freedom but they never talk about power. But it's power that's askew in America - concentrated power that's constraining the freedom of the vast majority. ¶ Hillary Clinton should make the moral case about power: for taking it out of the hands of those with great wealth and putting it back into the hands of average working people. ¶ In these times, such a voice and message make sense politically. The 2016 election will be decided by turnout, and turnout will depend on enthusiasm. The largest party in America isn't the Republican or Democratic Parties; it is the Party of Non-Voters, who have become so cynical about politics they've ceased voting. ¶ If she talks about what's really going on and what must be done about it, she can arouse the Democratic base as well as millions of Independents and even Republicans who have concluded, with reason, that the game is rigged against them. ¶ The question is not her values and ideals. It's her willingness to be bold and to fight, at a time when average working people need a president who will fight for them more than they've needed such a president in living memory. ¶ This is a defining moment for Democrats, and for America. It is also a defining moment for Hillary Clinton.

I/L – trade

Clinton is against TPP

Bradner 15' Eric Bradner (Reporter in CNN Politics) May 19th, 2015. CW Politics. "Clinton finds Problems with Obama TPP Trade Proposal" <http://www.cnn.com/2015/05/19/politics/hillary-clinton-trade-issues-iowa-trip/>

Hillary Clinton took aim Tuesday at two core components of a massive free trade pact that President Barack Obama is negotiating — signaling some agreement with the deal's liberal critics. ¶ The Democratic front-runner in the 2016 presidential race said she wants to see rules included in the Trans-Pacific Partnership that would penalize countries for driving down the value of their currencies in order to give their exports a price advantage in the U.S. market. ¶ And she said she's concerned about a provision that would give "corporations more power to overturn health and environmental and labor rules than consumers have." "I think that is a problem," Clinton said ¶ during a roundtable event in Iowa, when one woman participating in the event asked her about the deal. ¶ It's

as close to staking out a clear position on the trade deal that Clinton has come — though she left wiggle room Tuesday. ¶ "I want to judge the final agreement. I have been for trade agreements; I have been against trade agreements," she said. ¶ Her comments come as the Senate prepares to vote on trade promotion authority, a measure that would allow Obama to finalize the Pacific Rim deal and submit it to Congress for a vote with limited debate and no amendments. That authority, negotiators say, is crucial to getting other countries to sign off on a final deal. ¶ Those two items are central to the critique that trade unions, environmental and public health groups have made against the 12-country Pacific Rim pact, which would link 40% of the world's economy, including Japan, Australia, Canada and Mexico. ¶ Currency manipulation is not part of the talks. U.S. trade negotiators have instead said currency issues are best left to the Treasury Department, and that including them in the trade talks could be a deal-breaker for other countries. ¶ Democrats are pushing to amend the trade promotion authority bill to force Obama to address currency in the trade deal. ¶ The amendments being pushed, Clinton said, have "some merit." ¶ What is part of the negotiations, though, is a wonky item known as an "investor-state dispute settlement" mechanism. ¶ It would give corporations the right to challenge, to an independent, international arbiter, whether countries' rules and regulations meet their free trade obligations. ¶ Democratic Sen. Elizabeth Warren of Massachusetts has raised that issue as the key reason she wants to see the Trans-Pacific Partnership rejected.

Hillary will reject TAA

White 6/19/15

(Hillary's campaign stumbles on trade Ben White is Politico's chief economic correspondent and a CNBC contributor Friday, 19 Jun 2015, http://www.cnbc.com/id/102773635?_source=msn%7Cmoney%7Cheadline%7Cstory%7C&par=msn)

Hillary Clinton remains the all-but-certain Democratic nominee for president. But right now her campaign is something of a hot mess, especially on the issue of trade, where pressure from the left is leading her into nonsensical and inconsistent statements. Clinton was a strong advocate of the Trans-Pacific Partnership trade deal as secretary of state. And she wrote about the giant Asia trade pact in glowing terms in her pre-campaign book "Hard Choices." But as the activist left of the party mobilizes against the deal, Clinton now says on the campaign trail that there is stuff in it she doesn't like. And Clinton backed House Minority Leader Nancy's Pelosi's approach, which was to torpedo Trade Adjustment Assistance (TAA), a cherished Democratic program, in order to stop Obama's push for Trade Promotion Authority (TPA). But without TPA there is no TPP, which Clinton once strongly supported. Figure that out, if you can. And many of the former first lady's comments on the topic lately have made no logical sense whatsoever. This is perhaps the most bizarre: "The TPA is a process issue. The issue for me is what's in the deal," Clinton said this week in New Hampshire. "I think this is a chance to use this leverage so that the deal does become one that more Americans and members of Congress can vote for." ¶ Where to start trying to deconstruct this statement? TPA is not just a process issue. Without it Obama cannot complete TPP because no country is going to offer up major concessions if they fear Congress will just amend the deal. So what kind of leverage was she talking about? TPA is designed to give the administration leverage to get the best trade

terms possible. Blocking it would take that leverage away. Clinton might as well have said, "I can't anger unions and the left and feed Bernie Sanders' momentum by backing my former boss on TPA so an advisor told me to dismiss it as a 'process issue' so that's what I'm doing even though it makes no sense and everyone knows it." The Bernie Sanders problem is increasingly real for Clinton. It's impossible to imagine the Democratic Party nominating an avowed socialist for president. But Sanders is drawing close to Clinton in New Hampshire polling and drawing big enthusiastic crowds wherever he goes. The reason for this is he thrills the activist left with his outspoken (and consistent) opposition to free trade deals and repeated calls for breaking up big banks and otherwise cracking down hard on Wall Street. He is to the left what Eugene McCarthy and Adlai Stevenson were in the past: The genuine progressive article. So far Clinton is trying to defuse this with her references to overpaid hedge fund managers and now backing off on previous trade support. But just as soon as Hillary Clinton hedged on trade, her husband former President Bill Clinton went on "The Daily Show" and talked up the benefits to American workers and the economy of signing such deals. Bill Clinton obviously speaks for himself not his wife but these moments can only remind voters that it's hard to know exactly where the Clintons really stand on some of these issues. And the heat for Hillary Clinton to clarify her position on trade is only going to rise if the current legislative gambit to get TPA done works, which it probably will. If it does, Obama could finish TPP and send it to Congress. Perhaps Clinton's need to tack so nakedly and embarrassingly to the left will be over by the time that happens and she can return to her previous support for TPP. But she will not have covered herself in glory (or consistency or trustworthiness) by the time that happens. The whole trade mess points up the central problem with Hillary Clinton's candidacy: Who exactly is she and what does she believe? Is she the liberal fighter for universal health care? Or the moderate, centrist who backs free trade and sees a pivotal role for Wall Street and the banking industry in the American capitalist system? Is she the foreign policy hawk who backed the second Iraq war and ran to the right of Barack Obama in 2008 or the more dovish 2016 version who admits the Iraq vote was a mistake? So far the answer has been: Who knows? And attempts by the Clinton campaign to wrap the candidate in gauzy platitudes about grandmotherhood and advocacy for women and girls won't cut it as the primaries and caucuses approach. Hillary Clinton will eventually have to take tough and clear stands on issues like free trade and let voters decide if they like what they hear. Hard choices, indeed.

Impact

1NR — Turns climate

Clinton win solves climate change

Sargent 14

Greg, “This one Hillary quote about climate change is very, very important”

[<http://www.washingtonpost.com/blogs/plum-line/wp/2014/12/04/this-one-hillary-quote-about-climate-change-is-very-very-important/>] December 14 //

Hillary Clinton said something important about climate change this week — something that could resonate into the next presidential race. It isn't what you've read about, though. Clinton gave a speech at the League of Conservation Voters, and judging by the headlines about it, you'd think the newsworthy portion was her unwillingness to take a position on the Keystone pipeline. ¶ That is understandably frustrating to environmental activists. But now that video of the full speech is available, it's obvious that her Keystone dodge is potentially far less important than this portion: ¶ “You pushed for and rallied behind President Obama's use of the Clean Air Act to set the first ever federal limits on carbon pollution from existing power plants, which are driving the most dangerous effects of climate change. As you know so well, power plants account for about 40 percent of the carbon pollution in the United States, and therefore must be addressed. And the unprecedented action that President Obama has taken must be protected at all cost. ¶ “So this is an exciting time. From the administration's announcement last month of a \$3 billion commitment to the global green climate fund, to that new joint announcement with China, to new rules under consideration for ozone, we continue to push forward. But that is just the beginning of what is needed.” ¶ Taking Clinton at her word, this hints at the ways in which climate could become an important issue in the 2016 race. The key is that it is a forward-looking policy statement. Clinton isn't simply praising Obama's environmental record. She is also saying that protecting and implementing his policies for years into the future is an urgent priority — which is to say, an urgent priority for the next president. ¶ There is a great deal riding on the successful implementation of those policies — long after Obama leaves office. As Coral Davenport explained the other day, Obama is currently using the 1970 Clean Air Act to put in place a far-reaching environmental legacy that, most prominently, includes ambitious new regulations on existing power plants. Implementation of these regulations will reach years into the future, with the eventual goal of reducing carbon-dioxide emissions from U.S. power plants by 25 percent into the next decade, and by 30 percent by 2013. ¶ The question of whether the U.S. successfully reduces emissions over time has important long term international ramifications. The success of the recently announced deal between the United States and China to cap or reduce emissions will turn in part on whether the U.S. meets its own goals, and as Philip Bump noted recently, this could be complicated if a Republican president takes over in 2017. ¶ Indeed, Republicans have pledged to do everything possible to roll back Obama's environmental regulations, and they essentially received the news of the China deal with a big shrug. What's more, the 2016 GOP candidates might dig in even harder against Obama's regs. After all, once Obama announced his executive action to defer deportations, that immediately supplanted Obamacare as the leading Enemy Of Freedom for the Tea Party. Next year, Obama will likely be talking about climate change a good deal more, as negotiations for a global climate treaty get underway — hopes for which were boosted by news of the U.S.-China deal. There will likely be court challenges to the new regs, which means more attention to them. They, too, could become another Tea Party preoccupation — which means the 2016 GOP presidential candidates may be expected to pledge to eradicate them once elected president. ¶ As Ron Brownstein noted recently, climate is a key area in which Hillary will embrace Obama's legacy, even as Republicans line up to campaign for president by vowing to unwind it. Clinton has now confirmed this, on her side, by vowing to protect Obama's initiatives “at all cost.” The battle may shape up as one over whether the U.S. should participate in global efforts to reduce carbon emissions, and embrace all the difficult domestic policy trade-offs that will entail, or retreat from them. ¶ Perhaps for Clinton, such promises are little more than checking a box for an important Democratic constituency (the environmental movement). Perhaps her consultants will want her to shy away from discussing climate out of fear of alienating blue collar whites in swing states. But the key architect of Obama's climate agenda, John Podesta, is expected to play a major role on Clinton's campaign. The Democratic coalition in national elections is less and less reliant on culturally conservative downscale whites, and Democrats are increasingly organized around the priorities — climate included — of its emerging coalition of millennials, minorities, and socially liberal college educated whites.

1NR — Turns econ

Hilary presidency solves the Chinese economy – that’s key to global growth and outweighs the US

Suwankiri, PhD, economist – TMB Bank Risk Analytics and Research Group, analyst – NBER, 3/4/'11

(Benjarong, “When the dragon ceases to roar,” Bangkok Post, <http://www.bangkokpost.com/business/economics/224714/when-the-dragon-ceases-to-roar>)

Will China remain important? Today, it is the world's second-largest economy. Its gross domestic product (GDP) is one-third that of the US, or two-thirds if you adjust for cost of living – what economists fancily call “purchasing power parity-adjusted”. By any measure, that makes China a very large economy, but it remains poor compared with the Group of Three (G3) economies of the US, the EU and Japan.¶ With per capita GDP at US\$4,000 – not very far behind Thailand – China is no match in the view of cynics for the \$46,000 per capita GDP of the US. But when adjusted for purchasing power, the gap closes considerably, with both Chinese per capita GDP at \$7,500 and that of the US about the same. In other words, it takes 6.1 Chinese to equal to one American. China has 1.3 billion people, the US has 307 million – that's a factor of 4.2. Not there yet.¶ However, if we factor in China's economic growth, it will take only four or five years for 4.2 Chinese to equal one American. By sheer size, China is already positioned to be a world economic leader without the need to be fully developed. When it sneezes, the rest of Asia – indeed the world – catches cold.¶ This brings us to the present main concern of world markets – the possibility of a Chinese economic slowdown, a potential byproduct of the recent waves of policy tightening and a crackdown on commercial bank lending by Chinese authorities. Beyond a doubt, this will be the main threat to the global economy over the next decade.¶ Let us briefly review how China has found itself in such an uneasy position. The story begins with the sub-prime crisis that triggered the global downturn and a plunge in demand for Chinese exports, which account for more than one-third of its GDP. As a countermeasure, Beijing authorities resorted to a quick-fix policy of injecting easy money via aggressive credit expansion by banks into real estate and construction. This was indeed done on an unprecedented scale, and credit growth managed to top 30% by the end of 2009.¶ But the policy worked only too well, as the aftermath was an economic phase close to what can only be called “irrational exuberance” against the backdrop of global recession. Serving as a high-profile memento is Dongguan's “ghost mall”, an empty shopping complex that was built to be the world's largest retail shopping space. Then, to make matters worse, along came the current commodity bubble in global markets, affecting everything from energy to crops. This combination is a classic recipe for a destructive inflationary cycle. In fact Chinese consumer prices have risen continuously over the past year and now look set to cruise above the 5% level in the coming months.¶ This explains the urgency in Chinese authorities' attempts to curb rising inflationary and asset price pressures via a rapid reversal of its policy stance, with surprise interest rate rises and higher required reserve ratio. These new policies have indeed been effective, cutting loan growth in half, but inflation persists. The market expects more tightening, but doing it just right is difficult to achieve – not enough policy will be too little, too late, but too much and the bubble could pop, bringing China crashing down and the world economy with it.¶ Vulnerability to China's downfall differs in each country, but the main channel of crisis transmission will be trade. To quantify this exposure, we must look beyond just the simple share of exports to China, as the global trade network is complex. First, it depends on how much your country directly exports to China. Second, it depends on how much your trading partners export to China and how much you export to them, an indirect exposure.¶ For direct exports alone, we find that South Korea, Australia and Japan top the list of high exposure to a Chinese slowdown, with about 20% of exports concentrated in that country. Asean countries have medium exposure, while Western economies such as Europe and the US are only mildly exposed.¶ Once indirect measures are taken into account, the situation looks slightly different. Some Asean economies move up the rank such as the Philippines and Singapore. Malaysia and Thailand would then double the direct effect from their exports to China. With Asean economies tightly knit via Afta and the Asean-China FTA, this should come to no surprise. Australia, on the other hand, has fairly small indirect exposure to China, but being a major commodity exporter it is undeniably tied to this second-biggest economy.¶ China is undoubtedly the most important economy today. The global economy can withstand another slowdown in the US or European economies, but a contraction in China guarantees disaster, with the world plunging into a double-dip recession. After all, the US economy has lost its shine, while the EU and Japan remain crippled by long-term structural problems, so the world is learning to live with less from the G3 economies.

Hillary key to Iran nuclear deal

High Political Stakes For Hillary Clinton On Iran Nuclear Agreement ¶ AP | By By KEN THOMAS and JULIE PACE ¶ Posted: 04/04/2015 9:18 am EDT

But Clinton occupies a unique space on the nuclear issue because of her role in Obama's Cabinet. She sent a close adviser, Jake Sullivan, to participate in the secret talks with Iran that led to the start of the international negotiations over the country's nuclear ambitions. ¶ Clinton is also navigating delicate ties with Israel and the American Jewish community, an influential group of voters and donors. Israeli Prime Minister Benjamin Netanyahu, a fierce critic of the Obama administration's outreach to Iran, described the framework deal as a threat to "the very survival" of his nation. ¶ "I don't know how you can maneuver all aspects of this politically," said Ray Takeyh, a senior fellow for Middle Eastern studies at the Council on Foreign Relations. "You can be supportive and skeptical. I suspect that's the direction." ¶ The tentative agreement announced Thursday by the U.S. and its negotiating partners — Britain, France, Germany, China and Russia — is aimed at keeping Iran from developing a nuclear weapon. Negotiators have until June 30 to settle the technical details. ¶ The deal would remove economic penalties against Iran once the U.N. nuclear agency verifies Tehran's compliance. ¶ At times, Clinton has tried to play up her connection to the historic diplomacy. The U.S. and Iran severed diplomatic relations in 1979 after the Islamic revolution and the storming of the U.S. Embassy in Tehran, where 52 Americans were held hostage for more than a year. ¶ When Obama was getting credit for the clandestine negotiations, Clinton's aides made sure reporters knew that the approach had started during her tenure at the State Department. ¶ Clinton wrote in her memoir of how she set the negotiations in motion by facilitating back-channel discussions with Iran through the sultan of Oman, who suggested the talks after he helped free an American hiker held by Iran. Clinton tapped Sullivan to establish contact with the Iranians in 2012, an important step in the path to Thursday's preliminary agreement. ¶

Hillary is in support of the Iran nuclear deal

Elliot Smilowitz 15, Writer for the Hill. 4-3-2015, "Hillary: 'The onus is on Iran'," <http://thehill.com/blogs/blog-briefing-room/news/237810-hillary-touts-iran-deal>

Former Secretary of State Hillary Clinton expressed support Thursday for the United States's nuclear agreement with Iran, but warned that "the devil is always in the details." In a statement released Thursday evening, Clinton called the deal "an important step toward a comprehensive agreement that would prevent Iran from getting a nuclear weapon and strengthen the security of the United States, Israel, and the region." She praised President Obama and current Secretary of State John Kerry for being "persistent and determined in pursuit of this goal." Clinton encouraged the U.S. to hold the line in the remaining negotiations to "reach a final deal that verifiably cuts off all of Iran's paths to a nuclear weapon." "The onus is on Iran and the bar must be set high," she said. "It can never be permitted to acquire a nuclear weapon. "It is also vital that these efforts be part of a comprehensive strategy to check Iran's regional ambitions, defend our allies and partners, and reinforce American leadership in the Middle East." The United States and allies announced Thursday they'd reached an outline of a deal with Iran that would lift international sanctions on the country in exchange for new limitations on its nuclear program. President Obama called it a "historic" agreement that would leave the United States and its allies safe by preventing Iran from acquiring nuclear weapons. The deal has faced criticism from Israeli leader Benjamin Netanyahu, Republicans and some Democrats.

Hillary Clinton supports the Iran deal

Walker 15' Hunter Walker (Business Insider's politics editor, has worked for The New York Observer, The Daily, and has a master's degree in journalism from Columbia University) Business Insider. "Hillary Clinton is very happy with the Iran Nuclear Deal" <http://www.businessinsider.com/hillary-clinton-is-very-happy-with-the-iran-nuclear-deal-2015-4>

Former Secretary of State **Hillary Clinton issued a statement expressing strong support for the framework for a nuclear deal with Iran** that was announced on Thursday.¶ In her statement, **Clinton**, who **is widely seen as the Democratic frontrunner in the 2016 presidential race, praised the agreement as a step that would improve security in the US and international community.** ¶ **"The understanding that the major world powers have reached with Iran is an important step toward a comprehensive agreement that would prevent Iran from getting a nuclear weapon and strengthen the security of the United States, Israel, and the region,"** Clinton said.¶ This framework was negotiated by Iran and the so-called P5+1 powers, the US, Russia, France, the United Kingdom, China, and Germany. Negotiators originally set a March 31 deadline for a political framework agreement. Any final deal must be signed by June 30, which was the ultimate deadline established by the agreement that allowed for the talks. ¶ "President [Barack Obama] and Secretary [of State John] Kerry have been persistent and determined in pursuit of this goal, building on a decade of bipartisan pressure and diplomacy. Getting the rest of the way to a final deal by June won't be easy, but it is absolutely crucial. I know well that the devil is always in the details in this kind of negotiation," **Clinton** said. "So I **strongly support** President **Obama and Secretary Kerry's efforts** between now and June **to reach a final deal that verifiably cuts off all of Iran's paths to a nuclear weapon, imposes an intrusive inspection program with no sites off limits, extends breakout time, and spells out clear and overwhelming consequences for violations."**¶ Critics of the deal, including Israeli Prime Minister Benjamin Netanyahu, have suggested the deal will pave the way towards Iran obtaining a nuclear weapon, which would undermine US and Israeli security.¶ In statements on Thursday, both Obama and Kerry defended the political framework agreement as the best option on the table for preventing Iran from developing a nuclear bomb.¶ Clinton echoed these defenses in her own statement.¶ "The onus is on Iran and the bar must be set high. It can never be permitted to acquire a nuclear weapon. **It is also vital that these efforts be part of a comprehensive strategy to check Iran's regional ambitions, defend our allies and partners, and reinforce American leadership in the Middle East,**" **Clinton said.** adding, "There is much to do and much more to say in the months ahead, but **for now diplomacy deserves a chance to succeed."**

1NR- Deal Good

Nuclear deal is key to preventing military confrontation

Joseph 10/8

(Jofi, "In Iran Nuclear Talks, 'No Deal' Is Worse Than Status Quo," 10/8/14,

<http://thediplomat.com/2014/10/in-iran-nuclear-talks-no-deal-is-worse-than-status-quo/>)/JHH

If talks collapse and the interim agreement is allowed to expire, **we are likely to witness a significant escalation of regional tensions**. Iran will likely move to quickly reconstitute 20 percent enrichment production, and remove caps on its 3.5 percent low-enriched uranium (LEU) stockpile by ending its conversion into oxide form. It will reduce IAEA access to the Natanz and Fordow enrichment facilities from the current daily inspections to the bare-bones requirements under its safeguards agreement. It **may introduce new, more advanced centrifuges** like the IR-2m model **to replace older and less efficient IR-1 models**, enhancing its capability to enrich uranium more quickly. **Threats of military action against Iran will resurface**, even as a U.S.-led coalition pursues action against the Islamic State in Iraq and Syria, supported tacitly by Iran itself.

Causes extinction

Avery 13

(John Scales, Lektor Emeritus, Associate Professor, at the Department of Chemistry, University of Copenhagen, since 1990 he has been the Contact Person in Denmark for Pugwash Conferences on Science and World Affairs, An Attack On Iran Could Escalate Into Global Nuclear War, 11/6/13, <http://www.countercurrents.org/avery061113.htm>)/JHH

Despite the willingness of Iran's new President, Hassan Rouhani to make all reasonable concessions to US demands, **Israeli pressure groups in Washington continue to demand an attack on Iran**. But **such an attack might escalate into a global nuclear war**, with **catastrophic consequences**.[¶] As we approach the 100th anniversary World War I, we should remember that this colossal disaster escalated uncontrollably from what was intended to be a minor conflict. There is a danger that an **attack on Iran would escalate into a large-scale war in the Middle East**, entirely destabilizing a region that is already deep in problems.[¶] The unstable government of Pakistan might be overthrown, and **the revolutionary Pakistani government might enter the war** on the side of Iran, thus **introducing nuclear weapons** into the conflict. **Russia and China**, firm allies of Iran, **might also be drawn into a general war** in the Middle East. Since much of the world's oil comes from the region, **such a war would certainly cause the price of oil to reach unheard-of heights, with catastrophic effects on the global economy**.[¶] In the dangerous situation that could potentially result from an attack on Iran, **there is a risk that nuclear weapons would be used, either intentionally, or by accident or miscalculation**. Recent research has shown that besides making large areas of the world uninhabitable through long-lasting radioactive contamination, **a nuclear war would damage global agriculture to such a extent that a global famine of previously unknown proportions would result**.[¶] Thus, **nuclear war is the ultimate ecological catastrophe**. It **could destroy human civilization and much of the**

biosphere. To risk such a war would be an unforgivable offense against the lives and future of all the peoples of the world, US citizens included.

Successful deal key to prevent war with Iran Shank and Gould '13

(Michael Shank, Ph.D., is director of foreign policy at the Friends Committee on National Legislation. Kate Gould is legislative associate for Middle East policy at FCNL, No Iran deal, but significant progress in Geneva, 9/12/13,
<http://communities.washingtontimes.com/neighborhood/cause-conflict-conclusion/2013/nov/12/no-iran-deal-significant-progress-geneva/>)//JHH

WASHINGTON, November 12, 2013 — Even without a final nuclear deal with Iran, this weekend's intensive negotiations in Geneva resulted in major diplomatic achievements that warrant mention. First and foremost, since direct contact between U.S. and Iranian diplomats has long been unthinkable, the fact that U.S. Secretary of State John Kerry and Iranian Foreign Minister Javad Zarif are talking to each other is a good thing. ¶ More progress was made in U.S.-Iran relations from these three days of talks than at any point in the last three decades. Most notably, Iran is allowing inspectors from the International Atomic Energy Agency much broader access to nuclear sites long-unseen. That is a diplomatic achievement in and of itself. ¶ These one-on-one conversations between the United States and Iran were crucial to the progress made toward a deal that will be a substantial step forward in guarding against another **nuclear-armed nation and another Middle East war**. Despite French objection to specific details of the deal at the eleventh hour, diplomats from all seven countries involved in the talks have another opportunity to reach a preliminary accord when they meet on November 20. ¶ Providing neither the French nor the U.S. Congress get in the way, the parties are close to a deal that would be unprecedented. It imposes limits on Iran's nuclear enrichment program for six months in exchange for small relief from sanctions, which have devastated Iran's economy. It addresses the most urgent areas of concern vis-à-vis Iran's nuclear program, while laying the groundwork for a comprehensive agreement to prevent weaponization over the long-term. ¶ This is what diplomacy looks like. And this is exactly the kind of deal a U.S. Secretary of State should be brokering. Yet some members of Congress refuse to accept a win, and could sabotage the deal even before the parties meet next week by imposing new sanctions. House majority leader Eric Cantor, R-Va., has already trashed efforts toward a deal, saying that, "any agreement that does not require the full and complete halting of the Iranian nuclear program is worse than no deal at all." Cantor's nay saying of diplomacy with Iran is longstanding, though recently outmatched by his Super PAC funder, Sheldon Adelson, who called for President Obama to launch a nuclear weapon against Iran. ¶ The Republican House majority leader is not alone in demanding unrealistic ultimatums for dealing with Iran. Senator Robert Menendez, D-N.J., chair of the Senate Foreign Relations Committee, has pressed for more sanctions until Iran halts its entire nuclear enrichment program, including the programs for the more benign fields of energy production, health research, etc. ¶ The abolition of nuclear weapons and energy is desirable, not only in Iran but throughout the world. Short of that, however, hawks in both parties in Congress must realize the gains garnered this weekend. ¶ Congress should welcome, not stubbornly dismiss, diplomatic efforts to finalize the interim accord and support the continued conversation

to reach a more comprehensive agreement. The sanctions that hawks on the Hill are pushing derail such efforts and increase the prospects of war. ¶ There is, thankfully, a growing bipartisan contingent of Congress who recognizes that more sanctions could undercut the delicate diplomatic efforts underway. Senator Carl Levin, D-Mich., chair of the Senate Armed Services Committee, cautioned early on that, “We should not at this time impose additional sanctions.” ¶ Senator Tim Johnson, D-S.D., chair of the Banking Committee, is still weighing whether to press forward with new sanctions in his committee. Separately, as early as next week, the Senate could vote on Iran sanctions amendments during the chamber’s debate on the must-pass annual defense authorization bill. ¶ This caution against new sanctions, coming from these more sober quarters of the Senate, echoes the warnings from a wide spectrum of former U.S. military officials against new sanctions. There is broad recognition by U.S. and Israeli security officials that the military option is not the preferred option; a diplomatic one is. ¶ This widespread support for a negotiated solution was highlighted last week when 79 national security heavyweights signed on to a resounding endorsement of the Obama Administration’s latest diplomatic efforts. ¶ Any member of Congress rejecting a diplomatic solution moves the United States toward another war in the Middle East. Saying no to this deal-in-the-works, furthermore, brings the world no closer toward the goal of Iran giving up its entire nuclear program. Rather, it would likely result in an unchecked Iranian enrichment program, while the United States and Iran would teeter perilously close on the brink of war. ¶ A deal to prevent war and a nuclear-armed Iran is within reach and it would be dangerous to let it slip away. Congress can do the right thing here, for America’s security and Middle East’s stability, and take the higher diplomatic road. Pandering to harsh rhetoric and campaign contributors is no way to sustain a foreign policy agenda. It will only make America and her assets abroad less secure, not more. The time is now to curb Iran’s enrichment program as well as Congress’s obstructionism to a peaceful path forward.

Russia Defense

Competition in the squo makes Russian war immiment – only standing up to them solves

Goldenberg '14 [Suzanne, US environment correspondent, Climate change poses growing threat of conflict in the Arctic, report finds, <http://www.theguardian.com/environment/2014/may/14/climate-change-arctic-security-threat-report>]

Climate change poses a growing security threat and could cause conflict in the Arctic, a group of retired American generals and admirals said on Tuesday. In a new report, the former military officers said the Pentagon had been caught out by the rapid changes under way in the Arctic because of the melting of the sea ice. **“Things are accelerating in the Arctic faster than we had looked at,” said** General Paul Kern, the chairman of the Centre for Naval Analysis Corporation's military advisory board, which produced the report. “The changes there appear to be much more radical than we envisaged.” **The prospect of an ice-free Arctic by mid-century had set off a scramble for shipping lanes by Russia** and China especially, and for access to oil and other resources. “As the Arctic becomes less of an ice-contaminated area it represents a lot of opportunites for Russia,” he said. Oil companies were also moving into the Arctic. “We think things are accelerating in the Arctic faster than we had looked at seven years ago,” he said, saying **the situation had the potential to “spark conflict there”**. The CNA report deepens concern about the security risks posed by climate change. In March, the United Nations' IPCC, in a landmark report, also warned that growing competition for resources in a world under climate change could lead to conflict. The report from the retired generals goes further, however, upgrading the climate risk from a “threat multiplier” to a “conflict catalyst”.

Russia won't break relations with the US

Rumer and Wallander 2003 - *senior fellow at the Institute for National Strategic Studies at the National Defense University, **director of the Russia and Eurasia Program and Trustee Fellow at CSIS (Eugene B., Celeste A., Washington Quarterly 27.1, 57-73, Project MUSE, WEA)

Given Russia's geopolitical predicament, it is difficult to imagine how a rational, even selfish, assessment of Russian interests would lead Russia to conclude that it would be best served by undermining the United States. The fallout from a weaker and diminished U.S. role in global security affairs would carry with it a number of serious challenges to Russian security interests, ranging from a strong Russian stake in partnership with the United States on geopolitically balancing China to the immediate threat to Russian security in the event of U.S. abandonment of its security assistance to Central Asia to the prospect of Iran armed with nuclear weapons and ballistic missiles with Moscow well within range. Thus, although Russia apparently has a strong interest in making clear to the United States that it is not to be taken for granted and that its interests and sensitivities are not to be brushed aside, Russia has no compelling rational interest in undermining or geopolitically balancing the United States' international position.

Individual disputes do not spill over.

Federal News Service '07 (Tom Casey, Deputy Spokesman, 7/19/2007, State Department Briefing, <http://www.globalsecurity.org/military/library/news/2007/07/mil-070719-stateb01.htm>)

In terms of the broader relationship, we talked a little bit about this this morning. Certainly, there are issues where the United States and Russia, where the UK and Russia, where other countries will have their differences. And we've talked about them on any number of occasions from here. But fundamentally, the relationship between Russia and the United States, and I think Russia and the broader West, is certainly very different than it was during the time of the Soviet Union. And there are many areas where we do cooperate and where I expect we will continue to cooperate, whether that is in the Security Council working to prevent Iran from acquiring a nuclear weapon, whether that's with us and the Russians and the other members of the six-party talks working to end North Korea's nuclear program, whether that's in areas like counterterrorism where we all share or are all under a common threat from extremists in various parts of the world and where we have a common interest in working together. So I think while these are important individual disputes and I'm not trying to make light of them, I do think that there is a fundamentally constructive relationship overall between the United States and Russia and more broadly between Russia and Europe.

Silver 5/12

2016 1:32 PM MAY 12, 2015 ¶ There Is No 'Blue Wall' ¶ By NATE SILVER

<http://fivethirtyeight.com/features/there-is-no-blue-wall/>

so **when commentators talk about the Democrats' "blue wall," all they're really pointing out is that Democrats have had a pretty good run in presidential elections lately.** And they have, if you conveniently draw the line at 1992 (it doesn't sound so impressive to instead say Democrats have won five of the 12 elections since 1968). During that time, Democrats have won four elections pretty clearly, lost one narrowly and essentially tied the sixth. This has been evident from the popular vote, however. The one time the Electoral College really mattered — that was 2000, of course — it hurt the Democrats. ¶ **Republicans, in all likelihood, would have won by similar Electoral College margins if they'd done as well as the Democrats in the popular vote,** casting all sorts of cracks in the blue wall. Suppose, for instance, that Romney, rather than Obama, had won the 2012 election by 3.9 percentage points. What would the map have looked like? ¶ It would have looked pretty red. A 3.9-point Romney victory represents a 7.8-point swing from the actual result. So if the swing were distributed uniformly, Obama would have lost every state that he won by 7.8 percentage points or less. That means he'd have lost three "blue wall" states — Minnesota, Pennsylvania and Wisconsin — along with Colorado, Florida, Iowa, Nevada, New Hampshire, Ohio and Virginia. ¶ An alternative technique is to assume that some states are more "elastic" than others, meaning that they contain more swing voters and are more responsive to national trends. Based on our previous calculations, for instance, New Hampshire is relatively elastic — its vote swings a lot — whereas Georgia (where there are a lot of black voters and a lot of conservative whites and not many voters in between) is less so. ¶ But running the calculation that way changes the outcome of just one electoral vote. Romney would have narrowly won the rural, 2nd Congressional District of Maine, which like Nebraska awards one electoral vote to the winner of each congressional district, in addition to his other spoils. That would have put Romney on 332 electoral votes — exactly the total that Obama finished with, as it happens. ¶ **Where you'd see more evidence of an impregnable "blue wall" is in the event of an extremely lopsided election.** Suppose that Democrats had lost the 2012 election by 18.2 percentage points, as Walter Mondale did to Ronald Reagan. In 1984, Mondale won only 13 electoral votes — 10 from his home state of Minnesota, plus D.C.'s three. In contrast, I estimate that a Democrat losing by that margin now would still carry states totaling 104 electoral votes: California, New York, Maryland, Vermont, Hawaii, and D.C. That's a reflection of the fact that the country is far more geographically polarized than it once was. ¶ But this cuts both ways. If Obama had won by Reagan's 1984 margin, Republicans would still have won Texas, Tennessee, Alabama, South Carolina, Kentucky, Louisiana, Oklahoma, Arkansas, Kansas, Mississippi, Utah, Nebraska, 4 West Virginia, Idaho, North Dakota, South Dakota and Wyoming — for 136 electoral votes. Neither party's slate is close to a majority, however, and they mostly offset each other. (In the chart below, I've run this calculation for all possible outcomes, up to a 30-point win for either party.) ¶ **What about in the event of an extremely close election, instead of a lopsided one? Another election as close as 2000, for instance? ¶ Obama would probably have won such an election in 2012.** My method has him winning the Electoral College 285-253 in the event of an exactly tied popular vote, for instance. ¶ **But it would have had to be very close indeed.** If Obama had lost the popular vote by just 1 percentage point, for instance, I have **him losing the election 279-259,** as highly elastic states like New Hampshire and Colorado would have fallen out of his column. ¶ The net impact of this is minor. Our Election Day forecast in 2012 estimated that there was about a 5 percent chance that Obama would win the Electoral College but lose the popular vote (and about a 1 percent chance that Romney would do so). ¶ **So if you want to argue that Hillary Clinton's chances of winning the popular vote next year are 50 percent but that her Electoral College chances are more like 53 percent or 55 percent instead, go ahead — that's probably about what the "blue wall" amounts to.** (And even that advantage is tenuous, possibly reflecting Obama's superior turnout operation in swing states — an edge that Clinton might or might not replicate.) ¶ Hey, look: I can get carried away, too. ¶ **If the 2016 election turns out to be close, we'll be sweating the small stuff by October and November.** The difference between a 50 percent and a 55 percent chance of victory for Clinton or Marco Rubio or whomever because of Electoral College dynamics will seem like a pretty big deal. ¶ But for now? The Electoral College just isn't worth worrying about much. **If you see analysts talking about the**

“blue wall,” all they’re really saying is that Democrats have won a bunch of presidential elections lately — an obvious fact that probably doesn’t have much predictive power for what will happen this time around.¶ I’m not saying Clinton is doomed. Rather, I think the “fundamentals” point toward her chances being about 50-50, and I wouldn’t argue vigorously if you claimed the chances were more like 60-40 in one or the other direction. But Clinton is no sort of lock, and if she loses the popular vote by even a few percentage points, the “blue wall” will seem as archaic as talk of a permanent Republican majority.

General

Despite Sanders' rise, Clinton will still win

CNN 6/26 Clinton weathers the summer of Sanders ¶ By Jeff Zeleny, CNN ¶ Updated 3:51 PM ET, Sat June 27, 2015 <http://www.cnn.com/2015/06/26/politics/hillary-clinton-summer-of-bernie-sanders/> ¶ Washington (CNN) Hillary Clinton always insisted she wasn't expecting a coronation in her second presidential bid, but a single-digit lead over Bernie Sanders was surely not what she had in mind. ¶ It's now clear that Clinton, despite a raft of political advantages that make her the envy of rivals from both parties, faces a stubborn obstacle in her quest to win the Democratic nomination. ¶ She must weather the summer of Sanders. ¶ In New Hampshire on Saturday, he drew hundreds of supporters -- or curiosity-seekers -- during a weekend campaign tour. As a senator from neighboring Vermont, Sanders is a familiar figure in the first-in-the-nation primary state, which helps explain why he now trails Clinton by only 8 points, according to a new CNN/WMUR New Hampshire Primary poll. ¶ "I have been attacked recently: 'Bernie is extreme.' I don't think these things are extreme," Sanders told an audience of about 500 people in Nashua. "This is the agenda of America, what the American people want. Don't let anyone tell you or define me as extremist or out of touch with the American people." ¶ He has emerged as the leading progressive alternative to Clinton, consolidating support from Democrats who had been clamoring for Elizabeth Warren to enter the race. ¶ "This is a different type of campaign -- a people's campaign," Sanders said, railing against the influence from what he calls the "billionaire class." ¶ While the Clinton campaign has been carefully tracking the Sanders momentum for the last month, particularly the Obama-size crowds he's been drawing in Iowa, New Hampshire and beyond, aides say she has no immediate plans to go after Sanders. ¶ Taking an aggressive posture could not only elevate him even more in the eyes of liberals, it could also backfire and create deep divisions inside the Democratic Party that she is still far more likely than not to lead. ¶ Several Democrats close to the campaign, even some who have been underwhelmed by the first three months of her candidacy, tell CNN that Clinton and her team are far from panicking.

Although Hillary's image is tainted, she is still leading the most recent polls. She leads in key categories which have accurately predicted the last 5 elections

LA Times 6/23 ¶ Hillary Clinton's image is dented, but she still leads all challengers in polls June 23, 2015 By DAVID LAUTER <http://www.latimes.com/nation/la-na-hillary-clinton-polls-20150623-story.html> ¶ Hillary Rodham Clinton weathered an intense period of scrutiny this spring that has left her public image dented, but it has done little to diminish her strength as a presidential contender, several recent polls indicate. ¶ The latest numbers come from a new Wall St. Journal/NBC poll, which indicates that Clinton continues to hold a vast lead over her rivals for the Democratic nomination, with the support of 75% of voters surveyed who said they planned to take part in the party's primaries. ¶ An even larger share of Democratic voters polled, 92%, said they could see themselves supporting her as the party nominee. By contrast, 40% said they could see themselves supporting her closest rival, Sen. Bernie Sanders of Vermont, with just under one-third saying they could not see supporting him and about a quarter saying they did not know. ¶ The Wall St. Journal/NBC survey is overseen by two leading polling firms, one Democratic and the other Republican. ¶ Over the last month, half a dozen polling organizations have found Clinton with the support of about two-thirds of Democratic voters surveyed nationwide. Clinton's standing is lower in two recent polls of New Hampshire, the site of the next winter's first primary. There, the most recent surveys show her with support of just under half of Democratic primary voters polled, with Sanders about 15 points behind. ¶ New Hampshire, however, has advantages for Sanders that he lacks elsewhere -- not

just geographic proximity to his home state, but also an overwhelmingly white electorate. Sanders, who represents a mostly white, rural state, has few ties to the minority communities that make up large shares of the Democratic vote in other states. ¶ The Wall St. Journal/NBC poll also found Clinton continuing to lead the major Republican presidential prospects by between 8 and 14 points. ¶ This far in advance of the election, specific head-to-head contests don't mean much. What is more significant is the trend: Clinton's leads over the GOP candidates in surveys by several organizations have not changed significantly since April. That steadiness comes despite two months of negative publicity surrounding her use of a private email server while secretary of State and scrutiny of donations to the Clinton Foundation. ¶ Clinton's image has worsened, particularly on questions regarding whether she is honest and trustworthy. To date, however, that has not translated into declining support for her election -- in part because many of those who say they don't trust her are Republicans who were already planning to vote against her. ¶ One other number from the Wall St. Journal/NBC poll could be telling. Since the 1996 election, the survey has asked voters whether they would feel "optimistic," "satisfied," "uncertain" or "pessimistic" if a particular presidential candidate won the White House. ¶ In the current survey, 49% said they would be in one of the two positive categories if Clinton won, while 50% said they would be on the negative side. For Bush, the only Republican tested, the reaction was gloomier, 37% positive and 61% negative. ¶ In each election since 1996, the candidate with more positive responses to that question at this stage of the campaign went on to win.

Impact Modules

Bioterror Impact

Hillary has a hardline on bioterror

The only exception to Hillary's party-line voting were her support for the Iraq War & her votes for appropriations to fund it, her uniform support for tough anti-terrorism measures, and--in an attempt to curry favor with the media--her opposition to nullification of the FCC rules making media consolidation easier.¶ **Hillary has amassed a good legislative record on fighting terrorism. She has pushed hard for threat assessments on bioterrorism, to protect the food supply, promote benefits to children of terror victims, increase homeland security grants, investigate securing radioactive materials, require annual inspections of high-risk sites, identify potential terror sites, encourage bomb-scanning technology, and improve protection at our embassies.** But none of these bills has passed.¶ [On spending bills], Hillary has proposed additional spending to improve military housing, keep open facilities on closed defense bases, upgrade armed forces medical readiness, and increase aid to blind veterans.

Biological terrorist attack would cause extinction

Steinbruner 97¶ Steinbruner, Senior Fellow at Brookings Institute 1997 [John, Sr. Fellow @ Brookings institution, "Biological Weapons: A Plague upon All Houses", Foreign Policy, Winter 1997-1998, p. 85-96, JSTOR] ¶ Ultimately the world's military, medical, and business establishments will have to work together to an unprecedented degree if the international community is to succeed in containing the threat of biological weapons.

Although human pathogens are often lumped with nuclear explosives and lethal chemicals as potential weapons of mass destruction, there is an obvious, fundamentally important difference: Pathogens are alive, weapons are not. **Nuclear and chemical weapons do not reproduce themselves and do not independently engage in adaptive behavior; pathogens do both of these things.** That deceptively simple observation has immense implications. The use of a manufactured weapon is a singular event. Most of the damage occurs immediately. The aftereffects, whatever they may be, decay rapidly over time and distance in a reasonably predictable manner. Even before a nuclear warhead is detonated, for instance, it is possible to estimate the extent of the subsequent damage and the likely level of radioactive fallout. Such predictability is an essential component for tactical military planning. **The use of a pathogen, by contrast, is an extended process whose scope and timing cannot be precisely controlled.** For most potential biological agents, the predominant drawback Biological Weapons is that they would not act swiftly or decisively enough to be an effective weapon. But for a few pathogens ones most likely to have a decisive effect and therefore the ones most likely to be contemplated for deliberately hostile use--the risk runs in the other direction. **A lethal pathogen that could efficiently spread from one victim to another would be capable of initiating an intensifying cascade of disease that might ultimately threaten the entire world population.** The 1918 influenza epidemic demonstrated the potential for a global contagion of this sort but not necessarily its outer limit.

Israel Impact

Clinton would strengthen ties to Israel

Lewis 6/17

Clinton and Israel: No doubts about her support

JUNE 17, 2015 BY ANN LEWIS <http://washingtonjewishweek.com/22764/clinton-and-israel-no-doubts-about-her-support/>

Now, dialing up the partisan edge on cable TV doesn't require much twisting – but trying to dismiss Clinton's pro-Israel record? That calls for real gymnastics. ¶ Let's look at the facts: In eight years as a senator, Clinton worked consistently and effectively for Israel's security. She traveled to Jerusalem during the second Intifada, spoke at the site of a bombed pizzeria and visited with victims of terrorist attacks. She spoke for Israel's right to build the security fence, and she spoke out in the Senate about the dangers of anti-Israel and anti-Semitic biases in textbooks used in Palestinian schools. ¶ She led the fight to force admission of Magen David Adom as a full voting member of the International Red Cross, building a bipartisan coalition for legislation that tied America's contribution to the IRC to Israel's admission. She was a cosponsor of legislation like the Palestinian Anti-Terrorism Act and the Syrian Accountability Act. ¶ As secretary of state, Clinton built the international coalition that enacted the toughest sanctions against Iran in history, forcing the regime into negotiations about its nuclear program. "Iran can never be permitted to acquire a nuclear weapon," she said in April, speaking of what is at stake in the negotiations. "The onus is on Iran, and the bar must be set high." ¶ Throughout her time at the State Department, she worked closely with the government of Israel, including almost daily coordination on security issues. ¶ Israel's defense minister said the administration was "doing in regard to our security more than anything I can remember in the past." ¶ She condemned the U.N. Human Rights Council for its structural bias against Israel. In November 2012, after eight days of violence, she negotiated a cease-fire in Gaza, by working with Israeli leaders and the government of Egypt. She understands that direct talks between Israel and Palestinians are essential for a peaceful resolution, one that enables Israel to maintain defensible borders and advance its national interests. ¶ That record comes as no surprise to people who know her. We know that Clinton, who made her first trip to Israel in 1981, has a background of friendship and admiration for Israel and its people. ¶ Before she was ever a candidate for office, Clinton learned about a program developed at Hebrew University that offered early childhood education to disadvantaged families. She reached out to its creator and then worked with the National Council of Jewish Women to bring the concept to the United States. Today that program, developed in Israel, can be found in 21 states. ¶ That's one of my favorite examples of Clinton's record: Effective action on behalf of life-long principles, like investing in children; supporting Israel, as an ally with shared values and a source of good ideas; and working to ensure Israel's security and to maintain a strong U.S.-Israel relationship because she recognizes the importance to both our countries.

US-Israel alliance key to ME stability and rise of terrorism

Baruch 6/9/15

(Uzi Baruch, "Dempsey: I Couldn't Imagine a World Without US-Israel Alliance", Arutz Sheva, <http://www.israelnationalnews.com/News/News.aspx/196492#.VZCvPvIViko>) DZ

During their meeting, Yaalon praised Dempsey's record and hailed the enduring ties between their two respective countries as crucial. "I want to emphasize how much we value your work, which has strengthened the friendship and partnership between the defense establishment," Yaalon said. We are all facing the challenge of jihadism in the region. he continued, listing the wide range of threats spanning both Sunni and Shia Islamist groups, including "in Syria, in Lebanon; the radical Shia axis; the ISIS infrastructure in Sinai; and of course the terror infrastructure in Gaza." "We believe that vis-a-vis all developments connected to the regional turmoil, Israel and the United States are on the same page, to tackle these challenges." he said. Yaalon went on to stress that the strategic partnership between Israel and the US was deep and exceptional. in spite of political differences. "We greatly value the United States' commitment to our security," he told Dempsey. "Your personal commitment, the commitment of the Secretary of Defense, and the commitments of President Obama to our security," Yaalon also addressed the threat posed by Iran, less than a month before a final deal is due to be signed between Tehran and world powers which will see Iran maintain its core nuclear program which will only serve to embolden Iranian regional aggression. "We are very concerned about Israel's role in the region, not just in the present time but more than that, after it signs a deal," Yaalon warned. We recognize Iran's fingerprints in every conflict in the Middle East. he continued, referring to Tehran's deep involvement and support for terrorist proxies in conflicts including Gaza, Iraq, Syria and Yemen, as well as its role in stoking tensions in Lebanon. The Iranian

regime is playing a very criminal role, and we fear that the deal will enable the Iranians to rebuild their economy and (use it) **to increase its support for terrorism in the Middle East and globally.** **The turbulence in the Middle East is immense.**

in Syria alone there are some 30 terrorist organizations we need to deal with. They aren't engaging with us at the moment, and we are not involved in with is going on there, but the time may come when that all changes. "In such a case we will deal them a heavy blow," he warned. Islamist groups on both sides of the Syrian civil war - including ISIS and Al Qaeda's Nusra Front, as well as pro-regime Shia militias including Hezbollah - are inherently hostile to Israel, although all are currently focusing primarily on more immediate targets. General Dempsey responded by thanking Yaalon and the IDF for the honorary badge of appreciation he was awarded earlier Tuesday, saying he was accepting in on behalf of the entire US armed forces.

US-Israel alliance key to preventing spread of wmd terror and rogue states Hirsh and Kleiner 5/13/13- DPhil in International Relations and Foreign Affairs

(Jordan Chandler Hirsch and Sam Kleiner, "ISRAEL FIGHTS AMERICA'S BATTLES", Tablet, <http://www.tabletmag.com/jewish-news-and-politics/131868/israel-fights-americas-battles>) DZ

For two weeks in the summer of 1982, U.S. and Soviet jets duelled in the skies over Lebanon in one of the largest aerial dogfights since World War II. The pilots were Israelis and Syrians. In a classic Cold War proxy battle, U.S.-backed Israel humiliated Soviet-backed

Syria, downing 86 MiGs without a single loss. It was the finest example of Israel's strategic value to the United States: in return for the planes, Israel served as America's shield and a model for the superiority of American-made weaponry. In the summer of 2013,

American-made Israeli jets are humiliating Syria once again. Israel's **ability to evade sophisticated Russian-made anti-aircraft systems to bomb Syrian territory over the past week does not just signal a possible expansion of Syria's civil war or the latest salvo in the struggle with Iran.** It also suggests that the U.S.-Israel alliance may be returning to its Cold War roots—

which is good news for both countries. The strategic bond between the United States and Israel did not begin with the Jewish state's founding in 1948. Many U.S. officials cautioned against becoming too close with the nascent state, which identified itself as a socialist country, had diplomatic support within the Soviet bloc, and was hated by America's Arab oil suppliers. As the United States attempted to build a regional security alliance to contain Soviet power in the Middle East, President Dwight Eisenhower pressured Israel to cede a large portion of the Negev Desert so that Egypt and Jordan could link borders. He also forced Israel to abort its military incursion into Egypt to seize the Suez Canal in concert with Britain and

But as Cairo and other Arab capitals increasingly sided with Moscow, Washington began to see Jerusalem as a possible bulwark against Soviet influence. In 1962, John F. Kennedy told Golda Meir, then Israel's foreign minister, "The United States has a

special relationship with Israel in the Middle East really comparable only to what it has with Britain over a wide range of world affairs"—a statement that wasn't true at the time, but did turn out to be prophetic. The Kennedy and Johnson Administrations generally ignored Israel's development of nuclear weapons during the 1960s and sent moderate amounts of small arms that helped the Jewish state smash Arab armies fighting with Soviet weapons in the Six Day War. Israel's victory—largely achieved with French-made jets and homemade Kfir fighters rather than American weapons—suggested the benefits of a strategic alliance with Israel. After the Six Day War, the United States would supply the advanced weapons and Israel would do the fighting. Over the course of the 1970s and 1980s, Israel rescued the U.S.-supported Hashemite monarchy in Jordan from a Syrian invasion, embarrassed the U.S.S.R. by downing Soviet planes over the Suez Canal, and opened its port in Haifa to the U.S. Sixth Fleet to counter the establishment of a Soviet

submarine base in Syria. Despite several points of tension, such as U.S. displeasure with Israel's full-scale invasion of Lebanon in 1982, **the partnership between the two countries**

became a key component of Washington's Cold War strategy in the Eastern Mediterranean and a powerful advertisement for high-end American arms. But the end of the Cold War shook the strategic foundations of the U.S.-Israel relationship. No longer worried

about the Soviet threat, U.S. officials began to see Israel as an obstacle to building relations with erstwhile enemies in the Arab World. The rise of Palestinian resistance to Israel's occupation of the West Bank furthered this view. Many in Washington embraced the notion that the Israeli-Palestinian conflict drove anti-American resentment across the Middle East and saw Israel as a chief obstacle to regional harmony. President George H.W. Bush and his Secretary of State James Baker tried to force Israel to make peace with the PLO at the Madrid Peace Conference in the hopes of winning friends among the Arabs. When the United States cobbled together a coalition of Arab nations against Saddam Hussein, it sought desperately to keep Israel out of the war, suggesting that it saw the Jewish state as a strategic burden rather than an asset. The signing of the Oslo Accords on the White House lawn and subsequent negotiations at Wye and Camp David seemed to suggest that Israel's chief value to the United States was as a source of prestige for presidents who could deliver that most enchanting diplomatic prize, Middle East peace. The 2006 war between Israel and Hezbollah gave the Jewish state its first real opportunity since the end of the Cold War to quiet doubters by applying the classic alliance model. In a new Middle Eastern proxy struggle, this time between the United States and Iran, Israel sought to crush Hezbollah. Yet it did not perform up to its Cold War standard. In a bungling operation, it fought the Lebanese terrorist group to what many saw as a draw, causing then-U.S. Secretary of State Condoleezza Rice, among others, to lose faith in its value as an arm of U.S. deterrence in the region. The strategic drift between Washington and Jerusalem opened up space for critics to call for an end to a special relationship that had outlived its usefulness on the ground. Stephen Walt and John Mearsheimer spearheaded this campaign in 2006 with an explosive article arguing that there was no longer any strategic rationale for a continued alliance. Although critics rallied against aspects of their work, their basic contention was widely accepted in Washington. In 2010, Gen. David Petraeus, then the head of U.S. Central Command, testified on Capitol Hill that the Israeli-Palestinian conflict "foment[s] anti-American sentiment" and "limits the strength and depth of U.S. partnerships." Tensions during the Obama Administration's first term over the stalled peace process and Iran seemed to underscore the idea that official Washington saw the alliance with Israel as a costly political burden that served no evident military or

strategic purpose. But **recent events in the Middle East suggest that 20 years of uncertainty about Israel's**

strategic value may be ending ... The Israeli bombings in Syria over the past week came with Washington's close coordination and President Obama's post-strike blessing. Although the

United States does not seek any escalation of the war in Syria, it appears to have deputized Israel to police the spread of chemical weapons and advanced Iranian arms bound for

Hezbollah. Iran, to be sure, poses a lesser threat to the United States than the Soviet Union. Yet its drive for regional hegemony comes exactly as the United States is attempting to disengage from the region. That makes the strategic logic of relying

on Israel to guarantee U.S. interests more clear than it has been in a generation for Republicans and Democrats alike. **Those who want the United States to intervene more**

actively in the Middle East can take solace in the fact that the United States still has a means of striking back at Iran and containing other possible regional threats, like Syria's aborted attempt

to develop its own nuclear bomb. Those who want the United States to get as far away from the Middle East as possible, meanwhile, can be happy that Israel will do the fighting while America extracts itself.

The Pentagon, at the very least, appears to be embracing the idea of Israel fighting America's battles in the Middle East in exchange for high-end weapons systems, the same way it did during the Cold War. The strikes in Syria came two weeks after a major arms sale between the United States and Israel in which the Jewish state will receive anti-radiation missiles designed to target enemy aerial defenses, upgraded radar systems, Osprey helicopters, and air refueling tankers—a sale that U.S. Secretary of Defense Chuck Hagel

described as a "clear signal" to Iran. The United States has long had moral, emotional, and domestic political reasons to support Israel. **The return of the American-Israeli alliance to**

its Cold War foundations will aid both countries in overcoming their disagreements and

coordinating their efforts in Syria and across the Middle East. Just as Israel downed Soviet-made Syrian jets in the Cold War, **it will now**

destroy Iranian-made missiles, bolstering U.S. deterrence as Washington's proxy war with Tehran approaches its climax.

US-Israel alliance key to preventing Iran using nukes

Meng and Zeldin 5/17/15 – members of the House of Foreign Affairs Committee

(Reps. Grace Meng and Lee Zeldin, “It’s time to give Israel the means to take out Iranian nukes”, New York Post, <http://nypost.com/2015/05/17/its-time-to-give-israel-the-means-to-take-out-iranian-nukes/>) DZ

The negotiations over Iran’s nuclear program have engendered furious debate in Washington and in capitals across the world. But there are steps outside of the nuclear talks that President Obama can take to help ensure that the United States and its allies are stronger and more secure the day after a deal than they were the day before. One such step would be to provide Israel with GBU-57 30,000-pound bunker-buster bombs (known as the Massive Ordnance Penetrators, or MOPs) and the means to carry them, in a quantity sufficient to destroy Iran’s most deeply buried nuclear sites. At present, Israel possesses US-supplied 5,000-pound bunker-buster bombs. But experts doubt these bombs could seriously impede Iran’s nuclear development. On the other hand, there is little doubt that MOPs, which Israel lacks, are capable of destroying Iran’s nuclear sites. As Michael Makovsky and Lt. Gen. David Deptula noted in a 2014 Wall Street Journal op-ed, the Defense Department has MOPs to spare, aircraft in storage that could carry the MOP payload and legal authority to transfer such arms to the Israelis. A longstanding component of America’s Iran policy has been a credible military threat to ensure that Iran does not obtain a nuclear weapon. Many contend that the credibility of this threat has waned, and that Iran is now more assured than ever that it will not be attacked. Providing Israel with a stronger capability to destroy Iran’s nuclear facilities would help deter Iran from ever trying to break any agreement it may sign. Transferring MOPs to Israel would also help assuage the concerns of Congress and our Middle East allies, who are wary of the emerging deal. President Obama will need to take measures to strengthen the security of our allies and ensure Congress that he is negotiating from a position of strength. Transferring MOPs to Israel would help the president achieve these objectives. Because the MOPs are outside the scope of the negotiations, Iran is in no position to object to transferring them to the Israelis. Iran continues to expand Hezbollah’s arsenal, placing all of Israel’s population centers within range of Hezbollah rockets. Iran supports the Assad regime in Syria and Hamas in the Gaza Strip. It supports the Houthi rebels in Yemen, who have violently overthrown a democratically elected government. It propagates violence and terrorism throughout the Middle East. We are now in a period when more must be done for Israel to retain its Qualitative Military Edge (or “QME”), a legally binding American commitment to ensure that Israel can overcome any combination of credible conventional military threats against it. Last month, Russia lifted a ban on the sale of missiles to Iran and decided to deliver to Iran a sophisticated air-defense system. The United States needs to ensure that Israel’s conventional military capabilities become stronger relative to those of Iran, not weaker. Additionally, the issue of QME relates to the American desire to boost the military capabilities of its Gulf allies; in order to do this while not violating QME law, the president may need to proportionally strengthen Israel. This in part explains why the administration recently announced that it would provide Israel with new F-35 fighter jets, and it further underscores the need for Israel to obtain MOPs. Some may argue that regional instability and sensitive negotiations make this the wrong time to introduce new weapons into the Middle East. But those of us who trust in Israel and in the US-Israel alliance know that the MOPs would not create further instability. Israel already has significant offensive military capabilities, and it has always used them responsibly. The transfer of MOPs would not by itself resolve the Iranian nuclear question. Nor would it lessen the need for any deal to ensure that Iran has no technical path to a nuclear weapon. But it would enable the United States to negotiate from a position of strength — and remain in a position of strength long after the negotiations. It is one of several tools with which the president could pave the path to a strong, sustainable nuclear agreement with Iran, a more secure Israel and a more stable Middle East.

US-Israeli alliance is key to national security and Middle-East stability

Eisenstadt and Pollock Nov 7th 2012

(Friends with Benefits: Why the U.S.-Israeli Alliance Is Good for America Michael Eisenstadt is the Kahn Fellow and director of The Washington Institute’s Military and Security Studies Program and David Pollock is the Kaufman Fellow at The Washington Institute, focusing on regional political dynamics and related issues. Foreign Affairs November 7, 2012, <http://www.washingtoninstitute.org/policy-analysis/view/friends-with-benefits-why-the-u.s.-israeli-alliance-is-good-for-america>)

At the final presidential debate of the 2012 campaign season, President Barack Obama and

Governor Mitt Romney mentioned Israel some 30 times, more than any other country except Iran. Both candidates called the Jewish state "a true friend," pledging to stand with it through thick and thin.

Some political commentators criticized these effusive declarations of support as pandering, suggesting that the candidates were simply going after Jewish and pro-Israel votes. But if support for Israel is indeed such a political winner, then it's at least in part because the voters know best.

The U.S.-Israeli alliance now contributes more than ever to American security, as bilateral cooperation to deal with both military and nonmilitary challenges has grown in recent years.

The relationship may not be symmetrical; the United States has provided Israel with indispensable diplomatic, economic, and military support totaling more than \$115 billion since 1949. But it is a two-way partnership whose benefits to the United States have been substantial. The other, less tangible costs of the U.S.-Israeli alliance -- mainly, damage to Washington's reputation in Arab and Muslim countries, a problem also caused by American interventions and decades of U.S. support for autocratic leaders in the Middle East -- pale in comparison with the economic, military, and political gains it affords Washington. U.S.-Israeli security cooperation dates back to heights of the Cold War, when the Jewish state came to be seen in Washington as a bulwark against Soviet influence in the Middle East and a counter to Arab nationalism. Although the world has changed since then, the strategic logic for the U.S.-Israeli alliance has not. Israel remains a counterweight against radical forces in

the Middle East, including political Islam and violent extremism. It has also prevented the further proliferation of weapons of mass destruction in the region by thwarting Iraq and Syria's nuclear programs. **Israel continues to help the United States deal with traditional security threats. The two countries share**

intelligence on terrorism, nuclear proliferation, and Middle Eastern politics. Israel's military experiences have shaped the United States' approach to counterterrorism and homeland

security. The two governments work together to develop sophisticated military technology, such as the David's Sling counter-rocket and Arrow missile defense systems, which may soon be ready for export to other U.S. allies. Israel has also emerged as an important niche defense supplier to the U.S. military, with sales growing from \$300 million per year before

September 11 to \$1.1 billion in 2006, due to the wars in Afghanistan and Iraq. **Israel's military research and development complex has pioneered**

many cutting-edge technologies that are transforming the face of modern war, including cyberweapons, unmanned vehicles (such as land robots and aerial drones), sensors and electronic warfare systems, and advanced defenses for military vehicles.

The U.S.-Israeli alliance has paved the way for the countries to cooperate on far more than just traditional security issues. In part because of the long-standing political and security relationship between the United States and Israel, most Israelis know the United States and harbor positive feelings toward it. Israeli companies looking for a global market for their products have often viewed their American counterparts as partners of choice. So today, Israeli civilian technological innovations are helping the United States maintain its economic competitiveness, promote sustainable development, and address a range of non-military security challenges. Dozens of leading U.S. companies have set up technology incubators in Israel to take advantage of the country's penchant for new ideas, which is why Bill Gates observed in 2006 that the "innovation going on in Israel is critical to the future of the technology business." Likewise, Israeli high-tech firms often turn to U.S. companies as partners for joint production and marketing opportunities in the United States and elsewhere, creating tens of thousands of American jobs. And although Israelis make up just three percent of the population of the Middle East, in 2011 Israel was the destination of 25 percent of all U.S. exports to the region, having recently eclipsed Saudi Arabia as the top market there for American products. U.S. companies' substantial cooperation with Israel on information technology has been crucial to Silicon Valley's success. At Intel's research and development centers in Israel, engineers have designed many of the company's most successful

microprocessors, accounting for some 40 percent of the firm's revenues last year. If you've made a secure financial transaction on the Internet, sent an instant message, or bought something using PayPal, you can thank Israeli IT researchers. **Israeli**

innovators have also come up with novel solutions to the water and food security challenges posed by population growth, climate change, and economic development.

By necessity, given the geography of the Middle East, Israel is a world leader in water conservation and management and high-tech agriculture. Israel recycles more than eighty percent of its wastewater -- the highest level in the world -- and has pioneered widely used techniques of conserving or purifying water, including drip irrigation and reverse osmosis desalination. And a number of Israeli companies are leaders in the development of renewable energy sources. BrightSource Industries, for example, is building a solar power plant in California using Israeli technology that will double the amount of solar thermal electricity produced in America. These innovations, bolstered by the substantial American investment in Israel, contribute to long-term U.S. domestic and foreign policy objectives relating to sustainable development. To be sure, the alliance with Israel has not been without risks or costs for Washington. The 1973 War between Israel and its neighbors brought America to the brink of conflict with the Soviet Union and prompted an Arab embargo on oil exports to the United States. Following the 1982 Israeli invasion of Lebanon, the Reagan administration dispatched U.S. marines to help stabilize the country, which ultimately resulted in costly attacks on American diplomats and military personnel there. And U.S. diplomatic and military support for Israel has reinforced negative attitudes toward the United States in many Arab and predominantly Muslim countries. But these costs should not be overstated. Beyond leading to largely symbolic UN votes against U.S. positions, Washington's support for Israel has hardly damaged the United States' ties with its Arab and Muslim allies. Standing with Israel certainly has not hobbled U.S. policy toward the region as much as the war in Iraq or Washington's backing of autocratic Arab regimes. Meanwhile, no Arab ally of the United States

has ever, as a result of its pro-Israel posture, refused to cooperate with Washington on counterterrorism or denied its requests for access, basing, or overflight rights. **In fact, the U.S.-Israeli alliance has at times helped spur closer U.S.-Arab relations, on the theory that only the United States could convince Israel to make concessions in negotiations;**

this was part of the logic behind Egypt's shift away from the Soviet Union and toward the United States in the 1970s.

and even during the past decade of close U.S.-Israeli cooperation, and despite an impasse in the Israeli-Palestinian peace process, Arab ties with the United States have largely flourished:

bilateral trade and investment are booming, as U.S. exports to the Middle East in 2011 reached an all-time high of \$56 billion. Defense cooperation is as close as ever, indicated by the several multi-billion-dollar arms deals that Washington has struck with Gulf allies in recent years.

Moreover, several states, including Egypt and Jordan, along with the Palestinian Authority, share intelligence with Israel and at various times have worked behind the scenes to enlist Israel as an intermediary with Washington. This has been the case even with Egypt's post-revolutionary government. All this underscores the fact that self-interest, not ideology, is the primary driver of the Arab states' relations with Washington. Despite the ties that continue to bind the United States and some Arab countries, the last two years of

upheaval have brought turmoil to many of Washington's traditional allies in the region. **At a time of great uncertainty, particularly as tensions with Iran**

mount, the United States is even more likely to depend on its somehow stable nondemocratic allies, such as Saudi Arabia, and its **stable democratic allies, such as Israel** and Turkey, **to secure its interests in the region. If anything, recent**

events have reinforced the logic underpinning U.S.-Israeli strategic cooperation. The benefits to the United States of its relationship with Israel belie the argument that the alliance is based solely on the two countries' shared democratic values, on the popularity of Israel in American politics, or on the elusive pursuit of progress in the peace process. It is a relationship based on tangible interests -- and will remain so for the foreseeable future. It isn't always easy being Israel's ally (and Israeli actions don't always make it easier). The country faces many challenges, including the unresolved conflict with the Palestinians, internal socioeconomic gaps, voices around the world that deny it's right to exist, and now Iran's nuclear program. Israel has made uneven progress toward addressing these issues, and needs to do more to remain an attractive partner for the United States. But its past successes in incorporating huge numbers of immigrants, bridging deep social divides, and showing remarkable resilience in the face of war and terrorism provide reason to believe that Washington can continue to count on its closest partner in the Middle East, and will continue to benefit from its alliance with the Jewish state.

Israel is a key strategic ally in the Middle East-Key to hotspot stability

Oren April 25th 2011

(The "realists" are wrong: America needs Israel now more than ever, Micheal Oren formerly Israel's ambassador to the United States and now a member of Knesset., APRIL 25, 2011, "The ultimate ally", Foreign Policy, <http://foreignpolicy.com/2011/04/25/the-ultimate-ally-2/>)

What is the definition of an American ally? On an ideological level, an ally is a country that shares America's values, reflects its founding spirit, and resonates with its people's beliefs. Tactically, an ally stands with the United States through multiple conflicts and promotes its global vision. From its location at one strategic crossroads, an ally enhances American intelligence and defense capabilities, and provides ports and

training for U.S. forces. Its army is formidable and unequivocally loyal to its democratic government. An ally helps secure America's borders and assists in saving American lives on and off the battlefield. And an ally stimulates the U.S. economy through trade, technological innovation, and job creation. Few countries fit this description, but Israel is certainly one of them. As U.S. President Barack Obama told a White House

gathering, **The United States has no better friend in the world than Israel,** a statement reflecting the positions of Democrats and Republicans alike. **The importance of the U.S.-Israel alliance has been upheld by successive American administrations and consistently endorsed by lawmakers and military leaders. It should be unimpeachable.**

But for some it is not. Rather than viewing Israel as a vital American asset, an increasingly vocal group of foreign-policy analysts insists that support for the Jewish state, including more than \$3 billion in annual military aid, is a liability. Advocates of this "realist" school claim that the United States derives little strategic benefit from its association with Israel. The alliance, they assert, arises mainly from lobbyists who place Israel's interests before America's, rather than from a clearheaded assessment of national needs. Realists regard the relationship one-dimensionally — America gives Israel aid and arms — and view it as the primary source of Muslim anger at the United States. American and Israeli policies toward the peace process, the realists say, are irreconcilable and incompatible with relations between true allies. By definition, realists seek a foreign policy immune to public sentiment and special interest groups. In this rarefied view, the preferences of the majority of the American people are immaterial or, worse, self-defeating. This would certainly be the case with the U.S.-Israel alliance, which remains outstandingly popular among Americans. Indeed, a Gallup survey this February showed that two out of three Americans sympathize with Israel. Overall, since the Sept. 11, 2001, attacks, and the wars in Iraq and Afghanistan — and in spite of Israel's

responses to the second intifada and rocket attacks from Lebanon in 2006 and Gaza in 2008 — **support for Israel in the United States has risen, not declined. The surveys prove that most Americans do not accept the argument that U.S. support for Israel provokes Islamic radicals**

or do not especially care even if it does. In a Senate hearing last year, Gen. David Petraeus, then head of U.S. Central Command, testified that the Arab-Israeli conflict "challenges ... our ability to advance our interests." Critics of the U.S.-Israel relationship seized on the remark as evidence of the alliance's prohibitive costs — an interpretation Petraeus strenuously rejected — but the incident wrought no change in popular opinion. In fact, a CNN survey taken later that week showed that eight out of 10 Americans still regarded Israel as an allied or friendly state. That kind of popular foundation for the Israeli-American alliance is all the more important at a time of great upheaval in the Middle East. As Iran's malign influence spreads and Turkey turns away from the West, Israel's strategic value in the region, both to the United States and to pro-Western Arab governments, will surely increase. Following Hezbollah's recent takeover of Lebanon and the political

turmoil in Egypt, Jordan, and the Persian Gulf, **Israel is the only Middle Eastern country that is certain to remain stable**

and unequivocally pro-American. In Israel alone, the United States will not have to choose between upholding its democratic principles and pursuing its vital interests.

And yet, for all their urgency, the close ties between the United States and Israel are hardly new. Their roots extend further than Israel's creation 63 years ago — rather, they took hold with the Pilgrims' arrival in North America.

For GOP Presidential Candidates, a Slightly Changing Climate How the 2016 Republican contenders are discussing global warming. February 8, 2015 BY BEN GEMAN
<http://www.nationaljournal.com/twenty-sixteen/for-gop-presidential-candidates-a-slightly-changing-climate-20150208>

The 2012 Republican presidential field was largely made up of climate skeptics. As the 2016 field shapes up, that's still the case.¶ Many of the would-be 2016 contenders will acknowledge that the climate is changing but publicly question the extent to which man-made greenhouse-gas emissions are responsible—if at all. There's strong opposition in the field to President Obama's EPA regulations on power plants, a central pillar of his second-term agenda.¶ "The federal government has no business attempting to massively reorder the global economy, resulting in policies that kill jobs and keep people from rising out of poverty, all in the name of a theory that can't be proven or disproven," Republican Sen. Ted Cruz from Texas told National Journal.

He edited the SUNY Series in Constructive Postmodern Thought (1987-2004), which published 31 volumes. He has written 28 books, edited 13 books, and authored 248 articles and chapters. "The climate is ruined. So can civilization even survive?" 4/14/15, <http://edition.cnn.com/2015/01/14/opinion/co2-crisis-griffin/>)/JHH

(CNN) Although most of us worry about other things, climate scientists have become increasingly worried about the survival of civilization. For example, Lonnie Thompson, who received the U.S. National Medal of Science in 2010, said that virtually all climatologists "are now convinced that global warming poses a clear and present danger to civilization."¶ Informed journalists share this concern. The climate crisis "threatens the survival of our civilization," said Pulitzer Prize-winner Ross Gelbspan. Mark Hertsgaard agrees, saying that the continuation of global warming "would create planetary conditions all but certain to end civilization as we know it."¶ These scientists and journalists, moreover, are worried not only about the distant future but about the condition of the planet for their own children and grandchildren. James Hansen, often considered the world's leading climate scientist, entitled his book "Storms of My Grandchildren."¶ The threat to civilization comes primarily from the increase of the level of carbon dioxide (CO₂) in the atmosphere, due largely to the burning of fossil fuels. Before the rise of the industrial age, CO₂ constituted only 275 ppm (parts per million) of the atmosphere. But it is now above 400 and rising about 2.5 ppm per year.¶ Because of the CO₂ increase, the planet's average temperature has increased 0.85 degrees Celsius (1.5 degrees Fahrenheit). Although this increase may not seem much, it has already brought about serious changes.¶ The idea that we will be safe from "dangerous climate change" if we do not exceed a temperature rise of 2C (3.6F) has been widely accepted. But many informed people have rejected this assumption. In the opinion of journalist-turned-activist Bill McKibben, "the one degree we've raised the temperature already has melted the Arctic, so we're fools to find out what two will do."¶ His warning is supported by James Hansen, who declared that "a target of two degrees (Celsius) is actually a prescription for long-term disaster."¶ The burning of coal, oil, and natural gas has made the planet warmer than it had been since the rise of civilization 10,000 years ago.

Civilization was made possible by the emergence about 12,000 years ago of the "Holocene" epoch, which turned out to be the Goldilocks zone - not too hot, not too cold. But now, says physicist Stefan Rahmstorf, "**We are catapulting ourselves way out of the Holocene.**"¶ This catapult is dangerous, because **we have no evidence civilization can long survive with significantly higher temperatures.** And yet, the world is on a trajectory that would lead to an increase of 4C (7F) in this century. In the opinion of many scientists and the World Bank, **this could happen as early as the 2060s.**¶ What would "a 4C world" be like? According to Kevin Anderson of the Tyndall Centre for Climate Change Research (at the University of East Anglia), "during New York's summer heat waves the warmest days would be around 10-12C (18-21.6F) hotter [than today's]." Moreover, he has said, above an increase of 4C only about 10% of the human population will survive.¶ Believe it or not, some scientists consider Anderson overly optimistic.¶ The main **reason for pessimism is the fear that the planet's temperature** may be close to a tipping point that **would initiate a "low-end runaway greenhouse," involving "out-of-control amplifying feedbacks."** This condition would result, says Hansen, **if all fossil fuels are burned** (which is the intention of all fossil-fuel corporations and many governments). **This result "would make most of the planet uninhabitable by humans."**¶ Moreover, many scientists believe that **runaway global warming could occur much more quickly, because the rising temperature caused by CO2 could release massive amounts of methane (CH4), which is, during its first 20 years, 86 times more powerful than CO2.** Warmer weather induces this release from carbon that has been stored in methane hydrates, in which enormous amounts of carbon -- four times as much as that emitted from fossil fuels since 1850 -- has been frozen in the Arctic's permafrost. And yet now the Arctic's temperature is warmer than it had been for 120,000 years -- in other words, more than 10 times longer than civilization has existed.¶ According to Joe Romm, a physicist who created the Climate Progress website, **methane release from thawing permafrost in the Arctic "is the most dangerous amplifying feedback in the entire carbon cycle."** The amplifying feedback works like this: The warmer temperature releases millions of tons of methane, which then further raise the temperature, which in turn releases more methane.¶ **The resulting threat of runaway global warming may not be merely theoretical.** Scientists have long been convinced that methane was central to the fastest period of global warming in geological history, which occurred 55 million years ago. Now a group of scientists have accumulated evidence that methane was also central to the greatest extinction of life thus far: the end-Permian extinction about 252 million years ago.¶ Worse yet, whereas it was previously thought that significant amounts of permafrost would not melt, releasing its methane, until the planet's temperature has risen several degrees Celsius, recent studies indicate that a rise of 1.5 degrees would be enough to start the melting.¶ What can be done then? Given the failure of political leaders to deal with the CO2 problem, it is now too late to prevent terrible developments.¶ But **it may -- just may -- be possible to keep global warming from bringing about the destruction of civilization. To have a chance, we must,** as Hansen says, **do everything possible to "keep climate close to the Holocene range" -- which means, mobilize the whole world to replace dirty energy with clean as soon as possible.**

Turns Case

Turns the case – while Hillary has been quiet on surveillance, major GOP frontrunners would roll back the plan

Wofford 6/1

The First Fight for 2016's GOP Hopefuls: Surveillance BY TAYLOR WOFFORD 6/1/15 AT 5:34 PM
<http://www.newsweek.com/first-fight-2016s-gop-hopefuls-surveillance-338190>

On Monday, former Florida governor Jeb **Bush staked out a position on National Security Agency (NSA) surveillance in opposition to** his libertarian rival for the 2016 GOP presidential nomination, Senator Rand **Paul** of Kentucky. **Bush argued on publishing platform Medium that parts of the Patriot Act that expired Sunday night should be kept:** "Today we have lost the metadata program, authorized by Section 215 of the USA PATRIOT Act, **an important tool in helping law enforcement and the Intelligence Community connect the dots between known foreign terrorists and potential operatives in the United States,**" he wrote.¶ Bush has yet to file the Federal Election Commission forms announcing his intent to run for president. Paul filed with the FEC on April 8 after formally announced his campaign on April 7.¶ Section 215, which Bush argues should be kept, has most famously allowed bulk collection of telephone records by the NSA since 2001. In this context, metadata refers to information about a phone call—who was called and for how long, for example—but not the contents of the conversation. Critics of the Patriot Act, Rand Paul included, argue that allowing law enforcement agencies to see who Americans are calling is a violation of their privacy rights. They also argue that such tools have not helped the government thwart potential terrorist attacks. According to Cindy Cohn and Andrew Crocker at the Electronic Frontier Foundation, which argues government surveillance is unconstitutional, "Every assessment about the bulk collection of telephone records, including two by hand-picked administration panels, have concluded that 'collecting it all' hasn't materially aided any terrorism investigation."¶ **Paul filibustered in the Senate over the weekend, preventing a vote to extend to the provisions. His actions have sparked criticism from within the Republican Party, including an accusation from Senator Marco Rubio of Florida that the filibuster was nothing but "political posturing."**¶ The Kentucky libertarian is easily the most opposed to bulk collection of phone records out of the Republican hopefuls. **Senators Ted Cruz of Texas and Rubio have both spoken out in favor of the practice.** Cruz positioned himself as a moderate by backing the proposed USA Freedom Act, a replacement for the Patriot Act, which lessens the NSA's ability to spy on Americans somewhat by requiring the government to ask private companies to hand over records, rather than having the NSA collect them directly, but doesn't go far enough for Paul. Cruz said the Freedom Act strikes "the right balance" between "privacy interests of law-abiding citizens [and] the public's interest in national security." Paul says it still gives the government too much latitude to spy on Americans. Marco Rubio supports the Freedom Act. So does President Barack Obama.¶ The Senate on Sunday night voted 77-17 in favor of lining up a vote on the Freedom Act, which passed in the House of Representatives in May.¶ **Hillary Clinton, the presumptive Democratic nominee, has been mum on the issue so far.** But her challenger to the left, Senator Bernie Sanders of Vermont, is opposed to bulk collection.¶

Miscellaneous

Paul's security stance means he can't win – other GOP candidates would support stronger NSA measures

Bacon 4/7

Why Rand Paul Probably Can't Win Republican Nomination¶ Perry Bacon Jr.¶ Tuesday, 7 Apr 2015 | 6:23 AM ET <http://www.cnbc.com/id/102565085>

Paul, who is expected to announce a presidential run Tuesday, has spent the last two years courting black voters in part by urging the restoration of voting rights for convicted felons, who are disproportionately African-American. As leaders in both political parties take hawkish stances on national security, Paul, often with few allies, has warned against broad surveillance of American phone records and the expanded use of drones. ¶ But Paul's unorthodox and at times courageous approach has done little to help his presidential prospects. The Kentucky senator faces very long odds of becoming the GOP presidential nominee, mainly because he has taken foreign policy stances opposed by many powerful figures in the Republican Party.¶ Making sure the United States projects military strength has long been one of the core ideas of the GOP. But national security and foreign policy receded slightly in importance in conservative politics during President Barack Obama's first term, with Republicans reeling from the failures of George W. Bush's war in Iraq and both parties fixated on the recovery of the American economy after the 2008 meltdown. Paul was elected to the Senate in 2010 as part of a class of Republicans who had campaigned on reducing the national debt, cutting federal spending and repealing programs like the Affordable Care Act. With conservative voters not as fixated on national security, Paul overcame strong opposition from some Republicans who disliked his suggestions that the U.S. was too involved in conflicts overseas. ¶ Now, the first-term senator enters a presidential campaign amid the rise of ISIS, growing tensions between the U.S. and Israel and a resurgent Russia. Republicans believe that Obama's foreign policy record is full of failures and that he is weakening American influence abroad. ¶ But Paul has broken with GOP orthodoxy on a number of national security policies: supporting Obama's decision to normalize relations with Cuba; pledging to end the NSA program by which the U.S. government has collected the phone data of millions of Americans; suggesting the U.S. should engage in direct talks with Iran about its nuclear program; and saying he would oppose U.S. airstrikes in Iraq to fight ISIS, a position he has since reversed.¶ While polls suggest some younger Republicans agree with Paul, most of the party's members in Congress adamantly oppose these positions, isolating the Kentucky senator within the GOP. ¶ Nearly all of his 2016 rivals are to the right of Paul on foreign policy. Two potential candidates, South Carolina Sen. Lindsey Graham and former United Nations Ambassador John Bolton, have said they are considering running for president to show the Republican Party remains committed to a strong national defense, even though Bolton and Graham have almost no chance of winning.¶ Read More¶ NJ Sen. Menendez indicted on corruption charges¶ Former congressman Mike Rogers, once chair of the House Intelligence Committee, is now leading a political committee devoted to promoting hawkish national security views in early primary states like Iowa.

Rand Paul

Paul trailing primary now – decisive sweep still possible with win in Iowa.

Don Ramussen 06/03/15 Republican political consultant, Masters in political management from George Washington University, BA in political economy from University of Washington, “Here’s How Rand Paul Wins the GOP nomination,” <http://thelibertarianrepublic.com/author/nafl2214/>

The naysayers are wrong. Rand Paul has a clearer path to the Republican nomination than most of the other candidates. ¶ Last week I looked at the structure of the 2016 primary campaign. This week I’ll drill down on how this structure will affect Rand Paul’s strategy and his path to the nomination. The top line take-away is that Senator Paul needs to win early and decisively. Thanks to a big field, unique positioning and changes in campaign financing rules, it is more possible than many pundits are willing to admit, but still fraught with danger. ¶ 2016 primary voting starts with the Iowa Caucuses on February 2. In 2008, Ron Paul received 10% of the vote. In 2012, Ron Paul received 22% of the vote. In just 4 years, the percentage of Iowa Republicans that identified with libertarian views had increased by 108%. Assuming that Paul can hold his father’s voters and that the field will still be divided by half a dozen or more other credible candidates, this alone could be enough to win. After all, in 2012 there were only three credible alternatives on the ballot and one of them was Newt Gingrich. Santorum’s winning percentage was only 2.3 points better than Ron Paul. Throw one more credible candidate in the mix and Ron Paul (whose voters are uniquely loyal) wins Iowa and carries the momentum into New Hampshire. Most people don’t realize just how close Ron Paul actually came. ¶ An important difference this cycle is changes to campaign finance rules that allow any candidate with a sugar daddy supporting their PAC to stay in far longer in the hope that they can grind on, pick up delegates and catch the frontrunner. That means more candidates dividing the national security and evangelical votes, clearing the way for Paul to consolidate the libertarian, Constitutional and civil liberty blocs. Under this analysis, Ted Cruz becomes Paul’s biggest direct challenge along with the possibility of a break-out candidate consolidating security and religious voters a la Marco Rubio. ¶ The other thing to keep in mind is that Iowa is a closed caucus state so only registered Republicans can show up and vote. Although the state does allow same day party changes, this is still a structural impediment to activating a large number of the non-traditional voters that Team Paul has targeted. The current media strategy is clearly designed to enhance his chances in primaries such as New Hampshire as well as the general election by showing strong independent support and good head-to-head numbers against Hillary Clinton. ¶ Bottom line: Paul could maybe survive a second place finish in Iowa, but only maybe and no worse. If he is to maximize his potential to win the nomination, it must start in Iowa. There is one week between Iowa and New Hampshire. Media coverage will go overwhelmingly to the winner and define the narrative and momentum going in. ¶ New Hampshire has long broken the hearts of libertarians. For all of the bluster of “Live Free or Die”, the statist McCain and Romney took over 68% of the vote in 2008, the neo-con militarist Kelly Ayotte is their senator and the Free

State Project has been reduced to feeding parking meters. In the 2012 primary, Mitt Romney won New Hampshire by 16.5 points. More like “Live Free...you know, or not”.¶ But hope does spring eternal or there wouldn't be any libertarians left. In 2008 Ron Paul won 8%. In 2012 he juiced his total to 23%, an increase in votes of an eye-popping 297%. For the same reasons as in Iowa, Rand Paul could easily win New Hampshire with a similar vote total.¶ He also has a second big advantage; New Hampshire has a semi-closed primary. That means that unaffiliated voters can choose either a GOP or Democrat ballot. This allows that **much hoped for bloc of leave me alone liberal and social libertarian independents to be organized and turned out for Paul in a way that no other Republican candidate could match.**¶ Any way you slice it, New Hampshire is a must win for Paul. Not only will this result linger for 11 days before South Carolina goes to the polls, it is perceived to be among the most libertarian states. The line will go “If Paul can't win in New Hampshire, where can he win?

SSRA passage will be spun as huge Paul victory – sponsors of bill are staunch allies.

Spencer **Ackerman 06/02/15 Guardian National Security Editor, Former Wired Senior Writer, Recipient of 2012 national magazine award for Digital Reporting, “Rand Paul Allies plan new Surveillance reforms to follow USA freedom act,” <http://www.theguardian.com/us-news/2015/jun/02/rand-paul-house-allies-surveillance-usa-freedom-act>**

Several of Rand Paul's allies in the US House of Representatives are seeking to capitalize on the momentum of surveillance reform as the USA Freedom Act continues through the Senate by attempting to stop the National Security Agency from undermining encryption and banning other law enforcement agencies from collecting US data in bulk.¶ Thomas Massie, a libertarian-minded Kentucky Republican, has authored an amendment to a forthcoming appropriations bill that blocks any funding for the National Institute of Science and Technology to “coordinate or consult” with the NSA or the Central Intelligence Agency “for the purpose of establishing cryptographic or computer standards that permit the warrantless electronic surveillance” by the spy agencies. He is joined in the effort by Democrat Zoe Lofgren of California.¶ Massie and Lofgren will place the amendment on the bill funding the Justice Department as early as Tuesday. Their move is part of the first wave of follow-up measures by privacy advocates to supplement the USA Freedom Act, a bill already passed by the House which, although it would limit some NSA powers, many civil libertarians consider insufficient. ¶ “The USA Freedom Act is definitely not the last word. Whenever a program expires or whenever funding is required, those are must-pass pieces of legislation that present opportunities for refinement,” Massie told the Guardian on Tuesday.¶ Lofgren and another civil libertarian, Republican Ted Poe of Texas, will propose an amendment to the same appropriations bill that would block the Federal Bureau

of Investigation from inserting vulnerabilities into encryption on mobile devices.¶
Advertisement¶ The FBI director, James Comey, is currently campaigning against tech companies that are expanding encryption for their commercial products.¶ “Privacy is a constitutional right, whether the FBI likes it or not,” Poe told the Guardian on Tuesday. ¶
Another congressional privacy advocate, Democrat Jared Polis of Colorado, will push a further amendment to the appropriations bill that would in effect block the Drug Enforcement Agency from collecting Americans’ phone data in bulk – a recently exposed surveillance program that preceded the NSA’s now-shuttered bulk collection. The Guardian has acquired the text of all these amendments.¶ Polis told the Guardian he wanted to “rein in” the DEA’s “unwarranted and unconstitutional program”, calling the Freedom Act “the beginning of a reform process, not the conclusion of one”.¶ The Senate is slated on Tuesday to debate the USA Freedom Act, a bill to ban bulk collection of US phone records by the NSA that would have the effect of restoring provisions of the Patriot Act that expired at midnight on Sunday.¶ Passage is expected, but the GOP majority leader, Mitch McConnell, is pushing amendments that civil libertarians in the House reject and which would require a new House vote on the overall bill.¶ “We still don’t know what the Senate’s going to do. If they start changing what we sent them, we’re going to be looking to do further improvements in the bill,” Lofgren told the Guardian before the Senate vote. “We’re not giving up.”¶ Extensive compromise with the NSA and the White House, as well as clever legislative strategy, ensured House passage of the Freedom Act last month. But it also siphoned enthusiasm and even support from the chamber’s most fervent privacy advocates. Massie championed a different bill, the Surveillance State Repeal Act, that would have rolled back many more NSA and FBI spy powers.¶ The more technologically sophisticated privacy campaigners have warned that neither the White House nor the US Congress has addressed government efforts to secretly undermine encryption standards.¶ The Guardian, thanks to whistleblower Edward Snowden, revealed in September 2013 that the NSA and its British partner GCHQ routinely insert vulnerabilities into commercial encryption software that permit the agencies to access protected data. But the vulnerabilities, commonly called “backdoors”, also leave software that banks, businesses, internet service providers and others rely upon as prey for hackers.¶ The National Institute of Science and Technology issues encryption standards. But a document leaked by Snowden showed that in 2006, the NSA secretly worked with the institute to become the “sole editor” of a draft security standard that the institute issued.¶ “It’s bad for business. It’s bad for privacy and bad for civil rights,” Massie recently told a business conference in Louisville.¶ Last year, Lofgren unsuccessfully attempted to place a ban on undermining encryption in the USA Freedom Act. But this time, she and her allies will attempt to hang their amendments on to as many must-pass bills as necessary. Should their efforts fail this week, Poe confirmed that their next step will be to add the amendments to the must-pass Defense Department appropriations bill that the House will debate soon.¶ If that doesn’t work, they intend to move on to the next available bill and employ the same strategy. Massie indicated the coalition is already looking towards the June 2017 expiration of another broad surveillance power, Section 702 of the Foreign Intelligence Surveillance Act, to force additional rollbacks, much as the USA Freedom Act authors used the expiration of parts of the Patriot Act as leverage to pass their bill.¶ “We’re going to have multiple opportunities going forward. In fact, the 702 provisions expire in 2017, so those will have to be renewed, and there’ll be a great debate then about the even more invasive spying on American citizens that’s going on,” Massie

said. ¶ Lofgren added: “We will continue to make efforts to attach those improvements to every vehicle that moves through the body.” ¶ Massie, Poe and Lofgren’s efforts come as the FBI and NSA have launched a public campaign against commercial encryption. While advocating in favor of backdoors and denouncing new mobile-device encryption – which companies describe as a market-driven response to Snowden’s disclosures – they insist they can create vulnerabilities they alone can exploit. Engineers consider the effort to be technologically illiterate. ¶ “House members are sending two clear messages with these amendments to the Department of Justice funding bill. The first is to Senators Mitch McConnell and Richard Burr, and the message is: ‘Surveillance law reform is continuing; deal with it,’” said Patrick Eddington of the Cato Institute. ¶ “The second is to Attorney General Loretta Lynch and FBI director Jim Comey, and the message is: ‘We’re not going to let you make every American vulnerable to hackers and foreign spies by subverting public key encryption.’” ¶ **Massie is among the leading House allies of Senator Rand Paul, the Kentucky Republican and presidential candidate who is making opposition to mass surveillance a cornerstone of his campaign.** He and their comrade Justin Amash, a Michigan Republican, stood guard in the House last week to ensure surveillance advocates did not exploit a parliamentary maneuver to drive a weaker version of the USA Freedom Act through a recessed House.

Voter majority in Iowa disapprove of surveillance – sets Paul up for Iowa success.

Julian **Hatem 05/27/15 Columnist for The Hill, “Rand Paul seeks breakout moment,”** <http://thehill.com/policy/national-security/243274-rand-paul-seeks-breakout-moment>

At the same time, however, polls released by the American Civil Liberties Union this month found that 63 percent of Republican voters in Iowa and 57 percent of GOP voters in New Hampshire believed that Congress should modify the Patriot Act instead of preserving it without change. ¶ Still, it’s clear his campaign is trying to capitalize on his efforts in the Senate. ¶ Within just 24 hours of scuttling Majority Leader Mitch McConnell’s (R-Ky.) plans for a short-term patch to the expiring Patriot Act provisions early on Saturday morning, Paul’s campaign sent at least two separate emails asking supporters for money and contact information. ¶ “Last night I put NSA spying on life support,” Paul said in the subject line of one email. ¶ In recent days, the campaign has also begun selling a \$30 “filibuster starter pack” that includes a T-shirt, bumper sticker and “NSA spy cam blocker” device designed to cover a laptop Web camera. The shirt reads: “The NSA knows I bought this Rand Paul tshirt.” ¶ That publicity focus has certainly irked some of his fellow GOP lawmakers. ¶ Paul’s behavior is “a great revenue raiser,” quipped Sen. John McCain (R-Ariz.) after the late-night voting over the weekend. ¶ Even Republicans who largely agree with Paul about the need to rein in the NSA say that he’s playing political games, which detract from his message. ¶ Paul’s 10.5-hour floor remarks last week “was a speech from

someone who's running for president of the United States," Sen. Dean Heller (R-Nev.) told The Hill after the speech. Heller is a co-sponsor of the main NSA reform bill in the Senate, called the USA Freedom Act. ¶ "I don't disagree with him, but I don't think it has as much weight as it would be if it were from someone who is not a candidate running for president."

Paul nomination leads to general win over Hilary – attracts swing voters, republicans, and rapidly growing libertarian base.

Brian O' Connor 4/13/15 Contributing columnist and editor for New republic, "Rand Paul is Republicans' best hope to beat Hilary," <http://www.newrepublic.com/authors/brian-oconnor>

Hillary Clinton, to no one's surprise, announced Sunday that she's running for president. Barring catastrophe, she'll become the Democratic nominee next summer. There is no such clarity on the Republican side, with a new candidate official entering the race every week. But this much is clear: If the GOP want to defeat Clinton next fall, they should turn to the only Republican whose buzz rivals hers: Rand Paul. ¶ The **Republican Party** is at a crossroads. Its base, bolstered by big-tent conservatism throughout the 1980s and late 2000s, is aware of its own image problem: The "Party of No" **is on the losing side** in the battle for marriage equality, has failed to convince Americans that it has a clearer plan for healthcare reform, and remains tacitly pro-war when the population is interested in a U.S. withdrawal from foreign intervention. **Worse yet, its base is aging and isn't being replaced by younger voters. Libertarianism, however, is on the rise nationally, with 22 percent of eligible voters identifying with the movement in recent polling. Enter Rand Paul**, heir apparent to the movement, who pointedly said during in an interview with the Associated Press, "Young people aren't so wedded to party. The kids are probably adrift somewhat. I don't think someone who is an authoritarian, or comes from a much more authoritarian point of view like Hillary Clinton, will attract them." A **fresh brand of libertarian-infused conservatism** could be the **way forward for Republicans looking to woo the youth vote**, and Paul sees himself as the person who can provide it. ¶ Rand might be right. While Clinton has overwhelming support from Millennials who grew up under her husband's administration, **the growth of libertarian ideology among young voters may peel away some of Hillary's reliable supporters**, swayed by Paul's "leave-me-alone-coalition" of voters, reluctance toward the use of **military force abroad, support of medical marijuana legislation, his platform position on criminal justice reform, and his sometimes-unpolished appearance in interviews and stump speeches that connote a sense of "realness" that is uncommon in GOP candidates**. Paul gains headlines for what he's not: a non-threatening Republican with a cadre of platform stances that are nearer to obsolescence than relatability. His brand of digestible libertarianism is made for the post-Obama generation. Hillary, on the other hand, is likely seen as a successor of Obama's administration; she is the torch-bearer that Vice President Joe Biden would be, were he cut out for the presidency. Young voters who came of age during Obama's two exciting campaigns may find Hillary to be a less magnetic choice compared Paul—if he finds traction with any Republican

voters willing to compromise the beliefs of the base for the betterment of the party.¶ But therein lies the rub. Rand may be the candidate that Republicans need, but not the one they want. He is a dove in a party of hawks; a pro-marijuana legalization advocate in a party that only tacitly embraces reform. He's a young, vibrant speaker whom Millennials actually listen to (even if he needs to be trained not to lash out at reporters). He doesn't espouse the conservative boilerplate of his competitors, so he may not stand a chance in Iowa, where his father's campaign took devastating blows in 2012, or in the GOP primary generally. And yet, [polls suggest he would stand a chance against Hillary in the general election](#). In the [latest Quinnipiac poll, Paul leads Clinton in both Iowa and Colorado](#) while a national surveys place him only seven points behind Hillary. Paul leads Clinton in current Iowa polling by two to three percentage points. He leads Clinton on head-to-head polls in Colorado as well, a crucial state during both Obama campaigns.¶ ADVERTISEMENT¶ Jeb [Bush is seen as the strongest Republican candidate](#), given his name recognition, relative moderation, and powerful donor base. But it could [be tough to convince anyone outside the party to vote another Bush into the White House, especially after the economy is finally showing signs of recovery](#). Rand Paul, so far, has said all the right things to make the base warm to him: He calls for a balanced budget every year of his prospective administration, wants to curtail government spending, is decidedly anti-bailout, and would gleefully dismantle regulation before he has a chance to take off his overcoat in the Oval Office. What's more, Paul opposes abortion, would block welfare grants to states, and takes a dim view of marriage equality initiatives. With the waning influence of Evangelical Christians and the wholesale admonishment of neoliberalism by economists, it may be time for the GOP to cater to a fresh brand of conservatism, even if it means shifting what the base considers "conservative enough." Savvy Republicans would do well to see [Paul's mixture](#) of likeability and base conservative [values as a Trojan horse for swing voters](#), a demographic which might not want to vote for the obstructionist party after two more years with a sclerotic Congress.

Paul presidency leads to AFA repeal.

OTI 04/07/15 "Rand Paul on Health Care," Originally quoted from Rand Paul's Campaign site – titled "Issues,"

http://www.ontheissues.org/2016/Rand_Paul_Health_Care.htm,

I was not a member of the US Senate during the 111th Congress, but if I had been [I would have voted against ObamaCare](#). [As your President, one of my first acts would be to repeal the abomination that is ObamaCare](#).¶ As a doctor, I have had firsthand experience with the immense problems facing health care. Prior to the implementation of ObamaCare, our health care system was over-regulated and in need of serious market reforms--but ObamaCare is not the answer.¶ Government interventions in health care have driven up the cost of coverage and decreased competition within the market. More--not less--freedom to choose and innovate will make sure our health care system remains the best in the world.¶ As your President, I will ensure that real

free-market principles are applied to the American health care system so that it is responsive to patients, families, and doctors, rather than government bureaucracy.

ACA is key to the economy – 6 reasons.

Furman 14 – Jason, Chairman of the Council of Economic Advisers, Ph.D. in Economics @ Harvard, “Six Economic Benefits of the Affordable Care Act”

<http://www.whitehouse.gov/blog/2014/02/06/six-economic-benefits-affordable-care-act>

¶ This week has seen the release of a Congressional Budget Office (CBO) analysis that refuted claims by opponents of the Affordable Care Act (ACA) that it is a “job killer” and demonstrated that, by giving families more options for obtaining affordable health insurance outside the workplace, the ACA will make it easier for people take a risk and start a business, take time out of the labor force to raise a family, or retire when they are ready.¶ As CBO made clear, however, its analysis was not a comprehensive analysis of how the ACA will affect the labor market in particular or the economy as a whole. This blog post illustrates six ways that the ACA is helping the labor market, laying the foundation for future economic growth, and improving families’ financial security and well-being.¶ 1. Putting more money in families’ pockets, boosting demand, and bringing down unemployment today. As of January 1, more than 2 million people had selected a plan in the health insurance marketplace, and nearly 80 percent of those people will – thanks to the ACA – benefit from tax credits to help pay their premiums. All told, the Congressional Budget Office estimates that over the entirety of 2014, 5 million people will benefit from premium tax credits and help with cost-sharing averaging \$4,700 per person. In 2015, 11 million people are estimated to benefit, rising to 19 million in 2016. Many millions more will gain affordable health insurance coverage through Medicaid.¶ These provisions of the ACA make it easier for families to access health care services and to meet other pressing needs, which will increase the demand for goods and services throughout the economy at a time when the unemployment rate is still elevated. For this reason, as CBO Director Doug Elmendorf testified, the ACA “spurs employment and would reduce unemployment over the next few years.” The ACA is thus – today – helping ensure that every American who wants a job can find one.¶

Clinton

Jeb losing Iowa Caucus – 6th place in the polls and tops the “no way” list

Quinnipiac University 7/1 (Political Poll, cites data from RDD telephone survey, conducted from June 20 – 29, 2015 throughout the state of Iowa. 7/1/15, “It's Walker Plus Six Also-Rans In Iowa GOP Caucus, Quinnipiac University Poll Finds; Christie In 15th Place In Field Of 16”, <http://www.quinnipiac.edu/news-and-events/quinnipiac-university-poll/iowa/release-detail?ReleaseID=2258>, 7/7/15, ACC)

Scott Walker leads the pack in the Iowa Republican Caucus, but his support is shrinking among likely Republican Caucus participants, as six other contenders battle for second place, according to a Quinnipiac University poll released today. New Jersey Gov. Christopher Christie is in 15th place, with 1 percent. Walker has 18 percent of likely GOP caucus participants, compared to 25 percent in a February 25 poll by the independent Quinnipiac (KWIN-uh-pe-ack) University and 21 percent in a May 6 survey. Jostling for second place are Donald Trump and Ben Carson, at 10 percent each, U.S. Sen. Rand Paul of Kentucky and U.S. Sen. Ted Cruz of Texas at 9 percent each, former Gov. Jeb Bush of Florida at 8 percent and U.S. Sen. Marco Rubio of Florida at 7 percent. Former Arkansas Gov. Mike Huckabee has 5 percent. No other candidate is above 4 percent and 5 percent are undecided. Trump and Bush top the "no way" list as 28 percent say they would definitely not support Trump and 24 percent say no to Bush. Christie is next on this negative list with 18 percent. "Those who thought the Republican race in the Iowa caucuses might begin to clarify itself better think again," said Peter A. Brown, assistant director of the Quinnipiac University Poll. "As even more candidates toss their hats into the ring, the race has gotten even more muddled.

Mass surveillance splits GOP – Makes 2016 primaries unsteady

Diaz 6/8 (Kevin Diaz is the winner of the McClatchy President Award for Superior Journalism, a Washington Bureau reporter, Houston Chronicle Washington Correspondent, and a chief Washington correspondent for the Minneapolis Star Tribune, where he got his start in journalism in 1984 as a night cops reporter. During his tenure in Minneapolis, he won awards for his coverage of gang crime and city hall. He also taught public affairs reporting at the University of Minnesota, where he received his Master's. 6/8/15, “Spy powers debate poses challenge to GOP leaders ahead of 2016”, Houston Chronicle, <http://www.houstonchronicle.com/news/politics/us/article/Spy-powers-debate-poses-challenge-to-GOP-leaders-6311696.php>, 7/5/15, ACC)

Last week's 67-32 Senate vote was a milestone — the first substantial rollback of counter-terrorism powers approved in the immediate aftermath of 9/11 terrorist attacks. It also

represented a challenge for the Senate's new GOP leaders, exposing a rift within the Republican Party that will be felt in the upcoming GOP presidential nominating contest, where suspicion of Big Government is a dominant grass-roots theme. Moreover, the political environment Cornyn lamented brought together populists on the left and right, including in his own party, rejecting the post-9/11 telephone and Internet tracking authority. The shifting coalitions produced some portentous divisions among the four GOP presidential hopefuls in the Senate: Ted Cruz, the junior senator from Texas, voted for the Freedom Act restrictions, calling them "the right balance between protecting our privacy rights and our national security." But for Rand Paul of Kentucky, who led the opposition to the government's spy powers with an 11-hour filibuster-like speech, the reforms did not go far enough. Meanwhile, Florida's Marco Rubio and South Carolina's Lindsey Graham both argued to extend the government's previous surveillance powers, saying they are essential to national security. While most Democrats supported the new Freedom Act curbs, Vermont presidential candidate Bernie Sanders went with the Paul faction, arguing that the reforms do not sufficiently protect citizens' Constitutional rights. Much like an earlier immigration standoff that nearly shut down the Department of Homeland Security, some Republican leaders found themselves at odds with much of their party's rank-and-file. Except this time the divide split GOP leaders in the House and Senate as well, contributing to the impression of a fractious party in the run-up to 2016. Cornyn and Senate Majority Leader Mitch McConnell of Kentucky pleaded to keep the Bush-era provisions of the 2001 USA Patriot Act permitting the collection of telephone "metadata" — including call numbers, times and durations of calls. But the GOP-led House — including most of the Texas delegation — voted overwhelmingly last month to curb those powers, which were set to expire June 1. Under the USA Freedom Act, which President Barack Obama signed hours after Senate passage, those records would remain in the hands of private telephone companies, searchable by national security officials only by court order. McConnell and Cornyn cast the new restrictions as a vindication of Snowden, the fugitive NSA contractor who revealed the secret surveillance program to the world in 2013. "I'm sorry to say that a lot of what happened has been misrepresented, including by members of Congress, in a way that basically rewarded Edward Snowden and others who were conjuring conspiracy theories," Cornyn told Texas reporters after the vote. House Speaker John Boehner, who backed the new curbs on the NSA's surveillance authority, said "they can characterize it any way they want. The fact is I believe that we have a good bill to help keep Americans safe and address the concerns that have been brought to light." Cornyn stood by McConnell throughout the weeks-long impasse of debates and procedural votes. They argued that despite the extensive media coverage and controversy over Snowden's revelations, there have been no instances of abuse of the Patriot Act by national security officials. "Some, like me, have wondered why we're trying to fix a system that is not broken," Cornyn told the Senate. "I believe that it's absolutely reckless for us to take any unnecessary chances." He told reporters later that the threats to privacy could be worse under the Freedom Act. Now, when the government requests cell phone data, he said, "you have telephone company employees who are actually going to be conducting those queries, rather than a hand-selected, vetted group of people at the NSA." Among those defending the NSA spy powers is presumed GOP front-runner Jeb Bush, who irritated the Paul campaign by telling Fox News that "the great preponderance of people that want to overturn the Patriot Act are on the left." But concern over governmental — not corporate — intrusion has been getting more

traction with the public. Jameel Jaffer, deputy legal director of the American Civil Liberties Union, called the broad bipartisan passage of the Freedom Act “an indication that Americans are no longer willing to give the intelligence agencies a blank check.”

Jeb Bush would win the national election if he makes it past the Republican Primary

Glueck 6-12-2015 “Katie, Katie Glueck is a reporter at POLITICO. Glueck, a graduate of Northwestern University’s Medill School of Journalism, has previously written for The Wall Street Journal, Politics Daily, Medill News Service and Washingtonian magazine,”Jeb can beat Hillary-but he might not make it past primary, <http://www.politico.com/story/2015/06/gop-jeb-can-beat-hillary-but-he-might-not-make-it-past-primary-118913.html>” .CC

Despite a spell of rough headlines and a recent campaign shake-up, 70 percent of early-state Republicans think Jeb Bush could win their state in a general election contest against Hillary Clinton. But they’re not confident he’ll make it out of the primary. That’s the assessment of this week’s POLITICO Caucus, our bipartisan survey of top operatives, activists and elected officials in Iowa and New Hampshire. Story Continued Below On the eve of Bush’s expected presidential announcement Monday, only 32 percent of Iowa Republicans said he could win there if the caucuses were held today. His numbers were much stronger in New Hampshire — 86 percent of both Republicans and Democrats said he would win the primary as of now — yet many caution that his frontrunner status there is precarious. **“He could win but so could several other candidates,”** said one New Hampshire Republican who — like all 61 respondents this week — completed the questionnaire anonymously in order to speak candidly. “It’s going to be a horse race and Bush is no American Pharoah right now.” **“Operative word is ‘could,’” added another Granite State Republican,** speaking of the former Florida governor’s ability to win the New Hampshire primary. “He has all the advantages he brought to the race — he has performed very well in visits here and his staff is strong — **but R voters are liking a race with no frontrunner. That will change but for now for R voters it is like Black Friday for shopping deals.”** **Iowa, with its socially conservative GOP base, has never been considered a natural fit for Bush and his brand of establishment conservatism.** His travel schedule to the state reflects that: Bush has visited just twice in 2015, though he plans to return next week. Some Hawkeye State Republicans doubt it will make a difference. “Not a chance,” said one Iowa Republican aligned with another candidate, when asked whether Bush could win the caucuses today. “He has shown little regard for Iowa or for what Iowans are looking for. Just not going to do well here unless he changes his game.” But several noted that Bush doesn’t need to win Iowa — he just needs to avoid an embarrassing finish. **“Believe it or not, he could [effectively win], because everyone forgets what a win is in the Iowa Caucuses,” an uncommitted Iowa Republican argued. “A win is a slot in top three — and arguably the top prize is not the first place finish, but the one in the top three that exceeded expectations the most.** Bush is in a tight grouping behind [Scott] Walker. If he was to finish in the top three — a very doable task — it would turn heads. And likely help a great deal in New Hampshire. Remember, too, that New Hampshire never votes for the top finishing Republican in Iowa. Who is on top in New Hampshire? Bush. Pretty early to write him off.” As for general election match-ups in Iowa and New Hampshire — smaller states, but swing states nonetheless — 70 percent of Republicans said Bush could beat Clinton and just 30 percent said he couldn’t; those numbers were exactly reversed among early-state Democrats. “NH is a swing state, and not any Republican can carry it. Several current candidates cannot but Bush could,” a New Hampshire Republican said. “Jeb Bush enjoys campaigning; Hillary Clinton endures campaigning,” an Iowa Republican said. “That difference is becoming more clear by the week.” But, argued a New Hampshire Republican who thinks Bush would lose to Clinton, “Bush’s primary flaw in attempting to attract independent women against Clinton is that he does not have an issue that would cause this critical demographic to break away from their natural inclination to support Clinton.” On the other side of the aisle, more than two-thirds of Democrats said Clinton would beat Bush in their states. “The GOP will hype their chances here, but ultimately this state (both sides of the aisle) has had a checkered history with the Bush family, and Hillary is too strong,” a Granite State Democrat said. “Silent ‘time for a woman’ Republican women outnumber silent sexist Democratic men,” said an Iowa Democrat. Republicans who didn’t see Bush beating Clinton — and Democrats who could envision Clinton losing to Bush — largely pointed to concerns about low turnout in another Bush-Clinton match-up, citing fatigue with both families. The responses come as Bush nears the end of a nearly week-long European tour and the beginning of his official campaign on Monday. While his fundraising juggernaut continues to roll on, his standing has suffered in the run-up to his campaign launch — his struggles to articulate his position on the U.S. decision to invade Iraq alarmed donors and supporters who expected more from such a mature and polished officeholder — and for weeks Marco Rubio has sucked up a lot of Bush’s oxygen. In the most recent POLITICO Caucus survey, 29 of the 61 respondents called the

Florida senator the biggest threat to Bush (though some named Rubio and another candidate, like Scott Walker). Still, Caucus insiders brushed aside the rough stretch — especially news about a staff shuffle — saying it doesn't resonate outside the Beltway. The focus for Bush and his reconfigured team now, they said, needs to be on spending time in the early states. "They need to come up with an early state strategy," an Iowa Republican said. "It's clear their strategy to raise as much money as possible to ward off opponents and freeze the field didn't work. Now they need to do what it takes to actually win and that's meet voters." **Here are three other takeaways from this week's POLITICO Caucus: Jeb's announcement day is an opportunity to break away from the Bush brand** Bush has been an all-but-declared candidate for months, but when he makes it official on Monday, he should use the chance to distinguish himself from the family name, insiders say. "Show he's his own man, different from his father and brother," said one New Hampshire Republican. "Show those who don't know him that he is a thoughtful, detail-oriented, reform-minded governor with a record of remarkable accomplishment, not the legacy politico his detractors portray him as," added another. As with Clinton's first major rally, which will happen on Saturday, insiders said Bush's announcement is a time to spell out his campaign rationale, and to make clear he's not running out of a sense of entitlement. "Show that he really wants this, that it's not a family destiny endeavor," urged an Iowa Republican. Bush has a clear strength — and an obvious weakness. Caucus insiders, from both states and on both sides of the aisle, were in agreement on Bush's biggest political asset — and his biggest challenge. For most respondents, fundraising was cited as Bush's strongest attribute of the options given. About 70 percent of Iowa and New Hampshire Republicans, as well as New Hampshire Democrats, pointed to his ability to raise money as his biggest strength. Forty percent of Iowa Democrats said the same. Other options included his electability, his ability to broaden the base and his executive experience. About a quarter of both Iowa and New Hampshire Democrats named electability as his biggest strength. **"If Jeb Bush can make it out of the primary, he's going to be a very tough general election candidate," an Iowa Democrat said. "He's not going to appeal to hardcore Democrats, but there are plenty of moderate Democrats in Iowa and elsewhere who are not threatened by the idea of a Jeb Bush presidency like they are about a Scott Walker or Ted Cruz presidency."** As for weaknesses, more than half of respondents in each category pointed to "Bush fatigue." Seventy percent of Iowa Republicans called that Bush's biggest problem, while more than half of Iowa Democrats and New Hampshire respondents overall said the same. His next biggest flaw, according to respondents from all of the blocs represented, is that he turns off the conservative base. Roughly a quarter of New Hampshire Republicans and Iowa Democrats offered that answer; 20 percent of Iowa Republicans and 26 percent of New Hampshire Democrats said the same. "The national network he and his family have built are indeed impressive. It will have to wait to be seen if \$100 million can inoculate him from the weaknesses of his campaign," an Iowa Republican said. There's no Republican groundswell for John Kasich. The Ohio governor continues to signal serious interest in a presidential bid, swiping at Bush and hiring prominent GOP staffers for his political team. But 61 percent of Republican POLITICO Caucus insiders say there's no opening for him. "Who's looking for a curmudgeonly moderate to support?" said one Iowa Republican. Another, more diplomatically, added, "Plenty of others to choose from already — don't need another." Nearly 70 percent of Iowa Republicans said there was no space for Kasich. Kasich fared better overall in New Hampshire, where Republicans were evenly divided over where there is appetite for his potential candidacy. "For Republicans looking for a moderate to liberal Republican, John Kasich is a strong option," a Granite State Republican said. "That probably is part of the Jeb Bush base as well." But several said that the more moderate conservative lane in which he would run is already too crowded, and he would be late to the game. "Big field and he cannot differentiate himself adequately to make a difference," a New Hampshire Republican said. "We are going to have a half a dozen establishment candidates running against a half a dozen conservatives." Several Granite State Democrats, however, noted that Kasich might appeal to independents, who could vote in the New Hampshire primary. "His name recognition is nil but he's a straight talker which has lots of appeal in NH — especially as all the NH "undeclared" voters will be voting in the Republican primary," said one, echoing another Democrat who asserted that Kasich is best-positioned, aside from Bush, to make the "electability" argument.

Clinton is showing strong support for CIR, knows that the Latin turnout is key to her chances

Nowicki 6-19-2015 "Dan, a reporter for the Arizona Central, "Hillary Clinton stressing support for immigration reform" <http://www.azcentral.com/story/news/politics/immigration/2015/06/19/hillary-clinton-backing-comprehensive-immigration-reform/28966917/>". CC

LAS VEGAS — As the 2016 Republican presidential field toughens its tone on border security and enforcement, Democratic front-runner Hillary **Clinton has drawn a sharp distinction on immigration by embracing comprehensive reforms such as a pathway to citizenship for undocumented workers already in the United States.** Speaking Thursday before the National Association of Latino Elected and Appointed Officials, Clinton,

a former secretary of State, reiterated promises she made during a May 5 roundtable in North Las Vegas. That she **would fight for comprehensive immigration reform that includes "a real path to citizenship" for the more than 11 million undocumented immigrants who have settled in the United States.** That she would oppose any move to deport the young immigrants known as "dreamers" or to undo President Barack Obama's executive actions that are shielding millions of immigrants from enforcement action. And that **if Congress continues to balk at acting on immigration reform, "as president I will do everything possible under the law to go even further than what President Obama has attempted to achieve,"** she said. "There are so many people with deep ties and contributions to our communities, like many parents of dreamers, who deserve a chance to stay, and I will fight for them, too," Clinton said to applause from a standing-room-only crowd inside the Aria Resort & Casino. "But I don't have to wait to become president to take a stand, right here and right now, against divisive rhetoric that demonizes immigrants and their families. It's wrong and no one should stand for it." The contrast between Clinton and the Republican White House prospects grew sharper this week with the entry into the race of celebrity real-estate developer Donald Trump, who announced his candidacy with a speech bashing Mexican immigrants as "rapists" and vowing to build a border wall at Mexico's expense. "They're bringing drugs. They're bringing crime. They're rapists. And some, I assume, are good people," Trump said of immigrants from Mexico. **While Trump is viewed by many political handicappers as a novelty candidate, others said his anti-immigrant rant could tarnish the Republican brand with Latino voters, a fast-growing demographic that is increasingly influential in key swing states such as Nevada, Colorado, Florida, New Mexico and Virginia. Despite warnings** from national GOP leaders after the loss of 2012 nominee Mitt Romney to Obama, in which Romney was shellacked among Latino voters, **most of the Republican presidential contenders continue to stake out hard-line positions on immigration and border security.** Trump's comments were a noisy distraction from the official entry into the race of former Florida Gov. Jeb Bush, a more moderate GOP presidential candidate who supports immigration reform. But even Bush didn't appear inclined to take up the issue during his Monday announcement until he was interrupted by pro-citizenship hecklers. "By the way, just so that our friends know, the next president of the United States will pass meaningful immigration reform so that that will be solved, not by executive order," Bush said. Later in the week, Bush called for immigration reform while campaigning in Iowa, which hosts the first presidential caucuses. U.S. Sen. Marco Rubio, R-Fla., another GOP 2016 candidate, also sparred this week with immigration activists who interrupted a speech he was giving in Washington, D.C. Ben Carson, a conservative retired neurosurgeon seeking the Republican nomination, was the only GOP hopeful to make an appearance at the NALEO conference. His remarks on Wednesday largely avoided immigration and instead highlighted the economy and the need for global U.S. leadership. He did say national-security concerns dictate the need to seal the borders. "What we should do, I believe, is provide them a way that they don't have to hide in the shadows," Carson said of the millions of undocumented immigrants already in the country. "Give them an opportunity to become guest workers. They have to register. They have to enroll in a back-tax program. And if they want to become citizens, they have to get in the line with everybody else and do what's necessary." Clinton spent less than five minutes of her 30-minute speech to the NALEO conference focusing explicitly on immigration policy. She also discussed other issues that resonate with Latino voters, including early-childhood development, preschool, jobs, education and voting rights. She also addressed the mass shooting Wednesday in Charleston, S.C., which killed nine people at a historic Black church. **Clinton's efforts to secure the Latino vote are fueled, in part, by anxiety among some**

Democrats that Obama's winning coalition might not be as motivated to turn out to the polls if Obama is no longer on the ticket. "Because this is what this community wants and needs to hear, it's what it's going to take to energize that community to actually show up in this election," said state Sen. Martin Quezada, D-Phoenix, who attended the NALEO conference. "If we don't, I think she's going to be in trouble. It's going to be a tough race anyway, so she needs this community to turn out next year and this is one way to really motivate them to do that." One political scientist said that while the Republicans must finesse immigration-related issues so as not to alienate anti-"amnesty" conservatives who are influential in the GOP primary, **Clinton's pro-reform stance appeals not only to Democratic primary voters but also to less partisan general-election voters.** Clinton so far has a few opponents in the Democratic race, including U.S. Sen. Bernie Sanders, I-Vt., who is expected to address the NALEO conference on Friday. "A Democrat on an issue like this can run for the broad center from the beginning and doesn't have to worry that she'll pay a big price for that in the primaries, whereas on the Republican side, even nominal immigration moderates like Jeb Bush have to say they're against the executive action," said Louis DeSipio, a professor of political science and Chicano/Latino studies at the University of California-Irvine. Meanwhile, the Republican National Committee suggested Clinton's efforts to appeal to Latinos is merely cynical politics. "Latinos deserve to know that Hillary Clinton is looking out for her own political ambition instead of their interests," Reince Priebus, the RNC chairman, said Thursday in a written statement. "As she has proven time and again, Hillary Clinton will say anything to get elected — making big promises she won't and can't keep, just like President Obama." Still, Clinton's all-out endorsement of immigration reform so early in the presidential campaign has immigrant-rights activists applauding. "I don't doubt whether she is deeply committed to it, but what I respect is that she understands the power of our movement, the importance of the Latino vote, and therefore she feels like it's in her interest to say what she's saying," said Frank Sharry, the executive director of America's Voice, a liberal national group that advocates for comprehensive immigration reform. **"To me, it's a movement victory that she's saying what she's saying. And for me, it's slow-motion political suicide for the Republicans to be saying what they're saying,** with a few notable exceptions." Even so, Clinton's expansive pro-immigration agenda is a recent development for her and a sharp break from the policies of her husband, former President Bill Clinton, who served two terms in the White House from 1993 to 2001. As a U.S. senator from New York, Clinton voted for the border-fence-authorizing Secure Fence Act of 2006, although she distanced herself from it as early as her 2008 presidential race. Also during the 2008 campaign, when she lost the Democratic nomination to Obama, Clinton came out against issuing driver's licenses to undocumented immigrants, a position she reversed this year. "Hillary seemed tone-deaf and rusty when she was on her book tour (for her 2014 memoir 'Hard Choices') and she was asked a couple of questions about immigration, and both times she fumbled it," Sharry said. "But now, **as a candidate, she has really leaned into it, taken ownership of the issue and made it clear that she's going to draw sharp distinctions with whoever the Republican nominee** is, including if it's Jeb Bush." Her husband's legacy could follow her as the campaign rolls on. Bill Hing, a University of San Francisco law professor and immigration-policy expert, said that from the standpoint of immigrant-rights advocates, Bill Clinton "has one of the worst immigration records" of any president in modern history. Under his administration, the United States started the "big militarization of the border" through Operation Gatekeeper, which was aimed at stopping illegal immigration along the U.S.-Mexico border south of San Diego by deploying more Border Patrol agents, and installing fencing, ground sensors, lights and other technology, Hing said. Clinton also signed the Illegal Immigration Reform and Immigrant Responsibility

Act of 1996, a sweeping bill passed by the Republican-controlled Congress that was aimed at cracking down on undocumented immigrants through a wide range of punishments. Those included barring undocumented immigrants from returning to the United States for up to 10 years, and expanding the list of crimes for which legal immigrants could be stripped of their status and deported. However, Hing doubts Bill Clinton's old positions on border security and immigration enforcement will hurt Hillary Clinton with Latinos. "Latino voters are giving her a pass because the Republicans have been so intransigent on immigration reform," Hing said, pointing out that in recent years conservative Republicans have consistently foiled attempts by moderate Republicans and Democrats to pass immigration reform. Doris Meissner, former commissioner of the Immigration and Naturalization System during the Clinton administration, said it's unfair to tie Bill Clinton's record to Hillary Clinton. The border-security and immigration-enforcement measures launched under Bill Clinton's administration were badly needed, Meissner said. But **what distinguishes Hillary Clinton from her Republican rivals is that she believes it is time to move beyond border security and immigration enforcement,** she said. "She's talking about now what needs to be done in addition and that is very different from what all the Republicans are saying," Meissner said. "They are just saying more of the same and they are in a time warp. ... We just don't have the same issues at the border."

The effects of CIR would be huge it can reduce the debt by 2.5 trillion and create millions of new jobs over the coming decade empirically proven by the IRCA of 1986

IPC 13' "Immigration Policy Center, "an immigration stimulus the economic benefits of a legalization program", <http://www.immigrationpolicy.org/just-facts/immigration-stimulus-economic-benefits-legalization-program>".CC

As the legislative debate over immigration reform heats up, a central point of contention will be whether or not to create a pathway to legal status for all or most of the 11 million unauthorized immigrants now living in the United States. **In evaluating the pros and cons of a legalization program, it is important to keep in mind that legalization is not only a humanitarian act; it is also a form of economic stimulus. The example of the 1986 Immigration Reform and Control Act (IRCA) demonstrates that workers with legal status earn more than workers who are unauthorized. And these extra earnings generate more tax revenue for federal, state, and local governments, as well as more consumer spending which sustains more jobs in U.S. businesses. Recent studies suggest that the economic value of a new legalization program would be substantial, amounting to tens of billions of dollars in added income, billions of dollars in additional tax revenue, and hundreds of thousands of new jobs for native-born and immigrant workers alike.** In short, a new legalization program for unauthorized immigrants would benefit everyone by growing the economy and expanding the labor market. The experience of IRCA demonstrates that legalization allows previously unauthorized workers to earn higher wages and get better jobs. University of Michigan economist Sherrie Kossoudji and Australian National University economist Deborah Cobb-Clark estimate that men who gained legal status under IRCA would have been earning between 14 percent and 24 percent higher wages if they'd been "legal" for all of their working lives in the United States. In addition, Kossoudji reports that "using different methodologies, data sets, and national-origin groups, nearly all researchers agree: once legalized, men's wages increased simply because they now had the legal right to work." As a result, "IRCA provided immediate direct benefits by successfully turning formerly clandestine workers into higher-paid employees." More broadly, "legalization for otherwise law-abiding undocumented immigrants is humane for them and their families, develops a better workforce for U.S. companies, and acts as a workforce development

program for young people. **Legalization would also create a level playing field and fair competition for U.S. workers, improve the earnings of law-abiding companies,** increase the tax revenue of local, state, and federal governments, and free local police to return to crime prevention, crime solving, and building safe communities.” A study by Rob Paral and Associates found that “between 1990 and 2006, the educational attainment of IRCA immigrants increased substantially, their poverty rates fell dramatically, and their home ownership rates improved tremendously. Moreover, their real wages rose, many of them moved into managerial positions, and the vast majority did not depend upon public assistance.” In 1990, 27 percent of IRCA immigrants age 16-24 lived below the federal poverty line. By 2006, the share who lived in poverty had fallen to 15 percent. Similarly, among IRCA immigrants age 25-34 in 1990, the poverty rate declined from 26 percent to 14 percent between 1990 and 2006. Only 26 percent of IRCA immigrants who were 25-34 years old in 1990 owned their own homes. This had risen to 67 percent by 2006. Likewise, among immigrants age 35-44 in 1990, the homeownership rate rose from 34 percent to 68 percent between 1990 and 2006. Recent studies demonstrate that the higher earnings of legalized workers yield more tax revenue, more consumer buying power, and more jobs Raúl Hinojosa-Ojeda, founding director of the North American Integration and Development Center at the University of California, Los Angeles, estimates that in just the first three years following legalization, the “higher earning power of newly legalized workers translates into an increase in net personal income of \$30 to \$36 billion, which would generate \$4.5 to \$5.4 billion in additional net tax revenue. Moreover, an increase in personal income of this scale would generate consumer spending sufficient to support 750,000 to 900,000 jobs.” In general, the study found that “removing the uncertainty of unauthorized status allows legalized immigrants to earn higher wages and move into higher-paying occupations, and also encourages them to invest more in their own education, open bank accounts, buy homes, and start businesses.” Raúl Hinojosa-Ojeda also estimates the fiscal benefits of legalization for eight states. Arizona: The wages of unauthorized workers would increase by \$1.8 billion, generating an additional \$540 million in tax revenue and creating 39,000 new jobs. California: The wages of unauthorized workers would increase by \$26.9 billion, generating an additional \$5.3 billion in tax revenue and creating 633,000 new jobs. Colorado: The wages of unauthorized workers would increase by \$924 million, generating an additional \$297 million in tax revenue and creating 20,000 new jobs. Florida: The wages of unauthorized workers would increase by \$3.8 billion, generating an additional \$1.13 billion in tax revenue and creating 97,000 new jobs. Nevada: The wages of unauthorized workers would increase by \$970 million, generating an additional \$249 million in tax revenue and creating 23,000 new jobs. New Mexico: The wages of unauthorized workers would increase by \$312 million, generating an additional \$90 million in tax revenue and creating 8,000 new jobs. Texas: The wages of unauthorized workers would increase by \$9.7 billion, generating an additional \$4.1 billion in new tax revenue and creating 193,000 new jobs. Virginia: The wages of unauthorized workers would increase by \$1.2 billion, generating an additional \$371 million in tax revenue and creating 27,000 new jobs. A study by Manuel Pastor and his colleagues at the Center for the Study of Immigrant Integration at the University of Southern California found that California’s unauthorized Latino population lost out on \$2.2 billion in wages each year because of their lack of legal status. Were they to earn this additional \$2.2 billion, the “rise in income would spur direct consumption spending by about \$1.75 billion dollars per year, which would ripple throughout the state economy, generating an additional \$1.5 billion in indirect local spending. Such an increase in direct and indirect consumer spending of about \$3.25 billion would generate over 25,000 additional jobs in the state.” Moreover, “if unauthorized Latino workers were granted legal status, the state government would benefit from a gross increase of \$310 million in income taxes and the federal government would gain \$1.4 billion in paid income taxes each year.” In another study, Manuel Pastor and Justin Scoggins estimate that, if the 8.5 million Lawful Permanent Residents (LPRs) in the United States who are eligible to naturalize did so, their earnings over the next decade would rise somewhere between \$21 billion and \$45 billion. These additional earnings and the spending they generate would amount to an increase in Gross

Domestic Product of somewhere between \$37 billion and \$52 billion. A report from the American Action Forum, authored by former CBO director Douglas Holtz-Eakin, **estimates that immigration reform would “raise GDP per capita by over \$1,500 and reduce the cumulative federal deficit by over \$2.5 trillion” over 10 years. These benefits accrue because “immigration reform can raise population growth, labor force growth, and thus growth in Gross Domestic Product (GDP).** In addition, immigrants have displayed entrepreneurial rates above that of the native born population.” A study by the Center for American Progress and Partnership for a New American Economy estimated the economic benefits of passing the Development, Relief, and Education for Alien Minors (DREAM) Act, which would create a pathway to legal status for the estimated 2.1 million eligible unauthorized immigrants who were brought to this country as children. The study found that “through a combination of improved educational attainment and higher paid jobs available to authorized immigrants, the passage of the DREAM Act would result directly in \$148 billion in increased earnings for beneficiaries of the passage of the proposed law. This direct effect would result in an induced effect of an additional \$181 billion of economic activity. We conservatively estimate the combined economic benefits of the DREAM Act would be approximately \$329 billion over the next 20 years, leading to 1.4 million new jobs and at least an additional \$10.2 billion in tax revenue.”

Sanders

Bernie Sanders is a flash in the pan, Hillary will win inevitably - early polls are misleading - Sander's cannot get the key minority vote nationally

Zipperer 07-02-2015 "Eddie, "The Bernie Sanders Hoax", <http://thehill.com/blogs/pundits-blog/presidential-campaign/246734-the-bernie-sanders-hoax>, a writer for the hill".CC

My Facebook newsfeed has been invaded by more than rainbows and Confederate flags. Stories about Sen. Bernie Sanders's (I-Vt.) "surge" in the Democratic primary have become ubiquitous on social media. Out of nowhere, here comes this 72-year-old Vermont socialist — free education in one fist, single-payer healthcare in the other — poised to surpass the once-thought-inevitable Hillary Clinton. **Am I witnessing the emergence of 2015's Barack Obama?** Mad dash to the keyboard. Finally, I can write something about the Democratic primary! Finally, it got interesting! In a big, bold Salon headline, Bill Curry asserts that "Hillary Clinton is going to lose." In the Huffington Post, H.A. Goodman (a contributor to The Hill) has an article headlined "Bernie Sanders Has Overtaken Hillary Clinton In the Hearts and Minds of Democrats." Imagine my disappointment when I found out that it was all empty hype. In fairness to Curry and Goodman, their articles do address the overly optimistic nature of their headlines. **Still, the polls tell the story of a reality in stark contrast to the progressive opinion-writing zeitgeist. There is no surge. There is no overtaking Clinton.** In the most recent Fox News poll (note to those who are anti-Fox: Fox News polls are conducted by an independent, bipartisan organization), **Sanders is second at 15 percent. Up 4 points since the May 31 to June 2 poll. That's a nice little jump. Guess who else jumped 4 points since that poll? Clinton. Except her jump was from 57 percent to 61 percent. So Sanders's 4-point jump did not come at Clinton's expense, from voters jettisoning themselves from a sinking ship. Sanders's 4-point jump came from Elizabeth Warren voters.** Sen. Warren (D-Mass.) was at 7 percent in the May 31 to June 2 poll, but she was not included at all in the most recent poll. Those 7 percent of Democratic voters didn't decide to unregister and forgo voting; they simply chose a new candidate. The New Hampshire surge — which is responsible for much of the burgeoning Sanders mythology — is much more interesting than the nonexistent national surge. Bloomberg and CNN polled New Hampshire voters last week, and the results were a Dickensian tale of two polls. The CNN poll showed Clinton with an 8-point lead. The Bloomberg poll showed Clinton with a 32-point lead. Both polls polled likely Democratic primary voters. Both polls had similar sample sizes. Both polls had a margin of error near 5 points. So, why the 24 point disparity? The most obvious difference between these two polls was that the Bloomberg poll did not include Vice President Biden as a possible contender. When Biden is included, it hurts Clinton, which means that if Sanders is to have any real chance at all, it rests largely on Biden's decision. **That being said, Sanders is still 8 points down in New Hampshire, even with Biden in the race. An 8-point deficit is small compared to Clinton's national lead, but it's still formidable, and New Hampshire polling misrepresents Sanders's popularity because he does disproportionately well among white voters.** On a national level, Clinton leads Sanders among white Democrats by about 34 points. **Among black Democrats, she leads him by about 65 points. The black population of New Hampshire is about 1.5 percent according to the Census Bureau, which is far below the 13.5 percent black population of the U.S.** But what about the big lead that evaporated for Clinton in 2008? I asked Kyle Kondik, the managing editor at Larry Sabato's Crystal Ball about that, and he explained that "her leads were not as towering as they are now: She was generally in

the low-to-mid 40s nationally, whereas she's now consistently over 60 percent. Anything can happen, but Clinton is as big a favorite for her party's nomination as any non-incumbent in recent memory." So, what is all this Sanders hype really about? Dr. Paul Rutledge, associate professor of political science at the University of West Georgia, attributes it to "the media trying to sensationalize an otherwise dreadfully boring Democratic primary." Looks to me like wish-upon-a-star thinking from progressives in the media who see the Democratic Party ready to hand the nomination to a non-progressive Democrat who's perceived by 52 percent of people as "untrustworthy," according to the latest Fox poll. In Curry's insightful but overly optimistic Sanders article, he points to this himself, saying, "She's weakest on the sleeper issue of 2016: public corruption and the general debasement of politics and government." I sympathize with progressives and their lack of options in this primary. I'll take the so-called GOP "clown car," which comes with 15 to 20 choices, over the Democrats' self-driving Clinton-mobile any day.

Plan makes Clinton lose - Bernie can confront her corruption and hypocrisy

Curry 6-14-2015 "Bill, "Here's how Bernie Sanders could win: The one issue where Hillary's vulnerable, and where the Tea Party might be right", Bill Curry was White House counselor to President Clinton and a two-time Democratic nominee for governor of Connecticut. He is at work on a book on President Obama and the politics of populism, http://www.salon.com/2015/06/14/heres_how_bernie_sanders_could_win_the_one_issue_where_hillarys_vulnerable_and_where_the_tea_party_might_be_right/.CC

After one of many trips to sub-Saharan Africa, Bono recalled that on his first visit there he thought its biggest problem was AIDS. Later, it seemed it was poverty; after many visits over many years he at last saw that it was corruption: the problem that kept all other problems from ever being solved. Corruption is hard to unmask, and harder to measure, but we know its cost to Africa is truly staggering. One study puts it at a quarter of the continent's total GDP, itself a paltry 2.4 percent of world GDP. Another says it slashes growth by 20 percent every year. It was long hoped that the sale of Africa's vast trove of natural resources would generate the investment capital necessary to move its people out of poverty and into the modern age. Instead, the money is siphoned off by corrupt elites who blow it on lavish lifestyles, park it in Swiss banks or invest it in high-end Paris or London real estate. It's the world's most common form of treason and goes largely unpunished. We live amidst a global pandemic of corruption. It ravages Asia, Latin America and the Middle East and devours Africa. It was the issue at the heart of every uprising of the Arab Spring. It has spurred riots in India and Brazil, struck fear into the hearts of China's leaders and contributed mightily to the warping of Russia's politics as well as its economy. It tops liberal agendas everywhere in the world — everywhere, that is, but here. **America has not had a full-throated debate of political corruption since Watergate.** In that scandal's immediate aftermath Congress enacted sweeping campaign finance reforms (struck down by the Supreme Court in its vile Buckley v. Valeo decision). In the mid '70s, states passed a flurry of reforms, establishing what were often their first ethics, campaign finance and freedom-of-information commissions. But politicians have chipped away at those reforms ever since. Few commissions have anything like adequate enforcement staff. Most states lack the civic self-respect to enforce their ethics laws, preferring to leave the job to overburdened federal prosecutors. Some say the reason our politicians talk less about corruption is that we have less of it, but it's a hard point to prove. How much money do we lose to corruption each year? Our government goes out of its way not to know. All major retailers itemize "inventory shrinkage" in their annual reports; 2013 losses were pegged at \$37 billion. No public-sector budget itemizes the cost of corruption, but here's a safe bet: America loses more to corruption than to shoplifting. Some say voters don't care about ethics. Political consultants tell their clients that nobody cares except old "goo-goos" — good government types — and even they don't care much. It's just a "process issue," they say; too abstract, too far removed from people's lives to matter. For the consultants who pocket millions from corporate and political clients alike, it's a convenient theory, but it's a lie, proven to be such again and again by election results and, yes, even by polling data. Every election year major news organizations conduct nationwide exit polls to ask, among other things, what issues brought voters out. Ethics is never even on the list. In 2009 and 2010 pollster Scott **Rasmussen posed the same question but included "government ethics and corruption" as a possible response. Both times over 80 percent of voters called it very important and both times it topped the list, edging out even the economy — this in the teeth of a protracted recession.** This week the Times released a poll on money in politics. Eighty-five percent of respondents said the system needs "fundamental change" or even to be "completely rebuilt." Eighty-five percent said politicians do their donors' bidding some or all of the time. Seventy-eight percent want to limit spending by independent groups. Seventy-five percent would require disclosure of donations to any entity engaged in politics. Just 23 percent said all Americans have an equal voice in their democracy. And here's an interesting fact: On every question, it seems Democrats and Republicans felt pretty much the same. Our government is so corrupt it is odious even in the eyes of patriots. In a Gallup poll measuring reputations of professions, nurses finished first; 80 percent judged their integrity to be

high. Members of Congress finished last at 7 percent, a full 14 percent behind lawyers. Even these numbers don't capture the depth of public anger. If the anger turns to cynicism millions will walk away from politics. Millions already have. If it finds a voice we may have an Arab Spring of our own, maybe as soon as 2016. If so, the less-prepared party will be blown away. As things stand now, that would be the Democrats. Republicans are by nature better at ginning up anger, but lately it's as if they had the patent on it. Progressives were first to oppose the 2008 Wall Street bailout. The first protest was hosted by TrueMajority, a liberal advocacy group founded by Ben Cohen of Ben & Jerry's ice cream fame. But by 2009 Obama owned the bailout and word went out that to attack it would only undercut him. Enter the Tea Party, amidst cries of "crony capitalism," to tap the rich vein of public anger. For the first time, economic populism was the property of conservatives. It was some gift. Of course, Republicans don't really want to fix the government; they want to kill it. The only corruption they really oppose is when some business that gave to Obama gets a federal contract. But they do have a nose for the issue. And since the decline of the religious right they've been looking hard for other hornets' nests to poke. Thus Rick Santorum in his recent announcement speech mentioned abortion only twice, while referencing corruption and moneyed interests 10 times. In his announcement, George Pataki proposed a list of reforms. The first was a revolving-door law to stop members of Congress from cashing in as lobbyists. It was the first ethics reform proposed by a presidential candidate of either party. It won't be the last. Even when they don't propose any reforms, Republicans express the anger voters feel. If Democrats don't propose some reasonable reforms, voters will go with whoever does the best job of sounding as mad as they feel. **As for the Democrats, Hillary Clinton may not be the worst person to fly the reform flag,** but then again, she might be. Her first problem is her past. If the Clintons didn't invent pay-to-play politics, with such minions as Rahm Emanuel and Terry McAuliffe in tow, they came close to perfecting it. **Her second problem is her present: her special way of handling her email; the alleged conflicts of interest over at the Clinton Foundation;** the pricey speeches she gave and Bill still insists on giving. Her third problem is how she handles questions about it all: her defensive tone; her far-too-clever syntactical evasions; her insistence on being praised even as she stumbles; and, yes, her seeming sense of entitlement. In a June 2 Gallup poll, 57 percent of respondents said Hillary is not "honest or trustworthy." In a Public Policy Polling survey of Ohio voters this week, she led Ted Cruz by a point and was tied with Marco Rubio. The first poll explains the others. This week, Bill Clinton said he'll stop giving \$500,000 speeches if she becomes president. Yesterday, Hillary went to New York City to deliver a populist-themed speech. Neither Clinton has a clue about the depth of public anger over watching big-money interests treat government as their personal toy. **If Clinton loses the nomination or the general election, this will be the reason why. Bernie Sanders does a far better job on the issue, but even he doesn't quite nail it.** Like Clinton, he says his Supreme Court appointees must commit to overturn Citizens United. He said it first, but every Democrat says it now and it feels like a dodge. Overturning Citizens United, whether by judicial review or constitutional amendment, is a highly conjectural remedy. A president could serve two terms and not get to replace a single Republican Supreme Court justice, and hell will freeze over before a 38th state ratifies a constitutional amendment. Democrats speak of Citizens United as if overturning it would restore a golden age of ethics; as if its mere existence excuses all the bad bargains they strike with the rich and powerful; as if it proved that where corruption is concerned, they are only victims, never culprits. Government was corrupt before Citizens United was filed and will have to be cleaned up before it's overturned. Voters want to hear some practical ideas about how to do it up—but so far Democrats don't have any. The sight of any Democrat raising billions while offering vague assurances of future reform won't satisfy anyone and comes at a high opportunity cost. Jeb Bush has possibly been breaking at least two major campaign finance laws all year. Democrats can't call him to account because they do the same thing. How much money must they raise to recoup the expense of ceding the high moral ground? One reason Democrats can't talk about corruption is that it's as much in their nature to defend government as it is in the Republicans' nature to attack it. The idea that government may be rotten at its core is alien to them. Two of Clinton's declared Democratic opponents, Martin O'Malley and Lincoln Chafee, attack her ethics, but the only reform either proposes is to pick him over her. Neither seems able to frame the issue properly. Democrats just aren't very good at it. Another reason Democrats can't talk about corruption is that they deny both its extent and their complicity in it. In Citizens United, Justice Kennedy "found" that government has no stake in "soft corruption"—the billions spent on lobbying and elections—because, he says, it does no harm and people don't seem to mind it. There was no evidence in the pleadings to support his finding because none exists. It's a statement of a sacred tenet of the establishment creed, that the powerful can exchange endless favors without injury to ethics, reason or the public interest. It's the big lie that holds the whole corrupt enterprise together. When he told it, Kennedy wasn't speaking for the radical right. He was speaking for the center. Kennedy recognizes government's stake in curbing "hard corruption," meaning the bribery that occurs when a politician puts the money in his pocket rather than his campaign or agrees to an explicit quid pro quo, preferably on tape or in an email. But when everyone knows the rules of the game, there's no need for post-it notes or idle chit-chat: one guy pledges cash, another expresses vague but heartfelt thanks, saying nothing of tangible reward, leaving little in the way of tangible evidence. Everybody gets home safe. Thus the law rewards the subtle rather than the good. The false dichotomy between hard and soft corruption isn't just in Citizens United; it's everywhere. It's why the New York Times made a deal with the GOP hatchet man who penned the borderline libelous "Clinton Cash" to explore its dubious leads. It's why O'Malley and Chafee say so much about Clinton but so little about the system itself. I care less about whether Clinton put her staff on a foundation payroll than I do about the billions she'll raise and the vital reform she'll forswear to do it. To get real change we have to pierce everyone's denial, not just hers. Last week O'Malley blasted Clinton for her ties to Goldman Sachs while signing off on an "independent" PAC of his own. Maybe he thinks his cookie-cutter critique of Citizens United will keep the public from noticing the hypocrisy. I bet it won't. Of all the candidates running in both parties, only Bernie Sanders has said he won't set one up, or signal some close confidant to do it when he

isn't looking. Bush denies he's a candidate to skirt laws that limit contributions to candidates. Clinton attends fundraisers for her "independent" PAC but leaves before the pitch so as to appear to obey laws that forbid her campaign and her PAC from working together. It's sad to see them flout the few laws left on the books that seek to curb corruption. But it would be just as sad to see them follow the law to the letter and rake in as much cash with only a bit more work. It's not just one case that needs overturning, it's the whole system. Everyone knows it except the ones in charge. America isn't Africa. There every injustice stands out as if etched in bas-relief. Here it's harder to see how political corruption leads to income inequality, global warming and other man-made disasters. Political elites, including elite Democrats, deny what most average folks have long known, that the new global economy runs not on innovation but on corruption. Without the ties that bind politicians to their donors, wages would be harder to restrain, the air would be harder to pollute, social contracts would be harder to shred. If you don't believe it just ask Bono, or Buhari or your next-door neighbor. Our real enemy is corruption. **A storm's brewing, but if Democrats feel the barometric pressure dropping they do a good job of hiding it. As the party of government they pay the price for our revulsion at its condition. Voters now espouse liberal views on most big issues: climate change; income inequality; immigration; same sex marriage; gun control; prison reform; foreign interventions.** Yet Republicans run Congress and the 2016 race is a dead heat. How can it be? One answer: the government's broken and Democrats can't or won't fix it. Republicans won't either, but then they don't plan to use it. **On the issue of corruption, Clinton's the most vulnerable of all the candidates.** She should take steps to shore up her position. For starters, she and Bill should stop trying to justify their seeming obsession with their personal finances. ("When we left the White House we were broke"; "I gotta pay the bills", etc.) Since 2001 they've earned \$125 million. Enough is enough. Cancel the pricey speeches or talk for free. Rid the foundation of any hint of a conflict. Ethical behavior begins in the assumption of personal responsibility. Show us you know it. I doubt she will. She should embrace real ethics reform, but I doubt she'll do that either. **Her campaign model is a perfect match for her neoliberal worldview and it's all she knows. It's true of nearly every top Democrat, Sanders being a rare exception.** If he wins a few rounds with low-dollar fundraising and grass-roots organizing, it'll shake conventional political wisdom as nothing has in a long time. But Democrats will resist reform to the bitter end and he can't subdue them all by himself. **The only way to put ethics where it belongs, at the center of the political debate, is for progressives to mount a full-bore, grass-roots anti-corruption campaign. It isn't a task they often take on,** perhaps because the issue is something of an ideological outlier. To some, it's an issue for the judicial branch. Like Bono, many liberals fail at first to see its connection to other fundamental issues of the distribution of wealth, income, opportunity and power. But that's starting to change. There are many questions of strategy and policy. One thing that's clear is the need to pivot from the question of how we fund campaigns to that of how we run government. The former issues require long constitutional battles and are hard to explain. The latter are easily attainable and understood. In 2008 Obama made government ethics reforms the centerpiece of his campaign. The ones he promised were concrete and specific. Most could be implemented by executive order. By the late fall his reform agenda was his biggest applause line, delivered at the end of each speech to bring a crowd to its feet. In office, he did little of it, though all of it was within his discretion. Among his unkept vows: no hiring of lobbyists; opening up "back rooms," including a pledge to let C-SPAN cameras film health care negotiations; a public register of visits by donors or lobbyists (delayed three years, never fully implemented); procurement reform; protection of whistleblowers; expanded transparency; vigorous prosecution of public and private corruption. Add to it a reform of rules governing classified secrets and a revolving-door bill covering not just members of Congress but their staffs and executive branch appointees and you're off to a strong start. Whoever made these promises would have to mean it. But that's where a strong, grass-roots movement comes in: to educate and mobilize the public and thus to hold politicians to account. Leaders of such movements take instruction from none but their conscience and their base. The time to draft a platform is now. By late fall, activists could be out presenting candidates for president, Senate and Congress with pledges to sign. Many candidates won't grasp the politics or the policy. But we can educate them and perhaps save them from themselves. It may seem a long shot but this we know for sure: it's the only way reform will ever come.

Bernie Sanders can't win general – too polarizing

Catalyst 05-12-2015 ["The problem with Bernie Sanders, http://catalystnewspaper.com/archive/the-problem-with-bernie-sanders/, the catalyst an independent student newspaper".CC](http://catalystnewspaper.com/archive/the-problem-with-bernie-sanders/)

Bernie Sanders is the liberal version of Ron Paul. As the longest-serving Independent in U.S. Congressional history and the only person in Congress who self-identifies as a socialist, Bernie Sanders is perfect for those who find Hillary Clinton too hawkish or too cozy with corporate interests. Senator Sanders has been a long-time champion of populist issues like income inequality, and has thus received a Ron Paul-esque following among young people. Many students at CC are supportive of his presidential run, and a recent post on CC Confessions asked, "how can we best help the Bernie Sanders campaign?" In spite of all the excitement surrounding Sanders' campaign, his bid for the Democratic nomination is futile and ultimately counterproductive. First of all, Sanders will not win the Democratic nomination. Radical candidates who

come out of left field have a pretty bad track record in the primaries. While Ron Paul was able to mobilize a dedicated fan base, he did not win a single primary in 2012. In 2008, Democratic candidate Mike Gravel echoed many of the same sentiments as Bernie Sanders, and his bid for the Democratic nomination was a disaster. **Those who are outside of the mainstream party narrative suffer two problems. First, they receive little serious media attention.** Ron Paul's share of media coverage went from 34 percent in December 2011 to 3 percent in January 2012. Mike Gravel received only 5 percent of the questions in the CNN-YouTube Presidential Debate. Second, radical candidates are unable to raise enough money to seriously compete. **Large-scale donors tend to favor those who are likely to win, and radical candidates don't fit that description. In Bernie Sanders' case, he has outright refused to take any money from large donors and has instead opted to stick to grassroots funding, so even if there were big donors to support him, it wouldn't matter. While this might appeal to the idealistic voters, it is hardly a good campaign financing strategy.** There is simply not enough money in grassroots fundraising to sustain a successful campaign. While Barack Obama received more money from donations under \$200 than any other successful presidential candidate, it still only amounted to 22 percent of the money he raised in the 2008 Campaign. Dennis Kucinich received 68 percent of his funds from grassroots, more than any other 2008 candidate. He also failed to receive more than 10 percent of the vote in a single primary. Campaigns are expensive (Obama and Romney raised more than \$1 billion each in 2012) and small donations won't cut it. **Even if Bernie Sanders were to win the Democratic nomination, he would never win in the general election. As mentioned above, Sanders is the only person in Congress who is a self-proclaimed socialist. Unfortunately for him, "socialism" is a dirty term in American politics,** right up there with "boots on the ground" and "sex with the interns." There is simply no way that someone as openly left wing as Bernie Sanders could win in the general election. Many who support the Sanders campaign will point to Barack Obama as proof that Bernie Sanders can win. After all, Obama came out of nowhere and won the nomination when everyone thought Hillary Clinton would win. There are important differences between Obama and Sanders. First, Obama was willing to take money from corporate interests and was thus able to raise money like there was no tomorrow. JP Morgan Chase and Goldman Sachs were among the top 5 donors to the 2008 Obama campaign. Furthermore, Obama towed the mainstream party line. In spite of what Fox News might say, **Obama did not take any radical positions and never identified as a socialist.** **Finally, Bernie Sanders is a boring old white guy. It is unlikely that he could electrify voters the way a young African-American candidate could.** Another argument in favor of Bernie Sanders' prospects regards fundraising. Within 24 hours of his campaign announcement, Bernie Sanders was able to raise \$1.5 million, which many have hailed as proof that he can win. \$1.5 million is a pitiful amount of money in the era of billion-dollar campaigns. Ron Paul was able to raise four times as much in a 24-hour period, and still lost. Some concede that even if Bernie Sanders can't win, he will at least force mainstream candidates like Hillary Clinton to shift further left. This is unlikely, since previous candidates have failed to do so. Neither Dennis Kucinich nor Mike Gravel were able to force the mainstream Democratic candidates to take a tougher stance on big banks in 2008; the financial reform passed by the Obama administration is almost laughable. Ron Paul's vocal opposition to drug prohibition (probably the main reason he is popular among young people) and American foreign policy did not force Mitt Romney to become more libertarian. If anything, Sanders' campaign will prove to be counterproductive as the Democrats try to win more than two consecutive terms for the first time since Roosevelt and Truman. Up until now, a major advantage the Democrats had is that they were united behind Hillary while the Republicans had too many candidates in the race. Bernie Sanders will certainly erode that unity. While he certainly won't beat Hillary, he will force her to use up resources that would be better spent in the general election, while eroding enthusiasm among the Democratic base. Even if Bernie Sanders could win, there are reasons that a Sanders presidency would not be as great as many think it would. For one thing, many of his economic proposals (higher taxes on the rich, increased spending on infrastructure) would have to go through Congress and cannot be implemented by the President through executive action. Given the fact that only three of the bills he sponsored (out of more than 300) have been signed into law, Sanders' ability to push bills through the legislature is questionable at best. Bernie Sanders has also been noticeably silent on foreign policy. One of his few recent statements on foreign policy is an interview in which he argued that Middle Eastern nations should do the bulk of the fighting against ISIS. How this differs from the current policy and the policy everyone else has argued is unclear, regional armies are already doing the vast majority of the fighting and the dying in the War against ISIS. Sanders has also opposed the Trans-Pacific Partnership, a key free trade agreement that will bolster economic growth and innovation, create jobs, and counter China's growing influence. Sanders simply lacks foreign policy experience. He does not serve on any foreign policy committees in the Senate. His only foreign policy credential is that he opposed the Iraq War. Opposing a mistake that was made over a decade ago is fine, but how would the Sanders administration deal with current issues like the rise of China or Putin's stealth invasion of Ukraine? At the end of the day, foreign policy is the area that the President has the most control over, and Bernie Sanders seems pretty deficient. Sanders has also been outspoken in his belief that climate change is real, man-made, and threatening. However, he has also opposed nuclear energy, calling for a moratorium on licensing new plants and re-licensing existing ones. Nuclear energy is key to cutting carbon emissions (renewables alone aren't going to cut it in a world where the sun doesn't always shine and the wind doesn't always blow) and it is difficult to see how Sanders would combat climate change without it. Sanders should never have run in the first place. The 2016 election is too crucial for the Democrats to lose, and Sanders will do more harm than good. He won't win, and even if he

could, he would likely be a major disappointment. If you are serious about making sure that the Republicans don't take the White House in 2016, then drop all support for Bernie Sanders.

Clinton is showing strong support for CIR, knows that the Latin turnout is key to her chances

Nowicki 6-19-2015 "Dan, a reporter for the Arizona Central, "Hillary Clinton stressing support for immigration reform" <http://www.azcentral.com/story/news/politics/immigration/2015/06/19/hillary-clinton-backing-comprehensive-immigration-reform/28966917/>".CC

LAS VEGAS — As the 2016 Republican presidential field toughens its tone on border security and enforcement, Democratic front-runner Hillary **Clinton has drawn a sharp distinction on immigration by embracing comprehensive reforms such as a pathway to citizenship for undocumented workers already in the United States.** Speaking Thursday before the National Association of Latino Elected and Appointed Officials, Clinton, a former secretary of State, reiterated promises she made during a May 5 roundtable in North Las Vegas. That she **would fight for comprehensive immigration reform that includes "a real path to citizenship" for the more than 11 million undocumented immigrants who have settled in the United States.** That she would oppose any move to deport the young immigrants known as "dreamers" or to undo President Barack Obama's executive actions that are shielding millions of immigrants from enforcement action. And that **if Congress continues to balk at acting on immigration reform, "as president I will do everything possible under the law to go even further than what President Obama has attempted to achieve,"** she said. "There are so many people with deep ties and contributions to our communities, like many parents of dreamers, who deserve a chance to stay, and I will fight for them, too," Clinton said to applause from a standing-room-only crowd inside the Aria Resort & Casino. "But I don't have to wait to become president to take a stand, right here and right now, against divisive rhetoric that demonizes immigrants and their families. It's wrong and no one should stand for it." The contrast between Clinton and the Republican White House prospects grew sharper this week with the entry into the race of celebrity real-estate developer Donald Trump, who announced his candidacy with a speech bashing Mexican immigrants as "rapists" and vowing to build a border wall at Mexico's expense. "They're bringing drugs. They're bringing crime. They're rapists. And some, I assume, are good people," Trump said of immigrants from Mexico. **While Trump is viewed by many political handicappers as a novelty candidate, others said his anti-immigrant rant could tarnish the Republican brand with Latino voters, a fast-growing demographic that is increasingly influential in key swing states such as Nevada, Colorado, Florida, New Mexico and Virginia. Despite warnings** from national GOP leaders after the loss of 2012 nominee Mitt Romney to Obama, in which Romney was shellacked among Latino voters, **most of the Republican presidential contenders continue to stake out hard-line positions on immigration and border security.** Trump's comments were a noisy distraction from the official entry into the race of former Florida Gov. Jeb Bush, a more moderate GOP presidential candidate who supports immigration reform. But even Bush didn't appear inclined to take up the issue during his Monday announcement until he was interrupted by pro-citizenship hecklers. "By the way, just so that our friends know, the next president of the United States will pass meaningful immigration reform so that that will be solved, not by executive order," Bush said. Later in the week, Bush called for immigration reform while campaigning in Iowa, which hosts the first presidential caucuses. U.S. Sen. Marco Rubio, R-Fla., another GOP 2016 candidate, also sparred this week with immigration activists who interrupted a speech he was giving in Washington, D.C. Ben Carson, a conservative retired neurosurgeon seeking the Republican nomination, was the

only GOP hopeful to make an appearance at the NALEO conference. His remarks on Wednesday largely avoided immigration and instead highlighted the economy and the need for global U.S. leadership. He did say national-security concerns dictate the need to seal the borders. "What we should do, I believe, is provide them a way that they don't have to hide in the shadows," Carson said of the millions of undocumented immigrants already in the country. "Give them an opportunity to become guest workers. They have to register. They have to enroll in a back-tax program. And if they want to become citizens, they have to get in the line with everybody else and do what's necessary." Clinton spent less than five minutes of her 30-minute speech to the NALEO conference focusing explicitly on immigration policy. She also discussed other issues that resonate with Latino voters, including early-childhood development, preschool, jobs, education and voting rights. She also addressed the mass shooting Wednesday in Charleston, S.C., which killed nine people at a historic Black church.

Clinton's efforts to secure the Latino vote are fueled, in part, by anxiety among some Democrats that Obama's winning coalition might not be as motivated to turn out to the polls if Obama is no longer on the ticket. "Because this is what this community wants and needs to hear, it's what it's going to take to energize that community to actually show up in this election," said state Sen. Martin Quezada, D-Phoenix, who attended the NALEO conference. "If we don't, I think she's going to be in trouble. It's going to be a tough race anyway, so she needs this community to turn out next year and this is one way to really motivate them to do that." One political scientist said that while the Republicans must finesse immigration-related issues so as not to alienate anti-"amnesty" conservatives who are influential in the GOP primary, **Clinton's pro-reform stance appeals not only to Democratic primary voters but also to less partisan general-election voters.** Clinton so far has a few opponents in the Democratic race, including U.S. Sen. Bernie Sanders, I-Vt., who is expected to address the NALEO conference on Friday. "A Democrat on an issue like this can run for the broad center from the beginning and doesn't have to worry that she'll pay a big price for that in the primaries, whereas on the Republican side, even nominal immigration moderates like Jeb Bush have to say they're against the executive action," said Louis DeSipio, a professor of political science and Chicano/Latino studies at the University of California-Irvine. Meanwhile, the Republican National Committee suggested Clinton's efforts to appeal to Latinos is merely cynical politics. "Latinos deserve to know that Hillary Clinton is looking out for her own political ambition instead of their interests," Reince Priebus, the RNC chairman, said Thursday in a written statement. "As she has proven time and again, Hillary Clinton will say anything to get elected — making big promises she won't and can't keep, just like President Obama." Still, Clinton's all-out endorsement of immigration reform so early in the presidential campaign has immigrant-rights activists applauding. "I don't doubt whether she is deeply committed to it, but what I respect is that she understands the power of our movement, the importance of the Latino vote, and therefore she feels like it's in her interest to say what she's saying," said Frank Sharry, the executive director of America's Voice, a liberal national group that advocates for comprehensive immigration reform. **To me, it's a movement victory that she's saying what she's saying. And for me, it's slow-motion political suicide for the Republicans to be saying what they're saying,** with a few notable exceptions." Even so, Clinton's expansive pro-immigration agenda is a recent development for her and a sharp break from the policies of her husband, former President Bill Clinton, who served two terms in the White House from 1993 to 2001. As a U.S. senator from New York, Clinton voted for the border-fence-authorizing Secure Fence Act of 2006, although she distanced herself from it as early as her 2008 presidential race. Also during the 2008 campaign, when she lost the Democratic nomination to Obama, Clinton came out against issuing driver's licenses to undocumented immigrants, a position she reversed this

year. "Hillary seemed tone-deaf and rusty when she was on her book tour (for her 2014 memoir 'Hard Choices') and she was asked a couple of questions about immigration, and both times she fumbled it," Sharry said. "But now, **as a candidate, she has really leaned into it, taken ownership of the issue and made it clear that she's going to draw sharp distinctions with whoever the Republican nominee** is, including if it's Jeb Bush." Her husband's legacy could follow her as the campaign rolls on. Bill Hing, a University of San Francisco law professor and immigration-policy expert, said that from the standpoint of immigrant-rights advocates, Bill Clinton "has one of the worst immigration records" of any president in modern history. Under his administration, the United States started the "big militarization of the border" through Operation Gatekeeper, which was aimed at stopping illegal immigration along the U.S.-Mexico border south of San Diego by deploying more Border Patrol agents, and installing fencing, ground sensors, lights and other technology, Hing said. Clinton also signed the Illegal Immigration Reform and Immigrant Responsibility Act of 1996, a sweeping bill passed by the Republican-controlled Congress that was aimed at cracking down on undocumented immigrants through a wide range of punishments. Those included barring undocumented immigrants from returning to the United States for up to 10 years, and expanding the list of crimes for which legal immigrants could be stripped of their status and deported. However, Hing doubts Bill Clinton's old positions on border security and immigration enforcement will hurt Hillary Clinton with Latinos. "Latino voters are giving her a pass because the Republicans have been so intransigent on immigration reform," Hing said, pointing out that in recent years conservative Republicans have consistently foiled attempts by moderate Republicans and Democrats to pass immigration reform. Doris Meissner, former commissioner of the Immigration and Naturalization System during the Clinton administration, said it's unfair to tie Bill Clinton's record to Hillary Clinton. The border-security and immigration-enforcement measures launched under Bill Clinton's administration were badly needed, Meissner said. But **what distinguishes Hillary Clinton from her Republican rivals is that she believes it is time to move beyond border security and immigration enforcement**, she said. "She's talking about now what needs to be done in addition and that is very different from what all the Republicans are saying," Meissner said. "They are just saying more of the same and they are in a time warp. ... We just don't have the same issues at the border."

The effects of CIR would be huge it can reduce the debt by 2.5 trillion and create millions of new jobs over the coming decade empirically proven by the IRCA of 1986

IPC 13' "Immigration Policy Center, "an immigration stimulus the economic benefits of a legalization program", <http://www.immigrationpolicy.org/just-facts/immigration-stimulus-economic-benefits-legalization-program>".CC

As the legislative debate over immigration reform heats up, a central point of contention will be whether or not to create a pathway to legal status for all or most of the 11 million unauthorized immigrants now living in the United States. **In evaluating the pros and cons of a legalization program, it is important to keep in mind that legalization is not only a humanitarian act; it is also a form of economic stimulus. The example of the 1986 Immigration Reform and Control Act (IRCA) demonstrates that workers with legal status earn more than workers who are unauthorized. And these extra earnings generate more tax revenue for federal, state, and local governments, as well as more consumer spending which sustains more jobs in U.S. businesses. Recent studies suggest that the economic value of a new legalization program would be substantial, amounting to tens of billions of dollars in**

added income, billions of dollars in additional tax revenue, and hundreds of thousands of new jobs for native-born and immigrant workers alike. In short, a new legalization program for unauthorized immigrants would benefit everyone by growing the economy and expanding the labor market. The experience of IRCA demonstrates that legalization allows previously unauthorized workers to earn higher wages and get better jobs. University of Michigan economist Sherrie Kossoudji and Australian National University economist Deborah Cobb-Clark estimate that men who gained legal status under IRCA would have been earning between 14 percent and 24 percent higher wages if they'd been "legal" for all of their working lives in the United States. In addition, Kossoudji reports that "using different methodologies, data sets, and national-origin groups, nearly all researchers agree: once legalized, men's wages increased simply because they now had the legal right to work." As a result, "IRCA provided immediate direct benefits by successfully turning formerly clandestine workers into higher-paid employees." More broadly, "legalization for otherwise law-abiding undocumented immigrants is humane for them and their families, develops a better workforce for U.S. companies, and acts as a workforce development program for young people. **Legalization would also create a level playing field and fair competition for U.S. workers, improve the earnings of law-abiding companies,** increase the tax revenue of local, state, and federal governments, and free local police to return to crime prevention, crime solving, and building safe communities." A study by Rob Paral and Associates found that "between 1990 and 2006, the educational attainment of IRCA immigrants increased substantially, their poverty rates fell dramatically, and their home ownership rates improved tremendously. Moreover, their real wages rose, many of them moved into managerial positions, and the vast majority did not depend upon public assistance." In 1990, 27 percent of IRCA immigrants age 16-24 lived below the federal poverty line. By 2006, the share who lived in poverty had fallen to 15 percent. Similarly, among IRCA immigrants age 25-34 in 1990, the poverty rate declined from 26 percent to 14 percent between 1990 and 2006. Only 26 percent of IRCA immigrants who were 25-34 years old in 1990 owned their own homes. This had risen to 67 percent by 2006. Likewise, among immigrants age 35-44 in 1990, the homeownership rate rose from 34 percent to 68 percent between 1990 and 2006. Recent studies demonstrate that the higher earnings of legalized workers yield more tax revenue, more consumer buying power, and more jobs Raúl Hinojosa-Ojeda, founding director of the North American Integration and Development Center at the University of California, Los Angeles, estimates that in just the first three years following legalization, the "higher earning power of newly legalized workers translates into an increase in net personal income of \$30 to \$36 billion, which would generate \$4.5 to \$5.4 billion in additional net tax revenue. Moreover, an increase in personal income of this scale would generate consumer spending sufficient to support 750,000 to 900,000 jobs." In general, the study found that "removing the uncertainty of unauthorized status allows legalized immigrants to earn higher wages and move into higher-paying occupations, and also encourages them to invest more in their own education, open bank accounts, buy homes, and start businesses." Raúl Hinojosa-Ojeda also estimates the fiscal benefits of legalization for eight states. Arizona: The wages of unauthorized workers would increase by \$1.8 billion, generating an additional \$540 million in tax revenue and creating 39,000 new jobs. California: The wages of unauthorized workers would increase by \$26.9 billion, generating an additional \$5.3 billion in tax revenue and creating 633,000 new jobs. Colorado: The wages of unauthorized workers would increase by \$924 million, generating an additional \$297 million in tax revenue and creating 20,000 new jobs. Florida: The wages of unauthorized workers would increase by \$3.8 billion, generating an additional \$1.13 billion in tax revenue and creating 97,000 new jobs. Nevada: The wages of unauthorized workers would increase by \$970 million, generating an additional \$249 million in tax revenue and creating 23,000 new jobs. New Mexico: The wages of unauthorized workers would increase by \$312 million, generating an additional \$90 million in tax revenue and creating 8,000 new jobs. Texas: The wages of unauthorized workers would increase by \$9.7 billion, generating an additional \$4.1 billion in new tax revenue and creating 193,000 new jobs. Virginia: The wages of unauthorized workers would increase by \$1.2 billion, generating an additional \$371 million in

tax revenue and creating 27,000 new jobs. A study by Manuel Pastor and his colleagues at the Center for the Study of Immigrant Integration at the University of Southern California found that California's unauthorized Latino population lost out on \$2.2 billion in wages each year because of their lack of legal status. Were they to earn this additional \$2.2 billion, the "rise in income would spur direct consumption spending by about \$1.75 billion dollars per year, which would ripple throughout the state economy, generating an additional \$1.5 billion in indirect local spending. Such an increase in direct and indirect consumer spending of about \$3.25 billion would generate over 25,000 additional jobs in the state." Moreover, "if unauthorized Latino workers were granted legal status, the state government would benefit from a gross increase of \$310 million in income taxes and the federal government would gain \$1.4 billion in paid income taxes each year." In another study, Manuel Pastor and Justin Scoggins estimate that, if the 8.5 million Lawful Permanent Residents (LPRs) in the United States who are eligible to naturalize did so, their earnings over the next decade would rise somewhere between \$21 billion and \$45 billion. These additional earnings and the spending they generate would amount to an increase in Gross Domestic Product of somewhere between \$37 billion and \$52 billion. A report from the American Action Forum, authored by **former CBO director Douglas Holtz-Eakin, estimates that immigration reform would "raise GDP per capita by over \$1,500 and reduce the cumulative federal deficit by over \$2.5 trillion" over 10 years. These benefits accrue because "immigration reform can raise population growth, labor force growth, and thus growth in Gross Domestic Product (GDP).** In addition, immigrants have displayed entrepreneurial rates above that of the native born population." A study by the Center for American Progress and Partnership for a New American Economy estimated the economic benefits of passing the Development, Relief, and Education for Alien Minors (DREAM) Act, which would create a pathway to legal status for the estimated 2.1 million eligible unauthorized immigrants who were brought to this country as children. The study found that "through a combination of improved educational attainment and higher paid jobs available to authorized immigrants, the passage of the DREAM Act would result directly in \$148 billion in increased earnings for beneficiaries of the passage of the proposed law. This direct effect would result in an induced effect of an additional \$181 billion of economic activity. We conservatively estimate the combined economic benefits of the DREAM Act would be approximately \$329 billion over the next 20 years, leading to 1.4 million new jobs and at least an additional \$10.2 billion in tax revenue."

UQ

Clinton will beat Sanders

Voters who would support Sander's will inevitably vote for Clinton, they see her as the only candidate that can win the national election

Tani 07-01-2015 "Mexwell, "Here's the one number that proves Bernie Sanders isn't a threat to Hillary Clinton", a writer for business insider, <http://www.businessinsider.com/can-bernie-sanders-beat-hillary-clinton-2015-7>"

Here's a theory that has popped up in recent weeks: Democratic presidential candidate Sen. Bernie Sanders (I-Vermont) is a legitimate challenger to Hillary Clinton. Following several recent polls that showed Sanders in a statistical dead heat with the former Secretary of State in the first-in-the-nation primary state of New Hampshire, some spectators and analysts have begun to tout Sanders as a threat to Clinton, who has long been the presumptive Democratic nominee. Slate said that Bernie is "within striking distance" of Hillary Clinton in New Hampshire. So did the Boston Globe. The Hill said that Sanders's surge is "becoming a bigger problem" for Clinton. Prominent GOP pollster Glen Bolger predicted that Sanders would win Iowa and New Hampshire. We've noted the Sanders uptick, including one poll that showed a "statistical tie" in New Hampshire. But **one question** in a new CNN poll out Wednesday **takes the air out of Sanders' surge, and shows why his momentum likely won't translate to electoral success. According to CNN, only 2% of Democratic voters think Sanders has the best chance of winning the general election. That number has proven to be a red flag for any candidate.** Studies have long shown that most voters desire to cast their vote for a winning candidate, and they'll often vote for their second choice if they perceive the candidate to have a better chance of winning. As University of Maryland professor Eric Pacuit points out, many voters in 2000 who supported Green Party candidate Ralph Nader ended up voting for Democratic nominee Al Gore. There are a couple of reasons for this. According to Duke researchers Daniel Kselman and Emerson Noiu, **some voters cast their votes strategically, as some Nader supporters did for Gore. Other simply desire to jump on the bandwagon of the winning team.** Voting behavior aside, Sanders's recent gains in New Hampshire shouldn't be projected elsewhere. As Slate's Josh Voorhes points out, **the Senator's popularity in New Hampshire hasn't necessarily translated to other states. In Iowa, Sanders is barely making a dent, trailing Clinton by 40 points,** according to a recent Real Clear Politics polling average. So, yes: **Sanders is gaining ground with some Democratic primary voters in New Hampshire. But if more people don't start thinking he can actually win the nomination, it's unlikely that he'll be a continued threat.**

Clinton still has strong support in the key swing states of New Hampshire and Iowa, Bernie is a threatening but not even close to a viable candidate nationally

Cassidy 6-26-2015 "John, "Bernie Sanders is enjoying a mini surge", staff writer for the New Yorker since 1995, <http://www.newyorker.com/news/john-cassidy/bernie-sanders-is-enjoying-a-mini-surge>".CC

On Thursday, while the political world was focussed on the Supreme Court's Obamacare ruling, **two polls came out showing Bernie Sanders making up ground on Hillary Clinton in New Hampshire and Iowa.** In a survey carried out by the University of New Hampshire Survey Center for CNN and the Manchester-based WMUR TV, **Clinton was leading Sanders by just eight percentage points: forty-three per cent to thirty-five per cent. Meanwhile, a poll carried out in Iowa for Bloomberg found that Sanders now has the support of about a quarter of likely Democratic voters,** by far his strongest showing yet in the state that will be the first to vote in the

Democratic primary. “It’s tremendous progress that he is making with voters in the first two states,” Tad Devine, Sanders’s chief political strategist, told Bloomberg’s John McCormick. “It’s something we felt on the ground.” **At this stage, it’s necessary to issue a few qualifiers. First, it’s not July 4th yet, and there are still seven months until the 2016 primaries begin. At this early stage, opinion polls bounce around quite a bit, and no single survey should be accorded very much weight. Second, Clinton is trouncing Sanders in the national polls. Third, even in the early primary states she still has a big advantage. In Iowa, Sanders has yet to come within twenty-five points of her in any poll,** and in New Hampshire a separate Bloomberg survey found that she retains a much bigger lead than the CNN/WMUR survey suggested: twenty-six points. “Clinton remains enormously well-known and well-liked in New Hampshire, a state she won before,” Doug Usher, of Purple Strategies, the research firm that carried out Bloomberg’s New Hampshire poll, said. **She benefits from a gender gap in a primary that will be disproportionately female, and even Sanders’s voters admit Clinton is likely the nominee.** **So there’s no need for panic in the Clinton camp, which has adopted the public position that it expected a competitive primary all along.** But for Sanders, and for Democrats who would like an alternative to Clinton, the signs are encouraging. The seventy-three-year-old Vermont senator is clearly enjoying himself, hurtling around the country, drawing large crowds, and promoting his progressive agenda. In the past few days, for instance, he has welcomed Pope Francis’s encyclical on climate change, criticized Congress for granting President Obama fast-track authority to complete the Trans-Pacific Partnership, and reiterated his call to expand Medicare into a national health-care system for everyone. As Sanders promised when he started out, he isn’t criticizing Clinton directly. But he is seeking to draw a contrast between his clear positions on such issues as trade with his opponent’s nuanced statements. And he’s insisting he’s in it to win. Speaking to David Corn, of *Mother Jones*, Devine explained that Sanders’s strategy is based on raising enough money—forty or fifty million dollars—to advertise in the early primary states of Iowa, New Hampshire, Nevada, and South Carolina, and he claimed that, thanks to lots of small donations, this strategy is working so far. “I don’t know if we can outright beat her in Iowa and New Hampshire,” Devine said, “but we have a real shot at it in both places.” That may be stretching things. **Still, if Sanders keeps gaining, he will certainly have the capacity to disrupt some of the Clinton campaign’s carefully laid plans.** Should they go after Bernie? Should they ignore him? Something in the middle? Up until now, the Clintonites have been running a professional and highly scripted operation that has achieved most of its initial goals, but that sometimes resembles painting by numbers. Clinton has the money, the infrastructure, and the support from other prominent Democrats that Sanders lacks, but the Vermont senator has advantages, too: enthusiasm at the grassroots, the flexibility that comes with being a one-man band, and the ability to position himself as a scrappy underdog and outsider. “You can make the case that a certain amount of Bernie Sanders’s support is a protest vote, but there’s more to it than that,” J. Ann Selzer, the president of Selzer & Co, which carried out Bloomberg’s poll in Iowa, said. “People like him. They like what he stands for. They like showing up at his events and hearing him say things they believe in.” In short, Sanders is running a classic insurgency campaign. And as many establishment candidates have discovered in the past, running against such an opponent can be an uncomfortable experience.

Sanders Popular

Clinton should be worried by Sanders's rise, Hillary is weak because of her alignment with the Democratic establishment

Goodwin 05-07-2015 "Michael, "How Bernie Sanders threatens to derail Hillary's coronation", a writer for the New York post, <http://nypost.com/2015/07/05/how-bernie-sanders-threatens-to-derail-hillarys-coronation/>".CC

Trying to create a presidential persona and a rationale for running, Hillary Clinton relaunched her campaign at a memorial to FDR. She used the glorious setting of Four Freedoms Park to summon Roosevelt's legacy and frame her theme as "Four Fights." She also invoked her husband and President Obama, as if piggy-backing on presidents would define her. Perhaps it will work, but her predicament recalls a Dem president she didn't mention: Lyndon Baines Johnson. The similarities must scare her. LBJ looked certain to be re-elected in 1968, until a Minnesota senator with a penchant for poetry named Eugene McCarthy shocked the world by getting 42 percent in the New Hampshire primary, against Johnson's 49 percent. Less than three weeks later, the president famously declared that "I shall not seek, and I will not accept, the nomination of my party for another term as your president." **If there is a McCarthy-like figure on the scene today, it is Bernie Sanders, the scrappy underdog threatening to upset Hillary's coronation. The news that Sanders is surging in polls in Iowa and New Hampshire must be sending shivers through Clinton's camp. Even though Hillary still leads in the 2016 first states, the gap has narrowed so much that her surrogates are lowering expectations,** saying Sanders might win some showdowns. That's amazing enough, but her problem could be even more serious. Echoing the Mark Twain line that "history doesn't repeat itself, but it does rhyme," the Clinton-Sanders dynamic is starting to rumble like the political earthquake of '68. LBJ's demise is a textbook example of how quickly the bubble can burst. He had the power of incumbency while Hillary wears the mantle of inevitability. That didn't work for her in 2008, either, when Obama emerged to crash her party. **Sanders, a self-described democratic socialist, doesn't need to win the nomination — and he probably won't — to block Clinton. He only need show that she's not inevitable, and that there is a motivated, significant piece of the party that rejects her. That is exactly what he's doing, as large, enthusiastic crowds greet him wherever he goes. If she looks beatable, more viable candidates will find the courage to run.** That's the McCarthy model. He ran as a dissident against the Vietnam War and the New Hampshire results in mid-March of '68 crystallized unhappiness with Johnson. Nearly 20,000 American soldiers were dead by the end of 1967, and the election year would be the bloodiest of all. It started with a Jan. 1 attack on a US military base and February's Tet Offensive saw the deadliest single week of the war, when 543 Americans were killed and more than 2,500 wounded. Overall, 16,899 of our soldiers died in 1968, the most in any year. In those dark days, many people, including top Democrats, grew disillusioned with Johnson, and McCarthy's promise to end the conflict found special resonance among draft-age students. Shaggy anti-war protesters shaved and got haircuts in a "clean for Gene" movement. But the New Hampshire primary was McCarthy's high-water mark. Bobby Kennedy jumped in and, after Johnson bowed out, so did Hubert Humphrey. Kennedy probably would have won, but was assassinated in June by Palestinian terrorist Sirhan Sirhan. Humphrey got the nod at the Chicago convention, a debacle marked by violent street protests that helped Republican Richard Nixon win the presidency. **For her part, Clinton already has veered left to head off a challenge from the progressive flank. But her long record as a relative military hawk who is cozy with Wall Street is proving a tough sell in a party increasingly more radical than she is. The anti-Hillary movement is also picking up steam because of her shady dealings with international oligarchs and the rivers of cash flowing to the Clinton Foundation.** Never reliably honest, she's been caught in lies about her e-mails as secretary of state, leading most voters to say she is untrustworthy. That,

in turn, is keeping several GOP candidates ahead or close in hypothetical matchups. Although she remains the likely nominee, there are many dents in Clinton's armor and a long way to go. By the end, 2016 could be the new 1968. Bratton is better than his word Bill Bratton's bite is worse than his bark. That's a very good thing for New York. With crime in June falling to its lowest level since at least 1993, the top cop is showing he still has a talent for miracles. Through May, murder was up nearly 20 percent. Bratton's reaction then was a disappointment, writing in The Post that the "relatively minor increase" did not mean crime was "raging out of control." He said he had a plan of action, but his lack of a clear promise sounded like he was preparing the city for a new normal of more violence. Thankfully, that has not happened. June's numbers were dramatically lower than a year ago, with murders down 38 percent and fewer shootings, rapes, robberies and stolen cars. Beyond the obvious benefits, the stats are comforting because they prove the NYPD still can move quickly and make a life-saving difference despite the handcuffs and insults coming from City Hall. It's just one month, but let's hope this is the start of a new, downward trend. Congratulations to the commissioner and all the members of the NYPD. Once again, they showed why they are the Finest. Smith's old wives tale Former state Senate leader Malcolm Smith had delusions of grandeur, boasting that he, President Obama and Gov. David Paterson all had wives named Michelle. The implication was that he, too, was bound for glory. His sentencing on federal bribery charges brought him back to earth with a thud. A Democrat, he was convicted of a scheme to buy his way onto the Republican mayoral ballot in 2013. Leaving court last week, Smith said only, "I thank God for the opportunity I've had to serve." Presumably, he didn't mean his time in prison, which was set at seven years. Oh, how the would-be mighty have fallen. Pataki plays his 'Trump' card Who's afraid of Donald Trump? Apparently most of the GOP presidential candidates except George Pataki. Even as Republicans try to attract Latino voters, the former three-term New York governor broke the party's shocking silence over Trump's statement that Mexican immigrants are "bringing drugs. They're bringing crime. They're rapists." In an open letter to competitors, Pataki said the comments "left me and a lot of other sensible people wondering what century we are living in," and urged others to join him in denouncing them. Initially, only former Texas Gov. Rick Perry mumbled disagreement, but late Friday Marco Rubio finally denounced Trump's comments as "offensive." And yesterday, Jeb Bush chimed in, labeling Trump's remarks "extraordinarily ugly." Better late than never. Pataki is a long shot for the nomination, but his refreshing capacity for decency has not been dimmed by his time out of office.

Sanders is a legitimate threat to Clinton, he can tap into the grassroots movement his only obstacle is in getting his message out to every voter

Smith 07-03-2015 "Adam, tampa bay times political editor, "Bernie Sanders turns into force on presidential campaign trail", <http://www.tampabay.com/news/politics/national/bernie-sanders-turns-into-force-on-presidential-campaign-trail/2236070>".CC

The biggest obstacle to Hillary Rodham Clinton winning the Democratic presidential nomination is a rumped, white-haired grandfather who doesn't even call himself a member of the Democratic Party.

Bernie Sanders has no entourage or bevy of political advisers. He represents a state with half the population of Hillsborough County, and he has long been viewed by the national media as a quaint fringie — a self-described democratic socialist, of all things! — from the People's Republic of Vermont. **But contrary to conventional wisdom**

about the Democratic presidential contest, people are listening to presidential candidate

Sanders. A lot of people. "This is a rigged economy and, brothers and sisters, together we are going to change that," Sanders, 73, told a crowd of more than 10,000 people in Madison, Wis., Wednesday night. "This campaign is sending a message loud and clear to the billionaire class. And that is: You can't get tax breaks when children in America go hungry. You cannot continue to send our jobs to China when millions of Americans are desperately looking for work. You can't hide your profits in the Cayman Islands and in other tax havens when we have so many unmet needs in America!" The packed arena roared. "Bernie! Bernie! Bernie!" It was the largest campaign crowd any of the nearly two dozen 2016 presidential candidates has drawn so far, and it followed Sanders pulling 5,500 in Denver the previous week. Three hundred people showed up in late May when he appeared in the

farm town of Kensett, Iowa, population 260. Whether you call it old-fashioned class warfare or, as some Sanders fans prefer, a movement for economic justice, **Sanders is tapping into something, much as the less-focused Occupy Wall Street movement did.** How broad that something is remains to be seen, but Vermont's junior senator is no longer a bit player in a Democratic primary where Clinton had long been seen as the most commanding frontrunner in generations. The latest poll of New Hampshire primary voters, by WMUR and CNN, found that Clinton's 21-point lead over Sanders two months ago has dropped to 8 points, 43 percent support to 35 percent. That is within the poll's margin of error. None of the other announced Democratic candidates — former Maryland Gov. Martin O'Malley and former Sens. Lincoln Chafee of Rhode Island and James Webb of Virginia — topped 2 percent. A Quinnipiac University Iowa poll released last week found Clinton with an overwhelming 19-point lead over Sanders. But the Vermonter's support had doubled in less than two months, and Clinton's lead had been cut by more than half. "He is galvanizing support unlike any candidate I have ever seen, and I've been doing this for a while," said Mike Fox, a St. Petersburg resident and national organizer for the political group Progressive Democrats of America, which is independently helping Sanders. The Sanders campaign has no presence in Florida, concentrating instead on the early primary states like Iowa and New Hampshire and generating national attention, buzz and enthusiasm with appearances in liberal bastions like Austin and Madison. Grass roots Sanders supporters are still mobilizing across the Sunshine State. In Tampa Bay, nearly 80 people attended a Sanders event June 22 in Tampa, while former Pinellas Democratic chairman and St. Petersburg mayoral candidate Ed Helm last weekend hosted about 50 people at his home. They saw a Skype presentation from one of Sanders' aides in Vermont. "He's like a breath of fresh air," said Jim Jackson, a Democratic activist in Pinellas. "He's standing up and taking on the issues that so many of us care about: the big banks, the hedge fund people, how nobody went to jail for what they did to the economy, while the middle class keeps getting stepped on." Like Jackson, retired Tampa lawyer Rochelle Reback said she would support Clinton if she wins the nomination, but so far sees little to be excited about with the frontrunner. "Bernie Sanders is the one speaking up for the middle class in America and he's brave enough to take positions that are not favorable to Wall Street. It's about time somebody did that," she said. "Hillary has been overly cautious, and I don't think she's been very clear on a lot of her positions." Helm, who splits his time between St. Petersburg and Vermont, said it's not uncommon to see barns painted with the slogan "Take Back Vermont" — a backlash against liberal Vermonters — and pro-Bernie Sanders signs on the same property. "He connects with people. People respect his honesty, his directness and his commitment," said Helm, who thinks Sanders' populism and independence would pull tea party Republicans and libertarians in a general election. "He cares about things that matter to everyday people." Voters do not register by party in Vermont, but Sanders calls himself a democratic socialist. That's not as radical as it may sound. Sanders, who caucuses with the Democrats in the Senate, essentially argues that the government in a healthy democracy can and should play a big role in promoting and protecting the welfare of citizens. His platform includes: • Committing \$1 trillion to rebuild the country's infrastructure and generate jobs. • Creating a Medicare-for-all, single-payer health care system. • Raising the minimum wage to \$15 an hour. • Making tuition free for public colleges and universities. • Aggressively moving the country's energy policies away from fossil fuels. • Curbing the power and influence of Wall Street and breaking up the biggest banks. ("If a bank is too big to fail, it is too big to exist.") "The issue of wealth and income inequality, to my mind, is the great moral issue of our time, is the great economic issue of our time, and it is the great political issue of our time," Sanders said in Wisconsin in his Brooklyn baritone. "Let me be as clear as I can be: There is something profoundly wrong when today the top one-tenth of 1 percent own almost as much wealth as the bottom 90 percent. There is something profoundly wrong when today 58 percent of all new income is going to the top 1 percent." Sanders served as mayor of Burlington, Vt., for four terms, in the U.S. House for 16 years, and eight so far in the U.S. Senate. He may be among the most liberal members of Congress, but he also understands governing and compromise. He is the ranking Democrat on the Senate Budget Committee and chaired the Veterans Affairs Committee from 2013 to 2015. "You won't find two members of Congress more at the opposite ends of the ideological spectrum than Bernie and me," said North Florida U.S. Rep. Jeff Miller, the House Veterans Affairs chairman. "But from working with him on VA issues, I can tell you Bernie is a very intelligent man, a skilled negotiator and an astute political tactician. **I think he has been underestimated and will surprise a lot of people.**" Consistently drawing monster crowds does not necessarily translate to winning presidential nominations, as Democrat Howard Dean and Republican Ron Paul can attest. He has shown little momentum among minority voters — which would make him a much more serious threat to Clinton — **and he faces the widespread perception that he can't win. But even as Sanders lambastes the role of big money in politics, it appears money will not be his chief obstacle. He reported last week raising \$15 million from 250,000 donors since entering the race in April, with an average contribution of \$33.51. Clinton's campaign said she raised about \$45 million. "Right now the people who favor Bernie, we're not fighting Republicans. We're fighting the media's bias in not taking him seriously as a legitimate challenger,"** said Reback of Tampa. "People go, 'Bernie can't win,' but it's just you guys (in the media) talking to each other. You're not talking to the 10,000 people who showed up in Wisconsin." In Miami, 28-year-old Ellen Wall clicked on the New York Times website Thursday morning to read about Sanders' Madison event. She found a report on Jeb Bush's strong opposition to peas in guacamole, but nothing on Sanders. **"Yes, Bernie Sanders is a dark horse," she said. "But if more people are able to hear about his message, absolutely he can win the nomination."**

Sanders Loses General

Bernie Sanders cannot win the general election he does not have the money and the general electorate is polarized

Cesca 05-04-2015 “Bob, “The five nearly impossible challenges for Bernie Sanders and his supporters”, Bob Cesca is the Managing Editor of The Daily Banter. Cesca has written weekly featured columns in The Huffington Post since August 2005, <http://thedailybanter.com/2015/05/the-five-nearly-impossible-challenges-for-bernie-sanders-and-his-supporters/> .CC

Based strictly upon his agenda, Sen. Bernie Sanders (I-VT) would be a groundbreaking president, and in a general vote-your-conscience sense, he's definitely worthy of support from the activist left. Here are just a few of the reasons why: he supports single-payer healthcare; he supports higher tax rates on the wealthiest one percent, especially when it comes to paying for wars; he'd prioritize global warming as the number one crisis of our time; and he's arguably the most vocal supporter of the middle class since FDR. **In many ways, Sanders is a dream candidate... .On paper. This is the big “but.”** Supporting Sanders for the Democratic nomination is sort of like ordering a new-fangled As-Seen-On-TV exercise contraption. Making a conscious decision to get into better shape is admirable. However, there are about ten thousand subsequent steps that need to occur after handing over your credit card number. Either you'll do all of the impossibly necessary work to look like the fitness models in the infomercial, or you'll have a medieval clothes rack festooning the corner of your bedroom until the big yard sale. Likewise, **there are five impossible challenges facing Sanders and his people. 1) Raising money. Evidently, Sanders raised over a million dollars immediately after his announcement, with the average donation not exceeding \$43. That's significant and respectable. The question is whether he has the continuously generous donors to outspend not just Hillary Clinton, but the other potential contenders including** the John Edwards of this election, Martin O'Malley, who's getting ready to announce soon. In order to do so, will Sanders accept support from big-money donors and various 501(c)3 organizations, along with the accompanying dark money? And how will his supporters take the news? It'll be impossible for Sanders to make a serious dent in the delegate count without going there. 2) Calibrating expectations. On Sunday's *This Week with George Stephanopoulos*, Sanders made it clear that we shouldn't underestimate his chances, given his track record of victories so far. Frankly, however, I don't think he seriously, deep down, expects to win. Historically, candidates like Sanders (see also Dennis Kucinich, Ron Paul, Al Sharpton, Mike Gravel and even Ross Perot) never really believe they can win. If that's the case, what's the point in activating massive grassroots support and fundraising for a no-win candidate? The obvious answer, and one which I personally like, is the idea of nudging the Overton Window leftward. Sanders has the rhetorical chops to move the debate leftward, making some of his ideas more palatable to voters, and that's a good thing, given how rightward the Window has been pulled by the tea party and Bush-era, post-9/11 politics. The caveat here, though, is for his supporters to calibrate expectations to match this goal, rather blindly and singularly expecting victory because if too many supporters fail to steel

themselves for the inevitable, disillusionment and subsequently more Hillary Derangement Syndrome will ensue and that's terrible news for the Democratic nominee in the general. 3) Superdelegates and winning the nomination. Remember 2008? In the Democratic nomination fracas between Barack Obama and Hillary Clinton, 20 percent of the necessary delegates required for the nomination came from unpledged "superdelegates" who had enough power to throw a tight nomination battle in either direction, or worse, to a contested convention. Does an Independent-turned-Democrat have the superdelegate support of someone like Clinton or O'Malley, knowing that each candidate's been shmoozing party apparatchiks for many, many years. 2008 taught us that the Democratic nomination isn't solely decided by voters. Without superdelegate support, Sanders is entering the race with a 20 percent deficit. Unless Sanders runs a flawless campaign and reassures enough superdelegates that he's capable of defeating the Republican nominee, he doesn't have a shot. **4)**

Beating the Republican ticket. With an increasingly polarized electorate, Sanders would have to acquire massive support from the center-left and especially the middle in order to come close to beating the GOP nominee. While it's true the Republicans have mostly abandoned the middle for the tea party and libertarian extremists in the party, it doesn't necessarily mean a far-left socialist can grab up the centrist votes. There's no doubt that a Sanders general election campaign could generate plenty of Democratic support, from both the left and center-left, but how would moderate undecided voters swing: toward a crumpled socialist or a familiar GOP name like Bush, or a young newcomer like Scott Walker who feels familiar? Bottom line: Sanders has much farther to go in order to win the middle than the GOP ticket. 5) Governing and compromising his agenda. Let's say Sanders successfully runs the

gauntlet and a series of events transpire that impossibly thrusts him into the White House. What then? More than anything else, Sanders' coattails would have to be longer than Florida in order to carry with him enough congressional seats to support his agenda. And even if perchance the Democrats pull a Godzilla-sized rabbit out of a Jeb Bush-sized hat and win majorities in both chambers, would there be enough votes from moderate Democrats to support colossal tax hikes on the rich or a single-payer health insurance plan to replace Obamacare? Highly, highly, highly doubtful. Remember how long Obamacare was hashed out in Congress in order to win the support of blue-dog Democrats like Ben Nelson and Max Baucus? Nearly a year, as I recall, and a pantload of compromise, including the soul-crushing abandonment of the public option. Now imagine trying to get blue-dog Democratic Senator X to vote for single-payer. Honestly, it wouldn't even come to that because the Senate Republicans would filibuster the hell out of the entire Sanders agenda, much less single-payer. I think most liberals would agree, at least when compared to Sanders, that Obama has governed as a center-left Democrat and occasionally a centrist Republican. How has the GOP reacted? Like mental patients. Insert, now, an actual socialist agenda into that equation and stir. In order for Sanders to get anything passed he'd absolutely be forced to significantly compromise his agenda and cut deals with the Republicans. How might he compromise? First and foremost, his unwavering support for Israel as well as his votes against closing Guantanamo might indicate two areas that'd be on the table in negotiations with Mitch McConnell and John Boehner. But just imagine the apoplexy

from his far-left supporters if he did. And that's just the tip of the iceberg in a divided government. How would Sanders get his would-be Treasury Secretary Robert Reich (who's a fantastic choice, by the way) confirmed by a Republican Senate? He'd have to give them something they'd want, of course, and even then it'd be crap-shoot. Would the far-left be comfortable with a trade? Reich for, say, a moderate Supreme Court nominee? Or Reich for Keystone XL? Or Reich for ANWAR? Based on the last six-plus years and the far-left's ongoing perfectionist freakout over Obama's compromises, not to mention President Clinton's compromises in the 1990s, many heads would surely explode. Bottom line: while Sanders' agenda is attractive, it's wise to calculate whether it's at all practical. Sadly and regrettably, I'd argue that none of it is, given the political climate today — unless Sanders and his supporters are willing to compromise, and I don't think his supporters in particular have the capacity for compromise. Not even close, given recent history. There's a definite nobility in voting for candidates who best align with our personal values, even if they have no chance of winning. But our convictions in the voting booth are equally if not less important as having a realistic outlook on the bigger picture, and voters of both parties would do well to seriously consider these factors. If a vote for a longshot candidate with a longshot agenda triggers an explosive and perhaps irreparable blowback against your values, was it really worth it? Meanwhile, the left ought to provide Sanders just enough leverage to inject his message into the mainstream. At the end of the day, isn't that the point?

Sanders winning the nomination would give the GOP the win his continued candidacy makes liberals skeptical of Hillary and they will stay home in the general election

Clifton 05-09-2015 "Sanders is already making it more likely republicans win the white house in 2016, Allen Clifton is from the Dallas-Fort Worth area and has a degree in Political Science, <http://www.forwardprogressives.com/bernie-sanders-already-making-likely-republicans-win-white-house-2016/>".CC

I absolutely love Sen. Bernie Sanders (I-VT). He's one of the few genuine politicians we have in this country and he's someone I believe "gets it" when it comes to policies that can help the average American. **But he's also at an advantage to say and do a lot of the things other progressives/liberals can't because he represents the very liberal state of Vermont in the Senate. His polar opposite might be Sen. Ted Cruz (R-TX). Cruz can be as asinine, ridiculous and fanatical as he wants because that's what conservatives in Texas want. But there is one thing both Sanders and Cruz do have in common - neither of them are ever going to become president.** As much as I really like Bernie Sanders, I also care a heck of a lot about Republicans not winning the White House in 2016. What's worrying me now is I'm seeing signs that Sanders' entrance into the presidential race is already making it more likely that Republicans could do just that. Right now, the **GOP is continuing to try to convince millions** of Americans that Hillary **Clinton** is some shady, underhanded crook **who shouldn't be trusted.** **Meanwhile, many on the far-left are trying to paint her as a neocon who's actually more "Republican" than somebody like Jeb Bush** because she's not a far-left progressive like Sanders. In a lot of ways, far-left liberals are actually helping out the Republican party by bashing

Clinton. I've literally received several messages from people saying they believe that if Hillary Clinton had to nominate Supreme Court Justices, her choices might be more conservative than many of her potential Republican opponents. That statement in and of itself proves just how delusional many people have become about her. But there's a catch to why Sanders can say and do a lot of what he's doing now - because he's not actually trying to win. **Sure, his rhetoric plays well with far-left liberals, many liberal blogs and people who care more about idealism instead of realism, but none of that is going to win in the general election. Besides, Sanders is best suited for the Senate, not the presidency. And in 2016 we can't run on unrealistic idealism; far too much is at stake.** I don't deny Sanders is a revolutionary figure. I honestly believe in the not too distant future many of the policies he stands for now will be more mainstream in our government. But most of the country isn't ready for that drastic of a change, because change often happens very slowly. Right now, Bernie Sanders, if he were the Democratic nominee for president, would get crushed in the general election. I'll use same-sex marriage as an example of what I mean when I say change happens slowly. It's 2015 and only now are we finally on the brink of gay marriage becoming legal in all 50 states. Both President Obama and Hillary Clinton have come out in support of same-sex marriage, when even just a few years ago they both opposed it. But could they have done that 20 years ago? For the most part, no. For example, if Bill Clinton runs on legalizing same-sex marriage in 1992, George H.W. Bush wins re-election – because the country wasn't yet ready for marriage equality. Not only that, but pushing the issue before people were ready might have potentially led to a Constitutional Amendment banning gay marriage, as many Republicans have pushed for now, which would have made legalizing it now much more difficult (if not impossible). My point being, **you have to know when and where to pick your battles because sometimes you can do more harm than good.** Is that fair? No – it's just reality. My colleague Manny Schewitz disagrees with me on this. In a recent article, he wrote: Hillary Clinton does not do well when matched against Rand Paul, but **Bernie Sanders has the ability to win over many libertarians who don't trust Rand Paul** and would agree with Senator Sanders on issues like ending the War on Drugs, reducing military spending and ending domestic surveillance programs. (Source) First, the libertarian vote is minuscule in the grand scheme of things. If libertarians were a powerful enough entity in politics, we'd see more libertarians elected to public office. Second, the vast majority of libertarians are not going to support someone who describes themselves as a socialist, pushes for socialized health care and opposes many of those "free market ideas" libertarians hold so dear. So **even if he were to lure some of the libertarian vote, he's basically grabbing a tiny percentage of an already small pool of voters.** Besides, Paul is in no way going to win the GOP nomination, so wondering how a Sanders vs. Paul 2016 campaign would turn out might make for a fun debate, but it's not going to happen. Also from my colleague's article: Bernie Sanders has been a progressive for his entire career and has shown that you don't need massive amounts of money to win an election if you have a message that voters identify with. Hillary Clinton has a much shorter political career and is more of a center-right Democrat who voted to authorize the Iraq War, whereas Bernie Sanders voted against it. Ideally, a candidate should not only have a message that connects with the majority of voters, but they should be able to excite and energize the base as well – and nothing excites me less than being told that a candidate is inevitable and that I need to sit down, shut up, and support her. (Source) Again, while I am a big fan of Sanders, to believe he can become president is falling in love with idealism instead of the reality of politics. **Sanders wouldn't win in a national election in 2016 because he's a self-described socialist in a country where just that word alone terrifies many people.** While I respect the opinions of those like my colleague who believe Sanders would be a viable candidate (and there are quite a few who do), I can tell you with absolute certainty in my mind that there's no way he would win the general election – period. To put into perspective just how little Sanders' chances are at winning the nomination (even as much as I like him), let alone becoming president, in most polls he's getting about as much support as Joe Biden – and who honestly believes our vice president stands any chance at taking that next step? I like Biden, but not for

president. Though what I ultimately fear Sanders is going to do is get liberals worked up just enough to where when he eventually loses the Democratic primary election to Hillary, it's going to cause many to become apathetic and refuse to show up in 2016 to vote for the "not liberal enough/basically a Republican" Hillary Clinton. After all, liberal apathy is what happened to President Obama. Prior to moving into the White House, liberals were "energized" and excited about Barack Obama. Then reality set in and they began realizing that he couldn't wave a magic wand and make all their dreams come true overnight. By 2010, his approval rating had fallen a decent amount, liberals weren't "motivated" to vote because apathy had set in and Republicans took control of the House of Representatives, ensuring that almost nothing "liberal" would ever get passed. And that apathy, if strong enough in even just a couple of swing states next year, can be more than enough to ensure that a Republican wins the White House in 2016. That cannot happen, because like I said earlier, far too much is at stake. Read more at: <http://www.forwardprogressives.com/bernie-sanders-already-making-likely-republicans-win-white-house-2016/>

2016 will be determined by voter turnout the election hangs on if Democrats stay home

Clifton 3-18-2015 "Allen,"There's a reality about Hillary Clinton many liberals need to face," Clifton is a writer for the publication forward progressives, he has a degree in political science, <http://www.forwardprogressives.com/reality-hillary-clinton-liberals-need-face/>"

Let me list a few numbers for everyone: 78 80 80 83 Those are the ages that Supreme Court Justices Stephen Breyer, Antonin Scalia, Anthony Kennedy and Ruth Bader Ginsberg will be when the next president is sworn in, respectively. The next president we elect (assuming he or she serves two terms) could very well be the individual who selects four Supreme Court Justices. Now, in a world where we've all seen how powerful the Supreme Court can be concerning the laws that impact all of us, who on the left wants a Republican such as Jeb Bush, Ted Cruz or Scott Walker potentially selecting four Supreme Court Justices? Listen, I know quite a few people on the left aren't huge Hillary Clinton supporters. I personally like her, but I understand that a lot of people don't. Even as a supporter, I know she's far from perfect – but there's a harsh reality that Hillary haters on the left need to face. First, Sen. Elizabeth Warren (D-MA) isn't going to run for president. I repeat, Elizabeth Warren is not going to run for president. The only way I think she might is if Clinton decided not to run. Considering that isn't going to happen, I will repeat once again – Elizabeth Warren isn't going to run for president. And if you don't believe me, here she is - several different times - stating that she's not going to run for president. Besides, she's best suited for the Senate. She's a warrior who can get much more done fighting Republicans as a senator than she could as president. We need her voice in the Senate. Then there are those people who are excited Sen. Bernie **Sanders** (I-VT) is running. Listen, I love Sanders, but he's never going to be president - ever. He'll be 75 in 2016, meaning that if he served eight years he'd be 83-years-old. Even if you get past his age, which many wouldn't, he's also a self-described socialist. If you really think this country is going to elect a self-described socialist to the White House, you really don't know much about politics. Furthermore, Sanders is also best suited for the Senate – just like Elizabeth Warren. Outside of those three, it's too late in the game for anyone to sneak in and make a big name for themselves. If someone worth electing was planning to run, they would already be a big name with a lot of momentum. Liberals might not like hearing this, but it's going to be Hillary Clinton or a Republican in 2016. It really breaks down to these two options: Either get on board with Hillary Clinton, even if she's not everything you've dreamed of. - or – Whine and cry because Elizabeth Warren isn't going to run, become apathetic, then let Republicans win the White House in 2016; likely replace four Supreme Court Justices over the following 8 years; start a war with Iran; ruin the planet; destroy our economy again; and undo all the good that's been done these last 6 years. Yes, it's really that simple. The question is, would

you rather have a candidate who supports 60-70 percent of what you support, or almost none of it? And spare me this, "I'll vote for an independent because Americans need to move away from the two-party, corrupt system that's ruining this country" nonsense. **Look, if you want to waste a vote based on principles, that's your choice. I'm telling all of those people right now, Republicans won't. In fact, Republicans are hoping that's exactly what many liberals and independents will do. The system is what it is and it's unlikely to ever change. We've mostly been a two-party system since the founding of this nation, and definitely have been for the last century and a half. While some liberals will go off and pout in a corner, pointlessly carrying on about how their wasted vote is a "stance against a system they don't support," you know what Republicans will be doing?** Voting for Republicans and destroying this country. Republicans overwhelmingly won this past November, not because they were popular or ran the better candidates, but because liberals let them win. For every liberal who didn't cast a vote, that was essentially a vote for a Republican. **The GOP thrives on lower voter turnout and a disjointed Democratic party.** Hell, they count on it. So, while I understand that Hillary Clinton isn't everyone's cup of tea, I can promise you this much – she's a hell of a lot better than any Republican alternative. So to all of you liberals who loathe her and feel that voting for her would be "selling out," do you really want a Republican president potentially replacing four Supreme Court Justices? It all goes back to one simple fact: **If liberals don't want to get behind whomever is the Democratic candidate for president in 2016, then a Republican is going to occupy the White House after President Obama.** This isn't me trying to sensationalize anything or using hyperbole, I'm just telling you the truth. Even if we break this down to its simplest form, ignoring any mention of who is or isn't running for president, then the question really comes down to: Who do you want potentially replacing four Supreme Court Justices in the next 8 to 10 years – a Democrat who supports same-sex marriage, abortion rights, health care and the separation of church and state, or a Republican who opposes all of that and then some? Read more at: <http://www.forwardprogressives.com/reality-hillary-clinton-liberals-need-face/>

Clinton Loses General

1. Empirics prove approval ratings don't carry over, and models show voters flip flop after consecutive wins for same party.

Meghan Mcardle 04/15/15 Bloomberg Columnist, MBA from University of Chicago, English lit BA from University of Penn. "Hilary Clinton isn't inevitable."
<http://www.bloombergview.com/articles/2015-04-14/hillary-clinton-isn-t-inevitable04/15/15>

Unlike fine wine, presidential parties do not age well. There's evidence that voters get sick of the ruling party after a while and want a change, even if things seem to be doing OK. Now, we don't have that many elections to go by, as this just covers the postwar period. The theory could be wrong. But it makes a certain amount of sense: The longer a party has been in office, the staler its ideas seem, and the more time there has been for scandals to accumulate. And in Clinton's case, she comes prepackaged with scandals of her own. It's just less motivating to turn out for your party's third presidential term than it was for the first, when your base was fired up and a substantial number of independents were sick of the party in office. ¶9. Obama's approval ratings do not make for long coattails. In the last four years of his presidency, Bill Clinton's approval ratings averaged over 60 percent. Nonetheless, his not-particularly-appealing VP barely fought the election to a statistical draw. Obama, meanwhile, has struggled to break 50 percent. Maybe those ratings are going to shoot up for the last year, but that's going to take some shooting to get Hillary Clinton into "inevitable" territory.

2. Clinton scandals and stoic attitude kill public appeal.

Meghan Mcardle 04/15/15 Bloomberg Columnist, MBA from University of Chicago, English lit BA from University of Penn. "Hilary Clinton isn't inevitable."
<http://www.bloombergview.com/articles/2015-04-14/hillary-clinton-isn-t-inevitable04/15/15>

6. She's not a particularly good candidate. She has never won a tough election. In fact, she's only won in deep blue New York, which is not exactly playing against the varsity. On the stump, she has nowhere near the appeal of her husband, or Barack Obama. She's a totally fine speaker, but she is not inspiring, and she does not come off as warm; her tone ranges from "well coached" to "annoyed." You might call her the Mitt Romney of the Democrats. ¶ 7. All the Clinton baggage is going to come back to haunt her. Americans love their presidents ... in retrospect. Even George W. Bush is starting to attract some warm, fuzzy feelings for his foray into painting and his

admirable determination not to go around trying to conduct shadow policy debates. All the things we hated about the Clintons, from the financial scandals to the pardons, have faded into distant memory. As soon as Hillary Clinton goes on the stump, however, we'll start having flashbacks. Indeed, with the e-mail mess, they have already started.

3. Chait's conclusions are false, large voter coalitions are empirically fragile.

Meghan Mcardle 04/15/15 Bloomberg Columnist, MBA from University of Chicago, English lit BA from University of Penn. "Hillary Clinton isn't inevitable."
<http://www.bloombergview.com/articles/2015-04-14/hillary-clinton-isn-t-inevitable>04/15/15

Seemingly alone among commentators, I am bearish on Hillary Clinton. Not "she can't win" bearish, but "something less than a 50 percent chance of winning" bearish. Why is everyone else convinced she's a lock?¶ If you believe the "wisdom of crowds" argument, the answer is that I'm wrong and they're right. And fair enough. But this crowd is composed of mostly left-leaning journalists and academics, so there might be a wee bit of sample bias.¶ Gender Gap¶ Jonathan Chait has a smart piece in New York magazine on why Clinton is probably going to win. Here's my bear-side case for why I don't think she will. The Emerging Democratic Majority is questionable. Chait thinks it still holds; I'm skeptical, mostly because I don't believe in permanent coalitions. The bigger your coalition, the bigger its internal tensions. Coalitions can collapse suddenly and without warning -- who in 1976 would have predicted 1980?

4. Clinton campaign focus on female audience that already leans towards democrats trades off with low male and minority turnout needed for win.

Meghan Mcardle 04/15/15 Bloomberg Columnist, MBA from University of Chicago, English lit BA from University of Penn. "Hillary Clinton isn't inevitable."
<http://www.bloombergview.com/articles/2015-04-14/hillary-clinton-isn-t-inevitable>04/15/15

It's not clear how far she'll outperform Barack Obama with women. Clinton beat Rick Lazio in 2000 by a shocking percentage among women -- 20 points. But that's in New York state, where there are a lot of unmarried women (married women actually lean Republican). And Obama already carried women 55 to 60 percent in 2012. Realistically, how much higher can she drive that percentage, or turnout among women voters? Moreover, there are trade-offs: Democrats outperformed among women, but are underperformed among men. Clinton seems to be planning a platform heavy on items designed to appeal to female voters, such as paid family leave. But these actually appeal to a pretty narrow segment of the population -- young single women, and those with small children -- where Democrats already do really well. There's the risk that these gain her voters among folks who are already strong Democrats while costing her votes in segments she needs to pick up. Especially since any serious promise of these things is going to have to come with a plan for paying its hefty price tag. 3. I doubt she'll replicate Obama's turnout among black voters. Obama brought a lot of black voters to the polls, for the same reasons that Catholic voters, especially Irish Catholics, lined up around the block to vote for Al Smith and John F. Kennedy. The first president from a group that has historically faced discrimination is naturally going to drive higher turnout among that group, but that doesn't mean they'll keep turning out in the same numbers (or even for the same party -- 20 years after JFK, a lot of Irish Catholics were voting Republican). I expect that blacks will continue to be a strong constituency for Democrats in years to come, but I doubt they will come to the polls for Clinton in the same way they did to vote for the first black president. That means she has to make up those votes elsewhere.

Dems Lose General

Democrats will lose General but Economic growth could be Black Swan

Fair 5/27 (Ray Fair, professor of economics at Yale University, has predicted 7 out of 9 elections, author of 'Predicting Presidential Elections and Other Things', 5/27/15, 'In 2016's presidential race, the winner will be ...', <http://www.latimes.com/opinion/op-ed/la-oe-0527-fair-election-prediction-20150527-story.html>, 7/1/15, ACC)

Since 1978, based on data going back to 1916, I've documented how four conditions affect voting patterns. The first is whether the president is running again. If so, this has a positive effect on votes for the president. The second is how long a party has controlled the White House. **Voters like change; when a party has been in power for two or more consecutive terms, this has a negative effect on votes for that party's candidate.** The third is the slight but persistent bias in favor of the Republican Party. Finally, the state of the economy: **A good economy at the time of the election has a positive effect on votes for the incumbent party candidate.** The economic variables that matter are the rate of inflation and output (GDP) growth. Of particular importance is GDP growth in the first three quarters of the election year. **These first three conditions are working against the Democrats** in 2016. The president is not running; the Democrats have been in power for two terms; there is that lingering Republican bias. According to the equation behind my work, then, **the economy has to be very strong between now and the election for the Democrats to have a good chance of winning.** Most economists believe the economy will grow at about a 3% annual rate between now and **November 2016**. If that happens, my equation predicts the Democrats will win about 46% of the vote in a two-party contest. **In order for them to win more than 50%, the economy would need to grow at about 4%, and even in that case their predicted vote share would climb only slightly above the halfway mark.** My equation's average prediction error over the 25 elections since 1916 is between 2.5 and 3.5 percentage points. **Assuming the economy does indeed grow at 3%, the probability that the Democrats will win is low, between about 5% and 13%.** Republicans have cause for confidence. My analysis is, of course, based on the assumption that the future will be like the past. What if voters start caring more about income inequality than economic growth, and perceive the Republicans to be poor on that issue? Or what if the GOP nominates someone further from the mainstream than ever before? **Shifts in priorities can never be ruled out, but** the best I can say is that **the conditions that sway voters appear to have been fairly stable for 100 years** — and my equation has a fairly good track record. **In seven of the nine contests** between 1980 and 2012, my **equation correctly predicted which party would win the popular vote**. It was wrong in 1992, when it predicted that Clinton would lose. (There was a strong third-party candidate that year, Ross Perot, which may have been a problem.) And it was wrong in 2012, when it predicted President Obama would win only 49% of the vote and he got 52%. All along, however, I said the prediction fell within the margin of error. A prediction of the sort I have just made is different from predictions using polls. **Although polls can at times be fairly accurate, at least near the time of the election, they are not causal. The theory behind my analysis is that the economy and the other conditions have a causal effect on voting behavior.** Given an economic forecast, I can make a prediction at any time — I don't

even need to know who's running. I made my first prediction for the 2016 election in November, at which time I predicted, as now, that the Republicans would win if the economy turned out as currently expected. **If a more robust economy does not materialize, it is likely that after 18 months of essentially nonstop campaigning, the Democratic nominee will lose** — through no fault of her own.

Bush Losing Now

Jeb Bush could not win the Republican primary now due to the conservative vote

Collins 3-2-2015 "Kevin, "Here's Why It Is Simply Not Possible For Jeb Bush To Win 2016 GOP Primary, <http://www.westernjournalism.com/heres-simply-not-possible-jeb-bush-win-2016-gop-primary/>, a writer for **Western Journalism**".CC

We didn't really notice the political ineptness of George H.W. Bush. He ran with the great Ronald Reagan, who could have picked a name from the phone book as his running mate and still would have won both times. Bush the elder brought little to the ticket as he knew little about politics. When he ran on his own and picked Dan Quayle to run with him, he proved that point. George W. Bush was different. He had been Governor of Texas and knew things about politics his father never learned. He presented himself to us as a solid Texas-style conservative at first; but as his two terms progressed, his basic, RINO streak came out. Nevertheless, he won two hard-fought campaigns and demonstrated enough political skill to get by. Now, **the younger Bush-brother Jeb-who was twice elected governor of Florida, wants to be the Republican nominee for president in 2016. His political skills are not to be dismissed; yet a case can be made that, like his father, he was merely at the right place at the right time. Jeb Bush seems to think that he is entitled to the nomination** because..... well, it isn't clear why; but it is certainly the case. He has openly declared his intention **to capture the nomination without the support of the TEA party, which is the conservative core of the Republican Party. This is simply not possible. There are just not enough moderate and liberal Republicans who will actually vote in the Party's primaries to overcome the number of conservatives who will NOT turn out to vote.** Jeb winning Republican primaries will be as likely as his drawing the cards to fill an inside royal straight flush. **This doesn't seem to bother Jeb because he feels he is "entitled" to the nomination, somewhat like Bob Dole was in 1996.** Nevertheless, the differences between them are stark. While Dole was "conservative enough" for his time, Jeb is actively promoting the worst of the Left's agenda and has been for some time. He has called illegal immigration "an act of love" and continues to support amnesty for illegal aliens, even now after the Democrats have started openly admitting they want to use illegal aliens to gain and keep control of Congress for decades to come. Even knowing conservatives hate Common Core, Jeb wants to taunt us as he smugly talks down to us on the campaign trail. Jeb is undoubtedly being led astray by the likes of Karl Rove, just as his brother was. If they succeed, and Jeb Bush is the Republican nominee in 2016 (or ever, for that matter), he and the Republican Party will be crushed at the polls. Jeb's BFFs from Mexico won't vote for him, and neither will we. Jeb Bush's candidacy is a danger to America and the Republican Party.

No Republican Frontrunner– GOP loses confidence in Walker and JEB Campaign Mistakes

Hunt 5/14 (Kasie Hunt, Political correspondent for MSNBC, also writes for msnbc.com and NBCNews.com, and reporter in Washington, D.C., for nearly 10 years, 5/14/15, 'Lack of 2016 front-runner puts the GOP on edge',

<http://www.msnbc.com/msnbc/lack-2016-front-runner-puts-the-gop-edge,6/30/15,ACC>)

The Republican Party is without a front-runner in the presidential nomination fight. It's a reality that's been brewing for months, but has crystallized this week among the GOP officials gathered here in Arizona for the Republican National Committee's spring meeting. Jeb Bush has fallen from the man to beat to the richest member of the pack. Scott Walker seems to have gone underground. Marco Rubio is exciting but untested. And the Republican establishment is growing increasingly nervous that the party is facing a long, bloody primary fight that could drag into next summer. "There are a bevy of riches," former presidential candidate Rick Santorum said Thursday, putting the most positive possible spin on the chaotic reality that Republicans now face. "I don't know how you could look at any metric and not see that this is a completely wide open race." Santorum's rosy take is different from the slightly nervous, somewhat unsettled mood among the state party chairs, committee members and operatives who have gathered at the luxurious Phoenician resort. But hallway conversations, interviews and casual discussions over two days reveal they've largely reached the same conclusion about the state of the race: "It's anybody's ballgame," as one longtime RNC member put it, bluntly. Driving this reality? First, major mistakes. Earlier this year, it was Walker, who was leading in polls when he struggled to answer simple questions about President Obama's religion. He ducked questions from reporters and voters in the weeks that followed — though he has opened up some in recent weeks — and refused press access to his ongoing trip to Israel this week. "Now he's running the Hillary strategy," said an RNC member who's supporting a different candidate in the 2016 race. "It's the right strategy for him, but it's not a good situation." And then there's Bush, who this week couldn't seem to find an answer to the question that has seemed the most obvious from the get-go: Whether he would have authorized the war in Iraq that his brother launched in 2003. He stumbled into it in the very first sit-down TV interview he's given since December, when he announced he was interested in pursuing the presidency, telling Fox News' Megyn Kelly that he would have launched the war. It took him four days to fix it. "Knowing what we know now," Bush finally said on Thursday during a town hall in nearby Tempe, "I would not have engaged. I would not have gone into Iraq." The stumbling raised fears among many Bush loyalists and admirers. "That's not a hard answer. The answer is, 'hell no,'" said one RNC attendee. "I always encourage everybody to run for president, but it's hard," said Santorum, when a reporter asked if Bush was no longer an unstoppable force. "You're [reporters] here to cut to the bone. And, I've felt that knife at the bone. And it's a tough business, and if you're not prepared for it ... you're not going to do very well." Bush's diminished stature is quite a switch from just four months ago, when the party met in San Diego and the halls were energized by the prospect of Bush's impending candidacy. Back then, it had been about a month since Bush had announced he was interested in the race; Mitt Romney was considering a bid and many of the RNC's members privately wanted Romney to get out of the way so they could jump aboard with Bush. Since that time, Bush has raised tens of millions of dollars — possibly over \$100 million, an eye-popping and likely record-breaking sum. He's mounted an intense behind-the-scenes campaign to win over party chairs, officials and donors, taking aim at rivals' longtime supporters (particularly Chris Christie's). But he's failed to truly consolidate the party's support in the early stages of the nomination battle — and that's not just because of the recent Iraq stumble. It's

also the overall inaction in the non-finance areas of the campaign — namely Bush's waiting to formally announce and his failure to gin up excitement among voters in early states. "It's not just Iraq. It's everything about how he's conducted his campaign so far," said another member of the committee, who hasn't yet signed on with a candidate and requested anonymity to discuss private deliberations. Bush's family legacy and the focus on finding a new face to lead the charge against Hillary Clinton have raised nagging doubts for both Republican elites and the grassroots. It helps explain why there seem to be more and more potential Republican presidential candidates by the day — including John Kasich, the Ohio governor with longstanding ties to the Bush family who was widely expected to stay out when Jeb Bush announced he was interested. The whole scenario is the exact opposite of what the RNC tried to engineer as it surveyed the damage in the wake of 2012. Officials, led by RNC Chairman Reince Priebus, changed the rules for awarding delegates and altered the calendar to try and make sure the party picked a nominee quickly. It was supposed to eliminate a drawn-out fight like the one between Santorum and Romney that continued through April 2012 —and drained Romney's campaign of the money it could have used to answer Obama campaign attack ads that aired all summer long. All the better, the thinking went, to take on Clinton with a strong, consensus choice nominated at an early convention in July of 2016. Now, party members speculated this week, it's possible that as many as a half dozen candidates could emerge from the early state primaries. That sends the contest into a handful of bigger states that will award delegates proportionally, and then into a winner-take-all season after March 15. If there are multiple candidates still in, it could spark an across-the-map slugfest as hopefuls campaigned in different friendly delegate-rich states, their ads paid for by super PACs that can raise unlimited funds from a single wealthy backer.

No republican front-runner – Smaller contenders can still win

Shribman 6/2 (David Shribman, PITTSBURGH POST-GAZETTE EXECUTIVE EDITOR, 6/2/15, "For Kasich and other possible GOP hopefuls, low poll numbers not necessarily bad", The Blade, <http://www.toledoblade.com/David-Shribman/2015/06/02/For-Kasich-and-other-possible-GOP-hopefuls-low-poll-numbers-not-necessarily-bad.html>, 7/6/15, ACC)

Fox News and CNN, which will hold debates this summer, have established separate criteria to determine who gets to participate in their sessions. But both **will eliminate candidates who don't have average poll ratings in the top 10.** That may seem like a reasonable standard, but it is not foolproof. At this time in the political cycle in 1972, Sen. George McGovern of South Dakota averaged 5 percentage points in the polls. He won the Democratic presidential nomination. **At this time in the political cycle in 1976, former Gov. Jimmy Carter of Georgia polled an average 1 percent in national polls. He won the Democratic nomination — and the presidency.** Mr. Carter, who stood below former Mayor John Lindsay of New York, did not rank in the top 10 in 1975. Mr. Carter ranked just below Rep. Morris Udall of Arizona, who checked in with 1.7 percent. Mr. Udall was Mr. Carter's most ferocious and persistent challenger in that 1976 Democratic campaign. And **though Mr. Kasich and Mr. Pataki may seem like presidential long shots, they have occupied positions that have propelled occupants to the White House.** Martin Van Buren, Grover Cleveland, Theodore Roosevelt, and Franklin Roosevelt all were

former governors of New York. Rutherford B. Hayes and William McKinley both served as governor of Ohio. Mr. Graham can take comfort that a onetime senator from South Carolina, John Calhoun, served as vice president under two chief executives, was both secretary of state and secretary of war, and mounted several presidential campaigns. None of this is likely to help those three, however. **The rules of the road for 2016 require high poll ratings.** In a crowded field of declared candidates, that is going to be harder to do in 2015 than it was in 1971 and 1975. Of course, sometimes the front-runner wins the nomination and all the machinations of those at the bottom are rendered meaningless. But **in the 2016 GOP presidential race, there is no discernible front-runner. The distance separating** former Florida Gov. **Jeb Bush**, Sen. **Marco Rubio** of Florida, and Wisconsin Gov. **Scott Walker is an average 2.6 percentage points.** And **in one poll, Mr. Rubio leads. In another, Mr. Walker leads.** But **resolving the nomination is far off. Getting into contention is Job One for the new candidates.** And it will be hard for a candidate to get into contention unless he or she is involved in the debates. Then again, maybe the barrier to entry isn't quite as formidable as it may seem. **The two people tied for the No. 10 position — the contenders these other candidates have to surpass — are Mr. Kasich and Mr. Perry.** They stand at 2.0 percent in the polls.

JEB needs a GOP split to win primary – Walker and Rubio are main rivals

Stirewalt 6/15 (Chris Stirewalt, joined Fox News Channel (FNC) in July of 2010 and serves as digital politics editor based in Washington, D.C. and he authors the daily "Fox News First" political news note, 6/15/15, "It's really more like 'Jeb?' than 'Jeb!'", Fox News, <http://www.foxnews.com/politics/2015/06/15/its-really-more-like-jeb-than-jeb/>, 7/6/15, ACC)

The biggest disadvantage that Jeb Bush has isn't his last name, but rather the relative quality of the Republican field he is facing. That's not to say that being George W. Bush's little brother is an unalloyed positive for the former Florida governor. But as polls have shown, it is (no surprise) less of a problem for GOP primary voters than with the general electorate. Plus, Dubya is mellowing in the cask of public opinion, especially as President Obama flails about over Iraq. The younger Bush obviously understands the liabilities involved with his family name and the basic American resistance to dynasties. Otherwise, he wouldn't pick a logo that emphasizes a nickname that sounds as if it were ringing across the tennis courts at Andover. But don't let them kid you. If you wanted to be president and could choose whether to be the son and brother of presidents or be the son of a small-town preacher or a Miami bartender, you know what you'd pick. Bush was born on third base; everybody else had to hit a triple. But still, as he launches his official candidacy, Bush is struggling to assert his dominance. Bush is probably a better establishment-backed candidate than either of the two after his brother, and both John McCain and Mitt Romney won by comfortable margins. Yet, this time seems different. Part of it is technique. While Hillary Clinton has lowered the bar dramatically for forthrightness, accountability and probity, Bush's decision to invoke his Right to Raise unlimited sums for six months before actually declaring hasn't exactly set him up to run as the tribune of the people. But the biggest part is that Bush is facing serious competition. In 2008, Romney had to keep other viable establishmentarians out of the field, particularly then-Indiana Gov. Mitch Daniels. Once the field was set, Romney had only one real threat: then Texas Gov. Rick Perry. But Perry

was a bust. Everything after was just delaying the inevitable. This time, Bush has at least two rivals in Gov. Scott Walker, R-Wisc., and Sen. Marco Rubio, R-Fla., whose talents and positions make them real alternatives. Remember, the way the previous two candidates put away the nomination: Mainstream Republicans blanched at the thought of nominating candidates seen, fairly or not, as one-dimensional, social issue grinds. Neither Walker nor Rubio is that kind of candidate. If either makes it into the home stretch with Bush, the surge is more likely to come for the underdog rather than the current frontrunner. **Unless Walker and Rubio succeed in destroying each other and leaving the way open for a riskier pick,** Bush will not have the advantage of declaring his final foe electorally toxic.

Bush Wins General

Jeb Bush's moderate stance can capture votes from both sides of the aisle he is the only Republican that can defeat Hillary Clinton, his surveillance stance only

hurts him in the primary **Rose 15** "Steve, writer for the Kansas City Star, "Jeb Bush would be a lock for the GOP in the 2016 presidential campaign", <http://www.kansascity.com/opinion/opn-columns-blogs/steve-rose/article5350368.html>".CC

No matter what many political pundits say, I believe Jeb Bush will be the Republican nominee for president in 2016. Furthermore, the former governor of Florida is the only Republican candidate in sight who can beat Hillary Clinton (who, I believe, has nearly a 100 percent chance of running). I know the arguments against what I am predicting. Bush is too moderate to make it through the Republican primaries, where conservatives dominate the process. But here is why I believe Bush will prevail in the primaries and possibly become the next president of the United States: Conservatives will want, more than anything, to beat Hillary. They will look around, they will study the polls and they will find they will lose without Bush at the head of their ticket. Furthermore, with what appears will be the most competitive Republican primary for president in recent memory, there is a good possibility that the conservatives will split up their vote, while Bush parades through with his moderate views. Jeb Bush has so many things going for him, to help him in both the primary and the general elections. **First of all, he has the name identification. Although his brother, George W. Bush, left the presidency with a highly unpopular rating, the Bush name is still a plus, over so many other Republican candidates, some of whom remain mysteries to most people. Bush has his family's network to fundraise tens of millions of dollars overnight.** He has the political organization inherited from the Bush family — a state-by-state infrastructure — to immediately place him ahead of any other Republican candidate. Bush stands, by far, the best chance of capturing a good size of the critical Hispanic vote. His wife is Mexican, and **Bush speaks fluent Spanish. His open position on immigration reform will draw throngs of Latinos to his side. Although immigration reform is not popular with conservatives, when they do the math and see that the Hispanic vote can make the difference in key states,** they will come to realize they cannot win without Jeb Bush's immigration reform. Bush isn't afraid to speak his mind. He has been critical of many in his own party, who he believes have been irresponsible and abrasive. He is refreshing, because most other candidates — if not all the others — will kowtow to the right and say the same things to get nominated. Bush will stand out as a leader, who has a mind of his own. Bush has been a Catholic since 1995 and is devoutly pro-life. Jeb Bush is a likable candidate. His demeanor is one that voters can embrace. He comes across as affable, reasonable and friendly. **He is not a fire-brand Republican, nor would he alienate moderate Republicans and, critically, independents. All of these pluses, for sure, would make Bush the best candidate to field against Hillary Clinton, or any other Democratic candidate.** Conservatives will begrudgingly come to the same conclusion. Rush Limbaugh and others are incorrect when they pose the hypothesis that Republicans lose the presidency so often because its candidates are not conservative enough. Limbaugh holds the mistaken belief that a majority of Americans believe like he and his listeners do. Quite the opposite is true. **The majority of voters in a presidential election are not conservatives. They are mainstream voters looking for moderation. If Mitt Romney, for example, had portrayed himself more like the moderate former governor of Massachusetts that he is, and not a conservative caricature of himself, he might have beaten Barack Obama. But, no, he alienated so many middle-of-the-road voters, that he had no chance in a general election.** I wouldn't be surprised if Bush skips the Iowa Caucus, where he would end up getting trounced by an ultra-conservative. He could build momentum after that. **I just do not think conservatives will commit suicide, assuming Hillary Clinton runs. Only Bush can beat her, and conservatives detest the Clintons so much, they would do anything to keep**

both of them out of the White House. Read more here: <http://www.kansascity.com/opinion/opn-columns-blogs/steve-rose/article5350368.html#storylink=cpy>

Turn Out: Dynasty

Bush and Clinton are synonymous with their parties - limits the other factors that would change turnout and the course of the election

Ladd 5-1 “Clinton v Bush could be the most political science-y election of all time, Jonathan Ladd is an associate professor in the McCourt School of Public Policy and the Department of Government at Georgetown and a nonresident senior fellow at the Brookings Institution, <http://www.mischiefsoffaction.com/2014/05/clinton-v-bush-in-2016-could-be-most.html>”.CC

As Jeb Bush considers whether to run for the 2016 Republican presidential nomination, and Hillary Clinton remains the most likely Democratic nominee, **analysts have already begun speculating about what it would mean to have a Bush v. Clinton election in 2016.** Why are political dynasties so successful in the United States? Is it further evidence that the United States is really an oligarchy? While these questions are certainly important, as a political scientist, this sparks another thought in me. **A Bush v. Clinton 2016 race could be the most political science-y presidential election of all time!** If ever there is ever an election where the fundamentals are vastly more important than details of the candidates and campaigns, this will be it **There is a stereotype that political scientists think presidential election results are entirely determined by national conditions.** These conditions lead the parties to perform similarly regardless of whom they nominate or what happens in the campaign. While few political scientist would go that far, there is some truth to this. The consensus in the field is that structural factors matter much more than is usually depicted in political journalism. The variables political science most often puts forth are national economic performance in the election year, how long the current party has held the presidency, whether the nation is involved in a costly foreign war, and the division of party identification in the mass public. Beyond these, it is hard to find anything else that is correlated with election results, yet not caused by them. For instance, issue preferences and assessments of candidates personalities are strongly correlated with vote choice, but largely because they are rationalizations of pre-existing political orientations. This is not to say that candidate attributes never matter. But we only have good evidence of this in a few instances. One type of circumstance is when the demographics of the candidate is very novel. In 1928, the first Catholic major party nominee Al Smith did better than expected among Catholic voters. And in 2008, some plausibly argue that the first African American nominee Barack Obama performed worse because of his race than the disastrous economic conditions would predict. Even the classic 1960 book, *The American Voter*, which is usually cited for its argument about the importance of long term party identification, admits that candidates can matter. One of the themes of the book is that in 1952 and 1956, Dwight Eisenhower's tremendous personal popularity based on saving western civilization from the Nazis allowed him to overcome the Democrats' advantage in long term party identification. Campaign resources also can matter when the discrepancy between the campaigns is huge. At one point Larry Bartels estimated that a 2-to-1 advantage in general election spending, which the Republican Party enjoyed from 1964 to 1972, produced a three-percentage-point increase in vote share. But short of a dramatic discrepancy in resources, almost all campaign efforts by the two sides cancel each other out **If Hillary Clinton is the Democratic nominee and Jeb Bush the Republican nominee, none of these special situations where candidates and**

campaigns matter will be present. It will be practically the exact opposite. Rather than standing out from their parties' typical nominees, at this point Bushes and Clintons are synonymous with their respective parties. A 2016 Clinton v Bush race would mean that since 1980, 8 of 10 presidential elections had a Bush or Clinton on a major party ticket and 6 of 10 had a Bush or Clinton at the top of a major ticket. This is more prior national campaign exposure linking nominees' names to their parties than in any previous presidential election. (*Historical Side Note:* The closest analogue might be 1968, when Nixon had previously been on a national ticket 3 times and Humphrey once. FDR was elected 4 times, and was vice-presidential nominee in 1920, but none of his opponents' names had been on a national ticket before. Of course his fifth cousin Teddy had been president from 1901 to 1909, but representing the opposite party. Going all the way back to a very different media era, Andrew Jackson and John Quincy Adams ran against each other twice in a row in 1824 and 1828. Adams' father was widely known for his role in the revolutionary era. But when John Adams was president 1797-1801, he represented the Federalist Party, which was defunct by the 1820s, when his son ran essentially without a clear party affiliation.) One of the reasons the structural circumstances of the parties usually matter so much is that those who have weak enough party attachments to be persuadable pay only loose attention to politics. Once a candidate gets a major party nomination, they are mainly known to these voters as someone who holds said nomination. That is by far the most salient thing about them. They are assumed to hold the policy positions and economic management aptitude of their party. Yet in this case, it is not a matter of party reputations overwhelming candidate reputations so much as the two already being inseparable. The actions of Clintons and Bushes have helped create the parties' national reputations over the past several decades at the same time as the families' long prominent partisan activities have adhered those parties' reputations to the families. If they are nominated in 2016, they might as well be named Jeb Republican and Hillary Democrat. **As a result, structural party circumstances that political scientist love to talk about will loom large and it will be harder than ever for some new campaign appeal to distract voters from that.** The two ways that this could be wrong is if Hillary's gender has an impact, or if one side obtains a huge financial advantage. While possible, I think both are unlikely. The reason I am skeptical that women would support Hillary in greater numbers (or men in smaller numbers) than they would for another Democrat is that women are historically not disproportionately likely to favor so called "women's issues." Women in recent decades have disproportionately supported Democrats, but that is because women have more liberal views than men on social welfare spending, defense policy, crime policy, and racial policy. Women and men have on average the same views on things like women's role in the family and abortion (see here and here). Gender differences in party preference are not the result of gender-specific political appeals. Thus, I expect Hillary to have the same advantage among women (and disadvantage among men) that Democrats typically do, because that is based on the foundational policy commitments of the parties. With recent Supreme Court decisions loosening campaign finance regulations, it is difficult to speculate about how much spending will favor each side in 2016. It is possible that money from the wealthy and corporations will produce a Republican advantage greater than we've seen in recent years. All I will say is that, if there is any nominee who minimizes the chances of that happening, it is Hillary. The Clinton family's long-developed network of donors and fundraisers, along with their reputation as members of the more pro-business wing of the Party, will likely give her as much money as any Democrat could hope for in 2016. If Jeb and Hillary are nominated in 2016, you'll be able to ignore the day-to-day blather of the campaign more than ever, knowing that voters will be deciding based on structural assessments of the two parties. For

better or worse, those hoping to get a respite next cycle from political scientists feeling superior to campaign journalists may be disappointed.

Predictions/Polls Good

Polls only way for updated political opinion – gives people a voice

Gallup 7 (Gallup Organization, American research-based, global performance-management consulting company, known for its public opinion polls conducted in several countries, 'What Is Public Opinion Polling and Why Is It Important?', Gallup.com, <http://media.gallup.com/muslimwestfacts/PDF/PollingAndHowToUseItR1drevENG.pdf>, 7/2/15, ACC)

A scientific, nonbiased public opinion poll is a type of survey or inquiry designed to measure the public's views regarding a particular topic or series of topics. Trained interviewers ask questions of people chosen at random from the population being measured. Responses are given, and interpretations are made based on the results. It is important in a random sample that everyone in the population being studied has an equal chance of participating. Otherwise, the results could be biased and, therefore, not representative of the population. Representative samples are chosen in order to make generalizations about a particular population being studied. Why are opinion polls important? Helping regular people be heard Polls tell us what proportion of a population has a specific viewpoint. They do not explain why respondents believe as they do or how to change their minds. This is the work of social scientists and scholars. Polls are simply a measurement tool that tells us how a population thinks and feels about any given topic. This can be useful in helping different cultures understand one another because it gives the people a chance to speak for themselves instead of letting only vocal media stars speak on behalf of all. Opinion polling gives people who do not usually have access to the media an opportunity to be heard.

Election forecasts growing more accurate – pollsters switch to online surveys

Ball 13 (Molly Ball, staff writer covering U.S. politics at The Atlantic, March 2013, 'A More Perfect Poll', The Atlantic, <http://www.theatlantic.com/magazine/archive/2013/03/a-more-perfect-poll/309219/>, 7/2/15, ACC)

But a funny thing happened last fall, even as polling paranoia was raging: the polls got smarter, thanks in part to Internet-based polling, a method that had previously been seen as the industry's redheaded stepchild. After the election, when Silver ranked 23 pollsters by how closely they approximated the presidential-election result, firms that had conducted their polls online took four of the top seven spots; in a separate ranking by a Fordham University professor, they took three of the top seven. Meanwhile, traditional, telephone-based survey groups like Gallup and the Associated Press scored near the bottom of both lists. That's right: in 2012, polls that relied on people clicking on the equivalent of those "Your Opinion Counts!" pop-up ads proved a more effective gauge of the American electorate than the venerable Gallup Poll. There's reason to believe the Internet-based survey may be the future of political polling. If people are increasingly inaccessible by phone, they're increasingly accessible online. Market research by big corporations, which have economic incentives to pursue fast, cheap, accurate data, has largely migrated to the Internet already. Darrell Bricker, the CEO of Ipsos Public Affairs, whose online polls for Reuters placed a respectable sixth out of 28 in the Fordham professor's rankings, told me that about 70 percent of corporate opinion studies are now Internet-based. Political polling is another matter, however. Bricker says he's heard online researchers mocked

on more Washington, D.C., political panels than he can count. Political consultants and the media have been cautious, even hidebound, about changing their polling standards in recent years. "I'm all for experimentation," Jon Cohen, the polling director for The Washington Post, told me. "But until it's been justified methodologically the way random polling with telephones has been, I'm skeptical." Some of this skepticism is understandable. Whereas most phone surveys follow a well-established protocol, online polling's sheer newness means practitioners are still refining techniques and working out methodological kinks. The chief issue is how to get people to participate. Most online-survey participants have opted in, sometimes in exchange for cash or other rewards. Some companies, like Ipsos, bring in additional respondents through social media and ads on Web sites (for example, a poll that needs more 18-to-34-year-old men might advertise on a gaming site). Nonetheless, the traditionalists charge that online polls don't achieve a truly "probabilistic" sample, in which each member of the electorate has a theoretically equal chance of being contacted. Just about everyone who votes has a phone, but only 80 percent of American adults have Internet access, and those who don't are predominantly older and lower-income. For Ipsos, a French opinion-research conglomerate that takes in more than \$1.5 billion annually, early success in online market research for clients like Coca-Cola opened minds to the Internet's possibilities. The company began experimenting with online political polling in 2004, in Canada. The country proved to be an ideal laboratory, as a series of unstable minority governments led to four national elections in seven years. Conducting surveys online and by telephone simultaneously, Ipsos refined its techniques until, by the fourth election, its Internet surveys were consistently more reliable than its phone polling. The company later persuaded Reuters to go online for the 2012 election, a decision that was vindicated almost immediately, in Florida's January 2012 Republican primary. Primaries are notoriously difficult to forecast, because they involve relatively small—and fickle—blocs of voters. But while other pollsters were off by an average of nearly 6 percentage points, Ipsos came within half a point of the Florida result. When it came to the general election, online-poll results were quite a bit more accurate, on average, than their offline competitors. When Silver compared polls in the final weeks of the presidential campaign with the outcome, Internet polls had an average error of 2.1 points, while telephone polls by live interviewers had an average error of 3.5 points. Might the polling traditionalists finally come around? You might think so, and yet The New York Times—the very paper that hosts FiveThirtyEight, Silver's blog—still refuses to cite Internet-based polls in its news reporting.

Generic: Sanders

Plan brings up Clinton's voting history on surveillance – paints her as hypocritical and Bernie will press the issue

Friedersdorf 2-25-2015 “Conor, Conor Friedersdorf is a staff writer at The Atlantic, where he focuses on politics and national affairs, “Hillary’s evasive views on the NSA”, <http://www.theatlantic.com/politics/archive/2015/02/hillary-clintons-evasive-position-on-nsa-spying/386024/>” .CC

Hillary Clinton is almost certain to launch a bid for the presidency. But **at least for now, she's determined to keep the public guessing about her stance on NSA spying. As Edward Snowden's revelations forced the issue to the fore of national debate, she kept mum, even as other prospective candidates staked out positions.** On Tuesday, the technology journalist Kara Swisher raised the subject of surveillance while questioning the former Secretary of State. "Would you throttle back the NSA in the ways that President Obama has promised but that haven't come to pass?" she asked. Clinton's successfully evasive answer unfolded as follows: Clinton: Well, I think the NSA needs to be more transparent about what it is doing, sharing with the American people, which it wasn't. And I think a lot of the reaction about the NSA, people felt betrayed. They felt, wait, you didn't tell us you were doing this. And all of a sudden now, we're reading about it on the front page... So when you say, "Would you throttle it back?" Well, the NSA has to act lawfully. And we as a country have to decide what the rules are. And then we have to make it absolutely clear that we're going to hold them accountable. What we had because of post-9/11 legislation was a lot more flexibility than I think people really understood, and was not explained to them. I voted against the FISA Amendments in 2008 because I didn't think they went far enough to kind of hold us accountable in the Congress for what was going on. Swisher: By flexibility you mean too much spying power, really. Clinton: Well yeah but how much is too much? And how much is not enough? That's the hard part. I think if Americans felt like, number one, you're not going after my personal information, the content of my personal information. But I do want you to get the bad guys, because I don't want them to use social media, to use communications devices invented right here to plot against us. So let's draw the line. And I think it's hard if everybody's in their corner. So I resist saying it has to be this or that. I want us to come to a better balance. This will not do. **The answer elides the fact that Clinton has *not* been a passive actor in surveillance policy. "What the rules are" is something that she was responsible for helping to decide. She served in the United States Senate from 2001 to 2009. She cast votes that enabled the very NSA spying that many now regard as a betrayal. And she knew all about what the NSA wasn't telling the public. To say now that the NSA should've been more transparent raises this question: Why wasn't Clinton among the Democrats working for more transparency?** Clinton may resist "saying" that surveillance policy "has to be this or that," but it must be *something* specific. "Let's draw the line" and "I want us to come to a better balance" are shameless weasel phrases when you're vying to call the shots. What is being balanced in her view? What should the NSA have revealed earlier? How much transparency should it provide going forward? What does the law require of the NSA? **Since 9/11, when has the NSA transgressed against the law as Clinton sees it? Those questions hint at the many ways that her position is evasive. So long as no one else contests her party's nomination, she can get away with it.**

Generic: Rand Paul

Federal curtailment of Surveillance gets tied back to Paul – Freedom Act proves.

Rogers 6-1-2015 “Alex, a correspondent for the National Journal, “Rand Paul takes credit for NSA reform bill he opposes, <http://www.nationaljournal.com/defense/rand-paul-takes-credit-for-advancing-nsa-reform-bill-he-opposes-20150601>”.CC

Sen. Rand Paul is taking credit for advancing a bill he opposes. A day after forcing a temporary shutdown of the National Security Agency's bulk collection of America's metadata, the Kentucky Republican said Monday night that his actions actually boosted the surveillance-reform bill known as the USA Freedom Act, which will likely pass the Senate in the coming days despite his repeated—and vociferous—objections that it doesn't go far enough protecting the privacy rights of Americans. Noting that the Senate failed to get the requisite 60 votes before Memorial Day recess and subsequently voted overwhelming Sunday to move the bill forward, Paul told reporters as he left the Capitol that his blockade of the bill helped Freedom Act advocates. "The government will no longer be collecting in bulk all Americans' records under a generalized warrant," he said. "So I think that's a big step forward." "I like to look at the bright side of things," Paul added. **Before I got involved there were 57 votes. Even though I object to the final vote, there's now 77 votes for ending bulk collection. So you could say that I—in an unusual way—persuaded 20 people to switch their vote and to vote to end bulk collection. It's kind of a different way of persuading people, but it seemed to work."**

Paul held up consideration of the Freedom Act during a rare Sunday session called to try to stave off the lapse of the Patriot Act's spy authorities—which expired the moment the calendar turned over to June. The presidential candidate has repeatedly said he would relent in gumming up the process if he were allowed simple-majority votes on two amendments to the Freedom Act he is seeking, but the Republican leadership has refused. On Monday, Paul again objected to allowing the Senate to move more quickly on voting on the Freedom Act when Majority Leader Mitch McConnell sought unanimous consent to proceed, continuing his delay tactics even though the expiration has already come and gone. Though Paul is taking credit for the jump in support for the Freedom Act, something else likely played a more significant role: McConnell released his caucus to vote for the measure. The defense hawk had been unusually aggressive in whipping against the House-passed bill until it became clear that there was no support for his push of a "clean" short-term extension. When the measure came up for another vote to proceed Sunday, **it jumped from 47 to 77 "ayes," and both McConnell and Majority Whip John Cornyn joined in the switch. Sens. Mike Lee, R-Utah, and Joe Manchin, D-W.Va., and others took to the floor to press for the bill during Paul's 10-plus hour-talk-a-thon on the chamber floor last month.** Paul's "fear," as he said Monday, is that the bill would still keep Americans' metadata—the numbers, time stamps, and duration of a call but not its contents—by asking phone companies to hold that data. "If you think bulk collection is wrong, why do they need new authorities," asked Paul during his "filibuster." "Why are we giving them some new authorities?" Paul said Monday that his position is still misconstrued. "I think there's still some misunderstanding about what I want, because I'm for researching the records of terrorists," he added. "I'm just not for having a generalized search of everybody in the American public."

SSRA: Rand Paul

SSRA passage will be spun as huge Paul victory – sponsors of bill are staunch allies.

Spencer Ackerman 06/02/15 Guardian National Security Editor, Former Wired Senior Writer, Recipient of 2012 national magazine award for Digital Reporting, “Rand Paul Allies plan new Surveillance reforms to follow USA freedom act,” <http://www.theguardian.com/us-news/2015/jun/02/rand-paul-house-allies-surveillance-usa-freedom-act>

Several of Rand Paul’s allies in the US House of Representatives are seeking to capitalize on the momentum of surveillance reform as the USA Freedom Act continues through the Senate by attempting to stop the National Security Agency from undermining encryption and banning other law enforcement agencies from collecting US data in bulk. ¶ Thomas Massie, a libertarian-minded Kentucky Republican, has authored an amendment to a forthcoming appropriations bill that blocks any funding for the National Institute of Science and Technology to “coordinate or consult” with the NSA or the Central Intelligence Agency “for the purpose of establishing cryptographic or computer standards that permit the warrantless electronic surveillance” by the spy agencies. He is joined in the effort by Democrat Zoe Lofgren of California. ¶ Massie and Lofgren will place the amendment on the bill funding the Justice Department as early as Tuesday. Their move is part of the first wave of follow-up measures by privacy advocates to supplement the USA Freedom Act, a bill already passed by the House which, although it would limit some NSA powers, many civil libertarians consider insufficient. ¶ “The USA Freedom Act is definitely not the last word. Whenever a program expires or whenever funding is required, those are must-pass pieces of legislation that present opportunities for refinement,” Massie told the Guardian on Tuesday. ¶ Lofgren and another civil libertarian, Republican Ted Poe of Texas, will propose an amendment to the same appropriations bill that would block the Federal Bureau of Investigation from inserting vulnerabilities into encryption on mobile devices. ¶

Advertisement ¶ The FBI director, James Comey, is currently campaigning against tech companies that are expanding encryption for their commercial products. ¶ “Privacy is a constitutional right, whether the FBI likes it or not,” Poe told the Guardian on Tuesday. ¶ Another congressional privacy advocate, Democrat Jared Polis of Colorado, will push a further amendment to the appropriations bill that would in effect block the Drug Enforcement Agency from collecting Americans’ phone data in bulk – a recently exposed surveillance program that preceded the NSA’s now-shuttered bulk collection. The Guardian has acquired the text of all these amendments. ¶ Polis told the Guardian he wanted to “rein in” the DEA’s “unwarranted and unconstitutional program”, calling the Freedom Act “the beginning of a reform process, not the conclusion of one”. ¶ The Senate is slated on Tuesday to debate the USA Freedom Act, a bill to ban bulk collection of US phone records by the NSA that would have the effect of restoring provisions of the Patriot Act that expired at midnight on Sunday. ¶ Passage is expected, but the GOP majority leader, Mitch McConnell, is pushing amendments that civil libertarians in the

House reject and which would require a new House vote on the overall bill.¶ “We still don’t know what the Senate’s going to do. If they start changing what we sent them, we’re going to be looking to do further improvements in the bill,” Lofgren told the Guardian before the Senate vote. “We’re not giving up.”¶ Extensive compromise with the NSA and the White House, as well as clever legislative strategy, ensured House passage of the Freedom Act last month. But it also siphoned enthusiasm and even support from the chamber’s most fervent privacy advocates. Massie championed a different bill, **the Surveillance State Repeal Act**, that would have rolled back many more NSA and FBI spy powers.¶ The more technologically sophisticated privacy campaigners have warned that neither the White House nor the US Congress has addressed government efforts to secretly undermine encryption standards.¶ The Guardian, thanks to whistleblower Edward Snowden, revealed in September 2013 that the NSA and its British partner GCHQ routinely insert vulnerabilities into commercial encryption software that permit the agencies to access protected data. But the vulnerabilities, commonly called “backdoors”, also leave software that banks, businesses, internet service providers and others rely upon as prey for hackers.¶ The National Institute of Science and Technology issues encryption standards. But a document leaked by Snowden showed that in 2006, the NSA secretly worked with the institute to become the “sole editor” of a draft security standard that the institute issued.¶ “It’s bad for business. It’s bad for privacy and bad for civil rights,” Massie recently told a business conference in Louisville.¶ Last year, Lofgren unsuccessfully attempted to place a ban on undermining encryption in the USA Freedom Act. But this time, she and her allies will attempt to hang their amendments on to as many must-pass bills as necessary. Should their efforts fail this week, Poe confirmed that their next step will be to add the amendments to the must-pass Defense Department appropriations bill that the House will debate soon.¶ If that doesn’t work, they intend to move on to the next available bill and employ the same strategy. Massie indicated the coalition is already looking towards the June 2017 expiration of another broad surveillance power, Section 702 of the Foreign Intelligence Surveillance Act, to force additional rollbacks, much as the USA Freedom Act authors used the expiration of parts of the Patriot Act as leverage to pass their bill.¶ “We’re going to have multiple opportunities going forward. In fact, the 702 provisions expire in 2017, so those will have to be renewed, and there’ll be a great debate then about the even more invasive spying on American citizens that’s going on,” Massie said.¶ Lofgren added: “We will continue to make efforts to attach those improvements to every vehicle that moves through the body.” ¶ Massie, Poe and Lofgren’s efforts come as the FBI and NSA have launched a public campaign against commercial encryption. While advocating in favor of backdoors and denouncing new mobile-device encryption – which companies describe as a market-driven response to Snowden’s disclosures – they insist they can create vulnerabilities they alone can exploit. Engineers consider the effort to be technologically illiterate.¶ “House members are sending two clear messages with these amendments to the Department of Justice funding bill. The first is to Senators Mitch McConnell and Richard Burr, and the message is: ‘Surveillance law reform is continuing; deal with it,’” said Patrick Eddington of the Cato Institute.¶ “The second is to Attorney General Loretta Lynch and FBI director Jim Comey, and the message is: ‘We’re not going to let you make every American vulnerable to hackers and foreign spies by subverting public key encryption.’”¶ **Massie is among the leading House allies of Senator Rand Paul, the Kentucky Republican and presidential candidate who is making opposition to mass surveillance a cornerstone of his campaign.** He and their comrade Justin

Amash, a Michigan Republican, stood guard in the House last week to ensure surveillance advocates did not exploit a parliamentary maneuver to drive a weaker version of the USA Freedom Act through a recessed House.

Plan -> GOP Split

Surveillance is key for primary – GOP divisions on security

Shribman 6/9 (David Shribman, PITTSBURGH POST-GAZETTE EXECUTIVE EDITOR, 6/9/15, “Surprises in 2016 campaign: National security, GOP attacking income gap”, The Blade, <http://www.toledoblade.com/David-Shribman/2015/06/09/Surprises-in-2016-campaign-National-security-GOP-attacking-income-gap.html>, 7/6/15, ACC)

So it should be no surprise that the 2016 presidential campaign already has provided several surprises. But these surprises are worth noting, because they help explain the road ahead and prepare us for the sorts of surprises that may be around the next bend. The prominence of national security. Few American elections have been about foreign policy. Usually our candidates emphasize domestic issues, especially the economy. There was every expectation when this campaign began months ago that 2016 would be no different. But two events last week suggest the opposite may be true. One was the entrance into the Republican presidential race of Sen. Lindsey Graham of South Carolina, a defense hawk who emphasized foreign policy in his announcement. “I have more experience with our national security than any other candidate,” he said. About Democrat and former secretary of State Hillary Clinton, Mr. Graham added: “That includes you, Hillary.” Also last week, Sen. Rand Paul of Kentucky transformed the Capitol debate on the Patriot Act into a campaign event, bringing attention to his drive to curtail electronic surveillance. The Republican also set out his broader foreign-policy views, which his critics argue verge on isolationism. Republicans of a bygone age, but only a few who’ve been recently active, such as Mr. Paul’s father, were confirmed isolationists. During the Vietnam era and the years that followed, though, it was Democrats who shied away from international involvement. Now the presence of Mrs. Clinton in the presidential race assures that foreign policy will have unusual attention.

JEB supports surveillance – Applauded Obama for continuation

Shiner and Stableford 5/19 (Meredith Shiner, Reporter for Roll Call, Politico and a Yahoo Political Correspondant; Dylan Stableford, Reporter for The Wrap and Yahoo News 5/19/15, ‘Bulk domestic surveillance: Where the 2016 candidates stand’, Yahoo Politics, <https://www.yahoo.com/politics/bulk-domestic-surveillance-where-the-2016-119309240446.html>, 6/30/15, ACC)

Jeb Bush is a big supporter of surveillance — so much so, he has applauded the Obama administration’s continuation of the program, which began under his brother’s presidency. “I would say the best part of the Obama administration would be his continuance of the protections of the homeland using, you know, the big metadata programs, the NSA being enhanced,” Bush said on a radio show in April. “Even though he never defends it, even though he never openly admits it, there has been a continuation of a very important service, which is the first obligation I think of our national government is to keep us safe.” “For the life of me, I don’t understand [how] the debate has gotten off track,” the former Florida governor said in

February , “where we’re not understanding and protecting — we do protect our civil liberties, but this is a hugely important program.”

I/L Theory

Swing States Key

Voter majority from all stances in key swing states strongly support curtailment.

Julian Hattem 05/19/15 Contributing columnist for the Hill, “ACLU, Tea Party take on federal spying: 'They've gone too far',”
<http://thehill.com/policy/national-security/242502-aclu-tea-party-run-anti-nsa-ads-in-dc-iowa-new-hampshire>

The American Civil Liberties Union ([ACLU](#)) and a top Tea Party organization are teaming up to pressure lawmakers to oppose renewing controversial parts of the Patriot Act that undergird National Security Agency (NSA) operations.¶ The strange bedfellows of the ACLU and Tea Party Patriots [will be running joint TV advertisements in](#) Washington, D.C., as well as the early presidential [primary states of New Hampshire and Iowa](#).¶ The ads increase the political pressure

on the Senate to rein in the NSA, and reflect the growing coalition that has risen up to oppose the agency's spying practices.¶ The federal government surveillance program has collected records on nearly every American's phone calls, emails, — your most private moments — without a warrant, without cause and without your permission,” a narrator says in the 30-second ad.¶ Among those communications, the ad implies, are those between a doctor and their patient as well as a troop stationed abroad chatting with his daughter over the internet.¶ “When Washington invades your privacy, they've gone too far,” the narrator concludes.¶ The commercials come amid a standoff in the Senate over whether or not to reform parts of the Patriot Act before they expire at the end of the month. Lawmakers are at odds over how to proceed, which has increased the chances that the law expires in just a few days.¶ Versions of the new commercial running in Iowa and New Hampshire urge people to contact Sens. Chuck Grassley (R-Iowa) and Kelly Ayotte

(R-N.H.), who have appeared to resist reforms to the NSA. Both lawmakers are up for reelection in 2016, and Ayotte is seen as vulnerable.¶ At the same time, however, the [ads also serve to prepare Democratic and Republican voters](#) in the nation's first two primary states [to oppose the NSA](#).¶ [Polling released by the ACLU](#) this week showed that [voters in both parties overwhelmingly support reforming the NSA](#). In [both Iowa and New Hampshire, 61 percent of voters believe Congress should](#) [limit government surveillance and protect Americans' privacy](#).

the poll found. Twenty-eight percent of likely Iowa voters and 33 percent of likely voters in New Hampshire disagreed, and said that Congress could renew the law unchanged.¶ Former Secretary of State Hillary Clinton and other top Democratic White House hopefuls have supported reforming the NSA.¶ On the Republican side, Sens. Ted Cruz (R-Texas) has co-sponsored legislation to change the agency's surveillance practices, while Sen. Rand Paul (R-Ky.) has pledged to

filibuster any “clean” extension of the law.¶ Other White House hopefuls, however — including Sen. Marco Rubio (R-Fla.), New Jersey Gov. Chris Christie (R) and former Florida Gov. Jeb Bush (R) — have warned that reforming the law would risk jeopardizing American national security.¶

President Promises

Empirically Presidents enact their campaign promises – party and cabinet pressure face off against congressional opposition

Bernstein 12 (Jonathan Bernstein, political scientist who writes about American politics, especially the presidency, Congress, parties, and elections, January/February 2012, “Campaign Promises”, Washington Monthly, http://www.washingtonmonthly.com/magazine/january_february_2012/features/campaign_promises034471.php?page=all#, 7/6/15, ACC)

The solution was obvious, and for the U.S. budget, fateful: Bush ran on a radical regressive tax cut, thereby destroying the rationale for the Forbes campaign and leaving the Texas governor a clear path to the nomination. And, as everyone knows, that tax cut also became part of Bush’s general election campaign platform, and was eventually enacted into law in the massive 2001 and 2003 tax cuts—tax cuts that have set the terms of budget politics for the last decade. The lesson: we can be governed now by measures that were adopted years ago, in some cases decades ago, based on what some candidate said in reaction to the particular dynamics of some now-obscure nomination battle. Or, to be more blunt: presidents usually try to enact the policies they advocate during the campaign. So if you want to know what Mitt Romney or the rest of the Republican crowd would do in 2013 if elected, the best way to find out is to listen to what they are saying right now. I suspect that many Americans would be quite skeptical of the idea that elected officials, presidents included, try to keep the promises they made on the campaign trail. The presumption is that politicians are liars who say what voters want to hear to get elected and then behave very differently once in office. The press is especially prone to discount the more extreme positions candidates take in primaries on the expectation that they will “move to the center” in the general election. Certainly everyone can recall specific examples of broken promises, from Barack Obama not closing Gitmo to George W. Bush and “nation building” to, well, you may remember this from the Republican National Convention in 1988: And I’m the one who will not raise taxes. My opponent, my opponent now says, my opponent now says, he’ll raise them as a last resort, or a third resort. But when a politician talks like that, you know that’s one resort he’ll be checking into. My opponent won’t rule out raising taxes. But I will. And the Congress will push me to raise taxes, and I’ll say no, and they’ll push, and I’ll say no, and they’ll push again, and I’ll say, to them, “Read my lips: no new taxes.” Political scientists, however, have been studying this question for some time, and what they’ve found is that out-and-out high-profile broken pledges like George H. W. Bush’s are the exception, not the rule. That’s what two book-length studies from the 1980s found. Michael Krukones in *Promises and Performance: Presidential Campaigns as Policy Predictors* (1984) established that about 75 percent of the promises made by presidents from Woodrow Wilson through Jimmy Carter were kept. In *Presidents and Promises: From Campaign Pledge to Presidential Performance* (1985), Jeff Fishel looked at campaigns from John F. Kennedy through Ronald Reagan. What he found was that presidents invariably attempt to carry out their promises; the main reason some pledges are not redeemed is congressional opposition, not presidential flip-flopping. Similarly, Gerald Pomper studied party platforms, and discovered that the promises parties made were consistent with their postelection agendas. More recent and smaller-scale papers have

confirmed the main point: presidents' agendas are clearly telegraphed in their campaigns. Richard Fenno's studies of how members of Congress think about representation are relevant here, even though his research is based on the other side of Pennsylvania Avenue. Fenno, in a series of books beginning with *Home Style* in 1978, has followed members as they work their districts, and has transcribed what the world looks like through politicians' eyes. What he has found is that representatives and senators see every election as a cycle that begins in the campaign, when they make promises to their constituents. Then, if they win, they interpret how those promises will constrain them once they're in office. Once in Washington, Fenno's politicians act with two things in mind: how their actions match the promises they've made in the previous campaign; and how they will be able to explain those actions when they return to their district. Representation "works," then, because politicians are constantly aware that what they do in Washington will have to be explained to their constituents, and that it will have to be explained in terms of their original promises. Of course, there's more to it than that; at the presidential level, one of the key ways that campaigns constrain presidents is that the same people who draft the candidate's proposals usually wind up working on those same issue areas in the White House or the relevant departments and agencies, and they tend to be highly committed to the ideas they authored. And don't sell short the possibility that candidates themselves are personally committed to the programs they advocate—either because those issues sparked their interest in politics to begin with (and that's why they were advocating them on the campaign trail), or because it's just a natural human inclination to start believing your own rhetoric. So why are most Americans (and many members of the working press) so skeptical of campaign promises? One reason is that we tend to care a lot when promises are broken, and so those examples get a lot more attention than do the ones that are redeemed, which often can seem by the time they are finally acted on as foregone conclusions, not news. That's especially true for the president's strongest supporters, who are the most likely to be upset about a broken presidential promise, and "Democrats upset with Obama" or "Republicans upset with Bush" is more unexpected and therefore more newsworthy than when the other party attacks the president. Another reason is that the Madisonian system of checks and balances, especially in eras of frequent divided government, often yields situations in which a president may try hard to achieve a goal he campaigned for, only to be stymied by Congress. (And not just Congress: the bureaucracy doesn't automatically implement even those initiatives that can be accomplished without legislation.) But given the media's intense focus on the president at the expense of the rest of the system, activists often blame the president for falling short, rather than holding Congress or others responsible for blocking presidential initiatives. The result is that people systematically underestimate the importance of positions taken on the presidential campaign trail. For illustrations of this, it's useful to look back on the last few elections, including at least one—the close 2000 election between George W. Bush and Al Gore—in which many pundits and voters (not to mention Ralph Nader) believed that it didn't matter what happened. As it turned out, of course, some of the things that Bush did that Gore might not have done were only dimly predictable from the campaign. But in fact the 2000 campaign was a good guide to many of Bush's initiatives as president, from No Child Left Behind to his faith-based initiative to, most notably, his tax and budget preferences. A look back at the Republican debates leading into the primaries makes that very clear. Republicans held a debate in Iowa in December 1999, just before the caucuses (this was the debate in which Bush was asked about his favorite

philosopher, and he answered, "Christ"). Other than pandering to social conservatives, what did Bush promise to do if he was elected? If we look at public policy issues mentioned in the debate, Bush supported the following: ethanol; trade agreements as a key way of boosting the economy, including easier trade with China; missile defense, and withdrawing from the ABM treaty; more military spending; and the status quo (but tougher) on drugs. These are all ideas he went on to support as president. His proposed tax cuts were mentioned in that debate a few times, as well.

Millennials

Millennials like the NSA

Santos, Red Alert Politics staff writer, 2015

(Maria, "Poll: The NSA is more popular among millennials than any other generation", 3-4, <http://redalertpolitics.com/2015/03/04/poll-nsa-popular-among-millennials-generation/>)

Pew's new poll on public views of various government agencies finds that a lot of agencies are viewed favorably by the majority of Americans—including the NSA, CDC, CIA, and VA. ^{The IRS,} however, is the one agency with a favorable-view percentage below 50 percent—no surprise here. Some of the most interesting numbers come from views of the NSA. Overall, 51 percent view the agency favorably, and 37 percent unfavorably. Democrats are bigger fans than Republicans—58 to 47 percent. (The CIA is the only agency that Republicans favor more than Democrats—64 to 46 percent.) **And millennials—generally thought to distrust institutions—have more favorable views of the NSA than any other generation. 61 percent of 18-29 years view the NSA favorably. That number dwindles down to 55 percent within the 30-49 age group, and down further, to 40 percent, among those 65 and older.**

Clinton Key Scenario(s)

Key To CIR

Clinton is dedicated to passing CIR through Congress or by executive order she knows this consistency and commitment is what the important Latin vote desires

Avila et al 5-5-2015 "Jim, A reporter for abc news, "Clinton vows to push past Obama on immigration, <http://abcnews.go.com/Politics/hillary-clinton-reveals-plans-immigration-reform/story?id=30812123>".CC

She is the presumed favorite of Latino voters and, today in Las Vegas, **Hillary Clinton doubled down on what is seen as a gateway issue for that voting bloc. She laid out her plan for comprehensive immigration reform at a campaign event—including a pathway to citizenship, willingness to take executive action, and reforming detention programs.** At a campaign event today, her third since announcing she's running for president, Clinton made immigration reform a defining issue, and on Cinco de Mayo, no less. State Department Says No Undue Influence After Foreign Gifts to Clinton Foundation Meet Hillary Clinton: Everything You Need to Know (And Probably Didn't Know) About The Prospective 2016 Presidential Candidate Latino leaders consulting her campaign have told ABC News that **Clinton is looking for a way to clearly contrast herself with Republican presidential candidates** by embracing the full path to citizenship rather than proposing a second class of Americans who can work in the United States but not enjoy the protection of citizenship. Clinton made the argument that comprehensive immigration reform "strengthens families, strengthens our economy, and strengthens our country." "That's why we can't wait any longer. We can't wait any longer for a path to full and equal citizenship." Clinton also took an aggressive stance against Republicans. "Now this is where I differ with everybody on the Republican side," she said. **"Make no mistakes. Today not a single Republican candidate - announced or potential - is clearly and consistently supporting a path to citizenship.** Not one." "When they talk about 'legal status' that is code for second-class status," she added. She added that her time as Secretary of State showed her the difference of countries that include "second-class status." "They never feel they belong or have allegiance...that is a recipe for divisiveness and even disintegration... we are a nation of immigrants," she said. "Those who say, we can do reform but not a path to citizenship, would be fundamentally undermining what has made American unique... not just in my view the right thing to do for America, if you compare us to other countries." And while she said she was unsure if it would be among her first moves if elected president, **she did say it would be a priority. Clinton,** speaking at Rancho High School in Las Vegas, where 70 percent of students are Hispanic **added that if no action taken, she wouldn't be adverse to executive authority.** "I will fight for comprehensive immigration reform and a path to citizenship," she said. "I will fight to stop partisan attacks on the executive action that would put dreamers with us today at risk of deportation. **If congress refuses to act, as president I would do**

everything under the law to go even further. Last November, President Obama chose a Las Vegas high school to lay out his plans for immigration reform. Clinton also promised to extend the DREAMer program to undocumented parents of children born in the United States (as President Obama's proposed DAPA program would do) and responded to pushes by immigrant groups to expand protections to parents of DREAMers. "We have a lot of these blended families," she said. "I want to do more to make sure that DACA and DAPA and all of the changes that have occurred continue and would like to try to do more on behalf of the parents of dreamers who are not necessarily included." She also outlined support for reforms to the detention process currently in place. "I don't think we should put children and vulnerable people into the detention facilities bc I think they are at risk—their physical and mental health are at risk," she said.

Clinton has professed her deep concern for immigrants and her unwavering support for CIR

AFP 5-20-2015 "AFP, is one of the central French press

agencies,<http://www.rawstory.com/2015/05/hillary-clinton-singles-out-immigration-as-a-key-2016-campaign-issue/>, "Hillary Clinton signals out Immigration as a key 2016 campaign issue".CC

The 11 million undocumented immigrants in the United States don't vote, but they have children, siblings or cousins who do, and Hillary Clinton is courting their support. The Democratic presidential candidate has singled out immigration as a key campaign issue in her bid for the White House in 2016. **She is looking to set herself apart from her Republican rivals on the matter, and has even said she wants to go further than President Barack Obama to secure legal status,** and citizenship, for millions of undocumented immigrants, most of whom are Hispanic. The move is a strategic one: **securing the Hispanic vote could be what Clinton — or any candidate — needs to become president in the next election. In 2012, the Hispanics made up 10 percent of the vote, compared to only two percent in 1976.** In recent elections, they have shown an increasing preference for the Democratic Party. Obama won the 2012 race with 82 percent of the minority vote, including 71 percent of the Hispanic vote. Sitting with a group of undocumented students this week in Nevada, Clinton made her stance clear, calling on Congress to adopt comprehensive immigration reform and create a path to citizenship for the youths and millions of others like them. **She promised to do more than Obama, who used executive action last November to bypass Congress and approve measures to protect about four million undocumented foreigners from deportation. Clinton said she was ready to use executive action to shield many more.** Republicans immediately zeroed in on this to attack Clinton as a hyper-partisan Democrat. "She is running even further to the left than Barack Obama," Whit Ayres, Republican pollster and adviser to conservative presidential hopeful Marco Rubio, told AFP. "Executive actions on immigration are exactly the wrong way to solve a broken immigration system. If anything we need more bipartisan approaches to addressing a broken system, not declarations of unilateral action," said Ayres. — 'Howling for impeachment' — **Clinton's stance will matter even more in states with a large Hispanic population, such as Nevada and Florida.** But

Republican rivals hope the move will come back to bite her. “This is just one more issue that she’s going to have to answer for in the general election,” Glen Bolger, Republican pollster and co-founder of Public Opinion Strategies, told AFP. “If Republicans started to do major policymaking by executive action, the Democrats would be howling for impeachment,” Bolger said. However, Republican presidential candidates are aware they cannot ignore the immigration question, a key issue for Hispanic voters. **Ayres predicts that Republicans will need much more than 40 percent of the Hispanic vote in next year’s election to win, a substantial hike from the 27 percent that Republican candidate Mitt Romney clinched in 2012.** Republicans focus on a precondition for reform, that the long border with Mexico should be better secured. Texas Senator Ted Cruz, the first to join the 2016 White House race, once proposed to triple the number of police along the border. But none has offered any kind of substantive plan on immigration reform. Rubio, the Florida Senator whose parents immigrated from Cuba, has previously supported comprehensive immigration reform but has since backpedaled. He acknowledges that 11 million people cannot simply be deported, but now insists on securing the border first, indefinitely delaying any action on legal status. Jeb Bush, who is expected to announce his White House bid, remains somewhat ambiguous. He prefers to talk about legal immigration, and has proposed reducing family-based immigration, removing the sibling category preference, to increase the number of permanent visas for skilled immigrants. But Bush, whose wife was born in Mexico, has adopted a more compassionate tone to discuss the lives of immigrants who take risks to cross the border. “We’re going to turn people into Republicans if we’re much more aspirational in our message, and our tone has to be more inclusive as well,” he said last month. But Hispanic hopes, at least for the moment, seem to remain in the Democrats’ camp. Asked by Pew in 2014 “which party do you think has more concern for Hispanics/Latinos?”, half of the Hispanic respondents said Democrats. Only 10 percent thought Republicans cared more, and 35 percent said there was no difference between the parties.

CIR: Economy

CIR will help the economy - Obama's recent executive order proves that when legal rights are given to aliens, productivity and GDP increase

Gittleson "Kim, BBC business reporter stationed in New York, us economy will immigration reform help the recovery", <http://www.bbc.com/news/business-30182934>".CC

US President Barack Obama angered many - and pleased few - when he announced plans last week to reform parts of the US immigration system without Congressional approval. But one potential impact of his plan - the boost it will provide to the US economy - could help sway many Americans who are still primarily concerned with the sluggish pace of the recovery.

The question, of course, is just how much the US economy could benefit from President Obama's proposal, which would give an estimated four million immigrants who are here illegally a path towards legal status, as well as reforming part of the visa process that allows high-skilled workers primarily in technology fields to work in the USA study by economists at UCLA estimates that this proposal will generate, in the short term, \$6.8bn in labour income, create around 160,000 jobs and create \$2.5bn in tax revenue. **A different study by the White House has estimated that in the long term, the plan would increase gross domestic product (GDP) - what the US economy produces - by about 0.4% to 0.9% - or about \$90bn to \$210bn - over the next ten years.** Alex

Nowrasteh, an immigration policy analyst with the right-leaning Cato Institute, says: **"What seems to be the case is that everyone agrees that the economic benefits will be positive from legalisation.** "The dispute is over to what degree." The eighties are back Most economists agree that there are two main ways that President

Obama's immigration plan will affect the US economy: via the wages paid to low-skilled workers, and via the productivity boost that comes from allowing more high-skilled

workers to enter the US labour force. In the case of the former, the best data comes **from 1986.** That's when then-US President Ronald Reagan announced a sweeping amnesty programme for immigrants who were in the country illegally, where any unauthorised immigrants who had already been living in the US continuously since 1982 were eligible for temporary legal status. **Academics who have studied the impact of that programme on those immigrants found that their wages rose anywhere from five to 10%, according to**

several studies. The wage boost was a result of several factors, according to Giovanni Peri, a professor of economics at University of California, Davis. Illegal immigrant workers who previously could not switch jobs, out of fear of being reported to authorities, could now search for work better suited to their skills. Furthermore, immigrants granted amnesty "invest more in their abilities and their training because they know they'll be here for a long time," says Prof Peri, leading to wage increases down the line. Participation problems The question for those looking to study how this increase in wages might impact the overall US economy is not whether or not wages will rise - but how many workers will choose to participate in President Obama's initiative. Under Reagan's plan, only around 50% to 75% of those who were eligible took advantage of the law - and most observers expect a similar or even lesser level of participation this time around, because President Obama's order will not grant illegal immigrants full legal status. The life of the American worker will probably not change very much Giovanni Peri, Professor, UC Davis "We only expect about two million people will come forward which is not huge in a labour force of 150 million," says Randy Capps, the director of research for US programmes at the Migration Policy Institute. Furthermore, Mr Capps said the benefit in terms of tax revenues would almost certainly be negligible. That is because anywhere from one third to two thirds of illegal immigrants are working under false Social Security numbers or other papers, meaning they already contribute income taxes. Halo effect Another aspect of President Obama's immigration overhaul involves changing the restrictions involved on the visas for high-skilled immigrants, known as H1B - something Silicon Valley firms have long been lobbying for. Although the provisions offered by President Obama fell far short of the long list of tech firm demands, there will nonetheless be some economic benefits, according to Mr Capps

Labor Secretary Perez claims CIR can increase GDP by 5.4% and help build US infrastructure

Oleaga 14' "Michael, a reporter for the latin post "Immigration Reform Economy Benefits: Comprehensive Reform Is

'Economic Imperative' for US, Says Labor Secretary Thomas Perez",

<http://www.latinpost.com/articles/24132/20141021/immigration-reform-economy-benefits-comprehensive-economic-imperative-labor-secretary-thomas.htm>".CC

U.S. Department of Labor Secretary Thomas Perez identified immigration as one step to "shared prosperity" for the U.S. economy. During a speech at the National Press Club, **Perez said immigration reform would increase economic benefits, including trillions of dollars in economic activity for the U.S. "It's not just a moral, humanitarian and national security imperative; it's an economic imperative,"** said Perez regarding why the immigration system needs to be fixed. "The Congressional Budget Office estimates **that immigration reform would increase real GDP relative to current projections by 5.4 percent over the next two decades.**

That translates into an additional \$1.4 trillion in economic activity -- adding jobs, putting upward pressure on wages and helping stabilize the Social Security Trust Fund." **SHARE THIS STORY**
RELATED NEWS Immigration Reform Update: Senate Democrats to Homeland Security Secretary: Refugee Mothers and Children 'Should Not Be Treated Like Criminals' Immigration News Update: Undocumented Immigrants Given Bail Rights in Arizona, Court Rules Prop 100 Unconstitutional "Congress shouldn't stop there," added Perez. He said comprehensive immigration reform is "big and bold" and is one of many policy initiatives that are "long overdue."
With immigration reform, Perez also noted an increase of the minimum wage and infrastructure improvements can also build the economy. Perez acknowledged that the three aforementioned ideas have worked in the past and should be supported in the future. Regarding the minimum wage, Perez said a wage increase is not a "radical idea" despite comments from "certain folks" in Washington, D.C. The Labor secretary recalled the minimum wage increase passed during the Republican-controlled Congress led by Newt Gingrich and has been signed into law by every president, except two, since Franklin D. Roosevelt's presidency. "The purchasing power of the minimum wage is 20 percent less today than it was 30 years ago, and the United States has the third lowest minimum wage - as a percentage of median wage -- among OECD (Organization for Economic Co-operation and Development) countries," said Perez, who highlighted the conservative British government recently increasing its minimum wage to \$11.05 per hour. **Infrastructure improvements, which range from rebuilding bridges, ports, roads and transit systems, can grow the economy and added jobs.** "Yes, it involves some federal spending, but no, it's not an exotic left-wing idea ... As someone who worked on transportation issues as a local elected official, I know firsthand that we can't build a 21st century transportation infrastructure with the current approach -- lurching from one short-term bill to the next and making long-term planning nearly impossible," said Perez.

Key To GW: Generic

Hilary best hope for climate leadership – Senate years prove energy advocacy Drury 5/16 (Shawn Drury, senior editor of Blue Nation Review and Senior Editor MOKO Social Media, 5/16/15, 'On Environmental Issues, Hillary Clinton is a No-Brainer Over Rivals', BNR.com, <http://bluenationreview.com/environmental-issues-hillary-clinton-brainer-rivals/>, 7/5/15, ACC)

Conversely, Hillary Clinton's record during her eight years in the Senate should be encouraging to environmentalists. The League of Conservation Voters issues a report card every year on members of Congress. During then-Sen. Clinton's time in office, she amassed a lifetime score of 82 out of 100. As a means of comparison, current Republican Senators Ted Cruz, Lindsey Graham, Rand Paul, and Marco Rubio have lifetime scores of 11, 11, 9, and 9, respectively. There is no comparison. While in the senate, Clinton voted to: Keep drillers out of public lands, including Alaska's Arctic National Wildlife Refuge. Support clean, safe, renewable energy. Protect families by ensuring water and air are clean. Seek alternatives to coal. Provide assistance for low income families for help with energy bills. The challenge for environmentalists is to push their issues up the priority list so they make it into the discussion of a general election campaign. That would benefit Clinton, given her record, and it would help her with younger, undecided voters for whom the environment is a priority.

Hilary prioritizes climate change – supported cap and trade and UN's climate plan

Friedman et al 4/13 (Lisa Friedman, writer for Scientific American, Evan Lehmann, writer for Scientific American, ClimateWire, led by veteran Wall Street Journal reporter John Fialka, and the reporting crew includes additions to our team from award-winning writers who worked at the Houston Chronicle, Denver Post and LA Daily News, "Hillary Clinton May Take a Strong Stance on Global Warming", Scientific American, <http://www.scientificamerican.com/article/hillary-clinton-may-take-a-strong-stance-on-global-warming/>, 7/5/15, ACC)

Clinton signaled in September that she will stay apace of Obama's soaring oratory on the impacts of climbing temperatures (ClimateWire, Sept. 5, 2014). The president has described it as an ever-growing threat with deeper risks to the economy and the environment than perhaps even from disparate terrorist groups. Clinton also puts it near the top of her priority list. She described global warming as "the most consequential, urgent, sweeping collection of challenges we face as a nation and a world" at the National Clean Energy Summit held by Sen. Harry Reid (D-Nev.). Then, in December, she locked arms with Obama's climate legacy by vowing to defend U.S. EPA's Clean Power Plan "at all cost" (Greenwire, July 1, 2014). Some see that as a sign that she'll wage war against Republican climate change deniers in her campaign for the White House, potentially giving climate a higher profile in 2016 than in previous elections. "The science of

climate change is unforgiving," Clinton said then. "No matter what deniers may say, sea levels are rising; ice caps are melting; storms, droughts and wildfires are wreaking havoc." Clinton isn't a recent convert. She proposed a cap-and-trade program in 2007 when she and Obama were dueling to be their party's presidential nominee -- and to be the leader on climate solutions. Her goal was to cut emissions 80 percent below 1990 levels by 2050. That year, in a speech in Cedar Rapids, Iowa, she reminisced about a trip she had taken to the Alaskan wilderness, where she heard about warming winters from dogsledders, rising seas from villagers and drying lakebeds. "There are no climate change skeptics inside the Arctic Circle," Clinton said then, adding later, "This is the biggest challenge we have faced in a generation." Podesta choice sends a strong signal Purvis noted that her tenure as secretary of State was more punctuated by work on womens' empowerment than on energy. But, he argued, she also found a way to weave those concerns into new climate policies. She put \$50 million into a new initiative to encourage families to use cleaner-burning stoves instead of kerosene, wood, dung and other solid fuels as a way to both improve health and cut emissions, focused on helping those hardest hit by climate change. She also spearheaded the Climate and Clean Air Coalition, dedicated to curbing non-carbon-dioxide pollutants that cause global warming. "One has to acknowledge that the issues that probably animate her the most are the rights of women, community empowerment, children and democracy. But I can't think of a time when she didn't make the right environmental decision," Purvis said. Since leaving office, Clinton has toughened her language. Skeptical Republicans are now described as deniers by Clinton and her party. Paul Bledsoe, a former Clinton White House climate adviser and now a fellow at the German Marshall Fund, noted that the fact Clinton tapped Podesta to run her campaign signals that she considers climate change a winning campaign issue and a top priority. "I think she's going to run as an economic populist and a defender of the middle class against the depredations of extreme economic inequality," Bledsoe said. "Climate fits in because I think she's going to portray the Republicans as willing to put the average American in clear and present danger from climate change, because the solutions don't fit with the ideological litmus test of the party. "I think she's going to be very aggressive in the campaign as pushing climate change as a part of the 'defender of the little guy' message," Bledsoe said.

Key To GW: EPA

Next President can make or break climate policy – Ex can change fuel-economy standards, Clean Power Plan, and EPA strength

Plumer 5/5 (Brad Plumer, senior editor at Vox.com, where he oversees the site's science, energy, and environmental coverage and he was previously a reporter at the Washington Post covering climate and energy policy, 5/5/15, "The next president can have a big impact on climate policy — even without Congress", <http://www.vox.com/2015/5/5/8542787/climate-change-2016-election>, 7/7/15, ACC)

Okay, now let's assume it's 2017. There's a new president, and Congress is still totally gridlocked on climate change. What happens next? The next president likely won't be able to dismantle Obama's climate policies entirely — not on his or her own. After all, the Supreme Court has effectively ordered the EPA to regulate greenhouse gases so long as there's evidence that they cause harm, and that evidence is quite solid. Only Congress could undo everything Obama's done, by revising the Clean Air Act. Still, whoever occupies the White House and EPA will have a lot of say in how to implement Obama's climate rules. That sounds boring, but it's actually a key step. There's tons of leeway to strengthen or weaken these rules. Here are a few ways this could play out: 1) Fuel-economy standards could be tightened (or weakened) in 2017. Remember, the EPA's fuel-economy standards for new cars and light trucks are on pace to rise from their current 35 miles per gallon to 54.5 miles per gallon by 2025. Yet those numbers aren't set in stone. These CAFE (corporate average fuel economy) rules are scheduled to come up for a midterm review in 2017. At that point, automakers may lobby to allow the standards to rise more slowly — particularly if sales of fuel-efficient vehicles have been sluggish due to low oil prices. Green groups, meanwhile, could push to make the standards stricter, or to have them keep increasing past 2025, to push vehicle emissions down even further. So the next administration will have to decide. Leave the vehicle standards alone? Make them stricter? Weaker? The one twist here is that due to a longstanding quirk of the Clean Air Act, California can threaten to create its own stricter standards if it's not happy with what the federal government is doing (and other states can join). Automakers really hate the idea of multiple sets of vehicle standards around the country, so they may prefer not to weaken the federal rules too much and risk having California go it alone. 2) The Clean Power Plan will live or die based on implementation. The EPA will finalize its rules for reducing carbon dioxide from existing power plants in the summer of 2015. It's a core component of Obama's climate policy — power plants are responsible for 40 percent of the nation's greenhouse gas emissions. But the next president will have enormous influence over how this plan actually works. Assuming the rule holds up in court, it could prove difficult for the next president to simply hit the kill switch on the plan and start all over. But he or she will get to decide how to implement it — and that's arguably just as significant. After the rule is finalized, states will have another 14 months to submit plans for cutting emissions, though some will request extensions. That process could drag on until 2017 or 2018. At that point, the EPA will review each state's plans for reducing emissions from its power plants and decide whether the plans are acceptable. An administration that really wants to tackle climate change can make sure states are doing as much as is feasible. By contrast, a

president who was less concerned about global warming could allow states that wanted to, like Texas, to submit less-aggressive plans. "There's a lot of latitude in the review process," says Stanford's Michael Wara. "The history of the Clean Air Act shows this. If you have a president who doesn't like climate policy, they could basically signal to the states that they're going to give a lot of compliance flexibility and allow states to make assumptions in their plan that reduce their costs." This would likely involve seemingly arcane tweaks to models and baselines that would be harder for green groups to challenge in court. Meanwhile, some states may outright refuse to submit any plans for reducing emissions. (Sen. Mitch McConnell, R-KY, is already urging states to do exactly this.) If that happens, the EPA has the authority to impose its own federal plan on the states. The agency will unveil the details of this federal plan in 2015, though, again, implementation would be left to the next president. Meanwhile, industry groups are almost certain to challenge aspects of the rule in court. Adele Morris, the policy director for the Climate and Energy Economics Project at the Brookings Institution, points out that an administration hostile to Obama's EPA rule could defend it weakly in court. And if any parts of the rule get struck down, the next administration will get to decide how to redo it. It all comes down to preference. "If you have an administration that's friendly to [Obama's] policy, then you'd have continuity in implementation," says David Doniger, director of the Natural Resources Defense Council's climate and clear air program. "But if you had an administration that wasn't as friendly, they could try to drag their feet or change the rules." 3) The next president will decide whether to regulate other sectors — like refineries. The Clean Air Act doesn't just cover vehicles and power plants. Technically the EPA has the authority to regulate carbon dioxide from other sources, as well. Oil refineries. Cement plants. Trucks. Airplanes. The agency is regulating methane leaks from new oil and gas wells, but it hasn't touched existing wells. And so on. These sources all add up. The Obama administration is leaving most of the decisions about what to do with these sectors to the next president. If Hillary Clinton comes in and wants to expand the EPA's authority here, she can. If Marco Rubio comes in and doesn't, he may have to fend off lawsuits, but he can likely hold off on doing this for a long time.

EPA key to international climate negotiations – next president determines success

Plumer 5/5 (Brad Plumer, senior editor at Vox.com, where he oversees the site's science, energy, and environmental coverage and he was previously a reporter at the Washington Post covering climate and energy policy, 5/5/15, "The next president can have a big impact on climate policy — even without Congress", <http://www.vox.com/2015/5/5/8542787/climate-change-2016-election>, 7/7/15, ACC)

Where the EPA rules could have a more important effect is on the international stage — at least in the near term. Remember, the United States only accounts for about 17 percent of worldwide greenhouse gas emissions. There's also China, India, Brazil, Europe, Russia, and so on. That's why international cooperation on climate change is so crucial. Right now, the world is groping toward a very, very weak international agreement. The US put forward its pledge to cut emissions at least 26 percent between 2005 and 2025. That spurred China to respond by vowing to get its emissions to peak around 2030. Other countries have started to pitch in, too. Add all

these pledges up, and we're still not close to tackling global warming. The Climate Action Tracker estimates that we're on pace for global average temperatures to rise 3.1°C (or 5.6°F) above pre-industrial levels, give or take — a seriously disruptive change. Even so, some experts think even these weak promises could lead, iteratively, to stronger action over time. "You can see how those plans could start to connect together and create a positive negotiating dynamic," David Victor, a political scientist at UC San Diego's School of International Relations and Pacific Studies, told me. "The encouraging precedent here is in trade ... You build credibility and trust over time and then move to bigger issues." The next US president can help decide how this agreement continues to evolve in the years to come. The US can keep pushing its own emissions down and try to persuade countries like China and India to respond in kind. Or it could abandon this budding framework entirely. Abandoning the US climate targets, says Wara, "would do real damage to whatever credibility the US has left on the international stage. What Obama has done with China is a big step in changing the dynamics in a very positive way. And if the US were to walk away from that, that would be very damaging for future climate negotiations and commitments."

GW: Bush Fails

Jeb will restrict EPA – needs conservative vote, supports Keystone XL and fracking

Foran and Geman 4/10 (Clare Foran, energy reporter at National Journal. Her writing has appeared in The Atlantic Cities, Philadelphia City Paper and NPR's science and technology blog, All Tech Considered, Ben Geman National Journal Energy and Environment Correspondent, and has nearly a decade of experience on the beat and spent four years as an energy correspondent for The Hill, where he helped launch the paper's energy blog., "How Jeb Bush's Environmental Record Could Hurt Him In 2016", National Journal, <http://www.nationaljournal.com/energy/how-jeb-bush-s-environmental-record-could-hurt-him-in-2016-20150310>, 4/10/15, ACC)

Overall, Bush is firmly in line with the GOP on most high-profile energy priorities. He has repeatedly endorsed the Keystone XL oil pipeline and lauded the onshore hydraulic-fracturing boom that has boosted natural-gas production to record levels and crude-oil production to near-record levels. In a speech to the National Automobile Dealers Association in San Francisco early this year, Bush quipped that "it is not cool in San Francisco" to talk about the boom. "It's cool in places like North Dakota and West Texas. It's cool because it creates significant economic activity," Bush said, according to a transcript. He lauded jobs and argued that the boom is saving consumers billions of dollars at the pump and on power bills. In the same speech, Bush said Washington "shouldn't try to regulate hydraulic fracturing," but that it should be done "reasonably and thoughtfully to protect the environment." The comments put Bush at odds with Democratic efforts to boost federal oversight. The Interior Department is preparing to release final regulations to govern fracking on public lands, while EPA is planning new methane emissions standards for new oil and gas development nationwide. Bush has also lobbed attacks at the Obama administration's environmental regulations, a common refrain among likely Republican presidential contenders. He called EPA "a pig in slop" at the Iowa Agriculture Summit earlier this month and called for action to "rein in this top-down regulatory system." That stance is likely to play well with conservatives. "Going after the EPA and connecting its actions to harming jobs and economic growth goes a long way with Republican primary voters across the board," veteran Republican strategist Ron Bonjean said.

JEB denies anthro caused warming – appealing to GOP voters

Nuccitelli 5/27 (Dana Nuccitelli, blogger on environmentguardian.co.uk and an environmental scientist and risk assessor, 5/27/16, "Memo to Jeb Bush: denying human-caused global warming is ignorant", The Guardian, <http://www.theguardian.com/environment/climate-consensus-97-per->

cent/2015/may/27/memo-to-jeb-bush-denying-human-caused-global-warming-is-ignorant, 7/6/15, ACC)

In a campaign event last week, Republican presidential frontrunner Jeb Bush exhibited Stage 2 climate denial, saying (video available here), “Look, first of all, the climate is changing. I don’t think the science is clear what percentage is man-made and what percentage is natural. It’s convoluted. And for the people to say the science is decided on, this is just really arrogant, to be honest with you. It’s this intellectual arrogance that now you can’t even have a conversation about it.” The Politics Unfortunately, denial of human-caused global warming may be a prerequisite for any viable Republican presidential candidate. Conservative and Tea Party Republicans are the one group of American voters among whom Stage 2 climate denial is the majority position, but they’re also the group that most reliably votes in GOP primary elections. In American politics, a candidate first has to win a primary election before reaching the national ballot. For Republicans, that means appealing to conservatives. It’s not clear that a Republican presidential candidate can accept climate science and run a viable primary campaign.

GW: Extinction

Global Warming greatest threat to survival – reduced food yields, heatwaves, natural disasters and disease

Snow and Hannam 14 (Deborah Snow, Senior Writer for the Sydney Morning Herald, Peter Hannam, Sydney Morning Herald writer who covers broad environmental issues,, “Climate change could make humans extinct, warns health expert”, 3/31/14, <http://www.smh.com.au/environment/climate-change/climate-change-could-make-humans-extinct-warns-health-expert-20140330-35rus.html>, 7/7/15, ACC)

The Earth is warming so rapidly that unless humans can arrest the trend, we risk becoming "extinct" as a species, a leading Australian health academic has warned. Helen Berry, associate dean in the faculty of health at the University of Canberra, said while the Earth has been warmer and colder at different points in the planet's history, the rate of change has never been as fast as it is today. "What is remarkable, and alarming, is the speed of the change since the 1970s, when we started burning a lot of fossil fuels in a massive way," she said. "We can't possibly evolve to match this rate [of warming] and, unless we get control of it, it will mean our extinction eventually." Professor Berry is one of three leading academics who have contributed to the health chapter of a Intergovernmental Panel on Climate Change (IPCC) report due on Monday. She and co-authors Tony McMichael, of the Australian National University, and Colin Butler, of the University of Canberra, have outlined the health risks of rapid global warming in a companion piece for The Conversation, also published on Monday. The three warn that the adverse effects on population health and social stability have been "missing from the discussion" on climate change. "Human-driven climate change poses a great threat, unprecedented in type and scale, to wellbeing, health and perhaps even to human survival," they write. They predict that the greatest challenges will come from undernutrition and impaired child development from reduced food yields; hospitalisations and deaths due to intense heatwaves, fires and other weather-related disasters; and the spread of infectious diseases. They warn the "largest impacts" will be on poorer and vulnerable populations, winding back recent hard-won gains of social development programs. Projecting to an average global warming of 4 degrees by 2100, they say "people won't be able to cope, let alone work productively, in the hottest parts of the year". They say that action on climate change would produce "extremely large health benefits", which would greatly outweigh the costs of curbing emission growth. A leaked draft of the IPCC report notes that a warming climate would lead to fewer cold weather-related deaths but the benefits would be "greatly" outweighed by the impacts of more frequent heat extremes. Under a high emissions scenario, some land regions will experience temperatures four to seven degrees higher than pre-industrial times, the report said.

Climate change increases disease outbreak – transmission cycles shaped by heat patterns

Harris 14 (Chris Harris,

Climate change will lead to 250,000 extra deaths a year from 2030, a report quantifying the health impacts of global warming has claimed. The study, published by the World Health Organisation (WHO), estimates around 48,000 will die from diarrhoea, 60,000 due to malaria, 95,000 from childhood undernutrition, as well as 38,000 elderly people because of heat exposure. "Our planet is losing its capacity to sustain human life in good health," said Dr Margaret Chan, director general of WHO. "Earlier this year, the Intergovernmental Panel on Climate Change (IPCC) issued its most disturbing report to date, with a strong focus on the consequences for health." The report said the health impacts of climate change would be "overwhelmingly negative" with the biggest changes expected by 2050. Dr Chan said: "Debates about climate change are still not giving sufficient attention to the profound effects that climate variables have on health. "Many of the world's most worrisome diseases have transmission cycles that are profoundly shaped by conditions of heat and humidity and patterns of rainfall. As one important example, malaria parasites and the mosquitoes that transmit them are highly sensitive to climate variability, which has been repeatedly linked to epidemics. "Other epidemic-prone diseases, like cholera, dengue, and bacterial meningitis, are likewise highly sensitive to climate variability. All of these diseases have a huge potential for social disruption and make huge logistical demands on response teams." Dr Chan also highlighted speculation that climate may affect the frequency of Ebola outbreaks. She said 75% of new human diseases begin in animals, adding climate influences "animal populations and their incursion into areas inhabited by humans".

Key to Prisons

Clinton will end mass incarceration – criminal justice reforms and body cameras

Terkel 4/29 (Amanda Terkel, Senior Political Reporter and Politics Managing Editor at The Huffington Post and previously served as Deputy Research Director at the Center for American Progress, 4/29/15, “Hillary Clinton: 'There Is Something Profoundly Wrong' In Our Criminal Justice System”, Huffington Post, http://www.huffingtonpost.com/2015/04/29/hillary-clinton-baltimore_n_7170668.html, 7/5/15, ACC)

Clinton laid out her vision for fundamentally reforming the criminal justice system, centering around an "end to the era of mass incarceration." Those changes include addressing probation and drug diversion programs, increasing support for mental health and drug treatment and pursuing alternative punishments for low-level offenders. She also wants to see body cameras given to every police department to increase transparency and accountability in a way that benefits both officers and members of the public. "We have allowed our criminal justice system to get out of balance, and these recent tragedies should galvanize us to come together as a nation to find our balance again," said Clinton. Wednesday's speech was Clinton's most significant comment on the situation in Baltimore thus far. During a fundraiser in New York City last week, she also said, "We have to restore order and security. But then we have to take a hard look as to what we need to do to reform our system."

Hilary commits to reducing mass incarceration and faster probation programs – Dems will hold her to it

Bouie 4/30 (Jamelle Bouie, Slate staff writer covering politics, policy, and race, 4/30/15, “Hillary Clinton’s Impressive Criminal Justice Speech”, Slate, http://www.slate.com/articles/news_and_politics/politics/2015/04/hillary_clinton_s_impressive_criminal_justice_speech_the_democratic_front.html, 7/6/15, ACC)

Two days after riots in Baltimore—at a time when most of the presidential field is either silent or contemptuous—Clinton has stepped out front with a forward-looking agenda on bringing people out of prison, a definitive rebuke to the “law and order” politics used by her husband throughout his career. Not only did Clinton call for an end to “the era of mass incarceration,” but she also connected our prison population to broader patterns of inequality. “Without the mass incarceration that we currently practice, millions fewer people would be living in poverty,” she said. “And it’s not just families trying to stay afloat with one parent behind bars. Of the 600,000 prisoners who re-enter society each year, roughly 60 percent face long-term unemployment.” We have to do more than release nonviolent offenders to solve mass incarceration, but this at least shows that Clinton is thinking in broad terms. Reducing the prison population is the beginning of the project. What comes next—reintroducing former inmates into mainstream society and giving them a chance to succeed—is just as important. Clinton’s speech is a political gamble as much as it is a policy commitment. Likewise, Clinton is clearly giving thought to how we restructure policing and punishment. In the speech, she promises to make

sure that “federal funds for state and local law enforcement are used to bolster best practices, rather than to buy weapons of war that have no place on our streets.” She calls for body cameras on all police—a major goal of the “Black Lives Matter” movement—supports better, “swifter” probation programs, and stresses help for mental health patients. “You and I know that the promise of de-institutionalizing those in mental health facilities was supposed to be followed by the creation of community-based treatment centers. Well, we got half of that equation—but not the other half.” On a more prosaic note, Clinton alludes to high-profile cases of police abuse and racial violence, directly identifying with black and Latino families on an issue that is polarizing with white Americans. “You don’t have to look too far from this magnificent hall to find children still living in poverty or trapped in failing schools,” she says, “Mothers and fathers who fear for their sons’ safety when they go off to school—or just to go buy a pack of Skittles.” What’s important about this, beyond public policy, is that it’s a sign of where Clinton sees the electorate. A Hillary Clinton who believed she needed working class whites to win is not a Hillary Clinton who would embrace this agenda for police reform, or use this rhetoric. No, this Clinton clearly believes that she needs to reconstitute the Obama coalition to win, and to do that, she’ll push forward on key issues for black Americans, Latinos, young women, and other members of the Obama electorate. Put differently, this speech is a political gamble as much as it is a policy commitment. To some, that sounds cynical. And maybe it is. But it also doesn’t matter. Political science is clear: Presidential candidates don’t make idle promises. When they make a commitment or signal a priority, they try to follow through, and when they don’t, the party tries to hold them accountable. Now, Clinton is on the record, and if elected, she’ll face the kind of pressure that makes policy happen. On that, it’s worth a final point. Four years ago, body cameras weren’t a priority for national politicians. Now, the Democrats’ presumptive nominee for president—who may win next year—has endorsed them for all police officers. Even if its not a panacea for broad problems of police violence, it’s still a victory. Not just because Clinton has made the commitment, but because she’s sent a powerful signal to other Democrats (and even some Republicans) to treat police reform as a mainstream issue. Competitors like Sen. Bernie Sanders and former Maryland Gov. Martin O’Malley may try to outflank her, but potential allies, either in Congress or elsewhere, will support her message and her leadership. Suddenly, police reform is a Democratic agenda item, something a Democratic Congress and a Democratic White House may act on.

Prisons: Econ

Better job security for prisoners saves \$57-65 billion – accounts for 1.5% of unemployment rate

Wang 14 (Emily Wang, 4/7/14, “Ban the Box: Employing Former Felons Will Improve the Economy and Public Safety”, Pacific Standard, <http://www.psmag.com/politics-and-law/ban-box-employing-former-felons-will-improve-economy-public-safety-78407>, 7/6/15, ACC)

An overwhelming 65 million Americans with criminal records face significant barriers to employment each day. Most applications for employment include a box that asks, "Have you ever been convicted of a crime?" Check the box, and nowadays, the application most likely goes to the trash. In 2009, a team of Princeton and Harvard researchers found that having a criminal record in New York city reduced the likelihood of a callback or job offer by nearly 50 percent. It doesn't matter if you finished serving your time, committed a crime decades ago, or whether the crime would impact the quality of your work. In the aftermath of 9/11, the background check industry skyrocketed. In 2007, private intelligence companies, like ChoicePoint, reported \$253 million in employee-screening revenue and, last year alone, the FBI preformed a record 16.9 million criminal background checks, a six-fold increase from over a decade ago. Economists at the Center for Economic and Policy Research estimate that the United States has at least 12 million individuals with criminal records of working age, who account for about 1.5 percent of our unemployment rate, costing the economy between \$57 and \$65 billion in lost output.

Jeb -> Iran War

Jeb Bush's foreign policy advisors are the same that were in his brother's, father's, and the Reagan administration - they will increase tensions

Bump 2-18-2015 "Philip, "Jeb Bush's foreign policy team is eerily familiar, in one Venn diagram, <http://www.washingtonpost.com/blogs/the-fix/wp/2015/02/18/jeb-bushs-foreign-policy-team-is-eerily-familiar-in-1-venn-diagram/>, a reporter for the Washington Post".CC

Former Florida governor Jeb Bush will announce his foreign policy vision in a speech Wednesday in Chicago. Accompanying that speech is **a rollout of a slate of experts who will help guide the candidate on foreign policy issues. If Bush's goal is to present himself as his "own man," that list of advisers undermines the point somewhat: 19 of the 21 people on it worked in the administrations of his father or brother.** We've identified the roles each played in the past three Republican administrations, divvying them up as needed in the following Venn diagram. **It's easy to suggest** that the above diagram indicates that **Jeb Bush is hopelessly linked to his brother and father. But it's important to remember that the foreign policy team of any Republican president probably would draw heavily from the experience of the past three Republican administrations** — each of which had a Bush at or near the top. Many of the foreign policy names on the alternate-universe Mitt **Romney** transition team appear above — although Romney branched out a bit more. That may be because **he was four years closer to the low point of the Iraq war and some of the Bush-era advisers on foreign policy were still too damaged. Bush has access to a lot of people by virtue of his family's long history in Washington.** That can be a mixed blessing. "Each president learns from those who came before — their principles . . . their adjustments," Bush plans to say in Chicago. "One thing we know is this: Every president inherits a changing world . . . and changing circumstances." And, on occasion, they inherit the same advisory team.

Bush has said he will press for new sanctions on Iran replacing the deals currently in place and defend Israel at all costs - puts the US on a path to nuclear war

McCarthy 2-18-2015 "Tom, Jeb Bush's attacks Obama's foreign policy and insists I am my own man, national affairs correspondent for the Guardian US, <http://www.theguardian.com/profile/tommccarthy>"

Warning that "everywhere you look, you see the world slipping out of control," Jeb Bush mounted a harsh attack on the foreign policy of President Obama Wednesday, in a speech that appeared to be a next step in a carefully choreographed rollout of a 2016 presidential bid. Addressing a crowd of about 800 at the Chicago Council on Global Affairs, Bush described a foreign policy vision that was sharply at odds with Obama's, and more subtly divergent from that of his brother, President George W Bush. **In a speech that was sharply skeptical of Iran,**

demonstratively supportive of Israel and disdainful of a White House foreign policy that he characterized as lackadaisical and foolish, Bush covered everything from the legacy in Iraq and Israeli prime minister Binyamin Netanyahu's controversial visit to Washington to surveillance reform and relations with Cuba.

Perhaps Bush's most pointed remarks were in faulting the Obama administration for entering nuclear negotiations that would leave Iran with civilian nuclear power. "Iran's intent is clear," Bush said at the Chicago Council of Global Affairs, a non-partisan thinktank. "Its leaders have openly called for an attempt to annihilate the state of Israel. This is an existential threat to Israel" and America's friends in the region. **Bush called on Congress to pass sanctions in advance of the close of nuclear negotiations, to go into effect if the negotiations fail. The Obama administration and others have warned that such new legislation would derail the negotiations.** "Iran's ambitions are clear, and its capabilities are growing ... yet the Obama administration has launched negotiations in which the goal has shifted," Bush said. "The Obama administration no longer seeks to 'prevent' nuclear enrichment, but only to 'manage' it." Bush emphasized his close ties with Israel, and jumped into the debate over a planned address to Congress by Netanyahu about Iran's nuclear program. The White House has said it was not informed in advance of the planned speech, which was scheduled at the invitation of House Speaker John Boehner, and that Vice President Joe Biden would not attend. "I for one am very eager to hear what he has to say," Bush said of Netanyahu. "I don't blame him for wanting to share his views... I'm surprised that the US administration is upset about hearing from such a close and valuable ally." Bush said the Obama "administration has lobbed personal leaks and insults" at Netanyahu "with incredible regularity". **Bush said government surveillance programs, including dragnet metadata collection by the National Security Agency, were important to preserve in the interests of national security. "For the life of me, I don't understand – the debate has gotten off track," Bush said of the NSA collections. "We do protect our civil liberties, but this is a hugely important program to keep us safe."** But Bush also grappled on Wednesday with perhaps the thorniest topic he will have to face in the 2016 presidential campaign: his brother George W Bush's Iraq war. "I love my brother, I love my dad – I actually love my mother, too," Jeb Bush said in Chicago. "I admire their service to the nation and the difficult decisions they had to make. But I am my own man – and my views are shaped by my own thinking and own experiences." **A list of foreign policy advisers** announced in advance of the speech by the Bush team threatened to complicate the message, however. The list, first **obtained by the Washington Post, includes several prominent advocates of the 2003 invasion of Iraq. Among them are Paul Wolfowitz, deputy defense secretary under George W Bush; Stephen Hadley, national security adviser under Bush; and John Negroponte, ambassador to the UN under Bush.** "In 2003, at the beginning of the liberation of Iraq, neither Twitter nor Isis existed," he said. "New circumstances require new approaches." Bush laid out principles he said would ensure American leadership, beginning with the importance of growing the US economy. He said Congress should give the president trade authority to complete new deals in the Pacific and in Europe. Bush said the "normalization" of US-Cuba relations announced by the White House last December was "the wrong thing to do" and resulted from poorly conducted negotiations with the Cuban government. He said falling oil prices would have brought Cuba to the negotiating table in a weaker position, comparing the effect to the weakening

of Iran through sanctions. “A little more patience would have yielded a better result,” Bush said. “The notion that somehow you’re just going to have freedom outbreak in Cuba, I think it’s false,” he said. “I think it’s incorrect.” While Bush has not officially declared his candidacy for president, he has assembled teams of aides and donors and begun to lay out a policy platform. The foreign policy plank Bush laid out on Wednesday featured sharp criticism of Obama, whom Bush accused of “withdrawing from the world”. Bush’s brother left the White House as an historically unpopular president in part for the failure of his project to shape events in the Middle East. On the 10th anniversary of the March 2003 invasion of Iraq, 53% of Americans said the US “made a mistake sending troops to fight in Iraq” and 42% said it was not a mistake, according to a Gallup poll. **For the distance he sought to create from his brother’s foreign policy, Bush fell back on speech that was sometimes reminiscent of the clipped cadence and cowboy imagery of George W Bush. Asked about “diplomacy on Isis,” Jeb Bush said: “No diplomacy. “With them directly? No. We have to develop a strategy that’s global, that takes them out. Restrain them, tightening the noose and then taking them out is the strategy. No talking about this. That just doesn’t work, for terrorism.”** Veterans of the second Bush presidency who are now advising Jeb Bush have admitted mistakes in Iraq. “We also did not anticipate that al-Qaida would move into the security vacuum created by [Saddam] Hussein’s fall and seek to defeat the United States in Iraq,” Hadley wrote on the war’s 10-year anniversary. Hadley has also warned, however, about the dangers of inaction abroad. “Syria today shows what happens when a bloody dictator goes unchecked,” Hadley wrote in a 2014 op-ed. **Other former George W Bush cabinet members or advisers who are working on the Jeb Bush presidential project, according to the Washington Post list, include former homeland security secretaries Tom Ridge and Michael Chertoff, former CIA directors Porter Goss and Michael Hayden, and former attorney general Michael Mukasey. Jeb Bush’s list also includes James Baker and George Schultz, both secretaries of state who served under his father, President George HW Bush. Bush described a need for American interventionism, saying that if the United States did not pursue terrorists “in their own dark corner of the globe,” “they will eventually strike at America, and they often do.” “If we withdraw from the defense of liberty elsewhere, the battle will come to us anyway,” Bush said.**

Ron Paul Scenario

Key to Keystone/Flat Tax

Rand Paul is key to the passage of the keystone xl pipeline and he is key to a flat tax

Gillespie 4-7-2015 "Patrick, "Rand Paul 2016, breaking down his economic policy", reporter at CNN money, <http://money.cnn.com/2015/04/07/news/economy/rand-paul-2016-economics/>".CC

Republican Senator Rand Paul hopes to drill, slash and "simplify" if he becomes president. If he reaches the Oval Office, Paul, who announced his presidential candidacy Tuesday, wants to reel in government spending, taxes and regulation. He would like to increase America's energy production and put more oversight on the Federal Reserve. While many details of the Kentucky senator's plans need to be fleshed out, here are four key points of "Paulonomics" that we know so far: 1. An energy-focused economy: Drill baby drill. Paul wants the U.S. economy to run on American gas, oil and coal. His budget plan -- arguably a presidential manifesto -- calls for more government-owned land to be open for drilling. Perhaps not surprising for a senator from a coal-heavy state, Paul says America should return its focus to coal energy. Paul is a big advocate for the Keystone XL Pipeline, which he says will create jobs and enhance America's energy independence.

Paul's energy economy will face major questions during the election. Oil prices have tumbled from \$100 a barrel to about \$50. There's an oil oversupply in the world, and U.S. energy companies have laid off 30,000 workers this year, according to the Labor Department. It's uncertain how Paul's energy economy would stack up against the industry's tough reality right now. Related: The Ted Cruz economy: Reality-checking his talking points 2. **Federal spending slide: Paul wants to eliminate the U.S. departments of education, commerce, housing and energy** (that would cut a quarter of the president's cabinet secretaries). He would reduce government payments on food stamps, Medicaid and child nutrition programs too. Paul argues that many welfare programs waste money. These cuts are meant to eliminate the U.S. government's deficit and return power to state governments. It's unclear how easily Paul could shave off four departments and decrease America's welfare programs. The four departments he wants to get rid of are also small spenders compared to defense, Social Security and Medicare Related: Senator Rand Paul goes after Fed...again 3. Audit the Fed (and more?): One of Paul's big campaign promises is to audit the Federal Reserve ... even though it's already audited twice. Paul is the author of an "Audit the Fed" bill that would allow a Congressional oversight office to go a step further than just looking at the numbers and actually comment on the Fed's monetary policy decisions. Many at the Fed, and even some of Paul's Republican peers, say the bill is an attempt to influence the Fed's policy, especially on interest rates. Fed Chair Yellen staunchly opposes Paul's bill and says she's prepared to fight it. America's central bank wants to remain independent of politics as much as possible. But Paul is not backing down. He is even raising money off his Fed attacks. He raised \$88,000 in grassroots donations for his "Stand with Rand Audit the Fed Money Bomb" campaign in February (though he hoped to get \$150,000). Paul actually grew up in an anti-Fed household: his father, former Congressman Ron Paul, published a book entitled "End the Fed" in 2009. Republican presidential hopeful Ted Cruz is also in favor of auditing the Fed. Related: Rand Paul on Hillary Clinton's email 4. Bye-bye (many) taxes: **Flat tax is the buzz word of the 2016 race so far. Like many GOP presidential candidates before him** (including Ted Cruz and Rick Perry, Herman Cain and Newt Gingrich in the last election cycle), **Paul wants to enact a flat tax if elected president. He also plans to cut taxes on stock profits, corporations and estates.** Paul opines that a low-tax economy will give Americans more spending power, boosting economic activity. The United States has had two flat-tax laws passed -- in the 19th century. One was later ruled unconstitutional and the government never enforced the other. Paul points out that America's tax code is too complicated today and

needs to be simpler, but the idea of a flat tax is often criticized for being unfair to lower income households who pay little to no federal income taxes now. So far, Paul and Cruz -- the only two to announce their presidential bids -- appear to agree on a lot when it comes to economic policy.

Paul presidency would spur efforts for keystone XL construction, and strip EPA regulation authority.

Ben Adler 04/06/15 Contributing editor for Columbia journal, Grist columnist, "Rand Paul is no moderate on climate change," <http://grist.org/politics/rand-paul-is-no-moderate-on-climate-change/04/06/15>

Journalists love a counterintuitive story, like when a Democrat criticizes unions or a Republican endorses gay marriage. Sen. Rand Paul (R-Ky.), with his idiosyncratic libertarianism, provides them with a lot of good stories, like his opposition to mass incarceration. In that vein, a couple of recent media reports assert, on the thinnest reeds of evidence, that Paul has accepted climate science or endorsed regulating carbon pollution. He hasn't. Sorry, reporters: There is no counterintuitive story about Paul and climate change.¶ Paul, who is announcing a presidential run on Tuesday, is an anti-government extremist and a climate change denier. Just last April, he said he is "not sure anybody exactly knows why" the climate is changing. He went on to call the science "not conclusive" and complain about "alarmist stuff." If you're wondering what he means by "alarmist stuff," in 2011, while [arguing for a bill that would prevent the EPA from regulating carbon emissions](#), Paul said, "If you listen to the hysterics, ... you would think that the Statue of Liberty will shortly be under water and the polar bears are all drowning, and that we're dying from pollution. It's absolutely and utterly untrue." Paul went on to assert that children are being misled into believing that "pollution" has gotten "a lot worse," when "It's actually much better now." Paul, of course, was conflating conventional air pollution — like sulfur dioxide, which has declined in the U.S. — and climate pollution, which is cumulative and global, and therefore gets worse every year, even if America's annual emissions drop.¶ Indeed, Paul is prone to making ignorant, conspiracist statements about science in general. In October, he suggested to Breitbart News that Ebola may be more easily spread than scientists say and that the White House had been misleading the country on the issue. And in February, Paul told CNBC, "I've heard of many tragic cases of walking, talking normal children who wound up with profound mental disorders after vaccines." This despite the fact that the supposed connection between autism and vaccination has been thoroughly debunked.¶ Like almost every other Senate Republican, [Paul has voted to strip the EPA of its legal authority to regulate greenhouse gas emissions, to force approval of the Keystone XL oil pipeline, and to prevent Congress from placing any tax or fee on carbon pollution.](#) Paul's lifetime voting score from the League of Conservation Voters is 9 percent

Keystone: War and GW

(highlight this next card down if needed – has several very good warrants however).

Causes great power war, water depletion, and massive environmental collapse.

Michael Klare 2/13/2015 Five Colleges Prof of Peace and World Security Studies @ Hampshire College, “A Republican Neo-Imperial Vision for 2016”
http://www.truthdig.com/report/item/keystone_xl_cold_war_20_and_the_gop_vision_for_2016_20150213

This approach has been embraced by other senior Republican figures who see increased North American hydrocarbon output as the ideal response to Russian assertiveness. In other words, the two pillars of a new energy North Americanism—enhanced collaboration with the big oil companies across the continent and reinvigorated Cold Warism—are now being folded into a single Republican grand strategy. Nothing will prepare the West better to fight Russia or just about any other hostile power on the planet than the conversion of North America into a bastion of fossil fuel abundance. This strange, chilling vision of an American (and global) future was succinctly described by former Secretary of State Condoleezza Rice in a remarkable Washington Post op-ed in March 2014. She essentially called for North America to flood the global energy market, causing a plunge in oil prices and bankrupting the Russians. “Putin is playing for the long haul, cleverly exploiting every opening he sees,” she wrote, but “Moscow is not immune from pressure.” Putin and Co. require high oil and gas prices to finance their aggressive activities, “and soon, North America’s bounty of oil and gas will swamp Moscow’s capacity.” By “authorizing the Keystone XL pipeline and championing natural gas exports,” she asserted, Washington would signal “that we intend to do exactly that.” So now you know: approval of the Keystone XL pipeline isn’t actually about jobs and the economy; it’s about battling Vladimir Putin, the Iranian mullahs, and America’s other adversaries. “One of the ways we fight back, one of the ways we push back is we take control of our own energy destiny,” said Senator Hoeven on January 7th, when introducing legislation to authorize construction of that pipeline. And that, it turns out, is just the beginning of the “benefits” that North Americanism will supposedly bring. Ultimately, the goals of this strategy are to perpetuate the dominance of fossil fuels in North America’s energy mix and to enlist Canada and Mexico in a U.S.-led drive to ensure the continued dominance of the West in key regions of the world. Stay tuned: you’ll be hearing a lot more about this ambitious strategy as the Republican presidential hopefuls begin making their campaign rounds. Keep in mind, though, that this is potentially dangerous stuff at every level—from the urge to ratchet up a conflict with Russia to the desire to produce and consume ever more North American fossil fuels (not exactly a surprising impulse given the Republicans’ heavy reliance on campaign contributions from Big Energy). In the coming months, the Obama administration and Hillary Clinton’s camp will, of course, attempt to counter this drive. Their efforts will, however, be undermined by their sympathy for many of its components. Obama, for instance, has boasted more than once of his success in increasing U.S. oil and gas production, while Clinton has repeatedly called for a more combative foreign policy. Nor has either of them yet come up with a grand strategy as seemingly broad and attractive as Republican North Americanism. If that plan is to be taken on seriously as the dangerous contrivance it is, it evidently will fall to others to do so. This Republican vision, after all, rests on the desire of giant oil companies to eliminate government regulation and bring the energy

industries of Canada and Mexico under their corporate sway. Were this to happen, it would sabotage efforts to curb carbon emissions from fossil fuels in a major way, while undermining the sovereignty of Canada and Mexico. In the process, the natural environment would suffer horribly as regulatory constraints against hazardous drilling practices would be eroded in all three countries. Stepped-up drilling, hydrofracking, and tar sands production would also result in the increased diversion of water to energy production, reducing supplies for farming while increasing the risk that leaking drilling fluids will contaminate drinking water and aquifers. No less worrisome, the Republican strategy would result in a far more polarized and dangerous international environment, in which hopes for achieving any kind of peace in Ukraine, Syria, or elsewhere would disappear. The urge to convert North America into a unified garrison state under U.S. (energy) command would undoubtedly prompt similar initiatives abroad, with China moving ever closer to Russia and other blocs forming elsewhere. In addition, those who seek to use energy as a tool of coercion should not be surprised to discover that they are inviting its use by hostile parties—and in such conflicts the U.S. and its allies would not emerge unscathed. In other words, the shining Republican vision of a North American energy fortress will, in reality, prove to be a nightmare of environmental degradation and global conflict. Unfortunately, this may not be obvious by election season 2016, so watch out.

Keystone: GW=Extinction

Absent cuts in emissions, warming causes extinction

Mazo 10 (Jeffrey Mazo – PhD in Paleoclimatology from UCLA, Managing Editor, Survival and Research Fellow for Environmental Security and Science Policy at the International Institute for Strategic Studies in London, 3-2010, “Climate Conflict: How global warming threatens security and what to do about it,” pg. 122)

The best estimates for global warming to the end of the century range from 2.5-4.~C above pre-industrial levels, depending on the scenario. Even in the best-case scenario, the low end of the likely range is 1.5oC, and in the worst 'business as usual' projections, which actual emissions have been matching, the range of likely warming runs from 3.1--7.1°C. Even keeping emissions at constant 2000 levels (which have already been exceeded), global temperature would still be expected to reach 1.2°C (0.9"1.5°C) above pre-industrial levels by the end of the century." Without early and severe reductions in emissions, the effects of climate change in the second half of the twenty-first century are likely to be catastrophic for the stability and security of countries in the developing world - not to mention the associated human tragedy. Climate change could even undermine the strength and stability of emerging and advanced economies, beyond the knock-on effects on security of widespread state failure and collapse in developing countries. And although they have been condemned as melodramatic and alarmist, many informed observers believe that unmitigated climate change beyond the end of the century could pose an existential threat to civilisation." What is certain is that there is no precedent in human experience for such rapid change or such climatic conditions, and even in the best case adaptation to these extremes would mean profound social, cultural and political changes

No adaptation – 4 degree temperature increase will breakdown civilization and cause every impact

Roberts 13 (David, citing the World Bank Review's compilation of climate studies, "If you aren't alarmed about climate, you aren't paying attention" <http://grist.org/climate-energy/climate-alarmism-the-idea-is-surreal/>)

We know we've raised global average temperatures around 0.8 degrees C so far. We know that 2 degrees C is where most scientists predict catastrophic and irreversible impacts. And we know that we are currently on a trajectory that will push temperatures up 4 degrees or more by the end of the century. What would 4 degrees look like? A recent World Bank review of the science reminds us. First, it'll get hot: Projections for a 4°C world show a dramatic increase in the intensity and frequency of high-temperature extremes. Recent extreme heat waves such as in Russia in 2010 are likely to become the new normal summer in a 4°C world. Tropical South America, central Africa, and all tropical islands in the Pacific are likely to regularly experience heat waves of unprecedented magnitude and duration. In this new high-temperature climate regime, the coolest months are likely to be substantially warmer than the warmest months at the end of the 20th century. In regions such as the Mediterranean, North Africa, the Middle East, and the Tibetan plateau, almost all summer months are likely to be warmer than the most extreme heat waves presently experienced. For example, the warmest July in the Mediterranean region could be 9°C warmer than today's warmest July. Extreme heat waves in recent years have had severe impacts, causing heat-related deaths, forest fires, and harvest losses. The impacts of the extreme heat waves projected for a 4°C world have not been evaluated, but they could be expected to vastly exceed the consequences experienced to date and potentially exceed the adaptive capacities of many societies and natural systems. [my emphasis] Warming to 4 degrees would also lead to "an increase of about 150 percent in acidity of the ocean" leading to levels of acidity "unparalleled in Earth's history." That's bad news for, say, coral reefs: The combination of thermally induced bleaching events, ocean acidification, and sea-level rise threatens large fractions of coral reefs even at 1.5°C global warming. The regional extinction of entire coral reef ecosystems, which could occur well before 4°C is reached, would have profound consequences for their dependent species and for the people who depend on them for food, income, tourism, and shoreline protection. It will also "likely lead to a sea-level rise of 0.5 to 1 meter, and possibly more, by 2100, with several meters more to be realized in the coming centuries." That rise won't be spread evenly, even within regions and countries — regions close to the equator will see even higher seas. There are also indications that it would "significantly

exacerbate existing water scarcity in many regions, particularly northern and eastern Africa, the Middle East, and South Asia, while additional countries in Africa would be newly confronted with water scarcity on a national scale due to population growth." Also, more extreme weather events: Ecosystems will be affected by more frequent extreme weather events, such as forest loss due to droughts and wildfire exacerbated by land use and agricultural expansion. In Amazonia, forest fires could as much as double by 2050 with warming of approximately 1.5°C to 2°C above preindustrial levels. Changes would be expected to be even more severe in a 4°C world. Also loss of biodiversity and ecosystem services: In a 4°C world, climate change seems likely to become the dominant driver of ecosystem shifts, surpassing habitat destruction as the greatest threat to biodiversity. Recent research suggests that large-scale loss of biodiversity is likely to occur in a 4°C world, with climate change and high CO2 concentration driving a transition of the Earth's ecosystems into a state unknown in human experience. Ecosystem damage would be expected to dramatically reduce the provision of ecosystem services on which society depends (for example, fisheries and protection of coastline afforded by coral reefs and mangroves.) New research also indicates a "rapidly rising risk of crop yield reductions as the world warms." So food will be tough. All this will add up to "large-scale displacement of populations and have adverse consequences for human security and economic and trade systems." Given the uncertainties and long-tail risks involved, "there is no certainty that adaptation to a 4°C world is possible." There's a small but non-trivial chance of advanced civilization breaking down entirely. Now ponder the fact that some scenarios show us going up to 6 degrees by the end of the century, a level of devastation we have not studied and barely know how to conceive. Ponder the fact that somewhere along the line, though we don't know exactly where, enough self-reinforcing feedback loops will be running to make climate change unstoppable and irreversible for centuries to come. That would mean handing our grandchildren and their grandchildren not only a burned, chaotic, denuded world, but a world that is inexorably more inhospitable with every passing decade.

Keystone:Food Shortages

Food shortages cause nuclear world war 3

FDI 12, Future Directions International, a Research institute providing strategic analysis of Australia's global interests; citing Lindsay Falvey, PhD in Agricultural Science and former Professor at the University of Melbourne's Institute of Land and Environment, "Food and Water Insecurity: International Conflict Triggers & Potential Conflict Points," <http://www.futuredirections.org.au/workshop-papers/537-international-conflict-triggers-and-potential-conflict-points-resulting-from-food-and-water-insecurity.html>

There is a **growing appreciation** that the **conflicts in the next century will most likely be fought over a lack of resources.** Yet, in a sense, **this is not new. Researchers point to the French and Russian revolutions as conflicts induced by a lack of food.** More recently, **Germany's World War Two efforts are said to have been inspired, at least in part, by its perceived need to gain access to more food.** Yet the general sense among those that attended FDI's recent workshops, was that **the scale of the problem in the future could be significantly greater** as a result of population pressures, changing weather, urbanisation, migration, loss of arable land and other farm inputs, and increased affluence in the developing world. In his book, *Small Farmers Secure Food*, **Lindsay Falvey**, a participant in FDI's March 2012 workshop on the issue of food and conflict, clearly **expresses the problem** and why countries across the globe are starting to take note. He writes (p.36), "...**if people are hungry**, especially in cities, **the state is not stable** – riots, violence, breakdown of law and order and migration result." "Hunger feeds anarchy." This view is also shared by **Julian Cribb**, who in his book, *The Coming Famine*, writes that **if "large regions of the world run short of food, land or water in the decades that lie ahead, then wholesale, bloody wars are liable to follow."** He continues: **"An increasingly credible scenario for World War 3 is not so much a confrontation of super powers and their allies, as a festering, self-perpetuating chain of resource conflicts."** He also says: "The wars of the 21st Century are less likely to be global conflicts with sharply defined sides and huge armies, than a scrappy mass of failed states, rebellions, civil strife, insurgencies, terrorism and genocides, sparked by bloody competition over dwindling resources." As another workshop participant put it, people do not go to war to kill; they go to war over resources, either to protect or to gain the resources for themselves. Another observed that hunger results in passivity not conflict. Conflict is over resources, not because people are going hungry. **A study by the International Peace Research Institute indicates that where food security is an issue, it is more likely to result in some form of conflict. Darfur, Rwanda, Eritrea and the Balkans experienced such wars.** Governments, especially in developed countries, are increasingly aware of this phenomenon. **The UK Ministry of Defence, the CIA, the US Center for Strategic and International Studies and the Oslo Peace Research Institute, all identify famine as a potential trigger for conflicts and possibly even nuclear war.**

Keystone:Ag = Ext.

Agricultural collapse causes extinction.

Richard **Lugar 2k**, Chairman of the Senator Foreign Relations Committee and Member/Former Chair of the Senate Agriculture Committee “calls for a new green revolution to combat global warming and reduce world instability,”

<http://www.unep.org/OurPlanet/imgversn/143/lugar.html>

In a world confronted by global terrorism, turmoil in the Middle East, burgeoning nuclear threats and other crises, it is easy to lose sight of the long-range challenges. But we do so at our peril. One of the most daunting of them is meeting the world's need for food and energy in this century. At stake is not only preventing starvation and saving the environment, but also world peace and security. History tells us that **states may go to war over access to resources**, and that poverty and **famine** have **often bred fanaticism and terrorism. Working to feed the world will minimize factors that contribute to global instability** and the proliferation of **weapons of mass destruction. With the world population expected to grow** from 6 billion people today to 9 billion by mid-century, the **demand for affordable food will increase well beyond current international production** levels. People in rapidly developing nations will have the means greatly to improve their standard of living and caloric intake. Inevitably, that means eating more meat. This will raise demand for feed grain at the same time that the growing world population will need vastly more basic food to eat. Complicating a solution to this problem is a dynamic that must be better understood in the West: **developing countries often use limited arable land to expand cities** to house their growing populations. **As good land disappears, people destroy timber resources and even rainforests** as they try to create more arable land **to feed themselves**. The long-term **environmental consequences could be disastrous for the entire globe**. ¶ Productivity revolution ¶ **To meet the expected demand** for food over the next 50 years, we in **the United States will have to grow** roughly **three times more food** on the land we have. That's a tall order. My farm in Marion County, Indiana, for example, yields on average 8.3 to 8.6 tonnes of corn per hectare – typical for a farm in central Indiana. To triple our production by 2050, we will have to produce an annual average of 25 tonnes per hectare. Can we possibly boost output that much? Well, it's been done before. Advances in the use of fertilizer and water, improved machinery and better tilling techniques combined to generate a threefold increase in yields since 1935 – on our farm back then, my dad produced 2.8 to 3 tonnes per hectare. Much US agriculture has seen similar increases. But of course there is no guarantee that we can achieve those results again. Given the urgency of expanding food production to meet world demand, we must invest much more in scientific research and target that money toward projects that promise to have significant national and global impact. For the United States, that will mean a major shift in the way we conduct and fund agricultural science. Fundamental research will generate the innovations that will be necessary to feed the world. The **United States** can take a leading position in a productivity revolution. And our success at **increasing food production may play a decisive humanitarian role in the survival of billions of people and the health of our planet.**

Flat Tax: Ruins Economy

Rand Paul's economic policies would destroy American manufacturing jobs and competitiveness Richman 4-9-2015 "Howard, writes for the blog American thinker "Rand Paul would give

Libertarian economics a bad name"

http://www.americanthinker.com/blog/2015/04/president_rand_paul_would_give_libertarian_economics_a_bad_name.html".CC

I watched Senator Rand Paul's announcement that he was running for president. He had good goals, but his economic ignorance was dismayng. For example, he argued that allowing American corporations to bring back profits from overseas at a low tax rate would encourage investment in American manufacturing. Exactly the opposite. Doing so would not only make outsourcing more profitable, but it would also bid up the exchange rate of the dollar (American corporations would convert foreign profits to dollars), which would put even more American manufacturing workers out of work.

Several of his goals were excellent: Balanced Budget. He called for a balanced budget, one of the requirements for stable economic growth. Unfortunately, balancing budgets can cause recession unless monetary growth and trade are also balanced. Bringing Back American Manufacturing. He called for increasing U.S. manufacturing jobs. Unfortunately, his program for doing so would reduce U.S. manufacturing jobs. U.S. manufacturing jobs could be increased simply by requiring balanced trade through a **Scaled Tariff**. Auditing the Federal Reserve. The Federal Reserve under Bernanke supported financial losers by buying their bad loans, which awarded those with political power and contributed to crony capitalism. The Federal Reserve should be put on a much tighter leash. Recent Federal Reserve chairs Bernanke and Yellen caused asset price bubbles by purchasing long-term bonds, not just the short-term bonds that their predecessors purchased. In contrast, their predecessors Volcker and Greenspan maintained balanced monetary growth during the 1980s and 1990s, producing stable economic growth that would have continued if not for the growing U.S. trade deficits. Senator Paul may be the candidate for president who is least tied to the crony-capitalist system that is becoming entrenched in U.S. economic policies. If he only understood economics, he could be a great president. Unfortunately, his economic policies would backfire. They would produce recession and increased loss of American manufacturing jobs, giving economic libertarianism a bad name. We need a president who not only understands the need for smaller government and balanced budgets, but also understands the need for balanced monetary growth and balanced trade. The combination of balanced budgets, balanced monetary growth, and balanced trade would restore American prosperity.

Keystone Ext.

KXL fails – jobs temporary, refineries foreign owned, and greater costs than benefit because of spills, fuel prices, and other factors.

Jack Holmes 11/15/14 Editor and columnist for the Daily beast, Previously contributing editor and columnist for New York Times, “The pipeline from Hell: There’s no Good Reason to Build Keystone XL,”

<http://www.thedailybeast.com/articles/2014/11/15/the-pipeline-from-hell-there-s-no-good-reason-to-build-keystone-xl.html>

No lasting jobs, no cheaper gas, and a chance to kill off one-fourth of U.S. farmland and maybe the planet.¶ So why, you might ask, are many of our leaders so eager to build it? The answer is straightforward: money and political gain.¶ Why, if the project will create a lot of jobs and have little environmental impact, does it continue to be met with opposition? To begin with, it won't actually create many jobs. According to a George Mason University study, via Bloomberg, the pipeline's construction could create between 2,500 and 20,000 jobs. More likely (PDF), it'll be between 2,500 and 4,650, assuming that a huge chunk (as much as 50 percent) of steel production will be outsourced to China, Canada, and India. Moreover, when construction ends, the number of permanent jobs could fall to 20. Yes, 20.¶ A rosier estimate, from the State Department's report and Newsweek, puts the number of permanent jobs at 35. A study by Cornell's Global Labor Institute claims that the project may actually kill more American jobs than it creates due to pipeline spills, additional fuel costs in the Midwest, and other factors. It also claims that 85-90 percent of people hired for the line's construction will not be from the areas through which the pipeline is running.¶ So, it won't create that many jobs. After all, it's merely taking oil drilled in Canada to pre-existing refineries on the Gulf Coast. But it's a \$7 billion project, and the State Department has said it will have a minimal negative effect on the environment. Plus, it could increase America's energy independence and strengthen our position in the Middle East and beyond. These are all good reasons to move ahead with the plan, but unfortunately, none of them are actually true.¶ The pipeline is a \$7 billion project, but only \$3 billion-\$4 billion of that would be headed to the U.S. The rest is going to wherever that steel is getting outsourced. The claim of reduced dependence on foreign oil suppliers is also suspect. China has already invested billions in Canada's oil sands, and Chinese corporations are upping their stakes all the time. Much of the oil transported by the pipeline will be refined in Port Arthur, Texas, where the main refinery is half-owned by the state-owned oil company of Saudi Arabia (PDF). The Keystone project is not an American one, but a global one, financed and favored by major multinational oil interests. Besides, real domestic oil production—oil drilled and refined in the U.S. by nominally American companies—has already increased 70 percent under the Obama administration.

Their State department studies are bogus – conducted by ERM – a long time TransCanada business partner.

Jack Holmes 11/15/14 Editor and columnist for the Daily beast, Previously contributing editor and columnist for New York Times, “The pipeline from Hell: There’s no Good Reason to Build Keystone XL,”
<http://www.thedailybeast.com/articles/2014/11/15/the-pipeline-from-hell-there-s-no-good-reason-to-build-keystone-xl.html>

¶ All of this means that the pipeline’s approval would essentially be a continuation of the status quo, with a few billion dollars kicked the U.S. economy’s way. Except that the project would, **in spite of the State Department’s claims, have drastic effects on the environment on both local and global levels.** That **study published by the State Department was conducted by Environmental Resources Management (ERM), a firm that listed TransCanada, the would-be pipeline builder, as a client in its marketing materials a year before** it began the Keystone contract.¶ Both ERM and TransCanada told the State Department at the time that they had not worked together for at least five years, a term of the contract meant to limit conflict of interest. Of course, any doubts about a conflict of interest evaporated when it emerged that up until the summer of 2013, a division of ERM had been “working alongside TransCanada on the Alaska Pipeline Project.” These are two in a **laundry list of troubling connections between the two companies.**

KXL leak destroys ¼ of U.S. farm land, and tar sands burned from pipeline would create irreversible warming nightmare.

Jack Holmes 11/15/14 Editor and columnist for the Daily beast, Previously contributing editor and columnist for New York Times, “The pipeline from Hell: There’s no Good Reason to Build Keystone XL,”
<http://www.thedailybeast.com/articles/2014/11/15/the-pipeline-from-hell-there-s-no-good-reason-to-build-keystone-xl.html>

¶ Considering, then, that the State Department study was conducted by TransCanada’s business partner, it’s little surprise that it failed to find any environmental consequences for the project. The reality is far different. On a **local level, pipeline leaks and spills could have a number of drastic effects.** **Recent leaks** from similar lines have been bad. Really bad. A New York Times article cites a 2010 leak of 840,000 gallons of bitumen into Michigan’s Kalamazoo River. The **cleanup has cost \$1 billion** so far, **and continues today.**¶ It also mentions an Arkansas leak that

sent 210,000 gallons of bitumen running through the streets of small-town Mayflower and left local residents with respiratory problems, nausea, and headaches. The proposed Keystone route would see it “pass over the Ogallala Aquifer, the lifeblood of Great Plains agriculture,” where the water table is close to the surface. A major leak could poison the water supply of large swaths of the Midwest that add up to one quarter of the nation’s farmland.[¶] The pipeline also has environmental consequences on a larger scale. The pipeline would encourage accelerated extraction of Canada’s tar sands, which have greenhouse gas emissions 81 percent greater than those of conventional oil. By most measures, it is the dirtiest fossil fuel on the planet. James Hansen, formerly of NASA, claimed in a 2012 op-ed that the tar sands contain twice the amount of carbon dioxide emitted by global oil use in our entire history. If true, its exploitation along with our continued use of fossil fuels at present levels would bring carbon concentration in the atmosphere above the 500 parts per million threshold often discussed by climatologists as the point of no return. That would create an irreversible cycle wherein the climate is beyond our control. Hansen describes it as “game over for the environment.”[¶] Even if that’s an alarmist prediction, and Canada will exploit their tar sands with or without the Keystone XL Pipeline, there is no question that its construction will not help with controlling emissions, boosting energy independence, or creating jobs. The only people it will benefit are TransCanada, the Canadian oil companies (many part-owned by Chinese and Mideast interests) working in the tar sands, the multinational oil companies who will refine what it brings to the Gulf Coast, and a few thousand workers. Temporarily.

Flat Tax: Econ KT Heg

Economic strength is vital to hegemony and conflict suppression

Hubbard, Open Society Foundations program assistant, 2010

(Jesse, "Hegemonic Stability Theory: An Empirical Analysis", 5-28,
<http://isrj.wordpress.com/2010/05/28/hegemonic-stability-theory/>)

Regression analysis of this data shows that Pearson's r-value is -.836. In the case of American hegemony, economic strength is a better predictor of violent conflict than even overall

national power, which had an r-value of -.819. The data is also well within the realm of statistical significance, with a p-value of .0014. While the data for British hegemony was not as striking, the same overall pattern holds true in both cases. During both periods of hegemony, hegemonic strength was negatively related with violent conflict, and yet use of force by the hegemon was positively correlated with violent conflict in both cases. Finally, in both cases, economic power was more closely associated with conflict levels than military power. Statistical analysis created a more complicated picture of the hegemon's role in fostering stability than initially anticipated. VI. Conclusions and Implications for Theory and Policy To elucidate some answers regarding the complexities my analysis unearthed, I turned first to the existing theoretical literature on hegemonic stability theory. The existing literature provides some potential frameworks for understanding these results. Since economic strength proved to be of such crucial importance, reexamining the literature that focuses on hegemonic stability theory's economic implications was the logical first step. As explained above, the literature on hegemonic stability theory can be broadly divided into two camps – that which focuses on the international economic system, and that which focuses on armed conflict and instability. This research falls squarely into the second camp, but insights from the first

camp are still of relevance. Even Kindleberger's early work on this question is of relevance. Kindleberger posited that the **economic instability between the First and Second World Wars could be attributed to the lack of an economic hegemon** (Kindleberger 1973). But economic instability obviously has spillover effects into the international political arena.

Keynes, writing after WWI, warned in his seminal tract *The Economic Consequences of the Peace* that Germany's economic humiliation could have a radicalizing effect on the nation's political culture (Keynes 1919). Given later events, his warning seems prescient. In the years since the Second World War, however, the European continent has not relapsed into armed conflict. What was different after the second global conflagration? Crucially, the United States was in a far more powerful position than Britain was after WWI. As the tables above show, Britain's economic strength after the First World War was about 13% of the total in strength in the international system. In contrast, the United States possessed about 53% of relative economic power in the international system in the years immediately following WWII. The U.S. helped rebuild Europe's economic strength with billions of dollars in investment through the Marshall Plan, assistance that was never available to the defeated powers after the First World War (Kindleberger 1973). The interwar years were also marked by a series of debilitating trade wars that likely worsened the Great Depression (Ibid.). In contrast, when Britain was more powerful, it was able to facilitate greater free trade, and after World War II, the United States played a leading role in creating institutions like the GATT that had an essential role in facilitating global trade (Organski 1958). The possibility that economic stability is an important factor in the overall

security environment should not be discounted, especially given the results of my statistical analysis. **Another theory that could provide insight into the patterns observed in this research is that of preponderance of power.**

Gilpin theorized that when a state has the preponderance of power in the international system, rivals are more likely to resolve their disagreements without resorting to armed

conflict (Gilpin 1983). The logic behind this claim is simple – it makes more sense to challenge a weaker hegemon than a stronger one. This simple yet powerful theory can help explain the puzzlingly strong positive correlation between military conflicts engaged in by the hegemon and conflict overall. It is not necessarily that military involvement by the hegemon instigates further conflict in the international system. Rather, this military involvement could be a function of the hegemon's weaker position, which is the true cause of the higher levels of conflict in the international system.

Additionally, it is important to note that military power is, in the long run, dependent on economic strength. Thus, it is possible that as hegemons lose relative economic power, other nations are tempted to challenge them even if their short-term military capabilities are still strong.

This would help explain some of the variation found between the economic and military data. The results of this analysis are of clear importance beyond the realm of theory. As the debate rages over the role of the United States in the world, hegemonic stability theory has some useful insights to bring to the table. What this research makes clear is that a strong hegemon can exert a positive influence on stability in the international system. However, this should not give policymakers a justification to engage in conflict or escalate military budgets purely for the sake of international

stability. **If anything, this research points to the central importance of economic influence in fostering international stability.** To misconstrue these findings to justify anything else would be a grave error indeed. Hegemons may play a stabilizing role in the international system, but this role is complicated. **It is economic strength, not military dominance that is the true test of**

hegemony. A weak state with a strong military is a paper tiger – it may appear fearsome, but it is vulnerable to even a short blast of wind.

Econ collapse causes global conflict - Current geo-political climate creates multiple scenarios

Duncan 12

Richard Duncan, former World Bank specialist and chief economist in Blackhorse Asset Management, in 2012 (Richard, chief economist at Singapore-based Blackhorse Asset Management, former financial sector specialist at the World Bank and global head of investment strategy at ABN AMRO Asset Management, studied literature and economics at Vanderbilt University (1983) and international finance at Babson College (1986), “The New Depression: The Breakdown of the Paper Money Economy”, <http://www.amazon.com/The-New-Depression-Breakdown-ebook/dp/B007GZOYI6>, 2/24/12)

The consequences of a New Great Depression would extend far beyond the realm of economics. Hungry people will fight to survive. Governments will use force to maintain internal order at home. This section considers the geopolitical repercussion of economic collapse, beginning with the United States. First, the U.S. government’s tax revenues would collapse with the depression. Second, because global trade would shrivel up, other countries would no longer help finance the U.S. budget deficit by buying government bonds because they would no longer have the money to do so. At present, the rest of the world has a \$500 billion annual trade surplus with the United States. The central banks of the United States’ trading partners accumulate that surplus as foreign exchange reserves and invest most of those reserves into U.S. government bonds. An economic collapse would cause global trade to plummet and drastically reduce (if not eliminate altogether) the U.S. trade deficit. Therefore, this source of foreign funding for the U.S. budget deficit would dry up. Consequently, the government would have to sharply curtail its spending, both at home and abroad. Domestically, social programs for the old, the sick, and the unemployed would have to be slashed. Government spending on education and infrastructure would also have to be curtailed. Much less government spending would result in a dramatic increase in poverty and, consequently, in crime. This would combine to produce a crisis of the current two-party political system. Astonishment, frustration, and anger at the economic breakdown would radicalize politics. New parties would form at both extremes of the political spectrum. Given the great and growing income inequality going into the crisis, the hungry have-nots would substantially outnumber the remaining wealthy. On the one hand, a hard swing to the left would be the outcome most likely to result from democratic elections. In that case, the tax rates on the top income brackets could be raised to 80 percent or more, a level last seen in 1963. On the other hand, the possibility of a right-wing putsch could not be ruled out. During the Great Depression, the U.S. military was tiny in comparison with what it became during World War II and during the decades of hot, cold, and terrorist wars that followed. In this New Great Depression, it might be the military that ultimately determines how the country would be governed. The political battle over America’s future would be bitter, and quite possibly bloody. It cannot be guaranteed that the U.S. Constitution would survive. Foreign affairs would also confront the United States with enormous challenges. During the Great Depression, the United States did not have a global empire. Now it does. The United States maintains hundreds of military bases across dozens of countries around the world. Added to this is a fleet of 11 aircraft carriers and 18 nuclear-armed submarines. The country spends more than \$650 billion a year on its military. If the U.S. economy collapses into a New Great Depression, the United States could not afford to maintain its worldwide military presence or to continue in its role as global peacekeeper. Or, at least, it could not finance its military in the same way it does at present. Therefore, either the United States would have to find an alternative funding method for its global military presence or else it would have to radically scale it back. Historically, empires were financed with plunder and territorial expropriation. The estates of the vanquished ruling classes were given to the conquering generals, while the rest of the population was forced to pay imperial taxes. The U.S. model of empire has been unique. It has financed its global military presence by issuing government debt, thereby taxing future generations of Americans to pay for this generation’s global supremacy. That would no longer be possible if the economy

collapsed. Cost-benefit analysis would quickly reveal that much of America's global presence was simply no longer affordable. **Many**—or even most—of the **outposts** that did not pay for themselves **would have to be abandoned.** Priority would be given to those places that were of vital economic interests to the United States. The Middle East oil fields would be at the top of that list. The United States would have to maintain control over them whatever the price. In this global depression scenario, **the price of oil could collapse to \$3 per barrel.** **Oil consumption would fall** by half and there would be no speculators left to manipulate prices higher. **Oil at that level would impoverish** the **oil-producing nations,** **with extremely destabilizing political consequences.** **Maintaining control over** the Middle East oil fields would become much more difficult for the United States. It would require a much larger military presence than it does now. On the one hand, **it might become necessary for the United States to reinstate the draft** (which would possibly meet with violent resistance from draftees, as it did during the Vietnam War). On the other hand, America's all-volunteer army might find it had more than enough volunteers with the national unemployment rate in excess of 20 percent. **The army might have to be employed to keep order** at home, given that mass unemployment would inevitably lead to a sharp spike in crime. Only after the Middle East oil was secured would the country know how much more of its global military presence it could afford to maintain. If international trade had broken down, would there be any reason for the United States to keep a military presence in Asia when there was no obvious way to finance that presence? **In a global depression, the United States' allies in Asia would most likely be unwilling or unable to finance America's military bases** there or to pay for the upkeep of the U.S. Pacific fleet. **Nor would the United States have the strength to force them** to pay for U.S. protection. Retreat from Asia might become unavoidable. And Europe? What would a cost-benefit analysis conclude about the wisdom of the United States maintaining military bases there? What valued added does Europe provide to the United States? Necessity may mean **Europe will have to defend itself.** **Should a New Great Depression put an end to the Pax Americana, the world would become a much more dangerous place.** When the Great Depression began, Japan was the rising industrial power in Asia. It invaded Manchuria in 1931 and conquered much of the rest of Asia in the early 1940s. Would China, Asia's new rising power, behave the same way in the event of a new global economic collapse? Possibly. China is the only nuclear power in Asia east of India (other than North Korea, which is largely a Chinese satellite state). However, in this disaster scenario, **it is not certain that China would survive** in its current configuration. **Its economy would be in ruins.** Most of its factories and banks would be closed. Unemployment could exceed 30 percent. There would most likely be starvation both in the cities and in the countryside. **The Communist Party could lose its grip on power,** in which case **the country could break apart,** as it has numerous times in the past. It was less than 100 years ago that China's provinces, ruled by warlords, were at war with one another. United or divided, China's nuclear arsenal would make it Asia's undisputed superpower if the United States were to withdraw from the region. From Korea and Japan in the North to New Zealand in the South to Burma in the West, all of Asia would be at China's mercy. And **hunger among China's population** of 1.3 billion people **could necessitate territorial expansion** into Southeast Asia. In fact, the central government might not be able to prevent mass migration southward, even if it wanted to. In Europe, severe economic hardship would revive the centuries-old struggle between the left and the right. During the 1930s, the Fascists movement arose and imposed a police state on most of Western Europe. In the East, the Soviet Union had become a communist police state even earlier. The far right and the far left of the political spectrum converge in totalitarianism. **It is difficult to judge whether Europe's democratic institutions would hold up better this time** that they did last time. England had an empire during the Great Depression. Now it only has banks. In a severe worldwide depression, the country— or, at least London—could become ungovernable. **Frustration over poverty and a lack of jobs would erupt into anti-immigration riots** not only in the United Kingdom but also across most of Europe. The extent to which Russia would menace its European neighbors is unclear. On the one hand, **Russia would be impoverished by the collapse in oil prices** and might be too preoccupied with internal unrest to threaten anyone. On the other hand, **it could provoke a war with the goal of maintaining internal order through emergency wartime powers.** Germany is very nearly demilitarized today when compared with the late 1930s. Lacking a nuclear deterrent of its own, it could be subject to Russian intimidation. While Germany could appeal for protection from England and France, who do have nuclear capabilities, it is uncertain that would buy Germany enough time to remilitarize before it became a victim of Eastern aggression. As for the rest of the world, its prospects in this disaster scenario can be summed up in only a couple of sentences. Global economic output could fall by as much as half, from \$60 trillion to \$30 trillion. Not all of the world's seven billion people would survive in a \$30 trillion global economy. Starvation would be widespread. **Food riots would provoke** political upheaval and myriad big and small **conflicts around the world.** It would be a humanitarian catastrophe so extreme as to be unimaginable for the current generation, who, at least in the industrialized world, has known only prosperity. Nor would there be reason to hope that the New Great Depression would end quickly. The Great Depression was only ended by an even more calamitous global war that killed approximately 60 million people.

Flat Tax: Heg Stops War

Losing hegemony causes great power war

Zhang et al., Carnegie Endowment researcher, 2011

(Yuhan, "America's decline: A harbinger of conflict and rivalry", 1-22,

<http://www.eastasiaforum.org/2011/01/22/americas-decline-a-harbinger-of-conflict-and-rivalry/>, Idg)

This does not necessarily mean that the US is in systemic decline, but it encompasses a trend that appears to be negative and perhaps alarming. Although the US still possesses incomparable military prowess and its economy remains the world's largest, the once seemingly indomitable chasm that separated America from anyone else is narrowing. Thus, the global distribution of power is shifting, and the inevitable result will be a world that is less peaceful, liberal and prosperous, burdened by a dearth of effective conflict regulation. Over the past two decades, no other state has had the ability to seriously challenge the US military. Under these circumstances, motivated by both opportunity and fear, many actors have bandwagoned with US hegemony and accepted a subordinate role. Canada, most of Western Europe, India, Japan, South Korea, Australia, Singapore and the Philippines have all joined the US, creating a status quo that has tended to mute great power conflicts. However, as the hegemony that drew these powers together withers, so will the pulling power behind the US alliance. The result will be an international order where power is more diffuse. American interests and influence can be more readily challenged, and conflicts or wars may be harder to avoid. As history attests, power decline and redistribution result in military confrontation. For example, in the late 19th century America's emergence as a regional power saw it launch its first overseas war of conquest towards Spain. By the turn of the 20th century, accompanying the increase in US power and waning of British power, the American Navy had begun to challenge the notion that Britain 'rules the waves.' Such a notion would eventually see the US attain the status of sole guardians of the Western Hemisphere's security to become the order-creating Leviathan shaping the international system with democracy and rule of law. Defining this US-centred system are three key characteristics: enforcement of property rights, constraints on the actions of powerful individuals and groups and some degree of equal opportunities for broad segments of society. As a result of such political stability, free markets, liberal trade and flexible financial mechanisms have appeared. And, with this, many countries have sought opportunities to enter this system, proliferating stable and cooperative relations. However, what will happen to these advances as America's influence declines? Given that America's authority, although sullied at times, has benefited people across much of Latin America, Central and Eastern Europe, the Balkans, as well as parts of Africa and, quite extensively, Asia, the answer to this question could affect global society in a profoundly detrimental way. Public imagination and academia have anticipated that a post-hegemonic world would return to the problems of the 1930s: regional blocs, trade conflicts and strategic rivalry. Furthermore, multilateral institutions such as the IMF, the World Bank or the WTO might give way to regional organisations. For example, Europe and East Asia would each step forward to fill the vacuum left by Washington's withering leadership to pursue their own visions of regional political and economic orders. Free markets would become more politicised — and, well, less free — and major powers would compete for supremacy. Additionally, such power plays have historically possessed a zero-sum element. In the late 1960s and 1970s, US economic power declined relative to the rise of the Japanese and Western European economies, with the US dollar also becoming less attractive. And, as American power eroded, so did international regimes (such as the Bretton Woods System in 1973). A world without American hegemony is one where great power wars re-emerge the liberal international system is supplanted by an authoritarian one, and trade protectionism devolves into restrictive, anti-globalisation barriers. This, at least, is one possibility we can forecast in a future that will inevitably be devoid of unrivalled US primacy.

Heg decline causes every scenario for extinction

Brzezinski, John Hopkins American Foreign Policy professor, 2012

(Zbigniew, Strategic Vision: America and the Crisis of Global Power, google books, Idg)

An American decline would impact the nuclear domain most profoundly by inciting a crisis of confidence in the credibility of the American nuclear umbrella. Countries like South Korea, Taiwan, Japan, Turkey, and even Israel, among others, rely on the United States' extended nuclear deterrence for security. If they were to see the United States slowly retreat from certain regions, forced by circumstances to pull back its guarantees, or even if they were to lose confidence in standing US guarantees, because of the financial, political, military, and diplomatic consequences of an American decline, then they will have to seek security elsewhere. That "elsewhere" security could originate from only two sources: from nuclear weapons of one's own or from the extended deterrence of another power—most likely Russia, China, or India. It is possible that countries that feel threatened by the ambition of existing nuclear weapon states, the addition of new nuclear weapon states, or the decline in the reliability of American power would develop their own nuclear capabilities. For crypto-nuclear powers like Germany and Japan, the path to nuclear weapons would be easy and fairly quick, given their extensive civilian nuclear industry, their financial success, and their technological acumen. Furthermore, the continued existence of nuclear weapons in North Korea and the potentiality of a nuclear-capable Iran could prompt American allies in the Persian Gulf or East Asia to build their own nuclear deterrents. Given North Korea's increasingly aggressive and erratic behavior, the failure of the six-party talks, and the widely held distrust of Iran's megalomaniacal leadership, the guarantees offered by a declining America's nuclear umbrella might not stave off a regional nuclear arms race among smaller powers. Last but not least, even though China and India today maintain a responsible nuclear posture of minimal deterrence and "no first use," the uncertainty of an increasingly nuclear world could force both states to reevaluate and escalate their nuclear posture. Indeed, they as well as Russia might even become inclined to extend nuclear assurances to their respective client states. Not only could this signal a renewed regional nuclear arms race between these three aspiring powers but it could also create new and antagonistic spheres of influence in Eurasia driven by competitive nuclear deterrence. The decline of the United States would thus precipitate drastic changes to the nuclear domain. An increase in proliferation among insecure American allies and/or an arms race between the emerging Asian powers are among the more likely outcomes. This ripple effect of proliferation would undermine the transparent management of the nuclear domain and increase the likelihood of interstate rivalry, miscalculation, and eventually even perhaps of international nuclear terror. In addition to the foregoing, in the course of this century the world will face a series of novel geopolitical challenges brought about by significant changes in the physical environment. The management of those changing environmental commons—the growing scarcity of fresh water, the opening of the Arctic, and global warming—will require global consensus and mutual sacrifice. American leadership alone is not enough to secure cooperation on all these issues, but a decline in American influence would reduce the likelihood of achieving cooperative agreements on environmental and resource management. America's retirement from its role of global policeman could create greater opportunities for emerging powers to further exploit the environmental commons for their own economic gain, increasing the chances of resource-driven conflict, particularly in Asia. The latter is likely to be the case especially in regard to the increasingly scarce water resources in many countries. According to the United States Agency for International Development (USAID), by 2025 more than 2.8 billion people will be living in either water-scarce or water-stressed regions, as global demand for water will double every twenty years.⁹ While much of the Southern Hemisphere is threatened by potential water scarcity, interstate conflicts—the geopolitical consequences of cross-border water scarcity—are most likely to occur in Central and South Asia, the Middle East, and northeastern Africa, regions where limited water resources are shared across borders and political stability is transient. The combination of political insecurity and resource scarcity is a menacing geopolitical combination. The threat of water conflicts is likely to intensify as the economic growth and increasing demand for water in emerging powers like Turkey and India collides with instability and resource scarcity in rival countries like Iraq and Pakistan. Water scarcity will also test China's internal stability as its burgeoning population and growing industrial complex combine to increase demand for and decrease supply of usable water. In South Asia, the never-ending political tension between India and Pakistan combined with overcrowding and Pakistan's heightening internal crises may put the Indus Water Treaty at risk, especially because the river basin originates in the long-disputed territory of Jammu and Kashmir, an area of ever-increasing political and military volatility. The lingering dispute between India and China over the status of Northeast India, an area through which the vital Brahmaputra River flows, also remains a serious concern. As American hegemony disappears and regional competition intensifies, disputes over natural resources like water have the potential to develop into full-scale conflicts. The slow thawing of the Arctic will also change the face of the international competition for important resources. With the Arctic becoming increasingly accessible to human endeavor, the five Arctic littoral states—the United States, Canada, Russia, Denmark, and Norway—may rush to lay claim to its bounty of oil, gas, and metals. This run on the Arctic has the potential to cause severe shifts in the geopolitical landscape, particularly to Russia's advantage. As Vladimir Radyuhin points out in his article entitled "The Arctic's Strategic Value for Russia," Russia has

the most to gain from access to the Arctic while simultaneously being the target of far north containment by the other four Arctic states, all of which are members of NATO. In many respects this new great game will be determined by who moves first with the most legitimacy, since very few agreements on the Arctic exist. The first Russian supertanker sailed from Europe to Asia via the North Sea in the summer of 2010.¹⁰ Russia has an immense amount of land and resource potential in the Arctic. Its territory within the Arctic Circle is 3.1 million square kilometers—around the size of India—and the Arctic accounts for 91% of Russia's natural gas production, 80% of its explored natural gas reserves, 90% of its offshore hydrocarbon reserves, and a large store of metals.¹¹ Russia is also attempting to increase its claim on the territory by asserting that its continental shelf continues deeper into the Arctic, which could qualify Russia for a 150-mile extension of its Exclusive Economic Zone and add another 1.2 million square kilometers of resource-rich territory. Its first attempt at this extension was denied by the UN Commission on the Continental Shelf, but it is planning to reapply in 2013. Russia considers the Arctic a true extension of its northern border and in a 2008 strategy paper President Medvedev stated that the Arctic would become Russia's "main strategic resource base" by 2020.¹² Despite recent conciliatory summits between Europe and Russia over European security architecture, a large amount of uncertainty and distrust stains the West's relationship with Russia. The United States itself has always maintained a strong claim on the Arctic and has continued patrolling the area since the end of the Cold War. This was reinforced during the last month of President Bush's second term when he released a national security directive stipulating that America should "preserve the global mobility of the United States military and civilian vessels and aircraft throughout the Arctic region." The potentiality of an American decline could embolden Russia to more forcefully assert its control of the Arctic and over Europe via energy politics; though much depends on Russia's political orientation after the 2012 presidential elections. All five Arctic littoral states will benefit from a peaceful and cooperative agreement on the Arctic—similar to Norway's and Russia's 2010 agreement over the Barents Strait—and the geopolitical stability it would provide. Nevertheless, political circumstances could rapidly change in an environment where control over energy remains Russia's single greatest priority. **Global climate change** is the final component of the environmental commons and the one with the greatest potential geopolitical impact. **Scientists** and policy makers alike **have projected catastrophic consequences for** mankind and **the planet** if the world average temperature rises by more than two degrees over the next century. Plant and animal **species could grow extinct** at a rapid pace, large-scale **ecosystems could collapse**, human **migration could increase** to untenable levels, and global **economic development could be** categorically **reversed**. **Changes** in geography, forced migration, and global economic contraction layered on top of the perennial regional security challenges **could create a** geopolitical reality of **unmanageable** complexity and **conflict**, especially in the densely populated and politically unstable areas of Asia such as the Northeast and South. Furthermore, any legitimate action inhibiting global climate change will require unprecedented levels of self-sacrifice and international cooperation. The United States does consider climate change a serious concern, but its lack of both long-term strategy and political commitment, evidenced in its refusal to ratify the Kyoto Protocol of 1997 and the repeated defeat of climate-change legislation in Congress, deters other countries from participating in a global agreement. The United States is the second-largest global emitter of carbon dioxide, after China, with 20% of the world's share. The United States is the number one per capita emitter of carbon dioxide and the global leader in per capita energy demand. Therefore, **US leadership is essential in not only getting other countries to cooperate**, but also in actually inhibiting climate change. Others around the world, including the European Union and Brazil, have attempted their own domestic reforms on carbon emissions and energy use, and committed themselves to pursuing renewable energy. Even China has made reducing emissions a goal, a fact it refuses to let the United States ignore. But none of those nations currently has the ability to lead a global initiative. President Obama committed the United States to energy and carbon reform at the Copenhagen Summit in 2009, but the increasingly polarized domestic political environment and the truculent American economic recovery are unlikely to inspire progress on costly energy issues. China is also critically important to any discussion of the management of climate change as it produces 21% of the world's total carbon emissions, a percentage that will only increase as China develops the western regions of its territory and as its citizens experience a growth in their standard of living. China, however, has refused to take on a leadership role in climate change, as it has also done in the maritime, space, and cyberspace domains. China uses its designation as a developing country to shield itself from the demands of global stewardship. China's tough stance at the 2009 Copenhagen Summit underscores the potential dangers of an American decline: no other country has the capacity and the desire to accept global stewardship over the environmental commons. Only a vigorous United States could lead on climate change, given Russia's dependence on carbon-based energies for economic growth, India's relatively low emissions rate, and China's current reluctance to assume global responsibility. **The protection and good faith management of the global commons—sea, space, cyberspace, nuclear proliferation, water security, the Arctic, and the environment itself—are imperative to the long-term growth of the global economy and the continuation of basic geopolitical stability**. But in almost every case, **the potential absence of constructive and influential US leadership would fatally undermine the essential communality of the global commons**. The argument that America's decline would generate global insecurity, endanger some vulnerable states, produce a more troubled North American neighborhood, and make cooperative management of the global commons more difficult is not an argument for US global supremacy. In fact, the strategic complexities of the world in the twenty-first century—resulting from the rise of a politically self-assertive global population and from the dispersal of global power—make such supremacy unattainable. But in this increasingly complicated geopolitical environment, an America in pursuit of a new, timely strategic vision is crucial to helping the world avoid a dangerous slide into international turmoil.

Ends Diplomacy: War

Rand Paul would virtually end all US diplomacy this causes our allies to be alienated and encourages aggression

Solmimi 4-10-2015 “Dave, writer for talking points memo “Rand Paul’s deeply misguided national security policy”, <http://talkingpointsmemo.com/cafe/rand-paul-misguided-national-security-policy>”.CC

Senator Rand Paul came out of the gates swinging this week, and one of his biggest swipes was at foreign aid, development and diplomacy funding. While his stated reason of cost doesn’t pass the sniff test—foreign aid costs about what Americans spent on \$1 smartphone apps last year—that isn’t the worst thing about Paul’s plan. **The real problem is that Rand Paul’s national security policy is a mismatch both for the world we live in and public opinion about what America’s role should be. A basic premise of security spending is that we should buy the tools we need to meet the threats we face. The 21st century is full of challenges that don’t respond well to bombs and bullets.** We can’t bomb nuclear knowledge out of Iran. We can’t send in a tank to deal with Ebola. And the F-22 is little use against a terror cell plotting in the heart of London. **Paul’s approach would cut the very tools we need to address those threats: diplomacy with Iran, public health in Africa and public diplomacy in Pakistan.** This shouldn’t be too much of a surprise; Paul’s neo-libertarian worldview is a bit odd. What with its survivalists and preppers and tri-corner hats, it’s all a bit fetishistic for a real-world version of The Walking Dead where you hole up with your rifle, live behind a big wall and wait for the grid to go down. Applying that view to the international sphere becomes an exercise in overly simplistic analogy: the libertarian supplants the man in his castle with the nation surrounded by oceans and becomes an isolationist. **These roots lie in corrupted nostalgia for the 1700s—an era of kings and mercantilism, when transatlantic trade took a month and transpacific trade didn’t exist.** In those days, the vast geography of our continent offered opportunities for growth that today can only be met by trade beyond our shores. Paul’s views can’t adapt to a hyperconnected world of Internet communication and global economy. **President Paul would have at his disposal a big military, but no real diplomatic corps, no foreign aid and few tools of economic statecraft—the sanctions, summits, prods and pressures that grease international relations. Yet the problems of the world would not go away. And here lies an even bigger rub: With only force to use, Paul is more, not less, likely to become involved in military adventures overseas. Without trade leverage, how does President Paul protect significant trading partners like Japan and South Korea from Chinese aggression in the South China Sea?** Without sanctions available to him, Paul has few choices to confront Russian aggression on the border of the EU, our fourth largest trade partner. Without UN resolutions and the alliances to enforce them, how does Paul prevent a nuclear-armed Iran? Much of international relations is about creating more options when the set available to you looks bad. But when all you have is a bomber, everything starts looking like a target. By refusing the modern tools of statecraft and power, Rand Paul would tie one hand behind our back and then force us to fight with the other. American feelings of weariness towards the world have had an impact on our policy preferences. From opposition to intervention in Syria and Ukraine to worries about military moves against Iran, hawkish choices today seem more off the table than on it, at least for voters. The assumption of neo-isolationists like Senator Paul is that voters who want less government at home also want less America in the world. It turns out that this a simplified caricature. Rather than becoming truly isolationist, Americans have instead become skeptical of military intervention alone. Since 2001, American global engagement has been defined by the use of force, and we have learned costly lessons about the limits of American military power. It should be no surprise that when Americans are asked about “global engagement,” they actually hear “war.” Yet dig into the particulars of the data and there is strong support for civilian tools of power. With Iran,

Americans prefer negotiations to attack. In Syria, they prefer humanitarian support to air strikes. Americans give more private donations to international development projects than any other people in the world. These aren't the views of a country that wants to withdraw; they are the views of people grasping for alternative ways to engage with the world. Successful leaders will embrace the lessons of American leadership earned during the 20th century through clarity of values, diplomatic engagement, international development, and capable defense when necessary. That approach fits our world and our people much better than Senator Paul's.

Violates Civil Rights

Rand Paul would have the worst on civil rights of an president, he values the freedom to discriminate over protecting the discriminated

Millhiser 4-7-15 “Ian, “Rand Paul would be the worst President on civil rights since the 1800s”, Ian Millhiser is a Senior Fellow at the Center for American Progress Action Fund and the Editor of ThinkProgress Justice. He received a B.A. in Philosophy from Kenyon College and a J.D., magna cum laude, from Duke University, <http://thinkprogress.org/justice/2015/04/07/3643434/rand-paul-worst-president-civil-rights-since-reconstruction/>” .CC

Every piece of anti-discrimination legislation passed over the past few decades,” a young campus activist wrote in a 1982 editorial in Baylor University’s college paper, “ignores one of the basic, inalienable rights of man — the right to discriminate.” Though “eliminating racial and sexual prejudice” had “noble aspiration,” the editorial claimed, anti-discrimination laws “necessarily utilize the ignoble means of coercive force.” More than three decades later, the author of that editorial is a United States senator who hopes to be president. On Monday, Sen. Rand Paul (R-KY) revealed his presidential campaign slogan: “Defeat the Washington machine. Unleash the American dream.” On Tuesday, he is expected to formally announce his bid for the White House. Yet, while Paul’s ambitions have no doubt grown since his days as a college prankster and member of the Baylor swim team, his politics have changed little. Paul continued to espouse the same opposition to civil rights laws that he expressed as an undergraduate until months before his election to the Senate. And, while Paul has since learned to be more careful in his rhetoric, his public statements on the Constitution are entirely inconsistent with a legal regime that protects women and minorities from businesses that engage in discrimination. Indeed, if a President Paul succeeds in implementing the younger Paul’s concept of the “basic, inalienable rights of man,” he would destroy decades of legislation won by men and women who literally bled for the cause of freedom. **No president since Rutherford B. Hayes, who ended Reconstruction as part of a deal to secure his own election, could make a similar claim. ‘A Free Society Will Abide’** It is unlikely that many national figures would fare well if they were judged according to the views they held while in college, so the editorial Paul penned at Baylor could easily be dismissed as the naive rantings of a young man born into privilege with little understanding of the outside world. Twenty years later, however, Paul was a medical doctor practicing ophthalmology in Bowling Green, Kentucky — and his views on discrimination had not changed one bit. **“Decisions concerning private property and associations should in a free society be unhindered,” Paul wrote in a 2002 letter to his local newspaper.** He added that these decisions should remain unhindered even though “some associations will discriminate.” **“A free society will abide unofficial, private discrimination,” Paul claimed, “even when that means allowing hate-filled groups to exclude people based on the color of their skin.”** This notion that “freedom” requires permitting business owners to engage in odious behavior animates many of Paul’s statements on discrimination. Though “[i]t is unenlightened and ill-informed to promote discrimination against individuals based on the color of their skin,” Paul wrote in his 2002 letter, “It is likewise unwise to forget the distinction between public (taxpayer-financed) and private entities. A society that forgets this distinction will ultimately lose the freedoms that have evolved and historically been attached to private ownership.” Eight years later, during his successful bid for the U.S. Senate, Paul laid out this philosophy more succinctly. After a member of the Louisville Courier-Journal’s editorial board asked Paul if “it would be okay for Dr. [Martin Luther] King not to be served at the counter at Woolworths,” the soon-to-be-senator replied that permitting racists to discriminate is “the hard part about believing in freedom.” And then there was his interview with MSNBC’s Rachel Maddow, where he admitted that he has a problem with much of the Civil Rights Act of 1964. As originally enacted, the Civil Rights Act is divided into 11 titles, most of which prevent discrimination by government actors. Shortly after winning the GOP nomination for the Senate seat he now holds, **Paul told Maddow that he has no problem with these bans on state-sanctioned action because “the government should not be involved with institutional racism or discrimination.”** Paul did express doubts, however, about the provisions of the Civil Rights Act that “harbor in on private businesses and their policies.” When pushed on whether businesses should be able to turn patrons away because they are black, Paul suggested that doing so would violate the free speech rights of racists — “I don’t want to be associated with those people, but I also don’t want to limit their speech in any way in the sense that we tolerate boorish and uncivilized behavior because that’s one of the things freedom requires is that we allow people to be boorish and uncivilized.” The Right to Contract Since this interview, Paul’s been somewhat more cautious in his rhetoric, possibly because he learned an important lesson about politics after

his encounter with Maddow dominated early coverage of his Senate campaign. As the New Yorker's Ryan Lizza explained in a lengthy profile of Paul, once Paul won his Senate primary, "the appearances on Alex Jones's show stopped and the wooing of the establishment that he abhorred began." Paul wasn't going to let his willingness to tolerate racism stand between him and victory at the polls. Yet, while Paul's been much less direct in laying out the implications of these views for civil rights laws, he still clings to an understanding of the Constitution that is incompatible with bans on private discrimination. Just last January, for example, Paul praised the Supreme Court's notorious 1905 decision in *Lochner v. New York* during a speech at the conservative Heritage Foundation. *Lochner*, which is widely taught in law schools as an example of how judges should not behave, helped fabricate a "right to contract" that employers could wield to challenge laws protecting their workers. **Lochner later formed the basis for decisions stripping workers of a right to unionize and striking down a minimum wage.** As I explain in my book, *Injustices: The Supreme Court's History of Comforting the Comfortable and Afflicting the Afflicted*, **Lochner's right to contract is wholly incompatible with modern civil rights laws.** As the Court explained shortly after *Lochner*, this fabricated right does not permit the government "to compel any person in the course of his business and against his will to accept or retain the personal services of another, or to compel any person, against his will, to perform personal services for another." So the law can neither require racists to hire racial minorities nor can it require racist business owners to serve people of color — at least under the Supreme Court decision that Paul recently praised. What's striking about Paul's statements on civil rights, however, is that, despite his lifelong opposition to bans on private discrimination, Paul sounds less like George Wallace than he does like Commander Data when he discusses anti-discrimination laws. That is, rather than coming off as an unrepentant racist seeking to carve out a space for bigotry, Paul almost always goes to great pains to emphasize that he views racism as "unenlightened," "ill-informed," "boorish," and "uncivilized." Yet he also seems unable to grasp fundamental concepts that most lawmakers — indeed, most humans — simply take for granted. Paul lives in a world of theory untouched by the lessons of history and evidence. In 2013, for example, Paul gave another speech praising the *Lochner* decision in which he made the surprising claim that *Lochner* helped "end Jim Crow." His evidence for this claim was a 1917 Supreme Court decision named *Buchanan v. Warley*, which did, indeed, rely on *Lochner*-like reasoning to strike down an ordinance prohibiting a homeowner from selling his home to "colored people." Yet there is a reason why *Buchanan* is an obscure Supreme Court decision that few people have heard of: Jim Crow didn't exactly end in 1917. To the contrary, it continued to thrive for nearly half a century. *Lochner*'s rule, which placed obedience to contracts above other virtues, could work in white supremacists' favor just as easily as it could be turned against them. Racially restrictive covenants, for example, which prohibited homeowners from selling their property to African Americans, were a common Jim Crow tactic. Moreover, the Supreme Court's decisions that actually helped tear down Jim Crow, cases like *Shelley v. Kraemer* (which blocked enforcement of racist covenants) and *Brown v. Board of Education*, were rooted in the Constitution's guarantee that no one may be denied "the equal protection of the laws." They had nothing whatsoever to do with *Lochner*. Criminal Justice and Civil Rights Like the proverbial man with a hammer, who must treat every problem as if it is a nail, Paul behaves as if tearing down government programs is the solution to every problem. This explains his idiosyncratic view that *Lochner* helped dissolve Jim Crow. It also explains an unusual op-ed Paul published last November, as much of America watched the heavy-handed tactics used by police in Ferguson, Missouri with horror. Ferguson, with its images of tear gas-filled streets and peaceful protesters confronted by tanks, offered a genuine window into the dangers of government overreach, and **Paul rightfully described Ferguson as a symptom of a criminal justice system run amok. In offering solutions to Ferguson, however, Paul quickly slipped into hammer-and-nailism, claiming that police overreach could somehow be linked back to America's welfare policy.** "The failure of the War on Poverty has created a culture of violence and put police in a nearly impossible situation," Paul claimed, without citing any evidence other than the fact that poverty still exists. The strongest argument against the image of Paul as the scourge of civil rights is his admirable willingness to seek criminal justice reform. As Bloomberg's Dave Weigel wrote on Monday, Paul could potentially "cement the GOP's role in the reform push—a role that still benefits from the Nixon-to-China, fish-out-of-water coverage conservatives get for leading on reform." Paul teamed with Senate Minority Leader Harry Reid (D-NV) to introduce legislation restoring voting rights to many people convicted of non-violent offenses. And he joined with Sen. Cory Booker (D-NJ) to introduce the REDEEM Act, a set of reforms that primarily focus on juvenile offenders, but which also include sealing some adult offenders' criminal records and restoring government benefits to some minor drug offenders. These proposed reforms are welcome, but they are also far from adequate to the task of reforming a criminal justice system in which 1 in 3 African American men can expect to go to prison at some point in their lifetime. Paul's relatively modest criminal justice proposals also do very little to counterbalance a philosophy of governance that is hostile to bans on private discrimination. Paul's anti-government views, moreover, cut much deeper than the two areas of criminal justice reform and civil rights. Last month, in a speech at the historically black Bowie State University, Paul correctly linked high crime rates to poverty — "Criminal justice, or the lack of criminal justice, it's not a black or white problem," Paul explained, "It's a poverty problem." But Paul has also called for deep cuts to programs like Medicaid and food stamps, including a massive 30 percent cut to the later. If poverty begets "the lack of criminal justice," Paul's fiscal policies seem designed to make our criminal justice system even worse. The Leverage Point As Barack Obama has discovered repeatedly since moving into the White House, a president's power is limited if Congress is not on board with their agenda. So a President Paul is unlikely to repeal many civil rights laws legislatively, even if he sets out to do so, if Congress balks at such an agenda. Whoever the next president is, however, they are likely to have an unusual opportunity to work around Congress by shaping the institution at the top of the one remaining branch of government: the Supreme Court. Assuming that no one leaves the Court before Inauguration Day 2017, three justices will be over the age of 80 when the next

president is sworn in, and a fourth, Justice Stephen Breyer, will be 78 years-old. If Paul is that president, he could replace nearly half of the Supreme Court in just one term. Meanwhile, Justice Clarence Thomas, who will be a relatively young man at the age of 68 during the next inaugural, has already embraced a narrow reading of the federal government's power under the Constitution that is complementary to Paul's — Thomas's reading of our founding document would forbid a nationwide ban on child labor, federal minimum wage laws, and the ban on whites-only lunch counters, among other things. If Thomas were joined by four Paul appointees, that constitutes a majority of the Court. Paul, in other words, would not need to push repeal legislation through Congress in order to gut our civil rights laws. He would not even need to openly express his desire to do so. He would simply need to place men and women who share his views on the Supreme Court, and then sit back while they implement his vision. And even if the American people soundly reject this agenda when Paul seeks reelection, those four new justices would serve for life.

Snowden revelations is creating a commercial market for encryption and other security technologies

Doctorow 14 (Cory-Technology columnist for the Guardian and Co-Editor of Boing Boing, a technology blog, “What happens with digital rights management in the real world?” The Guardian, 2/5/14, <http://www.theguardian.com/technology/blog/2014/feb/05/digital-rights-management>)

The revelations of the NSA whistleblower Edward Snowden have changed the global conversation about privacy and security. According to a Pew study from last autumn, most American Internet users are now attempting to take measures to make their computers more secure and keep their private information more private. It's hard to overstate how remarkable this is (I devoted an entire column to it in December). For the entire history of the technology industry, there was no appreciable consumer demand for security and privacy. There was no reason to believe that spending money making a product more secure would translate into enough new users to pay for the extra engineering work it entailed. With the shift in consciousness redounding from the Snowden files, we have, for the first time ever, the potential for commercial success based on claims of security. That's good news indeed – because computer security is never a matter of individual action. It doesn't matter how carefully you handle your email if the people you correspond with are sloppy with their copies of your messages. It's a bit like public health: it's important to make sure you have clean drinking water, but if your neighbours don't pay attention to their water and all get cholera, your own water supply's purity won't keep you safe.

Surveillance “reform” tricks the public into believing that their communications are now private-destroys consumer market for privacy and encryption technology

Greenwald 14 (Glenn-Journalist and Constitutional Lawyer, the first person Snowden contacted in the 2013, “CONGRESS IS IRRELEVANT ON MASS SURVEILLANCE. HERE’S WHAT MATTERS INSTEAD,” The Intercept, 11/19/14, <https://firstlook.org/theintercept/2014/11/19/irrelevance-u-s-congress-stopping-nas-mass-surveillance/>)

All of that illustrates what is, to me, the most important point from all of this: the last place one should look to impose limits on the powers of the U.S. government is . . . the U.S. government. Governments don't walk around trying to figure out how to limit their own power, and that's particularly true of empires. The entire system in D.C. is designed at its core to prevent real reform. This Congress is not going to enact anything resembling fundamental limits on the NSA's powers of mass surveillance. Even if it somehow did, this White House would never sign it. Even if all that miraculously happened, the fact that the U.S. intelligence community and National Security State operates with no limits and no oversight means they'd easily co-opt the entire reform process. That's what happened after the eavesdropping scandals of the mid-1970s led to the establishment of congressional intelligence committees and a special FISA “oversight” court—the committees were instantly captured by putting in charge supreme servants of the intelligence community like Senators Dianne Feinstein and Chambliss, and Congressmen Mike Rogers and “Dutch” Ruppertsberger, while the court quickly became a rubber stamp with subservient judges who operate in total secrecy. Ever since the Snowden reporting began and public opinion (in both the U.S. and globally)

began radically changing, the White House's strategy has been obvious. It's vintage Obama: Enact something that is called "reform"—so that he can give a pretty speech telling the world that he heard and responded to their concerns—but that in actuality changes almost nothing, thus strengthening the very system he can pretend he "changed." That's the same tactic as Silicon Valley, which also supported this bill: Be able to point to something called "reform" so they can trick hundreds of millions of current and future users around the world into believing that their communications are now safe if they use Facebook, Google, Skype and the rest. In pretty much every interview I've done over the last year, I've been asked why there haven't been significant changes from all the disclosures. I vehemently disagree with the premise of the question, which equates "U.S. legislative changes" with "meaningful changes." But it has been clear from the start that U.S. legislation is not going to impose meaningful limitations on the NSA's powers of mass surveillance, at least not fundamentally. Those limitations are going to come from—are now coming from—very different places

Encryption and other defensive strategies are necessary to combat cyberattacks- current infrastructure is all offense no defense

Doctorow 6/20 (Cory-Co-Editor of Boing Boing, a technology blog, citing Bruce Schneider-acclaimed security expert, "Schneier: China and Russia probably did get the Snowden leaks — by hacking the NSA," Boing Boing, 6/20/15, <http://boingboing.net/2015/06/20/schneier-china-and-russia-pro.html>)

Schneier argues that China and Russia's spy agencies are full of infowar ninjas who've been hacking away at the NSA's repositories for years, and that there is likely a steady flow of secrets that are exfiltrated by the agencies. He says that he thinks successful hack-attacks against the NSA are much more likely than Chinese and Russian spooks coming up with some kind of magic crypto-cracking ability (especially as Snowden didn't even bring the docs with him to Russia). There is a lot of evidence for this belief. We know from other top-secret NSA documents that as far back as 2008, the agency's Tailored Access Operations group has extraordinary capabilities to hack into and "exfiltrate" data from specific computers, even if those computers are highly secured and not connected to the Internet. These NSA capabilities are not unique, and it's reasonable to assume both that other countries had similar capabilities in 2008 and that everyone has improved their attack techniques in the seven years since then. Last week, we learned that Israel had successfully hacked a wide variety of networks, including that of a major computer antivirus company. We also learned that China successfully hacked US government personnel databases. And earlier this year, Russia successfully hacked the White House's network. These sorts of stories are now routine. Which brings me to the second potential source of these documents to foreign intelligence agencies: the US and UK governments themselves. I believe that both China and Russia had access to all the files that Snowden took well before Snowden took them because they've penetrated the NSA networks where those files reside. After all, the NSA has been a prime target for decades. Those government hacking examples above were against unclassified networks, but the nation-state techniques we're seeing work against classified and unconnected networks as well. In general, it's far easier to attack a network than it is to defend the same network. This isn't a statement about willpower or budget; it's how computer and network security work today. A former NSA deputy director

recently said that if we were to score cyber the way we score soccer, the tally would be 462–456 twenty minutes into the game. In other words, it's all offense and no defense.

A cyber-attack would trigger military retaliation and escalate to nuclear war

Robert **Tilford 12**, Graduate US Army Airborne School, Ft. Benning, Georgia, “Cyber attackers could shut down the electric grid for the entire east coast” 2012, <http://www.examiner.com/article/cyber-attackers-could-easily-shut-down-the-electric-grid-for-the-entire-east-coa> ***we don't agree with the ableist language

To make matters worse **a cyber attack** that **can take out** a civilian power grid, for example **could** also **cripple (destroy) the U.S. military.** ¶ The senator notes that is that **the same power grids** that supply cities and towns, stores and gas stations, cell towers and heart monitors also **power “every military base in our country.”** ¶ “Although bases would be prepared to weather a short power outage with **backup diesel generators**, within hours, not days, fuel **supplies would run out**”, he said. ¶ Which means **military command and control centers could go dark.** ¶ **Radar systems** that detect air threats to our country **would shut Down** completely. ¶ **Communication between commanders and their troops would** also **go silent.** And **many weapons systems would be left without** either fuel or **electric power**”, said Senator Grassley. ¶ “So **in a few short hours** or days, **the mightiest military in the world would be left scrambling** to maintain base functions”, he said. ¶ **We contacted the Pentagon and officials confirmed the threat of a cyber attack is something very real.** ¶ **Top national security officials**—including the Chairman of the Joint Chiefs, the Director of the National Security Agency, the Secretary of Defense, and the CIA Director— **have said, “preventing a cyber attack** and improving the nation's electric grids **is among the most urgent priorities** of our country” (source: Congressional Record). ¶ So how serious is the Pentagon taking all this? ¶ Enough to start, or end a war over it, for sure. ¶ **A cyber attack** today **against the US could** very well **be seen as an “Act of War”** and could be met with a **“full scale” US military response.** ¶ **That could include** the use of **“nuclear weapons”**, if authorized by the President.

2NC Uniqueness

2NC-Snowden Effect

Snowden revelations indicate a new movement towards investment in security technologies-statistics prove

Doctorow 13 (Cory-Technology columnist for the Guardian and Co-Editor of Boing Boing, a technology blog, "We cannot afford to be indifferent to internet spying," The Guardian, 12/9/13, <http://www.theguardian.com/technology/2013/dec/09/internet-surveillance-spying>)

In September, the Pew Research Centre released Anonymity, Privacy, and Security Online, a study of American Internet users' attitudes towards privacy. Broadly, they found that Americans had recently taken extensive, affirmative steps to improve their privacy, but had, generally speaking, failed. Their technology and their technical literacy were insufficient to accomplish such a difficult end. They evinced a widespread view that privacy rules were too loose. They reported many instances of bad consequences arising from breaches of their privacy or the privacy of people close to them. Not long after this report, Cassidy Wolf, this year's Miss Teen USA, made headlines after it was revealed that her computer had been taken over by a creep who took covert nude photos of her using its webcam, captured her social media passwords, and demanded live sex shows or he would post the compromising photos to her online accounts. Wolf went to the FBI, and they ran the creep to ground, only to discover that he had dozens of other victims, including minor children. The Internet Engineering Task Force is promising to encrypt the entire internet by default. Internet companies like Google and Yahoo are stepping up the encryption within their networks. They're rethinking their collusion with spy agencies – having discovered that these agencies not only demanded the right to their spy-boxes in the data-centre, they also secretly tapped the fibre leading in and out of it. More of us are increasingly aware of the risks of the privacy risks from technology. From here on in, the market for privacy-preserving technology will only grow. From here on in, the public pressure to rein in spy agencies and preserve privacy in law will only mount. From here on in, the chorus of voices correcting the nothing-to-hides will only swell. From here on in, the privacy-preserving design decisions in technology will only rise in importance. The spies will keep spying. They will spy more. They will spy harder. They have proven themselves to be without any scruple and without any adult supervision. But their job gets a lot harder from here on out. There is a moment out there for privacy activists to seize upon, a moment that privacy entrepreneurs can capitalise upon, a moment that privacy-oriented lawmakers can make political hay from. It's up to us to make the most of it.

The "Snowden Effect" has allowed the security and encryption industries to see unprecedented growth

P.A.M. 14 (Pictet Asset Management- Investment management firm part of the independent wealth and asset manager group Pictet, "News from the Advisory Board Security – Post-NSA leaks, a new cyber security landscape," Pictet Asset Management, May 2014, http://www.pictetfunds.fr/files/Focus_du_mois/Contributions/Pictet-Security_Advisory-Board_201405.pdf)

These low-profile niche operators are cyber-security firms. Specialising in antivirus, firewall, intrusion detection or encryption, such companies have played a key role in the expansion of the technology by giving users - individuals and businesses - the confidence to shift more of their activities to the cloud. But recent events suggest these firms will not remain in the background for much longer. While revelations of systematic spying by the US National Security Agency appear to have damaged the reputation of the big tech companies operating the cloud, they have had the opposite effect on cyber-security providers. The actions of NSA whistleblower Edward Snowden have pushed cyber-security to the very top of the corporate agenda; the sector is set to become both a source of innovation and a destination for investment as a result. This is one of the topics discussed at the recent Advisory Board meeting of the PictetSecurity fund, which invests in companies that offer innovative solutions to protect individuals, businesses and

governments. IT services have represented one of the main areas of investment since the fund's inception in 2006. The Snowden effect Snowden's revelations that US security agencies had obtained confidential data held by major US tech companies threatened to irreversibly damage the cloud industry. Leaked documents showed that US and British intelligence agencies had gained access to huge swathes of internet traffic - users' personal data as well as online transaction and emails stored on tech companies servers - as part of a clandestine data-mining program named PRISM. Of equal concern were the methods used. It emerged that the NSA had been given complete control over international encryption standards and that it had used supercomputers to break encryption. Even more worrying were suggestions that NSA officials had collaborated with technology companies and internet service providers - enabling agencies to insert secret "backdoors" into commercial encryption software. Although big technology firms denied they had knowingly provided the government with such backdoors, the revelations were seen as a threat to the future growth of the cloud as it suggested companies could not safeguard the security and privacy of their customers. In the immediate aftermath of the leaks, a report released by the Information Technology and Innovation Foundation (ITIF), a non-partisan think tank based in Washington, estimated that foreigners' distrust in US cloud storage providers since the NSA spying scandal could cost such companies up to USD35 billion in lost revenues by 2016. Forrester Research, an IT market research company, argued that losses could top USD180 billion over the same period - a 25 per cent hit to overall IT service provider revenues. NSA leaks unlock fast growth in the IT security sector Fast-forward nine months and a more nuanced picture is emerging, AB participants heard. What our panel of security experts report is that while the NSA's practices may have undermined customer confidence, slowing the rate of cloud adoption, they have unlocked opportunities for security vendors. Security concerns move higher on corporate agenda Snowden's revelations have made the cyber-security threat far more visible, forcing companies to review how their data is stored. If IT security professionals had long suspected that government agencies were involved in systematic electronic spying, there was scant evidence available. But the Snowden leaks have revealed the full extent of NSA surveillance activities and brought to light the collaboration of US major tech companies. Such is the level of concern that cyber security has evolved from a being compliance matter for IT specialists into a strategic priority for corporations worldwide. The scandal has served as a trigger to unlock corporate investment in cyber-security solutions. Cyber security companies see investment boom Companies with data stored in clouds are upgrading their systems, and are increasingly engaging the services of cyber-security providers. They are turning to the providers with the most innovative solutions - and in the IT security world, the companies with the hottest technologies are small, very dynamic start-ups. Revelations by Snowden of possible ties between tech firms and government have made consumers suspicious that large US-based companies could be beholden to intelligence agencies. As a result, it has become easier for new, smaller security businesses to sell their solutions. With spending on cyber-security rising, the sector has drawn the attention of investors. Intense interest in the sector has helped fuelled a buoyant IPO market and robust share price performance; companies operating in the sector of cloud security, data management or encryption have attracted particularly strong demand. Rising valuations may be a reflection of the heated competition in the sector, which has seen a wave of consolidation in recent months as these young security companies make attractive acquisition targets for their larger rivals (RSA/Silvertail, Cisco/Sourcefire, F5 Networks/Versafe).

Snowden leaks has private users concerned for their own security

Raistrick 13 (Security administrator for Palo Alto Networks, "Is Your Organisation Edward Snowden Proof?" Business Computing World, 7/1/13, <http://www.businesscomputingworld.co.uk/is-your-organisation-edward-snowden-proof/>)

From a national security point of view, the post-mortem of Snowden's leak is where attention should be most keenly focused, to determine the veracity of his statements. But if the claims turn out to be true, it does not automatically mean that other organisations are prone to the same breaches. Generally speaking, the more powerful an application is, the more tightly it is segmented, monitored, and controlled. The same is true of security administrators themselves. The more power they are provided, the more their duties need to be segmented, monitored, and controlled. In the case of Ed Snowden, we have a very privileged administrator accessing very powerful applications - common practice would be to watch him like a hawk. Ultimately the access to sensitive information comes down to company mindset. In many cases, companies simply think of security as blocking attacks as opposed to the process of securing their information. Blocking the attack is obviously a critical part of the equation, but it has to be tied into the context of the data itself, the applications that serve that data, and the people that use those applications. The NSA leak is a perfect example of what can happen when very powerful applications and powerful users are

not controlled sufficiently. A modern solution to a modern problem With vast amounts of privileged and sensitive data stored on company networks and pervasive threat vectors that want to steal that data, businesses require a segmented approach to security that monitors all users, content and applications that are present on the network. It's an approach some companies have been reluctant to grasp but, given the revelations of the past few weeks, the consequences of not taking appropriate measures should be far more of a concern.

Snowden revelations have started a new market for encryption technology- even if the technology isn't 100% effective

Reuters 14 (Reuters-New Agency, "Snowden leaks a boon for the digital security market," Business Tech New Zealand, 8/6/14, <http://businesstech.co.za/news/internet/64984/snowden-leaks-a-boon-for-the-digital-security-market/>)

Public concerns about the U.S. government's secretive surveillance programs exposed by Edward Snowden have spawned a slew of encryption products and privacy services that aim to make electronic spying more difficult. Two products brought out in the past five weeks illustrate the rapid development of the new marketplace: Blackphone, a handset which started shipping on June 30 for \$629, and Signal, a free app that appeared on the iPhone app store last week. They are among an array of offerings to emerge since Snowden, a former National Security Agency contractor, last year leaked documents that showed the U.S. government harvested enormous amounts of data from the likes of Google Inc, Yahoo Inc, Microsoft Corp, AT&T Inc and Verizon Communications Inc. Though they have different business philosophies, target markets and tactical approaches, the companies behind Blackphone and Signal share an underlying encryption technique, world-class cryptographers, and an anti-government stance. "In an environment of increasingly pervasive surveillance, we want to make it as easy as possible for anyone to be able to organize and communicate securely," Signal maker Open Whisper Systems wrote on its blog. Secure communications will be a major topic at two key hacking conferences in Las Vegas this week: Black Hat, which is aimed at professionals, and Def Con, which attracts many amateurs. Blackphone uses software from one of its backers, Silent Circle, that allows users to send encrypted voice calls and texts to one another. Silent Circle's software is already available for iPhone and Android phones, but the company says Blackphone is more secure because it uses a new operating system – based on Android – that makes it harder for hackers to take control of the phone and eavesdrop. Silent Circle recently expanded its service by allowing encrypted calls to landlines. That feature has helped its sales rate triple in the past three months, said Silent Circle Chief Revenue Officer Vic Hyder. He declined to give subscriber figures but said Chevron Corp and Walt Disney Co were among the company's major corporate customers. Supported mainly by grants, Signal maker Open Whisper Systems was co-founded by security researcher Moxie Marlinspike and already has a compatible Android version called RedPhone. The company said Signal had 70,000 downloads on the first day. Marlinspike said the company may charge in the future for extra services, but the basic functions of the app should remain free forever. "Open Whisper Systems is a project rather than a company, and the project's objective is not financial profit," he wrote on his personal blog. An encrypted chat service popular with security professionals is Wickr. The free service relies on heavy encryption that is considered unbreakable for the foreseeable future if implemented correctly. Wickr does not use the open-source software that is the industry standard, which means security experts cannot inspect its software code. But Wickr says it will soon post results of security audits by well-regarded firms, and it is offering a \$200,000 reward for anyone who breaks its system. Wickr Chief Executive Nico Sell, a longtime official at Def Con, said she plans to add a desktop version of Wickr soon. Law enforcement concerns Civil liberties enthusiasts have welcomed the proliferation of new privacy-protecting software and services, but some law enforcement and intelligence agents are concerned that they make it more difficult for agents to intercept communications. "It's a significant problem, and it's continuing to get worse," Amy S. Hess, executive assistant director of the Federal Bureau of Investigation, told the Washington Post. An FBI spokeswoman declined to elaborate. Experts said it was unlikely that any communications system can be 100 percent safe from government interception. The goal for some users would be simply to make it expensive for the authorities to eavesdrop on them without good reason.

2NC- Silicon Valley Innovation

The encryption renaissance is here because of NSA surveillance-Silicon valley are all using new innovative ways to counter surveillance and pushing encryption innovation-curtailing surveillance reverses that

Marten 14 (Donn-Blogger for Carrying a Flag, an anti-surveillance blog, "NSA Reform is Dead: Tech Companies Must Act to Protect Us Now," Carrying a Flag, 6/7/14, <http://carryingaflag.blogspot.com/2014/06/nsa-reform-is-dead-tech-companies-must.html>)

Not that it is surprising that the NSA Stasi is protected by a firewall of entrenched and corrupt members of our pathetic excuse for a legislative branch - the US Congress remains the number one enemy of the American people - and that any sort of effective reform in the aftermath of the Snowden leaks has always been dead on arrival. The USA Freedom Act seemed to be a perfect counterpart to the fascist USAPATRIOT Act when it was introduced, with the backing of US Representative James Sensenbrenner who was largely responsible for the latter monstrosity but as the establishment stalled enough time had passed for it to be gutted. The intelligence committee chairpersons of the House and Senate, respectively the right-wing talk radio bound fanatic Mike Rogers and the always ghastly Dianne Feinstein would be there to protect the warrantless mass surveillance and data-mining in all of its Constitution trashing glory because the protection of criminality is the main reason why they got their gigs in the first place. The USA Freedom Act, in its watered down version which prolific security blogger Marcy Wheeler of Emptywheel has brilliantly pegged as the USA Freedumber Act not only preserves the powers of the NSA but now provides them with official cover. The Freedumber Act is the Obama administration's wet dream as it would allow the narcissistic one to present himself as a champion of the American people by fixing the system and the business of getting all of the phone calls, financial data, images, book purchases, associations, family information, political affiliation, blog traffic, internet searches, sexual orientation, religious preferences, text messages and thousands of other data points to sock away in their massive storage facilities like the one out in Utah. Then Obama can get about the business of avenging the injury to his ego when Vladimir Putin prevented a war in Syria and Russia provided asylum to Snowden saving him from a US torture chamber and starting a new cold war which will ensure that military contractor money rolls in for the next election cycles. Barring the promised bombshell revelations from journalist Glenn Greenwald - which are taking forever and making many (although not myself, at least not yet) nervous that he sold out to billionaire Pierre Omidyar and that the real stuff is never going to see the light of day - are so shocking as to make serious reform possible the great hope at this point is having to hope that Silicon Valley will come to the rescue. The NSA rampage has permanently tarnished the image of American big tech to the point that the only rational thing - at least from a business standpoint and these area after all businesses - is to improve their own security in order to prevent or at least make it more difficult for the government goons to penetrate their networks and customer communication activity. This is currently in process and will continue to evolve as the US government has chosen to continue the programs rather than lose precious time between now and the day that the order comes down to use the data to go after those who are deemed to be threats to state power. According to a New York Times article entitled "Internet Giants Erect Barriers to Spy Agencies" that was published on Friday: Just down the road from Google's main campus here, engineers for the company are accelerating what has become the newest arms race in modern technology: They are making it far more difficult — and far more expensive — for the National Security Agency and the intelligence arms of other governments around the world to pierce their systems. As fast as it can, Google is sealing up cracks in its systems that Edward J. Snowden revealed the N.S.A. had brilliantly exploited. It is encrypting more data as it moves among its servers and helping customers encode their own emails. Facebook, Microsoft and Yahoo are taking similar steps. After years of cooperating with the government, the immediate goal now is to thwart Washington — as well as Beijing and Moscow. The strategy is also intended to preserve business overseas in places like Brazil and Germany that have threatened to entrust data only to local providers. Google, for example, is laying its own fiber optic cable under the world's oceans, a project that began as an effort to cut costs and extend its influence, but now has an added purpose: to assure that the company will have more control over the movement of its customer data. A year after Mr. Snowden's revelations, the era of quiet cooperation is over. Telecommunications companies say they are denying requests to volunteer data not covered

by existing law. A.T.&T., Verizon and others say that compared with a year ago, they are far more reluctant to cooperate with the United States government in “gray areas” where there is no explicit requirement for a legal warrant. AND Eric Grosse, Google’s security chief, suggested in an interview that the N.S.A.’s own behavior invited the new arms race. “I am willing to help on the purely defensive side of things,” he said, referring to Washington’s efforts to enlist Silicon Valley in cybersecurity efforts. “But signals intercept is totally off the table,” he said, referring to national intelligence gathering. “No hard feelings, but my job is to make their job hard,” he added. There is naturally the standard fear-mongering by the US government and the implied threat of terrorist attacks is tech companies do not allow the NSA to proceed with impunity. The NYT piece cites an Obama administration official who invokes the 9/11 card once again: Robert S. Litt, the general counsel of the Office of the Director of National Intelligence, which oversees all 17 American spy agencies, said on Wednesday that it was “an unquestionable loss for our nation that companies are losing the willingness to cooperate legally and voluntarily” with American spy agencies. “Just as there are technological gaps, there are legal gaps,” he said, speaking at the Wilson Center in Washington, “that leave a lot of gray area” governing what companies could turn over. In the past, he said, “we have been very successful” in getting that data. But he acknowledged that for now, those days are over, and he predicted that “sooner or later there will be some intelligence failure and people will wonder why the intelligence agencies were not able to protect the nation.” Companies respond that if that happens, it is the government’s own fault and that intelligence agencies, in their quest for broad data collection, have undermined web security for all. BINGO on that last statement - the government to this day has yet to fire anyone who was on the job and failed to protect the nation on the morning of September 11, 2001 - why is that? Power will not be surrendered willingly and at this point, as there is ZERO chance for legitimate and serious reform of the unconstitutional practices of the NSA within the government it is incumbent on the tech companies to do what they can to go into a defensive mode and internet users to look into getting some serious encryption software installed.

2NC Link

2NC- Consumer Security Link

Ending surveillance is a “shell game” luring consumers into a false sense of security

Peterson 15 (Andrea- Technology policy reporter for the Washington Post, “It’s nearly two years after Snowden and privacy advocates are divided on how to fix NSA spying,” Washington Post, 4/29/15, <https://www.washingtonpost.com/blogs/the-switch/wp/2015/04/29/its-nearly-two-years-after-snowden-and-privacy-advocates-are-divided-on-how-to-fix-nsa-spying/>)

Without those limits, ending 215 might result in a sort of "shell game," where the government replaces one authority with another, according to Julian Sanchez, a senior fellow at the Cato Institute. There's also a provision built into the current Patriot Act that would allow for 215 to continue to be used for ongoing investigations even after it sunsets, as reported by the New York Times last year. Such a provision might be used to continue the bulk phone records program because some government enterprise-level investigations, such as those into major terror groups, can go on for a decade or more, according to Geiger and Sanchez. "The truth is that neither the USA Freedom Act nor the expiry of Section 215 would end the government’s mass-surveillance programs," said the ACLU's Jaffer. But actually forcing a sunset on 215 would send "an important message" against spying programs, he argued. Some critics also worry the bill might actually give the government expanded spying powers, even if it moves direct control of Americans' bulk phone records out of government hands, because of the breadth of data that service providers might be forced to turn over in response to a request. "In a way, it's kind of like PRISM," the program revealed by Snowden where major tech companies turned over the content of online communications to the NSA, said longtime independent surveillance researcher Marcy Wheeler. "It pushes things to providers: Everyone gets immunity, but it doesn't add to the privacy." Passing the bill, she argues, might also make it harder to get movement on more comprehensive reforms because tech companies, who have been a major political force on this issue, will be able to already point to changes they helped win. "Companies are provided monetary incentive to spy and share that information with the government and blanket liability once they do under USA Freedom -- even if that breaks that law," said Sascha Meinrath, the director of X-lab, an independent tech policy institute previously associated with New America. "Once companies receive that, they'll have almost no reason to weigh in on meaningful surveillance reform."

2NC- Circumvention Link

Legal solutions to surveillance fail- governments will circumvent encryption is the only effective way to combat surveillance

Ingham 15 (Lucy-Editor for Factor Magazine-consumer technology and science magazine, also cites Edward Snowden's presentation at London's FutureFest in March 2015, "EDWARD SNOWDEN ON THE FUTURE OF SURVEILLANCE," Factor Magazine, 5/25/15, <http://factor-tech.com/feature/edward-snowden-on-the-future-of-surveillance/>)

While there are continued efforts to bring an end to mass surveillance through legal means, most recently with the ruling in a New York federal appeals court that the collection of American's metadata and phone records is unlawful, there is scepticism that governments will ever fully stop mass surveillance due to its tremendous spying benefits. "We're losing leverage. Governments are increasingly gaining more power and we are increasingly losing our ability to control that power and even to be aware of that power," he says. Although he is keen to remind everyone that he is just the "mechanism of disclosure", Snowden does have some ideas about how we can turn the tables. "Fundamentally, changes to the fabric of the Internet, our methods of communication, can enforce our rights, they can enforce our liberties, our values, on governments," he says. Increasingly all of our elected officials are pulled from the same class "By leaning on companies, by leaning on infrastructure providers, by leaning on researchers, graduate students, postdocs, even undergrads to look at the challenges of having untrusted Internet, we can restructure that communications fabric in a way that's encrypted. And by encrypted I mean the only people who can read and understand the communications across those wires are the people at the two distant ends. This is called end-to-end encryption, and what we're doing there is making it much more difficult to perform mass surveillance." Not only does he believe this is the way forward, but suspects that this will be the likely scenario as we seek to resolve this issue. "I think it is more likely than not that the technical side of the argument will come in, because it's much easier, I think, to protect communications rather than it is to enforce legislation in every country in the world." LONG ROAD AHEAD However, the future is likely to be fraught with challenges as we seek to put an end to mass surveillance Snowden warns. "I think we're going to see disasters on both sides, I think we're going to see it exploited callously and relentlessly by governments to purposes that undermine the progress of the public's interest in favour of the elite's interests," he says. "And when we have these people representing everyone in our society, millions of people, the question becomes, are we really going to get policies that reflect the broad social interests, the broad public interests, or more of class interests?" However, this does not mean we should give up, and simply ignore mass surveillance as we get on with our daily lives. "We have to at least say that this is happening. We can't wish it away, we can't say that it's something that it's not. We have to confront the reality of our world, and make the hard decisions about which way we want to move forward," he advises.

There is no possible ability for actual privacy reform- legislation is like rearranging chairs on the titanic

Stanley 15 (Mark-Director of Communications and Operations at Demand Progress "DEMAND PROGRESS AND CREDO MOBILE BLAST USA FREEDOM ACT," Demand Progress, 4/28/15, <http://demand-progress.tumblr.com/post/117623640615/demand-progress-and-credo-mobile-blast-usa-freedom>)

A vote for a bill that does not end mass surveillance is a vote in support of mass surveillance.
The way to end mass surveillance is to end mass surveillance. Everything else is window dressing. Rather than reauthorizing section 215, Congress should let this dangerous provision expire and pass much-needed reforms, including ending mass surveillance under section 702 of the FISA Amendments Act, Executive Order 12333 and other authorities, and enhancing Congressional oversight of secret intelligence agencies. CREDO and Demand Progress would support legislation enshrining the reforms demanded in this just-released letter, signed by 60 organizations, businesses, and prominent national security whistleblowers. <http://demand-progress.tumblr.com/post/117018009995/letter-to-congress-end-mass-surveillance> Furthermore, the organizations support likely efforts to amend the legislation to ban warrantless wiretapping of U.S. persons. “It’s like rearranging the chairs on the deck of the Titanic,” said Becky Bond, Vice President of CREDO Mobile. “As a telecom that can be compelled to participate in unconstitutional government surveillance, we can tell you that the latest version of the USA FREEDOM Act is just a diversion to take the heat off our out-of-control surveillance state. That’s why CREDO Mobile opposes this proposal to reauthorize section 215 of the USA PATRIOT Act.” “This bill purports to ban certain acts under narrow authorities — but it doesn’t ban those behaviors outright. Nor does it increase meaningful oversight of the NSA. If there’s one thing we know about the NSA, it’s that it will stretch the law to its limits,” said David Segal, Executive Director of Demand Progress. “If this bill passes, the NSA will continue unaddressed surveillance programs and will secretly torture the English language to devise novel justifications for spying on Americans — we won’t even know the details until a new whistleblower comes forward a decade or two from now.”

2NC Impacts

Impact Magnifier-Cyber Security

Cyberattacks are highly likely- even small attacks will overwhelm the US

Gady 15 (Franz-Stefan-associate editor for the Diplomat and Senior Fellow with the EastWest institute, “Russia Tops China as Principal Cyber Threat to US,” The Diplomat, 3/3/15, <http://thediplomat.com/2015/03/russia-tops-china-as-principal-cyber-threat-to-us/>)

While I can't go into detail here, the Russian cyber threat is more severe than we had previously assessed,” the director of national intelligence, James Clapper, told the Senate Armed Services Committee during the 2015 presentation of the “Worldwide Threat Assessment of the U.S. Intelligence Community.” The report lists sophisticated cyberattacks as the principle national security threat facing the United States. “Cyber threats to U.S. national and economic security are increasing in frequency, scale, sophistication, and severity of impact,” the assessment notes. Russia is singled out as one of the most sophisticated nation-state actors in cyberspace. The report notes that Russia’s Ministry of Defense is establishing its own cyber command, responsible for conducting offensive cyber activities (similar to the United States Cyber Command). The report says that Russia’s cyber command will also be responsible, again similar to its U.S. counterpart, for attacking enemy command and control systems and conducting cyber propaganda operations. Furthermore, “unspecified Russian cyber actors” have developed the capability to target industrial control systems and thereby attack electric power grids, air-traffic control, and oil and gas distribution networks. However, the report points out that the United States will not have to fear debilitating strategic cyberattacks on a large scale: “Rather than a ‘Cyber Armageddon’ scenario that debilitates the entire U.S. infrastructure, we envision something different. We foresee an ongoing series of low-to-moderate level cyber attacks from a variety of sources over time, which will impose cumulative costs on U.S. economic competitiveness and national security.” The assessment also provided a hint that we may see an increase in “naming and shaming” campaigns, similar to the cyber espionage charges against five Chinese military officials accused of hacking into U.S. companies back in May 2014. The report argues that “the muted response by most victims to cyber attacks has created a permissive environment in which low-level attacks can be used as a coercive tool short of war, with relatively low risk of retaliation.” In addition, the report notes that identification of perpetrators has become a lot easier in the last few years. Perhaps this is the reason why the U.S. intelligence community chose to go public at this stage. U.S. intelligence agencies have known for years that Russia is a much more capable adversary in cyberspace than China and that Moscow employs more sophisticated and stealthier cyberattack methods. “The threat from China is overinflated, (and) the threat from Russia is underestimated,” Jeffrey Carr, head of the web security firm Taia Global and author of the book Inside Cyber Warfare, emphasized in an interview last year. Carr added: “Russia certainly has been more active than any other country in terms of combining cyber-attacks, or cyber-operations, with physical operations. The Russia-Georgia war of 2008 was a perfect example of a combined kinetic and cyber operation. And nobody else has ever done that – China has never done anything like that.” In another article back in 2014, Carr stated that the United States has neglected to keep track of Russia’s ever growing cyber power. “If you want to properly assess a threat, you need to understand your adversary’s intent, capability and opportunity,” Carr wrote. “The U.S. government has not kept current on Russian technical advancements which means that we cannot estimate capability accurately.” Back in 2010, in a report for the EastWest Institute, my colleague Greg Austin and I proposed “cyber military exercises” between the United States and Russia as a vehicle for trust building. While the idea may seem far-fetched, it perhaps might have allowed for both countries to become more familiar with each other’s capabilities and helped reduce tensions. This could have happened without reducing one’s side capability for waging cyber war. Bruce Schneier emphasizes that it is almost impossible to stop the spread of sophisticated attack tools in cyberspace or to keep them secret for too long. In his article “The Democratization of Cyberattack” he laconically summarizes the predicament of cyber warriors: “Today’s NSA secrets become tomorrow’s Ph.D. theses and the next day’s hacker tools.”

Innovation I/L

Investment in IT security is key to technological innovation- specifically cloud computing

P.A.M. 14 (Pictet Asset Management- Investment management firm part of the independent wealth and asset manager group Pictet, “News from the Advisory Board Security – Post-NSA leaks, a new cyber security landscape,” Pictet Asset Management, May 2014, http://www.pictetfunds.fr/files/Focus_du_mois/Contributions/Pictet-Security_Advisory-Board_201405.pdf)

In the view of experts on the AB panel, the industry is witnessing a profound shift in the behaviour of cloud users, who are now focusing less on protecting infrastructure but more on protecting data. A new privacy industry is emerging as a result, with demand rising for technology to browse the web privately and encrypt emails, mobile phone calls and text messages. The NSA’s mass surveillance programme has accelerated the development of a range of tools for individuals and corporate users, from NSA-proof messaging apps to Boeing’s Black phone, an Android phone for government agencies and contractors which will self-destruct if its hardware is tampered with. This is just as well, since most of the data-gathering capabilities detailed by Snowden may be available commercially within five years. Prospects look especially bright for providers of smart cyber-security solutions, as individuals and businesses continue to face increasingly complex cyber threats. Snowden’s revelations of the existence of mass-surveillance programmes has generated interest in the security industry all levels. Once a “grudge purchase” that was considered a drain on resources, IT security in its new incarnation is now viewed as delivering added value to buyers, and putting them back in control. Cyber-security is intrinsically linked to the long-term technological trends shaping our society, from cloud computing to mobile devices and big data. IT security providers can give companies the confidence they require to embrace these new technologies - one positive development investors can give Snowden credit for.

Competitiveness I/L

Snowden leaks have set off a gold rush for security companies increasing competitiveness

Ungerleider 14 (Neal-reporter for Fast Company, "MANDIANT AND THE CYBERSECURITY GOLDRUSH," Fast Company, 1/7/14, <http://www.fastcompany.com/3024445/mandiant-and-the-cybersecurity-goldrush>)

2014 was celebrated in the cybersecurity world with a massive, billion-dollar acquisition. Mandiant, a security firm best known for conducting forensics on alleged Chinese military attacks against the New York Times, was acquired by security software provider FireEye. If you happen to run a security firm or have equity in one, congratulations: The next year is going to be all about acquiring cybersecurity firms, and it's largely the result of one Edward Snowden. Snowden's revelations of omnipresent American government data vacuuming of the entire digital world, and not just of foreign militant or government targets, accelerated larger trends in the security sphere. Large and midsized companies realized that for cybersecurity, they'd have to go it alone: Closer ties between tech firms and the government could hurt foreign sales due to non-U.S. consumers fearing U.S.-based companies are in cahoots with American intelligence agencies. There were even post-Snowden fears by foreign-owned companies working on American soil that the NSA might be spying on them as well. These weren't just idle fears; Reuters recently offered good evidence that security firm RSA let the NSA put a backdoor in one of their software tools as part of a secret \$10 million contract. In 2013 and 2014, it's deeply out of fashion to discuss increased collaboration between the government and cybersecurity firms. For said security firms, this means a gold rush of mergers and acquisitions. The combination of a higher volume of digital attacks, more clients being aware of the need to protect themselves, and government paranoia means security companies—many of which are on the small side—are in a good place to be purchased for large sums of money. Mandiant, many of whose employees reportedly come from the intelligence community, was acquired for more than \$1 billion in cash and stock. They're only the latest in a string of cybersecurity acquisitions over the past year. Websense was acquired this past spring, IBM acquired financial security firm Trusteer last summer, and Cisco acquired SourceFire in July for a reported \$2.7 billion dollars. Acquisitions in the billions of dollars are relatively commonplace in the security world because of the organizations that use their services: Fortune 500 companies are willing to dig deep in their pockets to keep away white collar criminals and other digital intruders—just think of how Target's public image suffered as a result of their data breach. The trend of acquisitions is likely to continue; Gartner Research analyst Lawrence Orans told me in a telephone conversation that "there are a lot of small companies in various segments of the security market, defending and protecting against advanced persistent threats (APTs) ... and you'll see a lot more consolidation there. You'll see the larger players acquiring smaller players." He added that smaller and mid-sized companies will be using outside cybersecurity services as well. "Smaller to mid-size companies will have to rely on third-party services, because defending against APTs and targeted attacks is a complicated area that they don't have time or resources to bring their people up to speed. Large companies will develop expertise and invest internally in security." Either way, this means security firms are in a prosperous position right now.

Ex-Im Bank DA JDI

*****NEGATIVE**

1nc

Uniqueness and link – Congress will let the Export-Import bank expire now unless its attached to must-pass legislation like the plan Werner 6-24

Erica, Political Analyst for the Associated Press, “GOP-led Congress prepared to let Export-Import Bank expire,” <http://www.kptv.com/story/29393533/gop-led-congress-prepared-to-let-export-import-bank-expire>

Republican House Speaker John Boehner of Ohio, a longtime business booster, has pushed his Financial Services Committee Chairman Jeb Hensarling, R-Texas, to come up with a plan to reform the bank or wind it down. Hensarling has responded, instead, by pushing for the bank's charter to expire without a vote June 30. With Congress heading out on recess next week and no prospect of action on the Export-Import Bank before then, Hensarling and fellow tea party conservatives will get their wish. But their victory may be short-lived. Lawmakers of both parties on Capitol Hill expect a reauthorization of the bank could move in the Senate in July. **if attached to must-pass legislation** extending the federal highway trust fund, **it could make it through** the House as well.

Export-Import Bank financing is corporate welfare that stifles market competition—it's the worst form of picking winners

Rugy 12

Veronique de Rugy, PhD and senior research fellow @ the Mercatus Center @ George Mason University, the National Review, March 8, “Why Would Anyone be Against the Export-Import Bank?,” <http://www.nationalreview.com/corner/292997/why-would-anyone-be-against-export-import-bank-veronique-de-rugy>, jj

I am more than happy to explain why we should get rid of the Export-Import Bank. First, **the Ex-Im Bank is nothing more than corporate welfare.** This is an agency that is in the business of **subsidizing private companies with taxpayer dollars.** It is unseemly and I will never understand why anyone would think that it is a role of the federal government to help private companies make money, pay their employees, get loans, or produce goods or services at home or abroad. If a company can't stay in business on its own, that is probably because it is trying to sell stuff that consumers don't want to buy. If that's the case, why should consumers then have to buy the goods or the service indirectly through their taxes? **An excellent paper** by Cato Institute's trade analyst Sallie James **exposes just how unseemly, inefficient, and irrelevant the Export-Import Bank is.** As James explains, **the Bank not only picks winners and losers by guaranteeing the loans of private companies, but it also introduces unfair competition for all the U.S. firms that do not benefit from such special treatment.** Also, while advocates for the programs claim that the bank takes risk that the private sector is unwilling to take (I wonder why the private sector will, year after year, pass up supposedly great opportunities), **the bank's lending activity is almost certainly irrelevant, since so few U.S. exports are supported through Ex-Im Bank activities.** With this paper, James is following in the steps of David Stockman who, over 20 years ago, called for the termination of the Ex-Im Bank. In the book, *The Triumph of Politics*, Stockman does a great job at exposing the export subsidies as a mercantilism illusion based on the strange idea that a country — in this case the United States — can raise its employment and produce wealth by selling its goods for less than they cost to produce. In a way, **we can think of the Bank as a charitable organization with an international bent.** The truth, he explains, is that **“export subsidies subtract from GDP and jobs, not expand them.”** More importantly, **the idea that export subsidies will create jobs and increase GDP is yet another example of the single-**

entry-bookkeeping mentality that has larded the federal budget with so many subsidies and payments to special interests. One of the biggest special interests, in this case, is Boeing. Yes, the giant manufacturer Boeing. According to the Washington Examiner's Tim Carney, in 2009, **90 percent of the loan guarantees issued by the Bank went to subsidize Boeing.** Not surprisingly, as a result, in 2011 Boeing "accounted for 45.6%, or \$40.7 billion, of ExIm's total exposure in fiscal 2011." With the help of the federal government guarantees, the company gained contracts from airlines like Air China and Air India. Good for Boeing. However, not good for Delta or other U.S. companies that have to compete with Air China and its new discounted Boeing planes. The Wall Street Journal, for instance, reported on Saturday that "In a letter to Congress last month, Delta estimated that Ex-Im cost the U.S. airline industry up to 7,500 jobs and \$684 million a year." Moreover, what does it tell you about Boeing and its ability to fly on its own without the help of taxpayers that the Bank has been providing for decades? Enough, already. I will leave the conclusion to David Stockman, because of his points' incredible relevance in today's politics. It is an important message to Republicans in particular and it applies to all forms of subsidies (oil, gas, wind, small businesses, manufacturers, automobiles, banks, and others). He writes: I had long insisted, to any liberals who would listen, that the supply-side revolution would be different from the corrupted opportunism of the organized business groups; that it would go after weak claims like Boeing's, not just weak clients such as food stamp recipients. Given the heave-ho to the well-heeled lobbyists of the big corporations who keep the whole scam alive would be dramatic proof that we meant business, not business-as-usual. Washington, listen up.

The impact is great power war

Baru 9 Sanjaya is a Professor at the Lee Kuan Yew School in Singapore Geopolitical Implications of the Current Global Financial Crisis, Strategic Analysis, Volume 33, Issue 2 March 2009 , pages 163 – 168

Hence, economic policies and performance do have strategic consequences.² In the modern era, the idea that strong economic performance is the foundation of power was argued most persuasively by historian Paul Kennedy. 'Victory (in war)', Kennedy claimed, 'has repeatedly gone to the side with more flourishing productive base'.³ Drawing attention to the interrelationships between economic wealth, technological innovation, and the ability of states to efficiently mobilize economic and technological resources for power projection and national defence, Kennedy argued that nations that were able to better combine military and economic strength scored over others. 'The fact remains', Kennedy argued, 'that all of the major shifts in the world's military-power balance have followed alterations in the productive balances, and further, that the rising and falling of the various empires and states in the international system has been confirmed by the outcomes of the major Great Power wars, where victory has always gone to the side with the greatest material resources'.⁴ In Kennedy's view, the geopolitical consequences of an economic crisis, or even decline, would be transmitted through a nation's inability to find adequate financial resources to simultaneously sustain economic growth and military power.

***uq**

2nc/1nr uq wall

It'll be attached to the plan – supporters are searching for must-pass legislation Miller 6-9

Kathleen, political contributor, Bloomberg, “Ex-Im Bank Likely to Lapse as Congress Lacks Path to Votes,” <http://www.bloomberg.com/politics/articles/2015-06-09/ex-im-likely-to-lapse-as-congress-lacks-path-to-votes-on-bank>

Shelby's Stance Senator Richard Shelby, an Alabama Republican and chairman of the Banking Committee, said Tuesday that Congress should let the bank die if it's not going to be revised, according to his spokeswoman, Torrie Miller. He doesn't plan for his committee to consider legislation reauthorizing Ex-Im, she said. That's significant because such efforts would usually pass through his committee. In the House, Paul Ryan, the Wisconsin Republican who is chairman of the Ways and Means Committee, said he won't let the bank's reauthorization be attached to a measure that would speed consideration of trade agreements. “Ex-Im Bank will not be included in any of these trade deals,” Ryan, who opposes the bank, said last week. “We are not doing that.” **That leaves supporters searching for must-pass legislation to carry the reauthorization**, something that Ex-Im opponents would be reluctant to vote against even if it means extending the bank's charter.

Yes attached to must-pass legislation

Roberts 6-24

Gregory, Reporter, the Advocate, “Export-Import Bank likely to expire next week,” <http://theadvocate.com/sports/saints/12731923-148/export-import-bank-likely-to-expire>

The vehicle for the bank's revival likely will be “must-pass” legislation — such as a transportation projects bill — that originates in the Senate and comes to the House for approval, with the reauthorization included as an amendment, Boustany said. Such a measure can be taken up directly on the House floor, bypassing the committee process.

Passage is uncertain in the House – they'll attach it to the first must-pass bill

Weisman 6-25

Jonathan, Reporter, New York Times, “Jeb Hensarling's Fight Against Ex-Im Bank Succeeds, for the Moment,” <http://www.nytimes.com/2015/06/26/business/jeb-hensarlings-fight-against-ex-im-bank-succeeds-for-the-moment.html>

Many House Republicans say that has only left the House vulnerable to the Senate, where moves are afoot to save the bank. In a recent show vote, 65 senators — including 22 Republicans — voted on a procedural measure to extend the bank's charter. And supporters hope to attach it to the **first must-pass bill they can**, probably an extension of the Highway Trust Fund scheduled to be taken up after the July 4 break that would bring it back to life after a short demise.

Must pass legislation

Lawder 6-24

David, Reporter, Reuters, "U.S. firms fear financing drought as trade bank deadline looms,"
<http://www.reuters.com/article/2015/06/24/us-usa-congress-exim-insight-idUSKBNOP40C320150624>

The bank will have to stop lending and writing new trade guarantees on June 30 if Congress fails to act. At least a short-term lapse in its activities looks likely. Asked if Ex-Im's would later be revived, Republican House Speaker John Boehner told reporters on Wednesday: "I have no idea." But Boehner, a traditional backer of the trade bank, said such legislation could be attached to a "must-pass" bill in the Senate and then be considered in the House.

2nc/1nr uq – at thumpers

No thumpers – Congress is avoiding attaching it to must-pass legislation in the squo

Dumain 6-22

Emma, congressional reporter, Roll Call, “House Poised to Let Ex-Im Bank Charter Expire,” <http://blogs.rollcall.com/218/house-set-let-ex-im-bank-charter-expire/?dcz=>

The House will consider its seventh appropriations bill of the year this week — one to fund the Interior Department and related activities — and possibly more legislation related to trade in the event the Senate keeps to its schedule. But with only four scheduled legislative work days left before the weeklong July 4 recess, there’s one thing the House is not expected to take up: reauthorization of the Export-Import Bank. The now-likely expiration of the bank’s charter on the last day of this month is a fate supporters of the bank, which provides credit and financing for U.S. export sales, predicted back in the waning days of 2014, when lawmakers were negotiating the terms of a government-funding bill. **Disconnecting the bank’s sunset date from “must-pass” legislation was a key element of the strategy for Ex-Im opponents, who want to see funding for the credit agency lapse without the political costs associated with a larger shutdown of federal operations.** And that is what’s on track to happen, despite support for the bank from a majority of House members — almost every Democrat and several dozen Republicans.

No must-pass legislation this month – aff happens first

Everett and Raju 6-4

Burgess and Manu, Political Reporters, Politico, “Ex-Im Bank expiration 'inevitable' amid 2016 GOP fight,” <http://www.politico.com/story/2015/06/ex-im-bank-expiration-now-inevitable-amid-2016-gop-fight-118663.html>

The Export-Import Bank is almost certain to close its doors for the first time in history this summer, dragged down by presidential politics and a bitterly divided GOP — raising the question of whether the nation’s chief export credit agency will ever be revived. Supporters are beginning to throw up their hands and admit that **the agency is very likely to lose its charter after June 30**, the first time since President Franklin D. Roosevelt established the agency in 1934 that it won’t be available to support U.S. exporters. House leaders, who are divided on the issue, are waiting to see if the Senate can pass a reauthorization bill first. But **the** lack of available floor time in the Senate — combined with **scant pieces of must-pass legislation awaiting action this month** — means the political football will almost certainly be punted until July after the bank’s charter expires, according to top Senate Republicans and Democrats following the matter. That means bank supporters are sure to try to revive the bank later this summer, an effort that will cause a major rift within the GOP.

Committee chairmen block reauthorization now

Bloomberg 6-25

Reporter, “Republicans Will Allow Export-Import Bank to Expire Under Senate Plan,”
<http://ttnews.com/articles/basetemplate.aspx?storyid=38667&t=Republicans-Will-Allow-Export-Import-Bank-to-Expire-Under-Senate-Plan>

Reproduction, redistribution, display or rebroadcast by any means without written permission is prohibited.

House Democrats, led by Representative Maxine Waters of California, the top member of her party on the Financial Services Committee, said they would try to force a vote June 24 to reauthorize the bank. A similar effort by Waters failed last week. Bank supporters say the Senate and House would reauthorize Ex-Im if allowed to vote on the issue. **They have struggled to get a floor vote on the matter because top Republicans, including the two committee chairmen with oversight of the bank** — House Financial Services Committee Chairman Jeb Hensarling and Senate Banking Chairman Richard **Shelby** — **oppose extending Ex-Im’s charter.**

Relative popularity doesn’t matter – House leadership prevents Ex-Im now Weisman 6-28

Jonathan, Reporter, New York Times, “EX-IM Bank to Halt Lending,”
http://www.nytimes.com/2015/06/29/business/greeces-impending-deadline-apples-new-music-service-and-the-jobs-report.html?_r=0

At 12:01 a.m. on Wednesday, a major federal agency’s charter will lapse — a victory, at least temporarily, for the Republican Party’s most conservative wing, which has been waging war on the Export-Import Bank for more than a year now. The bank, which guarantees commercial loans for overseas customers of American exporters, will not exactly go out of business. Its employees will continue to service all outstanding loans, some of them so large they could take up to 15 years to pay back. But no new loans can be guaranteed, and a host of small business support programs will halt at midnight. Supporters of the bank, however, are hoping to attach legislative language restarting the bank to a must-pass transportation funding bill in late July, then dare opponents in the House to kill it. Earlier this month, 65 senators voted to keep the bank alive in a test vote to show it could overcome a filibuster. And few doubt the agency has majority support in the House. **But** so far, **the House members who matter have blocked consideration.**

Not enough votes in the House or Senate – no momentum Fleming 5-21

Matthew, Reporter, Roll Call, “Trade Deal Tees Up Export-Import Bank Vote,”
<http://blogs.rollcall.com/wgdb/trade-deal-tees-up-export-import-bank-vote/>

It’s unclear if the votes are there in the Senate to pass reauthorization, and chances in the House are far worse. Despite the fact that Speaker John A. Boehner, R-Ohio, has been supportive of at least winding the program down, House Financial Services Chairman Jeb Hensarling, R-Texas, has been adamant about letting the charter lapse. In January, the conservative group Heritage Action for America began attacking Republican members of the House who supported reauthorization, calling the bank “corporate welfare.” It’s possible that if

the Senate approves reauthorization, the momentum could carry the bill through House, if Boehner brings it up for a vote. **But that's uncertain to say the least.** "Just because the Senate votes on a piece of crap doesn't mean we have to vote for it," said Rep. Mick Mulvaney, R-S.C. Boehner confirmed that Cantwell had reached out to him to try to secure a House vote on the bank, but he said Thursday that he "will not make that commitment" to have a vote. Cantwell told reporters that "the Republican Party needs to stand up and decide whether they're for essential tools that businesses need to compete in a global economy like the export bank credit agency, or whether they're with the Heritage Foundation."

2nc/1nr – at highway thumper

Highway bill doesn't thump –

a) Vote is in July – happens after the plan

Timiraos and Peterson 6-23

Nick and Kristina, Reporters, Wall Street Journal, "Time Running Out for Ex-Im Bank,"
<http://www.wsj.com/articles/time-running-out-for-ex-im-bank-1435091246>

Members of the Senate Environment and Public Works Committee unveiled a six-year reauthorization of the highway bill on Tuesday. The legislation would increase funding for roads and transit systems and expand funding for a freight program. Lawmakers expect to approve the bill in committee this week, and hope it will come to the floor in July.

b) Highway bill won't pass – Congress won't agree to tax increases

Baker and Starkey 6-24

Karl and Jonathan, Reporters, Delaware Online, "Political gridlock puts DelDOT funding in peril,"
<http://www.delawareonline.com/story/news/traffic/2015/06/24/political-gridlock-puts-deldot-funding-peril/29217911/>

Congress would need to authorize an additional \$13 billion to \$18 billion every year through 2024 to maintain its level of highway spending from recent years, Joseph Kile, an economist at the Congressional Budget Office, told Congress last year. If Congress doesn't pass a new highway spending bill by the end of July, the U.S. Department of Transportation will begin to cut back on the dollars that it sends to states. President Barack Obama is pushing a bill that would provide \$478 billion for transportation projects over six years, which would be funded by taxing the profits that U.S. businesses earn outside of the country. The plan doesn't appear to have enough support to pass both houses of Congress, however.

c) Won't be attached to a highway bill – financing differences

PB 6-29

Repoter, Policy Bazar, "What's subsequent for Ex-Im as time runs out,"
<http://policybazar.xyz/latest-news/whats-next-for-ex-im-as-time-runs-out/>

For now, a bank's supporters still have a shot during a discerning renewal, potentially hitching it a float on a highway authorization bill that expires during a finish of July. Senate Majority Leader Mitch McConnell, who is opposite to a bank, has betrothed a opinion an Ex-Im renewal. Sen. Maria Cantwell (D-Wash.), a supporter, pronounced she and other proponents will accommodate with Obama on Jul 8 to ask his subsidy for a renovation "in a early days of July." It appears a infancy of members in both chambers would support renewal. Sixty-five senators voted opposite murdering an Ex-Im reauthorization amendment to a invulnerability process check — a offer that was after withdrawn. More than 240 House members are co-sponsors of during slightest one of dual renovation bills, yet estimable differences remain, quite over supplies to mislay a administration's restrictions on financing for spark projects.

d) Committee chairmen block passage

NEI 6-25

Nuclear Energy Institute, citing Dan Lipman, NEI's vice president of supplier and international programs, "NEI's Dan Lipman on Ex-Im Bank Reauthorization," <http://www.nei.org/News-Media/News/News-Archives/NEI-s-Dan-Lipman-on-Ex-Im-Bank-Reauthorization>

Nuclear Energy Overview: What are the reauthorization prospects after June 30?^a Lipman: A strong bipartisan majority of Congress supports reauthorizing Ex-Im Bank. **The challenge is to get a vote, given the opposition to the bank by key committee chairmen.** We are hopeful that the Senate will attach reauthorization legislation to a must-pass bill that will be approved by the House. We would like to see majority leaders in both houses allow an up-or-down vote on the bank.

e) Momentum – opposition is gaining strength

Guida 6-28

Victoria, trade reporter, Politico, "What's next for Ex-Im as time runs out," <http://www.politico.com/story/2015/06/whats-next-for-ex-im-as-time-runs-out-119488.html>

Ex-Im's champions in both chambers — Mark Kirk (R-Ill.) and Heidi Heitkamp (D-N.D.) in the Senate and Stephen Fincher (R-Tenn.), Maxine Waters (D-Calif.) and Steny Hoyer (D-Md.) in the House — have used news conferences, hearings, floor speeches and procedural maneuvers to urge their leadership to bring its renewal up for a floor vote. But neither Hensarling nor Senate Banking Chairman Richard Shelby (R-Ala.) will mark up a stand-alone bill, **lending huge momentum to the opposition's cause.**^b For now, the bank's supporters still have a shot at a quick renewal, potentially hitching it a ride on the highway authorization bill that expires at the end of July. Senate Majority Leader Mitch McConnell, who is opposed to the bank, has promised a vote on Ex-Im renewal.^c Sen. Maria Cantwell (D-Wash.), a supporter, said she and other proponents will meet with Obama on July 8 to ask his backing for a renewal "in the early days of July."^d It appears a majority of members in both chambers would support renewal. Sixty-five senators voted against killing an Ex-Im reauthorization amendment to the defense policy bill — a proposal that was later withdrawn. More than 240 House members are co-sponsors of at least one of two renewal bills, though substantial differences remain, particularly over provisions to remove the administration's restrictions on financing for coal projects.^e Still, Rep. Jim Jordan, who criticizes the bank both for its role in the economy and the fraud investigations some of its employees are facing, is optimistic.^f "Those of us who are opposed to it, we are making progress," the Ohio Republican said in an interview earlier this month. "It looks like **it's likely to go past June 30.** Six months ago, did anyone think that was going to happen?"

2nc AT Plan Not Must-Pass/Theory

Plan has to be must pass – fiat guarantees passage

Certainty is mandated by topicality – if they don't meet, you should vote against them

Resolved

Burton's Legal Thesaurus 98

William C. Burton, 3rd Edition

Resolved: decisive, deliberate, indomitable, inexorable, **inflexible**, intense, intentional, patient, peremptory, persistent, pertinacious, purposeful, **res judicata**, **resolute**, sedulous, serious

"Should" means "must" and requires immediate legal effect

Summers 94

(Justice – Oklahoma Supreme Court, "Kelsey v. Dollarsaver Food Warehouse of Durant", 1994 OK 123, 11-8,

<http://www.oscn.net/applications/oscn/DeliverDocument.asp?CiteID=20287#marker3fn13>)

4 The legal question to be resolved by the court is whether the word "should"¹³ in the May 18 order connotes futurity or may be deemed a ruling in praesenti.¹⁴ The answer to this query is not to be divined from rules of grammar;¹⁵ it must be governed by the age-old practice culture of legal professionals and its immemorial language usage. To determine if the omission (from the critical May 18 entry) of the turgid phrase, "and the same hereby is", (1) makes it an in futuro ruling - i.e., an expression of what the judge will or would do at a later stage - or (2) constitutes an in in praesenti resolution of a disputed law issue, the trial judge's intent must be garnered from the four corners of the entire record.¹⁶

[CONTINUES – TO FOOTNOTE]

¹³ "Should" not only is used as a "present indicative" synonymous with *ought* but also is the past tense of "shall" with various shades of meaning not always easy to analyze. See 57 C.J. Shall § 9, Judgments § 121 (1932). O. JESPERSEN, GROWTH AND STRUCTURE OF THE ENGLISH LANGUAGE (1984); St. Louis & S.F.R. Co. v. Brown, 45 Okl. 143, 144 P. 1075, 1080-81 (1914). For a more detailed explanation, see the Partridge quotation infra note 15. Certain contexts mandate a construction of the term "should" as more than merely indicating preference or desirability. Brown, supra at 1080-81 (jury instructions stating that jurors "should" reduce the amount of damages in proportion to the amount of contributory negligence of the plaintiff was held to imply an *obligation and to be more than advisory*); Carrigan v. California Horse Racing Board, 60 Wash. App. 79, 802 P.2d 813 (1990) (one of the Rules of Appellate Procedure requiring that a party "should devote a section of the brief to the request for the fee or expenses" was interpreted to mean that a party is under an *obligation* to include the requested segment); State v. Rack, 318 S.W.2d 211, 215 (Mo. 1958) ("should" would mean the same as "shall" or "must" when used in an instruction to the jury which tells the triers they "should disregard false testimony"). ¹⁴ In praesenti means literally "at the present time." BLACK'S LAW DICTIONARY 792 (6th Ed. 1990). In legal parlance the phrase denotes that which in law is presently or **immediately effective**, as opposed to something that will or would become effective in the future [*in futuro*]. See Van Wyck v. Knevals, 106 U.S. 360, 365, 1 S.Ct. 336, 337, 27 L.Ed. 201 (1882).

Ex-Im discourages competition by picking winners – impedes economic growth Rugy 6-18

Veronique de Rugy, PhD and senior research fellow @ the Mercatus Center @ George Mason University, Reason.com, "End the Export-Import Bank,"
<http://reason.com/archives/2015/06/18/expecting-the-export-import-bank-to-expi>

On June 30, the Export-Import Bank of the United States—an agency that mostly extends loans and loan guarantees to large foreign companies to buy U.S. products—will most likely see its charter expire for the first time in 81 years. This state of affairs is nothing short of remarkable, considering that for years, Ex-Im's charter has been reauthorized by Congress without any debates or even formal votes. The change is the result of an intense fight between the people who oppose corporate welfare and those who will support it at any cost. However, it would be a mistake to see this battle against Ex-Im as an end in and of itself. It is not. The battle is better understood in the context of a broader rejection of government-funded privileges for a handful of connected actors. Indeed, everywhere we look, big business is teaming up with big government, and that's causing big problems. People know this, and they're sick of it. **Ex-Im is the epitome of that cronyism** and has a charter that is set to expire, which is why it became such a great target. For instance, in recent years, some 60 percent of the bank's activities have benefited 10 giant U.S. corporations, with 40 percent benefiting one company alone: Boeing. On the foreign side, the cheap loans are extended to giant state-owned companies such as Mexico's petroleum company, Pemex, and the United Arab Emirates' airline, Emirates. When the Ex-Im financing isn't benefiting a state-owned firm, it is often flowing to very successful private firms with plenty of access to capital, such as the loan extended to the richest woman in Australia to finance her iron ore project at the expense of its U.S competitors. These Ex-Im companies may enjoy the perks of cheap financing and artificially inflated profits, but it's not fair for the 98 percent of U.S. exports generated without special treatment from the federal government. That's especially outrageous when the program has taxpayers on the hook for \$140 billion. The Department of Energy's 1705 loan program falls squarely in that category. A few years ago, it received a lot of media and political attention when one of its recipients, a solar company named Solyndra, defaulted on its \$538 million loan guarantee, leaving taxpayers with the tab. The overlooked scandal of the 1705, however, is that—as with the Ex-Im Bank—most of its beneficiaries are green energy projects backed by gigantic companies with plenty of access to capital, such as Goldman Sachs and NRG Energy. But cronyism goes beyond loan guarantees. A 2012 paper by budget analyst Tad DeHaven calculated that subsidies to businesses alone cost taxpayers almost \$100 billion each year. The subsidies flow to air carriers, community developers, fisheries and wineries. There are also billions in subsidies to rich farmers, on top of such things as the bailout of the automobile industry, which ended up costing \$9.26 billion. Whatever form it takes, this cronyism is harmful. As my colleague Matt Mitchell explains, "whatever its guise, government-granted privilege is an extraordinarily destructive force. It misdirects resources, impedes genuine economic progress, breeds corruption, and undermines the legitimacy of both the government and the private sector."

Economic collapse causes extinction

Kerpen 8

Phil, National Review Online, October 29, , Don't Turn Panic Into Depression,
<http://www.cbsnews.com/stories/2008/10/29/opinion/main4555821.shtml>

It's important that we avoid all these policy errors - not just for the sake of our prosperity, but for our survival. The Great Depression, after all, didn't end until the advent of World War II, the most destructive war in the history of the planet. In a world of nuclear and biological weapons and non-state terrorist organizations that breed on poverty and despair, another global economic breakdown of such extended duration would risk armed conflicts on an even greater scale. To be sure, Washington already has stoked the flames of the financial panic. The president and the Treasury secretary did the policy equivalent of yelling fire in a crowded theater when they insisted that Congress immediately pass a bad bailout bill or face financial Armageddon. Members of Congress splintered and voted against the bill before voting for it several days later, showing a lack of conviction that did nothing to reassure markets. Even Alan Greenspan is questioning free markets today, placing our policy fundamentals in even greater jeopardy. But after the elections, all eyes will turn to the new president and Congress in search of reassurance that the fundamentals of our free economy will be supported. That will require the shelving of any talk of trade protectionism, higher taxes, and more restrictive labor markets. The stakes couldn't be any higher.

I/L – Economic Growth

Letting Ex-Im expire is key to growth, innovation, and job creation Rugy and Katz 15

Veronique de Rugy, PhD and senior research fellow @ the Mercatus Center @ George Mason University, Diane Katz, Senior Research Fellow in Regulatory Policy @ the Heritage Foundation, “The Export-Import Bank’s Top Foreign Buyers,” <http://mercatus.org/sites/default/files/DeRugy-Ex-Im-Foreign-Buyers.pdf>

Ex-Im Bank advocates emphasize its importance to small businesses and economic growth. A new analysis of government data reveals that Ex-Im Bank’s top 10 overseas buyers are large corporations that primarily purchase exports from multinational conglomerates. Ex-Im Bank’s small business narrative is challenged by the fact that the buyers receiving the most subsidies are—like the exporters—major corporations. **If lawmakers truly want to nurture** small businesses and **economic growth, they should end** the **Ex-Im Bank favoritism** that undermines domestic companies and focus instead on reducing the tax and regulatory barriers that ~~choke~~ deter investment, innovation, and job creation.

Impact – Growth Good – AT Impact Defense

Nuclear war

Friedberg and Schoenfeld 8

Aaron, Prof. Politics. And IR @ Princeton's Woodrow Wilson School and Visiting Scholar @ Witherspoon Institute, and Gabriel, Senior Editor of Commentary and Wall Street Journal, "The Dangers of a Diminished America" <http://online.wsj.com/article/SB122455074012352571.html>

Then there are the dolorous consequences of a potential collapse of the world's financial architecture. For decades now, Americans have enjoyed the advantages of being at the center of that system. The worldwide use of the dollar, and the stability of our economy, among other things, made it easier for us to run huge budget deficits, as we counted on foreigners to pick up the tab by buying dollar-denominated assets as a safe haven. Will this be possible in the future? Meanwhile, traditional foreign-policy challenges are multiplying. The threat from al Qaeda and Islamic terrorist affiliates has not been extinguished. Iran and North Korea are continuing on their bellicose paths, while Pakistan and Afghanistan are progressing smartly down the road to chaos. Russia's new militancy and China's seemingly relentless rise also give cause for concern. If America now tries to pull back from the world stage, it will leave a dangerous power vacuum. The stabilizing effects of our presence in Asia, our continuing commitment to Europe, and our position as defender of last resort for Middle East energy sources and supply lines could all be placed at risk. In such a scenario there are shades of the 1930s, when global trade and finance ground nearly to a halt, the peaceful democracies failed to cooperate, and aggressive powers led by the remorseless fanatics who rose up on the crest of economic disaster exploited their divisions. Today we run the risk that rogue states may choose to become ever more reckless with their nuclear toys, just at our moment of maximum vulnerability. The aftershocks of the financial crisis will almost certainly rock our principal strategic competitors even harder than they will rock us. The dramatic free fall of the Russian stock market has demonstrated the fragility of a state whose economic performance hinges on high oil prices, now driven down by the global slowdown. China is perhaps even more fragile, its economic growth depending heavily on foreign investment and access to foreign markets. Both will now be constricted, inflicting economic pain and perhaps even sparking unrest in a country where political legitimacy rests on progress in the long march to prosperity. None of this is good news if the authoritarian leaders of these countries seek to divert attention from internal travails with external adventures.

Growth controls conflict escalation – solves aff impacts

Griswold 7 Griswold, Trade Policy Studies @ Cato, 4/20/7,

(Daniel, Trade, Democracy and Peace, <http://www.freetrade.org/node/681>)

A second and even more potent way that trade has promoted peace is by promoting more economic integration. As national economies become more intertwined with each other, those nations have more to lose should war break out. War in a globalized world not only means human casualties and bigger government, but also ruptured trade and investment ties that impose lasting damage on the economy. In short, globalization has dramatically raised the economic cost of war.

Statistical studies go neg

Royal 10

Jedediah Royal, Director of Cooperative Threat Reduction at the U.S. Department of Defense, 2010, "Economic Integration, Economic Signaling and the Problem of Economic Crises," in *Economics of War and Peace: Economic, Legal and Political Perspectives*, ed. Goldsmith and Brauer, p. 213-214

Less intuitive is how periods of economic decline may increase the likelihood of external conflict. Political science literature has contributed a moderate degree of attention to the impact of economic decline and the security and defence behaviour of interdependent states. Research in this vein has been considered at systemic, dyadic and national levels. Several notable contributions follow. First, on the systemic level, Pollins (2008) advances Modelski and Thompson's (1996) work on leadership cycle theory, finding that rhythms in the global economy are associated with the rise and fall of a pre-eminent power and the often bloody transition from one pre-eminent leader to the next. As such, exogenous shocks such as **economic crises could usher in a redistribution of relative power** (see also Gilpin, 1981) that leads to uncertainty about power balances, increasing the risk of miscalculation (Feaver, 1995). Alternatively, even a relatively certain redistribution of power could lead to a permissive environment for conflict as a rising power may seek to challenge a declining power (Werner, 1999). Separately, Pollins (1996) also shows that global economic cycles combined with parallel leadership cycles impact the likelihood of conflict among major, medium and small powers, although he suggests that the causes and connections between global economic conditions and security conditions remain unknown. Second, on a dyadic level, Copeland's (1996, 2000) theory of trade expectations suggests that 'future expectation of trade' is a significant variable in understanding economic conditions and security behaviour of states. He argues that interdependent states are likely to gain pacific benefits from trade so long as they have an optimistic view of future trade relations. However, **if the expectations of future trade decline**, particularly for difficult to replace items such as energy resources, the likelihood for conflict increases, as states will be inclined to use force to gain access to those resources. Crises could potentially be the **trigger** for **decreased trade expectations** either on its own or because it triggers protectionist moves by interdependent states.⁴ Third, **others have considered the link between economic decline and external armed conflict at a national level**. **Blomberg and Hess** (2002) find a strong correlation between internal conflict and external conflict, particularly during periods of economic downturn. They write: The linkages between internal and external conflict and prosperity are strong and mutually reinforcing. Economic conflict tends to spawn internal conflict, which in turn returns the favour. Moreover, the **presence of a recession tends to amplify the extent to which international and external conflicts self-reinforce each other**. (Blomberg & Hess, 2002, p. 89) **Economic decline has also been linked with an increase in the likelihood of terrorism** (Blomberg, Hess, & Weerapana, 2004), which has the capacity to spill across borders and lead to external tensions. Furthermore, crises generally reduce the popularity of a sitting government. "Diversionary theory" suggests that, when facing unpopularity arising from economic decline, sitting governments have increased incentives to fabricate external military conflicts to create a 'rally around the flag' effect. Wang (1996), DeRouen (1995), and Blomberg, Hess, and Thacker (2006) find supporting evidence showing that economic decline and use of force are at least indirectly correlated. Gelpi (1997), Miller (1999), and Kisangani and Pickering (2009) suggest that **the tendency towards diversionary tactics are greater for democratic states** than autocratic states, due to the fact that democratic leaders are generally more susceptible to being removed from office due to lack of domestic support. DeRouen (2000) has provided evidence showing that periods of weak economic performance in the United States, and thus weak Presidential popularity, are statistically linked to an increase in the use of force. In summary, recent economic scholarship positively correlates economic integration with an increase in the frequency of economic crises, whereas **political science scholarship links economic**

decline with external conflict at systemic, dyadic and national levels.⁵ This implied connection between integration, crises and armed conflict has not featured prominently in the economic-security debate and deserves more attention.

Impact – Turns Democracy

Decline turns democracy

Friedman 5 – Professor of Economics @ Harvard

Ben, professor of economics at Harvard, Meltdown: A Case Study,
<http://www.theatlantic.com/doc/200507/friedman>

Not just in America but in the other Western democracies, too, history is replete with instances in which a turn away from openness and tolerance, often accompanied by a weakening of democratic institutions, has followed economic stagnation. The most familiar example is the rise of Nazism in Germany, following that country's economic chaos in the 1920s and then the onset of worldwide depression in the early 1930s. But in Britain such nasty episodes as the repression of the suffragette movement under Asquith, the breaking of Lloyd George's promises to the returning World War I veterans, and the bloody Fascist riots in London's East End all occurred under severe economic distress. So did the ascension of the extremist Boulangist movement in late-nineteenth-century France, and the Action Française movement after World War I. Conversely, in both America and Europe fairness and tolerance have increased, and democratic institutions have strengthened, mostly when the average citizen's standard of living has been rising. The reason is not hard to understand. When their living standards are rising, people do not view themselves, their fellow citizens, and their society as a whole the way they do when those standards are stagnant or falling. They are more trusting, more inclusive, and more open to change when they view their future prospects and their children's with confidence rather than anxiety or fear. Economic growth is not merely the enabler of higher consumption; it is in many ways the wellspring from which democracy and civil society flow. We should be fully cognizant of the risks to our values and liberties if that nourishing source runs dry.

Impact – Turns Heg

Decline kills heg – defense spending

Haass 8 – President @ CFR

Richard. President of the Council on Foreign Relations. 11/8/8.
<http://online.wsj.com/article/SB122611110847810599.html>.

Pressures to rein in federal spending are sure to grow. There is little that is easy to cut given the need to meet entitlement obligations, pay interest on the \$10 trillion debt, and bail out states and cities unable to balance their budgets. What's more, there is an emerging consensus on the need for yet another stimulus package. Down the road, ballooning deficits will bring inflation and cause problems for the dollar. It is highly likely then that Congress will want to cut the defense and foreign-aid budgets simply because there are so few other targets available to reduce federal spending. This will limit the availability of tools central to asserting U.S. power and influence abroad.

Impact – Turns Warming

Decline turns warming – green tech investments

Klare 8 – Peace and World Security Studies Professor at Hampshire College

Michael, October 17, "The Crisis and the Environment" Foreign Policy in Focus,
<http://www.commondreams.org/view/2008/10/17-6>

The Downside But there is a downside to all this as well. Most serious is the risk that venture capitalists will refrain from pouring big bucks into innovative energy projects. At an energy forum organized by professional services firm Ernst & Young on October 9, experts warned of a sharp drop-off in alternative energy funding. "The concept of alternative energy has a lot of momentum," says Dan Pickering, head of research for Tudor, Pickering, Holt & Co. Securities in Houston. "But lower oil prices make it harder to justify investment. At \$50 a barrel, a lot of that investment will die." Governments could also have a hard time coming up with the funds to finance alternative energy projects. Moderators at the presidential debates repeatedly asked both John McCain and Barack Obama what programs they would cut in order to finance the massive financial-rescue packages the Bush administration has engineered in order to avert further economic distress. Both insisted that their respective energy initiatives would be spared any such belt-tightening. It is highly likely, however, that costly endeavors of this sort will be scaled back or postponed once the magnitude of the financial rescue effort becomes apparent. The same is true for Europe and Japan, who have also pledged to undertake ambitious energy initiatives in their drive to reduce greenhouse-gas emissions. Indeed, leaders of some European Union countries are calling for a slowdown in efforts to curb emissions of greenhouse gases due to the burgeoning economic crisis. Under a plan adopted by the EU in 2007, member countries pledged to reduce such emissions by 20% below 1990 levels by 2020, which is far more ambitious than the Kyoto Protocol. European leaders are scheduled to implement a detailed plan to achieve this goal by December of this year. But at a rancorous summit meeting of the EU heads of state in mid-October, Prime Minister Silvio Berlusconi of Italy and the leaders of some Eastern European countries indicated that due to the current crisis, they were no longer able to finance the high costs of attaining the 2020 goal and so weren't prepared to adopt a detailed plan. "We don't think this is the moment to push forward on our own like Don Quixote," Berlusconi declared at the summit. "We have time." At some point, the price of gasoline will fall so low that many drivers will once again engage in the wasteful driving habits they may have given up when the price of gas soared over \$3 per gallon. This may not occur right away. But with crude oil at \$70 per barrel, half of what it was in August, a corresponding drop in the price of refined products will eventually follow. And that could lead people to see cheap gasoline as the one bright spot on an otherwise dismal horizon. It's unclear at this point whether the crisis will do more good or more harm for the environment. In the short term, it will certainly slow the increase in carbon dioxide emissions. It will also cause a delay in developing environmentally hazardous projects like Canadian tar sands. But if the crisis also sets back the development of energy alternatives for any significant length of time, it will cancel out any of these positive developments. Many people are waiting and watching what happens in the global financial markets. Likewise, the verdict is still out on the ultimate impact of the crisis on the environment.

Impact – Turns Terrorism

Decline causes terrorism

Thomas 8 – Professor of Economics

John Thomas, Professor of Economics, January 18 2008, Becker-Posner Blog, Accessed April 8 2008, http://www.becker-posner-blog.com/archives/2008/01/terrorism_and_e.html

However lack of economic growth also helps terrorism. To manage in the modern world, every country requires an intellectual class, and without sufficient economic growth this intellectual class is often idle or their partially educated children are idle and likely somewhat unemployed, and thus ripe for radicalism. Also, lack of economic growth tends to support the idea that the nation has fallen behind as a great power. People always like to feel like their part of a great power and economic growth makes people feel like if they are not part of a great power they are becoming part of one. Much of the discontent in the Muslim world is from the idea that the Muslim world has fallen behind the West and thus it must become a great power by any means necessarily.

*****impact – competitiveness**

I/L – Competitiveness

The bank only picks losers—they are responsible for multiple epic fails like Enron and Solyndra—this destroys competitiveness and growth **Williams 13**

David, October 24, “Ending Ex-Im Bank Should Be Top Priority For Both Parties,”
<http://townhall.com/columnists/davidwilliams/2013/10/24/ending-exim-bank-should-be-top-priority-for-both-parties-n1730923/page/full>

While there are certainly more pressing issues at hand, like the debt ceiling and another budget showdown, Congress must address the future of the Ex-Im Bank. And unlike the debt ceiling and potential shutdown, there is a reasonable amount of room for both sides to come together concerning the Bank, considering Republicans have consistently opposed it, Democrats have recently begun to express reservations about its actions and President Obama himself once called it “little more than a fund for corporate welfare.” The fact that the Ex-Im Bank was willing to get involved with companies such as these should raise alarms, but the fact that the federal agency has a record rife with similar mistakes is what should push Americans to call on our elected officials to wind-down this corporate welfare program. The Export-Import Bank is a federal government agency that is authorized by Congress and the loans are backed by the American taxpayer. One might think that such an agency would be somewhat risk-adverse considering that the Bank is operating on behalf of the American public, but **when it comes to investing in questionable energy companies the Ex-Im Bank has a lengthy rap sheet that includes providing financial backing to companies such as Enron and Solyndra.** The Bank has been often been referred to as a reverse Robin Hood, distributing wealth to large companies that use their influence and lobbyists to secure favorable financial packages. This practice is not only unfair, but it is also a **danger to our free market economy.** The Bank effectively gives the U.S. government the power to intrude into free markets and unilaterally provide companies with monetary advantages over their competitors. This aids bad companies, such as Enron, and Solyndra, and often has damaging unintended consequences on healthy American employers. Take, for example, Boeing, which receives the lion’s share of Ex-Im’s loans. This successful American company has been the benefactor of much of Ex-Im’s largesse, sometimes receiving more than \$12 billion a year. And while this is fantastic for Boeing and its shareholders, **these loans wreak havoc** on the entire American airline industry and its workers. Due to its charter, the Export-Import Bank has traditionally only financed deals that allow foreign companies to purchase goods from American manufacturers, in an effort to promote trade with entities outside the United States. This has excluded American carriers from receiving the same low-interest loans and favorable terms that are often given to their foreign competitors by the Ex-Im Bank. This puts the entire American airline industry at a relative disadvantage, and over the long-term, foreign airlines save millions, while American carriers are left in the dark. This disadvantage has caused the American airline industry to reportedly lose as many as 7,500 jobs and hundreds of millions of dollars in potential revenue. Given that Ex-Im is having a disastrous impact on American economic growth, in addition to a track record of assisting failed companies such as Abound Solar, Congress should scrap its charter altogether. There aren’t many issues

that Democrats and Republicans agree on, so let's move forward with the one that they do agree on, shutting down the Ex-Im Bank.

Ex-Im loan guarantees destroy competitiveness and distort markets

Katz 14

Diane Katz is Research Fellow for Regulatory Policy in the Thomas A. Roe Institute for Economic Policy Studies at The Heritage Foundation, April 11, 2014, The Heritage Foundation, "U.S. Export-Import Bank: Corporate Welfare on the Backs of Taxpayers"
<http://www.heritage.org/research/reports/2014/04/us-exportimport-bank-corporate-welfare-on-the-backs-of-taxpayers>

Congress will soon debate the fate of the U.S. Export-Import Bank (Ex-Im), which doles out financing to favored corporations and credit to foreign governments. Proponents claim that such taxpayer bankrolling creates jobs and fills "gaps" in private financing.[1] In fact, the bank is a conduit for corporate welfare beset by unreliable risk management, inefficiency, and cronyism. Terminating the bank's charter should be an easy call for lawmakers. Even Barack Obama, as a presidential candidate, endorsed its end.[2] With strong growth in privately financed exports, there is no justification for maintaining this Depression-era relic. The New Deal Ex-Im was incorporated in 1934 by President Franklin D. Roosevelt to finance trade with the Soviet Union. Congress later constituted the bank as an independent agency under the Export-Import Bank Act of 1945. Its authorization, last extended in 2012, will expire on September 30 unless reauthorized. The bank provides loans and loan guarantees as well as capital and credit insurance to "facilitate" U.S. exports. The financing is backed by the "full faith and credit" of the U.S. government, which means taxpayers are on the hook for losses that bank reserves fail to cover. Weaknesses in Governance Supporters say the bank carefully manages risk; its charter allows loans only to enterprises that demonstrate "a reasonable assurance of repayment." However, the latest report to Congress by Ex-Im's inspector general (IG) hardly inspires confidence, noting insufficient policies to prevent waste, fraud, and abuse. According to the IG, the bank also exhibits "weaknesses in governance and internal controls for business operations." [3] In another review, the Government Accountability Office reported that the bank appears to be relying on inappropriate risk modeling that could produce inaccurate estimates of both subsidy costs and potential losses.[4] These findings are not surprising. Ex-Im officials are not putting their own money at risk and thus have less of a stake in the outcome. It is an inevitable aspect of government intrusion into the finances of private enterprise. Such operational shortcomings have worsened as the number and value of bank transactions have increased.[5] In FY 2013, the bank authorized financing totaling \$27.3 billion—a 28 percent increase from 2009—including \$636 million for China and \$630 million for Russia. Taxpayers' exposure now totals nearly \$134 billion. However, the IG suggests that sloppy record-keeping has obscured the actual amount of outstanding commitments, which likely exceed the \$140 billion cap set by Congress. Working the Numbers Bank officials and advocates emphasize that Ex-Im financing creates jobs. In fact, the bank does not count actual jobs related to its projects but simply extrapolates numbers based on national data. This formula does not distinguish among full-time, part-time, and seasonal jobs. It also assumes that average employment trends apply to Ex-Im clients (who may not be typical). Most important, the bank does not account for what would occur in the absence of the subsidies. Ex-Im officials assume that the economic activity they subsidize would not occur absent bank financing. That is an absurd notion, but it is prevalent among bureaucrats who cannot fathom that business actually functions without

them. In some cases, Ex-Im financing actually puts U.S. workers at a disadvantage by providing overseas companies with billions of dollars in financing at favorable rates. Delta Airlines and the Airline Pilots Association, for example, filed a legal challenge last year against the bank for providing financing to five foreign airlines[6] for the purchase of Boeing aircraft. According to the lawsuit: The bank's aggressive approach to aircraft financing allows foreign airlines to borrow at much cheaper rates than they could in the private market. Cheaper financing, in turn, leads to competitive advantages for foreign airlines...shifts industry growth abroad, and puts downward pressure on American production and employment.[7] Whether well-intentioned or otherwise, **government interference distorts the competitive landscape, with winners and losers determined by political considerations rather than the merit of their products and services.** On Automatic Pilot Multinational corporations attract the largest proportion of Ex-Im financing, including the construction and engineering firm of Bechtel, ranked by Forbes as the fourth-largest privately held company by revenue, and Lockheed Martin, valued in excess of \$50 billion. But the bank's foremost beneficiary is Boeing, the world's largest aerospace company (with a market capitalization exceeding \$91 billion). In the past five years, the company has profited from 197 Ex-Im deals totaling \$48 billion. Last year alone, Boeing-related financing comprised 30 percent of all Ex-Im activity. These and the other deals with titans of industry belie claims that the bank is necessary to fill "gaps" in financing—that is, bankrolling deals that supposedly pose too much political or economic risk to garner private capital. In fact, U.S. exports hit a record-high \$2.2 trillion in 2013, up from \$1.4 trillion five years ago, reflecting no shortage of private export capital.[8] In decades past, political and economic turmoil around the world did present export risks, but global trade is now firmly entrenched. If the bank were stepping in where private investors fear to tread, a larger proportion of its financing would be directed to Africa and Latin America, where risks are greatest. Instead, bank authorizations last year were concentrated in Asia (\$9.7 billion), followed by Europe (\$5.7 billion) and North America (\$3.4 billion). In contrast, Latin America has received \$2.9 billion and Africa a measly \$600 million.[9] To the extent Ex-Im does finance deals that the private sector supposedly snubs, taxpayers are justified in questioning whether they should be saddled with risk that private investors deem unacceptable. It is also difficult to reconcile bank officials' assertions that they alone assist higher-risk exporters but still manage to offer competitive rates and generate profits. On the Level? Advocates also claim that the bank is necessary to create a "level playing field" vis-à-vis government subsidies to foreign firms, but only 2.2 percent of all U.S. exports last year received Ex-Im financing, which means that 98 percent of American exporters are competing without the bank's intervention. Nor is the playing field leveled for the domestic firms that do not receive special treatment. Rather than recommit to the government's risky and inefficient finance scheme, lawmakers should focus on reducing tax and regulatory barriers to exports. For example, the flood of Dodd-Frank regulations is likely to constrain private-sector credit, while the costs of Obamacare weigh heavily on U.S. firms. In fact, regulatory costs have increased by nearly \$73 billion a year under the Obama Administration.[10] An Easy Call Ex-Im advocates offer myriad excuses for maintaining government interference in export financing, including job creation, gaps in private investment, and government subsidies lavished on foreign firms. Such justifications do not stand up to the facts, and the purported benefits, if any, are not commensurate with the risk to taxpayers.

More evidence – kills competitiveness

Murray 12

Iain Murray is Vice-President for Strategy at the Competitive Enterprise Institute, 3.21.12, The American Spectator, "THE EXPORT-IMPORT BANK SHOULD BE AN EX-BANK" <http://spectator.org/articles/35842/export-import-bank-should-be-ex-bank>

Among the nation's failing financial institutions the Export-Import Bank has received little notice. Now, however, the House and Senate are considering whether to reauthorize the bank. They should not. It was a bad idea to begin with, and the market is currently developing better ways to meet its stated goals without putting taxpayer money at risk. It is time to do away with this outdated mercantilist institution. Why do we have a bank to subsidize exports at all? This stems from a fundamental economic misunderstanding -- that exports are good and imports are bad. In fact, both are beneficial to an economy. Essentially we export goods to pay for the goods we import. If we are wealthy enough to pay for the goods we import without exporting, we are still better off. When we subsidize exports, we are paying to export things with money we could be using to import more things we actually want. To be competitive, imports need to be more affordable than home-grown goods. Therefore, imports lead to savings. That means that we free up wealth to use elsewhere in the economy, which is why the idea that we should subsidize exports to provide jobs is also a myth. There is no economic case for the Export-Import Bank. Yet its supporters claim that it is solving a case of market failure by providing taxpayer money for risky ventures that are unable to attract conventional funding. Unfortunately for this line of argument, the Ex-Im Bank has a dual mandate -- to subsidize these ventures but also to lend money only when there is a reasonable chance of repayment. It is difficult to square that particular circle. If something has a reasonable chance of repayment, private sector funding should be available for it. If something is too risky for conventional funding, that is what venture capital is for. Using taxpayers' money to finance the venture is the worst possible choice. As former Obama adviser Larry Summers acknowledged in comments about the Solyndra boondoggle, government makes a terrible venture capitalist (though he put it somewhat more crudely).

I/L – Competitiveness – AT China Markets

Reauthorization won't cause U.S. companies to lose new markets to China – best literature proves

Rugy 6-4

Veronique De Rugy, PhD and senior research fellow @ the Mercatus Center @ George Mason University, National Review, “Ex-Im Is Supposed to Help Us Compete against Chinese Companies, But It Also Helps Chinese Companies to the Tune of Billions,” <http://www.nationalreview.com/corner/419322/ex-im-bank-export-subsidies-wanted?target=author&tid=900102>

Export-Import Bank defenders often argue that the U.S. government must subsidize foreign companies because we need to fight back against competition from China. I wouldn't be surprised if the argument came up today at the Senate's hearing on Ex-Im. In particular, the argument goes, we have to subsidize our own exports because the Chinese government does too, through the Export-Import Bank of China. But this assumes, for one, export subsidies are good for the country extending them. **The academic literature is pretty clear that this assumption is incorrect.** Heritage economist Salim Furth reviewed the literature last year; here's how he summarized his findings: However, ample research by academic economists found that in most cases, export subsidies reduce the total income of the country paying the subsidies. In all cases, export subsidies reduce global income, and benefits accrue only to those who are subsidized—at the expense of other exporters and taxpayers. Most of the arguments in favor of the Export-Import Bank recast the bank as having a primary function other than providing export subsidies—such as small-business lending or global diplomacy. But theory and practical reality both show that the bank does not, and should not, engage in other activities. **Since the bank's main function is harmful to the U.S. economy,** and it is not designed to carry out other functions, **its charter should not be renewed.** Over at the Cato Institute, K. William Watson has a great piece making the case that unilateral disarmament isn't even really a thing. A tidbit: Claiming that the United States should pursue any economic policy on the grounds that China is doing it strikes me as bordering on insanity absurdity. Market intervention by the Chinese government has resulted in large-scale misallocation and is a serious liability for the stability of the Chinese economy. It's true that Chinese subsidies to domestic industries reduce opportunities for U.S. businesses, and it's perfectly alright for the U.S. government to condemn those policies. But should we really seek to emulate them? Competitive metaphors about trade are generally bad, and martial ones are especially unhelpful. The United States is simply not engaged in a metaphorical war with its trading partners. Thinking of trade as a contest inevitably leads to bad policy by giving governments an excuse to intervene in the market for the benefit of crony constituencies. The fact that some U.S. businesses would make more money if foreign governments pursued better policies is not a legitimate excuse to intervene in the market on their behalf. But just as important, Chinese companies and – believe it or not — China's export credit agency also happen to be beneficiaries of Ex-Im financing:

Impact – Competitiveness Turns Heg

Declining innovation empirically causes hegemonic transition and great power war --- outweighs the aff

Drezner 2001 Daniel Drezner (professor of international politics at The Fletcher School of Law and Diplomacy at Tufts University) 2001 “State structure, technological leadership and the maintenance of hegemony” <http://www.danieldrezner.com/research/tech.pdf>

In this decade, proponents of globalization argue that because information and capital are mobile, the location of innovation has been rendered unimportant.⁶ While this notion has some popular appeal, the globalization thesis lacks theoretical or empirical support.

Theoretically, even in a world of perfect information and perfect capital mobility, economists have shown that the location of technological innovation matters.⁷ Empirically, the claims of globalization proponents have been far-fetched. Capital is not perfectly mobile, and increased economic exchange does not lead to a seamless transfer of technology from one country to another.⁸ The location of innovation still matters. Long-cycle theorists have paid the most attention to the link between technological innovation, economic growth, and the rise and fall of hegemons.⁹ They argue that the past five hundred years of the global political economy can be explained by the waxing and waning of hegemonic powers. Countries acquire hegemonic status because they are the first to develop a cluster of technologies in leading sectors. These innovations generate spillover effects to the rest of the lead economy, and then to the global economy. Over time, these ‘technological hegemons’ fail to maintain the rate of innovations, leading to a period of strife until a new hegemonic power is found.

Impact – Competitiveness Turns Heg/Econ

Competitiveness is vital to U.S. hegemony and the economy

Segal, 4 – Senior Fellow in China Studies at the Council on Foreign Relations

(Adam, Foreign Affairs, “Is America Losing Its Edge?” November / December 2004, <http://www.foreignaffairs.org/20041101facomment83601/adam-segal/is-america-losing-its-edge.html>)

The **U**_{nited} **S**_{tates}' global primacy **depends in large part** on its ability to develop new technologies and industries faster than anyone else. For the last five decades, **U.S. scientific innovation and technological entrepreneurship have ensured the country's economic prosperity and military power**. It was Americans who invented and commercialized the semiconductor, the personal computer, and the Internet; other countries merely followed the U.S. lead.

Today, however, **this technological edge-so long taken for granted-may be slipping, and the most serious challenge is coming from Asia.** Through competitive tax policies, increased investment in research and development (R&D), and preferential policies for science and technology (S&T) personnel, Asian governments are improving the quality of their science and ensuring the exploitation of future innovations. The percentage of patents issued to and science journal articles published by scientists in China, Singapore, South Korea, and Taiwan is rising. Indian companies are quickly becoming the second-largest producers of application services in the world, developing, supplying, and managing database and other types of software for clients around the world. South Korea has rapidly eaten away at the U.S. advantage in the manufacture of computer chips and telecommunications software. And even China has made impressive gains in advanced technologies such as lasers, biotechnology, and advanced materials used in semiconductors, aerospace, and many other types of manufacturing.

Although the United States' technical dominance remains solid, the globalization of research and development is exerting considerable pressures on the American system. Indeed, as the United States is learning, globalization cuts both ways: it is both a potent catalyst of U.S. technological innovation and a significant threat to it. **The **U**_{nited} **S**_{tates} will never be able to prevent rivals from developing new technologies; it **can remain dominant only by continuing to innovate faster than everyone else.** But this won't be easy; **to keep its privileged position in the world, the **U**_{nited} **S**_{tates} **must get better at fostering technological entrepreneurship at home.******

Impact – Competitiveness Turns Warming

Turns warming – key to renewables transition

Schelmetic 12

Tracey Schelmetic, 8-21-12, Thomas Net, Do Tariffs on Chinese Solar Panels Help or Hurt the U.S. Solar Industry?, http://news.thomasnet.com/green_clean/2012/08/21/do-tariffs-on-chinese-solar-panels-help-or-hurt-the-u-s-solar-industry/

If the goal is to create a global energy system that is largely carbon free, continual dependence on subsidies, whether domestic and legitimate or foreign and mercantilist, is not the way.

Driving innovation is. Matthew Stepp, one of the authors of the report, told Ars Technica that it is important for the U.S. to create an effective solar market policy because it could well serve as the foundation for future policies for next-generation renewable

energy technologies. "For the U.S. to out-innovate, it must still prosecute green mercantilist policies," Stepp said. "China is dominating first-generation silicon-based solar PV. But the U.S. has been a leader in second-generation thin-film solar technologies and is currently investing significantly in third- and fourth-generation solar designs that use nanotechnologies. What's to stop China from simply doing what it's doing now in first-generation solar to next-generation solar ... and unfairly subsidize and export dump their way to market dominance?" Clifton Yin, a clean energy policy analyst at the Information Technology and Innovation Foundation (ITIF), expressed optimism for the U.S. solar industry. He said the Obama administration's tariffs will work to the U.S.'s advantage. "The tariffs are meant not only to level the solar market playing field for U.S. manufacturers, but also to discourage unfair Chinese trade practices and hopefully serve as a wake-up call for Chinese policymakers," Yin said. "However, even in the absence of the Chinese government changing policies, there is a lot that U.S. solar panel manufacturers can do.

There needs to be a renewed focus on research and development and innovation to develop solar products that are much more cost and performance effective. Ultimately, they're not only competing with cheap Chinese panels, but also cheap fossil fuels everywhere," he added. "The ultimate goal, Yin said, should be spurring cost reductions and performance improvements such that solar is competitive with fossil fuels without relying on subsidies.

Picking winners inhibits the technological innovation necessary to solve warming

EnergyWashington Week, 08 ("DOE Science Chief Eyes Energy Policy Focused On Breakthrough R&D," 7/2, lexis)

DOE's science chief says "breakthrough" scientific research is the key to solving current energy woes -- including the food-versus-fuel crisis, carbon capture and sequestration, nuclear power, electricity storage and the material difficulties inherent in using hydrogen as a low carbon fuel. The official discussed the direction of the Office of Science while testifying June 25 before the Senate Energy and Natural Resources Committee on the future development of energy technologies in a carbon constrained world. DOE's Office of Science chief Dr. Raymond Orbach, saying that the era of incremental advancements on energy is over, argued that refocusing DOE toward fundamental breakthroughs should be the priority. His testimony hints at the recent food-versus-fuel debate playing a role in the shift, together with high fuel prices and the move toward new CO2 emissions controls. In recent years, detractors of the Bush administration's energy policy have criticized funding reductions for basic science research in favor of big ticket R&D efforts such as the president's hydrogen fuel cell initiative. Now with the Bush presidency coming to a close, and the administration backtracking on fuel cells, Orbach's push for "basic science" breakthroughs could become a prominent feature of a new energy policy. Issues surrounding the nation's increased focus and use of ethanol and biofuels are at the center of this basic science shift, driven in part by the recent food-versus-fuel debacle being played out on

global grain commodity exchanges. Orbach wants to see breakthroughs in the development of advanced biofuels derived from cellulose and other sources meeting a third of the U.S.'s transportation needs without competing with fuel, feed or export demands. The increased demand for corn-based ethanol, the meat industry has argued, has driven up the price of feed, while also driving up prices for wheat and rice. Many argue that the consequences of increased food costs due in part to biofuels production were not discussed in the move to establish renewable fuels mandates in both the 2005 and 2007 energy laws.¶ "Imagine a sustainable, carbon-neutral biofuels economy capable of meeting a third of U.S. transportation fuel needs without competing with fuel, feed, and export demands," he said. "Unfortunately, our current means of converting cellulose, or plant fiber, to fuel is neither efficient nor cost effective." But it is Orbach's position that this should impel the cause of basic science research to make the breakthroughs that crack the cellulose barrier and deliver on the potential of biofuels.¶ "Incremental improvements in our current technologies will not be enough to meet this challenge [of increased energy demand and CO2 emissions mitigation]," said Orbach in prepared remarks. "We will need transformational breakthroughs in basic science to provide the foundation for truly disruptive technologies that will fundamentally change the rules of the game. This applies to renewables, nuclear, and CO2 capture and storage as well as to promising technologies like fusion that are farther off."¶ Recently, DOE's Assistant Secretary of Energy Efficiency and Renewable Energy Andy Karsner said that the hydrogen initiative, for example, was too narrowly focused, and that the next administration should take pains to construct an energy policy to be more inclusive of a variety of technologies. The policy should focus more on balance and the goals of the technology than trying to "pick a winner" (or, one technology type). This would correspond with Orbach's push for a more wide-ranging policy that promotes the ability of basic science research to cascade across a variety of areas toward a breakthrough.

Technological innovation is the only way to solve warming

Newell and Wilson, 05 - * Senior Fellow at Resources for the Future AND **economist with the Energy Information Administration (Richard and Nathan, "Technology Prizes for Climate Change Mitigation," June, <http://www.rff.org/documents/RFF-DP-05-33.pdf>)

Ninety percent of the energy consumed globally comes from fossil fuels, whose combustion generates the bulk of the greenhouse gases (GHG) that are linked to global climate change. In response to growing concern about the potential damages from climate change, many of the world's governments, including the government of the United States, have agreed on the goal of stabilizing GHG concentrations. If stabilization is to be accomplished without drastically reducing energy consumption, the world needs a new energy system capable of meeting demand, but with close to zero net emissions. The adoption of such an energy system is conditional on the development of new technologies. At present, the most commonly cited technology options for reducing GHG emissions are increased energy efficiency, renewable energy sources, advanced nuclear generation, and carbon capture and storage.

AT Econ Turn

Reauthorization is worse for growth – outweighs the turn

Luddy 5-28

Robert, founder and CEO of Captive Aire Systems, USA Today, "Crony capitalism only Boeing could love: Column," <http://www.usatoday.com/story/opinion/2015/05/28/export-import-bank-congress-commerce-column/27975647/>

The weight of evidence is on their side. The claims made by the bank's backers and beneficiaries frequently don't add up. One example in particular stands out: the bank's insistence that it primarily serves small businesses. This is perhaps its favorite talking point, if Ex-Im's annual reports are any indication. Put aside, if you can, that Ex-Im defines a small business as having up to 1,500 employees or \$21 million in annual revenues, depending on the industry. That may count as a small business in Washington, D.C., but you'd be hard-pressed to find anyone in my home town of Raleigh, N.C. who'd agree. A look at the bank's own data raises additional problems. In 2014, small businesses received only a quarter of Ex-Im's money. In 2013, they received less than a fifth. And according to a news report last year, the bank also potentially mischaracterized hundreds of big businesses as small ones, including firms owned by Warren Buffett and Carlos Slim Helu, the second and third richest individuals in the world. The real beneficiaries are major companies across the globe. In 2013, nearly two-thirds of the bank's assistance benefited only ten companies — and nearly one-third benefited only one company, Boeing. These same companies are now donating to politicians and hiring lobbyists in an effort to keep Ex-Im's doors open. As for the bank's foreign beneficiaries, a staggering number are state-owned, from Russia to China to Saudi Arabia to other countries around the globe. Strangely, America's Export-Import Bank even sends our taxpayer dollars to its counterpart in China. So much for "small business." This is hardly the only area in which the bank's claims don't match up with reality — see the argument that it makes money for taxpayers. While the bank contributed \$1.6 billion to the federal treasury between 2007 and 2012, this wasn't always the case. Ex-Im failed to turn a profit at any point between 1982 and 1995. In 1991, its total accumulated deficit was some \$6.2 billion. The Congressional Budget Office now projects that the bank will likely return to the red in the next decade, during which time it could lose some \$2 billion. Considering that the bank's portfolio has grown by 92% from 2008 to 2014 — from \$58.4 billion to \$112 billion — it isn't difficult to see how Ex-Im's cost to taxpayers could quickly increase in our unpredictable global economy. Also at play are the bank's internal failings, which other government agencies have frequently noted. Its own inspector general stated in 2012 that Ex-Im "lacks a systematic approach to identify, measure, price, and reserve for its portfolio risk." This shouldn't fill American taxpayers with confidence. Nor should we be confident that Ex-Im "supports jobs," another common claim. When the bank sends taxpayers' hard-earned money overseas, it often helps one company at the expense of another. Take the bank's role in financing the sale of commercial airliners to international customers — the bank's biggest function in terms of dollars spent. Yes, this benefits domestic manufacturers, but it simultaneously harms domestic airlines. The Air Line Pilots Association has estimated that Ex-Im's support for just two airlines — Emirates and Air India — eliminated some 7,500 American jobs. Whether it's airlines, mining, or any other industry in which Ex-Im is involved, the global

economy is simply too complex for the bank to accurately claim that it helps the U.S. job market.
No wonder the Export-Import Bank has become a major political issue in recent years. It encourages the sort of government-sponsored cronyism that only lobbyists and their clients could love — and that the rest of us see and despise. If Americans are ever going to stop believing that government and big business work together at rest of the country's expense, then Washington needs to eliminate the places where such collusion occurs. They can start this summer by letting the Export-Import Bank expire.

Export/Import Bank DA Michigan 7

1nc ex-im bank

Despite setbacks in the House, the Senate will push towards reauthorization of the Export-Import bank

Laing 7/28 [Keith, The Hill, "Senate pressing ahead with long-term highway funding bill," <http://thehill.com/policy/transportation/249428-senate-pressing-ahead-with-long-term-highway-bill>] //khirn

The Senate is pressing ahead on Tuesday with its effort to pass a long-term extension of federal highway bill that is set to expire on Friday, despite staunch objections from the House.

Lawmakers in the House are planning to vote Wednesday on a temporary three-month transportation extension and then leave town in an effort to force the Senate to accept its version of the must-pass highway bill.

Senate Majority Leader Mitch McConnell (R-Ky.) said his chamber will continue to try to drive its long-term highway bill over the finish line this week.

"The Senate continues to move closer and closer to passage of bipartisan, multi-year highway bill," he said at the start of Tuesday's Senate session.

"Success was never assured at the beginning of this process, it wasn't assured even yesterday," McConnell continued. "We're not done yet, but the important thing is that the Senate is now on the verge of passing a multi-year highway bill."

Lawmakers are facing a Friday deadline for renewing federal road funding. The House and Senate are gridlocked on the length of a possible extension, imperiling infrastructure spending at the height of the busy summer construction season.

Lawmakers in the House balked at the Senate's multiyear proposal, and the lower chamber is planning to vote on a bill that would extend transportation funding until Oct. 29 and leave town to jam the Senate into dropping its longer proposal.

McConnell did not address the House's plans on Tuesday, but he made the case for his chamber's longer proposal.

"The legislation we advanced again last night is fiscally responsible, it won't raise taxes by a penny and it will give state and local governments the kind of stability they need to plan longer-term projects for American roads and bridges," he said.

"The bottom line is this," McConnell continued. "If Republicans and Democrats resolve to keep working hard for the American people, we'll get this done."

Other Republican leaders predicted that the House would have no choice but to accept the Senate's multiyear highway bill to prevent an interruption in the nation's transportation funding if the upper chamber can pass it before the chamber goes home this week.

"My feeling is this...one of the reasons that I think statements have been made over there is that they never believed we're going to be able to get passed a six-year highway reauthorization bill over here," said Sen. Jim Inhofe (R-Okla.), who is chairman of the Senate Environment and Public Works Committee.

Inhofe said he hoped the Senate would be able to speed up the procedural clock to pass the long-term highway bill before Wednesday to "allow the House to look at it and perhaps come up with a better judgment than they've expressed thus far."

"There is time to do this, and I'm personally going to make every effort," he said.

Democrats in the Senate also sharply criticized Republican leaders in the House for planning to leave town for the traditional August early to avoid taking up the Senate's multi-year highway bill.

"Is it even August?" Sen. Sheldon Whitehouse (D-R.I.) asked. "Isn't it July 28th today?"

The squabbling between the chambers has threatened to imperil the nation's infrastructure spending.

The House moved first to pass an \$8 billion patch earlier this month that would have extended transportation funding until Dec. 18 **in an effort to preempt Senate efforts to add a renewal of the controversial Ex-Im Bank to the must-pass highway bill.**

Surveillance reform is unpopular

Diamond 6/2 Jeremy Diamond, reporter for CNN politics, "NSA surveillance bill passes after weeks-long showdown," 6/2/2015, *CNN*, <http://www.cnn.com/2015/06/02/politics/senate-usa-freedom-act-vote-patriot-act-nsa///RA>

Washington (CNN)The National Security Agency lost its authority to collect the phone records of millions of Americans, thanks to a new reform measure Congress passed on Tuesday. President Barack Obama signed the bill into law on Tuesday evening. It is the first piece of legislation to reform post 9/11 surveillance measures. "It's historical," said Sen. Patrick Leahy, D-Vermont, one of the leading architects of the reform efforts. "It's the first major overhaul of government surveillance in decades." The weeks-long buildup to the final vote was full of drama. Kentucky Sen. Rand Paul assailed the NSA in a 10-hour speech that roused civil libertarians around the country. He opposed both renewing the post 9/11-Patriot Act and the compromise measure -- that eventually passed -- known as the USA Freedom Act. Meanwhile, Senate Majority Leader Mitch McConnell, and defense hawks such as Sens. John McCain and Lindsey Graham, had hoped to extend the more expansive Patriot Act, arguing it was essential for national security. NSA spying: Has the government lost important tool? NSA spying: Has the government lost important tool? 02:40 PLAY VIDEO RELATED: Are post 9/11 politics shifting? The Republican infighting broke out during two weeks of debate on Capitol Hill and on the presidential campaign trail. And in part thanks to Paul's objections, certain counterterrorism provisions of the Patriot Act expired late Sunday amid warnings of national security consequences. Obama welcomed the bill's final passage on Tuesday, but took a shot at those who held it up. "After a needless delay and inexcusable lapse in important national security authorities, my administration will work expeditiously to ensure our national security professionals again have the full set of vital tools they need to continue protecting the country," he said in a statement. No that Obama has signed the bill, his administration will get to work getting the bulk metadata collection program back up and running during a six-month transition period to the new data collection system. Senior administration officials described a two-step process: The first is the technical process -- essentially flipping the switches back and coordinating the databases of information stored by the government -- which takes a full day. White House slams Senate over lapse in spy measures White House slams Senate over lapse in spy measures 03:28 PLAY VIDEO RELATED: McConnell refuses to blast Rand Paul The second is a legal process that could take longer. The government needs to make a filing with the special secretive court -- which has authorized the bulk metadata collection program since 2006 -- to verify that the metadata programs are legal under the new law. It's unclear how long the process would take, but one official estimated the process could take three or four days. Final passage of the compromise bill was in question until Tuesday, until the Senate successfully rebuffed with three amendments which could have thrown a wrench into the works. The bill's passage is the culmination of efforts to reform the NSA that blossomed out of NSA leaker Edward Snowden's 2013 revelations. "This is the most important surveillance reform bill since 1978, and its passage is an indication that Americans are no longer willing to give the intelligence agencies a blank check," said Jameel Jaffer, deputy legal director at the American Civil Liberties Union. Congress had failed last year to pass a similar reform effort. The legislation will require the government obtain a targeted warrant to collect phone metadata from telecommunications companies, makes the Foreign Intelligence Surveillance Court (known as the FISA court) which reviews those warrant requests more transparent and reauthorizes Patriot Act provisions that lapsed early Monday. The bill, though, passed over the strong and impassioned objections of security hawks in the Republican Party and from some former members of the intelligence community. But as the June 1 deadline to renew expiring provisions of the Patriot Act closed in, and as NSA reform advocates refused to budge in the face of charges of damaging national security, top Senate Republicans led by Senate Majority Leader Mitch McConnell eventually relented, giving way to pressure from House

Republicans, the Obama administration and reform advocates in their own body. McConnell and others realized that the USA Freedom Act, which passed the House three weeks earlier, was their only ticket to keeping counterterrorism provisions like data collection and roving wiretaps alive. But while McConnell kept up his protest into the final moments leading up to the vote, his fellow Kentucky senator who antagonized his every move to reauthorize provisions of the Patriot Act noticeably avoided the spotlight on Tuesday. Paul's weeks of staunch and unflinching opposition to reauthorizing the Patriot Act, and to the USA Freedom Act for not going far enough, ended Thursday with a simple "No" vote on that bill. He even relented in his plan to offer his own amendments to that piece of legislation and didn't make a prominent speech on the Senate floor on Tuesday. Paul chalked up his efforts as a win, though, succeeding in leading the bulk metadata collection program to its expiration on Sunday night.

Political capital is key

Nelson 7/8 (Colleen McCain, WSJ, 7/8/2015, "Obama Works to Corral Support From Senate Democrats on Several Issues", <http://blogs.wsj.com/washwire/2015/07/08/obama-works-to-coral-support-from-senate-democrats-on-several-issues/>)PG

President Barack Obama huddled with Senate Democrats Tuesday night at the White House for a social get-together that also served as an opportunity to hit the reset button after parting ways on trade legislation. With Iran nuclear negotiations nearing an end and time running short for the president's domestic to-do list, Mr. Obama turned to Democrats on the Hill for help advancing his policy objectives. The most immediate White House priorities include marshaling lawmakers' support for a possible deal to curb Iran's nuclear program, reauthorizing the U.S. Export-Import bank and passing a highway funding measure. Tuesday's meeting came two weeks after the president partnered with Republican congressional leaders to pass a fast-track trade bill amid a messy battle that divided the Democratic Party. With the approval of the trade package, Mr. Obama notched his biggest win to date in this Republican-controlled Congress, but he clashed with many Democrats in the process. Administration officials have dismissed suggestions of any lingering hard feelings, saying that the president and Democratic lawmakers would quickly return to work on shared goals. Still, the gathering in the State Dining Room signaled a concerted outreach effort aimed at ensuring that the president has Senate Democrats in his corner on several key issues. Chief among them is a long-sought nuclear agreement with Iran. While the diplomatic process has extended into overtime and the outcome remains uncertain, any eventual deal will be vetted by Congress. White House Press Secretary Josh Earnest said lawmakers are closely following the nuclear talks, and "the administration is doing the best we can to try to be responsive to that interest and help them understand exactly where things stand." Mr. Obama is working to corral Democratic support for a potential deal as many Republicans express deep reservations about an accord with Iran and some urge the White House to suspend negotiations. Mr. Earnest said the president also is looking to Democratic senators to push for the renewal of the Ex-Im Bank's charter, which lapsed last month. And with the Highway Trust Fund set to expire at the end of July, Mr. Obama is seeking Democrats' help forging a deal to fund an infrastructure package. "Obviously, there is a deadline coming up at the end of this month and we're hopeful that Congress can take action in bipartisan fashion that would reflect the need to make investments in our infrastructure in a way that would not just benefit our infrastructure but also benefit our broader economy in terms of creating jobs and stimulating economic growth," Mr. Earnest said.

It's the lynchpin of the economy – failure to reauthorize decimates growth

Brunell 13 [Don, Bonney Lake Sumner Courier Herald Business Columnist, 3/15/2013, <http://www.blscourierherald.com/business/142408875.html>]

It started in 1935 with a \$3.8 million loan to Cuba for the purchase of U.S. silver ingots. That loan, backed by the U.S. government, was the beginning of the Export-Import Bank. Today, the bank helps finance export sales by thousands of U.S. manufacturers. While it is little-known outside our nation's capital, the Export-Import Bank is a lynchpin of our economy. It

provides direct loans, loan guarantees and insurance to help finance sales of American goods and services overseas. In 2011, the Export-Import Bank provided \$32 billion in financing, supporting more than \$41 billion in export sales from more than 3,600 U.S. companies. More than 85 percent of those transactions directly supported small business. Those exports, in turn, support approximately **290,000 export-related American jobs.** For example, financing from the Export-Import Bank is critical to the success of The Boeing Company. Beleaguered airlines around the world need to replace aging fleets with more fuel efficient jet liners. Boeing is competing with manufacturers in Europe, Canada, Brazil and China to win those contracts, and in that highly competitive environment, financing options are important. **For our manufacturers, the Export-Import Bank is a vital link in U.S. export sales, and it is one government-backed program that is returning money to the U.S. Treasury** – some \$195 million last year and more than \$3.4 billion in the last five years. It operates at no cost to the taxpayer. But there's a glitch. The Export-Import Bank is currently operating under an extension that expires on May 31. Congress must pass legislation to reauthorize the bank for the long term and substantially increase its lending authority. Absent congressional action, it will run out of funding ability, derailing pending sales of U.S. manufactured products and harming manufacturing companies of all sizes.

Nuclear war

Roberts, PhD, 2014 (Paul Craig, PhD in Economics, served in the Reagan Administration, 12/13/2014, "On the Brink of War and Economic Collapse", *GlobalResearch*, <http://www.globalresearch.ca/on-the-brink-of-war-and-economic-collapse/5419685>)/PG

"And so is Russia." As I have often remarked, Americans are an insouciant people. They are simply unaware. Suppose they were aware, suppose that the entire population understood the peril, could anything be done, or have the insouciant Americans fallen under the control of the police state that Washington has created? I don't think there is much hope from the American people. The American people cannot tell genuine from fake leadership, and the ruling private elites will not permit real leaders to emerge. Moreover, there is no organized movement in opposition to the neoconservatives. The hope comes from outside the political system. The hope is that the House of Cards and rigged markets erected by policymakers for the benefit of the One Percent collapses. David Stockman regards this outcome as a highly likely one. The collapse that Stockman sees as being on its way is the same collapse about which I have warned. Moreover, the number of Black Swans which can originate collapse are even more numerous than the ones Stockman correctly identifies. Some financial organizations are worried about a lack of liquidity in the fixed income (bonds) and derivatives markets. Barbara Novack, co-chair of Black Rock, is lobbying hard for a derivatives bailout mechanism. Many will ask: If the wealth of the One Percent is vulnerable to economic collapse, will war be initiated to protect this wealth and to blame the Russians or Chinese for the hardships that engulf the American population? My answer is that the kind of collapse that I expect, and that David Stockman, Nomi Prins, Pam Martens, Dave Kranzler, and no doubt others expect, presents government with such social, political, and economic insecurity that organizing for a major war becomes impossible. Whereas the political impotence of the American people and the vassalage of the Western World impose no constraints on Washington, economic collapse brings revolutions and the demise of the existing order. As hard as collapse would make it for people to survive, the chances for survival are higher than in the event of nuclear war.

2nc uniqueness

Will pass – vote counts

Weisman 7/26 [Jonathan, New York Times, “Senate Resurrection of Export-Import Bank Goes To Divided House,” http://www.nytimes.com/2015/07/27/business/senate-resurrection-of-export-import-bank-goes-to-divided-house.html?_r=0] //khirn

WASHINGTON — In a rare and fiery weekend session, the Senate voted on Sunday to resurrect the federal Export-Import Bank, handing the Republican Party’s most conservative wing a major defeat and setting up a showdown this week with House leaders divided over the moribund export credit agency.

The bipartisan vote, 67 to 26, broke a filibuster and allowed supporters to attach a measure to a three-year highway and infrastructure bill that would reauthorize the Export-Import Bank. That bill is expected to pass the Senate early this week.

The agency’s authorization expired on June 30, halting all new loan guarantees and other assistance to foreign customers seeking to purchase goods from American companies. The agency continues to service existing loans.

A clear majority in the House supports resurrecting the agency, but it will be up to House leaders to decide whether the chamber will get a vote, or whether to allow the bank’s powerful opponents — led by the House majority leader, the majority whip, the Ways and Means Committee chairman and the Financial Services Committee chairman — to stand in the way.

Will pass – business support

Weisman 7/26 [Jonathan, New York Times, “Senate Resurrection of Export-Import Bank Goes To Divided House,” http://www.nytimes.com/2015/07/27/business/senate-resurrection-of-export-import-bank-goes-to-divided-house.html?_r=0] //khirn

But Sunday’s session showed that the U.S. Chamber of Commerce and National Association of Manufacturers still hold some sway in a Republican Party increasingly willing to buck business lobbies.

“With more than 60 export credit agencies enabling our foreign competitors to seize opportunities away from workers, it’s critical that Congress restores this important tool for American exports,” Jay Timmons, the president of the manufacturers’ association, said on Sunday.

The Sunday session to hasten action on the highway bill, called by Senator Mitch McConnell of Kentucky, the majority leader, came as tensions rose between Republican leaders and rank-and-file conservatives, intensified by the presidential candidacies of four Republican senators — Ted Cruz of Texas, Rand Paul of Kentucky, Marco Rubio of Florida and Mr. Graham.

On Friday, after Mr. McConnell scheduled the Ex-Im vote, Mr. Cruz took to the Senate floor to say that Mr. McConnell had assured him that he had made no deal to bring the bank to a vote.

“Not only what he told every Republican senator, but what he told the press over and over and over again was a simple lie,” Mr. Cruz said.

That brought the most senior Senate Republicans to the floor on Sunday to rebuke Mr. Cruz.

"Squabbling and sanctimony may be tolerated on the campaign trail, but not in here," said Senator Orrin G. Hatch of Utah, the most senior Republican. "We are not here on some frolic or to pursue personal ambitions. We are here because the people of the United States have entrusted us with the solemn responsibility to act on their behalf."

"It is a sacred trust in which pettiness or grandstanding should have no part," he added.

Unrepentant, Mr. Cruz responded, "It is entirely consistent with decorum and with the nature of this body traditionally as the world's greatest deliberative body to speak the truth."

The Senate then beat back a novel effort by Mr. Cruz to break Senate legislative rules and force a vote on an amendment he hoped to attach to the highway bill. That amendment would have blocked the lifting of sanctions on Iran — part of a broad deal to curb Iran's nuclear program — until Tehran recognized the State of Israel and released American prisoners from its jails.

On Friday, the lawmaker presiding over the Senate at the time, Shelley Moore Capito of West Virginia, had ruled Mr. Cruz's amendment out of order. He had hoped to get a simple majority to reject that ruling, a "nuclear option" that Senator John Cornyn of Texas, the No. 2 Republican, said would usher in "chaos."

Senator Mike Lee, Republican of Utah, then joined Mr. Cruz, moving to amend the highway bill with a measure to defund Planned Parenthood. When that was ruled out of order, he too asked the Senate to vote to disregard that ruling. Again, most Republicans refused to back him up.

But the rift between conservatives and the Republican leadership has been most acute with respect to the Ex-Im Bank. Conservative groups like Heritage Action, the political arm of the Heritage Foundation, and the Kochs' Freedom Partners saw a chance to deal a blow to President Obama, after losing fights to defund the Affordable Care Act and reverse Mr. Obama's executive orders on immigration.

They hoped that if they could make sure Congress did nothing to save the bank, its future lending operations would go dark this summer.

Their problem has been strong support for the bank by Democrats, coupled with deep divisions among Republicans. On Sunday, 24 Republicans, nearly half the Senate Republican Conference, voted with Democrats to revive the bank. By contrast, opposition to Ex-Im has become almost automatic on the Republican presidential campaign trail.

"A vote against reauthorization is nothing more than a shameless attempt to garner the affection of the Koch brothers," Senator Harry Reid of Nevada, the Democratic leader, said on the Senate floor Sunday. "After all, opposition to the Export-Import Bank is a prerequisite for any Republican running for president."

But in Congress, lawmakers have proved more sensitive to companies in their district that have lobbied hard, saying the demise of the bank would cripple their export business or at least put them at a disadvantage against foreign competitors.

"We are one step closer to keeping American jobs here in America and not lost to countries like China," said Senator Mark Kirk, Republican of Illinois and one of the most endangered incumbents up for re-election next year.

Will pass – Senate support

Miller 7/28 [Kathleen, Bloomberg Politics, July 28, 2015, "Ex-Im Backers Fret Over Future As U.S. House Ignores Bank," <http://www.bloomberg.com/politics/articles/2015-07-28/ex-im-backers-fret-over-its-future-as-u-s-house-ignores-bank>] //khirn

Yet, the Senate voted late Monday night to reauthorize the Export-Import Bank using a series of convoluted parliamentary procedures that blocked opposition and permitted the Export-Import Bank

to bypass the normal law-making procedures. The House had originally planned to leave after handling business on Thursday.

The House wants to fill the wide highway funding hole temporarily – and then head home.

Senate Democrats piled on Mr. McConnell Monday, saying he ignored their plea to **debate the highway bill sooner and avoid these problems**. The Obama administration and some lawmakers in both parties had hoped to find more money to pay for a six-year transportation bill by taxing profits U.S. companies park overseas, and House leaders are pushing their highway bill extension to **buy more time to work on that issue**.

Authority for federal highway aid payments to states will expire at midnight Friday without congressional action.

The House's three-month bill also includes \$3.4 billion to fill a budget hole that the Department of Veteran's Affairs claims would force it to close hospitals and clinics nationwide.

"It's frustrating, but the only thing worse than a short-term extension would be to allow funding to run out, so it's the best we can do right now", said Rep. Carlos Curbelo, R-Fla.

The House decision to move a shorter bill for the plagued Highway Trust Fund, which has experienced 33 small patches since 2009, comes as the Senate is full steam ahead on its own version.

"Squabbling and sanctimony may be tolerated in other venues and perhaps on the campaign trail, but they have no place among colleagues in the United States Senate", said Sen.

The US House will not vote on the Senate's six-year transportation bill and China's economic crisis could cause gold imports to plunge there.

"**The assumption is that it will come back; the Senate will find a way to get Ex-Im over to the House**", Representative Carlos Curbelo, a Florida Republican, said in an interview in the U.S. Capitol. Its charter expired June 30, but Democrats and some Republicans-with the support of Senate Majority Leader Mitch McConnell tried to revive the agency through an amendment to the Senate highway bill.

Democratic Sen. Chuck Schumer of New York is drooling for a deal and pressing Republicans to drop their no new taxes pledge in a bipartisan package.

Will pass – lobbies

Schoffstall 7/23 [Joe, July 23, 2015, "Major Ex-Im Beneficiaries Pour Millions Into Lobbying Efforts for Subsidies," <http://freebeacon.com/issues/major-ex-im-beneficiaries-pour-millions-into-lobbying-efforts-for-subsidies/>]

Two large companies who receive taxpayer-backed financing from the Export-Import bank have **poured millions** into recent lobbying efforts to revive the controversial bank.

The government-owned Ex-Im bank, which provides taxpayer-backed loans to foreign companies for the purchase of American goods, left the companies scrambling to find private funding in place of the subsidies after the expiration of the bank's charter June 30.

Boeing Co. and General Electric, who are the two largest beneficiaries of the bank, increased their lobbying expenditures in recent months as the charter was nearing expiration, according to newly released lobbying disclosure reports.

The disclosure reports show that from April 1 to June 30, aerospace conglomerate Boeing Co. spent \$9.3 million on lobbying efforts—the third highest total of any company or organization during the period—and deployed 20 lobbyists to Capitol Hill in efforts to revive the bank. This was more than twice the amount from the \$3.8 million Boeing spent on lobbying efforts in the first quarter of 2015.

Last year, Boeing received over \$8.1 billion from the Export-Import bank. This figure accounted for over 40 percent of Ex-Im's total authorizations making it by far the bank's largest program. When looking at long-term guarantees, their percentage of the bank's total authorizations skyrockets to 68 percent. Due to these figures, critics often to refer to the Export-Import bank as "Boeing's Bank."

General Electric, another major benefactor from the bank, poured \$8.5 million into their ramped up lobbying push during the second quarter and was the fourth largest lobbying spender from April until late June.

Like Boeing, General Electric has reason for the frantic reauthorization push. General Electric is the second largest benefactor from the Export-Import bank, having received billions from the bank as well.

Will pass in September at the latest

Journal Gazette 7/29 [Fort-Wayne Journal Gazette, "Export-Import Bank bolsters area manufacturing," July 29, 2015, <http://www.journalgazette.net/opinion/editorials/Smart-business-7957864>] //khirn

Reauthorization of the Export-Import Bank used to be a bipartisan cinch. Presidents and congressional leaders from both parties supported it. Founded during the Depression to help U.S. companies compete internationally, the bank is more important than ever in today's global economy. Extending credit to encourage foreign purchasers to buy U.S. goods, the bank even makes a profit: \$6.9 billion in fees, premiums and interest over the last two decades.

In northeast Indiana, the bank supports 19 exporters, including 14 small businesses, representing \$232 million in total export value. Fort Wayne's Master Spas Inc., for instance, has done \$27,686,678 worth of business with the support of the bank. Other Fort Wayne companies include Alliance Winding Equipment Inc., Advanced Machine & Tool Corp. and Rea Magnet Wire Inc.

A spokesperson for Republican 3rd District Rep. Marlin Stutzman says he tried to get the bank to make changes as a member of the House Financial Services Committee. "Unfortunately, the bank under current leadership has repeatedly failed to implement the reforms Congress required as part of the last reauthorization," said Stutzman's communications director, Kelsey Knight.

Other critics of the bank say it's an example of big government and crony capitalism. But the Export-Import Bank is not about swelling the size of government or giving handouts – it's about leveling the playing field for American companies in communities like ours that have to compete in a world market.

"Unilaterally eliminating our export credit agency," Donnelly said in a Senate speech last month, "just further handcuffs U.S. job creators and allows competitors in foreign countries to pick up the business.

"If the Ex-Im Bank no longer provides financing, foreign companies and countries, they're still going to buy their goods and products – they need the products – but instead of buying a product made in Muncie, Indiana, they'll purchase it in Russia or China."

Caught up in a whirlwind of political maneuvering, the effort to resuscitate the Export-Import Bank will probably have to be renewed in September. If so, it will need the support of House members like Stutzman, who may not have to vote on the question before the break.

There are sufficient votes to pass Export-Import Bank

Kim And French 7/20 [Seung and Lauren, "Battle lines drawn over Ex-Im renewal," *Politico*, 7/20/15 <<http://www.politico.com/story/2015/07/battle-lines-drawn-over-ex-im-renewal-120339.html>>]//shrek

Just three weeks ago, lawmakers quietly let the little-known Export-Import Bank expire, handing Republican conservatives one of their biggest victories since they took control of Congress. But now an effort to resurrect the bank, led by Democrats and business-backed Republicans, could trigger open warfare within the GOP. And the battle over Ex-Im could upend a must-pass highway bill that lawmakers are scrambling to pass before the end of the month. Conservatives aren't going to go quietly, and GOP leaders would likely risk the wrath of the right if they chose to let an Ex-Im renewal advance. "I think our leadership understands where Republicans in the House are on this issue," said Rep. Bill Flores of Texas, chairman of the Republican Study Committee. "They don't want Ex-Im reauthorized." Bank supporters, including nearly all Democrats and many moderate Republicans, will get their chance to challenge the conservative wing as early as this week, when the Senate is expected to take up the highway bill. Because it's a must-pass measure, Export-Import backers have targeted it as a quick way to send a bank reauthorization to President Barack Obama's desk. "Not having the Ex-Im Bank authorized today is costing us business," Sen. Heidi Heitkamp (D-N.D.) said. "Every day we're not in business — where we can't take an application or guarantee a credit — are days that we're hurting American workers, and so we need to do everything we can to reauthorize it this month." A clear majority of both the House and Senate support the Export-Import Bank, whose charter expired last month and rendered the agency unable to underwrite any new loans. Sixty House Republicans have publicly supported the bank, and 180 House Democrats are on record backing the agency. Meanwhile, 65 senators, including 22 Republicans, voted in favor of the bank in a key test vote in June. But a majority of Senate Republicans, including its top four leaders, voted against the bank in that key vote, and conservative forces both on and off Capitol Hill believe a majority of the House GOP oppose it as well. At least 95 House Republicans have indicated publicly that they won't support the bank. Conservative lawmakers are already crowing about Ex-Im's demise, pointing to it as one of the first and biggest successes of the new GOP-controlled Congress. House conservatives are pledging to keep up opposition to the bank even as the Senate works toward reauthorization. The majority of these hard-line members are opposed to any highway deal that would reauthorize the bank's charter and have indicated to GOP leadership not to count on their votes — which could force Speaker John Boehner (R-Ohio), who has praised the bank as essential to job growth, to turn to House Democrats for votes on a final highway package Boehner has tried to strike a delicate balance with his conservative members. He's told Financial Services Chairman Jeb Hensarling that if the Senate sends over a highway bill with Ex-Im measures attached, the Texas Republican will be allowed to offer amendments to the bill. That would put pressure on Hensarling to whip enough Republicans against the bank to ensure its charter is not renewed. In the Senate, Majority Leader Mitch McConnell (R-Ky.) is open to amendments on the highway bill and expects Ex-Im backers to offer one. He's likely to face pressure from conservatives like Sen. Ted Cruz (R-Texas) — who's threatened to use any procedural weapon in his arsenal on the highway bill to ensure the bank stays dead — to shut down any prospects of a bank reauthorization. But with at least 65 votes already on record in favor of the bank, it would be politically impossible for McConnell — who has made a more open and freewheeling chamber a key tenet of his tenure so far as majority leader — to block a vote. Even on its own, the politics of the underlying highway bill are complicated. House and Senate Republicans are colliding over how to get a bill to Obama that keeps money flowing for rundown roads and bridges in need of repair by the end of the month, when the Highway Trust Fund is expected to run dry. House Republicans, backed by more than 130 Democrats, easily cleared a bill that fuels the trust fund with enough cash to keep it running until December. But Senate Republicans want a highway bill that runs at least through the November 2016 elections. And the main problem for Senate Republicans: They haven't even released a bill. A key test vote on a highway measure is set for Tuesday afternoon in the Senate, but Democrats haven't said whether they'll help advance it since the bill isn't finished. Senators are still tussling over how to pay for the highway measure, and offsets that are too far to the right could turn off Democrats — who'll likely be needed to get the bill across the finish line. Sen. Jim Inhofe (R-Okla.), chairman of the Senate Environment and Public

Works Committee and an opponent of Ex-Im, said if a reauthorization were attached, the highway bill could lose some votes once it heads over to the House. “I think we have enough votes over there anyway,” Inhofe said. “But it wouldn’t do it any good.” And that dynamic is just what Ex-Im backers fear. “My concern is not having enough for Ex-Im,” Heitkamp said. “It’s whether the vehicle, the debate about surface transportation will in fact create some concerns for people so they might vote for the amendment, but not be able to vote for the bill.” The Ex-Im language that supporters will try to get included in the highway bill hews closely to a bill written by Heitkamp and Mark Kirk (R-Ill.), two of the Senate’s most vocal proponents of the export agency. It would reauthorize the bank’s charter for four years. And adding to the jumbled politics of the highway bill, Sen. Rand Paul (R-Ky.) last week threw another curveball: The 2016 hopeful is threatening to use procedural tactics to force a vote on defunding Planned Parenthood. The highway bill, work on which is likely going to run into next week, is a ripe target for Paul. House Republicans want no part of the Senate highway mess, and some of the House’s influential members are pushing senators to swallow their short-term highway fix and veer clear of attaching any Ex-Im reauthorizations. When the five-month highway patch passed last week, House Ways and Means Committee Chairman Paul Ryan (R-Wis.) — who wants the short-term bill to buy time for a broader, multiyear highway measure — urged senators to quickly pass it, “without any unrelated measures.” Still, if Boehner were to move to put a Senate compromise bill to the floor, it would face stiff opposition from the House Freedom Caucus and even some more moderate members, including Majority Leader Kevin McCarthy (R-Calif.). And while Boehner has turned to House Minority Leader Nancy Pelosi before for “yes” votes, he has faced harsh criticism each time. “Six months ago, if I was to tell any of you that we’d be 15 days into July and the Export-Import Bank would not be reauthorized, you all would have laughed at me,” said Rep. Jim Jordan (R-Ohio), chairman of the House Freedom Caucus, last week. “But that’s exactly where we are at. Momentum, I think, is on our side.”

at: gop blocks

Even if they punt it to after the August recess, it'll get through

Russert 7/28 [Luke, NBC News, "Six Things to Know About the Export-Import Bank," <http://www.nbcnews.com/news/us-news/six-things-know-about-export-import-bank-n399786>] //khirn

WHO SUPPORTS IT?

President Barack Obama as well as most Democrats who think the bank saves American jobs. So do pro-business Republicans who believe EX-IM puts the USA on equal footing with other foreign nations that insure and promote their products.

Not surprisingly, so do politicians who have a large group of constituents who work for General Electric, Boeing and Caterpillar.

WHAT'S GOING TO HAPPEN? The Ex-IM Bank can only work on the loans and insurance previously agreed to. House Majority Leader Kevin McCarthy says there are no plans to vote on the reauthorization of the Export-Import Bank before the August recess and that the House will not agree to attach it to the must-pass highway bill.

IS THIS THE END FOR THE BANK? Probably not. The vote in the Senate showed it has enough support to move forward if given a chance on the floor. It's all a balancing act of how the GOP Leadership wants to move it forward in a way where it can pass and cause them the least amount of headaches with the activist base.

Will pass --- Senate GOP leadership will overcome House GOP opposition

West 7/29 [Chelsea, TheWeatherSpace, "House weighs short-term highway extension, possible way out after clash with," <http://theweatherspace.com/2015/07/29/90132-house-weighs-short-term-highway-extension-possible-way-out/>] //khirn

Obama underscored the importance of export credits during a visit to Addis Ababa Tuesday as he viewed a Boeing 787 Dreamliner sold to Ethiopian Airlines, the first African operator of the leading-edge jetliner. The Export-Import bank loans were vital to the survival of these companies and the gainful employment of their workforce.

"This is a good path forward, and we should be able to do our work", Shuster said.

Namely: a probable reauthorization of the Move plus An extension of the motorway expenses - Import Bank.

"It really does put Ex-Im in a hard position", he said.

Despite the House's announcement, the Senate continued work Tuesday on its longer-term bill even as Republicans expressed resignation they'd end up having to swallow the House's short-term patch.

Three of the Senate's highest-ranking Republicans rose after the Senate convened Sunday afternoon to counter the stunning floor speech Cruz gave on Friday in which he attacked McConnell, R-Ky. "At some point, we will miss out on some business opportunity of such magnitude that it will catch the attention of the public, and **we will respond**".

2nc obama pushing

Obama pushing

USA Today 7/22 [David Jackson, July 22, 2015, "Obama urges Congress to reauthorize Ex-Im Bank," <http://www.usatoday.com/story/news/nation/2015/07/22/obama-export-import-bank-business-owners/30527085/>]

The Export-Import Bank helps American businesses compete with foreign competition, President Obama said Wednesday in urging Congress to re-authorize the agency after allowing its charter to lapse.

The Ex-Im Bank "helps U.S. companies — with U.S. companies — sell their products overseas," Obama said after meeting with lawmakers and business owners who have used the bank's services are now in the lurch.

In allowing its charter to expire as June ended, some congressional Republicans described the bank as corporate welfare that benefits big corporations at the expense of U.S. taxpayers.

Still, congressional leaders are working to re-authorize the bank before the August congressional recess.

Big companies do benefit from the bank, Obama said, but so do smaller ones. He noted that his guests at the White House included the owner of a business that makes specialized organic coffee and another that makes quiche.

The bank underwrites loans to foreign companies purchasing American products. Obama noted that every other advanced country has some kind of similar program to promote its exports.

"We cannot unilaterally disarm," Obama said. "We've heard stories from these companies right now that orders are on hold, business is in danger, potentially expansions will stall, fewer employees will be hired, if we do not get this done."

Businesses that use the Export-Import Bank also have to pay a fee, Obama said, so the U.S. Treasury profits from its operations.

"The Export-Import Bank makes money for the U.S. government," Obama said. "I just want to be clear about this: This is not a situation in which taxpayers are subsidizing these companies."

Obama pushing

Laing 7/23 [Keith, "White House insists on attaching Ex-Im bank to highway bill," The Hill, <http://thehill.com/policy/transportation/248970-white-house-insists-on-attaching-ex-im-bank-to-highway-bill>]

President **Obama is insisting** that lawmakers reauthorize the controversial Export-Import Bank in must-pass transportation funding legislation that is being debated this week, the White House said Thursday.

Republicans in the House have vocally objected to the idea of including an extension of the Ex-Im Bank's charter in the highway bill, despite an apparent openness to the proposal in the Senate.

The standoff has imperiled federal transportation funding that is scheduled to expire on July 31 without congressional action.

White House press secretary Josh Earnest said Thursday that **Obama is adamant** the Ex-Im Bank renewal should be included in the transportation funding bill, despite the objections from the GOP-led House.

"Surface transportation legislation is the most likely legislative vehicle, no pun intended, to move before the end of the month," he said. "That's why we've insisted that the provisions related to reauthorizing the Export-Import Bank should be added to any transportation bill that passes Congress this month."

The fight over whether reauthorization of the Ex-Im Bank, which expired in June, should be added to the highway bill comes as lawmakers are scrambling to prevent an interruption in the nation's transportation spending.

GOP leaders are scrambling to meet a **July 31** deadline for replenishing the Department of Transportation's beleaguered Highway Trust Fund. Transportation department officials have warned they will have to cut back on payments to states at the end of the month **unless Congress reaches an agreement** on a transportation funding extension.

Lawmakers in the Senate have worked on a multi-year transportation bill, but GOP leaders in the House resisted the upper chamber's efforts to add the Ex-Im Bank renewal to its proposal.

2nc political capital key

Political capital is key

Puzzanghera 6/30 [Jim, business reporter, graduate from Northwestern University, "As Export-Import Bank charter expires, backers warn of economic damage," *Los Angeles Times*, 6/30/15, <<http://www.latimes.com/business/la-fi-export-import-bank20150630-story.html>>]//eugchen

As the charter of the Export-Import Bank was set to expire Tuesday, supporters warned of economic damage if Congress doesn't act quickly to reauthorize the federal agency when lawmakers return next week from a holiday recess. "We are undermining thousands and thousands of jobs," said Rep. Steny Hoyer (D-Md.). "This is unilateral disarmament in the competition for jobs and sales in the world." Business groups and Democrats, who strongly back the bank, organized news conferences and calls with journalists to try to increase the pressure on House Republican leaders to allow a reauthorization vote. Even President Obama was getting personally involved. The White House said he scheduled a conference call Tuesday with elected officials, business owners, and labor leaders to discuss the importance of reauthorizing the bank, which provides loans to foreign buyers of U.S. goods and other assistance to support exports. "We are facing the cold reality of the Ex-Im bank authorization expiring," said Aric Newhouse, a senior vice president at the National Assn. of Manufacturers. "This is a critical blow to manufacturers," he said. Dick Rogovin, chief legal counsel at U.S. Bridge, a Cambridge, Ohio, manufacturer, said a nearly \$100-million sale to Ghana is in jeopardy without Export-Import Bank assistance. "We have already received a very disturbing message ... that one of our competitors from China has informed our customer that they cannot secure financing for our bridges and therefore they should consider another source." said Rogovin, whose company has about 150 employees. "Ex-Im Bank was going to guarantee a long-term loan to Ghana," he said. "There is no U.S. domestic commercial bank that will perform the same service." Newhouse and business executives blamed politics for the failure to reauthorize the bank, which has helped U.S. exporters for 81 years. The bank, similar to export-assistance agencies in about 60 other countries, provided \$20.5 billion in aid last year that that financed \$27.5 billion worth of U.S. exports. The bank is funded by interest and fees paid by users and last year sent \$675 million in profits to the U.S. Treasury. But many conservative Republicans complain that the bank mostly helps large corporations, such as Boeing Co., putting taxpayers at risk for any losses the bank can't cover on about \$112 billion in outstanding assistance. Critics say the assistance amounts to crony capitalism, with government officials picking winners and losers in the marketplace. "This is a small step toward renewing a competitive free-market economy and arresting the rise of the progressive welfare state and the cronyism connected to it," said House Financial Services Committee Chairman Jeb Hensarling (R-Texas), a leading bank opponent. About 195 pending bank transactions, totaling more than \$9.1 billion in assistance, will be put on hold by the lapse of its charter, said Rep. Maxine Waters (D-Los Angeles). "Unless Congress acts to renew the Bank's charter, these transactions – and the American jobs they support – will hang in the balance," said Waters, one of the bank's most outspoken advocates. Bank supporters are hoping the lapse of the bank's charter, which expires at 9 p.m. Tuesday, will be temporary.

2nc key to economy

Key to reverse the trade deficit

Baltimore Sun 7/29 ["Revive Export-Import Bank,"

<http://www.baltimoresun.com/news/opinion/editorial/bs-ed-ex-im-20150727-story.html>
//khirn

What independent agency has supported millions of jobs, enjoyed support from Republican and Democrat presidents alike over its 81-year history and doesn't cost taxpayers a dime, actually earning billions of dollars in revenue for the U.S. Treasury? The answer is **the U.S. Export-Import Bank**, a little-known entity that has stepped into the spotlight this week.

Even the most ardent newswatchers may have been caught off guard this past weekend when the reauthorization of the Export-Import Bank caused a heated debate in the U.S. Senate. Sen. Ted Cruz called Senate Majority Leader Mitch McConnell a liar for bringing the matter to a vote — as an amendment to a long-term transportation funding bill. The amendment passed the Senate, 67-26, breaking what had been a filibuster against the agency's reauthorization.

The "EXIM Bank," as its commonly known, helps finance or insure some foreign purchases of U.S. goods. That it could stir such passions within the GOP seems ludicrous on its face. But the bank's defeat has been a cause celebre for the tea party wing as well as some of the conservative moment's biggest backers including Charles and David Koch and the Club for Growth. They see the bank as the kind of government intervention into the marketplace — the so-called picking of winners and losers — that they decry as self-defeating corporate welfare.

But that criticism not only fails to recognize the agency's record of success — an estimated 164,000 jobs created in fiscal year 2014 alone by helping underwrite \$27.4 billion in U.S. exports (the vast majority of the transactions helping small businesses) — but ignores the reality of government involvement in the global marketplace. The vast majority of U.S. competitors in international trade offer similar government-backed loans so that foreign customers can afford to buy their exports. Will Russia or China stop providing that credit to purchasers if the U.S. no longer offers it? **Not likely. Killing the EXIM Bank amounts to unilateral surrender.**

And it's already happening. The bank lost its lending authority on June 30 when its reauthorization expired. Now, it's reduced to simply completing and servicing existing loans. That's entirely unhelpful to U.S. trade interests. This country continues to import far more than it exports (the monthly deficit reaching \$42.7 billion in May), and denying customers the ability to pay for U.S. goods is only going to make matters worse.

That's key to the economy

Zwim 13 [Randy, Siemens Energy CEO, "Where the Jobs Are: Exports",

<http://www.marketwatch.com/story/where-the-jobs-are-exports-2012-03-02>]]

When President Obama called on the United States to double its exports by the end of 2014, business and political leaders were strongly supportive. After all, doubling exports should create roughly two million American jobs. Today exports already support almost 10 million jobs in the United States and have been responsible for nearly half of all U.S. economic growth since the middle of 2009. There's really **no question that growing exports is central to America's future prosperity.** But there is a question about how the U.S. can achieve this goal without the

reauthorization of the Export-Import Bank. Last month Congress delayed the long-term reauthorization of the Bank, a worrying development for companies who manufacture products in America and sell them around the world. In 2011, the Bank offered \$32.7 billion in financing. That financing, in turn, spurred \$40.6 billion in U.S. exports and supported nearly 300,000 export-related jobs. More than 3,600 companies were able to export products because of that financing. With the Export-Import Bank in place, the U.S. is actually on pace to meet President Obama's ambitious goal of doubling exports by the end of 2014. Without it, America will almost certainly come up short. There is extraordinary power in the collaboration between innovative, export-savvy companies on one side and the Export-Import Bank on the other, making it imperative that the Export-Import Bank is reauthorized and its lending cap raised for a considerable period of time. This is especially important right now, when statistics show that manufacturing in America is on the march. According to the Labor Department, last year the U.S. added 136,000 jobs in manufacturing, the first time we've seen those numbers go up since 1997. A perfect example of this collaboration can be found in Charlotte, North Carolina. There, Siemens recently opened a plant that manufactures the most advanced, most energy efficient gas turbine and is committed to making Charlotte a major export hub, selling "Made in America" turbines around the world. The first turbine off the line went straight to Mexico. The next ten, thanks to a \$638 million direct loan from the Export-Import bank, are headed to Saudi Arabia. This is a billion dollar deal and it never would have happened if the Export-Import Bank hadn't provided this financing for the customer. These orders are supporting the work of 825 employees currently at this plant and 400 new employees. The truth is, for all the talk about the decline of American manufacturing, of the widening of its trade deficit, the U.S. now has a unique opportunity to turn the conventional wisdom on its head. The Export-Import Bank has the ability to help sell America's higher technology products around the world while creating jobs for workers at home. And we know the rest of the world is eager to do business with the United States.

Ex-Im Bank key to international competitiveness

Druzin 7/6 (Rye, "Conaway: Ex-Im Bank Important for American companies", http://www.mrt.com/news/politics/article_68683356-2459-11e5-94ec-db0191181371.html Acc. 7/16/15 // yZ)

Congressman Mike Conaway visited the Ranchland Hills Golf Club to talk at the West Texas & Trade luncheon about the expired Export-Import Bank and the Republican presidential field. In an interview after the talk, Conaway discussed the importance of the Export-Import Bank, a federal program that provides American businesses with funds to help promote exports and imports. The mandate for the Ex-Im Bank expired at the end of June. "It's a way for American manufacturers to be able compete against other countries," Conaway said. "Almost all the countries we compete with have some sort of financing vehicle, and Ex-Im bank-like thing, and this allows our guys to be competitive in that regard." The congressman, who is also the chairman of the House Agriculture Committee, acknowledged that the Ex-Im Bank clashed with some conservative values of smaller and less intrusive government. But he reiterated that the bank is a necessary tool for the government. "From a pure conservative standpoint you can argue to get the federal government out of that deal, but the truth of the matter is it's no different than other things that we do to try to level the playing field between American manufacturers and producers and their competition around the world," he said. Conaway added that the bank has made money and reduced the federal trade deficit. While he has voted both for and against it in the past, he said that he is struggling to make a decision as to how he will vote this time when the bank comes up in Congress. About the crowded Republican field for president, the Congressman said that he is still waiting to see which candidate will emerge at the top. He urged those in the crowd to continue to push forward even if their first, second or third candidates drop out. Conaway was also divided on controversial comments made by presidential candidate and billionaire Donald Trump. In his presidential campaign announcement, Trump called immigrants from Mexico rapists and accused them of drug smuggling, comments that have exploded into a flurry of uproar online and in the media. When asked if the comments and Trump's affiliation with the Republican Party would hurt the GOP, Conaway replied that "it's unhelpful in coalescing toward a solution." "That just further polarizes the positions, because those comments were music to the

ears of some people and to some people they resented what he said," Conaway added. "So as you look at the impact it has on the people that are going to have to come together to try to find a solution then that's how you ought to judge the comments that are made: does it help us move the direction we want to go?" He then said that the comments do highlight some of the issues that Americans have over immigration, and advocated for a guest worker program that does not promise citizenship in order to keep food prices low.

Ex-Im solves for American security, economic diplomacy, and economic collapse
