IF YOU WANT to understand why **the government freaked out when a \$400 remote-controlled quadcopter landed on the White House grounds** last week, you need to look four miles away, to a small briefing room in Arlington, Virginia. There, just **10 days earlier, officials from the US military, the Department of Homeland Security, and the FAA gathered for a DHS “summit” on a danger that had been consuming them privately for years: the potential use of hobbyist drones as weapons of terror or assassination.** The conference was open to civilians, but explicitly closed to the press. One attendee described it as an eye-opener. **The officials played videos of low-cost drones firing semi-automatic weapons, revealed that Syrian rebels are importing consumer-grade drones to launch attacks, and flashed photos from an exercise that pitted \$5,000 worth of drones against a convoy of armored vehicles.** (The drones won.) But the most striking visual aid was on an exhibit table **outside the auditorium, where a buffet of low-cost drones had been converted into simulated flying bombs. One quadcopter, strapped to 3 pounds of inert explosive, was a DJI Phantom 2, a newer version of the very drone that would land at the White House** the next week. Attendee Daniel Herbert snapped a photo and posted it to his website along with detailed notes from the conference. The day after the White House incident, he says, DHS phoned him and politely asked him to remove the entire post. He complied. “I’m not going to be the one to challenge Homeland Security and cause more contention,” says Herbert, who runs a small drone shop in Delaware called Skygear Solutions.

Courts Don't Link

They alleviate political pressure

Ward, political science professor Northern Illinois University, 2009

(Artemus, "Political Foundations of Judicial Supremacy: The Presidency, the Supreme Court", Congress & the Presidency, Jan-Apr, (36)1; p. 119)

After the old order has collapse the once- united, new-regime coalition begins to fracture as original commitments are extended to new issues. In chapter 3 Whittington combines Skowronek's articulation and disjunctive categories into the overarching "affiliated" presidencies as both seek to elaborate the regime begun under reconstructive leaders. By this point in the ascendant regime, Courts are staffed by justices from the dominant ruling coalition via the appointment process - and Whittington spends time on appointment politics here and more fully in chapter 4. Perhaps counter-intuitively, affiliated political actors - including presidents - encourage Courts to exercise vetoes and operate in issue areas of relatively low political salience. Of course, this "activism" is never used against the affiliated president per se. Instead, affiliated Courts correct for the overreaching of those who operate outside the preferred constitutional vision, which are often state and local governments who need to be brought into line with nationally dominant constitutional commitments. Whittington explains why it is easier for affiliated judges, rather than affiliated presidents, to rein in outliers and conduct constitutional maintenance. The latter are saddled with controlling opposition political figures, satisfying short-term political demands, and navigating intraregime gridlock and political thickets. Furthermore, because of their electoral accountability, politicians engage in position-taking credit-claiming, and blame-avoidance behavior. By contrast, their judicial counterparts are relatively sheltered from political pressures and have more straightforward decisional processes. Activist Courts can take the blame for advancing and legitimizing constitutional commitments that might have electoral costs. In short, a division of labor exists between politicians and judges affiliated with the dominant regime.

Courts avoid partisanship

Tushnet, law professor at Harvard, 2008

(Mark, "THE OBAMA PRESIDENCY AND THE ROBERTS COURT: SOME HINTS FROM POLITICAL SCIENCE: POLITICAL FOUNDATIONS OF JUDICIAL SUPREM-ACY: THE PRESIDENCY, THE SUPREME COURT, AND CONSTITUTIONAL LEADERSHIP IN U.S. HISTORY", Summer, 25 Const. Commentary 343, lexis)

What can the courts do for a resilient regime? Presidents and Congress have limited time and political energy. They will spend them on what they regard as central issues. But at any time there will be "outliers" - geographic regions as yet uncommitted to the regime's constitutional understandings, or substantive areas that plainly require change if those understandings are to become deeply implanted in society, yet politically too touchy [*347] or relatively unimportant to Congress. "For the affiliated leader, enhancing judicial authority to define and enforce constitutional meaning provides an efficient mechanism for supervising and correcting those who might fail to adhere to the politically preferred constitutional vision" (pp. 105-06). The courts can serve as a convenient but essentially administrative mechanism for bringing these outliers into the constitutional order. n16 In addition, the courts may have rhetorical resources unavailable to presidents. Their obligation to explain their decisions, and the fact that they make decision after decision, means that they have an opportunity to develop a

reasonably general account of the resilient regime's constitutional understandings. In Whittington's words, "It is the classic task of judges within the Anglo-American tradition ... to render new decisions and lay down new rules that can be explicated as a mere working out of previously established legal principles" (p. 84). Presidents, in contrast, only sporadically make speeches illuminating those understandings. More boldly, affiliated presidents may try to use the courts to "overcome gridlock" (p. 124) caused by the strategic positions recalcitrant opponents of the new constitutional regime may occupy. And, if not "use the courts," at least rely on the courts to take the initiative, because "the Court can sometimes move forward on the constitutional agenda where other political officials cannot" (p. 125). "Coalition leaders might be constrained by the needs of coalition maintenance," but "judges have a relatively free hand" (p. 125). This "use" of the courts, though, poses risks. The courts may push the regime's constitutional principles further and faster than is politically wise, and the regime's political leaders may find themselves on the defensive. Indeed, in this way the courts can contribute to making a resilient regime vulnerable, which may be part of the story about the Warren Court and the demise of the New Deal/Great Society regime. n17 [*348] Preemptive presidents face a special strategic problem. Sometimes they take office because they manage to persuade the public that they remain committed to a resilient regime's constitutional vision even if in their hearts they want to transform the regime. n18 At other times they take office as a regime becomes vulnerable, but do not themselves have the program, vision, or charisma to be reconstructive presidents themselves. n19 They are likely to face opposition in Congress and to some degree in the courts. But they can turn divided government to their advantage by seeking judicial confirmation of executive prerogative. The judges in place might be sympathetic to such claims for doctrinal and political reasons. They will have "inherited from affiliated administrations" (p. 169) doctrines supporting executive authority. And, though Whittington doesn't make this point explicitly, they may see the preemptive president as an accident, soon to be replaced by an affiliated one whose exercises of presidential power they will want to endorse. Finally, preemptive presidents need to get their authority from somewhere when they face congressional opposition, as they will. They don't have much of their own, but they can try "to borrow from the authority of the courts in order to hold off their political adversaries" (p. 195). One final point before I move to some speculations about the future of judicial supremacy. Whittington emphasizes the growth of judicial supremacy during the twentieth century, both in terms of the judges' self-understanding and, perhaps more importantly, in terms of the degree of political commitment to judicial supremacy (p. 25). He suggests that politicians have had increasingly strong reasons to support the Supreme Court. The reconstructive presidency of Ronald Reagan was less ambitious than that of Franklin Roosevelt (p. 232), assuring the American people that Reagan's policies would strengthen rather than destroy the social safety nets that Roosevelt and Lyndon Johnson's regimes had created. Even a reconstructive president could hope that the Supreme Court would assist in articulating regime principles in the way the Court ordinarily does for affiliated presidents. Further, drawing again on Skowronek's account of the [*349] ways in which regimes leave a residue even after they have been displaced, Whittington describes the doctrinal thickening that occurred during the twentieth century with respect to essentially every possible ideological and political commitment a President could have (p. 283). Doctrinal thickening means that every member of a ruling coalition will have some basis in constitutional law for its assertions that the Constitution requires satisfaction of its policy preferences, and that the Court cannot possibly satisfy all the demands on it. n20 So, for the future, we might expect Presidents to have increasingly ambivalent views about the Supreme Court. In the twenty-first century, the Supreme Court will be useful and annoying to every President - useful because the Court can serve to articulate regime principles and can do some policy work that Presidents would rather not expend time and political capital on, and annoying because the Court's failure to satisfy all the demands emanating from a President's political supporters will put pressure on the President to do something about the Court.

PC Key—Top Shelf

No override now but GOP looking to poach democrats

Logiurato 7/14 (Brett Logiurato; July 14th 2015; Politics editor at Business Insider; “Here's how Congress could kill the Iran deal”; Business Insider; <http://www.businessinsider.com/how-congress-can-veto-iran-deal-2015-7>) jskullz

While even opponents of the deal concede the odds are long, there's at least a small chance that Congress could torpedo the deal.¶ “The American people are going to repudiate this and I believe Congress will kill the deal,” said Sen. Tom Cotton (R-Arkansas), one of the more hawkish members of the Senate on foreign policy.¶ Here's a brief overview of what happens next:¶ Once Congress receives the details of the deal, it will have 60 days to debate and vote on it, according to the terms of the law Obama signed in May. A GOP congressional aide told Business Insider that it has not yet received the details.¶ If Congress sends a joint resolution of disapproval to Obama (meaning both chambers of Congress disapprove of the deal), it would trigger a new timeline. He would have 12 days to veto the resolution. That's likely, considering his promise Tuesday morning to veto anything that would hamper the deal's implementation.¶ Following an Obama veto, Congress would have 10 days to vote to override his veto, which would require a two-thirds majority of both chambers of Congress.¶ If both chambers vote to override, it would prevent Obama from suspending sanctions on Iran related to its nuclear program.¶ Simple math, then, is in favor of the Iran deal moving along through Congress unscathed. ¶ Nevertheless, the deal has not only become just about universally unpopular among Republican members of Congress. It's also opposed by a chunk of Democrats normally aligned with Obama on both domestic and foreign-policy matters.¶ Sen. Chuck Schumer (D-New York), the third-ranking Democrat in the Senate and the incoming Democratic leader after Sen. Harry Reid's retirement next year, said he'd be going through the deal with a "fine-toothed comb" before deciding whether or not to support it. Rep. Eliot Engel (D-New York), the top Democrat on the House Committee on Foreign Affairs, said likewise that he'd have to go through the details — but added that he's been "troubled" by the negotiations.¶ Many congressional observers consider it likely that Congress will pass an initial resolution of disapproval. Thereafter, it will again become another question of math.¶ “The rhetoric and behavior from Iran's ayatollahs has been so provocative in recent months that Congress is surprisingly united in its opposition to the nuclear deal that was announced this morning,” said Greg Valliere, the chief political strategist at Potomac Research Group.¶ Furious lobbying against the deal, from pro-Israeli groups in particular, will begin immediately as a 60-day review period starts. There's little doubt that both houses will pass a resolution of disapproval, which will prompt a veto from President Obama. Then the real drama will begin.¶ A veto override would require at least 13 Democrats in the Senate and 44 in the House to break with their party and president — if all Republicans are united in their opposition.¶ There were 20 Democratic co-sponsors of the legislation that eventually gave Congress a say in the negotiations. Some congressional GOP aides believe at least 13 of those Democrats and an Sen. Angus King (I-Maine), an independent who caucuses with Democrats, are swayable. ¶ GOP leaders aren't convinced they'll get the veto override — but they do plan to force a sustained drumbeat leading up to the first vote in September.¶

PC key to deal legitimacy—too much conflict kills it

Weisman and Davis 7/14 (Jonathan Weisman and Julie Hirschfeld Davis; July 14, 2015; Journalists for the New York Times; “Congress to Start Review of Iran Nuclear Deal”; New York Times; http://www.nytimes.com/2015/07/15/world/middleeast/congress-iran-nuclear-deal.html?_r=0) jskullz

But even potential supporters say the spectacle of a majority of Congress rejecting such a delicate international accord could do real damage. ¶ “If I were in their shoes and I was responsible for this, I would want to win over a majority of the American people and convince them the deal is in their interest,” said Senator Chris Coons, Democrat of Delaware and a member of the Senate Foreign Relations Committee. “Who wants their legacy to be a deal that is barely approved by the narrowest of margins and is opposed by the majority of Congress? That would indicate a depth of division that would put the whole venture into question.”

PC key to keep Schumer—Key to democratic unity

Rogers 7/9 (Alex Rogers; July 9th 2015; Congressional reporter for National Journal; “The Democrat Who Could Swing the Iran Deal”; Defense One; <http://www.defenseone.com/politics/2015/07/democrat-who-could-swing-iran-deal/117442/>) jskullz

“Senator Schumer is a passionate, engaged advocate on the concerns of America and America’s security, and he’s been a strong and persistent voice in the Democratic caucus about making sure that we only support a deal that is a strong and enforceable deal,” Coons said. ¶ ¶ Having Schumer—one of the most vociferous Democratic critics of the Iran talks—on the administration’s side would be a huge get for President Obama. While he worked to alter the nuclear-deal-review bill to bring along more Democrats and supported delaying a vote on a bill that could increase sanctions due to the administration’s concerns, Schumer also ultimately backed both bills over the White House’s objections. ¶ ¶ Dylan Williams, the vice president of government affairs at the left-leaning J Street advocacy group, said supporters of the deal were encouraged by a June 3 speech by Schumer to Orthodox Union activists. “The overall reaction to the speech among those who saw it was that he was making a case that a deal which may not be perfect might be preferable to the alternatives,” Williams said. ¶ ¶ Williams believes that Schumer’s embrace of the final accord “would send a very strong signal that there would be overwhelming, near-unanimous Democratic support in the Senate for a deal.” Only if the administration suffered an unexpected major loss of support—over two-thirds of members—could Congress endanger a final deal by voting to keep sanctions. ¶ ¶ But Republicans point to Schumer’s history as a fierce Israel ally—and his self-described identity as a shomer, or guardian of Israel—and hope to pry the Senate Democrats’ main message man from his party. At least three conservative outside groups released videos last month urging viewers to call Schumer’s office and ask him to reject a deal they too deemed weak.’

Deal will pass but Obama still needs PC to get moderate Dems on board – lobbying now

Lee et al 7/15/15 (CAROL E. LEE, COLLEEN MCCAIN NELSON and KRISTINA PETERSON, Writers for the Wall Street Journal, “Obama Girds for Battle With Congress on Iran Deal”, <http://www.wsj.com/articles/obama-girds-for-battle-with-congress-on-iran-deal-1437005023>)/BW

President Barack Obama delivered an unusually animated and sometimes combative defense of the Iran nuclear deal the day after it was reached, girding for a complicated political challenge likely to force him to use his veto to save his crowning foreign-policy achievement. Lawmakers have 60 days to review the agreement and an option to vote on approving or disapproving it, with opposition to the deal widespread among Republicans who control both houses of Congress. If they vote it down, the deal’s survival will hinge on Mr. Obama’s ability to secure enough support from his own Democratic Party to prevent a two-thirds majority in each chamber from overriding his promised veto. Mr. Obama, in a 67-minute news conference at the White House, accused opponents—from Israeli leader Benjamin Netanyahu to Republican lawmakers—of pushing political talking points to simply discredit the accord as a bad deal. “For all the objections of Prime Minister Netanyahu or, for that matter, some of the Republican leadership that’s already spoken, none of them have presented to me or the American people a better alternative,” Mr. Obama said. “Either the issue of Iran obtaining a nuclear weapon is resolved diplomatically through a negotiation or it’s resolved through force, through war,” he added. “Those are the options.” The president’s aggressive defense of the deal drew quick pushback from Republicans in Congress, where the criticism has largely been twofold: that the agreement won’t stop Iran from acquiring a nuclear weapon and that it doesn’t address broader concerns about Tehran’s behavior in the region. Rep. Lee Zeldin (R., N.Y.) disputed the president’s assertion that this is a choice between the accord or war. “Here’s an alternative other than war: A better deal,” Mr. Zeldin said. “For the security of America and the stability of the Middle East, we must pursue a better direction immediately.” Sen. Marco Rubio, a Florida Republican and 2016 presidential candidate, started an online petition opposing the deal, and the powerful pro-Israel lobby Aipac is calling on lawmakers to vote against it. At the same time, J Street, a liberal pro-Israel group, said Wednesday it will launch a multimillion-dollar effort, including ads in print and broadcast media, to lobby lawmakers to support the deal. The agreement reached Tuesday in Vienna puts strict limits on Iran’s nuclear program for the next decade that are designed to keep Tehran from being at least 12 months away from amassing enough nuclear fuel for a bomb. In exchange, the U.S., the European Union and the United Nations will lift economic sanctions on Iran. Mr. Obama said he is “not betting on the Republican Party rallying around this agreement,” and Vice President Joe Biden met with Democrats on Capitol Hill. Mr. Biden told Democratic lawmakers he was initially skeptical of the deal but is now convinced the agreement, while not perfect, is worth supporting, according to participants. But even some Democrats expressed concerns about the deal, particularly on the inspections provisions and the decision to lift United Nations embargoes on arms and ballistic missile sales to Iran. “For most members, including myself, it comes down to verification,” said Rep. Ron Kind of Wisconsin, chairman of the New Democrat Coalition, a group of centrist House Democrats. “It comes down to access to the sites, making sure they’re not impeded in any way, that we’ve got unlimited access to where we need to go to make sure Iran is living up to their agreement.” The White House’s effort to preserve the deal depends on cohesion among Democrats in the House and persuading wavering Democratic senators to stick with the president. That is because it became clear in the hours after the agreement’s unveiling that few, if any, Republicans were likely to support it. For Mr. Obama, the next best option would be for Democrats to block the Republican-controlled Congress from passing a resolution of disapproval. Such a resolution would likely prompt the agreement’s collapse if Congress could override a veto from Mr. Obama.

Obama needs political capital to pass the Iran deal

WERNER 7/8/15 (Erica, writer at The Associated Press, “Obama presses Senate Democrats to withhold judgment on Iran”, http://www.philly.com/philly/news/politics/20150708_ap_b1b9c2e2baa6436fb31d29e234afcd66.html)/BW

A top focus was Iran, according to several lawmakers. Prospects are uncertain for the Obama administration to complete a deal, but if the accord isn’t sent to Congress by Thursday, its

month-long review period would be doubled to 60 days. Obama has expended significant political capital on finalizing an agreement to keep Iran from going nuclear, prompting Republicans to accuse him of making too many concessions and even some Democrats to express deep ambivalence. "He wanted to make it perfectly clear that he is in no rush to an agreement and that he will walk away from the table if there is no good deal to be reached and that there isn't a deal yet and so all of these reports about what is in a deal are premature," said Sen. Chris Murphy, D-Conn. Participants said that after Obama's opening remarks, the reception with senators and Cabinet members turned into an unusually friendly and free-flowing question and answer session ranging from climate change, to politics, to the church shooting in Charleston, S.C., to the budget, to rare diseases, to health care in the wake of the Supreme Court decision upholding Obama's health care law.

I/L—Unity

Democratic unity key—plan wedges Obama and rest of democrats

Allen 7/14 (Johnathan Allen; July 14 2015; Chief political correspondent at Vox; "Obama's Iran deal is making Democrats in Congress very nervous"; Vox; <http://www.vox.com/2015/7/14/8963101/obama-iran-deal-democrats>) jskullz

The Iran nuclear deal may be good policy — and a legacy builder for President Barack Obama — but it also creates a tougher political environment for Democrats running for president and Congress in 2016. "Overall, this is a deal that will probably come at a price on the campaign trail," said Princeton University political science professor Julian Zelizer, who has written about the short-term political pain of past treaties. "Republicans will play to the fears among voters, including Democrats, that this is too risky." The best proof of the thorny politics: Obama already has vowed to veto planned legislation blocking the deal. That means he will rely on just one-third of either the House or Senate voting with him to save it. He needs a majority of Democrats but only a minority of either chamber. That paradigm — Republicans uniformly opposed and Democrats divided — will make the agreement a tougher sell to the broader public than if it had bipartisan majority support or even full backing from Obama's Democrats. "The easier vote for most us will be no," said one House Democrat who is inclined to back the president. Members don't tend to lose their seats for voting against the president when his position ends up winning, the lawmaker explained. On the other side, it's easy for Republican candidates to be against Obama and his foreign policy — it plays well with their base — and they were vocal in their criticism of the deal even before they'd had a chance to read all the details. Wisconsin Gov. Scott Walker flicked at how the GOP will go after Democrats on the deal. "President Obama has abandoned the bipartisan principles that have guided our nonproliferation policy and kept the world safe from nuclear danger for decades," Walker said in a statement. "Instead of making the world safer, this deal will likely lead to a nuclear arms race in the world's most dangerous region." The larger issue here is that in the waning light of his presidency, Obama is increasingly making policy in areas that divide Democrats — from trade to the Iran deal — and they are concerned that his political incentives no longer match theirs. They know that Obama, who refers to the last two years of his presidency as the "fourth quarter," is running a two-minute drill to secure as much of his legacy as possible before he leaves office. And those goals may not always serve their political futures. Why this is so difficult for Democrats From the White House's perspective — and that of many Democrats — the deal with Iran is far preferable to leaving in place a sanctions regime that doesn't actually stop Tehran from developing a nuclear weapon or going to war with Iran. Under the pact, Iran would give up its nuclear weapons program in exchange for the lifting of certain economic sanctions, which would make it less of a nuclear threat and more stable. The key is whether the inspections and enforcement provisions of the deal can be implemented effectively and whether Iran's loss of nuclear capability is verifiable. And therein lies the rub for Democrats on the ballot in 2016. The deal won't be consecrated for months. Republicans charge that it's not airtight — that Obama is putting his faith in the trustworthiness of the Iranian regime. The truth is that the next election is too soon to judge whether Iran is complying with its end of the bargain, which leaves Democrats open to Republican attacks that the deal is a disaster. It will be hard for Democratic candidates to prove a negative. One House Democrat who is generally supportive of the president — and open to

the deal — expressed hope Tuesday that the Senate would sustain an Obama veto of legislation blocking the deal so that House Democrats wouldn't have to vote on it at all. It's easier for Obama to round up 34 senators than 146 House Democrats, the lawmaker argued — even though conventional wisdom holds that the opposite is true.¶ Obama's interests and those of fellow Democrats are diverging in the "fourth quarter"¶ There was a time, earlier in his administration, when fellow Democrats would have walked the plank for Obama without letting their political concerns slow them down. Those days are over.¶ "It is not unusual as a president comes to the last months of his administration, particularly if it's his second term, that members of his party become a little less willing to follow the president's lead," former Sen. Bob Graham, a Florida Democrat and onetime chairman of the Senate Intelligence Committee, said.¶ Obama's incentives are necessarily different from those of his Democratic allies in Congress. While he's focused on policy and legacy, they are focused on policy and winning reelection. Increasingly, Obama has used tools that don't require full Democratic support to implement policy — such as executive actions and the Iran deal. Still, Democrats know they will be held accountable for his actions, particularly if they can't show that they opposed him on a specific issue.¶ Jim Manley, a former aide to the late Sen. Ted Kennedy and Minority Leader Harry Reid, said the dynamics of a congressional disapproval vote — which would set up the veto and the one-third threshold necessary to sustain it — give the president an advantage.¶ "I think in the end, the president will have enough Democrats with him to sustain a veto," Manley said. "For many Democrats, the politics of this are so tricky they will be forced to vote against their president."

Deal is 50-50 now, Dems are key to ensuring passage

Werner 7/8/15 (Erica Werner, congressional reporter for the associated press, "President tells them he will walk away if a good deal isn't there," <http://www.slttrib.com/home/2710403-155/obama-presses-senate-democrats-to-withhold>, 7/8/15)

Washington • President Barack Obama downplayed chances for an Iran nuclear deal in a closed-door meeting with Senate Democrats, participants said Wednesday, while asking them to withhold judgment until any deal is complete. Obama also insisted that he won't sign a weak deal — a message that won praise from senators who joined the president for wine and appetizers in the White House State Dining Room on Tuesday evening. "He was urging that we wait to see the actual terms of an agreement if there is one and to have confidence that he would not sign a deal he viewed as flawed," said Sen. Chris Coons, D-Del. Coons added that Obama said it was uncertain whether the Iranians would go along with some of the tougher conditions and that a deal is "at best a 50-50 proposition."

I/L—Dems Key

Dem base key—rest of congress too polarized

Weisman and Davis 7/14 (Jonathan Weisman and Julie Hirschfeld Davis; July 14, 2015; Journalists for the New York Times; “Congress to Start Review of Iran Nuclear Deal”; New York Times; http://www.nytimes.com/2015/07/15/world/middleeast/congress-iran-nuclear-deal.html?_r=0) jskullz

[ed royce is a republican representative from California; benjamin cardin is head democate on the senate foreign relations committee]

“There are people who have already made up their minds, no question about that, and I think that’s unfortunate,” Mr. Cardin said. “But at this point, a majority of Congress believes we have to objectively review what’s in the agreement before we decide what course we’re going to take.”¶ Mr. Cardin said the Iran review, while proceeding in Congress initially over the White House’s objections, probably played to the West’s advantage. Under the terms of the law that established the review, Congress has 30 days to examine the agreement before sanctions can be lifted on Iran. But because Congress will be in its August recess when that review period ends, the deal effectively has an additional month of public scrutiny before Congress can decide its actions.¶ Mr. Cardin said the Iranians thought they could force negotiators to accept terms more favorable to Tehran to avoid that extra 30-day period. But American negotiators in the end let that deadline slip.¶ “Iran thought they’d blink at the last minute, and they didn’t,” he said.¶ White House officials must now decide whether the president should try to win over a majority of Congress, including hostile Republicans, or focus on shoring up a Democratic base to sustain a veto. Mr. Royce said he thought the strategy to protect the veto was already in play.¶ “I don’t see them convincing skeptical Democrats this is a good agreement. I see them pressuring Democrats to go along,” he said.

Senate Dems key to Iran deal

Hughes and Peterson 7/16/15 (Siobhan Hughes and Kristina Peterson, reports for the wall street journal both cover congressional issues, “Senate Democrats Key to Iran Deal,” <http://www.wsj.com/articles/senate-democrats-key-to-iran-deal-1437092680>, 7/16/15)

WASHINGTON—President Barack Obama’s efforts to cement the nuclear deal with Iran hinge on support from a majority of senators in his party, many of whom face competing political pressures as they weigh an agreement that could reshape the U.S. relationship with the Middle East. Sen. Chuck Schumer of New York, the chamber’s Democratic leader-in-waiting, is perhaps the most closely watched, because of his influence in the broader caucus. The top Democrat on the Senate Foreign Relations Committee, Ben Cardin of Maryland, is pivotal because he is a point person for the party on foreign policy, as is Sen. Chris Coons (D., Del.), whose views are being solicited by others in the caucus. So far, few of the Democrats have shown their hand as they assess the deal, its likely impact on the Mideast—and on their own political futures. Even Minority Leader Harry Reid (D., Nev.), who isn’t running for re-election and is often a reliable Obama ally, is a question mark. Republicans have almost universally promised to fight the agreement, which would stand as a cornerstone of Mr. Obama’s foreign-policy legacy. That leaves Senate Democrats as the key line of defense for the White House, because Republicans need 60 votes to reject the deal and they control only 54 seats. In other words, one of Mr. Obama’s best bets for avoiding a congressional resolution of disapproval of the Iran pact would be getting 41 of the 46 senators in the Democratic caucus to support a filibuster of it, thus depriving Republicans of the 60 votes they need to advance the measure. Mr. Obama has threatened a veto of any such resolution, which would then force Republicans to assemble 67 votes for an override. The lobbying has already begun. Vice President Joe Biden on Thursday met with Democrats on the Senate Foreign Relations Committee in a bid to help Senate Democrats get comfortable with it. An early problem cropped up when lawmakers raised questions about

why the Obama administration would head to the United Nations on Monday for an expected vote on lifting U.N. sanctions that are separate from American-imposed sanctions. Some lawmakers viewed such a move as an affront to Congress, which will have 60 days to review the deal and which is protective of its prerogatives. They feel their imposition of sanctions several years ago made possible this week's diplomatic agreement. "We are deeply concerned that your administration plans to enable the United Nations Security Council to vote on the agreement before the United States Congress can do the same," Senate Foreign Relations Committee Chairman Bob Corker (R., Tenn.) and Mr. Cardin wrote in a letter Thursday to Mr. Obama. "We urge you to postpone the vote at the United Nations until after Congress considers this agreement." House Minority Leader Nancy Pelosi (D., Calif.), who has a strong record of keeping her caucus in line, was optimistic House Democrats would largely hang together with the administration. But because the GOP-controlled House is expected to have the votes to initially reject the Iran deal, Democratic cohesion is more important in the Senate, where the party has more sway. Democrats are caught between competing forces, a situation aggravated by 2016 politics. Liberals view the pact as preferable to the risk of war with Iran, which the Obama administration has painted as the stark alternative. On the other side, pro-Israel constituents—some of whom are big campaign donors—worry that lifting sanctions will make Israel vulnerable and leave Iran flush with cash to support terrorist activities. Mr. Schumer embodies the pressures in his party. He said Thursday he hadn't made a decision, but in January showed a willingness to buck the White House by siding with Republicans in the Banking Committee in favor of a bill to toughen sanctions on Iran if a deal wasn't reached by the end of June. The White House had said the bill could undermine the talks. Two other Democrats seen as crucial, Mr. Cardin and Mr. Coons, have also times been willing to go their own way. Last month, Mr. Cardin voted against a fast-track trade bill pushed by the White House even though he had earlier supported it. "I am in the process of reviewing it," Mr. Cardin said of the Iran pact. "We have lots of questions—we do—and I'm going to take advantage of getting the answers to those questions." Sen. Jon Tester (D., Mont.) said his primary concern with the deal is oversight, to ensure that Iran can't cheat. "There aren't a lot of other options out there, other than boots on the ground," he said. Mr. Tester's position is being watched closely because as chairman of the Democratic Senatorial Campaign Committee he must make calculations about how his voting record will affect fundraising. Sen. Michael Bennet (D., Colo.), a former DSCC chair who is up for re-election in 2016, also has special political considerations. The White House faces additional uncertainty with lawmakers such as Sens. Kirsten Gillibrand of New York, Cory Booker and Bob Menendez of New Jersey and Bill Nelson of Florida, who face pressure because of large Jewish populations in their states. The tone from the New Jersey Democrats hasn't been not promising for the White House. "I'm concerned that the deal ultimately legitimizes Iran as a threshold-nuclear state," Mr. Menendez said in a statement this week. "The bottom line is: The deal doesn't end Iran's nuclear program—it preserves it." Mr. Booker said in a statement that "the most important question...is whether it will credibly prevent Iran from obtaining a nuclear weapon, now and into the future." Liberals like Sen. Brian Schatz (D., Hawaii) were more supportive of the Obama administration. "The more I learn about it, the more inclined I am to support it. The harder you scratch, in terms of the opposition, the more it becomes clear that they have no alternative," Mr. Schatz said. Some centrists, while still weighing the decision, were going through a similar thought process. "I'm skeptical, but I'm also going to very closely examine the alternatives," said Sen. Claire McCaskill (D., Mo.). Ms. McCaskill said she worried that if the U.S. rejected the deal, the international sanctions regime could collapse. "What does the world look like with no more sanctions on Iran except us? Does that mean their race to a nuclear weapon is on steroids at that point? I'm trying to weigh not just what's in this deal and whether or not it's verifiable, but what are we left with if we turn this deal down," she said.

Senate Dems key to Iran deal

Hughes and Peterson 7/16/15 (Siobhan Hughes and Kristina Peterson, reports for the wall street journal both cover congressional issues, "Senate Democrats Key to Iran Deal," <http://www.wsj.com/articles/senate-democrats-key-to-iran-deal-1437092680>, 7/16/15)

WASHINGTON—President Barack Obama's efforts to cement the nuclear deal with Iran hinge on support from a majority of senators in his party, many of whom face competing political pressures as they weigh an agreement that could reshape the U.S. relationship with the Middle East. Sen. Chuck Schumer of New York, the chamber's Democratic leader-in-waiting, is perhaps the most closely watched, because of his influence in the broader caucus. The top Democrat on the Senate Foreign Relations Committee, Ben Cardin of Maryland, is pivotal because he is a point person for the party on foreign policy, as is Sen. Chris Coons (D., Del.), whose views are being solicited by others in the caucus. So far, few of the Democrats have shown their hand as they assess the deal, its likely impact on the Mideast—and on their own political futures. Even Minority Leader Harry Reid (D., Nev.), who isn't running for re-election and is often a reliable Obama ally, is a question mark. Republicans have almost universally promised to fight the agreement, which would stand as a cornerstone of Mr. Obama's foreign-policy legacy. That leaves Senate Democrats as the key line of defense for the White House, because Republicans need 60 votes to reject the deal and they control only 54 seats. In other words, one of Mr. Obama's best bets for avoiding a congressional resolution of disapproval of the Iran pact would be getting 41 of the 46 senators in the Democratic caucus to support a filibuster of it, thus depriving Republicans of the 60 votes they need to advance the measure. Mr. Obama has threatened a veto of any such resolution, which would then force Republicans to assemble 67 votes for an override. The lobbying has already begun. Vice President Joe Biden on Thursday met with Democrats on the Senate Foreign Relations Committee

in a bid to help Senate Democrats get comfortable with it. An early problem cropped up when lawmakers raised questions about why the Obama administration would head to the United Nations on Monday for an expected vote on lifting U.N. sanctions that are separate from American-imposed sanctions. Some lawmakers viewed such a move as an affront to Congress, which will have 60 days to review the deal and which is protective of its prerogatives. They feel their imposition of sanctions several years ago made possible this week's diplomatic agreement. "We are deeply concerned that your administration plans to enable the United Nations Security Council to vote on the agreement before the United States Congress can do the same," Senate Foreign Relations Committee Chairman Bob Corker (R., Tenn.) and Mr. Cardin wrote in a letter Thursday to Mr. Obama. "We urge you to postpone the vote at the United Nations until after Congress considers this agreement." House Minority Leader Nancy Pelosi (D., Calif.), who has a strong record of keeping her caucus in line, was optimistic House Democrats would largely hang together with the administration. But because the GOP-controlled House is expected to have the votes to initially reject the Iran deal, Democratic cohesion is more important in the Senate, where the party has more sway. Democrats are caught between competing forces, a situation aggravated by 2016 politics. Liberals view the pact as preferable to the risk of war with Iran, which the Obama administration has painted as the stark alternative. On the other side, pro-Israel constituents—some of whom are big campaign donors—worry that lifting sanctions will make Israel vulnerable and leave Iran flush with cash to support terrorist activities. Mr. Schumer embodies the pressures in his party. He said Thursday he hadn't made a decision, but in January showed a willingness to buck the White House by siding with Republicans in the Banking Committee in favor of a bill to toughen sanctions on Iran if a deal wasn't reached by the end of June. The White House had said the bill could undermine the talks. Two other Democrats seen as crucial, Mr. Cardin and Mr. Coons, have also times been willing to go their own way. Last month, Mr. Cardin voted against a fast-track trade bill pushed by the White House even though he had earlier supported it. "I am in the process of reviewing it," Mr. Cardin said of the Iran pact. "We have lots of questions—we do—and I'm going to take advantage of getting the answers to those questions." Sen. Jon Tester (D., Mont.) said his primary concern with the deal is oversight, to ensure that Iran can't cheat. "There aren't a lot of other options out there, other than boots on the ground," he said. Mr. Tester's position is being watched closely because as chairman of the Democratic Senatorial Campaign Committee he must make calculations about how his voting record will affect fundraising. Sen. Michael Bennet (D., Colo.), a former DSCC chair who is up for re-election in 2016, also has special political considerations. The White House faces additional uncertainty with lawmakers such as Sens. Kirsten Gillibrand of New York, Cory Booker and Bob Menendez of New Jersey and Bill Nelson of Florida, who face pressure because of large Jewish populations in their states. The tone from the New Jersey Democrats hasn't been not promising for the White House. "I'm concerned that the deal ultimately legitimizes Iran as a threshold-nuclear state," Mr. Menendez said in a statement this week. "The bottom line is: The deal doesn't end Iran's nuclear program—it preserves it." Mr. Booker said in a statement that "the most important question...is whether it will credibly prevent Iran from obtaining a nuclear weapon, now and into the future." Liberals like Sen. Brian Schatz (D., Hawaii) were more supportive of the Obama administration. "The more I learn about it, the more inclined I am to support it. The harder you scratch, in terms of the opposition, the more it becomes clear that they have no alternative," Mr. Schatz said. Some centrists, while still weighing the decision, were going through a similar thought process. "I'm skeptical, but I'm also going to very closely examine the alternatives," said Sen. Claire McCaskill (D., Mo.). Ms. McCaskill said she worried that if the U.S. rejected the deal, the international sanctions regime could collapse. "What does the world look like with no more sanctions on Iran except us? Does that mean their race to a nuclear weapon is on steroids at that point? I'm trying to weigh not just what's in this deal and whether or not it's verifiable, but what are we left with if we turn this deal down," she said.

Deal Bad

Iran deal leads to nuclear proliferation

Rogin 6/24/14 (Josh, writer for Bloomberg, "Clinton Defense Chief: Iran Deal Could Spark Proliferation", [//BW](http://www.bloombergview.com/articles/2015-06-24/clinton-defense-chief-iran-deal-could-spark-proliferation))

Gulf Arab powers are likely to respond to President Barack Obama's pending nuclear deal with Iran by developing their own nuclear programs, former Defense Secretary William Cohen said Wednesday. He said they don't trust either the Iranians or the United States to protect their interests. "The administration's intent was to have a counter-proliferation program. And the irony is, it may be just the opposite," he told a meeting of Bloomberg reporters Wednesday morning. As Secretary of State John Kerry prepares to meet Iranian leaders for the final push toward a comprehensive nuclear deal with Iran, there's growing angst in countries like Saudi Arabia, the United Arab Emirates, Qatar and Israel about the deal, which will leave Iran with significant uranium enrichment capabilities and may not give the international community the right to inspect all of Iran's nuclear facilities. The administration argues that a deal with Iran will remove the need for other regional powers to pursue their own nuclear enrichment and weapons programs. Cohen said the region doesn't see it that way. "Once you say they are allowed to enrich, the game is pretty much up in terms of how do you sustain an inspection regime in a country that has carried on secret programs for 17 years and is still determined to maintain as much of that secrecy as possible," said Cohen, who was a Republican lawmaker from Maine before serving under President Clinton from 1997 to 2001. Other regional powers are further skeptical of the international community's ability to enforce any deal with Iran because the Obama administration has lost credibility in the region, according to Cohen. He said America's relationships in the region were damaged in 2013, when President Obama backed away from striking Syria after telling Gulf allies he would do so, even though the Assad regime had crossed his "red line" on chemical weapons. "It was mishandled and everybody in the region saw how it was handled. And I think it shook their confidence in the administration. ... The Saudis, the UAE and the Israelis were all concerned about that," Cohen said. "They are looking at what we say, what we do, and what we fail to do, and they make their judgments. In the Middle East now, they are making different calculations." Cohen acknowledged that without a nuclear deal, Iran could have the ability to expand its nuclear activities with no restrictions, leading to an even more dangerous situation for the U.S. and the region. He doesn't agree with some lawmakers, such as Senator Tom Cotton, who argue that a military strike on Iran's nuclear facilities could be a solution. Cohen said that if a deal is reached, there will be significant international momentum for implementing the deal and lifting sanctions against Iran. The drive to do business in Iran will be alluring, especially to European countries, who have been eager to return to Iran but have been held back by the U.S.-led sanctions. Iranian officials have said that if the U.S. is the only country left with sanctions on Iran, that would amount to America sanctioning itself. "I anticipate this deal will be done. I think Congress is going to be hard-pressed to reject it," said Cohen. "Congress, the only chance it has to influence it is now, before it's signed." Cohen disagrees with those who believe that a nuclear deal will mollify Iran. He is skeptical that giving Iran large economic benefits will lead to significant reform in the Islamic Republic. "Most people that I know believe that Iran will continue to be a revolutionary country, and that's what bothers all of the others in the region, that this is going to continue the expansion of power, that they will be at a disadvantage, and they can't count on the United States," he said. Overall, countries in the Middle East have lost confidence in the Obama administration, Cohen said, in part because the U.S. has failed to articulate a clear vision for America's role in the world in the 21st century. That may not be resolved in the remainder of this administration. "There's a lot of worry about U.S. leadership and what we'll do next. You couple that with the Iran situation, and you could see there's a lot of nervousness now about where we are," he said. "That's something the next president will have to deal with."

Iran deal leads to global proliferation and hurts the economy

Yashar, 7/2/15 (Ari, writer for Israel Nation News, "Experts Warn Iran Deal Will Kill Nuclear Non-Proliferation", [//BW](http://www.israelnationalnews.com/News/News.aspx/197588#.VaVjMRNViko))

Foreign policy experts warned this week that if the US proves itself unable to enforce a hard line against Iran's pursuit of nuclear power, America will be rendered unable to oppose nuclear proliferation on a global scale. The experts were speaking at the Heritage Foundation on Tuesday, reports the Washington Free Beacon, in an event just a week ahead of the extended July 7 deadline for a nuclear deal between world powers and Iran over the latter's controversial nuclear program. "The fundamental problem is that we're giving ground on what has been a principle of US non proliferation policy for 70 years, which (views) the spread of enrichment and reprocessing to any country, even our allies, as a problem," said Matthew Kroenig, associate professor at Georgetown University. "What this Iran deal does is make an exception, not just for any country, but for Iran, a country that's continually cheating on its agreements. So in the wake of the deal, I think it becomes very hard for us to go to our allies and say, 'we trust Tehran with this technology, but we don't trust you.'" Brian Finaly, vice president of the Washington DC-based think tank Stimson Center, added to Kroenig's troubling assessment. "As we understand how the world is changing, it is certainly impacting how we manage the proliferation threat, and I believe that getting out in front of this, thinking beyond the limited ability of the state to control proliferation in the future, is going to be essential to successful non-proliferation efforts," warned Finaly. He explained that non-state actors such as multinational companies can play a role in preventing nuclear crises, noting on the conflict between India and Pakistan in the 1980s. "A group of very senior level executives from an array of companies got together and sent a very clear message to the Indian Prime Minister: 'this crisis is bad for business and if we decide to leave India, we will not return,'" Finlay said. That warning "had the ultimate effect of, I think, contributing significantly to the easing of nuclear tensions between the two countries, and it returned to semi-regular relations between the two countries," he added. Regarding economic incentives, experts have warned that the current sanctions regime against Iran has not been tough enough to have an effect, as the Iranian GDP grew 3% in 2014. Just this Monday Iranian officials announced that 13 tons of gold had been repatriated as part of sanctions relief, bringing the total in unfrozen assets since the November 2013 interim deal was signed to just under \$12 billion.

Deal causes runaway prolif—breakdown of non-proliferation treaty

Pletka 7/14 (Danielle Pletka; July 14 2015; vice president for foreign and defense policy studies at the American Enterprise Institute; "8 Unplanned Results of the Iran Deal"; Politico; www.politico.com/magazine/story/2015/07/eight-unplanned-results-of-the-iran-deal-120129.html?ml=tl_38_b) jskullz

4. The beginning of the end of the NPT Like any set of rules, the Nuclear Non-Proliferation Treaty is only as good as its members make it. Once, a country that hid behind the NPT to violate safeguards agreements and work on nuclear weapons faced the certainty of international punishment. That is what happened to North Korea. With this deal, the exact reverse is happening with Iran. After using the treaty to advance its nuclear weapons program, Iran is now being pardoned, rehabilitated and allowed to keep its nuclear infrastructure. We can expect other countries — especially those most worried about Iran's rising power in the Middle East — to emulate Iran in using the NPT as cover for advancing their own nuclear weapons programs.

Deal causes Israeli first strike—escalates to nuclear war

Worral 15 (Eric Worral; Apr 28 2015; Writer for Breitbart; “Israel Will Strike Iran First To Thwart Nuclear Attack”; Breitbart; <http://www.breitbart.com/big-government/2015/04/28/israel-will-strike-iran-first-to-thwart-nuclear-attack/>) jskullz

Israel is not in a pleasant situation. Every day, her arch enemy Iran draws closer to refining enough uranium to build 100s of nuclear weapons.¶ Every day the Iranian program becomes more difficult to dislodge – as the uranium is concentrated, the number of centrifuges required to complete the process decreases, allowing the remaining refining operation to be moved to smaller and more covert facilities.¶ America, ostensibly Israel’s ally, is rumoured to have ordered US warships to shoot down Israeli aircraft, should a strike on Iran appear to be in progress. According to Israeli newspapers, President Obama thwarted a planned 2014 Israeli attack against Iranian nuclear facilities, by threatening to shoot down the Israeli bombers.¶ America is currently sending additional warships to the Persian Gulf – ostensibly to blockade Iranian supply runs to rebels in Yemen, but if rumours of President Obama’s threat against Israel are correct, perhaps also to reinforce US firepower, should Israel decide to mount an attack against Iran.¶ There is no doubt an attack is on the drawing board – the Israeli Defence Force admitted they are training for an attack on Iran, in a recent interview with The Times of Israel.¶ Iran may pose a grave existential threat to Israel – at least Israel believes they do and they appear to have good reasons for their concerns. According to an Israeli report written in 2008, Iran regularly state that Israel will shortly be wiped from the face of the Earth.¶ Regardless of whether the Iranian threats are as bad as is claimed, or whether Iran actually means what they say, the Iranian nuclear programme will provide Iran with the means to fulfill this terrifying threat.¶ Iran is currently purchasing an advanced Russian air defence system – which will further complicate the job of attacking Iran, should Israel choose to mount an attack.¶ If Israel does decide to mount an attack against Iran, they will run a gauntlet – they will have to fly long distances, over hostile Syria, and other unfriendly countries. They will potentially face a massive counterattack from the growing American presence in the Persian Gulf. When they finally reach Iran, they will suffer even more casualties from the advanced Russian anti-aircraft systems, which will shortly be operational.¶ And when a handful of Israeli aircraft finally reach their targets, the surviving Israeli warplanes will have to somehow inflict sufficient damage on heavily armoured nuclear facilities, some of which are buried hundreds of feet underground, to prevent them from being repaired.¶ There is only one kind of bomb in Israel’s arsenal, which can fulfill this military requirement.¶ A weak Iran deal, if it is ratified, will in my opinion be a lot more than a diplomatic failure – for the reasons I have provided, I believe it may trigger a nuclear war.

Despite the nuclear deal, Iran is still belligerent

Tamara Cofman **Wittes, 7/14**, senior fellow and the director of the Center for Middle East Policy at Brookings, July 14, 2015 , “An Iran deal won’t stabilize the messy Middle East — but maybe Arab states can”, http://www.brookings.edu/blogs/markaz/posts/2015/07/14-iran-nuclear-deal-us-middle-east-wittes?utm_campaign=Brookings+Brief&utm_source=hs_email&utm_medium=email&utm_content=20603985&_hsenc=p2ANqtz-

eYpDMYrvARu3NA&_hsmi=20603985 //Zabner

Iran's proclivity for regional meddling is longstanding, and the chaotic politics of the Arab world since 2011 has given the Islamic Republic unprecedented opportunities to insert itself into local politics in destabilizing ways. In my recent congressional testimony, and in remarks to the Herzliya Conference in Israel last month, I explained my view that Iran's regional troublemaking is likely to grow worse in coming years, regardless of a deal over the nuclear program. I said: In fact, whether there's a nuclear deal or not, I predict we will see a more aggressive approach by Iran in a host of arenas around the region, where the upheaval has given them greater opportunities than before. If there is a nuclear deal, the hardline elements within the Iranian regime, those most opposed to a deal, are also those with the greatest interest and investment in regional troublemaking. They are likely to use their ability to make noise regionally to try and compensate for the power disadvantages they see inherent in a deal — and they are likely to have a green light from the Supreme Leader to do so, because he will want to compensate them for their unhappiness with a deal. If there's no deal on the nuclear issue, however, then the Iranian leadership will want to scale up its regional assertions of power for a different reason: in order to solidify or even strengthen its current regional power position in advance of whatever tougher American / Israeli / Sunni Arab efforts it anticipates to contain it. I stand by that prediction. While sanctions relief will give Iran considerably more resources, it has never lacked motivation for its assertions of power, and it continues to face ample opportunity. As my Herzliya panel partner, Meir Javandefar, revealed at the conference, Iran's sanctions-induced economic hardship in recent years has not prevented Iran from spending billions of dollars and its own soldiers' lives keeping Bashar al-Assad in power. So yes, Iranian meddling across the region will get worse in the wake of an Iran deal — but it was going to get worse anyway. The real question about Iran's regional behavior is not, therefore, whether a nuclear deal is too dangerous for the Middle East because it will give Iran more ability to make trouble. Trouble, in case you haven't noticed, is not lacking in the Middle East, and Iran is one major source (though not, to be sure, the only one). The real question is what the United States and America's Arab allies are prepared to do about it. Note that, in my view, America's Arab allies have an essential role to play here, independent of the United States. Read on to see what I mean.

The deal changes nothing

Suzanne **Maloney, 7/15**, interim deputy director of the Foreign Policy program at the Brookings Institution and a senior fellow in the Brookings Center for Middle East Policy, July 15, 2015, Brookings, "For the U.S. and Iran, a nuclear accord upends old assumptions", http://www.brookings.edu/blogs/markaz/posts/2015/07/15-iran-deal-diplomacy-sanctions-rouhani-beginning?utm_campaign=Brookings+Brief&utm_source=hs_email&utm_medium=email&utm_content=20624082&_hsenc=p2ANqtz-9SEY60r2pRxzjZc8Zu75XmClZT-sdnEWMIAMc36o-qhMilxtyiusrW5bawoJ6D5CCKUxda4qPpcueDZOOFQw4TxorWVg&_hsmi=20624082 //Zabner

But though the negotiating process itself has ended, the factors that undermine its relationship with the world have not. The deal will not put an end to the dispute over Iran's nuclear ambitions. The agreement will now undergo an excruciating dissection in both capitals, with every word of the 159-page English language text probed for signs of leniency or capitulation. Then, if it survives legislative scrutiny (as it is likely to do), a laborious implementation process will ensure that the issue remains a major preoccupation for each of the states that is a party to the agreement, as well as a source of continuing frictions and suspicions between Washington and Tehran. Nor do Washington's other differences with Tehran appear to be

nearing a more auspicious conclusion. Only the most credulous optimist can assert that a nuclear deal will somehow produce an Iranian epiphany about the horrific and destabilizing consequences of its assistance to Bashar Al Assad. Tehran's approach to extending its regional influence, via the funding and direction of violent proxies across the region, will continue to exacerbate instability in Iraq, Yemen, Lebanon, and beyond, while fueling the geostrategic rivalry with Saudi Arabia and the related sectarian tensions. This week's resumption of a trial of a Washington Post reporter underscores that Iran's unjust detention of American citizens for months or even years will likely continue as well. The same streets where Iranians celebrated a deal yesterday were the scenes of anti-American and anti-Israeli protests, where both flags were burnt in effigy, only a few days ago. Perhaps most importantly, as I'll argue in a follow-up piece tomorrow examining the uncertain prospects for new beginnings, the underlying logic of Islamic regime is unlikely to be altered significantly by the resolution of the nuclear impasse. The nuclear agreement was a transactional decision for Iranian leaders, not a transformational one, and the odds against the moderation of the Iranian system remain overwhelmingly stacked against the establishment of the revolution's elusive Thermidor.

Turn—the Iran bill is problematic and shouldn't pass—concedes too much nuclear power to Iran

Edelman and Takeyh 7/17, Eric Edelman, undersecretary of defense for policy from 2005 to 2009, is a scholar in residence at Johns Hopkins School of Advanced International Studies. Ray Takeyh is a senior fellow at the Council on Foreign Relations., "On Iran Congress should just say no," Washingtonpost, 7/17/15, http://www.washingtonpost.com/opinions/on-iran-congress-should-just-say-no/2015/07/17/56e366ae-2b30-11e5-bd33-395c05608059_story.html

After two years of painstaking diplomacy, the Obama administration has finally concluded a nuclear agreement with Iran. A careful examination of the Joint Comprehensive Plan of Action (JCPOA) reveals that it concedes an enrichment capacity that is too large; sunset clauses that are too short; a verification regime that is too leaky; and enforcement mechanisms that are too suspect.

No agreement is perfect, but at times the scale of imperfection is so great that the judicious course is to reject the deal and renegotiate a more stringent one. The way for this to happen is for Congress to disapprove the JCPOA. Prior to the 2013 interim accord, the Obama administration's position rested on relatively sensible precepts. The United States insisted that, given Iran's practical needs, it should only have a symbolic enrichment program of a few hundred centrifuges, and that the Islamic republic could not be considered a member of the Nuclear Non-Proliferation Treaty (NPT) in good standing until it secured the trust and confidence of the international community in the peaceful nature of its program. These were not just U.S. aspirations but also the position of members of the "P5+1" powers — the five U.N. Security Council members plus Germany. These prudent parameters were overtaken by a cavalcade of concessions that began in 2013. The administration soon brandished the notion of a one-year breakout period that would allow Iran to maintain a substantial enrichment apparatus, in effect abandoning the goal of preventing development of an Iranian nuclear capability in favor of managing its emergence. The much heralded one-year breakout period will only shrink over time as the JCPOA concedes that Iran can begin phasing out its primitive centrifuges in favor of more advanced ones. Even more troublesome is the agreement's stipulation that after its limits expire, the "Iranian nuclear program will be treated in the same manner as that of any other non-nuclear weapon state party to the NPT." This means that Iran can proceed with the construction of an industrial-sized nuclear infrastructure similar to that of Japan. At that time, Iran could easily sprint to the bomb without risking timely detection. In the coming weeks, the administration will justify its concessions by professing that the agreement establishes an unprecedented inspections regime. The verification measures of the JCPOA rely on "managed access" whereby the International Atomic Energy Agency has to first offer credible evidence of untoward activity and then negotiate with Iran for timely access to

the suspect facility. This certainly falls short of the inspection modality pledged by Energy Secretary Ernest Moniz, the administration's chief nuclear physicist, who said in April that "we expect to have anywhere, anytime access." Under the current arrangement, the likely response to Iranian mischief will be prolonged negotiations mired in arcane detail over at least a three-week period. In as little as a few months, Iran will for all intents and purposes no longer be a sanctioned country. Although elaborate and protracted procedures are in place for the re-imposition of the U.N. Security Council sanctions resolutions, the economic sanctions imposed by the European Union and the United States — always the most essential ones — will be rolled back quickly and will not be easily reconstituted. The European oil embargo, international banking restrictions and efforts to segregate Iran from the global economy will be suspended. And the notion that U.S. business will be left out of the commercial march to Iran because congressionally imposed U.S. sanctions will remain in place is itself undermined by a loophole in the deal allowing "non-U.S. entities that are owned or controlled by a U.S. person to engage in activities with Iran that are consistent with this JCPOA." The JCPOA stands as one of the most technologically permissive arms-control agreements in history. All is not lost, however, and with sensible amendments the accord can be strengthened. The United States should return to the table and insist that after the expiration of the sunset clause, the P5+1 and Iran should vote on whether to extend the agreement for an additional 10 years. A majority vote every 10 years should determine the longevity of the agreement, not an arbitrary time-clock. Further, the JCPOA has usefully stressed that all of Iran's spent fuel from its heavy-water reactor will be shipped out permanently. A similar step should be taken with Iran's enriched uranium. The revised agreement should also limit Iran to the first-generation centrifuges and rely on "anytime, anywhere access." These and other such measures could help forestall an Iranian bomb and stem the proliferation cascade in the Middle East that this agreement is likely to trigger. At this late date, the only way that the agreement can be reopened and amended is for Congress to first reject it. At that time, the Obama administration or its successor can return to the table and confess that given the absence of a bipartisan foundation of support in the United States, key provisions of the agreement have to be reconsidered. At the end of such a process, the United States may yet be able to obtain a viable accord that reliably alters Iran's nuclear trajectory.

Bomb Good

Iran bomb good—no prolif or terrorism, and prevents escalatory war with Israel and other states

Waltz 12 (Kenneth N. Waltz; July/Aug 2015; Political Science prof at Columbia and one of the single most influential international relations scholars; Why Iran Should Get the Bomb; Foreign Affairs <https://www.foreignaffairs.com/articles/iran/2012-06-15/why-iran-should-get-bomb>) jskullz

The third possible outcome of the standoff is that Iran continues its current course and publicly goes nuclear by testing a weapon. U.S. and Israeli officials have declared that outcome unacceptable, arguing that a nuclear Iran is a uniquely terrifying prospect, even an existential threat. Such language is typical of major powers, which have historically gotten riled up whenever another country has begun to develop a nuclear weapon of its own. Yet so far, every time another country has managed to shoulder its way into the nuclear club, the other members have always changed tack and decided to live with it. In fact, by reducing imbalances in military power, new nuclear states generally produce more regional and international stability, not less. ¶ Israel's regional nuclear monopoly, which has proved remarkably durable for the past four decades, has long fueled instability in the Middle East. In no other region of the world does a lone, unchecked nuclear state exist. It is Israel's nuclear arsenal, not Iran's desire for one, that has contributed most to the current crisis. Power, after all, begs to be balanced. What is surprising about the Israeli case is that it has taken so long for a potential balancer to emerge. ¶ Of course, it is easy to understand why Israel wants to remain the sole nuclear power in the region and why it is willing to use force to secure that status. In 1981, Israel bombed Iraq to prevent a challenge to its nuclear monopoly. It did the same to Syria in 2007 and is now considering similar action against Iran. But the very acts that have allowed Israel to maintain its nuclear edge in the short term have prolonged an imbalance that is unsustainable in the long term. Israel's proven ability to strike potential nuclear rivals with impunity has inevitably made its enemies anxious to develop the means to prevent Israel from doing so again. In this way, the current tensions are best viewed not as the early stages of a relatively recent Iranian nuclear crisis but rather as the final stages of a decades-long Middle East nuclear crisis that will end only when a balance of military power is restored. ¶ UNFOUNDED FEARS ¶ One reason the danger of a nuclear Iran has been grossly exaggerated is that the debate surrounding it has been distorted by misplaced worries and fundamental misunderstandings of how states generally behave in the international system. The first prominent concern, which undergirds many others, is that the Iranian regime is innately irrational. Despite a widespread belief to the contrary, **Iranian policy is made not by "mad mullahs" but by perfectly sane ayatollahs who want to survive just like any other leaders. Although Iran's leaders indulge in inflammatory and hateful rhetoric, they show no propensity for self-destruction.** It would be a grave error for policymakers in the United States and Israel to assume otherwise. ¶ Yet that is precisely what many U.S. and Israeli officials and analysts have done. Portraying Iran as irrational has allowed them to argue that the logic of nuclear deterrence does not apply to the Islamic Republic. If Iran acquired a nuclear weapon, they warn, it would not hesitate to use it in a first strike against Israel, even though doing so would invite massive retaliation and risk destroying everything the Iranian regime holds dear. ¶ Although it is impossible to be certain of Iranian intentions, it is far more likely that if Iran desires nuclear weapons, it is for the purpose of providing for its own security, not to improve its offensive capabilities (or destroy itself). Iran may be intransigent at the negotiating table and defiant in the face of sanctions, but it still acts to secure its own preservation. Iran's leaders did not, for example, attempt to close the Strait of Hormuz despite issuing blustery warnings that they might do so after the EU announced its planned oil embargo in January. The Iranian regime clearly concluded that it did not

want to provoke what would surely have been a swift and devastating American response to such a move.¶ Nevertheless, even some observers and policymakers who accept that the Iranian regime is rational still worry that a nuclear weapon would embolden it, providing Tehran with a shield that would allow it to act more aggressively and increase its support for terrorism. Some analysts even fear that Iran would directly provide terrorists with nuclear arms. The problem with these concerns is that they contradict the record of every other nuclear weapons state going back to 1945. History shows that when countries acquire the bomb, they feel increasingly vulnerable and become acutely aware that their nuclear weapons make them a potential target in the eyes of major powers. This awareness discourages nuclear states from bold and aggressive action. Maoist China, for example, became much less bellicose after acquiring nuclear weapons in 1964, and India and Pakistan have both become more cautious since going nuclear. There is little reason to believe Iran would break this mold. ¶ As for the risk of a handoff to terrorists, no country could transfer nuclear weapons without running a high risk of being found out. U.S. surveillance capabilities would pose a serious obstacle, as would the United States' impressive and growing ability to identify the source of fissile material. Moreover, countries can never entirely control or even predict the behavior of the terrorist groups they sponsor. Once a country such as Iran acquires a nuclear capability, it will have every reason to maintain full control over its arsenal. After all, building a bomb is costly and dangerous. It would make little sense to transfer the product of that investment to parties that cannot be trusted or managed. ¶ Another oft-touted worry is that if Iran obtains the bomb, other states in the region will follow suit, leading to a nuclear arms race in the Middle East. But the nuclear age is now almost 70 years old, and so far, fears of proliferation have proved to be unfounded. Properly defined, the term "proliferation" means a rapid and uncontrolled spread. Nothing like that has occurred; in fact, since 1970, there has been a marked slowdown in the emergence of nuclear states. There is no reason to expect that this pattern will change now. Should Iran become the second Middle Eastern nuclear power since 1945, it would hardly signal the start of a landslide. When Israel acquired the bomb in the 1960s, it was at war with many of its neighbors. Its nuclear arms were a much bigger threat to the Arab world than Iran's program is today. **If an atomic Israel did not trigger an arms race then, there is no reason a nuclear Iran should now.**¶ REST ASSURED¶ In 1991, the historical rivals India and Pakistan signed a treaty agreeing not to target each other's nuclear facilities. They realized that far more worrisome than their adversary's nuclear deterrent was the instability produced by challenges to it. Since then, even in the face of high tensions and risky provocations, the two countries have kept the peace. Israel and Iran would do well to consider this precedent. If Iran goes nuclear, Israel and Iran will deter each other, as nuclear powers always have. There has never been a full-scale war between two nuclear-armed states. **Once Iran crosses the nuclear threshold, deterrence will apply, even if the Iranian arsenal is relatively small. No other country in the region will have an incentive to acquire its own nuclear capability, and the current crisis will finally dissipate, leading to a Middle East that is more stable than it is today.**

Defense

Iran won't launch a nuke—only interested for defensive purposes

Shanahan 15 (Roger Shanahan; Jan. 8th 2015; ANU's National Security College and is a non-resident fellow at the Lowy Institute for International Policy; "Would Iran Start a Nuclear War?"; National Interest; <http://nationalinterest.org/blog/the-buzz/would-iran-start-nuclear-war-11995>) jskullz

¶ The language is dramatic but the posts lack much by the way of reasoned argument. Don't get me wrong, I'm a devoted counter-proliferator and think that a nuclear-armed Iran should be stopped simply to avoid other states seeking to do the same. But I disagree with the view advocated by Andy Nikolic and others that a nuclear-armed Iran will seek to use those weapons to become more regionally influential or to launch them against Israel.¶ ¶ (Recommended: 5 Iranian Weapons of War Israel Should Fear) ¶ ¶ The main reason I oppose such views is because they lack intellectual rigour. Firstly, simply having nuclear weapons doesn't make anyone more influential. Pakistan and India are no more influential following their acquisition of a nuclear capability than they were before it. Influence comes through a range of media, and Iran has always understood that in many ways it's an outsider in the region—ethnically, linguistically and religiously different from its Arab and Turkic neighbours. Hence its reliance on allies and proxies to exert influence—and that wouldn't change if it became a nuclear-capable country.¶ ¶ Second, Andy's argument is predicated on Iran's seeing a nuclear weapon as simply an offensive weapon. The reality is that nuclear weapons are often the ultimate defensive weapon. Tehran could look east and see how Islamabad's nuclear capability has stopped it from going to war with India, and it could look west and see how Tel Aviv's undeclared capability has deterred its neighbours from invading it. Its nuclear capability hasn't stopped conflict or guaranteed military success for Israel, as it has faced two intifadas, invaded Gaza, had to withdraw from southern Lebanon and fought a short but bloody war against Hizbullah in 2006. But none of those have been existential threats.¶ ¶ (Recommended: Five Israeli Weapons of War Iran Should Fear) ¶ ¶ The argument follows that Tehran sees a nuclear capability as the ultimate shield, rather than as a potential sword. Having been invaded by the British and the Soviets in World War II, and then suffering through eight years of a war with Iraq backed by its Arab neighbours and some in the West that cost hundreds of thousands of lives, it's easy to see the logic of Tehran viewing a nuclear weapon as the ultimate shield.¶ ¶ In order to protect the Islamic Revolution the leadership seeks to guarantee its survival from external attack first and foremost and a nuclear weapon would do that. Any preemptive use of such weapons would be nearly guaranteed to receive more in return and hence end the rule of those charged with ruling in accordance with God's will. Again, there seems to be no reason why the Supreme Leader would seek to do such a thing. Some have argued that a strain of Shi'a millenarianism would see Iran loose off volleys of nuclear weapons in order to set the conditions to hasten the arrival of the Awaited Imam. There's no explanation of how that would follow, nor evidence of any support for such a concept by the Supreme Leader, who is in charge of Iran's nuclear file.¶ ¶ (Recommended: 5 Israeli Weapons of War ISIS Should Fear) ¶ ¶ Andy claims that Iran exhibits "a determination to leverage the anticipated benefits of that [nuclear] investment" and that it seeks a nuclear capability "because of the prestige, power and authority which Iran believes such weapons would give it, both regionally and beyond." What he doesn't do is explain exactly what he sees those benefits to be, nor how he sees Tehran achieving power and authority as a nuclear state. I agree that Tehran seeks regional influence commensurate with how it views its rightful place in the international system. But I don't see how having a nuclear capability achieves that other than by safeguarding it from existential threats. Rather, I'd argue that Iranian national power, and hence that of the Islamic Revolution, will be furthered by leveraging its enormous potential economic and human capabilities. In many ways that's what its Gulf neighbours truly fear.¶

Deal passes now --solves iran prolif

Aaron **Mehta**, 7-18-2015, "Experts Praise Iran Deal, Despite Congressional Concerns," Defense News, <http://www.defensenews.com/story/defense/policy-budget/2015/07/18/experts-praise-iran-deal-despite-congressional-concerns/30261893/>

Substantively, a general consensus quickly emerged following the July 14 unveiling of the agreement that the deal is as close to a best-case situation as reality would allow.¶ Jeffrey Lewis, director of the East Asia Nonproliferation Program at the James Martin Center for Nonproliferation Studies, believes "the deal is excellent compared to where we are today."¶ "It puts a gap between [Iran's] ability to build a bomb and actually doing it, and the gap is big enough for us to do something about it if we detect them moving toward a bomb," Lewis said. "At the highest macro level, I think that's fantastic."¶ As to critics who say a better deal should have been reached, Kingston Reif, director for disarmament and threat reduction policy at the Arms Control Association, puts it in simple terms: "A perfect deal was not attainable.¶ Overall, it's a very strong and good deal, but it wasn't negotiations that resulted in a score of 100-0 for the US," Reif said. "That's not how international negotiations go."¶ Added James Acton, co-director of the Nuclear Policy Program and senior associate at the Carnegie Endowment: "You can't compare this to a perfect deal, which was never attainable."¶ Speaking July 15, Obama called the agreement "the most vigorous inspection and verification regime by far that has ever been negotiated," something Reif agreed with fully.¶ "The monitoring and verification regime in this deal is the most comprehensive and intrusive regime that has ever been negotiated," Reif said. "But there is no country which would grant [total open access to all its territory], and there has never been a settlement where that has happened."¶ Jon Wolfsthal, senior director for arms control and nonproliferation at the US National Security Council, echoed the president by insisting that the treaty is "a very good deal that not only met, but exceeded" parameters laid out in the interim Lausanne accord from November 2013.¶ "Limitations imposed through this agreement are for the long term. There is no sunset clause here. Limitations are permanent and we have the ability to enforce them," he told a July 15 gathering of the Atlantic Council in Washington.¶ An overriding concern with any Iranian nuclear deal, identified by all interviewed for this story, is the possibility of them starting up a covert nuclear program, one which inspectors possibly could miss.¶ In theory, Tehran could keep inspectors focused on the known nuclear sites while developing weapons elsewhere. And under the treaty, Iran can deny access to inspectors of any non-negotiated site for up to 24 days, raising concerns from some that an Iranian nuclear program could be moved frequently and kept underground.¶ If Iran refuses to allow inspectors to look at a site after 24 days, the US and its partners can reinstate the sanctions being lifted.¶ Given past Iranian behavior and attempts to conceal key aspects of its nuclear program, Wolfsthal said US negotiators and other world powers crafted the agreement on the assumption that Tehran would try to cheat.¶ "Our expectation is that Iran will implement the agreement, but the verification mechanism is structured to assume otherwise," Wolfsthal said.¶ Obama hit back at the idea that the Iranians could develop and produce nuclear weapons without inspectors being aware of the issue, noting that inspectors will be keeping a close eye

on the potential streams of nuclear material and have 24/7 access to known sites.¶ “The nature of nuclear programs and facilities is such, this is not something you hide in a closet. This is not something you put on a dolly and kind of wheel off somewhere,” Obama said. “And, by the way, if we identify an undeclared site that we’re suspicious about, we’re going to be keeping eyes on it.”¶ Wolfsthal noted that compared with previous agreements with North Korea, Iraq and the Moscow Treaty of 2002, which numbered a handful of pages, the treaty is meticulously detailed and annexed.¶ “We assume they will try to cheat. But this agreement is more than 100 pages long; it’s like no nonproliferation agreement that’s ever been signed. It will prevent them from cheating.”¶ Acton agreed the document is crafted to address such concerns, noting that “it is impossible” to hide evidence of a nuclear program within that 24-day time period.¶ “If Iran wants a secret program, they have to procure yellow cake and centrifuge components,” Acton said. “It now can’t do that from existing facilities because they will be monitored. So then it will have to build more facilities or acquire it on the black market — creating opportunities for detection.”¶ Joe Cirincione, president of the Washington-based Plowshares Fund, added Iran has very little, if any, room for error to hide a secret attempt at a nuclear program.¶ “The claims about the inspection regime are particularly ridiculous to anyone who knows anything about inspecting nuclear programs. If Iran were to flush the evidence down the toilet, they’d have a radioactive toilet. And if they were to rip out the toilet, they’d have a radioactive hole in the ground. They simply won’t be able to cheat,” he said.¶ “There is no silver bullet,” to preventing a secret Iranian program, Acton noted. “There is nothing else that could be included in this agreement that solves the problem. What it does contain is a series of provisions that significantly mitigate the chance.”¶ In other words, **while a black program may be hypothetical, it is logistically very, very difficult**. And Iran was never going to allow inspectors 24/7 access to its entire territory, so the system put in place here helps create roadblocks to a secret program being spun up, Reif said.¶ According to Wolfsthal, Washington aims to expand the funding, technological expertise and personnel it contributes to the IAEA to ensure “24/7 monitoring.¶ “We’re providing satellite coverage, live camera feeds, radio identification, tamper seals. ... We will know whatever goes on in those facilities,” he said.¶ Barbara Slavin, senior fellow of the Atlantic Council’s South Asia Center and host of the July 15 event, noted that Iran has abided by previous commitments put forth in the interim agreement and believes the public focus of its people will help keep the agreement on track.¶ “This is a nation that, despite the rhetoric of its leaders, is influenced by its public.”¶ Slavin, who has made repeated visits to Tehran, added the Iranian people aspire to turn a new page with regard to their place in the world.¶ Congressional Challenge Ahead?¶ Cirincione said the debate surrounding the deal needs to be broken down into three parts.¶ “On its nuclear merits, **the expert community is overwhelmingly in favor of this deal. There is not a serious debate on whether it blocks Iran from the bomb; it does,**” he said. “**But then** you get into policy, and that’s where you’ll find a divide among regional experts. And where **it really gets contentious is at the political level;** that’s **where facts don’t really matter anymore.**”¶ Indeed, while experts are happy with the deal, **members of Congress moved quickly to criticize the agreement** — in some cases, before the final wording was even released publicly.¶ The most audible criticisms are coming from Republican members of the House and Senate, as well as the bevy of GOP presidential hopefuls who seem to view a deal with Iran as a cudgel that can be wielded during campaign season.¶ Much of the criticism is of the same flavor: that the US and Israel are less safe because of the agreement reached with

Tehran.¶ Sen. Kelly Ayotte, R-N.H., said the deal "appears to be an historic capitulation on Iran's nuclear program," while her counterpart on the Senate Armed Services Committee, Sen. Lindsey Graham, R-S.C., slammed the deal in a series of television appearances. Graham, notably, is a GOP presidential hopeful who is staking his campaign on his foreign policy and defense credentials.¶ The committee's chairman, Sen. John McCain, R-Ariz., cited concerns that Iran already is expanding in other parts of the region and that loosening restrictions will allow the Iranian government to spread its influence unchecked.¶ "Ultimately, the problem with this agreement is that it is built far too much on hope, on the belief that somehow the Iranian government will fundamentally change in the next several years," McCain said in a statement.¶ "This is delusional and dangerous."¶ **Realistically, Lewis sees little chance that Congress successfully blocks the deal, as it would require veto-proof majorities in both the House and Senate.** Instead, he said, expect a lot of talk, a lot of posturing, and potentially, a way for members of Congress to avoid the issue entirely.¶

But, it will be a battle – PC is key to hold off republican spoiling

By: Kimberly **Atkins 7-8** "Atkins: Expect a battle on the Hill after Iran deal done" Boston Herald http://www.bostonherald.com/news_opinion/columnists/kimberly_atkins/2015/07/atkins_expect_a_battle_on_the_hill_after_iran_deal

WASHINGTON — As Secretary of State John Kerry and a team of negotiators continue eleventh-hour talks in hopes of securing a nuclear pact with Iran, **lawmakers on Capitol Hill are gearing up for a battle** over whatever plan emerges — and **the GOP-dominated Congress could have considerable influence over how the deal is implemented, even if Republicans cannot swing enough Democratic votes to shoot the pact down.**¶ "Congress can establish a 'Team B,' a technique that has been used in the past to monitor the implementation of this agreement so that there are outside experts with access to all the intelligence who can confirm compliance or ensure that noncompliance is detected," said Robert Joseph, senior scholar at the National Institute for Public Policy and former George W. Bush administration State Department undersecretary.¶ **The White House has already begun an urgent behind-the-scenes campaign to sell the pact to Democratic lawmakers not only to prevent intra-party defections that could help Republicans torpedo the agreement, but also to help combat the expected firestorm of criticism from GOP presidential candidates.**¶ President Obama met with several Democratic senators last night, and Iran was on the agenda.¶ The pact is expected to ease sanctions against the Iranian regime in exchange for limits on its nuclear program and monitoring intended to prevent the development of weapons.¶ Critics, including Israeli officials, have said the U.S. appears likely to give too much in exchange for too little. Although negotiators have extended the deadline for reaching a deal to Friday, the timing for Kerry is more urgent.¶ If a deal is sent to Congress for review by tomorrow, lawmakers will have 30 days to approve or reject it.¶ **If a deal is reached after that, lawmakers get a 60-day review, giving critics more time to drum up opposition,** and giving GOP presidential candidates another talking point as debate season begins next month.¶ **Even if a deal is approved, lawmakers have already promised to push to**

continue or even ratchet up sanctions against Iran, a move White House officials have warned could derail the pact.

iran prolif snowballs and causes nuke war

Matthew **Kroenig 12** (1-24, Stanton Nuclear Security fellow at the Council on Foreign Relations. "Five reasons to attack Iran"

<http://www.csmonitor.com/Commentary/Opinion/2012/0124/Five-reasons-to-attack-Iran/A-strike-is-the-least-bad-option>

1. A nuclear-armed Iran poses a grave threat to international peace and security. Iran currently restrains its foreign policy because it fears US and Israeli retaliation. With nuclear weapons, Tehran will be emboldened by the confidence that it can engage in provocation and use its nuclear weapons to deter the worst forms of retaliation. A more aggressive Iran will increase its support to terrorists and engage in tougher coercive diplomacy. Nuclear weapons in Tehran will cause global nuclear proliferation, as other states in the Middle East seek their own nuclear weapons in response, and as Iran provides uranium enrichment technology to US enemies. The global nonproliferation regime would be weakened. A nuclear Iran could threaten nuclear war to stop developments contrary to its interests, giving the world a nuclear scare every few years. And given that the nuclear balance between Iran and its adversaries would be less stable than the one that held between the United States and the Soviet Union during the cold war, these future crises could very well spiral out of control resulting in a nuclear exchange between Iran and Israel or even Iran and the United States.

Impact Overview 2NC

Deal failure outweighs -- prolif snowballs and causes escalatory spirals of nuclear conflict—crushes the global nonprolif regime – that’s Kroenig Iran deal failure causes nuclear war – Israel strike

Philip **Stevens 13**, associate editor and chief political commentator for the Financial Times, Nov 14 2013, “The four big truths that are shaping the Iran talks,”
<http://www.ft.com/cms/s/0/af170df6-4d1c-11e3-bf32-00144feabdc0.html>

The who-said-what game about last weekend’s talks in Geneva has become a distraction. The six-power negotiations with Tehran to curb Iran’s nuclear programme may yet succeed or fail. But wrangling between the US and France on the terms of an acceptable deal should not allow the trees to obscure the forest. The organising facts shaping the negotiations have not changed. The first of these is that Tehran’s acquisition of a bomb would be more than dangerous for the Middle East and for wider international security. It would most likely set off a nuclear arms race that would see Saudi Arabia, Turkey and Egypt signing up to the nuclear club. The nuclear non-proliferation treaty would be shattered. A future regional conflict could draw Israel into launching a pre-emptive nuclear strike. This is not a region obviously susceptible to cold war disciplines of deterrence. The second ineluctable reality is that Iran has mastered the nuclear cycle. How far it is from building a bomb remains a subject of debate. Different intelligence agencies give different answers. These depend in part on what the spooks actually know and in part on what their political masters want others to hear. The progress of an Iranian warhead programme is one of the known unknowns that have often wreaked havoc in this part of the world. Israel points to an imminent threat. European agencies are more relaxed, suggesting Tehran is still two years or so away from a weapon. Western diplomats broadly agree that Ayatollah Ali Khamenei has not taken a definitive decision to step over the line. What Iran has been seeking is what diplomats call a breakout capability – the capacity to dash to a bomb before the international community could effectively mobilise against it. The third fact – and this one is hard for many to swallow – is that neither a negotiated settlement nor the air strikes long favoured by Benjamin Netanyahu, Israel’s prime minister, can offer the rest of the world a watertight insurance policy. It should be possible to construct a deal that acts as a plausible restraint – and extends the timeframe for any breakout – but no amount of restrictions or intrusive monitoring can offer a certain guarantee against Tehran’s future intentions. By the same token, bombing Iran’s nuclear sites could certainly delay the programme, perhaps for a couple of years. But, assuming that even the hawkish Mr Netanyahu is not proposing permanent war against Iran, air strikes would not end it. You cannot bomb knowledge and technical expertise. To try would be to empower those in Tehran who say the regime will be safe only when, like North Korea, it has a weapon. So when Barack Obama says the US will never allow Iran to get the bomb he is indulging in, albeit understandable, wishful thinking. The best the international community can hope for is that, in return for a relaxation of sanctions, Iran will make a judgment that it is better off sticking with a threshold capability. To put this another way, if Tehran does step back from the nuclear brink it will be because of its own calculation of the balance of advantage. The fourth element in this dynamic is that Iran now has a leadership that, faced with the severe and growing pain inflicted by

sanctions. is prepared to talk There is nothing to say that Hassan Rouhani, the president, is any less hard-headed than previous Iranian leaders, but he does seem ready to weigh the options.

U: Will Pass 2NC

Will pass now and obama is pushing – solves Mideast war

Matt Spetalnick and Patricia Zengerle, **Reuters, 7-16-2015**, "Republicans are honing in on their plan to derail the Iran nuclear deal," Business Insider, <http://www.businessinsider.com/r-republicans-target-un-arms-embargo-rollback-in-bid-to-derail-iran-deal-2015-7?r=UK&IR=T>

WASHINGTON (Reuters) - Republicans on Thursday honed their attack plan against President Barack Obama's Iran nuclear deal in Congress, targeting part of the pact that calls for eventually rolling back a U.N. arms embargo on Tehran. Opponents of the landmark nuclear agreement hope to use the arms embargo issue, one of the final obstacles to the accord sealed in Vienna on Tuesday between Iran and six world powers, to draw some of Obama's wavering Democrats into helping to derail it. "It blows my mind that the administration would agree to lift the arms and missile bans," John Boehner, speaker of the U.S. House of Representatives and the top Republican in Congress, told reporters. But even as Republicans who control Congress sharpened their criticism, Obama's top aides stepped up their defense of the historic deal to restrict Iran's nuclear program in exchange for sanctions relief. Vice President Joe Biden met Democrats on Capitol Hill for the second day in a row to make the administration's case. Participants said much of the questioning focused on a final compromise that Obama agreed to for lifting the United Nations ban on Iran after five years for conventional weapons and eight years for ballistic missile technology. "It's hard for us to accept it, so we just want to take a look at it," said Senator Ben Cardin, top Democrat on the Senate Foreign Relations Committee. Obama says the deal is the only alternative to Iran moving forward on developing a nuclear weapon, **risking more war in the Middle East.** Tehran has denied seeking a bomb. Critics of the broader deal say easing sanctions will empower Iran financially to expand its influence in the Middle East in the near term. But many lawmakers are just as worried that Tehran's access to advanced arms – even years down the line – would give it even greater ability to fuel regional sectarian strife and threaten U.S. ally Israel. With Congress due to begin a 60-day review of the Iran deal, Republicans hope that misgivings expressed earlier by top Pentagon officials when the arms embargo issue was still under negotiation would give them further leverage with Democrats. Army General Martin Dempsey, chairman of the Joint Chiefs of Staff, told a congressional hearing last week: "Under no circumstances should we relieve pressure on Iran relative to ballistic missile capabilities and arms trafficking." Obama, at a news conference on Wednesday, shrugged off such concerns, saying that the U.S. arms embargo would remain in effect and that the United States and its partners would still have other ways of preventing Iran from acquiring and sending weapons to militant groups. While critics accused the United States of caving on a last-minute Iranian demands in order to salvage Obama's legacy achievement, Wendy Sherman, a key U.S. negotiator, said the American team always knew it would have to be resolved at the end of the talks. Russia and China, two of the world powers involved, had taken Iran's side and pushed for the arms embargo to be lifted. She insisted that while Iran wanted an immediate lifting of the embargo, the United States won a "very tough" bargain in stretching it

out for years.¶ With a U.N. Security Council vote on a resolution considered likely as early as next week, the Republican chairs of the House Foreign Affairs and Homeland Security Committees have sent a letter to Obama asking him to delay the vote.¶ The embargo issue was the final major holdup before a deal was sealed.¶ On July 8, Obama, under pressure from critics who accused him of giving too much ground, held a video conference with his team in Vienna in which he "essentially rejected the deal that was on the table", in part because he didn't like the how fast the U.N. embargo would be removed, a White House official said.¶ The compromise that ultimately won Obama's approval extended that timetable.¶ Republicans would need the support of dozens of Democrats to sustain a "resolution of disapproval" that could [destroy] cripple a deal. But the odds are considered slim that they could muster enough support to overrule an Obama veto.

Veto threat holds now – it will pass

Friedman 7-1415 Dan Friedman joined the Washington bureau of the Daily News in December 2012. He covers Congress, the White House and the New York delegation. Dan Friedman. 7/14/2015. "Opponents of Iran nuclear deal blast pact, Obama after agreement reached" <http://www.nydailynews.com/news/politics/opponents-iran-deal-blast-pact-obama-article-1.2291488>. 7/14/15.

WASHINGTON — Congressional opponents of diplomacy with Iran rushed Tuesday to condemn President Obama's nuclear deal with the Islamic Republic, but are unlikely to round up the votes needed to block the deal. House Speaker John Boehner (R-Ohio) vowed Tuesday to fight what he called "a bad deal that is wrong for our national security and wrong for our country." "The agreement will hand Iran billions in sanctions relief while giving it time and space to reach a break-out threshold to produce a nuclear bomb - all without cheating," Boehner said. Israeli Prime Minister Benjamin Netanyahu said "this agreement is an historic mistake for the world." But congressional Democrats mostly praised the agreement or remained silent, suggesting Republicans will be hard-pressed to find Democratic support needed to reject the agreement. Instead they will hope to make opposition a campaign issue next year. Obama said in remarks Tuesday morning that he will "veto any legislation that prevents the successful implementation of this agreement." WIN MCNAMEE/GETTY IMAGES House Speaker John Boehner (R-Ohio) vowed to fight what he called 'a bad deal that is wrong for our national security and wrong for our country.' Congressional opponents will need two-thirds of votes in both congressional chambers to overcome his veto. House Minority Leader Nancy Pelosi (D-Calif.), who weighed in in favor of the agreement, and Senate Minority Leader Harry Reid (D-Nev.) will work to ensure the Democrats don't join in veto override efforts. But it may not even come to that. Obama can probably avoid using his veto pen. With 54 Senate seats, Republicans will be hard pressed to gather 60 votes they will need to pass legislation rejecting the agreement. Within minutes of Obama's early morning remarks on the agreement, Sen. Tom Cotton (R-Ark.) a vocal critic of the talks, called the agreement "a terrible, dangerous mistake that's going to pave the path for Iran to get a nuclear weapon." Rep. Lee Zeldin (R-Long Island) a hawkish freshman said Obama "just negotiated away our sanctions that made for critical leverage to deal with so many other completely unacceptable acts."

Iran deal will likely pass, but Republicans will make it a tough fight, Obama will have to go all out to make sure it passes

Borger 7/15; JULIAN BORGER is the Guardian's diplomatic editor. He was previously a correspondent in the US, the Middle East, Eastern Europe and the Balkans; 7/15/15; "Iran nuclear deal moves to battleground of US Congress"; (<http://www.theguardian.com/world/2015/jul/14/iran-nuclear-deal-moves-to-battleground-of-us-congress>)

The battle over the Iran nuclear agreement is set to move to Washington as the Obama administration begins a three-month campaign to stop the hard-won deal being derailed by congressional Republicans. The deal – reached in a Vienna hotel early on Tuesday morning after prolonged talks between foreign ministers – binds Iran, the US, UK, France, Germany, Russia and China to a series of undertakings stretching over many years. Iran will dismantle much of its nuclear infrastructure, while the UN, US and European Union will remove a wall of sanctions built around Iran over the last nine years. Republicans and some Democratic hawks in Congress, who have long argued that there should be no nuclear programme on Iranian soil whatsoever, are determined to find ways to sabotage an agreement that they argue seeks to manage rather than prevent an Iranian nuclear programme and endangers Israel. The struggle to win over wavering Democratic votes in the Senate will pit some American allies against others. The Israeli prime minister, Binyamin Netanyahu, signalled that he would intervene assertively in the debate on Capitol Hill in an attempt to kill the deal, which will grant sanctions relief to Iran in return for its acceptance of long-lasting curbs on its nuclear programme. In that debate, Israel will be assisted by the Gulf Arab monarchies. On the other side, Britain, France and Germany – all parties to the historic agreement – will be called on to support the administration's argument, that the agreement protects the US and its friends in the region. In a statement to coincide with the announcement of the deal, known officially as the Joint Comprehensive Plan of Action (JCPOA), Barack Obama said: "I am confident that this deal will meet the national security interest of the United States and our allies. So I will veto any legislation that prevents the successful implementation of this deal." The president's Iranian counterpart, Hassan Rouhani, said a new phase had begun in Iran's relations with the rest of the world, while the foreign minister, Mohammad Javad Zarif, who led his country's delegation in Vienna, described the agreement as a "win-win" solution, but not perfect. "I believe this is a historic moment," he said. "We are reaching an agreement that is not perfect for anybody but is what we could accomplish. Today could have been the end of hope, but now we are starting a new chapter of hope." Federica Mogherini, the EU's foreign policy chief, said the agreement would "open the way to a new chapter in international relations" and show that diplomacy can overcome decades of tension. "This is a sign of hope for the entire world," she said. Netanyahu, who has faced mounting criticism at home over his handling of the diplomacy around Iran, denounced the deal even before the details had emerged. Heading a chorus of condemnation from Israeli politicians – including many members of his rightwing coalition – he said the agreement was a capitulation and a mistake of historic proportions. The hardline former foreign minister Avigdor Lieberman described it as "a total surrender to terror". Yair Lapid, head of the Yesh Atid party, said Netanyahu's campaign over Iran had been a "colossal failure". The Obama administration has a few days to present the agreement to Congress, which then has 60 days to review it. Another 22 days is set aside for an initial vote, in which the Republican majority is likely to reject the deal, and then a second vote, over which there is a presidential veto. The Republicans have to win over just a handful of Senate Democrats to ensure a congressional vote of disapproval is not blocked by a filibuster. They would have to peel off 12 Democrats or independents to override Obama's veto, an uphill task. Republicans were vociferous in denouncing the JCPOA. One of the party's presidential hopefuls, the former Arkansas governor Mike Huckabee, said: "Shame on the Obama administration for agreeing to a deal that empowers an evil Iranian regime to carry out its threat to 'wipe Israel off the map' and bring 'death to America.'" Other Republicans echoed the near-apocalyptic rhetoric

consistently used by Netanyahu in denouncing the deal. The Democratic frontrunner, Hillary Clinton, supported the deal, calling it "an important step, which puts a lid on Iran's nuclear programmes". However, the Democrat Chuck Schumer, who is likely to become the Senate minority leader, was noncommittal. He said he would "go through this agreement with a fine-tooth comb ... Supporting or opposing this agreement is not a decision to be made lightly, and I plan to carefully study the agreement before making an informed decision." Speaking in the Austrian capital, the secretary of state, John Kerry, who led the US negotiating team, said: "If Congress were to veto the deal, the United States of America would be in non-compliance with this agreement and contrary to all of the other countries in the world. I don't think that's going to happen." "I really don't believe that people would turn their backs on an agreement which has such extraordinary steps in it with respect to Iran's programme as well as access and verification," he said. The UK's foreign secretary, Philip Hammond, who was in Vienna for many of the last critical days of negotiations, said the US administration "is confident that it will carry the argument with Congress". "[The agreement] will give the international community the confidence it needs that Iran will not have the capability to go for a bomb," Hammond said. "There is an opportunity now for an opening that will allow us to understand each other better, get behind some of the mythology and hopefully create a new dynamic in the region, where Iran can play a more constructive and transparent role in regional affairs." Hammond said the UK had fought hard in the last days of the bargaining to ensure an arms embargo on Iran would remain in place for five years, with restrictions on the transfer of missile technology remaining for eight years. Those measures were essential to "reassure Iran's neighbours in the region", he said. Under the terms of the agreement, a UN security council resolution will be passed later this month, codifying the JCPOA, which would be an attachment to the resolution. The agreement, however, would not come into effect for 90 days, allowing time for domestic review processes in Washington and Tehran. Iran would then take a series of steps to reduce the scale of its nuclear programme, which would be verified by the UN nuclear watchdog, the International Atomic Energy Agency, which Hammond said had been given "excellent access provisions ... so that we can be highly confident that the obligations that Iran is entering into will be complied with".

The Iran Deal will pass barely, there will be a huge political battle, Obama will have to push the bill to pass

- **So I am split about this card. It could be used as the bill will or won't pass. It could technically be used for either side. It could also be an ! extension card.**

Abdullah 7/15; HALIMAH ABDULLHA is published by CNN. He is also published by ABC News, Google News, Market Watch, The Next Web, and The New York Times; 7/15/15; "Obama: Iran Nuke Deal Makes Our Country, World Safer"; (<http://www.nbcnews.com/news/us-news/coming-obama-takes-questions-iran-nuclear-deal-n392511>)

President Barack Obama fiercely defended the historic nuclear deal with Iran as he faced White House reporters Wednesday at a press conference. "The bottom line is this. This nuclear deal meets the national security interest of the United States and our allies," the president said. "It prevents the most serious threat, Iran obtaining a nuclear weapon, which would only make the other problems that Iran may cause even worse. That's why this deal makes our country and the world safer and more secure." Six world powers, including the United States, reached the deal on Tuesday. It aims to limit Iran's nuclear capability in exchange for lifting punishing economic sanctions. Obama has said the deal eliminates every pathway to an Iranian nuclear weapon. The president is also keenly aware that it will take work to convince U.S. lawmakers, especially those who have expressed deep skepticism, to support the agreement. "I expect the debate to be robust, as it should be," the president said on Wednesday. During the press conference, the president referred to notes and dissected point by point the type of criticism leveled at the deal since it was announced. He also said that critics of the deal have not presented a better alternative and indicated that he was ready for an engaged conversation on the matter. "I suspect this is not the last

we've heard of this debate," the president said. **The deal still faces a vote in Congress, although it is unclear whether Republicans and some Democrats who object to the deal will actually be able to override the decision — and Obama threatened Tuesday to veto any attempt to reject the accord. Republicans have said it amounts to appeasement of a dangerous regime.** Sen. Lindsey Graham of South Carolina, a presidential candidate, said on TODAY that **the deal was like throwing gasoline on a fire.** After House Democrats emerged from a briefing Wednesday morning with Vice President Joe Biden, New York Democrat Rep. Steve Israel said he is a "skeptic" of the agreement, but will take the entire 60-day review period to figure out if this deal is worth supporting. "I think the vice president made as convincing of an argument as he can make, but I think there are a lot of questions to be answered," Israel said. "I had been skeptical from the beginning of this. I am still skeptical. I read the Joint Comprehensive plan of action last night and there was nothing in it to relieve my skepticism." Israeli leadership has been more blunt in its criticism. Prime Minister Benjamin Netanyahu of Israel told Lester Holt that **Iran "has two paths to the bomb: One if they keep the deal, the other if they cheat on the deal."** **The agreement involves limiting Iran's nuclear production for 10 years and Tehran's access to nuclear fuel and equipment for 15 years in return for hundreds of millions of dollars in sanctions relief.** However, the sanctions would not be lifted until Iran proves to the International Atomic Energy Agency that it has met its obligations under the terms of the deal. **The agreement also includes the provision of a "snap back" mechanism that could lead to the reinstatement of sanctions within 65 days if Iran violates the terms of the deal, according to officials.** The head of the International Atomic Energy Agency confirmed Iran also has signed a roadmap with his organization to clarify outstanding issues. The agreement also makes no mention of the four Americans who have been held in Iran for years, a fact Obama said "nobody is content" over in fiery remarks. **Nuclear and foreign policy experts say that while the agreement isn't perfect it is the best option on the table right now. "The deal will happen,"** said David Rothkopf, a former Clinton administration official and editor of Foreign Policy Group, a collection of foreign policy publications. "**Congress can't stop it. So its critics ought to start focusing on how to make it work in the context of a broader strategy rather than simply trying to score political points."**

U: Obama Pushes 2NC

PC gets it over the finish line

Reuters, 7-19-2015, "Obama Sends Congress the Iran Nuclear Deal," Newsweek,
<http://www.newsweek.com/obama-sends-congress-iran-nuclear-deal-355293>

Obama has promised to exercise his veto if Congress rejects the deal, which curbs Iran's nuclear program while allowing an easing of economic sanctions. ¶ Try Newsweek for only \$1.25 per week ¶ Overriding it would require a two-thirds majority of both the House of Representatives and Senate, so the administration is **working to win over enough of Obama's fellow Democrats to offset strong Republican opposition.**

Uq doesn't overwhelm- obama's involvement is key

Chris **Villani**, 7-19-2015, "Dem, GOP reps: Murky forecast for Iran deal in Congress," Boston Herald,

http://www.bostonherald.com/news_opinion/local_coverage/2015/07/dem_gop_reps_murky_forecast_for_iran_deal_in_congress

The future of the Iran nuclear deal in Congress is uncertain, congressmen from both sides of the aisle said on Boston Herald Radio today.¶ **“I think it’s going to be close, but it’s hard to tell,”** Massachusetts Democrat Michael Capuano said. “It looks at the moment as though most of the Republicans will be in lock-step against whatever the president supports and there are some Democrats who will have some problems with this. I think there are enough votes to support a veto, but the president has his work cut out for him.”¶ “On my side of the aisle, I think there will be strong agreement to override, the question is ‘what to the Democrats do?’” Oklahoma Republican Jim Bridenstine said. “From what I have been hearing from some Democrats, it seems they are very concerned about this.”

U: A2 “Deal Expires”

Even if the deal expires in 10 years, sanctions and other regulations will be in place which checks Iran’s nuclear capabilities

Jalabi 7/15; RAYA JALABI is a reporter and editor for *The Guardian*; 7/15/15; “Obama defends Iran nuclear deal as battle moves to Congress – live updates”;
(<http://www.theguardian.com/world/live/2015/jul/15/barack-obama-iran-nuclear-deal-congress-live-updates>)

Obama addresses what happens if the deal holds, at the end of the set 10 years. Some of the restrictions will still be in place, he says. The inspections will not go away. There’s no scenario in which the US president is not in a stronger position 15 years from now, if Iran wanted to develop a nuclear weapon down the line, he says. Even if what the critics say are true, Obama says, that at the end of 10-15 years, Iran is now in a position to develop a nuclear weapon, that they are at a breakout point, they won’t be at a more dangerous breakout point than they are now. It won’t be shorter than the one that exists today, he says.

U: A2 “Future Prez Rollback”

Future presidents won't roll back

Aaron **Mehta**, 7-18-2015, "Experts Praise Iran Deal, Despite Congressional Concerns," Defense News, <http://www.defensenews.com/story/defense/policy-budget/2015/07/18/experts-praise-iran-deal-despite-congressional-concerns/30261893/>

Acton said that if a deal goes through, it is highly unlikely that the next president will look to end it — despite widespread condemnation of the deal from the current crop of GOP hopefuls. “If this goes into effect and a future president decides to roll it back, they will be responsible for giving Iran carte blanche to do its nuclear program. End of story,” Acton said. “If Congress were to overcome the barriers in its way and override the treaty, it would likely lead to the crumbling of sanctions from the international community, said several of the experts.

Greg **Myre**, 7-14-2015, "How The Iran Nuclear Deal Could Reshape The Middle East," NPR.org, Greg Myre is the international editor of NPR.org
<http://www.npr.org/sections/parallels/2015/07/14/422536452/how-the-iran-nuclear-deal-could-reshape-the-middle-east>

Is it a good deal? President Obama and his detractors are headed for a ferocious debate on this question following the nuclear agreement announced Tuesday in Vienna between Iran and six world powers. The evidence will likely trickle in over an extended period. What's certain is that the narrow and highly technical negotiations on Iran's nuclear program will influence the much broader trajectory of the Middle East in many ways, large and small. One impact was instant: Oil prices tumbled in response to the prospect of increased Iranian oil on the world market. The nuclear deal was more than a decade in the making and bars Iran from moving toward nuclear weapons for at least another decade in exchange for relief from international sanctions that have been squeezing hard. "Every pathway to a nuclear weapon is cut off," Obama said Tuesday morning. For Obama, it's a signature diplomatic achievement that he regards as the best available option for keeping Iran out of the nuclear weapons club. Beyond that, he's hoping for an added bonus in which Iran, its international isolation eased, will be more inclined to reduce rather than inflame Middle East tensions. But the many critics, including U.S. Republicans, Israel and Saudi Arabia, say they don't trust Iran to abide by the terms. And an Iran unshackled from sanctions will have even greater resources to stir up trouble in the region, they say. Related Coverage President Obama, standing with Vice President Joe Biden, delivers a statement about the nuclear deal reached between Iran and six major world powers during an address from the White House on Tuesday. THE TWO-WAY The Latest On Iran Deal: Obama Says Deal Provides New Way Forward Israel's Prime Minister Benjamin Netanyahu issued a statement before the deal was formally announced, saying, "From the initial reports we can already conclude that this agreement is a historic mistake for the world." Intelligence Squared U.S. debate stage. INTELLIGENCE SQUARED U.S. Debate: Is Obama's Iran Deal Good for America? NPR Morning Edition host Steve Inskeep interviews President Obama on April 6 at the White House. POLITICS Transcript: President Obama's Full NPR Interview On Iran Nuclear Deal Of the many possible scenarios that could play out, there's also a middle ground between the visions offered by Obama and his critics. The nuclear deal could proceed as planned, but Iran may remain an aggressive actor that continues to be at odds with the West and many Sunni Muslim states across the Middle East. Here's a look at the key issues, as well as the wider impact it could potentially have. Iran Faces Tough Inspections: The U.S. says this is the most intrusive inspection regime ever placed on any country. The International Atomic Energy Agency will have regular access to all nuclear facilities, according to the agreement. Without an agreement, Iran could kick out or limit IAEA access, making it far more difficult, if not impossible, to keep tabs on the nuclear program. During the negotiations, Iran described the inspections in different language, calling it "managed access." One key question was over inspections at military sites. Iran has often balked at this, saying the military installations are not part of its nuclear facilities. A compromise was reached that would allow inspectors to monitor military sites, but Iran could challenge requests for access, according to The Associated Press. Iran's 'Breakout Time' Will Be

Lengthened: There's broad consensus that Iran, at present, could produce enough highly enriched uranium to build a nuclear weapon within a few months. The deal is designed to extend Iran's nuclear "breakout time" to at least a year. The thinking is this would give the U.S. and others plenty of time to respond if Iran scraps the agreement and makes a sprint toward a weapon. Iran will be required to reduce its current stockpile of enriched uranium by 98 percent, according to the White House. The remaining uranium it keeps will be at low levels, sufficient for a power plant, but nowhere near what's needed for a weapon. Iran will also have to reduce by two-thirds its centrifuges that can enrich uranium. This has not impressed critics who say Iran developed its program at secret, hidden facilities in the past and could do so again. Some say they would not be satisfied even if Iran sticks to the letter of the deal. They argue that Iran's nuclear enrichment program is now entrenched in the agreement and that, after a decade, many restrictions will begin to fall away. Sanctions Relief: Sanctions have been biting. Perhaps the most punitive measure took effect three years ago, when Europe and others stopped buying Iran's oil, its main export. Iran's oil exports have been down by roughly half, delivering a major economic blow. Iran wanted all sanctions lifted immediately. But the U.S. says inspectors must first verify that Iran has met all its obligations, and this process could take months. The U.S., the United Nations and the European Union all have their own sanctions against Iran, and each would have to act independently to lift them. Republicans in the U.S. Congress are authorized to review the agreement, but they will need a two-thirds majority to block the deal and override a veto by Obama. From Iran's perspective, the EU oil and banking sanctions are the ones that have the greatest adverse effect on their economy. Assessing the overall sanctions picture, analysts have tossed around the figure of \$100 billion in relief that could come Iran's way in the short term. The Broader Middle East: [Obama has sketched an optimistic scenario in which Iran observes the nuclear deal, which builds trust and shows Iran the benefits of cooperation in the region and with the West. One possible example: Both the U.S. and Iran are battling the self-described Islamic State in Iraq and Syria, though they insist there's no formal collaboration. If the nuclear deal goes well, it could open up the possibility for the U.S. and Iran to work together, formally or informally, for the first time since Iran's 1979 Islamic Revolution.](#) But the critics see a much more pessimistic future. Iran is emboldened by the deal, receives a badly needed influx of cash and pushes to further extend its influence in countries where it already plays a key role, including Iraq, Syria, Lebanon and Yemen. Reaching a deal was tough. Some of the hardest questions are still ahead.

Iran deal Good solves prolif

James **Conca**, 11-30-2013, "The Iranian Nuclear Deal Is A Good One," Forbes, <http://www.forbes.com/sites/jamesconca/2013/11/30/the-iranian-nuclear-deal-is-a-good-one/>, WGR 7-16-14

This Thanksgiving had an extra reason to be thankful – the new deal between Iran and six superpowers. Last week, the United States, Great Britain, France, Germany, Russia and China (the P5+1 group) reached an interim deal with Iran to stop their nuclear weapons program. Four key provisions were obtained in this deal:

1) no enrichment of U above 5% U-235, and all highly-enriched materials, some as high as 20% U-235, must be blended down to less than 5% or altered to a form not usable for weapons. 2) no additional centrifuges are to be installed or produced, and three-fourths of the centrifuges at Fordow and half of the centrifuges at Natanz will be inoperable, 3) stop all work on the heavy-water reactor at Arak, provide design details on the reactor (which could be used to produce Pu for the other type of atomic weapon) and do not develop the reprocessing facilities needed to separate Pu from used fuel, 4) full access by IAEA inspectors to all nuclear facilities, including daily visitation to Natanz and Fordow, and continuous camera surveillance of key sites. Despite all the rhetoric of horror and claims that this deal is a mistake, this deal is just what we all hoped for as the first step to resolving the Iranian nuclear weapons issue, the structure of which we've been proposing for years. It is the first step to bringing Iran into the world's nuclear community as a partner instead of an adversary, making Iran a compliant signatory of the Non-Proliferation Treaty. While this may make some of its neighbors nervous, there is no real alternative that does not involve lots of destruction and death. Old orders are falling in the Middle East. The region is in upheaval, Shia and Sunni are as far apart as ever, and Iran's theocracy, embodied by their new President Hassan Rouhani, has decided that the cost/benefit of maintaining an expensive, useless nuclear program that is still a long way from producing a reliable weapon, while being starved by a barrage of sanctions, on the heels of a global economic meltdown, has now gone into the too-much-cost-and-not-enough-benefit category. Thus, there is now an opening to change the game. This deal is not about trust, as the last point above about access addresses. No one trusts governments, even supposedly good ones. There must be unfettered access to verify that the nuclear facilities are not being used to produce weapons and that is what this deal allows, and it will be easy to determine when Iran breaks this deal (The Economist; The Guardian; Fox News). But the facilities can, and will, be used to support nuclear power, as was the original purpose of Iran's nuclear program when the United States set it up under the Shah in the 1960s, and that is the actual end point of this whole deal. Not the end of Iran's nuclear program or the destruction of their facilities, their country or their people.

Iran deal good

Christopher A. **Preble, 7-14-2015**, Christopher A. Preble is the vice president for defense and foreign policy studies at the Cato Institute. "The Pros and Cons of the Iranian Nuclear Deal," Cato Institute, <http://www.cato.org/blog/pros-cons-iranian-nuclear-deal>, WGR, 7-16-14

Earlier today in Vienna, international negotiators reached a deal with Iran over its nuclear program. **The New York Times reports that the agreement will eventually lift oil and financial sanctions, "in return for limits on Iran's nuclear production capability and fuel stockpile over the next 15 years."** The international restrictions on Iranian arms exports will remain in place for up to 5 years, and the ban on ballistic missile exports could remain for up to 8 years. In a televised statement this morning, President Obama defended his decision to engage in the negotiations "from a position of strength" and assured the American people that, **under the deal, "Iran will not be able to achieve a nuclear weapon."** His opponents are sure to challenge both assertions. **The deal**, Obama said, **"is not built on trust, it is built on verification."** Those

verification provisions appeared to have been one of the final sticking points in the negotiations. According to the Associated Press, the Iranians agreed to allow inspection of Iranian military sites, “something the country’s supreme leader, Ayatollah Ali Khamenei, had long vowed to oppose,” but such inspections are not the surprise, snap inspections that some had pushed for. **The focus now turns to the Senate, which has 60 days to review the agreement. Senators could vote to block it, but Obama has already pledged that he would veto any legislation that prohibits the deal’s implementation.** He has a reasonably strong hand to play. Even if all Senate Republicans vote to kill the deal, opponents would need at least a dozen Senate Democrats to vote with them in order to override the president. Expect the details of the nearly 100-page document to come under close scrutiny, even though many opponents don’t appear to believe that the specifics matter that much. For them, nearly any deal is a bad deal. For example, the latest entrant into the 2016 Republican presidential contest, Wisconsin Governor Scott Walker, yesterday pledged to “terminate the bad deal with Iran on Day One” – before the terms were even finalized. And he predicted that any other Republican president would do the same. Arkansas’s freshman Senator Tom Cotton has publicly stated that his object has been to blow up any deal. For Walker, Cotton, and others you don’t negotiate with a regime like Iran’s – you destroy it. But counter proliferation by means of regime change has a bad odor today, thanks chiefly to the Iraq war that, coincidentally, many of the most outspoken Iran deal opponents had a hand in pushing on the American people beginning in the late 1990s. They have learned nothing, it appears, but most Americans have: refusing to engage diplomatically with an odious regime, or waging war to separate said regime from its weapons – by removing the regime from power – is a costly proposition, and there is no guarantee that the government that emerges in its place will be better than that which came before. George W. Bush came around to this view by the middle of his second term in office: the man who in 2002 cast Iran as a charter member of the Axis of Evil – along with Iraq and North Korea – supported the P5 + 1 negotiating process that eventually led to today’s deal. So keep all this in mind in the coming weeks as the details of the Iran deal are debated in Washington and around the country. Deal opponents have an obligation to describe their preferred alternative, not merely what they are against.

Iran solves terror, Middle East war, and prevents proliferation

Jalabi 7/15; RAYA JALABI is a reporter and editor for The Guardian; 7/15/15; “Obama defends Iran nuclear deal as battle moves to Congress – live updates”; (<http://www.theguardian.com/world/live/2015/jul/15/barack-obama-iran-nuclear-deal-congress-live-updates>)

That’s it from Barack Obama’s press conference on Iran. Here’s a summary of what the US president said: Obama argued the debate over the landmark nuclear agreement was ultimately a choice between diplomacy and war. He praised the historic deal, preempted critics by saying the deal “meets the national security interests of the US and its allies”, and reminded all present that the sole priority was always to stop Iran from developing a nuclear weapon. Obama said he hoped the deal would help encourage Iran to decrease its regional involvement and terrorist activities, but he wasn’t betting on it. Obama said that Iran’s support for terrorism remained a concern, but said blocking Iran from getting a nuclear weapon was more important than blocking Iran from funding its regional proxies. Obama said he hoped Congress would evaluate the deal based on the facts, though he conceded that politics would inevitably intrude.

Iran deal good

Haaretz, 7-16-2015, "Iran deal: good or bad? Five analyses you don't want to miss,"

<http://www.haaretz.com/news/diplomacy-defense/1.666240>, Haaretz is a newspaper based out of Israel. WGR 7-16-15

Barak Ravid acknowledges various shortfalls in the agreement, but says that Prime Minister Benjamin Netanyahu is mistaken and misleading when he suggests a good agreement was even possible. At least this deal, Ravid says, will compel Iran to take steps that it would unlikely take under any other scenario. Ravid adds that a decade in the Middle East is a long time, and an Iran that is closer to the U.S. could be an Iran that's less dangerous for Israel.

Iran deal good for US

Haaretz, 7-16-2015, "Iran deal: good or bad? Five analyses you don't want to miss,"

<http://www.haaretz.com/news/diplomacy-defense/1.666240>, Haaretz is a newspaper based out of Israel. WGR 7-16-15

Peter Beinart, on the other hand, says this deal, while imperfect, achieves America's goal of peacefully preventing Iran from achieving a nuclear weapon. He says the real reason behind the drama playing out between Israel and the United States over the deal is that the two countries have conflicting vital interests: the U.S. does not want to keep Iran weak. In fact, the United States would prefer a relatively strong Iran to maintain the balance of power in the Middle East and possibly even help in the fight against Islamic State. Israel, on the other hand, has a vital interest in keeping Iran weak. What scares Jerusalem most is that the deal legitimizes Iran's regime internationally and ends sanctions, giving Tehran a lot more cash, and with it a lot more power.

Iran deal good

James M. **Acton**, 7-14-2015, "Iran Deal: Not Perfect, But Better Than Nothing," Carnegie Endowment for International Peace, <http://carnegieendowment.org/2015/07/14/iran-deal-not-perfect-but-better-than-nothing/idfg>, WGR 7-16-14

Carnegie's James Acton talked to CNBC about why Tuesday's nuclear deal with Iran is better than existing alternatives. Acton argued that the agreement has very stringent limits on Iran's

nuclear activities lasting between ten and twenty-five years, as well as some very stringent verification provisions to detect cheating.

"It's not a perfect deal, but the result I believe is better than any of the reasonably achievable alternatives at this point," Acton said.

Acton added that it would be very hard to undo the deal and that that is "a good thing."
Responding to criticisms of the deal, Acton pointed out that the Soviet Union lied and yet the United States successfully did arms control with the USSR.

"This idea that the Iran deal is somehow based on trusting Iran is simply wrong. There are stringent verification provisions associated with this deal," Acton said.

Plan stops gangbusters, slows down enrichment programs, and has many safeties to stop a country breaking of the agreement

"I would give it an A": Why nuclear experts love the Iran deal", Max Fisher 7-15, July 15, 2015, online @ <http://www.vox.com/2015/7/15/8967147/iran-nuclear-deal-jeffrey-lewis>

Jeffrey Lewis is the director of the East Asia Nonproliferation Program at the Monterey Institute of International Studies, and also runs an excellent arms control blog network and arms control podcast and has a regular arms control column in Foreign Policy.

Jeffrey Lewis was so eager to read the Iran nuclear deal that he woke up at 3:30 am California time to pore through all 150-plus pages of the text. Lewis is a nukes super nerd: He's the director of the East Asia Nonproliferation Program at the Monterey Institute of International Studies, and also runs an excellent arms control blog network and arms control podcast and has a regular arms control column in Foreign Policy. He is the person to talk to on this. 1When Lewis and I first spoke, in early 2015, he was skeptical, as a lot of arms control analysts were. He was skeptical that the US, world powers, and Iran would ever reach a nuclear deal. And he was skeptical that if they did reach a deal, it would be good enough. But when the negotiators released the "framework" in April, describing the broad strokes, Lewis came away impressed and happily surprised — but with some caveats and some unanswered questions. I called up Lewis to see what he thought of the final deal. His assessment was very positive: Asked to grade the deal, he said, "I would give it an A." Max Fisher: Talk me through what your reactions were as you were reading through the text of the deal. Jeffrey Lewis: I'm reading it and I'm bored, because it looks like exactly the fact sheet from the spring [from the framework deal] and the explanations that Obama administration officials gave privately. There were little points where I thought, "Oh, that's an interesting little detail, I'm glad they caught that." Or, "Oh, they dealt with that problem." It's exactly the deal they had in the spring. There are little things that they improved on, or that they fussed with, but it's the same. Max Fisher: Well, but there are some holes they filled in, some unresolved stuff in the framework, and I want to ask you about that later on. But first I want to ask more broadly, back in April you told me that the framework was very good if they could get it on a formal agreement and if they could resolve the open issues.

So did they do that? Jeffrey Lewis: Yes. That's exactly what I was going to tell you. The thing I was saying at the time was, "The fact sheet looks great, good luck getting that on paper." And then they did it. Max Fisher: Are you surprised? Jeffrey Lewis: Well, there was always a deal to be had here if reasonable people could make reasonable compromises. I never really count on that, but it seems like they did it. I wouldn't say I'm surprised, but I am pleased. I'm happy with it. I was talking to a colleague who is unhappy [with the deal], and it's kind of fascinating. He's unhappy because, he said, "We spent eight years, and the deal we got is not better than the deal we could have gotten eight years ago." And it's like, oh, no kidding. That's not an indictment of the deal, my friend, it's an indictment of eight years of fucking around. "SEE IT AS A REALLY STRAIGHTFORWARD MEASURE TO SLOW DOWN AN ENRICHMENT PROGRAM THAT WAS GOING GANGBUSTERS" Max Fisher: Why is this a good deal? Jeffrey Lewis: It's a good deal because it slows down their nuclear program — which they say is for civilian purposes but could be used to make a bomb, and which we think was originally intended to make a bomb. And it puts monitoring and verification measures in place that mean if they try to build a bomb, we're very likely to find out, and to do so with enough time that we have options to do something about it. There's a verifiable gap between their bomb option and an actual bomb. That's why it's a good deal. Max Fisher: So that rests on Iran looking at all of this and saying, "It's not worth even trying to cheat on the deal." Jeffrey Lewis: It's a slightly more resigned attitude. I can't get inside the supreme leader's head. He might be a guy who likes to take risks. He might be stupid, he might get bad advice. So I don't ever look at a situation where you're trying to deter someone and say, "This will work." Because you can never know that. What I try to do is ask, "Have we done all of the things that we reasonably can so that more will not help, and we can't imagine more intrusive mechanisms that are likely to be accepted?" What you want is to feel like the administration has maxed out what they could have reasonably hoped to achieve. You can't know that [Iranian Supreme Leader Ayatollah Ali Khamenei] will be deterred. But I don't know that there's any way to make him more deterred than this. "I KNOW IT MAKES THE FRENCH REALLY ANGRY WHEN THEY HEAR THIS, BUT..." Max Fisher: When we talked in April, just after the framework came out, the biggest unresolved issue was sanctions relief for Iran. It wasn't clear how the timing would work, how the sanctions would come off. So how did this work out in the final deal? Jeffrey Lewis: It looked like we thought it would look. They knew they would have to massage the Iranian demand for immediate sanctions relief, and the American demand for sanctions to be lifted conditionally, and they did it the way we thought they would do it, which is with an implementation period. The simple version is that the US can say, "Sanctions don't come off until the agreement is implemented," and Iran can say, "Sanctions come off immediately." And that satisfies the requirements of each political system. Max Fisher: The two other components that are getting a lot of discussion are "managed access" for inspectors to certain Iranian military sites, which I talked about with Aaron Stein in a separate Q&A [to be published soon]. The second is the "snapback" process for bringing back sanctions in case Iran cheats. What do you make of that? Jeffrey Lewis: The snapback thing is really clever, I had to read it a couple of times to make sure it said what I think it said. According to the deal, the way this is going to work is that sanctions will be lifted, but in a conditional fashion. If any party to the deal — and, not to spill the beans, that means the United States — is dissatisfied with Iran's compliance, then first it has to go to the joint commission [of the seven states that signed the Iran deal plus the European Union]. If they don't get satisfaction, then they go to the UN

Security Council. And they can notify them that they're not satisfied with the compliance of another party. That starts a 30-day clock ticking. The Security Council must act to resolve the concerns of the state. If the Security Council does nothing — which could include them trying to pass something and the US vetoing it — at the end of the 30 days, if there's no action from the Security Council, the sanctions are reimposed automatically.

Max Fisher: You wonder how they got Russia and China on board for this, given that the entire snapback arrangement is basically a fancy way of cutting Russia and China out of any decision on reimposing sanctions and stripping them of their Security Council veto authority on this issue. Jeffrey Lewis: This was, I suspect, satisfactory to Russia and China for two reasons. One is they seem to really care about the principle of their veto, and so even though this in practice provides an end run around their veto, it doesn't take it away from them. I think they cared about that principle more than anything else. It's the same way that they set it up so that the cowards in Congress don't have to vote on the deal if they don't want to. They can talk for 60 days, and talk about how much they hate it, and then filibuster it into action. Lotta profiles of courage on this deal. The second reason, which I do think makes sense, is that through the perspective of the Chinese and Russians — and even the Iranians — this is really a deal between the US and Iran. I know it makes the French really angry when they hear this — they played an important role, and I don't want to diminish it — but at the end of the day, if this deal collapses it's the US that would end up bombing Iran. So even though it sounds like the US can blow up the deal any time it wants and revert to sanctions, that's just how things are anyway. So it's kind of a nod to the reality that, on some level, this is really just a US-Iran deal. "THESE ARE PEOPLE WHO ARE BUILDING NUCLEAR WEAPONS — THERE ARE NO NOT-MORALLY-DUBIOUS PEOPLE INVOLVED" Max Fisher: A lot of what you wrote throughout 2014 was skeptical. Not of the idea of the Iran deal, but rather skeptical that they could make it work, that they would get there in time, that they would have all the right conditions. Jeffrey Lewis: That's right. I had no faith whatsoever that they could pull this off. Max Fisher: Now that we're here, what grade would you give it? Jeffrey Lewis: I would give it an A. Max Fisher: A solid A! Jeffrey Lewis: I mean, it's hard. There are two pieces to this. Compared to the deal we could have gotten 10 years ago, if the Bush administration hadn't had their heads up their butts? Not an A! That would have been a great deal! I remember when they had 164 centrifuges, in one cascade, and I said, "You know what, we should let them keep it in warm standby. No uranium, just gas." And people were like, "You're givin' away the store!" Max Fisher: We would kill for that now! They got cut down to 5,000 centrifuges, and it's a huge deal. Jeffrey Lewis: Exactly. And that's been the fundamental experience of this for me. Every six months, the deal we could have gotten six months before looks better. Every time we tried to hold out for a better deal, and every time we got in the position of a worse deal. So, compared to where they started, and what I thought was feasible to achieve, this team I thought did a fantastic job. If this team had been in place in 2003 or 2004 or 2005, it might have looked even better. But they inherited what they inherited, and they did a pretty decent job with it. How could I give them less than A? Max Fisher: We did a post just rounding up tweets from arms control analysts on what they're saying about the Iran deal, and it was really hard to find arms control analysts who seem to be critical of the deal on the nonproliferation merits. Maybe there are some we just missed, but it seems like the consensus was overwhelmingly positive, which was so interesting to me because it's very different from the conversation among Middle East policy analysts, which is much more divided. Why do you think that is?

Jeffrey Lewis: If you are interested in the nonproliferation piece — how to say this. As a deal, this is what deals look like. Actually, they usually don't look this good. So if you don't know that... When I read people saying, you know, "I can't believe we're making a deal with these morally dubious people," I understand why a regional security specialist might feel that way. But when you work in the arms control field, they're all morally dubious people! These are people who are building nuclear weapons — there are no not-morally-dubious people involved. So when you take that out of the equation, you end up just looking at, "Do these limits slow them down, are they verifiable, are we likely to catch them if they cheat, are we likely to have enough time to do anything?" The problem [for regional analysts] is not going to be the terms. It's not going to be how it's written. It's going to be the fact that one side or another decides they don't like the idea of it. But the deal itself can still be perfectly workable. "WHEN I SEE IRANIANS POURING OUT INTO THE STREETS WITH JOY, THAT GIVES ME A LITTLE BIT OF ANXIETY" Max Fisher: So if regional analysts look at a deal with a terrible regime and see it as morally dubious, and arms control analysts look at it and aren't bothered, is that because arms control people are just amoral monsters? Jeffrey Lewis: Maybe! But I think it's more that they're looking at it differently. Whenever I hear regional security specialists talk about the deal, it is just a bizarre conversation. Because they all talk about how either it will fundamentally alter our relationship with the Islamic Republic [of Iran], which I think is just silly, or about how it's a mistake to try to fundamentally alter our relationship with the Islamic Republic. I just don't think that the deal does any of those things. I see it as a really straightforward measure to slow down an enrichment program that was going gangbusters. So you ask, "Does it slow it down?" Yes. "Does it slow it down in a way that is verifiable?" Yes. "Does it slow it down more than bombing it would?" Yes. "Okay, good deal." That might be a different way of looking at it. But when two countries have a security situation that is so poor that one or both of them feels the need to acquire weapons, you're really just trying to keep them from killing each other. You're not hoping for a fundamental transformation. Like the reason that the Agreed Framework [the 1994 nuclear deal with North Korea] didn't work — well, it didn't work for lots of reasons, but at its core, North Koreans want to be accepted as a normal country. And that was not going to happen. We wanted them to be a non-nuclear pariah as opposed to a nuclear pariah; we did not want to accept them as a normal country. So they were always disappointed that this tiny little bit of disarmament that they engaged in didn't cause us to forget that they have labor camps and that they execute people with anti-aircraft guns. Libya's the other place where this happened [after Libya negotiated a 2003 deal with the US to give up its entire nuclear program]. Qaddafi thought this would give him a good relationship with the West. Except guess what! Max Fisher: But if you're saying that part of what Iran wants here is to not be a pariah state anymore, doesn't that mean transforming the relationship on some level beyond just nonproliferation? Jeffrey Lewis: I interpret them as being interested in sanctions relief, and that's I suppose a way in which they're becoming less of a pariah, that they can trade. So I guess in a narrow sense that's not being a pariah. But until they stop supporting [Lebanese terrorist group] Hezbollah, doing what they're doing in Syria and Iraq and Yemen, I don't think there's going to be a transformation in the relationship. If that's their hope — when I see Iranians pouring out into the streets with joy, that gives me a little bit of anxiety. They need to manage their expectations a little better than that.

US protects venerable countries and prevents escalation

Rosenberg, 7/15 (Matthew Rosenberg, national security reporter for the New York Times, 7-15-2015, "U.S. Offers to Help Israel Bolster Defenses, Yet Iran Nuclear Deal Leaves Ally Uneasy," New York Times, http://www.nytimes.com/2015/07/16/world/middleeast/us-offers-to-help-israel-bolster-defenses-yet-nuclear-deal-leaves-ally-uneasy.html?_r=0, accessed 7/16/15, SAM)

WASHINGTON — When President **Obama** called Prime Minister Benjamin Netanyahu on Tuesday to discuss the nuclear deal with Iran, the American president **offered the Israeli leader**, who had just deemed the agreement a "historic mistake," a consolation prize: **a fattening of the already generous military aid package the United States gives Israel.** The nuclear agreement, which would lift sanctions on Iran in exchange for restrictions designed to prevent it from developing a nuclear weapon, would ultimately provide a financial windfall to Israel's sworn enemy in the region, and Mr. Obama said he was prepared to hold "intensive discussions" with Mr. Netanyahu on what more could be done to bolster Israel's defenses, administration officials said. Nuclear Pact Raises Kin's Hopes of Freedom for 3 Held in Iran JULY 15, 2015 Prime Minister Benjamin Netanyahu of Israel said on Tuesday that the accord with Iran would allow Tehran to continue Iran Deal Denounced by Netanyahu as 'Historic Mistake' JULY 14, 2015 But, as in previous talks with Mr. Obama, Mr. Netanyahu refused to engage in such talk "at this juncture," the officials said, speaking on the condition of anonymity to detail the private discussions. And on Tuesday, as administration officials fanned out to make the case for the Iran agreement, one aide suggested in a phone call to Jewish and pro-Israel groups that Mr. Netanyahu had rebuffed their overtures because he believes accepting them now would be tantamount to blessing the nuclear deal, say people involved in the call who did not want to be quoted by name in describing it. Photo Prime Minister Benjamin Netanyahu of Israel with President Obama at the White House in 2013. Credit Charles Dharapak/Associated Press The president himself has hinted that he believes the Israeli prime minister is loath to talk about any additional security assistance he may want from the United States until after Congress has had its say on the Iran deal. Lawmakers have 60 days to review the deal, which Mr. Netanyahu has urged them to reject. Mr. Netanyahu "perhaps thinks he can further influence the congressional debate, and I'm confident we're going to be able to uphold this deal and implement it without Congress preventing that," Mr. Obama said in an interview with the New York Times columnist Thomas L. Friedman on Tuesday, hours after

announcing the accord. He went on: "But after that's done, if that's what he thinks is appropriate, then I will sit down, as we have consistently throughout my administration, and then ask some very practical questions: How do we prevent Hezbollah from acquiring more sophisticated weapons? How do we build on the success of Iron Dome, which the United States worked with Israel to develop and has saved Israeli lives?" That conversation may begin as soon as next week, when the defense secretary, Ashton B. Carter, is planning to travel to Israel and meet with Israeli leaders. The Iran deal is likely to feature prominently in the discussions, defense officials said, but it remains unclear what, if anything, he might offer the Israelis. That issue is the latest chapter in the long history of tensions and mistrust between Mr. Obama and Mr. Netanyahu, who have clashed publicly and privately over the nuclear deal and whose relationship became particularly strained this year after Mr. Netanyahu arranged to address Congress to denounce the pending agreement without first notifying the White House. "The idea that somehow Israel would be compensated for this deal in the way the Gulf states would be is rejected by this prime minister as signaling that he is somehow silently acquiescing to it," said David Makovsky, a fellow at the Washington Institute for Near East Policy. "The negative optic would be, he is being bought off from his principled opposition. He sees any package now as muddying what he sees as the moral clarity of his objection." In Israel, the question was not whether the deal would be followed by a robust new military aid package from Washington, but rather when such discussions would commence and what might be on the shopping list. Isaac Herzog, the leader of the opposition in Parliament, said Tuesday night that he would soon travel to the United States "to advance a package of security measures to suit the new situation." Yuval Steinitz, the senior Israeli minister sent Wednesday morning to brief international journalists, was blunt when asked about Mr. Obama's promises: "It's wrong to use the word 'compensation' because there is no real compensation from a nuclear threat." When pressed, he said, "Of course we are ready to speak on everything — we never said no." "Our attitude is first to focus on the agreement," Mr. Steinitz said, adding that there might still be room to "fix some things." American officials said the Israelis were not interested in engaging in the kind of quid pro quo that appeared to go on when Mr. Obama invited Persian Gulf leaders to Camp David earlier this year. During that May visit, Mr. Obama offered Saudi Arabia and smaller Arab states new support to defend against potential missile strikes, maritime threats and cyberattacks from Iran. The United States has offered Israel an array of defense capabilities in recent years, some of which Israel decided against because of budget constraints. United States Defense Secretary Chuck Hagel offered V-22 Osprey aircraft and aerial refueling tankers when he visited Tel Aviv in 2013. But Israel decided that its own money and the security aid provided by America were better used on other items, said Derek Chollet, a United States assistant secretary of defense at the time. Giora Eiland, a former Israeli national security adviser, said that adding batteries, radars and missiles to the Arrow missile-defense system should be "the No. 1 priority." Focusing on such defensive capabilities would enable both sides to frame the deal not as political "compensation" but rather as a response to Israel's concerns that lifting sanctions will increase the threats against it by Iranian-backed groups like Hezbollah and Hamas, he said. Some officials suggested that one way to indirectly placate Israel involved how much security assistance the United States will offer in coming years, under a memo of understanding being renegotiated before it expires in 2018. The current agreement, which went into effect in 2009, provides for \$3 billion a year, most of which is used by Israel to buy American military hardware,

such as jets and components for missile defense. In talks that started long before the Iran nuclear deal began to take shape, Israel requested between \$4.2 billion and \$4.5 billion a year for the next 10 years, an official familiar with the talks said.

Iran Prolif Bad – Middle East Instability

Nuclear Iran creates instability and insecurity in the Middle East

Kahl '12 (Colin H., an associate professor in the Security Studies Program in the Edmund A. Walsh School of Foreign Service at Georgetown University, where he teaches courses on international relations, international security, the geopolitics of the Middle East, American foreign policy, and civil and ethnic conflict. He is also a senior fellow at the Center for a New American Security (CNAS), a Washington, DC-based think tank. Current research projects include assessments of the geopolitical implications of Iranian nuclearization and a separate study of the evolution of U.S. counterinsurgency practices during the Iraq war. , "Iran and the Bomb

Would a Nuclear Iran Make the Middle East More Secure?" ,September/October, Foreign Affairs, <https://www.foreignaffairs.com/articles/iran/2012-07-17/iran-and-bomb>, LS)

Kenneth Waltz is probably right that a nuclear-armed Iran could be deterred from deliberately using nuclear weapons or transferring a nuclear device to terrorists ("Why Iran Should Get the Bomb," July/August 2012). But he is dead wrong that the Islamic Republic would likely become a more responsible international actor if it crossed the nuclear threshold. In making that argument, Waltz mischaracterizes Iranian motivations and badly misreads history. And despite the fact that Waltz is one of the world's most respected international relations theorists, he ignores important political science research into the effects of nuclear weapons, including recent findings that suggest that new nuclear states are often more reckless and aggressive at lower levels of conflict. RATIONAL BUT DANGEROUS Waltz correctly notes that Iran's leaders, despite their fanatical rhetoric, are fundamentally rational. Because Iran's leadership is not suicidal, it is highly unlikely that a nuclear-armed Iran would deliberately use a nuclear device or transfer one to terrorists. Yet even though the Islamic Republic is rational, it is still dangerous, and it is likely to become even more so if it develops nuclear weapons. Iran's government currently sponsors terrorist groups and supports militants throughout the Middle East, in part to demonstrate a capability to retaliate against the United States, Israel, and other states should they attack Iran or undermine its interests. If the Iranian leadership's sole concern was its own survival and it believed that a nuclear deterrent alone could give it enough protection, then as a nuclear state, it might curtail its support for proxies in order to avoid needless disputes with other nuclear powers. But Iran is not a status quo state, and its support for terrorists and militants is intended to be for more than just defense and retaliation. Such support is an offensive tool, designed to pressure and intimidate other states, indirectly expand Iran's influence, and advance its revisionist agenda, which seeks to make Iran the preeminent power in the Middle East, champion resistance to Israel and "arrogant powers" in the West, promote its brand of revolutionary Islamist ideology, and assert its leadership in the wider Islamic world. Tehran currently calibrates its support for militants and sponsorship of terrorism to minimize the risks of a direct confrontation with more powerful states. But if Iranian leaders perceived that a nuclear arsenal provided a substantially more robust deterrent against retaliation, they would likely pursue their regional goals more aggressively. Specifically, a nuclear-armed Tehran would likely provide Hezbollah and Palestinian militants with more sophisticated, longer-range, and more accurate conventional weaponry for use against Israel. In an effort to bolster the deterrent capabilities of such allies, Iran might consider giving them "dual-capable" weapons,

leaving Israel to guess whether these systems were conventional or armed with chemical, biological, or nuclear material. A nuclear-armed Iran might also give its proxies permission to use advanced weapons systems instead of keeping them in reserve, as Tehran reportedly instructed Hezbollah to do during the militant group's 2006 war with Israel. A nuclear-armed Iran, believing that it possessed a powerful deterrent and could thus commit violence abroad with near impunity, might also increase the frequency and scale of the terrorist attacks against U.S. and Israeli targets carried out by Hezbollah and the Quds Force, the covert operations wing of Iran's elite Islamic Revolutionary Guard Corps. And a bolder Iran might increase the number of Revolutionary Guard forces it deployed to Lebanon, allow its navy to engage in more frequent shows of force in the Mediterranean, and assert itself more aggressively in the Persian Gulf and the Strait of Hormuz. To further enhance its image in the eyes of domestic and regional audiences as the leader of an anti-Western resistance bloc, a nuclear-armed Iran might respond to regional crises by threatening to use all the means at its disposal to ensure the survival of the Assad regime in Syria, Hezbollah, or Palestinian groups. And Iran might be emboldened to play the spoiler in the Israeli-Palestinian peace process by encouraging large-scale militant attacks and might try to destabilize its neighbors through more coercive diplomacy and subversion in Iraq and the Gulf states. The growing influence of "principlist" hard-liners in Tehran makes those possibilities even more likely. The principlists' view of the world is shaped by their ideological belief in the inevitability of U.S. decline, Israeli defeat, and Iranian ascendance. They see the competition with the United States and Israel as a zero-sum game. If Iran obtains a nuclear weapon, the principlists will see it as a confirmation of their convictions and push the Iranian government further in the direction of risk and provocation. To be sure, a nonnuclear Iran already engages in many destabilizing activities. But equipped with nuclear weapons, Tehran would likely dial up its trouble-making and capitalize on its deterrent to limit the response options available to threatened states. THE STABILITY-INSTABILITY PARADOX "History shows that when countries acquire the bomb, they feel increasingly vulnerable and become acutely aware that their nuclear weapons make them a potential target in the eyes of major powers," Waltz argues. "This awareness discourages nuclear states from bold and aggressive action." In writing this, Waltz ignores a long history of emerging nuclear powers behaving provocatively. In 1950, for example, Soviet leader Joseph Stalin gave North Korea the green light to invade South Korea, thus beginning the Korean War. Stalin apparently assumed (incorrectly) that the United States was unlikely to respond because the Soviets had by then developed their own nuclear weapons. Waltz also claims that China became less aggressive after going nuclear in 1964. But in 1969, Mao Zedong authorized Chinese troops to attack Soviet forces on the Chinese-Soviet border. The attack was meant to warn Moscow against border provocations and to mobilize domestic Chinese support for Mao's revolution. Like Stalin before him, Mao was probably confident that China's recently acquired nuclear capabilities would limit the resulting conflict. (In the end, the border clashes produced a larger crisis than Mao had expected, raising the possibility of a Soviet nuclear strike, and China backed down.) Waltz also asserts that "India and Pakistan have both become more cautious since going nuclear." But Pakistan's development of nuclear weapons has in fact facilitated its strategy of engaging in low-intensity conflict against India, making the subcontinent more crisis-prone. As the political scientist S. Paul Kapur has shown, as Islamabad's nuclear capabilities have increased, so has the volatility of the Indian-Pakistani rivalry. Since 1998, when both India and Pakistan openly tested nuclear devices,

Islamabad has appeared more willing to back militant groups fighting in disputed Kashmir and to support groups that have conducted terrorist attacks elsewhere in India. Furthermore, in 1999, Pakistan sent conventional forces disguised as insurgents across the Line of Control in the Kargil district of Kashmir, triggering a limited war with India. This move was encouraged by the Pakistanis' belief that their nuclear deterrent placed clear limits on India's ability to retaliate with conventional weapons. Additionally, over the past decade, Pakistani-backed militants have engaged in high-profile terrorist attacks inside India itself, including the 2001 attack on the New Delhi parliament complex and the 2008 Mumbai attacks. Waltz writes that "policymakers and citizens in the Arab world, Europe, Israel, and the United States should take comfort from the fact that history has shown that where nuclear capabilities emerge, so, too, does stability." In fact, the historical record suggests that competition between a nuclear-armed Iran and its principal adversaries would likely follow the pattern known as "the stability-instability paradox," in which the supposed stability created by mutually assured destruction generates greater instability by making provocations, disputes, and conflict below the nuclear threshold seem safe. During the Cold War, for example, nuclear deterrence prevented large-scale conventional or nuclear war between the United States and the Soviet Union. At the same time, however, the superpowers experienced several direct crises and faced off in a series of bloody proxy wars in Korea, Vietnam, Afghanistan, Angola, Nicaragua, El Salvador, and elsewhere. A recent statistical analysis by the political scientist Michael Horowitz demonstrated that inexperienced nuclear powers tend to be more crisis-prone than other types of states, and research by another political scientist, Robert Rauchhaus, has found that nuclear states are more likely to engage in low-level militarized disputes with one another, even if they are less likely to engage in full-scale war. If deterrence operates the way Waltz expects it to, a nuclear-armed Iran might reduce the risk of a major conventional war among Middle Eastern states. But history suggests that Tehran's development of nuclear weapons would encourage Iranian adventurism, leading to more frequent and intense crises in the Middle East. Such crises would entail some inherent risk of a nuclear exchange resulting from a miscalculation, an accident, or an unauthorized use -- a risk that currently does not exist at all. The threat would be particularly high in the initial period after Iran joined the nuclear club. Once the superpowers reached rough nuclear parity during the Cold War, for example, the number of direct crises decreased, and the associated risks of nuclear escalation abated. But during the early years of the Cold War, the superpowers were involved in several crises, and on at least one occasion -- the 1962 Cuban missile crisis -- they came perilously close to nuclear war. Similarly, a stable deterrent relationship between Iran, on the one hand, and the United States and Israel, on the other, would likely emerge over time, but the initial crisis-prone years would be hair-raising. Although all sides would have a profound interest in not allowing events to spiral out of control, the residual risk of inadvertent escalation stemming from decades of distrust and hostility, the absence of direct lines of communication, and organizational mistakes would be nontrivial -- and the consequences of even a low-probability outcome could be devastating. A VERY REAL THREAT Because Waltz is sanguine about the effects of Iranian nuclearization, he concludes that "the United States and its allies need not take such pains to prevent the Iranians from developing a nuclear weapon." Waltz believes that the only utility of continued diplomacy is to maintain "open lines of communication," which "will make the Western countries feel better able to live with a nuclear Iran," and he argues that "the current sanctions on Iran can be dropped." Waltz is wrong. The

threat from a nuclear-armed Iran might not be as grave as some suggest, but it would make an already volatile Middle East even more conflict-prone. Preventing Iran from crossing the nuclear threshold should therefore remain a top U.S. priority. Because a preventive military attack on Iran's nuclear infrastructure could itself set off a series of unpredictable and destabilizing consequences, the best and most sustainable solution to Iran's nuclear challenge is to seek a negotiated solution through a combination of economic pressure and diplomacy. It is possible to oppose a rush to war with Iran without arguing, as Waltz does, that a nuclear-armed Iran would make the world a better place. COLIN H. KAHL is an Associate Professor at Georgetown University's Edmund A. Walsh School of Foreign Service and former Deputy Assistant Secretary of Defense for the Middle East. He is also a Senior Fellow at the Center for a New American Security and a co-author of its report Risk and Rivalry: Iran, Israel, and the Bomb, from which this response is adapted.

(**note** this article was written in response to the previous card “Nuclear Iran balances out powers in the Middle East creating stability and security” by Kenneth N. Waltz)

Iran Prolif Bad – Cascading Prolif?

Iran will need some sort of nuclear weapon to satisfy it's political needs

Waltz 12 (Senior Research Scholar at Saltzman Institute of War and Peace Studies, "Why Iran Should Get the Bomb", August 2012, <https://www.foreignaffairs.com/articles/iran/2012-06-15/why-iran-should-get-bomb>)

The crisis over Iran's nuclear program could end in three different ways. First, diplomacy coupled with serious sanctions could convince Iran to abandon its pursuit of a nuclear weapon. But this outcome is unlikely: the historical record indicates that a country bent on acquiring nuclear weapons can rarely be dissuaded from doing so. Punishing a state through economic sanctions does not inexorably derail its nuclear program. Take North Korea, which succeeded in building its weapons despite countless rounds of sanctions and UN Security Council resolutions. If Tehran determines that its security depends on possessing nuclear weapons, sanctions are unlikely to change its mind. In fact, adding still more sanctions now could make Iran feel even more vulnerable, giving it still more reason to seek the protection of the ultimate deterrent. The second possible outcome is that Iran stops short of testing a nuclear weapon but develops a breakout capability, the capacity to build and test one quite quickly. Iran would not be the first country to acquire a sophisticated nuclear program without building an actual bomb. Japan, for instance, maintains a vast civilian nuclear infrastructure. Experts believe that it could produce a nuclear weapon on short notice. Such a breakout capability might satisfy the domestic political needs of Iran's rulers by assuring hard-liners that they can enjoy all the benefits of having a bomb (such as greater security) without the downsides (such as international isolation and condemnation). The problem is that a breakout capability might not work as intended. The United States and its European allies are primarily concerned with weaponization, so they might accept a scenario in which Iran stops short of a nuclear weapon. Israel, however, has made it clear that it views a significant Iranian enrichment capacity alone as an unacceptable threat. It is possible, then, that a verifiable commitment from Iran to stop short of a weapon could appease major Western powers but leave the Israelis unsatisfied. Israel would be less intimidated by a virtual nuclear weapon than it would be by an actual one and therefore would likely continue its risky efforts at subverting Iran's nuclear program through sabotage and assassination -- which could lead Iran to conclude that a breakout capability is an insufficient deterrent, after all, and that only weaponization can provide it with the security it seeks. The third possible outcome of the standoff is that Iran continues its current course and publicly goes nuclear by testing a weapon. U.S. and Israeli officials have declared that outcome unacceptable, arguing that a nuclear Iran is a uniquely terrifying prospect, even an existential threat. Such language is typical of major powers, which have historically gotten riled up whenever another country has begun to develop a nuclear weapon of its own. Yet so far, every time another country has managed to shoulder its way into the nuclear club, the other members have always changed tack and decided to live with it. In fact, by reducing imbalances in military power, new nuclear states generally produce more regional and international stability, not less.

Iran Prolif Bad – Terrorism

Iranian proliferation increases terrorism

(Nahal Toosi- a foreign affairs correspondent at POLITICO. She joined POLITICO from The Associated Press, where she reported from and/or served as an editor in New York, Islamabad, Kabul and London. She was one of the first foreign correspondents to reach Abbottabad, Pakistan, after the killing of Osama bin Laden. Toosi worked for the Milwaukee Journal Sentinel, , 6-19-2015, "Iran still a proliferation 'concern' State Dept. says," POLITICO, <http://www.politico.com/story/2015/06/iran-proliferation-concern-state-department-report-119208.html>) Accessed July 15th 2015//PEG

Iran remains a state of nuclear “proliferation concern,” has kept up its support for terrorism in the Middle East and is trying to grow its influence in regions as far away as Latin America, the State Department said in its latest report on global terrorism. The 388-page report, released Friday, notes that the number of terrorist attacks jumped 35 percent from 2013 to 2014, and fatalities rose 81 percent. Much of that was due to terrorist activities in Iraq, Afghanistan and Nigeria. Iran, however, is of special concern in Washington because the U.S. is currently engaged in talks aimed at stopping the country’s nuclear program, which the West has long suspected is aimed at creating weapons. The U.S. designated Iran a state sponsor of terrorism in 1984, and the latest report’s section on Iran is emblematic of the dizzying nature of the alliances and enmities convulsing the Middle East today. The document notes Iran’s affiliations with Palestinian groups such as Hamas, as well as Hezbollah in Lebanon and various Shiite militias in Iraq. The Shiite militias, which have been accused of many abuses, nonetheless share the American aim of stopping the spread of the Sunni extremist Islamic State terror network, which has grabbed territory in Iraq and Syria. Iran uses its Islamic Revolutionary Guard Corps-Quds Force as its “primary mechanism” for cultivating terrorists abroad, the report says. It also discusses Iran’s support for the regime of Bashar Assad in Syria, which has led it to “provide arms, financing, training and the facilitation” of Iraqi Shiite and Afghan fighters to support Assad’s “brutal crackdown that has resulted in the deaths of at least 191,000 people in Syria.” “While its main effort focused on supporting goals in the Middle East, particularly in Syria, Iran and its proxies also continued subtle efforts at growing influence elsewhere including in Africa, Asia and, to a lesser extent, Latin America,” the report says, adding: “Iran remained unwilling to bring to justice senior [Al-Qaeda] members it continued to detain, and refused to publicly identify those senior members in its custody.” A comprehensive nuclear deal with Iran is due by June 30, although negotiators may miss the deadline. U.S. officials have stressed that although the accord could lead to a lifting of some nuclear-related international sanctions, the Iranians will still face sanctions related to their support for terrorism and abuses of human rights. Iran has long insisted its nuclear program is peaceful, and many lawmakers from both parties in Congress remain skeptical that Iran will fulfill its end of a deal. Arab allies of the U.S. also fear that once Iran gets access to billions of dollars in frozen assets, it will use that funding to foment more unrest in the Middle East.

Nuclear proliferation will have a drastic effect on the economy

Reichmuth, Short, Wood, Rutz, & Schwartz 05 (Researchers at the Pacific

Northwest National Laboratory, "Economic Consequences of a Rad/NNuc Attack: Cleanup Standards Significantly Affect Cost", April 2005, http://www.nuclearfiles.org/menu/key-issues/nuclear-weapons/issues/effects/PDFs/economic_consequences_report.pdf)

Property destruction, loss of life, and injuries sustained from a nuclear or radiological attack have significant economic consequences. The loss of productive assets can extend for long periods and generate significant economic loss. Economic impacts caused by an event need to be addressed in sequential order beginning with the detonation, atmospheric dispersion, and deposition of the fallout from the weapon. Weapon characteristics provide the boundary conditions for the response, including defining how large the response area is and what specific actions need to be taken to protect the population in the target area. These economic consequences are highly dependent on the magnitude of the weapon event and do not scale in a linear fashion. The cost to clean up or remediate the affected area will depend on the cleanup standard applied to the event and is highly sensitive to this standard. Currently, there are no cleanup standards specifically designed for Rad/Nuc terrorist events, but it is likely that the existing Environmental Protection Agency (EPA) and Nuclear Regulatory Commission (NRC) standards would apply defacto. The Department of Energy (DOE) has spent billions of dollars on superfund cleanup, under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) guidance, at former weapons production sites, and the cleanup is expected to continue through 2035. This paper offers an economic perspective on the magnitude of the consequences for a selected class of targets in the United States, with an emphasis on cost sensitivity as the cleanup standard changes. The prospect of a nuclear attack on the United States was long thought to be restricted to the domain of state actors.

Threat of nuclear proliferation has increased

Reichmuth, Short, Wood, Rutz, & Schwartz 05 (Researchers at the Pacific

Northwest National Laboratory, "Economic Consequences of a Rad/NNuc Attack: Cleanup Standards Significantly Affect Cost", April 2005, http://www.nuclearfiles.org/menu/key-issues/nuclear-weapons/issues/effects/PDFs/economic_consequences_report.pdf)

Following the terrorist events of September 11, 2001, and other more recent terrorist activities around the world, concerns about all types of terror attacks, including potential radiological and nuclear attacks, have been magnified. The spotlight has shifted to countermeasures that will either reduce the likelihood or reduce the consequences of a radiological or nuclear (Rad/Nuc) terrorist attack. The decision to invest in Rad/Nuc countermeasures can be viewed as a tradeoff between investment cost of the countermeasure and the consequences of the event. There are both physical consequences and economic consequences that would result from a Rad/Nuc event. Economic impacts caused by an event, and the subsequent response to the event, need to be addressed in sequential order and begin with the physical impacts of the detonation, atmospheric dispersion, and deposition of the fallout from the weapon. Physical consequences dictate the response function including the long-term cleanup and site restoration actions taken. One of the recurring themes regarding event response is that there are currently no federal standards that cover the long-term site restoration and cleanup following a radiological or improvised nuclear device (IND) terrorist attack. The cost to clean up or remediate the affected area is highly sensitive to the cleanup standard applied to the event. There are currently no cleanup standards specifically designed for Rad/Nuc terrorist events, but it is likely that the existing EPA and NRC standards would apply defacto [1]. The General Accounting Office (GAO) reports that the current EPA and NRC cleanup standards differ and these differences have implications for both the pace and ultimate cost of cleanup [2]. The Department of Energy (DOE) has spent billions of dollars on superfund cleanup at former weapons production sites and the cleanup is expected to continue through 2035 [3]. In 2003 recognizing the importance of this issue, the Department of Homeland Security (DHS) tasked an interagency working group to address the issue of Protective Action Guidelines (PAGs) for radiological dispersal devices (RDDs) and improvised nuclear device (IND) incidents. DHS anticipates a draft of that guidance to be issued in the Federal Register in June of 2005.

Prolif Bad – War

Nuclear weapons will likely lead to war

Waltz '81 (Ph.D, M.A. in political science from Columbia University, *The Spread of Nuclear Weapons: More May Better*”, 1981,
http://polsci.colorado.edu/sites/default/files/10B_Waltz.pdf

What are the principal worries? Because of the importance of controlling nuclear weapons—of keeping them firmly in the hands of reliable officials—rulers of nuclear states may become more authoritarian and ever more given to secrecy. Moreover, some potential nuclear states are not politically strong and stable enough to ensure control of the weapons and of the decision to use them. If neighbouring, hostile, unstable states are armed with nuclear weapons, each will fear attack by the other. Feelings of insecurity may lead to arms races that subordinate civil needs to military necessities. Fears are compounded by the danger of internal coups in which the control of nuclear weapons may be the main object of the struggle and the key to political power. Under these fearful circumstances to maintain governmental authority and civil order may be impossible. The legitimacy of the state and the loyalty of its citizenry may dissolve because the state is no longer thought to be capable of maintaining external security and internal order. The first fear is that states become tyrannical; the second, that they lose control. Both these fears may be realized, either in different states or, indeed, in the same state at different times. What can one say? Four things primarily. First, Possession of nuclear weapons may slow arms races down, rather than speed them up, a possibility considered later. Second, for less developed countries to build nuclear arsenals requires a long lead time. Nuclear power and nuclear weapons programmes, like population policies, require administrative and technical teams able to formulate and sustain programmes of considerable cost that pay off only in the long run. The more unstable a government, the shorter becomes the attention span of its leaders. They have to deal with today's problems and hope for the best tomorrow. In countries where political control is most difficult to maintain, governments are least likely to initiate nuclear-weapons programmes. In such states, soldiers help to maintain leaders in power or try to overthrow them. For those purposes nuclear weapons are not useful. Soldiers who have political clout, or want it, are less interested in nuclear weapons than they are in more immediately useful instruments of political control. They are not scientists and technicians. They like to command troops and squadrons. Their vested interests are in the military's traditional trappings. Third, although highly unstable states are unlikely to initiate nuclear projects, such projects, begun in stable times, may continue through periods of political turmoil and succeed in producing nuclear weapons. A nuclear state may be unstable or may become so. But what is hard to comprehend is why, in an internal struggle for power, any of the contenders should start using nuclear weapons. Who would they aim at? How would they use them as instruments for maintaining or gaining control? I see little more reason to fear that one faction or another in some less developed country will fire atomic weapons in a struggle for political power than that they will be used in a crisis of succession in the Soviet Union or China. One or another nuclear state will experience uncertainty of succession, fierce struggles for power, and instability of regime. Those who fear the worst have not shown with any plausibility how those expected events may lead to the use of nuclear weapons. Fourth, the possibility of one side in a civil war firing a nuclear warhead at its opponent's stronghold nevertheless remains. Such an act would produce a national tragedy, not an international one. This question then arises: Once the weapon is fired, what happens next? The domestic use of nuclear weapons is, of all the uses imaginable, least likely to lead to escalation and to threaten the stability of the central balance. The United States and the Soviet Union, and other countries as well, would have the strongest reasons to issue warnings and to assert control.

Prolif Bad – War

Prolif bad- intimidates other countries and escalates war conflicts

Quester 74

(George Quester, "More Nuclear Nations?: Can Proliferation Now Be Stopped?," Foreign Affairs, <https://www.foreignaffairs.com/articles/1974-10-01/more-nuclear-nations-can-proliferation-now-be-stopped>) Accessed July 15th 2015//PEG

Proliferation is indeed still bad for the world. The spread of nuclear weapons in some cases may make war more likely, because such weapons temptingly suggest preemptive strikes by the air forces of a region. And in most cases the spread of nuclear weapons will make war enormously more deadly and destructive, as entire cities become vulnerable to the strike of a single bomber. If one concluded that the Indian detonation made the further spread of nuclear weapons inevitable, this author would see that detonation as a disaster for the world. An alternative possibility will be explored here, however, that proliferation may yet be containable, even after the Indian action.

Prolif Bad – Impact Magnifier

Proliferation greatest existential threat- increased use in instable countries and terrorism

Wilson 2015

(Valerie Plame Wilson-the former CIA covert operations officer, was born on Elmendorf Air Force Base in Anchorage, Alaska in 1963. She holds a bachelor's degree from Pennsylvania State University and a master's degrees from the London School of Economics and Political Science and the College of Europe in Bruges, Belgium. Her career in the CIA included assignments in counterproliferation operations, working to ensure that enemies of the United States could not threaten America with weapons of mass destruction., 5-13-2015, "Looking Forward, Nuclear Proliferation Is Still Greatest Existential Threat We Face," Huffington Post, http://www.huffingtonpost.com/valerie-plame-wilson/nuclear-proliferation-existential-threat_b_7118460.html, Accessed 7-15-2015)//PEG

As a former covert CIA operative, specializing in counter-proliferation, I still believe that the spread of nuclear weapons and the risk of their use is the greatest existential threat we face. Twenty-six years after the end of the Cold War, the world still has more than 15,000 nuclear weapons. Whatever other issues people care about -- poverty, the environment, inequality and so many others -- if we don't get this one right, and soon, nothing else will matter. We are at a crossroads on this issue and the decisions we make over the next 10 years will set us on a course either toward the elimination of all nuclear weapons or toward expanding arsenals and proliferation. There are some disturbing trends. All of the nuclear countries are investing heavily, or planning to do so, in modernizing their forces and/or expanding their arsenals. President Obama is proposing a massive overhaul of the U.S. nuclear arsenal that the Congressional Budget Office (CBO) estimates will cost \$1 trillion over the next 30 years. Russia has already begun a major upgrade of its arsenal. China is ramping up each leg of its nuclear triad, India is close to having a full nuclear triad with the addition of a nuclear submarine to its forces, and North Korea continues to develop its nuclear capability. Perhaps most worrisome is Pakistan, which has the fastest-growing nuclear arsenal and is plagued by persistent political instability and extremist elements. In addition to developing new types of weapons, nuclear weapons countries also appear to be taking steps toward establishing the dangerous nuclear high-alert posture that the United States and Soviet Union adopted during the Cold War (and still maintain) -- shortening the decision time for launch and increasing the risk that nuclear weapons will be used in conflict, by accident or through unauthorized launch. Longstanding regional conflicts involving nuclear-armed countries remain unresolved and tensions high, including on the South Asian Peninsula, the Korean Peninsula and the Middle East. Relations between Russia and the West have spiraled dangerously downward; Russia has even threatened to use nuclear force to defend its annexation of Crimea. Meanwhile, terrorists are working to get their hands on the bomb. This danger has risen as states have failed and ungoverned zones have spread, especially in the Middle East and Africa. In the last two decades there have been dozens of incidents of nuclear explosive materials being lost or stolen. The so-called "Islamic State" group has already seized low-grade nuclear material from a facility in Mosul. These are very difficult challenges. But there are also significant factors that could provide opportunities for progress. A final agreement with Iran would verifiably prevent it from developing a nuclear bomb. It would negate a long-standing leading argument of opponents to Global Zero -- that Iran and countries like it would never agree to forgo nuclear weapons. And it provides a model --

multilateral negotiations and intrusive verification -- for pursuing global reductions in nuclear arsenals.

Iran deal will be completed, Obama's political capital is key to ensure congress accepts whatever terms are negotiated

Kimberly **Atkins, 7-8-2015**, Atkins: Expect a battle on the Hill after Iran deal done," Boston Herald,

http://www.bostonherald.com/news_opinion/columnists/kimberly_atkins/2015/07/atkins_expect_a_battle_on_the_hill_after_iran_deal, Accessed: 7-11-2015, /Bingham-MB

WASHINGTON — As Secretary of State John Kerry and a team of negotiators continue eleventh-hour talks in hopes of securing a nuclear pact with Iran, lawmakers on Capitol Hill are gearing up for a battle over whatever plan emerges — and the GOP-dominated Congress could have considerable influence over how the deal is implemented, even if Republicans cannot swing enough Democratic votes to shoot the pact down. “Congress can establish a ‘Team B,’ a technique that has been used in the past to monitor the implementation of this agreement so that there are outside experts with access to all the intelligence who can confirm compliance or ensure that noncompliance is detected,” said Robert Joseph, senior scholar at the National Institute for Public Policy and former George W. Bush administration State Department undersecretary. The White House has already begun an urgent behind-the-scenes campaign to sell the pact to Democratic lawmakers not only to prevent intra-party defections that could help Republicans torpedo the agreement, but also to help combat the expected firestorm of criticism from GOP presidential candidates. President Obama met with several Democratic senators last night, and Iran was on the agenda. The pact is expected to ease sanctions against the Iranian regime in exchange for limits on its nuclear program and monitoring intended to prevent the development of weapons. Critics, including Israeli officials, have said the U.S. appears likely to give too much in exchange for too little. Although negotiators have extended the deadline for reaching a deal to Friday, the timing for Kerry is more urgent. If a deal is sent to Congress for review by tomorrow, lawmakers will have 30 days to approve or reject it. If a deal is reached after that, lawmakers get a 60-day review, giving critics more time to drum up opposition, and giving GOP presidential candidates another talking point as debate season begins next month. Even if a deal is approved, lawmakers have already promised to push to continue or even ratchet up sanctions against Iran, a move White House officials have warned could derail the pact.

Deal failure causes Iran prolif and Israeli strikes

Ross, 10-16-2014

[Dennis, Foreign Affairs, How To Muddle Through With Iran,

<http://www.foreignaffairs.com/articles/142219/dennis-ross/how-to-muddle-through-with-iran> /Bingham-MB

One negotiator from the P5+1 (the five permanent members of the UN Security Council plus Germany) told me that he expects that if there is no agreement before the talks end, the Iranians will take the lid off their program and rapidly ramp up their uranium enrichment

program. Tehran would resume enriching uranium at 20 percent, increase its use of next generation centrifuges, and expand its stockpiles of enriched material. This would shrink the so-called break-out time that Iran would require to produce weapons-grade enriched uranium and potentially hide it. And that, in turn, would mean that the United States could no longer be confident that it could prevent Iran from possessing nuclear weapons.⁴¹ How would the United States respond? Its first step would almost certainly be to introduce more draconian sanctions against Tehran and mobilize international support for them. (The most important of these sanctions would be designed to greatly curtail Iran's ability to export its oil.) Notwithstanding the new sanctions, the Israeli government's temptation to launch a military strike against the Iranian nuclear program would surely grow -- not only because of the increased threat of Tehran's program, but also because the international community might be more forgiving of Israeli military action in circumstances where the Iranians appear to be rapidly accelerating their nuclear program.

Impact is extinction

John Scales Avery, Associate Professor, University of Copenhagen," COUNTERCURRENTS, 11—5—13, <http://www.countercurrents.org/avery061113.htm>

Despite the willingness of Iran's new President, Hassan Rouhani to make all reasonable concessions to US demands, Israeli pressure groups in Washington continue to demand an attack on Iran. But such an attack might escalate into a global nuclear war, with catastrophic consequences. As we approach the 100th anniversary World War I, we should remember that this colossal disaster escalated uncontrollably from what was intended to be a minor conflict. There is a danger that an attack on Iran would escalate into a large-scale war in the Middle East, entirely destabilizing a region that is already deep in problems. The unstable government of Pakistan might be overthrown, and the revolutionary Pakistani government might enter the war on the side of Iran, thus introducing nuclear weapons into the conflict. Russia and China, firm allies of Iran, might also be drawn into a general war in the Middle East. Since much of the world's oil comes from the region, such a war would certainly cause the price of oil to reach unheard-of heights, with catastrophic effects on the global economy. In the dangerous situation that could potentially result from an attack on Iran, there is a risk that nuclear weapons would be used, either intentionally, or by accident or miscalculation. Recent research has shown that besides making large areas of the world uninhabitable through long-lasting radioactive contamination, a nuclear war would damage global agriculture to such a extent that a global famine of previously unknown proportions would result. Thus, nuclear war is the ultimate ecological catastrophe. It could destroy human civilization and much of the biosphere. To risk such a war would be an unforgivable offense against the lives and future of all the peoples of the world, US citizens included.

Uniqueness – Congress

2NC UQ Wall – Will Pass

Will pass and will be a fight

Fox News, 7-12-2015, McConnell: Any Iran nuclear deal will be 'very hard sell in Congress'," <http://www.foxnews.com/politics/2015/07/12/mcconnell-any-iran-nuclear-deal-will-be-very-hard-sell-in-congress/>, Accessed: 7-12-2015, /Bingham-MB

Senate Majority Leader Mitch McConnell said Sunday that any Iran nuclear deal to which Secretary of State John Kerry agrees will be “a very hard sell in Congress.” The Kentucky Republican made his remarks on “Fox News Sunday” amid news reports that the United States and Iran are close to a provisional agreement during one-on-one talks in Vienna. “We already know (any deal) leaves Iran as a threshold nuclear state,” McConnell said. Still, **McConnell said, the deal will likely go forward** even though the Republican-led Congress should be able to get 60 votes to pass a “joint resolution of disapproval,” considering President Obama can veto the bill with just 34 Senate votes. “Democrats will likely have the same concerns,” he said. “I hope Democrats look at this objectively and say, ‘This is not good.’ ” However, McConnell acknowledged the deal, which allows Obama to ease some sanctions, will “likely be approved and passed.” Negotiations between Iran, the U.S. and five other countries to get Tehran to curb its nuclear program in exchange for sanction relief have been in the works for roughly two years. The sides reached a framework agreement in April and reconvened in Vienna about two weeks ago with hopes of reaching a final pact, which supporters say would limit Iran’s capacity to create a nuclear weapon. Iran says its nuclear program is not to develop such a weapon.

Iran deal will be approved by Congress but Obama’s political capital will be necessary to keep Senate Dems on his side.

ALEX ROGERS July 7 2015 <http://www.nationaljournal.com/congress/obama-s-iran-test-keeping-democrats-together-on-a-deal-20150707>

July 7, 2015 President Obama will have to work hard over the coming weeks to assuage skeptical Democrats that his potentially imminent, legacy-defining accord limiting Iran's ability to build a nuclear bomb meets their deep-seated concerns. While some outside observers don't expect that enough Democrats would stand with Republicans to vote against the deal and keep congressional sanctions intact, key Senate Democrats laid out before a White House meeting Tuesday night one requirement in particular—anywhere, anytime inspections—that could cause the administration trouble. The White House meeting touched on several subjects—including appropriations, the Affordable Care Act, and climate change—in addition to Iran. But it's clear the potential nuclear agreement is the most suspenseful issue this week, with the clock ticking down. Sen. Ben Cardin, the top Democrat on the Foreign Relations Committee, said that only a “very small part” of the 90-minute meeting was on Iran. Obama “indicated” that there must be all avenues of inspections, including military dimensions, Cardin said. Obama “doesn't know whether we'll get an agreement or not but [said] that he will not bring forward an agreement that does not accomplish those objectives” of preventing Iran from obtaining nuclear weapon, Cardin said. And Cardin added: “I think the president is justifiably concerned that some Americans might believe what the Supreme Leader is saying. He urged us that that should not be our source as to what's in the agreement.” Senate Democrats, meanwhile, are making their

own **priorities clear**. Inspections are "vital," said Sen. Christopher Coons, a Democratic member of the Foreign Relations Committee, which wrote the bill laying out how Congress would review the prospective accord. "That is a central point. Exactly what the mechanism is by which we have assurances that we can inspect sites reasonably quickly anywhere in the country is going to be a central piece of whether or not this is an agreement that we should sign, and whether or not this is an agreement that will enjoy broad congressional support." "There really has to be full access, anytime, to sites where there may be development or production of nuclear weapons," added Sen. Richard Blumenthal. "I think that the agreement has to be airtight, comprehensive, long-lasting, and maybe most important, verifiable." So far the administration has said little in public about whether the deal will meet that demand. But it's possible that the deal will be announced very soon. Under the law, after July 9, Congress will have 30 extra days to review the deal and act upon it. If Congress fails to act during that period, the deal will be considered approved. **Some opponents**, like Republican Sen. John McCain, **believe that the additional time could help increase scrutiny and change some members' minds**. "The longer there is to examine it, the more likely it is, in my view, for people to reject it because it's a bad deal," McCain said on Tuesday. "As George Shultz and Henry Kissinger wrote, it went from the purpose was to eliminate Iran's capacity for nuclear weapons to delaying it." Even Coons said **it is a possibility—although in his mind not a likely one—that Congress will vote against it**. "if it is a genuinely bad deal." Other senators, including Cardin, and some outside experts don't see the enhanced time frame making much of a difference. "If the substance of the deal is right (e.g. meeting the terms of the Washington Institute statement I signed), 30 vs. 60 day review doesn't matter," said Gary Samore, a former Obama official and the president of the nonprofit United Against Nuclear Iran. That letter, signed by four other former Obama advisers, said that Iran cannot "deny or delay timely access to any site anywhere in the country," a demand rebuked recently by Ayatollah Ali Khamenei, who opposes international inspection of Iran's military sites. Democratic Sen. Chris Murphy, a progressive member of the Foreign Relations committee, said Tuesday that "anytime, anywhere" inspections weren't realistic. "There aren't going to be inspections anytime, anywhere," Murphy said. "There are going to be certain military sites in which you are going to have to have credible evidence in order to get access. I think it's not fair to set up a standard by which Iran is going to give inspectors access to anything, at any time, for any reason. There has to be a meaningful process to get access to military sites if we have information that compels an inspection. But frankly, we shouldn't have unfettered access to military sites. We should only be able to get onto those sites if we have evidence there's covert nuclear activity happening there." The negotiators announced a framework agreement in the beginning of April, limiting Iran's nuclear capabilities and extending the length it would take to build a bomb from a few months to about a year in exchange for reducing sanctions and increasing inspection capabilities. No member wants to see the strength of the negotiators—including the U.S., Russia, China, France, Germany, and Britain—go to waste after 18 months of talks and over a decade of dreaming to get to this point. "The imbalance here is dramatic," said Coons. "It is the allied powers of the modern world against one isolated extremist theocracy in the Middle East. And if they get a deal, they will get over \$100 billion with which to do mischief in the region and a pathway towards being a renewed participant in the global economy. That's huge for them, and we should hold out for the best deal we can get." "I am disheartened," added Senate Foreign Relations Chairman Bob Corker on Tuesday. "It is just amazing to me that Iran, with a boot on its

neck, has ended up in this place with six important countries. From their standpoint, they've done just an incredible job of outmaneuvering. I don't know. I am sort of despondent over where we are. ... But I do want to read it and then figure out what direction to go."

It will pass, but it's a challenge, Obama will need political capital

Sandy **Fitzgerald** | **July 8** Wednesday, 08 Jul 2015 09:06 AM Republicans Face Uphill Fight in Blocking an Iran Deal Read Latest Breaking News from Newsmax.com

<http://www.newsmax.com/Newsfront/iran-nuclear-deal-gop/2015/07/08/id/653968/#ixzz3fJ6AnODi>

Republicans know they'll face an uphill fight in an effort to kill the upcoming nuclear containment deal with Iran, even with a law passed in May that allows Congress to weigh in on the agreement, **because President Barack Obama will likely be able to get the 34 votes he needs in the Senate to sustain a veto**. **"Clearly, it's going to be challenging,"** New Hampshire Republican Sen. Kelly Ayotte told Politico. And Sen. Tom Cotton, R-Ark., the only senator to vote against the Iran review bill, said on Tuesday that he opposed the measure because it gives the "illusion of oversight without oversight." Special: The Danger of Investing in Dollars Exposed — Free eBook That is, Cotton said, the review law leaves it up to Congress to gather enough votes to prevent a veto, rather than requiring the administration to attract enough votes to approve the agreement, as would be normally done with a treaty. "It didn't give Congress much power that's beyond our inherent authority," Cotton said of the May law. "If that act was not law, we could still pass legislation with a veto-proof majority to block the deal from moving forward." **Democrats**, though, **are saying that the very fact that the deal's deadline had been moved back repeatedly** — from June 30 to July 7, and now to July 10 — **means the administration is working to ensure the agreement will have some congressional support**. "One of the reasons why we're seeing this going into overtime is because Secretary (of State John) Kerry and Secretary (of Energy Ernest) Moniz have a very firm grasp on what it's going to take to have a defensible deal. And they should," New Mexico Democratic Sen. Martin Heinrich told Politico. **"If it's a solid deal, I think we will have adequate support to make sure that it stands."** The review law means Congress can choose to vote on a resolution of approval or disapproval, and Senate Majority Leader Mitch McConnell has supported having an approval vote — something not likely to make it through the Republican-controlled House and Senate — so as to give an "unmistakable signal about congressional opposition to lifting sanctions." Special: New Probiotic Fat Burner Takes GNC by Storm Cotton, meanwhile, said "there is no graver threat to national security" than a bad deal, and that Congress should use all its powers to stop a poor agreement from going through. If the deal is reached on or by Thursday, Congress gets 30 days to review it. But if the agreement talks go past that date, the resolution will have a 60-day congressional review period. **The approval or disapproval resolution will start with the Senate Foreign Relations Committee**. On Tuesday, committee Chairman Sen. Bob Corker, R-Tenn., told MSNBC's Andrea Mitchell that he is looking forward to the deal, but urged negotiators to take their time, as he remains "very, very concerned about the trend, the direction, I've said this several times, the direction of these negotiations for some time. ... on these final points, you know, any time, anywhere inspections, please, yes, take your time and at least try to get these in the best place you possibly can." Corker told Politico he has spoken privately with McConnell, and "discussed every option known to man," but still doesn't know what direction will be **taken Republicans are**

not yet conceding that 34 or more Democrats will stand with Obama. "I really think there's a better than 50-50 chance that we'll get enough 'no' votes," Sen. Lindsey Graham, R-S.C., said. "If the Arabs come out and say this is a bad deal, if AIPAC says this is a bad deal, if public opinion says we don't trust this deal, then our Democratic colleagues will hopefully come forward to say, 'We can do better."

AT: UQ overwhelms link

Obama still faces hurdles – congress has 60 days to stall – political capital is key

Ken **Thomas**, Associated Press, “McConnell: Iran deal will be ‘hard sell’ to congress,” The Rundown, July 12, **2015**.

WASHINGTON — Senate Majority Leader Mitch McConnell of Kentucky and other congressional leaders expressed doubts Sunday about a historic agreement with Iran to address that country’s nuclear program, predicting President Barack Obama could face hurdles in Congress if negotiators reach a final deal. ¶ McConnell spoke minutes after diplomats said on Sunday that negotiators at the Iran nuclear talks were expected to reach a provisional agreement to curb the country’s atomic program in return for tens of billions of dollars in sanctions relief. Secretary of State John Kerry has been leading the U.S. delegation in the talks in Vienna, which aims to impose long-term, verifiable limits on Tehran’s nuclear programs. ¶ “This is going to be a very hard sell for the administration,” McConnell said on “Fox News Sunday” when asked about the likelihood of Congress signing off on a deal. ¶ President Barack Obama has come under criticism from members of Congress and some U.S. allies in the Middle East who say the administration has conceded too much in the Iran talks. Iran has denied any nuclear weapon ambitions and said its program is meant to supply domestic energy and other peaceful purposes. ¶ The current negotiations have run more than two weeks and blown through three deadlines. Because the talks are in overtime, Congress will have 60 days to assess the deal, requiring Obama to await that review before easing sanctions agreed to in a deal. ¶ During those two months, lawmakers could try to build a veto-proof majority behind new legislation that could impose new sanctions on Iran or prevent Obama from suspending existing ones.

2NC AT PC Low

Has PC now, and enough to succeed on Iran

Jordan **Fabian**, The Hill, **7-7-2015**, Nuclear deal with Iran appears elusive,"

<http://thehill.com/homenews/administration/247156-nuclear-deal-with-iran-appears-elusive>,
Accessed: 7-10-2015, /Bingham-MB

While Obama is riding the momentum from a series of successes on the domestic front, on trade, same-sex marriage and healthcare, failure on Iran could blunt his gains. "He had secured his domestic legacy in a pretty dramatic fashion in the last two weeks. That's always been his No. 1 priority," said James Jeffrey, a distinguished fellow at the Washington Institute for Near East Policy and a former ambassador to Iraq under Obama. "He realizes his international legacy is a mess." Obama has spent a tremendous amount of political capital in pursuit of the deal — both with Democrats in Congress and the U.S.'s traditional allies in Persian Gulf states and Israel, who fear the deal could embolden Iran in its pursuit of dominance in the Middle East. Deputy national security adviser Ben Rhodes acknowledged last week the president is "taking on some sacred cows" in dealing with hostile regimes. But he said the aim of dealing with Iran is to avoid being pulled into another conflict in the Middle East while preventing it from becoming a nuclear power. Administration officials told The Wall Street Journal Monday that they hope a successful Iran deal could open the door to resolving lingering conflicts in Syria and Yemen, where Iran is involved. But Obama is coming under pressure from lawmakers in both parties not to agree to a deal at all costs. On Tuesday evening, the president met with Senate Democrats at the White House, where he was expected to sooth members of his party who are worried about the talks. Influential Democrats, including Senate Foreign Relations Committee ranking member Ben Cardin (Md.), have demanded "anytime, anywhere" inspections of Iranian nuclear facilities. But those conditions are unlikely to be met, making it tougher for the administration to prevent a veto-proof majority from voting to disapprove of a deal, if one is reached. Complicating that effort further is the fact that a deal is unlikely to be reached by Thursday, when the congressional review period doubles from 30 days to 60 days. That could allow opposition to build. Republicans were emboldened in their calls for Obama to walk away from the talks following Tuesday's extension. "The stakes are too high for this diplomatic charade to continue," Sen. Marco Rubio (R-Fla.), a 2016 presidential candidate, said in a statement. "Iranian leaders continue to walk back previous commitments, even as they actively sponsor terrorism, pursue regional domination and hold American citizens hostage." At the same time, Obama seems to understand the risks failure could pose to his legacy. "Look, 20 years from now, I'm still going to be around, God willing. If Iran has a nuclear weapon, it's my name on this," he told The Atlantic in May. Obama is closely following the talks, receiving updates from national security adviser Susan Rice and other aides multiple times daily, Earnest said. There are major risks for Iran too. The regime in Tehran desperately wants relief from international sanctions related to its nuclear program, which have crippled the country's economy. Sanctions caused its gross domestic product to shrink by 5 percent in 2013, and its economy has recovered only slightly since an interim agreement was reached that year. Despite the delay, Jeffrey believes Obama is in a strong position heading into the final stretch of the talks. He predicted the president's legacy would not be hurt if, at this point, a deal falls through because Iranian intransigence. "By taking a tough position at the talks to the point where we'll walk out or the Iranians will have to

walk out — we're basically making it clear to the Iranians that we can't be pushed around," he said. "That we are deadly serious in this process."

Uniqueness – Iran Negotiations

2NC – Yes Deal

Deal all but wrapped up now—will be agreed to soon

Michael **Crowley and Nahal Toosi, 7-12-2015**, Iran deal may be imminent," POLITICO, <http://www.politico.com/story/2015/07/reports-iran-deal-sunday-119992.html>, Accessed: 7-12-2015, /Bingham-MB

Negotiators from the United States, Iran and five other nations neared a deal Sunday on an accord that would lift some international sanctions on Iran in return for stiff curbs on its nuclear program. A provisional deal could be reached as early as Sunday with a formal announcement on Monday, according to the Associated Press, citing diplomats involved with the talks in Vienna. Story Continued Below The State Department would not confirm the reports and an Iranian official told POLITICO that a deal was not imminent. "We are working hard, but a deal tonight is simply logistically impossible," the Iranian government official said. "This is a 100 page document, after all." Other top officials sounded optimistic in their public comments Sunday. "I think we're getting to some real decisions," Secretary of State John Kerry told reporters on Sunday, without commenting more specifically on timing. "So I will say, because we have a few tough things to do, I remain hopeful. Hopeful." France's foreign minister, Laurent Fabius, sounded a similar note. "I hope, I hope, that we are finally entering the final phase of this marathon negotiation," Fabius told Reuters upon his return to Vienna from a meeting on the Greek financial crisis in Paris. Russian Foreign Minister Sergei Lavrov, who had departed Vienna, is headed back to rejoin the talks, Russia's Foreign Ministry announced on Twitter. A senior State Department official declined to confirm that an agreement could come as soon as Sunday. "We have never speculated about the timing of anything during these negotiations, and we're certainly not going to start now — especially given the fact that major issues remain to be resolved in these talks," the official said. The nuclear talks between the U.S., Britain, China, France, Russia, Germany and Iran have hit several roadblocks in recent days, including a dispute over whether the United Nations must fully lift an arms embargo on Tehran as part of any deal. A preliminary framework laying the ground for a comprehensive deal was reached in April. The current stage of negotiations was aimed at hammering out the technical details, including how and in what order sanctions might be lifted.

2NC AT Dems Will Abandon

They will wait to see what the agreement says

Karoun **Demirjian, 7/8/2015**, senate Democrats not abandoning Obama on Iran deal — for now," Washington Post, <http://www.washingtonpost.com/news/powerpost/wp/2015/07/08/senate-democrats-stand-with-obama-on-iran-deal-for-now/>, Accessed: 7-9-2015, /Bingham-MB

As Republicans herald the latest extension of Iran negotiations as a sure sign President Obama's administration is going to strike a bad deal, Senate **Democrats are stuck** between a diplomatic rock and a political hard place. But **by and large, Democrats are not abandoning the president** on the deal, **even as negotiations look like they will drag past the midnight deadline** on Thursday for closure. **Even Democrats who have expressed reservations about the process are** checking them at the party line and **urging tense restraint with, in the words of** Sen. Charles E. **Schumer** (D-N.Y.): **"I'm waiting to see the agreement."** "There are some who say already they're against it — there are some who say already they're for it. I think both are premature," said Schumer, who angled to give Congress oversight over the Iran deal despite the Obama administration's opposition. **As the No. 3 Senate Democrat** and likely leader of his caucus in 2017, **Schumer's decision will be watched carefully by other Democrats.** "We're all going to have to judge based on what the agreement is," said Sen. Bob **Menendez** (D-N.J.), the Democrat who has been most **openly critical of the process.** "I'm sure that if it's a bad agreement, I would expect Sen. Schumer to be with me and if it's a good agreement I would expect to be with him in support of the agreement."

2NC AT Passed Deadline

Just means there is 60 days to review the deal—nothing else changes

Karoun **Demirjian, 7/8/2015**, senate Democrats not abandoning Obama on Iran deal — for now," Washington Post, <http://www.washingtonpost.com/news/powerpost/wp/2015/07/08/senate-democrats-stand-with-obama-on-iran-deal-for-now/>, Accessed: 7-9-2015, /Bingham-MB

Many Senate Democrats have their own concerns about the percolating deal to rein in Iran's nuclear ambitions – if the inspections regime under a final agreement will be strong enough, if they will be able to trust the timing and phasing of sanctions relief. Many rank-and-file Democrats also say that while the White House is being fairly responsive to concerns and questions, they are primarily getting their information about the state of the negotiations from what they read in the news. Negotiators in Vienna are expected to blow past a Thursday deadline to deliver the specifics of a finished agreement to Congress, which will trigger a 60-day review period for lawmakers that would have otherwise only been entitled to 30 days. While there is substantively little else that changes at that point, Republicans have seized the moment to warn that the Obama administration is ready to give away the store in order to secure an historic deal for the president's legacy.

Congress is happy to wait for a better deal

Karoun **Demirjian, 7/8/2015**, senate Democrats not abandoning Obama on Iran deal — for now," Washington Post, <http://www.washingtonpost.com/news/powerpost/wp/2015/07/08/senate-democrats-stand-with-obama-on-iran-deal-for-now/>, Accessed: 7-9-2015, /Bingham-MB

Thus far though, the president doesn't appear to be pushing Senate Democrats any further: Obama has not started actually lobbying Democrats for their support before the deal is done, senators said. "There are open issues and they do not feel rushed to enter into an agreement that they feel is inconsistent with the framework," said Sen. Ben Cardin (D-Md.), the ranking member on the Senate Foreign Relations committee, adding with a smile: "I fully expect he'll be fully engaged if there's an agreement." "This is a highly technical deal – they're going to need some time, to get members of Congress, especially their friends, comfortable with the detailed inspection regime," said Sen. Chris Murphy (D-Conn.). As negotiations continue, it's clear that many Democrats will be watching for the outcome warily. But even those carefully reserving judgment seemed unfazed by the fact that negotiators have missed self-imposed deadlines to continue talks – even if the extensions keep coming. "If the extended talks get us to the point where we have an Iran that isn't nuclear, that's fine, extend them," said Sen. Jon Tester (D-Mont.). "The important thing is to get a deal that's going to be beneficial to the United States, to the P5+1, and will deny Iran the ability to get a nuclear weapon," said Sen. Jeanne Shaheen (D-N.H.). "And if that takes a couple more weeks, I'm willing to wait that long."

2NC AT Talks Fail – Embargo

Embargo won't derail the deal

Nahal **Toosi**, **7-9-2015**, John Kerry: 'We will not rush' on Iran deal," POLITICO,
<http://www.politico.com/story/2015/07/john-kerry-iran-deal-update-thursday-119898.html>,
Accessed: 7-10-2015, /Bingham-MB

Though it appears to have snagged the talks for now, **it's questionable whether the embargo** — as compared to issues such as intrusive inspections of Iran's military sites and its research and development of advanced centrifuges — **is a big enough issue to derail the nuclear talks.** **Negotiators could reach a compromise that allows for the possibility that the embargo could be lifted at some point in the future,** though not necessarily the day a nuclear deal is reached. A **U.N. resolution that replaces past measures** designed to punish Iran over the deal **could also be worded in a way that leaves the ban on non-atomic weapons in place.**

2NC AT Talks Fail – Redlines

Redlines won't tank a deal

Nahal **Toosi**, **7-9-2015**, John Kerry: 'We will not rush' on Iran deal," POLITICO, <http://www.politico.com/story/2015/07/john-kerry-iran-deal-update-thursday-119898.html>, Accessed: 7-10-2015, /Bingham-MB

According to multiple news reports, a senior Iranian official briefing journalists in Vienna on condition of anonymity Thursday said the U.S. and some of its negotiating allies did not seem unified on their stances and were backing off commitments made in the preliminary deal in April. "It's not like a multilateral negotiation. It's like we're doing five bilateral negotiations," the official said in the unusually stark comments, according to an account in The Guardian. "Everyone now has their own red line. There is one red line for the the US, there is one red line for the UK, there is one line for the France. One red line for Germany. They come to us and say: I'm flexible on his red line, but not on mine." Kerry offered no details as to what the stumbling blocks were. He also gave no definite timeframe for the talks. French Foreign Minister Laurent Fabius said he expected the talks to run into Friday morning. According to The Associated Press, Fabius said that as far as the status of the discussions, there are "good things, but there is still work to do."

Link

Link – Surveillance

Post USA Freedom act—any changes to government surveillance will be large fights that require massive government investment

Grant **Gross** Washington Correspondent for IDG news service, **6-5-2015**, Don't expect major changes to NSA surveillance from Congress," PCWorld, <http://www.pcworld.com/article/2932337/dont-expect-major-changes-to-nsa-surveillance-from-congress.html>, Accessed: 7-10-2015, /Bingham-MB

After the U.S. **Congress approved** what critics have called **modest limits on the National Security Agency's** collection of domestic telephone records, many **lawmakers may be reluctant to further change the government's surveillance programs**. The Senate this week passed the USA Freedom Act, which aims to end the NSA's mass collection of domestic phone records, and President Barack Obama signed the bill hours later. **After that action, expect Republican leaders in both the Senate and the House of Representatives to resist further calls for surveillance reform. That resistance is at odds with many rank-and-file lawmakers, including many House Republicans, who want to further limit NSA programs** brought to light by former agency contractor Edward Snowden. Civil liberties groups and privacy advocates also promise to push for more changes. **It may be difficult to get "broad, sweeping reform" through Congress**, but many lawmakers seem ready to push for more changes, said Adam Eisgrau, managing director of the office of government relations for the American Library Association. The ALA has charged the NSA surveillance programs violate the Fourth Amendment of the U.S. Constitution, which prohibits unreasonable searches and seizures. "Congress is not allowed to be tired of surveillance reform unless it's prepared to say it's tired of the Fourth Amendment," Eisgrau said. "The American public will not accept that." Other **activists are less optimistic about more congressional action. "It will a long slog getting more restraints,"** J. Kirk Wiebe, a former NSA analyst and whistleblower said by email. "The length of that journey will depend on public outcry—that is the one thing that is hard to gauge." **With the USA Freedom Act, "elected officials have opted to reach for low-hanging fruit,"** said Bill Blunden, a cybersecurity researcher and surveillance critic. "The theater we've just witnessed allows decision makers to boast to their constituents about reforming mass surveillance while spies understand that what's actually transpired is hardly major change." The "actual physical mechanisms" of surveillance programs remain largely intact. Blunden added by email. **"Politicians may dither around the periphery but they are unlikely to institute fundamental changes."**

New amendments to government surveillance will cause Republican backlash

Grant **Gross** Washington Correspondent for IDG news service, **6-5-2015**, Don't expect major changes to NSA surveillance from Congress," PCWorld, <http://www.pcworld.com/article/2932337/dont-expect-major-changes-to-nsa-surveillance-from-congress.html>, Accessed: 7-10-2015, /Bingham-MB

Republican leaders opposed to more changes Supporters of new reforms will have to bypass congressional leadership, however. **Senate Republican leaders attempted to derail even the USA Freedom Act and refused to allow amendments that would require further changes at the NSA.** In the House, **Republican leaders threatened to kill the USA Freedom Act if the Judiciary**

Committee amended the bill to address other surveillance programs. Still, many House members, both Republicans and Democrats, have pushed for new surveillance limits, with lawmakers adding an amendment to end so-called backdoor government searches of domestic communications to a large appropriations bill this week. Obama's administration has threatened to veto the appropriations bill for several unrelated reasons, but several House members have pledged to push hard to prohibit the FBI and CIA from searching the content of reportedly tens of thousands of U.S. communications swept up in an NSA surveillance program targeting overseas terrorism suspects.

Link – Drone Surveillance

Debating drone surveillance sparks controversy

Pete **Kasperowicz**, The Hill, 1-4-**2014**, Sen. Paul proposes bill protecting Americans from drone surveillance," <http://thehill.com/policy/technology/232489-sen-paul-proposes-bill-protecting-americans-from-drone-surveillance>, Accessed: 7-10-2015, /Bingham-MB

While drone surveillance in the United States would undoubtedly prove controversial, the use of drones is currently a topic of international concern. Some Democrats have said the use of drones to disrupt terrorist networks is hurting America's image overseas. Additionally, the United Nations is considering an investigation into drone airstrikes inside Pakistan, which could focus on the rate of civilian casualties caused by these attacks. Congress has ordered the Federal Aviation Administration (FAA) to move toward allowing drones to fly alongside commercial aircraft in U.S. airspace by 2015. The FAA is planning a pilot program to test fly drones in six locations, but will not set the rules for what the unmanned aircraft can be used for. Law enforcement agencies and state and local governments have expressed a strong interest in unmanned aircraft, and are being courted as potential customers by the booming drone industry. There is opposition, however, from groups such as the American Civil Liberties Union (ACLU) that have raised concerns about the impact of the drones on privacy.

Expansive drones are congressionally popular

Tom **Barry**, 4-5-**2012**, Drones Flying Under the Radar," Truthout.org, <http://www.ciponline.org/research/entry/drones-flying-under-radar>, Accessed: 7-10-2015, /Bingham-MB

In the seven years that the CIA and US military have deployed killer drones, the US Congress has never once debated the new commitment to drone operations. Although the CIA and the US military now routinely direct intelligence, surveillance and reconnaissance (ISR) operations that enter foreign airspace, these interventions haven't been subject to serious Congressional review. Drone operations often proceed without any authorization or knowledge of the intervened nations. On the domestic front, local police and Homeland Security agents are also enthusiastically deploying drones for law enforcement and border security missions. At all levels, government in the United States is sidelining mounting civil rights, privacy and air safety concerns. The US Congress functions more as a booster for the drone industry than as a regulator.

Restriction drones unpopular—massive drone lobby interests

Glenn **Greenwald**, 3-30-**2013**, GLENN GREENWALD: The US Needs To Wake Up To Threat Of Domestic Drones," Business Insider, <http://www.businessinsider.com/drone-threats-strikes-us-2013-3>, Accessed: 7-10-2015, /Bingham-MB

One significant reason why this proliferation of domestic drones has become so likely is the emergence of a powerful drone lobby. I detailed some of how that lobby is functioning here, so will simply note this passage from a recent report from the ACLU of Iowa on its attempts to persuade legislators to enact statutory limits on the use of domestic drones: "Drones have their own trade group, the Association for Unmanned Aerial Systems International, which includes

some of the nation's leading aerospace companies. And Congress now has 'drone caucuses' in both the Senate and House." Howie Klein has been one of the few people focusing on the massive amounts of money from the drone industry now flowing into the coffers of key Congressional members from both parties in this "drone caucus". Suffice to say, there is an enormous profit to be made from exploiting the domestic drone market, and as usual, that factor is thus far driving the (basically nonexistent) political response to these threats.

Plan costs capital – disputes between civil liberties advocates and security hawks on drone restriction legislation

Wells **Bennett**, Sept **2014** <http://www.brookings.edu/research/reports2/2014/09/civilian-drones-and-privacy>

Remotely controlled flying robots are increasingly cheaper, and at times more capable of sustained flight, than some manned counterparts. Many can be outfitted with imaging or other recording equipment, itself increasingly more affordable and widely available nowadays. An airborne droid might take in more information over a much longer period of time than a human eye or ear; and it might also find its way to areas where other aerial platforms might not be able to go. In this way drones pose real if manageable privacy risks. And policymakers have aimed to manage them following Congress's call to broaden drones' access to the skies by late 2015. The timing raises any number of big-ticket privacy questions. Two are recurring: which arm of the government (states or feds) ought to balance a proliferating technology's benefits against its privacy costs; and which drones (government or private) will present the greatest threats to privacy. On one side of the first question are certain members of Congress and civil liberties advocates, who have called for a robust federal approach to drones and privacy.² On the other are "drone federalists": scholars³ and policymakers⁴ who generally oppose enactment of a preemptive, federal drone statute, and who would in any event keep federal regulation to a minimum or reserve it for discrete subjects only. In recent years, only states have passed legislation meant to account for America's drone experiment and its implications for privacy. In that sense, momentum isn't with the feds: the FAA, for example, pointedly refused to regulate privacy in a broad fashion (though, as explained below, it nevertheless undertook some drone privacy work later). And unlike some state houses, the U.S. Congress hasn't seriously considered or passed a bill to set general privacy standards or to regulate drones and privacy specifically.

Large businesses oppose drone restrictions; which will spark Congressional battles

The Street, June 17 <http://www.thestreet.com/video/13190214/amazon-to-urge-congress-for-fewer-restrictions-on-us-drone-use.html>

Amazon (AMZN) is set to ask Congress Wednesday for fewer restrictions on U.S. drone usage in order to get its Prime Air service off the ground. Amazon Prime Air is designed to deliver packages up to five pounds to customers in 30 minutes or less using small drones. Paul Misener, Amazon's vice president for global public policy, will appear in front of the U.S. House Committee on Oversight and Government Reform to argue against current Federal Aviation Administration rules. According to his prepared testimony, Misener explains that he disagrees with the FAA's current opinion that extending see-and-avoid principles on small drones presents

'unique safety concerns' which warrant delayed consideration. Misener plans to urge the FAA to act expeditiously, and ask that Congress provide legislative guidance and if necessary, additional legal authority.

Internal Link

2NC PC Key

PC key to passage of the Iran deal

Jordan **Fabian July 06, 2015**, 06:38 pm Obama to host Senate Dems

<http://thehill.com/blogs/blog-briefing-room/news/246998-obama-to-host-senate-dems>

President **Obama will host Senate Democrats for a meeting and reception** on Tuesday, a White House official said. The White House says **the gathering will mostly be a social occasion. But it gives the president a chance to huddle with his allies in Congress** who have a long to-do list this month, including a partisan standoff over government spending that could result in a shutdown. **The White House is also expected to lean heavily on Senate Democrats to support a nuclear agreement with Iran if one is reached this week. Republicans in Congress have said they will vote against the deal so Obama will need to limit defections from Democrats to prevent the GOP from amassing a veto-proof majority.** Obama has threatened to veto GOP spending bills because they do not lift sequestration spending caps and he is backed by Senate Democrats, who are threatening to block the proposals. But that has not stopped Republicans, who are advancing the bills and accusing Democrats of obstructionism. Congress faces a Sept. 30 deadline to fund the government, but **lawmakers only have a few weeks to resolve the dispute because they will leave Washington for a month-long recess in August.** Another top priority is highway funding, which is set to expire on July 31, and a renewal of the Export-Import Bank.

PC key to sustain a veto

Karoun **Demirjian, 7/8/2015**, senate Democrats not abandoning Obama on Iran deal — for now," Washington Post,

<http://www.washingtonpost.com/news/powerpost/wp/2015/07/08/senate-democrats-stand-with-obama-on-iran-deal-for-now/>, Accessed: 7-9-2015, /Bingham-MB

Obama made an effort to step in front of the political onslaught in a briefing **with Senate Democrats** Tuesday night, **during which he assured them that he was ready to walk away from a bad deal**, according to several senators present. **"The president was so reassuring, and I think people were very impressed with that,"** said Sen. **Barbara Boxer** (D-Calif.). **"I'm rooting for a good agreement and I've supported this,** so maybe I'm seeing it through rose-colored glasses — but I felt in the room that **people were glad the president raised it and that he went out of his way to say I'm not signing a bad agreement.**" It isn't the first time the **president has given such assurances to Democrats whose support he will need to sustain a deal.** Majorities of both the **Republican-led House and Senate are expected to vote to disapprove any deal. But if 34 senators side with Obama, it will be enough to keep Congress from overriding his veto.**

Obama will need all his current political capital to sustain veto of disapproval vote from congress which would prohibit the president from lifting sanctions

Scott **Johnson**, "Goodnight Vienna," Powerline, **7/12/15**

Presumably more details will leak as reporters start to hunt down details, but **it looks like a done deal.** **Congress will now have 60 days to review the agreement,** and lawmakers will be specifically looking for how the Obama administration managed to overcome the final issues

that held up a deal over the last two weeks: anytime/anywhere inspections including access to military sites, the IAEA's concerns over the possible military dimensions of Iran's nuclear program, and the Iranian/Russian demand that the United Nations arms embargo against Tehran be lifted. ¶ Based on how negotiations have progressed since mid-March – Iranian intransigence followed by repeated American collapses on nearly every core issue – it's unlikely that Congress will like what it finds. Mitch McConnell predicted this morning on Fox News Sunday that the deal will be “a very hard sell in Congress.” ¶ The Corker legislation allows lawmakers to introduce a resolution of disapproval, introduce a resolution of approval, or do nothing. ¶ A resolution of approval would be loaded with symbolism. It would most likely be introduced and then voted down: a rebuke by a co-equal branch of the U.S. federal government of inarguably the most important diplomatic gamble in decades. But it wouldn't have any legal force. ¶ A resolution of disapproval would carry all of the symbolism of a failed resolution of approval, but it would also prohibit the President from lifting some sanctions. The trick is that the President would have the ability to veto it, and then Congress would have to override that veto. There may be enough worried Democrats in the Senate to get to 67, but the conventional wisdom is that the White House retains sufficient political capital to prevent 290 votes in the House (there are simply too many safe seats where the general elections don't matter, and members' existence relies on not getting primaried – and the President is still the most powerful force in the Democratic party). ¶ In any case, this will be the next 60 days in Washington DC.

Obama pushing Iran deal success – political capital key

Alexander **Bolton** - **07/06/15** 07:15 PM EDT <http://thehill.com/homenews/senate/247003-dems-raise-pressure-on-obama-over-iran-nuclear-deal>

The narrative is completely owned by the White House here,” said Danielle Pletka, senior vice president for foreign and defense policy studies at the American Enterprise Institute. She says it will be difficult to assess how the deal will be interpreted on Capitol Hill because administration officials will dominate the narrative in the early days. “They've already got their people out there lobbying very aggressively and the president has an enormous amount of power in this country, frankly much more power than the Congress at this point,” she added. “He has the power to affect the fortunes of individual members of Congress.”

Obama using his political capital to corral votes on the Iran deal

Wall Street Journal, **7-8-15** <http://blogs.wsj.com/washwire/2015/07/08/obama-works-to-coral-support-from-senate-democrats-on-several-issues/>

President Barack Obama huddled with Senate Democrats Tuesday night at the White House for a social get-together that also served as an opportunity to hit the reset button after parting ways on trade legislation. With Iran nuclear negotiations nearing an end and time running short for the president's domestic to-do list, Mr. Obama turned to Democrats on the Hill for help advancing his policy objectives. The most immediate White House priorities include marshaling lawmakers' support for a possible deal to curb Iran's nuclear program, reauthorizing the U.S. Export-Import bank and passing a highway funding measure. Tuesday's meeting came two weeks after the president partnered with Republican congressional leaders to pass a fast-track trade bill amid a messy battle that divided the Democratic Party. With the approval of the trade

package, Mr. Obama notched his biggest win to date in this Republican-controlled Congress, but he clashed with many Democrats in the process. Administration officials have dismissed suggestions of any lingering hard feelings, saying that the president and Democratic lawmakers would quickly return to work on shared goals. Still, the gathering in the State Dining Room signaled a concerted outreach effort aimed at ensuring that the president has Senate Democrats in his corner on several key issues. Chief among them is a long-sought nuclear agreement with Iran. While the diplomatic process has extended into overtime and the outcome remains uncertain, any eventual deal will be vetted by Congress. White House Press Secretary Josh Earnest said lawmakers are closely following the nuclear talks, and "the administration is doing the best we can to try to be responsive to that interest and help them understand exactly where things stand." Mr. Obama is working to corral Democratic support for a potential deal as many Republicans express deep reservations about an accord with Iran and some urge the White House to suspend negotiations.

Obama has the political capital to push Iran deal now—he will use it

David Jackson, 6-28-2015, On a hot streak, Obama looks to Iran deal," USA TODAY, <http://www.usatoday.com/story/theoval/2015/06/28/obama-iran-nuclear-deal-health-care-gay-marriage-free-trade-charleston/29423255/>, Accessed: 6-29-2015, /Bingham-MB

Following perhaps the most momentous week of his tenure, President Obama looks to what could be another major event next month: The Iran nuclear deal. Obama -- coming off major victories on free trade, health care, and gay marriage, as well as a much-praised eulogy on the Charleston church killings -- has set a Tuesday deadline for completion of an Iran nuclear agreement, though there are definite signs that the deadline will slip. "Given the dates, and that we have some work to do ... the parties are planning to remain in Vienna beyond June 30 to continue working," a U.S. official told the Associated Press about the ongoing talks. The administration is putting out the word that July 9 is the "real" deadline for a deal in which the U.S. and allies would reduce sanctions on Iran if it agrees to give up the means to make nuclear weapons. The July 9 date would give Congress time to review the agreement before its August recess. Further evidence that Tuesday's deadline will slip came Sunday as Iran's foreign minister prepared to leave talks in Vienna for consultations back in Tehran. The Obama administration enters the final stages of the Iran talks following a string of remarkable victories within the past week. First, Congress cleared the way for a major free trade agreement with Asia, a deal that some thought dead in the water earlier in the month. Then the Supreme Court handed down landmark decisions on items of high importance to the Obama administration, its health care law and the right of gay marriage. The president capped the week with a moving eulogy on the Charleston church shootings, urging Americans to confront long-festering problems of gun control and racial prejudice. Now, on to Iran -- though the proposed agreement has fierce critics in Israel and the U.S. Congress who believe it will actually pave the way for Iran to secure nuclear weapons. It will be a busy few weeks. From the Associated Press: "Both sides recognize that there is leeway to extend to July 9. As part of an agreement with the U.S. Congress, lawmakers then have 30 days to review the deal before suspending congressional sanctions. But postponement beyond that would double the congressional review period to 60 days, giving both Iranian and U.S. critics more time to work on undermining an agreement. Arguing for more time to allow the U.S. to drive a harder bargain, Israeli Prime Minister Benjamin Netanyahu -- a

fierce opponent of the talks -- weighed in on Sunday against 'this bad agreement, which is becoming worse by the day.' "It is still not too late to go back and insist on demands that will genuinely deny Iran the ability to arm itself with nuclear weapons," he said."

2NC AT Winner's Win

Legislative wins don't spillover—empirics, true for Obama, too polarized— newest ev Eberly, 2013

Todd Eberly is coordinator of Public Policy Studies and assistant professor in the Department of Political Science at St. Mary's College of Maryland. His email is teeberly@smcm.edu. This article is excerpted from his book, co-authored with Steven Schier, "American Government and Popular Discontent: Stability without Success," to be published later this year by Routledge Press., 1-21-2013 http://articles.baltimoresun.com/2013-01-21/news/bs-ed-political-capital-20130121_1_political-system-party-support-public-opinion/2

As Barack **Obama** prepares to be sworn in for the second time as president of the United States, he **faces the stark reality** that **little of what he hopes to accomplish** in a second term **will likely come to pass**. Mr. **Obama occupies an office** that **many assume to be all powerful, but** like so many of his recent predecessors, **the president** knows better. He **faces a political capital problem and a power trap** in the post-1960s American political system, **presidents have found** the exercise of **effective leadership** a difficult task. **To lead well, a president needs support** — or at least permission — from federal courts and Congress; steady allegiance from public opinion and fellow partisans in the electorate; backing from powerful, entrenched interest groups; and accordance with contemporary public opinion about the proper size and scope of government. This is a long list of requirements. **If presidents fail to satisfy these** requirements, **they face the prospect of inadequate political support or political capital to back their power assertions**. What was so crucial about the 1960s? We can trace so much of what defines contemporary politics to trends that emerged then. Americans' confidence in government began a precipitous decline as the tumult and tragedies of the 1960s gave way to the scandals and economic uncertainties of the 1970s. Long-standing party coalitions began to fray as the New Deal coalition, which had elected Franklin Roosevelt to four terms and made Democrats the indisputable majority party, faded into history. The election of Richard Nixon in 1968 marked the beginning of an unprecedented era of divided government. Finally, the **two parties** began **ideologically divergent** journeys that **resulted in intense polarization** in Congress, **diminishing the possibility of bipartisan compromise**. **These** changes, combined with the growing influence of money and interest groups and the steady "thickening" of the federal bureaucracy, **introduced significant challenges to presidential leadership**. Political capital can best be understood as a combination of the president's party support in Congress, public approval of his job performance, and the president's electoral victory margin. The components of political capital are central to the fate of presidencies. It is difficult to claim warrants for leadership in an era when job approval, congressional support and partisan affiliation provide less backing for a president than in times past. **In recent years, presidents' political capital has shrunk while their power assertions have grown**, making the president a volatile player in the national political system. Jimmy Carter and George H.W. Bush joined the small ranks of incumbents defeated while seeking a second term. Ronald Reagan was elected in two landslides, yet his most successful year for domestic policy was his first year in office. Bill Clinton was twice elected by a comfortable margin, but with less than majority support, and despite a strong economy during his second term, his greatest legislative successes came during his first year with the passage of a controversial but crucial budget bill, the Family and Medical Leave Act, and the North American Free Trade Agreement. George W. Bush won election in 2000 having lost the popular vote, and though his impact on national security policy after the Sept. 11 attacks was far reaching, his greatest domestic policy successes came during 2001. Ambitious plans for Social Security reform, following his narrow re-election in 2004, went nowhere. Faced with obstacles to successful leadership, recent presidents have come to rely more on their formal powers. The number of important executive orders has increased significantly since the 1960s, as have the issuance of presidential signing statements. Both are used by presidents in an attempt to shape and direct policy on their terms. Presidents have had to rely more on recess appointments as well, appointing individuals to important positions during a congressional recess (even a weekend recess) to avoid delays and obstruction often encountered in the Senate. Such power assertions typically elicit close media scrutiny and often further erode political capital. Barack Obama's election in 2008 seemed to signal a change. Mr. Obama's popular vote majority was the largest for any president since 1988, and he was the first Democrat to clear the 50 percent mark since Lyndon Johnson. The president initially enjoyed strong public approval and, with a Democratic Congress, was able to produce an impressive string of legislative accomplishments during his first year and early into his second, capped by enactment of the Patient Protection and Affordable Care Act. But with each legislative battle and success, his political capital waned. His impressive successes with Congress in 2009 and 2010 were accompanied by a shift in the public mood against him, evident in the rise of the tea party movement, the collapse in his approval rating, and the large GOP gains in the 2010 elections, which brought a return to divided government. By mid-2011, Mr. Obama's job approval had slipped well below its initial levels, and Congress was proving increasingly intransigent. In the face of declining public support and rising congressional opposition, Mr. Obama, like his predecessors, looked to the energetic use of executive power. In 2012, the president relied on executive discretion and legal ambiguity to allow homeowners to more easily refinance federally backed mortgages, to help veterans find employment and to make it easier for college graduates to consolidate federal student loan debt. He issued several executive orders effecting change in the nation's enforcement of existing immigration laws. He used an executive order to authorize the Department of Education to grant states waivers from the requirements of the No Child Left Behind Act — though the enacting legislation makes no accommodation for such waivers. Contrary to the outcry from partisan opponents, Mr. Obama's actions were hardly unprecedented or imperial. Rather, they represented a rather typical power assertion from a contemporary president. Many looked to the 2012 election as a means to break present trends. But Barack **Obama's narrow re-election** victory, coupled with the re-election of a somewhat-diminished Republican majority House and Democratic majority Senate, **hardly signals a grand resurgence of his political capital**. The president's recent issuance of multiple executive orders to deal with the issue of gun violence is further evidence of his power trap. Faced with the likelihood of legislative defeat in Congress, the president must rely on claims of unilateral power. But such claims are not without limit or cost and will likely further erode his political capital. Only by solving the problem of political capital is a president likely to avoid a power trap. **Presidents** in recent years **have been unable to prevent their political capital from eroding**. When it did, their power assertions often got them into further political trouble. Through leveraging public support, presidents have at times been able to overcome contemporary leadership challenges by adopting as their own issues that the public already supports. Bill Clinton's centrist "triangulation" and George W. Bush's careful issue selection early in his presidency allowed them to secure important policy changes — in Mr. Clinton's case, welfare reform and budget balance, in Mr. Bush's tax cuts and education reform — that at the time received popular approval. However, **short-term legislative strategies** may win policy success for a president, **but do not serve as an antidote to declining political capital** over time, as the difficult final years of both the Bill Clinton and George W. Bush presidencies demonstrate. None of Barack Obama's

recent predecessors solved the political capital problem or avoided the power trap. It is the central political challenge confronted by modern presidents and one that will likely weigh heavily on the current president's mind today as he takes his second oath of office.

And, PC finite – opportunity cost Hayward 12

[John, writer at Human Events. "DON'T BE GLAD THE BUFFETT RULE IS DEAD, BE ANGRY IT EVER EXISTED," 4/17, <http://www.humanevents.com/2012/04/17/dont-be-glad-the-buffett-rule-is-dead-be-angry-it-ever-existed/>]

Toomey makes the excellent point that Obama's class-warfare sideshow act is worse than useless, because it's wasting America's valuable time, even as the last fiscal sand runs through our hourglass. Politicians speak of "political capital" in selfish terms, as a pile of chips each party hoards on its side of the poker table, but in truth America has only a finite amount of political capital in total. When time and energy is wasted on pointless distractions, the capital expended---in the form of the public's attention, and the debates they hold among themselves---cannot easily be regained. ¶ There is an "opportunity cost" associated with the debates we aren't having, and the valid ideas we're not considering, when our time is wasted upon nonsense that is useful only to political re-election campaigns. Health care reform is the paramount example of our time, as countless real, workable market-based reforms were obscured by the flaccid bulk of ObamaCare. The Buffett Rule, like all talk of tax increases in the shadow of outrageous government spending, likewise distracts us from the real issues.

And Obama will behave as if winners don't win Burnett, 13

Bob Burnett, Founding Executive @ CiscoSystems, Berkeley writer, journalist, columnist @ huffington post, 4/5, http://www.huffingtonpost.com/bob-burnett/keystone-xl-obama_b_3020154.html

On April 3 and 4, President Obama spoke at several San Francisco fundraisers. While he didn't specifically mention the Keystone XL pipeline, the tenor of his remarks indicated that he's likely to approve the controversial project. Obama seems to be most influenced by his inherent political pragmatism. I've heard Barack Obama speak on several occasions. The first was February 19, 2007, at a San Francisco re-election fundraiser with a lengthy question and answer session. Towards the end of the event a woman asked then presidential-candidate Obama what his position was on same-sex marriage. For an instant, Obama seemed surprised; then he gathered himself and responded he was aware of strong feelings on both sides of this issue and his position was evolving. Five years later, in May of 2012, President Obama announced his support for same-sex marriage. What took Obama so long to make up his mind? No doubt he needed to clarify his own moral position -- although the Protestant denomination he was baptized into, the United Church of Christ, announced its support for same-sex marriage in 2005. But I'm sure the president carefully weighed the political consequences and, last May, thought the timing was right. Over the last six years I've realized Barack Obama has several personas. On occasion he moves us with stirring oratory; that's Reverend Obama, the rock star. Once in a while, he turns philosophical; that's Professor Obama, the student of American history. On April 3, I saw Politician Obama, the pragmatic leader of the Democratic Party. Obama has learned that, as president, he only gets a fixed amount of political capital each year and has learned to ration it. In 2007, he didn't feel it was worth stirring up controversy by supporting same-sex marriage; in 2012 he thought it was. He's a cautious pragmatist. He doesn't make snap decisions or ones that will divert his larger agenda. Intuitively, most Democrats know this about the president. At the beginning of 2012, many Democratic stalwarts were less than thrilled by the prospect of a second Obama term. While their reasons varied, there was a common theme, "Obama hasn't kept his promises to my constituency." There were lingering complaints that 2009's stimulus package should have been bigger and a communal whine, "Obama should have listened to us." Nonetheless, by the end of the Democratic convention on September 6, most Dems had come around. In part, this transformation occurred because from January to September of 2012 Dems

scrutinized Mitt Romney and were horrified by what they saw. In January some had muttered, "There's no difference between Obama and Romney," but nine months later none believed that. While many Democrats were not thrilled by Obama's first-term performance, they saw him as preferable to Romney on a wide range of issues. In 2009, Obama got a bad rap from some Dems because they believed he did not fight hard enough for the fiscal stimulus and affordable healthcare. In March of 2011, veteran Washington columnist, Elizabeth Drew, described Obama as: ... a somewhat left-of-center pragmatist, and a man who has avoided fixed positions for most of his life. Even his health care proposal -- denounced by the right as a 'government takeover' and 'socialism' -- was essentially moderate or centrist. When he cut a deal on the tax bill, announced on December 7 [2010], he pragmatically concluded that he did not have the votes to end the Bush tax cuts for the wealthiest, and in exchange for giving in on that he got significant concessions from the Republicans, such as a fairly lengthy extension of unemployment insurance and the cut in payroll taxes. Making this deal also left him time to achieve other things -- ratification of the START treaty, the repeal of don't ask, don't tell. Drew's description of the president as a "left-of-center pragmatist" resonates with my sense of him. He is a political pragmatist who, over the past five years, has learned to guard his political capital and focus it on his highest priorities. In this year's State-of-the-Union address half of the president's remarks concerned jobs and the economy. We gather here knowing that there are millions of Americans whose hard work and dedication have not yet been rewarded. Our economy is adding jobs -- but too many people still can't find full-time employment. Corporate profits have rocketed to all-time highs -- but for more than a decade, wages and incomes have barely budged. It is our generation's task, then, to reignite the true engine of America's economic growth -- a rising, thriving middle class. He also spoke passionately about the need to address global warming, "For the sake of our children and our future, we must do more to combat climate change." But it's clear that's a secondary objective. At one of the Bay Area fundraisers, President Obama observed that his big challenge is to show middle-class families that, "we are working just as hard for them as we are for an environmental agenda." Obama isn't going to block the Keystone XL pipeline because he doesn't believe that he can make the case his action will help the middle-class. He's conserving his political capital. He's being pragmatic.

2NC AT Hirsch

Hirsh agrees with the thesis of the politics DA even if he disagrees with the term “political capital”

Michael **Hirsh**, National Journal, **2/7/13**, There’s No Such Thing as Political Capital, www.nationaljournal.com/magazine/there-s-no-such-thing-as-political-capital-20130207

Presidents are limited in what they can do by time and attention span, of course, just as much as they are by electoral balances in the House and Senate. But this, too, has nothing to do with political capital. Another well-worn meme of recent years was that Obama used up too much political capital passing the health care law in his first term. But the real problem was that the plan was unpopular, the economy was bad, and the president didn’t realize that the national mood (yes, again, the national mood) was at a tipping point against big-government intervention, with the tea-party revolt about to burst on the scene. For Americans in 2009 and 2010—haunted by too many rounds of layoffs, appalled by the Wall Street bailout, aghast at the amount of federal spending that never seemed to find its way into their pockets—government-imposed health care coverage was simply an intervention too far. So was the idea of another economic stimulus. Cue the tea party and what ensued: two titanic fights over the debt ceiling. Obama, like Bush, had settled on pushing an issue that was out of sync with the country’s mood. Unlike Bush, Obama did ultimately get his idea passed. But the bigger political problem with health care reform was that it distracted the government’s attention from other issues that people cared about more urgently, such as the need to jump-start the economy and financial reform. Various congressional staffers told me at the time that their bosses didn’t really have the time to understand how the Wall Street lobby was riddling the Dodd-Frank financial-reform legislation with loopholes. Health care was sucking all the oxygen out of the room, the aides said.

2NC AT PC Theory Wrong

PC allocation changes votes—key to the agenda

Beckman 10 Matthew N. Beckman, Professor of Political Science @ UC-Irvine, 2010, "Pushing the Agenda: Presidential Leadership in U.S. Lawmaking, 1953-2004," pg. 61-62

For cases where the president wants to lobby but has limited political capital to draw on ($0 < C < C_1$), looking back, Figure 2.11 affirms the intuitive: the president's legislative options are limited. Lacking enough capital to induce leaders to accept any sort of "deal" that is better than he could get from lobbying pivotal voters, the president and his staffers' only viable strategy is the vote-centered one. But, of course, even executing the vote-centered strategy does not yield much influence; the president simply does not have enough "juice" to substantially alter members' preferences or, in turn, the outcome. The president's prospects improve substantially, though, when he allocates even modest levels of political capital ($C < C < C_1$) to lobbying for a particular initiative. At this point - specifically, at C_1 - an agenda-centered strategy becomes viable. That is, with a medium investment of political capital, now the president has enough resources to get opposing leaders to cut a "deal" with the White House that is better than he could get from just lobbying pivotal voters. In fact, even with this rather modest infusion of political capital, C_1 to C_2 , an agenda-centered lobbying strategy allows a president to exert even more influence than would be possible with a massive investment (up to C_3) in vote-centered lobbying. And granting the president even more political capital to invest in an issue ($C_2 < C$) only adds to an agenda-centered strategy's attractiveness and effectiveness compared to the more familiar vote-centered strategy. Overall, the predicted impact of the president's agenda-centered lobbying is real, and potentially substantial, but also highly conditional. In contrast to a vote-centered strategy, which can be employed whenever a president is willing and able to invest lobbying resources in advocating an issue, the White House's agenda-centered strategy only applies with (1) a far-off status quo, and (2) a medium to large supply of political capital. Absent these prerequisites, the president's fate turns on pivotal voters and his ability to influence them via vote-centered lobbying. But often these strategic stars do align - that is, the president is flush with political capital when seeking to change a distant status quo - and when they do, an agenda-centered strategy affords presidents not just a second path for exerting influence but also a better path. Indeed, under these favorable conditions, the president gets far more policy bang for his lobbying buck from an agenda-centered strategy than a vote-centered one - without having to prevail in an all-out floor fight for pivotal voters' support.

PC key – most critical factor – sets the agenda

Light, Brookings Center for Public Service founding director, **99**

(Paul Charles, New York University Professor of Public Service, *The President's Agenda: Domestic Policy Choice from Kennedy to Clinton*, p. 25-26, Google Books, http://books.google.com/books?id=vuWJHWDgstsC&printsec=frontcover&dq=the+Presidents+Agenda&hl=en&ei=X2FATOLRFIWKlwfVLHxDQ&sa=X&oi=book_result&ct=result&resnum=1&ved=0CCwQ6AEwAA#v=onepage&q=the%20Presidents%20Agenda&f=false, accessed 7-15-10)

In chapter 2, I will consider just how capital affects the basic parameters of the domestic agenda. Though the internal resources are important contributors to timing and size, capital remains the critical factor. That conclusion will become essential in understanding the domestic agenda. Whatever the President's personal expertise, character, or skills, capital is the most important resource. In the past, presidential scholars have focused on individual factors in discussing White House decisions, personality being the dominant factor. Yet, given low levels in presidential capital, even the most positive and most active executive could make little impact. A president can be skilled, charming, charismatic, a veritable legislative wizard, but if he does not have the basic congressional strength, his domestic agenda will be severely restricted -

capital affects both the number and the content of the President's priorities. Thus, it is capital that determines whether the President will have the opportunity to offer a detailed domestic program, whether he will be restricted to a series of limited initiatives and vetoes. Capital sets the basic parameters of the agenda, determining the size of the agenda and guiding the criteria for choice. Regardless of the President's personality, **capital is the central force behind the domestic agenda.**

PC key – Political scientists and experts agree

Beckman 10 Matthew N. Beckman, Professor of Political Science @ UC-Irvine, 2010, "Pushing the Agenda: Presidential Leadership in U.S. Lawmaking, 1953-2004," pg. 50

However, many close observers of the presidential-congressional relationship have long cited prevoiting bargaining across Pennsylvania Avenue as being substantively important. For example, discussing President Eisenhower's legislative record in 1953, CQ staffers issued a caveat they have often repeated in the years since: ¶ The President's leadership often was tested beyond the glare spotlighting roll calls. . . . Negotiations off the floor and action in committee sometimes are as important as the recorded votes. (CQ Almanac 1953, 77) ¶ Many a political scientist has agreed. Charles Jones (1994), for one, wrote, "However they are interpreted, roll call votes cannot be more than they are: one form of floor action on legislation. If analysts insist on scoring the president, concentrating on this stage of lawmaking can provide no more than a partial tally" (195). And Jon Bond and Richard Fleisher (1990) note that even if they ultimately are reflected in roll-call votes, "many important decisions in Congress are made in places other than floor votes and recorded by means other than roll calls . . ." (68).

Impact

2NC – Impact Overview

Failure of the Iran deal causes multiple scenarios for global nuclear war. Global war would trigger nuclear use, Pakistan overthrow, Russia/China draw in, famine, economy collapse, and destruction of civilization, that's Avery.

Impact outweighs:

Timeframe—collapse of talk freaks out the middle east now, pushes hardliners to war, and miscalc escalates quickly

Probability—middle east is still the most likely scenario for war, instability religious tensions make threats escalate

Magnitude—Russia/China draw in, nuclear weapons use and economic collapse go global—evidence says civilization will be destroyed which is an extinction argument

Attack on Iran is the only unique middle east war threat that goes global and spirals out of control—avoids their impact defense

Trabanco 9 – Independent researcher of geopolitical and military affairs (1/13/09, José Miguel Alonso Trabanco, “The Middle Eastern Powder Keg Can Explode at anytime,”

<http://www.globalresearch.ca/index.php?context=va&aid=11762>)

In case of an Israeli and/or American attack against Iran, Ahmadinejad's government will certainly respond. A possible countermeasure would be to fire Persian ballistic missiles against Israel and maybe even against American military bases in the regions. Teheran will unquestionably resort to its proxies like Hamas or Hezbollah (or even some of its Shiite allies it has in Lebanon or Saudi Arabia) to carry out attacks against Israel, America and their allies, effectively setting in flames a large portion of the Middle East. The ultimate weapon at Iranian disposal is to block the Strait of Hormuz. If such chokepoint is indeed asphyxiated, that would dramatically increase the price of oil, this a very threatening retaliation because it will bring intense financial and economic havoc upon the West, which is already facing significant trouble in those respects. In short, the necessary conditions for a major war in the Middle East are given. Such conflict could rapidly spiral out of control and thus a relatively minor clash could quickly and dangerously escalate by engulfing the whole region and perhaps even beyond. There are many key players: the Israelis, the Palestinians, the Arabs, the Persians and their respective allies and some great powers could become involved in one way or another (America, Russia, Europe, China). Therefore, any miscalculation by any of the main protagonists can trigger something no one can stop. Taking into consideration that the stakes are too high, perhaps it is not wise to be playing with fire right in the middle of a powder keg.

Impact – Israel Lashout

Nuclear Iran = Israel freak out - That escalates to full scale war

Adamsky 2011, Dima Adamsky is an Assistant Professor at the Lauder School of Government, Diplomacy, and Strategy at the Interdisciplinary Center Herzliya and the author of *The Culture of Military Innovation*. The scenarios discussed here are speculative and do not represent the views of any official in the Israeli government, Foreign affairs, march – april 2011, lexis

The insecurity generated by a nuclear Iran might dwarf previous peaks of existential fear in Israel. A nuclear Iran would likely undermine the foundations of Israeli self-confidence by crossing two "redlines" in the Israeli strategic psyche. First, the arsenal of a single country would pose an existential threat, conjuring memories of Nazi Germany. Focusing on Iran's ultimate destructive capability rather than its intentions, Israeli strategists might therefore view a nuclear Iran apocalyptically. Second, many Israelis might come to believe that the end of Israel's nuclear monopoly has terminated the country's ultimate insurance policy, fundamentally undermining Israel's general deterrence posture. These concerns, as Eric Edelman, Andrew Krepinevich, and Evan Montgomery assert, might lead Israeli strategists to reexamine nuclear policies and adjust their current deterrence models.

Extinction

Moore 2009, Carole, author, activist, leader of Libertarians for Peace, "Israeli Nuclear Threats and Blackmail", <http://www.carolmoore.net/nuclearwar/israelithreats.html>

The phrase the "Samson Option" is used to describe Israel's strategy of massive nuclear retaliation against "enemy" nations should its existence as a Jewish state be jeopardized through military attack. Israeli leaders created the term in the mid-1960s, inspired by the Biblical figure Samson, who destroyed a Philistine temple, killing himself and thousands of Philistine enemies.[1][2] Israel refuses to admit officially that it has nuclear weapons - a policy known as "nuclear ambiguity" or "nuclear opacity." [3] This despite government officials inferring repeatedly - and occasionally admitting - the fact. And despite Israeli nuclear whistle blower Mordechai Vanunu making public smuggled photographs of nuclear weapons and production equipment in the 1980s.[4] Israel now may have as many as 400 atomic and hydrogen nuclear weapons,[5][6] as well as the ability to launch them via long range missiles, submarines and aircraft.[7] It can use them in a second strike even if its military is devastated. Originally a strategy of last resort retaliation - even if it means Israel's annihilation - it has developed into being a nuclear bullying strategy to further Israel's territorial goals through threats and blackmail. Israel has bullied not only Arab and Muslim nations, but the United States and Russia with its Samson Option threats. Mordechai Vanunu has alleged that Israel uses for purposes of blackmail its ability to "bombard any city all over the world, and not only those in Europe but also those in the United States." [8] Official policy and threats During the 1960s Israel concentrated on conventional military superiority to defend lands confiscated in the 1948 and 1967 wars - and to convince Palestinians in Israel and the occupied territories that they could not break free of it. However, in 1973's Yom Kippur War Israel was almost overwhelmed by Arab forces. Prime Minister Golda Meir authorized a nuclear alert, ordering 13 atomic bombs be prepared for missiles and aircraft. Israeli Ambassador to the U.S. Simha Dinitz threatened "very

serious conclusions" if there was not an immediate airlift of supplies.[9] This forced U.S. President Richard Nixon to make emergency airlifts of state of the art military supplies to Israel.[10][11] Fearing intervention by the Soviet Union, U.S. forces went on Defense Condition (DEFCON) III alert status[12], something which could have led to full scale nuclear war in case of misinterpretation of signals or hardware or software failures. Additionally, as Seymour Hersh documents in detail in his book *The Samson Option*, from 1973 these weapons have been used to discourage the Soviet Union - now Russia - from intervening militarily on behalf of Arab nations.[13] Obviously an Israeli nuclear attack on Russia by the United States' great ally Israel would result in Russia sending thousands of nuclear weapons towards the U.S. and the U.S. responding in kind. Not surprisingly, no nation state has attempted to attack Israel since 1973. A former Israeli official justified Israel's threats. "You Americans screwed us" in not supporting Israel in its 1956 war with Egypt. "We can still remember the smell of Auschwitz and Treblinka. Next time we'll take all of you with us." [14] General Moshe Dayan, a leading promoter of Israel's nuclear program[15], has been quoted as saying "Israel must be like a mad dog, too dangerous to bother." [16] Amos Rubin, an economic adviser to former Prime Minister Yitzhak Shamir, said "If left to its own Israel will have no choice but to fall back on a riskier defense which will endanger itself and the world at large... To enable Israel to abstain from dependence on nuclear arms calls for \$2 to 3 billion per year in U.S. aid." [17] In 1977, after a right-wing coalition under Menachen Begin took power, the Israelis began to use the Samson Option not just to deter attack but to allow Israel to "redraw the political map of the Middle East" by expanding hundreds of thousands of Israeli settlers into the West Bank and Gaza.[18] Then-Minister of Defense Ariel Sharon said things like "We are much more important than (Americans) think. We can take the middle east with us whenever we go" [19] and "Arabs may have the oil, but we have the matches." [20] He proclaimed his - and many Likud Party members' - goals of transforming Jordan into a Palestinian state and "transferring" all Palestinian refugees there.[21][22] A practice known worldwide as "ethnic cleansing." To dissuade the Soviet Union from interfering with its plans, Prime Minister Begin immediately "gave orders to target more Soviet cities" for potential nuclear attack. Its American spy Jonathan Pollard was caught stealing such nuclear targeting information from the U.S. military in 1985.[23] During the next 25 years Israel became more militarily adventurous, bombing Iraq's under-construction Osirak nuclear reactor in 1981, invading Lebanon to destroy Palestinian refugee camps in 1982 and to fight Hezbollah in 2006, massively bombing civilian targets in the West Bank Jenin refugee camp in 2002 and throughout Gaza in 2008-2009. There are conflicting reports about whether Israel went on nuclear alert and armed missiles with nuclear weapons during the 1991 Gulf War after Iraq shot conventionally armed scud missiles into it.[24][25] In 2002, while the United States was building for the 2003 invasion of Iraq, then Prime Minister Ariel Sharon threatened that if Israel was attacked "Israel will react. Is it clear?" [26] Israeli defense analyst Zeev Schiff explained: "Israel could respond with a nuclear retaliation that would eradicate Iraq as a country." It is believed President Bush gave Sharon the green-light to attack Baghdad in retaliation, including with nuclear weapons, but only if attacks came before the American military invasion.[27] **Former Israeli Foreign Minister Shimon Peres has admitted that nuclear weapons are used by Israel for "compellent purposes"** - i.e., forcing others to accept Israeli political demands.[28] In 1998 Peres was quoted as saying, "We have built a nuclear option, not in order to have a Hiroshima, but to have an Oslo," referring to imposing a settlement on the Palestinians.[29] In her book *Israel's Sacred*

Terrorism Livia Rokach documented how Israelis have used religion to justify paramilitary and state terrorism to create and maintain a Jewish State.[30] Two other Israeli retaliation strategies are the popularized phrase “Wrath of God,” the alleged Israeli assassination of those it held responsible for the 1972 killings of Israeli athletes during the Munich Olympics[31], and the “Dahiya doctrine” of destruction of civilian areas to punish Palestinians for supporting their leaders.[32] Israeli Israel Shahak wrote in 1997: "Israel clearly prepares itself to seek overtly a hegemony over the entire Middle East...without hesitating to use for the purpose all means available, including nuclear ones." [33] Zeev Schiff opined in 1998 that "Off-the-cuff Israeli nuclear threats have become a problem." [34] In 2003 David Hirst noted that “The threatening of wild, irrational violence, in response to political pressure, has been an Israeli impulse from the very earliest days” and called Israel a candidate for “the role of 'nuclear-crazy' state.” [35] Noam Chomsky said of the Samson Option “the craziness of the state is not because the people are insane. Once you pick a policy of choosing expansion over security, that's what you end up getting stuck with.” [36] Efraim Karsh calls the Samson Option the “rationality of pretended irrationality,” but warns that seeming too irrational could encourage other nations to attack Israel in their own defense. [37] Samson Option Supporters Two Israel supporters are frequently quoted for their explicit support of the Samson Option. Martin Van Creveld, a professor of military history at the Hebrew University in Jerusalem, has been quoted as saying: "Most European capitals are targets for our air force.... We have the capability to take the world down with us. And I can assure you that that will happen before Israel goes under." [38] In 2002 the Los Angeles Times, published an opinion piece by Louisiana State University professor David Perlmutter in which he wrote: "What would serve the Jew-hating world better in repayment for thousands of years of massacres but a Nuclear Winter. Or invite all those tut-tutting European statesmen and peace activists to join us in the ovens? For the first time in history, a people facing extermination while the world either cackles or looks away--unlike the Armenians, Tibetans, World War II European Jews or Rwandans--have the power to destroy the world. The ultimate justice?" [39]

Impact – Prolif Cascades

Iran proliferation = cascading regional proliferation, terrorism, economic collapse and war. Greatest threat of extinction.

MICHAEL RAMIREZ Posted 11/15/2013 06:43 PM ET <http://news.investors.com/ibd-editorials-perspective/111513-679468-if-iran-gets-bomb-others-will-want-it-too.htm>

The danger that Iran poses is not just from developing a nuclear bomb. Let's set aside for a moment the belligerent behavior of Iran and their export of terrorism, extremism and destabilization. Let's forget about their three-stage rocket development and their funding and support of terrorists around the world. Let's put aside the proxy wars they've waged on the U.S. and the West that have already killed Americans and countless others. Let's even put aside their willingness to use a nuclear weapon and the direct threat it poses to the survival of our ally, Israel. If Iran has a nuclear bomb, Saudi Arabia will have a nuclear bomb. If the Saudis have a nuclear bomb, Egypt will have a nuclear bomb. Syria may be next, then Iraq. And so on. The real danger lies in an accelerated nuclear arms race in a region awash in oil money, where extremism is valued but life is not, where all things are bought and sold, where surrogates, terrorists, extremists and their apostles of death exist without the constraints of geographical borders or national affiliation and can be paid or brainwashed to do anything without a direct link to the real planners of mischief. The nuclear arms race and the proliferation of nuclear material that will result represent the largest threat to the world today. The next time you have a terrorist attack, it will not be thousands of dead and wounded, it will be millions. And its tentacles reach much further than the area directly attacked. Consider this: some estimates put the cost of 9/11 at over \$3 trillion. If there is a nuclear attack, that area — those houses, the buildings, the businesses — will be uninhabitable for 50 years. There will be a military response. And the economic consequences alone will be catastrophic. Just think: It's taken over 12 years just to rebuild the World Trade Center.

Iran prolif causes nuclear war

Edelman et al., distinguished fellow – Center for Strategic and Budgetary Assessments, **11** (Eric S, Andrew Krepinevich, Center for Strategic and Budgetary Assessments President, Evan Braden Montgomery, Research Fellow, Center for Strategic and Budgetary Assessments, “The Dangers of a Nuclear Iran,” Foreign Affairs, January/February, ebsco, accessed 11-14-13, CMM)

The reports of the Congressional Commission on the Strategic Posture of the United States and the Commission on the Prevention Of Weapons of Mass Destruction Proliferation and Terrorism, as well as other analyses, have highlighted the risk that a nuclear-armed Iran could trigger additional nuclear proliferation in the Middle East, even if Israel does not declare its own nuclear arsenal. Notably, Algeria, Bahrain, Egypt, Jordan, Saudi Arabia, Turkey, and the United Arab Emirates— all signatories to the Nuclear Nonproliferation Treaty (npt)—have recently announced or initiated nuclear energy programs. Although some of these states have legitimate economic rationales for pursuing nuclear power and although the low-enriched fuel used for power reactors cannot be used in nuclear weapons, these moves have been widely interpreted as hedges against a nuclear-armed Iran. The npt does not bar states from developing the sensitive technology required to produce nuclear fuel on their own, that is, the capability to enrich natural uranium and separate plutonium from spent nuclear fuel. Yet enrichment and reprocessing can also be used to accumulate weapons-grade enriched uranium and plutonium—the very loophole that Iran has apparently exploited in pursuing a nuclear weapons capability. Developing nuclear weapons remains a slow, expensive, and difficult process, even for states with considerable economic resources, and especially if other nations try to constrain aspiring nuclear states' access to critical materials and technology. Without external

support, it is unlikely that any of these aspirants could develop a nuclear weapons capability within a decade.¶ There is, however, at least one state that could receive significant outside support: Saudi Arabia. And if it did, proliferation could accelerate throughout the region. Iran and Saudi Arabia have long been geopolitical and ideological rivals. Riyadh would face tremendous pressure to respond in some form to a nuclear-armed Iran, not only to deter Iranian coercion and subversion but also to preserve its sense that Saudi Arabia is the leading nation in the Muslim world. The Saudi government is already pursuing a nuclear power capability, which could be the first step along a slow road to nuclear weapons development. And concerns persist that it might be able to accelerate its progress by exploiting its close ties to Pakistan. During the 1980s, in response to the use of missiles during the Iran-Iraq War and their growing proliferation throughout the region, Saudi Arabia acquired several dozen css-2 intermediate-range ballistic missiles from China. The Pakistani government reportedly brokered the deal, and it may have also offered to sell Saudi Arabia nuclear warheads for the css-2s, which are not accurate enough to deliver conventional warheads effectively. There are still rumors that Riyadh and Islamabad have had discussions involving nuclear weapons, nuclear technology, or security guarantees. This “Islamabad option” could develop in one of several different ways. Pakistan could sell operational nuclear weapons and delivery systems to Saudi Arabia, or it could provide the Saudis with the infrastructure, material, and technical support they need to produce nuclear weapons themselves within a matter of years, as opposed to a decade or longer. Not only has Pakistan provided such support in the past, but it is currently building two more heavy-water reactors for plutonium production and a second chemical reprocessing facility to extract plutonium from spent nuclear fuel. In other words, it might accumulate more fissile material than it needs to maintain even a substantially expanded arsenal of its own. Alternatively, Pakistan might offer an extended deterrent guarantee to Saudi Arabia and deploy nuclear weapons, delivery systems, and troops on Saudi territory, a practice that the United States has employed for decades with its allies. This arrangement could be particularly appealing to both Saudi Arabia and Pakistan. It would allow the Saudis to argue that they are not violating the npt since they would not be acquiring their own nuclear weapons. And an extended deterrent from Pakistan might be preferable to one from the United States because stationing foreign Muslim forces on Saudi territory would not trigger the kind of popular opposition that would accompany the deployment of U.S. troops. Pakistan, for its part, would gain financial benefits and international clout by deploying nuclear weapons in Saudi Arabia, as well as strategic depth against its chief rival, India. The Islamabad option raises a host of difficult issues, perhaps the most worrisome being how India would respond. Would it target Pakistan’s weapons in Saudi Arabia with its own conventional or nuclear weapons? How would this expanded nuclear competition influence stability during a crisis in either the Middle East or South Asia? Regardless of India’s reaction, any decision by the Saudi government to seek out nuclear weapons, by whatever means, would be highly destabilizing. It would increase the incentives of other nations in the Middle East to pursue nuclear weapons of their own. And it could increase their ability to do so by eroding the remaining barriers to nuclear proliferation: each additional state that acquires nuclear weapons weakens the nonproliferation regime, even if its particular method of acquisition only circumvents, rather than violates, the NPT.¶ n-player competition¶ Were Saudi Arabia to acquire nuclear weapons, the Middle East would count three nuclear-armed states, and perhaps more before long. It is unclear how such an n-player competition would unfold because most analyses of nuclear deterrence are based on the U.S.- Soviet rivalry during the Cold War. It seems likely, however, that the interaction among three or more nuclear-armed powers would be more prone to miscalculation and escalation than a bipolar competition. During the Cold War, the United States and the Soviet Union only needed to concern themselves with an attack from the other. Multipolar systems are generally considered to be less stable than bipolar systems because coalitions can shift quickly, upsetting the balance of power and creating incentives for an attack. More important, emerging nuclear powers in the Middle East might not take the costly steps necessary to preserve regional stability and avoid a nuclear exchange. For nuclear-armed states, the bedrock of deterrence is the knowledge that each side has a secure second-strike capability, so that no state can launch an attack with the expectation that it can wipe out its opponents’ forces and avoid a devastating retaliation. However, emerging nuclear powers might not invest in expensive but survivable capabilities such as hardened missile silos or submarinebased nuclear forces. Given this likely vulnerability, the close

proximity of states in the Middle East, and the very short flight times of ballistic missiles in the region, any new nuclear powers might be compelled to “launch on warning” of an attack OR even, during a crisis, to use their nuclear forces preemptively. Their governments might also delegate launch authority to lower-level commanders, heightening the possibility of miscalculation and escalation. Moreover, if early warning systems were not integrated into robust command-and-control systems, the risk of an unauthorized or accidental launch would increase further still. And without sophisticated early warning systems, a nuclear attack might be unattributable or attributed incorrectly. That is, assuming that the leadership of a targeted state survived a first strike, it might not be able to accurately determine which nation was responsible. And this uncertainty, when combined with the pressure to respond quickly, would create a significant risk that it would retaliate against the wrong party, potentially triggering a regional nuclear war.

Impact – Middle East War

Deal failure cases Middle East war and Iran proliferate

Economist 4/2 (2015, "Is this a good deal?" <http://www.economist.com/news/middle-east-and-africa/21638915-better-alternatives-and-long-way-good-deal?zid=308&ah=e21d923f9b263c5548d5615da3d30f4d>)

For years Iran has lied about its nuclear plans. The Islamic Republic insists that it wants peace, but it has built secret, bomb-proof facilities for enriching uranium and, most outsiders conclude, begun work on designs for nuclear weapons. At the same time, it has spouted anti-Semitism and sponsored terrorists and militias in Lebanon and the Gaza Strip. It is fighting directly or by proxy in Syria, Iraq and now Yemen, often supporting vicious sectarian clients. And yet, despite Iran's transgressions, this week's progress towards an agreement to limit its nuclear programme is still welcome. The declaration that emerged on April 2nd, after marathon negotiations between Iran and six world powers in Lausanne, was surprisingly comprehensive. Iran will curb its programme and open it to inspection in exchange for a gradual lifting of sanctions. Speaking at the White House, President Barack Obama called it a good deal that will make the United States, its allies and the world safer. However, the details remain to be thrashed out by the end of June. The president warned that this process could still fail—and hardliners in both Tehran and Washington will do their damndest to see that it does. Failure would be a grave loss. This agreement offers the best chance of containing Iran's nuclear ambitions. And it also offers the faint promise of leading the Middle East away from the violence that has been engulfing it. Must try harder. The best reason for wanting the next three months to produce a deal is that the alternatives are so unattractive. Military action to destroy Iran's programme would have only a temporary effect. Air raids cannot annihilate know-how, but they would redouble the mullahs' determination to get hold of a weapon, further radicalise Muslims, and add to the mayhem in a part of the world that is already in flames. Then there are sanctions. Some people, such as Israel's prime minister, Binyamin Netanyahu, argue that Iran is too malign to be left with anything but a symbolic ability to enrich uranium. He recommends redoubling sanctions and holding out until Iran is forced to concede to the world's demands. But there is a contradiction here. On the one hand, Iran is so bent on destruction that it cannot be treated as a normal negotiating partner; on the other it is so pliant that more sanctions will make it give up a nuclear programme that it has defended, at great cost, for many years. Besides, waiting for Iran to make concessions does not have a good record. In 2003 the Bush administration ignored tentative Iranian signals that it was ready to talk. Since then, the mullahs have enhanced their expertise and increased their count of centrifuges from 164 to 19,000 or so. As Mr Obama argues, this second option very quickly leads back to either war or negotiations—and on worse terms. By contrast the deal that has come out of Lausanne is at least attainable. Iran will cut its capacity to enrich by two-thirds compared with today for a minimum of ten years; it will radically shrink its stockpile of enriched uranium for a minimum of 15; and it will permanently cut off the route to a bomb placed on plutonium. Iran will also submit itself to intrusive inspections throughout the nuclear supply chain. In exchange, the outside world will lift economic sanctions and agree to Iran's right to enrich uranium. That compromise contains a prize worth having. Verification makes it easier to catch Iran cheating. And if the country is indeed caught working on a bomb, sanctions would snap back into place. Most important of all, the world would also have a year to muster a response—compared with a few months today. The region burns. The harder argument is whether the gains from a nuclear deal will come at the expense of regional stability. Israel and America's Sunni allies contend that the Obama administration is going easy on Iran. Some say that this is in order to secure a deal.

Others think that the nuclear diplomacy is part of a grand plan to turn Iran into a strategic partner of America to help it manage the Middle East. That would count as an act of betrayal made all the worse by the threats that Iran habitually makes against them. The coming months may indeed deepen the hatreds that are raging from the Mediterranean to the Arabian Sea. You could imagine Iranian leaders stepping up their meddling in the region—to show, perhaps, that supping with the Great Satan has not made them soft. It is no accident that the Sunni monarchies have been turning away from America: backing an army coup against the Muslim Brotherhood in Egypt, attacking fighters in Libya without forewarning America and, rushing into Yemen to take on Iranian-funded Houthis. But before blaming this mess on Mr Obama’s nuclear diplomacy, consider two arguments. First, the catastrophe in the Middle East has its own, murderous dynamic that is quite separate from the nuclear deal. Iran has set out ruthlessly to exert control over neighbouring Iraq, to protect its links to Hizbullah in Lebanon and to shore up Bashar Assad in Syria. Deal or no deal, this meddling is driven by a desire to support fellow Shias, to exert regional influence and to keep conflagrations far away from its own borders. There is no sign that, as yet, sanctions or the talks have made much of a difference. Second, the idea that America is being treacherous does not add up. Blame Mr Obama for standing back when the uprising in Syria was still peaceful, and again when Mr Assad gassed his own people. But the time is long gone when America alone could manage the conflict devouring the Middle East. Today regional mayhem is tugging the United States every which way. In the cross-currents of a sectarian war, America is working against Iranian-backed forces in Yemen and Syria, and with them in the war against Islamic State. That is not treachery, but pragmatism born out of regional collapse. The fallout of a deal Amid the chaos, a nuclear could deal actually help--by enabling America and Iran to develop a pragmatic relationship. Overseeing an agreement would not be easy. Iran would chafe; there would be rows and disputes. But nuclear diplomacy could force America and Iran to work together after 35 years of enmity that thrust America firmly into the Sunni camp. At worst relations with Iran would remain dysfunctional; but at best America would for the first time in decades find itself in a position to mediate between Sunni and Shia. That matters, because Iran and its Sunni rivals must themselves rein in their proxies and militias so that local people can begin to put their communities back together. Such a process would get a further boost if a deal brought change within Iran. Most Iranians are young and disillusioned with their leaders. They want normal, prosperous lives. In non-stop wrangling between factions in Tehran, a deal could strengthen Hassan Rohani, who has staked his presidency on it and who is thought to favour engagement with the world. In a deal’s decade-long first phase, Iran is likely to see a new supreme leader. Nobody knows who will take over—it may even be Mr Rohani himself—but the new leader is more likely to work with the West if America and Iran are no longer riven by mutual hatred. A thaw between Iran and America is not guaranteed, obviously. The possibility of wholesale moderation within Iranian politics is even more remote. But neither does a nuclear deal depend on such things to be successful or to be worth having. On the contrary, success relies on the routine of inspections and the slow accumulation of confidence; and the deal will be measured chiefly on whether it puts a bomb out of reach. Everything else is a bonus. Some people think that any deal must be wrong because it turns Iran from an international pariah into a partner. But that world view leads inexorably toward war—and an Iranian bomb. Well-founded mistrust of Iran is a reason to be vigilant, but in the real world the most important diplomacy takes place between enemies. The exhausted negotiators in Lausanne took a valuable step this week. They must finish their work.

Impact – Obama Doctrine

Iran is litmus test for Obama engagement doctrine

Jordan **Fabian**, The Hill , “nuclear deal with iran appears elusive,” 7/7/15.

The stakes are high for Obama. Along with his bid to re-establish ties with Cuba, the Iran deal is a major test of the president’s doctrine of engaging with the U.S.’s traditional adversaries to address common interests. ¶ If the talks falter, it would wipe away an elusive legacy-defining foreign policy achievement for Obama, who has grappled with instability in the Middle East and the rise of the Islamic State in Iraq and Syria.

Impact – Syria/Yemen

Political capital is key to holding off opposition to iran deal – solves middle east conflicts including Syrian and Yemen

Jordan **Fabian**, The Hill , “nuclear deal with iran appears elusive,” 7/7/15.

Obama has spent a tremendous amount of political capital in pursuit of the deal — both with Democrats in Congress and the U.S.’s traditional allies in Persian Gulf states and Israel, who fear the deal could embolden Iran in its pursuit of dominance in the Middle East. ¶ Deputy national security adviser Ben Rhodes acknowledged last week the president is “taking on some sacred cows” in dealing with hostile regimes. ¶ But he said the aim of dealing with Iran is to avoid being pulled into another conflict in the Middle East while preventing it from becoming a nuclear power.¶ Administration officials told The Wall Street Journal Monday that they hope a successful Iran deal could open the door to resolving lingering conflicts in Syria and Yemen, where Iran is involved. ¶ But Obama is coming under pressure from lawmakers in both parties not to agree to a deal at all costs. ¶ On Tuesday evening, the president met with Senate Democrats at the White House, where he was expected to sooth members of his party who are worried about the talks.¶ Influential Democrats, including Senate Foreign Relations Committee ranking member Ben Cardin (Md.), have demanded “anytime, anywhere” inspections of Iranian nuclear facilities.

A2: Deal Causes Iran Strikes

It actually pushes them farther from their red line

Cirincione 11-25 [Joseph Cirincione is president of Ploughshares Fund, a global security foundation, and a member of Secretary of State John Kerry's International Security Advisory Board and the Council on Foreign Relations. He's also the author of "Bomb Scare: The History and Future of Nuclear Weapons." Interviewed by Ezra Klein 11-25-2013 "If you don't like negotiating with Iran what you're really saying is you want to go to war"
<http://www.washingtonpost.com/blogs/wonkblog/wp/2013/11/25/if-you-dont-like-negotiating-with-iran-what-youre-really-saying-is-you-want-to-go-to-war/>]

This addresses the major threat that Prime Minister Netanyahu warned the world about in September 2012. He went to the dais of the U.N. General Assembly and he held up a cartoon drawing of a bomb and drew a red line across the top. He warned the world that Iran would soon have enough uranium enriched to 20 percent and that they could quickly, in weeks or months, make a bomb.¶ His concerns were well-founded. Iran now has about 190 kilograms of this enriched uranium. If they got to 240 kilograms, they'd be very close to a bomb. This deal drains the uranium from Mr. Netanyahu's bomb. It drains the amount of 20 percent enriched uranium [Iran has]. It makes it much less likely Iran could break out and make a bomb. And it goes further: It stops the manufacturing of new centrifuges. It changes the inspection regime from weekly to daily. If Iran wanted to do anything suspicious, there's a high probability we'd know about it and could act instantly to stop them.¶ EK: What's the counterfactual here? Imagine this deal wasn't struck and things simply kept on trend. Where would this issue be going?¶ JC: If Iran hadn't paused, in a matter of months they would cross Israel's red line. In perhaps a year they could've constructed a crude nuclear device. In another year, they could construct a warhead to put on a missile. While we might think we had two years or so to act, Israel doesn't look at it that way. They wanted to kill the nuclear baby in the crib. So the alternative to this deal was war. We shouldn't kid ourselves. There's no sanction regime known to man that's been able to coerce a country into compliance. So if you don't like negotiating with Iran, what you're really saying is you want to go to war. We should be clear-eyed about this. We shouldn't think there's some better deal out there.

No Israel Strike now

Cirincione 11-25 [Joseph Cirincione is president of Ploughshares Fund, a global security foundation, and a member of Secretary of State John Kerry's International Security Advisory Board and the Council on Foreign Relations. He's also the author of "Bomb Scare: The History and Future of Nuclear Weapons." Interviewed by Ezra Klein 11-25-2013 "If you don't like negotiating with Iran what you're really saying is you want to go to war"
<http://www.washingtonpost.com/blogs/wonkblog/wp/2013/11/25/if-you-dont-like-negotiating-with-iran-what-youre-really-saying-is-you-want-to-go-to-war/>]

EK: One argument that Jeffrey Goldberg makes is that another objective of this deal was stopping Israel from making any sudden moves. Now that there's a deal in place, Israel can't simply blow up the international community's negotiations and launch an attack. Do you agree?¶ JC: I think it's almost impossible for Israel to launch a military strike on Iran right now. They're isolated. The prime minister is issuing some very tough statements but as far as I can see, he's the only world leader issuing them. Even Saudi Arabia, which has serious qualms about the deal, is issuing positive statements at the start.

AT: Iran Cheats/Won't Comply

New deal has the most robust inspections ever – makes breakout so long – the risk of breakout is negligible

Jeffrey Lewis, Arms Control Wonk, Monterrey Institute Nuclear Professor, 4/2/15, A Skeptic's Guide to the Iran Nuclear Deal, foreignpolicy.com/2015/04/02/a-skeptics-guide-to-the-iran-nuclear-deal-2/

K, I admit it. I thought this framework was going to suck. Actually, it's not bad. My main concern all along was that the P5+1 countries (technically the E3/EU+3; congratulations if you know the difference) were too focused on "breakout time" — imposing arbitrary limits on Iran's centrifuge program to ensure that if Iran used its known nuclear infrastructure, it would take at least a year to build a bomb. The bigger worry about Iran's nuke program, I always thought, was unknown nuclear infrastructure, such as any hidden centrifuge sites. To my surprise, the deal — at least as it is described in the fact sheet released by the White House — manages to impose measures to guard against breakout, while also providing for a number of measures that help substantially with the problem of covert facilities. All in all, it's a pretty comprehensive framework for managing the problem. It's certainly worth lifting some sanctions, though a crucial detail is how quickly that will happen and whether sanctions can be reimposed if things go pear-shaped. But there are still reasons to be cautious. First, all we have at the moment are a White House-released fact sheet and a couple of ambiguous news conferences in Lausanne, Switzerland, and the White House Rose Garden. (Javad Zarif, Iran's foreign minister and lead negotiator, is already complaining about the White House's fact sheet.) There is, after all, a reason one writes these things down. The parties will need a few more months to work out the details of the actual agreement in order to implement the "framework" that was announced Thursday, April 2. Those negotiations will be crucial because the kind of language in the statements and fact sheet — which probably seem pretty detailed to a casual observer — doesn't provide the sort of clarity that a final agreement will need in order to work. (Ask me about long-range missiles of any kind sometime.) Second, getting a deal on paper is only the first step. The parties have agreed to do all sorts of things. This may shock you, but sometimes parties have trouble delivering on such promises. Agreements aren't self-implementing, so a major test will be how the parties deal with the inevitable challenges that human beings pose to implementing even a beautifully written final agreement. That's not a reason to reject agreements, just a caution about being realistic. Finally, please keep in mind that this deal makes it marginally less likely that Iran will build a nuclear weapon. That's great. But it doesn't solve the problem of Iran's missile program or Tehran's less-than-stabilizing role in the Middle East. Expectations for any written agreement should be modest. I wouldn't let myself get swept up in loose talk about a new relationship with Tehran. We're agreeing to not kill each other, for the moment, over this one thing. In my business, that's pretty good! Still, the details are pretty interesting. The big-ticket item for the U.S. national security community will be the "breakout" timeline. I am not going to do a calculation, but the important parameters are about 5,000 centrifuges enriching to less than 3.7 percent and a reduction in the existing stockpile of low-enriched uranium to 300 kilograms. The fact sheet claims this extends the breakout timeline from two to three months to more than a year. I don't see any reason to doubt the administration's math, but I just don't think the breakout timeline matters. So I will just step aside and let other people who are invested in this argument fight it out. The provisions against covert sites — what my friend James Acton calls "sneak-out" and what I worry about most — look very strong. The fact sheet asserts that the International Atomic Energy Agency (IAEA will have continuous access to the facilities that produce Iran's centrifuge rotors and bellows for 20 years). The agreement also provides access to Iran's uranium mines and mills, as well as a dedicated procurement channel for any goods destined for Iran's nuclear program. Iran will return to the Additional Protocol and modified Code 3.1 of the subsidiary arrangements — these are improvements to the safeguards agreement and subsidiary arrangements that Iran has with the IAEA. They are an important part of verifying any agreement. And it seems Iran has agreed to certain measures to address the so-called "possible military dimensions" of the nuclear program — all the intelligence, such as the infamous "laptop of death," that suggests Iran had a covert bomb program until 2003. Iran also agreed to limit enrichment to a single site at Natanz. Again, the details will matter here. The E3/EU+3 would be well advised to make sure the agreement includes a nice map of the Natanz facility — lest we find secret

centrifuge halls in a Natanz “annex” down the road. The advantage of limiting work to a single site is that, should the U.S. intelligence community catch Iran building a centrifuge site elsewhere (again), Tehran won’t be able to make any tendentious legal excuses. Finally, there are reasonable limits on Tehran’s program to develop new generations of centrifuges. These measures can’t guarantee that Iran doesn’t have a parallel, secret program. That’s still going to depend on the capabilities of the U.S. intelligence community. But they do force Iran to ensure that any parallel program is fully parallel, from uranium mines through centrifuge workshops to the proverbial underground mountain lair. That’s an imposition, and if secrecy breaks down at any point along that chain, the whole endeavor is compromised. The fact sheet really does assert what looks to be an impressive monitoring regime. Last but not least, the agreement seems to deal adequately with Iran’s enrichment plant at Fordow and its heavy-water reactor at Arak. Fordow — the covert enrichment site under a mountain and revealed in 2009 — will be converted into non-nuclear isotope separation. An earlier story indicated that a small number of centrifuges at Fordow would separate “stable” isotopes — “stable” here means non-radioactive. The nuclear fuel company Urenco has a side business that sells stable isotopes, so it’s not a crazy idea. It’s a little hard to tell from the fact sheet, but that seems to be what has happened. The IAEA will still have access to the site to make sure that it’s only used for non-nuclear purposes. The heavy-water reactor at Arak, meanwhile, will apparently be redesigned so that it “will not produce weapons grade plutonium.” There are real benefits to redesigning the reactor to produce less plutonium, though the fact sheet isn’t clear about the nature of the redesign. Iran also committed to ship the spent fuel from the reactor out of the country and to refrain “indefinitely” from reprocessing or reprocessing-related research. The terms “reprocessing” and “reprocessing research” are not defined, but if the goal is to make Arak no scarier than, say, the light-water reactor at Bushehr, they’ve succeeded.

Framework resolved all key issues – final agreement likely

Ariane **Tabatabai**, visiting assistant professor in the Security Studies Program at the School of Foreign Service, Georgetown, **4/2/15**, Why the framework nuclear agreement with Iran is good for both sides, thebulletin.org/why-framework-nuclear-agreement-iran-good-both-sides8152#.VR3DFYBgmcg.twitter

After months of negotiations, Iran and six world powers have finally reached a framework agreement on limiting the country’s nuclear program in exchange for sanctions relief. The deal announced on Thursday is intended as the basis for a comprehensive agreement to be worked out by the end of June. Getting to this agreement was a crucial step, as virtually all technical issues have now been addressed, but much work still remains to be done. The coming months will involve a great deal of legal and political wrangling. In the United States especially, due to anxious allies (Saudi Arabia and Israel) and some domestic opposition (especially among Republicans in Congress), negotiations will keep the White House busy. Nonetheless, this is a good agreement for both sides, as indicated by some of its key components. First, most of the public discussion about the negotiations has until now been focused on quantifiable elements, such as the number of centrifuges and amount of low-enriched uranium that Iran gets to keep, and the length of the deal’s implementation. But perhaps the most crucial aspect lies in the International Atomic Energy Agency’s (IAEA) access to Iranian facilities. In the framework deal, Tehran has said it will once again voluntarily implement the Additional Protocol to its existing IAEA safeguards agreement, granting the nuclear watchdog more inspections authority. (Iran had previously implemented the Protocol but stopped adhering to it.) This means that IAEA inspectors will be able to regularly monitor Iranian facilities and can conduct unannounced inspections as well. Inspectors will also have access to the supply chain through which Iran obtains materials for its nuclear program. Inspections will likely last for about 25 years, longer than the implementation period of the agreement itself. Second, Iran’s enrichment program will be limited. It has agreed not to build any new enrichment facilities for 15 years, and will not enrich uranium above 3.7 percent—a level suitable for commercial power plants, but too low to practically be used in a nuclear weapon—for at least that long. It is also reducing its current stockpile of 10,000 kilograms of low-enriched uranium to a small fraction of that amount. The Fordow nuclear facility will cease enriching any uranium and will be converted into a research center instead—one barred from doing research on enrichment. In fact, Iran will not keep any fissile material at Fordow for 15 years. Iran will instead make the Natanz facility the focus of all enrichment activities. There, it will use only its first-generation (IR-1) centrifuges to enrich for 10 years. The more advanced IR-2m centrifuges will be stored for that period, under IAEA monitoring. In fact, advanced centrifuge models (the IR-2, IR-4, IR-5, IR-6, and IR-8) will not be used for enrichment for 10 years. In total, Iran will reduce its current enrichment apparatus by roughly two thirds. It will have only 6,104 installed centrifuges, as opposed to the current 19,000.

All of them will be the IR-1 model. Third, Iran will implement Modified Code 3.1 of the Subsidiary Arrangements to its IAEA Safeguards Agreement, which requires it to give early notification that it is constructing new nuclear facilities. Fourth, Iran will take steps to address concerns over the Possible Military Dimensions (PMD) of its program. Fifth, Iran will redesign and rebuild the Arak heavy water reactor. The design will be agreed upon by negotiators from the six world powers, China, France, Germany, Great Britain, Russia, and the United States. The redesign will mean that the reactor will not be able to produce weapon-grade plutonium. Iran is also recommitting itself to not developing a reprocessing capability. (Reprocessing, the back end of the fuel cycle, is a vital component in developing a plutonium bomb.) The original core of the reactor will be removed and either destroyed or taken out of the country. Additionally, Iran agrees not to build a new heavy water reactor for 15 years. A number of these **steps will, in effect, be irreversible.** They will not just limit Iran's nuclear capability for 10 to 15 years, but will reshape it entirely and indefinitely. so what is Iran getting in exchange? First, it will receive sanctions relief. US and EU proliferation-related sanctions will be suspended after the IAEA verifies that the above steps have been taken. Second, all UN Security Council **resolutions** on Iran's nuclear program will be lifted simultaneously. A transparent procurement channel will be established, allowing Iran to get what it needs for civilian nuclear development while giving assurances to the world that the materials will not be diverted for non-peaceful use. Third, the **agreement "encourages" international cooperation to help Iran in research** and development. This stipulation was a sticking point over the last couple of weeks. But as Iranian Foreign Minister Javad Zarif said at the press conference announcing the deal, it will now allow countries that had been reluctant to engage with Tehran to help the country further its technological and scientific progress. In the following weeks, the agreement will doubtless receive much criticism. Many will claim that one side or the other made too many concessions. But **both sides stand to gain from the framework agreement, which should also be considered a victory** for the global nonproliferation regime. Ahead of the Nuclear Non-Proliferation Treaty Review Conference that begins in late April, where no major achievements in nonproliferation are likely to be announced, the framework agreement is a very important success. **The negotiating partners will have to meet** major political, legal, and financial **challenges** to turn the framework agreement into a final deal. For the moment, though, **it represents a promising and beneficial achievement** for all sides.

Deters acquisition, no future prolif

George **Perkovich**, Carnegie Endowment VP, **4/2/15**, The Benefits of Mutual Distrust, www.politico.com/magazine/story/2015/04/iran-nuclear-deal-116635_Page2.html#.VR3i80b6lio

If this assessment is correct, it is possible to devise an arrangement that will satisfy Iran's needs for a peaceful nuclear energy program and the international community's requirement that Iran not acquire nuclear weapons. A sound deal, in short, would have to convince Iran that the risks of cheating and the cost of non-compliance are too high. Rather than "trust but verify," as Ronald Reagan defined his approach to nuclear arms control, the logic with Iran should be "distrust, verify, and deter." The benefits Iran hopes to accrue from sanctions relief can themselves augment deterrence of cheating. To the extent that Iranian businesses and citizens welcome the economic improvements that follow, they will hold their government responsible if it acts in ways that cause sanctions to be snapped back on. While the Iranian internal security apparatus remains repressive, it is sensitive to popular discord, which can be expressed even in constrained presidential elections. For all of the imperfections of the comprehensive deal whose details must now be completed, the **compromises** that are being made to **persuade Iranian leaders to** accept it **augment their incentives to uphold it.** These **leaders distrust the United States** at least as much as the United States distrusts them. They have struggled to retain leverage in the negotiated arrangements to deter the U.S. and its partners from renegeing on our side of the bargain. The underground research and development facility at Fordow, for example, is retained as insurance against military attack. The likely phasing of disclosure of past activities with possible military dimensions is meant to bide time to see if sanctions relief will be delivered as promised. Rather than being inherently bad for the U.S., the leverage Iran retains gives their leaders reason to think the U.S. will not renege on a deal. Recent history demonstrates that Iran is deterrable. Iran began its secret quest for enrichment capability in 1985 during the war with Iraq. Saddam Hussein's forces were attacking Iranian cities with ballistic missiles armed with chemical weapons. The United States and France rebuffed Iranian efforts to mobilize the UN Security Council to make Iraq stop. Iranian leaders then began looking for a nuclear option to ensure that their country would "never again" face such a threat. Throughout the 1990s the United States and others reasonably sought to block most of Iran's nuclear

initiatives, as they also sought to verifiably eliminate all of Iraq's weapons of mass destruction. While Iranians quietly welcomed the efforts in Iraq, they noticed the Bush Administration's increasingly dire warnings that Iraq had WMDs and would use them. The invasion of Iraq in 2003 removed the perceived Iraqi threat. At the same time, intelligence exposed that Iran was secretly building facilities to enable it to enrich uranium and produce plutonium, for which there was no realistic civilian requirement. The International Atomic Energy Agency began investigating and uncovered a long list of Iranian violations of requirements to report sensitive nuclear activities. The threat of possible U.S. intervention from Iraq into Iran also loomed. At this point, according to the U.S. intelligence community, "Tehran halted its nuclear weapons program... primarily in response to increasing international scrutiny and pressure resulting from exposure of Iran's previously undeclared nuclear work." Negotiations ensued in 2003 and continued on and off until today. Since early 2014, the Joint Plan of Action that Iran implemented has essentially frozen its fuel-cycle program. Throughout, Iranian leaders have assiduously sought to preserve space for an ambitious nuclear energy program, relenting only where the terms of the Nuclear Nonproliferation Treaty clearly require and when international pressure, including economic sanctions, made it too painful to press for more. The NPT clearly proscribes acquiring nuclear weapons, but it does not define precisely which enabling activities and capabilities are forbidden. Iran's performance since 2003 suggests, but does not prove, that its interests can be served without nuclear weapons. Saudi Arabia is a leading source of Sunni resistance to Iran, in terms of ideology and funding. But as long as Saudi Arabia does not have nuclear weapons, Iran will retain a significant power advantage over it. If making and keeping a nuclear deal reduces the likelihood of a Saudi bomb, Iran will be better off. And Iran does not need nuclear weapons to fight the Islamic State and other Sunni militias in Iraq. A robust nuclear arsenal might make Iran more secure vis a vis Israel and the United States, but the problem is that getting from today's capability to a robust nuclear arsenal would risk a war with one or both. Implementing a nuclear deal – and retaining the leverage of the capabilities it allows – practically removes the threat of Israeli and American military attack. And, by relieving Iran's international isolation and earning it kudos from many countries, a nuclear deal would enhance Iran's standing for condemning Israel's own nuclear arsenal and occupation policies. The latter possibilities will not be welcome in Israel and the U.S., but this only buttresses the assessment that Iran would have an interest in upholding a nuclear deal. To reinforce this Iranian calculation, the details of a comprehensive agreement should combine deterrence and positive incentives. On the deterrence side, verification is vital. Iranian leaders should conclude that efforts to cheat will be detected with enough time to allow military interdiction before Iran could acquire nuclear weapons. The primary risk is in the domain of uranium enrichment. Here, Iran's activities must be monitored from mining of ore all the way through the enrichment process, as the U.S. fact sheet released April 2 says it will. All of Iran's facilities and activities involved in producing centrifuges must be monitored, as well as all operations of centrifuges, from research and development to larger-scale production of low-enriched uranium for reactor fuel. A satisfactory agreement also should prohibit research and development activities whose purposes are closely associated with nuclear weaponization. Even if Iran will not resolve the IAEA's ongoing questions about past activities with possible military dimensions until the later stages of an agreed arrangement, Iran should conduct no new activities of this sort. To verify this, Iran will have to agree to procedures for international inspections of any facilities reasonably suspected of conducting work related to nuclear weaponization. Such arrangements would correct a shortcoming of the 1968 NPT and serve as an important precedent to be applied to all non-nuclear-weapon states. Deterrence of cheating will be further enhanced by the process designed for relieving sanctions on Iran. In the initial years of an agreement, Iran's performance of its obligations should be reciprocated by waivers of U.S. and other sanctions, rather than the removal of the underlying legal authorities behind them. This way, if Iran fails to perform, sanctions can be "snapped-back" into place quickly by ending waivers. A final comprehensive nuclear agreement should be codified in a UN Security Council resolution, under Chapter VII, as it now appears has been agreed in Switzerland. The U.S. and other Security Council members can augment deterrence by explaining that violation of such a resolution may be punished by force. The U.S. Congress could affirm that it would support the use of force in the event Iran materially breached the agreement. None of this is to gainsay the violence Iran's protégés and its Revolutionary Guard forces perpetrate in neighboring countries. Nor is it to accept the theocratic repressiveness of Iranian politics and governance. The U.S., Israel and Iran's Arab neighbors will continue to contest Iranian assertiveness, as Iran will in reverse. Washington will continue to press for democratization and protection of human rights in Iran, just as Iran will denounce Israel's treatment of the Palestinians and Washington's complicity with it. A nuclear deal will limit the dangers of this competition by significantly reducing the risks of nuclear proliferation and war, and providing an opportunity to test whether diplomatic agreements can be maintained. If the proposed deal can be completed as now planned, at the end of its duration, near 2030, a major threat to international peace and security and the global nuclear order will have been abated. At that time, Iran will have been restored to good standing under the Nuclear Nonproliferation Treaty, bound by its now clarified terms. Iran's first-generation revolutionary leaders will have passed from the scene. Then, if new Iranian leaders somehow concluded that they wanted to try again to move towards nuclear weapons, as Prime Minister Netanyahu and others warn, they should expect an immediate and decisive international campaign to stop them.

Israel DA Michigan Classic

1nc

US-Israeli strategic cooperation is high now

Berman 7/14/15, Ilan, Vice President of the American Foreign Policy Council in Washington, DC. An expert on regional security in the Middle East, Central Asia, and the Russian Federation, he has consulted for both the U.S. Central Intelligence Agency and the U.S. Department of Defense, and provided assistance on foreign policy and national security issues to a range of governmental agencies and congressional offices. He has been called one of America's "leading experts on the Middle East and Iran" by CNN, National Review, July 14, 2015, <http://www.nationalreview.com/article/420065/former-israeli-ambassadors-memoir-condemns-obamas-foreign-policy-matthew-continetti>, CC

Amid all the negative press regarding the current, frayed state of bilateral ties, it's easy to miss what's going right in the U.S.–Israel relationship. Yet **today's strategic cooperation has plenty of bright spots**. **The most prominent** of these **is missile defense**. Last summer's two-month-long Gaza War showcased the spectacular success of the jointly developed Iron Dome system, which intercepted nearly 90 percent of the thousands of rockets shot at Israeli cities by the Hamas terrorist group. In the wake of that conflict, **cooperative missile defense has surged forward; in recent budgetary deliberations**, Congress more than doubled the funding requested by the administration for cooperative anti-missile programs undertaken by Washington and Jerusalem, to nearly \$350 million. Nor is missile defense the only area of fruitful cooperation. For example, **consultations between counterterrorism specialists from the two countries continue, animated by the threat of the Islamic State and** by a pressing need to move ahead on things like anti-tunneling technology, to help deal with **the threat of terrorist infiltration**. **Technical discussions regarding the** ongoing **need to maintain Israel's** "qualitative **military edge**" (QME) — its qualitative military superiority over its more numerous potential adversaries — **have likewise been robust (and productive)** on the Obama administration's watch. **The bilateral strategic relationship**, in other words, **is still going strong — even if the political one is not**. Which brings us back to Oren's opus. As policymakers in Washington look ahead, it's certainly useful to understand how and why the two countries grew apart over the last several years. But it's even more helpful to grasp the principles, ideas, and values that brought Washington and Jerusalem together in the first place — and then to refocus on them.

Recent commitment to enhanced intelligence cooperation is key to the relationship

Jones 15 (Keith Jones, 7-17-2015, "US seeks to placate Mideast allies angered by Iran nuclear deal," No Publication, <https://www.wsws.org/en/articles/2015/07/17/iran-j17.html>, MJW)

US President Barack **Obama is dispatching Defense Secretary** Ashton **Carter to** the Middle East to **placate Israel** and Saudi Arabia, **key US allies that are angered by Washington's recent nuclear accord with Iran.**

Under the accord, Tehran has agreed to dismantle key parts of its civil nuclear program, roll back and freeze others for 10-15 years, and submit to the most intrusive inspections regime ever devised. In return, and only after Iran completes the dismantling and rollback, the US and its European Union allies are to lift the punishing economic sanctions that have halved Iran's oil exports and denied it access to some \$150 billion of its own money—a sum equivalent to almost 30 percent of Iran's annual GDP. For years to come, the sanctions will only be suspended, however. They can be re-imposed should the US and its European Union allies deem Iran to have violated its commitments under the Joint Comprehensive Plan of Action on Iran's nuclear program reached Tuesday between Iran, the US, the four other permanent UN Security Council members, and Germany. While no specifics have been provided, Obama and his top aides have indicated that Defense Secretary Carter will offer Israel and the Saudi monarchy new weapons systems and enhanced intelligence cooperation and security guarantees. In Israel's case some or all of the new weaponry may be gifted.

Ending surveillance programs hurts US-Israeli terror cooperation

Bob, Columbia honors JD, 6-1-15 (Yonah Jeremy, Yonah Jeremy Bob is legal affairs correspondent and an international affairs commentator for the Jerusalem Post. He writes about war and international law, the International Criminal Court, Justice Minister Tzipi Livni, major terror trials in the US and Israel, landmark Israeli and US Supreme Court decisions, significant criminal trials and constitutional law. He also writes about Iran, North Korea and a range of other geopolitics and international affairs issues. He has worked for the IDF International Law Division, the Ministry of Foreign Affairs and the Ministry of Justice International Law Division. Yonah has been interviewed and provided international affairs and also legal commentary for BBC, Skynews, Voice of America, ABC Los Angeles Radio, Russia Today and a range of other tv and radio programs. Yonah also delivers foreign affairs lectures throughout the US, Canada and Israel. He is admitted as a lawyer in both the US and Israel and has practiced law for over seven years. Hailing from Baltimore in the US, Yonah graduated with honors from both Columbia University, receiving a BA, and Boston University, receiving a JD, where he focused his studies on international relations and international law. He is married with three children, The Jerusalem Post, "US NSA spy program ends, could impact Israeli anti-terror efforts," <http://www.jpost.com/Israel-News/US-NSA-spy-program-ends-could-impact-Israeli-anti-terror-efforts-404751>, A.ZHU)

Obama administration and top US intelligence officials have warned that allowing such a lapse could endanger their ability to protect the country's national security. The lapse may signal a shift in Americans' attitudes toward fighting terrorism that could indirectly hurt Israeli efforts to combat the scourge. Critics of the now defunct NSA spy program had said it had gone much too far in violating privacy rights and civil liberties, that the checks on abuse of the spying powers were ineffective and that the program had not racked up sufficient successes to justify its wide reach. Despite the drama of the program ending, virtually all American officials expect a new, more moderate, version to pass within days since it has passed initial votes in both houses of Congress and has firm support from the US president. The Freedom Act would end spy agencies' bulk collection of domestic telephone "metadata" and replace it with a more targeted system. This week's historic clashes over the issue are the culmination of two years of public debate that started with revelation of the program's existence by former National Security Agency contractor Edward Snowden. Although the Senate's 77-17 vote in favor of the compromise USA Freedom Act did not come in time to keep the program from expiring, the vote was at least a partial victory for President Barack Obama, who had pushed for the reform measure as a way to address privacy concerns while preserving a tool to protect the country from attack. The bill passed the US House on a 338-88 vote on May 13. But final Senate passage was delayed until at

least Tuesday by objections from US Senator and Republican presidential hopeful Rand Paul (R-Kentucky). The termination of aspects of the post-September 11, 2001, law known as the USA Patriot Act meant that law enforcement and security agencies lost authority for various programs. Those allowed for "roving wiretaps" aimed at terrorism suspects who use multiple disposable cellphones; permitted authorities to target "lone wolf" suspects with no connection to specific terrorist groups, and made it easier to seize personal and business records of suspects and their associates. **The new bill could directly impact Israeli national security by reducing the speed at which the NSA shares data with Israel's NSA-equivalent, IDF Military Intelligence's Unit 8200, responsible for signal intelligence. The indirect affect may even be greater, with many officials noting that Israel often follows the US on anti-terrorism policies,** and a weaker stomach for aggressive policies in the US could portend the same for Israel. Finally, Israeli officials often cite examples of post-September 11, 2001, US anti-terrorism policies in international forums to defend their policies.

Uniqueness

Iran-Specific UQ

!! Israel wants more military assistance from the US as a result of the Iran nuke deal

Williams 15 (Dan Williams, 7-17-2015, "Israel signals may ask for more US military aid over Iran deal," Reuters UK, <http://uk.reuters.com/article/2015/07/17/uk-iran-nuclear-israel-usa-idUKKCN0PR26920150717,MJW>)

Israel signalled on Friday that it would ask the United States for increased military aid to counter any threats that may arise as result of the international agreement on Iran's nuclear programme. Israel gets \$3 billion (£1.92 billion) in annual military aid from Washington under a package due to expire in 2017 and has in recent years secured hundreds of millions of dollars in additional U.S. funding for missile defence. Israel and the United States had been in talks on future grants but Israeli Prime Minister Benjamin Netanyahu suspended them in the run-up to Tuesday's agreement which curtailed Iran's nuclear projects, which he condemned as insufficient. Netanyahu plans to lobby the U.S. Congress not to approve the nuclear deal. But Defence Minister Moshe Yaalon on Friday appeared to regard congressional ratification as a foregone conclusion and described the deferral of aid discussions with Washington as an opportunity to assess the ramifications of the agreement. "We talk about the American defence aid, it is clear that the situation here has changed and must be studied," Yaalon told Israel's Channel 2 TV. Yaalon said Tehran's economic gains from a lifting of Western sanctions could boost Iranian-backed guerrillas in Lebanon and the Palestinian territories. It could also lead to an arms race with Arab states unfriendly to Israel, he said. "We will ultimately, of course, have to go and talk about the trade-offs that Israel has coming to it in order to preserve a qualitative edge," he said, referring to Israel's military superiority in the Middle East. This would not be next week, when U.S. Defense Secretary Ashton Carter visits Israel, he said. "It will be in several more months, certainly, after the (Iran) deal is approved and studied." Before Netanyahu's suspension of aid talks, the two sides were close to a new package of grants starting in 2017 and worth \$3.6 billion-\$3.7 billion, U.S. and Israeli officials said. That sum would likely rise once talks resumed, they said. In the interim, defence-related contacts between the allies have not ceased completely. Yedioth Ahronoth newspaper said Defence Ministry director-general Dan Harel was in the United States this week to assess the Obama administration's planned military aid to Gulf Arab states and its impact on the Israeli "qualitative edge". An Israeli official confirmed Harel's U.S. trip to Reuters but did not comment on Yedioth's account of what was discussed. Isaac Herzog, centre-left leader of Israel's parliamentary opposition, closed ranks with Netanyahu against the Iran nuclear deal and said he would go to Washington "to work on advancing a package of security measures befitting the new situation".

NSA involvement key to US-Israeli cooperation on deterring Iran

Wall 13 (Kim Wall is a graduate at School of International Public Affairs at Columbia University and a writer for the South China Morning Post, <http://www.lexisnexis.com/hotttopics/lnacademic/?>, EM)

America's National Security Agency helped Israel code the Stuxnet computer worm used to attack Iranian nuclear facilities several years ago, according to former NSA contractor and whistle-blower Edward Snowden. Involvement of the US and Israel in creation and deployment of the sophisticated malware has been suspected for some time. But the NSA's role has remained largely unknown. Snowden made the claim in an interview with WikiLeaks associate Jacob Appelbaum in May and published by the German weekly Der Spiegel on Sunday. "The NSA and Israel wrote Stuxnet together," Snowden said. Stuxnet came to public attention in 2010 when it was reported to have knocked out about a fifth

of the centrifuges Iran was using to enrich uranium. From the outset, computer security experts argued the worm's unprecedented level of sophistication indicated **it was a government-led cyberattack**. The New York Times chief Washington correspondent David Sanger reported the US and Israeli governments were behind Stuxnet. Drawing on his earlier reports for the Times, Sanger wrote in his 2012 book *Confront and Conceal* that Israel's Unit 8200 and the NSA took a key role in designing the worm. Snowden's claims back up Sanger's anonymous White House sources and place the NSA at the heart of the operation. In light of the new information, Washington's response to Snowden may - once again - be one of contradictions. "On one hand, they'll claim that there is nothing new to debate, but on the other hand, the US may claim that irrevocable damage has been done to national security," said Ross Anderson, professor of security engineering at Cambridge University's Computer Laboratory. Despite the Stuxnet offensive, Anderson said cyberwarfare was still unlikely to replace military force any time soon. "It takes months and years of preparations to create these viruses and they have to be crafted individually for attacking each target," he said, adding that it would take six separate programmes just to cut off the electricity in Britain. "Planes, tanks and ships, however, can be manufactured and sent to anywhere in the world."

General Relations on Brink

US-Israeli relations tense- Israeli espionage and WMD production

Stein 14 Jeff Stein is a columnist and at Newsweek. Previously, he was the SpyTalk columnist and National Security Editor for Congressional Quarterly's website, CQ Politics, from 2002–2009. He specializes in U.S. intelligence, military and foreign policy issues. In addition to his work for CQ, he has written three books and hundreds of news articles, opinion pieces and book reviews, Newsweek, August 4, 2014, <http://www.newsweek.com/israel-flagged-top-spy-threat-us-new-snowden-sa-document-262991>, CC.

Israel was singled out in 2007 as a top espionage threat against the U.S. government, including its intelligence services, in a newly published National Security Agency (NSA) document obtained by fugitive leaker Edward Snowden, according to a news report Monday. The document also identified Israel, along with North Korea, Cuba and India, as a “leading threat” to the infrastructure of U.S. financial and banking institutions. The threats were listed in the NSA’s 2007 Strategic Mission List, according to the document obtained by journalist/activist Glenn Greenwald, a founding editor of The Intercept, an online magazine that has a close relationship with Snowden, a former NSA and CIA contractor who fled the U.S. with thousands of top-secret documents last year. In this new document, Israel was identified by the NSA as a security threat in several areas, including “the threat of development of weapons of mass destruction” and “delivery methods (particularly ballistic and nuclear-capable cruise missiles).” The NSA also flagged Israel’s “WMD and missile proliferation activities” and “cruise missiles” as threats. In a section of the document headed “Foreign Intelligence, Counterintelligence; Denial & Deception Activities: Countering Foreign Intelligence Threats,” Israel was listed as a leading perpetrator of “espionage/intelligence collection operations and manipulation/influence operations...against U.S. government, military, science & technology and Intelligence Community” organs. The term “manipulation/influence operations” refers to covert attempts by Israel to sway U.S. public opinion in its favor. In this, Israel has dubious company, according to the NSA: Other leading threats were listed as China, Russia, Cuba, Iran, Pakistan, North Korea, France, Venezuela and South Korea. Israel has similar company in threats against U.S. infrastructure, according to the NSA document. Under a section headed “Mastering Cyberspace and Preventing an Attack on U.S. Critical Information Systems,” Israel, India, North Korea and Cuba are identified as “FIS [financial/banking system] threats.” Israel also appears on the list of countries believed by the NSA to be “enabling” electronic warfare “producers/proliferators.” The new document again underscores the schizoid relationship between the U.S. and Israel, which cooperate closely in military and intelligence operations but also aggressively spy on each other. A previously released Snowden document said that “one of NSA’s biggest threats is actually from friendly intelligence services, like Israel.” Another revealed that a U.S. National Intelligence Estimate ranked Israel as “the third most aggressive intelligence service against the U.S.,” behind only China and Russia. **Washington’s protective relationship toward Israel is heavily influenced by its close cooperation in intelligence operations against common Middle Eastern threats,** such as Iran, Syria, terrorist groups and the Palestinians. Citing NSA documents, Greenwald’s piece in The Intercept says, “The relationship has, on at least one occasion, entailed the covert payment of a large amount of cash to Israeli operatives.” The NSA and its British counterpart also “rely on U.S.-supported Arab regimes, including the Jordanian monarchy and even the Palestinian

Authority Security Forces, to provide vital spying services regarding Palestinian targets. “Over the last decade,” Greenwald added, “the NSA has significantly increased the surveillance assistance it provides to its Israeli counterpart, the Israeli SIGINT National Unit (ISNU; also known as Unit 8200), including data used to monitor and target Palestinians. In many cases, the NSA and ISNU work cooperatively with the British and Canadian spy agencies, the GCHQ and CSEC.”

US-Israeli relations will recover from Iran deal, based on weapons

Abunimah 7/15/15 Ali, Palestinian-American journalist who contributes regularly to such publications as The Chicago Tribune and The Los Angeles Times, he has also served as the Vice-President on the Board of Directors of the Arab American Action Network, is a fellow at the Palestine Center,[2] and is co-founder of The Electronic Intifada, Electronic Intifada, July 15, 2015, <https://electronicintifada.net/blogs/ali-abunimah/obama-buries-gaza-under-iran-nuclear-deal>, CC

In May, **Obama agreed to fork over** an additional **\$1.9 billion in US weapons to Israel** that will more than likely be used against Palestinians, and to reinforce Israel’s regime of apartheid and colonization. **Obama has made it clear that this is only a down payment.** The president told the The New York Times yesterday that despite Netanyahu’s efforts to “influence the congressional debate” against the agreement, he was confident the deal would be implemented. But Obama affirmed that **after Netanyahu is done trying to sabotage the Iran deal, the president would** “sit down” with the Israeli leader to **figure out what more the US could give him.** **The message is clear: no matter what Israel does, Obama will reward it with weapons and deeper US ties.**

Above all, there will be no pressure over the Palestinians. It would be foolish to think that the president’s successor – whether a Democrat or a Republican – will do any less. The message for those concerned about the Palestinians is to step up the pressure on Israel through all available means, notably boycott, divestment and sanctions (BDS), which Obama – like his would-be successor Hillary Clinton – has vowed to do all he can to oppose.

Link

Surveillance K2 Relations

Surveillance cooperation is key

Stein 14 Jeff Stein is a columnist and at Newsweek. Previously, he was the SpyTalk columnist and National Security Editor for Congressional Quarterly's website, CQ Politics, from 2002–2009. He specializes in U.S. intelligence, military and foreign policy issues. In addition to his work for CQ, he has written three books and hundreds of news articles, opinion pieces and book reviews, Newsweek, August 4, 2014, <http://www.newsweek.com/israel-flagged-top-spy-threat-us-new-snowdennsa-document-262991>, CC.

Washington's protective relationship toward Israel is heavily influenced by its close cooperation in intelligence operations against common Middle Eastern threats, such as Iran, Syria, terrorist groups and the Palestinians. Citing NSA documents, Greenwald's piece in The Intercept says, "The relationship has, on at least one occasion, entailed the covert payment of a large amount of cash to Israeli operatives." The NSA and its British counterpart also "rely on U.S.-supported Arab regimes, including the Jordanian monarchy and even the Palestinian Authority Security Forces, to provide vital spying services regarding Palestinian targets. "Over the last decade," Greenwald added, "the NSA has significantly increased the surveillance assistance it provides to its Israeli counterpart, the Israeli SIGINT National Unit (ISNU; also known as Unit 8200), including data used to monitor and target Palestinians. In many cases, the NSA and ISNU work cooperatively with the British and Canadian spy agencies, the GCHQ and CSEC."

US surveillance provisions are key to sustaining Israeli relations

Greenwald, American lawyer, August 4, 2014 (Glenn Greenwald, American lawyer, author, journalist, and columnist for the Guardian, "Cash, weapons and surveillance: The U.S. is a key party to every Israeli attack", The Intercept, 8/4/14, AKHB)

The U.S. government has long lavished overwhelming aid on Israel, providing cash, weapons and surveillance technology that play a crucial role in Israel's attacks on its neighbors. But top secret documents provided by NSA whistleblower Edward Snowden shed substantial new light on how the U.S. and its partners directly enable Israel's military assaults – such as the one on Gaza.

Over the last decade, the NSA has significantly increased the surveillance assistance it provides to its Israeli counterpart, the Israeli SIGINT National Unit (ISNU; also known as Unit 8200), including data used to monitor and target Palestinians. In many cases, the NSA and ISNU work cooperatively with the British and Canadian spy agencies, the GCHQ and CSEC.

The relationship has, on at least one occasion, entailed the covert payment of a large amount of cash to Israeli operatives. Beyond their own surveillance programs, the American and British surveillance agencies rely on U.S.-supported Arab regimes, including the Jordanian monarchy and even the Palestinian Authority Security Forces, to provide vital spying services regarding Palestinian targets.

The new documents underscore the indispensable, direct involvement of the U.S. government and its key allies in Israeli aggression against its neighbors. That covert support is squarely at odds with the posture of helpless detachment typically adopted by Obama officials and their supporters.

General Intel

!! NSA and Israeli Intelligence Officers working together

Black 15 (Ian Black, the Guardian's Middle East editor. In more than 25 years on the paper he has also been its European editor, diplomatic editor, foreign leader writer and Middle East correspondent, Wednesday 15 July 2015 14.00 EDT, The Guardian, "NSA document: Israeli special forces assassinated top Syrian military official", <http://www.theguardian.com/world/2015/jul/15/nsa-reveals-israeli-commandos-killed-mahmoud-suleiman-syria>)

The Intercept said that, according to three former US intelligence officers with extensive experience in the Middle East, the document's classification markings indicate that the NSA learned of the assassination through surveillance. The information in the document was labelled "SI," which means the intelligence was collected by monitoring communications signals.

It added that knowledge within the NSA about surveillance of Israeli military units is especially sensitive because the NSA has Israeli intelligence officers working jointly with its officers at NSA headquarters in Fort Meade, Maryland.

!! US-Israel security cooperation overwhelmingly one-sided in favor of Israel

Greenwald, Poitras, and Macaskill 13 (Glenn Greenwald is a journalist, constitutional lawyer, and author of four New York Times best-selling books on politics and law. Laura Poitras is a Pulitzer-winning Guardian columnist. Ewen Macaskill the defense and intelligence correspondent for the Guardian, The Guardian, September 11, 2013, "NSA shares raw intelligence including Americans' data with Israel", <http://www.theguardian.com/world/2013/sep/11/nsa-americans-personal-data-israel-documents>, CC.)

While NSA documents tout the mutually beneficial relationship of Sigint sharing, another report, marked top secret and dated September 2007, states that the relationship, while central to US strategy, has become overwhelmingly one-sided in favor of Israel.

"Balancing the Sigint exchange equally between US and Israeli needs has been a constant challenge," states the report, titled 'History of the US – Israel Sigint Relationship, Post-1992'. "In the last decade, it arguably tilted heavily in favor of Israeli security concerns. 9/11 came, and went, with NSA's only true Third Party [counter-terrorism] relationship being driven almost totally by the needs of the partner."

NSA Data

Israel perceives NSA data as key to national security

Bamford 14 (James Bamford is an American bestselling author and journalist noted for his writing about United States intelligence agencies, especially the National Security Agency (NSA). Bamford has taught at the University of California, Berkeley, as a distinguished visiting professor and has written for The New York Times Magazine, The Atlantic, Harper's, and many other publications. In 2006, he won the National Magazine Award for Reporting for his article, "The Man Who Sold The War", published in Rolling Stone, New York Times, September 16, 2014, <http://www.nytimes.com/2014/09/17/opinion/israels-nsa-scandal.html>, **CC**.)

WASHINGTON — IN Moscow this summer, while reporting a story for Wired magazine, I had the rare opportunity to hang out for three days with Edward J. Snowden. It gave me a chance to get a deeper understanding of who he is and why, as a National Security Agency contractor, he took the momentous step of leaking hundreds of thousands of classified documents. Among his most shocking discoveries, he told me, was the fact that the N.S.A. was routinely passing along the private communications of Americans to a large and very secretive Israeli military organization known as Unit 8200. This transfer of intercepts, he said, included the contents of the communications as well as metadata such as who was calling whom. Typically, when such sensitive information is transferred to another country, it would first be "minimized," meaning that names and other personally identifiable information would be removed. But when sharing with Israel, the N.S.A. evidently did not ensure that the data was modified in this way. Mr. Snowden stressed that the transfer of intercepts to Israel contained the communications — email as well as phone calls — of countless Arab- and Palestinian-Americans whose relatives in Israel and the Palestinian territories could become targets based on the communications. "I think that's amazing," he told me. "It's one of the biggest abuses we've seen."

NSA spying directly enables Israel's military capabilities – Snowden leaks prove

Greenwald, Pulitzer prize journalist, **2014** (Glenn, Glenn Greenwald is a journalist, constitutional lawyer, and author of four New York Times best-selling books on politics and law. His most recent book, No Place to Hide, is about the U.S. surveillance state and his experiences reporting on the Snowden documents around the world. Prior to his collaboration with Pierre Omidyar, Glenn's column was featured at The Guardian and Salon. He was the debut winner, along with Amy Goodman, of the Park Center I.F. Stone Award for Independent Journalism in 2008, and also received the 2010 Online Journalism Award for his investigative work on the abusive detention conditions of Chelsea Manning. For his 2013 NSA reporting, he received the George Polk award for National Security Reporting; the Gannett Foundation award for investigative journalism and the Gannett Foundation watchdog journalism award; the Esso Premio for Excellence in Investigative Reporting in Brazil (he was the first non-Brazilian to win), and the Electronic Frontier Foundation's Pioneer Award. Along with Laura Poitras, Foreign Policy magazine named him one of the top 100 Global Thinkers for 2013. The NSA reporting he led for

The Guardian was awarded the 2014 Pulitzer Prize for public service, The Intercept, "Cash, Weapons and Surveillance: the U.S. is a Key Party to Every Israeli Attack," Intercept, <https://firstlook.org/theintercept/2014/08/04/cash-weapons-surveillance/>, A.ZHU)

The U.S. government has long lavished overwhelming aid on Israel, providing cash, weapons and surveillance technology that play a crucial role in Israel's attacks on its neighbors. But top secret documents provided by NSA whistleblower Edward Snowden shed substantial new light on how **the U.S. and its partners directly enable Israel's military assaults** – such as the one on Gaza. Over the last decade, the NSA has significantly increased the surveillance assistance it provides to its Israeli counterpart, the Israeli SIGINT National Unit (ISNU; also known as Unit 8200), including data used to monitor and target Palestinians. In many cases, the NSA and ISNU work cooperatively with the British and Canadian spy agencies, the GCHQ and CSEC. The relationship has, on at least one occasion, entailed the covert payment of a large amount of cash to Israeli operatives. Beyond their own surveillance programs, the American and British surveillance agencies rely on U.S.-supported Arab regimes, including the Jordanian monarchy and even the Palestinian Authority Security Forces, to provide vital spying services regarding Palestinian targets. The new documents underscore **the indispensable, direct involvement of the U.S. government and its key allies in Israeli aggression against its neighbors.** That covert support is squarely at odds with the posture of helpless detachment typically adopted by Obama officials and their supporters. President Obama, in his press conference on Friday, said “it is heartbreaking to see what’s happening there,” referring to the weeks of civilian deaths in Gaza – “as if he’s just a bystander, watching it all unfold,” observed Brooklyn College Professor Corey Robin. Robin added: “Obama talks about Gaza as if it were a natural disaster, an uncontrollable biological event.” Each time Israel attacks Gaza and massacres its trapped civilian population – at the end of 2008, in the fall of 2012, and now again this past month – the same process repeats itself in both U.S. media and government circles: the U.S. government feeds Israel the weapons it uses and steadfastly defends its aggression both publicly and at the U.N.; the U.S. Congress unanimously enacts one resolution after the next to support and enable Israel; and then American media figures pretend that the Israeli attack has nothing to do with their country, that it’s just some sort of unfortunately intractable, distant conflict between two equally intransigent foreign parties in response to which all decent Americans helplessly throw up their hands as though they bear no responsibility. “The United States has been trying to broker peace in the Middle East for the past 20 years,” wrote the liberal commentator Kevin Drum in Mother Jones, last Tuesday. The following day, CNN reported that the Obama administration “agreed to Israel’s request to resupply it with several types of ammunition ... Among the items being bought are 120mm mortar rounds and 40mm ammunition for grenade launchers.” The new Snowden documents illustrate a crucial fact: **Israeli aggression would be impossible without the constant, lavish support and protection of the U.S. government,** which is anything but a neutral, peace-brokering party in these attacks. **And the relationship between the NSA and its partners on the one hand, and the Israeli spying agency on the other, is at the center of that enabling.**

Israel relies on NSA data for security

Greenwald, Poitras, and Macaskill 13 Glenn Greenwald is a journalist, constitutional lawyer, and author of four New York Times best-selling books on politics and law. Laura Poitras

is a Pulitzer-winning Guardian columnist. Ewen Macaskill the defense and intelligence correspondent for the Guardian, The Guardian, September 11, 2013, <http://www.theguardian.com/world/2013/sep/11/nsa-americans-personal-data-israel-documents>, CC.

Although Israel is one of America's closest allies, it is not one of the inner core of countries involved in surveillance sharing with the US - Britain, Australia, Canada and New Zealand. This group is collectively known as Five Eyes. The relationship between the US and Israel has been strained at times, both diplomatically and in terms of intelligence. In the top-secret 2013 intelligence community budget request, details of which were disclosed by the Washington Post, Israel is identified alongside Iran and China as a target for US cyberattacks. While NSA documents tout the mutually beneficial relationship of Sigint sharing, another report, marked top secret and dated September 2007, states that the relationship, while central to US strategy, has become overwhelmingly one-sided in favor of Israel. "Balancing the Sigint exchange equally between US and Israeli needs has been a constant challenge," states the report, titled 'History of the US – Israel Sigint Relationship, Post-1992'. "In the last decade, it arguably tilted heavily in favor of Israeli security concerns. 9/11 came, and went, with NSA's only true Third Party [counterterrorism] relationship being driven almost totally by the needs of the partner." In another top-secret document seen by the Guardian, dated 2008, a senior NSA official points out that Israel aggressively spies on the US. "On the one hand, the Israelis are extraordinarily good Sigint partners for us, but on the other, they target us to learn our positions on Middle East problems," the official says. "A NIE [National Intelligence Estimate] ranked them as the third most aggressive intelligence service against the US." Later in the document, the official is quoted as saying: "One of NSA's biggest threats is actually from friendly intelligence services, like Israel. There are parameters on what NSA shares with them, but the exchange is so robust, we sometimes share more than we intended." The memorandum of understanding also contains hints that there had been tensions in the intelligence-sharing relationship with Israel. At a meeting in March 2009 between the two agencies, according to the document, it was agreed that the sharing of raw data required a new framework and further training for Israeli personnel to protect US person information.

The NSA acts in Israel's

Impacts

Economy

US-Israel relationship helps the economy and supports thousands of jobs

Brilliant, executive VP and head of International Affairs for the US Chamber of Commerce, **15** (Myron Brilliant, The Hill, Congress Blog, “The Strategic Imperative of US-Israel commerce” March 3, 2015, <http://thehill.com/blogs/congress-blog/foreign-policy/234331-the-strategic-imperative-of-us-israel-commerce>)

The U.S. and Israel have long-standing trade and investment ties that serve to benefit both countries, and our close commercial bond supports game-changing innovation benefiting the global economy. Since the signing of the U.S.-Israel Free Trade Agreement 30 years ago, two-way trade has multiplied tenfold to over \$40 billion per year with shared economic benefits for both countries.

In a country as small as Israel, it is amazing that over 250 multinational companies have R&D centers there. And underscoring the importance of our relationship, two-thirds of them are U.S. companies. Intel, Microsoft, IBM, and Cisco have been in Israel for decades, and just days ago, Apple CEO Tim Cook visited Israel to inaugurate the company’s largest innovation center outside of California.

Israel is the top importer of U.S. goods in its region, despite representing a mere 2 percent of the population. There are more companies listed on the NASDAQ exchange from Israel than from any country besides the U.S. and China. And nearly half of all investment into the U.S. from the Middle East comes from Israeli companies. The commercial relationship, while often glossed over given the focus on security matters, is not only sparking new technologies but supports thousands of good jobs in both countries.

US- Israeli relations k2 preserving the economy and US global leadership

Eisenstadt and Pollock 12 (Michael, David, September 2012, report by the Washington Institute, “How the United States Benefits from Its Alliance with Israel”, <https://www.washingtoninstitute.org/uploads/Documents/pubs/StrategicReport07.pdf>, MJW)

There is bipartisan agreement that restoring the vitality and competitiveness of the U.S. economy is crucial to preserving U.S. global leadership. Technological innovation is key to achieving this goal. While Israel is a small country, it ranks among the top half-dozen countries world- wide in various indices of innovation. U.S.-Israel investment, R&D, and joint ventures create tens of thousands of jobs for American workers in informa- tion technology, medical R&D, and defense. Israel is among the top twenty international direct investors in the United States, and two-way trade between America and Israel leads a number of much larger countries, such as Spain and Saudi Arabia.

Cybersecurity

US- Israel relationship key to cybersecurity

Brillant, executive VP and head of International Affairs for the US Chamber of Commerce, **15** (Myron Brilliant, The Hill, Congress Blog, “The Strategic Imperative of US-Israel commerce” March 3, 2015, <http://thehill.com/blogs/congress-blog/foreign-policy/234331-the-strategic-imperative-of-us-israel-commerce>)

Following major cyber breaches on public and private institutions across the world, we have a better understanding of the vulnerability of our companies and governments. With more than 10 percent of global cybersecurity investment going into Israel—including from U.S. investors—and Israel’s own establishment of a new cyber hub in Beersheva, we can already see the importance of our partnership in this area.

US-Israeli relations are k2 cyber security

Eisenstadt and Pollock 12 (Michael, David, September 2012, report by the Washington Institute, “How the United States Benefits from Its Alliance with Israel”, <https://www.washingtoninstitute.org/uploads/Documents/pubs/StrategicReport07.pdf>, MJW)

Israel has emerged as a pioneer in IT, and **U.S.-Israel cybersecurity cooperation in the private sector is substantial. The architecture for many of Intel’s most successful computer chips was invented in Israel, accounting for an estimated 40 percent of the firm’s revenues. Israeli-designed algorithms and techniques are also key to securing a significant percentage of U.S. financial transactions and telecommunications.** Thus, in early 2012, Cisco paid \$5 billion to acquire the Israeli-founded firm NDS, one of the top TV-encryption companies worldwide. Israeli researchers also play a disproportionate role in many other computer-related and telecommunications inventions and applications, including instant messaging, voice-over internet protocol (VoIP), online money transfers, and data mining programs. **Official U.S.- Israel cyber cooperation is also reported to be significant, and may include offensive cyberwarfare against Iran’s nuclear program.**

Iran Nuke Prolif

US-Israeli relations necessary to prevent war with Iran

Clawson and Makovsky 12 ("Preventing an Iranian Nuclear Breakout", Strategic Report 8 9/12,

<http://www.washingtoninstitute.org/uploads/Documents/pubs/StrategicReport8.pdf>, Patrick Clawson is the director of research and head of the Iran Security Initiative at The Washington Institute and has written for *New York Times*, *Wall Street Journal*, and *Washington Post*. He has testified before Congress 20 times and been a witness in 30 federal cases concerning the Middle East. David Makovsky is the director on the Project of the Middle East Peace Project and author of the 2009 *Washington Post* bestseller *Myths, Illusions, and Peace: Finding a New Direction for America in the Middle East*)

As for Israelis who think that America has no intention of striking, they believe Washington will ultimately adopt a policy of containment, despite the public repudiation of this voiced by President Obama and repeated by other senior officials. No one can know for certain how U.S. leaders will react if a crisis arrives, since past statements may not be a good predictor of future policies in real, rather than theoretical, scenarios. Whatever the U.S. path, Washington's slower clock may eventually, and unwittingly, provide the incentive for Israel to act on its own. In assessing the debate within Israel, commentators often misinterpret the view of opponents of an Israeli strike. Those security officials (present and former) and Israeli cabinet ministers who are advising the Netanyahu government to resist striking Iran hold this view not because they oppose a strike altogether, or because they support containment of Iran as applied to the Soviet Union during the Cold War, but because they believe the responsibility of striking falls to the United States. Both schools in the Israeli debate are united on the view that Iran's declared enmity toward Israel is real, not theoretical. Even if Israeli officials could ignore the many bloodcurdling threats from Iran's leaders—which they cannot—there would still remain Iran's actions. Iran has spent more than \$5 billion—some estimate much more—funding and arming every group dedicated to killing Israeli civilians and eliminating the state of Israel, such as Hizballah, Hamas, and Palestinian Islamic Jihad. Iran has proven that it will provide the arms with which to attack Israeli civilians. Israel, for its part, will not remain indifferent to Iran's established track record of hostility. In the absence of U.S. action, the internal debate is likely to shift, over time, in the favor of those who believe that the only alternative is an Israeli strike. Another argument used by some Israelis for a preemptive strike is that Washington will be too late in concluding that Iran is about to get a bomb. These fears date to the ultimately inaccurate identification of WMD in Iraq by U.S. intelligence and the scars inflicted by this failure. In this view, the U.S. intelligence community showed skittishness in its response to the discovery in 2007 of a Syrian nuclear reactor well that had no purpose other than to build weapons. Prior to this discovery, U.S. intelligence had not found a reprocessing plant for weaponization and so was unwilling to state with confidence that Syria's objective was to obtain weapons. U.S. failure to act was a post-Iraq phenomenon: the Bush administration and the intelligence community did not want to strike because they wanted to avoid being accused of acting precipitously. Israel would argue that the price of this reluctance to attack before the reprocessing plant was found reflected a willingness to allow the reactor to go "hot" and thereby preclude any prospects of an attack beyond that point. Of course, there are differences between the Syria and Iran cases. For Israel, however, a commonality would be Israel's concern that the United States may not recognize that the final relevant point for decisionmakers is less the issue of weaponization and more the ability of the United States or Israel to intervene and halt the program.

NSA- ISNU (Israel Sigint National Unit) key to prevent Iranian and Syrian nuclear prolif

NSA 13 ("NSA Intelligence Relationship with Israel" United States. National Security Agency/ Central Security Service. Office of the Directorate. Foreign Affairs Directorate. Israel Desk. Top Secret, Information Paper. April 19, 2013: 3 pp.)

(U) Success Stories _ (TS//SI//REL TO USA, ISR) A key priority for ISNU is the Iranian nuclear development program, followed by Syrian nuclear efforts, Lebanese Hizballah plans and intentions, Palestinian terrorism, and Global Jihad. Several recent and successful joint operations between NSA and ISNU have broadened both organizations' ability to target and exploit Iranian nuclear

efforts. In addition, a robust and dynamic cryptanalytic relationship has enabled breakthroughs on high priority Iranian targets. (TS//REL TO USA, ISR) NSA and ISNU continue to initiate joint targeting of Syrian and Iranian leadership and nuclear development programs with CIA, ISNU, SOD and Mossad. This exchange has been particularly important as unrest in Syria continues, and both sides work together to identify threats to regional stability. NSA's cyber partnerships expanded beyond ISNU to include Israeli Defense Intelligence's SOD and Mossad, resulting in unprecedented access and collection breakthroughs that all sides acknowledge would not have been possible to achieve without the others.

Iran war causes WWII

Hanchett, 7-14-2015, (Ian, citing Mark Reed Levin, Mark Reed Levin (born September 21, 1957) is an American lawyer, author, and the host of American syndicated radio show The Mark Levin Show. Levin worked in the administration of President Ronald Reagan and was a chief of staff for Attorney General Edwin Meese. He is president of the Landmark Legal Foundation, has authored five books, and contributes commentary to various media outlets such as National Review Online. Levin enrolled at Temple University Ambler including summer classes and graduated with a bachelor's degree in Political Science in 1977 at age 19, summa cum laude and Phi Beta Kappa.[5] Levin won election to the Cheltenham school board in 1977 on a platform of reducing property taxes.[4] In 1980 Levin earned a juris doctor from Temple University Beasley School of Law, "Levin: Iran Deal 'Planted the Seeds' 'For World War III,' 'This Is Munich'," Breitbart, <http://www.breitbart.com/video/2015/07/14/levin-iran-deal-planted-the-seeds-for-world-war-iii-this-is-munich/>, A.ZHU)

Talk radio host and author of "Plunder and Deceit," Mark Levin declared of the Iran deal "Barack Obama has planted the seeds...for World War III" and "This is Munich" on Tuesday. Levin said, "Barack Obama has planted the seeds, in my view, for World War III. They were already there, but he's moved it along. I honestly believe that the next, massive, conflagration, war will now be in the Middle East. And I believe the Saudis are going to get nukes, and the Egyptians are going to get nukes, and others, and you can hardly blame them." He continued, "there's no effective inspection regime here. There's no effective sanctions. The Russians and the Chinese are not going to allow them in any event. Obama has sealed the fate of the next generation. ... I really believe that one day this is going to lead to a horrific war." And that the deal has "sealed the fate of the people of Iran" and "may well have" sealed Israel's fate.

!! Iran war leads to international terrorism and economic collapse

Kemp and Gay, MIT PHD, 14

(Geoffrey Kemp and John Allen Gay are coauthors of War with Iran: Political, Military, and Economic Consequences. Geoffrey Kemp is Director of Regional Security Programs at the Center for the National Interest. He served in the **White House during the first Reagan administration as Special Assistant to the President for National Security Affairs** and Senior Director for Near East and South Asian Affairs on the National Security Council Staff. Dr. Kemp received his **Ph.D. in Political Science at M.I.T. and his M.A. and B.A. degrees from Oxford University.** Gay is an

assistant editor at The National Interest, 11-24-2014, "The High Cost of War with Iran," National Interest, <http://nationalinterest.org/commentary/the-high-cost-war-iran-8265>, A.ZHU)

This will not be the only front of a war, however. Iran's leaders have threatened the West with retaliation too frequently and too publicly to simply ignore an attack. Iran has agents and allies that may commit acts of terrorism. Lebanese Hezbollah's deadly bombing of a bus full of Israeli tourists in Burgas, Bulgaria and the discovery of a similar plot in Cyprus are examples of this capability. And **assassination plots against Israeli diplomats** in India, Georgia, Thailand and Kenya, as well as the Saudi ambassador in Washington, **show Iranian willingness to commit acts of terrorism as part of its strategy.** Iran also has many small military speedboats, midget submarines and antiship missiles. It may use these to attack American vessels near its shores or to disrupt the flow of oil through the Strait of Hormuz. **An oil blockade, if successful and sustained, would send shockwaves through the global economy,** as roughly a fifth of the world's internationally traded oil passes through the strait. But Iran's leaders know that such a severe step would risk a severe response, and it is unlikely that they'd be able to effectively seal Hormuz. Thus, they are more likely to launch a sustained campaign of pinprick harassment—a missile here, a few floating mines there, spread out over hours, days and weeks. When combined with actions by Iranian operatives in neighboring countries and possibly by Iran's ballistic missile forces, this will create uncertainty for any attacker—too violent to be peace, but not fully war. **This state of affairs will put Iran on a more level footing with the United States,** and will challenge U.S. policy makers to come up with an appropriate response. A sustained entanglement may result. The economic impact of this kind of war would be negative. **Regardless of how the conflict proceeds, there would be a significant spike in oil prices;** if the war is not swift and decisive, the spike could last for weeks or months. **The impact of this should not be underestimated, especially given the fragility of the global economic recovery.** A \$10 increase in the price per barrel of oil would take a billion dollars from American consumers in about five days. War could see oil between \$150 and \$200 per barrel. High prices would harm most states, although oil exporters outside the Persian Gulf region, like Russia and Venezuela, could see a windfall. **The economic fallout would drive much of the war's negative political impact. Asian nations, which are the recipients of much Gulf oil, would be particularly unhappy.** Washington's **European allies also would be divided at best. Relations with Russia and China would suffer most.** Both states are alarmed by U.S. willingness to use force to reshape the strategic environment, and a major conflict with Iran could see the two taking steps to be an effective counterbalance. **This could include helping Iran rebuild and rearm.**

!! Iran bomb sparks worldwide proliferation, war causes them to pursue proliferate Kemp and Gay, MIT PHD, 14

Geoffrey Kemp and John Allen Gay are coauthors of *War with Iran: Political, Military, and Economic Consequences*. Geoffrey Kemp is Director of Regional Security Programs at the Center for the National Interest. He served in the **White House during the first Reagan administration as Special Assistant to the President for National Security Affairs** and Senior Director for Near

East and South Asian Affairs on the National Security Council Staff. Dr. Kemp received his **Ph.D. in Political Science at M.I.T. and his M.A. and B.A. degrees from Oxford University.** Gay is an assistant editor at The National Interest, 11-24-2014, "The High Cost of War with Iran," National Interest, <http://nationalinterest.org/commentary/the-high-cost-war-iran-8265>, A.ZHU)

The United States might not start the war. Israeli prime minister Benjamin Netanyahu has been singularly determined to bring the Iran crisis to a swift resolution. The rest of the Israeli security establishment shares many of Netanyahu's worries. If Israel strikes Iran on its own, and the United States is drawn in, the U.S.-Israeli relationship will likely suffer. Polls already show fading sympathy for Israel on the American left; an unpopular war could fuel this trend. As counterintuitive as it may seem, Iran could also start the war. Certain hardline cliques within Iran are willing to engage in provocative actions. If a terror plot like that against the Saudi ambassador to the United States were to succeed, it would likely be seen as a casus belli. Further, Iran's economic isolation is a source of tension that it could seek to alleviate by provoking instability. Needless to say, inaction has its own costs. There is not yet any indication that Iran has chosen to build a bomb, but as its nuclear program steadily advances, detecting and stopping a rush to weaponize will become more difficult. An Iran with a nuclear weapon will be better-equipped to resist the efforts of the United States and its allies in the Middle East. There will be fewer options if relations sour. Still, Iran isn't likely to give atomic weapons to terrorists or launch sudden nuclear attacks—history suggests that even the most radical regimes that get the bomb, like Mao's China, become very wary of using it. Iran's leaders may sponsor terror, but they are not out to commit national suicide by provoking nuclear retaliation against their country. Perhaps the biggest concern with an Iranian bomb is that it will end the nuclear nonproliferation regime and provoke a cascade of proliferation, not only in the Middle East but in South and East Asia, including South Korea and Japan. This would be a significant setback for the United States, which has long made nonproliferation a center of its foreign policy. The risk of a nuclear conflict would increase.

!! Iran war causes WWII, unprecedented destruction

Hussain 12

(Murtaza Hussain is a journalist and political commentator now working for First Look Media. His work focuses on human rights, foreign policy and cultural affairs. Murtaza's work has appeared in The New York Times, The Guardian, The Globe and Mail, Salon and elsewhere, 9-12-2012, "Why war with Iran would spell disaster," Al Jazeera, <http://www.aljazeera.com/indepth/opinion/2012/09/201291194236970294.html>, A.ZHU)

War with Iran would be no quick and clean affair, as many senior political and military figures have pointed out it would make the Iraq and Afghanistan wars, which cost trillions of dollars and the lives of thousands of soldiers and civilians, seem like "a cakewalk". The fact that it is becoming increasingly likely, inevitable in the eyes of many, and that it is high on the agenda of so many leading political figures warrants exploration of what such a conflict would really entail. Conflict on an unprecedented scale Not a war of weeks or months, but a "generations-long war" is how no less a figure than former Mossad chief Efraim Halevy describes the consequences of open conflict with Iran. In comparison with Iraq and Afghanistan, both countries with relatively small populations which were already in a state of relative powerlessness before they were invaded, Iran commands the eighth largest active duty military in the world, as well as highly trained special forces and guerilla organisations which operate in countries throughout the region and beyond. Retired US General John Abizaid has previously described the Iranian military as "the most powerful in the Middle East" (exempting Israel), and its highly sophisticated and battle-hardened proxies in Lebanon and Iraq have twice succeeded in defeating far stronger and better funded Western military forces. Any attack on Iran would assuredly lead to the activation of these proxies in neighbouring countries to attack American interests and would create a situation of borderless war unprecedented in any past US conflicts in the Middle East. None of this is to suggest that the United States would not "win" a war with Iran, but given the incredibly painful costs of Iraq and Afghanistan; wars fought against weak, poorly organised enemies lacking broad influence, politicians campaigning for war with Iran are leading the American people into a battle which will be guaranteed to make the past decade of fighting look tame in comparison.

!! Iran war turns US Econ

Hussain 12

(Murtaza Hussain is a journalist and political commentator now working for First Look Media. His work focuses on human rights, foreign policy and cultural affairs. Murtaza's work has appeared in The New York Times, The Guardian, The Globe and Mail, Salon and elsewhere, 9-12-2012, "Why war with Iran would spell disaster," Al Jazeera, <http://www.aljazeera.com/indepth/opinion/2012/09/201291194236970294.html>, A.ZHU)

Oil shocks and the American economy The fragile American economic recovery would be completely upended were Iran to target global energy supplies in the event of war, an act which would be both catastrophic and highly likely if US Iran hawks get their way. Not only does the country itself sit atop some of the largest oil and natural gas reserves on the planet, its close proximity to the shipping routes and oil resources of its neighbours means that in the event of war, its first response would likely be to choke off the global supply of crude; a tactic for which its military defences have in fact been specifically designed. The Strait of Hormuz, located in the

Persian Gulf is the shipping point for more than 20 per cent of the world's petroleum. Iran is known to have advanced Silkworm missile batteries buried at strategic points around the strait to make it impassable in the event of war, and has developed "swarming" naval tactics to neutralise larger, less mobile ships such as those used by the US Navy. While Iran could never win in straightforward combat, it has developed tactics of asymmetrical warfare that can effectively inflict losses on a far stronger enemy and render the strait effectively closed to naval traffic. The price of oil would immediately skyrocket, by some estimates upwards several hundred dollars a barrel, shattering the already tenuous steps the US and other Western economies are taking towards recovery. Former National Security Adviser Zbigniew Brzezinski has said a war with Iran could drag out years and would have economic consequences "devastating for the average American"; but these facts are conspicuously absent in public discussion of the war.

!! Iran War turns Middle East and South Asia wars

Hussain 12

(Murtaza Hussain is a journalist and political commentator now working for First Look Media. His work focuses on human rights, foreign policy and cultural affairs. Murtaza's work has appeared in The New York Times, The Guardian, The Globe and Mail, Salon and elsewhere, 9-12-2012, "Why war with Iran would spell disaster," Al Jazeera, <http://www.aljazeera.com/indepth/opinion/2012/09/201291194236970294.html>, A.ZHU)

Conflict across borders Finally, a war with Iran would be not be like conflicts in Iraq, Afghanistan and Libya where the fighting was constrained to the borders of the country in question. Despite widespread resentment towards the country due to the perception of it as a regionally imperialist power as well sectarian animosity towards it as Shia Muslim theocracy, Iran maintains deep links throughout the Middle East and South Asia and can count on both popular support as well as assistance from its network of armed proxies in various countries. In a report for Haaretz, Ahmed Rashid noted that an attack on Iran would likely inflame anti-American sentiment throughout the region, across both Shia and Sunni Muslim communities. Despite Iran's poor human rights record and bellicose leadership, polls have consistently shown that Iranian and Iranian-backed leaders such as Mahmoud Ahmadinejad and Hassan Nasrallah remain among the most popular figures throughout the Arab and Muslim world. This popularity comes not necessarily out of respect for Iranian ideology, but from a perception that Iran is the only assertive power in the region and is the target of aggression from the United States and its allies. In Rashid's analysis, both the Middle East and South Asia would become unsafe for American citizens and their interests for years to come; popular anger would reach a level which would render these area effectively off-limits and would cause grave and immediate danger to both American businesses and troops based in the region.

Judicial Deference DA HSS

1NC – Deference DA

1NC – Deference DA

For NSA surveillance matters, the courts currently grant deference to the executive. Only the executive can make decisions on national security matters.

Kalanges 14 – Shaina, second-year law student at the Northern Illinois University College of Law with a Bachelor of Arts from the University of Illinois Urbana-Champaign, Assistant Editor of the Northern Illinois University Law Review, 2014 (“Modern Private Data Collection and National Security Agency Surveillance: A Comprehensive Package of Solutions Addressing Domestic Surveillance Concerns,” *Northern Illinois University Law Review* (34 N. Ill. U. L. Rev. 643) Available Online to Subscribing Institutions via Lexis-Nexis)

[*652] On the other hand, Judge Pauley from the Southern District of New York delivered an opposite ruling in *ACLU v. Clapper*, nearly ten days after Judge Leon ruled in *Klayman*. n64 Judge Pauley reasoned that the **NSA could not achieve its objective of combating future terrorist attacks if it could not conduct a sweeping collection of every telephone record**. n65 Like Judge Leon, Judge Pauley described the querying system the NSA uses on surveillance targets. n66 However, unlike Judge Leon, Judge Pauley discerned a greater purpose behind the queries and held that the system was constitutional and kept with the *Smith* precedent. n67 Judge Pauley applied *Smith* to find that the communication records were already handed over to private companies by citizens who could not expect that the information could still be considered private to the individual. n68 Judge Pauley took his analysis a step further and **bolstered a need to keep FISC matters secret by citing historical deference to the executive when it comes to matters of national security**. n69 Judge Pauley dismissed the ACLU's claim and held that the program was meant to remain classified and unchallenged and that telephony metadata collection is constitutional. n70

Also, Judge Pauley held that a mere fear of chilling of free speech does not provide standing to challenge telephony metadata collection. n71 While cellular technology evolved since *Smith*, Judge Pauley cited the *Klayman* court and maintained that metadata remains unchanged and that the information gathered only contains phone numbers, dates, and times. n72 Judge Pauley also commented on the previous issues FISC faced, explaining that the FISC followed court rules to weed out issues of noncompliance in the past. n73 The Intelligence Committees received detailed reports of those noncompliance issues, which were addressed with tighter standards on the NSA from the FISC. n74 Accordingly, the NSA director also did comprehensive evaluations of section 215 practices and established the position of the director of compliance. n75

[*653] While Judge Pauley reasoned that any issues with noncompliance were weeded out of the current surveillance process, one legislative proposal, which gained nearly eighty-five sponsors, reacts to this issue quite differently and suggests that more may be done to insure American civil liberties. n76 Additionally, Judge Leon in *Klayman* picked apart the examples of metadata collection that the government provided to demonstrate the metadata program's progress in preventing terrorist attacks. n77 The *Klayman* court discerned that any uncovered terrorists were already found with other evidence that the metadata program merely corroborated. n78 Judge Pauley, in *Clapper*, **held to the contrary and used some examples to demonstrate how section 215 surveillance stops terrorist attacks before they take place**. n79

Judge Pauley even explained that the current program would have identified and prevented 9/11 hijacker Khalid Al-Mihdhar from carrying out his attack. n80

Nonetheless, both Judge Leon and Judge Pauley agreed on one point: that the legislature constructed FISA to exclude third party surveillance targets from challenging the NSA's compliance with the statute. n81 But both judges agreed that claims challenging the constitutionality of the statute were not precluded. n82 While Smith may never be overturned, distinguishing NSA surveillance from the surveillance in Smith may open the door to new Supreme Court precedent setting or suggesting constitutional guidelines for certain domestic surveillance practices. n83

The ACLU and the Supreme Court may have the potential to shape domestic privacy expectations with the Constitution under their belt, but Judge Pauley was correct in holding that deference should be granted to the executive in dealing with matters of national security. n84 Ultimately, the executive will decide where NSA surveillance is headed. n85 The Supreme Court will have Judge Pauley's point in mind and avoid appearing to undermine executive determinations if any ruling on the constitutionality of [*654] NSA practices emerges. n86 Accordingly, since President Obama approved continued surveillance under section 702 and section 215, the greatest policy changes in NSA practices may likely be implemented through legislative action that a Supreme Court ruling would heavily influence by articulating some constitutional guidelines, furthering down the path of Keith. n87

Breaking judicial deference to the executive in matters of intelligence gathering undermines executive flexibility.

Yoo 14 — John Yoo, Emanuel Heller Professor of Law at the University of California, Berkley, Visiting Scholar at the American Enterprise Institute, J.D. from Yale University, 2014 (“NSA Spying — Will Obama Lead or Punt to Courts, Congress and Harm the Presidency?,” *American Enterprise Institute*, January 4th, Accessible Online at <http://www.foxnews.com/opinion/2014/01/07/nsa-spying-will-obama-lead-or-punt-to-courts-congress-and-harm-presidency.html>)

Under Barack Obama, the presidency's control over national security intelligence has come under a [damaging] crippling cross-fire.

From the right, in December Bush-appointed Judge Richard Leon found the National Security Agency's “Orwellian” phone records collection program to violate the Constitution.

From the left, the White House's own blue-ribbon commission recently urged the president to place an “out of control” NSA under unprecedented judicial, bureaucratic, and even private controls.

If he makes the same mistake again, Mr. Obama will follow in the footsteps of failed presidents who shrunk before similar challenges, to the long-term harm of their office.

Mr. Obama may rise up to defend the NSA from the growing chorus of critics in Congress, the media, and the antiwar wing of his own party.

He might blunt the effort to subject the NSA's national security mission to the stricter rules that govern domestic law enforcement.

He might even preserve the intelligence agency's ability to collect phone calls and email data that, by the account of two successive administrations of both parties, has stopped terrorist attacks on the United States and its allies.

But don't count on it.

Mr. Obama's first instinct is to shift national security responsibility to other branches of government — witness his past attempts to try the 9/11 plotters in civilian court in New York City, move the terrorists in Guantanamo Bay, Cuba to a domestic prison, and ask Congress decide on intervening in Syria.

If he makes the same mistake again, Mr. Obama will follow in the footsteps of failed presidents who shrunk before similar challenges, to the long-term harm of their office.

Kicking the intelligence question to Congress or the courts undermines the Oval Office by reversing the polarity of its constitutional powers.

The Framers created the presidency precisely because foreign affairs and national security pose unique challenges to a legislature, which cannot react quickly to sudden, unforeseen events.

"Decision, activity, secrecy, and dispatch will generally characterize the proceedings of one man," Alexander Hamilton explained in "Federalist 70."

Only a single president could marshal the nation's resources with the energy and vigor to effectively protect its security. "Of all the cares or concerns of government," he added in "Federalist 74," "the direction of war most peculiarly demands those qualities which distinguish the exercise of power by a single hand."

Presidents who have defied the Framers' design have led the nation into some of its greatest disasters, despite their great intellect or political skills.

Executive flexibility is crucial to stopping terrorism, preventing WMD proliferation, deterring rogue nations, and staying in line with multilateral alliances. This trumps constitutionality – the international scene is changing.

Li 09 – Zheyao, Candidate, Georgetown University Law Center; B.A., Political Science and History, Yale University, 2009 ("War Powers for the Fourth Generation: Constitutional Interpretation in the Age of Asymmetric Warfare," *Georgetown Journal of Law & Public Policy* (Vol. 7, No. 1, p. 373) Available Online to Subscribing Institutions via Lexis-Nexis)

IV. WAR POWERS IN THE FOURTH GENERATION OF WARFARE

A. The Emergence of Non-State Actors

Even as the quantity of nation-states in the world has increased dramatically since the end of World War II, the institution of the nation-state has been in decline over the past few decades. Much of this decline is the direct result of the waning of major interstate war, which primarily

resulted from the introduction of nuclear weapons.¹²² The proliferation of nuclear weapons, and their immense capacity for absolute destruction, has ensured that conventional wars remain limited in scope and duration. Hence, "both the size of the armed forces and the quantity of weapons at their disposal has declined quite sharply" since 1945.¹²³ At the same time, concurrent with the decline of the nation-state in the second half of the twentieth century, non-state actors have increasingly been willing and able to use force to advance their causes. In contrast to nation-states, who adhere to the Clausewitzian distinction between the ends of policy and the means of war to achieve those ends, non-state actors do not necessarily fight as a mere means of advancing any coherent policy. Rather, they see their fight as a life-and-death struggle, wherein the ordinary terminology of war as an instrument of policy breaks down because of this blending of means and ends.¹²⁴ It is the existential nature of this struggle and the disappearance of the Clausewitzian distinction between war and policy that has given rise to a new generation of warfare. The concept of fourth-generational warfare was first articulated in an influential article in the Marine Corps Gazette in 1989, which has proven highly prescient. In describing what they saw as the modern trend toward a new phase of warfighting, the authors argued that:

In broad terms, fourth generation warfare seems likely to be widely dispersed and largely undefined; the distinction between war and peace will be blurred to the vanishing point. It will be nonlinear, possibly to the point of having no definable battlefields or fronts. The distinction between "civilian" and "military" may disappear. Actions will occur concurrently throughout all participants' depth, including their society as a cultural, not just a physical, entity. Major military facilities, such as airfields, fixed communications sites, and large headquarters will become rarities because of their vulnerability; the same may be true of civilian equivalents, such as seats of government, power plants, and industrial sites (including knowledge as well as manufacturing industries). ¹²⁵

It is precisely this blurring of peace and war and the demise of traditionally definable battlefields that provides the impetus for the formulation of a new theory of war powers. As evidenced by Part M, supra, the constitutional allocation of war powers, and the Framers' commitment of the war power to two co-equal branches, was not designed to cope with the current international system, one that is characterized by the persistent machinations of international terrorist organizations, the rise of multilateral alliances, the emergence of rogue states, and the potentially wide proliferation of easily deployable weapons of mass destruction, nuclear and otherwise.

B. The Framers' World vs. Today's World

The Framers crafted the Constitution, and the people ratified it, in a time when everyone understood that the state controlled both the raising of armies and their use. Today, however, the threat of terrorism is bringing an end to the era of the nation-state's legal monopoly on violence, and the kind of war that existed before-based on a clear division between government, armed forces, and the people-is on the decline.¹²⁶ As states are caught between their decreasing ability to fight each other due to the existence of nuclear weapons and the increasing threat from non-state actors, it is clear that the Westphalian system of nation-states

that informed the Framers' allocation of war powers is no longer the order of the day. 127 As seen in Part III, supra, the rise of the modern nation-state occurred as a result of its military effectiveness and ability to defend its citizens. If nation-states such as the United States are unable to adapt to the changing circumstances of fourth-generational warfare-that is, if they are unable to adequately defend against low-intensity conflict conducted by non-state actors-"then clearly [the modern state] does not have a future in front of it." 128

The challenge in formulating a new theory of war powers for fourth generational warfare that remains legally justifiable lies in the difficulty of adapting to changed circumstances while remaining faithful to the constitutional text and the original meaning. 29 To that end, it is crucial to remember that the Framers crafted the Constitution in the context of the Westphalian system of nation-states. The three centuries following the Peace of Westphalia of 1648 witnessed an international system characterized by wars, which, "through the efforts of governments, assumed a more regular, interconnected character." 130 That period saw the rise of an independent military class and the stabilization of military institutions. Consequently, "warfare became more regular, better organized, and more attuned to the purpose of war-that is, to its political objective." 131 That era is now over. Today, the stability of the long-existing Westphalian international order has been greatly eroded in recent years with the advent of international terrorist organizations, which care nothing for the traditional norms of the laws of war.

This new global environment exposes the limitations inherent in the interpretational methods of originalism and textualism and necessitates the adoption of a new method of constitutional interpretation. While one must always be aware of the text of the Constitution and the original understanding of that text, that very awareness identifies the extent to which fourth-generational warfare epitomizes a phenomenon unforeseen by the Framers, a problem the constitutional resolution of which must rely on the good judgment of the present generation. 13 Now, to adapt the constitutional war-marking scheme to the new international order characterized by fourth-generational warfare, one must understand the threat it is being adapted to confront.

C. The Jihadist Threat

The erosion of the Westphalian and Clausewitzian model of warfare and the blurring of the distinction between the means of warfare and the ends of policy, which is one characteristic of fourth-generational warfare, apply to al-Qaeda and other adherents of jihadist ideology who view the United States as an enemy. An excellent analysis of jihadist ideology and its implications for the rest of the world are presented by Professor Mary Habeck. 133 Professor Habeck identifies the centrality of the Qur'an, specifically a particular reading of the Qur'an and hadith (traditions about the life of Muhammad), to the jihadist terrorists. 134 The jihadis believe that the scope of the Qur'an is universal, and "that their interpretation of Islam is also intended for the entire world, which must be brought to recognize this fact peacefully if possible and through violence if not." 135 Along these lines, the jihadis view the United States and her allies as among the greatest enemies of Islam: they believe "that every element of modern Western liberalism is flawed, wrong, and evil" because the basis of liberalism is secularism. 136 The jihadis emphasize the superiority of Islam to all other religions, and they believe that "God does

not want differing belief systems to coexist.'" 37 For this reason, jihadist groups such as al-Qaeda "recognize that the West will not submit without a fight and believe in fact that the Christians, Jews, and liberals have united against Islam in a war that will end in the complete destruction of the unbelievers.' 138 Thus, the adherents of this jihadist ideology, be it al-Qaeda or other groups, will continue to target the United States until she is destroyed. Their ideology demands it. 139

To effectively combat terrorist groups such as al-Qaeda, it is necessary to understand not only how they think, but also how they operate. Al-Qaeda is a transnational organization capable of simultaneously managing multiple operations all over the world."14 It is both centralized and decentralized: al-Qaeda is centralized in the sense that Osama bin Laden is the unquestioned leader, but it is decentralized in that its operations are carried out locally, by distinct cells."4 Al-Qaeda benefits immensely from this arrangement because it can exercise direct control over high-probability operations, while maintaining a distance from low-probability attacks, only taking the credit for those that succeed. The local terrorist cells benefit by gaining access to al-Qaeda's "worldwide network of assets, people, and expertise." 42 Post-September 11 events have highlighted al-Qaeda's resilience. Even as the United States and her allies fought back, inflicting heavy casualties on al-Qaeda in Afghanistan and destroying dozens of cells worldwide, "al-Qaeda's networked nature allowed it to absorb the damage and remain a threat." 14 3 This is a far cry from earlier generations of warfare, where the decimation of the enemy's military forces would generally bring an end to the conflict.

D. The Need for Rapid Reaction and Expanded Presidential War Power

By now it should be clear just how different this conflict against the extremist terrorists is from the type of warfare that occupied the minds of the Framers at the time of the Founding. Rather than maintaining the geographical and political isolation desired by the Framers for the new country, today's United States is an international power targeted by individuals and groups that will not rest until seeing her demise. The Global War on Terrorism is not truly a war within the Framers' eighteenth-century conception of the term, and the normal constitutional provisions regulating the division of war powers between Congress and the President do not apply. Instead, this "war" is a struggle for survival and dominance against forces that threaten to destroy the United States and her allies, and the fourth-generational nature of the conflict, highlighted by an indiscernible distinction between wartime and peacetime, necessitates an evolution of America's traditional constitutional warmaking scheme.

As first illustrated by the military strategist Colonel John Boyd, constitutional decision-making in the realm of war powers in the fourth generation should consider the implications of the OODA Loop: Observe, Orient, Decide, and Act. 44 In the era of fourth-generational warfare, quick reactions, proceeding through the OODA Loop rapidly, and disrupting the enemy's OODA loop are the keys to victory. "In order to win," Colonel Boyd suggested, "we should operate at a faster tempo or rhythm than our adversaries." 145 In the words of Professor Creveld, "[b]oth organizationally and in terms of the equipment at their disposal, the armed forces of the world will have to adjust themselves to this situation by changing their doctrine, doing away with much of their heavy equipment and becoming more like police."1 46 Unfortunately, the existing constitutional understanding, which diffuses war power between two branches of government,

necessarily (by the Framers' design) **slows down decision- making**. In circumstances where war is undesirable (which is, admittedly, most of the time, especially against other nation-states), the deliberativeness of the existing decision-making process is a positive attribute.

In America's current situation, however, in the midst of the conflict with al-Qaeda and other international terrorist organizations, **the existing process** of constitutional decision-making in warfare **may prove a fatal hindrance to achieving** the initiative necessary for **victory**. As a slow-acting, deliberative body, Congress does not have the ability to **adequately deal with fast-emerging** situations in **fourth-generational warfare**. Thus, **in order to combat transnational threats** such as al-Qaeda, **the executive branch must have the ability to operate by taking offensive military action** even without congressional authorization, because **only the executive branch is capable of the swift decision-making and action necessary to prevail in fourth-generational conflicts against fourth generational opponents.**

2NC/1NR – Link Uniqueness

Secret State Privilege Doctrine

Courts unanimously support deference in the squo – stats – the trend will only continue

Ellington 15

Thomas C. Ellington, Associate Professor of Political Science at Wesleyan College, 2015, (Secrecy, Law and Society, Routledge, Edited by Greg Martin, Rebecca Bray, and Miiko Kumar: Faculty Members of the Department of Law at the University of Sydney, Chapter 3: Secrecy law and its problems in the United States) - AW

Judicial **deference** at its most extreme, however, **is found in the application of the state secrets privilege, under which the government withholds evidence by claiming that revealing it to a judge or opposing counsel would tend to endanger national security.** Accordingly, '[b]ecause successful invocation of the privilege involves no independent judicial review of the evidence, critics worry that it opens the door to abuse by the executive branch'. 41 Louis **Fisher provides the definitive account** of the origins of **state secrets privilege and some of the problems in its underlying doctrine.**' 42 Two things are worth noting:

1. the state secrets privilege has its origins in a case in which the government has since been shown definitely to have mischaracterised the nature of the evidence it was withholding; and
2. **the US Government has increasingly invoked the state secrets privilege in recent years as a way of shutting down civil litigation in cases involving** such subjects as extraordinary rendition and **blanket eavesdropping by the NSA.** 43

What had once been a moribund piece of judicial **doctrine has found new life under** the **Bush and Obama** administrations. Laura K. **Donohue counts more than 100 instances** in which the **Bush** administration invoked the state secrets privilege." **Despite setting a new policy that is supposed to limit the circumstances in which the state secrets privilege is invoked,** 45 the **Obama** Justice Department **continues to use this flawed doctrine extensively.** The Federation of American Scientists maintains an ongoing list of state secrets claims." 46

Courts, almost unanimously, have east their lot with national security, granting considerable deference to government assertions of the state secrets principle. **This deference to state secrets shows no signs of abating;** indeed, **the growing trend is for counts to dismiss these legal challenges pre-discovery.**⁹

Constitutionality

On issues of surveillance, the court currently cedes deference to the executive branch – constitutional authority and practical competence.

Margulies 14 – Peter, Professor of Law, Roger Williams University School of Law. B.A. 1978, Colgate University; J.D. 1981, Columbia Law School, 2014 ("Dynamic Surveillance: Evolving Procedures in Metadata and Foreign Content Collection After Snowden," *Hastings Law Journal* (66 *Hastings L.J.* 1) Available Online to Subscribing Institutions via Lexis-Nexis)

The first opinion to authorize bulk collection was a 2004 opinion by Judge Kollar-Kotelly that granted the government's application under FISA to use a pen register to collect information on the routing or addressing of e-mails, excluding the content of communications. n48 This opinion introduced a concept that would shape collection in the years to come: it coupled authority for the wide collection of information by the government with significant restrictions on the government's use of that information. Judge Kollar-Kotelly assumed that a relevance standard governed both pen registers and FISC orders under section 215. n49 Finding that the statutory language in the FISA pen register provision did not require that the government identify specific targets prior to collection, Judge Kollar-Kotelly acknowledged that the statute allowed "exceptionally broad" acquisition of e-mail records, n50 most of which would be "unrelated" to terrorism. n51 To avoid giving the government the unchecked ability to rummage through these mountains of data, Judge Kollar-Kotelly added restrictions on government analysts' access to the information collected. When structuring queries of the electronic data, Judge Kollar-Kotelly held that analysts could use only those e-mail addresses specifically linked to particular terrorist organizations. n52 No other queries - for example, addresses of celebrities or government critics - were permissible.

Supporting her analysis, Judge Kollar-Kotelly suggested that Congress intended the relevance standard in the pen register provision to broaden information gathering for national security purposes. The relevance standard replaced language that required only a "reasonable suspicion" that the communication facility subject to the pen register be [*13] used by an individual engaged in "international terrorism or clandestine intelligence activities." n53 Collecting e-mail metadata from a range of Internet service providers ("ISPs") would meet the relevance standard, the court found, accepting the government's argument. n54 Broad collection would allow the government to ferret out previously unknown e-mail addresses linked to terrorism, which "more precisely targeted forms of collection against known accounts" would exclude. n55 The court defended its deference to the government's rationale, finding that, "for reasons of both constitutional authority and practical competence, deference should be given to the fully considered judgment of the executive branch in assessing and responding to national security threats and in determining the potential significance of intelligence-related information." n56

Empirics

Judicial deference is empirically proven. The Supreme Court refused to take a major case involving NSA surveillance; instead, leaving it to the executive branch.

Richey 13 – Warren, staff writer for The Christian Science Monitor, 2013 (“Supreme Court rejects case on NSA spying on Americans' phone calls; The US Supreme Court on Monday refused to consider whether the NSA, in collecting and storing information about the phone calls of virtually every American, overstepped its authority under the law,” *The Christian Science Monitor*, Available Online at <http://www.csmonitor.com/USA/Justice/2013/1118/Supreme-Court-rejects-case-on-NSA-spying-on-Americans-phone-calls-video>)

The US Supreme Court on Monday declined to take up a potential major case examining whether the National Security Agency's bulk collection and storage of telephone metadata from virtually every American violate the limits of federal law.

The justices turned aside the case without comment. Had they agreed to take up the issue, the stage would have been set for a high-court showdown testing whether the NSA overstepped its authority under the Foreign Intelligence Surveillance Act (FISA) by collecting and storing telephone service information for every telephone call made and received in the US.

Several other cases pending in federal district courts challenge the massive collection program as an invasion of Americans' privacy.

Aside from the pending court cases, the high court's action on Monday leaves it to the political branches - Congress and the White House - to sort out whether the NSA and other US spy agencies should have the power to make bulk collections of data for later use in intelligence gathering and counter-terrorism.

Multiple court cases prove the judiciary defers to the executive on matters of intelligence gathering.

Turner 13

Robert Turner, Professor specializing in National Security Law at the University of Virginia, Former Charles H. Stockton Chair of International Law at the U.S. Naval War College, Founder and Associate Director of the Center for National Security Law, 10/21/13, (“First Principles: Are Judicial and Legislative Oversight of NSA Constitutional?”, <http://www.fed-soc.org/publications/detail/first-principles-are-judicial-and-legislative-oversight-of-nsa-constitutional>) - AW

II. Judicial Deference to the Executive

That same month, Chief Justice John Marshall—in perhaps the most famous Supreme Court decision of all times—reaffirmed that the Constitution grants the President important powers over foreign affairs that are checked neither by the Legislature nor the Judiciary:

By the constitution of the United States, the President is invested with certain important political powers, in the exercise of which he is to use his own discretion, and is accountable only to his country in his political character, and to his own conscience . . . The subjects are political. They respect the nation, not individual rights, and being intrusted to the executive, the decision of the executive is conclusive.

The application of this remark will be perceived by adverting to the act of congress for establishing the department of foreign affairs. This officer, as his duties were prescribed by that act, is to conform precisely to the will of the president. . . . The acts of such an officer, as an officer, can never be examinable by the courts.¹⁰

In the 1936 Curtiss-Wright case, the Supreme Court noted that the President “makes treaties with the advice and consent of the Senate; but he alone negotiates. Into the field of negotiation the Senate cannot intrude, and Congress itself is powerless to invade it.”¹¹

In this same landmark case, the Court noted:

The marked difference between foreign affairs and domestic affairs in this respect is recognized by both houses of Congress in the very form of their requisitions for information from the executive departments. In the case of every department except the Department of State, the resolution directs the official to furnish the information. In the case of the State Department, dealing with foreign affairs, the President is requested to furnish the information “if not incompatible with the public interest.” A statement that to furnish the information is not compatible with the public interest rarely, if ever, is questioned.¹²

Now, in candor, I believe the Court in Curtiss-Wright got the right answer for the wrong reasons. Justice Sutherland focused not upon the expressed grant of “executive power” to the President, but instead on the idea that the foreign policy power was a natural attribute of sovereignty that attached to the presidency at the time of America’s independence from Great Britain. It was not an unreasonable explanation (and Curtiss-Wright remains by far the most often cited Supreme Court foreign affairs case), but it is clear that the Framers believed they had expressly vested this power in the President through Article II, Section 1’s grant of “executive power.”

This longstanding deference to presidential discretion in foreign affairs was recognized by both the courts and Congress into the second half of the twentieth century. In the 1953 case of United States v. Reynolds, the Supreme Court discussed the executive privilege to protect national security secrets, noting that: “Judicial Experience with the privilege which protects military and state secrets has been limited in this country . . .” But the Court recognized an absolute privilege for military secrets, explaining:

In each case, the showing of necessity [of disclosure] which is made will determine how far the court should probe in satisfying itself that the occasion for invoking the privilege is appropriate. Where there is a strong showing of necessity, the claim of privilege should not be lightly accepted, but even the most compelling necessity cannot overcome the claim of privilege if the court is ultimately satisfied that military secrets are at stake.¹³

Obviously, intelligence programs run by a Department of Defense agency (NSA) designed to intercept communications from our nation's enemies during a period of authorized war **are among the most sensitive of "military secrets."**

Four years later, Professor Edward S. Corwin, one of the nation's leading constitutional scholars of his era, wrote in his classic volume, *The President: Office and Powers*:

So far as practice and weight of opinion can settle the meaning of the Constitution, it is today established that the President alone has the power to negotiate treaties with foreign governments; that he is free to ignore any advice tendered him by the Senate as to a negotiation; and that he is final judge of what information he shall entrust to the Senate as to our relations with other governments.¹⁴

In the 1959 *Barenblatt* case, the Supreme Court recognized that there are proper limits not only on the power of Congress to control Executive discretion, but even to "inquire" into matters vested by the people in the President: "Congress . . . cannot inquire into matters which are within the exclusive province of one of the other branches of the Government. Lacking the judicial power given to the Judiciary, it cannot inquire into matters that are exclusively the concern of the Judiciary. Neither can it supplant the Executive in what exclusively belongs to the executive."¹⁵

Precedence

Actions modifying presidential war power set a precedent. The War Powers Resolution and other historical examples prove.

Paul 08 – Christopher, Senior Social Scientist at RAND, 2008 (“US Presidential War Powers: Legacy Chains in Military Intervention Decisionmaking,” *Journal of Peace Research* (Vol. 45, No. 5) Available Online to Subscribing Institutions via Jstor, p. 665-679)

There's an obvious kernel of truth to the old saying, 'Generals always fight the last war'. This article explores one of the sources of this kind of policy inertia, 'legacy chains', by examining the sequence of disputes over military deployments that led up to the United States War Powers Resolution of 1973 and its impact on the US military interventions that have followed. The War Powers Resolution was passed by a Congress attempting to re store balance to war-making powers constitutionally divided between the Congress (as the only body legally allowed to make a 'declaration of war') and the president (the commander in chief). This article traces the war powers legacy chain through the US military operations in Korea, Vietnam, the Dominican Republic, Grenada, Panama, Iraq, Haiti, and Iraq again. The exercise of war powers (and the disputes associated with them) for these military operations show how legacies are formed and institutionalized within a policy sphere; how institutionalized legacies affect subsequent policy (in sometimes unintended ways); and how subsequent policies modify, transform, or reinforce these legacies. Based on the War Powers example and other historical data, this article argues that past policy affects subsequent policy by creating institutional legacies that shape the decision space in which subsequent policy is made. These institutional legacies can be modified, transformed, and/or reinforced by subsequent policymaking and then constitute 'legacy chains'.

Legacy Chains

Finegold & Skocpol (1995: 222) describe policy legacies:

Past and present policies are connected in at least three different ways. First, past policies give rise to analogies that affect how public officials think about contemporary policy issues. Second, past policies suggest lessons that help us to understand the processes by which contemporary policies are formulated and implemented and by which the consequences of contemporary policies will be determined. Third, past policies impose limitations that reduce the range of policy choices available as responses to contemporary problems.

All three of the ways in which they connect past policy to present policy can be viewed as changes in the institutional context in which policy is made. These legacies are institutionalized in two different ways: first, through changes in formal rules or procedures, and second, in the 'taken for granted', 'schemas', and accepted wisdom of policy makers and ordinary citizens alike (Sewell, 1992: 1-29).

While a policy or event can leave multiple legacies, it often leaves a single major legacy. For example, the War Powers Resolution formally changed the relationship between the president and the congress with regard to war-making and the deployment of troops. Subsequent military interventions were influenced by this change and have, in turn, left their own legacy (legal

scholars might call it **precedent**) as a link in that chain. Legacy chains can be modified, transformed, or reinforced as they step through each 'link' in the chain. As another example, US involvement in Vietnam left a legacy in the sphere of press/military relations which affected the intervention in Grenada in 1983 (the press was completely excluded for the first 48 hours of the operation). The press legacy chain begun in Vietnam also affected the Panama invasion of 1989 (a press pool was activated, in country, but excluded from the action), but the legacy had been transformed slightly by the Grenada invasion (the press pool system itself grew out of complaint regarding press exclusion in Grenada) (Paul & Kim, 2004).

Because of the different ways in which policy legacies are institutionalized, **some legacies have unintended institutional consequences.** The War Powers Resolution was intended to curtail presidential war-making powers and return some authority to the congress. In practice, the joint resolution failed to force presidents to include congressional participation in their intervention decision making, but it had the unintended consequence of forcing them to change the way they planned interventions to comply with the letter of the law (see the extended example presented later in the article).¹

They Say: “Second Circuit Ruling on Section 215 Thumps”

The Second Circuit Ruling on Section 215 was a matter of statutory ambiguity, *not* about constitutionality. On matter of constitutionality, the Second Circuit acknowledges they don’t have the expertise to make decisions that could impact national security and defers its authority.

Kerr 15 – Orin, Fred C. Stevenson Research Professor of Law, 2015 (“Second Circuit rules, mostly symbolically, that current text of Section 215 doesn’t authorize bulk surveillance,” *The Washington Post*, May 7th, Available Online at <http://www.washingtonpost.com/news/volokh-conspiracy/wp/2015/05/07/second-circuit-rules-mostly-symbolically-that-current-text-of-section-215-doesnt-authorize-bulk-surveillance/>)

Edward Snowden’s biggest leak was that the Foreign Intelligence Surveillance Court had interpreted Section 215 of the Patriot Act to authorize bulk collection of everyone’s phone records. This was astonishing news, as nothing on the face of the face of the statute suggested it had that anything like that broad a reach. Legal challenges followed, on both statutory and constitutional grounds.

This morning, the Second Circuit finally handed down its opinion on one of the pending legal challenges. It’s the first appellate court ruling on the issue. Today’s decision rules that the text of Section 215 does not authorize the program as a matter of statutory law. The Second Circuit does not reach whether the NSA program violates the Fourth Amendment.

My initial reaction, on a first read, is that the Second Circuit’s decision is mostly symbolic. As regular readers know, I agree with the court’s bottom line statutory analysis that Section 215 doesn’t authorize the NSA program. But while you would normally think that a ruling on such an important question by a court as important as the Second Circuit would be a big deal, I’m not sure the Second Circuit’s opinion actually matters very much.

The main reason is that Section 215 sunsets in three weeks. The Second Circuit ruling does not enjoin the NSA program. It does not rule on the Fourth Amendment question. It mostly interprets statutory language that goes off the books in a few weeks, with the understanding that the court’s ruling won’t be implemented by the district court in that time window. So from a practical perspective, it’s mostly symbolic. With that said, the decision is a rebuke to the Foreign Intelligence Surveillance Court for the FISC’s statutory analysis that approved the bulk telephone metadata program.

Here’s a rundown of the majority opinion, with some additional thoughts of mine at the end.

1. Standing

The opinion begins by concluding that any person whose data is collected as part of the program has Article III standing to challenge the program. Article III standing to challenge the program is not limited to those whose data was queried, but rather to anyone whose data was collected. This is perhaps the most confusing part of the opinion, because the Court somewhat oddly blends together Article III and Fourth Amendment principles to create a sort of Article III

standing doctrine for challenges that include Fourth Amendment claims — even though the court then doesn't rule on the Fourth Amendment claims. Here's what the court says:

Appellants challenge the telephone metadata program as a whole, alleging injury from the very collection of their telephone metadata. And, as the district court observed, it is not disputed that the government collected telephone metadata associated with the appellants' telephone calls. The Fourth Amendment protects against unreasonable searches and seizures. Appellants contend that the collection of their metadata exceeds the scope of what is authorized by § 215 and constitutes a Fourth Amendment search. We think such collection is more appropriately challenged, at least from a standing perspective, as a seizure rather than as a search. Whether or not such claims prevail on the merits, appellants surely have standing to allege injury from the collection, and maintenance in a government database, of records relating to them. “[A] violation of the [Fourth] Amendment is fully accomplished at the time of an unreasonable governmental intrusion.” *United States v. Verdugo-Urquidez*, 494 U.S. 259, 264 (1990) (internal quotation marks omitted). If the telephone metadata program is unlawful, appellants have suffered a concrete and particularized injury fairly traceable to the challenged program and redressable by a favorable ruling.

Further, there's Article III standing because there's a kind of search at issue here, whether or not it is a “search” in the technical Fourth Amendment sense:

Finally, the government admits that, when it queries its database, its computers search all of the material stored in the database in order to identify records that match the search term. In doing so, it necessarily searches appellants' records electronically, even if such a search does not return appellants' records for close review by a human agent. There is no question that an equivalent manual review of the records, in search of connections to a suspect person or telephone, would confer standing even on the government's analysis. That the search is conducted by a machine might lessen the intrusion, but does not deprive appellants of standing to object to the collection and review of their data.

2. Preclusion

The court next rules that nothing in the text of Section 215 or FISA more generally precludes the usual rule that executive action can be challenged in court under the Administrative Procedure Act:

The government has pointed to no affirmative evidence, whether “clear and convincing” or “fairly discernible,” that suggests that Congress intended to preclude judicial review. Indeed, the government's argument from secrecy suggests that Congress did not contemplate a situation in which targets of § 215 orders would become aware of those orders on anything resembling the scale that they now have. That revelation, of course, came to pass only because of an unprecedented leak of classified information. That Congress may not have anticipated that individuals like appellants, whose communications were targeted by § 215 orders, would become aware of the orders, and thus be in a position to seek judicial review, is not evidence that Congress

affirmatively decided to revoke the right to judicial review otherwise provided by the APA in the event the orders were publicly revealed.

. . . [T]he government relies on bits and shards of inapplicable statutes, inconclusive legislative history, and inferences from silence in an effort to find an implied revocation of the APA's authorization of challenges to government actions. That is not enough to overcome the strong presumption of the general command of the APA against such implied preclusion. Congress, of course, has the ability to limit the remedies available under the APA; it has only to say so. But it has said no such thing here. We should be cautious in inferring legislative action from legislative inaction, or inferring a Congressional command from Congressional silence. At most, the evidence cited by the government suggests that Congress assumed, in light of the expectation of secrecy, that persons whose information was targeted by a § 215 order would rarely even know of such orders, and therefore that judicial review at the behest of such persons was a non-issue. But such an assumption is a far cry from an unexpressed intention to withdraw rights granted in a generally applicable, explicit statute such as the

APA.

3. The Statutory Merits

On the statutory merits, the court concludes that Section 215 doesn't support the program. As drafted and passed by Congress, Section 215 is just a grand jury subpoena authority:

In adopting § 215, Congress intended to give the government, on the approval of the FISC, broad-ranging investigative powers analogous to those traditionally used in connection with grand jury investigations into possible criminal behavior.

Bulk metadata collection just doesn't fit in the traditional powers of a grand jury subpoena authority:

The records demanded are all-encompassing; the government does not even suggest that all of the records sought, or even necessarily any of them, are relevant to any specific defined inquiry. Rather, the parties ask the Court to decide whether § 215 authorizes the "creation of a historical repository of information that bulk aggregation of the metadata allows," Appellees' Br. 32, because bulk collection to create such a repository is "necessary to the application of certain analytic techniques," Appellants' Br. 23. That is not the language in which grand jury subpoenas are traditionally discussed.

Thus, the government takes the position that the metadata collected – a vast amount of which does not contain directly "relevant" information, as the government concedes – are nevertheless "relevant" because they may allow the NSA, at some unknown time in the future, utilizing its ability to sift through the trove of irrelevant data it has collected up to that point, to identify information that is relevant. We agree with appellants that such an expansive concept of "relevance" is unprecedented and unwarranted.

The statutes to which the government points have never been interpreted to authorize anything approaching the breadth of the sweeping surveillance at issue here.

. . . The metadata concerning every telephone call made or received in the United States using the services of the recipient service provider are demanded, for an indefinite period extending into the future. The records demanded are not those of suspects under investigation, or of people or businesses that have contact with such subjects, or of people or businesses that have contact with others who are in contact with the subjects – they extend to every record that exists, and indeed to records that do not yet exist, as they impose a continuing obligation on the recipient of the subpoena to provide such records on an ongoing basis as they are created. The government can point to no grand jury subpoena that is remotely comparable to the real-time data collection undertaken under this program.

As I put the same point in my recent article, for the text of Section 215 to authorize bulk collection, “any federal prosecutor anywhere in the country could have compelled every phone company to hand over all of its telephony metadata on an ongoing basis so long as the prosecutor claimed that it was necessary to help solve a case. It is hard to imagine a federal judge allowing such a subpoena in a criminal case[.]”

Also, the Second Circuit rejects the argument that Congress knew about the program and impliedly approved it: The program wasn’t widely known in Congress and the public wasn’t aware of it.

And that brings us to the Second Circuit’s **bottom line**:

We conclude that to allow the government to collect phone records only because they may become relevant to a possible authorized investigation in the future fails even the permissive “relevance” test. Just as “the grand jury’s subpoena power is not unlimited,” *United States v. Calandra*, 414 U.S. 338, 346 (1974), § 215’s power cannot be interpreted in a way that defies any meaningful limit. Put another way, we agree with appellants that the government’s argument is “irreconcilable with the statute’s plain text.” Appellants’ Br. 26. Such a monumental shift in our approach to combating terrorism requires a clearer signal from Congress than a recycling of oft-used language long held in similar contexts to mean something far narrower. “Congress . . . does not alter the fundamental details of a regulatory scheme in vague terms or ancillary provisions — it does not . . . hide elephants in mouseholes.” *Whitman v. Am. Trucking Ass’ns.*, 531 U.S. 457, 468 (2001). The language of § 215 is decidedly too ordinary for what the government would have us believe is such an extraordinary departure from any accepted understanding of the term “relevant to an authorized investigation.”

That’s correct, I think.

4. The Fourth Amendment

Having ruled for the challengers on the statutory claim, the court does not rule on the Fourth Amendment challenge. However, the court decides to “discuss” the Fourth Amendment issue anyway because the finds the issue “potentially vexing.” The court’s discussion is mostly about

the role of Congress. Congress should take “the primary role . . . in deciding, explicitly and after full debate, whether such programs are appropriate and necessary.” Further, the court would see express statutory authorization as relevant to constitutionality:

[W]hether Congress has considered and authorized a program such as this one is not irrelevant to its constitutionality. The endorsement of the Legislative Branch of government provides some degree of comfort in the face of concerns about the reasonableness of the government’s assertions of the necessity of the data collection. **Congress is better positioned than the courts to understand and balance the intricacies and competing concerns involved in protecting our national security, and to pass judgment on the value of the telephone metadata program as a counterterrorism tool.** Moreover, **the legislative process has considerable advantages in developing knowledge about the far-reaching technological advances that render today’s surveillance methods drastically different from what has existed in the past, and in understanding the consequences of a world in which individuals can barely function without involuntarily creating metadata that can reveal a great deal of information about them. A congressional judgment as to what is “reasonable” under current circumstances would carry weight – at least with us, and, we assume, with the Supreme Court as well – in assessing whether the availability of information to telephone companies, banks, internet service providers, and the like, and the ability of the government to collect and process volumes of such data that would previously have overwhelmed its capacity to make use of the information, render obsolete the third-party records doctrine or, conversely, reduce our expectations of privacy and make more intrusive techniques both expected and necessary to deal with new kinds of threats.**

As a result, Congress passes an executive supported bill – the FREEDOM Act.

Peterson and Paletta 15 – Kristina and Damian, both reporters for The Wall Street Journal, 2015 (“Congress Reins In NSA’s Spying Powers,” The Wall Street Journal, June 2nd, Available Online at <http://www.wsj.com/articles/senate-passes-house-bill-overhauling-nsa-surveillance-program-1433277227>)

WASHINGTON—A long-running congressional battle over privacy and surveillance ended Tuesday when the Senate voted to curb the collection of millions of Americans’ phone records, the first significant retrenchment of government spying powers since the 9/11 attacks.

The measure, which was signed Tuesday night by President Barack Obama, will reauthorize and reboot the provisions of the USA Patriot Act that lapsed Sunday at midnight, but it will phase out the National Security Agency’s bulk phone-records program.

The bill, passed by the Senate Tuesday in a 67-32 vote, will shift storage of the phone records to telecommunications companies over six months.

Supporters said the legislation marked a victory for civil liberties diminished by laws put in place in the wake of the September 2001 terror attacks.

“Today the American people are now safe from the federal government’s collection of their personal data,” said Sen. Mike Lee of Utah, the bill’s chief GOP proponent in the Senate.

The House approved the bill, known as the USA Freedom Act, in May.

The bill will require the NSA and Federal Bureau of Investigation to obtain phone records for most counterterror investigations and other probes on a case-by-case basis from telecommunications companies. This would end the nine-year-old practice underpinned by Section 215 of the Patriot Act, which allowed the NSA to hold the telephone records of millions of Americans, regardless of any person's background or behavior. The bulk data collection didn't include the content of the calls themselves.

The Central Intelligence Agency, the Justice Department and the White House all supported the curbs, a reflection of government officials' shifting stance on surveillance since former NSA contractor Edward Snowden's 2013 leaks about secretive data collection.

They Say: “Deference to FISA is More Likely”

The executive has jurisdiction and authority over domestic electronic intelligence gathering; data is crucial to national security issues. Furthermore, judicial deference would go to the executive, *not* the FISA courts. This framework for executive authority is most reasonable, complying with the Fourth Amendment.

Yoo 14 – John, Emanuel Heller Professor of Law at the University of California, Berkley, Visiting Scholar at the American Enterprise Institute, J.D. from Yale University, 2014 (“The Legality of the National Security Agency’s Bulk Data Surveillance Programs,” *Harv. JL & Pub. Pol’y* 37 (2014): 901, Available Online to Subscribing Institutions via HeinOnline)

The need for executive authority over electronic intelligence gathering becomes apparent when we consider the facts of the war against al Qaeda. In the hours and days after 9/11, members of the government thought that al Qaeda would try to crash other airliners or use a weapon of mass destruction in a major East Coast city, probably Washington, D.C. Combat air patrols began flying above New York and Washington. Suppose a plane was hijacked and would not respond to air traffic controllers. In order to protect the nation from attack, it would be reasonable for U.S. anti-terrorism personnel to intercept any radio or cell phone calls to or from the airliner, in order to discover the hijackers’ intentions, what was happening on the plane, and ultimately whether it would be necessary for the fighters to shoot down the plane. Or suppose the government had to put up a net to intercept all cellular phone calls in a city because it was searching for a terrorist cell which had yet to launch an attack. Under such circumstances, **FISA should not control** whether the President has the executive authority to monitor any radio or cell phone calls to or from the airliner; after all, the purpose is not to arrest and gather evidence for trial, but to prevent the nation from attack. Indeed, because the United States is in a state of war, the military can intercept the communications of the plane to see if it poses a threat, and target the enemy if necessary. This authority is not only within the President’s executive powers, but it also comports with the principle of reasonableness that guides the Fourth Amendment.

2NC/1NR – Impact

Presidential Powers High

The president's power is higher than ever. Obama has become a "matchless war-powers unilateralist" – Syria, military force against ISIS, and unilateral decisions for intervention proves.

Goldsmith 14 – Jack, professor at Harvard Law School and a member of the Hoover Institution Task Force on National Security and Law, served as Assistant Attorney General in the Office of Legal Counsel, from 2003-2004, in the George W. Bush Administration, 2014 ("Obama's Breathtaking Expansion of a President's Power To Make War," *Time*, Sept. 11, Available Online at <http://time.com/author/jack-goldsmith/>)

President **Obama hoped to repeal the Bush-era authorization declaring war on al Qaeda— instead he's expanded it without bound**

Future historians will ask why George W. Bush sought and received express congressional authorization for his wars (against al Qaeda and Iraq) and his successor did not. They will puzzle over how Barack **Obama** the prudent war-powers constitutionalist **transformed into a matchless war-powers unilateralist**. And they will wonder why he claimed to "welcome congressional support" for his new military initiative against the Islamic State but did not insist on it in order to ensure clear political and legal legitimacy for the tough battle that promised to consume his last two years in office and define his presidency.

"History has shown us time and again . . . that military action is most successful when it is authorized and supported by the Legislative branch," candidate Barack Obama told the Boston Globe in 2007. "It is always preferable to have the informed consent of Congress prior to any military action." President Obama has discarded these precepts. **His announcement that he will expand the use of military force against the Islamic State without the need for new congressional consent marks his latest adventure in unilateralism and cements an astonishing legacy of expanding presidential war powers.**

The legacy began in 2011 with the seven-month air war in Libya. President **Obama relied only on his Commander in Chief powers** when he ordered U.S. forces to join NATO allies in thousands of air strikes that killed thousands of people and effected regime change. His lawyers argued beyond precedent that the large-scale air attacks did not amount to "War" that required congressional approval. They also blew a large hole in the War Powers Resolution based on the unconvincing claim that the Libya strikes were not "hostilities" that would have required compliance with the law.

Although he backed down from his threat to invade Syria last summer, President **Obama proclaimed** then **the power to use unilateral force** for purely humanitarian ends without congressional or United Nations or NATO support. This novel theory, **which removed all practical limits on presidential humanitarian intervention, became a reality in last month's military strikes to protect civilians trapped on Mount Sinjar and in the town of Amirli.**

Yesterday's announcement of a ramped-up war against the Islamic State in Iraq and possibly Syria rests on yet another novel war powers theory. The administration has said since August that air strikes in Syria were **justified under his constitutional power alone.** But yesterday it

switched course and maintained that Congress had authorized the 2014 campaign against the Islamic State in the 2001 law that President George W. Bush sought to fight the Taliban and al Qaeda.

Executive power is strong now – Syria situation proves.

Posner 13 – Eric, a professor at the University of Chicago Law School, 2013 (“Obama Is Only Making His War Powers Mightier,” September 3, Available Online at http://www.slate.com/articles/news_and_politics/view_from_chicago/2013/09/obama_going_to_congress_on_syria_he_s_actually_strengthening_the_war_powers.html)

President Obama’s surprise announcement that he will ask Congress for approval of a military attack on Syria is being hailed as a vindication of the rule of law and a revival of the central role of Congress in war-making, even by critics. But all of this is wrong. Far from breaking new legal ground, President Obama has reaffirmed the primacy of the executive in matters of war and peace. The war powers of the presidency remain as mighty as ever.

It would have been different if the president had announced that only Congress can authorize the use of military force, as dictated by the Constitution, which gives Congress alone the power to declare war. That would have been worthy of notice, a reversal of the ascendance of executive power over Congress. But the president said no such thing. He said: “I believe I have the authority to carry out this military action without specific congressional authorization.” Secretary of State John Kerry confirmed that the president “has the right to do that”—launch a military strike—“no matter what Congress does.”

Thus, the president believes that the law gives him the option to seek a congressional yes or to act on his own. He does not believe that he is bound to do the first. He has merely stated the law as countless other presidents and their lawyers have described it before him.

The president’s announcement should be understood as a political move, not a legal one. His motive is both self-serving and easy to understand, and it has been all but acknowledged by the administration. If Congress now approves the war, it must share blame with the president if what happens next in Syria goes badly. If Congress rejects the war, it must share blame with the president if Bashar al-Assad gases more Syrian children. The big problem for Obama arises if Congress says no and he decides he must go ahead anyway, and then the war goes badly. He won’t have broken the law as he understands it, but he will look bad. He would be the first president ever to ask Congress for the power to make war and then to go to war after Congress said no. (In the past, presidents who expected dissent did not ask Congress for permission.)

People who celebrate the president for humbly begging Congress for approval also apparently don’t realize that his understanding of the law—that it gives him the option to go to Congress—maximizes executive power vis-à-vis Congress. If the president were required to act alone, without Congress, then he would have to take the blame for failing to use force when he should and using force when he shouldn’t. If he were required to obtain congressional authorization, then Congress would be able to block him. But if he can have it either way, he can force Congress to share responsibility when he wants to and avoid it when he knows that it will stand in his way.

Laundry List

Executive flexibility is crucial to preserving peace, stopping nuclear proliferation, preventing terrorism, and de-escalating regional hotspots.

Blomquist 10 – Robert F., Professor of Law, Valparaiso University School of Law. J.D., Cornell Law School; B.S., University of Pennsylvania, 2010 (“The Jurisprudence Of American National Security Presiprudence,” *Valparaiso University Law Review* (44 Val. U. L. Rev. 881) Available Online to Subscribing Institutions via Lexis-Nexis)

A. Strategic Considerations of Institutional Design Coupled with Form and Function

Supreme Court Justices—along with legal advocates—need to conceptualize and prioritize big theoretical matters of institutional design and form and function in the American national security tripartite constitutional system. By way of an excellent introduction to these vital issues of legal theory, the Justices should pull down from the library shelf of the sumptuous Supreme Court Library in Washington, D.C. (or more likely have a clerk do this chore) the old chestnut, *The Legal Process: Basic Problems in the Making and Application of Law* by the late Harvard University law professors Henry M. Hart and Albert M. Sacks.⁷ Among the rich insights on institutional design coupled with form and function in the American legal system that are germane to the Court’s interpretation of national security law-making and decision-making by the President are several pertinent points. First, “Hart and Sacks’ intellectual starting point was the interconnectedness of human beings, and the usefulness of law in helping us coexist peacefully together.”⁸ By implication, therefore, the Court should be mindful of the unique constitutional role played by the POTUS in preserving peace and should prevent imprudent judicial actions that would undermine American national security. Second, Hart and Sacks, continuing their broad insights of social theory, noted that legal communities establish “institutionalized[] procedures for the settlement of questions of group concern”⁹ and regularize “different procedures and personnel of different qualifications . . . appropriate for deciding different kinds of questions”¹⁰ because “every modern society differentiates among social questions, accepting one mode of decision for one kind and other modes for others—e.g., courts for ‘judicial’ decisions and legislatures for ‘legislative’ decisions”¹¹ and, extending their conceptualization, an executive for “executive” decisions.¹² Third, Professors Hart and Sacks made seminal theoretical distinctions between rules, standards, principles, and policies.¹³ While all four are part of “legal arrangements in an organized society,”¹⁴ and all four of these arrangements are potentially relevant in judicial review of presidential national security decisions, principles and policies¹⁵ are of special concern because of the sprawling, inchoate, and rapidly changing nature of national security threats and the imperative of hyper-energy in the Executive branch in responding to these threats.¹⁶

The Justices should also consult Professor Robert S. Summers’s masterful elaboration and amplification of the Hart and Sacks project on enhancing a flourishing legal system: the 2006 opus, *Form and Function in a Legal System: A General Study*.¹⁷ The most important points that Summers makes that are relevant to judicial review of American national security presiprudence are three key considerations. First, a “conception of the overall form of the whole of a functional [legal] unit is needed to serve the founding purpose of defining, specifying, and organizing the

makeup of such a unit so that it can be brought into being and can fulfill its own distinctive role”¹⁸ in synergy with other legal units to serve overarching sovereign purposes for a polity. The American constitutional system of national security law and policy should be appreciated for its **genius** in making the POTUS the national security sentinel with vast, but not unlimited, powers to protect the Nation from **hostile, potentially catastrophic, threats**. Second, “a conception of the overall form of the whole is needed for the purpose of organizing the internal unity of relations between various formal features of a functional [legal] unit and between each formal feature and the complementary components of the whole unit.”¹⁹ Thus, Supreme Court Justices should have a thick understanding of the form of national security decisionmaking conceived by the Founders to center in the POTUS; the ways the POTUS and Congress historically organized the processing of national security through institutions like the National Security Council and the House and Senate intelligence committees; and the ways the POTUS has structured national security process through such specific legal forms as Presidential Directives, National Security Decision Directives, National Security Presidential Decision Directives, Presidential Decision Directives, and National Security Policy Directives in classified, secret documents along with typically public Executive Orders.²⁰ Third, according to Summers, “a conception of the overall form of the whole functional [legal] unit is needed to organize further the mode of operation and the instrumental capacity of the [legal] unit.”²¹ So, the Supreme Court should be aware that tinkering with national security decisions of the POTUS— unless clearly necessary to counterbalance an indubitable violation of the text of the Constitution— may lead to unforeseen negative second-order consequences in the ability of the POTUS (with or without the help of Congress) to preserve, protect, and defend the Nation.²²

B. Geopolitical Strategic Considerations Bearing on Judicial Interpretation

Before the United States Supreme Court Justices form an opinion on the legality of national security decisions by the POTUS, they should immerse themselves in judicially-noticeable facts concerning what national security expert, Bruce Berkowitz, in the subtitle of his recent book, calls the “challengers, competitors, and threats to America’s future.”²³ Not that the Justices need to become experts in national security affairs,²⁴ but every Supreme Court Justice should be aware of the following five basic national security facts and conceptions before sitting in judgment on presiprudential national security determinations.

(1) “National security policy . . . is harder today because the issues that are involved are more numerous and varied. The problem of the day can change at a moment’s notice.”²⁵ While “[y]esterday, it might have been proliferation; today, terrorism; tomorrow, hostile regional powers”²⁶, the twenty-first century reality is that “[t]hreats are also more likely to be intertwined—proliferators use the same networks as narcotraffickers, narco-traffickers support terrorists, and terrorists align themselves with regional powers.”²⁷

(2) “Yet, as worrisome as these immediate concerns may be, the long-term challenges are even harder to deal with, and the stakes are higher. Whereas the main Cold War threat—the Soviet Union—was brittle, most of the potential adversaries and challengers America now faces are resilient.”²⁸

(3) “The most important task for U.S. national security today is simply to retain the strategic advantage. This term, from the world of military doctrine, refers to the overall ability of

a nation to control, or at least influence, the course of events."²⁹ Importantly, "[w]hen you hold As further serious preparation for engaging in the jurisprudence of American national security presiprudence in hotly contested cases and controversies that may end up on their docket, our Supreme Court Justices should understand that, as Walter Russell Mead pointed out in an important essay a few years ago,³⁵ the average American can be understood as a Jacksonian pragmatist on national security issues.³⁶ "Americans are determined to keep the world at a distance, while not isolating ourselves from it completely. If we need to take action abroad, we want to do it on our terms."³⁷ Thus, recent social science survey data paints "a picture of a country whose practical people take a practical approach to knowledge about national security. Americans do not bother with the details most of the time because, for most Americans, the details do not matter most the time."³⁸ Indeed, since the American people "do know the outlines of the big picture and what we need to worry about [in national security affairs] so we know when we need to pay greater attention and what is at stake. This is the kind of knowledge suited to a Jacksonian."³⁹

Turning to how the Supreme Court should view and interpret American presidential measures to oversee national security law and policy, our Justices should consider a number of important points. First, given the robust text, tradition, intellectual history, and evolution of the institution of the POTUS as the American national security sentinel,⁴⁰ and the unprecedented dangers to the United States national security after 9/11,⁴¹ national security presiprudence should be accorded wide latitude by the Court in the adjustment (and tradeoffs) of trading liberty and security.⁴² Second, Justices should be aware that different presidents institute changes in national security presiprudence given their unique perspective and knowledge of threats to the Nation.⁴³ Third, Justices should be restrained in second-guessing the POTUS and his subordinate national security experts concerning both the existence and duration of national security emergencies and necessary measures to rectify them. "During emergencies, the institutional advantages of the executive are enhanced";⁴⁴ moreover, "[b]ecause of the importance of secrecy, speed, and flexibility, courts, which are slow, open, and rigid, have less to contribute to the formulation of national policy than they do during normal times."⁴⁵ Fourth, Supreme Court Justices, of course, should not give the POTUS a blank check—even during times of claimed national emergency; but, how much deference to be accorded by the Court is "always a hard question" and should be a function of "the scale and type of the emergency."⁴⁶ Fifth, the Court should be extraordinarily deferential to the POTUS and his executive subordinates regarding questions of executive determinations of the international laws of war and military tactics. As cogently explained by Professors Eric Posner and Adrian Vermeule,⁴⁷ "the United States should comply with the laws of war in its battle against Al Qaeda"—and I would argue, other lawless terrorist groups like the Taliban—"only to the extent these laws are beneficial to the United States, taking into account the likely response of other states and of Al Qaeda and other terrorist organizations,"⁴⁸ as determined by the POTUS and his national security executive subordinates.

Breaking deference destroys foreign military ops – causes diplomatic failure and intelligence breakdown/Judicial adjudication fails – decentralization, lack of expertise, and protracted decision-making.

Murray 09

Kristian Murray, Judge Advocate, U.S. Army, Chief, Admin. Law, U.S. Army Central Command, Operational Command Post, Kuwait, JD from Gonzaga Law School, Spring 2009, (“NATIONAL SECURITY VEILED IN SECRECY: AN ANALYSIS OF THE STATE SECRETS PRIVILEGE IN NATIONAL SECURITY AGENCY WIRETAPPING LITIGATION”, [https://www.jagcnet.army.mil/DOCLIBS/MILITARYLAWREVIEW.NSF/0/132c6b43e1e6335d852575900049e74f/\\$FILE/Article%201%20-%20By%20MAJ%20Kristian%20W.%20Murray.pdf](https://www.jagcnet.army.mil/DOCLIBS/MILITARYLAWREVIEW.NSF/0/132c6b43e1e6335d852575900049e74f/$FILE/Article%201%20-%20By%20MAJ%20Kristian%20W.%20Murray.pdf)) - AW

2. National Security Matters Should Be Handled by the Executive

The Judiciary is not better equipped than the Executive or Congress to handle foreign policy or national security matters. The Judiciary is decentralized, has a time-consuming adjudication process, and lacks expertise in the areas of foreign policy and national security.²²⁰ Conversely, the Executive acts with a unified voice in security-related matters, has a relatively quick decision and implementation process, and possesses the requisite knowledge and expertise in national security issues. Most importantly, the Executive has a constitutional responsibility to protect the United States.²²¹

There are ninety-four district courts, nine circuit courts, and one Supreme Court.²²² Until appellate courts have adjudicated a matter, each of the district courts can have a differing opinion on a legal issue. This system works well for criminal or civil matters litigated in the respective district courts, as the courts are able to adjudicate matters relatively quickly within their jurisdictions without having to report to a higher authority. However, this decentralized system would be ineffective in adjudicating national security cases involving the invocation of the state secrets privilege. Commentators have argued that our nation’s forefathers framed the Constitution specifically to ensure that our government speaks with one voice in the context of foreign relations.²²³ Indeed, the district court’s ruling in ACLU v. NSA, enjoining the NSA from conducting further terrorist electronic surveillance, aptly demonstrates the danger of allowing courts to adjudicate foreign policy matters.²²⁴ If the state secrets privilege were eliminated, cases involving legitimate government security programs such as the terrorist surveillance program could be subject to lengthy and arbitrary litigation in multiple district courts. Without the privilege, it would be very difficult for our intelligence community to engage in secret operations. This would have profound national security ramifications as government intelligence could be subject to judicial activism.

However, assume for the sake of argument that the Executive is running a secret program that is blatantly unconstitutional and is in violation of applicable statutes, but is important to national security. Assume also that the program originates from this country with support of private corporations, but also receives technical support from other countries such as Pakistan and India. Further, the program receives unofficial support from operatives in Iran and Saudi Arabia who secretly route information originating from those countries to the American government.

If this program were to be fully exposed in a judicial forum it likely would cause major diplomatic issues, damage national security through the exposure of methods, means, and sources, and jeopardize foreign country operatives. It would also risk the possibility of private industries failing to cooperate with the government in future operations to thwart national security threats. Under these circumstances, it seems reasonable that a court would uphold the Government's assertion of the state secrets privilege.

They Say: “Surveillance Isn’t a War Power”

The executive still has constitutional authority over surveillance – Vesting Clause of Article II proves.

Lawson 08 – Gary, Professor, Boston University School of Law, 2008 (“WHAT LURKS BENEATH: NSA SURVEILLANCE AND EXECUTIVE POWER,” *Symposium: The Role of the President in the Twenty-First Century* (88 B.U. L. Rev. 375) Available Online to Subscribing Institutions via HeinOnline)

My basic contention is that the President's constitutional power⁴ stems entirely from two provisions in the Constitution: the provision in Article 1, Section 7 which gives the President the presentment and veto power⁵ and the first sentence of Article II, Section 1 which states that "[t]he executive Power shall be vested in a President of the United States of America."⁶ The second half of this statement is the eye of the storm. No one doubts that the Presentment Clause is a grant of power to the President, but the idea that the President draws power from the "Vesting Clause" of Article II rather than from the specific enumerations of presidential functions in Sections 2 and 3 of Article II - an idea that will henceforth be called "the Article II Vesting Clause thesis"⁷ - is one of the most hotly debated propositions in modern constitutional law.⁸

The debate turns out to be remarkably one-sided upon careful consideration: the Vesting Clause grants power to the President beyond a reasonable doubt. To be sure, there are plenty of reasonable doubts about the scope and character of the power granted to the President by the Article II Vesting Clause, but the proposition that the Constitution itself grants something called "[t]he executive Power"⁹ to the President is a slam dunk as a matter of textual, linguistic, intratextual, and structural analysis.

Once the Article II Vesting Clause is seen as a grant of power, the proper framework for evaluating the legality of presidentially-ordered surveillance of foreign communications becomes clear. Without the Article II Vesting Clause thesis, the case for the legality of the current surveillance program is dicey at best. With the Article II Vesting Clause thesis, the case for the legality of the program, while not unanswerable, is very strong, at least as a matter of original constitutional meaning.¹⁰ Accordingly, the Article II Vesting Clause thesis should be front and center in any discussion of the National Security Agency ("NSA") surveillance controversy for which the original meaning of the Constitution is deemed relevant.

The President’s War Powers authorize covert surveillance — history abounds with examples.

Yoo 14 — John Yoo, UC Berkeley Law Professor, former Deputy Assistant U.S. Attorney General in the Office of Legal Counsel at the Department of Justice under President GW Bush, 2014 (“Surveillance and executive power,” *Constitution Daily*, October 3rd, Available Online at <http://blog.constitutioncenter.org/2014/10/surveillance-and-executive-power/>, Accessed 06-07-2015)

As Commander-in-Chief, the President has the constitutional power and the responsibility to wage war in response to a direct attack against the United States.

In the Civil War, President Lincoln undertook several actions—raised an army, withdrew money from the treasury, launched a blockade—on his own authority in response to the Confederate attack on Fort Sumter, moves that Congress and the Supreme Court later approved.

During World War II, the Supreme Court similarly recognized that once war began, the President's authority as Commander-in-Chief and Chief Executive gave him the tools necessary to effectively wage war.

In the wake of the September 11 attacks, Congress agreed that “the President has authority under the Constitution to take action to deter and prevent acts of international terrorism against the United States,” which recognizes the President's authority to use force to respond to al Qaeda, and any powers necessary and proper to that end.

Even legal scholars who argue against this historical practice concede that once the United States has been attacked, the President can respond immediately with force.

The ability to collect intelligence is intrinsic to the use of military force. It is inconceivable that the Constitution would vest in the President the powers of Commander-in-Chief and Chief Executive, give him the responsibility to protect the nation from attack, but then disable him from gathering intelligence to use the military most effectively to defeat the enemy.

Every evidence of the Framers' understanding of the Constitution is that the government would have every ability to meet a foreign danger. As James Madison wrote in *The Federalist*, “security against foreign danger is one of the primitive objects of civil society.” Therefore, the “powers requisite for attaining it must be effectually confided to the federal councils.”

After World War II, the Supreme Court declared, “this grant of war power includes all that is necessary and proper for carrying these powers into execution.” Covert operations and **electronic surveillance are clearly part of this authority.**

During the writing of the Constitution, some Framers believed that the President alone should manage intelligence because only he could keep secrets.

Several Supreme Court cases have recognized that the President's role as Commander-in-Chief and the sole organ of the nation in its foreign relations must include the power to collect intelligence.

These authorities agree that intelligence rests with the President because its structure allows it to act with unity, secrecy, and speed.

Presidents have long ordered electronic surveillance without any judicial or congressional participation.

More than a year before the Pearl Harbor attacks, but with war clearly looming with the Axis powers, President Franklin Roosevelt authorized the FBI to intercept any communications, whether wholly inside the country or international, of persons “suspected of subversive activities against the Government of the United States, including suspected spies.”

FDR was concerned that “fifth columns” could wreak havoc with the war effort. “It is too late to do anything about it after sabotage, assassinations and ‘fifth column’ activities are completed,” FDR wrote in his order.

FDR ordered the surveillance even though a federal law at the time prohibited electronic surveillance without a warrant.

Presidents continued to monitor the communications of national security threats on their own authority, even in peacetime.

If Presidents in times of peace could order surveillance of spies and terrorists, executive authority is only the greater now, as hostilities continue against al Qaeda.

Even if they’re right, presidential precedent treats NSA surveillance as an Article II war power.

Levy 6 — Robert Levy, senior fellow in constitutional studies and chairman of the Board of Directors at the Cato Institute, director of the Institute for Justice, the Foundation for Government Accountability, J.D. and Ph.D. in business, former professor of law at Georgetown, 2006 (“Wartime Executive Power: Are Warrantless Wiretaps Legal?,” *The Freeman*, a publication of the Foundation for Economic Education, drawn from his testimony before the Senate Judiciary Committee, August 1st, Available Online at <http://fee.org/freeman/detail/wartime-executive-power-are-warrantless-wiretaps-legal/>, Accessed 05-29-2015)

President Bush has authorized the National Security Agency (NSA) to eavesdrop, without obtaining a warrant, on telephone calls, e-mails, and other communications between U.S. persons in the United States and persons outside the United States. For understandable reasons, the operational details of the NSA program are secret, as are the details of the executive order that authorized the program. But Attorney General Alberto Gonzales has stated that surveillance can be triggered if an executive-branch official has reasonable grounds to believe that a communication involves a person “affiliated with al-Qaeda or part of an organization or group that is supportive of al-Qaeda.”

The attorney general has declared that the President’s authority rests on the post-9/11 Authorization for Use of Military Force (AUMF) and the president’s inherent wartime powers under Article II of the U.S. Constitution, which includes authority to gather “signals intelligence” on the enemy.

My conclusions, as elaborated below, are: First, the president has some latitude under the “Executive Power” and “Commander-in-Chief” Clauses of Article II, even lacking explicit congressional approval, to authorize NSA warrantless surveillance without violating Fourth Amendment protections against “unreasonable” searches. But second, if Congress has expressly prohibited such surveillance (as it has under FISA, the Foreign Intelligence Surveillance Act), then the statute binds the president unless there are grounds to conclude that the statute does not apply. Third, in the case at hand, there are no grounds for such a conclusion—that is, neither the AUMF nor the president’s inherent powers trump the express prohibition in the FISA statute.

2NC/1NR – AT: Impact Turns

Security Outweighs

Critics of executive power fail to recognize the security benefits of an unrestrained executive branch.

Posner and Vermeule 07 – Eric A., Kirkland and Ellis Distinguished Service Professor of Law and Arthur and Esther Kane Research Chair at the University of Chicago; Adrian, John H. Watson Professor of Law at Harvard University and previously Bernard D. Meltzer Professor of Law at the University of Chicago, 2007 (*Terror In The Balance Security, Liberty, And The Courts*, Published by Oxford University Press, ISBN 0-19-531025, p. 55-56)

Third, the critics of executive power in emergencies are usually unclear about their normative premises. Suppose that executive power increases during emergencies and that this results in abuses. In terms of the tradeoff thesis, however, such abuses are just a cost to be measured against the benefits of increased security, given the finding, reported above, that a constrained executive is associated with higher levels of terrorism.⁸⁰ If the gains on the security margin exceed the costs, then the expansion of executive power improves social welfare overall, and no special opprobrium should attach to the executive's behavior, although it would be nice to also prevent the abuses if possible. The critics treat executive abuses of civil liberties as something to be minimized, down to zero. But this is quixotic, and even if it were feasible, it would not be desirable. Some rate of abuse is inevitable once an executive branch is created, and an increase in abuses is inevitable when executive discretion expands during emergencies, but both shifts may be worth it; the critics fail to account for the gains side of the ledger.⁸¹ Granting the executive extensive powers during emergencies has many benefits, about which the critics are often silent.

They Say: “Bad for CMR”

The impact is non unique. Breaking deference is not the crucial internal link to CMR.

Wittkopt and McCormick 04 – Eugene, Professor emeritus of Political Science at Louisiana State; James, Professor and Chair, Department of Political Science, Iowa State University, 2004 (*The Domestic Sources of American Foreign Policy: Insights and Evidence*, Rowan and Littlefield Publishers, ISBN: 0742525627, pg. 87 – 88)

Concerns about a troublesome divide between the armed forces and the society they serve are hardly new and in fact go back to the beginning of the Republic. Writing in the 1950s, Samuel Huntington argued that the divide could best be bridged by civilian society tolerating, if not embracing, the conservative values that animate military culture. Huntington also suggested that politicians allow the armed forces a substantial degree of cultural autonomy. Countering this argument, the sociologist Morris Janowitz argued that in a democracy, military culture necessarily adapts to changes in civilian society, adjusting to the needs and dictates of its civilian masters.² The end of the Cold War and the extraordinary changes in American foreign and defense policy that resulted have revived the debate.

The contemporary heirs of Janowitz see the all volunteer military as drifting too far away from the norms of American society, thereby posing problems for civilian control. They make four principal assertions. First, the military has grown out of step ideologically with the public, showing itself to be inordinately right-wing politically, and much more religious (and fundamentalist) than America as a whole, having a strong and almost exclusive identification with the Republican Party. Second, the military has become increasingly alienated from, disgusted with, and sometimes even explicitly hostile to, civilian culture. Third, the armed forces have resisted change, particularly the integration of women and homosexuals into their ranks, and have generally proved reluctant to carry out constabulary missions. Fourth, civilian control and military effectiveness will both suffer as the military—seeking ways to operate without effective civilian oversight and alienated from the society around it—loses the respect and support of that society.

The impact is non unique and CMR is bad. (how do I tag?)

Metz 15 – Steven, journalist for the World Politics Review, 2015 (“U.S. Civil-Military Relations’ Neglected Component: Congress,” *World Politics Review*, Feb. 13th, <http://www.worldpoliticsreview.com/articles/15077/u-s-civil-military-relations-neglected-component-congress>)

Yet as Mackubin Thomas Owens points out, “Those who neglect the congressional role in American civil-military relations are missing an important element.” In many ways, this is a more complicated relationship, since it lacks the clear chain of command that defines the military’s dealings with the executive. It is particularly difficult during times of shrinking defense budgets and intense partisanship. Both of these conditions exist today, creating potentially dangerous political shoals that Congress and the military are struggling to navigate.

Shrinking defense budgets intensify competition among the military services and can tempt military leaders to seek congressional help to preserve their share of the money and save the programs they favor. But declining defense dollars can also exacerbate differences between the military and Congress over how to allocate the budget. In a time of austerity, the military emphasizes what it considers to be most important for it to perform its missions. Members of Congress are naturally concerned with the impact that the decisions of the services will have in their districts. These perspectives can clash.

At times, in order to save jobs in members' districts, Congress insists on funding equipment and programs that the military would rather do without. Today, for instance, the Army doesn't want more main battle tanks, but Congress, with the encouragement of powerful defense industries, insists on keeping the tank production line open. Congress has forced the Navy to hold on to ships it **wanted to retire** and the Air Force to do the same with some aircraft. The military favors another round of base closures, but Congress, sensitive to the job losses this would cause, opposes the idea.

At the same time, the intensely partisan climate in Washington has turned up the heat on the uneasy relationship between U.S. President Barack Obama's administration and the military. Afghanistan was the first salvo. But what pulled Congress into the fray has been America's conflict with the so-called Islamic State (IS). Reports have swirled that many of the military's top leaders are unhappy with the Obama administration's handling of the situation, particularly its resistance to the use of American ground forces. As Seth Cropsy wrote in The Wall Street Journal, "The political landscape is cleared for a contest between the president's pledge not to use combat troops and the military's professional opinion that defeating the enemy requires the use of well-trained and -equipped and disciplined forces on the ground."

Obama's opponents in Congress have used this to undercut the administration. Since the military's serving senior leaders will not openly dissent from the president's position even in congressional testimony, Republicans have brought in well-known retired officers who can be more vocal in their opposition. A few weeks ago, Congress heard testimony from retired Marine Gen. James Mattis, who was also the former commander of the U.S. Central Command; retired Navy Adm. William Fallon, who held the same job; and retired Army Gen. John Keane, a former Army vice chief of staff who helped convince then-President George W. Bush's administration to surge U.S. forces into Iraq in 2007. All three told Congress that the absence of a clear policy from the White House made success in Iraq and Syria unlikely. The intended message from Senate Republicans was that these retired flag officers reflected what the rest of the military thought but could not say.

The most serious instance of Congress trying to drive a partisan wedge between the military and the administration came when GOP Rep. Doug Lamborn told an audience: "A lot of us are talking to the generals behind the scenes, saying, 'Hey, if you disagree with the policy that the White House has given you, let's have a resignation.'" Luckily, none of the military's senior leaders heeded Lamborn's advice, but the fact that he would suggest this openly shows how caustic today's political climate is.

As Owens noted, problems in civil-military relations seldom pit civilians against the military, but most often happen when elements of the military become part of a conflict between different factions of the civilian leadership. That is what is happening today, as the military is caught in the middle of an intense struggle between the Obama administration and its congressional opponents.

The best solution would be a de-escalation of the partisan struggle and the revival of a working partnership on national security. But since that is not going to happen, at least not during the Obama administration, Congress should resist the temptation to use the military to oppose the administration's policies no matter how much it disagrees with them. If there are members of Congress encouraging senior military leaders to openly revolt against the administration, they have crossed a red line. Responsible congressional leaders should stop their less responsible colleagues. Congress also should stop forcing the military to buy things it doesn't want and maintain bases it doesn't need. Members of Congress should be deeply committed to the well-being of their districts, but there are times when the national interest must take precedence. This is the only way to avoid the shoals in the congressional component of American civil-military relations.

QDR non uniques the impact.

Schake 14 – Kori, Ph.D., fellow at Stanford University's Hoover Institution, 2014 ("THIS QDR IS A BUDGET DOCUMENT, NOT A STRATEGY DOCUMENT," *War on the Rocks*, platform for analysis, commentary, debate and multimedia content on foreign policy and national security issues through a realist lens, Available Online at <http://warontherocks.com/2014/03/this-qdr-is-a-budget-document-not-a-strategy-document/>)

Secretary Hagel claims that the fiscal year (FY) 2015 defense budget "matches our strategy to our resources...Our updated defense strategy," that is. Updated because the Chairman of the Joint Chiefs of Staff memorably said the defense strategy could not be executed if a single dollar was cut from the budget, right before Congress cut about \$50 billion of them.

The only update in this Quadrennial Defense Review from earlier strategic guidance looks to consist of narrowing the force-sizing demand to defeat a regional adversary while "imposing unacceptable costs" on another. Otherwise it's all the usual about the world becoming more volatile, global connectedness, building partner capacity, rebalancing to Asia without diminishing effort anywhere else, the need for "exceptional agility" in our forces and efficiencies in the defense effort. There's lots of talk about innovation, but little evidence of it—the QDR details forces that would be cut if sequestration goes into effect, but does not explore different ways of achieving our defense objectives.

Even this updated strategy is, by Hagel's own admission, unexecutable without \$115 billion more than the top line legislated in 2010 (separate from the \$26 billion "Opportunity, Growth, and Security Initiative" submitted as a wish list along with the budget itself). That completely negates the \$113 billion in cuts that the President's budget "imposes." So, they're actually cutting nothing. The Defense Department has had three budget cycles to bring its spending into line with the law, and—even with an \$80 billion annual slush fund of war operations—it has not complied. Hagel says "it would have been irresponsible not to request these additional resources." That twists the argument: it was irresponsible not to develop a strategy consistent with available resources. This QDR has failed in its fundamental purpose.

Perhaps the central issue this QDR should have addressed in detail is where to accept risk as resources become less plentiful: in what areas can we afford to reduce our margin of error, and where would unacceptable dangers be incurred? What missions ought we to stop doing and stop preparing for in order to ensure we are able to meet our highest priorities? Where do redundancies exist that can be eliminated to free up resources? The Department of Defense claimed that the QDR would initiate a serious debate about risk. While the press statements emphasize greater risk in carrying out the strategy, there's no actual discussion in the QDR about how risk is assessed. The QDR does say we "continue to experience gaps in training and maintenance over the near term and will have a reduced margin of error in dealing with risks of uncertainty," but does not explain how different choices might aggravate or mitigate those risks. If DOD actually wants a debate about where to accept risk—instead of simply brandishing it as a threat to budget hawks—it will need to establish a metric for evaluating risk.

Secretary Hagel claims that the QDR prioritizes America's highest security interests by focusing on three strategic pillars: defending the homeland against all threats; building security globally by projecting U.S. influence and deterring aggression; and remaining prepared to win decisively against any adversary should deterrence fail.

It is difficult to discern how these three fundamental purposes of defense activity constitute priorities—they comprise the entirety of the defense effort. What program or activity could not be justified on their bases? The purpose of priorities is to allow apportionment of resources.

And where is the politicking with Congress to gain adoption of this approach? The Hagel budget has zero probability of being adopted by either authorizers or appropriators on the Hill. By neglecting his own fundamental responsibility, which is to be the Department of Defense's interface with the political processes of governance, Secretary Hagel has set the DOD up for another year of ineffectual bleating by the service chiefs that the end is nigh. It didn't change a single vote in the past two years of sequestration and absent a serious effort, it won't change a single vote this year. Where is the private horse-trading and, if need be, public shaming, to get Senator Kelly Ayotte off her hobby horse about the A-10s? Where is the flinty insistence that continuing the galloping pace of military entitlements is creating a hollow force? Where is the orchestration of presidential involvement to raise the political stakes? That ought not be the uniformed military's job; and in any event, the Obama White House has selected service chiefs who demonstrably cannot deliver that kind of political heft. If

Congress is to be cajoled into doing the right things, it needs to be confronted politician-to-politician. That Secretary Hagel sent the third echelon and a press statement to announce this tells us that the administration is going to mail it in, which will result in attaining neither the top line it seeks nor the latitude to implement its priorities.

Hagel has failed in the essential work of gaining support for his strategy and his budget among the people with the constitutional responsibility for making it into law. This is not only bad politics, it is bad for civil-military relations because DOD's civilian leadership is already busy blaming Congress rather than getting on with the business of effectively programming the world's largest defense budget. The Obama administration is encouraging the uniformed military to attack the legislative branch for any shortfalls of funding they have no right to expect receiving.

They Say: “Fear Clouds Effective Decision-making”

The “panic thesis” is incorrect. The influence of fear and panic on decision-making during *emergencies* is no different than the influence of fear and panic on decision-making during *normal times*. Critics hold that the immediate nature of decision-making in times of crises guarantees miscalculation. *However*, the reality is that no national emergency requires an immediate reaction; the systems takes time to make complex judgments about the appropriate response.

Posner and Vermeule 07 – Eric A., Kirkland and Ellis Distinguished Service Professor of Law and Arthur and Esther Kane Research Chair at the University of Chicago; Adrian, John H. Watson Professor of Law at Harvard University and previously Bernard D. Meltzer Professor of Law at the University of Chicago, 2007 (*Terror In The Balance Security, Liberty, And The Courts*, Published by Oxford University Press, ISBN 0-19-531025, p. 64-66)

Suppose now that the simple view of fear is correct and that it is an unambiguously negative influence on government decisionmaking. Critics of the deferential view argue that the supposed negative effect of fear justifies skepticism about emergency policies and, therefore, about the deferential view. The problem with this argument is that it implicitly assumes that fear has more influence on decisionmaking during emergencies than on decisionmaking during normal times. This assumption is not plausible. The panic thesis holds that citizens and officials respond to terrorism and war in the same way that an individual in the jungle responds to a tiger or snake. The national response to an emergency, because it is a standard fear response, is characterized by the same circumvention of ordinary deliberative processes: (i) the response is instinctive rather than reasoned, and thus subject to error; and (ii) the error will be biased in the direction of overreaction. While the flight reaction might have been a good evolutionary strategy on the savannah, in a complex modern society the flight response is not suitable and can only interfere with judgment. Its advantage—speed—has minimal value for social decisionmaking. No national emergency requires an immediate reaction, except by trained professionals, such as soldiers or police officers, who execute policies established earlier. Instead over days, months, or years people make complex judgments about the appropriate institutional response. And the asymmetrical nature of fear guarantees that people will, during a national emergency, overweight the threat and underweight other things that people value, such as civil liberties.

But if decisionmakers rarely act immediately, then the tiger story cannot bear the metaphoric weight that is placed on it. Indeed, the flight response has nothing to do with the political response to the bombing of Pearl Harbor or to the attacks on September 11. The people who were there—the citizens and soldiers beneath the bombs, the office workers in the World Trade Center and the Pentagon—no doubt felt fear, and most of them probably responded in the classic way. They experienced the standard physiological effects and (with the exception of trained soldiers and security officials) fled without stopping to think. It is also true that in the days and weeks after the attacks, many people felt fear, although not the sort that produces an irresistible urge to flee. But this kind of fear is not the kind in which cognition shuts down. Some

people did have more severe mental reactions and, for example, shut themselves in their houses, but these reactions were rare. The fear is probably better described as a **general anxiety** or jumpiness, an anxiety that was probably shared by government officials as well as ordinary citizens.¹⁵

While, as we have noted, there is psychological research suggesting that normal cognition partly shuts down in response to an immediate threat, we are aware of **no research** suggesting that people who feel anxious about a medium-term or long-term threat are **incapable of thinking, or thinking properly, or that they systematically overweight the threat relative to other values.** Indeed, it would be **surprising** to find research that clearly distinguished “anxious thinking” and “calm thinking,” given that anxiety is a **pervasive aspect of life.** People are anxious about their children, about their health, about their job prospects, about their vacation arrangements, about walking home at night.¹⁶ So it is **hard** to see why anxiety about more remote threats, from **terrorists or unfriendly countries with nuclear weapons, should cause** the public or elected officials to place more emphasis on security than is justified and to sacrifice civil liberties unnecessarily. Quite the contrary, a standard view is that people ignore low-probability risks and that elected officials with short time horizons ignore remote ones; on this account, **government will probably do too little to prevent terrorist threats, not too much.**

Fear generated by immediate threats, then, may cause instinctive responses that are not rational in the cognitive sense, not always desirable, and not a good basis for public policy, but it is not this kind of fear that leads to restrictions of civil liberties during wartime. The internment of Japanese Americans during World War II may have been due to **racial animus**, or to a **mistaken assessment of the risks**; it was **not the direct result of panic.** Indeed, there was a **delay of weeks** before the policy was seriously considered.¹⁷ The civil libertarians’ argument that fear produces bad policy trades on the ambiguity of the word panic, which refers both to real fear that undermines rationality and to collectively harmful outcomes that are driven by rational decisions, such as a bank panic, in which it is rational for all depositors to withdraw their funds if they believe that enough other depositors are withdrawing funds. Once we eliminate the false concern about fear, it becomes clear that the **panic thesis is indistinguishable from the argument that during an emergency people are likely to make mistakes.** But if the only concern is that during emergencies people make mistakes, there would be **no reason** to demand that the Constitution be enforced normally during emergencies. Political errors occur during emergencies and during **normal times**; once the panic thesis is rejected there is **no reason** to think that political errors occur at a higher rate during emergencies such that **judicial scrutiny should be heightened,** despite all of the disadvantages described in chapter 1.

In sum, the panic thesis envisions decisionmakers acting immediately when in fact **government policymaking moves slowly even during emergencies.** Government is organized so that general policy decisions about responses to emergencies are made in advance, and the implementation of those policies during an emergency is trusted to **security officials who have been trained to resist the impulse to panic.** The notion of fear causing an irresistible urge to flee is a bad metaphor for an undeniable truth: during an emergency, the government does not have as much time for making decisions as it usually does, and as a result will make more errors than it usually does. But these errors will be driven by ordinary cognitive limitations and not the

pressure of fear; thus, **the errors will be normally distributed.** It is as likely that the government will curtail civil liberties too little as too much.

They Say: “Executive Power Will Snowball Out of Control”

Claims of abuses in executive power are grounded in the naturalistic fallacy and the slippery slope fallacy. Furthermore, critics rely on outdated examples and fail to present a holistic analysis of executive power. *Even if they are right about executive power abuses, the judiciary is not a better alternative; a litany of historical examples prove.*

Posner and Vermeule 07 – Eric A., Kirkland and Ellis Distinguished Service Professor of Law and Arthur and Esther Kane Research Chair at the University of Chicago; Adrian, John H. Watson Professor of Law at Harvard University and previously Bernard D. Meltzer Professor of Law at the University of Chicago, 2007 (*Terror In The Balance Security, Liberty, And The Courts*, Published by Oxford University Press, ISBN 0-19-531025, p. 56-57)

Concerns about increasing executive power often rest on an implicit status quo bias, or naturalistic fallacy. The assumption is that the scope or level of executive power before the emergency was optimal. But this need not be so, and there is no general reason to think it will be so; consider the finding that the 7/7 attacks in London went unprevented because the United Kingdom’s intelligence services, who knew something about the plotters, had too few resources to investigate them adequately.⁸² Emergencies may release the polity from a sclerotic equilibrium in which executive power was too feeble to meet new challenges, as we illustrate in chapter 4. One interpretation of history is that emergencies allow presidents to obtain powers that are necessary to cope with new problems. Our original constitutional structure, with a relatively weak presidency, reflects the concerns of the eighteenth century and is not well adapted to current conditions.

Finally, to the extent that the critics of executive power envision judicial review as the solution, they are whistling in the wind, especially during times of emergency. The critics envision an imperial executive, who is either backed by a sustained national majority or else has slipped the political leash, and who enjoys so much agency slack as to be heedless of the public’s preferences. In either case, it is not obvious what the critics suppose the judges will or can do about it. As we will recount in more detail in later chapters, the judges proved largely powerless to stem the tide of the New Deal, in conditions of economic emergency, or to stop Japanese internment during World War II, or to block aggressive punishment and harassment of communists during the Cold War. What is more, many of the judges had no desire to block these programs. Judges are people too and share in national political sentiments; they are also part of the political elite and will rally ’round the flag in times of emergency just as much as others do.⁸³

Critics of executive power implicitly appeal to a slippery-slope argument: once executive power is increased to meet an emergency in a manner that is necessary and reasonable, it will unavoidably expand beyond what is necessary and reasonable. As we emphasize in chapters 4 and 5, the problem with this argument is that there is no evidence for it and no mechanism that generates such a slope. The critics focus obsessively on pathological polities like Weimar, ignoring that current well-functioning liberal democracies do not present the same conditions that led to dictatorship in 1933. More recent work in comparative politics suggests that grants

of emergency powers or of decree authority to executives **do not systematically end in dictatorship.**⁸⁴

Arguing that executive power would snowball out of control oversimplifies the equation of presidential power. Critics usually fail to distinguish the effects of “presidency as an institution” and “presidency as individuals.”

Posner and Vermeule 07 – Eric A., Kirkland and Ellis Distinguished Service Professor of Law and Arthur and Esther Kane Research Chair at the University of Chicago; Adrian, John H. Watson Professor of Law at Harvard University and previously Bernard D. Meltzer Professor of Law at the University of Chicago, 2007 (*Terror In The Balance Security, Liberty, And The Courts*, Published by Oxford University Press, ISBN 0-19-531025, p. 54)

First, **the executive-despotism concern supposes that executive officials desire, above all, to maximize their power.** As Daryl Levinson has emphasized, both for officials generally and for executive officials in particular, **it is hardly obvious that this is so**, at least in any systematic way.⁷⁶ Lower-level executive **officials and administrative agencies have many other possible goals** or maximands, **including the desire to enjoy leisure or to advance programmatic or ideological goals**—goals which will usually be orthogonal to the tradeoff between security and liberty and which might even include the protection of civil liberties. **The same is true for presidents: some have been power maximizers; some have not.** Moreover, **even with respect to power-maximizing presidents, critics fail to distinguish the man from the office. Presidents as individuals do not internalize** all of the **gains from expanding the power of the presidency as an institution**, because **those gains are shared with future presidents and senior executive officials.**⁷⁷ Conversely, **presidents as individuals do not fully internalize harms to the institution and may thus acquiesce in limitations on executive power for partisan or personal advantage.** The latter point may be more pronounced in emergencies than in normal times, because emergencies shorten the relevant time horizon; policymaking for the short run looms larger than in normal times. (We bracket for now the question of whether this is bad, an issue taken up in chapter 2.) Emergencies thus increase the divergence between the utility of individual officeholders and the institutional power of their offices, which extends into the remote future, beyond the horizon of the emergency.

Critics also fail to account for political motivations. Politics can incentivize the executive branch to maximize its power. However, this does *not* mean politics will *always* push a president to test the boundaries. Critics conflate increases in executive power with aggrandizement.

Posner and Vermeule 07 – Eric A., Kirkland and Ellis Distinguished Service Professor of Law and Arthur and Esther Kane Research Chair at the University of Chicago; Adrian, John H. Watson Professor of Law at Harvard University and previously Bernard D. Meltzer Professor of Law at the University of Chicago, 2007 (*Terror In The Balance Security, Liberty, And The Courts*, Published by Oxford University Press, ISBN 0-19-531025, p. 54-55)

Second, **whatever the intrinsic preferences of presidents and executive officials, politics sharply constrains their opportunities for aggrandizement,**⁷⁸ especially in times of emergency. The

president is elected from a national constituency (ignoring the low probability that the Electoral College will make a difference). A first-term president who seeks reelection to a second term, or even a second-term president who seeks to leave a legacy, will try to appeal to the median voter, or at least to some politically engaged constituency that is unlikely to be extremist in either direction. If the national median or the political center favors increased executive authority during emergencies, then the president will push the bounds of his power, but if it does not, then he will not; there is no general reason to think that national politics will always push executive authority as far as possible, even during emergencies. Of course, during emergencies, the public will often favor increased executive power, and this may be fully sensible, given the executive's relative decisiveness, secrecy, centralization, and other advantages over Congress and other institutions. Note, in this connection, the important finding that political constraints on the executive are associated with increased terrorism;⁷⁹ shackling the executive has real security costs. The critics of executive power typically assume that executive power not only expands during emergencies, but expands too far. However, the critics supply no general reason to think this is so; they systematically conflate increases in executive power with "aggrandizement," a normatively loaded concept which connotes an unjustified increase. We return to this point shortly. Here, the point is just that the expansion of presidential power during emergencies may reflect nothing more than the demands of the politically effective public, rather than intrinsic opportunism.

The political constraints on the executive branch and the president are partisan as well as institutional. The president is the leader of a political party but is also beholden to it. The party constrains the president in various ways, and it is not necessarily in the interest of a single party to enhance the power of the executive during emergencies. For one thing, the president's party may not win the next presidential election; for another, his party may have many other bases of power, including Congress, the judiciary, and local institutions. Expanding the president's personal or institutional power need not be in the interests of partisan politicians who govern behind the scenes. Opposition parties, of course, have powerful incentives to criticize the expansion of presidential power during emergencies, portraying small adjustments to the legal rules as omens of a putsch. In emergencies, partisan criticism can make the political constraints on presidents even tighter than during normal times, a point we emphasize in chapter 5. Governmental decisionmaking is often more visible during emergencies than during normal times; emergency policymaking is more centralized, even within the executive branch, and more closely associated with the president; the resulting policies often present a larger target for political attack.

Judicial Precedent DA HSS

File Notes

This is a DA that links to Courts Affs that rule on the 4th Amendment. The DA is based off of the third-party doctrine (a judicial precedent from Smith v. Maryland that established that there is no reasonable expectation of privacy when you give data to a third party). This DA argues that the plan overturns the third party doctrine, the current justification for mass surveillance, and that the third party doctrine is necessary to stop child pornography and crime.

This DA is net-benefit to the SOP CP.

1NC Shell — Judicial Precedent DA

[THE FIRST/NEXT OFF-CASE POSITION IS THE JUDICIAL PRECEDENT DA]

First, the third-party doctrine precedent is at a tipping point — recent cases prove

Sheehan 15 — Tim Sheehan, J.D. Candidate, Georgetown University Law Center (2015); B.F.A. from New School University (2009), 2015 (“Taking the Third-Party Doctrine Too Far: Why Cell Phone Tracking Data Deserves Fourth Amendment Protection,” *Georgetown Journal of Law and Public Policy* (13 Geo. J.L. & Pub. Pol’y 181), Available Online to Subscribing Institutions via Lexis-Nexis)

[*197] V. THE SUPREME COURT'S RENEWED FOCUS ON THE NORMATIVE ANALYSIS

This section analyzes the Supreme Court's recent decisions in *United States v. Jones* n136 and *Riley v. California*. n137 Although the Court has not directly decided whether CSLI is protected by the Fourth Amendment, Jones and Riley show that the current Court is serious about crafting constitutional rules to account for shifting societal norms, and more pointedly that a majority of the Justices appear willing to reconsider the third-party doctrine altogether. Jones is notable for the concurring opinions of Justices Sotomayor and Alito, which seriously challenged the continuing viability of the third-party doctrine and show that the Court is willing to reassess old precedents in light of new technologies. n138 Riley is significant because it shows the Court's willingness to treat evidence gleaned from cell phones as categorically different, given the wealth of information that modern cell phones reveal. n139

Second, ruling on the 4th Amendment necessarily overturns Smith and the third party doctrine — only current legal justification for mass surveillance

Donohue 15 — Laura K. Donohue, Professor of Law, Georgetown University Law Center, Director of Georgetown’s Center on National Security and the Law, and Director of the Center on Privacy and Technology, writes on U.S. Constitutional Law, American and British legal history, and national security and counterterrorist law, currently working on *The Future of Foreign Intelligence* (Oxford University Press, 2015), focusing on the Fourth Amendment and surveillance in a digital world, A.B., Dartmouth; M.A., University of Ulster, Northern Ireland; Ph.D., Cambridge University; J.D., Stanford, 2015 (“Bulk Metadata Collection: Statutory And Constitutional Considerations,” *Harvard Journal of Law & Public Policy* (37 Harv. J.L. & Pub. Pol’y 757), Available Online to Subscribing Institutions via Lexis-Nexis)

In Smith v. Maryland, the Supreme Court held that a pen register placed on a telephone line did not constitute a search within the meaning of the Fourth Amendment, because persons making phone calls do not have a reasonable expectation that the numbers they dial will remain private. n478 The key sentence from the decision centered on the customer's relationship with the telephone company: "A person has no legitimate expectation of privacy in information he voluntarily turns over to third parties." n479 It is this sentence that spawned what has come to be known as the "third party doctrine." n480

The government relies on this opinion and the resultant third-party doctrine to argue that the telephony metadata program is constitutional. In the DOJ's August 2013 White Paper, it suggests that a Section 215 order is not a search because "the Supreme Court has expressly held participants in telephone calls lack any reasonable expectation of privacy under the Fourth Amendment in the telephone numbers dialed." n481 In *ACLU v. Clapper*, the government again cited to the Court's reasoning [*867] in *Smith v. Maryland* that, even if a subscriber harbored a subjective expectation that the numbers dialed would remain private, it would not be reasonable because individuals have "no legitimate expectation of privacy in information" voluntarily turned over "to third parties." n482 The government suggested that because courts subsequently followed *Smith* to find no reasonable expectation of privacy in the sending or receipt of e-mail and Internet protocol addressing information, as well as subscriber information, "*Smith* is fatal to Plaintiffs' claim that the collection of metadata records of their communications violates the Fourth Amendment." n483

Judge Eagan similarly relied almost exclusively on *Smith v. Maryland* in her August 2013 opinion: "The production of telephone service provider metadata is squarely controlled by the U.S. Supreme Court decision in *Smith v. Maryland*." n484 She reasoned that because customers are aware that telephone service providers maintain call detail records in the normal course of business, customers assume the risk that the telephone company will provide those records to the government. n485 That information was collected in bulk was of no consequence: "[W]here one individual does not have a Fourth Amendment interest, grouping together a large number of similarly-situated individuals cannot result in a Fourth Amendment interest springing into existence ex nihilo." n486

Third, the third-party doctrine is key to investigating child pornography — IP address tracking

Kerr 10 — Orin Kerr, Professor at George Washington University Law School, JD from Harvard, M.S. from Stanford, BSE from Princeton, 2010 ("Applying The Fourth Amendment To The Internet: A General Approach," *Stanford Law Review*, Available online to subscribing institutions via Lexis-Nexis, Accessed 6-26-15)

The only Fourth Amendment fact pattern that courts reached concerning Internet investigations before 2007 considered the disclosure of basic subscriber information for Internet users. This has proved to be a recurring issue in child pornography investigations: in these cases, investigators learn that an individual has been using a specific Internet account or Internet protocol (IP) address to distribute or seek images of child pornography. Investigators then subpoena the Internet service provider (ISP) associated with that address to obtain the name and home address associated with that account, and they use that information as part of the probable cause to obtain a warrant to search the home associated with the address. n75 After a search warrant reveals contraband images and leads to charges, the defendant challenges the collection of his home address. Courts began to decide such cases in the late 1990s and have uniformly concluded that the Fourth Amendment does not protect it. n76 This conclusion did not require any intellectual heavy lifting, however: it has been long established that the Fourth Amendment doesn't apply to basic subscriber information for telephone accounts, n77 Western Union accounts, n78 and other [*1027] similar third-party accounts, and it is difficult to

articulate a reason why the name and address of an Internet account should receive a different rule.

Finally, if child-pornography elicits a strong emotional reaction from you, that's a reason to prioritize stopping it—any other system is morally indefensible

King 7 — Peter King, Professor of Philosophy at Pembroke College, Oxford, PhD from Oxford, 2007 (“No Plaything: Ethical Issues concerning Child-Pornography,” *Ethical Theory and Moral Practice*, November 30, Available online at <http://www.jstor.org/stable/40284244>, Accessed 6-29-15)

The emotional reaction to such a suggestion will surely be appalled rejection, similar to the reaction to the consumer of rape-type child-pornography. As I explained in Section 2, as an objectivist I take our emotions to be at the heart of morality; if the utilitarian really were to suppress her revulsion and apply a bloodless principle, then something would have gone badly wrong with her utilitarianism as a moral theory. Mill addresses a similar criticism in Utilitarianism:

It is often affirmed that utilitarianism renders *[people] cold and unsympathising; that it chills their moral feelings towards individuals; that it makes them regard only the dry and hard consideration of the consequences of actions, not taking into their moral estimate the qualities from which those actions emanate. (Mill 1861, chap. 2, f20)

Our emotions cannot be ignored without losing part of the heart of morality. Also at the heart of morality, though, is reason; it is essential to establish grounds for our condemnation of the consumer of the material in question - that is, to show that our emotional response has the right origin and the right relationship with our rational nature.¹² What are the available approaches here?

The third-party doctrine is a trump card right now but modern technology challenges like the plan will test its limitations

Henderson 6 — Stephen E. Henderson, Associate Professor, Widener University School of Law. Yale Law School (J.D., 1999); University of California at Davis (B.S., 1995), 2006 (“Learning From All Fifty States: How To Apply The Fourth Amendment And Its State Analogs To Protect Third Party Information From Unreasonable Search,” *Catholic University Law Review* (55 Cath. U.L. Rev. 373), Available Online to Subscribing Institutions via Lexis-Nexis)

While this has an intuitive appeal, neither court addressed significant Supreme Court precedent to the contrary. There is no Fourth Amendment protection for garbage left for collection despite typical municipal laws forbidding inspection of that garbage. n97 There is no Fourth Amendment protection for bank records despite laws restricting their disclosure. n98 And there is no Fourth Amendment protection for open fields despite the law of criminal trespass. n99 The Supreme Court has consistently applied the third-party doctrine as a "trump" over other legal restrictions.

[*390] While their constitutional analysis is therefore inadequate, the decisions demonstrate judges are struggling to find a limitation to the third-party doctrine given its implications for modern technologies. This may be important, because presumably they (and hopefully their colleagues) will seriously consider more developed arguments for limiting the doctrine when those arguments reach their courtrooms. Any small fracture in the monolithic federal third-party doctrine is welcome, and underscores the need for commentators and litigants to articulate and advocate limitations to the doctrine like that described in later sections of this Article.

Third party precedent remains but Jones proves the Supreme Court is ready to reconsider

Ernst 14 — Colleen Maher Ernst, Law Clerk at U.S. Court of Appeals for the Eighth Circuit, former Legal Fellow, Committee on Foreign Affairs

U.S. House of Representatives, Harvard Law School (J.D.), Boston College, BA, Psychology, summa cum laude, 2015 (“Looking Back To Look Forward: Reexamining The Application Of The Third-Party Doctrine To Conveyed Papers,” *Harvard Journal of Law and Public Policy* (37 Harv. J.L. & Pub. Pol’y 329), Available Online to Subscribing Institutions via Lexis-Nexis)

[*345] VI. WHY THE COURT MUST REVISIT THE DOCTRINE

The modern third-party doctrine creates an expansive exception to the law's general insistence on warrants. Fourth Amendment scholar Orin Kerr acknowledges the rule's general infamy in the academic world: "The Third-Party doctrine is the Fourth Amendment rule scholars love to hate. It is the *Lochner* of search and seizure law, widely criticized as profoundly misguided." n103 At the time the Supreme Court decided *United States v. Miller*, courts did not share the understanding of the relationship between the property-based and expectations-based lines of protection articulated by the majority in *Jones*. Accordingly, the *Miller* Court failed to carry out

the requisite inquiry involving examination of the Court's early property-based protection for conveyed papers. As Justice Sotomayor recognized in her Jones concurrence, the third-party doctrine is "ill suited" to the modern era. n104 History reveals it is equally ill suited to the Court's call for consideration of early conceptions of Fourth Amendment protections. Under the trespass-based conception of search, the application of the third-party rule to papers and their digital equivalents demands another look. Perhaps with reexamination, the Court will finally end the reign of this modern Lochner, and the American people will be able to convey papers and digital data confident in the protections of the Fourth Amendment.

[Note to fellow debaters: Lochner refers to Lochner v. New York, one of the most controversial decisions in the Supreme Court's history, giving its name to what is known as the Lochner era. In the Lochner era, the Supreme Court issued several controversial decisions invalidating federal and state statutes that sought to regulate working conditions during the Progressive Era and the Great Depression.]

Fourth Amendment rulings on the aff will set a precedent for mass surveillance

Galicki 15 — Alexander Galicki, Georgetown University Law Center, J.D. expected 2015; B.A. in International Relations from University of Southern California, 2015 (“The End Of Smith V. Maryland?: The Nsa's Bulk Telephony Metadata Program And The Fourth Amendment In The Cyber Age,” *American Criminal Law Review* (52 Am. L. Rev. 375), Available Online to Subscribing Institutions via Lexis-Nexis)

IV. CONCLUSION

It is debatable whether the NSA's bulk collection of telephony metadata is or is not desirable public policy, but whether it constitutes a "search" under the Fourth Amendment will set precedent for an expanding horizon of technology including mass drone surveillance, cell phone tracking, and Internet metadata. While the NSA program might seem insignificant in that it tracks only telephony metadata without "content," the possibility remains that technology will advance to the point where all information (visual, auditory, and olfactory) exposed in public could be collected, aggregated, and analyzed using complex algorithms over the lifetime of all American citizens. To be able to address this kind of aggregate and all-encompassing surveillance, the Court should follow its recent trend, relying particularly on a combination of Jones and Ferguson, to rule that the aggregate bulk collection of telephony metadata over time constitutes a "search" within the meaning of the Fourth Amendment.

Lower courts only uphold surveillance on Smith v. Maryland—the weakness of this precedent means the aff easily overturns it

Wyden et al. 14 — Ron Wyden, senator from Oregon since 1996, member of Senate Select Committee on Intelligence with access to classified meta-date program information, Mark Udall, Senator from Colorado from 2009 to 2015, also a member of the Senate Select Committee on Intelligence, and Martin Heinrich, senator from New Mexico, 2014 (. “BRIEF FOR AMICI CURIAE SENATOR RON WYDEN, SENATOR MARK UDALL, AND SENATOR MARTIN HEINRICH IN SUPPORT OF PLAINTIFF-APPELLANT, URGING REVERSAL OF THE DISTRICT COURT,” *Electronic Frontier Foundation*, submitted to *Smith v. Obama*, September 9th, Available online at <https://www.eff.org/document/wyden-udall-heinrich-smith-amicus>, Accessed 6-18-15)

As a close reading demonstrates, the district court's rationale for dismissing plaintiffs' Fourth Amendment claim rests on a broad reading of *Smith v. Maryland*, 442 U.S. 735 (1979) and its Ninth Circuit progeny. *Smith v. Obama*, No. 2:13-CV-257, 2014 U.S. Dist. LEXIS 76344 (D. Idaho June 3, 2014); ER1-8. Even as the district court relied on *Smith*, it correctly recognized the existence of “a looming gulf between *Smith* and this case.” *Smith*, 2014 U.S. Dist. LEXIS 76344, at *7; ER5. The *Smith* case involved the investigation of a single crime, and the collection of the phone records of a suspected robber over a two-day time period. The district court quoted the *Klayman v. Obama* opinion to underscore the danger of expanding *Smith* so far as to encompass telephone records collected in bulk over a much longer period of time: “people in 2013 have an entirely different relationship with phones than they did thirty-four years ago Records that

once would have revealed a few scattered tiles of information about a person now reveal an entire mosaic –a vibrant and constantly updating picture of the person’s life.” Smith, 2014 U.S. Dist. LEXIS 76344, at *11; ER7 (quoting Klayman v. Obama, 957 F. Supp. 2d 1, 36 (D.D.C. 2013)).

AT: Link Non-Unique — LA v. Patel

City of Los Angeles v. Patel's 4th Amendment ruling was narrow and did not address the third party doctrine

Frye 15 — Kelly Frye, Business Litigation Attorney at Robinson+Cole LLP, JD from The University of Connecticut School of Law, Alvin Pudlin Memorial Scholarship Recipient (2013), George W. Crawford Black Bar Association Priscilla Green Scholarship Award Recipient (2013), The Honorable M. Joseph Blumenfeld Award Recipient (2014), B.A. in Legal Studies from Bay Path College, 2015 ("Supreme Court declares warrantless searches of hotel registries unconstitutional," *Data Privacy + Security Insider*, June 24th, Available Online at <http://www.dataprivacyandsecurityinsider.com/2015/06/supreme-court-declares-warrantless-searches-of-hotel-registries-unconstitutional/>, Accessed 6-29-2015)

In a 5-4 decision in the case of City of Los Angeles v. Patel, the Supreme Court found that the ordinance was facially unconstitutional because it did not provide for judicial review of the reasonableness of an officer's demand to search the registry before issuing penalties for noncompliance.

The recent decision does not require warrants or subpoenas for every hotel registry inspection. Rather, it orders that these measures be in place for when they are needed, giving hotel owners the opportunity to challenge warrantless searches without facing jail time or fines.

The holding constitutes a small and very narrow victory for the Fourth Amendment rights of Los Angeles hotel owners. The decision pertains solely to the Los Angeles ordinance and does not address the constitutionality of other, similar records sweeps allowed under the Third Party Doctrine. Nor does it address the Fourth Amendment implications of the "pervasive regulation" of certain businesses—like the records legally required to be kept and provided to officers on demand by businesses like firearms dealers, pawn shops, and junkyards.

The Supreme Court did not directly confront the third party doctrine in City of Los Angeles v. Patel

Atlantic 15 — The Atlantic, 2015 ("The Supreme Court's Liberals Just Made It Easier for Hotels to Protect Your Privacy," Byline Conor Friedersdorf, June 23rd, Available Online at <http://www.theatlantic.com/politics/archive/2015/06/an-motel-sized-victory-for-privacy-at-the-supreme-court/396542/>, Accessed 6-29-2015)

As I noted last year when the Supreme Court first agreed to hear Los Angeles v. Patel, it's worth stepping back to think through the logic embraced by Los Angeles, the LAPD, a district court, a Ninth Circuit dissent, and now, four dissenting Supreme Court justices. All seem comfortable with something that wasn't addressed directly in this case: the notion that hotel and motel guests have no right to privacy in information that they voluntarily turn over to third parties, per Smith v. Maryland.

City of Los Angeles v. Patel only triggers the link with direct confrontation of the third party doctrine

Lamparello 14 — Adam Lamparello, Assistant Professor of Law at Indiana Tech Law School, Bachelor's degree from the University of Southern California, his Juris Doctorate from The Ohio State University Michael E. Moritz College of Law, and a Master of Laws from New York University School of Law, 2014 ("City of Los Angeles v. Patel: The Upcoming Supreme Court Case No One is Talking About," *Texas Journal on Civil Liberties and Rights*, Vol. 20, Available Online at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2543157, Accessed 6-29-2015)

Indiscriminately collecting metadata, monitoring internet search history, or sifting through hotel guest registries can be just that—a fishing expedition. The Government's commonly articulated purpose for collecting such information—national security—is certainly valid, but it should not countenance a government dragnet that delves into the lives of millions of citizens just to find a few bad apples. The Fourth Amendment's particularity requirement exists for a reason: to prevent the "reviled 'general warrants' and 'writs of assistance' of the colonial era." 17 This is precisely why the third-party doctrine, as currently applied by the courts, is ill-suited to the digital era: it provides law enforcement with almost limitless authority to monitor our private lives, including where we travel, who we call, and what search for on Google. Indeed, the scope of the third-party doctrine in the digital age is the issue lurking underneath the surface in Patel—and it has the potential to affect privacy rights in a variety of contexts.

Even if the Supreme Court wants to sidestep the third-party doctrine in Patel, it will, at the very least, indirectly confront the issue, because the Ninth Circuit expressly stated that the doctrine was still valid law.¹⁸ Thus, if the Court's holding is narrow and confined to the hotel owner's expectation of privacy in a guest registry, one can assume that the third-party doctrine remains good law in its current form. If the Court confronts the third party doctrine directly, the Justices will have the power to strengthen privacy protections by establishing principled limits on the warrantless collection of information, such as cell phone metadata. Conversely, the Court's decision has the potential to place law enforcement's investigatory powers—and the Government's [End of p. 5] interest in national security—above privacy rights, therefore sinking the Fourth Amendment further into the sea of irrelevance.

AT: Impact Inevitable — Law Enforcement Fails

Eradicating the third-party doctrine promotes criminal activity like child pornography with exclusive third-party communication

Twomey 15 — Margaret E. Twomey, J.D. expected from University of Michigan in 2016, 2015 (“Voluntary Disclosure Of Information As A Proposed Standard For The Fourth Amendment’s Third-Party Doctrine,” *Michigan Telecommunications & Technology Law Review* (21 Mich. Telecomm. Tech. L. Rev. 401), Available Online to Subscribing Institutions via Lexis-Nexis)

When criminals avail themselves of the benefits of third-party assistance, they should not receive the same amount of privacy that criminals acting alone receive. n98 Most **law enforcement investigations are based on the two-step investigatory scheme** that has been established and developed through Fourth Amendment jurisprudence. This scheme starts with less invasive, open surveillance techniques, followed by more invasive steps that require law enforcement to make certain showings (such as the probable [*414] cause required for a search warrant). n99 **If the third-party doctrine is eradicated and criminals are able to use third parties to conduct entire criminal acts, law enforcement agencies will lose some of their most basic investigative abilities.** n100 Third parties that would have previously met in public, or could be observed leaving a subject's house, can now be e-mailed from a basement, entirely out of sight of law enforcement officers. n101 The traditional open surveillance techniques are no longer effective. Even if officers have reasons to investigate a subject further, they are hamstrung by a technologically-advanced world that puts physical surveillance out of reach and, for example, allows child pornography to be shared across the world without a subject ever leaving home.

AT: TPD Bad — Abuse

No third-party doctrine abuse — other protections check abuse

Kerr 9 — Orin Kerr, Professor at George Washington University Law School, JD from Harvard, M.S. from Stanford, BSE from Princeton, 2009 (“The Case for the Third-Party Doctrine,” *Michigan Law Review Vol. 107*, Available online at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1138128, Accessed 6-28-15)

Finally, functional arguments about government power overlook the legal system’s substitutes for Fourth Amendment protection. The Fourth Amendment is not the only game in town. Common law privileges, entrapment law, the Massiah doctrine, First Amendment doctrine, and statutory privacy protections have been designed specifically to address concerns of police harassment in their use of third parties.¹⁶ These mostly nonconstitutional legal principles each regulate specific aspects of third-party practices to deter police abuses, generally forcing the police to use third parties in good faith or in a reasonable way. Critics have overlooked these substitutes, and as a result have tended to see the choice as between Fourth Amendment protection or no protection at all. Understanding how other doctrines substitute for Fourth Amendment protection reveals that this understanding is incorrect.

2NC/1NR Impacts

Child Pornography turns Privacy

Child pornography violates victims' rights to privacy and causes powerlessness

Rogers 8 — Audrey Rogers, Professor of Law at Pace Law School, BS, State University of New York at Albany, JD, St. John's University School of Law, 2008 ("Child Pornography's Forgotten Victims," *Pace Law Review* (Vol. 28), 2008, Available Online at <http://digitalcommons.pace.edu/cgi/viewcontent.cgi?article=1539&context=lawfaculty>, Accessed 7-2-2015)

When the pornographic images are viewed by others, the children depicted are victimized once again. The mere knowledge that images exist and are being circulated causes shame, humiliation and powerlessness.⁹ This victimization lasts forever since the pictures can resurface at any time, and this circulation has grown exponentially because of the Internet.⁴¹ As [End of p. 8] one expert explained: "The victim's knowledge of publication of the visual material increases the emotional and psychic harm suffered by the child."⁴² At a more fundamental level, child pornography victims' rights of privacy and human dignity are violated when their images are circulated and viewed by others.⁴³ The possessor thus has real victims and inflicts actual harm upon them by his conduct.

Child Pornography Expanding

Child pornography is a rapidly expanding problem — 14 million websites, 20,000 images posted each week, and a thirty-fold increase in reports

Henzey 11 — Michael J. Henzey, Assistant Commonwealth's Attorney, Office of the Commonwealth's Attorney of the City of Hampton, VA, Master of Laws (LLM) degree in Criminal Law with Honors from State University of New York at Buffalo - Law School, J.D. from The Catholic University of America, Columbus School of Law, B.A. in history from George Mason University, 2015 ("Going On The Offensive: A Comprehensive Overview Of Internet Child Pornography Distribution And Aggressive Legal Action," *Appalachian Journal of Law* (11 *Appalachian J. L.* 1), Available Online to Subscribing Institutions via Lexis-Nexis)

Child pornography n2 is among the most heinous of crimes: it is the permanent record of physical, sexual, and psychological abuse of a young, helpless human being. Its victims come from a variety of circumstances. Some are victims of child sex trafficking, but most are abused by family members or family friends. Often, they are plied with drugs and alcohol to lower their resistance. Frequently, the photographs and videos produced are used to silence the victims or to force them to submit to repeated abuse. The trauma to the victim is felt both in the near and long term. The immediate effects are bruises, cuts, and sexually transmitted infections. The long term effects include psychological problems, feelings of hopelessness and worthlessness, and drug and alcohol addiction. Society also pays a significant cost for the crime of child pornography.

Child pornography, which was nearly eliminated until the advent of the Internet in the early 1990s, has become a massive problem of global [*2] scale. There are an estimated fourteen million child pornography websites n3 with more than 20,000 images of child pornography posted each week. n4 Not only is it a "cotton industry" supported by pedophiles, but it has also developed into a profit-driven enterprise with profit estimates ranging up to twenty billion dollars annually. n5 In addition, despite increased legislative attention and greater law enforcement efforts, the volume of available child pornography continues to grow. Reports of child pornography to the National Center for Missing and Exploited Children's CyberTipline increased from 3,267 reports in 1998 to 106,119 in 2004 - more than a thirty-fold increase. n6

Sexual Abuse Impact

Child pornography contributes to child sexual abuse — it desensitizes the public to abuses while exploiting and dehumanizing children

King 7 — Peter King, Professor of Philosophy at Pembroke College, Oxford, PhD from Oxford, citing Michelle Elliott, leading child psychologist, former chair of the WHO, honorary doctorate from the University of Birmingham, 2007 ("No Plaything: Ethical Issues concerning Child-Pornography," *Ethical Theory and Moral Practice*, November 30, Available online at <http://www.jstor.org/stable/40284244>, Accessed 6-29-15)

It is certainly true that the harms done by adult-pornography to women are not precisely mirrored by the harms done by child-pornography to children. The latter material is not splashed over top-shelf magazine-covers in full view of those who would not frequent sex shops and cinemas. Or, rather, child-pornography of the first three kinds is not thus openly, publicly displayed. Matters are very different with regard to nudity-type and pin-up-type material, however. Michele Elliott, for example, offers a catalogue of sexually-oriented images of children in the mainstream media - from record covers to the Sunday Times magazine, from greetings cards to advertising posters: "Most people will never encounter hard-core child pornography. Without doubt it would disgust and horrify them [...] Child pornography is easily condemned. Yet we are now seeing daily images of children being used as sexual objects to sell products" (Elliott 1992, p.218). In other words: "Without our knowing, soft-core child pornography has crept into our everyday lives and most of us are unaware that this has happened" (loc. cit.). In this way our emotional responses are dulled; we are desensitised, and our attitudes to children are poisoned.

Elliott gives an extensive list of what is involved in this phenomenon, and what its consequences are. This sort of material, she says:

is contributing to the problem of child sexual abuse. It is condoning the use of children in inappropriate sexual contexts. It is desensitising the public and setting new standards for what is acceptable. It is strengthening the argument of paedophiles that children are asking for sex. It is exploiting and dehumanising children without their informed consent. It is glamourising children as sexual objects. It is saying to children that adults agree with the idea of them being sexualised. It is suggesting to other children that this is a desirable way to be portrayed. (Elliott 1992, p.220)

Child pornography makes child molestation more likely

King 7—Peter King, Professor of Philosophy at Pembroke College, Oxford, PhD from Oxford, citing Joel Feinberg, former Professor at Princeton, PhD from the University of Michigan, 2007 ("No Plaything: Ethical Issues concerning Child-Pornography," *Ethical Theory and Moral Practice*, November 30, Available online at <http://www.jstor.org/stable/40284244>, Accessed 6-29-15)

To this it might be objected that the person's original character traits, which led him to use pornography in the first place, are likely to be intensified, hardened, or extended by that use, or

that the material could lead to the development of attitudes or beliefs that make it more likely that he act on his desires. For example, one of Feinberg's "pornography-reading machos" might come to believe, through (repeated) exposure to pornography of a certain kind, that women actually want to be raped, or that once raped they find that they enjoy it; this might lead him to overcome whatever moral scruples had hitherto prevented him from acting out his fantasies.

When we turn back to child-pornography, it seems very likely that the person who takes pleasure in rape-type material falls into the kind of category to which Feinberg refers. We might not understand such people, but we can be sure that they would only choose to view and read such material - and could only enjoy it - if they were already morally corrupt, and beyond the power of the material to affect further. Moreover, the material itself makes no pretence that the actions it presents are anything but cruel and harm-causing, so there seems to be no room for the consumers' self-deception to be encouraged.

With regard to consensual-type and fake-type material, however, the case is very different. Here it seems likely that someone who is sexually attracted to children, but who retains moral scruples that hold him back from acting on his desires, might well view or read material that presents children as being complicit in or even actively desirous of sexual activity with adults; he might thus come to believe that his previous reluctance to act upon his desires was misplaced - that his moral scruples rested upon a mistake. That is, although he starts looking at child-pornography as a substitute for actual sexual abuse of children, the material actually makes it more likely that he will turn to such abuse. The inference drawn by others - that, although there is no (or minimal) immediate harm, there is consequent, future, or non-apparent harm - simply will not be drawn by the paedophile.

The consumption of consensual-type and fake-type material is thus more likely to have harmful affects on its consumers and their potential victims than is the consumption of rapetype material.⁶ We see, then, that the situation is more complex than might have been thought if only the effects on the subjects had been considered. While it is clearly true that rape-type child-pornography does greater harm to its subjects than do consensual-type and fake-type pornography, that moral ordering is reversed when it comes to harm caused to and through the consumers. And the number of potential victims at consequent risk from the consumers of the latter two types is very large.

General Crime Impact

Limiting the third-party doctrine allows criminals to commit crimes without entering into the public domain — that makes investigations impossible

Kerr 9 — Orin Kerr, Professor at George Washington University Law School, JD from Harvard, M.S. from Stanford, BSE from Princeton, 2009 (“The Case for the Third-Party Doctrine,” *Michigan Law Review Vol. 107*, Available online at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1138128, Accessed 6-28-15)

The basic division into unregulated and regulated steps leads to a balance between privacy and security because most crimes have traditionally required suspects to carry out at least part of their crimes in spaces open to surveillance. To see why, consider a world with no advanced technology. Part of the crime will normally occur outside. If John wants to rob a person walking down the street, for example, he needs to leave his house and go out to the street. If he wants to purchase drugs, he needs to go out of his home and find a dealer who will sell them to him. If he wants to murder his coworker, he needs to go out and buy a knife; after the act, he needs to dispose of the body. In all of these traditional types of crimes, the wrongdoer has to leave his home and go out into spaces unprotected by the Fourth Amendment. The public component of most traditional crimes is critical to the traditional balance of Fourth Amendment rules. If at least part of a crime occurs in spaces unprotected by the Fourth Amendment, the police have at least some opportunity to look more closely at whether criminal activity is afoot. Because the police normally begin an investigation with only speculation that a particular person is a lawbreaker, the public portion of crimes give the police an opportunity to develop more evidence. The police will have access to the public portion of the crime free of legal regulation. If they are observing him, they will know where the suspect went and what he said in public. That information won't solve the crime in most cases: Unless an officer directly observes the crime, the publicly available evidence only provides a lead.⁸⁴ But it's a start. If the evidence is strong enough, it can support invasions of protected spaces with a warrant. And those steps help the police solve at least a moderate percentage of criminal cases. Of course, many cases won't be solved. But enough cases are solved that a significant prospect of criminal punishment exists, allowing the criminal justice system to serve its utilitarian and retributive ends. B. Third Parties and the Basic Division Third parties pose a major threat to the Fourth Amendment's basic division between unregulated and regulated steps. The reason is that third parties act as remote agents that permit wrongdoers to commit crimes entirely in private. Those committing crimes naturally try to hide them from the police; no criminal wants to get caught. If a wrongdoer can use third parties as remote agents, he can reduce his exposure to public surveillance. Instead of going out into the world and subjecting himself to exposure, a wrongdoer can bring third-party agents inside and share plans or delegate tasks to them. He can use the third-party services to commit his crimes without exposing himself to spaces open to government surveillance. Put another way, the use of third parties often has a substitution effect.⁸⁵ Without the third party, the wrongdoer would have needed to go out into public spaces where the Fourth Amendment does not regulate surveillance. But use of a third party substitutes a hidden transaction for the previously open event. What would have been public now becomes hidden. The wrongdoer no longer needs to leave his home, as the third-party agents enable him to commit the crime remotely. The crime now comes to the criminal rather than the criminal going to the crime.⁸⁶

Consider how a person might use third parties to commit crimes from the protection of his own home. A mob boss might summon his underlings to his house to give them orders. A stalker might call his victim on his home phone rather than lying in wait outside her door. A computer hacker might hack into computers thousands of miles away without leaving his bedroom. In all of these cases, individuals use third parties to carry on their crimes without exposing themselves to spaces unprotected by the Fourth Amendment. The third-party agents—the employee, the telephone, and the Internet—do the work remotely on the principal's behalf. Now we can see the importance of the third-party doctrine. Without the doctrine, criminals could use third-party agents to fully enshroud their criminal enterprises in Fourth Amendment protection. A criminal could plot and execute his entire crime from home knowing that the police could not send in undercover agents, record the fact of his phone calls, or watch any aspect of his Internet usage without first obtaining a warrant. He could use third parties to create a bubble of Fourth Amendment protection around the entirety of his criminal activity. The result would be a notable shift in the balance between privacy and security. If any observation of any part of the target's conduct violates his reasonable expectation of privacy, then the police would need a warrant to observe any aspect of his behavior. That is, they would need probable cause to believe that the evidence to be collected constitute evidence of the crime. But if the entire crime were protected by a reasonable expectation of privacy, they couldn't observe any aspect of the crime to develop that probable cause. The effect would be a Catch-22: The police would need probable cause to observe evidence of the crime, but they would need to observe evidence of the crime first to get to probable cause. In many cases, this would eliminate the use of third-party evidence in investigations altogether. By the time the police would have probable cause to believe that someone's thirdparty records are evidence of crime, they usually would already have probable cause to arrest and charge him with the crime.⁸⁷

Judicial Salaries and Court Stripping DA Michigan 7

Judicial branch salaries are increasing now

Moyer, 15 – [Bruce, is on the Federal Bar Association government relations counsel, Federal Bar Association, “Federal Judges Score a Pay Adjustment, Quietly”, January 2015, <http://www.fedbar.org/Advocacy/Washington-Watch/WW-Archives/2015/JanuaryFebruary-2015-Federal-Judges-Score-a-Pay-Adjustment-Quietly.aspx>, 7/6/15]JRO

Long-standing precedent has been overturned, Constitutional history made, and the size of federal judicial salaries enlarged over the past year—largely beneath the public radar.

All of this has come about through a series of court decisions, stretching from the U.S. Court of Federal Claims to the U.S. Supreme Court, that have permitted the federal judiciary to win a long, protracted battle over its pay that centered on the guarantee of judicial independence and the Constitution’s bar against reductions in the compensation of federal judges. Most remarkably, the outcome has been achieved in the judiciary’s own arena: the federal courtroom. There, beginning with a lawsuit in 2009 by a small group of senior-status and retired federal jurists, the federal judiciary has won a series of adjustments in its pay, as guaranteed by a 1989 law and affirmed by the Constitution.

Many members of Congress are only today waking up to the fact that federal judges have prevailed in a string of court decisions that caused their salaries to spike 14 percent from 2013 to 2014. Prior to that time, the paychecks of House members and senators were equal to those of federal district judges, although there was never a statutory link. But today the salaries of members of Congress are less. Today a federal district judge makes \$199,100, while a member of Congress earns \$174,000.

Decisive court decisions have struck down prior congressional freezes on judicial pay as illegal and restored federal judicial salaries to what they would have been absent the freezes. Those decisions have affected the pay of all 1,330 federal judgeships established under Article III of the Constitution, which includes those in the district, appeals, and international trade courts, as well as the Supreme Court. The decisions also have raised the pay of many non-Article III judges, including magistrates, and those in the tax, bankruptcy, and claims courts.

The Legal Path to Restoration of Prior Pay Adjustments

The judges’ initial winning lawsuit, *Beer v. United States*, centered on the validity of congressional actions that blocked “automatic” pay adjustments for federal judges despite a 1989 law that purported to guarantee the adjustments. (Congress, in previously blocking the judicial pay adjustments, also blocked adjustments for themselves, largely for political reasons.) The filing of the lawsuit by the six plaintiff judges in Beer in 2009 did not mark the first time that judges had challenged freezes in their pay. Over the past three decades, judges twice before in five different federal courts had challenged the denial of automatic pay adjustments. Each time they lost. Meanwhile, efforts in Congress to secure legislative relief that restored those adjustments also fell to defeat, despite repeated campaigns by the Federal Bar Association and others, along with public appeals for higher pay by Chief Justice Rehnquist and later Chief Justice Roberts.

Continued tenacity and brilliant advocacy finally brought about a different outcome in the landmark *Beer* decision. There the U.S. Court of Appeals for the Federal Circuit overturned prior law and declared the pay adjustment-blocking actions of Congress unconstitutional. In reaching that decision, the Federal Circuit overruled its decision in *Williams* in 2000, which had relied on a 1980 Supreme Court decision denying judicial pay adjustments because the congressional blocking statutes were enacted before the adjustments were to take effect. A subsequent appeal of the *Williams* decision led to the Supreme Court’s denial of review, but three justices (Breyer, Scalia, and Kennedy) filed an elaborate dissent, dissecting the 1989 statute that established the annual cost-of-living adjustments and explaining why the Compensation Clause of the Constitution was violated by Congress’s actions.

Nine years later, the rationale of the Breyer-Scalia-Kennedy dissent in Williams served as the winning blueprint for the judges' victory in Beer before an en banc panel of the Federal Circuit. (The FBA twice filed supportive amicus briefs during the Beer litigation.) Ultimately (and not surprisingly), the Supreme Court denied review in Beer, finalizing the outcome. Since then, groups of judges have successfully brought a handful of lawsuits, applying the outcome of Beer to all Article III judges as a class and, more recently, to various groups of Article I judges.

Congress empirically blocks salary increases in response to controversial decisions --- critical to judicial independence

Miller, 6 --- Associate Professor and Chair of the Department of Government and International Relations at Clark University (Summer 2006, Mark C., Case Western Reserve University, "SYMPOSIUM: JUDICIAL INDEPENDENCE AND JUDICIAL ACCOUNTABILITY: SEARCHING FOR THE RIGHT BALANCE: When Congress Attacks the Federal Courts," 56 Case W. Res. 1015, JMP)

I. Congress's Compensation Power

There have been many instances in which Congress has used various mechanisms to attack the federal courts for decisions with which a determined legislative majority has disagreed. n30 While to my knowledge Congress has not yet deliberately defied the protections inherent in the Compensation Clause, the legislative branch has used other means to attack the courts and to attempt to influence court decisions. Even though the Compensation Clause prevents Congress from reducing any judicial salaries that have already vested, n31 the clause neither requires Congress to provide any annual cost of living [*1021] adjustments for federal judges nor prevents Congress from canceling future announced judicial salary increases. n32 Thus, judicial salaries have always been a point of contention, and Congress has sometimes used judicial salaries to send a clear message to the courts. For example, in 1964, Congress increased the salaries for lower federal judges by \$ 7,500 per year but increased the salaries for Justices of the U.S. Supreme Court by only \$ 4,500 per year. As Schmidhauser and Berg explain, "The \$ 3,000 differential clearly reflected a direct Congressional reprimand to the Supreme Court. **This crude rebuff clearly stemmed from congressional dissatisfaction with several controversial decisions rendered by the Court.**" n33

Clearly, judicial salary issues have added to the tensions between the courts and Congress. Federal judges often feel that Congress does not provide adequate compensation for them. As Professor Paul M. Bator has remarked, "federal judges, as a group, complain more about their pay than any other group I have ever encountered." n34 There is probably a great deal of truth to the fact that federal judges feel that they are underpaid. In 2003, Judges Coffin and Katzmann noted that, "Since 1969, federal judicial salaries have lost twenty-four percent of their purchasing power." n35 Various congressional actions regarding annual cost of living adjustments for federal judges have not made federal judges feel better about their financial situations. For example, in 1995, 1996, 1997, and 1999, Congress blocked previously announced "automatic" cost of living increases for various governmental officials, including federal judges, that had been provided for in the Ethics Reform Act of 1989. n36 Congress was really attempting to prevent the automatic pay raises for its own members from going into effect, but the legislation blocked federal judicial pay increases as well as the pay raises for legislators. When federal judges sued to [*1022] recover their blocked "automatic" pay increases, the United States Court of Appeals for the Federal Circuit ruled that the proposed "automatic" pay raises had not vested, and thus, there was no violation of the Compensation Clause in the legislative actions. n37 Although the Supreme Court refused to grant certiorari in the case, Justice Breyer wrote a strongly worded dissent to the denial of certiorari, which Justices Scalia and Kennedy joined. n38 This concern with judicial salaries and other budgetary resources is not new, of course. Although he was speaking more broadly of his frustration with congressional budgeting practices, Chief Justice Warren stated in 1969 that, "It is next to impossible for the courts to get something from Congress." n39

In his annual year-end reports on the State of the Judiciary, Chief Justice Rehnquist often complained about Congress's approach to judicial salary issues. In his 2000 Year-End Report on the Federal Judiciary, Chief Justice Rehnquist focused most of the report on what he termed, "the most pressing issue facing the Judiciary: the need to increase judicial salaries." n40 The Chief Justice went on to say,

In order to continue to provide the nation a capable and effective judicial system we must be able to attract and retain experienced men and women of quality and diversity to perform a demanding position in the public service. The fact is that those lawyers who are qualified to serve as federal judges have opportunities to earn far more in private law practice or business than as judges. In order to continue to attract highly

qualified and diverse federal judges -- judges whom we ask and expect to remain for life -- we must provide them adequate compensation. n41

In a quite lengthy discussion of the subject, the Chief Justice also noted that judicial salary issues had been discussed in thirteen of the last nineteen end-of-year reports on the state of the judiciary. n42 In his 2002 Annual Report, the Chief Justice reiterated the same sentiment: "At the risk of beating a dead horse, I will reiterate what I have said many times over the years about the need to compensate judges fairly." n43 Judicial salary issues remain important to the Supreme Court and to all federal judges. In his first annual report, Chief Justice Roberts also raised the judicial salary issue:

A more direct threat to judicial independence is the failure to raise judges' pay. If judges' salaries are too low, judges effectively serve for a term dictated by their financial position rather than for life. Figures gathered by the Administrative Office show that judges are leaving the bench in greater numbers now than ever before.

n44

Ensuring adequate judicial salaries key to judicial independence and rule of law --- guts global model

Justice Kennedy, 2007 – Supreme Court Justice, Harvard Law School, London School of Economics, Stanford University (Justice Anthony M. Kennedy, "Testimony of Associate Justice Anthony M. Kennedy before the United States Senate Committee on the Judiciary Judicial Security and Independence", February 14, 2007, http://www.americanbar.org/content/dam/aba/migrated/poladv/priorities/judicial_pay/kennedystatement.authcheckdam.pdf)/TT

As I have tried to convey, separation of powers and checks and balances are not automatic mechanisms. They depend upon a commitment to civility, open communication, and good faith on all sides. Congress has certain functions that cannot be directed or initiated by the other branches; yet those prerogatives must be exercised in good faith if Congress is to preserve the best of our constitutional traditions. You must be diligent to protect the Constitution and to follow its letter and spirit, and, on most matters, no one, save the voters, can call you to account for the manner in which you discharge these serious responsibilities. This reflects, no doubt, the deep and abiding faith our Founders placed in you and in the citizens who send you here.

Please accept my respectful submission that, to keep good faith with our basic charter, you have the unilateral constitutional obligation to act when another branch of government needs your assistance for the proper performance of its duties. It is both necessary and proper, furthermore, that we as judges should, and indeed must, advise you if we find that a threat to the judiciary as an institution has become so serious and debilitating that urgent relief is necessary. In my view, the present Congressional compensation policy for judicial officers is one of these matters.

Judges in our federal system are committed to the idea and the reality of judicial independence. Some may think the phrase "judicial independence" a bit timeworn. Perhaps there has been some tendency to overuse the term; there may be a temptation to invoke it each time judges disagree with some commonplace legislative proposal affecting the judiciary. If true, that is unfortunate, for judicial independence is a foundation for sustaining the Rule of Law.

Judicial independence is not conferred so judges can do as they please. Judicial independence is conferred so judges can do as they must. A judiciary with permanent tenure, with a sufficient degree of separation from other branches of government, and with the undoubted obligation to resist improper influence is essential to the Rule of Law as we have come to understand that term.

Judicial independence presumes judicial excellence, and judicial excellence is in danger of erosion. So at this juncture in the history of the relationship between our two branches my conclusion is that we have no choice but to make clear to you the extent of the problem as we see it, with the hope your Committee will help put the problem into proper perspective for your own colleagues and for the nation at large.

It is my duty, then, to tell you, Mr. Chairman, that in more than three decades as a judge, I have not seen my colleagues in the judiciary so dispirited as at the present time. The blunt fact is that the past Congressional policy with respect to judicial salaries has been one of neglect. As a consequence, the nation is in danger of having a judiciary that is no longer considered one of the leading judiciaries of the world. This is particularly

discordant and disheartening, in light of the care and consideration Congress has generally given in respect to other matters of judicial resources and administration.

The current situation, in my submission, is a matter of grave systemic concern. Let me respectfully suggest that it is a matter Congress in the exercise of its own independent authority should address, in order to ensure that the essential role of the judiciary not be weakened or diminished. You are well aware of threats to the judiciary that history has deemed constitutional crises, such as the Court's self-inflicted wound in Dred Scott or the ill-conceived 1937 Court-packing proposal. These were constitutional crises in the usual sense of the term. So too, however, there can be systemic injury over time, caused by slow erosion from neglect. My concern, shared by many of my colleagues, is that we are in real danger of losing, through a gradual but steady decline, the highly qualified judiciary on which our Nation relies. Your judiciary, the Nation's judiciary, will be diminished in its stature and its capacity if there is a continued neglect of compensation needs.

Democratic transitions will fail without Supreme Court leadership

Suto 11 --- Research Associate at Tahrir Institute and J.D. [07/15/11, Ryan Suto is a Research Associate at Tahrir Institute for Middle East Policy, has degrees in degrees in law, post-conflict reconstruction, international relations and public relations from Syracuse Law, "Judicial Diplomacy: The International Impact of the Supreme Court", <http://jurist.org/dataline/2011/07/ryan-suto-judicial-diplomacy.php>]

The Court is certainly the best institution to explain to scholars, governments, lawyers and lay people alike the enduring legal values of the US, why they have been chosen and how they contribute to the development of a stable and democratic society. A return to the mentality that one of America's most important exports is its legal traditions would certainly benefit the US and stands to benefit nations building and developing their own legal traditions, and our relations with them. Furthermore, it stands to increase the influence and higher the profile of the bench. The Court already engages in the exercise of dispensing justice and interpreting the Constitution, and to deliver its opinions with an eye toward their diplomatic value would take only minimal effort and has the potential for high returns. While the Court is indeed the best body to conduct legal diplomacy, it has been falling short in doing so in recent sessions. We are at a critical moment in world history. People in the Middle East and North Africa are asserting discontent with their governments. Many nations in Africa, Asia, and Eurasia are grappling with new technologies, repressive regimes and economic despair. With the development of new countries, such as South Sudan, the formation of new governments, as is occurring in Egypt, and the development of new constitutions, as is occurring in Nepal, it is important that the US welcome and engage in legal diplomacy and informative two-way dialogue. As a nation with lasting and sustainable legal values and traditions, the Supreme Court should be at the forefront of public legal diplomacy. With each decision, the Supreme Court has the opportunity to better define, explain and defend key legal concepts. This is an opportunity that should not be wasted.

Democracy prevents global wars

Kagan '15 [Bob. Senior Fellow for Foreign Policy at Brookings. "Is Democracy in Decline? The Weight of Geopolitics" 1/25/15 <http://www.brookings.edu/research/articles/2015/01/democracy-in-decline-weight-of-geopolitics-kagan//GBS-JV>]

Diamond and others have noted how important it was that these "global democratic norms" came to be "reflected in regional and international institutions and agreements as never before."^[10] Those norms had an impact on the

internal political processes of countries, making it harder for authoritarians to weather political and economic storms and easier for democratic movements to gain legitimacy. But “norms” are transient as well. In the 1930s, the trendsetting nations were fascist dictatorships. In the 1950s and 1960s, variants of socialism were in vogue. But from the 1970s until recently, the United States and a handful of other democratic powers set the fashion trend. They pushed—some might even say imposed—democratic principles and embedded them in international institutions and agreements. Equally important was the role that the United States played in preventing backsliding away from democracy where it had barely taken root. Perhaps the most significant U.S. contribution was simply to prevent military coups against fledgling democratic governments. In a sense, the United States was interfering in what might have been a natural cycle, preventing nations that ordinarily would have been “due” for an authoritarian phase from following the usual pattern. It was not that the United States was exporting democracy everywhere. More often, it played the role of “catcher in the rye”—preventing young democracies from falling off the cliff—in places such as the Philippines, Colombia, and Panama. This helped to give the third wave unprecedented breadth and durability. Finally, there was the collapse of the Soviet Union and with it the fall of Central and Eastern Europe’s communist regimes and their replacement by democracies. What role the United States played in hastening the Soviet downfall may be in dispute, but surely it played some part, both by containing the Soviet empire militarily and by outperforming it economically and technologically. And at the heart of the struggle were the peoples of the former Warsaw Pact countries themselves. They had long yearned to achieve the liberation of their respective nations from the Soviet Union, which also meant liberation from communism. These peoples wanted to join the rest of Europe, which offered an economic and social model that was even more attractive than that of the United States. That Central and East Europeans uniformly chose democratic forms of government, however, was not simply the fruit of aspirations for freedom or comfort. It also reflected the desires of these peoples to place themselves under the U.S. security umbrella. The strategic, the economic, the political, and the ideological were thus inseparable. Those nations that wanted to be part of NATO, and later of the European Union, knew that they would stand no chance of admission without democratic credentials. These democratic transitions, which turned the third wave into a democratic tsunami, need not have occurred had the world been configured differently. That a democratic, united, and prosperous Western Europe was even there to exert a powerful magnetic pull on its eastern neighbors was due to U.S. actions after World War II.

1nc Court Stripping – Case Turn

Congressional retaliation will undercut courts --- they have no institutional protection against the backlash

Crabb, 12 --- United States District Judge, Western District of Wisconsin (2012, Barbara B., Wisconsin Law Review, "ADDRESS: ROBERT W. KASTENMEIER LECTURE: BRIDGING THE DIVIDE BETWEEN CONGRESS AND THE COURTS," 2012 Wis. L. Rev. 871)

Another thirty years passed before the judicial system had the opportunity to become self-governing. In 1922, Congress authorized the establishment of what is now the Judicial Conference of the United States, to be made up of the chief judges of each circuit court of appeals, headed by the Chief Justice, and charged with the responsibilities of holding annual meetings to make policy, report on the condition of the dockets in each circuit, and submit recommendations for improving the administration of justice. n21 In 1939, Congress established the Administrative Office of the United States Courts, subject to the control of the Chief Justice and the Judicial Conference, and gave the office financial control of the lower federal courts and primary responsibility for the administration of the federal judiciary. n22 Among other things, this meant that for the first time, the courts were not in the questionable position of having to seek funding from the most frequent litigator in their courts, the Department of Justice. n23 In 1967, Congress authorized the establishment of the Federal Judicial Center, the judiciary's educational and research arm. n24 In 1980 and again in 2002, Congress enacted legislation giving the judicial councils of each circuit new responsibilities for judicial discipline. n25

[*878] These major changes in court administration put the judicial branch on a firmer footing than it had been in the nineteenth century and gave it a larger measure of autonomy, but they did not change the basic relationship between the two branches. The judiciary remained dependent on Congress for the confirmation of new judges, the creation of new judgeships, funding for courthouses, their basic budgets, and procedural rules, just as it is today. The courts still have no independent source of funding. They have no right to be heard on congressional decisions to expand or restrict the scope of the courts' jurisdiction or to enact laws that will increase the courts' workload. In other words, when it comes to matters affecting institutional independence, the judiciary has no constitutional protection and its power is limited to persuasion. If Congress wanted to, it could retaliate against the courts by cutting the courts' funding; disestablishing individual courts; adding or taking away Justices from the Supreme Court; imposing crippling restrictions on the operations of the courts; narrowing their jurisdiction; impeaching individual judges and Justices; and refusing to confirm nominees to fill judicial vacancies.

The framers set up what could well be a recipe for disaster: giving the judiciary the last word on the law, with the inevitable controversies that authority will provoke, and then giving it no institutional protection. It is a little like giving a person a very old and very unpredictable gun for personal security. If used properly, the gun may perform its intended function, but it's just as possible that it will inflict great damage on its owner. Making the judiciary the final arbiter on the meaning of the law, with the authority to declare a law or practice unconstitutional gives it power, but a power that can be explosive and set off backlashes of varying proportions. By no means is it a power that can ward off encroachment by the other branches. When an entity has little power in a relationship, it behooves it to assess the sticking points between it and its protagonist, husband carefully what little power it possesses, employ diplomacy, look for areas in which the interests of both parties are in alignment, and seek ways to enhance what little power of persuasion it has.

This crushes judicial independence

Baum, 9 --- Professor of Poli Sci at Ohio State (Lawrence, Congress & the Presidency, "Review of "When Courts and Congress Collide: The Struggle for Control of America's Judicial System" Taylor and Francis)

Geyh's explanation of the customary independence of courts, supported by his analysis of historical developments, provides considerable insight into the limited use of congressional powers over the courts. Clearly, Congress as a body developed a kind of self-restraint, one that became more deeply rooted over time. Members of Congress who want to take strong

concrete action against the courts have had a strong burden of proof to overcome. When members who agree with what the courts have done combine with members who are reluctant to attack judicial independence, they create a formidable barrier to action.

One potential drawback to historical analysis of a current phenomenon is that it is tempting to interpret the outcome of history—in this case, customary judicial independence—as inevitable and permanent. That is especially true when the resulting state of the system is characterized in terms of equilibrium. Geyh avoids that temptation. Indeed, he thinks that the courts' independence might decline markedly as the current era of court-congressional relations continues. He ascribes that possibility largely to a growing belief that judges act on their own preferences rather than the law, a belief that weakens congressional deference to the courts.

Geyh argues that federal judges have helped to preserve their independence by acting cautiously in relation to Congress. He catalogues the array of forms that this caution takes. He recognizes that caution has been mixed with bold actions that could be expected to arouse congressional wrath, and he sees increasing judicial boldness in the current era as another potential catalyst for inroads on judicial independence. Admittedly, it is difficult to determine the extent to which judges rein themselves in with Congress in mind and even more difficult to determine the effects of such choices. But Geyh makes a good case that judicial caution has helped to protect the courts' relative autonomy.

Congress empirically blocks salary increases in response to controversial decisions --- critical to judicial independence

Miller, 6 --- Associate Professor and Chair of the Department of Government and International Relations at Clark University (Summer 2006, Mark C., Case Western Reserve University, "SYMPOSIUM: JUDICIAL INDEPENDENCE AND JUDICIAL ACCOUNTABILITY: SEARCHING FOR THE RIGHT BALANCE: When Congress Attacks the Federal Courts," 56 Case W. Res. 1015, JMP)

I. Congress's Compensation Power

There have been many instances in which Congress has used various mechanisms to attack the federal courts for decisions with which a determined legislative majority has disagreed. ⁿ³⁰ While to my knowledge Congress has not yet deliberately defied the protections inherent in the Compensation Clause, the legislative branch has used other means to attack the courts and to attempt to influence court decisions. Even though the Compensation Clause prevents Congress from reducing any judicial salaries that have already vested, ⁿ³¹ the clause neither requires Congress to provide any annual cost of living [*1021] adjustments for federal judges nor prevents Congress from canceling future announced judicial salary increases. ⁿ³² Thus, judicial salaries have always been a point of contention, and Congress has sometimes used judicial salaries to send a clear message to the courts. For example, in 1964, Congress increased the salaries for lower federal judges by \$ 7,500 per year but increased the salaries for Justices of the U.S. Supreme Court by only \$ 4,500 per year. As Schmidhauser and Berg explain, "The \$ 3,000 differential clearly reflected a direct Congressional reprimand to the Supreme Court. **This crude rebuff clearly stemmed from congressional dissatisfaction with several controversial decisions rendered by the Court.**" ⁿ³³

Clearly, judicial salary issues have added to the tensions between the courts and Congress. Federal judges often feel that Congress does not provide adequate compensation for them. As Professor Paul M. Bator has remarked, "federal judges, as a group, complain more about their pay than any other group I have ever encountered." ⁿ³⁴ There is probably a great deal of truth to the fact that federal judges feel that they are underpaid. In 2003, Judges Coffin and Katzmann noted that, "Since 1969, federal judicial salaries have lost twenty-four percent of their purchasing power." ⁿ³⁵ Various congressional actions regarding annual cost of living adjustments for federal judges have not made federal judges feel better about their financial situations. For example, in 1995, 1996, 1997, and 1999, Congress blocked previously announced "automatic" cost of living increases for various governmental officials, including federal judges, that had been provided for in the Ethics Reform Act of 1989. ⁿ³⁶ Congress was really attempting to prevent the automatic pay raises for its own members from going into effect, but the legislation blocked federal judicial pay increases as well as the pay raises for legislators. When federal judges sued to [*1022] recover their blocked "automatic" pay increases, the United States Court of Appeals for the Federal Circuit ruled that the proposed "automatic" pay raises had not vested, and thus, there was no violation of the Compensation Clause in the legislative actions. ⁿ³⁷ Although the Supreme Court refused to grant certiorari in the case, Justice Breyer wrote a strongly worded dissent to the denial

of certiorari, which Justices Scalia and Kennedy joined. n38 This concern with judicial salaries and other budgetary resources is not new, of course. Although he was speaking more broadly of his frustration with congressional budgeting practices, Chief Justice Warren stated in 1969 that, "It is next to impossible for the courts to get something from Congress." n39

In his annual year-end reports on the State of the Judiciary, Chief Justice Rehnquist often complained about Congress's approach to judicial salary issues. In his 2000 Year-End Report on the Federal Judiciary, Chief Justice Rehnquist focused most of the report on what he termed, "the most pressing issue facing the Judiciary: the need to increase judicial salaries." n40 The Chief Justice went on to say,

In order to continue to provide the nation a capable and effective judicial system we must be able to attract and retain experienced men and women of quality and diversity to perform a demanding position in the public service. The fact is that those lawyers who are qualified to serve as federal judges have opportunities to earn far more in private law practice or business than as judges. In order to continue to attract highly qualified and diverse federal judges -- judges whom we ask and expect to remain for life -- we must provide them adequate compensation. n41

In a quite lengthy discussion of the subject, the Chief Justice also noted that judicial salary issues had been discussed in thirteen of the last nineteen end-of-year reports on the state of the judiciary. n42 In his 2002 Annual Report, the Chief Justice reiterated the same sentiment: "At the risk of beating a dead horse, I will reiterate what I have said many times over the years about the need to compensate judges fairly." n43 Judicial salary issues remain important to the Supreme Court and to all federal judges. In his first annual report, Chief Justice Roberts also raised the judicial salary issue:

A more direct threat to judicial independence is the failure to raise judges' pay. If judges' salaries are too low, judges effectively serve for a term dictated by their financial position rather than for life. Figures gathered by the Administrative Office show that judges are leaving the bench in greater numbers now than ever before.

n44

Adequate judicial salaries key to judicial independence --- guts the global model

Justice Kennedy, 2007— Supreme Court Justice, Harvard Law School, London School of Economics, Stanford University (Justice Anthony M. Kennedy, "Testimony of Associate Justice Anthony M. Kennedy before the United States Senate Committee on the Judiciary Judicial Security and Independence", February 14, 2007, http://www.americanbar.org/content/dam/aba/migrated/poladv/priorities/judicial_pay/kennedystatement.authcheckdam.pdf)/TT

As I have tried to convey, separation of powers and checks and balances are not automatic mechanisms. They depend upon a commitment to civility, open communication, and good faith on all sides. Congress has certain functions that cannot be directed or initiated by the other branches; yet those prerogatives must be exercised in good faith if Congress is to preserve the best of our constitutional traditions. You must be diligent to protect the Constitution and to follow its letter and spirit, and, on most matters, no one, save the voters, can call you to account for the manner in which you discharge these serious responsibilities. This reflects, no doubt, the deep and abiding faith our Founders placed in you and in the citizens who send you here.

Please accept my respectful submission that, to keep good faith with our basic charter, you have the unilateral constitutional obligation to act when another branch of government needs your assistance for the proper performance of its duties. It is both necessary and proper, furthermore, that we as judges should, and indeed must, advise you if we find that a threat to the judiciary as an institution has become so serious and debilitating that urgent relief is necessary. In my view, the present Congressional compensation policy for judicial officers is one of these matters.

Judges in our federal system are committed to the idea and the reality of judicial independence. Some may think the phrase "judicial independence" a bit timeworn. Perhaps there has been some tendency to overuse the term; there may be a temptation to invoke it each time judges disagree with some commonplace legislative proposal affecting the judiciary. If true, that is unfortunate, for judicial independence is a foundation for sustaining the Rule of Law.

Judicial independence is not conferred so judges can do as they please. Judicial independence is conferred so judges can do as they must. A judiciary with permanent tenure, with a sufficient degree of separation from

other branches of government, and with the undoubted obligation to resist improper influence is essential to the Rule of Law as we have come to understand that term.

Judicial independence presumes judicial excellence, and judicial excellence is in danger of erosion. So at this juncture in the history of the relationship between our two branches my conclusion is that we have no choice but to make clear to you the extent of the problem as we see it, with the hope your Committee will help put the problem into proper perspective for your own colleagues and for the nation at large.

It is my duty, then, to tell you, Mr. Chairman, that in more than three decades as a judge, I have not seen my colleagues in the judiciary so dispirited as at the present time. The blunt fact is that the past Congressional policy with respect to judicial salaries has been one of neglect. As a consequence, the nation is in danger of having a judiciary that is no longer considered one of the leading judiciaries of the world. This is particularly discordant and disheartening, in light of the care and consideration Congress has generally given in respect to other matters of judicial resources and administration.

The current situation, in my submission, is a matter of grave systemic concern. Let me respectfully suggest that it is a matter Congress in the exercise of its own independent authority should address, in order to ensure that the essential role of the judiciary not be weakened or diminished. You are well aware of threats to the judiciary that history has deemed constitutional crises, such as the Court's self-inflicted wound in Dred Scott or the ill-conceived 1937 Court-packing proposal. These were constitutional crises in the usual sense of the term. So too, however, there can be systemic injury over time, caused by slow erosion from neglect. My concern, shared by many of my colleagues, is that we are in real danger of losing, through a gradual but steady decline, the highly qualified judiciary on which our Nation relies. Your judiciary, the Nation's judiciary, will be diminished in its stature and its capacity if there is a continued neglect of compensation needs.

Uniqueness

Pay Raises Now for Federal Judges

They're getting paid now House '14

[William. Political Reporter for the National Journal. "Court Rulings Mean Judges Will Get an Extra \$1B in Pay and Benefits" *The National Journal* 9/24/14 <http://www.nationaljournal.com/congress/court-rulings-mean-judges-will-get-an-extra-1b-in-pay-and-benefits-20140924>]

More than 2,000 federal judges from Chief Justice John Roberts down will share in about \$1 billion more in salary and benefits over the next 10 years because of court rulings determining that Congress improperly withheld automatic increases dating from the 1990s, according to the Congressional Budget Office. ¶ "As a result of those decisions and corresponding administrative actions, many judges will now receive automatic salary increases, and subsequent annuity adjustments, as well as restitution for prior automatic salary increases they should have received," wrote CBO Director Douglas Elmendorf. ¶ His cost calculations were delivered in a letter on Wednesday to Senate Judiciary Committee Chairman Patrick Leahy. ¶ The letter addresses the financial impacts of successful court challenges to the congressional withholding of federal judge pay increases in 1995, 1996, 1997, 1999, 2007, and 2010. Those legal challenges were most notably carried out in *Beer v. United States* and *Barker v. United States*. ¶ Federal court judges have already started to benefit. Their salaries rose by 14 percent on Jan. 1, as the years of missing cost-of-living adjustments were added to their paychecks. The chief justice now is paid \$255,500, and associate Supreme Court justices have a \$244,400 salary. U.S. Circuit Court of Appeals judges are getting \$211,200 a year, and the annual salary of a U.S. District Court judge is \$199,100. ¶ As a cumulative result of the court decisions, writes Elmendorf, **direct federal spending will be higher by about \$1.027 billion from 2015 through 2024.** Only about \$190 million of that will be discretionary costs, subject to annual appropriations.

Pay raises now for federal judges

Gosselin, 14 (1/24/2014, Gary, Michigan Lawyers Weekly, "Federal judges get long-awaited raises," Lexis, JMP)

(January 16, 2014) All federal judges have received a long-awaited 14 percent pay raise, as years of catch-up cost-of-living adjustments were added to their paychecks, according to Bloomberg News.

The chief justice is being paid \$255,500, up from \$223,500, according to the report, with associate Supreme Court justices pulling down \$244,400 annually up from \$213,900. U.S. Circuit Court of Appeals judges are getting \$211,200 a year, up from \$184,500, and the annual salary of a U.S. District Court judge increased to \$199,100 from \$174,000.

Back in 1995 Congress canceled four cost-of-living wage increases, resulting in a class action that the judges won.

Judicial-Congress Relations Good Now

Relations between congress and the courts are increasing now – familiarity

Palazzolo, 14 – [Joe, Staff Writer for the Wall Street Journal on legal affairs, The Wall Street Journal, “Congress and the Courts Are Learning to Get Along”, 12/18/14, <http://blogs.wsj.com/law/2014/12/18/congress-and-the-courts-are-learning-to-get-along/>, 7/7/15]JRO

The legislative and judicial branches are less neighborly than they once were, but efforts are underway to rekindle a spark in the relationship. The U.S. Supreme Court hasn’t had a member with experience as an elected politician since Justice Sandra Day O’Connor, a former state senator in Arizona, retired nearly a decade ago. Likewise, only seven members of Congress, all in the House, were judges. The past couple years may have marked a low point in inter-branch relations. The partial shutdown of the government in 2013 “caused broad disruptions” to the courts, which were already smarting from budget cuts. U.S. District Judge Richard G. Kopf in Nebraska, writing on his blog during the shutdown, told Congress to “go to hell,” capturing the sentiments of more than few of his colleagues. To bridge the gulf, federal judges have been meeting with legislators under the auspices a Pew Charitable Trusts program called “Safe Spaces,” according to a recent interview posted on the website of the Administrative Office of the U.S. Courts. In the interview, Chief Judge Robert A. Katzmann of the Second U.S. Circuit Court of Appeals says **mending fences is smart from a practical perspective. “After all, the courts depend upon Congress for the appropriation of its budget.”** He goes on: We have to understand that the courts will be reviewed in terms of operations by the Congress. They will want to make sure that our funds are being used appropriately and efficiently. So, we respect congressional prerogatives. We want the Congress to respect judicial prerogatives as to the decisions of particular cases and the decisional autonomy that courts need to have. Understanding each other is essential if we are to do our work effectively. A few seconds later, he breaks the news that judges and legislators (and staff) are learning to be neighbors again. Judge Katzmann says: As part of that work to improve relations between the branches, the Pew Charitable Trusts has included us in its program on safe spaces, and what this program involves is, over the next two years, having a variety of kinds of meetings with the Hill. So we had a wonderful meeting with the House Judiciary Committee that included the chair and ranking member – Chairman Goodlatte and John Conyers — Justice Breyer, Justice Alito, other members of Congress. We had a meeting just recently with the committee staffs of the House Judiciary Committee and the Senate Judiciary Committee. We’re having a meeting this spring with senators. And so these kinds of interactions foster a familiarity, make it easier when there are issues having to do with the administration of justice for the branches to interact. A spokeswoman for the Administrative Office of the U.S. Courts declined to describe the nature of the discussions but said there are no set agendas. A spokeswoman for Pew Charitable Trusts, who also declined to reveal the content of the meetings, said, “We have been pleased to work with Judge Katzmann and others to facilitate discussion among members of Congress and the judiciary on issues of common interest.”

AT: Supreme Court Will Rule on NSA

The Supreme Court will avoid ruling on the NSA – too little data

Kerr, 14 – [Orin, is a professor of law at the George Washington University Law School., The Volokh Conspiracy, “Will the Supreme Court Review the NSA’s Telephony Metadata Program?”, 1/2/14, <http://volokh.com/2014/01/02/supreme-court-take-bulk-telephony-case-circuit-courts-dont-invalidate-program/>, 7/7/15]JRO

In the wake of the dueling opinions by Judges Leon and Pauley about the NSA’s Section 215 telephony metadata program, a lot of commentators are assuming that the issue is heading to the Supreme Court. If a federal circuit court rules that the program is unconstitutional and survives en banc review, then I agree that Supreme Court review is likely. Invalidating a major federal program will usually get the Justices’ attention. But let’s assume that the Second Circuit upholds Judge Pauley’s decision, and the DC Circuit reverses Judge Leon. Will the Supreme Court intervene if the Second and DC Circuits uphold the program? We don’t know, of course, as it all depends on what might get four votes to grant cert. It’s a discretionary call, so it’s hard to predict. At the same time, I think a lot of commentators overestimate the chances that the Supreme Court would step in. It’s certainly possible, but it’s not at all a sure thing. Here are five reasons why the Supreme Court might not review the Section 215 cases: 1) Section 215 sunsets on June 1, 2015. On that date, the statutory authority for the bulk telephony program will end. If the White House wants to continue the program beyond that date, it will have to convince Congress to expressly approve bulk collection. Alternatively, Congress might not be willing to go along, and will only be willing to approve a modified program or no program at all. Either way, the sunset of Section 215 will trigger a major Congressional debate on the desirability of bulk collection that will either reject it or accept it in modified form. A cert petition in the Section 215 cases from Judges Pauley and/or Leon would reach the Supreme Court as this debate was either ongoing or recently worked its way through the elected branches. The fresh debate over the desirability of bulk collection in Congress lessens the likelihood of the Supreme Court stepping in to the debate at that time, both because the issue may be mooted by statute and because the Court may feel that statutory regulation is preferable to constitutional regulation in this context. See *United States v. Jones*, 132 S.Ct. 945 (2012) (Alito, J. concurring) (“In circumstances involving dramatic technological change, the best solution to privacy concerns may be legislative. A legislative body is well situated to gauge changing public attitudes, to draw detailed lines, and to balance privacy and public safety in a comprehensive way.”). 2) As I have noted before, there are reasons why the circuit courts may not reach the Fourth Amendment merits in these cases. The same grounds provide reasons why there might not be a Supreme Court ruling on the merits. 3) The record of exactly what the telephony metadata program is and how it works remains quite murky. The Justices might want to wait until the litigation develops more and the facts become better known. 4) If pretty much everyone has standing to bring a lawsuit seeking to enjoin the telephony metadata program, then there’s no reason why the Supreme Court has to step in after the DC Circuit and Second Circuit rule. The Justices can wait until other circuits address the same issue, especially in light of the changing statutory picture discussed in #1 above, 5) Reviewing the telephony metadata program would require the Justices to take on a lot of complicated issues that haven’t been explored much in the lower courts. First, the Justices presumably would have to take on the mosaic theory; second, they would have to address the reasonableness of NSA non-content surveillance. Those are each huge issues, and there is very little on them among lower court decisions. Given the Justices’ preference for percolation in the lower courts, and in light of #4 above, they may want to wait until the lower courts work through them. Of course, the counter-argument is that the constitutionality of the bulk telephony program is a question of national importance, and the Supreme Court is the Supreme Court. We pay them the big bucks to step in and decide the big cases. Perhaps. But that view hinges on a notion of the Supreme Court’s role that four or more Justices may or may not share. We don’t know how eager the Justice s may be to step in, and the arguments above will give them reasons to stay out for now.

Link --- Constitutional Rulings

Controversial constitutional rulings cause significant Congressional backlash – constitutional amendments can be passed to overturn them

Miller 09 [Mark - Professor of Political Science, Adjunct Professor of History, Director of Law and Society Program, at Clark University, 'Constitutionalism and Democracy : View of the Courts from the Hill : Interactions Between Congress and the Federal Judiciary.' University of Virginia Press, 2009, proquest] Bschuiz 9

In theory, when the Supreme Court or another federal court issues a constitutionally based decision, the only way for Congress to overturn that decision is through a constitutional amendment. In fact, a variety of amendments to the Constitution have been enacted mainly to overturn Supreme Court decisions, including the Eleventh Amendment, the Civil War amendments (the Thirteenth, Fourteenth, and Fifteenth), the Sixteenth Amendment, and the Twenty-Sixth Amendment. In addition, a variety of constitutional amendments designed to overturn specific Supreme Court decisions have been proposed but never ratified. For example, there have been efforts to pass constitutional amendments prohibiting abortion, prohibiting flag burning, allowing prayer in schools, and prohibiting gay marriage. To date, none of these proposed amendments have received the two-thirds vote in both houses of Congress necessary to send them to the states for ratification. Even when Congress enacts a constitutional amendment, however, the inter-institutional conversation does not end. As Comiskey has noted, "Because the courts can rule on disputes over the meaning of an amendment's terms, amendments do not always end the constitutional dialogue on the subjects they address" (2008, 207).

Some of the most persistent proposals for constitutional amendment proposals have been aimed at prohibiting burning of the American flag as a form of political protest. Votes on proposed constitutional amendments to prohibit flag burning have been taken nearly every year since the Supreme Court's decisions in *Texas v. Johnson* (1989) and *United States v. Eichman* (1990) allowing it. Almost every year since these cases were handed down, one house of Congress has gotten the necessary two-thirds vote to pass the proposed amendment, but the other house has failed to reach that threshold. Thus the proposed amendment has never been sent to the states for ratification because it has never gotten the necessary vote in both houses of Congress at the same time.

In reality, Congress can also take statutory steps to reverse the policy announced by the Court, if not the constitutional decision itself. Davidson notes that the same partisan and ideological fights that Congress engages in over a wide variety of policy issues clearly spill over into issues of constitutional interpretation. **"Partisan and ideological allegiances are as divisive as ever,"** he writes, **"and are especially salient in congressional responses to pressing constitutional questions"** (1993, 118). But one Democratic member of Congress warned that Congress should not rush to overturn constitutionally based decisions of the Supreme Court. This member said to me, "The President has said that he has an equal role in interpreting the Constitution with Congress and the Supreme Court, but that is not true. Congress and the President must follow the Supreme Court in constitutionally based cases because the job of the courts is to interpret the Constitution. We can't just ignore court rulings on the Constitution like the President has tried to do."

Of the twenty-three Supreme Court decisions studied by Robert Dahl (1957), in effect seventeen were reversed by Congress. Likewise, Joseph Ignagni and James Meernik (1994) found that in the years 1954–90 Congress had in effect reversed the policy direction in thirteen of the sixty-five decisions they studied. For example, in 1978 the Supreme Court ruled that the Fourth Amendment did not protect the offices of a newspaper from police searches if the police had a search warrant. Congress responded by passing legislation granting additional protections to newspapers (see Peretti 1999, 142). Using a different methodology, Pickerill (2004, 41) found that in almost half of the cases he studied, Congress acted to save statutes found to be unconstitutional by the courts. Pickerill argues that although at times Congress will directly confront the Court's constitutionally based decisions, "it is much more common for Congress to amend legislation in a manner that makes clear concessions to the Court's decision" (2004, 49).

Link --- First Amendment

Judicial rulings regarding the First Amendment are fraught with political resentment and fail

Miller 09 [Mark - Professor of Political Science, Adjunct Professor of History, Director of Law and Society Program, at Clark University, 'Constitutionalism and Democracy : View of the Courts from the Hill : Interactions Between Congress and the Federal Judiciary.' University of Virginia Press, 2009, proquest] Bschulz 10

Fights between Congress and the Supreme Court over the interpretation of the Free Exercise Clause of the First Amendment have also occurred recently. After Congress overwhelmingly enacted the Religious Freedom Restoration Act in an attempt to overturn the Supreme Court's decision limiting the free exercise of religion in Employment Division v. Smith (1990), the Supreme Court promptly struck down that statute in City of Boerne v. Archbishop Flores (1997) (see, e.g., Bragaw and Miller 2004). Congress responded by enacting the Religious Land Use and Institutionalized Persons Act of 2000, which reestablished some of the rights protected by the Religious Freedom Restoration Act (see Baum 2004, 212). In striking down the Religious Freedom Restoration Act, the Supreme Court said in the Boerne case, "Our national experience teaches that the Constitution is preserved best when each part of the government respects both the Constitution and the proper action and determinations of the other branches. When the Court has interpreted the Constitution, it has acted within the province of the Judicial Branch, which embraces the duty to say what the law is. When the political branches of the Government act against the background of a judicial interpretation of the Constitution already issued, . . . it is this Court's precedent . . . which must control" (521 U.S. 507, 535–36). Thus the Boerne decision will long be remembered for "its stunning assertion of the Court's supremacy in settling all governmental disputes" (Bragaw and Perry 2002, 21). Therefore, the U.S. Supreme Court claims to be the last word on issues of constitutional interpretation. However, many scholars doubt that Congress will refrain in the future from attempting to modify or to overrule Supreme Court decisions through statutory means (see Murphy et al. 2006, 339).

Link --- Statutory Interpretations

Unpopular statutory interpretations not only cause congressional backlash but get ignored

Miller 09 [Mark - Professor of Political Science, Adjunct Professor of History, Director of Law and Society Program, at Clark University, 'Constitutionalism and Democracy : View of the Courts from the Hill : Interactions Between Congress and the Federal Judiciary.' University of Virginia Press, 2009, proquest] Bschuz 8

Congress and the federal courts also have routine interactions regarding federal court decisions involving statutory interpretation. Federal courts routinely interpret the statutes enacted by Congress. As Lawrence Baum and Lori Hausegger remind us, "The largest share of the Court's work is interpretation of statutes enacted by Congress" (2004, 107). Of course, when the majority in Congress is unhappy with a judicial decision involving statutory interpretation, they can simply pass a new statute to overturn the court's decision (see, e.g., Henschen 1983). For example, in 1978 Congress enacted the Pregnancy Discrimination Act after the Supreme Court held that pregnancy was not a protected disability under the Civil Rights Act of 1964 (see Pacelle 2002, 94). The Civil Rights Restoration Act of 1991 overturned at least a dozen Supreme Court statutory-interpretation decisions regarding the ability of victims to sue for alleged race and sex discrimination. In fact, it is not uncommon for Congress to move to overturn judicial decisions involving statutory interpretation (see, e.g., Eskridge 1991a; and Baum and Hausegger 2004). R. Shep Melnick (1995, 101) believes that Congress overturns many more judicial-policy statements than Eskridge has found, in large part because many members of Congress may not even realize that they are taking action to overturn a court decision in any given piece of legislation. Mark Graber (1993) and George Lovell (2003), among others, argue that at times Congress intentionally passes statutes with ambiguous language, thus further empowering the courts by almost requiring them to interpret the ambiguous statutes. In other words, Congress punts the most controversial decisions to the courts in order to preserve a fragile coalition in the legislative branch. After the courts issue rulings involving statutory interpretation, Congress may decide to review its original ambiguous compromise. Davidson (1993) reports that Congress now pays increasing attention to the statutory-interpretation decisions of the courts. According to Davidson, "An increasingly frequent source of the lawmaking agenda is found in judicial interpretations of existing statutory language" (1993, 103). Jeb Barnes (2004b) has found that Congress pays a great deal of attention to the statutory-interpretation decisions of the federal courts. As Barnes has summarized the changing nature of the such rulings by the courts, "Put simply, today's federal judges not only serve their traditional role of resolving politically important constitutional disputes, but also pay a significant role in administering conflicts among competing agencies over the meaning of statutes and considering public challenges to regulatory procedures and decisions" (J. Barnes 2004a, 36).

Link --- National Security Ruling

Judicial involvement in national security cases threatens its prestige and authority

Chesney, 2009 – Professor at the University Of Texas School Of Law (Robert, “National Security Fact Deference”, 95 Va. L. Rev. 1361, October 2009, <http://www.virginialawreview.org/sites/virginialawreview.org/files/1361.pdf>)/TT

This leaves the matter of secrecy. Secrecy relates to the collateral consequences inquiry in the sense that failure to maintain secrecy with respect to national security information can have extralitigation consequences for government operations—as well as for individuals or even society as a whole—ranging from the innocuous to the disastrous. Without a doubt this is a significant concern. But, again, it is not clear that deference is required in order to address it. Preservation of secrecy is precisely the reason that the state secrets privilege exists, of course, and it also is the motive for the Classified Information Procedures Act, which establishes a process through which judges work with the parties to develop unclassified substitutes for evidence that must be withheld on secrecy grounds.²²²

3. Institutional Self-Preservation

Judicial involvement in national security litigation, as noted at the outset, poses unusual risks for the judiciary as an institution. Such cases are more likely than most to involve claims of special, or even exclusive, executive branch authority. They are more likely than most to involve a perception—on the part of the public, the government, or judges themselves—of unusually high stakes. They are more likely than most to be in the media spotlight and hence in view of the public in a meaningful sense. These cases are, as a result of all this, especially salient as a political matter. And therein lies the danger for the courts. Because of these elements, an inappropriate judicial intervention in national security litigation is unusually likely to generate a response from the other branches or the public at large that might harm the institutional interests of the judiciary, either by undermining its prestige and authority or perhaps even by triggering some form of concrete political response.

This concern traditionally finds expression through the political question doctrine, which in its prudential aspect functions to spare judges such risks. But just because a court determines that a case or an issue is justiciable does not mean that the institutional self-preservation concern has gone away or that a judge has lost sensitivity to it. National security fact deference provides a tempting opportunity for judges to accept the responsibility of adjudication while simultaneously reducing the degree of interbranch conflict and hence the risk of political blowback. We cannot expect judges to attribute deference decisions to this motivation, of course, but we must account for the possibility—even the likelihood—that such concerns will play some role.

Link --- NSA / Surveillance

Congress opposes any further restrictions on surveillance

Gross 6/5/15 [Grant - covers technology and telecom policy in the U.S. government for the IDG News Service, and is based in Washington, D.C. "Don't expect major changes to NSA surveillance from Congress", PC World, <http://www.pcworld.com/article/2932337/dont-expect-major-changes-to-nsa-surveillance-from-congress.html>] BSchulz 21

After the U.S. Congress approved what critics have called modest limits on the National Security Agency's collection of domestic telephone records, many lawmakers may be reluctant to further change the government's surveillance programs. The Senate this week passed the USA Freedom Act, which aims to end the NSA's mass collection of domestic phone records, and President Barack Obama signed the bill hours later. After that action, expect Republican leaders in both the Senate and the House of Representatives to resist further calls for surveillance reform. That resistance is at odds with many rank-and-file lawmakers, including many House Republicans, who want to further limit NSA programs brought to light by former agency contractor Edward Snowden. Civil liberties groups and privacy advocates also promise to push for more changes. It may be difficult to get "broad, sweeping reform" through Congress, but many lawmakers seem ready to push for more changes, said Adam Eisgrau, managing director of the office of government relations for the American Library Association. The ALA has charged the NSA surveillance programs violate the Fourth Amendment of the U.S. Constitution, which prohibits unreasonable searches and seizures. "Congress is not allowed to be tired of surveillance reform unless it's prepared to say it's tired of the Fourth Amendment," Eisgrau said. "The American public will not accept that." Other activists are less optimistic about more congressional action. "It will a long slog getting more restraints," J. Kirk Wiebe, a former NSA analyst and whistleblower said by email. "The length of that journey will depend on public outcry—that is the one thing that is hard to gauge." With the USA Freedom Act, "elected officials have opted to reach for low-hanging fruit," said Bill Blunden, a cybersecurity researcher and surveillance critic. "The theater we've just witnessed allows decision makers to boast to their constituents about reforming mass surveillance while spies understand that what's actually transpired is hardly major change." The "actual physical mechanisms" of surveillance programs remain largely intact. Blunden added by email. "Politicians may dither around the periphery but they are unlikely to institute fundamental changes." What's in the USA Freedom Act? Some critics have blasted the USA Freedom Act as fake reform, while supporters have called it the biggest overhaul of U.S. surveillance program in decades. Many civil liberties and privacy groups have come down in the middle of those two views, calling it modest reform of the counterterrorism Patriot Act. The law aims to end the NSA's decade-plus practice of collecting U.S. telephone records in bulk, while allowing the agency to search those records in a more targeted manner. The law also moves the phone records database from the NSA to telecom carriers, and requires the U.S. Foreign Intelligence Surveillance Court (FISC) to consult with tech and privacy experts when ruling on major new data collection requests from the NSA. It also requires all significant FISC orders from the last 12 years to be released to the public. The new law limits bulk collection of U.S. telephone and business records by requiring the FBI, the agency that applies for data collection, to use a "specific selection term" when asking the surveillance court to authorize records searches. The law prohibits the FBI and NSA from using a "broad geographic region," including a city, county, state or zip code, as a search term, but it doesn't otherwise define "specific search term." That's a problem, according to critics. The surveillance court could allow, for example, "AT&T" as a specific search term and give the NSA the authority to collect all of the carrier's customer records. Such a ruling from FISC would seem to run counter to congressional intent, but this is the same court that defined all U.S. phone records as "relevant" to a counterterrorism investigation under the old version of the Patriot Act's Section 215. The USA Freedom Act also does nothing to limit the NSA's surveillance of overseas Internet traffic, including the content of emails and IP voice calls. Significantly limiting that NSA program, called Prism in 2013 Snowden leaks, will be a difficult task in Congress, with many lawmakers unconcerned about the privacy rights of people who don't vote in U.S. elections. Still, the section of the Foreign Intelligence Surveillance Act that authorizes those NSA foreign surveillance programs sunsets in 2017, and that deadline will force Congress to look at FISA, although lawmakers may wait until the last minute, as they did with the expiring sections of the Patriot Act covered in the USA Freedom Act. The House Judiciary Committee will continue its oversight of U.S. surveillance programs, and the committee will address FISA before its provisions expire, an aide to the committee said. Republican leaders opposed to more changes Supporters of new reforms will have to bypass congressional leadership, however. Senate Republican leaders attempted to derail even the USA Freedom Act and refused to allow amendments that would require further changes at the NSA. In the House, Republican leaders threatened to kill the USA Freedom Act if the Judiciary Committee amended the bill to address other surveillance programs. Still, many House members, both Republicans and Democrats, have pushed for new surveillance limits, with lawmakers adding an amendment to end so-called backdoor government searches of domestic communications to a large appropriations bill this week. Obama's administration has threatened to veto the appropriations bill for several unrelated reasons, but several House members have pledged to push hard to prohibit the FBI and CIA from searching the content of reportedly tens of thousands of U.S. communications swept up in an NSA surveillance program targeting overseas terrorism suspects. Closing that surveillance backdoor is a top priority for civil liberties groups, said Neema Singh Guliani, a legislative counsel with the American Civil Liberties Union's Washington, D.C., legislative office. "We've had this statute that masquerades as affecting only people abroad, but the reality is that it sweeps up large numbers of U.S. persons," she said. Other changes possible Advocates and lawmakers will also push for a handful of other surveillance reforms in the

coming months. The changes most likely to pass make limited changes to surveillance programs, however. While not tied to NSA surveillance, lawmakers will press for changes to the 29-year-old Electronic Communications Privacy Act (ECPA), a wiretap law that gives law enforcement agencies warrantless access to emails and other communications stored in the cloud for more than six months. A House version of ECPA reform counts more than half the body as co-sponsors. Still, tech companies and civil liberties groups have been pushing since 2010 to have those communications protected by warrants, but law enforcement agencies and some Republican lawmakers have successfully opposed the changes.

Link --- Executive Order 12333 / Surveillance

Congress would be heavily opposed to the plan - they tried to slip 12333 provisions into the Intelligence Authorization Act in attempt to prevent court intervention

Masnick 14 [Mike - he founder and CEO of Floor64 and editor of the Techdirt blog. "How Congress Secretly Just Legitimized Questionable NSA Mass Surveillance Tool", Tech Dirt, 12/12/14, <https://www.techdirt.com/articles/20141212/07421729414/how-congress-secretly-just-legitimized-questionable-nsa-mass-surveillance-tool.shtml>] BSchulz 23

We recently noted that, despite it passing overwhelmingly, Congress quietly deleted a key bit of NSA reform that would have blocked the agency from using backdoors for surveillance. But this week something even more nefarious happened, and it likely would have gone almost entirely unnoticed if Rep. Justin Amash's staffers hadn't caught the details of a new provision quietly slipped into the Intelligence Authorization Act, which effectively "legitimized" the way the NSA conducts most of its mass surveillance. For a while now, we've discussed executive order 12333, signed by President Ronald Reagan, which more or less gives the NSA unchecked authority to tap into any computer system not in the US. Over the summer, a former State Department official, John Napier Tye, basically blew the whistle on 12333 by noting that everyone focused on other NSA programs were missing the point. The NSA's surveillance is almost entirely done under this authority, which has no Congressional oversight. All those other programs we've been arguing about -- Section 215 of the Patriot Act or Section 702 of the FISA Amendments Act -- are really nothing more than ways to backfill the data the NSA has been unable to access under 12333. In other words, these other programs are the distraction. 12333 is the ballgame, and it has no Congressional oversight at all. It's just a Presidential executive order. Yet, what Amash and his staffers found is that a last minute change by the Senate Intelligence Committee to the bill effectively incorporated key parts of EO 12333 into law, allowing for "the acquisition, retention, and dissemination" of "nonpublic communications." Here's where those who slipped this bit into the law got sneaky. Recognizing that they might be called on it, they put it in with language noting that such information could only be held on to for five years -- and then claimed what they were really doing was putting a limit on data already collected: Backers of the section argue it would actually limit to five years the amount of time communications data could be kept at intelligence agencies, certain exceptions permitting. But it is generally acknowledged that such data is already rarely kept beyond five years, which Amash characterized as a trade-off that "provides a novel statutory basis for the executive branch's capture and use of Americans' private communications." "The provisions in the intel authorization appear to be an attempt by Congress to place statutory restrictions on the retention of information collected under Executive Order 12333, which is not subject to court oversight, has not been authorized by Congress, and raises serious privacy concerns," said Neema Guliani, legislative counsel with the American Civil Liberties Union. "However, these restrictions are far from adequate, contain enormous loopholes, and notably completely exclude the information of non-U.S. persons." This seems particularly nefarious. In trying to claim that they're putting a limit on this activity (that's already happening) they can claim that they're not really expanding the power of the NSA and the surveillance state. But, by putting it in law, rather than just having it in an executive order, they're effectively legitimizing the practice, and making it much harder to roll back. And they did it all quietly without any debate. That's massively troubling. Inserting such a major power into the law at the very least deserves (and should require) a full and fair public debate about the issue and whether or not it is truly needed. Doing it in secret, at the last minute, with no public acknowledgement or discussion, and then pretending it's about "limits" rather than legitimizing what's in EO 12333 is really, really nefarious. Unfortunately, even with Rep. Amash raising the alarm about it, the bill easily passed 325 to 100, without most in Congress probably having any idea about this issue and what it meant. Rep. Zoe Lofgren claimed that if Congress fully understood the provision, it almost certainly wouldn't have passed: "If this hadn't been snuck in, I doubt it would have passed," said Rep. Zoe Lofgren, a California Democrat who voted against the bill. "A lot of members were not even aware that this new provision had been inserted last-minute. Had we been given an additional day, we may have stopped it." This is the kind of crap that the intelligence community keeps pulling, and it's why there's so much that's troubling in the way they play the legislative game. Not only do they write the legislative language in sneaky ways that they can carefully interpret themselves -- they then get "friends" in Congress to quietly insert the language when no one's looking. By putting it in bills that have to pass, these things get put into the law and aren't at all easy to remove.

Link --- Drones

Congress views domestic drones as a necessity

Waterman 12 [Shaun - editor of POLITICO Pro Cybersecurity. He is an award-winning journalist who has worked for the BBC and United Press International. "Drones over U.S. get OK by Congress", Washington Times, 2/7/12, <http://www.washingtontimes.com/news/2012/feb/7/coming-to-a-sky-near-you/?page=all>] **SChuliz 24**

Look! Up in the sky! Is it a bird? Is it a plane? It's ... a drone, and it's watching you. That's what privacy advocates fear from a bill Congress passed this week to make it easier for the government to fly unmanned spy planes in U.S. airspace. The FAA Reauthorization Act, which President Obama is expected to sign, also orders the Federal Aviation Administration to develop regulations for the testing and licensing of commercial drones by 2015. Privacy advocates say the measure will lead to widespread use of drones for electronic surveillance by police agencies across the country and eventually by private companies as well. "There are serious policy questions on the horizon about privacy and surveillance, by both government agencies and commercial entities," said Steven Aftergood, who heads the Project on Government Secrecy at the Federation of American Scientists. The Electronic Frontier Foundation also is "concerned about the implications for surveillance by government agencies," said attorney Jennifer Lynch. The provision in the legislation is the fruit of "a huge push by lawmakers and the defense sector to expand the use of drones" in American airspace, she added. According to some estimates, the commercial drone market in the United States could be worth hundreds of millions of dollars once the FAA clears their use. The agency projects that 30,000 drones could be in the nation's skies by 2020. The highest-profile use of drones by the United States has been in the CIA's armed Predator-drone program, which targets al Qaeda terrorist leaders. But the vast majority of U.S. drone missions, even in war zones, are flown for surveillance. Some drones are as small as model aircraft, while others have the wingspan of a full-size jet. In Afghanistan, the U.S. use of drone surveillance has grown so rapidly that it has created a glut of video material to be analyzed. The legislation would order the FAA, before the end of the year, to expedite the process through which it authorizes the use of drones by federal, state and local police and other agencies. The FAA currently issues certificates, which can cover multiple flights by more than one aircraft in a particular area, on a case-by-case basis. The Department of Homeland Security is the only federal agency to discuss openly its use of drones in domestic airspace. U.S. Customs and Border Protection, an agency within the department, operates nine drones, variants of the CIA's feared Predator. The aircraft, which are flown remotely by a team of 80 fully qualified pilots, are used principally for border and counternarcotics surveillance under four long-term FAA certificates. Officials say they can be used on a short-term basis for a variety of other public-safety and emergency-management missions if a separate certificate is issued for that mission. "It's not all about surveillance," Mr. Aftergood said. Homeland Security has deployed drones to support disaster relief operations. Unmanned aircraft also could be useful for fighting fires or finding missing climbers or hikers, he added. The FAA has issued hundreds of certificates to police and other government agencies, and a handful to research institutions to allow them to fly drones of various kinds over the United States for particular missions. The agency said it issued 313 certificates in 2011 and 295 of them were still active at the end of the year, but the FAA refuses to disclose which agencies have the certificates and what their purposes are. The Electronic Frontier Foundation is suing the FAA to obtain records of the certifications. "We need a list so we can ask [each agency], 'What are your policies on drone use? How do you protect privacy? How do you ensure compliance with the Fourth Amendment?'" Ms. Lynch said. "Currently, the only barrier to the routine use of drones for persistent surveillance are the procedural requirements imposed by the FAA for the issuance of certificates," said Amie Stepanovich, national security counsel for the Electronic Privacy Information Center, a research center in Washington. The Department of Transportation, the parent agency of the FAA, has announced plans to streamline the certification process for government drone flights this year, she said. "We are looking at our options" to oppose that, she added. Section 332 of the new FAA legislation also orders the agency to develop a system for licensing commercial drone flights as part of the nation's air traffic control system by 2015. The agency must establish six flight ranges across the country where drones can be test-flown to determine whether they are safe for travel in congested skies. Representatives of the fast-growing unmanned aircraft systems industry say they worked hard to get the provisions into law. "It sets deadlines for the integration of [the drones] into the national airspace," said Gretchen West, executive vice president of the Association for Unmanned Vehicle Systems International, an industry group. She said drone technology is new to the FAA. The legislation, which provides several deadlines for the FAA to report progress to Congress, "will move the [drones] issue up their list of priorities," Ms. West said.

Link Magnifier --- Congress Scrutinizes Court Decisions

Court decisions are subject to extreme Congressional scrutiny – ensures backlash

Miller 09 [Mark - Professor of Political Science, Adjunct Professor of History, Director of Law and Society Program, at Clark University, 'Constitutionalism and Democracy : View of the Courts from the Hill : Interactions Between Congress and the Federal Judiciary.' University of Virginia Press, 2009, proquest] Bschulz 12

Pickerill has found that Congress pays a great deal of attention to constitutionally based judicial decisions, at least those from the Supreme Court. Congress may not devote much time to constitutional issues in its initial debates on legislation (Pickerill 2004, 67), but it does respond when the courts declare congressional actions to be unconstitutional. As Pickerill notes, **“Congress is highly responsive to Supreme Court decisions striking federal statutes; that is, Congress usually responds formally to the Supreme Court by repassing the statute in modified form, amending the Constitution, or taking other official action”** (2004, 7). “When it comes to constitutional issues,” he concludes, “Congress is often a reactive body” (2004, 145). Congress is certainly aware of the voice of the courts in the inter-institutional constitutional debate, although the legislative branch may not always yield to the dictates of the judicial branch.

The more routine interactions between Congress and the federal courts illustrate that the two institutions have very different perspectives and wills. At times, these regular interactions inevitably produce friction and tension between the two institutions. At times, Congress has attempted to use its institutional powers in the judicial confirmation process and in the budgetary process, among others, to help shape the direction of judicial decisions. At other times, Congress has been more direct in its attempts to guide or alter the scope of judicial decisions. Since constitutional interpretation is a continuous dialogue among the political actors in American society, these interactions between Congress and the courts will probably continue well into the future. Congress will always attempt to influence the decision making of federal judges, including the justices who sit on the U.S. Supreme Court. While this continuous conversation among the branches of government is certainly healthy, there are limits as to how far Congress should go in its attempts to influence judicial decisions. When Congress goes too far, the majority in Congress may get what they want in the short term, but at the expense of the fundamental principle of judicial independence. Independent federal courts must remain key participants in the ongoing inter-institutional constitutional conversation.

Internal --- Congressional Backlash Impacts Judicial Salaries

Controversial court decisions result in Congress stripping judicial pay

Miller 09 [Mark - Professor of Political Science, Adjunct Professor of History, Director of Law and Society Program, at Clark University, 'Constitutionalism and Democracy : View of the Courts from the Hill : Interactions Between Congress and the Federal Judiciary.' University of Virginia Press, 2009, proquest] Bschulz 1

Appropriations for the Courts and Judicial Salaries Another regularized interaction between Congress and the federal courts involves the annual budget process for the federal judiciary. Congress has the power of the purse, and each year Congress must appropriate funds for the operation of the federal court system. Each year, one or two justices travel across the street to testify before the Appropriations Committee of either the House or the Senate to explain the proposed budget for the federal judiciary. In a rare occurrence, in February 2007 Justice Kennedy even testified before the Senate Judiciary Committee concerning the judicial branch's request for higher salaries for federal judges (see Biskupic 2007; and Mauro 2007). Thus overall appropriations for the judicial branch have long been a source of concern and conflict between Congress and the federal courts (see, e.g., Walker and Barrow 1985; Perry 1999; and Rishkof and Perry 1995). In her study of congressional appropriations for the federal judiciary, Eugenia Toma found that from 1946 to 1977, Congress rewarded the Supreme Court with budget increases when it handed down conservative decisions and attempted to punish the Court for its liberal decisions by withholding budget increases. Toma concluded that Congress "signals its overall approval or disapproval of the Court's direction through budgetary allocations" (1991, 146). However, even Toma agrees that this control mechanism works only "at the margin" (145). Members of Congress do often threaten to use their power of the purse against the federal courts, even if those threats usually do not materialize. Thus when Majority Leader Tom DeLay bellowed, "We set up the courts. We can unset the courts. We have the power of the purse!" (qtd. in Klein 2005), or when Congressman Steve King (R-IA) expressed his frustration with the courts by declaring, "When their budget starts to dry up, we'll get their attention" (qtd. in Marcus 2005), these threats seemed to ring hollow. The fact that Congress rarely cuts the federal judiciary's budget, however, does not reduce the seriousness of these threats. It is certainly possible in the future that if Congress becomes angry enough with the Supreme Court or with the other federal courts, the judicial branch's annual budget will suffer. In addition to judicial salaries, the federal courts depend upon Congress for funds for new judgeships, for courthouses, for staff, for technology, and for a variety of other purposes. Chief Justice Warren was upset with Congress because it would not even provide the necessary funds for a library messenger for the Court (see Peretti 1999, 143). As I have written previously, "The annual appropriations process provides a clear avenue to see the different institutional perspectives of the Supreme Court and of Congress. The courts rightly see themselves as an independent third branch, and many judges seem to resent Congress's interference with their budget requests" (Miller 2004, 64). Congress, however, often views the federal courts as just one more federal agency begging for funds (see, e.g., Resnik 2000b, 1011). Judicial salary increases are not at the top of the agenda for many politicians. As one staffer to a liberal Democrat told me, "Federal judges already make more money than most of our constituents. It's hard to be sympathetic to their salary concerns." Another staffer for a liberal Democrat told me, "There's no way we are raising judicial salaries until we get a decent increase in the minimum wage first." Echoing the point that the courts are just one more federal agency begging for money, a Democratic staffer in the Senate told me, "Judges are public servants, and the courts aren't special. There are other benefits to being a judge other than the salaries." Thus judicial salaries are not high-priority items on the congressional agenda each year, although federal judges have long complained that they were severely underpaid.

Congress can use compensation and appropriation power in response to decisions it disagrees with

Miller, 6 --- Associate Professor and Chair of the Department of Government and International Relations at Clark University (Summer 2006, Mark C., Case Western Reserve University, "SYMPOSIUM: JUDICIAL INDEPENDENCE AND JUDICIAL ACCOUNTABILITY: SEARCHING FOR THE RIGHT BALANCE: When Congress Attacks the Federal Courts," 56 Case W. Res. 1015, JMP)

I would like to begin by thanking the organizers of this wonderful conference on judicial independence for inviting me to comment on the excellent paper presented by Professors Entin and Jensen. n1 This paper tells us a great deal about issues surrounding tax legislation and the Compensation Clause. It is certainly possible that Congress might attempt to attack the courts through the use of tax legislation, and the Compensation Clause is certainly one device designed to protect the courts from such attacks. Clearly, the Compensation Clause helps ensure judicial independence. I think Professors Entin and Jensen have given us a strong examination of the intersection of tax law and the Compensation Clause. Nevertheless, I would like to broaden the discussion to cover various ways in which Congress can attack the federal courts when the legislative branch is unhappy with the decisions of the judicial branch. Specifically, Congress can use its compensation power, appropriation power, and impeachment power to demonstrate Congress's disapproval of a judicial decision.

Congressional backlash empirically blocks judicial salary increases

Talmadge, 99 --- Justice on the Washington Supreme Court (Winter 1999, Philip A., Seattle University Law Review, "Understanding the Limits of Power: Judicial Restraint in General Jurisdiction Court Systems," 22 Seattle Univ. L. R. 695)

The doctrine of judicial restraint has been encrusted in recent years with considerable ideological cant of both the left and the right. n17 The ideological discussion highlights particular political issues of the day. Many conservatives decry judicial activism with respect to the courts' role in racial desegregation in America or [*702] reproductive rights issues. n18 Liberals complain today of judicial activism in property and economic issues. n19 But this doctrine need not be the captive of the left or the right. The doctrine itself has become "political" largely because it is not susceptible to rigorous and predictable definition.

That the courts are not entirely trusted by the partisan branches of government to announce constitutional principles is illustrated by recent Washington legislation. In 1997, a bill was introduced in the Washington State House of Representatives with thirty-three sponsors. The bill challenged the doctrine of judicial review: "The doctrine of judicial review that the courts have the sole and final say in interpreting the Constitution on behalf of all three branches of government has been subject to serious analysis and criticism by scholars, jurists, and others for almost two hundred years." n20 The legislation's apparent intent was to undercut the finality and authority of judicial review of constitutional questions by permitting the legislature to disagree with a judicial interpretation of the Washington Constitution and to submit the issue to the voters in a statewide referendum. n21

[*703] The sense that the courts are too powerful sometimes conflicts with direction to judges from the partisan branches to state their views more publicly. In 1997, twenty-two sponsors introduced in the Washington State House of Representatives a measure urging the Supreme Court to amend Canon 7 of the Code of Judicial Conduct to afford judges and judicial candidates the right to "speak freely and without fear of governmental retaliation, on issues that are not then before the court." n22

The United States Congress has also raised serious questions about judicial performance through a different methodology. The United States Senate's recent glacial pace in confirming nominees to judicial vacancies increases judicial workloads and instills trepidation in the minds of the nominees. n23 In recent legislation, n24 Congress [*704] sought to restrain "judicial activism" by denying judges cost-of-living salary adjustments and limiting federal court jurisdiction. Various versions of the legislation would deny federal courts the power to release federal prisoners because of bad prison conditions and establish special procedures to hear challenges to state initiative measures.

In summary, these issues illustrate the need for the courts continually to revisit and review the core constitutional functions of the judiciary. n25 Within the constitutional sphere, however, the courts should be active and the other branches of government constrained not to act unconstitutionally. The judiciary cannot "restrain" itself from declaring the enactments of legislative bodies violative of constitutional norms. The courts must vigorously protect individuals, particularly minorities, from majoritarian tyranny. But this protective role does not allow the courts to "constitutionalize" every controversy. Judicial self-restraint lends support to the legitimacy of judicial independence.

In our system of separation of powers, achievement of the necessary balance between a judiciary vigorous within its constitutional sphere and independent of the partisan branches of government, and a judiciary restrained in its inclination to right every wrong, is no easy task. That necessary balance is, however, the essence of ordered liberty in the American constitutional system. Likewise, the other branches of government must regard the authority and independence of the judiciary by respecting judicial review, properly funding the courts, and avoiding the imposition of nonjudicial duties or ever-escalating caseloads. The fulfillment of separation of powers is found in the principles of restraint employed in the federal and state court systems.

Congress uses the judicial budget to exert political influence over the Supreme Court—threatens judicial independence

Toma, 91 – Professor of Public Policy at the Martin School of Public Policy and Administration, PhD Economics (Eugenia Froedge, “Congressional Influence and the Supreme Court: The Budget as a Signaling Device”, The Journal of Legal Studies, January 1991, <http://www.jstor.org/stable/724457>)/TT

Taken together, the results of the empirical tests and the anecdotal evidence suggest that Congress uses the budget as a device to signal its approval or disapproval to the Court. The answer as to whether the Court responds to the budgetary signals by altering its decisions in the direction desired by Congress was not addressed through an examination of specific case decisions. Instead, I tested only whether the budget was a determinant of the overall liberal/conservative rating of Court decisions. The budget was significant in all tests. The results are supportive of the thesis developed in this article. While the selection process for judges and the lifetime tenure on the bench can insulate the Court from political pressures to a large degree, the budget appears to be a mechanism which, at the margin, allows Congress to exert political influence over Supreme Court decision making.

[omit chart]

IV. CONCLUDING COMMENTS

This article has empirically examined the relationship between budget allocations by Congress and Supreme Court decision making. The findings suggest that the relationship between Congress and the Supreme Court resembles-in kind if not in degree-that between Congress and other agencies in a very important way. Congress signals its overall approval or disapproval of the Court's direction through budgetary allocations.

Richard Epstein suggests that there is an optimal amount of independence for the Supreme Court.²³ From a constitutional perspective, complete independence of any single branch of government grants a greater than optimal amount of discretion to that branch. Epstein argues that a fixed term of tenure on the bench, therefore, may be preferable to the current life tenure, for it would reduce the power of the Court. The retention of budgetary authority by Congress over the Court represents another means by which some accountability of the Court remains intact. As long as the Congress controls the purse strings, members of the Supreme Court will not be totally autonomous agents.

Internal --- Congressional Backlash => Cuts to Judicial Budget

Congress cuts judicial budget in response to politically unpopular decisions

Cross and Nelson, 2001 – JD Harvard, BA University of Kansas, Professor of Business Law and Law at the University of Texas; Assistant Professor of Political Science at the Pennsylvania State University (Frank and Blake, "STRATEGIC INSTITUTIONAL EFFECTS ON SUPREME COURT DECISIONMAKING", 95 Nw. U. L. Rev. 1437 2000-2001, hein online)//TT

Congressional resource controls are not limited to salary adjustments and expenses. The judiciary has considerable concern about its caseload and docket control.¹⁹⁹ When Congress in the 1980s considered the Civil Justice Reform Act, legislation that would affect judicial control over civil case processing, the judiciary lobbied hard and effectively to ward off this intrusion of their authority.²⁰⁰ Congress may pressure the judiciary by refusing to authorize new judgeships or confirm new judges, or even by threatening the reduction of judgeships.²⁰¹ Such measures increase the caseload per judge and make the position a less enjoyable one.

Judicial resource concerns are periodically quite evident. In 1989, a press conference at the Supreme Court was held to express concern for judicial salaries, described as "the most serious threat to the future of the judiciary and its continued operation.²⁰² Judicial lobbying is readily observed by casual review of *The Third Branch*, the official journal of the federal courts, published monthly by the Administrative Office of the U.S. Courts.^{2°} i Judith Resnik suggests that the federal judiciary has recently become something like an agency, not a co-equal branch, due to its dependency on Congress for resources.²⁰⁴

There is empirical evidence that Congress pays attention to Supreme Court decisions and punishes undesirable decisions with budget cuts, and that the Justices respond with decisions more amenable to congressional policy goals. Eugenia Toma hypothesized that the relationship between Congress and the Supreme Court was a contractual one in which budgetary favors are linked to politically acceptable decisions.²⁰⁵ She empirically analyzed the Court's budget and its decisions. The greater the ideological distance between a term's decisions and the congressional average of the relevant House and Senate committees, the less money was appropriated for the Court's budget.²⁰⁶ She also found that the Court responded to these signals and modified its decisions accordingly.²⁰⁷ The effect was not an enormous one and not entirely consistent over the years,²⁰⁸ but it was clearly present, enough to meet rigorous standards of statistical significance.²⁰⁹ Congress may achieve indirectly through appropriations what it cannot do directly.²¹⁰

Congress will backlash by limiting salary increases or cutting other necessary funding for courts

Cross and Nelson, 2001 – JD Harvard, BA University of Kansas, Professor of Business Law and Law at the University of Texas; Assistant Professor of Political Science at the Pennsylvania State University (Frank and Blake, "STRATEGIC INSTITUTIONAL EFFECTS ON SUPREME COURT DECISIONMAKING", 95 Nw. U. L. Rev. 1437 2000-2001, hein online)//TT

c. Resource Punishment.-Perhaps the most salient constraint on courts involves congressional control over their resources. **Judicial salaries are generally protected from being cut by Congress, but a displeased Congress may withhold salary increases or other resources.**¹⁸² There are few, if any, constraints on congressional control of funding for judicial support staff, courthouses, and other necessary resources of the Third Branch. Congress does not automatically defer to the Court's budget requests, nor does it automatically grant the Court some increase in resources to account for inflation or growing caseloads. Between 1946 and 1988, the real budget for the Court increased at an average of 3.2% per year, but annual changes in the budget have varied from a negative 9.8% to a positive 13.7%.¹⁸³ Plainly, Congress has both the power and inclination to manipulate appropriations to the courts.'⁸⁴

One might naively presume that federal judges are above caring about matters so mundane as money, but this is not the case. Justices frequently go to Congress pleading for more resources and even more pay.⁸⁵ More indirectly, the judiciary has gone to Congress to reduce their caseload, seeking an expansion in the number of judges and a reduction in federal cases.¹⁸⁶ They express a concern for coming years about "how to pay the rent."¹⁸⁷ The "federal judiciary as an entity now worries about federal judges' salaries, their cost of living increases, pensions, travel budgets, sharing courtrooms (as compared to having a courtroom of one's own), building and maintenance, ' staff and employment - " policies, and the nature of .., 88 federal judges' assignments, that is, jurisdictional grants."¹⁸⁸

There is a history of congressional resource punishment. The legislature "communicated its displeasure with the liberal Warren Court in 1964 by increasing the annual salary of federal judges by \$7,500 while providing the [Supreme Court] justices with only a \$4,500 increase."⁸⁹ Earl Warren lamented his poor relations with Congress, noting that on one occasion, a Court request for a library messenger was struck from its budget.⁹⁰ Congress may withhold a cost-of-living pay increase for judges, thus functionally reducing their salaries.¹⁹¹ Judges have sought to resist congressional efforts to limit their salaries, but there are limits to their ability to resist.¹⁹²

Resource punishment goes far beyond salaries, as the federal courts are dependent upon financing an increasingly vast infrastructure. The salary protection provided by the Constitution "does not begin to meet the demands for staff, space and equipment now common within the 'federal court system.'"⁹³ Congress has resisted some judicial requests for resources. Senator Grassley has taken a green eyeshade view of court expenses.¹⁹⁴ Other legislators have also exercised increasingly tough oversight on judicial expenditures.¹⁹⁵ This legislative "power to determine judges' salaries and judicial budgetary appropriations assists it in controlling judicial behavior."⁹⁶ Whatever the congressional motivation behind such oversight, federal judges have shown concern.¹⁹⁷ In response to this congressional pressure, the judiciary appears "ready to placate and to mollify."¹⁹⁸

Judicial decisions affect Congress' budget allocation

Toma, 91 – Professor of Public Policy at the Martin School of Public Policy and Administration, PhD Economics (Eugenia Froedge, "Congressional Influence and the Supreme Court: The Budget as a Signaling Device", The Journal of Legal Studies, January 1991, <http://www.jstor.org/stable/724457>)/TT

According to the thesis of Section II, the more closely the Court's decisions correspond to the desires of Congress, the larger the budget appropriation Congress will grant. For empirical purposes, the smaller the difference in the ratings between the Court decisions and the Congressional votes on a liberal-conservative scale, the higher the Supreme Court's budget should be. Similarly, the higher the budget, the smaller the resulting difference between the ratings of the Court and Congress, if the budget affects Court decisions. Alternatively, if the Court acts in a way that is independent of political influences, the budget should not affect the ratings difference.

Internal --- Congressional Backlash Destroys Judicial Legitimacy

Congressional backlash will crush judicial legitimacy --- even an unsuccessful attack will gut judicial review

Martin, 1 --- Prof of Political Science at Washington University

(Andrew D., Statutory Battles and Constitutional Wars: Congress and the Supreme Court)

But the large policy payoff in the constitutional cases. What does the ability of the President and Congress to attack through overrides or other means constitutional court decisions imply in terms of the cost of the justices bear? If an attack succeeds and the court does not back down, it effectively removes the court from the policy game and may seriously or, even irrevocably harm its reputation, credibility, and legitimacy. Indeed, such an attack would effectively remove the court from policy making, thus incurring an infinite cost. With no constitutional prescription for judicial review, this power is vulnerable, and would be severely damaged if congress and the president were effective in attack on the Court. But **even if the attack is unsuccessful,** the integrity of the court may be damaged, for the assault may compromise its ability to make future constitutional decisions and, thus, more long-lasting policy. One does not have to peer as far back as scott v. sandford to find examples; Bush v. Gore (2000, U.S.) may provide one. To be sure, the new President and Congress did not attack the decision, but other members of government did of course, unsuccessfully at least in terms of the ruling's impact. Yet, there seems little doubt that the critics (not to mention the decision itself) caused some major damage to the reputation of the court, the effects of which the justices may feel in the not-so-distant future.

Internal --- Budget Cuts Undermine Judicial Independence

Sufficient funding key to ensure independent judiciary

Judge Harlington, 2001 - Professor at the Washington University in Saint Louis – School of Law (Wood, "JUDGES' FORUM NO. 2: "Real Judges", New York University School of Law, 2001, ProQuest)//TT

Judges have always been at some personal risk from disgruntled litigants and antigovernment

groups. n17 For example, an ordinary looking

[*265] letter was delivered to me one February at the office, but its contents were not ordinary. It was a very mean and vicious threat about what would soon happen to me. The sender from the Chicago area got so enthusiastic about sending me his "valentine" that he forgot and conveniently put his name and return address on the envelope. Since we are now in a war with terrorists, **the risks are much greater for**

everyone. Congress has the responsibility to look after the welfare of the judiciary because the **judiciary cannot financially care for itself. The judicial structure must be kept healthy and safe,** especially in times of national crises, **or the terrorist will have achieved some part of their goal.**

Federal judges who meet certain age and service requirements and voluntarily choose to become "senior judges" are constitutionally entitled, without further judicial service, to receive full salary for the rest of their lives. That additional salary, however, has already been earned. It is like a pension that most others in nonpublic pursuits earn during their productive years. Judges, as a result, need not be motivated out of concerns for an uncertain

financial future. That future has been provided for, but **today many senior federal judges keep on working without any additional compensation out of a sense of duty. Senior judges could fully retire, as do many in private business, and just go home to a rocking chair and "smell the roses."** That rocking chair **would likely be a much safer place these days than any federal building.**

Because of the contributions by working senior judges who have not retired, many judicial emergencies are avoided, our judicial system is kept in operation, and the federal government is saved great additional expense. Currently, senior judges handle twenty percent of the federal caseload. **Even with the help of the working senior judges, the active judges in some areas need additional help to take care of the continually increasing caseload.** In the past three decades, **judges of the United States courts of appeals have seen a nearly two hundred percent increase in their average caseloads, and a federal district judge's average caseload has increased by over fifty five percent.** n18

[*266] **In addition to adequate salaries, the independent judiciary must have adequate resources to function. The judiciary needs funding for offices, staff, training, and equipment.** A reasonably impressive courtroom is not a waste of money as appropriate surroundings contribute to the dignity of the law and the respect for those who administer it.

But this emphasis on salary does not mean that salary is the only reward for judicial service. **Being judges and rendering impartial and competent judicial service ordinarily brings with it some public prestige and confidence in the system, as well as personal satisfaction** to the judges for service rendered for their country. **The prestige, public confidence, and judicial independence were inherited from judicial predecessors, but that inheritance must be continually earned and protected. That judicial inheritance must be passed on unblemished to our successor judges of tomorrow.**

Congress uses appropriation process to undermine judicial independence

Miller 09 [Mark - Professor of Political Science, Adjunct Professor of History, Director of Law and Society Program, at Clark University, "Constitutionalism and Democracy : View of the Courts from the Hill : Interactions Between Congress and the Federal Judiciary." University of Virginia Press, 2009, proquest] Bschulz 2

Concerns over the annual appropriations process led Chief Justice Roberts to also argue that the independence of the courts was under attack. He wrote in his 2005 annual report that "in recent years, the budget for the federal judiciary and the ever-lengthening appropriations process have taken a toll on the operation of the courts." He went on to complain about the overly high rents that the judicial branch pays to the federal General Services Administration for courthouses and other office space. **He continued,** "Escalating rents combined with **across-the-board cuts imposed** during fiscal years 2004 and 2005 **resulted in a reduction of approximately 1,500 judicial branch employees** as of mid-December 2005 when compared to October 2003" (2006).

Congress may also be able to use its taxing power against federal judges, although that seems unlikely (see, e.g., Entin and Jensen 2006). The legislature can use its power of the purse in other ways to make life more difficult for federal judges, such as refusing to give them adequate courthouses, technology, or staff. Some members of Congress have used the appropriations process to attempt to force the Supreme Court and other federal courts to allow cameras in their courtrooms (see, e.g., Biskupic 2007; and Mauro 2007). One federal judge told me that Congress may require federal district court judges to share courtrooms, which he interpreted as an attack on the professionalism of the judiciary. Judge Harry T. Edwards, of the U.S. Court of Appeals for the District of Columbia Circuit, agrees: “In the process of deciding to allocate funds, Congress and the President can sometimes turn courthouse funding into a political football” (2006, 233). When it comes to the annual appropriations process, it seems that Congress often does not consider significant the fact that the courts are a coequal third branch. As a former chair of the House Appropriations subcommittee with jurisdiction over the budget for the judicial branch explained, “The courts do not have many advocates in Congress. They do not have a constituency. Congress continues to pass more and more laws that require the courts to assume jurisdiction of more cases and add to their workload. Congress is eager to authorize more judges, but when it comes to paying for them, the members of Congress do not think that is a very high priority” (N. Smith 1996, 177). In fact, the courts are often at a disadvantage when it comes to funding because there is little that they or federal judges can do for the reelection-minded legislators. Certainly, as John Walker and Deborah Barrow note, “judges cannot exchange their decisions for favorable congressional treatment without destroying the very foundations of the judiciary’s independence and authority” (1985, 44). Or as Chief Justice Warren noted, it is difficult for the courts to lobby Congress, because “we can’t trade anything with the Committees” (qtd. in Walker and Barrow 1985, 44). None of the liberal congresspersons or liberal congressional staff whom I interviewed would admit that they or their bosses would support cutting the budgets of the courts in retaliation for conservative judicial decisions. As one Democratic staffer told me, “Liberals don’t want to hurt judges because we are fighting for increased access to the federal judiciary. Increased access to the federal courts always serves the interests of justice.” With the courts lacking a clear constituency, it becomes far too easy for Congress to treat the courts as just one more federal entity begging for money from the legislative purse.

Internal --- Judicial Salary Key to Independence

Salary concern is the most pressing issue facing the judiciary --- key to its independence. Our 1nc Miller evidence quoted Chief Justice Rehnquist.

Salaries are the most important internal link to judicial independence

Schwartz, 12 --- Symposia Editor, Cardozo Law Review (Karissa M., Cardozo Law Review de novo, "ARTICLE: SOUND THE ALARM: THE CONSTITUTIONAL CRISIS OF JUDICIAL COMPENSATION," 2012 Cardozo L. Rev. De Novo 101, JMP)

When legal scholars refer to a "constitutional crisis," they speak about a substantive legal showdown between branches of the government, such as President Roosevelt's "court packing" plan, n1 the presidential subpoena issued by Congress during the Watergate era, n2 or the election recount in Bush v. Gore. n3 Chief Justice Roberts has recently sounded the alarm about an ongoing constitutional crisis that threatens the viability of the judicial branch of government. n4 This constitutional crisis undermining the strength and independence of the federal judiciary is the failure to raise judicial pay. n5

Over the years, federal judicial salaries have stagnated, while [*102] inflation has risen. n6 Since 1993, judicial pay has fallen 10.8% behind inflation while the pay of most other federal workers has increased by 18.5%. n7 Consequently, judicial pay has declined substantially and, in doing so, has impacted the makeup of the judiciary. n8 The inadequate levels of judicial pay not only threaten the judiciary's composition but also the quality of justice in the United States. n9

Critics argue that there is no need to increase judicial salaries, since judicial salaries are already higher than those of other occupations. n10 Former Chief Justice Rehnquist answered this critique by identifying the disparity in judicial compensation as compared to the [*103] rest of the legal profession. n11 In addition, Chief Justice Roberts has noted that a federal judge is aware he is making financial sacrifices to serve the nation; however, there comes a point when those sacrifices become an undue financial burden. n12 The national cost to minimize the financial burden on judges is minimal compared to the intangible cost of minimizing American justice. n13 Thus, in order to maintain a judicial system made up of diverse and competent individuals, we must adequately compensate our judiciary lest we lose the most qualified individuals to higher paying occupations. n14

Fair compensation is key to maintaining judicial independence

American College of Trial Lawyers, 2007 ("JUDICIAL COMPENSATION: OUR FEDERAL JUDGES MUST BE FAIRLY PAID", Board of Regents, March 2007, http://www.americanbar.org/content/dam/aba/migrated/poladv/priorities/judicial_pay/actlpospaper.authcheckdam.pdf)/TT

An independent judiciary is critical to our society; and fair compensation is essential to maintaining that independence.

Of all the grievances detailed in the Declaration of Independence, none was more galling than the lack of independence imposed by King George on Colonial judges:

He has made Judges dependent on his Will alone, for the tenure of their offices, and the amount and payment of their salaries.

Declaration of Independence, July 4, 1776. English judges were assured life tenure during their "good behavior" by the Act of Settlement of 1700, but their Colonial counterparts served at the pleasure of the King. Their salaries were subject to his whims. Judges beholden to the King, not surprisingly, often ruled as he pleased, no matter how unfairly. The framers of our post-Revolution government needed to ensure an independent judiciary.

In 1780, nearly a decade before the U.S. Constitution was ratified, John Adams drafted a Declaration of Rights for the Massachusetts State Constitution, which declared:

It is the right of every citizen to be tried by judges as free, impartial and independent as the lot of humanity will admit.

The concept of judicial independence – that judges should decide cases, faithful to the law, without “fear or favor” and free from political or external pressures – remains one of the fundamental cornerstones of our political and legal system. As Alexander Hamilton explained, once the independence of judges is destroyed, “the Constitution is gone, it is a dead letter; it is a paper which the breath of faction in a moment may dissipate.”³

Fair compensation is critical to maintain that independence. In the Federalist Papers, Hamilton explained the importance of fair compensation: “[I]n the general course of human nature, a power over a man’s subsistence amounts to a power over his will.” Federalist Papers No. 79. Thus, the U.S. Constitution contains two critical provisions to defend and preserve judicial independence for federal judges: (1) life tenure and (2) a prohibition against diminution of compensation.

Inflation is not unique to modern times. The drafters of the Constitution were aware of the problem, and they took steps to solve it. Explaining that “next to permanency in office, nothing can contribute more to the independence of the judges than a fixed provision for their support,” Hamilton, in Federalist Paper No. 79, observed:

It would readily be understood that the fluctuations in the value of money and in the state of society rendered a fixed rate of compensation in the Constitution inadmissible. What might be extravagant today might in half a century become penurious and inadequate. It was therefore necessary to leave it to the discretion of the legislature to vary its provisions in conformity to the variations in circumstances, yet under such restrictions as to put it out of the power of that body to change the condition of the individual for the worse. A man may then be sure of the ground upon which he stands, and can never be deterred from his duty by the apprehension of being placed in a less eligible situation.

A case can be made that the Constitution requires a raise in judicial compensation to ameliorate the diminution which has occurred over time as the result of inflation.⁴ When the Constitution was adopted, the Founding Fathers provided that the President was entitled to compensation which can be neither increased nor decreased during the term of office, while judges were guaranteed there would be no diminution of compensation; there was no ban on increases in judicial compensation, because it was contemplated that there might have to be increases. Hamilton explained:

It will be observed that a difference has been made by the Convention between the compensation of the President and of the judges. That of the former can neither be increased nor diminished; that of the latter can only not be diminished. This probably arose from the difference in the duration of the respective offices. As the President is to be elected for no more than four years, it can rarely happen that an adequate salary, fixed at the commencement of that period, will not continue to be such to its end. But with regard to the judges, who, if they behave properly, will be secured in their places for life, it may well happen, especially in the early stages of the government, that a stipend, which would be very sufficient at their first appointment, would become too small in the progress of their service.

The prohibition against diminution of judicial salaries was not simply to protect judges; it was designed to protect the institution of an independent judiciary and thereby to protect all of us. Society at large is the primary beneficiary of a fairly compensated bench:

[T]he primary purpose of the prohibition against diminution was not to benefit the judges, but, like the clause in respect of tenure, to attract good and competent men to the bench and to promote that independence of action and judgment which is essential to the maintenance of the guaranties, limitations and pervading principles of the Constitution and to the administration of justice without respect to persons and with equal concern for the poor and the rich.

Salary declines will erode the integrity of the federal judiciary

Denton, 9 --- Associate, Latham & Watkins LLP. B.A., Rutgers University; J.D., Brooklyn Law School (Fall 2009, Blake, Drexel Law Review, “THE FEDERAL JUDICIAL SALARY CRISIS,” 2 Drexel L. Rev. 152, JMP)

[*152] The federal judiciary is revered in the legal world and stands as a testament to the virtues of our system of justice. As with any institution, its reputation is a function of the professionalism, intelligence, and hard work of its past and current members. Nominees for federal judgeships go through a rigorous vetting process, n1 which to date has yielded an exceptionally qualified judiciary. Unfortunately, Congress has not treated federal judges with the dignity that they deserve when it comes to salary

considerations. Judicial pay has not increased commensurate with that of other federal employees, nor kept up with inflation. n2

The Framers sought to insulate the federal judiciary from political influence by granting federal judges the constitutional guarantees of lifetime tenure "during good Behaviour" and, through the Compensation Clause, "Compensation, which shall not be diminished during their Continuance in Office." n3 Although Congress has not actually decreased the pay of federal judges, which would be an obvious violation of the Compensation Clause, it has accomplished the functional equivalent of a salary cut by failing to increase federal judges' wages; instead, standing idly by as the quality of life one can lead on a judicial salary declines.

This Article argues that Congress, in its treatment of judicial pay, has violated the spirit and possibly even the letter of the Constitution. Admittedly, this argument may be purely academic [*153] because the forum for such a debate would be federal court. n4 Federal judges might be reluctant to find Congress's actions unconstitutional, due to the perceived impropriety of granting themselves a de facto pay raise. Thus, the bulk of this Article focuses on the practical and more immediate effect of the growing inadequacy of judicial salaries. I contend that the steady erosion of judges' "real salaries," i.e. their salaries once we account for changes in the cost-of-living due to inflation, n5 will impact the composition of the federal judiciary in three ways: (1) there will be less diversity on the federal bench; (2) more judges will retire once they have attained the requisite age and service requirements; and (3) fewer top legal professionals will seek federal judgeships. Therefore, if Congress does not act quickly to improve judicial pay, the integrity of the federal judiciary is at risk.

Inadequate pay is causing high quality district judges to leave and discouraging others from becoming judges --- undermines the judiciary

Kennedy, 7 --- Supreme Court Justice (2/14/2007, Anthony M., "Testimony of Associate Justice Anthony M. Kennedy before the United States Senate Committee on the Judiciary; Judicial Security and Independence," http://www.judiciary.senate.gov/hearings/testimony.cfm?id=e655f9e2809e5476862f735da1200c37&wit_id=e655f9e2809e5476862f735da1200c37-1-1, JMP)

It is disquieting to hear from judges whose real compensation has fallen behind. Judges do not expect to become wealthy when they are appointed to the federal bench; they do expect, however, that Congress will protect the integrity of their position and provide a salary commensurate with the duties the office requires. For the judiciary to maintain its high level of expertise and qualifications, Congress needs to restore judicial pay to its historic position vis-à-vis average wages and the wages of the professional and academic community.

A failure to do so would mean that we will be unable to attract district judges who come from the most respected and prestigious segments of the practicing bar. One of the distinguishing marks of the Anglo-American legal tradition is that many of our judges are drawn from the highest ranks of the private bar. This is not the case in many other countries, where young law school graduates join the judicial civil service immediately after they complete their legal educations. Our tradition has been to rely upon a judiciary with substantial experience and demonstrated excellence. Private litigants depend on our judges to process complex legal matters with the skill, insight, and efficiency that come only with years of experience at the highest levels of the profession.

There are two present dangers to our maintaining a judiciary of the highest quality and competence: First, some of the most talented attorneys can no longer be persuaded to come to the bench; second, some of our most talented and experienced judges are electing to leave it.

In just the past year, two of the finest federal district judges in California have left for higher-paying jobs elsewhere, one in academia and the other in the state judiciary. The loss of these fine jurists is not an isolated phenomenon. Since January 1, 2006, ten Article III judges have resigned or retired from the federal bench. It is our understanding that seven of these judges sought other employment. In 2005, nine Article III judges resigned or retired from the bench, which was the largest departure from the federal bench in any one year. Four of those nine judges joined JAMS, a California-based arbitration/mediation service, where they have the potential to earn the equivalent of a district judge's salary in a matter of months. My sense is that this may be just the beginning of a large-scale departure of the finest judges in the federal judiciary. It would be troubling if the best judges were available only to those who could afford private arbitration.

The income of private-sector lawyers has risen to levels that make it unlikely Congress could use earnings of a senior member of the bar as a benchmark for judicial salaries in anything approaching a one-to-one ratio. It has not been our tradition, furthermore, that highly accomplished, private attorneys go to the bench with the expectation of equivalent earnings. Still, outside earning figures are relevant, particularly if we look at earnings for entry-level attorneys, senior associates, and junior and mid-level partners. These persisting differentials create an atmosphere in which it is difficult to attract eminent attorneys to the bench and to convince experienced judges to remain. Something is wrong when a judge's law clerk, just one or two years out of law school, has a salary greater than that of the judge or justice he or she served the year before. These continuing gross disparities are of undoubted relevance. They are a material factor for the attorney who declines a judicial career or the judge who feels forced to leave it behind. The disparities pose a threat to the strength and integrity of the judicial branch.

The intangible rewards of civic service are a valid consideration in fixing salary levels, but here, too, we are at a disadvantage in recruiting and retaining our best judges. As my colleague Justice Breyer says to me, it is one thing to lose a judge to a partnership in a New York law firm but quite another to lose him or her to a non-profit position with rich intangible rewards plus superior financial incentives. The relevant benchmark here is law school compensation. At major law schools salaries not just of the deans but also of the senior professors are substantially above the salaries of federal district judges. So if a highly qualified attorney wants to serve by teaching young people, the salary differential is itself an incentive to leave. The intangible rewards of judicial service, while of undoubted relevance, do not overcome the present earnings disparity.

For judges to use federal judicial service as a mere stepping-stone to re-entry into the private sector and law firm practice is inconsistent with our judicial tradition. It could **undermine faith in the impartiality of our judiciary** if the public believes judges are using the federal bench as an opportunity to embellish their resumes for more lucrative opportunities later in their professional careers.

Judicial salaries are a key factor in ensuring judicial independence and attracting qualified candidates

Judge Harlington, 2001 - Professor at the Washington University in Saint Louis – School of Law (Wood, "JUDGES' FORUM NO. 2: "Real Judges", New York University School of Law, 2001, ProQuest)//TT

Not only is a reasonable judicial salary fair treatment of judges for their work, but it is also **an important factor in judicial independence**. A well paid judge is less susceptible to deserting the bench for the more lucrative private practice or, in the very rarest of circumstances, succumbing to the temptation to do judicial favors for a fee. Judges who have accepted bribes may not only be subject to impeachment as judges, but also find themselves as defendants in front of the bench of another judge and possibly on their way to the penitentiary. n15 Reasonable judicial salaries also serve another very important purpose because fair compensation helps attract the most qualified lawyers to the bench. If serving as a judge were to mean a financial sacrifice impacting prospective judges and their families, only the rich would become federal judges. That should not be. In 2001, Congress did not forget the Third Branch entirely and gave the judges a cost of living increase, not a pay raise, for which the judges are grateful.^{ul} However, since 1993, the judges have received only four of nine annual cost of living adjustments. n16

Judicial salaries are key to judicial independence

Entin, 2011 – Associate Dean for Academic Affairs; David L. Brennan Professor of Law and Professor of Political Science (Jonathan L., "GETTING WHAT YOU PAY FOR: JUDICIAL COMPENSATION AND JUDICIAL INDEPENDENCE", Utah Law Review, 2011, [//TT">http://epubs.utah.edu/index.php/ulr/article/viewFile/542/403">//TT](http://epubs.utah.edu/index.php/ulr/article/viewFile/542/403)

One vital way of assuring judicial independence is to guarantee that judges need not fear that their salaries will be reduced if they render unpopular or controversial decisions. The United States Constitution seeks to do this by providing that all federal judges "shall, at stated Times, receive for their Services, a Compensation, which shall not be diminished during their Continuance in Office."¹ As the Supreme Court explained in perhaps the leading case on the Compensation Clause, "[a] Judiciary free from control by the Executive and the Legislature is essential if there is a right to have claims decided by judges who are free from potential domination by other branches of government."²

The Compensation Clause does not forbid increases in judicial pay; rather it prohibits only reductions in judges' salaries. This aspect of the clause undoubtedly reflects the notion that the prospect of a pay cut poses a

greater threat to judicial independence than does a pay raise.³ While the prospect of a salary increase also could influence a judge's rulings,⁴ the framers debated at length the propriety of allowing for increasing judicial pay before deciding to omit any reference to that matter from the Compensation Clause.⁵

The apparent simplicity of the language of the federal Compensation Clause and its state counterparts conceals several troublesome issues. ⁶ Part II of this Article will address when a judicial salary becomes vested and thus no longer susceptible to reduction. Part III considers whether taxation of judicial salaries can amount to an unconstitutional diminution in compensation. Part IV focuses on the extent to which withholding cost-of-living increases impermissibly reduces judicial pay. Even in situations that do not violate the Compensation Clause, questions about how much to pay judges, as well as how often and by what process judicial salaries should be increased, present potentially significant policy issues. Part V considers some of those questions, and suggests that the case for raising judges' pay should not rest exclusively or even primarily on the financial aspects of judicial service.'

The number of judges have declined as a result of low salaries

Justice Kennedy, 2007— Supreme Court Justice, Harvard Law School, London School of Economics, Stanford University (Justice Anthony M. Kennedy, "Testimony of Associate Justice Anthony M. Kennedy before the United States Senate Committee on the Judiciary Judicial Security and Independence", February 14, 2007, http://www.americanbar.org/content/dam/aba/migrated/poladv/priorities/judicial_pay/kennedystatement.authcheckdam.pdf)/TT

The commitment and dedication of our judges have allowed us to maintain a well-functioning system despite a marked increase in workload. In 1975, when I began service on the Court of Appeals for the Ninth Circuit, there were approximately 17,000 appellate cases filed. By 2005, that number had quadrupled to nearly 70,000 cases. The increase in the number of judges has not kept up. In 1975 each three-judge panel heard approximately 500 cases per year; by 2001, the number had risen to over 1,200. Without the dedicated service of our senior judges, who are not obligated to share a full workload but do so anyway, our court dockets could be dangerously congested. It is essential to the integrity of the Article III system that our senior judges remain committed to serving after active duty and that those now beginning their judicial tenure do so with the expectation that it will be a lifelong commitment.

Despite the increase in workload, the real compensation of federal judges has diminished substantially over the years. Between 1969 and 2006, the real pay of district judges declined by about 25 percent. In the same period, the real pay of the average American worker increased by eighteen percent. The resulting disparity is a forty-three percent disadvantage to the district judges. If judges' salaries had kept pace with the increase in the wages of the average American worker during this time period, the district judge salary would be \$261,000. That salary is large compared to the average wages of citizens, but it is still far less than the salary a highly qualified individual in private practice or academia would give up to become a judge.

Since 1993, when the Ethics Reform Act's Employment Cost Index pay adjustment provision ceased operating as Congress intended, the real pay of judges has fallen even faster. Inflation caused a loss of real pay of over twelve percentage points, while the real pay of most federal employees has outpaced inflation by twenty-five percentage points.

Former Federal Reserve Chairman Paul Volcker has advocated raising the salary of federal district judges to remedy this decades-long period of neglect. His proposal would at least restore the judiciary to the position it once had. My concern is that any lesser increase would be counterproductive because it would indicate a Congressional policy to discount the role the federal court system has as an equal and coordinate branch of a constitutional system that must always be committed to excellence.

Internal --- Congress Strips the Court

The congress will backlash against unpopular decisions and strip the court of jurisdiction

Miller 09 [Mark - Professor of Political Science, Adjunct Professor of History, Director of Law and Society Program, at Clark University, 'Constitutionalism and Democracy : View of the Courts from the Hill : Interactions Between Congress and the Federal Judiciary.' University of Virginia Press, 2009, proquest] Bschulz 3

Historically, court stripping has often been threatened, for example by labor supporters and other progressives during the conservative activist era of the Supreme Court from the 1890s to the mid-1930s (see Ross 1994). Today, it is the conservatives who are acting to strip the federal courts of jurisdiction over a variety of types of cases. While their actions are controversial, some conservatives, such as former attorney general Edwin Meese, have clearly stated their preference that Congress strip the courts of jurisdiction under many circumstances. These conservatives often feel that too many federal judges take a liberal activist approach to judicial decision making and that court-stripping legislation is one clear way to reign in a judiciary in which federal judges improperly "legislate from the bench." In other words, these conservatives feel that the courts should reflect the will of the majority, and they perceive liberal judicial activism as counter-majoritarian. For example, overstating the historical record a bit Meese said, "Congress has in the past withdrawn jurisdiction from the lower federal courts when it became dissatisfied with their performance or concluded that state courts were the better forum for certain types of cases" (Meese and Dehart 1997, 181– 82). In September 2004 the Senate Republican Policy Committee distributed a report entitled Restoring Popular Control of the Constitution: The Case for Jurisdiction-Stripping Legislation. The report states that "the American people must have a remedy when they believe that federal courts have overreached and interpreted the Constitution in ways that are fundamentally at odds with the people's common constitutional understandings and expectations" (Kyl 2004, 1). Thus court stripping is a method for changing the direction of federal judicial decisions and altering the independent voice of the courts in the inter-institutional constitutional dialogue.

Congress will strip the courts of jurisdiction because of controversy – empirics prove

Brandenburg 09 [Bert - Executive Director, Justice at Stake Campaign. Justice at Stake (JAS) is a nonpartisan national partnership working to keep courts fair, impartial, and independent. "OURTS UNDER PRESSURE: THE GROWING THREAT TO IMPARTIAL JUSTICE", 59 Syracuse L. Rev. 371 (2008-2009)] Bschulz 6

The second recent threat to impartial justice was a surge in efforts to strip jurisdiction from federal courts, often in retaliation for rulings in highprofile cases. It was not the first such round of attacks. After the Supreme Court's 1954 Brown v. Board of Education decision, angry lawmakers sought to block federal courts from ruling on public education laws.²⁴ During the 1960s and 1970s, issues like the draft, Miranda warnings, busing, school prayer, and abortion sparked efforts to cut the courts' power to review challenges to federal laws. ²⁵ The latest cycle of assaults began in 1996, a presidential election year that saw three major court-stripping laws and a political assault on a sitting judge. ²⁶ In the wake of the Oklahoma City bombing, Congress passed an anti-terrorism bill that dramatically restricted federal judicial review for death row inmates and for many immigrants facing deportation. ²⁷ The Illegal Immigration Reform and Immigrant Responsibility Act eliminated or severely restricted the ability of immigrants to seek a federal court review as they seek asylum from persecution or fight deportation efforts. ²⁸ The Prison Litigation Reform Act drastically diminished the ability of prisoners to get a day in court to object to abusive prison conditions, and weakened the authority of federal judges to craft remedies when those conditions actually break the law. ²⁹ The efforts quickened after the 2002 elections. The 2003 "Feeney Amendment" sharply limited the ability of federal judges to issue sentences below federal guidelines.³⁰ In 2004, the House of Representatives passed a measure to strip federal courts of jurisdiction to rule on challenges to the Pledge of Allegiance. ³¹ The House also passed the "Marriage Protection Act," which singled out one law (the Defense of Marriage Act) for special treatment, exempting it from any review by the federal courts.³² Another measure passed in 2005 gave the Secretary of Homeland Security unilateral power to waive any law on the books that might interfere with the building of border fences-including civil-rights and minimum-wage protections, and even criminal laws.³³ The recent surge in culture-war attacks on the courts culminated in the effort to rig the Terri Schiavo case. Congressional efforts to send a family dispute into federal court were so politically transparent that they generated a national backlash.³⁴ Other measures fell short, but showed the surge in anti-court sentiment. Proposed marriage amendments to the Constitution sought to take powers from state judges to rule on family law issues they have handled for centuries. ³⁵ The "Constitution Restoration Act" would have denied federal courts the power to hear any suit involving a governmental official's "acknowledgment of God as the sovereign source

of law, liberty, or government." 36 For good measure, any judge caught exceeding his or her jurisdiction could have been impeached.³⁷ A separate House measure would have allowed Congress to reverse any Supreme Court decision that struck down a law on constitutional grounds.³⁸

Congress can undercut the Court in a number of ways when it disagrees with decisions

Miller, 6 --- Associate Professor and Chair of the Department of Government and International Relations at Clark University (Summer 2006, Mark C., Case Western Reserve University, "SYMPOSIUM: JUDICIAL INDEPENDENCE AND JUDICIAL ACCOUNTABILITY: SEARCHING FOR THE RIGHT BALANCE: When Congress Attacks the Federal Courts," 56 Case W. Res. 1015))

IV. Conclusion

There are of course other examples of ways that a determined majority in Congress can attack the independence of the federal judiciary. It is beyond the scope of this paper to discuss in detail some of the other mechanisms that could be used by Congress to attack the federal courts. For example, this paper has discussed neither court packing plans such as those advocated by President Franklin Roosevelt,ⁿ⁸⁰ nor various plans to prevent federal courts from hearing certain types of cases, commonly referred to as court-stripping proposals.ⁿ⁸¹ Other actions that Congress could take include proposals to divide up the Ninth Circuit U.S. Court of Appeals in response to the particular ideological path taken by that court.ⁿ⁸² Certainly, a determined majority in Congress can find other innovative avenues for attacking the courts.

It is clear that the federal courts and Congress have radically different institutional cultures and wills. These different institutional wills and institutional perspectives mean that the two branches usually do not understand the other's decision-making process very well. For the sake of the rule of law, we need to know more about the interactions and relationships between these two governmental bodies. The Entin and Jensen paper takes an important step closer to reaching that level of knowledge.

Congress can meddle with courts in a number of ways after offending opinions

Geyh, 03 --- Professor of Law at Indiana (Winter/Spring 2003, Charles G., Indiana Law Journal, "Judicial Independence, Judicial Accountability, and the Role of Constitutional Norms in Congressional Regulation of the Courts," 78 Ind. L.J. 153))

There is a multitude of ways that a motivated Congress could conceivably get the Supreme Court's attention. I have already alluded to some: it could impeach and remove justices who issue offending opinions, or it could defy unacceptable decisions, exclude troublesome categories of cases from the Supreme Court's appellate jurisdiction, pursue constitutional amendments limiting judicial review, or manipulate judicial appointments so as to avoid the confirmation of judges who would perpetuate a narrow view of congressional power. In addition, it could hold the judiciary's budget hostage, or (with the aid of a cooperative President) enlarge the size of the Supreme Court to ensure a sympathetic majority.

With the possible exception of manipulating the appointments process, the foregoing suggestions are likely to elicit an "oh, come now" response. But why? One [*157] explanation is that such proposals are thought to violate the independence of the judiciary as guaranteed by Article III of the U.S. Constitution; another is that, regardless of their constitutionality, these proposals are unacceptable because they undermine the spirit of interbranch comity that the political branches seek to preserve. And yet, according to oft-cited lore, the political branches have exploited these devices for judicial control throughout our history, and with rare exception, the judiciary has acquiesced:ⁿ¹⁶ at the turn of the Nineteenth century, Congress packed and unpacked the lower courts for partisan ends in the "Midnight Judges" affair, and impeached judges for their strident, pro-Federalist sympathies; a generation later, Georgia defied the Supreme Court altogether, and President Andrew Jackson declared that he had the constitutional authority to do likewise; during Reconstruction, a radical Republican Congress stripped the Court of jurisdiction to undo an important piece of Reconstruction legislation, and, the story goes, packed and unpacked the Supreme Court for political purposes. During the populist and progressive period, proposals to curb or eliminate judicial review and end life tenure abounded, culminating in a successful effort by Franklin Delano Roosevelt to intimidate the Supreme Court into changing its pattern of decisionmaking by proposing to pack the Court with New Deal sympathizers. And a generation later, Richard

Nixon campaigned to end Warren Court liberalism in the wake of calls to impeach Earl Warren and William O. Douglas, and did so by replacing retiring justices with avowedly more conservative successors.

A2: Congress Can't Reduce Salary

Congress can prevent judicial pay increases – this crushes judicial independence

Miller 09 [Mark - Professor of Political Science, Adjunct Professor of History, Director of Law and Society Program, at Clark University, 'Constitutionalism and Democracy : View of the Courts from the Hill : Interactions Between Congress and the Federal Judiciary.' University of Virginia Press, 2009, proquest] Bschulz 7

While Congress is constitutionally barred from reducing the salaries of federal judges, an angry Congress can refuse to grant them salary increases. In 1964, for example, Congress increased the salaries for lower federal judges by \$7,500 per year but increased those for Supreme Court justices by only \$4,500 per year, a clear indication that Congress was unhappy with several Court decisions (see Schmidhauser and Berg 1972, 9). During the fight between FDR and the Supreme Court over the constitutionality of the New Deal, Congress did the reverse by enacting financial incentives for early retirement for the justices, hoping to encourage some retirements from the Court so that Roosevelt could appoint justices more favorable to his views (see Murphy et al. 2006, 337).

Today judicial salaries remain a key point of contention between Congress and the federal courts. Seth Stern noted that "salaries [for federal judges] are far lower than what fresh-faced law school grads can make at big corporate firms" (2002). Chief Justice Roberts said in his 2006 Year-End Report that keeping judicial salaries well below those of many law professors today is a "constitutional crisis" and a potential threat to judicial independence (2007, 1). In his appearance before the Senate Judiciary Committee in February 2007, Justice Kennedy echoed this theme: "The Committee knows that judges throughout the United States are increasingly concerned about the persisting low salary levels Congress authorizes for judicial service. Members of the federal judiciary consider the problem so acute that it has become a threat to judicial independence" (U.S. Senate 2007). In his 2007 Year-End Report Chief Justice Roberts again raised the concern of inadequate judicial salaries, noting that many federal judges received lower salaries than some first-year lawyers at the largest firms in major U.S. cities, where many of the federal judges serve. The chief justice also praised congressional efforts to increase judicial salaries, including action by the House Judiciary Committee in late 2007 to give federal judges cost-of-living adjustments that had been denied to them since 1989. The Senate Judiciary Committee passed similar legislation in February 2008. In his 2007 Year-End Report Roberts declared, "I am resolved to continue Chief Justice Rehnquist's twenty-year pursuit of equitable salaries for federal judges" (2008, 6).

The main problem for federal judges is that since 1989, annual cost-of-living increases for federal judges have been linked to congressional salary increases. When Congress votes to raise its own pay, it often hides behind the fact that federal judges will also enjoy the salary increase. When members of Congress refused to vote themselves annual cost-of-living increases (usually during election years), these increases were automatically denied to federal judges. Members of Congress also are hesitant to allow other federal employees, including federal judges, to earn higher salaries than they do. In December 2007 The Third Branch, a newsletter published by the Administrative Office of the Federal Courts, carried an interview with Congressman Howard Berman (D-CA), the then chair of the House Judiciary Committee's Subcommittee on Courts, the Internet, and Intellectual Property, the subcommittee in which legislation to decouple judicial salaries from congressional salaries originated. When asked about the opposition of some members of Congress to the legislation, Congressman Berman responded, "Some of my colleagues believe that linking the salaries of federal judges to our own salaries will somehow make it politically more palatable for Members of Congress to approve cost-of-living adjustments for themselves. The evidence simply does not bear this out" (Berman 2007, 1).

AT: Aff Doesn't Overturn Statute

Even reviewing and interpreting statute can cause Congressional backlash

Crabb, 12 --- United States District Judge, Western District of Wisconsin (2012, Barbara B., Wisconsin Law Review, "ADDRESS: ROBERT W. KASTENMEIER LECTURE: BRIDGING THE DIVIDE BETWEEN CONGRESS AND THE COURTS," 2012 Wis. L. Rev. 871, JMP)

Even when a judge upholds a statute, she may frustrate the will of Congress unknowingly by reading the statute in a way Congress never intended. It may be that Congress did not make its intention clear or the statute contains a drafting error or the judge simply makes a mistake. It is true, of course, that not every legislator feels a personal affront when a statute is ruled unconstitutional or when it is misread. Some were not in office when it was passed; others opposed its passage and are glad to see it overturned; others voted for it only because they anticipated it would not survive judicial review. Nevertheless, the fact that judges have this responsibility and exercise it is a source of irritation to members of Congress.

AT: Congress Can't Strip

Congress has authority to strip courts

Yoo, 7 --- Professor of Law at UC Berkeley (Fall 2007, Jesse Choper and John Yoo, California Law Review, "Wartime Process: A Dialogue on Congressional Power to Remove Issues from the Federal Courts," 95 Calif. L. Rev. 1243, JMP)

Yoo: Whether Congress has the authority to remove federal jurisdiction over a class of federal question cases is a difficult issue, but it seems to me that the balance of authorities is in favor of the power. Congress has traditionally been understood by most, n36 but not all, n37 commentators to hold the power to decide whether to implement Article III's jurisdictional grants to the federal courts. This power comes from several sources. First, Article III, Section 2's enumeration of the cases and controversies to which the federal judicial power extends has not generally been thought to be self-executing. n38 Second, Congress has the power to decide whether to create the inferior courts at all, and this power has been thought to imply the authority to define what cases will be heard by those courts. n39 These powers allow Congress to remove whole categories of cases from the jurisdiction of both the lower federal courts and the Supreme Court.

Neither Article I nor Article III appears to place any substantive limitation on how Congress chooses to use these powers. In the past, the Court has accepted the removal of jurisdiction when Congress obviously sought to stop the Court from reaching substantive outcomes with which [*1254] Congress disagreed. The clearest example of this is Ex Parte McCordle, in which the Court upheld Congress's elimination of an 1867 Act's grant of appellate jurisdiction to the Supreme Court in federal habeas claims. n40 Reacting to Ex Parte Milligan, n41 decided the year before McCordle, Congress stripped the Court of jurisdiction because it feared that the Court would use the case to pass on the constitutionality of military occupation of the Southern States during Reconstruction. Congress even went so far as to act after the Court had heard oral argument but before it had issued a judgment. n42 Nonetheless, in McCordle the Court upheld the law and dismissed the case, saying that it lost jurisdiction the moment Congress passed the stripping law and had no authority to declare the law invalid. In Lauf v. E.G. Shinner, the Norris-La Guardia Act removed jurisdiction from the federal courts to issue injunctions in labor dispute cases, again because Congress disagreed with the course of previous judicial decisions. n43

AT: Congress Won't Strip

Congressional inaction is not inevitable --- it is a product of judicial restraint that the plan breaks. That's the 1nc Baum ev.

Past isn't relevant --- congressional backlashes against the court could be successful in the current partisan environment

IU News Room, 6 (4/6/2006, Indiana University News Room, "Congressional control over the courts? History says no, but it could happen," <http://newsinfo.iu.edu/news-archive/3254.html>, JMP)

BLOOMINGTON, Ind. -- Despite regular confrontations with the courts throughout American history, Congress has rarely used its powers to control the federal judiciary. But that tradition may be changing, according to an Indiana University Bloomington law professor.

An intensifying partisan divide over the future of America's judicial system, which threatens to undermine public confidence in our courts and the rule of law, is jeopardizing the longstanding balance between the courts and Congress, argues Charles Geyh in his debut book, *When Courts and Congress Collide: The Struggle for Control of America's Judicial System* (University of Michigan Press, 2006).

History has shown that congressional proposals to control the decisions judges make by impeaching them, taking away their jurisdiction, holding their budgets hostage or "un-making" their courts rarely succeed, said Geyh, a professor of law and Charles L. Whistler faculty fellow at the IU School of Law-Bloomington.

Yet he believes that the recent round of attacks on courts -- from Congress, pundits and evangelical conservatives -- has increased the possibility that current **proposals to control the federal judiciary might actually succeed.**

"There's this confluence of events -- you might call it a perfect storm of factors -- where you have a deeply polarized public, an evangelical right sharpening the divide over moral issues that ultimately the courts will have to decide, and a new way of looking at judges as being controlled by their political preferences," Geyh said. "In this environment, it may prove extremely difficult to preserve a system where we give judges breathing room and latitude to decide cases without **legislative interference.**"

While Congress has long been willing to influence judicial decision-making indirectly by blocking the appointments of ideologically unacceptable nominees, it has, with rare exceptions, resisted employing more direct methods of control. So why hasn't Congress made good on its threats to strip federal judges of their autonomy? Geyh believes the answer lies in a custom of respect for the judiciary's independence that Congress has honored for two centuries. This custom is grounded in the belief that judges will usually decide cases based on the facts and the law and seek immunity from political and other pressures that could corrupt their impartial judgment, he said.

More recently, though, scholars and policy makers have challenged that belief and argued that "independent" judges routinely disregard the law and decide cases in light of their personal politics. This ongoing campaign against "judicial activism" and "legislating from the bench" has eroded public confidence in the courts, Geyh said. Along with an escalating battle between the nation's political parties for control of judicial appointments, it has created a potentially destabilizing environment that threatens to jeopardize the "dynamic equilibrium" between Congress and the courts.

"If you already believe that judges aren't following the law and are guided by their political preferences, then why even have independent judges?" Geyh asks. **"Why not just control them?"**

AT: Congress Doesn't Care

Congress does react to controversial decisions and disregard of congressional directives

Crabb, 12 --- United States District Judge, Western District of Wisconsin (2012, Barbara B., Wisconsin Law Review, "ADDRESS: ROBERT W. KASTENMEIER LECTURE: BRIDGING THE DIVIDE BETWEEN CONGRESS AND THE COURTS," 2012 Wis. L. Rev. 871, JMP)

The divides between and among the branches are a given in our system. The congressional-executive divide is a continuing struggle for supremacy, fueled by the constant pull of partisan politics, ideology, lobbyists, the media, financial influence, and the unrelenting focus on the next election. The judicial-legislative divide is marked by legislative indifference, broken intermittently by periods of anger provoked by controversial judicial decisions or the perception that judges are disregarding congressional directives. Partisan politics are at play in the relationship, particularly when Congress confirms, or refuses to confirm, judicial nominees and when it establishes, or refuses to establish, new judgeships, but these fights are essentially between Congress and the executive branch. The judiciary is the battlefield, not the army.

The fact is that "few in Congress know much about or pay attention to the third branch of government," as Congressman Kastenmeier observed in 1988. n1 He continued: "in some respect, the judiciary for the Congress is ... sort of tolerated by benign neglect." n2 Columnist Andrew Cohen made essentially the same point in a March 18, 2012, article on TheAtlantic.com, lamenting the slow pace of Senate confirmation of judicial nominees and the lack of understanding among some legislators of what federal judges do. n3 He noted in particular the legislative failure to appreciate the importance of judges to job creation "to the extent [that judges] bring certainty and finality to legal disputes" and to "the financial uncertainty that pending litigation brings." n4

This lack of understanding is unfortunate, but not surprising. Senators and representatives are inundated with matters of importance to attend to. The old days in which long-serving legislators developed knowledge and experience in particular areas have largely faded away; legislators do not serve as long as they used to, even when they are not subject to term limits. The legislative week is shorter, because more members keep their homes in their districts, and the constant pressure [*873] to raise reelection funds means less time for learning about legislation and providing oversight. Increasing partisanship makes it harder for legislators to agree on even routine matters. (And, to be fair, judges do not know all that much about the nuts and bolts of legislating.)

AT: Courts Will Block

Courts can't check congressional backlash

Crabb, 12 --- United States District Judge, Western District of Wisconsin (2012, Barbara B., Wisconsin Law Review, "ADDRESS: ROBERT W. KASTENMEIER LECTURE: BRIDGING THE DIVIDE BETWEEN CONGRESS AND THE COURTS," 2012 Wis. L. Rev. 871, JMP)

When Congress responds to perceived problems, in the courts or elsewhere, by proposing legislation that the courts find threatening to their independence, there is little the courts can do. If the legislation is a true threat to decisional independence, the courts may be obliged by the Constitution to strike down the legislation.

When the legislation is a threat only to institutional independence and therefore not prohibited by the Constitution, the courts must fall back on persuasion, diplomacy, and compromise.

The Civil Justice Reform Act provides an example. The Act raised questions about judicial independence when it was proposed in 1990 for the purpose of reducing the cost of litigation. n37 To judges, the bill was overly intrusive: it attempted to prescribe exactly how courts should handle civil cases; when they should hold pretrial conferences; who should hold them (judges only; never magistrates); and how quickly judges were to get cases to trial. n38 In addition, it required analyses of caseloads and semiannual reporting of motions under advisement and cases that had been pending for more than three years. n39

Impacts

No Solvency --- Congress Ignores Court

Congress just ignores court decisions

Miller 09 [Mark - Professor of Political Science, Adjunct Professor of History, Director of Law and Society Program, at Clark University, 'Constitutionalism and Democracy : View of the Courts from the Hill : Interactions Between Congress and the Federal Judiciary.' University of Virginia Press, 2009, proquest] Bschulz 11

Of course, when the Supreme Court issues a constitutionally based decision, there is no guarantee that Congress will actually follow the ruling. At times, **Congress just ignores constitutional decisions from the courts.** For example, in Immigration and Naturalization Service v. Chadha (1983) the Supreme Court ruled that Congress could not constitutionally use a one-house veto to overrule decisions by federal agencies. The response from Congress has been to continue to enact such legislative vetoes, and a variety of presidents have signed them into law. Thus Congress has effectively ignored the Court's decision in Chadha (see Fisher and Adler 2007, 222–24). **It is difficult for the Supreme Court to be an active participant in the inter-institutional constitutional dialogue when the other branches simply ignore the Court's pronouncements.**

No Solvency --- Congress Overrides Court

Congress regularly overrides Supreme Court decisions that overturn federal law

Emenaker, 2013 – MA Government at Johns Hopkins University, MA Social Science at Humboldt State University, BA Political Science with minor in Sociology at Humboldt State University (Ryan Eric, “Constitutional Interpretation and Congressional Overrides: Changing Trends in Court-Congress Relations”, College of the Redwoods, March 28-30, 2013, SSRN database)//TT

A third trend identified by this paper is the increased number of successful overrides to Court decisions nullifying federal law. In most instances when federal law was nullified, bills were proposed to modify the decision. In 29.3 percent of cases invalidating federal law, during the Rehnquist Court, Congress successfully overrode the Court decision. The rate of overrides found in this study is significantly higher than the rate found in a previous study of constitutional-interpretation-overrides. This rate of overrides is also significantly higher than what has been found in studies focused on statutory overrides. Obviously, the low override rates found in studies focusing on statutory interpretation decisions fail to reflect the commonality of constitutional-interpretation-overrides. This may indicate—despite commonly held beliefs—that it is actually easier for Congress to override a decision based on constitutional interpretation than it is a decisions based on statutory interpretation. This frequency of overrides also directly challenges the belief that the Court has the final word in interpreting the Constitution. Further these results negate the notion that Congress’s only option after the Court nullifies federal law is amending the Constitution, clearly Congress can and does simply pass statues to modify constitution-interpretation-decisions. The above information clearly indicates that interactions between the Court and Congress do not end with judicial review. It also indicates that theories of Court-Congress relations that do not account for constitutional-interpretation-overrides are incomplete.

It is important to note that the high rate of nullifications of federal law, and the high rate of congressional overrides, both observed during the Rehnquist Court, do not necessarily reflect hostility between the two branches. In some instances the Court struck down acts of Congress by inviting a congressional override. This clearly supports theories that the justices do not always seek to avoid being overridden. Override invitations suggest it is too simplistic to conclude that Court action nullifying federal law, or congressional attempts to override, automatically indicate strained relations between the branches.

At the same time it is also important to note that not all congressional overrides are based on invitations. This means that Supreme Court judges sometimes fail to avoid uninvited overrides. If the justices are acting strategically to avoid overrides, as rational choice scholars suggest, they often miscalculate. The interactions between the Rehnquist Court and Congress also highlighted a process involving multiply rounds of constitutional interpretation. As the process in the Metropolitan Washington Airports Act and Boerne showed, interactions between Congress and the Court continued after the first instance of judicial review. Current rational choice models fail to diagram this level of complexity, oversimplifying the interactions of the two branches.

Turns Case --- SOP / Modeling

Turns SOP and guts judicial model

Schwartz, 12 --- Symposia Editor, Cardozo Law Review (Karissa M., Cardozo Law Review de novo, "ARTICLE: SOUND THE ALARM: THE CONSTITUTIONAL CRISIS OF JUDICIAL COMPENSATION," 2012 Cardozo L. Rev. De Novo 101, JMP)

CONCLUSION

The country's first constitutional crisis, Marbury v. Madison, n197 resulted in the doctrine of judicial review and established the independence of the judicial branch. Marbury v. Madison created a vigorous judiciary, which has served the United States well for more than two hundred years. Since that decision, judges have weighed in on major questions of constitutional rights that have shaped American society. Judges have contributed to the growth and prosperity of this nation and are entitled to be compensated fairly for the work they do. n198 No other branch can take on the role of the judiciary, as it goes expressly against the constitutionally mandated separation of powers doctrine.

Thus, Congress must adhere to the Constitution and take the necessary steps to fairly compensate the federal judicial branch. If Congress fails to make adjustments to the current compensation structure, America will lose the diverse and independent judiciary that has created the highest standard of jurisprudence in this nation, if not the world.

Turns Case --- Decision Won't Be Implemented

Court stripping has been the recent norm in war power cases --- guts solvency

Alexander, 7 --- Professor of Law at Stanford (Fall 2007, Janet Cooper, California Law Review, "Jurisdiction-Stripping in a Time of Terror," 95 Calif. L. Rev. 1193, JMP)

Introduction

Although the question of congressional power to limit the jurisdiction of the federal courts is a centerpiece of the federal courts canon, there are few decided cases that grapple squarely with the constitutional issues involved in jurisdiction-stripping. n1 For the past fifty years or so, jurisdiction-stripping bills have been introduced on a host of politically controversial issues n2 including racial discrimination, free speech and association, the rights of criminal defendants, state legislative apportionment, abortion, school prayer, gay marriage, n3 and environmental preservation. n4 In the end, however, Congress usually backs off; very few such bills have been enacted. n5 And while the Supreme Court has repeatedly [*1194] said that "substantial constitutional questions" would be raised if judicial review of constitutional claims were unavailable, n6 the Court has almost always managed to resolve challenges to jurisdiction-stripping statutes on non-constitutional grounds-most recently in June 2006. n7 Both Congress and the Court have avoided confrontation. n8

But now the Executive Branch seems determined to force the constitutional issue. After the Supreme Court rendered decisions requiring procedural safeguards for detainees in the war on terrorism, n9 and with more cases pending that raised additional claims, n10 the Administration elected to press its vision of exclusive and unfettered presidential power and its effort to make Guantanamo Bay a law-free zone where the Constitution does not operate. When the Supreme Court held in *Rasul v. Bush* that the Guantanamo detainees had a right to file habeas petitions challenging their detention and stated in a footnote that their petitions "unquestionably" described violations of the Constitution, n11 Congress passed the Detainee Treatment Act of 2005 (DTA) n12 withdrawing federal jurisdiction over habeas petitions by Guantanamo detainees. n13 Senators who opposed [*1195] eliminating habeas jurisdiction noted that *Hamdan v. Rumsfeld*, a habeas petition challenging the constitutionality of military commission trials of detainees, was then pending before the Supreme Court, n14 and explicitly likened the situation to that of *Ex parte McCordle*. n15

The Administration's handling of the detainees received another blow when the Court held in *Hamdan* that the DTA's jurisdiction-stripping provisions were inapplicable to pending cases and invalidated the military commissions because they violated the Uniform Code of Military Justice (UCMJ) and the Geneva Conventions. n16 Rather than complying with the decision, or seeking Congressional authorization of appropriate procedures as the Court strongly hinted, however, the Administration secured the passage of the Military Commissions Act of 2006 (MCA). n17 Although the MCA was presented as a compromise bill it in fact was a virtually complete victory for the President, a congressional endorsement (albeit over strong opposition in the Senate) of his broad claims of presidential power in the war on terrorism.

The statute expands the definition of enemy combatant far beyond the Supreme Court's narrow definition in *Hamdi*. Whereas *Hamdi* defined "enemy combatant" as one who was "part of or supporting forces hostile to the United States or coalition partners in Afghanistan and who engaged in [*1196] an armed conflict against the United States there," n18 the MCA expands the definition to include those who have "purposefully and materially supported hostilities" against the United States or its allies. n19

Hamdi did not authorize detention of anyone who did not actually engage in armed conflict against U.S. or allied troops in Afghanistan. The MCA, however, permits the President to treat persons captured far from any battlefield, who have not participated in any violent activity, as enemy combatants. Indeed, the Government's lawyers have taken the position in court that a "little old lady in Switzerland who writes checks to what she thinks is a charity that helps orphans in Afghanistan but ... really is a front to finance al-Qaeda activities" can be classified as an enemy combatant. n20

The MCA also makes all noncitizens who are declared to be enemy combatants subject to trial by military commission rather than the courts, n21 including even lawful permanent residents located within the United States. The provisions denying habeas review apply to all proceedings "relating to" such military commission prosecutions. n22 Additionally, the MCA authorizes the use of military commission procedures that fall short of the requirements of the Geneva Conventions, contrary to the holding of *Hamdan*; purports to give the President the power to interpret the meaning and application of the Conventions; n23 attempts to legislatively define the commissions and the MCA's amendments to the War Crimes Act into compliance with the Conventions; n24 declares that the Conventions may not [*1197] be judicially enforced by any individual, including citizens, n25 despite *Hamdan's* holding to the contrary; and prohibits the courts from using foreign sources of law in cases interpreting the War Crimes Act. n26 In addition to its express provisions, the MCA strengthens the President's assertion of legal authority in his actions toward the detainees by placing them into the highest category of deference under *Youngstown*, n27 when the President exercises his Article II powers with the express authorization of Congress exercising its Article I powers.

The MCA attempts to insulate all of these innovations from constitutional scrutiny by eliminating the possibility of judicial review. While the DTA denied habeas only for noncitizens detained at Guantanamo by the Department of Defense, the MCA purports to deny habeas (and "any other action" seeking judicial review) for any alien, regardless of geographical location, who has been "determined by the United States to have been properly detained as an

enemy combatant or is awaiting such determination." n28 The MCA thus strips habeas protection from lawful resident aliens detained within the United States as well as detainees at Guantanamo and other locations outside the United States.

The further effect of the jurisdiction-stripping provisions of the DTA and the MCA is to eliminate any means of enforcing Rasul and Hamdan - which is to say, to render those decisions nullities if the government does not wish to comply with them.

Nothing in the DTA or MCA requires a speedy determination of enemy combatant status, or any determination at all, and no review is possible within the military or court systems until a [*1198] final decision is made by a Combatant Status Review Tribunal (CSRT) or a military commission. It would now be possible for the administration simply not to conduct status determinations, and the affected detainees would have no way to obtain any relief. In fact, the statutes attempt to make the provisions of the Geneva Conventions, the War Crimes Act, and the substantive restrictions of the Detainee Treatment Act unenforceable as well by expressly eliminating jurisdiction for any judicial review of the conditions of confinement, including interrogation through torture or cruel, inhumane and degrading treatment n29 and forced transfer of detainees to other countries for interrogation and imprisonment. n30 Unlike the DTA, which explicitly applied only to noncitizens in the custody of the Defense Department at Guantanamo Bay, the MCA's jurisdiction-stripping provisions apply to all noncitizens who are determined to be enemy combatants. n31 The provision barring claims based on the Geneva Conventions applies to all persons, including citizens and persons who are not in custody. n32

As one supporter of the legislation put it:

Congress and the president ... told the courts, in effect, to get out of the war on terror ... It is the first time since the New Deal that Congress had so completely divested the courts of power over a category of cases. It is also the first time since the Civil War that Congress saw fit to narrow the court's habeas powers in wartime because it disagreed with its decisions. The law ... directly reverses

Hamdan ... n33

2nc Rule of Law Impact

Rule of law solves war—multiple triggers

Feldman '8 [Noah Feldman, a contributing writer for the magazine, is a law professor at Harvard University and an adjunct senior fellow at the Council on Foreign Relations, "When Judges Make Foreign Policy", NEW YORK TIMES, 9—25—08, www.nytimes.com/2008/09/28/magazine/28law-t.html]

Looking at today's problem through the lens of our great constitutional experiment, it emerges that there is no single, enduring answer to which way the Constitution should be oriented, inward or outward. The truth is that we have had an inward- and outward-looking Constitution by turns, depending on the needs of the country and of the world. Neither the text of the Constitution, nor the history of its interpretation, nor the deep values embedded in it justify one answer rather than the other. In the face of such ambiguity, the right question is not simply in what direction does our Constitution look, but where do we need the Constitution to look right now? Answering this requires the Supreme Court to think in terms not only of principle but also of policy: to weigh national and international interests; and to exercise fine judgment about how our Constitution functions and is perceived at home and abroad. The conservative and liberal approaches to legitimacy and the rule of law need to be supplemented with a healthy dose of real-world pragmatism. In effect, the fact that the Constitution affects our relations with the world requires the justices to have a foreign policy of their own. On the surface, it seems as if such inevitably political judgments are not the proper province of the court. If assessments of the state of the world are called for, shouldn't the court defer to the decisions of the elected president and Congress? Aren't judgments about the direction of our country the exclusive preserve of the political branches? Indeed, the **Supreme Court** does need to be limited to its proper role. But when it comes to our **engagement with the world**, that role **involves taking a stand, not stepping aside**. The reason for this is straightforward: the court is in charge of interpreting the Constitution, and the Constitution plays a major role in shaping our engagement with the rest of the world. The court therefore has no choice about whether to involve itself in the question of which direction the Constitution will face; it is now unavoidably involved. Even choosing to defer to the other branches of government amounts to a substantive stand on the question. That said, **when the court exercises its own independent political judgment, it still does so in a distinctively legal way**. For one thing, the court can act only through deciding the cases that happen to come before it, and the court is limited to using the facts and circumstances of those cases to shape a broader constitutional vision. The court also speaks in the idiom of law — which is to say, of regular rules that apply to everyone across the board. It cannot declare, for instance, that only this or that detainee has rights. It must hold that the same rights extend to every detainee who is similarly situated. **This, too, is an effective constraint on the way the court exercises its policy judgment**. Indeed, it is this very regularity that gives its decisions legitimacy as the product of judicial logic and reasoning. Why We Need More Law, More Than Ever So what do we need the Constitution to do for us now? The answer, I think, is that the Constitution must be read to help us remember that while the war on terror continues, we are also still in the midst of a period of rapid globalization. An enduring lesson of the Bush years is the extreme difficulty and cost of doing things by ourselves. **We need to build and rebuild alliances — and law has historically been one of our best tools** for doing so. In our present precarious situation, **it would be a terrible mistake to abandon our historic position of leadership in the global spread of the rule of law. Our leadership matters** for reasons both universal and national. Seen from the perspective of the world, **the fragmentation of power** after the cold war **creates new dangers** of disorder that need to be mitigated by the sense of regularity and predictability **that only the rule of law can provide. Terrorists need to be deterred. Failed states need to be brought under the umbrella of international organizations so they can govern themselves. And economic interdependence demands coordination, so that the collapse of one does not become the collapse of all**. From a national perspective, our interest is less in the inherent value of advancing individual rights than in claiming that our allies are obligated to help us by virtue of legal commitments they have made. The Bush administration's lawyers often insisted that law was a tool of the weak, and that therefore as a strong nation we had no need to engage it. But this notion of "lawfare" as a threat to the United States is based on a misunderstanding of the very essence of how law operates. **Law** comes into being and is sustained not because the weak demand it but because it is a tool of the powerful — as it has been for the United States since World War II at least. The reason those with power prefer law to brute force is that it **regularizes and legitimates the exercise of authority. It is easier and cheaper to get the compliance of weaker people or states by promising them rules and a fair hearing than by threatening them constantly with force**. After all, if those wielding power really objected to the rule of law, they could abolish it, the way dictators and juntas have often done the world over.

Collapse of rule of law causes nuclear war [gender paraphrased].

Charles S. **Rhyne**, Founder and Senior Partner of Rhyne & Rhyne law firm. "Law Day Speech for Voice of America." May 1, 19**58**. American Bar Association. <http://www.abanet.org/publiced/lawday/rhyne58.html>

In these days of soul-searching and re-evaluation and inventorying of basic concepts and principles brought on by the expansion of man's vision to the new frontiers and horizons of outer space, we want the people of the world to know that we in America have an unshakable belief in the most essential ingredient of our way of life—the rule of law. The law we honor is the basis and foundation of our nation's freedom and the freedom for the individual which exists here. And to Americans our freedom is more important than our very lives. The rule of law has been the bulwark of our democracy. It has afforded protection to the weak, the oppressed, the minorities, the unpopular; it has made it possible to achieve responsiveness of the government to the will of people. It stands as the very antithesis of Communism and dictatorship. When we talk about "justice" under our rule of law, the absence of such justice behind the Iron Curtain is apparent to all. When we talk about "freedom" for the individual, Hungary is recalled to the minds of all men. And when we talk about peace under law—peace without the bloodbath of war—we are appealing to the foremost desire of all peoples everywhere. The tremendous yearning of all peoples for peace can only be answered by the use of law to replace weapons in resolving international disputes. We in our country sincerely believe that [hu]mankind's best hope for preventing the tragic consequences of nuclear-satellite-missile warfare is to persuade the nations of the entire world to submit all disputes to tribunals of justice for all adjudication under the rule of law. We lawyers of America would like to join lawyers from every nation in the world in fashioning an international code of law so appealing that sentiment will compel its general acceptance. Man's relation to man is the most neglected field of study, exploration and development in the world community. It is also the most critical. The most important basic fact of our generation is that the rapid advance of knowledge in science and technology has forced increased international relationships in a shrunken and indivisible world. Men must either live together in peace or in modern war we will surely die together. History teaches that the rule of law has enabled [hu]mankind to live together peacefully within nations and it is clear that this same rule of law offers our best hope as a mechanism to achieve and maintain peace between nations. The lawyer is the technician in man's relationship to man. There exists a worldwide challenge to our profession to develop law to replace weapons before the dreadful holocaust of nuclear war overtake our people.

U.S. Judiciary Modeled

Emerging democracies model the US and need a strong judiciary

The Center for Justice and Accountability et al, 04 (3/1/2004, Amici Curiae in support of petitioners in Al Odah et al. v USA, "Brief of the Center for Justice and Accountability, the International League for Human Rights, and Individual Advocates for the Independence of the Judiciary in Emerging Democracies," http://www.jenner.com/files/tbl_s69NewsDocumentOrder/FileUpload500/82/AmiciCuriae_Center_for_Justice_Int_League_Human_Rights_Adv_For_Indep_Judiciary2.PDF)/Jmoney

Many of the newly independent governments that have proliferated over the past five decades have adopted these ideals. They have emerged from a variety of less-than-free contexts, including the end of European colonial rule in the 1950's and 1960's, the end of the Cold War and the breakup of the former Soviet Union in the late 1980's and 1990's, the disintegration of Yugoslavia, and the continuing turmoil in parts of Africa, Latin America and southern Asia. Some countries have successfully transitioned to stable and democratic forms of government that protect individual freedoms and human rights by means of judicial review by a strong and independent judiciary. Others have suffered the rise of tyrannical and oppressive rulers who consolidated their hold on power in part by diminishing or abolishing the role of the judiciary. And still others hang in the balance, struggling against the onslaught of tyrants to establish stable, democratic governments.

In their attempts to shed their tyrannical pasts and to ensure the protection of individual rights, emerging democracies have consistently looked to the United States and its Constitution in fashioning frameworks that safeguard the independence of their judiciaries. See Ran Hirschl, The Political Origins of Judicial Empowerment through Constitutionalization: Lessons from Four Constitutional Revolutions, 25 Law & Soc. Inquiry 91, 92 (2000) (stating that of the "[m]any countries . . . [that] have engaged in fundamental constitutional reform over the past three decades," nearly all adopted "a bill of rights and establishe[d] some form of active judicial review").¹⁹ Establishing judicial review by a strong and independent judiciary is a critical step in stabilizing and protecting these new democracies. See Christopher M. Larkins, Judicial Independence and Democratization: A Theoretical and Conceptual Analysis, 44 Am. J. Comp. L. 605-06 (1996) (describing the judicial branch as having "a uniquely important role" in transitional countries, not only to "mediate conflicts between political actors but also [to] prevent the arbitrary exercise of government power"; see also Daniel C. Prefontaine and Joanne Lee, The Rule of Law and the Independence of the Judiciary, International Centre for Criminal Law Reform and Criminal Justice Policy (1998) ("There is increasing acknowledgment that an independent judiciary is the key to upholding the rule of law in a free society Most countries in transition from dictatorships and/or statist economies recognize the need to create a more stable system of governance, based on the rule of law."), available at <http://www.icclr.law.ubc.ca/Publications/Reports/RuleofLaw.pdf> (last visited Jan. 8, 2004). Although the precise form of government differs among countries, "they ultimately constitute variations within, not from, the American model of constitutionalism . . . [a] specific set of fundamental rights and liberties has the status of supreme law, is entrenched against amendment or repeal . . . and is enforced by an independent court" Stephen Gardbaum, The New Commonwealth Model of Constitutionalism, 49 Am. J. Comp. L. 707, 718 (2001).

This phenomenon became most notable worldwide after World War II when certain countries, such as Germany, Italy, and Japan, embraced independent judiciaries following their bitter experiences under totalitarian regimes. See id. at 714- 15; see also United States v. Then, 56 F.3d 464, 469 (2d Cir. 1995) (Calabresi, J., concurring) ("Since World War II, many countries have adopted forms of judicial review, which — though different from ours in many particulars — unmistakably draw their origin and inspiration from American constitutional theory and practice. See generally Mauro Cappelletti, The Judicial Process in Comparative Perspective (Oxford: Clarendon Press, 1989)."). It is a trend that continues to this day.²⁰

The US Supreme Court has international influence.

Narasimhan, 08 (Angela, Doctoral Candidate in Syracuse University's Political Science Department. "DOMESTIC COURTS, GLOBAL CHANGES: INTERNATIONAL INFLUENCES ON THE POST-COLD WAR SUPREME COURT." March 18, 2008. http://jpm.syr.edu/wp-content/uploads/2012/04/15_a.pdf)/CB

This summer, five of the nine current Supreme Court justices spent time overseas teaching law and attending international legal conferences. Although these same individuals continue to clash over the place of foreign law in their decision making – the travelers included both Justice Antonin Scalia, who vehemently opposes its consideration in Supreme Court decision making, and a vocal supporter, Justice Anthony Kennedy – their willingness to travel and interact with the global legal community was not seen as out of the ordinary. Perhaps this is because, as members of the most prominent national judiciary in the world, such interaction is considered a natural part of these justices' job. Indeed, the greater context in which the Court operates has changed in recent decades. Since the end of the Cold War, the American legal system has gained visibility abroad through the United States' involvement in constitution drafting and judicial reform. Although this involvement was originally a minor part of American foreign aid and concentrated primarily on the new democracies of Europe and the former Soviet Union, it has become a primary focus of U.S. democracy assistance across the globe in the past decade as attention has turned to the importance of securing the rule of law in transitional countries (Carothers 2005). As a result, the prominence of our national judicial system has grown and members of foreign and international courts have become more familiar with and likely to consider its decisions (Slaughter 1998). Scholars have also linked the universalization of and widespread international convergence on human rights' protections in recent decades to the active exportation and influence of the U.S. Bill of Rights (Kelemen and Sibbitt 2004).

On a global scale, a rise in both formal and informal interaction between the national judiciaries of the world has also been noted. The development of an active international community of judges and legal professionals has been part of what some scholars call judicial globalization (Slaughter 2005), a process in which national courts have become increasingly likely to communicate and consider each others' decisions (Slaughter 1997). Transnational legal activism and the involvement of non-domestic actors in domestic legal issues and cases has also become prevalent (Keck and Sikkink 1998). However, when considering the increasingly global network of legal norms and actors, the United States' role is generally considered to be limited to that of an exporter, not an importer.

Judicial Independence Key to Democracy

Judicial independence guarantees democratic stability --- interpret the constitution, protect minority rights, and maintain rule of law

Gibler and Randazzo, 11 --- *Associate Professor of Political Science, University of Alabama, AND **Associate Professor of Political Science, University of South Carolina.

(July 2011, Douglas Gibler and Kirk Randazzo, "Testing the Effects of Independent Judiciaries on the Likelihood of Democratic Backsliding", JSTOR)//Yak

The difficulties of establishing judicial independence have led some to argue that courts only reflect elite interests. Tsebelis (2002), for example, argues that courts almost never constitute a separate veto player within a polity. Judicial-selection procedures in most countries

practically guarantee that courts will fail to provide new constraints on the policymaking

process. Only when other political actors take extreme positions or when a new issue, not related to judicial selection, comes before the court can

the judiciary pose an effective veto. This is why judicial independence does not necessarily lead to higher rates of judicial annulment (Burbank, Friedman, and Goldberg 2002). This is also why institutionalization of the courts matters as newly independent courts will tend to reflect executive and/or legislative policy preferences on most issues (Epstein, Knight, and Shvetsova 2001). Nevertheless, the attention other political actors devote to

the courts suggests that judicial institutions can matter. Yeltsin was concerned enough with the Russian

constitutional court to dismiss it entirely, as was Argentina's military regime in 1976 and its

democratic regime in 1983. These rulers understand that even courts lacking judicial independence can

provide increased legitimacy for the dominant position of other political actors (Larkins 1998).

The weak version of judicial independence argues a selection effect. Courts matter by providing

constraints on the crafting of legislation. Stone Sweet (2000, see also Shapiro and Stone 1994), for example, notes that

parliaments in Europe increasingly alter their behavior to conform to court rulings, sometimes

by asking the judiciary for input before passing law. Because judicial influence places limits on the

preferences of parliamentary actors, parliaments often govern as the courts desire so that law reflects judicial interests even in the absence of judicial intervention. Difficulties arise in testing this argument since scholars must deduce prior preferences from what is likely to be strategic political

behavior. What is clear, however, is that judicial preferences affect the content of legislation even if no

annulments are observed.

The stronger version of judicial independence argues that courts can play a central role in guaranteeing democratic

stability. The judiciary is responsible for interpreting the constitution, for protecting minority

rights, and often with securing other procedures associated with liberal government (Larkins 1996).

More generally, courts are responsible for maintaining the rule of law (O'Connor 2003, 2008), and this guarantee

serves as the last step to ward ensuring the establishment of consolidated democracy (Linz and Stepan

1996). Absent judicial protection, citizens lose their ability to monitor and check the ruling regime

with speech, press, and public demonstration. Consequently, the judiciary ensures that political

leaders do not act in complete disregard for statutory and constitutional law.

Judicial independence allows a strong middle class to prevent autocratic reversions

Gibler and Randazzo, 11 --- *Associate Professor of Political Science, University of Alabama, AND **Associate Professor of Political Science, University of South Carolina.

(July 2011, Douglas Gibler and Kirk Randazzo, "Testing the Effects of Independent Judiciaries on the Likelihood of Democratic Backsliding", JSTOR)//Yak

One of the strongest predictors of democratic survival seems to be wealth (Lipset 1959,75). Przeworski and

various coauthors (Przeworski et al. 1996; Przeworski and Limongi 1997; Przeworski et al. 2000) argue that wealth provides the

antidote to all types of antidemocratic reversions. According to their research, democratic transitions occur for myriad reasons that are often unrelated to economic development. Nevertheless, high levels of state wealth (usually measured by GDP) provide strong societal protections against reversions from democracy. A strong middle class makes autocratic repression more difficult (Moore 1966; Reuschemeyer, Stephens, and Stephens 1992), and more generally, an increase in the number of powerful actors within society is more likely to bring about a competitive, democratic equilibrium (Olson 1992). Though the role of wealth in establishing democracy has been questioned (Boix 2002; Boix and Stokes 2003; Epstein et al. 2006), no one seems to doubt that wealth prevents reversions from democracy.

The mechanisms by which wealth maintains democratic stability leave room only for instrumental influence from an independent judiciary. For example, the ability of Lipset's (1959) middle class or Moore's (1966) bourgeoisie to demand political power would also presuppose a judiciary that guarantees property and other individual rights. In this case, power within society rests with these new interests, not an institution. Thus, any political leverage the court has becomes completely endogenous to public support, and absent public support, an independent judiciary becomes meaningless. Empirically, this logic suggests a spurious relationship as controls for wealth will render the effects of independent judiciaries statistically insignificant in any study involving a representative sample of cases. This argument provides a baseline hypothesis with which to test the effects of judicial independence.

Judicial independence prevents concentration of power in the executive during economic crisis

Gibler and Randazzo, 11 --- *Associate Professor of Political Science, University of Alabama, AND **Associate Professor of Political Science, University of South Carolina.

(July 2011, Douglas Gibler and Kirk Randazzo, "Testing the Effects of Independent Judiciaries on the Likelihood of Democratic Backsliding", JSTOR)//Yak

Military crises are often associated with rejections of democratic principles (Desch 1996; Gibler 2012; Thompson 1996). Though the causal mechanisms are not completely uniform across theories, the majority of these second-image-reversed arguments assume that conflict changes the distribution of power within the state (Rasler and Thompson 2004). The modal path toward reversions to authoritarianism follows several well-documented responses to external threat. First, the executive seeks increased political power to efficiently deal with potential threats (Rasler 1986). This move is backed by a public that seeks security and defense of national pride (Mansfield and Snyder 2003). Increased nationalism and increased power for the executive mean that dissent will be quashed as an intolerant majority moves against the opposition (Gurr 1998). Institution ally, a strong military is created to deal with the threat, and this military becomes a significant force within society (Lasswell 1997). Finally, power is institutionalized within an executive that now has a strong military to enforce its position within the polity (Gibler 2010).

Building on the connection between wealth and democratic survival, many scholars have argued that economic crises can also lead to increased concentrations of power within the executive. O'Donnell's (1973) work provided one of the first of these arguments. Concentrating on Brazil and Argentina, O'Donnell argued that the wealth initially created by import substitution industrialization did not translate initially into strong regimes capable of withstanding economic downturns. When economic crises crippled the governments, powerful elite interests established authoritarian regimes to facilitate the painful economic measures necessary for the protection of property and economic recovery (see also Crowther 1986; Im 1987). Meanwhile, Gasiorowski (1995) provides substantial empirical support for the argument that democratic breakdown follows economic recessions (see Kaufman 1976; Skidmore 1977; Wallerstein 1980).

The economic crisis model has also been incorporated into the foreign policy literature by the diversionary use of force theory. According to this theory, during difficult economic times, leaders may provoke low-level conflicts to distract the public from failures in leadership. Successful involvement in foreign conflicts then creates a rally effect that salvages their electoral future (DeRouen 2000). Although the model has received only modest empirical support when predicting the use of force internationally (Gelpi 1997; Levy 1989; and more recently, Oneal and Tir 2006), each theory explicitly assumes at least a partial breakdown of democracy during economic crises as the executive seeks increased political power. Note, too, the implicit assumption that public support follows the use of force; this is consistent with the external threat argument above.

Role of Judiciary

Both crisis models outlined above rely on a common mechanism that leads to democratic reversion: crisis affects the domestic bargaining power of various actors, this advantages the executive vis-a-vis other domestic actors, and eventually, power is concentrated in the executive as democratic principles are eroded. The causal mechanism in both scenarios relies on the opportunity given the executive by each type of crisis, as this opportunity, when coupled with popular backing, allows the executive to supersede the constitution in favor of expediency.

An independent judiciary can affect this process in two ways. First, established judiciaries are likely to deter executives from using the crisis as an opportunity to gain power. An executive during crisis will likely not risk additional political decisions that question their authority. While this weak form of judicial independence creates few judicial annulments, the court does buttress the political power of other societal and governmental interests against executive incursions. The strong form of judicial independence manifests when the executive is overtly checked with annulments as the court favors minority rights and participatory democracy. In either case, the executive is constrained by the court and democracy maintains. Both forms of judicial independence lead to our central hypothesis:

H1: Established independent judiciaries decrease the likelihood of regime reversions toward authoritarian governmental systems.

In Hypothesis 2, we modify slightly the argument regarding the effects of an independent judiciary by including a time restriction. As the literature suggests, only established independent judiciaries are likely to have an ability to counter executive or legislative influences. Since most studies view new judiciaries as reflections of elite interests, we are agnostic about the effects of new courts:

H2: New independent judiciaries will have no effect on the likelihood of regime reversions toward authoritarian governmental systems.

Courts need independence to preserve legitimacy and prevent authoritarianism

Gibler and Randazzo, 11 --- *Associate Professor of Political Science, University of Alabama, AND **Associate Professor of Political Science, University of South Carolina.

(July 2011, Douglas Gibler and Kirk Randazzo, "Testing the Effects of Independent Judiciaries on the Likelihood of Democratic Backsliding", JSTOR)//Yak

Should judiciaries succeed in creating broad popular support and establish their independence, the court can serve as a powerful political force within the regime. This explains why autocratic regimes often preempt the threat of court-led embarrassments and restrict the judiciary's ability to hear unfriendly cases. Although courts under authoritarian regimes tend to consist of impartial judges, courts in autocracies also tend to possess narrow legal authority (Larkins 1998). For example, the Franco regime in Spain had a separate court to handle politically sensitive cases (Toharia 1974).

Judiciaries that lack political independence have strong incentives to protect the interests in power and exercise whatever authority they have only at the margins. Dependent courts therefore regularly seek cases over which ruling elites have little concern in order to distance

their branch from the executive, or justices will make rulings to curry favor with those likely to gain power (Helmke 2002). Either way, to maintain the legitimacy of the court, justices must pay attention to the prevailing economic conditions within the state, the concentration of executive power, the identity of litigants, and the constitutional ramifications of their decisions before ruling against elite interests (Bumin, Randazzo, and Walker 2009; Gibson, Caldeira, and Baird 1998; Herron and Randazzo 2003). Assumed, then, is a highly strategic court that develops its legitimacy and independence over time.

Judicial independence key to stabilization during democratic transition

OFFICE OF DEMOCRACY AND GOVERNANCE 02 (January 2002, Office of Democracy and Governance; Bureau for Democracy, Conflict, and Humanitarian Assistance; U.S. Agency for International Development. "GUIDANCE FOR PROMOTING JUDICIAL INDEPENDENCE AND IMPARTIALITY," http://pdf.usaid.gov/pdf_docs/PNACM007.pdf) WM

<B. The Importance of Judicial Independence and Impartiality Judicial independence is important for precisely the reasons that the judiciary itself is important. If a judiciary cannot be relied upon to decide cases impartially, according to the law, and not based on external pressures and influences, its role is distorted and public confidence in government is undermined. In democratic, market-based societies, independent and impartial judiciaries contribute to the equitable and stable balance of power within the government. They protect individual rights and preserve the security of person and property. They resolve commercial disputes in a predictable and transparent fashion that encourages fair competition and economic growth. They are key to countering public and private corruption, reducing political manipulation, and increasing public confidence in the integrity of government. Even in stable democracies, the influence of the judiciary has increased enormously over the past several decades. Legislation protecting social and economic rights has expanded in many countries, and with it the court's role in protecting those rights. The judiciary has growing responsibility for resolving increasingly complex national and international commercial disputes. As criminal activity has also become more complex and international and a critical problem for expanding urban populations, judges play a key role in protecting the security of citizens and nations. Judiciaries in countries making the transition to democratic governance and market economies face an even greater burden. Many of these judiciaries must change fairly dramatically from being an extension of executive branch, elite, or military domination of the country to their new role as fair and independent institutions. At the same time, the demands on and expectations of these judiciaries are often high, as views about citizens' rights, the role of the executive branch, and market mechanisms are rapidly evolving. **The judiciary often finds itself a focal point as political and economic forces struggle to define the shape of the society.** These judiciaries also face the serious crime problems that frequently accompany transitions, as well as enormous issues of corruption, both that carried over from old regimes, as well as corruption newly minted under changing conditions.>

Strong Judiciary Checks Authoritarianism

Strong judiciary key to check authoritarianism

Kalb 13 [Summer, 2013; Johanna Kalb is an Associate Professor of Law, Loyola University New Orleans College of Law, "The Judicial Role in New Democracies: A Strategic Account of Comparative Citation", 38 Yale J. Int'l L. 423]

The role of the judiciary in transitional regimes has received increasing attention in the last few decades based largely on two historical developments. First, **constitutionalism and judicial review have become increasingly pervasive attributes** of late twentieth-century political transitions, **which has increased the predominance of the judicial role in most new democratic regimes.** Second, **a growing number of countries that once held democratic elections** **have regressed into authoritarian or semi-**

authoritarian rule or have simply failed to move beyond the thin electoral definition of democracy. In this historical context, scholars have turned their focus to the role that courts can play in helping to consolidate or solidify the post-election transition to a democratic order. A. Diagonal Accountability According to Juan J. Linz and Alfred Stepan, democratic consolidation is complete when a government comes to power that is the direct result of a free and popular vote, when this government de facto has the authority to generate new policies, and [*431] when the executive, legislative, and judicial power generated by the new democracy does not have to share power with other bodies de jure. As is now widely acknowledged, **the project of democratic consolidation is inhibited by accountability failures in**

political institutions. In other words, **democracy stalls** or collapses **because institutional weaknesses undermine the processes by which governmental actors are held responsible for performing their appropriate functions. Courts can aid** in democratic consolidation **by** **reinforcing constitutional**

structures of accountability across a number of different planes. First, **a credible and autonomous judiciary may serve as an important mechanism of horizontal accountability.** "In institutionalized democracies, **accountability runs ... horizontally across a network of relatively autonomous powers** (i.e. other institutions) **that can call into question, and eventually punish, improper ways of discharging the**

responsibility of a given official." n42 **Given the primacy of judicial review** in most new regimes, **courts are well positioned to ensure that other governmental actors are subject to the constraints of the law.**

An effective judiciary may thus be a key institutional actor in preventing the reconsolidation of power in the executive that has characterized so many nations in transition. n43 **Courts also play a role in vertical**

accountability, which can be understood to **characterize the relationship between the citizenry and the national government.** In introducing this concept, Guillermo O'Donnell focuses on the methods by which nonstate actors in media and civil society can continue to hold state actors to account through regular election, social mobilization, and media oversight. n44 **An effective judiciary can protect and enable these processes of vertical accountability** **by ensuring**

governmental respect for the individual rights that underlie them - for example, **by ensuring access to the voting booth and protecting freedom of speech and association.** [*432] While O'Donnell's vertical axis ended with the national government, in the democracies of the last fifty years, the notion of vertical accountability arguably extends further to characterize the relationship between the domestic population, the national government, and the international community, which includes international courts, the governments of other nations, and international NGOs. Most **recent democratic transitions were in fact driven by pressures from both internal and external constituencies**, sometimes in concert. n45 For

example, **"few would question the central role played by occupation forces in fostering democratic government** in Germany and Japan after World War II," while "the American security umbrella played a similar facilitating function for democracy in South Korea, and Taiwan." n46 In recent decades, international sanctions have helped to force internal political change (perhaps most notably in South Africa), while "the export of election monitoring technologies such as parallel vote tabulation and exit polls played a crucial role in bringing down Augusto Pinochet in Chile in 1988, unseating Slobodan Milošević in Serbia in 2000, and sparking the Orange Revolution in 2004." n47 In each of these cases, donor funding has helped to generate and preserve a global web of civil society groups, which has helped to inspire and operationalize the indispensable efforts of domestic advocates during transitions. n48 Moreover, even long after the formal

democratic transition has occurred, new governments, particularly in the economically underdeveloped countries of the Global South, continue to confront pressures from the international community to maintain systems of democratic governance, to protect and promote human rights, and to facilitate economic integration. Thus, **governmental actions during the transitional period and beyond are under increased levels of scrutiny from both vertical and horizontal audiences**, which can mobilize each other in support of accountability at the national level. **The judiciary can also play a role in mediating these relationships by protecting the domestic rights that enable these transnational connections** - by protecting access to the Internet and to international travel, for example. **The ongoing activity along both of the axes creates the opportunity for the judiciary to engage in what we may describe as "diagonal accountability."** n49 In modern [*433] regimes in transition, the judiciary must be responsive to activities on both the vertical and horizontal axes. The challenge is in satisfying these different audiences that are sometimes in harmony and sometimes in conflict. **The courts**, given their responsibility for preserving the possible channels of horizontal and vertical accountability, **are uniquely positioned to manage this overlap** and can mobilize one axis "diagonally" in support of promoting accountability along the other. **Courts may draw on international support "vertically" to protect against encroachment from the other branches "horizontally"** - for example, by reaching out to influential international institutions to put pressure on the president to comply with judicial orders limiting executive authority. Alternatively, **courts may be well positioned to safeguard the authority of other domestic institutions along the horizontal axis by acting as a site of resistance against coercive international pressures** - for example, **by striking down as unconstitutional domestically unpopular legislation forced on the elected branches by international actors.**

Democracy => Global Peace

Strong democracy maintains global peace – the best research proves

Cortright 13, David Cortright is the director of Policy Studies at the Kroc Institute for Peace Studies at the University of Notre Dame, Chair of the Board of Directors of the Fourth Freedom Forum, and author of 17 books, Kristen Wall is a Researcher and Analyst at the Kroc Institute, Conor Seyle is Associate Director of One Earth Future, Governance, Democracy, and Peace How State Capacity and Regime Type Influence the Prospects of War and Peace, <http://oneearthfuture.org/sites/oneearthfuture.org/files//documents/publications/Cortright-Seyle-Wall-Paper.pdf>

Drawing from the empirical literature, this paper identifies two underlying pathways through which state governance systems help to build peace. These are: State capacity. If states lack the ability to execute their policy goals or to maintain security and public order in the face of potentially violent groups, armed conflict is more likely. State capacity refers to two significant aspects: security capacity and social capacity. Security capacity includes the ability to control territory and resist armed incursion from other states and nonstate actors. Social capacity includes the ability to provide social services and public goods. Institutional quality. Research suggests that not all governance systems are equally effective or capable of supporting peace. Governance systems are seen as more credible and legitimate, and are better at supporting peace, when they are characterized by inclusiveness, representativeness, transparency, and accountability. In particular, systems allowing citizens to voice concerns, participate politically, and hold elected leaders accountable are more stable and better able to avoid armed conflict. Both dimensions—state capacity and quality—are crucial to the prevention of armed conflict and are the focus of part one of this paper. Part two of the paper focuses on democracy as the most common way of structuring state government to allow for inclusive systems while maintaining state capacity. The two parts summarize important research findings on the features of governance that are most strongly associated with prospects for peace. Our analysis, based on an extensive review of empirical literature, seeks to identify the specific dimensions of governance that are most strongly associated with peace. We show evidence of a direct link between peace and a state's capacity to both exert control over its territory and provide a full range of social services through effective governance institutions. We apply a governance framework to examine three major factors associated with the outbreak of war—border disputes, ethnic conflict, and dependence on commodity exports—and emphasize the importance of inclusive and representative governance structures for the prevention of armed conflict.

Democratic Backsliding => War

Democratic backsliding causes great power war

Gat 11, Professor at Tel Aviv University, Ezer Weizman Professor of National Security at Tel Aviv University, Azar 2011, "The Changing Character of War," in The Changing Character of War, ed. Hew Strachan and Sibylle Scheipers, p. 30-32

Since 1945, **the decline of major great power war has deepened** further. Nuclear weapons have concentrated the minds of all concerned wonderfully, but no less important have been the institutionalization of free trade and the closely related process of rapid and sustained economic growth throughout the capitalist world. The communist bloc did not participate in the system of free trade, but at least initially it too experienced substantial growth, and, unlike Germany and Japan, it was always sufficiently large and rich in natural resources to maintain an autarky of sorts. With the Soviet collapse and with the integration of the former communist powers into the global capitalist economy, the prospect of a major war within the developed world seems to have become very remote indeed. This is one of the main sources for the feeling that war has been transformed: its geopolitical centre of gravity has shifted radically. The modernized, economically developed parts of the world constitute a 'zone of peace'. **War now seems to be confined to the less-developed parts of the globe, the world's 'zone of war', where countries that have so far failed to embrace modernization and its pacifying spin-off effects continue to be engaged in wars** among themselves, as well as with developed countries.¶ While the trend is very real, **one wonders if the near disappearance of armed conflict within the developed world is likely to remain as stark as it has been since the collapse of communism. The post-Cold War moment may turn out to be a fleeting one. The probability of major wars within the developed world remains low**—because of the factors already mentioned: increasing wealth, economic openness and interdependence, and nuclear deterrence. **But the deep sense of change prevailing since 1989 has been based on the far more radical notion that the triumph of capitalism also spelled the irresistible ultimate victory of democracy;** and that in an affluent and democratic world, major conflict no longer needs to be feared or seriously prepared for. **This notion, however, is fast eroding with the return of capitalist non-democratic great powers that have been absent from the international system since 1945.** Above all, there is the formerly communist and fast industrializing authoritarian-capitalist **China**, whose massive growth **represents the greatest change in the global balance of power. Russia, too, is retreating from its postcommunist liberalism and assuming an increasingly authoritarian character.**¶ **Authoritarian capitalism may be more viable than people tend to assume.** 8 The communist great powers failed even though they were potentially larger than the democracies, because their economic systems failed them. By contrast, the **capitalist authoritarian/totalitarian powers during the first half of the twentieth century, Germany and Japan**, particularly the former, **were as efficient economically as, and if anything more successful militarily than, their democratic counterparts.** They were defeated in war mainly because they were too small and ultimately succumbed to the exceptional continental size of the United States (in alliance with the communist Soviet Union during the Second World War). However, the **new non-democratic powers are both large and capitalist. China** in particular **is the largest player in the international system in terms of population and is showing spectacular economic growth** that within a generation or two is likely to make it a true non-democratic superpower.¶ Although **the return of capitalist non-democratic great powers** does not necessarily imply open conflict or war, it **might indicate that the democratic hegemony since the Soviet Union's collapse could be short-lived and that a universal 'democratic peace' may still be far off.** The new capitalist authoritarian powers are deeply integrated into the world economy. They partake of the development-open-trade-capitalist cause of peace, but not of the liberal democratic cause. Thus, it is crucially important that any protectionist turn in the system is avoided so as to prevent a grab for markets and raw materials such as that which followed the disastrous slide into imperial protectionism and conflict during the first part of the twentieth century. Of course, the openness of the world economy does not depend exclusively on the democracies. In time, China itself might become more protectionist, as it grows wealthier, its labour costs rise, and its current competitive edge diminishes.¶ With the possible exception of the sore Taiwan problem, China is likely to be less restless and revisionist than the territorially confined Germany and Japan were. Russia, which is still reeling from having lost an empire, may be more problematic. However, **as China grows in power, it is likely to become more assertive, flex its muscles, and behave like a superpower**, even if it does not become

particularly aggressive. The **democratic and non-democratic powers may coexist more or less peacefully**, albeit warily, side by side, armed because of mutual fear and suspicion, as a result of the so-called 'security dilemma', and against worst-case scenarios. **But there is also the prospect of more antagonistic relations, accentuated ideological rivalry, potential and actual conflict, intensified arms races**, and even new cold wars, with spheres of influence and opposing coalitions. Although great power relations will probably vary from those that prevailed during any of the great twentieth-century conflicts, as conditions are never quite the same, they may vary less than seemed likely only a short while ago.

Democracy Solves Middle East War

Democratic stability prevents outbreak of Middle Eastern war – the threat is under-estimated

Cordesman 13, Anthony H. Cordesman holds the Arleigh A. Burke Chair in Strategy at CSIS, Iraq: The New Strategic Pivot in the Middle East, <http://csis.org/publication/iraq-new-strategic-pivot-middle-east>

It is hard to determine why Iraq receives so little U.S. attention as it drifts towards sectarian conflict, civil war, and alignment with Iran. Tensions in Iraq have been rising for well over a year, and the UN warned on June 1, 2013 that “1,045 Iraqis were killed and another 2,397 were wounded in acts of terrorism and acts of violence in May. The number of civilians killed was 963 (including 181 civilian police), and the number of civilians injured was 2,191 (including 359 civilian police). A further 82 members of the Iraqi Security Forces were killed and 206 were injured.”

This neglect may be a matter of war fatigue; the result of a conflict the United States “won” at a tactical level but seems to have lost at a strategic level. It may be the result of the fact the civil war in Syria is more intensive, produces more human suffering, and is more open to the media. The end result, however, is that that the United States is just beginning to see how much of a strategic pivot Iraq has become.

The strategic map of the region is changing and Iraq’s role in that change is critical. It used to be possible to largely separate the Gulf and the Levant. One set of tensions focused on the Arab-Israel conflict versus tensions focused on the Gulf. Iraq stood between them. It sometimes became a crisis on its own but always acted as a strategic buffer between two major subregions in the Middle East.

However, it has become clear over the last year that the upheavals in the Islamic and Arab world have become a clash within a civilization rather than a clash between civilizations. The Sunni vs. Alewite civil war in Syria is increasingly interacting with the Sunni versus Shi’ite tensions in the Gulf that are edging Iraq back towards civil war. They also interact with the Sunni-Shi’ite, Maronite, and other confessional struggles in Lebanon.

The “Kurdish problem” now spreads from Syria to Iraq to Turkey to Iran. The question of Arab identity versus Sunni or Shi’ite sectarian identity divides Iraq from the Arab Gulf states and pushes it towards Iran. Instead of terrorism we have counterinsurgency, instability, and religious and ethnic conflict.

For all the current attention to Syria, Iraq is the larger and more important state. Iraq is a nation of 31.9 million and Syria is a nation of 22.5 million. Iraq has the larger economy: Iraq has a GDP of \$155.4 billion, and Syria had a GDP of \$107.6 billion in 2011, the last year for which there are useful data. Most important, Iraq is a critical petroleum state and Syria is a cypher. Iraq has some 143 billion barrels worth of oil reserves (9 percent of world reserves) and Syria has 2.5 billion (0.2 percent). Iraq has 126.7 has trillioncubic meters of gas, and Syria has 10.1. Iraq has a major impact on the overall security of the Gulf, and some 20 percent of the world oil and LNG exports go through the Gulf.

This does not mean the conflict in Syria is not tragic or that it is not important. But from a practical strategic viewpoint, Iraq divided Iran from the Arab Gulf states. Iraqi-Iranian tensions acted as a strategic buffer between Iran and the rest of the Middle East for half a century between the 1950s and 2003. Today, Iraq has a Shi’ite government with close links to Iran and is a military vacuum. Iraq’s Shi’ite leaders treat its Sunnis and Kurds more as a threat than as countrymen. Its Arab neighbors treat Iraq’s regime

more as a threat than an ally, and the growing Sunni-Shi'ite tension in the rest of the region make things steadily worse in Iraq and drive it towards Iran.

If Iraq moves towards active civil war, its Shi'ites will be driven further towards Iran and Syria.

If Assad survives and the Arab Gulf states continue to isolate Iraq, the largely token U.S. presence in Iraq is likely to become irrelevant and Iraq is likely to become part of a "Shi'ite" axis going from Lebanon to Iran. If Assad falls, and U.S. and Gulf Arab tensions with Iran continue to rise, Iran seems likely to do everything it can to replace its ties to Syria with influence in Iraq.

If Iraq moves towards active civil war, its Shi'ites will be driven further towards Iran and Syria. If Assad survives and the Arab Gulf states continue to isolate Iraq, the largely token U.S. presence in Iraq is likely to become irrelevant and Iraq is likely to become part of a "Shi'ite" axis going from Lebanon to Iran. If Assad falls, and U.S. and Gulf Arab tensions with Iran continue to rise, Iran seems likely to do everything it can to replace its ties to Syria with influence in Iraq.

Arab and Turkish pressure on Iraq seems more likely to push Iraq towards Iran than away from it. If Iraq becomes caught up in sectarian and ethnic civil war, this will push its Shi'ite majority towards Iran, push its Kurds toward separatism, and push the Arab states around Iraq to do even more to support Sunni factions in Lebanon, Syria, and Iraq while suppressing their own Shi'ites.

The United States has limited cards to play. The U.S.-Iraqi Strategic Framework Agreement exists on paper, but it did not survive the Iraqi political power struggles that came as the United States left. The U.S. military presence has been reduced to a small U.S. office of military cooperation at the U.S. Embassy in Baghdad and it is steadily shrinking. The cumbersome U.S. arms transfer process has already pushed Iraq to buy arms from Russia and other suppliers. The U.S. State Department's efforts to replace the military police training program collapsed before they really began. The United States is a marginal player in the Iraqi economy and economic development, and its only aid efforts are funded through money from past years. The State Department did not make an aid request for Iraq for FY2014.

However, it is far from clear that Prime Minister Nouri al-Maliki or most of the Shi'ite ruling elite really want alignment with Iran or that anyone in Iraq wants civil war. A revitalized U.S. office of military cooperation and timely U.S. arms transfer might give the United States more leverage, and U.S. efforts to persuade Arab Gulf states that it is far better to try to work with Iraq than isolate it might have a major impact. Limited and well-focused U.S. economic and governance aid might improve leverage in a country that may have major oil export earnings but whose economy needs aid in reform more than money and today has the per capita income of a poverty state, ranking only 162 in the world.

Making Iraq a major strategic focus in dealing with Turkey and our Arab friends and allies might avoid creating a strategic bridge between Iran and the Gulf states. It might limit the growing linkages between the tensions and conflicts in the Gulf and those in the Levant, and help secure Jordan, Lebanon, and Egypt. It would not be a major expense to give the State Department's country team in Baghdad all of the aid resources it needs to move Iraq towards economic reform and a stable military.

Even limited success in damping down internal conflict in Iraq and helping Iraq keep a distance from Iran might save the United States far more, even in the short run, than substituting strategic neglect for strategic patience. It also might help prevent Iraq from becoming a far worse civil conflict than now exists in Syria, **fueling the religious war** between Sunnis and Shi'ites, **which can turn** a clash within a civilization **into a serious war and spill over into terrorism in the West**.

Judicial Independence Solves Terrorism

Independent judiciaries establish government credibility—that's key to prevent terrorism.

Findley and Young 11 (Michael, assistant prof of polisci at Brigham Young University with a research emphasis in terrorism and development. Joseph, Associate Professor at American University with a joint appointment in the School of Public Affairs and the School of International Service. "Terrorism, Democracy, and Credible Commitments," International Studies Quarterly. Vol. 55 No. 2, spring 2011. Wiley Online Library.)/CB

Political institutions are an important part of an explanation of terrorism precisely because different institutions provide distinct strategic incentives for groups to pursue policy change. Both democracies and nondemocracies could have higher or lower levels of terrorism depending on how well their institutional arrangements make government commitments credible. We consider a specific institutional arrangement, whether a state has an independent judiciary, and hypothesize that independent judiciaries make government commitments more credible, thereby providing less incentive for groups to use terrorism. Without independent judiciaries, executives cannot credibly restrain themselves from future violations of rights. Thus, groups seeking to make extreme demands through a formal political process must assess whether the executive will resort to force. An independent judiciary offers some assurances about future government behavior in this situation.[¶] We examine this credible commitment hypothesis using a new data set of all domestic and transnational terrorist events in 149 countries from 1970 to 1997 (LaFree and Dugan 2007).² The results indicate that independent judiciaries decrease the likelihood of terrorism, offering support for the credible commitment hypothesis. We also find that variation in terrorism exists both within and across regime type, although on average democracies have higher levels of terrorism than autocracies. In addition to standard statistical tests and robustness checks, we use matching methods and demonstrate that our results are not dependent on any one model specification (Rosenbaum and Rubin 1983; Ho, Imai, King, and Stuart 2007).

Credibility established by independent judiciaries reduces violence and terrorism.

Findley and Young 11 (Michael, assistant prof of polisci at Brigham Young University with a research emphasis in terrorism and development. Joseph, Associate Professor at American University with a joint appointment in the School of Public Affairs and the School of International Service. "Terrorism, Democracy, and Credible Commitments," International Studies Quarterly. Vol. 55 No. 2, spring 2011. Wiley Online Library.)/CB

Like dissident groups, states are not always homogeneous actors. Different actors could vie for policy control within the state, the main divisions being the branches of government. In many circumstances, the executive branch is dominant. In other cases, a legislative branch could be the primary state actor. In cases where the judicial branch exercises a credible check on executive power, we contend that the outcome of the interactions between the state and the dissident group will be less violent.⁷ The separation of powers could thus alter the incentive structure that shapes the actions of both states and extremist groups.[¶] North, Summerhill, and Weingast (2000:27) indicate that "establishing credible commitments requires the creation of political institutions that alter the incentives of political officials so that it becomes in their interest to protect relevant citizen rights." A credible commitment to limited government makes terrorism and other violent dissent less beneficial in comparison with formal, nonviolent political participation. Nonviolent interaction with the state is also less costly, as the regime not only tolerates, but honors, political participation through formal mechanisms. In particular, it offers a wider range of choices—not simply violence—for political contention (Tilly 2003). Importantly, for a commitment to be credible, a limit on government power needs to be self-enforcing (Weingast 1995). Institutions that credibly restrain the executive branch of government are most important, because the executive branch typically has the ability to control the means of

coercion. Terrorism, therefore, is less likely in states that credibly commit to honoring the formal political process and respecting citizen rights than in states that cannot make such commitments.[¶] Although most of the conflict bargaining literature highlights the need for credible commitments to avoid or end wars (Fearon 1995; Walter 2002; Powell 2006), precisely which institutions make commitments more credible is not well understood.⁸ A number of political institutions could facilitate credible commitments, and we now turn to a discussion of one important institution — independent judiciaries.

Independent judiciaries establish governmental credibility that breeds state engagement instead of terrorism.

Findley and Young 11 (Michael, assistant prof of polisci at Brigham Young University with a research emphasis in terrorism and development. Joseph, Associate Professor at American University with a joint appointment in the School of Public Affairs and the School of International Service. “Terrorism, Democracy, and Credible Commitments,” *International Studies Quarterly*. Vol. 55 No. 2, spring 2011. Wiley Online Library.)//C

States that create independent judiciaries provide a limit on the power of the executive, the most likely agent of government violence (North and Weingast 1996; Smith 2008). As Staton and Reenock (2010:117) assert, rights enforced by “effective, independent judiciaries are designed to ensure that state promises to forgo financial predation and to respect the physical integrity of its subjects are perceived credible.” In their study of seventeenth-century England, North and Weingast (1989:819) find that “the creation of a politically independent judiciary greatly expanded the government’s ability credibly to promise to honor its agreements, that is, to bond itself. By limiting the ability of the government to renege on its agreements, the courts played a central role in assuring a commitment to secure rights.”^{11¶} Independent judiciaries can constrain the actions of the executive and provide confidence to citizens to invest, contract with other citizens, and negotiate with the state. As Feld and Voigt (2003:498) argue, there are three general cases in which an independent judicial branch has importance for societal interactions: “in cases of conflict between citizens... in cases of conflict between government and the citizens... in cases of conflict between various government branches.” The second case, conflict between the state and citizens, is important for understanding a citizen’s resort to terrorist violence. Davenport (1996), for example, finds that states with independent judiciaries repress their citizens less than states without this institution. Because states are constraining their use of violence and credibly limiting their power, citizens may be as well.¶ If individuals with extreme preferences feel that they cannot pursue their policy goals and/or grievances in a formal institutional setting because the government might later crack down on them, they will turn to noninstitutional participation. Because of the extreme nature of their preferences, violence is more likely than it may be for moderates. Moderates have less reason to be concerned about a future government response, because the nature of their claims is less consequential to the government. Because independent judiciaries can limit the power of the executive and credibly restrain state violence, thereby reducing the need for dissident violence, we offer the following hypothesis:

Judicial Independence Solves Disease

Independent judiciaries are key to fighting global disease spread

Greco 5 (Michael S., President – American Bar Association, Miami Daily Business Review, 52.42, 12-5, Factiva)

What makes the rule of law so important that it attracted such a distinguished community?
First, because the rule of law is so central to everything the legal community stands for, both in the United States and around the world. And second, **because we increasingly find that our nation's top international priorities-defeating terrorism, corruption and even the spread of deadly diseases-are being** **undone at the ground level by poor governance and lawlessness**. As Rice eloquently told the

gathering, "In a world where threats pass even through the most fortified boundaries, **weak** and poorly governed **states enable disease to spread undetected**, and corruption to multiply unchecked, and **hateful ideologies to grow** more **violent and more vengeful.**" **The only real antidote to these global threats is** governments, in all corners of the world, that operate with just, transparent and **consistent legal systems that are enforced by fair and independent judiciaries.** These issues are not just the province of distant foreign governments. Building the rule of law must begin at home. Recent revelations in our own country-that the CIA has maintained secret prisons for foreign detainees-underscore the urgent need for an independent, nonpartisan commission to investigate our treatment of such prisoners.

Extinction

Torrey and Yolken 5 E. Fuller and Robert H, Directors Stanley Medical Research Institute, 2005, Beasts of the Earth: Animals, Humans and Disease, pp. 5-6

The outcome of this marriage, however, is not as clearly defined as it was once thought to be. **For many years, it was believed that microbes and human slowly learn to live with each other as microbes evolve toward a benign coexistence** with their hosts. Thus, the bacterium that causes syphilis was thought to be extremely virulent when it initially spread among humans in the sixteenth century, then to have slowly become less virulent over the following three centuries. This reassuring view of microbial history has recently been challenged by Paul Ewald and others, who have questioned whether microbes do necessarily evolve toward long-term accommodation with their hosts. Under certain circumstances, Ewald argues, "**Natural selection may...favor the evolution of extreme harmfulness** if the exploitation that damages the host [i.e. disease] enhances the ability of the harmful variant to compete with a more benign pathogen." **The outcome of such a "marriage" may thus be the murder of one spouse by the other.** In eschatological terms, this view argues that **a microbe such as HIV or SARS virus may be truly capable of eradicating the human race.**

Judicial Independence Solves Economy

Judiciary independence key to economic growth—boosts investment, property rights, and regulates commerce.

Sievert 14 (Jacqueline, assistant professor of Political Sciences and Public affairs at Western Carolina University. “Courts and Conflict: Examining the Causal Mechanisms of Independent Judiciaries and Domestic Conflict” May 5, 2014. http://visionsinmethodology.org/wp-content/uploads/2013/11/Sievert_VIM2014.pdf)/CB

One of the most common answers to why autocrats create and use courts has been to create and ensure the protection of property rights to regulate commerce and attract investment. As Weingast (1995) wisely notes, any state strong enough to ensure property rights is strong enough to intrude on them. Therefore, governments must be able to credibly commit to the protection of property rights, and one way to do this has been the establishment of courts. “By establishing a neutral institution to monitor and punish violations of property rights, the state can make credible its promise to keep its hands off (Root and May, 2008). Similarly, Mustafa argues when writing about judicialization in Egypt,

“the consolidation of unbridled power resulted in a severe case of capital flight depriving the economy of a tremendous amount of Egyptian and foreign private investment... Judicial institutions were rehabilitated in an effort to attract investment, to provide the regime with new tools to monitor and discipline the state’s own bureaucratic machinery, and to shape a new legitimizing ideology around the “rule of law”” (Moustafa, 2008).

Establishing and adhering to the rule of law was not just an Egyptian strategy, but one adopted by Singapore as well. Then Prime Minister Lee Kuan Yew cited rule of law as the foundation of the impressive economic growth Singapore experienced after independence from Malaysia. This was echoed by the then-Chief Justice of Singapore,

“Singapore is a nation which is based wholly on the Rule of Law. It is clear and practical laws and the effective observance and enforcement of these laws which provide the foundation for our economic and social development. It is the certainty which an environment based on the Rule of Law guarantees which gives our people, as well as many [multinational corporations] and other foreign investors, the confidence to invest in our physical, industrial as well as social infrastructure” (Silverstein, 2008).

It is not just Singaporean elites who laud the rule of law as the key to economic growth and property rights. The 2013-2014 Global Competitiveness Report from the World Economic Forum ranks Singapore first for the efficiency of legal framework in settling disputes, transparency of government policymaking, and public trust in politicians. Singapore also ranks second in the world for the protection of property rights, for intellectual property protections, and for strength of investor protection (World Economic Forum, 2013-2014). Clearly international investors and monitoring groups, as well as Singaporean citizens view the courts, property protections, and the regulatory environment favorably as well.

Judicial independence spurs economic growth—government credibility protects property rights.

Voigt and Guttman 13 (Stefan, director of Economics and Law at Hamburg University. Jerg, post-doc at Hamburg University’s Graduate School of Economics and Law. “Turning cheap talk into economic growth: On the relationship between property rights and judicial independence,” Journal of Comparative Economics. Vol. 41 No. 1. Science Direct.)/CB

The argument to be developed in this paper is that promising private property rights is not sufficient to induce economic development. Rather, governments need to find means to make such promises credible. Over the last couple of years, various devices that could serve this function have been analyzed both theoretically and empirically. Among them are the number of veto players (Henisz, 2000; Tsebelis, 2002), the degree of checks and balances (Beck et al., 2001), but also joining international organizations (Levy and Spiller, 1994; a recent empirical test is Dreher and Voigt, 2011). Previous studies find that promises work only in conjunction with one or more of these means to increase the credibility of promises. This has been shown with regard to the promise of an independent central bank for bringing about monetary stability (Keefer and Stasavage, 2003; Hayo and Voigt, 2008). Here, we argue that a factually independent judiciary increases the credibility of government promises, including the promise to enforce property rights.

Feld and Voigt (2003, 2006) show that JI is conducive to economic growth. JI is a procedural attribute that asks whether judges who decide according to the law have to expect any negative consequences (such as being moved to other courts, being paid less or even fired). It is, at least on logical grounds, completely unrelated to the content of legislation, a substantive attribute. We hypothesize that the growth effect of a high degree of JI should be more pronounced if the substantive attributes are also growth-friendly. In other words, if countries promise secure property rights and have been factually implementing their promises for a while, then increased growth of per capita income is predicted to be observable.

Judicial Independence Solves Internal Conflict

Judicial independence reduces internal conflict of authoritarian states—regimes are more likely to engage with a credible government.

Sievert 14. (Jacqueline, assistant professor of Political Sciences and Public affairs at Western Carolina University. "Courts and Conflict: Examining the Causal Mechanisms of Independent Judiciaries and Domestic Conflict" May 5, 2014. http://visionsinmethodology.org/wp-content/uploads/2013/11/Sievert_VIM2014.pdf)/CB

This project seeks to unpack the relationship between independent judiciaries and authoritarian regimes, and present a unified theory that explains when autocrats have incentives to create and empower independent courts and when they have incentives to restrict the ability of the courts to overturn their most preferred policies. This work builds on existing literature on judicial institutions in authoritarian regimes and argues that in addition to the benefits of legitimacy and protected property rights autocrats can learn how resolved aggrieved groups are in society by allowing some independent judicial decision making.

To develop this argument I analyze a game-theoretic model in which a government, some aggrieved group, and a court all interact. The results show that leaders of authoritarian regimes can use independent courts to learn how resolved aggrieved groups are, and in turn this information allows the regime to offer policy concessions that satisfy the groups demands, alleviating the group's threat to mobilize against the regime. To learn how resolved groups are, they need to file suits against the regime, and in order to do so they must believe the court hearing their case will be at least nominally independent. That is, they need to believe their case will get a fair hearing in front of the court, as such the court needs to rule against the regime at least some of the time. The macro-implications of the theoretical model are then modeled empirically using observational data.

Independent judiciaries reduce internal conflict and human rights violations by decreasing executive overreach.

Sievert 14 (Jacqueline, assistant professor of Political Sciences and Public affairs at Western Carolina University. "Courts and Conflict: Examining the Causal Mechanisms of Independent Judiciaries and Domestic Conflict" May 5, 2014. http://visionsinmethodology.org/wp-content/uploads/2013/11/Sievert_VIM2014.pdf)/CB

According to the theoretical model by adopting at least a partially independent court a regime can reduce its likelihood of experiencing civil conflict with an aggrieved group by offering policy concessions to satisfy the group's demands. Therefore, what we can expect to observe is few states with independent courts experiencing civil conflict.

In addition to being informed by the theoretical model this expectation is supported by various studies regarding judicial independence and dissent, protests and human rights protections. Increased protections of human rights and respect for physical integrity rights are found to be positively associated with empowered judiciaries (Keith, 2002; Keith, Tate and Poe, 2009; Powell and Staton, 2009) and constraints on the executive (Bueno de Mesquita et al., 2005; Davenport, 2007). Additionally literature on international law and respect for human rights finds that international human rights treaties can create mobilization opportunities for citizens and that these laws matter most where domestic groups "have the motive and the means to demand the protection of their rights", most likely in court (Simmons, 2009). Interestingly Conrad and Ritter (2013) find that international human rights treaties have a small, but positive and effect on rights protections when they are secure in office. They find that secure leaders who are obligated under international human rights treaties will repress less when facing mobilized challenges to their rule in order to avoid potential court costs (Conrad and Ritter, 2013).

Money Laundering DA SDI

Money Laundering being successfully checked now Schectman 15

(a reporter for Risk & Compliance Journal and previously wrote for CIO Journal, Joel, "U.S. Official Says Money Launderers Have Been Hamstrung", The Wall Street Journal, Jun 12, 2015, <http://blogs.wsj.com/riskandcompliance/2015/06/12/u-s-official-says-money-launderers-have-been-hamstrung/>, GCM)

The U.S. Treasury Department says its efforts to squeeze money launderers and terrorists out of the U.S. financial system are working. Two Treasury Department assessments, released Friday, found that new bank requirements, sanctions and a heightened culture of compliance had effectively pushed illegal activity to the fringes of the financial system. Drug dealers and terrorists are now often forced to rely on costly and inefficient ways of moving money, such as shipments of hard cash, a senior Treasury official said on a conference call with reporters. The Treasury assessment—the first in more than a decade—uncovered no new or emerging methods used by criminals or terrorists, the official said. "[Money launderers] have been constrained in their existing methods," which include conspiring with employees at banks and using unregistered foreign money transmitters, said the official, who the Treasury Department requested not be named. Despite these successes, money launderers continue to use shell companies to hide the purpose of transactions. One of the agency reports points out that under state laws, businessmen can register corporate entities under an attorney's name without revealing the true owners. These corporate entities are sometimes used to covertly move illicit funds, and skirt anti-money laundering rules, the report said. The Treasury Department is pushing for legislation that would make sure beneficial ownership is recorded, the official said.

Mass data collection helps stop money laundering and drug trafficking Heath 15

(An investigative reporter at USA TODAY, writing primarily about law and criminal justice- His work includes award-winning series on misconduct by federal prosecutors and air pollution outside schools. He has a law degree from Georgetown University, Brad, "US secretly tracked billions of calls for decades", USA Today, April 8, 2015, <http://www.usatoday.com/story/news/2015/04/07/dea-bulk-telephone-surveillance-operation/70808616/>, ASN)

The DEA began assembling a data-gathering program in the 1980s as the government searched for new ways to battle Colombian drug cartels. Neither informants nor undercover agents had been enough to crack the cartels' infrastructure. So the agency's intelligence arm turned its attention to the groups' communication networks. Calling records – often called "toll records" – offered one way to do that. Toll records are comparable to what appears on a phone bill – the numbers a person dialed, the date and time of the call, its duration and how it was paid for. By then, DEA agents had decades of experience gathering toll records of people they suspected were linked to drug trafficking, albeit one person at a time. In the late 1980s and early 1990s, officials said the agency had little way to make sense of the data their agents accumulated and almost no ability to use them to ferret out new cartel connections. Some agents used legal pads. "We were drowning in toll records," a former intelligence official said. The DEA asked the Pentagon for help. The military responded with a pair of supercomputers and intelligence analysts who had experience tracking the communication patterns of Soviet military units. "What they discovered was that the incident of a communication was perhaps as important as the content of a communication," a former Justice Department official said. The military installed the supercomputers on the fifth floor of the DEA's headquarters, across from a shopping mall in Arlington, Va. The system they built ultimately allowed the drug agency to stitch together huge collections of data to map trafficking and money laundering networks both overseas and within the USA. It allowed agents to link the call records its agents gathered domestically with calling data the DEA and intelligence agencies had acquired outside the USA. (In some cases, officials said the DEA paid employees of foreign telecom firms for copies of call logs and subscriber lists.) And it eventually allowed agents to cross-reference all of that against investigative reports from the DEA, FBI and Customs Service. The result "produced major international investigations that allowed us to take some big people." Constantine said, though he said he could not identify particular cases. In 1989, President George H.W. Bush proposed in his first prime-time address using "sophisticated intelligence-gathering and Defense Department technology" to disrupt drug trafficking.

Three years later, when violent crime rates were at record highs, the drug agency intensified its intelligence push, launching a "kingpin strategy" to attack drug cartels by going after their finances, leadership and communication. In 1992, in the last months of Bush's administration, Attorney General William Barr and his chief criminal prosecutor, Robert Mueller, gave the DEA permission to collect a much larger set of phone data to feed into that intelligence operation. Instead of simply asking phone companies for records about calls made by people suspected of drug crimes, the Justice Department began ordering telephone companies to turn over lists of all phone calls from the USA to countries where the government determined drug traffickers operated, current and former officials said. Barr and Mueller declined to comment, as did Barr's deputy, George Terwilliger III, though Terwilliger said, "It has been apparent for a long time in both the law enforcement and intelligence worlds that there is a tremendous value and need to collect certain metadata to support legitimate investigations." The data collection was known within the agency as USTO (a play on the fact that it tracked calls from the U.S. to other countries). The DEA obtained those records using administrative subpoenas that allow the agency to collect records "relevant or material to" federal drug investigations. Officials acknowledged it was an expansive interpretation of that authority but one that was not likely to be challenged because unlike search warrants, DEA subpoenas do not require a judge's approval. "We knew we were stretching the definition," a former official involved in the process said. Officials said a few telephone companies were reluctant to provide so much information, but none challenged the subpoenas in court. Those that hesitated received letters from the Justice Department urging them to comply. After Sprint executives expressed reservations in 1998, for example, Warren, the head of the department's drug section, responded with a letter telling the company that "the initiative has been determined to be legally appropriate" and that turning over the call data was "appropriate and required by law." The letter said the data would be used by authorities "to focus scarce investigative resources by means of sophisticated

pattern and link analysis." The letter did not name other telecom firms providing records to the DEA but did tell executives that "the arrangement with Sprint being sought by the DEA is by no means unique to Sprint" and that "major service providers have been eager to support and assist law enforcement within appropriate bounds." Former officials said the operation included records from AT&T and other telecom companies. A spokesman for AT&T declined to comment. Sprint spokeswoman Stephanie Vinge Walsh said only that "we do comply with all state and federal laws regarding law enforcement subpoenas." Agents said that when the data collection began, they sought to limit its use mainly to drug investigations and turned away requests for access from the FBI and the NSA. They allowed searches of the data in terrorism cases, including the bombing of a federal building in Oklahoma City that killed 168 people in 1995, helping to rule out theories linking the attack to foreign terrorists. They allowed even broader use after Sept. 11, 2001. The DEA's public disclosure of its program in January came in the case of a man charged with violating U.S. export restrictions by trying to send electrical equipment to Iran. At first, officials said the DEA gathered records only of calls to a handful of countries, focusing on Colombian drug cartels and their supply lines. Its reach grew quickly, and by the late 1990s, the DEA was logging "a massive number of calls," said a former intelligence official who supervised the program. Former officials said they could not recall the complete list of countries included in USTO, and the coverage changed over time. The Justice Department and DEA added countries to the list if officials could establish that they were home to outfits that produced or trafficked drugs or were involved in money laundering or other drug-related crimes. The Justice Department warned when it disclosed the program in January that the list of countries should remain secret "to protect against any disruption to prospective law enforcement cooperation." At its peak, the operation gathered data on calls to 116 countries, an official involved in reviewing the list said. Two other officials said they did not recall the precise number of countries, but it was more than 100. That gave the collection a considerable sweep; the U.S. government recognizes a total of 195 countries. At one time or another, officials said, the data collection covered most of the countries in Central and South America and the Caribbean, as well as others in western Africa, Europe and Asia. It included Afghanistan, Pakistan, Iran, Italy, Mexico and Canada. The DEA often — though not always — notified foreign governments it was collecting call records, in part to make sure its agents would not be expelled if the program was discovered. In some cases, the DEA provided some of that information to foreign law enforcement agencies to help them build their own investigations, officials said. The DEA did not have a real-time connection to phone companies' data; instead, the companies regularly provided copies of their call logs, first on computer disks and later over a private network. Agents who used the system said the numbers they saw were seldom more than a few days old. The database did not include callers' names or other identifying data. Officials said agents often were able to identify individuals associated with telephone numbers flagged by the analysis, either by cross-referencing them against other databases or by sending follow-up requests to the phone companies. To keep the program secret, the DEA sought not to use the information as evidence in criminal prosecutions or in its justification for warrants or other searches. Instead, its Special Operations Division passed the data to field agents as tips to help them find new targets or focus existing investigations, a process approved by Justice Department lawyers. Many of those tips were classified because the DEA phone searches drew on other intelligence data. That practice sparked a furor when the Reuters news agency reported in 2013 that the DEA trained agents to conceal the sources of those tips from judges and defense lawyers. Reuters said the tips were based on wiretaps, foreign intelligence and a DEA database of telephone calls gathered through routine subpoenas and search warrants. As a result, "the government short-circuited any debate about the legality and wisdom of putting the call records of millions of innocent people in the hands of the DEA," American Civil Liberties Union lawyer Patrick Toomey said.

Money Laundering erodes political and social systems affecting stability, diminishes economic growth, and hurts basic individual liberties

Crime and Misconduct Commission 05

(The Crime and Corruption Commission (CCC) is a statutory body set up to combat and reduce the incidence of major crime and corruption in the public sector in Queensland. Its functions and powers are set out in the Crime and Corruption Act 2001, "Background intelligence brief Money laundering," Crime and Corruption Commission, July 2005, <http://www.ccc.qld.gov.au/research-and-publications/publications/crime/money-laundering.pdf>, GCM)

There are many reasons why money laundering is harmful in society. Some examples are listed below. It makes crime pay. Money laundering allows drug traffickers, smugglers and other criminals to accumulate economic power and expand their operations. This has the potential to erode the political and social systems of a country, and could affect stability and the general rule of law (Alweendo 2005). This in turn drives up the cost of law enforcement and the spin-off costs of health care in the treatment of problems such as drug addiction. It has the potential to undermine the financial community because of the sheer magnitude of the sums involved. Money laundering on a grand scale has the potential to change the demand for cash, make interest rates and exchange rates more volatile, and cause high inflation rates for a country. Laundering diminishes economic development because it undermines legitimate business, competition and government tax revenue, and therefore indirectly harms honest taxpayers and reduces legitimate job opportunities. Money laundering Perceived ease of entry to a country attracts an undesirable element across its borders, degrading quality of life and raising concerns

about national security (Solicitor General Canada 1998). The crimes perpetrated by these undesirable elements erode basic individual liberties by threatening rights to life and entitlements to own property. There are great incentives, therefore, for governments and private enterprise to work together to combat money laundering locally and globally.

Economic decline risks extinction

Auslin & Lachman, 2009, The Global Economy Unravels, Forbes, [Resident Scholar – American Enterprise Institute; Resident Fellow – American Enterprise Institute, Michael; Desmond], March 6, p. <http://www.aei.org/article/100187>

What do these trends mean in the short and medium term? The Great Depression showed how social and **global chaos followed hard on economic collapse.** The mere fact that parliaments across the globe, from America to Japan, are unable to make responsible, economically sound recovery plans suggests that they do not know what to do and are simply hoping for the least disruption. Equally worrisome is the adoption of more statist economic programs around the globe, and the concurrent decline of trust in free-market systems. The threat of instability is a pressing concern. China, until last year the world's fastest growing economy, just reported that 20 million migrant laborers lost their jobs. Even in the flush times of recent years, China faced upward of 70,000 labor uprisings a year. **A sustained downturn poses grave and possibly immediate threats to Chinese internal stability.** The regime in Beijing may be faced with a choice of repressing its own people or diverting their energies outward, leading to conflict with China's neighbors. Russia, an oil state completely dependent on energy sales, has had to put down riots in its Far East as well as in downtown Moscow. Vladimir Putin's rule has been predicated on squeezing civil liberties while providing economic largesse. If that devil's bargain falls apart, then **wide-scale repression inside Russia, along with a continuing threatening posture toward Russia's neighbors, is likely.** Even apparently stable societies face increasing risk and the threat of internal or possibly external conflict. As Japan's exports have plummeted by nearly 50%, one-third of the country's prefectures have passed emergency economic stabilization plans. Hundreds of thousands of temporary employees hired during the first part of this decade are being laid off. Spain's unemployment rate is expected to climb to nearly 20% by the end of 2010; Spanish unions are already protesting the lack of jobs, and the specter of violence, as occurred in the 1980s, is haunting the country. Meanwhile, in Greece, workers have already taken to the streets. **Europe as a whole will face dangerously increasing tensions** between native citizens and immigrants, largely from poorer Muslim nations, who have increased the labor pool in the past several decades. Spain has absorbed five million immigrants since 1999, while nearly 9% of Germany's residents have foreign citizenship, including almost 2 million Turks. The xenophobic labor strikes in the U.K. do not bode well for the rest of Europe. **A prolonged global downturn, let alone a collapse, would dramatically raise tensions inside these countries.** Couple that with possible protectionist legislation in the United States, unresolved ethnic and territorial disputes in all regions of the globe and a loss of confidence that world leaders actually know what they are doing. **The result may be a series of small explosions that coalesce into a big bang.**

Uniqueness

Frontline

AML in the squo prevents money laundering

Sareena M. Sawhney 4/25/14 (CONSEQUENCES OF HAVING A POOR ANTI-MONEY LAUNDERING PROGRAM, Sareena M. Sawhney, MBA, CFE, CAMS, MAFF, is a Director in the Litigation and Corporate Financial Advisory Services Group at Marks Paneth LLP, <http://www.markspaneth.com/publications/consequences-of-having-a-poor-anti-money-laundering-program>, ZV)

Section 352 of the Patriot Act requires all financial institutions to establish AML programs inclusive of the following: Establish internal policies, procedures, and controls to prevent money laundering; Designate a money laundering compliance officer; Establish an ongoing training program for awareness of money laundering; Establish an independent audit function to test the programs. Section 326 of the Patriot Act expands on the Bank Secrecy Act by requiring financial institutions to implement Customer Identification Programs (“CIPs”). The CIPs are to be incorporated into financial institutions’ money laundering programs and should verify and maintain records of any individual seeking to open an account. The Patriot Act also prohibits foreign shell banks from maintaining correspondent accounts at any US financial institution. “Shell banks” lack a physical presence^[4] in any country. It is strongly encouraged that the US institutions verify all the information provided by the foreign institution at least every two years. Additionally, financial institutions are required to establish due diligence policies, procedures and controls that are designed to detect money laundering through private and correspondent bank accounts^[5] held by non-US citizens. Brokers and dealers in securities must file with FinCEN (Financial Crimes Enforcement Network) a report of any suspicious activity that involves funds or assets of at least \$5,000, and the broker-dealer knows, suspects or has reason to suspect that the transaction involves illegal activity, evades regulations under the Bank Secrecy Act or has no business or lawful purpose in which a particular customer would expect to engage in.

There is no guaranteed way to stop money laundering. – but constant vigilance is key.

Chianuri 6/23/15,

(Certified Anti-Money Laundering Specialist (CAMS) from the Association of Certified Anti-Money Laundering Specialists (ACAMS), Valerie, “Treasury Department Publishes National Money Laundering Risk Assessment and National Terrorist Financing Risk Assessment”, Davis Wright Tremaine LLP, 6/23/15, <http://www.jdsupra.com/legalnews/treasury-department-publishes-national-92243/>, GCM)

The Department acknowledged that there is no “silver bullet” to combating money laundering and terrorist financing in its press release accompanying the NMLRA and the NTFRA and stresses that institutions should not use these assessments as sole sources of information for developing their compliance efforts. The responsibility for development of comprehensive compliance programs resides squarely with the institutions which should remain constantly vigilant to the new money laundering methods developed by criminals.

Extentions

1/3 of FBI's criminal referrals were money laundering

Megan Wallin 6-24-15 ("NSA can still see you", Megan Wallin is a young writer with a background in the social sciences, <http://baltimorepostexaminer.com/nsa-can-still-see-you/2015/06/24>, ZV)

Between 2003 and 2005, government records show that 143, 074 letters were issued by FBI agents approving their ability to obtain secure information from individuals. Of the 53 actual criminal referrals resulting, 17 were for money laundering, 17 for illegal immigration charges, 19 involved cases of fraud, and not a single one was turned in for suspected terrorism. That's right. According to UCLA's analysis of the records, titled "Surveillance Under the Patriot Act," fewer than five years after the 9/11 attacks, the findings produced no progress toward seeking out terrorists

Electronic surveillance prevents crimes with different methods.

Solove 4, Daniel J. Solove, *Reconstructing Electronic Surveillance Law*, 72 *Geo. Wash. L. Rev.* 1264 (2004).

http://scholarship.law.gwu.edu/cgi/viewcontent.cgi?article=2088&context=faculty_publications, TK

Electronic surveillance is one of the central tools of modern law enforcement. **It can aid significantly in the investigations of crimes**, for it allows the government to watch and listen to people during their unguarded moments, when they may speak about their criminal activity. **Video cameras may capture criminals in the act and aid in their identification and arrest. Surveillance can also assist in preventing crimes because it enables the government to learn about criminal activity that is afoot and to halt it before it happens.** Few would argue that these are not significant benefits. Surveillance can also prevent crime in another way. In 1791, Jeremy Bentham imagined a new architectural design for **a prison** which he **called the Panopticon**.¹⁷ As Michel Foucault describes it: [A]t the periphery, an annular building; at the centre, a tower; this tower is pierced with wide windows that open onto the inner side of the ring; the peripheric building is divided into cells, each of which extends the whole width of the building . . . All that is needed, then, is to place a supervisor in a central tower and to shut up in each cell a madman, a patient, a condemned man, a worker or a schoolboy. By the effect of backlighting, one can observe from the tower, standing out precisely against the light, the small captive shadows in the cells of the periphery. They are like so many cages, so many small theatres, in which each actor is alone, perfectly individualized and constantly visible.¹⁸ The Panopticon **achieves obedience and discipline by having all prisoners believe they could be watched at any moment. Their fear of being watched inhibits transgression. Surveillance can thus prevent crime by making people decide not to engage in it at all.** More generally, surveillance is good because it is a highly effective tool for maintaining social order. **We want to foster a society where people are secure from theft, vandalism, assault, murder, rape, and terrorism.** We thus desire social control, and surveillance can help achieve that end.

Link – CCTV

CCTV use is increasing and is able to monitor more areas

Kille and Maimino 14

(Director at the Harvard Kennedy School – seven year assistant editor at the Boston Phoenix – managing editor at the San Francisco Bay Guardian – research on environment, energy, sustainability, transportation and urbanism, Leighton and Martin, “The effect of CCTV on public safety: Research roundup”, Shorenstein Center on Media, Politics and Public Policy, February 11, 2014, <http://journalistsresource.org/studies/government/criminal-justice/surveillance-cameras-and-crime>, ASN)

Millions of closed-circuit television (CCTV) cameras are installed in streets and businesses throughout the world with the stated goal of reducing crime and increasing public safety. The United Kingdom is one of the most enthusiastic proponents, with an estimated 1.9 million cameras in 2011 — one for every 32 U.K. residents — and the number continues to rise. Chicago reportedly has at least 15,000 cameras installed in one of the largest U.S. networks — which has prompted civil liberties groups to express strong concerns — while in New York, cameras are increasingly found both on public transit as well as in businesses and even high-end residences. The 9/11 attacks led many municipalities to start installing CCTV systems, but sometimes what’s put in place goes beyond the original mandate: For example, Oakland, Calif., took \$7 million of federal money intended for safeguarding its port and is using it to create a citywide surveillance system instead. According to industry estimates, the global video surveillance market is expected to grow from \$11.5 billion in 2008 to \$37.7 billion in 2015. A 2013 New York Times/CBS poll found that 78% of respondents supported the use of surveillance cameras in public places, and authorities tend to point to spectacular successes — for example, crucial images cameras provided of the Boston Marathon bombing suspects or the identification of those responsible for the 2005 London attacks. Still, concerns remain about systems’ potential to violate personal privacy as well as their overall cost-effectiveness. A 2013 Chicago Tribune opinion piece quoted a city spokesman as saying that surveillance cameras helped solve 4,500 crimes over four years, but the writer notes that more than a million are estimated to have taken place over that time period — meaning that the cameras’ contribution was 0.05% at best. CCTV cameras also have the potential of creating unintended effects, good and bad. The “halo effect” refers to the potential for greater security in areas outside the view of cameras; this could be offset by the “displacement effect,” which pushes antisocial activity to other parts of the city. Cameras could also promote a false sense of security and lead citizens to take fewer precautions, or they could also cause more crimes to be reported, and thus lead to a perceived increase in crime. And as with the 2013 revelations of widespread data collection by the U.S. National Security Administration, the indiscriminate gathering of information on law-abiding citizens, however well-intentioned, has the potential for misuse. The Washington Post reported in February 2014 that new aerial video surveillance technologies are being deployed that can monitor virtually everything in an area the size of a small city. A 2010 document from the European Forum for Urban Security, “Charter for a Democratic Use of Video-Surveillance,” provides a useful overview of the issues at stake as well as a set of principles and tools to ensure that citizens’ rights are respected with CCTV systems. These include: Necessity: The use of camera systems must be justified empirically, ideally by an independent authority. Objectives and intended outcomes must be defined. Proportionality: CCTV equipment must be appropriate for the problem it is intended to address. Technology should “respond to the established objectives, without going further.” Data should be protected and the length of time it is retained be clearly defined. Transparency: Citizens should know what the objectives of a CCTV system are, what its installation and operational costs are, the areas being surveyed, and what the results are. Reports should occur regularly so citizens can make informed decisions. Accountability: Those in charge of public CCTV systems should be clearly identified and accountable to the public, whether the systems are run by the government or private firms. Independent oversight: An external body should be charged with ensuring that systems respect the public’s rights and are achieving their stated objectives. Ideally citizens would have a voice in the oversight process.

Link – DEA

Curtailing surveillance crushes DEA crime prevention.

Wing, 14

Nick Wing, Senior Viral Editor at The Huffington Post., 10/24/14("The DEA Once Turned A 14-Year-Old Into A Drug Kingpin. Welcome To The War On Drugs",

The Huffington Post, October 24th, 2014,

http://www.huffingtonpost.com/2014/10/24/dea-war-on-drugs_n_6030920.html, Accessed: July 13th, 2015, DSF)

The DEA has been spying on U.S. citizens with a surveillance program more expansive than the NSA's.

Just months after Edward Snowden unmasked the National Security Agency's massive domestic spying program, The New York Times broke news of the Hemisphere Project, which pairs experts from telecommunications giant AT&T with federal and local anti-drug officials, including DEA agents. It gives law enforcement officials access to "every call that passes through an AT&T switch -- not just those made by AT&T customers -- and includes calls dating back 26 years," according to the Times report. That's around 4 billion call records every day, each logged with information on the location of callers. The official government slideshow describing the program suggested it had been helpful in tracking drug dealers who frequently change phones, or use disposable "burner" phones.

The White House attempted to allay privacy concerns about the Hemisphere Project last year, noting that AT&T stores the collected data, unlike in the NSA's program, in which data is turned over to the government. Federal officials can quickly access the records, however, often within an hour of a subpoena.

Mass data collection helps stop money laundering and drug trafficking

Heath 15

(An investigative reporter at USA TODAY, writing primarily about law and criminal justice- His work includes award-winning series on misconduct by federal prosecutors and air pollution outside schools. He has a law degree from Georgetown University, Brad, "US secretly tracked billions of calls for decades", USA Today, April 8, 2015, <http://www.usatoday.com/story/news/2015/04/07/dea-bulk-telephone-surveillance-operation/70808616/>, ASN)

The DEA began assembling a data-gathering program in the 1980s as the government searched for new ways to battle Colombian drug cartels. Neither informants nor undercover agents had been enough to crack the cartels' infrastructure. So the agency's intelligence arm turned its attention to the groups' communication networks. Calling records – often called "toll records" – offered one way to do that. Toll records are comparable to what appears on a phone bill – the numbers a person dialed, the date and time of the call, its duration and how it was paid for. By then, DEA agents had decades of experience gathering toll records of people they suspected were linked to drug trafficking, albeit one person at a time. In the late 1980s and early 1990s, officials said the agency had little way to make sense of the data their agents accumulated and almost no ability to use them to ferret out new cartel connections. Some agents used legal pads. "We were drowning in toll records," a former intelligence official said. The DEA asked the Pentagon for help. The military responded with a pair of supercomputers and intelligence analysts who had experience tracking the communication patterns of Soviet military units. "What they discovered was that the incident of a communication was perhaps as important as the content of a communication," a former Justice Department official said. The military installed the supercomputers on the fifth

floor of the DEA's headquarters, across from a shopping mall in Arlington, Va. The system they built ultimately allowed the drug agency to stitch together huge collections of data to map trafficking and money laundering networks both overseas and within the USA. It allowed agents to link the call records its agents gathered domestically with calling data the DEA and intelligence agencies had acquired outside the USA. (In some cases, officials said the DEA paid employees of foreign telecom firms for copies of call logs and subscriber lists.) And it eventually allowed agents to cross-reference all of that against investigative reports from the DEA, FBI and Customs Service. The result "produced major international investigations that allowed us to take some big people," Constantine said, though he said he could not identify particular cases. In 1989, President George H.W. Bush proposed in his first prime-time address using "sophisticated intelligence-gathering and Defense Department technology" to disrupt drug trafficking. Three years later, when violent crime rates were at record highs, the drug agency intensified its intelligence push, launching a "kingpin strategy" to attack drug cartels by going after their finances, leadership and communication. In 1992, in the last months of Bush's administration, Attorney General William Barr and his chief criminal prosecutor, Robert Mueller, gave the DEA permission to collect a much larger set of phone data to feed into that intelligence operation. Instead of simply asking phone companies for records about calls made by people suspected of drug crimes, the Justice Department began ordering telephone companies to turn over lists of all phone calls from the USA to countries where the government determined drug traffickers operated, current and former officials said. Barr and Mueller declined to comment, as did Barr's deputy, George Terwilliger III, though Terwilliger said, "It has been apparent for a long time in both the law enforcement and intelligence worlds that there is a tremendous value and need to collect certain metadata to support legitimate investigations." The data collection was known within the agency as USTO (a play on the fact that it tracked calls from the U.S. to other countries). The DEA obtained those records using administrative subpoenas that allow the agency to collect records "relevant or material to" federal drug investigations. Officials acknowledged it was an expansive interpretation of that authority but one that was not likely to be challenged because unlike search warrants, DEA subpoenas do not require a judge's approval. "We knew we were stretching the definition," a former official involved in the process said. Officials said a few telephone companies were reluctant to provide so much information, but none challenged the subpoenas in court. Those that hesitated received letters from the Justice Department urging them to comply. After Sprint executives expressed reservations in 1998, for example, Warren, the head of the department's drug section, responded with a letter telling the company that "the initiative has been determined to be legally appropriate" and that turning over the call data was "appropriate and required by law." The letter said the data would be used by authorities "to focus scarce investigative resources by means of sophisticated pattern and link analysis." The letter did not name other telecom firms providing records to the DEA but did tell executives that "the arrangement with Sprint being sought by the DEA is by no means unique to Sprint" and that "major service providers have been eager to support and assist law enforcement within appropriate bounds." Former officials said the operation included records from AT&T and other telecom companies. A spokesman for AT&T declined to comment. Sprint spokeswoman Stephanie Vinge Walsh said only that "we do comply with all state and federal laws regarding law enforcement subpoenas." Agents said that when the data collection began, they sought to limit its use mainly to drug investigations and turned away requests for access from the FBI and the NSA. They allowed searches of the data in terrorism cases, including the bombing of a federal building in Oklahoma City that killed 168 people in 1995, helping to rule out theories linking the attack to foreign terrorists. They allowed even broader use after Sept. 11, 2001. The DEA's public disclosure of its program in January came in the case of a man charged with violating U.S. export restrictions by trying to send electrical equipment to Iran. At first, officials said the DEA gathered records only of calls to a handful of countries, focusing on Colombian drug cartels and their supply lines. Its reach grew quickly, and by the late 1990s, the DEA was logging "a massive number of calls," said a former intelligence official who supervised the program. Former officials said they could not recall the complete list of countries included in USTO, and the coverage changed over time. The Justice Department and DEA added countries to the list if officials could establish that they were home to outfits that produced or trafficked drugs or were involved in money laundering or other drug-related crimes. The Justice Department warned when it disclosed the program in January that the list of countries should remain secret "to protect against any disruption to prospective law enforcement cooperation." At its peak, the operation gathered data on calls to 116 countries, an official involved in reviewing the list said. Two other officials said they did not recall the precise number of countries, but it was more than 100. That gave the collection a considerable sweep; the U.S. government recognizes a total of 195 countries. At one time or another, officials said, the data collection covered most of the countries in Central and South America and the Caribbean, as well as others in western Africa, Europe and Asia. It included Afghanistan, Pakistan, Iran,

Italy, Mexico and Canada. The DEA often — though not always — notified foreign governments it was collecting call records, in part to make sure its agents would not be expelled if the program was discovered. In some cases, the DEA provided some of that information to foreign law enforcement agencies to help them build their own investigations, officials said. The DEA did not have a real-time connection to phone companies' data; instead, the companies regularly provided copies of their call logs, first on computer disks and later over a private network. Agents who used the system said the numbers they saw were seldom more than a few days old. The database did not include callers' names or other identifying data. Officials said agents often were able to identify individuals associated with telephone numbers flagged by the analysis, either by cross-referencing them against other databases or by sending follow-up requests to the phone companies. To keep the program secret, the DEA sought not to use the information as evidence in criminal prosecutions or in its justification for warrants or other searches. Instead, its Special Operations Division passed the data to field agents as tips to help them find new targets or focus existing investigations, a process approved by Justice Department lawyers. Reuters said the tips were based on wiretaps, foreign intelligence and a DEA database of telephone calls gathered through routine subpoenas and search warrants. As a result, "the government short-circuited any debate about the legality and wisdom of putting the call records of millions of innocent people in the hands of the DEA," American Civil Liberties Union lawyer Patrick Toomey said.

DEA using wiretaps and pen registers to catch international drug cartels

Kenny 11, Michael Kenny, August 15, 2011, From Pablo to Osama: Counter-terrorism Lessons from the War on Drugs, Survival: Global Politics and Strategy, <http://dx.doi.org/10.1080/00396338.2003.9688585>, TK

Michael Kenney is assistant professor of public policy at the School of Public Affairs at Pennsylvania State University, Harrisburg

The Colombian cocaine 'cartels'³ can be traced back to the 1970s, when numerous entrepreneurs sought to exploit the demand for cocaine in US illegal drug markets by transporting small quantities of the drug from Ecuador, Bolivia and Peru to Colombia, where it underwent further refinement in makeshift laboratories before final shipment northwards. Over time and through repeated exchange, numerous entrepreneurs developed far-flung transportation and distribution networks capable of coordinating several multi-tonne cocaine shipments a year. These 'wheel networks' contained a core group that coordinated activities among functionally specific nodes, including cocaine base suppliers, processing labs, transportation rings and distribution groups that delivered cocaine to independent retailers and funnelled the profits to network leaders and investors.⁴ While core groups were generally based in Colombia, support nodes were located in different countries, giving these networks a transnational dimension. To reduce their exposure to law-enforcement penetration, participants in cross-border transportation or wholesale distribution activities were often compartmentalised into small working groups or 'cells' that maintained close communication with core groups and followed elaborate procedures for delivering large amounts of drugs to independent wholesalers and conducting other hazardous activities. The core groups directed the transnational enterprise, providing security and resolving disputes and securing resources from independent investors. They also gathered intelligence about government drug enforcement efforts and served as the communications hub for the network, coordinating transactions among peripheral nodes. If something went wrong, informal relations of vertical accountability ensured that peripheral nodes answered to the core, protecting kingpins and investors from theft and other risks. Decision-making authority generally flowed out and downwards from the core, beginning with one or more kingpins that directed the transnational enterprise. Below them were 'managers' responsible for line functions, such as transportation and wholesale distribution. Beneath managers were cell workers that carried out much of the daily work of the enterprise. Kingpins or their day-to-day administrators sought to maintain control over their operations through frequent communication with overseas managers, often mediated through brokers that provided an additional layer of insulation from law enforcement. The predominantly vertical direction of command authority — proceeding from the hub of the core group along spokes to the most peripheral operatives — and its multiple vectors made the cartels 'wheel networks'. By the mid-1980s, US and Colombian officials were fully attuned to the danger represented by a handful of wheel networks, particularly the notorious

Medellín and Cali enterprises. **With US assistance, Colombian drug enforcers launched several crackdowns** against the leaders of these transnational enterprises between 1984 and 1988, **destroying processing labs, seizing cocaine shipments and arresting** (and occasionally extraditing) **lower and middle-level traffickers**. However, core-group kingpins were not greatly affected by these short-lived offensives, as their elaborate security arrangements allowed them to continue their illicit activities relatively unimpeded. Throughout the 1980s, police officials discovered numerous multi-tonne cocaine shipments in the US, indicating the growing capacity of Colombian trafficking networks. Yet even the largest of these seizures failed to put a significant dent in drug availability. While the estimated average price of cocaine at the 'dealer' level dropped from \$191 per gram in 1981 to \$65 per gram in 1989, during the same period the estimated purity of cocaine at the same transaction level rose from 60% to 80%. **The US Drug Enforcement Administration (DEA)'s response, in 1992, was the kingpin strategy. Leveraging the DEA's investigative and intelligence strengths, this initiative involved the aggressive use of electronic surveillance technologies, including wiretaps, pen registers and trap-and-trace devices.** A kingpin was defined as the leader of an international trafficking enterprise who directs the production, transportation, and distribution of large quantities of cocaine or heroin, as well as the organisation's financial operations. By 'neutralising' kingpins and dismantling their criminal infrastructures, the DEA hoped that it would be able to 'significantly reduce the availability of drugs in the United States'.⁵ Principal targets of the kingpin strategy were the leaders of the Colombian cocaine cartels. The initial list included Pablo Escobar, José Santacruz Londoño, Gilberto and Miguel Rodríguez Orejuela, Helmer Buitrago Herrera, and Iván and Jairo Urdinola Grajales. **In close cooperation with the Colombian National Police (CNP), the DEA sought to disable** their **trafficking networks by attacking their communications, transportation and finance systems.** After just a year and a half of operation, **the DEA reported that kingpin investigations had led to the seizure of \$210 million in drug proceeds, the confiscation of 144 aircraft and 91 boats, trucks and cars, and the arrest of over 713 'significant' traffickers.**⁶ In Colombia, elite drug enforcement units destroyed hundreds of cocaine processing labs, seized thousands of kilograms of cocaine base and cocaine hydrochloride, eradicated hundreds of thousands of hectares of coca leaf plantings, and **arrested hundreds of traffickers.** Remarkably, by 1996 all of the original kingpins were either dead or in jail, and their trafficking networks severely disrupted. Notwithstanding reports that some entrepreneurs continued to manage scaled-down smuggling operations from behind bars, a number of government officials crowed that the days of the cocaine cartels were over. Some went even further. Following the arrest of Gilberto Rodríguez-Orejuela, Colombian prosecutor general Alfonso Valdivieso exulted that 'narco-trafficking is in the way of disappearing from Colombia'.⁷ **In a war marked by considerable frustration for lawenforcement agencies, the state appeared to have earned a major victory.**

Link – Drug crime

USFG surveillance k2 stop the worst of drug crime. - empirics

US Courts, 12

US Courts, 12/31/2012 (“Wiretap Report 2012”, This report covers intercepts concluded between January 1, 2012, and December 31, 2012, and provides supplementary information on arrests and convictions resulting from intercepts concluded in prior years, [uscourts.gov](http://www.uscourts.gov), December 31, 2012,

<http://www.uscourts.gov/statistics-reports/wiretap-report-2012>, Accessed: July 13th, 2015, DSF)

Drug offenses were the most prevalent type of criminal offenses investigated using wiretaps. Table 3 indicates that 87 percent of all applications for intercepts (2,967 wiretaps) in 2012 cited illegal drugs as the most serious offense under investigation. Homicide, the second-most frequently cited crime, was specified as the most serious offense in more than 3 percent of applications. Racketeering, the third-most frequently cited crime, was specified in less than 3 percent of applications. Many applications for court orders revealed that multiple criminal offenses were under investigation, but Table 3 includes only the most serious criminal offense listed on an application.

In 2012, installed wiretaps were in operation for an average of 39 days, 3 days below the average in 2011. The federal wiretap with the most intercepts occurred in the Western District of Missouri, where a narcotics investigation involving cellular telephones resulted in the interception of 34,261 messages over 60 days. The second-highest number of intercepts stemmed from a cellular telephone wiretap for a narcotics investigation in the District of Maine. This wiretap, active for 55 days, resulted in a total of 32,578 interceptions, **including 18,500 incriminating interceptions.**

Federal wire taps increasingly k2 quell big drug crime

US Courts, 12

US Courts, 12/31/2012 (“Wiretap Report 2012”, This report covers intercepts concluded between January 1, 2012, and December 31, 2012, and provides supplementary information on arrests and convictions resulting from intercepts concluded in prior years, [uscourts.gov](http://www.uscourts.gov), December 31, 2012,

<http://www.uscourts.gov/statistics-reports/wiretap-report-2012>, Accessed: July 13th, 2015, DSF)

Data on individuals arrested and convicted as a result of interceptions reported as terminated are presented in Table 6. As of December 31, 2012, a total of 3,743 persons had been arrested (up 6 percent from 2011), and 455 persons had been convicted (down 2 percent from 2011).

Federal wiretaps were responsible for **34 percent of the arrests and 25 percent of the convictions** arising from wiretaps for this period. The Central District of California reported the largest number of arrests (139) for a federal jurisdiction, and the Western District of Texas reported the most convictions (27). The Central District of California also reported the most arrests for an individual federal wiretap in 2012; a wiretap used in a murder investigation in that district resulted in the arrest of 52 individuals and 4 convictions.

Link – Face Recognition

Face Recognition Key to solve crime

Ng, 6

Rudy Ng, University of California, Hastings College of the Law, J.D. Candidate, 2006; San Francisco State University, M.S. in Biochemistry, 2001; University of California, Berkeley, B.A. in Biochemistry, 1996. I would like to thank my family and friends for their loving support and encouragement, especially Queenie Mak for editing this Note and for keeping me sane throughout this adventure called law school., Spring 2006, copyright Hastings College of Law, <http://www.lexisnexis.com.proxy2.cl.msu.edu/hottopics/Inacademic/>, Accessed: July 20th, 2015, DSF)

The concept of identifying people via their unique biometric identifiers is not a new idea. It has long been recognized that a person's fingerprint is a unique way to identify that person. n1 However, some more recent advances in technology have called into question the constitutionality of these new forms of biometric [*426] identification. n2 After the September 11, 2001, terrorist attacks, one of our primary concerns has been ensuring for our homeland security. n3 New, more rigorous forms of biometric screening have been proposed and implemented in some instances. n4 For example, San Francisco International Airport has installed hand geometry identification stations for employees in some secure areas. n5 Before being allowed to proceed into restricted areas, employees must place their hand on a biometric reader, which scans their hand and compares it to images stored in a database. n6

Another area of concern is tracking known or suspected criminals. A proposed method to achieve this is to use face recognition technology which can quickly scan an individual's facial geometry from a surveillance video and attempt to match that person's face to a database of millions of known or suspected criminals. n7 The science fiction movie Minority Report illustrated the use of iris scanners not only to provide positive identification of individuals who had been apprehended by the police, but also to identify ordinary citizens walking down the street in order to project personalized advertisements to them. n8 The future may not be as far away as we think. Foreign and domestic banks have experimented with the use of fingerprint and iris scanning technologies in ATMs. n9 In addition, police in London, England have been using face recognition technology as part of their Citywatch program aimed at reducing crime in the community. n10 The question is how far we are willing to take this technology, especially in regards to tracking known or suspected criminals.

[*427] In United States v. Kincade, n11 the Ninth Circuit upheld the constitutionality of the DNA Analysis Backlog Elimination Act of 2000, which required certain convicted felons to submit blood samples from which authorities could obtain their DNA profile. n12 Convicted felons' DNA profiles are kept in a DNA data bank to either provide evidence against or exonerate them if they were ever suspected of another crime. n13 This ruling by the Ninth Circuit could potentially pave the way to requiring convicted felons to submit to the collection of other types of biometric identification data, such as iris or face recognition scans. As with current DNA databases, iris and face recognition data would then be stored in databases and shared with authorities throughout the nation. n14 Tracking suspected criminals could be as easy as

matching an image of their face from a surveillance video at their local shopping mall to an image in the face recognition database. n15 How far are we willing to invade the privacy rights of individuals in the name of security?

These concerns are not restricted to convicted felons. While there are statutes in all fifty states which require certain convicted felons to submit DNA samples so law enforcement can maintain their DNA profile, n16 these DNA data banks are being supplemented with DNA profiles from people who have been arrested but have not been convicted of crimes. n17 If people not convicted of any crimes are being included in DNA data banks, then is this opening the door for the collection of other types of biometric data, such as face or iris recognition data, from people who are merely suspected of committing a crime? Is this the beginning of the slippery slope that may lead us to a world where a person suspected of committing a crime has to seek out an unscrupulous back-alley physician to perform an eye transplant surgery in order to maintain his or her freedom and privacy, as in the movie *Minority Report*? Clearly there are other concerns besides keeping our streets safer by making it easier for law enforcement personnel to identify recidivist activities.

[*428] Part II of this note is an overview of biometric recognition technology, especially iris scanning and face recognition technology. Part III provides an analysis of individual privacy rights under the Fourth Amendment in relation to biometric technology, the compulsory DNA sampling of convicted felons, and DNA databases, especially in light of recent Federal Court of Appeals decisions and recently passed legislation. Part IV presents legislative considerations for the collection of less invasive biometric data that is easier to collect and monitor passively, such as facial recognition data. Finally, Part V provides a summary of the discussion.

Biometrics are highly important in crime-stopping activities. – Finger prints and facial recognition

A. Biometrics

Biometrics refers to the automated methods of identifying a person based on their unique physical characteristics. n18 In a typical application, an individual's physical traits are scanned by a machine and then a comparison is made to a database containing previously stored information about that individual. n19 This process is used to positively identify the individual and is referred to as verification, or one-to-one matching. n20 For example, one-to-one matching could be used at a security checkpoint before allowing individuals access to restricted

areas of a building. n21 Biometric scanning can also be used to identify a person by comparing their biometric data to all of the records that have been stored in the database. n22 This process is referred to as identification, or one-to-many matching. n23 For example, one-to-many matching **could be used to identify an unknown person by trying to match their biometric data to the data of known individuals saved in a database.** n24

B. Fingerprints

Historically, fingerprints have been the most common and widely accepted form of biometric identification. n25 Fingerprint identification has been used by law enforcement since the early twentieth century. n26 Fingerprint identification initially required the fingerprint examiner to go through the tedious process of manually comparing ink fingerprints fixed onto fingerprint cards. n27 This process was very time consuming and could often take months to complete. n28 However, the fingerprint identification process has been computerized and automated. n29 The Federal Bureau of Investigation (FBI) now uses the Integrated Automated Fingerprint Identification System (IAFIS). n30 IAFIS contains the fingerprints and corresponding criminal history information for more than 47 million subjects, making it the largest biometric database in the world. n31 The process of matching fingerprints, which used to take months to complete, can now be performed in a few hours. n32 For example, the FBI can identify an unknown person who left a latent fingerprint at a crime scene by comparing the crime scene fingerprint to the IAFIS database. n33

Fingerprint identification involves comparing an individual's unique ridge formations or patterns found on the fingertips. n34 These fingertip patterns include ridge formations called whorls, arches and loops. n35 Fingerprint identification relies on the empirically validated assumptions that no two persons have the exact same arrangement of ridge patterns on their fingertips, and that an individual's fingerprints remain unchanged throughout their life. n36

[*430] An advantage of fingerprint identification is that it is widely accepted by the public and law enforcement as an accurate and repeatable means for identifying individuals. n37 In addition, finger scanning technology is a quick, non-invasive method of gathering biometric data. n38 A disadvantage of finger imaging is that dirt, oils or cuts on a person's finger can lead to errors in the results. n39

Link – FBI

**FBI drones are key to solve a swath of crime
Cratty, 13**

Carol Cratty, CNN Senior Producer, 6/19/15 (“FBI uses drones in U.S., says Mueller”, CNN, June 19th 2015, <http://security.blogs.cnn.com/2013/06/19/fbi-uses-drones-in-u-s-says-mueller/>, Accessed: July 13th, 2015, DSF)

FBI Director Robert Mueller **acknowledged the law enforcement agency uses drone aircraft in the United States for surveillance** in certain difficult cases.

Mueller told the Senate Judiciary Committee on Wednesday that drones are used by the FBI in a "very, very minimal way and very seldom."

He did not say how many unmanned surveillance vehicles (UAVs) the FBI has or how often they have been used.

But a law enforcement official told CNN the FBI has used them a little more than a dozen times but did not say when that started. The official said drones are useful in hostage and barricade situations because they operate more quietly and are less visible than traditional aircraft such as helicopters.

The **FBI said it used a UAV earlier this year to monitor the situation where a boy was held hostage in a bunker in Alabama.**

Bureau spokesman Paul Bresson said **their use allows "us to learn critical information that otherwise would be difficult to obtain without introducing serious risk to law enforcement personnel."**

Link – Mass Data

Mass data collection helps stop money laundering and drug trafficking

Heath 15

(An investigative reporter at USA TODAY, writing primarily about law and criminal justice- His work includes award-winning series on misconduct by federal prosecutors and air pollution outside schools. He has a law degree from Georgetown University, Brad, "US secretly tracked billions of calls for decades", USA Today, April 8, 2015, <http://www.usatoday.com/story/news/2015/04/07/dea-bulk-telephone-surveillance-operation/70808616/>, ASN)

The DEA began assembling a data-gathering program in the 1980s as the government searched for new ways to battle Colombian drug cartels. Neither informants nor undercover agents had been enough to crack the cartels' infrastructure. So the agency's intelligence arm turned its attention to the groups' communication networks. Calling records – often called "toll records" – offered one way to do that. Toll records are comparable to what appears on a phone bill – the numbers a person dialed, the date and time of the call, its duration and how it was paid for. By then, DEA agents had decades of experience gathering toll records of people they suspected were linked to drug trafficking, albeit one person at a time. In the late 1980s and early 1990s, officials said the agency had little way to make sense of the data their agents accumulated and almost no ability to use them to ferret out new cartel connections. Some agents used legal pads. "We were drowning in toll records," a former intelligence official said. The DEA asked the Pentagon for help. The military responded with a pair of supercomputers and intelligence analysts who had experience tracking the communication patterns of Soviet military units. "What they discovered was that the incident of a communication was perhaps as important as the content of a communication," a former Justice Department official said. The military installed the supercomputers on the fifth floor of the DEA's headquarters, across from a shopping mall in Arlington, Va. The system they built ultimately allowed the drug agency to stitch together huge collections of data to map trafficking and money laundering networks both overseas and within the USA. It allowed agents to link the call records its agents gathered domestically with calling data the DEA and intelligence agencies had acquired outside the USA. (In some cases, officials said the DEA paid employees of foreign telecom firms for copies of call logs and subscriber lists.) And it eventually allowed agents to cross-reference all of that against investigative reports from the DEA, FBI and Customs Service. The result "produced major international investigations that allowed us to take some big people," Constantine said, though he said he could not identify particular cases. In 1989, President George H.W. Bush proposed in his first prime-time address using "sophisticated intelligence-gathering and Defense Department technology" to disrupt drug trafficking. Three years later, when violent crime rates were at record highs, the drug agency intensified its intelligence push, launching a "kingpin strategy" to attack drug cartels by going after their finances, leadership and communication. In 1992, in the last months of Bush's administration, Attorney General William Barr and his chief criminal prosecutor, Robert Mueller, gave the DEA permission to collect a much larger set of phone data to feed into that intelligence operation. Instead of simply asking phone companies for records about calls made by people suspected of drug crimes, the Justice Department began ordering telephone companies to turn over lists of all phone calls from the USA to countries where the government determined drug traffickers operated, current and former officials said. Barr and Mueller declined to comment, as did Barr's deputy, George Terwilliger III, though Terwilliger said, "It has been apparent for a long time in both the law enforcement and intelligence worlds that there is a tremendous value and need to collect certain metadata to support legitimate investigations." The data collection was known within the agency as USTO (a play on the fact that it tracked calls from the U.S. to other countries). The DEA obtained those records using administrative subpoenas that allow the agency to collect records "relevant or material to" federal drug investigations. Officials acknowledged it was an expansive interpretation of that authority but one that was not likely to be challenged because unlike search warrants, DEA subpoenas do not require a judge's approval. "We knew we were stretching the definition," a former official involved in the process said. Officials said a few telephone companies were reluctant to provide so much information, but none challenged the subpoenas in court. Those that hesitated received letters from the Justice Department urging them to comply. After Sprint executives expressed reservations in 1998, for example, Warren, the head of the department's drug section, responded with a letter telling the company that "the initiative has been determined to be legally appropriate" and that turning over the call data was "appropriate and required by law." The letter said the data would be used by authorities "to focus scarce investigative resources by means of sophisticated pattern and link analysis." The letter did not name other telecom firms providing records to the DEA but did tell executives that "the

arrangement with Sprint being sought by the DEA is by no means unique to Sprint" and that "major service providers have been eager to support and assist law enforcement within appropriate bounds." Former officials said the operation included records from AT&T and other telecom companies. A spokesman for AT&T declined to comment. Sprint spokeswoman Stephanie Vinge Walsh said only that "we do comply with all state and federal laws regarding law enforcement subpoenas." Agents said that when the data collection began, they sought to limit its use mainly to drug investigations and turned away requests for access from the FBI and the NSA. They allowed searches of the data in terrorism cases, including the bombing of a federal building in Oklahoma City that killed 168 people in 1995, helping to rule out theories linking the attack to foreign terrorists. They allowed even broader use after Sept. 11, 2001. The DEA's public disclosure of its program in January came in the case of a man charged with violating U.S. export restrictions by trying to send electrical equipment to Iran. At first, officials said the DEA gathered records only of calls to a handful of countries, focusing on Colombian drug cartels and their supply lines. Its reach grew quickly, and by the late 1990s, the DEA was logging "a massive number of calls," said a former intelligence official who supervised the program. Former officials said they could not recall the complete list of countries included in USTO, and the coverage changed over time. The Justice Department and DEA added countries to the list if officials could establish that they were home to outfits that produced or trafficked drugs or were involved in money laundering or other drug-related crimes. The Justice Department warned when it disclosed the program in January that the list of countries should remain secret "to protect against any disruption to prospective law enforcement cooperation." At its peak, the operation gathered data on calls to 116 countries, an official involved in reviewing the list said. Two other officials said they did not recall the precise number of countries, but it was more than 100. That gave the collection a considerable sweep; the U.S. government recognizes a total of 195 countries. At one time or another, officials said, the data collection covered most of the countries in Central and South America and the Caribbean, as well as others in western Africa, Europe and Asia. It included Afghanistan, Pakistan, Iran, Italy, Mexico and Canada. The DEA often — though not always — notified foreign governments it was collecting call records, in part to make sure its agents would not be expelled if the program was discovered. In some cases, the DEA provided some of that information to foreign law enforcement agencies to help them build their own investigations, officials said. The DEA did not have a real-time connection to phone companies' data; instead, the companies regularly provided copies of their call logs, first on computer disks and later over a private network. Agents who used the system said the numbers they saw were seldom more than a few days old. The database did not include callers' names or other identifying data. Officials said agents often were able to identify individuals associated with telephone numbers flagged by the analysis, either by cross-referencing them against other databases or by sending follow-up requests to the phone companies. To keep the program secret, the DEA sought not to use the information as evidence in criminal prosecutions or in its justification for warrants or other searches. Instead, its Special Operations Division passed the data to field agents as tips to help them find new targets or focus existing investigations, a process approved by Justice Department lawyers. Many of those tips were classified because the DEA phone searches drew on other intelligence data. That practice sparked a furor when the Reuters news agency reported in 2013 that the DEA trained agents to conceal the sources of those tips from judges and defense lawyers. Reuters said the tips were based on wiretaps, foreign intelligence and a DEA database of telephone calls gathered through routine subpoenas and search warrants. As a result, "the government short-circuited any debate about the legality and wisdom of putting the call records of millions of innocent people in the hands of the DEA," American Civil Liberties Union lawyer Patrick Toomey said.

Link – NSA Metadata

NSA metadata used to help other domestic crime fighting agencies.

McGovern, 14

Ray McGovern, works with Tell the Word, a publishing arm of the ecumenical Church of the Saviour in inner-city Washington. He was an Army officer and CIA analyst for a total of 30 years and is now on the Steering Group of Veteran Intelligence Professionals for Sanity (VIPS), 6/2/14 (“How NSA Can Secretly Aid Criminal Cases”, Consortium News, June 12, 2014, <https://consortiumnews.com/2014/06/12/how-nsa-can-secretly-aid-criminal-cases/>, Accessed: July 19, 2015, DSF)

Though the NSA says its mass surveillance of Americans targets only “terrorists,” the spying may turn up evidence of other illegal acts that can get passed on to law enforcement which hides the secret source through a ruse called “parallel construction,” writes ex-CIA analyst Ray McGovern.

Rarely do you get a chance to ask a just-retired FBI director whether he had “any legal qualms” about what, in football, is called “illegal procedure,” but at the Justice Department is called “parallel construction.”

Government wordsmiths have given us this pleasant euphemism to describe the use of the National Security Agency’s illegal eavesdropping on Americans as an investigative tool to pass on tips to law enforcement agencies which then hide the source of the original suspicion and “construct” a case using “parallel” evidence to prosecute the likes of you and me.

For those interested in “quaint” things like the protections that used to be afforded us by the Fourth and Fifth Amendments to the Constitution, information about this “parallel construction” has been in the public domain, including the “mainstream media,” for at least a year or so.

So, I welcomed the chance to expose this artful practice to still more people with cameras rolling at a large conference on “Ethos & Profession of Intelligence” at Georgetown University on Wednesday, during the Q & A after former FBI Director Robert Mueller spoke.

Mueller ducked my question regarding whether he had any “legal qualms” about this “parallel construction” arrangement. He launched into a discursive reply in which he described the various “authorities” enjoyed by the FBI (and the CIA), which left the clear impression not only that he was without qualms but that he considered the practice of concealing the provenance of illegally acquired tip-off information somehow within those professed “authorities.”

Bottom line? Beware, those of you who think you have “nothing to hide” when the NSA scoops up your personal information. You may think that the targets of these searches are just potential “terrorists.” But the FBI, Internal Revenue Service, Drug Enforcement Administration and countless other law enforcement bodies are dipping their cursors into the huge pool of mass surveillance.

And, chances are that if some of your scooped-up data gets shared with law enforcement and the Feds conclude that you've violated some law, you'll never become aware of how they got onto you in the first place. They'll just find some "parallel" evidence to nail you.

After all, it's altogether likely for a great majority of us that some dirt can be retrieved with the NSA's voluminous files an inviting starting point. AT&T, for example, apparently has kept metadata about its customers, as well as all other traffic going through its switches, for the past 27 years.

For those who are Caesar's-wife pure and whose loved ones also approach perfection, "constructing" a prosecutable case may be more of a challenge. But relax not. If for some reason the government decides to get you – if you've popped up as somehow an obstacle to "national security" – it is not impossible. Even in recent decades, critics of government policies have ended up facing dredged-up, if not trumped-up, criminal charges over some past indiscretion or misdeed.

Learning Curve

It has been my good fortune this year to sponge up data and wisdom – in equal measure – from NSA alumni like Bill Binney, Kirk Wiebe, Tom Drake, and Ed Loomis, who in early January authored "NSA Insiders Reveal What Went Wrong."

More recently (on May 31), Bill and I took part in a panel discussion in New York, so this freshly sponged-up learning still dwelled in my frontal lobe when I was interviewed by RT on June 5, the anniversary of the first-published disclosure from Edward Snowden.

When asked how "ordinary people" in the U.S. were being affected by the disclosures about bulk collection, I passed along what I had recently learned from Bill and other whistleblowers regarding how law enforcement is masking illegal surveillance to the severe detriment of defendants' constitutional rights.

Former FBI Division Counsel in Minneapolis Coleen Rowley – who, with Jesselyn Radack, Tom Drake and me, visited Snowden in Russia last October – told me of two legal doctrines established many decades ago: the "exclusionary rule" and the rule regarding the "fruit of the poisonous tree."

These were designed to force over-zealous law enforcement officers to adhere to the Constitution by having judges throw out cases derived from improperly obtained evidence. To evade this rule, law enforcement officials who have been on the receiving end of NSA's wiretap data must conceal what tipped off an investigation.

After the Tip-Off

Among the revelations over the past year was DEA's definition of "parallel construction" as "the use of normal [read legal] investigative techniques to re-create the information received by DEA's Special Ops Division" from NSA or other sources that can't be acknowledged. Some of these sources may be confidential informants whose identities need protecting, but the NSA's massive database has become a very inviting place to trawl for valuable leads.

As Reuters reported last August, “A secretive U.S. Drug Enforcement Administration unit is funneling information from intelligence intercepts, wiretaps, informants and a massive database of telephone records to authorities across the nation to help them launch criminal investigations of Americans.”

“Although these cases rarely involve national security issues, documents reviewed by Reuters show that law enforcement agents have been directed to conceal how such investigations truly begin – not only from defense lawyers but also sometimes from prosecutors and judges.

“The undated documents show that federal agents are trained to ‘recreate’ the investigative trail to effectively cover up where the information originated, a practice that some experts say violates a defendant’s Constitutional right to a fair trial. If defendants don’t know how an investigation began, they cannot know to ask to review potential sources of exculpatory evidence – information that could reveal entrapment, mistakes or biased witnesses.”

So, in this way, the NSA’s warrantless surveillance can result in illegal law enforcement. And the FBI, the DEA and other organs of the deep state have become quite good at it, thank you very much.

Here’s how it works: NSA’s domestic surveillance – though supposedly restricted to detecting terrorism – gets wind of some potentially illegal activity unrelated to terrorism. So, NSA passes the information on to the relevant law enforcement agency. It could be a vehicle transporting illegal drugs or a transfer of suspicious funds or pretty much anything.

This evidence then sparks an investigation, but the original information can’t be used legally because it was acquired illegally for “national security” purposes. After the tip, “parallel” law enforcement techniques are introduced to collect other evidence and arrest and charge the suspects/defendants.

The arrest is made to appear the splendid result of traditional detective techniques. However, if the court learns of the initial shenanigans, the defendant may be released because her/his constitutional rights were violated.

To avoid that possibility, the government simply perjures itself during the court discovery process by concealing the key role played by the NSA database, exculpatory evidence that could weaken or destroy the government’s case.

Last week a journalist asked me why I thought Congress’ initial outrage – seemingly genuine in some quarters – over bulk collection of citizens’ metadata had pretty much dissipated in just a few months. What started out as a strong bill upholding Fourth Amendment principles ended up much weakened with only a few significant restraints remaining against NSA’s flaunting of the Constitution?

Let me be politically incorrect and mention the possibility of blackmail or at least the fear among some politicians that the NSA has collected information on their personal activities that could be transformed into a devastating scandal if leaked at the right moment.

Do not blanch before the likelihood that the NSA has the book on each and every member of Congress, including extramarital affairs and political deal-making. We know that NSA has collected such information on foreign diplomats, including at the United Nations in New York, to influence votes on the Iraq War and other issues important to U.S. “national security.”

We also know how the late FBI Director J. Edgar Hoover used much more rudimentary technology a half century ago to develop dossiers on the personal indiscretions of political and ideological opponents. It makes sense that people with access to the NSA’s modern surveillance tools would be sorely tempted to put these new toys to use in support of their own priorities.

I happened to be with a highly accomplished attorney – one not involved in security law – when we saw TV reporting that the Solicitor General of the United States had misled the U.S. Supreme Court. My lawyer friend kept shaking his head, with his mouth agape: “Now THAT is not supposed to happen” is all he could muster.

Other than the Supreme Court justices themselves, the Solicitor General is among the most influential members of the legal community. Indeed, the Solicitor General has been called the “tenth justice” as a result of the relationship of mutual trust that tends to develop between the justices and the Solicitor General.

Thus, while it is sad, it is hardly surprising that no one took Solicitor General Donald Verrilli Jr. to the woodshed. There are seldom penalties in Washington for playing fast and loose with the truth.

Verrilli, sworn in as Solicitor General three years ago, assured the Court in the “Clapper v. Amnesty International USA” case that defendants would be informed of evidence coming from NSA. The Department of Justice had reviewed his draft testimony and did not tell Verrilli that this was not the truth.

In the case, a majority of the Supreme Court justices decided to wait until a criminal defendant was actually convicted with the admitted use of NSA evidence before ruling on whether this violates the Fourth Amendment and the requirement of court warrants based on “probable cause” before police searches can be conducted.

The result of the Supreme Court’s decision was that the challenge to the constitutionality of NSA’s mass collection was abruptly stopped, and the mass surveillance continued. But Verrilli subsequently found out that his assurances had been false, and there ensued an argument with the Department of Justice, which opposed revealing use of NSA sources in any court.

Verrilli apparently prevailed partially, with the government subsequently notifying a few defendants in ongoing terrorism cases that NSA sources were used.

Separation of Powers?

We cannot escape some pretty dismal conclusions here. Not only have the Executive and Legislative branches been corrupted by establishing, funding, hiding and promoting unconstitutional surveillance programs for over 12 years, but the Judicial branch has been corrupted, too.

The discovery process in criminal cases is now stacked in favor of the government through its devious means for hiding unconstitutional surveillance and using it in ways beyond the narrow declared purpose of thwarting terrorism.

Moreover, federal courts at the district, appeals and Supreme Court levels have allowed the government to evade legal accountability by insisting that plaintiffs must be able to prove what often is not provable, that they were surveilled through highly secretive NSA means. And, if the plaintiffs make too much progress, the government can always get a lawsuit thrown out by invoking “state secrets.”

The Separation of Powers designed by the Constitution’s Framers to prevent excessive accumulation of power by one of the branches has stopped functioning amid the modern concept of “permanent war” and the unwillingness of all but a few hearty souls to challenge the invocation of “national security.” Plus, the corporate-owned U.S. media, with very few exceptions, is fully complicit.

Thus, a massive, intrusive power now looms over every one of us – and especially those few brave individuals with inside knowledge who might be inclined to inform the rest of us about the threat. Whistleblowers, like Chelsea Manning and Edward Snowden, face decades in prison for divulging important secrets to the American people. And so the legal rot continues.

The concept of a “United Stasi of America,” coined by Pentagon Papers whistleblower Daniel Ellsberg a year ago, has been given real meaning by the unconstitutional behavior and dereliction of duty on the part of both the George W. Bush and Obama administrations.

Just days after the first published disclosure from Snowden, Ellsberg underscored that the NSA, FBI and CIA now have surveillance capabilities that East Germany’s Stasi secret police could scarcely have imagined.

What, We Worry?

Last June, Mathew Schofield of McClatchy conducted an interesting interview of Wolfgang Schmidt, a former lieutenant colonel in the Stasi, in Berlin. With the Snowden revelations beginning to tumble out into the media, Schofield described Schmidt as he pondered the sheer magnitude of domestic spying in the United States.

Schmidt: “You know, for us, this would have been a dream come true.”

Schofield continues: “In those days, his department was limited to tapping 40 phones at a time, he recalled. Decide to spy on a new victim and an old one had to be dropped, because of a lack of equipment. He finds breathtaking the idea that the U.S. government receives daily reports on the cellphone usage of millions of Americans and can monitor the Internet traffic of millions more.”

“So much information, on so many people,” says Schmidt who, at that point, volunteers a stern warning for Schofield and the rest of us:

“It is the height of naiveté to think that, once collected, this information won’t be used. This is the nature of secret government organizations. The only way to protect the people’s privacy is not to allow the government to collect their information in the first place.” [emphasis added]

(For those who missed it, “The Lives of Others,” a 2006 film, offers a chilling depiction of the Stasi, a far more capable incarnation of which may soon be coming to your home or neighborhood with assistance of “parallel construction.”)

Take note, those of you who may still feel fearless, those of you with “nothing to hide.”

NSA metadata key to solve domestic crime

Powell, 13

Stewart M. Powell, writer for Connecticut Post, 8/4/13 (“NSA handing over non-terror intelligence”, CT Post, Updated 9:37 pm, Sunday, August 4, 2013, <http://www.ctpost.com/local/article/NSA-handing-over-non-terror-intelligence-4706227.php>, Accessed: July 19th, 2015, DSF)

WASHINGTON -- The National Security Agency is handing the Justice Department information, derived from its secret electronic eavesdropping programs, about suspected criminal activity unrelated to terrorism. This little-known byproduct of counterterrorism surveillance continues amid controversy over the NSA's wide-ranging collection of domestic communications intelligence, including Americans' telephone calling records and Internet use. It is unclear whether the referrals have been built upon the content of telephone calls and emails. Administration officials have previously assured Congress that NSA surveillance focuses on so-called metadata and in the main does not delve into the content of individual calls or email messages. Also, some in the legal community question the constitutionality of criminal prosecutions stemming from intelligence-agency eavesdropping. Current and former federal officials say the NSA limits non-terrorism referrals to serious criminal activity inadvertently detected during domestic and foreign surveillance. The NSA referrals apparently have included cases of suspected human trafficking, sexual abuse and overseas bribery by U.S.-based corporations or foreign corporate rivals that violate the Foreign Corrupt Practices Act. "We can't task the collection of information for those purposes, and the Department of Justice can't ask us to collect evidence of that kind of a crime," said Robert Litt, general counsel for the Office of the Director of National Intelligence. "If the intelligence agency uncovers evidence of any crime ranging from sexual abuse to FCPA, they tend to turn that information over to the Department of Justice," Litt told an audience at the Brookings Institution recently. "But the Department of Justice cannot task the intelligence community to do that." Litt declined to discuss NSA referrals to the Justice Department when asked about the practice by Hearst Newspapers after a Senate Judiciary Committee hearing last week. The super-secret NSA surveillance disclosed by fugitive leaker Edward Snowden has already sparked a public outcry and congressional hearings, and threatened congressional intervention to limit the programs. Litt's acknowledgement that the NSA is handing off intelligence to federal prosecutors could further stoke controversy and calls for action on Capitol Hill. "If the information from surveillance or wiretaps is used by the NSA

inconsistently with the warrant or other permission from the FISA court, certainly there would be a violation of law," said Sen. Richard Blumenthal, D-Conn., a former U.S. attorney and state attorney general. "Unfortunately we have no access to the FISA court opinions or orders that may authorize this activity because they're largely secret. This presents yet another clear and powerful reason that we need more transparency in the FISA court." Sen. John Cornyn, R-Texas, a former Texas Supreme Court judge and state attorney general, said, "There's certainly room to improve the process and to reassure the American people that their privacy rights are being protected while at the same time making sure that we have the tools in place to keep us safe." After intelligence-based information is referred to the FBI, the domestic law enforcement agency would have to prove probable cause to a federal judge to obtain a warrant to conduct electronic surveillance or a physical search as part of any domestic criminal investigation. But some lawyers, particularly in the criminal defense community, see that process as constitutionally flawed. "The NSA intercepts, whether they are mail covers, metadata or what have you, are in essence general warrants," said Harold Haddon, a prominent criminal defense attorney from Denver. Using information from those warrants as the basis for a criminal prosecution "is a bright-line Fourth Amendment violation," Haddon said, referring to the constitutional protection against unreasonable search and seizure.

NSA data mining can help stop cybercrime

Micheals, 2013, Michaels is a military writer for USA TODAY and has covered wars around the world. He is a former Marine infantry officer and author of the book "A Chance in Hell: The men who triumphed over Iraq's deadliest city and turned the tide of war.", Jim, NSA data mining can help stop cybercrime, analysts say, 4:50 p.m. EDT June 6, 2013, <http://www.usatoday.com/story/news/politics/2013/06/06/nsa-data-mining-cyber-crime-data/2397165/>, js

The huge volume of telephone records turned over to the U.S. government could help investigators identify and deter a range of terrorist acts, including cyberattacks, analysts say. "Once you have this big chunk of data and you have it forever... you can do all sorts of analytics with it using other data sources," said Joseph DeMarco, former head of the cybercrime unit in the U.S. attorney's office in New York City. "A data set like this is the gift that keeps on giving," said DeMarco, a partner at the law firm DeVore & DeMarco. The government obtained an order from the Foreign Intelligence Surveillance Court ordering a Verizon subsidiary to turn over phone records to the National Security Agency. The records do not include the content of phone calls and the order does not authorize eavesdropping. Still, the information can be helpful to investigators looking for patterns, linking people and networks. Also, phone numbers can be attached to computers, allowing hackers to get into networks through telephone lines. The data can also be viewed against other databases that help investigators see patterns and links among people and networks. "All the data is critical," said Robert Rodriguez, a cybersecurity expert and former Secret Service agent. The government considers many cyberattacks to be acts of terror, DeMarco said. "The definition of terrorism includes cyberterrorism," he said. The court order also raises questions about the relationship between the government and industry at a time when so much critical infrastructure, such as power grids and banking, is in the hands of industry and may be vulnerable to cyberattack. In the Verizon case, the NSA got a court order to get the phone records. But to combat cyberattacks, the government has been struggling with ways to compel more cooperation between government and industry. President Obama issued an executive order this year aimed at encouraging the sharing of information, such as reports of attacks on industry and threat information. The White House has said that legislation is also needed to develop a strong defense against cyberattacks. A key provision lawmakers are considering would include civil protections so that private companies could not be held liable for turning information over to the government. A similar provision was included in the 2008 reauthorization of the Foreign Intelligence Surveillance Act, the 1978 law that created the court that approved the NSA's Verizon request.

Link – PATRIOT ACT and Money laundering

Anti-Money laundering tech helps mass surveillance - Means there is a clear tradeoff with the plan

DeWeese 3

(a candidate for the Ohio Legislature, served as editor of two newspapers, and has owned several businesses, led the only privately-funded election-observation team to the Panamanian elections, invited to Cambridge University to debate the issue of the United Nations before the Cambridge Union, serves as Founder and President of the American Policy Center and editor of The DeWeese Report, Tom, "Total surveillance equals total tyranny", American Policy Center, August 25, 2003, <http://americanpolicy.org/2003/08/25/total-surveillance-equals-total-tyranny/>, ASN)

In the name of fighting terrorism a new kind of government is being implemented in Washington, D.C. We are witnessing the birth of a powerful multi-billion dollar surveillance lobby consisting of an army of special interest groups, Washington lawyers, lobbyists, and high-tech firms with wares to sell. The personal rights of American citizens, protected until now by the Bill of Rights, are the farthest thing from their minds as they seek to fill their pockets while enabling government to monitor and control our lives to a degree unheard of prior to September 11, 2001. This army seeks riches as it pushes for laws and regulations to spy on and control the lives of law-abiding Americans. The Government Electronics and Information Technology Association (GEIA) reports that there are more than 100 federal entities involved in forging the largest conglomeration of government-private contractor interests since the creation of the Pentagon. GEIA represents hundreds of corporate members seeking to cash in on the Homeland Security-citizen-surveillance-spending spree. GEIA told the news media that the "needed technologies include those providing digital surveillance, data mining, advanced encryption, smart cards, sensors and early warning and profiling tools." In September 2002, dozens of major high tech companies formed the "Homeland Security Industries Association". A key objective of the association is to win a piece of the action for the creation of national ID cards for travelers. The November 25 edition of Business Week reported that the SAS Institute is among many corporations scrambling to launch a whole new line of anti-money laundering software designed to help insurance companies, investment banks and brokerage firms spy on their clients' financial activities on behalf of the government in compliance with the Patriot Act. According to Bert Ely, the head of a consulting company for financial institutions, the new anti-money laundering provisions of the Patriot Act will do nothing to stop the financing of international terrorists. At best, he says, the new provisions will actually provide evil doers with a road map to avoid detection. What the new Patriot Act provisions are really about, says Ely, is to have the United States fall into line with an international campaign being waged by the Organization for Economic Cooperation and Development and the Financial Action Task Force against countries that serve as tax havens. The newly enacted regulations are being applied in the name of fighting terrorism, but are really about a different agenda. In mid-September 2002, the U.S. Department of Commerce and the Office of Homeland Security held an exposition in Washington. Medium and small firms from across the nation were invited in to showcase the very latest in citizen surveillance wares. This tradeshow and others like it have attracted hundreds of corporations who've shown their high-tech products to top government planners responsible for creating and implementing new restrictions on privacy in the name of "national security." PoliticalMoneyline says that 444 groups and individuals have registered as lobbyists to deal with "terror" and "security" issues. IBM has opened a "Government Solutions Center" in Vienna, Virginia. The high-tech Unisys Corporation has established a similar exhibition for inspection by federal surveillance planners, called the "Homeland Security Center for Excellence." Both corporations are racing to cash in on billions of dollars for facial recognition systems at airports, and in anticipation of "trusted traveler" cards, a high-tech ID tied to extensive background checks and biometric identification. In February 2003, it was discovered that the Department of Justice was drafting legislation to radically expand the reach of the federal government into the lives of every American citizen. The official title of the document is the "Domestic Security Enhancement Act of 2003. It's been given the nickname, Patriot 2. The bill has not yet been introduced in Congress and only a very few key government leaders including Vice President Cheney and House Speaker Dennis Hastert have reviewed it. It is suspected by many that the delay in officially offering the bill to Congress is a direct result of public attacks on the bill by privacy advocates, but it is feared that the Justice Department would get very bold in rushing it through should another terrorist attack occur. Here are just a few of the more frightening provisions of Patriot 2. By definition in the bill, almost any American citizen can arbitrarily be designated a terrorist.

Section 101 of this act will give the executive branch the power to declare any American a “foreign power” and therefore not a citizen. Those designated will be exempt from the protections of the Constitution. Keep in mind that the Patriot Act was passed by Congress, sight unseen, in the middle of an Anthrax scare. Every member of Congress was warned that if they failed to pass it then the next terrorist attack would be on their hands. That’s why the Patriot Act allows for wiretaps without warrants. And it’s why all the other surveillance a-go-go is in full swing. In the name of fighting terrorism, our government has gained the ability to see our every movement, inspect every transaction, and walk into our homes without our knowing it. For those of you who feel protected; who feel the government is just doing its job to defeat terrorism, I’m very sad to tell you that our government is not being honest with us. Terrorism is the excuse, not the motivation, for the massive drive toward Big Brother. We are not being protected. We are being wrapped in a cocoon of tyranny. All of the signs are there. Consider the power which we have now granted to the federal government twenty years down the road, driven by more technological developments that we can’t even pretend to foresee. Imagine the America that you are allowing the government to create for your children. What will their lives be like? Will they know freedom or oppression? We are making those decisions for our children today. The only way to make sure that government doesn’t abuse its power is to not grant it in the first place.

PATRIOT ACT is Key to effective counter-money laundering operations. White Paper on the USA PATRIOT ACT, 14

White Paper on the USA PATRIOT ACT, 2014 (“The USA PATRIOT ACT”, Lexis Nexis, August 2014, <https://cert-www.lexisnexis.com/risk/intl/en/regulations/USA-Patriot-Act.pdf>, Accessed: July 20th, 2015, DSF)

Money laundering is defined as the transfer of cash and valuables that are the product of and / or intended for the facilitation and execution of a crime. **The Act strengthens federal efforts against money laundering in the areas of regulations, criminal sanctions and forfeiture.** The Act broadens the Secretary of the Treasury’s authority to regulate the activities of the institutions that function within the United States financial system. This is especially true in reference to foreign entities. The Act provides the position to promote the following regulations:

- Securities brokers, commodity merchants, dealers, pool operators and advisors must file (SARs) suspicious activity reports
- Businesses are required to report cash transactions that involve sums that are greater than \$10,000 to the IRS in addition to filing a SAR
- Additional “special measures” and “due diligence” requirements to combat foreign money laundering
- Financial institutions are prohibited from maintaining a correspondent account for foreign shell banks
- Financial institutions are prohibited from permitting their customers to hide their financial activities by leveraging the institutions concentration account processes

An Effective Approach for News Screening 4

~~CONFIDENTIAL~~

- Introducing new customer identification (CIP) standards in addition to recordkeeping, as well as recommending effective processes to verify the identity of foreign customers
- Exhorting financial institutions as well as law enforcement in sharing information concerning suspected terrorist activity and money laundering
- Instituting the requirement that financial institutions maintain anti-money laundering programs, compliance personnel, employee training programs, internal policies, procedures and controls as well as an independent audit feature

The Act introduced a series of new money laundering crimes and amendments, in addition to increasing the penalties for previous offenses. Among these it:

- Prohibits laundering (in the United States) the proceeds from foreign crimes and or political corruption
- Prohibits laundering the proceeds for supporting terrorist organizations as well as for cybercrimes
- Increases the penalty for counterfeiting
- Sought to override a Supreme Court decision indicating that the confiscation of over \$300,000 (for attempting to leave the country without reporting the funds to customs) was an unconstitutionally exorbitant fine
- Allows for the authority to prosecute fraud committed overseas involving U.S.-based credit cards
- Promotes the prosecution of money laundering in the location where the offense occurred

The Act created two types of forfeitures in addition to modifying several confiscations-related procedures. The

Act allows the confiscation of an individual's or entity's property who either plans in or participates in an act of international or domestic terrorism. The Act also allows for the confiscation of property that is derived from or used to facilitate international or domestic terrorism. Under the constitution's due process, double jeopardy and the ex post facto clauses, the scope of these provisions may be limited. From a procedural perspective the Act:

- Provides mechanisms to extend jurisdiction in cases concerning forfeiture proceedings over individuals and entities
- Provides for property confiscation in the United States for a broader range of crimes committed in violation of foreign law
- Allows the United States enforcement of foreign forfeiture orders
- Permits the seizure of foreign correspondent accounts that are held in United States financial institutions for foreign banks who in turn hold forfeitable assets overseas

- Denies corporate entities the right to contest a confiscation if their principal shareholder is a fugitive

Pen register super useful in fighting crime

POV, 12

Point Of View, 1/1/12 (“Obtaining Electronic Communications and Records”, ALAMEDA COUNTY DISTRICT ATTORNEY’S OFFICE, January 1st, 2012, http://le.alcoda.org/publications/point_of_view/files/ELECTRONIC_RECORDSx.pdf, Accessed: July 21st, 2015, DSF)

Every day, virtually every criminal in the U.S. (at least those who aren’t incarcerated) will use a phone, send or receive email, surf the internet, or all four. So it is not surprising that many of the records pertaining to these communications can help investigators solve crimes and assist prosecutors in obtaining convictions. Among other things, they may reveal the identities of the suspect’s accomplices, establish the dates and times of their contacts, and prove the suspect’s whereabouts when a crime occurred. As the California Supreme Court observed, “[A] record of telephone calls provides a virtual current biography.”² In fact, electronic communication records now permit officers to follow a suspect by obtaining realtime reports of the locations of the cell phone towers that are receiving signals from his phone.

The question, then, is what are the legal requirements for obtaining these records? Unfortunately, the answer is not crystal clear. And the reason is the same as the reason that officers are having trouble figuring out the rules for obtaining copies of the communications themselves (which was the subject of the previous article). Simply put, both subjects are regulated by a federal law that was badly written and poorly organized, and which has not kept pace with changes in technology.

Another consequence of this uncertainty is that **overcautious service providers sometimes demand legal process beyond that required by the law.** As a result, officers who have complied with all the legal requirements will sometimes be told by the provider that it’s not enough. And **this can result in delays that seriously impair investigations.**

For example, homicide investigators in Hayward obtained a search warrant for a murder victim’s AT&T records and voicemail. They needed this information because they had virtually no leads in the case and they thought it would help if they knew the identities of the people who recently spoke with the victim. But AT&T refused to turn over the records or tapes unless the officers obtained a wiretap order. We challenged this in court, and won. But the incident cost time and money, and it needlessly delayed the investigation.

Nevertheless, it is possible to make sense of this area of the law, and that is the purpose of this article. But before we begin, there are four things that should be noted. First, there is a significant difference between communications (or “content”) and records, although a summary will suffice here because we discussed this issue at length in the accompanying article. A communication is the message that was sent or received, while a record consists of information that is ancillary or incidental to its transmission, such as information about the subscriber, the phone numbers and email addresses of the senders and recipients of messages, and exactly when those messages were made or received.³

Second, the rules for obtaining copies of electronic communication records are set forth in the federal Electronic Communications Privacy Act (ECPA). In particular, the section known as the Stored Communications Act (SCA) covers the acquisition of subscriber and transaction records, while data pertaining to pen registers and connection traps are covered in a separate chapter which also (arguably) covers the means by which officers can obtain cell tower location records.⁵

DEA using wiretaps and pen registers to catch international drug cartels

Kenny 11, Michael Kenny, August 15, 2011, From Pablo to Osama: Counter-terrorism Lessons from the War on Drugs, Survival: Global Politics and Strategy, <http://dx.doi.org/10.1080/00396338.2003.9688585>, TK

Michael Kenney is assistant professor of public policy at the School of Public Affairs at Pennsylvania State University, Harrisburg

The Colombian cocaine 'cartels'³ can be traced back to the 1970s, when numerous entrepreneurs sought to exploit the demand for cocaine in US illegal drug markets by transporting small quantities of the drug from Ecuador, Bolivia and Peru to Colombia, where it underwent further refinement in makeshift laboratories before final shipment northwards. Over time and through repeated exchange, numerous entrepreneurs developed far-flung transportation and distribution networks capable of coordinating several multi-tonne cocaine shipments a year. These 'wheel networks' contained a core group that coordinated activities among functionally specific nodes, including cocaine base suppliers, processing labs, transportation rings and distribution groups that delivered cocaine to independent retailers and funnelled the profits to network leaders and investors.⁴ While core groups were generally based in Colombia, support nodes were located in different countries, giving these networks a transnational dimension. To reduce their exposure to law-enforcement penetration, participants in cross-border transportation or wholesale distribution activities were often compartmentalised into small working groups or 'cells' that maintained close communication with core groups and followed elaborate procedures for delivering large amounts of drugs to independent wholesalers and conducting other hazardous activities. The core groups directed the transnational enterprise, providing security and resolving disputes and securing resources from independent investors. They also gathered intelligence about government drug enforcement efforts and served as the communications hub for the network, coordinating transactions among peripheral nodes. If something went wrong, informal relations of vertical accountability ensured that peripheral nodes answered to the core, protecting kingpins and investors from theft and other risks. Decision-making authority generally flowed out and downwards from the core, beginning with one or more kingpins that directed the transnational enterprise. Below them were 'managers' responsible for line functions, such as transportation and wholesale distribution. Beneath managers were cell workers that carried out much of the daily work of the enterprise. Kingpins or their day-to-day administrators sought to maintain control over their operations through frequent communication with overseas managers, often mediated through brokers that provided an additional layer of insulation from law enforcement. The predominantly vertical direction of command authority – proceeding from the hub of the core group along spokes to the most peripheral operatives – and its multiple vectors made the cartels 'wheel networks'. By the mid-1980s, US and Colombian officials were fully attuned to the danger represented by a handful of wheel networks, particularly the notorious Medellín and Cali enterprises. **With US assistance, Colombian drug enforcers launched several crackdowns** against the leaders of these transnational enterprises between 1984 and 1988, **destroying processing labs, seizing cocaine shipments and arresting** (and occasionally extraditing) **lower and middle-level traffickers**. However, core-group kingpins were not greatly affected by these short-lived offensives, as their elaborate security arrangements allowed them to continue their illicit activities relatively unimpeded. Throughout the 1980s, police officials discovered numerous multi-tonne cocaine shipments in the US, indicating the growing capacity of Colombian trafficking networks. Yet even the largest of these seizures failed to put a significant dent in drug availability. While the estimated average price of cocaine at the 'dealer' level dropped from \$191 per gram in 1981 to \$65 per gram in 1989, during the same period the estimated purity of cocaine at the same transaction level rose from 60% to 80%. The US Drug Enforcement Administration (DEA)'s response, in 1992, was the kingpin strategy. Leveraging the DEA's investigative and intelligence

strengths, this initiative involved the aggressive use of electronic surveillance technologies, including wiretaps, pen registers and trap-and-trace devices. A kingpin was defined as the leader of an international trafficking enterprise who directs the production, transportation, and distribution of large quantities of cocaine or heroin, as well as the organisation's financial operations. By 'neutralising' kingpins and dismantling their criminal infrastructures, the DEA hoped that it would be able to 'significantly reduce the availability of drugs in the United States'.⁵ Principal targets of the kingpin strategy were the leaders of the Colombian cocaine cartels. The initial list included Pablo Escobar, José Santacruz Londoño, Gilberto and Miguel Rodríguez Orejuela, Helmer Buitrago Herrera, and Iván and Jairo Urdinola Grajales. **In close cooperation with the Colombian National Police (CNP), the DEA sought to disable their trafficking networks by attacking their communications, transportation and finance systems.** After just a year and a half of operation, **the DEA reported that kingpin investigations had led to the seizure of \$210 million in drug proceeds, the confiscation of 144 aircraft and 91 boats, trucks and cars, and the arrest of over 713 'significant' traffickers.**⁶ In Colombia, elite drug enforcement units destroyed hundreds of cocaine processing labs, seized thousands of kilograms of cocaine base and cocaine hydrochloride, eradicated hundreds of thousands of hectares of coca leaf plantings, and **arrested hundreds of traffickers.** Remarkably, by 1996 all of the original kingpins were either dead or in jail, and their trafficking networks severely disrupted. Notwithstanding reports that some entrepreneurs continued to manage scaled-down smuggling operations from behind bars, a number of government officials crowed that the days of the cocaine cartels were over. Some went even further. Following the arrest of Gilberto Rodríguez-Orejuela, Colombian prosecutor general Alfonso Valdivieso exulted that 'narco-trafficking is in the way of disappearing from Colombia'.⁷ **In a war marked by considerable frustration for lawenforcement agencies, the state appeared to have earned a major victory.**

Link – Police Body Cameras

Federal push for police body cameras helps with solving crimes such as domestic violence because of the better evidence

Shepherd 14

(Reporter for Centralmaine – Covers Maine’s 2nd Congressional district – News and Politics reporter for the Kennebec Journal, Michael, “Police Body Cameras Already Catching on in Central Maine”, Centralmaine.com, December 7, 2014, <http://www.centralmaine.com/2014/12/07/police-body-cameras-already-catching-on-in-central-maine/>, ASN)

Gove’s department is one of the scattershot cities and towns in central Maine that began using chest-worn cameras department-wide well before a recent national push for police to adopt them. Three years ago, Gardiner Police Chief James Toman said his department started using body cameras during traffic stops, crime scene visits and most other interactions with the public. Now the department has seven of them. They cost \$700 to \$800 per unit, cheap compared to the in-car units that Gardiner hasn’t had and would have had to pay thousands to install. Toman said officers have embraced the body cameras, which help them write reports, document cases and guard against citizen complaints. “I think it’s one of the best things we’ve purchased, actually,” the chief said. Other area departments using them include those in Wilton, Farmington, Richmond and Monmouth. They bought them in the last few years as a more portable and cheaper alternative to dashboard cameras, which are more common. Meanwhile, larger Maine police agencies — including the Maine State Police and departments in Portland, Bangor, Lewiston and Augusta — haven’t bought body cameras. Those departments say they would consider using body cameras, but they cited cost as a main prohibitive factor. Departments nationwide, though, will get help with that if President Barack Obama gets his way. Last week, he asked Congress to spend \$263 million over three years to give police cameras, training and other resources in an effort to increase public confidence in law enforcement. Of that, the federal government would use \$75 million to help buy 50,000 body cameras for police through a program that would match state and local funding. The proposal was a response to recent events in Ferguson, Mo., where racial divides were highlighted after Michael Brown, an unarmed black 18-year-old suspected of robbery, was shot and killed by white police officer Darren Wilson after a scuffle in August. Brown’s death sparked protests in the St. Louis suburb and nationwide, prompting further debate about police use of riot gear, tear gas and armored vehicles to tamp down demonstrations. After a grand jury decided in November not to charge Wilson in Brown’s death, protesters took to the streets again. Brown’s family has said they would work “to ensure that every police officer working the streets in this country wears a body camera,” but Obama’s proposal wouldn’t get close to that: 50,000 cameras would cover less than a tenth of the nation’s police officers, estimated at just under 700,000 people. In Maine and across the nation, cameras in police cruisers are common, but not quite standard: In 2003, the U.S. Department of Justice said 72 percent of state police and highway patrol cars had cameras, up from 11 percent in 2000. The Maine State Police installed cruiser cameras in 1995, but like most agencies nationwide, they don’t use body cameras. A Justice Department survey of a sampling of police agencies in July 2013 found that 75 percent of those departments didn’t use them. But calls for them have grown louder of late, with New York City, Chicago and Philadelphia rolling out pilot programs. In some places, police unions have opposed mandatory expansion of body camera use, but there’s little opposition to the concept among police in Maine. The American Civil Liberties Union, which generally opposes many government surveillance programs, supports the concept of body cameras as long as individual privacy is protected. Robert Schwartz, executive director of the Maine Chiefs of Police Association, said he didn’t oppose the idea, but departments must set clear expectations for officers before using them. “There’s a lot of things to be discussed before you just put a camera on,” he said. With body cameras, the onus is typically on the officer to turn them on. In Gardiner, Toman has issued a written policy on body camera footage, which says officers must switch their cameras on when exiting their cruiser ahead of interactions. It can be switched off only after interactions. The policy says that videos must be kept for at least three months in Gardiner, but if there’s an arrest, they are maintained indefinitely and handed to prosecutors as evidence. Rachel Healy, a spokeswoman for the ACLU of Maine, praised Gardiner’s policy overall, especially the part that makes officers leave cameras on throughout interactions. She said she would liked to have seen certain allowances made for recording inside homes and disclosing the fact that officers often are recording, but she said Gardiner is well ahead of most agencies. “In the end, when these ultimately will be routine and technology advances, these problems will work themselves out,” Healy said. Gardiner is ahead of Wilton, whose department is more casual about using the cameras. Police Chief Heidi Wilcox said

there's no written policy for her officers, who follow "best-use" practices when using body cameras. The Waterville Police Department doesn't provide body cameras to its police, but Officer Damon Lefferts bought one for his own use last year. He told the Morning Sentinel that it once helped him get evidence in a domestic violence case. However, Police Chief Joseph Massey said last week that he'll ask Lefferts to stop using it until the department can develop protocols and determine how they would respond to public-access requests for his footage. Kennebec County District Attorney Maeghan Maloney said "the best evidence we have in a case is often from a body camera," saying that footage of victim interviews has led to convictions in domestic violence cases. That worked in the case of David L. Dixon. Last year, he admitted to Gardiner police Sgt. Todd Pilsbury that he had choked and "tried to kill" a woman. Pilsbury was wearing a body camera. Dixon eventually was found guilty and sentenced to six months in jail. The footage, which the department provided to the Kennebec Journal for review, also showed an interview with the victim, who had visible red marks around her neck.

Link – Stored Communications Act

SCA is super useful in fighting crime – Courts Say POV, 12

Point Of View, 1/1/12 (“Obtaining Electronic Communications and Records”, ALAMEDA COUNTY DISTRICT ATTORNEY’S OFFICE, January 1st, 2012, http://le.alcoda.org/publications/point_of_view/files/ELECTRONIC_RECORDSx.pdf, Accessed: July 21st, 2015, DSF)

Every day, virtually every criminal in the U.S. (at least those who aren’t incarcerated) will use a phone, send or receive email, surf the internet, or all four. So it is not surprising that many of the records pertaining to these communications can help investigators solve crimes and assist prosecutors in obtaining convictions. But the incident cost time and money, and it needlessly delayed the investigation.

Nevertheless, it is possible to make sense of this area of the law, and that is the purpose of this article. But before we begin, there are four things that should be noted. First, there is a significant difference between communications (or “content”) and records, although a summary will suffice here because we discussed this issue at length in the accompanying article. A communication is the message that was sent or received, while a record consists of information that is ancillary or incidental to its transmission, such as information about the subscriber, the phone numbers and email addresses of the senders and recipients of messages, and exactly when those messages were made or received.³

Second, the rules for obtaining copies of elec- tronic communication records are set forth in the federal Electronic Communications Privacy Act (ECPA). In particular, the section known as the Stored Communications Act (SCA) covers the acquisition of subscriber and transaction records, while data pertaining to pen registers and connec- tion traps are covered in a separate chapter which also (arguably) covers the means by which officers can obtain cell tower location records.⁵

Link – Wiretapping (Generic)

Wiretapping is key to check organized crime

Wade, 15

Christian M. Wade, State house reporter, 1/9/15 (“Essex County DA Blodgett calls for updated wiretap law”, Salem News, January 1st, 2015, http://www.salemnews.com/news/local_news/essex-county-da-blodgett-calls-for-updated-wiretap-law/article_ebfc081-27a7-54e0-b768-d45f0d2598f5.html, Accessed: July 13th 2015, DSF)

BOSTON — Law enforcement officials are planning another push to update the state’s antiquated wiretapping laws to include cell phones, as part of a broader effort to target drug gangs and human traffickers.

Such a measure would also expand the definition of organized crime beyond traditional mafia activity and allow police to ask judges for wiretaps on narcotics and human trafficking networks.

“One of the biggest instruments in criminal activity these days is the cell phone,” said Essex County District Attorney Jonathan Blodgett. “The drug cabals and the human traffickers — they’re all doing it with their cell phones.”

Blodgett, who heads the Massachusetts District Attorneys Association, said the group will seek a lawmaker to sponsor a measure broadening wiretap authority to include cases involving homicides, firearms and drug distribution, even if not part of organized crime.

Link – Wiretapping (Money Laundering)

Wiretaps and other forms of surveillance help curb Money Laundering

Auten 13 (Matthew R. Auten is a J.D. Candidate, Pace University School of Law (2013); B.A., McGill University (2002) - 2013- "Money Spending or Money Laundering: The Fine Line between Legal and Illegal Financial Transactions" - <http://www.lexisnexis.com.proxy2.cl.msu.edu/hottopics/lnacademic/>)

To determine whether sufficient evidence to support a conviction for money laundering has been produced by the prosecution, the most clear-cut cases rely on probative statements made by the defendant.

http://www.lexisnexis.com.proxy2.cl.msu.edu/lnacui2api/frame.do?tokenKey=rsh-20.976477.4087765907&target=results_DocumentContent&returnToKey=20_T22355215367&parent=docview&rand=1437401604139&reloadEntirePage=true - n37 Direct

evidence of this kind is often obtained through wiretaps, or through the testimony of co-conspirators. However, more often than not, the prosecution relies on circumstantial evidence--often with the interpretive help of an expert witness--to make their case that a dual-purpose transaction should be characterized as money laundering. In some instances, circumstantial evidence may provide a clear inference that a particular dual-purpose transaction, or series of transactions, should be characterized as money laundering, because the intent to conceal is clear. ⁿ⁴¹

Increase of wiretapping has resulted in more arrests of drug cartels

McCombs 14, Brady McCombs Arizona Daily Star, 12-14-2010, "Wiretap use expands in fight against drug lords," Arizona Daily Star, http://tucson.com/news/local/crime/wiretap-use-expands-in-fight-against-drug-lords/article_0d98c151-27b8-5cb5-888f-436c60487c12.htm, TK

Prosecutors had plenty of evidence against two members of the Dominguez drug smuggling organization, but it was a recording of the defendants arranging a cocaine deal that nailed the conviction. "Tell him to get me the job, the other kind, the Guero," said Ricardo Varela, using the slang term for cocaine in an exchange with Maria Isabel Dominguez. "I'm going to tell him," she said. "I need one or two there," Varela said. "I'll go over and buy it from him." The conversation was one of hundreds recorded in the summer of 2004 in a wiretap investigation by the Counter Narcotics Alliance that led to the 2008 conviction of Varela and 35 others from the organization. Dominguez pleaded guilty before trial. Though expensive and time-consuming, wiretap investigations are on the rise in Arizona and across the nation because they help investigators catch high-ranking targets and because, most importantly, the live recordings pack a punch in the courtroom that can't be matched by regular testimony. "You see the lights come on and the jury realizing, 'Holy moly, these guys were going to keep doing this until they got stopped,'" said Richard Wintory, who now heads the Arizona Attorney General's border crime enforcement team but was the prosecutor in the Dominguez case as a deputy Pima County attorney. That wiretap was one of only 29 in Arizona in 2004. Since then, the number of wiretaps authorized by judges has nearly doubled to 55 in 2009, records from the Office of United States Courts show. This year's total is expected to match or exceed last year's. Nationally, wiretaps have doubled since 2000 and are up one third in the last five years. "Wiretaps are devastatingly effective for law enforcement," said Tucson defense attorney Walter Nash, who is considered one of the foremost experts on litigating against them. "Nobody will dispute that. It gives them real-time evidence that can be the ball game." In Arizona, three-fourths are used to investigate drug cases and all tap into cell phones. Critics of wiretapping say law-enforcement agencies seem to be rushing to use them when traditional law-enforcement tactics would suffice. That should worry everyone, defense attorney Nash said, considering it's so intrusive. "I don't break any laws but - I don't know about you - I would be mighty uncomfortable knowing somebody is listening to my conversation," Nash said. Real wiretap investigations don't resemble the ones you see in the movies - they are expensive, time-consuming and strenuous. "It's not at all like the movies, where you see these knuckleheads in a van with headphones on and cheeseburgers being eaten," Wintory said. "There is so much involved in these investigations." The work begins long before investigators ever listen to a phone conversation. To get permission from a judge, they must show: • That the person they want to investigate is committing or about to commit a serious crime. • That he or she is using phones to commit the crime, which requires showing a pattern of phones being used repeatedly by suspected criminals. • That authorities have exhausted traditional methods and cannot further the investigation without a

wiretap. Police often come to Wintory's office wide-eyed about potential wiretap cases only to leave frowning when they realize they haven't used all the traditional methods, which include surveillance, record checks, trash pickups and informants or undercover officers. This high standard is why the American Civil Liberties Union isn't concerned about the increase in wiretaps, said the organization's legislative counsel, Chris Calabrese. Once a wiretap application is sent to a judge, it's hardly ever rejected. Only two applications have been denied since 2000, compared with 17,278 approved, show records from the Office of United States Courts. Critics call this proof that getting wiretaps is no more than a rubber-stamp process, but Wintory said hundreds of wiretap applications never reach a judge; they fizzle in internal reviews by committees that meticulously inspect them, he said. Once a judge approves a wiretap, suppressing the evidence it gathers is difficult, time-consuming and expensive for a defense attorney. For instance, Nash has to contract investigators to prove the agency could have used tactics it said it couldn't, such as surveillance. Deciphering codes Once a wiretap has been approved, the long hours begin. "It's not just somebody flipping a switch somewhere and listening in a room," said Glenn McCormick, deputy criminal chief in charge of the U.S. Attorney Office's organized crime and drug enforcement task force section. Monitors, usually Spanish speakers, listen to phone conversations, trying to make sense of what amounts to code language. Agents go to locations mentioned in the calls to watch houses or talk with people discreetly to connect the dots between what they are hearing and what is actually happening. **Stops are made, people are arrested and what do you know, they find 20 pounds of meth in the car and the phone conversation was talking about, 'You taking those 20 windows?' 'Yeah, we've got those 20 windows,'**" McCormick said. Each wiretap authorization is good for 30 days, with extensions available for 30 additional days at a time.

Investigators sometimes get approvals to tap new phones they discover during an investigation. **In 2009 in Arizona, wiretap cases lasted an average of 71 days. Agents made an average of 145 intercepts per day. Arizona wiretap cases cost an average of \$203,800 in 2009, including four cases that exceeded \$800,000. A federal drug investigation that began in May 2008 and led to the arrest of 169 people cost \$821,067.** A state case out of Maricopa County that began in October 2008 and hasn't yielded any arrests cost \$978,720. The manpower - paying people to listen, translate and transcribe the conversations and agents to conduct surveillance and make stops - accounted for 87 percent of the costs in Arizona cases in 2009. Agencies are able to do more of them because they have more staff and funds. The U.S. Attorney's Office in Arizona has added 42 assistant U.S. attorneys since 2006, bringing the total to 152. State agencies tap into federal grants for border security and forfeiture money. **Drug cartels are well aware of the increase in wiretaps and try to thwart them by frequently changing cell phone numbers,** said Anthony Coulson, a recently retired assistant special agent in charge of the Drug Enforcement Administration's Tucson office. For a while, cartels would only use a phone up to 20 times, knowing the Department of Justice required investigators to show the use of a phone number 21 times in applications for wiretaps, Coulson said. That requirement has since changed. **Drug smuggling organizations also try to use other means of communication or cut down on phone calls, but cell phones are vital to their operations,** Coulson said. "There is no other way to do it," he said. "You can't do it through telepathy." No independent monitoring During a wiretap investigation, agents are to make reasonable attempts not to listen to conversations unrelated to the criminal activity being investigated. That doesn't always happen, defense attorney Nash said. Sometimes authorities listen in on privileged conversations between a lawyer and client, or to irrelevant banter such as two teenagers chatting, he said. But Wintory says officers get so many warnings about the law that they've missed out on key conversations when an overly careful officer switched off a recording because he thought he wasn't allowed to listen in. **The wiretap model "is the most scrupulously respectful process of civil liberties that has ever been created" Wintory said. Wiretaps are an important tool in the difficult fight against powerful drug-trafficking organizations,** he said: "They give us the opportunity to reach out through those phone lines, jerk them up by the nape of their necks and drag them back to Tucson to face justice."

DEA using wiretaps and pen registers to catch international drug cartels

Kenny 11, Michael Kenny, August 15, 2011, From Pablo to Osama: Counter-terrorism Lessons from the War on Drugs, Survival: Global Politics and Strategy, <http://dx.doi.org/10.1080/00396338.2003.9688585>, TK

Michael Kenney is assistant professor of public policy at the School of Public Affairs at Pennsylvania State University, Harrisburg

The Colombian cocaine 'cartels'³ can be traced back to the 1970s, when numerous entrepreneurs sought to exploit the demand for cocaine in US illegal drug markets by transporting small quantities of the drug from Ecuador, Bolivia and Peru to Colombia, where it underwent further refinement in makeshift laboratories before final shipment northwards. Over time and through repeated exchange, numerous entrepreneurs developed far-flung transportation and distribution networks capable of coordinating several multi-tonne cocaine shipments a year. These 'wheel networks' **contained a core group that coordinated activities among functionally specific nodes, including cocaine base suppliers,**

processing labs, transportation rings and distribution groups that delivered cocaine to independent retailers and funnelled the profits to network leaders and investors.⁴ While core groups were generally based in Colombia, support nodes were located in different countries, giving these networks a transnational dimension. To reduce their exposure to law-enforcement penetration, participants in cross-border transportation or wholesale distribution activities were often compartmentalised into small working groups or 'cells' that maintained close communication with core groups and followed elaborate procedures for delivering large amounts of drugs to independent wholesalers and conducting other hazardous activities. The core groups directed the transnational enterprise, providing security and resolving disputes and securing resources from independent investors. They also gathered intelligence about government drug enforcement efforts and served as the communications hub for the network, coordinating transactions among peripheral nodes. If something went wrong, informal relations of vertical accountability ensured that peripheral nodes answered to the core, protecting kingpins and investors from theft and other risks. Decision-making authority generally flowed out and downwards from the core, beginning with one or more kingpins that directed the transnational enterprise. Below them were 'managers' responsible for line functions, such as transportation and wholesale distribution. Beneath managers were cell workers that carried out much of the daily work of the enterprise. Kingpins or their day-to-day administrators sought to maintain control over their operations through frequent communication with overseas managers, often mediated through brokers that provided an additional layer of insulation from law enforcement. The predominantly vertical direction of command authority – proceeding from the hub of the core group along spokes to the most peripheral operatives – and its multiple vectors made the cartels 'wheel networks'. By the mid-1980s, US and Colombian officials were fully attuned to the danger represented by a handful of wheel networks, particularly the notorious Medellín and Cali enterprises. **With US assistance, Colombian drug enforcers launched several crackdowns** against the leaders of these transnational enterprises between 1984 and 1988, **destroying processing labs, seizing cocaine shipments and arresting** (and occasionally extraditing) **lower and middle-level traffickers.** However, core-group kingpins were not greatly affected by these short-lived offensives, as their elaborate security arrangements allowed them to continue their illicit activities relatively unimpeded. Throughout the 1980s, police officials discovered numerous multi-tonne cocaine shipments in the US, indicating the growing capacity of Colombian trafficking networks. Yet even the largest of these seizures failed to put a significant dent in drug availability. While the estimated average price of cocaine at the 'dealer' level dropped from \$191 per gram in 1981 to \$65 per gram in 1989, during the same period the estimated purity of cocaine at the same transaction level rose from 60% to 80%. **The US Drug Enforcement Administration (DEA)'s response, in 1992, was the kingpin strategy. Leveraging the DEA's investigative and intelligence strengths, this initiative involved the aggressive use of electronic surveillance technologies, including wiretaps, pen registers and trap-and-trace devices.** A kingpin was defined as the leader of an international trafficking enterprise who directs the production, transportation, and distribution of large quantities of cocaine or heroin, as well as the organisation's financial operations. By 'neutralising' kingpins and dismantling their criminal infrastructures, the DEA hoped that it would be able to 'significantly reduce the availability of drugs in the United States'.⁵ Principal targets of the kingpin strategy were the leaders of the Colombian cocaine cartels. The initial list included Pablo Escobar, José Santacruz Londoño, Gilberto and Miguel Rodríguez Orejuela, Helmer Buitrago Herrera, and Iván and Jairo Urdinola Grajales. **In close cooperation with the Colombian National Police (CNP), the DEA sought to disable their trafficking networks by attacking their communications, transportation and finance systems.** After just a year and a half of operation, **the DEA reported that kingpin investigations had led to the seizure of \$210 million in drug proceeds, the confiscation of 144 aircraft and 91 boats, trucks and cars, and the arrest of over 713 'significant' traffickers.**⁶ In Colombia, elite drug enforcement units destroyed **hundreds of cocaine processing labs, seized thousands of kilograms of cocaine base and cocaine hydrochloride, eradicated hundreds of thousands of hectares of coca leaf plantings, and arrested hundreds of traffickers.** Remarkably, by 1996 all of the original kingpins were either dead or in jail, and their trafficking networks severely disrupted. Notwithstanding reports that some entrepreneurs continued to manage scaled-down smuggling operations from behind bars, a number of government officials crowed that the days of the cocaine cartels were over. Some went even further. Following the arrest of Gilberto Rodríguez-Orejuela, Colombian prosecutor general Alfonso Valdívieso exulted that 'narco-trafficking is in the way of disappearing from Colombia'.⁷ **In a war marked by considerable frustration for lawenforcement agencies, the state appeared to have earned a major victory.**

Impact

Crime Bad (Deontology)

Crime is psychologically destructive – Wolff, 5

Jonathan Wolff, Dean of Arts and Humanities and Professor of Philosophy, University College London, 2005 (“What’s So Bad About Crime?”, Bentham Lecture UCL, November 30th, 2005, https://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=4&ved=0CDUQFjADahUKewj17Pt6ezGAhVHig0KHZTLcrg&url=http%3A%2F%2Fwww.homepages.ucl.ac.uk%2F~uctyjow%2FWBC.doc&ei=3YuuVaX1H8eUNpSXq8AL&usg=AFQjCNFuT2F_VHWzdADYp7oxpDA2IKh1AQ&sig2=68O_yxrVLih1gd74Hc2oPQ, Accessed: July 21st, 2015, DSF)

All of this, though, rings rather hollow, and perhaps does more to discredit particular economic indicators rather than show that crime is a good thing, after all. However I raise the question ‘what’s so bad about crime?’ not from the standpoint of an economist, but from the standpoint of moral and political philosophy. Asking this question, and thereby placing crime in a broader context, may help with two tasks; not only understanding what is so bad about crime, but understanding what is so bad about anything at all. That is to say, any philosophical account of human well-being will have to be able to give an account of what it is about crime which gives rise to so much misery. Hence crime is an important testing ground for philosophical theory.

To understand what it is for a human life to go well or badly we need some sort of theoretical approach. One standard answer is that a good life is one filled with happiness or satisfaction; a different answer is that a good life is one that is well-resourced, in terms of income and wealth, allowing a good standard of living. The two accounts are, of course, related insofar as resources can buy happiness, but it is well-known that the correlation is imperfect. A life can be intolerable even though well-resourced, and happy though poorly resourced, at least by normal standards, for a whole range of reasons.

According to the first theory presumably what is wrong with crime is that it makes people unhappy in some way. There is, no doubt, a great deal of truth in this. One has only to think of the misery, to the point of despondency, in which a mugging or burglary can leave people. A convicted housebreaker told me that he went straight after his parents were burgled and he saw at first hand for the first time, how devastating this was for them, even though they hardly lost anything. He said that he had no idea that breaking into people’s houses could have such an effect, and it shocked him to find out what he must have been doing to people. Perhaps this was because he formerly had implicitly held the second view of well-being; that a good-life is a well-resourced one, or, more likely that there is a strong correlation between possession of goods and happiness. So if you steal from the rich, as he had been doing, or from the adequately insured, this should not affect their well-being in any serious way. Yet the experience of this burglar’s parents convinced him, I suppose, that this view was wrong.

The happiness view seems closer to the truth, yet it also seems in some way superficial. What it doesn’t tell us is why crime makes people so unhappy. My own experience of having to deal with a minor burglary is that, objectively, it is comparable to having to put together some badly

made self-assembly furniture with some missing pieces, while at the same time querying a utility bill and investigating the mis-location of a recorded delivery parcel. Very nasty, but, in itself, no worse than a visit from the Quality Assurance Agency. A mugging, in its purely physical aspects, is about at the same level as a mid-scale sporting injury. A character in Ian McEwan's *Saturday*, expecting to receive a beating in the street, has a flash forward to the months of convalescence and recovery that would follow. This would be to take a purely 'objective' aspect of crime. Yet these objective aspects hardly seem to capture what we worry about, as McEwan's novel brilliantly illustrates. There is something about being a victim of crime which goes much deeper than this. Hence fear of crime is not, or at least not always, for example, fear of the average expected objective effects of crime.

Jeremy Bentham, as so often, clarifies the issue:

The great point is, to clear the country of those crimes, each instance of which is sufficient to awaken and keep alive, in every breast within a certain circle, the fear of boundless injury to person or property, as well as of destruction to life itself – in comparison of this wide-spreading – this almost universally extending mischief – this fear of boundless injury – the sum of the mischiefs resulting in each instance from losses and other injuries actually sustained would be found relatively inconsiderable. Jeremy Bentham *Panopticon Versus New South Wales* (p. 244)

Money Laundering BAD – Laundry List of Reasons

Money Laundering erodes political and social systems affecting stability, diminishes economic growth, and hurts basic individual liberties

Crime and Misconduct Commission 05

(The Crime and Corruption Commission (CCC) is a statutory body set up to combat and reduce the incidence of major crime and corruption in the public sector in Queensland. Its functions and powers are set out in the Crime and Corruption Act 2001, “Background intelligence brief Money laundering,” Crime and Corruption Commission, July 2005, <http://www.ccc.qld.gov.au/research-and-publications/publications/crime/money-laundering.pdf>, GCM)

There are many reasons why money laundering is harmful in society. Some examples are listed below. It makes crime pay. Money laundering allows drug traffickers, smugglers and other criminals to accumulate economic power and expand their operations. This has the potential to erode the political and social systems of a country, and could affect stability and the general rule of law (Alweendo 2005). This in turn drives up the cost of law enforcement and the spin-off costs of health care in the treatment of problems such as drug addiction. It has the potential to undermine the financial community because of the sheer magnitude of the sums involved. Money laundering on a grand scale has the potential to change the demand for cash, make interest rates and exchange rates more volatile, and cause high inflation rates for a country. Laundering diminishes economic development because it undermines legitimate business, competition and government tax revenue, and therefore indirectly harms honest taxpayers and reduces legitimate job opportunities. Money laundering Perceived ease of entry to a country attracts an undesirable element across its borders, degrading quality of life and raising concerns about national security (Solicitor General Canada 1998). The crimes perpetrated by these undesirable elements erode basic individual liberties by threatening rights to life and entitlements to own property. There are great incentives, therefore, for governments and private enterprise to work together to combat money laundering locally and globally.

Money Laundering - Turns Democracy

Money Laundering damages the integrity of the entire society, and undermines democracy.

FATF 15 (Financial Action Task Force - The Financial Action Task Force (FATF) is an inter-governmental body established in 1989 by the Ministers of its Member jurisdictions. The objectives of the FATF are to set standards and promote effective implementation of legal, regulatory and operational measures for combating money laundering, terrorist financing and other related threats to the integrity of the international financial system. – “How does Money laundering Affect Business?” - <http://www.fatf-gafi.org/pages/faq/moneylaundering/>- KR)

The integrity of the banking and financial services marketplace depends heavily on the perception that it functions within a framework of high legal, professional and ethical standards. A reputation for integrity is the one of the most valuable assets of a financial institution. If funds from criminal activity can be easily processed through a particular institution – either because its employees or directors have been bribed or because the institution turns a blind eye to the criminal nature of such funds – the institution could be drawn into active complicity with criminals and become part of the criminal network itself. Evidence of such complicity will have a damaging effect on the attitudes of other financial intermediaries and of regulatory authorities, as well as ordinary customers. As for the potential negative macroeconomic consequences of unchecked money laundering, one can cite inexplicable changes in money demand, prudential risks to bank soundness, contamination effects on legal financial transactions, and increased volatility of international capital flows and exchange rates due to unanticipated cross-border asset transfers. Also, as it rewards corruption and crime, successful money laundering damages the integrity of the entire society and undermines democracy and the rule of the law.

Money Laundering – Developing Countries

Money Laundering damages developing countries internally

World Bank 03 (World Bank is a vital source of financial and technical assistance to developing countries around the world, World Bank, “The Adverse Implications for Developing Countries,” 3/30/3, <http://www1.worldbank.org/finance/assets/images/02-chap02-f.qxd.pdf>) RR

Criminal enterprises and terrorist financing operations succeed largely to the extent that they are able to sanitize and conceal their proceeds by moving them through national and international financial systems. The absence of, or a lax or corrupt, anti-money laundering regime in a particular country permits criminals and those who finance terrorism financing to operate, using their financial gains to expand their criminal pursuits and fostering illegal activities such as corruption, drug trafficking, illicit trafficking and exploitation of human beings, arms trafficking, smuggling, and terrorism. While money laundering and the financing of terrorism can occur in any country, they have particularly significant economic and social consequences for developing countries, because those markets tend to be small and, therefore, more susceptible to disruption from criminal or terrorist influences. Money laundering and terrorist financing also have significant economic and social consequences for countries with fragile financial systems because they too are susceptible to disruption from such influences. The economy, society, and ultimately the security of countries used as money-laundering platforms are all imperiled. Money laundering helps make criminal activities profitable. Thus, to the extent that a country is viewed as a haven for money laundering, it is likely to attract criminals and promote corruption. If money laundering is prevalent in a country, it generates more crime and corruption. It also enhances the use of bribery in critical gateways, such as: lawyers and accountants, the legislature, police authorities, the courts. A reputation as a money laundering or terrorist financing haven, alone, could cause significant adverse consequences for development in a country. Foreign financial institutions may decide to limit their transactions with institutions from money laundering havens; subject these transactions to extra scrutiny, making them more expensive; or terminate correspondent or lending relationships altogether. Even legitimate businesses and enterprises from money laundering havens may suffer from reduced access to world markets or access at a higher cost due to extra scrutiny of their ownership, organization and control systems.

Money Laundering impedes growth of countries and shows criminals that money laundering pays off leading to more fraud and corporate embezzling **Layton 06**

(Julia Layton holds a B.A. in English literature from Duke University and a M.F.A. in creative writing from the University of Miami, Julia Layton, “How Money Laundering Works,” HowStuffWorks.com, June 01, 2006, <http://money.howstuffworks.com/money-laundering5.htm>, GCM)

Depending on which international agency you ask, criminals launder anywhere between \$500 billion and \$1 trillion worldwide every year. The global effect is staggering in social, economic and security terms. On the socio-cultural end of the spectrum, successfully laundering money means that criminal activity actually does pay off. This success encourages criminals to continue

their illicit schemes because they get to spend the profit with no repercussions. This means more fraud, more corporate embezzling (which means more workers losing their pensions when the corporation collapses), more drugs on the streets, more drug-related crime, law-enforcement resources stretched beyond their means and a general loss of morale on the part of legitimate business people who don't break the law and don't make nearly the profits that the criminals do. The economic effects are on a broader scale. Developing countries often bear the brunt of modern money laundering because the governments are still in the process of establishing regulations for their newly privatized financial sectors. This makes them a prime target. In the 1990s, numerous banks in the developing Baltic states ended up with huge, widely rumored deposits of dirty money. Bank patrons proceeded to withdraw their own clean money for fear of losing it if the banks came under investigation and lost their insurance. The banks collapsed as a result. Other major issues facing the world's economies include errors in economic policy resulting from artificially inflated financial sectors. Massive influxes of dirty cash into particular areas of the economy that are desirable to money launderers create false demand, and officials act on this new demand by adjusting economic policy. When the laundering process reaches a certain point or if law-enforcement officials start to show interest, all of that money that will suddenly disappear without any predictable economic cause, and that financial sector falls apart. Some problems on a more local scale relate to taxation and small-business competition. Laundered money is usually untaxed, meaning the rest of us ultimately have to make up the loss in tax revenue. Also, legitimate small businesses can't compete with money-laundering front businesses that can afford to sell a product for cheaper because their primary purpose is to clean money, not turn a profit. They have so much cash coming in that they might even sell a product or service below cost. The majority of global investigations focus on two prime money-laundering industries: Drug trafficking and terrorist organizations. The effect of successfully cleaning drug money is clear: More drugs, more crime, more violence. The connection between money laundering and terrorism may be a bit more complex, but it plays a crucial role in the sustainability of terrorist organizations. Most people who financially support terrorist organizations do not simply write a personal check and hand it over to a member of the terrorist group. They send the money in roundabout ways that allow them to fund terrorism while maintaining anonymity. And on the other end, terrorists do not use credit cards and checks to purchase the weapons, plane tickets and civilian assistance they need to carry out a plot. They launder the money so authorities can't trace it back to them and foil their planned attack. Interrupting the laundering process can cut off funding and resources to terrorist groups.

Money Laundering - Econ

Money Laundering hurts the economy severely- list of reasons

FIU 15 (The Financial Intelligence Unit is assigned to conduct research on the causes and consequences of money laundering and terrorist financing through participation in projects, FIU, "Consequences of Money Laundering," 7/20/15, http://www.fiumauritius.org/index.php?option=com_content&view=article&id=1&Itemid=2&lang=en) **RR**

Money laundering impairs the development of the legitimate private sector through the supply of products priced below production cost, making it therefore difficult for legitimate activities to compete. Criminals may also turn enterprises, which were initially productive into sterile ones to launder their funds leading ultimately to a decrease in the overall productivity of the economy. Furthermore, the laundering of money can also cause unpredictable changes in money demand as well as great volatility in international capital flows and exchange rates. While the financial sector is an essential constituent in the financing of the legitimate economy, it can be a low-cost vehicle for criminals wishing to launder their funds. Consequently, the flows of large sums of laundered funds poured in or out of financial institutions might undermine the stability of financial markets. In addition, money laundering may damage the reputation of financial institutions involved in the scheming resulting to a loss in trust and goodwill with stakeholders. In worst-case scenarios, money laundering may also result in bank failures and financial crises. Money laundering also reduces tax revenue as it becomes difficult for the government to collect revenue from related transactions, which frequently take place in the underground economy. The socio-economic effects of money laundering are various because as dirty money generated from criminal activities are laundered into legitimate funds; they are used to expand existing criminal operations and finance new ones. Further to that money laundering may lead to the transfer of economic power from the market, the government and the citizens to criminals, abetting therefore crimes and corruption.

Money Laundering is devastating to the private sector, and can destabilize the economy.

FIU 13 (FIU is the financial intelligence unit, it has published numerous works regarding issues and risks in the finance world-"Consequences of money Laundering"- http://www.fiumauritius.org/index.php?option=com_content&view=article&id=18%3Amoney-laundering&catid=3&lang=en&limitstart=3-KR)

Money laundering impairs the development of the legitimate private sector through the supply of products priced below production cost, making it therefore difficult for legitimate activities to compete. Criminals may also turn enterprises which were initially productive into sterile ones to launder their funds leading ultimately to a decrease in the overall productivity of the economy. Furthermore, the laundering of money can also cause unpredictable changes in money demand as well as great volatility in international capital flows and exchange rates. While the financial sector is an essential constituent in the financing of the legitimate economy, it can be a low-cost vehicle for criminals wishing to launder their funds. Consequently, the flows of large sums of laundered funds poured in or out of financial institutions might undermine the stability of financial markets. In addition, money laundering may damage the reputation of financial institutions involved in the scheming resulting to a loss in trust and goodwill with stakeholders. In worst case scenarios, money laundering may also result in bank failures and financial crises. Money laundering also reduces tax revenue as it becomes difficult for the government to collect revenue from related transactions which frequently take place in the underground economy. The socio-economic effects of money laundering are various because as dirty money generated from criminal activities are laundered into legitimate funds; they are used to expand existing criminal operations and

finance new ones. Further to that money laundering may lead to the transfer of economic power from the market, the government and the citizens to criminals, abetting therefore crimes and corruption.

Money Laundering has terrible consequences for Econ growth

Pahuja 09 (Rajana Pahuja is an investment banker, who has interest in Macroeconomic events MBA, Asian Institute of Management – “Effects of Money Laundering on economy” - <http://fe-notes.blogspot.com/2009/10/effects-of-money-laundering-on-economy.html> - KR)

1. Direct Effects: Money laundering distorts the investments and depresses the productivity. Diverting resources to less-productive activity, and by facilitating domestic corruption and crime, which in turn depress economic growth. For developing countries, the diversion of such scarce resources to less productive domestic assets or luxury imports is a serious detriment to economic growth. 2. Effect on Corporate competitiveness and Taxation: Money laundering has a bearing on taxation and small business competition. Laundered money is usually untaxed, meaning that the rest of the people ultimately have to make up the loss in tax revenue. Furthermore, legitimate small businesses cannot compete with money laundering-front businesses that can afford to sell a product cheaply because their primary purpose is to clean money, not turn profit. 3. Effect on Interest and Exchange Rates: Money Laundering has adverse consequences on the interest rates and the exchange rate volatility particularly in developing nations and dollarized nations. It complicates the government effort to manage the economic policies. It affects the income distribution, contaminated the legal transactions, and has potential to destabilize the economy by inefficient movements, which reduces the GDP growth. 4. Effect on Foreign Investment: Although developing economies cannot afford to be too selective about the sources of capital they attract, but postponing action is dangerous. There is a damping effect on foreign direct investment when a country's commercial and financial sectors are perceived to be subject to the control and influence of organized crime. For business friendly environment these impedances have to be weeded out.

Impacts of Money Laundering on Cost of Capital

Pahuja 09 (Rajana Pahuja is an investment banker, who has interest in Macroeconomic events MBA, Asian Institute of Management – “Effects of Money Laundering on economy” - <http://fe-notes.blogspot.com/2009/10/effects-of-money-laundering-on-economy.html> - KR)

When Money Laundering takes place, the capital is reduced due to which the supply curve of capital moves towards the left. In this case due to the scarcity of the capital (credit crunch even when the central bank is infusing cash in the financial system) available the cost of capital increases. As can be seen from the various money-laundering mechanism typologies reports, money laundered through channels other than financial institutions is often placed in what are known as "sterile" investments, or investments that do not generate additional productivity for the broader economy.

Impacts of Money Laundering on Financial Sector

Pahuja 09 (Rajana Pahuja is an investment banker, who has interest in Macroeconomic events MBA, Asian Institute of Management – “Effects of Money Laundering on economy” - <http://fe-notes.blogspot.com/2009/10/effects-of-money-laundering-on-economy.html> - KR)

Since financial institutions are critical to economic growth, reputation and confidence plays an important part in the developing countries. 1. Customer Confidence: Reputation and integrity are valuable assets of

a financial institution and the perceived risk to depositors and investors from institutional fraud and corruption is an obstacle to such trust. When customers are defrauded by the corrupt individuals within the institutions it causes loss of business for the financial institutions. Prudential risks to bank soundness, contamination effects on legal financial transactions, and increased volatility of international capital flows and exchange rates due to unanticipated cross-border asset transfers. 2. Dampening of Entrepreneurial environment: Strong financial systems are incubators of entrepreneurial growth. For developing nations, technological change is often associated with the investment and new machinery. To adopt the more productive technologies from advanced nations requires entrepreneurship. At the most fundamental level, innovation and technology thrive when property rights are clear and taxes and other drains on profits (such as corruption) are low and predictable. 3. Investment: The nations in which crime and corruption are prevalent, investors are reluctant to invest and obtain the ownership. 4. Money Laundering erodes financial institutions themselves due to vulnerability to corruption by criminal elements seeking to gain further influence over their money-laundering channels.

Money laundering damages the financial sectors/institutions that are key to economic growth

Bartlett 2002 (Prior to joining Dewey & LeBoeuf LLP, Mr. Bartlett advised on the economic aspects of national security issues and served on the U.S. Secretary of State's Policy Planning Staff, Brent L., THE NEGATIVE EFFECTS OF MONEY LAUNDERING ON ECONOMIC DEVELOPMENT, May 2002, <http://mcta.org.au/wp-content/uploads/2014/06/the-negative-effects-of-money-laundering-on-economy.pdf>, JS)

The negative economic effects of money laundering on economic development are difficult to quantify, yet it is clear that such activity damages the financial-sector institutions that are critical to economic growth, reduces productivity in the economy's real sector by diverting resources and encouraging crime and corruption, which slow economic growth, and can distort the economy's external sector—international trade and capital flows—to the detriment of long-term economic development. Developing countries' strategies to establish offshore financial centers (OFCs) as vehicles for economic development are also impaired by significant money-laundering activity through OFC channels. Effective anti-money-laundering policies, on the other hand, reinforce a variety of other good-governance policies that help sustain economic development, particularly through the strengthening of the financial sector. A broad range of recent economic analyses points to the conclusion that strong developing-country financial institutions—such as banks, nonbank financial institutions (NBFIs), and equity markets—are critical to economic growth. Such institutions allow for the concentration of capital resources from domestic savings—and perhaps even funds from abroad—and the efficient allocation of such resources to investment projects that generate sustained economic development. Money laundering impairs the development of these important financial institutions for two reasons. First, money laundering erodes financial institutions themselves. Within these institutions, there is often a correlation between money laundering and fraudulent activities undertaken by employees. At higher volumes of money-laundering activity, entire financial institutions in developing countries are vulnerable to corruption by criminal elements seeking to gain further influence over their money-laundering channels. Second, particularly in developing countries, customer trust is fundamental to the growth of sound financial institutions, and the perceived risk to depositors and investors from institutional fraud and corruption is an obstacle to such trust.

Money laundering is serious harm-2 reasons

Levi, 2002 (David M. Rubenstein Senior Fellow for Energy and the Environment and Director of the Maurice R. Greenberg Center for Geoeconomic Studies, Micheal, "Money laundering and its regulation", ANNALS, AAPSS, July 2002, <http://ann.sagepub.com/content/582/1/181.full.pdf> JS)

Laundering can be considered important for three reasons: 1. It facilitates crime by capacitating crime groups and networks to self-finance, diversify, and grow. 2. It can have a corrosive impact on financial institutions and other parties.

However, there is an element of paradox here. For centuries, onshore and offshore bankers have been tolerantly laundering proceeds of many crimes and from many countries without obvious harm to them or to their economies. Criminal (as opposed to moral) corruption of bankers and trust/company formation agents in some jurisdictions has been made necessary as a consequence of the criminalization of laundering and of regulations intended to stop willful blindness. Given those regulations, laundering can be harmful to the financial system of laundering countries and creates serious reputational risk irrespective of the impacts on domestic crime there. In the Third World (including the former Soviet Union), the issues are more complex. Their economies vitally need investment capital, and if launderers provided venture capital without eliminating indigenous people from this function (economically and/or physically), then this might not be harmful. However, in practice, criminal funds can be used to create a license to operate piratically in a hollow state rather than for productive purposes, and criminally owned banks created to launder funds can also be used to defraud the public (though to do so will terminate their usefulness as laundering vehicles since normally they will close down as a result). 3. A third measure of harm is the extent of laundering, though this depends on which crimes are included and on harm to legitimate capital; unfortunately, there is no consensus on what this is. Figures of \$300 billion to \$500 billion for international flows are banded around and become "facts by repetition," but there is very little evidence to justify them (van Duyne 1998; van Duyne and de Miranda 1999). For an FATF exercise that ended in fundamental disagreement, Walker (1999) heroically attempted to construct money flows into all-crime and drug laundering guesstimation exercises, while Reuter (2000) made a sophisticated attempt to construct global expenditure on drugs as the sum of national estimates; outside the United States, national expenditure data are deeply unreliable, and even in the United States, the range is a broad \$40 billion to \$100 billion. Moreover, money laundered in year 1 may have to be relaunched in year 2, when it may have to be invested. Finally, criminal business costs (including protection and salaries to terrorist or crime gang members) and lifestyle expenditures—both high in multilayered drug business—have to be subtracted from the crime proceeds data before we reach the laundering figures, which are anyway dependent on the savings ratios of offenders. (Part of the business costs take the form of income for others and flow directly into the GNP.)

Money laundering enables crime and corruption, leading to economic decline

Bartlett 2002 (Prior to joining Dewey & LeBoeuf LLP, Mr. Bartlett advised on the economic aspects of national security issues and served on the U.S. Secretary of State's Policy Planning Staff, Brent L., THE NEGATIVE EFFECTS OF MONEY LAUNDERING ON ECONOMIC DEVELOPMENT, May 2002, <http://mcta.org.au/wp-content/uploads/2014/06/the-negative-effects-of-money-laundering-on-economy.pdf>, JS)

Money laundering also facilitates crime and corruption within developing economies, which is antithetical to sustainable economic growth. Just as an efficient financial sector is a key "input" to other productive processes in a developing economy— such as manufacturing—an efficient money-laundering channel is a key "input" to crime because the financial proceeds from crime are less valuable to the criminal (in a sense, an "unfinished product") than are laundered funds. The less expensive the money-laundering "input" to crime is as a result of lax anti-money-laundering policies, the more "productive" (active) the criminal element will be, just as in any industry or business. As numerous studies have demonstrated from statistical and anecdotal evidence, substantial crime and corruption act as a brake on economic development, while other studies have shown that anti-money-laundering policies can deter such activity.

ATA's

AT London center of money laundering

Lammy will stop the money laundering going on in London.

Hanning and Connett 15

(James and David, July 4, <http://www.independent.co.uk/news/uk/crime/london-is-now-the-global-moneylaundering-centre-for-the-drug-trade-says-crime-expert-10366262.html>, "London is now the global money-laundering centre for the drug trade, says crime expert", twm)

Labour MP David Lammy, who met Mr Saviano last week, said the UK needed to take "very seriously" his claims about its financial services' role in the international drugs trade. Mr Lammy, who is seeking to become Mayor of London in 2016, said: "We are rightly proud of our financial services industry in this country, but we cannot afford to be complacent. "I am particularly concerned that London's inflated property prices are fuelled by dirty money and I will do everything in my power as mayor to ensure that money laundering and tax evasion are rooted out by the authorities."

Nationalized Internet DA

Explanation of the Disad

There is a global fight going on about who should control the internet. The United States has been a strong supporter of a totally free and open internet that has no government involvement or control. Other countries, led by China and Russia, think that the government should be able to control the internet.

The U.S. is losing the fight globally now because no one trusts us. They think our government just uses access to the internet to spy on people and secretly control it. So, other countries are making moves to nationalize their internets. The plan improves US credibility – and allows us to stop other countries from nationalizing the internet.

What does “control of the internet” mean? The Chinese government has a block on certain websites. The Russian government wants to own the cables and networks that provide access to the internet. The Brazilian government wants to own the hard drives and servers where things are stored. Essentially, they want to treat the internet like it is electricity or water – regulated heavily by the government. The U.S. prefers that it be totally unregulated and free.

The disad argues that Nationalizing the Internet is good. Government control prevents cyber attacks from happening and allows each country to control their own systems. So, a person in China couldn't attack the U.S. system without the U.S. knowing who was responsible because of strict government controls – and vice versa – no one in the US could hack into a Russian system.

So, to break the disad down into jargon –

Uniqueness – governments controlling the internet is coming now.

Link – decreasing domestic surveillance improves US credibility – allows us to stop government control.

Impact – government control stops cyber attacks. Cyber attacks bad.

How does nationalized internet solve cyberterror?

If the Russian government controls the access point for all internet access in the country then it is able to monitor and control that internet access. It would be harder, if not impossible, for a single hacker or group of hackers to attack a website, power plant, financial institution, or other

group from outside of Russia since it would be detectable. The current system is an open free for all that makes it more difficult to control who is looking into what anywhere in the world.

Isn't a free and open internet a good thing?

Probably. But, the disad says the opposite. The internet is probably going to remain free and open for information. The disad assumes that a level of government control would make it more secure.

Glossary

Balkanize – to separate into groups or categories. In this instance, it refers to breaking the internet up into country-by-country sections. It is a common phrase used to describe the breaking up of something. It is a historical reference to the Balkans region of the world. Several countries were broken up from the larger Soviet Union. It is usually used by people to refer to breaking the internet up into groups. Each country would control their own internet services and access.

Cyber – A prefix used to describe anything that happens online. Usually reserved for aggression online. A Cyber crime would be a crime that is done online. Cyber Gambling would be gambling done online. If you read it, it is talking about the internets.

Cyberterror – committing an act of terror online. Any attack on a government website, an attempt to gain access to a power plant, or to just generally be violent and destructive is considered cyberterror. The phrase is very broad as the Department of Defense says they experience 60,000 or more cyberterror attempts a day. That obviously would have to include everyone just trying to get onto the websites of the DOD.

Cyberwar – use of an attack on someone's internet access or services during a time of war. Estonia is usually the example. During an invasion, Russia hacked into the Estonians internets and shut them down. This act is often called cyberwar. There are also instances of people saying "cyberwar" to reference fighting and hacking that is going on between countries.

DOD – Department of Defense – the cabinet of the United States that is in charge of the military branches and answers to the President. Referenced in a few cards.

ICANN – the group that is in charge of maintain all domain names on the internet. Established by the U.S., ICANN is a not-for-profit public-benefit corporation with participants from all over the world dedicated to keeping the Internet secure, stable and interoperable

<https://www.icann.org/>

ITU - International Telecommunication Union – the United Nations specialized agency for information and communication technologies. It is the group that would be given control over the internet internationally – <http://www.itu.int/en/Pages/default.aspx>

Multi-stakeholder – the ICANN and US supported model for the internet. Every group can control and contribute to the internet without government interference. The idea is that Internet governance should mimic the structure of the Internet itself- borderless and open to all

Nationalize – when the government takes over something it is nationalized. Health care literature will often reference ‘nationalizing health care.’ This disad will use it to discuss the internet. When the government regulates, controls, and is in charge of something it is said to be nationalized.

Partitioned – separated into parts. When a room is partitioned it is divided into parts. If the internet were nationalized it would be partitioned between countries.

Negative

1nc & Overview

1nc

Nationalization of the internet is coming now

Wall Street Journal 6-27-14

[Steve Rosenbush, The Morning Download: Nationalization of Internet Continues as Germany Hangs Up on Verizon, <http://blogs.wsj.com/cio/2014/06/27/the-morning-download-nationalization-of-internet-continues-as-germany-hangs-up-on-verizon/>]

Good morning. The nationalization of the Internet continues apace. The German government said on Thursday it would end a contract with Verizon Communications Inc. because of concerns that the U.S. National Security Agency had access to customer data maintained by U.S. telecommunications firms, the WSJ's Anton Troianovski reports. Verizon has provided Internet access and other telecom services to government agencies in Germany. Those contracts will be transferred to Deutsche Telekom AG by 2015, the Interior Ministry said.

As the WSJ reports, the move underscores the continuing political headaches for U.S. technology businesses operating abroad, more than a year after former National Security Agency contractor Edward Snowden started revealing the reach of America's electronic surveillance programs and the alleged cooperation with some U.S. firms.

CIOs are on the front lines of the dilemma. To the extent that more businesses are pressured to aid in government surveillance, CIOs should at the very least have a say in how those efforts will work. While those decisions will be made at the CEO and board level, the CIO can help frame the issues by engaging directly with a company's senior leadership. Their perspective is critical in an area where technology, business and global politics converge.

Fears of NSA surveillance is the driving force for nationalizing – only the aff restores US credibility to prevent it

Kehl et al 14

[Danielle Kehl et al, July 2014. Policy Analyst at New America's Open Technology Institute (OTI); Kevin Bankston is the Policy Director at OTI; Robyn Greene is a Policy Counsel at OTI; and Robert Morgus is a Research Associate at OTI. "Surveillance Costs: The NSA's Impact on the Economy, Internet Freedom & Cybersecurity," http://oti.newamerica.net/sites/newamerica.net/files/policydocs/Surveillance_Costs_Final.pdf]

Although there were questions from the beginning about whether the United States would hold itself to the same high standards domestically that it holds others to internationally, 178 the American government has successfully built up a policy and programming agenda in the past

few years based on promoting an open Internet. 179 These efforts include raising concerns over Internet repression in bilateral dialogues with countries such as Vietnam and China, 180 supporting initiatives including the Freedom Online Coalition, and providing over \$120 million in funding for “groups working to advance Internet freedom – supporting counter-censorship and secure communications technology, digital safety training, and policy and research programs for people facing Internet repression.” 181 However, the legitimacy of these efforts has been thrown into question since the NSA disclosures began. “Trust has been the principal casualty in this unfortunate affair,” wrote Ben FitzGerald and Richard Butler in December 2013. “The American public, our nation’s allies, leading businesses and Internet users around the world are losing faith in the U.S. government’s role as the leading proponent of a free, open and integrated global Internet.” 182

Prior to the NSA revelations, the United States was already facing an increasingly challenging political climate as it promoted the Internet Freedom agenda in global Internet governance conversations. At the 2012 World Conference on International Telecommunications (WCIT), the U.S. and diverse group of other countries refused to sign the updated International Telecommunications Regulations based on concerns that the document pushed for greater governmental control of the Internet and would ultimately harm Internet Freedom. 183 Many observers noted that the split hardened the division between two opposing camps in the Internet governance debate: proponents of a status quo multistakeholder Internet governance model, like the United States, who argued that the existing system was the best way to preserve key online freedoms, and those seeking to disrupt or challenge that multistakeholder model for a variety of political and economic reasons, including governments like Russia and China pushing for greater national sovereignty over the Internet. 184 Many of the proposals for more governmental control over the network could be understood as attempts by authoritarian countries to more effectively monitor and censor their citizens, which allowed the U.S. to reasonably maintain some moral high ground as its delegates walked out of the treaty conference. 185 Although few stakeholders seemed particularly pleased by the outcome of the WCIT, reports indicate that by the middle of 2013 the tone had shifted in a more collaborative and positive direction following the meetings of the 2013 World Telecommunications/ICT Policy Forum (WTPF) and the World Summit on Information Society + 10 (WSIS+10) review. 186

However, the Internet governance conversation took a dramatic turn after the Snowden disclosures. The annual meeting of the Freedom Online Coalition occurred in Tunis in June 2013, just a few weeks after the initial leaks. Unsurprisingly, surveillance dominated the conference even though the agenda covered a wide range of topics from Internet access and affordability to cybersecurity. 187 Throughout the two-day event, representatives from civil society used the platform to confront and criticize governments about their monitoring practices. 188 NSA surveillance would continue to be the focus of international convenings on Internet Freedom and Internet governance for months to come, making civil society representatives and foreign governments far less willing to embrace the United States’ Internet Freedom agenda or to accept its defense of the multistakeholder model of Internet governance as anything other than self-serving. “One can come up with all kinds of excuses for why US surveillance is not hypocrisy. For example, one might argue that US policies are more benevolent than those of many other regimes... And one might recognize that in several cases, some branches of

government don't know what other branches are doing... and therefore US policy is not so much hypocritical as it is inadvertently contradictory," wrote Eli Dourado, a researcher from the Mercatus Center at George Mason University in August 2013. "But the fact is that the NSA is galvanizing opposition to America's internet freedom agenda." 189 The scandal revived proposals from both Russia and Brazil for global management of technical standards and domain names, whether through the ITU or other avenues. Even developing countries, many of whom have traditionally aligned with the U.S. and prioritize access and affordability as top issues, "don't want US assistance because they assume the equipment comes with a backdoor for the NSA. They are walking straight into the arms of Russia, China, and the ITU." 190

Consequently, NSA surveillance has shifted the dynamics of the Internet governance debate in a potentially destabilizing manner. The Snowden revelations "have also been well-received by those who seek to discredit existing approaches to Internet governance," wrote the Center for Democracy & Technology's Matthew Shears. "There has been a long-running antipathy among a number of stakeholders to the United States government's perceived control of the Internet and the dominance of US Internet companies. There has also been a long-running antipathy, particularly among some governments, to the distributed and open management of the Internet." 191 Shears points out that evidence of the NSA's wide-ranging capabilities has fueled general concerns about the current Internet governance system, bolstering the arguments of those calling for a new government-centric governance order. At the UN Human Rights Council in September 2013, the representative from Pakistan—speaking on behalf of Cuba, Venezuela, Zimbabwe, Uganda, Ecuador, Russia, Indonesia, Bolivia, Iran, and China—explicitly linked the revelations about surveillance programs to the need for reforming Internet governance processes and institutions to give governments a larger role. 192 Surveillance issues continued to dominate the conversation at the 2013 Internet Governance Forum in Bali as well, where "debates on child protection, education and infrastructure were overshadowed by widespread concerns from delegates who said the public's trust in the internet was being undermined by reports of US and British government surveillance." 193

Further complicating these conversations is the fact that several of the institutions that govern the technical functions of the Internet are either tied to the American government or are located in the United States. Internet governance scholar Milton Mueller has described how the reaction to the NSA disclosures has become entangled in an already contentious Internet governance landscape. Mueller argues that, in addition to revealing the scale and scope of state surveillance and the preeminent role of the United States and its partners, the NSA disclosures may push other states toward a more nationally partitioned Internet and "threaten... in a very fundamental way the claim that the US had a special status as neutral steward of Internet governance." 194 These concerns were publicly voiced in October 2013 by the heads of a number of key organizations, including the President of the Internet Corporation for Assigned Names and Numbers (ICANN) and the chair of the Internet Engineering Task Force (IETF), in the Montevideo Statement on the Future of Internet Cooperation. Their statement expressed "strong concern over the undermining of the trust and confidence of Internet users globally due to recent revelations of pervasive monitoring and surveillance" and "called for accelerating the globalization of ICANN and Internet Assigned Numbers Authority (IANA) functions, towards an environment in which all stakeholders, including 22 all governments, participate on an equal

footing.” 195 In particular, the process of internationalizing ICANN—which has had a contractual relationship with the Commerce Department’s National Telecommunications and Information Association (NTIA) since 1998—has progressed in recent months. 196

Cyber threats are real and happening – government control is key to prevent attacks that could crush the international system

Renda, Senior Research Fellow, Centre for European Policy Studies, 2013

[Andrea Renda, Cybersecurity and Internet Governance, May 3, 2013, http://www.cfr.org/councilofcouncils/global_memos/p32414]

Cybersecurity is now a leading concern for major economies. Reports indicate that hackers can target the U.S. Department of Justice or Iranian nuclear facilities just as easily as they can mine credit card data. Threats have risen as the Internet has become a critical infrastructure for the global economy, with thousands of operations migrating onto it. For example, the innocuous practice of bring-your-own-device to work presents mounting dangers due to malware attacks--software intended to corrupt computers.

Between April and December 2012, the types of threats detected on the Google Android platform increased by more than thirty times from 11,000 to 350,000, and are expected to reach one million in 2003, according to security company Trend Micro (See Figure 1).

Put simply, as the global economy relies more on the Internet, the latter becomes increasingly insidious. There is no doubt that the Internet is efficient. But it now needs a more concerted global effort to preserve its best aspects and guard against abuses.

The rise of the digital cold war

Cyber threats and cyberattacks also reveal an escalating digital cold war. For years the United States government has claimed that cyberattacks are mainly state-sponsored, initiated predominantly by China, Iran, and Russia. The penetration of the U.S. Internet technology market by corporations such as Huawei, subsidized by the Chinese government, has led to more fears that sensitive information is vulnerable. After an explicit exchange of views between President Barack Obama and President Xi Jinping in February 2013, the United States passed a new spending law that included a cyber espionage review process limiting U.S. government procurement of Chinese hardware.

U.S. suspicions intensified when Mandiant, a private information security firm, released a report detailing cyber espionage by a covert Chinese military unit against 100 U.S. companies and organizations. In March 2013, the U.S. government announced the creation of thirteen new teams of computer experts capable to retaliate if the United States were hit by a major attack.

On the other hand, Chinese experts claim to be the primary target of state-sponsored attacks, largely originating from the United States. But in reality the situation is more complex. Table 1 shows that cyberattacks in March 2013 were most frequently launched from Russia and Germany, followed by Taiwan and the United States.

What is happening to the Internet?

Created as a decentralized network, the Internet has been a difficult place for policymakers seeking to enforce the laws of the real world. Distributed Denial of Service (DDoS) attacks—consisting of virus infected systems (Botnet) targeting a single website leading to a Denial of Service for the end user—became a harsh reality by 2000, when companies such as Amazon, eBay, and Yahoo! had been affected. These costs stem from the direct financial damage caused by loss of revenue during an attack, disaster recovery costs associated with restoring a company's services, a loss of customers following an attack, and compensation payments to customers in the event of a violation of their service level agreements.

As the Internet permeates everyday life, the stakes are becoming even higher. In a few years, society could delegate every aspect of life to information technology imagine driverless cars, machine-to-machine communications, and other trends that will lead to the interconnection of buildings to trains, and dishwashers to smartphones. This could open up these societies to previously unimaginable disruptive cyber events. What is as concerning is that in cyberspace, attacks seem to have a structural lead over defense capabilities: it can be prohibitively difficult to foresee where, how, and when attackers will strike.

Confronted with this challenge, the global community faces a dilemma. The neutrality of the Internet has proven to be a formidable ally of democracy, but the cost of protecting users' freedom is skyrocketing. Critical services, such as e-commerce or e-health, might never develop if users are not able to operate in a more secure environment. Moreover, some governments simply do not like ideas to circulate freely.

Besides the "giant cage" built by China to insulate its Internet users, countries like Pakistan have created national firewalls to monitor and filter the flow of information on the network. And even the Obama administration, which has most recently championed Internet freedom initiatives abroad, is said to be cooperating with private telecoms operators on Internet surveillance, and Congress is discussing a new law imposing information sharing between companies and government on end-user behavior, which violates user privacy.

The question becomes more urgent every day: Should the Internet remain an end-to-end, neutral environment, or should we sacrifice Internet freedom on the altar of enhanced security? The answer requires a brief explanation of how the Internet is governed, and what might change.

The end of the Web as we know it?

Since its early days, the Internet has been largely unregulated by public authorities, becoming a matter for private self-regulation by engineers and experts, who for years have taken major decisions through unstructured procedures. No doubt, this has worked in the past. But as cyberspace started to expand, the stakes began to rise.

Informal bodies such as the Internet Corporation for Assigned Names and Numbers (ICANN)—a private, U.S.-based multi-stakeholder association that rules on domain names and other major aspects of the Internet have been increasingly put under the spotlight. Recent ICANN rulings have exacerbated the debate over the need for more government involvement in Internet governance, either through a dedicated United Nations agency or through the International Telecommunications Union (ITU), an existing UN body that ensures international communication and facilitates deployment of telecom infrastructure. But many experts fear that if a multi-stakeholder model is abandoned, the World Wide Web would cease to exist as we know it.

Last year's World Conference on International Telecommunications, held in Dubai, hosted a heated debate on the future of cyberspace. Every stakeholder was looking for a different outcome. The ITU looked to expand its authority over the Internet; European telecoms operators wanted to secure more revenues by changing the rules for exchanging information between networks; China, Russia, and India wanted stronger government control over the Internet; the United States and Europe stood to protect the multi-stakeholder model of ICANN; and a group of smaller countries sought to have Internet access declared a human right.

When a new treaty was finally put to vote, unsurprisingly, as many as fifty-five countries (including the United States and many EU member states) decided not to sign. Since then, the question on how the Internet will be governed remains unresolved.

Cyber attacks between states results in great power war

GABLE 10 Adjunct Professor of Public International Law, Drexel University Earle Mack School of Law [Kelly A. Gable, *Cyber-Apocalypse Now: Securing the Internet Against Cyberterrorism and Using Universal Jurisdiction as a Deterrent*, *Vanderbilt Journal of Transnational Law*, January, 2010, 43 *Vand. J. Transnat'l L.* 57]

Spoofing attacks are concentrated on impersonating a particular user or computer, usually in order to launch other types of attacks. n122 Spoofing is often committed in connection with password sniffing; after obtaining a user's log-in and password, the spoofer will log in to the computer and masquerade as the legitimate user. The cyberterrorist typically does not stop there, instead using that computer as a bridge to another, hopping in this fashion from computer to computer. This process, called "looping," effectively conceals the spoofer's identity, especially because he or she may have jumped back and forth across various national boundaries. n123

Even more disturbing is the possibility of misleading entire governments into believing that another, potentially hostile government is attempting to infiltrate its networks. Imagine that a cyberterrorist perpetrates an attack on the network maintained by the U.S. Treasury and steals millions of dollars, transferring the money to his own account to be used for funding further terrorist activities. n124 He has used the spoofing technique, however, which causes the U.S. government to believe the Russian government to be behind the attack and to accuse them of

the attack. The Russian government denies the accusation and is insulted at the seemingly unprovoked hostility. Tensions between the governments escalate and boil over, potentially resulting in war. Though this may be only a hypothetical example, it is frighteningly plausible. In fact, it may have been used in the attacks on U.S. and South Korean websites - the South Korean government initially was so certain that North Korea was behind the attack that it publicly accused the North Korean government, despite already tense relations. ⁿ¹²⁵ Similarly, in the 2007 attack on Estonia, Estonian authorities were so certain that the Russian government was behind the attack that they not only publicly accused them but requested military assistance from NATO in responding to the attack. ⁿ¹²⁶ It was later determined that Russia was not behind the attack and that at least some of the attackers were located in Brazil and Vietnam. ⁿ¹²⁷

Impact Overview

Government control prevents cyber attacks – allows them to create bottlenecks and detection devices that prevent attacks from occurring. And cyber attacks between states risk global nuclear wars – our evidence cites the U.S. and Russia as likely to be attacked and escalate.

A successful attack would take milliseconds, couldn't be stopped, and escalates.

WALL 11 Senior Associate with Alston & Bird LLP; former senior legal advisor for U.S. Special Operations Command Central [Andru E. Wall, Demystifying the Title 10-Title 50 Debate: Distinguishing Military Operations, Intelligence Activities & Covert Action, Harvard National Security Journal]

Cyberwarfare differs from other forms of warfare in that the skills or tools necessary to collect intelligence in cyberspace are often the same skills or tools required to conduct cyber attack. Furthermore, the time lag between collecting information and the need to act upon that information may be compressed to milliseconds. Unlike the traditional warfighting construct where intelligence officers collect and analyze information before passing that information on to military officers who take direct action, cyber attack may require nearly simultaneous collection, analysis, and action. The same government hacker may identify an enemy computer network, [*122] determine its strategic import, and degrade its capabilities all in a matter of seconds.

This is precisely why President Obama put the same man in charge of cyber intelligence activities and military cyber operations. This is also the reason Congress evidenced considerable apprehension and asked many questions about authorities and oversight. After all, congressional oversight retains its antiquated, stovepiped organizational structure and presumes a strict separation between intelligence activities and military operations even when no such separation is legally required.

Cyber apocalypse will happen if the structure of the internet isn't made safer

Gable, Adjunct Professor of Public International Law, Drexel University Earle Mack School of Law, 2010

[Kelly A. Gable, Cyber-Apocalypse Now: Securing the Internet Against Cyberterrorism and Using Universal Jurisdiction as a Deterrent, VANDERBILT JOURNAL OF TRANSNATIONAL LAW, Vol. 43:57]

VI. CONCLUSION

Cyberterrorism poses perhaps the greatest threat to national and international security since the creation of weapons of mass destruction. As states and their economies become increasingly intertwined, largely due to the Internet and the international financial system of global trade, the effects of a cyberterrorist attack will be greater. Similarly, as cyberterrorists gain experience in disrupting national governments and shutting down critical infrastructure, their attacks likely will become increasingly successful. Although states, private industry, and international organizations have made significant efforts to increase international cooperation, much more needs to be done. In taking action, however, it must be understood that, due to the fundamental weakness of the structure of the Internet, those additional efforts will not completely prevent cyberterrorism. As a result, further efforts at international cooperation and international standards must be part of a layered approach to cyberterrorism that also includes deterrence. As a result of the realities inherent to cyberspace, the most feasible way to deter cyberterrorism is through the international law principle of universal jurisdiction. This is not to say that territorial jurisdiction (or nationality, passive personality, or protective jurisdiction) could not be used to prosecute cyberterrorists, should there be sufficient information and state willingness to exercise other forms of jurisdiction. It is merely to say that universal jurisdiction is likely to be the most feasible manner of prosecution and, therefore, deterrence. A layered approach of mitigation and deterrence can reduce the threat of cyberterrorism substantially. Unless and until states are willing to exercise universal jurisdiction over cyberterrorist acts as part of that layered approach, however, it is only a matter of time before cyberterrorists are able to unleash a cyber-apocalypse.

Cyber war causes extinction.

Rothkopf 11 (David, Visiting Scholar at Carnegie, "Where Fukushima meets Stuxnet: The growing threat of cyber war", 3/17/11, http://rothkopf.foreignpolicy.com/posts/2011/03/17/where_fukushima_meets_stuxnet_the_growing_threat_of_cyber_war)

The Japanese nuclear crisis, though still unfolding, may, in a way, already be yesterday's news. For a peek at tomorrow's, review the testimony of General Keith Alexander, head of U.S. Cyber Command. Testifying before Congress this week and seeking support to pump up his agency budget, the general argued that all future conflicts would involve cyber warfare tactics and that the U.S. was ill-equipped to defend itself against them.

Alexander said, "We are finding that we do not have the capacity to do everything we need to accomplish. To put it bluntly, we are very thin, and a crisis would quickly stress our cyber forces. ... This is not a hypothetical danger."

The way to look at this story is to link in your mind the Stuxnet revelations about the reportedly U.S. and Israeli-led cyber attacks on the Iranian nuclear enrichment facility at Natanz and the calamities at the Fukushima power facilities over the past week. While seemingly unconnected,

the stories together speak to the before and after of what cyber conflict may look like. Enemies will be able to target one another's critical infrastructure as was done by the U.S. and Israeli team (likely working with British and German assistance) targeting the Iranian program and burrowing into their operating systems, they will seek to produce malfunctions that bring economies to their knees, put societies in the dark, or undercut national defenses.

Those infrastructures might well be nuclear power systems and the results could be akin to what we are seeing in Japan. (Although one power company executive yesterday joked to me that many plants in the U.S. would be safe because the technology they use is so old that software hardly plays any role in it at all. This hints at a bit of a blessing and a curse in the fractured U.S. power system: it's decentralized which makes it hard to target overall but security is left to many power companies that lack the sophistication or resources to anticipate, prepare for or manage the growing threats.)

Importantly, not only does the apparent success of the Stuxnet worm demonstrate that such approaches are now in play but it may just be the tip of the iceberg. I remember over a decade ago speaking to one of the top U.S. cyber defenders who noted that even during the late 90s banks were losing millions and millions every year to cyber theft -- only they didn't want to report it because they felt it would spook customers. (Yes.) Recently, we have seen significant market glitches worldwide that could easily have been caused by interventions rather than just malfunctions. A couple years back I participated in a scenario at Davos in which just such a manipulation of market data was simulated and the conclusion was it wouldn't take much to undermine confidence in the markets and perhaps even force traders to move to paper trading or other venues until it was restored. It wouldn't even have to be a real cyber intrusion -- just the perception that one might have happened.

What makes the nuclear threat so unsettling to many is that it is invisible. It shares this with the cyber threat. But the cyber attacks have other dimensions that suggest that General Alexander is not just trying to beef up his agency's bank accounts with his description of how future warfare will always involve a cyber component. Not only are they invisible but it is hard to detect who has launched them, so hard, in fact, that one can imagine future tense international relationships in which opposing sides were constantly, quietly, engaging in an undeclared but damaging "non-war," something cooler than a Cold War because it is stripped of rhetoric and cloaked in deniability, but which might be much more damaging. While there is still ongoing debate about the exact definition of cyber warfare there is a growing consensus that the threats posed by both state-sponsored and non-state actors to power grids, telecom systems, water supplies, transport systems and computer networks are reaching critical levels. This is the deeply unsettling situation effectively framed by General Alexander in his testimony and rather than having been obscured by this week's news it should only have been amplified by it.

Uniqueness

Nationalization Rising

Nationalization is the trend

Blankenhorn, business journalist & Seeking Alpha Contributor, 2015

[Dana Blankenhorn, The Big Threat To Google Is Nationalizing The Internet,
<http://seekingalpha.com/article/3072296-the-big-threat-to-google-is-nationalizing-the-internet>]

Every national government has no-go zones, and Google goes there as part of its basic mission.

As national governments clamp down on, or seek to control the resource, they go against Google.

It's an age of Information War, and Google is in the crosshairs.

The biggest trend of the last five years, whether we're talking about business, politics, or society, has been the nationalization of the Internet.

The Internet was designed as an international medium. It was designed to be open and free. But nearly every national government has no-go zones, things they don't want covered, debated, or even discussed. Being a journalist has never been so hazardous for this reason - information is now a weapon.

Fight Coming

Fight over internet control coming and real

Goldstein, Writer for the Atlantic, 2014

[Gordon M. Goldstein, The End of the Internet?,
<http://www.theatlantic.com/magazine/archive/2014/07/the-end-of-the-internet/372301/>]

The World Wide Web celebrated its 25th birthday recently. Today the global network serves almost 3 billion people, and hundreds of thousands more join each day. If the Internet were a country, its economy would be among the five largest in the world.

In 2011, according to the World Economic Forum, growth in the digital economy created 6 million new jobs. The McKinsey Global Institute estimates that transborder online traffic grew 18-fold between 2005 and 2012 and that the global flow of goods, services, and investments—which reached \$26 trillion in 2012—could more than triple by 2025. Facebook has launched a major initiative, in partnership with tech giants including Samsung and Qualcomm, dedicated to making the Internet available to the approximately two-thirds of the world's population not yet connected. Cisco forecasts that between 2013 and 2022, the so-called Internet of Things will generate \$14.4 trillion in value for global enterprises.

Yet all of this growth and increasing connectedness, which can seem both effortless and unstoppable, is now creating enormous friction, as yet largely invisible to the average surfer. It might not remain that way for much longer. Fierce and rising geopolitical conflict over control of the global network threatens to create a balkanized system—what some technorati, including Google's executive chairman, Eric Schmidt, have called "the splinternet." "I'm the most optimistic person I know on almost every topic," the Internet entrepreneur Marc Andreessen recently said in a public interview, and "I'm incredibly concerned." Andreessen said it is an "open question" whether the Internet five years from now "will still work the way that it does today."

Now is key – Need Credibility

Firm US commitment to Internet freedom at Busan vital to curb global regulations that will cause Internet fragmentation

McDowell, Chair-FCC, 13

[2/15, “Commissioner McDowell Congressional Testimony,”

<http://www.fcc.gov/document/commissioner-mcdowell-congressional-testimony>]

Thank you Chairman Upton, Ranking Member Waxman, Chairman Royce, Ranking Member Engel, Chairman Walden, Ranking Member Eshoo, Chairman Poe, Ranking Member Sherman, Chairman Smith and Ranking Member Bass. It is an honor to be before you during this rare joint hearing. Thank you for inviting me. It is a privilege to testify before such a rare meeting of three subcommittees and beside such a distinguished group on this panel. Ladies and gentlemen, the Internet is under assault. As a result, freedom, prosperity and the potential to improve the human condition across the globe are at risk. Any questions regarding these assertions are now settled. Last year’s allegations that these claims are exaggerated no longer have credibility. In my testimony today, I will make five fundamental points: 1) Proponents of multilateral intergovernmental control of the Internet are patient and persistent incrementalists who will never relent until their ends are achieved; 2) The recently concluded World Conference on International Telecommunications (“WCIT”) ended the era of an international consensus to keep intergovernmental hands off of the Internet in dramatic fashion, thus radically twisting the one-way ratchet of even more government regulation in this space; 3) Those who cherish Internet freedom must immediately redouble their efforts to prevent further expansions of government control of the Internet as the pivotal 2014 Plenipotentiary meeting of the International Telecommunication Union (“ITU”)1 quickly draws nearer; 4) Merely saying “no” to any changes is – quite obviously – a losing proposition; therefore we should work to offer alternate proposals such as improving the longstanding and highly successful, non-governmental, multi-stakeholder model of Internet governance to include those who may feel disenfranchised; and 5) Last year’s bipartisan and unanimous Congressional resolutions clearly opposing expansions of international powers over the Internet reverberated throughout the world and had a positive and constructive effect. I. Proponents of multilateral intergovernmental control of the Internet are patient and persistent incrementalists who will never relent until their ends are achieved. First, it is important to note that as far back as 2003 during the U.N.’s Summit on the Information Society (“WSIS”), the U.S. found itself in the lonely position of fending off efforts by other countries to exert U.N. and other multilateral control over the Internet. In both 2003 and 2005, due to the highly effective leadership of my friend Ambassador David Gross – and his stellar team at the Department of State – champions of Internet freedom were able to avert this crisis by enhancing the private sector multi-stakeholder governance model through the creation of entities such as the Internet Governance Forum (“IGF”) where all stakeholders, including governments, could meet to resolve challenges. Solutions should be found through consensus rather than regulation, as had always been the case with the Internet’s affairs since it was

opened up for public use in the early 1990's.² Nonetheless, countries such as China, Russia, Iran, Saudi Arabia and scores of their allies never gave up their regulatory quest. They continued to push the ITU, and the U.N. itself, to regulate both the operations, economics and content of the Net. Some proposals were obvious and specific while others were insidious and initially appeared innocuous or insignificant. Many defenders of Internet freedom did not take these proposals seriously at first, even though some plans explicitly called for:

- Changing basic definitions contained in treaty text so the ITU would have unrestricted jurisdiction over the Internet;³
- Allowing foreign phone companies to charge global content and application providers internationally mandated fees (ultimately to be paid by all Internet consumers) with the goal of generating revenue for foreign government treasuries;⁴
- Subjecting cyber security and data privacy to international control, including the creation of an international "registry" of Internet addresses that could track every Internet-connected device in the world;⁵
- Imposing unprecedented economic regulations of rates, terms and conditions for currently unregulated Internet traffic swapping agreements known as "peering;"⁶
- Establishing ITU dominion over important non-profit, private sector, multistakeholder functions, such as administering domain names like the .org and .com Web addresses of the world;⁷
- Subsuming into the ITU the functions of multi-stakeholder Internet engineering groups that set technical standards to allow the Net to work;⁸
- Centralizing under international regulation Internet content under the guise of controlling "congestion," or other false pretexts; and many more.⁹

Despite these repeated efforts, the unanimously adopted 1988 treaty text that helped insulate the Internet from international regulation, and make it the greatest deregulatory success story of all time, remained in place. Starting in 2006, however, the ITU's member states (including the U.S.) laid the groundwork for convening the WCIT.¹⁰ The purpose of the WCIT was to renegotiate the 1988 treaty. As such, it became the perfect opportunity for proponents of expanded regulation to extend the ITU's reach into the Internet's affairs. In fact, in 2011, then-Russian Prime Minister Vladimir Putin summed it up best when he declared that his goal, and that of his allies, was to establish "international control over the Internet" through the ITU.¹¹ Last month in Dubai, Mr. Putin largely achieved his goal. II. December's WCIT ended the era of international consensus to keep intergovernmental hands off of the Internet in dramatic fashion. Before the WCIT, ITU leadership made three key promises: 1) No votes would be taken at the WCIT; 2) A new treaty would be adopted only through "unanimous consensus;" and 3) Any new treaty would not touch the Internet.¹² All three promises were resoundingly broken.¹³ As a result of an 89-55 vote, the ITU now has unprecedented authority over the economics and content of key aspects of the Internet.¹⁴ Although the U.S. was ultimately joined by 54 other countries in opposition to the new treaty language, that figure is misleading. Many countries, including otherwise close allies in Europe, were willing to vote to ensnare the Internet in the tangle of intergovernmental control until Iran complicated the picture with an unacceptable amendment. In short, the U.S. experienced a rude awakening regarding the stark reality of the situation: when push comes to shove, even countries that purport to cherish Internet freedom are willing to surrender. Our experience in Dubai is a chilling foreshadow of how international Internet regulatory policy could expand at an accelerating pace. Specifically, the explicit terms of the new treaty language give the ITU policing powers over "SPAM," and attempt to legitimize under international law foreign government inspections of the content of Internet communications to assess whether they should be censored by governments under flimsy pretexts such as network congestion.¹⁵

The bottom line is, countries have given the ITU jurisdiction over the Internet's operations and content. Many more were close to joining them. More broadly, pro-regulation forces succeeded in upending decades of consensus on the meaning of crucial treaty definitions that were universally understood to insulate Internet service providers, as well as Internet content and application providers, from intergovernmental control by changing the treaty's definitions.¹⁶ Many of the same countries, as well as the ITU itself,¹⁷ brazenly argued that the old treaty text from 1988 gave the ITU broad jurisdiction over the Internet.¹⁸ If these regulatory expansionists are willing to conjure ITU authority where clearly none existed, their control-hungry imaginations will see no limits to the ITU's authority over the Internet's affairs under the new treaty language. Their appetite for regulatory expansionism is insatiable as they envision the omniscience of regulators able to replace the billions of daily decisions that allow the Internet to blossom and transform the human condition like no other technology in human history. At the same time, worldwide consumer demand is driving technological convergence. As a result, companies such as Verizon, Google, AT&T, Amazon, Microsoft, Netflix, and many more in the U.S. and in other countries, are building across borders thousands of miles of fiber optics to connect sophisticated routers that bring voice, video and data services more quickly to consumers tucked into every corner of the globe. From an engineering perspective, the technical architecture and service offerings of these companies look the same. Despite this wonderful convergence, an international movement is growing to foist 19th Century regulations designed for railroads, telegraphs and vanishing analog voice phone monopolies onto new market players that are much different from the monoliths of yore. To be blunt, these dynamic new wonders of the early 21st Century are inches away from being smothered by innovation-crushing old rules designed for a different time. The practical effect of expanded rules would be to politicize engineering and business decisions inside sclerotic intergovernmental bureaucracies. If this trend continues, Internet growth would be most severely impaired in the developing world. But even here, as brilliant and daring technologists work to transform the world, they could be forced to seek bureaucratic permission to innovate and invest. In sum, the dramatic encroachments on Internet freedom secured in Dubai will serve as a stepping stone to more international regulation of the Internet in the very near future. The result will be devastating even if the United States does not ratify these toxic new treaties. We must waste no time fighting to prevent further governmental expansion into the Internet's affairs at the upcoming ITU Plenipotentiary in 2014. Time is of the essence. While we debate what to do next, Internet freedom's foes around the globe are working hard to exploit a treaty negotiation that dwarfs the importance of the WCIT by orders of magnitude. In 2014, the ITU will conduct what is literally a constitutional convention, called a "plenipotentiary" meeting, which will define the ITU's mission for years to come. Its constitution will be rewritten and a new Secretary General will be elected. This scenario poses both a threat and an opportunity for Internet freedom. The outcome of this massive treaty negotiation is uncertain, but the momentum favors those pushing for more Internet regulation. More immediately, the World Telecommunications Policy/ICT Forum ("WTPF"), which convenes in Geneva this May, will focus squarely on Internet governance and will shape the 2014 Plenipotentiary. Accordingly, the highest levels of the U.S. Government must make this cause a top priority and recruit allies in civil society, the private sector and diplomatic circles around the world. The effort should start with the President immediately making appointments to fill crucial vacancies in our diplomatic ranks. The recent

departures of my distinguished friend, Ambassador Phil Verveer, his legendary deputy Dick Beard, as well as WCIT Ambassador Terry Kramer, have left a hole in the United States' ability to advocate for a constructive – rather than destructive – Plenipot. America and Internet freedom's allies simply cannot dither again. If we do, we will fail, and global freedom and prosperity will suffer. We should work to offer constructive alternative proposals, such as improving the highly successful multi-stakeholder model of Internet governance to include those who feel disenfranchised. As I warned a year ago, merely saying “no” to any changes to the multi-stakeholder Internet governance model has recently proven to be a losing proposition.¹⁹ Ambassador Gross can speak to this approach far better than can I, but using the creation of the IGF as a model, we should immediately engage with all countries to encourage a dialogue among all interested parties, including governments, civil society, the private sector, non-profits and the ITU, to broaden the multi-stakeholder umbrella to provide those who feel disenfranchised from the current structure with a meaningful role in shaping the evolution of the Internet. Primarily due to economic and logistical reasons, many developing world countries are not able to play a role in the multi-stakeholder process. This is unacceptable and should change immediately. Developing nations stand to gain the most from unfettered Internet connectivity, and they will be injured the most by centralized multilateral control of its operations and content. V. Last year's bipartisan and unanimous Congressional resolutions clearly opposing expansions of international powers over the Internet reverberated around the world and had a positive and constructive effect, but Congress must do more. In my nearly seven years of service on the FCC, I have been amazed by how closely every government and communications provider on the globe studies the latest developments in American communications policy. In fact, we can be confident that this hearing is streaming live in some countries, and is being blocked by government censors in others. Every detail of our actions is scrutinized. It is truly humbling to learn that even my statements have been read in Thailand and Taiwan, as well as translated into Polish and Italian. And when Congress speaks, especially when it speaks with one loud and clear voice, as it did last year with the unanimous and bipartisan resolutions concerning the WCIT, an uncountable number of global policymakers pause to think. Time and again, I have been told by international legislators, ministers, regulators and business leaders that last year's resolutions had a positive effect on the outcome of the WCIT. Although Internet freedom suffered as a result of the WCIT, many even more corrosive proposals did not become international law in part due to your actions.²⁰ IV. Conclusion. And so, I ask you in the strongest terms possible, to take action and take action now. Two years hence, let us not look back at this moment and lament how we did not do enough. We have but one chance. Let us tell the world that we will be resolute and stand strong for Internet freedom. All nations should join us. Thank you for having me appear before you today. I look forward to your questions.

Fear → Nationalization

Fear of U.S. surveillance directly causes Internet nationalization.

WSJ, 6/27/2014. Steve Rosenbush, Editor. "The Morning Download: Nationalization of Internet Continues as Germany Hangs Up on Verizon," Wall Street Journal, <http://blogs.wsj.com/cio/2014/06/27/the-morning-download-nationalization-of-internet-continues-as-germany-hangs-up-on-verizon/>.

Good morning. The nationalization of the Internet continues apace. The German government said on Thursday it would end a contract with Verizon Communications Inc. because of concerns that the U.S. National Security Agency had access to customer data maintained by U.S. telecommunications firms, the WSJ's Anton Troianovski reports. Verizon has provided Internet access and other telecom services to government agencies in Germany. Those contracts will be transferred to Deutsche Telekom AG by 2015, the Interior Ministry said.

As the WSJ reports, the move underscores the continuing political headaches for U.S. technology businesses operating abroad, more than a year after former National Security Agency contractor Edward Snowden started revealing the reach of America's electronic surveillance programs and the alleged cooperation with some U.S. firms.

Hurts Credibility

It's specifically wrecked our global negotiating position on Internet freedom.

Adam Bender, 7/23/2013. "Has PRISM surveillance undermined Internet freedom advocates?"

Computer World,

http://www.computerworld.com.au/article/521619/has_prism_surveillance_undermined_internet_freedom_advocates_/.

The US surveillance program PRISM has severely threatened the continued freedom of Internet advocates, according to Internet Society (ISOC) regional bureau director for Asia-Pacific, Rajnesh Singh.

Recent reports have revealed the NSA, under a program called PRISM, is collecting metadata about US phone calls, which includes information about a call—including time, duration and location—but not the content of the call itself. Also, the NSA is collecting data on Internet traffic from major Internet companies including Google and Microsoft.

"What's happened with PRISM and the fallout we've seen is probably the greatest threat we have seen to the Internet in recent times," Singh said at an ISOC-AU event last night in Sydney.

Singh, who said he was speaking for himself and not necessarily ISOC as a whole, claimed that the spying program has undermined the positions of Internet advocates in the United States, United Kingdom, Canada and Australia, which historically have been "bastions of Internet freedom".

"What's happened with PRISM is these four or five countries are suddenly the enemy within," he said. "The argument [for Internet freedom] doesn't hold water any more and that's really made work difficult for us."

At last year's World Conference on International Telecommunications (WCIT) treaty talks, countries including Russia, China and Iran made proposals to regulate Internet content that could have had "very bad implications for the Internet going forward", Singh said.

Many of the proposals were defeated through talks leading up to the treaty, he said. "But what happened of course was that the countries at the forefront were Australia, US, UK [and] Canada."

After news about PRISM broke, a delegate from another country who had supported the four countries in walking out on the treaty told Singh that they now regretted the decision.

According to Singh, the delegate said, "My government is sorry that we didn't sign the [WCIT treaty] because now we realise what the real agenda was for the US and Australia and the UK and Canada. It wasn't to protect the Internet; it was to protect their own surveillance interests."

Undermines our leverage for international negotiations --- countries turning to Russia and China.

Megan Gates, 7/29/2014. "NSA's Actions Threaten U.S. Economy and Internet Security, New Report Suggests," Security Management, <http://www.securitymanagement.com/news/nsas-actions-threaten-us-economy-and-internet-security-new-report-suggests-0013601>.

The report's authors also suggested that the NSA disclosures have "undermined American credibility" when it comes to the Internet Freedom Agenda. In 2010, the United States began promoting a policy of an open and free Internet, but the recent disclosures about the NSA have "led many to question the legitimacy of these efforts in the past year."

"Concrete evidence of U.S. surveillance hardened the positions of authoritarian governments pushing for greater national control over the Internet and revived proposals from both Russia and Brazil for multilateral management of technical standards and domain names, whether through the International Telecommunications Union (ITU) or other avenues," according to the report. Many developing nations are now declining to work with the United States and are instead embracing assistance from Russia, China, and the ITU when it comes to Internet availability and control for their citizens.

Seriously harmed our leverage in international debates.

Danielle Kehl et al, July 2014. Policy Analyst at New America's Open Technology Institute (OTI); Kevin Bankston is the Policy Director at OTI; Robyn Greene is a Policy Counsel at OTI; and Robert Morgus is a Research Associate at OTI. "Surveillance Costs: The NSA's Impact on the Economy, Internet Freedom & Cybersecurity," http://oti.newamerica.net/sites/newamerica.net/files/policydocs/Surveillance_Costs_Final.pdf.

Mandatory data localization proposals are just one of a number of ways that foreign governments have reacted to NSA surveillance in a manner that threatens U.S. foreign policy interests, particularly with regard to Internet Freedom. There has been a quiet tension between how the U.S. approaches freedom of expression online in its foreign policy and its domestic laws ever since Secretary of State Hillary Clinton effectively launched the Internet Freedom agenda in January 2010. 170 But the NSA disclosures shined a bright spotlight on the contradiction: the U.S. government promotes free expression abroad and aims to prevent repressive governments from monitoring and censoring their citizens while simultaneously supporting domestic laws that authorize surveillance and bulk data collection. As cybersecurity expert and Internet governance scholar Ron Deibert wrote a few days after the first revelations: "There are unintended consequences of the NSA scandal that will undermine U.S. foreign policy interests – in particular, the 'Internet Freedom' agenda espoused by the U.S. State Department and its allies." 171 Deibert accurately predicted that the news would trigger reactions from both

policymakers and ordinary citizens abroad, who would begin to question their dependence on American technologies and the hidden motivations behind the United States' promotion of Internet Freedom. In some countries, the scandal would be used as an excuse to revive dormant debates about dropping American companies from official contracts, score political points at the expense of the United States, and even justify local monitoring and surveillance. Deibert's speculation has so far proven quite prescient. As we will describe in this section, the ongoing revelations have done significant damage to the credibility of the U.S. Internet Freedom agenda and further jeopardized the United States' position in the global Internet governance debates.

Surveillance Hurts Local Efforts

NSA surveillance also crushed the leverage of international civil society groups - -- prevents them from lobbying their governments for open Internet.

Danielle Kehl et al, July 2014. Policy Analyst at New America's Open Technology Institute (OTI); Kevin Bankston is the Policy Director at OTI; Robyn Greene is a Policy Counsel at OTI; and Robert Morgus is a Research Associate at OTI. "Surveillance Costs: The NSA's Impact on the Economy, Internet Freedom & Cybersecurity,"
http://oti.newamerica.net/sites/newamerica.net/files/policydocs/Surveillance_Costs_Final.pdf.

The effects of the NSA disclosures on the Internet Freedom agenda go beyond the realm of Internet governance. The loss of the United States as a model on Internet Freedom issues has made it harder for local civil society groups around the world—including the groups that the State Department's Internet Freedom programs typically support —to advocate for Internet Freedom within their own governments. The Committee to Protect Journalists, for example, reports that in Pakistan, "where freedom of expression is largely perceived as a Western notion, the Snowden revelations have had a damaging effect. The deeply polarized narrative has become starker as the corridors of power push back on attempts to curb government surveillance." For some of these groups, in fact, even the appearance of collaboration with or support from the U.S. government can diminish credibility, making it harder for them to achieve local goals that align with U.S. foreign policy interests. The gap in trust is particularly significant for individuals and organizations that receive funding from the U.S. government for free expression activities or circumvention tools. Technology supported by or exported from the United States is, in some cases, inherently suspect due to the revelations about the NSA's surveillance dragnet and the agency's attempts to covertly influence product development. Moreover, revelations of what the NSA has been doing in the past decade are eroding the moral high ground that the United States has often relied upon when putting public pressure on authoritarian countries like China, Russia, and Iran to change their behavior. In 2014, Reporters Without Borders added the United States to its "Enemies of the Internet" list for the first time, explicitly linking the inclusion to NSA surveillance. "The main player in [the United States'] vast surveillance operation is the highly secretive National Security Agency (NSA) which, in the light of Snowden's revelations, has come to symbolize the abuses by the world's intelligence agencies," noted the 2014 report. The damaged perception of the United States as a leader on Internet Freedom and its diminished ability to legitimately criticize other countries for censorship and surveillance opens the door for foreign leaders to justify—and even expand—their own efforts. For example, the Egyptian government recently announced plans to monitor social media for potential terrorist activity, prompting backlash from a number of advocates for free expression and privacy. When a spokesman for the Egyptian Interior Ministry, Abdel Fatah Uthman, appeared on television to explain the policy, one justification that he offered in response to privacy concerns was that "the US listens in to phone calls, and supervises anyone who could threaten its national security." This type of rhetoric makes it difficult for the U.S. to effectively criticize such a policy. Similarly, India's comparatively mild

response to allegations of NSA surveillance have been seen by some critics “as a reflection of India’s own aspirations in the world of surveillance,” a further indication that U.S. spying may now make it easier for foreign governments to quietly defend their own behavior. ²¹² It is even more difficult for the United States to credibly indict Chinese hackers for breaking into U.S. government and commercial targets without fear of retribution in light of the NSA revelations. ²¹³ These challenges reflect an overall decline in U.S. soft power on free expression issues.

Reversible

It is reversible

Gelb, 10

(Prof-Business & Economic-UH, "Getting Digital Statecraft Right," Foreign Affairs, 7/28, <http://www.foreignaffairs.com/articles/66502/betsy-gelb-and-emmanuel-yujuico/getting-digital-statecraft-right>)

All these cases share the same fallacy -- that U.S.-directed methods can spur development in other nations. But U.S. policies seeking to extend freedom through technology can be successful -- if the United States refrains from acting in ways that seem less than sincere, and if it adopts a gradual, rather than transformative, approach. U.S. protests against censorship would seem more convincing if it were not for its own policies restricting Internet freedom. Consider, for example, the United States' questionable prohibition of cross-border trade in Internet gambling. In 2004, the World Trade Organization ruled in favor of Antigua and Barbuda against the United States when the United States banned online gambling services emanating from the twin-island nation. The United States appealed the case and lost, but in the meantime, Antigua's online gambling industry was virtually destroyed. The United States still has not yet satisfactorily resolved this ruling and should do so by conforming to it.

NSA Link

Pressure to nationalize is coming & real – NSA fears are driving it

Goldstein, Writer for the Atlantic, 2014

[Gordon M. Goldstein, The End of the Internet?,
<http://www.theatlantic.com/magazine/archive/2014/07/the-end-of-the-internet/372301/>]

If the long history of international commerce tells us anything, it is this: free trade is neither a natural nor an inevitable condition. Typically, trade has flourished when a single, dominant country has provided the security and will to sustain it. In the absence of a strong liberal ethos, promoted and enforced by a global leader, states seem drawn, as if by some spell, toward a variety of machinations (tariffs, quotas, arcane product requirements) that provide immediate advantages to a few domestic companies or industries—and that lead to collective immiseration over time.

The U.S. has played a special role in the development of the Internet. The Department of Defense fostered ARPANET, the precursor to the Internet. As the network evolved, American companies were quick to exploit its growth, gaining a first-mover advantage that has in many cases grown into global dominance. A vast proportion of the world's Web traffic passes through American servers.

Laura DeNardis, a scholar of Internet governance at American University, argues that the Internet's character is inherently commercial and private today. "The Internet is a collection of independent systems," she writes, "operated by mostly private companies," including large telecommunications providers like AT&T and giant content companies such as Google and Facebook. All of these players make the Internet function through private economic agreements governing the transmission of data among their respective networks. While the U.S. government plays a role—the world's central repository for domain names, for instance, is a private nonprofit organization created at the United States' urging in 1998, and operating under a contract administered by the Department of Commerce—it has applied a light touch. And why wouldn't it? The Web's growth has been broadly congenial to American interests, and a large boon to the American economy.

That brings us to Edward Snowden and the U.S. National Security Agency. Snowden's disclosures of the NSA's surveillance of international Web traffic have provoked worldwide outrage and a growing counterreaction. Brazil and the European Union recently announced plans to lay a \$185 million undersea fiber-optic communications cable between them to thwart U.S. surveillance. In February, German Chancellor Angela Merkel called for the European Union to create its own regional Internet, walled off from the United States. "We'll talk to France about how we can maintain a high level of data protection," Merkel said. "Above all, we'll talk about European providers that offer security for our citizens, so that one shouldn't have to send e-mails and other information across the Atlantic."

Merkel's exploration of a closed, pan-European cloud-computing network is simply the latest example of what the analyst Daniel Castro of the Information Technology and Innovation Foundation calls "data nationalism," a phenomenon gathering momentum whereby countries require that certain types of information be stored on servers within a state's physical borders. The nations that have already implemented a patchwork of data-localization requirements range from Australia, France, South Korea, and India to Indonesia, Kazakhstan, Malaysia, and Vietnam, according to Anupam Chander and Uyen P. Le, two legal scholars at the University of California at Davis. "Anxieties over surveillance ... are justifying governmental measures that break apart the World Wide Web," they wrote in a recent white paper. As a result, "the era of a global Internet may be passing."

Security concerns have catalyzed data-nationalization efforts, yet Castro, Chander, and Le all question the benefits, arguing that the security of data depends not on their location but on the sophistication of the defenses built around them. Another motive appears to be in play: the Web's fragmentation would enable local Internet businesses in France or Malaysia to carve out roles for themselves, at the expense of globally dominant companies, based disproportionately in the United States. Castro estimates that the U.S. cloud-computing industry alone could lose \$22 billion to \$35 billion in revenue by 2016.

The Snowden affair has brought to a boil geopolitical tensions that were already simmering. Autocracies, of course, have long regulated the flow of Internet data, with China being the most famous example. But today such states are being joined by countries across Asia, the Middle East, and Europe in calling for dramatic changes in the way the Web operates, even beyond the question of where data are stored.

NSA fears spur internet balkanization efforts – fear the U.S.

Ray, Security Analyst at 21CT, 2014

[Tim ray, The Balkanization of the Internet, <http://www.21ct.com/blog/the-revolution-will-not-be-tweeted-the-balkanization-of-the-internet-part-2/>]

NSA SURVEILLANCE STIRS THE POT (AND PROVIDES COVER)

While countries are struggling with their own versions of this scenario and with how to spin this frightening picture of the new Balkanized Internet, they were handed a great gift: Edward Snowden's tales of NSA's global surveillance operations.

Suddenly, there's a common enemy: America. Globally adventurous, the Americans (it seems) are also watching everyone they can, sometimes without permission. Snowden's revelations alone will not be enough to force through the kinds of national controls we're talking about, but they are a great start, a unifying force.

Sound farfetched? Maybe. Are there other answers? Perhaps. Brazil is moving forward with nationalizing its email services as well as plans to store all data within the country's borders. The idea there is the same as the example above: take essential services in-country in order to prevent the U.S. from spying on them and (as a side effect) control them too. These proposals seem to be receiving some popular support; many see it as akin to nationalizing their oil, or another resource. Taking local control of formerly global services is the beginning of Balkanization for countries that choose that path.

Surveillance Fears

Surveillance fears drive nationalized internets

NPR 10 – 16 – 13

[Are We Moving To A World With More Online Surveillance?,
<http://www.npr.org/sections/parallels/2013/10/16/232181204/are-we-moving-to-a-world-with-more-online-surveillance>]

Suspicion Of American Surveillance

But McLaughlin sees that record now in jeopardy.

"We've kind of blown it," he says. "The global fear and suspicion about American surveillance is pushing countries to centralize their [Internet] infrastructures and get the U.S. out of the picture. Ultimately, I think that will have negative consequences for free speech as well as for protection of privacy."

Some of the countries pushing for more international control over the Internet were never all that supportive of Internet freedom, like Russia and China. But they've now been joined by countries like Brazil, whose president, Dilma Rousseff, was furious when she read reports that she was herself an NSA target.

Speaking at the United Nations last month, Rousseff called for a new "multilateral framework" for Internet governance and new measures "to ensure the effective protection of data that travel through the Web."

At home, Rousseff has suggested that Brazil partially disconnect from U.S.-based parts of the Internet and take steps to keep Brazilians' online data stored in Brazil, supposedly out of the NSA's reach.

But Schneier says such moves would lead to "increased Balkanization" of the Internet.

PRISM link

PRISM revelations crushed our credibility on Internet freedom. We're perceived like the CCP even if our Internet is actually still relatively free.

Abraham Riesman, 6/7/2013. Journalist and documentary filmmaker living in Manhattan.

"Renowned Rights Watchdog to Downgrade United States in Freedom Rankings," Slate, Future Tense,

http://www.slate.com/blogs/future_tense/2013/06/07/prism_hurts_us_internet_freedom_rankings_freedom_house_to_downgrade_america.html.

If you thought the astounding (and ongoing) revelations about the NSA's PRISM regime were going to hurt America's reputation, it appears you were right. Freedom House just made it official.

In an exclusive statement to Future Tense, the internationally renowned rights watchdog said it's going to downgrade the U.S. in its annual Internet freedom rankings.

"The revelation of this program will weaken the United States' score on the survey," the organization told me in an email.

The project director for Freedom House's Freedom on the Net initiative, Sanja Tatic Kelly, elaborated further in another email (emphasis added):

"[S]ome of the recent revelations were already known to the internet freedom community, albeit perhaps not the full scope of them. Consequently, the United States already has a pretty poor rating on our methodology when it comes to surveillance issues. However, with this week's revelations, as well as the recently uncovered surveillance of AP journalists, that rating is going to drop even further."

Kelly went on to emphasize that, compared with other countries around the world, the U.S. "does still have pretty well functioning political institutions and free press." However, she added that PRISM poses "unique" challenges to freedom. In her words:

"What makes the situation in the U.S. unique, however, is that our government is more technologically sophisticated than most others and many major internet companies are based in the United States, allowing the government to conduct surveillance of much greater magnitude."

The official Freedom House statement made a point of saying America's online freedom ranking probably won't plummet, noting, "the effect will likely be fairly modest, as the current score takes into consideration what was already known about the government's extensive electronic surveillance activities."

As of September, Freedom House listed the United States as the second-most "free" country in terms of Internet freedoms (within a 47-country sample), outranked only by Estonia. The

rankings were based on three general criteria: “Obstacles to Access” (e.g. keeping citizens from being able to access computers or specific applications), “Limits on Content” (e.g. blocking, censoring, or altering online content), and “Violations of User Rights” (e.g. surveillance or jailing of online dissidents). The PRISM revelations have nothing to do with the first two criteria, but definitely deal a huge blow on the third.

The Obama administration is already being compared to the Chinese Communist Party—arguably the world’s most infamous limiter of online freedoms. No doubt, PRISM makes the U.S. government (as well as the government of the U.K., which seems to have been in on the action) look like an opponent of the open Web, snooping through files and communications. But as massive as this digital espionage effort is, can we really call the U.S. an “Enemy of the Internet,” to use the terminology of Reporters Without Borders?

Not exactly—but PRISM does to an extent resemble the surveillance programs of Internet enemies like China, Russia, and Saudi Arabia. What’s new here is that we can even mention America in the same sentence as those countries now, when it comes to online freedom—something that was almost unthinkable just a few days ago.

For some perspective, let’s take a look at how the U.S. government now stacks up against some of the world’s best-known online oppressors (Note: in an attempt to avoid too many apples-and-oranges comparisons, I’ve tried to focus mostly on countries with high Internet penetration and a substantial middle class):

China: One big similarity here: the relationship between the central government and private companies. Chinese netizens live in the shadow of restrictions that are collectively referred to as the “Great Firewall of China.” As of 2010, a law has been in place that requires all telecom operators and Internet service providers to take orders from the government during investigations about the leaking of state secrets. PRISM appears to have functioned largely via some level of cooperation from major online firms like Microsoft, Google, Facebook, and Apple (though many of them have issued official denials of involvement). If you’re online in China, unless you use a VPN or some other kind of workaround, there is an extremely high chance that you’re being tracked. If PRISM is as widespread as is alleged, that could very easily be true here, too.

Of course, China’s online repression is far more extreme than America’s on almost every other count (if we jailed bloggers here like the CCP does there, Glenn Greenwald would be serving hard time, not getting on the front page of theGuardian). And the U.S. doesn’t appear to have been looking for anything beyond national-security information, as opposed to touchy political speech. But the combination of a huge Internet user base and cooperation between corporations and the government to spy on that user base—well, that seems a little too familiar now.

Russia: It’s actually possible that Russian netizens are under less surveillance than we are here in the United States. Despite its best efforts, the Russian government doesn’t appear to have any coherent infrastructure for massive surveillance. ISPs are required to install software that allows the police to monitor Internet traffic, but there have been no reported uses of the software. Government technology to find and flag “extremist” sites has been faulty and remains

unimplemented. Legislation passed in 2007 gave the government permission to intercept online data without a warrant, but actual use of that law has largely been absent in major population centers like Moscow and St. Petersburg.

That doesn't mean Russia doesn't attack online freedoms, of course. Bloggers are regularly intimidated, the state demands that ISPs provide user data for dissidents, and so on. But what's interesting to see here is that the U.S. appears to have a surveillance system that is so streamlined and efficient as to be the stuff of dreams for the Putin regime.

Iran: Luckily, PRISM doesn't get anywhere near the aggressive attacks on user rights that Iranian netizens face. That said, Iran has a relatively high Internet usership for the Middle East—users just can't surf freely. The mullahs make no secret of their contempt for free speech, enforcing laws against any material opposing state interests or Islam. Surveillance is widespread, too: The regime reportedly keeps connection speeds deliberately low, so as to make it easier to monitor and filter content. Indeed, Iran is in the process of completing a so-called "clean Internet"—a self-contained, state-controlled intranet that will be used as an alternative to the Internet. We're still a far way off from anything like that.

Bahrain: The U.S. doesn't go nearly as far as this tumultuous monarchy, but it has a similar philosophy of keeping its fingers in as many online pies as possible. Bahrain's Internet usership is possibly the highest of any Arab state, but virtually no user is safe from the government's watchful eye. As Reporters Without Borders puts it, "The royal family is represented in all areas of Internet management and has sophisticated tools at its disposal for spying on its subjects." Not only that, but the government makes no secret of its iron fist: It regularly hacks dissidents' Twitter and Facebook accounts, demands online passwords during interrogations, and uses malware to trawl every corner of the Bahraini Web. America is nowhere near that, thank goodness.

South Korea: User liberties are severely curtailed in this otherwise pretty liberal democracy, but not through a PRISM-like surveillance regime. Instead, the government in Seoul keeps tabs on netizens through what's known as Resident Registration Numbers. They're serial numbers assigned to every citizen born in Korea, and users are required to use them while using almost all online services. They're not spied upon, per se, but if someone does something Seoul doesn't like, he or she can face arrests, raids, or other unpleasantness. (See the case of Park Jung-geun, indicted for retweeting the official North Korean Twitter account.) We don't have anything resembling RNNs in the U.S.

North Korea: Even the most paranoid civil libertarian can take some comfort in knowing we're light years away from the Hermit Kingdom. We may be under watch, but at least we have the Internet, instead of a weird national intranet filled with sanitized information and happy-birthday messages.

So the U.S. is still one of the freer places to be an Internet user. But we're apparently much closer to these authoritarian states than many of us had imagined—and the scary thing is, we're really good at what we do. Our days as a respected beacon of near-total online liberty are probably at an end.

Impacts

Cyber Terror Likely

Cyberwar likely & will be huge – civilians are fair ground

KESAN & HAYES 12 * Professor, H. Ross & Helen Workman Research Scholar, and Director of the Program in Intellectual Property & Technology Law, University of Illinois College of Law. ** Research Fellow, University of Illinois College of Law [Jay P. Kesan* and Carol M. Hayes**, MITIGATIVE COUNTERSTRIKING: SELF-DEFENSE AND DETERRENCE IN CYBERSPACE, Spring, 2012, Harvard Journal of Law & Technology, 25 Harv. J. Law & Tec 415]

Many academics and political figures have weighed in on the potential for cyberwarfare. Nikolai Kuryanovich, a Russian politician, wrote in 2006 he expects that in the near future many conflicts will take place in cyberspace instead of traditional war environments. n171 [*443] Some commentators have asserted that cyberspace provides potential asymmetric advantages, which may be utilized by less powerful nations to exploit the reliance of the United States on information infrastructure. n172 Specifically, China recognizes the value of cyberwarfare, n173 and its military includes "information warfare units." n174 Meanwhile, Russia has a cyberwarfare doctrine that views cyberattacks as force multipliers, and North Korea's Unit 121 focuses solely on cyberwarfare. n175 Many suspect that the Russian government conducted the cyberattacks against Estonia, Georgia, and Kyrgyzstan, though the Russian government's involvement has not been proven. n176 Estimates suggest there are currently 140 nations that either have or are developing cyberwarfare capabilities. n177

It is fair to say that preparations are underway to make cyberwarfare a viable alternative to physical warfare, and that policymakers are recognizing the applicability of the laws of war to the cyber context. n178 The effects of these changes on the private sector cannot be ignored. The line between the government and the private sector on cyberwar matters is blurred. Dycus notes that the federal government has at times delegated to private companies the task of operating cyber technology for the purpose of collecting and analyzing intelligence. n179 Because of the degree to which the private sector is involved with cyber infrastructure, many commentators have observed that the private sector will likely be heavily implicated by future cyberwars. n180

[*444] This overlap between civilian and military roles may prove problematic. Some commentators express concerns that cyberwarfare may erode the distinction between combatants and noncombatants under international law, which currently protects noncombatants. n181 The degree to which conventional war doctrine applies to cyberwar is not yet clear. Some commentators argue that because of this uncertainty, aggressive countries may have carte blanche to launch cyberattacks against civilian targets in a manner that would be impermissible under the laws of kinetic war. n182 Given the importance of civilian targets in the cyberwar context, Brenner and Clarke suggest using a form of conscription to create a Cyberwar National Guard consisting of technologically savvy citizens to better protect CNI. n183 Indeed,

one of the focuses of any national cybersecurity program should be on protecting CNI -- the topic to which we now turn.

Cyber Terror Kills the Economy

Cyber threat could collapse the financial system

Holmes, former assistant secretary of state & distinguished fellow at the Heritage Foundation, 2013

[Kim R. Holmes, Washington Times, April 17, 2013, <http://www.washingtontimes.com/news/2013/apr/17/holmes-staying-one-step-ahead-of-cyberattacks/>]

The threats to America's cybersecurity are serious and growing. They range from private hackers of individuals to state-sponsored cyberattacks on companies and government agencies and networks. Cyberthreats endanger the entire American financial and security system, including the flow of money in banks and the electrical grid. The federal government already has experienced at least 65 cybersecurity breaches and failures.

Collapses US economic growth – major attack on infrastructure

OPDERBECK 12 Professor of Law, Seton Hall University Law School [David W. Opderbeck, Cybersecurity and Executive Power, Washington University Law Review, 89 Wash. U. L. Rev. 795]

In fact, cyberspace was in many ways the front line of the Egyptian revolution. Although Mubarak apparently lacked the support among the Egyptian military for sustained attacks on civilians, he waged a desperate last-gasp battle to shut down access to the Internet so that organizers could not effectively communicate with each other, the public, or the outside world.
n5

Could a similar battle over cyberspace be waged in developed democracies, such as the United States? Policymakers in the West are justifiably concerned about cyberattacks, cyberterrorism, and the possibility of cyberwar. The raging question is whether a democratic state governed by constitutional principles and committed to free speech and private property rights can promote cybersecurity without destroying the Internet's unique capacity to foster civil liberties.

Cyberspace is as vulnerable as it is vital. The threat is real. President Obama recently declared that "cyber threat is one of the most serious economic and national security challenges we face as a nation" and that "America's economic prosperity in the 21st century will depend on cybersecurity." n6 Cybersecurity has been described as "a major national security problem for

the United States." n7 Private and public cyber-infrastructure in the United States falls under nearly constant attack, often from shadowy sources connected to terrorist groups, organized crime syndicates, or foreign governments. n8 These attacks bear the potential to disrupt not only e-mail and other online communications networks, but also the national energy grid, military-defense ground and satellite facilities, transportation systems, financial markets, and other essential [*798] facilities. n9 In short, a substantial cyberattack could take down the nation's entire security and economic infrastructure. n10

U.S. policymakers are justifiably concerned by this threat. Existing U.S. law is not equipped to handle the problem. The United States currently relies on a patchwork of laws and regulations designed primarily to address the "computer crime" of a decade ago, as well as controversial antiterrorism legislation passed after the September 11 attacks, and some general (and equally controversial) principles of executive power in times of emergency.

Nationalization Avoids Attacks

Russia wants control for national security purposes – avoids attacks

Moscow Times 10 – 23 – 14

[Alexey Eremenko, Russia Wants State Control of Root Internet Infrastructure, <http://www.themoscowtimes.com/news/article/russia-wants-state-control-of-root-internet-infrastructure/509989.html>]

Russia has mounted an effort in recent weeks to bring the root infrastructure of the Internet under control of state-affiliated bureaucracies, both internationally and at home.

The global push is likely to fizzle out, industry experts said — but at home, the plan has every chance of succeeding.

Backers of the Kremlin line say bigger state control of the Internet is mandatory for national security, hinting that the U.S. could disconnect Russia from the Web.

But critics say that Russia, which already censors the Internet, simply wants to expand its means of political censorship.

"Russia wants state control of the global network ... instead of public control," said Artem Kozlyuk, a freedom of information activist with Rublacklist.net, an independent Internet freedom watchdog.

The latest wave-generating proposal came from Russian Communications and Mass Media Minister Nikolai Nikiforov, who urged the launch of a reform at the United Nations to give control of the Internet to national governments.

The move would prevent deliberate disconnections of national segments of the Internet, Nikiforov said earlier this week in South Korea at a session of the International Telecommunications Union, a UN body.

He identified the United States as a possible threat to other nations' Internet access, according to a transcript on the ministry's website.

Government Domain

Nikiforov's proposal comes hot on the heels of the Kremlin's attempt to take over the domestic system of domain name assignment, currently overseen by the non-profit organization Coordination Center for TLD RU.

The government wants the Coordination Center's job transferred to a state agency, several prominent media outlets, including business daily Vedomosti, said last month.

The issue was discussed at the now-famous Security Council meeting of Oct. 1, when top Russian officials reportedly gathered to discuss the possibility of Russia's disconnection from the Internet.

Nikiforov said last month that it was only contingency planning in case Russia's Western opponents pull the plug, possibly as further sanctions for Moscow's annexation of Ukraine's Crimean Peninsula in March.

However, Kozlyuk of Rublacklist.net said that so far, most cases of a country going off the grid were the work of domestic governments trying to suppress dissent, such as — most famously — Egypt in 2011 during the Arab Spring.

The proposal for a takeover of the Coordination Center has been stalled, but the government could follow through with it at any time simply by pushing the group to amend its charter to recognize state superiority, said Ilya Massukh, head of the state-affiliated Information Democracy Foundation.

ICANN vs. Autocrats

The key role in managing the global Internet is currently played by the Internet Corporation for Assigned Names and Numbers (ICANN), which oversees domain name assignment throughout the world.

ICANN is a California-based non-profit organization that operates under an agreement with the U.S. Department of Commerce.

The U.S. role in Internet policing has caused much grumbling in recent years as the Internet has spread across the globe, and prompted calls to move to a so-called "multi-stakeholder governance model" that would give other players a greater say in managing the World Wide Web.

Russia had previously staged a campaign to give root control of the Internet to the UN at an earlier International Telecommunications Union conference in Dubai in 2012.

Its proposal gathered a handful of backers at the time — mostly authoritarian countries such as China, Iran, Sudan and Saudi Arabia — but was torpedoed by Western powers.

But this time, China withdrew its support, which makes Nikiforov's initiative even less likely to succeed, said Karen Kazaryan, chief analyst for the lobby group the Russian Association of Electronic Communications.

"China has a working censorship system, and it is not going to antagonize the world, and the other backers don't have enough geopolitical clout to push it through," Kazaryan said by telephone Wednesday.

Kozlyuk of Rublacklist.net claimed that Russia was courting European Parliament members for lobbying support. The claim could not be independently verified.

RuNet Regulated

President Vladimir Putin famously pledged to leave the Internet alone at a meeting with industry representatives at his ascension to the Kremlin in 2000.

Free from state intervention, the Russian segment of the Internet — the RuNet — blossomed, now counting 58 million daily users in Russia, according to the state-run Public Opinion Foundation, and spawning highly successful companies such as Yandex and Mail.ru.

But things began to change in late 2011, when Russian netizens, many of them educated young urbanites, became the driving force of record anti-Putin protests.

Since then, the government has been so busy imposing new regulations that it is now routinely accused of building the "Great Russian Firewall" of censorship.

The state now has the power to blacklist websites without court order for a variety of reasons, including political ones.

Separate legislation ramps up state control over popular blogs and online news aggregators, making it easier to shut down any of them.

And another Kremlin-penned law under review in the State Duma would oblige most organizations handling the personal data of Russians — including the likes of Facebook, Twitter and Booking.com — to store them solely on Russia-based servers, easily accessible to secret services.

Bureaucrats and Utopias

Russia is not unique in its push to give control of the Internet to traditional bureaucratic structures, said Massukh, a former deputy communications minister.

The Internet is finally big enough for governments to take it seriously and consider possible online threats to national security, such as disruption of domestic banking systems, Massukh said.

He compared the push for state control of national segments of the Internet to the introduction of country calling codes, each of which is unique and sovereign to a specific country.

Gov't Control Prevents Attacks

Government control over the internet key to prevent and mitigate cyber disasters

Baldor, AP writer, 09

[Lolita C. Baldor, How much government control in cybercrisis?,
http://www.nbcnews.com/id/33038143/ns/technology_and_science-security/t/how-much-government-control-cybercrisis/#.VWXbAvlViko]

There's no kill switch for the Internet, no secret on-off button in an Oval Office drawer.

Yet when a Senate committee was exploring ways to secure computer networks, a provision to give the president the power to shut down Internet traffic to compromised Web sites in an emergency set off alarms.

Corporate leaders and privacy advocates quickly objected, saying the government must not seize control of the Internet.

Lawmakers dropped it, but the debate rages on. How much control should federal authorities have over the Web in a crisis? How much should be left to the private sector? It does own and operate at least 80 percent of the Internet and argues it can do a better job.

"We need to prepare for that digital disaster," said Melissa Hathaway, the former White House cybersecurity adviser. "We need a system to identify, isolate and respond to cyberattacks at the speed of light."

So far at least 18 bills have been introduced as Congress works carefully to give federal authorities the power to protect the country in the event of a massive cyberattack. Lawmakers do not want to violate personal and corporate privacy or squelching innovation. All involved acknowledge it isn't going to be easy.

For most people, the Internet is a public haven for free thought and enterprise. Over time it has become the electronic control panel for much of the world's critical infrastructure. Computer networks today hold government secrets, military weapons specifications, sensitive corporate data, and vast amounts of personal information.

Millions of times a day, hackers, cybercriminals and mercenaries working for governments and private entities are scanning those networks, looking to defraud, disrupt or even destroy.

Just eight years ago, the government ordered planes from the sky in the hours after the Sept. 11 terrorist attacks.

Could or should the president have the same power over the Internet in a digital disaster?

If hackers take over a nuclear plant's control system, should the president order the computer networks shut down? If there's a terrorist attack, should the government knock users off other computer networks to ensure that critical systems stay online? And should the government be able to dictate who companies can hire and what they must do to secure the networks that affect Americans' daily life.

Nuclear

1NC

The US nuclear energy sector is weak, but export reforms revitalize it

NEI, 12, National Energy Institute, Winter 2012, "US Nuclear Export Rules Hurt Global Competitiveness", <http://www.nei.org/News-Media/News/News-Archives/us-nuclear-export-rules-hurt-global-competitiveness>

Nuclear Winter 2012—Fifty years ago, the United States was the global leader in nuclear technology and services, the first country to harness atoms for peace, and the first to profit from it internationally. Today, U.S. dominance of the global nuclear power market has eroded as suppliers from other countries compete aggressively against American exporters. U.S. suppliers confront competitors that benefit from various forms of state promotion and also must contend with a U.S. government that has not adapted to new commercial realities. The potential is tremendous—\$500 billion to \$740 billion in international orders over the next decade, representing tens of thousands of potential American jobs, according to the U.S. Department of Commerce. With America suffering a large trade deficit, nuclear goods and services represent a market worth aggressive action. However, antiquated U.S. government approaches to nuclear exports are challenging U.S. competitiveness in the nuclear energy market. New federal support is needed if the United States wants to reclaim dominance in commercial nuclear goods and services—and create the jobs that go with them. "The U.S. used to be a monopoly supplier of nuclear materials and technology back in the '50s and '60s," said Fred McGoldrick, former director of the Office of Nonproliferation and Export Policy at the State Department. "That position has eroded to the point where we're a minor player compared to other countries." America continues to lead the world in technology innovation and know-how. So what are the issues? And where is the trade? Effective coordination among the many government agencies involved in nuclear exports would provide a boost to U.S. suppliers. "Multiple U.S. agencies are engaged with countries abroad that are developing nuclear power, from early assistance to export controls to trade finance and more," said Ted Jones, director for supplier international relations at NEI. The challenge is to create a framework that allows commercial nuclear trade to grow while ensuring against the proliferation of nuclear materials. "To compete in such a situation, an ongoing dialogue between U.S. suppliers and government needs to be conducted and U.S. trade promotion must be coordinated at the highest levels," Jones said. Licensing U.S. Exports Jurisdiction for commercial nuclear export controls is divided among the Departments of Energy and Commerce and the Nuclear Regulatory Commission and has not been comprehensively updated to coordinate among the agencies or to reflect economic and technological changes over the decades. The State Department also is involved in international nuclear commerce. It negotiates and implements so-called "123 agreements" that allow for nuclear goods and services to be traded with a foreign country. The federal agencies often have different, conflicting priorities, leading to a lack of clarity for exporters and longer processing times for export licenses. "The U.S. nuclear export regime is the most complex and restrictive in the world and the least efficient," said Jones. "Furthermore, it is poorly focused on items and technologies that pose little or no proliferation concern. By trying to protect too much, we risk diminishing the focus on sensitive technologies and handicapping U.S. exports."

Allows the US to challenge Russia in the nuclear sphere

Jack Spencer, 6/9, Vice President of the Institute for Economic Freedom and Opportunity at The Heritage Foundation, “Ex-Im Is Not the Key to Nuclear Industry’s Competitiveness”,
<http://dailysignal.com/2015/06/09/ex-im-is-not-the-key-to-nuclear-industrys-competitiveness/>

In the final days before the charter of the Export-Import Bank (Ex-Im) is set to expire, supporters of its export subsidies are claiming that Congress must reauthorize and expand Ex-Im if the U.S. commercial nuclear industry is to succeed internationally. We should take the concerns of the nuclear industry seriously—but not accept Ex-Im as a solution. Those who advocate for Ex-Im as a necessity for the U.S. nuclear industry’s success argue: Without Ex-Im, the U.S. nuclear industry cannot compete with aggressive Russian expansion in nuclear energy exports, which is heavily financed by the Russian government. As the argument goes, Russian financing not only threatens the U.S. nuclear industry’s ability to compete, but it fosters the region’s overdependence on Russia for energy. The response to Russia’s strategy is not to reciprocate with a similar, albeit milder, policy that encourages cronyism and puts taxpayers on the hook for corporate interests. The right approach is for the U.S. government to streamline export regulations with nations with whom we have entered into nuclear agreements and for nuclear companies to compete by offering superior products and services. Subsidies only undercut the industry’s competitive strength. American companies already have a distinct advantage over the Russian nuclear industry in the same regions Ex-Im supporters claim particular concern. European nations are willing to pay for secure access to energy resources, and the European Union has launched a strategic initiative to diversify the energy options of member nations.

Nuclear energy is the lynchpin of Russia’s economy

Andrei Frolov, 14, PhD degrees in physics from Alberta University, June 26, 2014, “Nuclear energy is still important for Russia”,
http://in.rbth.com/opinion/2014/06/26/nuclear_energy_is_still_important_for_russia_36237.html

The third reason for developing its nuclear resources is the growing prospects for the export of nuclear technologies. Russia’s nuclear energy sector is becoming a major world exporter of nuclear power units. Russian nuclear power units operate in countries ranging from China and India to Turkey and Slovakia. There are currently five Russian power units being built abroad, with 13 more under contract to be built in the next several years. Discussions are in progress for at least 10 more units. In addition to exporting reactor technology, under these contracts Russia agrees to provide fuel, components, spare parts and services such as maintenance and spent fuel recycling for the duration of the reactor’s life, which could be as much as 60 years. The value of these services to Russia’s economy is far greater than the sale of the reactor itself. Another important reason for the continued development of Russia’s nuclear sector is the country’s security. The existence of a strong civilian nuclear energy sector ensures effective operations of its nuclear weapons complex. In addition, civilian orders keep the sector’s dual-purpose enterprises busy. Russia lags behind in renewable energy 'game' For example, it is now clear that the Rosatom-funded program for the construction of a floating nuclear power station, which was heavily criticized in its early stages, has allowed Russia to retain its ship reactor

technology, which was later used to expand the nuclear icebreaker fleet. This fleet, in turn, is becoming ever more important for the global shipping industry as more goods are shipped through the Northern Sea Route. Nuclear power is important for Russia's continued economic development for reasons far beyond maintaining military readiness. Keeping up with the latest technologies in the sector keeps thousands of highly qualified Russian scientists employed.

Russian Economic decline cause nuclear war

Sheldon Filger, 9, Author and founder of www.GlobalEconomicCrisis.com, June 10, 2009, "Russian Economy Faces Disastrous Free Fall Contraction", http://www.huffingtonpost.com/sheldon-filger/russian-economy-faces-dis_b_201147.html

In Russia, historically, economic health and political stability are intertwined to a degree that is rarely encountered in other major industrialized economies. It was the economic stagnation of the former Soviet Union that led to its political downfall. Similarly, Medvedev and Putin, both intimately acquainted with their nation's history, are unquestionably alarmed at the prospect that Russia's economic crisis will endanger the nation's political stability, achieved at great cost after years of chaos following the demise of the Soviet Union. Already, strikes and protests are occurring among rank and file workers facing unemployment or non-payment of their salaries. Recent polling demonstrates that the once supreme popularity ratings of Putin and Medvedev are eroding rapidly. Beyond the political elites are the financial oligarchs, who have been forced to deleverage, even unloading their yachts and executive jets in a desperate attempt to raise cash. Should the Russian economy deteriorate to the point where economic collapse is not out of the question, the impact will go far beyond the obvious accelerant such an outcome would be for the Global Economic Crisis. There is a geopolitical dimension that is even more relevant than the economic context. Despite its economic vulnerabilities and perceived decline from superpower status, Russia remains one of only two nations on earth with a nuclear arsenal of sufficient scope and capability to destroy the world as we know it. For that reason, it is not only President Medvedev and Prime Minister Putin who will be lying awake at nights over the prospect that a national economic crisis can transform itself into a virulent and destabilizing social and political upheaval. It just may be possible that U.S. President Barack Obama's national security team has already briefed him about the consequences of a major economic meltdown in Russia for the peace of the world. After all, the most recent national intelligence estimates put out by the U.S. intelligence community have already concluded that the Global Economic Crisis represents the greatest national security threat to the United States, due to its facilitating political instability in the world.

Offshore

Explanation

The Disad

Companies that rely on data and IT services are afraid of US technology. No one trusts the NSA and fear that surveillance is guaranteed if they are working in or using U.S. technology. That means that foreign companies are growing in 2 ways –

- A. Offshoring IT services – moving technology away from US companies to companies in Germany, Brazil, etc are allowing those companies to grow.

- B. Foreign Companies abandoning the US – they don't want to deal with the fears – so instead of using US companies and services, they are redrawing back home.

The plan reverses those trends by signaling a weakening of domestic surveillance. Allows US companies to take advantage and steal the market share back.

The impact is growth in the global economy – offshoring is good for several reasons –

-job creation in places that need jobs. Jobs are good.

-higher wage growth in foreign countries – which is lagging behind. By creating good jobs in places that need them, the economy grows.

-contained inflation – because growth isn't in just one economy dealing with one currency – companies are shielded from harm done to a single currency like the dollar.

-expanded trade – doing business across borders boosts interdependence and overall trade – which is good for growth.

AND – all of that is based on several economic studies done by Behravesch – a Chief Economist for Global Insight.

Economic growth is good because it makes the world safer by making people trade more, be happy, and fight less. For an in depth look at that – please read the Royal evidence in the 1nc.

The affirmative

I have written a sample 2ac. Feel free to add more analytical arguments, change the order, etc. This isn't a rule of what must be read. Instead, it is just a suggestion of the arguments an affirmative can make. Please read through them.

Glossary of Terms

Economic Interdependence – when two countries trade with one another they are said to be “economically interdependent.” Or, they depend on each other for their economics to work. We depend on them and they depend on us. This is a common phrase in talking about trade and the reason good economies are less likely to fight the people they are dependent on. In the simplest of terms, you are unlikely to shoot your farmer.

GDP – Gross Domestic Product – the total economy of the United States. It is a shorthand way of referencing the economy in its entirety.

Impact – a debate jargon phrase. The “boom” or result of the argument. The impact is the ‘final outcome’ of the disad or advantage. What happens? Or Why is it bad? Is usually answered with the Impact.

IT – Information technology – broadly used to describe all things related to the internet and communication. The technology surrounding it and the people who work are often referenced as IT people, companies, and jobs.

Link – a debate jargon phrase. The connection between the action of the plan and the impact. What is the result of the plan? That is called a ‘link argument.’ Anything that is a result that ultimately results in a big ‘impact’ is called a link.

Meta-Data – the practice of the NSA of storing a bunch of data on a bunch of people to make it searchable later. So, for example, storing everyone in the US’s emails and texts in one central spot is often classified as meta-data. This is distinct from surveillance done on a particular person or for a particular crime.

NSA –The National Security Agency. They are in charge of the majority of security related surveillance that is done by the government.

Offshoring – also called ‘outsourcing.’ Placing a company or parts of a company that were in the U.S. in a foreign country. If, for example, Ford Motor company closes down a plant in Detroit and opens up a plant in Mexico that does the exact same thing, it is said that they have ‘offshored’ that job [yes, even if it didn’t cross a shore]. Generally this is viewed as a negative,

but this disad, and several recent studies, have shown that there are positives to outsourcing or offshoring IT jobs.

Snowden – The man who was contracted by the NSA that later revealed what he was doing. Revealed that the government was doing a lot more spying on US citizens than was previously assumed to be true.

Trade Deficit – When one country buys a lot of stuff from another country, but that other country doesn't buy very much. So, for example, if the US buys 10 trillion dollars worth of products from China, but China only buys 1 trillion dollars worth of products from the U.S. then it would be said that we have a 9 trillion dollar trade deficit. Trade deficits are almost always bad according to economists.

Uniqueness – debate jargon. The state of the world right now, that the plan changes as a result of the link. So, for the purposes of this disad, the arguments would be that the U.S. economy is good, and that businesses are moving offshore. The link changes the world.

Negative

1nc & Overview

1nc

Uniqueness and Link - Fears of 'domestic surveillance' are driving companies to abandon US technology companies and services for foreign competitors – foreign groups are also fighting to attract business based on fears of the NSA.

WALL STREET JOURNAL 9 – 27 – 13 [NSA Internet Spying Sparks Race to Create Offshore Havens for Data Privacy,

<http://www.wsj.com/articles/SB10001424052702303983904579096082938662594>]

Google Inc., Facebook Inc. and other American technology companies were put on the defensive when Edward Snowden's allegations about U.S.-government surveillance of Internet traffic emerged this spring.

Outside the U.S., some companies and politicians saw an opportunity.

Three of Germany's largest email providers, including partly state-owned Deutsche Telekom AG, teamed up to offer a new service, Email Made in Germany. The companies promise that by encrypting email through German servers and hewing to the country's strict privacy laws, U.S. authorities won't easily be able to pry inside. More than a hundred thousand Germans have flocked to the service since it was rolled out in August.

Politicians outside the U.S. are pushing new data-privacy rules in the wake of Edward Snowden's revelations.

"We can say that we protect the email inbox according to German law," says Jorg Fries-Lammers, a spokesman for one of the German companies, 1&1 Internet AG. "It's definitely a unique selling point."

The U.S. National Security Agency has acknowledged collecting email data about Americans through phone and Internet companies. Silicon Valley companies have said that they don't give the government unfettered access to user data but that they are barred from disclosing details.

Fueled by the controversy, countries are seeking to use data-privacy laws as a competitive advantage—a way to boost domestic companies that long have sought an edge over Google, Microsoft Corp. and other U.S. tech giants.

"Countries are competing to be the Cayman Islands of data privacy," says Daniel Castro, a senior analyst at the Information Technology and Innovation Foundation, a nonpartisan Washington, D.C., think tank that receives funding from the tech industry.

Impact - The IT 'offshoring' revival is key to economic growth and avoiding inflationary fears.

Raimondi, Global Insight IT/Telecom Advisory Service, 2005

[Mike Raimondi, IT Outsourcing and the U.S. Economy,
<http://www.ihsglobalinsight.com/MultiClientStudy/MultiClientStudyDetail846.htm>]

A new study by Global Insight concluded that IT outsourcing, while displacing some IT workers, actually benefits the U.S. economy and increases the number of U.S. jobs.

According to the 2005 study, *The Impact of Offshore IT Software and Services Outsourcing on the U.S. Economy and the IT Industry*, the U.S. economy has much to gain from global sourcing and an environment of free trade, open markets and robust competition. Benefits include job creation, higher real wages, higher real GDP growth, contained inflation and expanded exports resulting in increased economic activity.

The Study was commissioned by The Information Technology Association of America (ITAA), the leading trade association for the IT industry, and led by Global Insight's chief economist Dr. Nariman Behravesh.

Major Findings include:

Worldwide sourcing of IT services and software increases total employment in the United States. This activity generated an additional 257,042 net new U.S. jobs in 2005; by 2010, net new jobs will total 337,625;

Workers enjoy higher real wages. Global sourcing adds to the take-home pay of the average U.S. worker. With inflation kept low and productivity high, worldwide sourcing will increase real hourly wages in the U.S. by \$0.06 in 2005, climbing to \$0.12 in 2010;

The cost savings and use of offshore resources lower inflation, increase productivity, and lower interest rates. This boosts spending and increases economic activity;

Worldwide sourcing contributes significantly to real U.S. Gross Domestic Product, adding \$68.7 billion in 2005. By 2010, the real GDP will be \$147.4 billion higher than it would be in an environment in which offshore IT software and services outsourcing does not occur;

Spending for global sourcing of computer software and services will grow at a compound annual rate of 20 percent, from approximately \$15.2 billion in 2005 to \$38.2 billion in 2010. Total spending on software and services will also continue to increase in the U.S. During the same time period, total cost savings from worldwide sourcing of computer software and services will grow from \$8.7 billion to \$20.4 billion, much of which will be reinvested in the U.S.;

Demand for U.S. exports increases due to global sourcing. Countries can buy more because they can sell more; the U.S. has more to sell through increased investment in new products and services, better productivity and lower inflation. Global sourcing contributed \$5.1 billion to U.S. exports in 2005, growing to \$9.7 billion by 2010;

The U.S. continues to run a large and robust trade surplus in IT services with the rest of the world;

Global Economic Growth prevents great power wars

Royal 10 — Jedidiah Royal, Director of Cooperative Threat Reduction at the U.S. Department of Defense, M.Phil. Candidate at the University of New South Wales, 2010 ("Economic Integration, Economic Signalling and the Problem of Economic Crises," *Economics of War and Peace: Economic, Legal and Political Perspectives*, Edited by Ben Goldsmith and Jurgen Brauer, Published by Emerald Group Publishing, ISBN 0857240048, p. 213-215)

Less intuitive is how periods of economic decline may increase the likelihood of external conflict. Political science literature has contributed a moderate degree of attention to the impact of economic decline and the security and defence behaviour of interdependent states. Research in this vein has been considered at systemic, dyadic and national levels. Several notable contributions follow.

First, on the systemic level, Pollins (2008) advances Modelski and Thompson's (1996) work on leadership cycle theory, finding that rhythms in the global economy are associated with the rise and fall of a pre-eminent power and the often bloody transition from one pre-eminent leader to the next. As such, exogenous shocks such as economic crises could usher in a redistribution of relative power (see also Gilpin. 1981) that leads to uncertainty about power balances, increasing the risk of miscalculation (Feaver, 1995). Alternatively, even a relatively certain redistribution of power could lead to a permissive environment for conflict as a rising power may seek to challenge a declining power (Werner. 1999).

Separately, Pollins (1996) also shows that global economic cycles combined with parallel leadership cycles impact the likelihood of conflict among major, medium and small powers, although he suggests that the causes and connections between global economic conditions and security conditions remain unknown.

Second, on a dyadic level, Copeland's (1996, 2000) theory of trade expectations suggests that 'future expectation of trade' is a significant variable in understanding economic conditions and security behaviour of states. He argues that interdependent states are likely to gain pacific benefits from trade so long as they have an optimistic view of future trade relations. However, if the expectations of future trade decline, particularly for difficult [end page 213] to replace items such as energy resources, the likelihood for conflict increases, as states will be inclined to use force to gain access to those resources. Crises could potentially be the trigger for decreased trade expectations either on its own or because it triggers protectionist moves by interdependent states.⁴

Third, others have considered the link between economic decline and external armed conflict at a national level. Blomberg and Hess (2002) find a strong correlation between internal conflict and external conflict, particularly during periods of economic downturn. They write,

The linkages between internal and external conflict and prosperity are strong and mutually reinforcing. Economic conflict tends to spawn internal conflict, which in turn returns the favour. Moreover, the presence of a recession tends to amplify the extent to which international and external conflicts self-reinforce each other. (Blomberg & Hess, 2002. p. 89)

Economic decline has also been linked with an increase in the likelihood of terrorism (Blomberg, Hess, & Weerapana, 2004), which has the capacity to spill across borders and lead to external tensions.

Furthermore, crises generally reduce the popularity of a sitting government. "Diversionsary theory" suggests that, when facing unpopularity arising from economic decline, sitting governments have increased incentives to fabricate external military conflicts to create a 'rally around the flag' effect. Wang (1996), DeRouen (1995). and Blomberg, Hess, and Thacker (2006) find supporting evidence showing that economic decline and use of force are at least indirectly correlated. Gelpi (1997), Miller (1999), and Kisangani and Pickering

(2009) suggest that the tendency towards diversionary tactics are greater for democratic states than autocratic states, due to the fact that democratic leaders are generally more susceptible to being removed from office due to lack of domestic support. DeRouen (2000) has provided evidence showing that periods of weak economic performance in the United States, and thus weak Presidential popularity, are statistically linked to an increase in the use of force.

In summary, recent economic scholarship positively correlates economic integration with an increase in the frequency of economic crises, whereas political science scholarship links economic decline with external conflict at systemic, dyadic and national levels.⁵ This implied connection between integration, crises and armed conflict has not featured prominently in the economic-security debate and deserves more attention.

This observation is not contradictory to other perspectives that link economic interdependence with a decrease in the likelihood of external conflict, such as those mentioned in the first paragraph of this chapter. [end page 214] Those studies tend to focus on dyadic interdependence instead of global interdependence and do not specifically consider the occurrence of and conditions created by economic crises. As such, the view presented here should be considered ancillary to those views.

Impact Overview

Economic decline causes war, 3 reasons—

First is Power transition—economic shocks are associated with the rise and fall of powers which is statistically accompanied by bloody transitions due to miscalculation.

Second is Interdependence—economic decline prompts countries to rely on conquest for resources rather than trade.

Third is Diversionary theory—governments have a greater incentive to fabricate external military threats to distract the population from poor economic performance—this “rally around the flag” effect is statistically proven

—that’s Royal.

Economic wars go nuclear and global.

Kemp 10—Director of Regional Strategic Programs at The Nixon Center, served in the White House under Ronald Reagan, special assistant to the president for national security affairs and senior director for Near East and South Asian affairs on the National Security Council Staff, Former Director, Middle East Arms Control Project at the Carnegie Endowment for International Peace [Geoffrey Kemp, 2010, *The East Moves West: India, China, and Asia’s Growing Presence in the Middle East*, p. 233-4]

The second scenario, called Mayhem and Chaos, is the opposite of the first scenario; everything that can go wrong does go wrong. The world economic situation weakens rather than strengthens, and India, China, and Japan suffer a major reduction in their growth rates, further weakening the global economy. As a result, energy demand falls and the price of fossil fuels plummets, leading to a financial crisis for the energy-producing states, which are forced to cut back dramatically on expansion programs and social welfare. That in turn leads to political unrest: and nurtures different radical groups, including, but not limited to, Islamic extremists. The internal stability of some countries is challenged, and there are more “failed states.” Most serious is the collapse of the democratic government in Pakistan and its takeover by Muslim extremists, who then take possession of a large number of nuclear weapons. The danger of war between India and Pakistan increases significantly. Iran, always worried about an extremist Pakistan, expands and weaponizes its nuclear program. That further enhances nuclear proliferation in the Middle East, with Saudi Arabia, Turkey, and Egypt joining Israel and Iran as nuclear states. Under these circumstances, the potential for nuclear terrorism increases, and the possibility of a nuclear terrorist attack in either the Western world or in the oil-producing states may lead to a further devastating collapse of the world economic market, with a tsunami-like impact on stability. In this scenario, major disruptions can be expected, with dire consequences for two-thirds of the planet’s population.

Growth is necessary to prevent rising power wars—it eliminates war-fighting incentives.

Gartzke 11—Erik Gartzke is an associate professor of political science at the University of California, San Diego. Gartzke holds a Ph.D. in political science from the University of Iowa and a B.A. in history from the University of San Francisco. [February 9, 2011, “Security in an Insecure World,” Cato Unbound, <http://www.cato-unbound.org/2011/02/09/erik-gartzke/security-in-an-insecure-world/>]

Almost as informative as the decline in warfare has been where this decline is occurring. Traditionally, nations were constrained by opportunity. Most nations did not fight most others because they could not physically do so. Powerful nations, in contrast, tended to fight more often, and particularly to fight with other powerful states. Modern “zones of peace” are dominated by powerful, militarily capable countries. These countries could fight each other, but are not inclined to do so. At the same time, weaker developing nations that continue to exercise force in traditional ways are incapable of projecting power against the developed world, with the exception of unconventional methods, such as terrorism.

The world is thus divided between those who could use force but prefer not to (at least not against each other) and those who would be willing to fight but lack the material means to fight far from home. Warfare in the modern world has thus become an activity involving weak (usually neighboring) nations, with intervention by powerful (geographically distant) states in a policing capacity. So, the riddle of peace boils down to why capable nations are not fighting each other. There are several explanations, as Mack has pointed out.

The easiest, and I think the best, explanation has to do with an absence of motive. Modern states find little incentive to bicker over tangible property, since armies are expensive and the goods that can be looted are no longer of considerable value. Ironically, this is exactly the explanation that Norman Angell famously supplied before the World Wars. Yet, today the evidence is abundant that the most prosperous, capable nations prefer to buy rather than take. Decolonization, for example, divested European powers of territories that were increasingly expensive to administer and which contained tangible assets of limited value.

Of comparable importance is the move to substantial consensus among powerful nations about how international affairs should be conducted. The great rivalries of the twentieth century were ideological rather than territorial. These have been substantially resolved, as Francis Fukuyama has pointed out. The fact that remaining differences are moderate, while the benefits of acting in concert are large (due to economic interdependence in particular) means that nations prefer to deliberate rather than fight. Differences remain, but for the most part the capable countries of the world have been in consensus, while the disgruntled developing world is incapable of acting on respective nations’ dissatisfaction.

While this version of events explains the partial peace bestowed on the developed world, it also poses challenges in terms of the future. The rising nations of Asia in particular have not been equal beneficiaries in the world political system. These nations have benefited from economic integration, and this has proved sufficient in the past to pacify them. The question for the future is whether the benefits of tangible resources through markets are sufficient to compensate the

rising powers for their lack of influence in the policy sphere. The danger is that established powers may be slow to accommodate or give way to the demands of rising powers from Asia and elsewhere, leading to divisions over the intangible domain of policy and politics. Optimists argue that at the same time that these nations are rising in power, their domestic situations are evolving in a way that makes their interests more similar to the West. Consumerism, democracy, and a market orientation all help to draw the rising powers in as fellow travelers in an expanding zone of peace among the developed nations. Pessimists argue instead that capabilities among the rising powers are growing faster than their affinity for western values, or even that fundamental differences exist among the interests of first- and second-wave powers that cannot be bridged by the presence of market mechanisms or McDonald's restaurants.

If the peace observed among western, developed nations is to prove durable, it must be because warfare proves futile as nations transition to prosperity. Whether this will happen depends on the rate of change in interests and capabilities, a difficult thing to judge. We must hope that the optimistic view is correct, that what ended war in Europe can be exported globally. Prosperity has made war expensive, while the fruits of conflict, both in terms of tangible and intangible spoils have declined in value. These forces are not guaranteed to prevail indefinitely. Already, research on robotic warfare promises to lower the cost of conquest. If in addition, fundamental differences among capable communities arise, then warfare over ideology or policy can also be resurrected. We must all hope that the consolidating forces of prosperity prevail, that war becomes a durable anachronism.

Uniqueness

US economy Good

US economy is doing fine

New York Times 4 – 29 – 15

[Nelson D. Schwartz, U.S. Economy Grew at 0.2% Rate in First Quarter,
http://www.nytimes.com/2015/04/30/business/gdp-q1-united-states-economy.html?_r=0]

Still, even with the disappointing start to the year, most experts expect growth to rebound later in 2015, much as it did last year.

“We believe weakness was grossly exaggerated, and there will be significant catch-up in Q2, but, of course, that remains to be seen,” said Jim O’Sullivan, chief United States economist at High Frequency Economics in Valhalla, N.Y.

One part of the economy that had been expected to help, the public sector, actually hurt overall growth last quarter. State and local government expenditures fell at the steepest rate since the first quarter of 2012.

That the economy expanded at all last quarter was mostly because of outlays by consumers, although they spent at a significantly slower rate than in the second half of last year.

Consumer spending, which makes up roughly two-thirds of gross domestic product, rose 1.9 percent. That was well below the 4.4 percent gain in the fourth quarter of 2014, and was a sign that shoppers remained cautious, despite the big drop in energy prices.

Economists had expected a weak showing before the report. The consensus view called for a 1 percent growth rate in January, February and March, well below the 2.2 percent rate in the final three months of 2014.

This is the first of three estimates of economic growth the Commerce Department will release, and the number could be revised sharply upward or downward. The next estimate will come out on May 29.

Like Mr. O’Sullivan, Mr. Anderson said he was looking for growth to pick up in the current quarter, predicting a gain of slightly more than 2 percent for the spring, with the rate of expansion rising to just under 3 percent in the second half of 2015. “We’re not throwing in the towel for 2015,” he said.

He said that he expected consumers, with more money in their bank accounts from lower oil prices and an improving job market, to spend more aggressively later in the year.

Retail activity has been surprisingly weak recently given the drop in gasoline prices since last summer, he said. Consumers are most likely using the windfall to pay down credit card debt or add to savings. If spending does pick up, so will overall economic growth.

Guy Berger, United States economist at RBS, also expects a rebound in economic activity this year, but he cautioned that some of the headwinds evident last quarter would not immediately abate.

The drop in energy-related spending will eventually level out, he said, but it will take some time. Similarly, even though the port problems in California and elsewhere have been resolved, the dollar remains strong compared with currencies like the euro, and no relief for exporters is in sight.

“The dollar has strengthened so much that it could restrain the magnitude of the rebound,” Mr. Berger said.

Recent Decisions not enough

Domestic tech groups are losing business now – recent decisions haven't gone far enough – people fear the NSA and don't trust U.S. products

Johnson, senior writer for NBC News, 5 – 11 – 15

[M. Alex Johnson, Tech Giants Unite Behind Measure to Limit NSA Surveillance, <http://www.nbcnews.com/news/us-news/tech-giants-unite-behind-measure-limit-nsa-surveillance-n357431>]

Lobbying and trade groups representing most of the biggest tech companies in the world — including Facebook, Apple, Google and Microsoft — joined forces Monday to urge Congress to rein in the National Security Agency's collection of personal data.

Less than a week after a federal court declared the NSA's bulk collection of telephone records to be illegal — and three weeks before a controversial part of the post-Sept. 11 USA Patriot Act is set to expire — the seven groups released a joint letter arguing that "trust has declined measurably among both U.S. citizens and citizens of our foreign allies" since Edward Snowden began leaking details of the U.S. data collection two years ago.

As the biggest handlers of electronic personal data, Facebook, Google and other big tech companies have a crucial stake in efforts to reform the NSA and deliberations over whether to reauthorize Section 215 of the Patriot Act. That's the section that had been used to bolster the NSA's bulk collection of phone data, and it's scheduled to expire on June 1 unless Congress intervenes.

A panel of the 2nd U.S. Circuit Court of Appeals found last week that Congress hadn't actually given the NSA approval to indiscriminately collect the records of all telephone calls by millions of Americans not suspected of any crime. The court ruling has become a critical element of debate over whether to reauthorize the controversial provision.

The tech groups — whose members also include Yahoo, Amazon, eBay, Twitter, AOL, IBM, Intel, Samsung and Visa, among many others — specifically called on Congress to pass a separate bill called the USA FREEDOM Act. It would ban bulk collection of data without a court order, free companies from having to store such data indefinitely and bring the workings of the secret Foreign Intelligence Surveillance Court into greater public view.

"As a result of increasing concern about the level of access the U.S. government has to user-generated data held by technology companies, many domestic and foreign users have turned to foreign technology providers while, simultaneously, foreign jurisdictions have implemented reactionary policies that threaten the fabric of the borderless internet," the groups said.

"Meaningful surveillance reform is vital to rebuilding the essential element of trust not only in the technology sector but also in the U.S. government."

The White House endorsed the bill last week, but some civil liberties groups have opposed it for not, in their view, going far enough. The American Civil Liberties Union has neither endorsed nor opposed the measure, but Jameel Jaffer, director of the ACLU's Center for Democracy, wrote last week that "the vague language in the bill's key provisions will provide a new lease on life to surveillance programs that haven't yet been — and may never be — disclosed to the public."

NSA → Offshoring

Companies & countries offshoring due to NSA fears

DNS 13 Online Technology Blog [DNS Made Easy, NSA Fallout Continues: U.S. Companies Seeking “Offshore Havens” for Data Privacy, Silicon Valley Anticipates Billions In Lost Revenue, <http://www.dnsmadeeasy.com/nsa-fallout-continues-u-s-companies-seeking-offshore-havens-for-data-privacy-silicon-valley-anticipates-billions-in-lost-revenue/>]

As a result of NSA’s snooping, U.S. companies are seeking refuge overseas to protect their data. And U.S. companies aren’t the only ones who are now feeling suspicious about privacy issues on the internet. Numerous governments are turning away from the IT community in the U.S., and it turns out that Silicon Valley is not immune to the fallout from revelations about widespread surveillance by the NSA. In fact, the Valley is bracing itself for losses in the range of \$35 billion in annual revenue. Why such a big loss? Companies are seeking storage of their data elsewhere.

Indeed, damaging information about NSA’s tactics is spurring an IT renaissance in several countries. For instance, Brazil wants data about its own citizens stored there. So, the government is pushing a bill, once languishing most likely in some dead-end queue, to create servers to store data, ensuring that it won’t be looked at by NSA eyes. European leaders are asking for a “Euro cloud.” This Euro cloud would allow Europeans to share data with one another, but it would stop there – those outside of Europe would not be able to access the information. Google and Yahoo Inc. might be in for an ugly surprise, too. Apparently, India is moving forward with a measure that would prohibit government employees to use the mail services of these two companies. It is unclear whether or not they have already moved forward with this ban.

Despite these measures, it is unlikely that data will be protected from snoopers, because other countries are eager to catch up to Washington’s spying capabilities. So such measures are most likely futile, as it is probably inevitable that surveillance systems, if not already in place, will be built or improved upon outside of the United States.

What’s the reality? So-called private data on the internet is not really protected, and outfits, such as the NSA, will always have access to so-called protected information. That said, citizens as well as companies are unnerved by the revelations about spying that Snowden, the former NSA contractor and whistle blower, brought to light this past summer.

Fears spur offshoring

Domestic surveillance fears motivate offshoring of tech

BEDNAR 1 – 3 – 15 Red Orbit Staff Writer [Chuck Bednar, Storing data offshore won't protect it from NSA, expert says, <http://www.redorbit.com/news/technology/1113307187/storing-data-offshore-would-not-make-it-safe-from-nsa-expert-says-010315/>]

Ever since Edward Snowden first blew the lid off the US National Security Agency's data collection practices, Americans have been looking for a way to keep their information safe from prying eyes in the federal government.

Some tech companies, including Google, have explored the possibility of using floating data centers to move servers offshore. However, in a new article penned for TechCrunch, former Obama administration director of privacy and civil liberties and Brown University fellow Tim Edgar says that simply moving data centers offshore will not protect them from the NSA.

"The natural reaction of many citizens, companies and governments is to try to get their data out of the United States and out of the hands of American companies," Edgar wrote, calling the idea "a seductive one, even for Americans."

"This offshoring of data to avoid surveillance is not just an idle notion," he continued. "As a privacy lawyer with experience in the intelligence community and the Obama White House, technology companies have asked me how they might pursue such a strategy. It turns out that shifting user data abroad or into the hands of foreign companies is a very poor way to combat American surveillance."

While the NSA's top brass have "stated quite openly their desire to collect everything American law permits," Edgar explained that regulations governing what they do depends upon where they are collecting information. The Foreign Intelligence Surveillance Act (FISA), places stricter guidelines on data collected from domestic servers than from those located overseas, he noted.

Surveillance Spurs Foreign Advertisements

Advertising based on NSA fears

WALL STREET JOURNAL 9 – 27 – 13 [NSA Internet Spying Sparks Race to Create Offshore Havens for Data Privacy,

<http://www.wsj.com/articles/SB10001424052702303983904579096082938662594>]

It could be tough for U.S. companies to undo any damage, particularly when the extent of NSA activities is secret and other nations have been critical of the U.S. On Tuesday, Brazilian President Dilma Rousseff in a United Nations address assailed U.S. snooping on her country. Last week she canceled a planned visit to Washington.

European Commission Vice President Neelie Kroes, who supervises the European Union's digital portfolio, has been encouraging the bloc's companies to tout their privacy creds. "Privacy is not only a fundamental right," she said in Estonia this summer. "It can also be a competitive advantage."

For small German companies competing against big ones—like online-security company Symantec Corp. and Amazon.com Inc., which provides corporate cloud services—the NSA surveillance program "is a present from heaven," says Oliver Dehning, chief executive of antispameuropeGmbH, which builds spam-protection software. "It's kind of an opportunity to strike back and protect our home market."

He turned the Snowden leaks into a marketing campaign, tweeting about the news and speaking at industry conferences about how Germans can protect themselves from spying.

Symantec and Amazon declined to comment for this article.

Reversible

Only weakening NSA reverses the trend

ALLISON 12 – 17 – 13 Investigative Reporter – Sunlight Foundation [Bill Allison, Obama calls for tech support, <https://sunlightfoundation.com/blog/2013/12/17/obama-calls-for-tech-support/>]

The NSA paid some of the tech companies to separate the user data of foreigners from U.S. citizens. It might have been a penny-wise-but-pound-foolish decision to accept the NSA's cash: Bloomberg News reported last month that the potential lost sales to foreign customers outraged at the breach of their privacy could cost U.S. companies \$35 billion through 2016.

Short of shutting down the NSA, there may be little Obama can do to restore the tarnished overseas reputations of America's tech tattlers, but the president can offer plenty in consolation prizes. That \$35 billion in losses is just a rounding error when it comes to the taxpayer money that the tech giants stand to benefit from. The companies represented at Tuesday's meeting all have other issues before the federal government. Apple and Google have billions in "stateless" - that is, tax free -- profits socked away offshore, while AT&T needs government approval of its acquisition of low cost cellphone provider Leap Wireless. Even Etsy (\$3,500 in contributions to Obama), the sales platform for artisans and cottage industrialists, is seeking a small business exemption for its merchants should Congress require online retailers to collect state sales taxes from their customers.

Meanwhile, Facebook and other firms have won bipartisan support after lobbying Congress for legislation that would allow them to inform users how many requests for customer data they receive from the NSA and how many accounts are effected. Obama opposes the bill.

In addition to the fallout from Snowden's revelations, the companies will discuss how the government hires tech and IT companies and the ongoing problems with implementation of the Affordable Care Act.

Answer to – Offshoring is only about Economics

Not just economics

DOERKEN 05 retired CEO of DHL, interview with USA Today [Sandy Huffaker & Uwe Doerken, 'Offshoring ... benefits the consumer',
http://usatoday30.usatoday.com/tech/techinvestor/industry/2005-01-16-dhl-advice_x.htm]

Q: Is offshoring strictly about cheap labor, or are there other reasons to move jobs abroad?

A: There is a lot more to it than cutting cost. Economic skills tend to build in tightly packed geographic clusters. For example, a large portion of the world's diamonds are cut in some cities in India and around the Belgian city of Antwerp. It makes sense to source where there is an ample supply of those skills and honed to be up to date. That's another reason outsourcing brings to the world more choice of products and services at affordable prices.

Economics alone don't explain offshoring decisions

Business Insider 2011

[Here's The TRUE Reason US Companies Offshore Jobs, 1/25/11,
<http://www.businessinsider.com/heres-the-true-reason-us-companies-offshore-jobs-2011-1>]

Survey respondents are broadening the range of factors that influence their selection of an offshore site to include the location of the best service provider and the quality of infrastructure. In spite of placing a high priority on cost savings and labor arbitrage, the survey finds average achieved cost savings offshore have declined at many companies.

For example, IT services and software development have experienced consistent declines over the past five years, while average achieved savings have increased for administrative and innovative functions such as research and development and sales/marketing.

According to the researchers, survey participants have lower expectations than previous respondents for average cost savings in several offshoring functions. Contact center, IT and software development have seen the largest declines among all offshoring functions as companies new to offshoring discover a number of hidden costs involved, including expenses for training, staff recruitment and retention, and government and vendor relations.

“The potential for cost reduction alone is no longer enough to justify moving operations,” said Ton Heijmen, senior advisor to The Conference Board. “One survey respondent noted it has taken his company several years to discover the impact of labor arbitrage disappears in fewer

than three years. Companies are now shifting from cost-driven offshoring to a multidimensional value proposition in creating a global footprint.”

As companies expand offshoring activities by increasing scale or by offshoring more diverse and complex functions, most firms see a decline in the overall efficiency. This may be partially attributed to a loss of managerial control as offshoring operations are expanded, requiring companies to improve coordination and management of their global sourcing.

Impacts

Economy – Boosts Company Growth

Offshoring good for company growth – solve reasons offshoring might be bad

BALASUBRAMANIVAN 04 general manager at Wipro Technologies, a global IT services provider [S.M. Balasubramaniyan, Offshoring's positives outweigh its negatives, <http://www.networkworld.com/article/2323783/software/offshoring-s-positives-outweigh-its-negatives.html>]

Organizations all over the world are under constant pressure to provide value to their customers and meet the challenges of competition. In globalized free economies, this is truer today than ever. The primary factor that directly or indirectly contributes toward a company's business success is the cost of production and operation.

Among the many initiatives that have succeeded in reducing the cost of producing goods and services is the outsourcing/offshoring model. This model has taken many forms and its characteristics have been refined over a period of time.

Before enumerating the benefits of offshoring, it must be acknowledged that its success does not come without pain, mainly in the form of job cuts and the phasing out of low-earning products and services. However, organizations that take a well-planned and articulated approach to offshoring succeed in managing this situation better than ones that rush in without due consideration.

Offshoring happens through two means: outsourced offshoring through vendor partners, or in-house offshoring. In the former, the work is performed at the offshore partner's premises, using the partner's resources. In the latter, a U.S. company establishes its own global centers in other countries.

Perhaps the greatest benefit of offshoring is the cost advantage it produces, which directly affects the company's bottom line. In tight fiscal situations, any savings in operating costs will contribute toward the company's sustenance and growth. Companies in recession segments sustain themselves and grow through innovation. Lower operating costs means they have more money to invest in innovation, resulting in a stabilized domestic workforce.

In the service sectors, the cost saving from offshoring enables companies to create new service lines, many of which had been deferred for want of investment. New services increase customer satisfaction and become new revenue streams, as well as growth paths for companies.

The geographic nature of offshoring brings its own advantages. It helps the company expand its reach, thereby helping the company grow. This growth mitigates any negative effects of offshoring.

Offshoring also helps a company be closer to its global customers, thereby providing appropriate offerings to its regional market and ensuring speedier problem resolution. Developers and support personnel in the relevant geographies have a better understanding of customers' needs, regulatory compliances and regional preferences, and can better implement the product or provide the service.

Economy - Creates Jobs

IT outsourcing good for the US economy

Miller, chief information officer at Ziff Brothers investments, 04

[Michael J. Miller, The Benefits of Offshore Outsourcing 4/28/14, Offshoring is lowering costs and actually creating jobs by fostering a more efficient economy. Also: IT jobs are changing, and Adobe's CEO speaks his mind, <http://www.pcmag.com/article2/0,2817,1573729,00.asp>]

As more companies transfer programming and call-center jobs offshore, the topic of offshore outsourcing is raging throughout the information technology industry. I understand the frustration of workers whose jobs have moved and of customers who fail to get their technical-support questions answered. But the backlash may be overblown. One of the latest studies indicates that the trend may actually be creating more jobs. At least that's the conclusion of a recent study by Global Insight, sponsored by the Information Technology Association of America (ITAA).

Given our global economy, the globalization of the IT industry is inevitable. Most big IT companies do much of their business overseas and naturally want to have some of their employees in those markets. Lower wages in some countries are also a huge incentive to move operations, especially since high-speed communication removes many of the barriers to dealing with U.S.-based colleagues and customers.

I think that some of the criticism of offshore outsourcing is misplaced. According to the Global Insight study, from 1998 through 2003 offshore IT software and services spending increased from \$2.5 billion to \$10 billion; the figure could reach \$31 billion by 2008. It also estimates that as of 2003 nearly 104,000 IT software and services jobs were displaced. The same study says that 372,000 IT jobs have been lost in this country since 2000, accounting for about 10 percent of the total number of such jobs in the U.S. The main reasons for the loss: the dot-com bust, the recession, and the growth in productivity.

Interestingly, Global Insight says that rather than reducing the number of jobs in the U.S., offshoring is lowering costs for everyone and actually creating jobs, thanks to a more efficient economy. It says that about 194,000 new jobs—both IT and non-IT—were created in 2003 thanks to offshore IT outsourcing, and by 2008 the number will reach over 589,000.

According to a study by Gartner, fewer than 5 percent of U.S. IT jobs have moved offshore. But analysts predict that by 2010 25 percent will be in developing countries. They urge companies to proceed carefully, as such moves could result in the loss of future talent, intellectual assets, and organizational performance.

Poverty Impact Module

Growth solves poverty—it is the essential foundation.

Ben-Ami 11 — Daniel Ben-Ami, journalist and author, regular contributor to spiked, has been published in the American, the Australian, Economist.com, Financial Times, the Guardian, the Independent, Novo (Germany), Ode (American and Dutch editions), Prospect, Shanghai Daily, the Sunday Telegraph, the Sunday Times, and Voltaire (Sweden), 2011 (“Growth is good,” Ode, June, Available Online at <http://www.odemagazine.com/doc/print/75/growth-is-good>, Accessed 08-16-2011)

We should never forget that economic progress has already improved our lives beyond recognition. The fact that many problems remain is an argument for more growth, not less. Restraining growth means accepting that many millions, even billions, of people will continue to live in dire poverty. Accelerating growth, in contrast, is an essential foundation for overcoming the remaining challenges facing humanity.

Poverty is the equivalent of an ongoing nuclear war and is the root cause of all violence

Gilligan 96 – Professor of Psychiatry at the Harvard Medical School and Director of the Center for the Study of Violence (James, “Violence: Our Deadly Epidemic and Its Causes”, p. 195-96)

Comparing this frequency of deaths from structural violence to the frequency of those caused by major military and political violence, such as World War II (an estimated 49 million military and civilian deaths including those caused by genocide- or about eight million per year, 1939-1945), the Indonesian massacre of 1965-66 (perhaps 575,000 deaths), the Vietnam war (possibly two million, 1954-73) and even a hypothetical nuclear exchange between the US and USSR (232 million) it was clear that even war cannot begin to compare with structural violence, which continues year after year. In other words, every fifteen years, on the average, as many people die because of relative poverty as would be killed in a nuclear war that caused 232 million deaths; and every single year, two to three times as many people die from poverty throughout the world as were killed by the Nazi genocide of the Jews over a six year period. This is, in effect, the equivalent of an ongoing, unending, in fact accelerating, thermonuclear war, or genocide, perpetuated on the weak and poor every year of every decade, throughout the world. Structural violence is also the main cause of behavioral violence on a socially and epidemiologically significant scale (from homicide and suicide to war and genocide). The question as to which of the two forms of violence-structural or behavioral- is more important, dangerous, or lethal is moot, for they are inextricably related to each other, as cause to effect.

Growth Solves poverty

Alternatives to growth are morally repugnant—condemn billions to poverty.

Ben-Ami 11 — Daniel Ben-Ami, journalist and author, regular contributor to spiked, has been published in the American, the Australian, Economist.com, Financial Times, the Guardian, the Independent, Novo (Germany), Ode (American and Dutch editions), Prospect, Shanghai Daily, the Sunday Telegraph, the Sunday Times, and Voltaire (Sweden), 2011 (“Growth is good,” Ode, June, Available Online at <http://www.odemagazine.com/doc/print/75/growth-is-good>, Accessed 08-16-2011)

This still leaves the ultimate argument used against economic growth: climate change. The orthodox view is that we need to modify our behavior and make sacrifices to save the planet. We should avoid leaving electronic devices on standby, not take hot baths or perhaps any baths at all, and avoid using plastic bags when possible. Not only is such an approach undesirable, it is also the worst possible response to climate change. It is undesirable because it means accepting what is essentially a form of rationing in the West. Even worse, it means ruling out the possibility of full-scale development of the developing world. It literally means telling billions of people they cannot have access to air travel, cars, computers, modern medicine and much else that we in the West take for granted. Depriving billions of people of products so common for us in the West is morally repugnant.

Growth is key to economic mobility and tolerance.

Friedman 5 — Benjamin M. Friedman, William Joseph Maier Professor of Political Economy at Harvard University, former Chair of the Department of Economics at Harvard University, holds a Ph.D. in Economics from Harvard University, 2005 (“Rising Incomes, Individual Attitudes, and the Politics of Social Change,” The Moral Consequences of Economic Growth, Published by Knopf Publishing Group, ISBN 0679448918, p. 86)

Economic growth itself, however, whether steady or irregular, crucially affects people’s attitudes toward matters including equal opportunity and economic mobility. Because fear of moving down the economic scale is more compelling than the opportunity to move up, the prospect of mobility is naturally threatening. But in a stagnant economy, where one person’s gain is necessarily someone else’s loss, people who get ahead are perceived not only as doing so at other people’s expense but as directly disadvantaging others. As a result, the people who strongly support expanding opportunities in a stagnant economy are mostly either those who have little to lose because they are starting off near the bottom of the economic and social ladder, or those who think that their particular circumstances make them especially likely to benefit from specific new developments. Neither group is likely to be the dominant force in any society. Usually people at the bottom have both economic and political influence that is disproportionately weak compared to their numbers, and most new developments bring likely losers as well as likely winners. Stagnant economies, therefore, do not breed support for economic mobility, or for openness of opportunity more generally.

Answers to – “IT not that much of the Economy”

Tech offshoring good for the US economy

ITAA 05 Information Technology Association of America

[Executive Summary: The Comprehensive Impact of Offshore Software and IT Services Outsourcing on the U.S. Economy and the IT Industry,
<http://www.ihsglobalinsight.com/publicDownload/genericContent/103105execsum.pdf>]

Given the benefits that are expected to accompany offshore ITO spending by businesses in the United States, it would be unwise to enact protectionist legislation or regulations as a result of political pressures being created by this economic transition. Creating a "digital fortress" is not the answer. At the same time, however, government and industry should be responsive to the needs of displaced IT workers, as well as to the need to continue encouraging the next generation of workers to enter the IT field. To retain preeminence in global markets and respond to the growing needs for IT professionals in the United States despite the use of offshore resources for some IT activities, businesses, government, schools, and workers must recognize the competitive realities of global markets and respond to the challenges by improving competitive performance. The central issue surrounding the impact of offshore ITO is whether displaced software and IT services workers in the U.S. will remain unemployed or underemployed. Some workers might not be able to afford the cost of training or certification programs to upgrade their skills. Others might be close enough to "retirement age" that finding suitable employment becomes difficult. In software and IT services—both the industry and occupations across all industries—the pace of change is more rapid than that seen in most manufacturing sectors. Thus, skill obsolescence is a threat many displaced domestic software and IT services workers face and their dislocation could become more "permanent" than "temporary." Access to retraining programs or the funds with which to re-orient one's skills are necessary to maintain or expand the current stock of human capital. The industry implications due to offshore ITO also need to be considered. Incentives should be provided to encourage continued investment in research and development (R&D) in the United States. New software and IT services products and capabilities will continue to yield labor productivity enhancements for the foreseeable future. This affects not only the IT industry, but it also affects all industries and businesses that implement IT systems to leverage their employees' time and effort. To stay on the cutting edge of technology and its practical applications throughout business, a healthy level of R&D must be maintained domestically. Overall, adopting a free-trade posture toward offshore ITO will yield benefits to the U.S. economy. Aggressively implementing policies to retrain displaced workers and to encourage continued R&D investment could increase the benefits to the U.S. economy over the next few years.

Politics Cuba

Shell---Cuba Good

Cuban normalization will pass with an ambassador confirmed – PC key

-Will pass warrants: general momentum (which outweighs everything), public support, and previous progress

-Yes push – demands of Congress and press conferences

-Obama's PC is high – Supreme Court victories on the ACA and same-sex marriage + SC speech

Milbank 7/5 {Dana, politics columnist based at The Washington Post and MSNBC, former senior editor of The New Republic, B.A. cum laude in political science (Yale), "Obama spending his windfall of political capital on Cuba," Herald Net, 2015, <http://www.heraldnet.com/article/20150705/OPINION04/150709675#THUR>}

"This," President Obama said in the Rose Garden on Wednesday as he announced the restoration of diplomatic relations with Cuba, "is what change looks like." This echo of his 2008 campaign theme was self-congratulatory but deserved, coming at a time of unexpected hope late in his presidency. In the space of just over a week, Obama's tired tenure came back to life. He bested congressional Democrats and got trade legislation on his desk. The Supreme Court upheld the signature achievement of his presidency — Obamacare — and thereby cemented his legacy. The high court also made same-sex marriage legal across the land following a tidal change in public opinion that Obama's own conversion accelerated. Had the court's decisions not dominated the nation's attention, Obama's eulogy Friday for those slain in a South Carolina church, and his extraordinary rendition of "Amazing Grace," would have itself been one of the most powerful moments of his presidency. It is little surprise, then, that this lame duck's job approval rating hit a respectable 50 percent this week for the first time in two years in a CNN poll, and his disapproval rating dropped to 47. The good tidings of the past week have been arguably more luck than achievement for Obama, but he deserves credit for his effort to use the momentum of his victories to revive what had been a moribund presidency. When you earn political capital, as George W. Bush liked to say, you spend it. This is why it was shrewd of the surging Obama to demand new action from Congress on Cuba. "Americans and Cubans alike are ready to move forward; I believe it's time for Congress to do the same," he said, renewing his call to lift the travel and trade embargo. "Yes, there are those who want to turn back the clock and double down on a policy of isolation, but it's long past time for us to realize that this approach doesn't work. It hasn't worked for 50 years. ... So I'd ask Congress to listen to the Cuban people, listen to the American people, listen to the words of a proud Cuban American, [former Bush commerce secretary] Carlos Gutierrez, who recently came out against the policy of the past." Fifteen minutes later, Obama lifted off from the South Lawn in Marine One on his way to Nashville, where he tried to use the momentum generated by the Supreme Court Obamacare victory to spread the program to states where Republican governors have resisted. "What I'm hoping is that with the Supreme Court case now behind us, what we can do is ... now focus on how we can make it even better," he said, adding, "My hope is that on a bipartisan basis, in places like Tennessee but all across the country, we can now focus on ... what have we learned? What's working? What's not working?" He said that "because of politics, not all states have

taken advantage of the options that are out there. Our hope is, is that more of them do.” He urged people to “think about this in a practical American way instead of a partisan, political way.” This probably won't happen, but it's refreshing to see Obama, too often passive, regaining vigor as he approaches the final 18 months of his presidency. The energy had, at least for the moment, returned to the White House, where no fewer than six network correspondents were doing live stand-ups before Obama's appearance Wednesday morning. There was a spring in the president's step, if not a swagger, as he emerged from the Oval Office trailed by Vice President Biden. Republican presidential candidates were nearly unanimous in denouncing the plan to open a U.S. embassy in Havana. But Obama, squinting in the sunlight as he read from his teleprompters, welcomed the fight. “The progress that we mark today is yet another demonstration that we don't have to be imprisoned by the past,” he said. Quoting a Cuban-American's view that “you can't hold the future of Cuba hostage to what happened in the past,” Obama added, “That's what this is about: a choice between the future and the past.” Obama turned to go back inside, ignoring the question shouted by Bloomberg's Margaret Talev: “How will you get an ambassador confirmed?” That will indeed be tricky. But momentum is everything in politics — and for the moment, Obama has it again.

[Insert link – domestic surveillance reform is unpopular]

Full diplomatic ties key to normalized relations – vital to improved regional stability and counter-narcotics – status quo doesn't solve and Obama has exhausted his available actions

Bowman 7/1 {Michael, syndicated senate correspondent, “Global Chatter Greets US-Cuba Announcement,” VOA, 2015, <http://www.voanews.com/content/global-chatter-greets-us-cuba-restoration-of-diplomatic-ties/2845227.html#THUR>}

The restoration of full diplomatic relations between the United States and Cuba sparked overwhelmingly positive reactions around the world, except in the United States, where opinions diverged widely. A spokesman for U.N. Secretary-General Ban Ki-moon said he “welcomes the announcement today that Cuba and the United States will reopen embassies in Havana and Washington, D.C.” “The restoration of diplomatic ties is an important step on the path toward the normalization of relations. The secretary-general hopes that this historic step will benefit the peoples of both countries,” the spokesman added. For decades, Switzerland has served as a go-between for Washington and Havana, housing the U.S. Interest Section in the Cuban capital. In a statement, the Swiss government said: “Switzerland strongly believes that the reopening of the two embassies and the normalization process will overall be beneficial for the two states and contribute to security, stability and prosperity in the region. Switzerland views the normalization of relations between Cuba and the U.S. as very positive – not only for these two countries but for the whole region and for world stability.” ‘Incentivizing a police state’ By contrast, reactions are decidedly mixed in Washington and across the United States. The Speaker of the House of Representatives, Republican John Boehner, said in a statement, “The Obama administration is handing the Castros a lifetime dream of legitimacy without getting a thing for the Cuban people being oppressed by this brutal communist dictatorship.” Echoing the criticism, Democratic Senator Robert Menendez, the son of parents who

immigrated to the U.S. from Cuba, said: "Our demands for freedoms and liberty on the island will continue to be ignored, and we are incentivizing a police state to uphold a policy of brutality. A policy of the United States giving and the Castro brothers freely taking is not in our national interest and not a responsible approach when dealing with repressive rulers that deny freedoms to [their] people. An already one-sided deal that benefits the Cuban regime is becoming all the more lopsided." 'New era of possibility' House Democratic Leader Nancy Pelosi disagreed. "Reopening embassies lays the foundation for a new, more productive relationship with Cuba that can support and advance key American priorities, including human rights, counter-narcotics cooperation, business opportunities for American companies, migration, family unification, and cultural- and faith-based exchanges," she said. "President Obama's bold leadership has opened a new era of possibility in U.S.-Cuban relations." That sentiment was echoed by Democratic Senator Patrick Leahy.

Improved efforts key to prevent cartels and Hezbollah attacks with WMDs

Pavlich '11 (Katie, award-winning journalist, B.A. in broadcast journalism (University of Arizona)), This article quotes Douglas Farah (Senior Fellow at the International Assessment and Strategy Center, B.A. in Latin American Studies from Kansas) and Patrick Meehan (US representative on the Homeland Security Committee), "A Growing Terror Threat: Hezbollah in Latin America," TownHall Magazine, 7/8, http://townhall.com/columnists/katiepavlich/2011/07/08/a_growing_terror_threat_hezbollah_in_latin_america/page/full)

When Americans think of terrorist activity, we think of Yemen, Pakistan, Palestine and other places in the Middle East, but we overlook the rapidly increasing terrorism threat coming from Hezbollah operations taking place in Latin America. "This is a very important issue we pay too little attention to," Senior Fellow for the International Assessment and Strategy Center Douglas Farah told lawmakers on Capitol Hill yesterday during a counterterrorism hearing. According to testimony given on Capitol Hill yesterday, Hezbollah, the most extensive terrorist organization in the world, is operating along the U.S.-Mexico border and has vast influence in Latin America. Hezbollah is anti-American and anti-Israeli, and the United States has been concerned about the group since the 1980s. Before 9/11, Hezbollah, not Al Qaeda, was responsible for the majority of U.S. terrorism deaths, including the 1983 bombings of U.S. Marine barracks and U.S. embassy in Beirut, in addition to a series of attacks in the '80s. Hezbollah is also Israeli embassy in Buenos Aires. In 1994 they bombed the Jewish community center in the same responsible for countless attacks on Israel. In 1992, Hezbollah, with help from Iran, bombed the South American city. Those are just a handful of examples that don't even account for the thousands of rockets Hezbollah has launched into Israel throughout the years. "Hezbollah makes Al Qaeda look like a minor league team," Chairman of the Subcommittee on Counterterrorism and Intelligence Rep. Patrick Meehan (R-Pa.) said. Hezbollah was created by Iran and has close ties to Syria. The group is also backed by Venezuelan Dictator Hugo Chavez, who has a cozy relationship with Iran. "Hezbollah, backed by Iran and Venezuela, is a determined enemy of the United States that has made substantial progress in Latin America," Ambassador and American Enterprise Institute visiting fellow Roger Noriega said during the hearing, adding that he believes there will be an

attack on U.S. personnel if nothing is done soon to counter Hezbollah in Latin America. Hezbollah is the most prevalent terrorist organization in the world. The group operates in over 40 countries and on 5 continents, including operations in at least 15 U.S. cities and four major Canadian cities. In South America specifically, the group operates in the region where Argentina, Brazil and Paraguay meet. Brazil is used as a major terrorism hub and cocaine is exchanged for weapons in Colombia. "Hezbollah remains the premium terrorist organization in the world," Farah said in testimony. Hezbollah is a very sophisticated terrorist group, with activity beyond criminal. Intelligence shows the group started pushing its terrorism initiative into South America a decade ago but upped its efforts in 2005, a new approach that is a threat to the United States. Testimony showed Hezbollah is strategically positioning itself in order to possibly launch a response to an Iranian attack either from the U.S. or Israel on their nuclear program. Intelligence cited during the hearing also shows the group is interested in obtaining weapons of mass destruction, which should be taken seriously since the group has published entire books about how to build and use WMDs and terrorist operations are justified by Hezbollah's belief in Islam's ongoing struggle with the West through violent jihad. Hezbollah has also been supplying explosives training to Mexican drug cartels operating along the U.S.-Mexico border, and tunnels used in the area are near replicas of weapons-smuggling tunnels built by Hezbollah and used in Lebanon. Since 2006, violence in Mexico has rapidly escalated and cartels have become more ruthless. In addition, Mexican cartels are serving as source of financing and easy entrance for the organization into the United States.

Nuclear terrorist attack causes escalation – risks extinction directly and via retaliation

Hellman 8 (Dr. Martin E., professor emeritus of electrical engineering at Stanford University, The Bent, Spring 2008, <http://www.nuclearrisk.org/paper.pdf>)

The threat of nuclear terrorism looms much larger in the public's mind than the threat of a full-scale nuclear war, yet this article focuses primarily on the latter. An explanation is therefore in order before proceeding. A terrorist attack involving a nuclear weapon would be a catastrophe of immense proportions: "A 10-kiloton bomb detonated at Grand Central Station on a typical work day would likely kill some half a million people, and inflict over a trillion dollars in direct economic damage. America and its way of life would be changed forever." [Bunn 2003, pages viii-ix]. The likelihood of such an attack is also significant. Former Secretary of Defense William Perry has estimated the chance of a nuclear terrorist incident within the next decade to be roughly 50 percent [Bunn 2007, page 15]. David Albright, a former weapons inspector in Iraq, estimates those odds at less than one percent, but notes, "We would never accept a situation where the chance of a major nuclear accident like Chernobyl would be anywhere near 1% A nuclear terrorism attack is a low-probability event, but we can't live in a world where it's anything but extremely low-probability." [Hegland 2005]. In a survey of 85 national security experts, Senator Richard Lugar found a median estimate of 20 percent for the "probability of an attack involving a nuclear explosion occurring somewhere in the world in the next 10 years," with 79 percent of the respondents believing "it more likely to be carried out by terrorists" than by a government [Lugar 2005, pp. 14-15]. I support increased efforts to reduce the threat of

nuclear terrorism, but that is not inconsistent with the approach of this article. Because terrorism is one of the potential trigger mechanisms for a full-scale nuclear war, the risk analyses proposed herein will include estimating the risk of nuclear terrorism as one component of the overall risk. If that risk, the overall risk, or both are found to be unacceptable, then the proposed remedies would be directed to reduce whichever risk(s) warrant attention. Similar remarks apply to a number of other threats (e.g., nuclear war between the U.S. and China over Taiwan). This article would be incomplete if it only dealt with the threat of nuclear terrorism and neglected the threat of full-scale nuclear war. If both risks are unacceptable, an effort to reduce only the terrorist component would leave humanity in great peril. In fact, society's almost total neglect of the threat of full-scale nuclear war makes studying that risk all the more important.

The Cost of World War III The danger associated with nuclear deterrence depends on both the cost of a failure and the failure rate.³ This section explores the cost of a failure of nuclear deterrence, and the next section is concerned with the failure rate. While other definitions are possible, this article defines a failure of deterrence to mean a full-scale exchange of all nuclear weapons available to the U.S. and Russia, an event that will be termed World War III. Approximately 20 million people died as a result of the first World War. World War II's fatalities were double or triple that number—chaos prevented a more precise determination. In both cases humanity recovered, and the world today bears few scars that attest to the horror of those two wars. Many people therefore implicitly believe that a third World War would be horrible but survivable, an extrapolation of the effects of the first two global wars. In that view, World War III, while horrible, is something that humanity may just have to face and from which it will then have to recover. In contrast, some of those most qualified to assess the situation hold a very different view. In a 1961 speech to a joint session of the Philippine Congress, General Douglas MacArthur, stated, "Global war has become a Frankenstein to destroy both sides. ... If you lose, you are annihilated. If you win, you stand only to lose. No longer does it possess even the chance of the winner of a duel. It contains now only the germs of double suicide." Former Secretary of Defense Robert McNamara expressed a similar view: "If deterrence fails and conflict develops, the present U.S. and NATO strategy carries with it a high risk that Western civilization will be destroyed" [McNamara 1986, page 6]. More recently, George Shultz, William Perry, Henry Kissinger, and Sam Nunn⁴ echoed those concerns when they quoted President Reagan's belief that nuclear weapons were "totally irrational, totally inhumane, good for nothing but killing, possibly destructive of life on earth and civilization." [Shultz 2007] Official studies, while couched in less emotional terms, still convey the horrendous toll that World War III would exact: "The resulting deaths would be far beyond any precedent. Executive branch calculations show a range of U.S. deaths from 35 to 77 percent (i.e., 79-160 million dead) ... a change in targeting could kill somewhere between 20 million and 30 million additional people on each side These calculations reflect only deaths during the first 30 days. Additional millions would be injured, and many would eventually die from lack of adequate medical care ... millions of people might starve or freeze during the following winter, but it is not possible to estimate how many. ... further millions ... might eventually die of latent radiation effects." [OTA 1979, page 8] This OTA report also noted the possibility of serious ecological damage [OTA 1979, page 9], a concern that assumed a new potentiality when the TTAPS report [TTAPS 1983] proposed that the ash and dust from so many nearly simultaneous nuclear explosions and their resultant fire storms could usher in a nuclear winter that might erase homo sapiens from the

face of the earth, much as many scientists now believe the K-T Extinction that wiped out the dinosaurs resulted from an impact winter caused by ash and dust from a large asteroid or comet striking Earth. The TTAPS report produced a heated debate, and there is still no scientific consensus on whether a nuclear winter would follow a full-scale nuclear war. Recent work [Robock 2007, Toon 2007] suggests that even a limited nuclear exchange or one between newer nuclear-weapon states, such as India and Pakistan, could have devastating long-lasting climatic consequences due to the large volumes of smoke that would be generated by fires in modern megacities. While it is uncertain how destructive World War III would be, prudence dictates that we apply the same engineering conservatism that saved the Golden Gate Bridge from collapsing on its 50th anniversary and assume that preventing World War III is a necessity—not an option.

*****UNIQUENESS**

Will Pass---2NC Wall

Will pass but uniqueness doesn't overwhelm the link – appropriations committee proves momentum, vote count, lack of political means to block, Republicans coming around

Hattem 7/7 {Julian, B.A. in Anthropology (The University of Chicago), national affairs correspondent for The Hill, "Senators Back off Plan to Block Cuban Embassy," 2015, <http://thehill.com/policy/national-security/247094-senate-bill-backs-off-plan-to-block-cuban-embassy#THUR>}

Senate Republicans appear unlikely to use the funding process to block President Obama's plan to open a U.S. Embassy in Cuba this month, despite initial vows to prevent the landmark policy change. A \$49 billion funding bill for the State Department and foreign operations that passed through a Senate Appropriations subcommittee was silent on the plan. Efforts to amend it to block the embassy appear politically impossible, subcommittee Chairman Lindsey Graham (R-S.C.) acknowledged, though he opposes the new embassy as much as ever. "On the Senate side, I'm not so sure we have all Republicans where I'm at in terms of not establishing an embassy," Graham, who is running for president, told reporters after the brief subcommittee markup. "I don't know if the votes are there on our side, quite frankly." Despite the heated opposition to Obama's plans from Graham and other prominent Republicans such as Sen. Marco Rubio (Fla.), another presidential hopeful, many conservatives have been more receptive of the change in posture. Sens. Jeff Flake (R-Ariz.), White House candidate Sen. Rand Paul (R-Ky.) and others have welcomed the thaw in U.S.-Cuban relations. The GOP opposition appeared to be in trouble last week when the White House announced it planned to open the embassy in Cuba. The Cuban government said a U.S. Embassy in Havana and Cuban Embassy in Washington would both open their doors on July 20. Still, Graham's crusade is not necessarily dead. He is going to seek to add an amendment when the bill reaches the full committee later this week, he told reporters, though it is unclear whether he has the support for it to stick. "The one thing I've anticipated all my career is make sure I've got the votes," he said. "So I'm going to offer it tomorrow and whether or not we vote on it will be dependent on how the vote count goes." Unlike the Senate, House legislation to fund the State Department would block the creation of the embassy, which could be a stumbling block for the administration. A new ambassador to Cuba would also need to be confirmed by the Senate, which could be another hurdle. "It's just a matter of where the votes are at, and the House has good language, which I support," Graham said. "So this thing is not over yet."

Will pass – assumes barriers like property rights

Tucker 7/14 {Will, researcher at The Center for Responsive Politics, "Property Claims Loom as Issue in U.S.-Cuba Normalization," 2015, <http://www.opensecrets.org/news/2015/07/property-claims-loom-as-issue-in-u-s-cuba-normalization/#THUR>}

Cuba will soon get an American ambassador and a full U.S. embassy in Havana for the first time in more than half a century. But on the path to normalized relations, there's a \$7 billion potential roadblock. And large U.S. corporations with big lobbying operations aren't taking the lead on this one — individual Americans are. A group of 10 American families has hired a law firm in Alexandria, Va., to take aim at the issue of property claims in Cuba, of which there are about 6,000 certified by the U.S. government with a total value of between \$7 and \$8 billion, including interest. When Cuban revolutionaries seized assets owned by foreigners after the country's 1959 revolution, the U.S. was the largest foreign investor on the island. Many Americans with Cuban assets made claims on their lost property, which then ballooned in value with interest and have been passed down through families. Before June 2015, the Alexandria firm Poblete & Tomargo had just two clients with property claims in Cuba. One is a former American ambassador to Denmark who's a frequent donor to political campaigns; the other is a family in Omaha, Neb. Then came the Obama administration's overtures to Cuba in December. The firm has added eight more clients this year, riding the surge of renewed popular interest. Each of Poblete & Tomargo's clients will pay the firm less than \$5,000, according to Jason Poblete, one of the firm's principals and a former aide to Rep. Bill Thomas (R-Calif.) and the House Oversight Committee. The goal for each: get a check from Cuba that sets right the expropriation from many years ago. Before the revolution, Poblete said, "There was a positive relationship between the Cuban and American people...[W]hen the break happened in 1959, it was kind of a shock to all these people. And eventually they had to pack up and leave." Assets owned by large U.S. corporations were seized, too. One of the companies that had to decamp from the country was Exxon, now Exxon Mobil. The company lost \$71 million as Cuba seized its Havana refinery. Office Depot owns a \$256 million claim through corporate mergers. But "the overwhelming majority of claims are not corporate or large claims," Poblete said. And in fact, the large companies don't seem to be pressing on the issue of property claims. When it comes to Cuba lobbying, most large U.S. corporations and trade associations have focused on easing the embargo. Exxon has never disclosed lobbying on the issue of Cuba at all. A lobbyist for Officemax, later acquired by Office Depot, did work on "foreign relations with Cuba as it relates to company interests involving electric utility" — referring to the company's property claim, which involved an electric company — but did so for just one year, 2003. Overall, interest in — and lobbying on — Cuba has soared since Obama's December announcement. In the first quarter of 2014, there were 15 companies or other clients lobbying on anything Cuba-related. A year later, that number had more than tripled to 51. Some of the entities that newly hired lobbyists on Cuba issues this year include the American Society of Travel Agents, the City of Key West, Corning Inc., the commissioner's office of Major League Baseball and Halliburton. But restitution for property taken "was an issue nobody was paying attention to," Poblete said. "The property issue should have been close to the front of the discussion, and it hasn't been." Thanks to the new agreement between the two countries to restore diplomatic relations, the Obama administration is ready to start a discussion about the claims, according to a State Department official. "We have proposed to the Cubans starting such discussions," the official said. But Poblete believes that Cuba will almost certainly try to get the U.S. to shrink the \$7-8 billion figure calculated by including interest owed on the claims. The impoverished island country will likely argue that it deserves a discount for the hardship it experienced at the hands of the U.S., due to the embargo. Ahead of that debate, Poblete wants to educate Congress and the State

Department. "Let me be frank with you, a lot of folks on the Hill had no idea this even existed," he said. "We're trying to change that." Two of Poblete's & Tamargo's clients spoke at a House Foreign Affairs Committee hearing on June 18. If getting Cuba to cut a check for their property was the witnesses' main goal, it didn't show. For the most part, their testimony veered into the emotional. "I would love to reclaim ownership of grandmother's house. It's truly a family legacy and has great sentimental value to us. I don't know how realistic that is," Amy Rosoff, one of Poblete's clients, said at the hearing. Her family lost a 17-room Spanish Colonial house in Havana to the Cuban takeover, according to the Associated Press. "My father and grandmother had their homes, businesses, property and investments stolen from them. There's no way to quantify it...their lives were redefined without their consent." Congress passed the Helms-Burton Act in 1996, in which it laid out its desire for the U.S. to make progress on resolving claims like Rosoff's before normalizing relations. The U.S. and Cuba haven't yet done so, but "the [State] Department is committed to pursuing a resolution," the State official said.

Will pass – insider perspective

Hoskinson 6/27 {Charles, politics columnist and former senior editor for Politico and Congressional Quarterly, M.A. in Mass Communications (University of South Florida), "Senators Hope Congress Will Support Cuba Opening," Washington Examiner, 2015, <http://www.washingtonexaminer.com/senators-hope-congress-will-support-cuba-opening/article/2567184#THUR>}

A delegation of U.S. senators visiting Cuba on Saturday said they hope Congress would support President Obama's opening toward the Communist-run island, Reuters reported. The two Democrats, Sens. Patrick Leahy of Vermont and Ben Cardin of Maryland, and one Republican, Dean Heller of Nevada, spoke at a news conference after meeting First Vice President Miguel Diaz-Canel and Foreign Minister Bruno Rodriguez. "We think that can be achieved this year and we can make additional progress next year," Cardin said. "We're optimistic this path that President Obama and President (Raul) Castro started will be continued."

Will Pass---A2: McConnell Statements

McConnell is wrong and just posturing – bipartisan support for reform

Dennis 7/13 {Steven, syndicated White House correspondent and politics columnist, B.S. in journalism (University of Maryland), “White House on Cuba: Ambassador? We Don’t Need No Stinkin’ Ambassador,” Roll Call – POTUS Operandi, 2015, <http://blogs.rollcall.com/white-house/cuba-policy-will-go-ahead-without-ambassador/?dcz=#THUR>}

Senate Majority Leader Mitch McConnell’s statement on Fox News Sunday that it’s unlikely the Senate will confirm any nominee as ambassador to Cuba doesn’t sit well at the White House. “I think that that’s the kind of reflexive opposition to you know, anything that the president proposes, that is a hallmark — has been a hallmark of at least this Republican Congress,” White House Press Secretary Josh Earnest said Monday about the Kentucky Republican’s remark. “The irony here is there actually is some bipartisan support for the Cuba policy that the president announced at the end of last year.” Earnest said the administration would press ahead anyway.

Will Pass---A2: Public Sentiment

Public opinion arguments go neg – New pro-normalization PAC proves

Schwartz 7/14 {Felicia, syndicated politics correspondent for The Wall Street Journal/CNN/NewsCred, B.A. in History and Geography (Dartmouth), "Pro-Normalization PAC Raising Funds to Back Obama's Cuba Initiative," Wall Street Journal – Washington Wire, 2015, <http://blogs.wsj.com/washwire/2015/07/14/pro-normalization-pac-raising-funds-to-back-obamas-cuba-initiative/#THUR>}

A political action committee launched in May to support normalizing U.S. relations with Cuba raised more than \$178,000 in the past two months, a sign of public support for closer ties between the two countries, the group's director said. The group, New Cuba PAC, views itself as a counterweight to the pro-embargo U.S.-Cuba Democracy PAC, which launched in 2004. The director of that group, Mauricio Claver-Carone, said Monday the group had raised more than \$200,000 this year. In 2014, it raised more than \$300,000 and since its founding has raised over \$4 million, according to the group's filings with the Federal Election Commission. The sums announced this week aren't that big in the world of political fundraising – the largest PACs raise tens of millions of dollars each year – but are an indication of the surge of interest in Cuba since President Barack Obama's announcement last December that he would move to normalize relations with the former Cold War foe. "This is something that's been missing for a long time," James Williams, director of the pro-normalization New Cuba PAC said. "When we approached it the hard liner, pro-embargo side was incredibly skeptical and with this filing it shows they were wrong. People who care about this issue put their money where their mouth is."

*****THUMPERS**

A2: Thumpers---Top Shelf

Issues don't trade off until it's at the finish line

Drum, 10 (Kevin, Political Blogger, Mother Jones, <http://motherjones.com/kevin-drum/2010/03/immigration-coming-back-burner>)

Not to pick on Ezra or anything, but this attitude betrays a surprisingly common misconception about political issues in general. The fact is that political dogs never bark until an issue becomes an active one. Opposition to Social Security privatization was pretty mild until 2005, when George Bush turned it into an active issue. Opposition to healthcare reform was mild until 2009, when Barack Obama turned it into an active issue. Etc. I only bring this up because we often take a look at polls and think they tell us what the public thinks about something. But for the most part, they don't.¹ That is, they don't until the issue in question is squarely on the table and both sides have spent a couple of months filling the airwaves with their best agitprop. Polling data about gays in the military, for example, hasn't changed a lot over the past year or two, but once Congress takes up the issue in earnest and the Focus on the Family newsletters go out, the push polling starts, Rush Limbaugh picks it up, and Fox News creates an incendiary graphic to go with its saturation coverage — well, that's when the polling will tell you something. And it will probably tell you something different from what it tells you now. Immigration was bubbling along as sort of a background issue during the Bush administration too until 2007, when he tried to move an actual bill. Then all hell broke loose. The same thing will happen this time, and without even a John McCain to act as a conservative point man for a moderate solution. The political environment is worse now than it was in 2007, and I'll be very surprised if it's possible to make any serious progress on immigration reform. "Love 'em or hate 'em," says Ezra, illegal immigrants "aren't at the forefront of people's minds." Maybe not. But they will be soon.

A2: Thumpers---Iran

Iran won't cost capital – GOP likely won't oppose it

Sargent 7/15 {Greg, syndicated politics correspondent, "Morning Plum: Do Republicans Really Want to Block the Iran Deal in Congress? The Washington Post, 2014, <http://www.washingtonpost.com/blogs/plum-line/wp/2015/07/15/morning-plum-do-republicans-really-want-to-block-the-iran-deal-in-congress/#THUR>}

But here's the question: Once all the procedural smoke clears, do Republicans really want an endgame in which they succeeded in blocking the deal? Do they actually want to scuttle it? Perhaps many of them genuinely do want that. But here's a prediction: as this battle develops, some Republicans may privately conclude that it would be better for them politically if they fail to stop it. The Iran debate may come to resemble the one over the anti-Obamacare lawsuit that also recently fell short. Congressional Republicans and GOP presidential candidates are predicting dire consequences if the Iran deal goes forward. But what's missing from the discussion is that if Congress does somehow block the deal, that could precipitate a whole different set of consequences. Former Obama administration official Dennis Ross spells out those consequences this way: Opponents need to explain what happens if the rest of the world accepts this deal, Iran says it is ready to implement it — and Congress blocks it. Will the European Union, which explicitly commits in the agreement to lift sanctions once Iran has fulfilled its main nuclear responsibilities, not do so because Congress says no? Can sanctions really be sustained in these circumstances, particularly if the Iranians don't increase their enrichment and say they will observe the deal? Could we be faced with a world in which the sanctions regime collapses, Iran gets its windfall and is only two months from breakout, and there is little on-ground visibility into its program? Some Congressional Republicans are also quietly mulling another possibility: What if our allies blame them for tanking the deal they support? The New York Times points out that GOP repudiation of the deal "was a blow not only to Mr. Obama but also to conservative leaders the party usually backs, Prime Minister David Cameron of Britain and Chancellor Angela Merkel of Germany." And note this telling moment from GOP Senator Bob Corker: "In the next couple of months, the international community is going to be focused on Congress. I got that," Mr. Corker said in an interview. "I understand the position we're in." To be clear, it would be folly to predict with certainty how the politics of this will play out. Many Democrats may well decide it's hard for them to back the deal. And Republicans may be able to use procedural votes to inflict some damage on them. But even so, Republicans could also conclude that their best outcome is to inflict that damage in the short term while also failing to block the deal in the end. Just as Republicans realized that "winning" the lawsuit against Obamacare could force them to own the consequences of their "victory," and increase pressure them to specify concrete alternative courses of action, they may conclude it's a good thing that the Congressional oversight mechanism negotiated by Senator Corker (which they supported, by the way) makes it so hard for them to "win" by scuttling the Iran deal.

Even if we're wrong – No thumper – Senate republicans are key to Cuba and Dems are key to Iran

Allen 7/14 {Jonathan, former Washington bureau chief for Bloomberg News, "Obama's Iran deal is Making Democrats in Congress Very Nervous," Vox, 2015, <http://www.vox.com/2015/7/14/8963101/obama-iran-deal-democrats#THUR>}

The Iran nuclear deal may be good policy — and a legacy builder for President Barack Obama — but it also creates a tougher political environment for Democrats running for president and Congress in 2016. "Overall, this is a deal that will probably come at a price on the campaign trail," said Princeton University political science professor Julian Zelizer, who has written about the short-term political pain of past treaties. "Republicans will play to the fears among voters, including Democrats, that this is too risky." The best proof of the thorny politics: Obama already has vowed to veto planned legislation blocking the deal. That means he will rely on just one-third of either the House or Senate voting with him to save it. He needs a majority of Democrats but only a minority of either chamber. That paradigm — Republicans uniformly opposed and Democrats divided — will make the agreement a tougher sell to the broader public than if it had bipartisan majority support or even full backing from Obama's Democrats. "The easier vote for most of us will be no," said one House Democrat who is inclined to back the president. Members don't tend to lose their seats for voting against the president when his position ends up winning, the lawmaker explained. On the other side, it's easy for Republican candidates to be against Obama and his foreign policy — it plays well with their base — and they were vocal in their criticism of the deal even before they'd had a chance to read all the details. Wisconsin Gov. Scott Walker flicked at how the GOP will go after Democrats on the deal. "President Obama has abandoned the bipartisan principles that have guided our nonproliferation policy and kept the world safe from nuclear danger for decades," Walker said in a statement. "Instead of making the world safer, this deal will likely lead to a nuclear arms race in the world's most dangerous region." The larger issue here is that in the waning light of his presidency, Obama is increasingly making policy in areas that divide Democrats — from trade to the Iran deal — and they are concerned that his political incentives no longer match theirs. They know that Obama, who refers to the last two years of his presidency as the "fourth quarter," is running a two-minute drill to secure as much of his legacy as possible before he leaves office. And those goals may not always serve their political futures. Why this is so difficult for Democrats From the White House's perspective — and that of many Democrats — the deal with Iran is far preferable to leaving in place a sanctions regime that doesn't actually stop Tehran from developing a nuclear weapon or going to war with Iran. Under the pact, Iran would give up its nuclear weapons program in exchange for the lifting of certain economic sanctions, which would make it less of a nuclear threat and more stable. The key is whether the inspections and enforcement provisions of the deal can be implemented effectively and whether Iran's loss of nuclear capability is verifiable. And therein lies the rub for Democrats on the ballot in 2016. The deal won't be consecrated for months. Republicans charge that it's not airtight — that Obama is putting his faith in the trustworthiness of the Iranian regime. The truth is that the next election is too soon to judge whether Iran is complying with its end of the bargain, which leaves Democrats open to Republican attacks that the deal is a disaster. It will be hard for Democratic candidates to prove

a negative. One House Democrat who is generally supportive of the president — and open to the deal — expressed hope Tuesday that the Senate would sustain an Obama veto of legislation blocking the deal so that House Democrats wouldn't have to vote on it at all. It's easier for Obama to round up 34 senators than 146 House Democrats, the lawmaker argued — even though conventional wisdom holds that the opposite is true. Obama's interests and those of fellow Democrats are diverging in the "fourth quarter" There was a time, earlier in his administration, when fellow Democrats would have walked the plank for Obama without letting their political concerns slow them down. Those days are over. "It is not unusual as a president comes to the last months of his administration, particularly if it's his second term, that members of his party become a little less willing to follow the president's lead," former Sen. Bob Graham, a Florida Democrat and onetime chairman of the Senate Intelligence Committee, said. Obama's incentives are necessarily different from those of his Democratic allies in Congress. While he's focused on policy and legacy, they are focused on policy and winning reelection. Increasingly, Obama has used tools that don't require full Democratic support to implement policy — such as executive actions and the Iran deal. Still, Democrats know they will be held accountable for his actions, particularly if they can't show that they opposed him on a specific issue. Jim Manley, a former aide to the late Sen. Ted Kennedy and Minority Leader Harry Reid, said the dynamics of a congressional disapproval vote — which would set up the veto and the one-third threshold necessary to sustain it — give the president an advantage. "I think in the end, the president will have enough Democrats with him to sustain a veto," Manley said. "For many Democrats, the politics of this are so tricky they will be forced to vote against their president."

No Obama push – Uncle Biden has this one

Walsh 7/15 {Deirdre, Senior Congressional producer, B.A. in Political Science/Communications (Boston College), winner of the Joan Barone Award for excellence in Washington-based Congressional or political reporting, "WH Dispatches Joe Biden to Lock down Iran Deal on Capitol Hill," CNN – Politics, 2015, <http://www.cnn.com/2015/07/15/politics/iran-deal-white-house-democrats-congress/#THUR>}

A day after the Iran deal was unveiled, the Obama administration's sales job began in earnest. Vice President Joe Biden traveled to Capitol Hill to convince House Democrats to support the deal, while a small group of senators were invited to the White House to get their questions answered directly from officials who sat across from the Iranians at the negotiating table. Lawmakers said Biden was candid about the strengths and weaknesses of the compromise deal. One described his behind closed doors pitch. "I'm going to put aside my notes and talk to you from my heart because I've been in this business for 45 years," Biden said in his opening comments, according to Rep. Bill Pascrell, D-New Jersey, who attended the session. "I'm not going to BS you. I'm going to tell you exactly what I think," the vice president reportedly said. Since Republicans in the House and Senate are firmly against the Iran nuclear deal -- announced by President Barack Obama on Tuesday -- the administration is cranking up its campaign to sway concerned Democrats to back the agreement. Under legislation that allows Congress to review the agreement, the White House needs to secure enough votes from members of his own party to sustain the President's promised veto on an resolution of disapproval -- 145 in the House and

34 in the Senate. After the session with Biden, several House Democrats stressed that while the process is just beginning, right now the administration likely has the votes to sustain the President's veto on a resolution to block the deal. "I'm confident they will like it when they understand it all," the vice president told reporters on his way into the session, beginning what will be a two month campaign culminating in a vote, expected in September. Democrats, both for and against the deal, praised Biden's presentation. "Joe Biden was as good as I've seen him," Rep. John Larson, D-Connecticut, told CNN. "I thought he did an excellent job." Texas Democratic Rep. Henry Cuellar said Biden is a "master of detail" and helped clarify some concerns he had about the verification provisions in the deal, but he still planned to carefully study it and said he was undecided. Pascrell also cited the verification issue as a potential sticking point but said he is leaning 'yes' on the agreement. "On our side of the aisle there is concern and skepticism shared by a number of members but an openness to be persuaded if the facts take them that way," Rep. Gerry Connolly of Virginia said. "I think (Biden) made some real progress on behalf of the administration today." But Democratic Rep. Steve Israel of New York, a former member of Democratic leadership, told reporters he wasn't sold yet. "For me, I still have some very significant questions with respect to lifting of the embargo on conventional arms. And missiles. The (International Atomic Energy Agency) verification process for me is not any time anywhere, I think there are some very significant delays built into that," Israel said. Larson noted that both Biden's presentation, along with Hillary Clinton's a day earlier, who he said spoke favorably about the deal, helped lay the groundwork for most Democrats to back the White House.

Link Turns Case---Economy

Partisan spats tank the economy – consumer and investor confidence

Harwood 11 {John, Chief Washington Correspondent for CNBC, featured in the New York Times, Wall Street Journal, and Washington Post, Nieman Fellow at Harvard University, “Partisan Fighting Carries Risks at Election Time,” The New York Times: The Caucus, 9/4, <http://thecaucus.blogs.nytimes.com/2011/09/04/hostility-among-voters-as-politics-hurt-economy/#THUR>}

That is because over the summer, the ideological battles and partisan maneuvers woven into the fabric of the capital began to exert their own damaging effect on the economy, analysts from Washington to Wall Street have concluded. Typically, economic conditions frame the political debate. But in the fight over raising the federal debt limit, the political debate also influenced economic conditions — and not for the better. Last week’s unemployment report showing no job growth in August provided new evidence that the simultaneous erosion of confidence in the economy and in the government has harmed prospects for American workers and businesses. Thus in the post-Labor Day chapter of divided government, both parties are playing with this politically combustible material: the hostility of voters who see them as not merely failing to solve economic problems but, in fact, actively compounding them. The immediate legislative question is whether rising anxiety can drive Republicans and Democrats toward consensus solutions. So far, there is scant evidence of that happening, as the squabble over scheduling the president’s address to Congress made clear. White House advisers say Mr. Obama, exasperated with Republicans’ refusal to cooperate, is preparing to use his speech on Thursday to fight for an ambitious job-creation proposal costing hundreds of billions of dollars. But Republicans, ridiculing the idea of another stimulus, show limited interest in bargaining — even on tax-cut ideas they previously backed. Both of those calculations now involve heightened risks as the 2012 elections approach. The president is in the most conspicuous jeopardy. But Congressional Republicans are heading into these new skirmishes with their careers on the line, too. Eroding Confidence What makes political attitudes so economically consequential now is the role that consumer and business confidence plays in determining whether the stalled recovery kicks into gear — or slips back into recession. Since the 2008 financial crisis, Americans shaken by job losses, stagnant wages and falling home values have been borrowing less and spending less. The Federal Reserve Bank of New York calculated this year that this “deleveraging” has siphoned \$480 billion annually from the cash flow of American consumers. No one expects that lost spending to return. But the more pessimistic consumers feel, the less likely it is that businesses will see profit in hiring new workers and investing in additional production with the cash now filling their coffers. Research by the Republican pollster Bill McInturff and his Democratic counterpart Peter Hart for the financial television network CNBC showed that confidence was weak even before the final negotiations over the debt ceiling last month. By June, just 29 percent of Americans expected their wages to rise in the next year; 50 percent called it a bad time to invest in the stock market; and 30 percent expected their home values to decrease soon, compared with just 15 percent who expected an increase. Since then, Mr. McInturff said, the infighting in Washington has eroded consumer confidence further than

economic conditions themselves might have warranted. Mr. Hart reached the same conclusion in separate research for Citibank that showed Americans with diminishing expectations for recovery even as their assessment of current conditions remained unchanged since January.

Link Turns Case---Heg

Heightened political polarization makes us look dysfunctional – crushes primacy and eviscerates allies' trust

Collinson 13 {Stephen, syndicated White House correspondent, "World Worries Despite Temporary Truce in Polarized US," AlterNet, 10/20, <http://www.alternet.org/progressive-wire/world-worries-despite-temporary-truce-polarized-us#THUR>}

The world got a close-up look at US democracy during Washington's debt default showdown, and was traumatized by what it saw. Foreign commentators branded America "befuddled," and mocked its "dysfunctional" political system while French newspaper Le Monde bemoaned a "piteous spectacle" over a just avoided US debt default. The bad news for America's worried friends is that new stalemates over budgets and borrowing are looming early next year. Foreign angst over the spectacle -- which saw the far right Republican Tea Party faction try to hold President Barack Obama to ransom -- is understandable. The globalized economy has world powers chained to America's fate: a US debt default could have caused mayhem across the planet. Obama warned the showdown diminished US standing and "encouraged our enemies, it's emboldened our competitors and depressed our friends." The two week impasse was sparked when House Republicans tried to make a hike in US borrowing authority conditional on Obama gutting his signature health care law. Foreigners struggled to understand how an insurgent minority was able to hold US democracy hostage. Outsiders have often grumbled that a political system of checks and balances designed 230 years ago is too lumbering for an age where billions of dollars can flee a nation in a second and nimble developing nations challenge US primacy.

Link Turns Case---Signal

Link alone turns the entire case's signal

Norris, 11 (John Norris is the Executive Director of the Sustainable Security and Peacebuilding Initiative. 3/18,

http://www.americanprogress.org/issues/2011/03/rising_to_the_occasion.html)

The question is: What do our leaders need to do—to the degree that we can influence events—to help guide the region down the path to democracy and stability instead of chaos? First and foremost, we need to channel the late Republican Sen. Arthur Vandenberg of Ohio, who argued that politics should stop at the water's edge. In other words, we need to dial down the partisan sniping here at home. The president and Congress need to work together. If we get it wrong in the Middle East, both parties and the American people will reap that ill reward for years to come. Accordingly, the administration should pull in members of Congress, former national security officials of both parties, and other foreign policy experts on a regular basis. These should not be briefings but discussions about how best to navigate the incredibly tricky path before us. The administration needs to be less insular in its decision making and members of Congress need to avoid the cheap thrill of feeding the 24-hour news machine pithy tweets and a steady diet of second guesses. Indeed, it is truly astounding that we may be lurching toward a government shutdown in the middle of the most important events on the international stage in decades. Members of both parties need to understand full well that the American public will view our politicians as spoiled 12-year-olds if they shutter the government at this moment. Is partisan gridlock really the message we want to broadcast to protesters across the Middle East as they risk their lives fighting for the same freedoms we already enjoy? Second, our strategy needs to be clearly communicated to the public. It is encouraging that President Barack Obama is taking to the airwaves tonight to explain our military involvement in Libya and our stakes across the region. The president needs to be communicator in chief during this period and he needs to speak honestly of the risks and rewards as we move forward. At all costs, the administration needs to avoid the trap of thinking that its strategy is too complex to be understood by the general public. If you can't explain your strategy, it probably isn't a good one. By the same token, pundits should stop the ridiculous clamoring for a clearly identified endgame for every move the president makes. We are seeing an entire region in upheaval. We have seen protests in 21 countries with a population of more than 425 million people stretching across 4,800 miles. Things will be messy and uncertain for some time. Finally, and perhaps most dauntingly, the United States needs to manage its relationships with several longstanding Middle East allies while not betraying democratic aspirations in these countries. Nations such as Yemen, Bahrain, and Saudi Arabia have long been key partners in the region but we cannot let that mute our criticisms of what are highly autocratic systems. The administration realized that reform had gained powerful momentum in both Tunisia and Egypt and that it would be counterproductive to be seen as defending antidemocratic regimes. The strategic stakes are even higher in a country like Saudi Arabia. But we need to keep the heat on some of our friends to rule far more democratically even when it produces discomfort for all involved. The Middle East has been hurtled through a period of incredible change during the last three months.

Millions of people have marched in the face of armed opposition to speak out and demand their rights. There can be no better time for the United States to demonstrate its own maturity as a democracy by speaking clearly, listening to a diversity of voices, cooling the partisan rhetoric, and understanding that such historic moments are few and far between.

Obama Pushing

Huge Obama push for normalization of relations

Crabtree 7/2 {Susan, syndicated politics correspondent for The Hill/Congressional Quarterly/Roll Call, B.S. in broadcast journalism (University of Southern California), "Obama ready to fight over U.S. ambassador to Cuba," The Washington Examiner, 2015, <http://www.washingtonexaminer.com/obama-ready-to-fight-over-u.s.-ambassador-to-cuba/article/2567500#THUR>}

President Obama appears ready and even eager for a fight over naming the first ambassador to Cuba in over 50 years, a move that would no doubt further poison his relations with Senate Republicans right after a thaw with the passage of two key trade bills. After announcing the opening of embassies in Havana and Washington, the White House signaled Wednesday that it intends to nominate an ambassador and wouldn't mind a very public — and undoubtedly intense — debate over the issue. White House spokesman Josh Earnest said the administration has yet to lay out a timeline for an announcement of an ambassadorial nomination but left the impression that Obama intended to move forward with one. "I'm confident that [the Senate] would be a venue for robust debate about how the policy changes that the president announced back in December aren't just clearly in the best interests of the American people, they're clearly in the best interests of the Cuban people as well," he told reporters Wednesday traveling with the president on a trip on Air Force One.

Massive Obama effort on Cuba

Beatty 7/1 {Andrew, politics correspondent for AFP/Reuters/Economist, B.A. in philosophy (Queen's University Belfast), "U.S., Cuba Agree to Restore Ties, Embassies to Reopen," Digital Journal, 2015, <http://www.digitaljournal.com/news/world/us-proposes-us-cuba-reopen-embassies-as-of-july-20-havana/article/437226#THUR>}

The United States and Cuba on Wednesday agreed a historic deal to re-establish full diplomatic relations, severed 54 years ago in the heat of the Cold War. Presidents Barack Obama and Raul Castro exchanged letters agreeing to unfreeze ties on July 20, when embassies in Washington and Havana can be reopened. Obama hailed the deal as a "historic step forward" that would end a failed and archaic US policy of isolating the still Communist-ruled island. Obama -- who was born the year the US embassy was closed in 1961 -- called on domestic critics to stop "clinging to a policy that was not working." He pressed the Republican-controlled Congress to end a throttling US trade embargo set up in 1962. "It's long past time for us to realize that this approach doesn't work," he said in a White House Rose Garden address. "It hasn't worked for 50 years. It shuts America out of Cuba's future and it only makes life worse for the Cuban people."

Yes push – actions towards Congress and six months of empirics prove

MercoPress 7/3 {MercoPress – South Atlantic News Agency, "Republicans Anticipate They Will Not Approve A Us Ambassador to Cuba," 2015,

<http://en.mercopress.com/2015/07/03/republicans-anticipate-they-will-not-approve-a-us-ambassador-to-cuba#THUR>

Though Obama has not nominated an ambassador for Cuba yet, the current top U.S. diplomat there, Jeffrey DeLaurentis, was expected to be considered for the post. Labeling the moment “a choice between the future and the past,” Obama on Wednesday revealed the latest steps in a half-year of rapid-fire improvements in relations between two nations that lie 90 miles apart but have spent nearly six decades separated by light years diplomatically and economically. Obama also asked Congress to lift the economic and travel embargoes that the U.S. has used for decades to try forcing Cuba's leaders toward democracy. Obama has partly eased those restrictions on his own, but even before McConnell's comments Thursday, longtime opposition from many Republicans and some Democrats had made it unlikely that lawmakers will fully revoke the bans quickly.

PC High

Obama is killing it – PC high given court rulings

Feffer 7/13 {John, co-director of Foreign Policy in Focus at the Institute for Policy Studies, fellow at the Open Society Foundations, former professor at Sungkonghoe University, “Obama's Recent Victories: How and Why?” Huffington Post – Politics, 2015, http://www.huffingtonpost.com/john-feffer/obamas-recent-victories-h_b_7786006.html#THUR}

It would have been difficult, after the 2014 elections, to imagine that President Barack Obama could achieve much of anything in his last two years in office. After all, the opposition Republican Party had taken control of both houses of Congress in the midterm elections in 2014. The Supreme Court, led by the right-leaning Chief Justice John Roberts, maintained a narrow conservative majority. And the president's approval rating had dropped below 50 percent -- in and of itself not so surprising for a president in his second term but a significant obstacle for a leader hoping to marshal public support for his agenda. And yet here we are, only a few months after the new Congress took up residence on Capitol Hill, with a suddenly resurgent president. Just in the last few weeks, President Obama has been scoring a surprising number of domestic and foreign policy victories. His critics are cowed. The president reached a 50 percent public approval rating for the first time since May 2013. In recent weeks, the Supreme Court gave the president a clear victory on the Affordable Care Act, a piece of legislation on which the Republican Party has loudly declared war. Whatever the flaws of "Obamacare," the extension of health care benefits to millions of the uninsured will go down as a signature legacy of the Obama administration. The administration was slow to get behind same-sex marriage (and it was Vice President Joe Biden who first endorsed the movement back in May 2012). But eventually, the president acknowledged that his position on the issue had "evolved," and threw his support behind this important expansion of human rights. "We have made our union a little more perfect," the president said after the Supreme Court extended the right to same-sex marriage to all 50 states.

PC high – Laundry list of non-legislative victories and approval rating spike proves

Cannon 7/5 {Carl M, Washington Bureau Chief of RealClearPolitics, past recipient of the Gerald R. Ford Journalism Prize for Distinguished Reporting and the Aldo Beckman Award, former fellow-in-residence at Harvard University's Institute of Politics, “How Obama Can Build on His Winning Streak,” 2015, http://www.realclearpolitics.com/articles/2015/07/05/how_obama_can_build_on_his_winning_streak_127225.html#THUR}

With apologies to Judith Viorst, the nearly two weeks leading up to the July 4 weekend might be called President Obama’s wonderful, remarkable, not at all bad, very good fortnight. It started in Congress on Wednesday, June 24, when enough Democrats joined Republican proponents to

give the president sweeping “fast-track” authority to negotiate pacts with America’s Pacific Basin trading partners. The next day, just across the street from the Capitol, the Supreme Court dispensed with the last serious constitutional challenge to Obamacare. The day after that, the court affirmed the administration’s legal position in a 5-4 decision establishing gay marriage as the law of the land. When the marriage decision was announced, the president was in Charleston, S.C., at Emanuel A.M.E. Church where he gave an impassioned eulogy for nine murdered African-American parishioners before leading the congregation in a rendition of “Amazing Grace,” which he began a cappella. It was an extraordinary scene, and reminded millions of Americans of the Barack Obama they voted for in 2008. Although one snarky former White House aide issued a snide tweet criticizing South Carolina Gov. Nikki Haley for previously supporting the Confederate flag, Obama himself sat beside Haley in church and praised her from the pulpit for her leadership on the issue. Obama returned home Friday night to see the White House bathed—per his orders—in the rainbow colors of the gay pride movement. Asked days later about his winning streak at an East Room press conference, Obama merely acknowledged his “gratifying” week, but mentioned other blessed weeks in his life, including the one in which he’d married Michelle—and the times when his daughters were born. Obama also playfully mentioned scoring 27 points in a high school basketball game, although he may have been poking fun at himself. Or not. But there was no denying his string of successes. The American people noticed. Obama’s job approval rating in CNN’s poll topped 50 percent for the first time in a while. So why didn’t he spike the ball and do an end-zone dance? Several reasons, it seems to me.

PC Key

Obama's push is working but needs to continue – isolates public support and curries favor

Feffer 7/13 {John, co-director of Foreign Policy in Focus at the Institute for Policy Studies, fellow at the Open Society Foundations, former professor at Sungkonghoe University, "Obama's Recent Victories: How and Why?" Huffington Post – Politics, 2015, http://www.huffingtonpost.com/john-feffer/obamas-recent-victories-h_b_7786006.html#THUR}

There's also the rapprochement with Cuba, which the Obama administration has accelerated over the last few months. The two countries have just announced the exchange of embassies -- the first time in more than 50 years. Ferries will soon be running between the two countries. U.S. tourists have already begun to pour into Cuba. Still, numerous obstacles remain, including the economic embargo that Republicans in Congress insist on keeping in place. These opponents are beginning to sound like they're stuck in the 20th century. Obama once spoke of "purple America." In his speech at the Democratic convention in 2004, he dismissed the notion that the United States could be neatly sliced and diced into "red states" (conservatives) and "blue states" (liberals). Coming into office in 2008, he imagined that he could revive bipartisanship and build an enduring consensus for his political, economic and foreign policies. That has been his signal failure as a politician. He was unable to enlist the support of his political opponents. Most of his domestic programs -- such as health care -- received almost no support from the Republican Party. And he has pursued his more diplomatic foreign policy despite the often overwhelmingly hostile opposition of the Republican Party (not to mention quite a few hawkish Democrats as well). In this way, the president has learned an important lesson. He can win on these key issues when U.S. public opinion goes his way. Polls have shown that the American public supports Obamacare, gay marriage and rapprochement with Iran and Cuba. The president has been able to score these late victories not by working with the opposition but by isolating it. Ordinarily, the discrepancy between public opinion and the platform of the majority party in Congress should force a shift in the political landscape. To win in the next presidential election in 2016, the Republican Party might be expected to move to the center to appeal to independents and more hawkish Democrats. But the Republican Party candidates for presidents are by and large more conservative than even the most recent choices (Mitt Romney in 2012, John McCain in 2008). President Obama is not a radical. He generally situates himself in the political center, espouses a rhetorically impressive but rather narrow pragmatism and has mostly avoided economic populism. He has curried favor with the Pentagon, with Wall Street, with pharmaceutical companies. It is a sign of how far to the right America drifted during the George W. Bush era (and, indeed, during the preceding Clinton years) that Obama's centrist agenda has elicited such a strong reaction from his opponents both inside and outside Congress. It is also a sign of Obama's centrism that most of the Democratic candidates for president are running to his left, particularly on economic issues. What begins as heresy often very quickly becomes conventional wisdom. Such is the path that gay marriage, national health care and rapprochement with Cuba have taken. But Obama has succeeded only because public opinion is behind him on these

issues. The candidates who hope to replace him should take note. The next American president could win on a number of issues that provoke the ire of conservatives, but have broad public appeal: seriously addressing climate change, reining in military spending, enacting immigration reform, stabilizing Social Security and securing a living wage for workers nationwide. But why wait until 2016? Obama might even get the ball rolling on these issues in the next two years. After all, he's on a roll himself.

Obama PC key – spurs discussions, allows debate against the opponents, rallies lawmakers, finds common ground between rivals, and manages fundamental issues – it's especially important for Corker, who is key

Carney 7/3 {Jordain, B.A. in Journalism, English and Political Science with a Minor in Legal Studies (University of Arkansas at Fayetteville), syndicated politics reporter, "Obama Heads for Showdown over Cuba Embassy," The Hill, 2015, <http://thehill.com/blogs/floor-action/senate/246817-obama-heads-for-showdown-over-cuba-embassy#THUR>}

President Obama is heading for a showdown with Congress after announcing plans to reopen the U.S. embassy in Cuba. The administration's move is part of a months-long discussion between the two countries to normalize relations that could hand Obama a needed foreign policy win, but only if he can get lawmakers on board. But that could be an impossible task. While the administration can reopen the embassy without Congress signing off, they'll need lawmakers to help approve an ambassador, fund the embassy, and lift a decades-old embargo. Congressional Republicans, and some Democrats, are already plotting to block the administration's efforts, suggesting that Obama is going easy on a dictatorial regime. Sen. Tom Cotton (R-Ark.) called the decision to reopen the embassy the latest example of Obama's "appeasement of dictators." The Arkansas Republican is planning to work with his Senate colleagues to block funding for an embassy and vote against a potential ambassador "until there is real, fundamental change that gives hope to the oppressed people of Cuba." He could find an ally across the aisle in Sen. Robert Menendez (D-N.J.), who has been a vocal critic of Obama's policy. The Cuban-American senator said Obama's decision "is not in our national interest." "An already one-sided deal that benefits the Cuban regime is becoming all the more lopsided," he added. "The message is democracy and human rights take a back seat to a legacy initiative." Across the Capitol, Republican leadership also opposes Obama's Cuba moves, with House Speaker John Boehner (R-Ohio) saying that "relations with the Castro regime should not be revisited, let alone normalized, until Cubans enjoy freedom – and not one second sooner." The congressional opposition is hardly new. House lawmakers agreed in a 247-176 vote last month to keep the current restrictions on Americans wanting to travel to Cuba in place, effectively blocking rules issued earlier this year to make traveling easier." The House is also using its spending bills to try to torpedo Obama's efforts. A bill to fund the State Department would prohibit funds from being used to build a new embassy. The administration has requested approximately \$6 million to improve its current building there and convert it to a working embassy. Despite the congressional backlash, administration officials are adamant that it would be a mistake for lawmakers to block Obama's efforts, and suggest they could find common ground. A senior State Department official said that a decision by lawmakers to fight the

president's policy would be counterproductive. "It would be a shame if Congress impeded implementation of some of the very things that we think they – we all agree we want to do, such as better outreach to the Cuban people all over the island or additional," the official said. "These are the kinds of things that we can do as we move forward in this relationship with a more robust embassy. And I would assume that most on the Hill agree those are a good thing to do." White House press secretary Josh Earnest told reporters that while he hasn't "done any whip counts, but I do think that there is, at minimum, strong support in the United States Congress... for lifting the embargo on Cuba." And the administration isn't without allies across the aisle as it prepares to sell lawmakers. Sen. Jeff Flake (R-Ariz.) has said "it's long past time" to change the country's policy on Cuba. Meanwhile, Sen. Dean Heller (R-Nev.) called Obama's announcement "a step in the right direction," but added that "fundamental issues must be addressed by its government before our two nations can establish the bilateral relationship they are capable of achieving." Sen. Bob Corker (R-Tenn.), the chairman of the Foreign Relations Committee, offered a more measured response, saying that he will "continue to carefully evaluate the most appropriate way forward for the U.S.-Cuba relationship." The Tennessee Republican suggested late last year that the Cuban embargo hasn't been effective, but said in a statement provided to The Hill that "we still have yet to see any significant actions by the Castro regime that will benefit the United States or enhance freedoms and circumstances for the Cuban people." As Foreign Relations Chairman, Corker has wide sway over whether or not a nominee to be the U.S. ambassador to Cuba gets a confirmation hearing or a vote. The administration could also have an unlikely ally in Sen. Rand Paul (R-Ky.) who has been silent on Cuba since Obama's announcement. The 2016 presidential candidate got in a Twitter skirmish late last year with Sen. Marco Rubio, who is also running for president, over the Florida Republican's support for the embargo. At one point, Paul tweeted, "The United States trades and engages with other communist nations, such as China and Vietnam. So @marcorubio why not Cuba?"

*****IMPACTS**

Top Level---A2: Status Quo Solves

Status quo lacks normalized relations – Congressional action key

Goodman citing Lee 7/9 {Amy, award-winning syndicated politics columnist, B.S. in anthropology (Radcliffe College), Barbara Lee is a U.S. Representative (California), “Next Steps on Cuba: Rep. Lee Pushes for End to Embargo and US Travel Restrictions” Truth Out, 2015, <http://www.truth-out.org/news/item/31798-next-steps-on-cuba-rep-lee-pushes-for-end-to-embargo-and-us-travel-restrictions#THUR>}

Secondly, just in terms of normal trade relations, to be able to do business. Currently, under the recent executive orders and prior executive orders, there are some industries that can do business in Cuba. For instance, we can sell medicine and agricultural products to Cuba. But normal trade relations just don't exist. There's an embargo. And so, we have to pass legislation that would lift the sanctions and lift the embargo against Cuba, so that we can engage in normal financial and trade transactions. And let me just say, Amy, once that is done, there have been enough businesses, the Chamber of Commerces, all—many economic organizations have shown that we would create economic growth in this country, as well as create jobs in America, if in fact we had normal trade relations with Cuba. And so, there are two bills—there's a bill that would actually do just that, that Congressman Charlie Rangel is leading on, and I'm a co-sponsor of that. And so, I hope the people listening to this interview would call their members of Congress and tell them to—tell their members to sign on as co-sponsors, and let's get these bills passed so that we can have just normal trade and diplomatic relations between the United States and Cuba. It's to the benefit of the Cuban people and the American people.

Terror---A2: No IL---Cartels Key

Cartels key – safe haven and force-multiplier

Bartell 12 (et al; Dawn L. Bartell, Norwich University, Masters of Diplomacy, School of Graduate Studies – “Hezbollah and Al Shabaab in Mexico and the Terrorist Threat to the United States” – Global Security Studies, Fall 2012, Volume 3, Issue 4 – <http://globalsecuritystudies.com/Bartell%20Hezbollah%20and%20Al%20Shabaab%20in%20Mexico.pdf>)

Hezbollah and Al Shabaab have been discovered to have a footprint in Mexico, are receiving Mexican language and cultural assimilation training, have been discovered to have a relationship of convenience with the Mexican drug cartels, and have been smuggling their operatives into the United States to raise money and to recruit members to their cause. With raising tensions between the U.S. and Iran, Iran has stated that it currently has the ability to reach out and target the U.S. on U.S. soil. Since it is unlikely Iran will send military troops to the U.S. and lacks the capacity to strike the U.S. with an intercontinental ballistic missile, with Hezbollah residing in Mexico Iran could use Hezbollah as a proxy to strike targets within the United States. With Al Shabaab aligning itself with al Qaeda, residing in Mexico, and successfully smuggling operatives into the U.S. This provides a force multiplier and an established strategic cell structure for al Qaeda to reside near and within the U.S. and target the U.S. on U.S. soil. Therefore, Hezbollah and Al Shabaab residing in Mexico pose a direct terrorist threat to the United States. There is a growing terrorist security threat to the United States because Hezbollah and Al Shabaab have established a footprint in Mexico and have been successful in using Mexico as a safe haven and as a transit area to smuggle weapons and terrorist operatives into the United States. There are several reasons why Hezbollah staging itself in Mexico presents a direct threat to the United States. First, Iran is Hezbollah’s number one sponsor state, which presents a threat to the United States because Iran has been known to use Hezbollah as a proxy entity to strike targets of interest for Iran. Second, Hezbollah’s anti-Israeli goals make the United States and its interests a legitimate target in Hezbollah’s opinion since the United States is a supporter of the state of Israel. Third, Hezbollah’s relationship with Mexico’s drug cartels presents a threat to the United States because the drug cartels are a force multiplier for Hezbollah. The Mexican drug cartels have facilitated the acquisition of weapons and weapon components and the smuggling of weapons, weapon components, and Hezbollah operatives into the United States. These smuggling operations place Hezbollah terrorists and the resources they need to carry out terrorist operations within the borders of the United States. And fourth, the potential of Hezbollah establishing itself in Mexico gives Hezbollah safe haven within close proximity to the United States. This makes it easier for Hezbollah to plan and stage terrorist operations against the United States.

Cartels crucial to Hezbollah strikes on US.

Bartell 12 (et al; Dawn L. Bartell, Norwich University, Masters of Diplomacy, School of Graduate Studies – “Hezbollah and Al Shabaab in Mexico and the Terrorist Threat to the United States” – Global Security Studies, Fall 2012, Volume 3, Issue 4 –

<http://globalsecuritystudies.com/Bartell%20Hezbollah%20and%20Al%20Shabaab%20in%20Mexico.pdf>)

Furthering Hezbollah's success as an international terrorist group in North America is Hezbollah's efforts to establish a relationship with Mexico's drug cartels. "Michael Braun, a former chief of operations at the Drug Enforcement Agency, said Hezbollah had developed relationships with the powerful Mexican drug cartels to move their agenda forward" (New Mexico Department of Homeland Security and Emergency Management, 2012). Hezbollah, in establishing this relationship with Mexican drug cartels, has set itself up to take advantage of the well-established criminal transportation and smuggling routes between Mexico and the United States. Sheriff Sigifredo Gonzalez summed it up this way: "I dare to say that at any given time, daytime or nighttime, one can get on a boat and traverse back and forth between Texas and Mexico and not get caught. If smugglers can bring in tons of marijuana and cocaine at one time and can smuggle 20 to 30 persons at one time, one can just imagine how easy it would be to bring in 2 to 3 terrorists or their weapons of mass destruction across the river and not be detected. Chances of apprehension are very slim." (McCaul, 2006) The danger in this is it increases the ability of Hezbollah to plan, set up, and conduct terrorist operations from Mexico against targets in the United States.

Hezbollah-Cartel ties vital to strikes against the US

Pounds 14 Keith Pounds is president and CEO of Countercon – a Counterterrorism consulting company that provides consultations, inspections and training to companies and private groups. He previously served as a medic with the U.S. Navy and with the Marines. He holds an MBA with a concentration in organizational psychology. "Our Greatest Terrorism Threat is not The Middle East" – Prepper Journal – June 3rd – <http://www.theprepperjournal.com/2014/06/03/greatest-terrorism-threat-middle-east/>

As source put it, "terrorist attacks are much greater threats to hemispheric security than are conflicts between (nations)... terrorism is alive and well in the Americas and operating in different guises. Ungoverned spaces, porous borders, weak institutions, uncooperative regimes, and widespread corruption compound the problem." MEXICO By the 2000s, drug violence in Mexico included the assassinations of several police officials and even the head of Mexico City's police department. It is no secret that both drugs and violence originating in Mexico have already spilled into the U.S. Growing evidence shows that Hezbollah has a very close relationship with Mexican drug cartels, including benefitting from their smuggling routes into the U.S. On October 10, 2001, a group of ten terrorists belonging to a Lebanese Hezbollah cell were intercepted in Mexico City on their way to carry out a dual-pronged attack to assassinate (then) Mexican President Vicente Fox and attack the Mexican Senate. Reports are that they made their way to Mexico by way of the TBA. In 2007, Mohsen Rabbani – who masterminded Hezbollah's attacks in Argentina in the 1990s – assisted in the failed plot to bomb New York's JFK airport. In April 2009, Jamal Yousef – a former member of the Syrian military and senior agent of Hezbollah – was arrested in New York accused of acquiring U.S. arms stolen from U.S.

forces in Iraq. The charges were that he was engaged in dealings with FARC to exchange the arms for drugs which would be carried into the U.S. by Mexican drug smugglers. It was later discovered that Yousef had a cache of some 100 M-16 rifles, 100 AR-15 rifles, 2,500 grenades, C4 explosives, rocket-propelled grenades, and anti-tank weaponry, stored in Mexico. It was also discovered that Hezbollah in Mexico had been conducting explosives training for members of Mexican drug cartels. In July 2010, Moussa Ali Hamden – a naturalized American citizen and known Hezbollah operative – was arrested in Mexico and indicted for passport fraud, counterfeiting, and financing weapons smuggling between the U.S. and Syria, including plans to smuggle 1,200 America-manufactured Colt M4 rifles to the Middle East. A report in 2010 noted that, Al “Jamal” Basie – a Mexican national of Lebanese descent – was arrested in Tijuana. Interestingly, the source was a Kuwaiti news report, but both Mexican and U.S. officials would not confirm the report. In 2011, Iran attempted to hire what it thought was a Mexican drug trafficker to assassinate the Saudi Arabian ambassador in Washington, D.C. The would-be assassin turned out to be a U.S. undercover agent. In September 2012, Raffic Labboun – a Lebanese naturalized U.S. citizen who attended the University of California, received a degree in Mathematics and was considered to be the San Francisco Bay Area Hezbollah leader – was arrested in Mexico for committing some \$102,000 in bank fraud. Multiple open source accounts show the growing use of Improvised Explosives Devices (IEDs) among Mexican drug cartels, which they had not previously used to any significant degree. This new IED tactic among Mexican cartels is directly credited to the interaction between Hezbollah and Mexican drug cartels as Hezbollah is well known for its perfection in the use of IEDs. Hezbollah members have actively recruited Mexican nationals to set up Latin American networks to attack Israeli and American interests and Hezbollah operatives have already been placed in the drug smuggling corridors on the U.S./Mexican border. INTO THE UNITED STATES Cigarettes “are the most profitable of the smuggled goods in the TBA” and “account for 20% of the world’s cigarette market.” Smuggling routes from Ciudad del Este reach “north to the U.S.’s East Coast and Indian reservations in the American southwest” and across the Atlantic to Europe. South America’s drug networks – very substantially involving Hezbollah – have expanded into Venezuela, Colombia, Guatemala, Panama, Costa Rica and Mexico, and Hezbollah’s wing of drug smuggling has partnered with Mexican drug cartels using Mexican smuggling routes into the U.S. While perhaps not inherently Hezbollah-related, in 2006 two Trinidad and Tobago citizens were jailed in Canada for being involved in acts of terrorism. Both subjects were believed to belong to the Pakistani-based terrorist group Jamaat ul-Fuqra – the parent organization of Muslims of America (which has a compound in York, S.C. and some 22 other sites across the U.S.). In one investigation in the Carolinas that began in 2009, Nasser Alquza – from the Central Mosque in Charleston, linked to the Muslim Brotherhood – was found to have links to cigarette smuggling, buying cigarettes below market price then selling them in other states to avoid paying taxes. Along with ten others – including members from Charlotte, N.C. – he paid \$7.5 million to an undercover government agent for almost 7,000 boxes of cigarettes, which would have sold for over \$15 million. The group used legitimate businesses to hide the money. In 2011, Mohammed Yousef Hammoud – dispatched by Hezbollah to Charlotte when he was 21 years old, and lived in the U.S. by way of three sham marriages – was sentenced to 30 years for providing material support to Hezbollah, as well as conspiracy, cigarette smuggling, money laundering and immigration fraud. Lastly, law enforcement officials are reporting an increase in Hezbollah-

sympathetic tattoos among prison inmates in the southwestern U.S. CONCLUSIONS The prominence of drug activity and violence in Mexico and the TBA has occurred simultaneously with the increased infiltration of Hezbollah in Latin America. Hezbollah, FARC and Mexican drug cartels have formed tripartite partnerships to send drugs north into the U.S. in exchange for weapons – some of which are sent to the Middle East. As a result, Hezbollah has access to Mexican drug smuggling routes into the U.S. and both Mexican and South American drug cartels have acquired expertise in Hezbollah bomb making applications and deployment. The ramification, of course, is that Hezbollah – and its parent Iran – is poised to insert Mexican drug runners and its own operatives into the U.S. with car bomb and IED expertise. This occurs as Inspire magazine – Al Qaeda in the Arabian Peninsula’s English-language magazine targeted specifically at U.S. audiences – has very recently called on “Lone Wolf” attackers and small groups in the U.S. to independently construct their own bombs and attack targets in the U.S. Equally important is that the Muslim extremist/Latin American drug cartel relationships allow Iran a direct avenue of approach to U.S. targets, should it feel the need to use them.

Terror---A2: No IL---Cuba C/N Fails

Cuba-U.S. cooperation solves massive terror threats

Lee 9 {Rens, Ph.D. (Stanford), president of Global Advisory Services, "Cuba, Drugs, and U.S.-Cuban Relations," April, Foreign Policy Research Institute, <http://www.fpri.org/articles/2009/04/cuba-drugs-and-us-cuban-relations#THUR>}

Now on the foreign policy front: looking back in time, narcotics-trafficking was a focal point of conflict in U.S.-Cuban relations for most of the pre-1990 years, except for a brief period during the Carter administration. The focus gradually shifted to cooperation in the 1990s, as the Cuban leadership ostensibly severed connections to the international drug trade. Cooperation and information-sharing between the two countries have netted a few high profile seizures, arrests, and extraditions, but all of this has occurred rather episodically, without an umbrella agreement on counter-narcotics cooperation, (although Cuba has concluded such agreements with many other countries inside and outside the hemisphere). Such an agreed framework could set the stage for a more substantive level of engagement on drugs. For example, we could train and equip Cuban Border Guards and Interior Ministry operatives, we could conduct joint naval patrols with Cuba in the western Caribbean, we could coordinate investigation of regional trafficking networks and suspicious financial transactions through Cuban banks and commercial entities, and we could station DEA and FBI contingents in the U.S. Interests Section in Havana. We could also negotiate a ship-rider agreement with the Cuban authorities, and possibly even the right to pursue drug-laden vessels and aircraft seeking safe haven in Cuban territory. How far Havana and Washington would be willing to proceed in these directions is unclear, since the political barriers on both sides are formidable. Yet the prospects for more productive collaboration against the hemispheric drug threat seem a lot more promising today than in the past. In any event, failure to exploit Cuba's law enforcement and intelligence assets to good advantage leaves a major gap in U.S. defenses against drug trafficking through the Caribbean. Interdiction successes in Mexico seem likely to augment this flow down the road, a further reason to closely monitor trafficking trends in a Caribbean country only 90 miles from U.S. shores. The drug threat from Cuba seems destined to increase as the Castro regime's revolutionary order loses its hold and appeal, as the island's economic ties with the outside world continue to expand, and as criminally-inclined Cuban nationals seek alliances with South American and Mexican drug kingpins. Such an outcome is hardly in the best interests of the United States and other countries in the hemisphere.

Terror---A2: No IL---No Cuba/US Cooperation

Cuba says yes – allows crucial cooperation

Lee 9 {Rens, Ph.D. (Stanford), president of Global Advisory Services, “Cuba, Drugs, and U.S.-Cuban Relations,” April, Foreign Policy Research Institute, <http://www.fpri.org/articles/2009/04/cuba-drugs-and-us-cuban-relations#THUR>}

The United States and Cuba have a strong mutual interest in closing off trafficking routes in the western Caribbean and in preventing attempts by Mexican and South American cocaine mafias to set up shop in Cuba proper. Yet they have not entered into a formal agreement to fight drugs – even though Havana maintains such agreements with at least 32 other countries – and what cooperation exists occurs episodically, on a case-by-case basis. Washington and Havana need to engage more fully on the issue, deploying intelligence and interdiction assets to disrupt smuggling networks through and around Cuba. Washington hitherto has shied away from a deeper relationship, fearing that it would lead to a political opening and confer a measure of legitimacy on the Castro regime. Yet current strategic realities in the region and Havana's own willingness to engage in such a relationship, as well as impending leadership changes in Cuba, argue for rethinking these concerns, even in the absence of formal diplomatic ties.

Terror---A2: No Attacks---General

Unchecked cartels cause nuclear terror against the US – means AND motives

AI 11 [Analysis Intelligence, “Iron Triangle of Terror: Iran, Hezbollah and Los Zetas,” 12/19, <http://analysisintelligence.com/intelligence-analysis/iron-triangle-of-terror-iran-hezbollah-and-los-zetas/>]

Some sources have said that the strengthening relationship between Iran and Venezuela has increased Hezbollah’s influence in the region. Both leaders are staunchly anti-American, and it is reasonable to think that they would pursue activities that would undermine US interests. Roger Noreiga, the same official that warned of an attack by Hezbollah, indicates that Venezuela, “has allowed Iran to mine uranium” and that Venezuela’s Margarita Island has eclipsed the infamous TBA as the principal safe haven and center of Hezbollah operations in the Americas”. This is particularly disturbing as Iran is suspected of pursuing a nuclear weapon while simultaneously funding Hezbollah close to the US border. Therefore, there major concerns that if Iran obtains a nuclear weapon it might share the weapon with Hezbollah. There are two major Hezbollah networks operating in the Americas under the direction of the Iranian Quds Force. The first is the Nassereddine network, operated by a former Lebanese citizen that became a Venezuelan and is now the second-ranking diplomatic official to Syria. He currently resides on Margarita Island and runs money laundering operations for the group. The other network is purportedly run by Hojjat al-Eslam Mohsen Rabbani, a cultural attaché from Iran who is involved in various recruitment activities and frequently travels under false papers in Latin America. The two networks together make up the majority of Hezbollah’s activity in the Americas. Now back to the cartels. Why is the link between Hezbollah and Los Zetas so important? The main concern is that if Hezbollah and Los Zetas are cooperating on drugs (which they are to the tune of hundreds of millions), then why would they not cooperate on weapons? Hezbollah and other extremists may be willing to export their knowledge of IEDs to the cartels. The relationship between Hezbollah and Los Zetas appears to have already expanded beyond drugs. In October 2011, the US authorities revealed that there was an attempt made by Iran to assassinate the Saudi ambassador on US soil.

Yes nuclear terror – means and motives

Neeley 13 (Meggaen, research intern for the Project on Nuclear Issues at Heritage, “Doubting Deterrence of Nuclear Terrorism,” March 21, <http://csis.org/blog/doubting-deterrence-nuclear-terrorism>)

The risk that terrorists will set off a nuclear weapon on U.S. soil is disconcertingly high. While a terrorist organization may experience difficulty constructing nuclear weapons facilities, there is significant concern that terrorists can obtain a nuclear weapon or nuclear materials. The fear that an actor could steal a nuclear weapon or fissile material and transport it to the United States has long-existed. It takes a great amount of time and resources (including territory) to construct centrifuges and reactors to build a nuclear weapon from scratch. Relatively easily-transportable nuclear weapons, however, present one opportunity to terrorists. For example,

exercises similar to the recent Russian movement of nuclear weapons from munitions depots to storage sites may prove attractive targets. Loose nuclear materials pose a second opportunity. Terrorists could use them to create a crude nuclear weapon similar to the gun-type design of Little Boy. Its simplicity – two subcritical masses of highly-enriched uranium – may make it attractive to terrorists. While such a weapon might not produce the immediate destruction seen at Hiroshima, the radioactive fall-out and psychological effects would still be damaging. These two opportunities for terrorists differ from concerns about a “dirty bomb,” which mixes radioactive material with conventional explosives. According to Gary Ackerman of the National Consortium for the Study of Terrorism and Responses to Terrorism, the number of terrorist organizations that would detonate a nuclear weapon is probably small. Few terrorist organizations have the ideology that would motivate nuclear weapons acquisition. Before we breathe a sigh of relief, we should recognize that this only increases the “signal-to-noise ratio”: many terrorists might claim to want to detonate a nuclear weapon, but the United States must find and prevent the small number of groups that actually would. Transportable nuclear weapons and loose fissile materials grant opportunities to terrorists with nuclear pursuits. How should the United States seek to undercut the efforts of the select few with a nuclear intent?

Terror---A2: No Attacks---Yes Material

Nuclear fuel is vulnerable to theft – even if high grade is hard to steal low grade material can easily be manipulated

Bunn 6(Matthew, Senior research associate at the Project on Managing the Atom in the Belfer Center for Science and International Affairs at Harvard University's John F Kennedy School of Government, "Terrorist Nuclear Weapon Construction: How Difficult?" September, <http://www.jstor.org.proxy1.cl.msu.edu/stable/pdfplus/25097844.pdf?acceptTC=true>)

Stockpiles adequately from theft (Bunn 2006 [this volume]). Terrorists might attempt to steal such items themselves or to purchase them from others who have done so. Unfortunately, world stockpiles of separated plutonium and HEU now amount to more than twenty-three hundred tons (Albright and Kramer 2005) enough for more than two hundred thousand nuclear bombs and these materials exist in hundreds of buildings in more than forty countries, under security arrangements ranging from excellent to appalling (Bunn 2002). The International Atomic Energy Agency (IAEA; 2005) has documented eighteen cases of seizure of stolen plutonium or HEU that have been confirmed by the states concerned; the obvious question is how many more thefts have not been detected. The form of material most useful for constructing a nuclear bomb is pure HEU or plutonium metal. A terrorist group relying on stolen nuclear material, however, might well find that what it acquires is in a different form. Nuclear material in oxide form (as is commonly used in the nuclear industry) can be used directly in nuclear explosives without conversion to metal, but much larger quantities are required. Alternatively, chemical processes for converting either plutonium oxide or uranium oxide to metal have been widely published and are not unduly complex. Nevertheless, such conversion would be an additional hurdle for terrorists to clear. Another quite plausible form in which terrorists might acquire nuclear material is in the form of research reactor fuel containing HEU. The U.S. Department of Energy has compiled data indicating that 128 research reactors or associated facilities worldwide hold twenty kilograms or more of HEU (U.S. Congress 2004, 28). Unlike the massive fuel assemblies used in most power reactors (which usually contain only LEU), research reactor fuels are typically found in fuel elements that are small and easy to handle often less than a meter long, several centimeters across, and weighing a few kilograms. While many types of research reactor fuel exist (including, in some cases, weapon-grade HEU metal), a common fuel is a mixture of uranium and aluminum, with aluminum cladding. To separate the uranium from the aluminum, such fuel could be cut into pieces, dissolved in acid, and the uranium separated from the resulting solution by well-known processes. Converting the chemical forms of uranium that would be recovered by these means to metal would also involve straightforward processes, all of which are published in the open literature and require only modest commercially available equipment. Hence, while the need for such processing would require an additional set of expertise and equipment, it would probably not pose an insurmountable challenge to terrorist groups. It is worth noting that the chemistry involved in converting opium poppies to heroin an industry with which al Qaeda reportedly has substantial connections is probably roughly as complex as the chemistry required to separate uranium from research reactor fuel, and because of the toxicity of airborne heroin, primitive glove boxes of the

kind that might be used to handle nuclear material are sometimes used in the illegal narcotics industry as well. Even "spent" research reactor fuel poses a serious proliferation threat; irradiated research reactor fuels usually remain very highly enriched, and most are not radioactive enough to prevent them from being stolen and processed for bomb material (Bunn and Wier 2004, 37). This stands in stark contrast to spent fuel from nuclear power reactors; while such fuel contains some plutonium, the massive, intensely radioactive fuel assemblies would be extremely difficult to steal and process to recover plutonium. Spent power reactor fuel poses more of a sabotage than theft threat.

Materials are easy – theft or purchase

Montgomery 9 (Brad, research fellow at the Center for Strategic and Budgetary Assessments, "Nuclear Terrorism Assessing the Threat, Developing a Response")

Finally, there is the possibility that a group could purchase fissile material on the black market or steal it from a military or civilian facility and then use that material to construct an improvised nuclear device. In recent years, analysts have increasingly come to view this scenario as the most plausible route for terrorists seeking nuclear weapons, for two main reasons. First, large stockpiles of fissile material can be found throughout the world in military as well as civilian facilities, some of which are inadequately monitored and protected. Second, building a crude nuclear device once a sufficient amount of this material has been obtained, although not an easy task, is certainly within the realm of possibility. Here, the principal challenge for terrorists would involve the tradeoff between the quantity of fissile material required for a weapon and the type of weapon that could be built. That is to say, while a gun-type nuclear weapon would be relatively easy to build, it requires a significant amount of highly enriched uranium; conversely, far less uranium or a very small amount of plutonium would be needed to fuel an implosion weapon, but building this device would prove extremely difficult. Nevertheless, this threat remains particularly salient.

Terror---A2: No Attacks---Yes Means

Threat is high. Nuclear terrorists have multiple means and will detonate in the U.S.

Wilson 10 (Valeria Plame, Fellow – Santa Fe Institute and Former Covert CIA Operative Specializing in Nuclear Terrorism, “Nuclear Terrorism Is Most Urgent Threat”, CNN, 4-8, <http://www.cnn.com/2010/OPINION/04/08/plame.wilson.nuclear.danger/index.html>)

But I did not lose my belief that the danger of nuclear terrorism was the most urgent threat we face. Nor did I lose my passion for working, albeit in a new way, to address that threat. I am working on this issue now as part of the international Global Zero movement, in which political, military and faith leaders, experts and activists strive for the worldwide elimination of all nuclear weapons. We know that terrorist groups have been trying to buy, build or steal a bomb. In the past two decades, there have been at least 25 instances of nuclear explosive materials being lost or stolen. There is enough highly enriched uranium, or HEU, in the world today to build more than 100,000 bombs. Terrorists looking to buy or steal HEU could look to the approximately 40 countries with nuclear weapons materials. And then there are rogue individuals out there who are running black markets selling nuclear materials and technology. Pakistan's Dr. A. Q. Khan did it for years before my group at the CIA brought him down in December 2003 after catching him red-handed selling a full-scale nuclear bomb to Moammar Gadhafi's regime in Libya. If terrorists manage to get their hands on enough HEU, they could smuggle it into a target city, build a bomb and explode it. A hundred pounds of highly enriched uranium could fit in a shoebox, and 100,000 shipping containers come into the United States every day.

There's a massive threat – litany of vulnerabilities, expert testimony, constant theft

Dahl 13 (Fredrik, Reuters, covers mainly nuclear-related issues, including Iran's dispute with the West over its atomic plans. I previously worked in Tehran, Iran, between 2007-2010, and have also been posted to Belgrade, Sarajevo, London, Brussels, Helsinki and Stockholm during two decades with Reuters, 7/1/2013, "Governments warn about nuclear terrorism threat", www.reuters.com/article/2013/07/01/us-nuclear-security-idUSBRE96010E20130701)

More action is needed to prevent militants acquiring plutonium or highly-enriched uranium that could be used in bombs, governments agreed at a meeting on nuclear security in Vienna on Monday, without deciding on any concrete steps. A declaration adopted by more than 120 states at the meeting said "substantial progress" had been made in recent years to improve nuclear security globally, but it was not enough. Analysts say radical groups could theoretically build a crude but deadly nuclear bomb if they had the money, technical knowledge and materials needed. Ministers remained "concerned about the threat of nuclear and radiological terrorism ... More needs to be done to further strengthen nuclear security worldwide", the statement said. The document "encouraged" states to take various measures such as minimizing the use of highly-enriched uranium, but some diplomats said they would have preferred firmer

commitments. Many countries regard nuclear security as a sensitive political issue that should be handled primarily by national authorities. This was reflected in the statement's language. Still, Yukiya Amano, director general of the International Atomic Energy Agency (IAEA), which hosted the conference, said the agreement was "very robust" and represented a major step forward. RADICAL GROUPS' "NUCLEAR AMBITIONS" Amano earlier warned the IAEA-hosted conference against a "false sense of security" over the danger of nuclear terrorism. Holding up a small lead container that was used to try to traffic highly enriched uranium in Moldova two years ago, the U.N. nuclear chief said it showed a "worrying level of knowledge on the part of the smugglers". "This case ended well," he said, referring to the fact that the material was seized and arrests were made. But he added: "We cannot be sure if such cases are just the tip of the iceberg." Obtaining weapons-grade fissile material - highly enriched uranium or plutonium - poses the biggest challenge for militant groups, so it must be kept secure both at civilian and military facilities, experts say. An apple-sized amount of plutonium in a nuclear device and detonated in a highly populated area could instantly kill or wound hundreds of thousands of people, according to the Nuclear Security Governance Experts Group (NSGEG) lobby group. But experts say a so-called "dirty bomb" is a more likely threat than a nuclear bomb. In a dirty bomb, conventional explosives are used to disperse radiation from a radioactive source, which can be found in hospitals or other places that are generally not very well protected. More than a hundred incidents of thefts and other unauthorized activities involving nuclear and radioactive material are reported to the IAEA every year, Amano said. "Some material goes missing and is never found," he said. U.S. Energy Secretary Ernest Moniz said al Qaeda was still likely to be trying to obtain nuclear material for a weapon. "Despite the strides we have made in dismantling core al Qaeda we should expect its adherents ... to continue trying to achieve their nuclear ambitions," he said.

Terror---A2: No Attacks---Yes Motive

Threat's high --- attacks coming

Defence Journal 12 (Ashfaq Ahmed and Saima Kausar, Defence Journal, 9/30, lexis)

International community is aware of the terrorists' intentions to acquire nuclear material. We are thus living with the modern day nightmare of the possibility of nuclear terrorism. Among non- state actors Al Qaeda is considered to be the most aspirant organization which has used resources and made foiled attempts to acquire nuclear weapon/material and use it. Analysts fears that hostile states namely Iran and North Korea would provide nuclear material to terrorists to use it against their enemies. Despite the fact international community realized the threat of nuclear terrorism in 1990s, IAEA has registered 800 cases, since end of the Cold War to 2010, wherein radioactive material was either missing or it was taken into possession by smugglers. As all roads of terrorist activities are linked with Pakistan, this country can face serious problems if terrorists succeeds in their attempts. Several terrorist organizations and non-state actors across the globe have expressed their resolve to acquire Chemical, Biological, Radiological and Nuclear (CBRN) material. Among these terrorists organizations Al Qaeda has made multiple attempts and expressed its determination to obtain nuclear material. Prosecution witness Jamal Ahmad Al Fadl quit Al Qaeda in 1996 and assisted Central Intelligence Agency (CIA) and Federal Bureau of Investigation (FBI). Fadl while recording his statement in court claimed that in late 1993 or early 1994 Al Qaeda made an attempt to acquire uranium worth \$ 1.5 million. Amount was paid to former Sudanese president Saleh Mobruk. In post 9/11 era many feared that terrorists would acquire WMD and use it against their enemies and enemy allies. In 1998 Al Qaeda Chief Osama bin Laden declared, "it is his duty to obtain WMD." Al Qaeda senior leadership in pre 9/11 era pursued strategy to acquire nuclear and biological weapons. Non-state actors particularly Bin Laden and his followers pursued first use policy and to use these weapons after getting their hold on these weapons against their enemies or their allies anywhere in the world. Bin Laden initiated his fight against US believing it a holy war between Muslims and Christen-Jews Crusaders, to change the status quo in international system. He thought once the status quo is changed overall conditions would be conducive for the organizations to overthrow the apostate regimes/governments in Islamic states and Islamic Caliphate would be restored. In order to inflict massive harm to its enemies Al Qaeda's strategy is focused on acquiring "strategic weapons." "Documents seized in Afghan training camps in late 2001 also indicate a rudimentary understanding of nuclear fission devices." Khalid Sheikh Muhammad, mastermind of 9/11 attacks, was interviewed by Al Jazeera in, 2002. Al Qaeda leader stated that "Al Qaeda initially planned to include a nuclear plant in its 2001 attack sites, intensified concern about aircraft crashes." Acquisition of poisonous material had remained of little interest for Al Qaeda. Al Qaeda operatives were experimenting on "crude chemical agents" before 9/11 in its training camps in Afghanistan. However, their use was left on the individuals outside Al Qaeda core leadership command. Abu Khabab planned small scale chemical and biological activity, in 2002 and 2003 Abu Masab al Zarqawi planned attacks using ricin and cyanide in Europe and Bahrain based terror group also devised a plan to carryout attack using crude cyanide gas device in New York City subway. Al Qaeda top leadership was kept uniformed

of these attacks. Later, Al Zawahiri comes to know about New York subway planned attack he cancelled it "for something better." After reading the preceding paragraphs it is understood that unlike state actors, who are determined to acquire nuclear weapons to boost their security and deter enemies, terrorists also have three routes to get hold on these weapons. First acquire WMD. Second, develop nuclear device or dirty bomb. Thirdly, terrorist can carry-out attack on nuclear programme sites/complexes. Cont.... According to IAEA, 433 power plants and 240 operational nuclear research reactors are operating internationally. Despite the fact that measures are taken to deny the right of terrorists/non state actors to acquire nuclear material, fissile material is produced in great quantity - around the globe both for military purposes and civilian needs. Such material is dispersed at various sites worldwide. It is more difficult to maintain strict control over fissile material than over nuclear weapons. States posed with security threats are attempting to develop clandestine nuclear weapons programme in violation of the Non Proliferation Treaty (NPT). Iran is suspected by the US that it is violating the clauses of the NPT and developing nuclear programme for military purposes. Proliferators want to get nuclear weapons in order to employ them to deter their enemies both potential and declared rather than use it. However, presence of huge stockpile of nuclear fissile material, spread of nuclear weapons and existing nuclear arsenals have created fear that terrorists may either acquire or construct a nuclear device. Legacy of the risk of nuclear attack will persist as long as fissile material exists.

Tons of terrorist motivations – we only have to win one

Ackerman 6 (Gary, Research Director, National Consortium for the Study of Terrorism and Responses to Terrorism, Motivations for Engaging in Nuclear Terrorism)

Motives for Using Nuclear Weapons The following list examines possible terrorist motivations that reflect strategic, operational and tactical incentives for using nuclear weapons (i.e., where nuclear weapons are used as a means to an end) as well as more esoteric motives where the use of nuclear weapons is an end in itself.⁷ Mass Casualties. The most obvious reason for terrorists to seek nuclear weapons is for the purpose of inflicting massive casualties upon their perceived enemies.⁸ Indeed, while conventional (and even most unconventional) weapons will suffice to kill thousands or perhaps even tens of thousands of people, for perpetrators who seek to cause the maximum possible immediate carnage (on the order of hundreds of thousands or millions of fatalities) the most viable means is to utilize the kinetic and thermal effects of a nuclear blast.⁹ Much of the concern surrounding terrorism involving WMD stems from the belief that there is a growing number of non-state actors prepared to inflict catastrophic violence.¹⁰ The majority of terrorist attacks, however, are carried out for a multiplicity of motives, so one should not assume that the desire to inflict mass casualties is necessarily the sole, or even predominant, motive for resorting to a nuclear option.¹¹ Inordinate Psychological Impact. It is a truism that one of the core elements of terrorism is the terror it evokes. For a terrorist group seeking to traumatize a targeted society and generate public and official disorientation, nuclear weapons must hold a particular allure, for there can be few images that are guaranteed to leave as indelible a mark on the collective psyche of the targeted country as that of a mushroom cloud over one of its major cities.¹² Anthony Cordesman asserts that it is not even necessary for a

nuclear weapon to have catastrophic physical effects for it to have far-ranging psychological and political impact.¹³ Prestige. Historically, nuclear weapons have remained under the exclusive purview of nation-states, with one of the key motivations for state acquisition being the status which nuclear weapons are believed to bestow upon their possessors. How much more appealing then might the possession of nuclear weapons seem for non-state groups, many of whom seek international legitimization? To the extent that terrorists believe that nuclear weapons could enable them to attain quasi-state standing or redress military imbalances vis-à-vis their purported enemies, the possession of such weapons, but not necessarily their use, becomes an attractive proposition. It is even conceivable that a terrorist group might pursue nuclear weapons in the hope of deterring, blackmailing or coercing a particular state or group of states. Thomas Schelling explores the prestige and deterrence aspects for non-state terrorists.¹⁴ Incentives for Innovation and Escalation. In a milieu in which terrorist groups may have to compete with rival groups for “market share” of media attention and constituency support, terrorist decision makers may feel compelled to exceed the destruction wrought by previous attacks. For a discussion of why terrorists seek mass-casualty events that “out-do” previous attacks, see Post.¹⁵ The asymptote of such escalatory pressures, especially in the wake of such attacks as those of September 11, may be the detonation of a nuclear weapon on enemy territory, which would guarantee unrivalled attention upon the terrorists and their cause. While most terrorist supporters and sympathizers would be appalled by such horrific actions, there are certain subsets of disaffected populations that could condone the use of nuclear weapons against a hated enemy, for example, brutalized communities motivated by revenge. Mass Destruction and Area Denial. In certain cases, terrorists may desire not only mass casualties, but also to physically destroy the infrastructure of their enemies and deny them the use or functioning of vital areas, tasks to which nuclear weapons, which have both immediately destructive blast effects and persistent radiological contamination effects, are well suited. Ideology. The worldview of a terrorist group or individual demarcates allies and enemies and forms the basis for deciding between legitimate and illegitimate targets and tactics.¹⁶ As such it is likely to be one of the most important factors in any decision to resort to the use of nuclear weapons. It is often asserted that the use of a weapon as destructive and reviled as nuclear weapons would alienate the supporters and perceived constituency of any terrorist group motivated primarily by a nationalist or secular political ideology,¹⁷ and therefore that such groups would mostly refrain from using nuclear weapons. Whatever the accuracy of this assertion, a corollary is widely accepted by terrorism experts, i.e., that groups motivated by religion, which are focused on cosmic as opposed to mortal concerns, are far more willing to engage in attacks involving mass casualties and hence would be more prone to use nuclear weapons or other means of mass destruction.¹⁸ As one analyst observed, “to the extent that violent extremist groups are absolutely convinced that they are doing God’s bidding, virtually any action that they decide to undertake can be justified, no matter how heinous, since the ‘divine’ ends are thought to justify the means.”¹⁹ The resurgence in religiously-inspired terrorism in recent decades could imply that there is now a greater possibility of terrorists seeking to use weapons of mass destruction.²⁰ The situation, however, is more complex. First, not all religious terrorists are equally likely to pursue mass destruction—many religiously motivated terrorist organizations have political components, represent constituencies that are well-defined geographically (and thus are subject to retribution), or depend for financial or

logistical support on parties whose views may not be quite as radical as their own. Moreover, it is the theological and cultural content of the particular strand of religious belief that is argued to be of greatest significance,²¹ rather than the mere fact that a group has a religious bent. It has been asserted that the ideologies most conducive to the pursuit of catastrophic violence are those that simultaneously reflect an apocalyptic millenarian character, in which an irremediably corrupt world must be purged to make way for a utopian future, and emphasize the capacity for purification from sins through sacrificial acts of violence.²² Such ideologies are often, though not exclusively, found amongst unorthodox religious cults, such as Aum Shinrikyo, the Covenant, the Sword, and the Arm of the Lord, and R.I.S.E.²³ One can conceive of an affinity between the “the relentless impulse toward world-rejecting purification”²⁴ displayed by such groups and the levels of “cathartic” destruction only achievable using nuclear weapons. Moreover, Jessica Stern has suggested that religious terrorists might embrace weapons of mass destruction, including nuclear weapons, as a means of “emulat[ing] God”²⁵. One must bear in mind, however, that possessing an ideology with a religious character may at most be a contributing factor to any desire to engage in nuclear terrorism, and is certainly not determinative, an assertion which has been validated empirically for CBRN weapons en toto.

Atomic Fetishism. A terrorist group whose ideology or key decision makers display a peculiar fascination for things nuclear or radiological might be more likely to consider pursuing a nuclear weapons capability. It is not hard to imagine that a group whose ideology is based for instance, upon a nuclear holocaust motif, or whose leader is obsessed with the science-fiction genre, could be drawn towards nuclear weapons as their preferred instruments of destruction. The archetype amongst known terrorist groups is Aum Shinrikyo, whose leader, Shoko Asahara, behaved almost fetishistically towards several types of unconventional weapons, including the nuclear variety.

Revenge and Other “Expressive” Motives. It is believed that individuals from heavily brutalized and traumatized communities (such as those who fall victim to genocide) might be capable of unrestrained levels of violence in the pursuit of revenge against their perceived persecutors,²⁷ and thus might consider a retributive act as devastating as a nuclear detonation. Other expressive motives might also come into play, for example, an extreme form of defensive aggression wherein a group perceives its own imminent destruction (or that of those it purports to represent) and thus resorts to the most violent measures imaginable as a “swan song”.²⁸ In addition to the possible set of instrumental, ideological or psychological motives already described, opportunity and organizational dynamics may influence indirectly a terrorist group’s pursuit of a nuclear capability. Turning first to opportunity, a terrorist group manifesting one or more of the above-described motives may be propelled to consider the nuclear option more seriously by happenstance. For example, governmental collapse in a nuclear weapons state could provide increased scope for the terrorists’ procurement of intact nuclear weapons and thus might precipitate for the first time the consideration of using a nuclear device. Looking next at organizational dynamics, groups exhibiting certain structural characteristics might be more likely to engage in acts of violence as extreme as nuclear terrorism. Some of these allegedly pernicious traits include: control by megalomaniacal or sadistic, but nonetheless charismatic and authoritarian leaders; isolation from their broader society, with little display of concern for outgroups; an intentional focus on recruiting technical or scientifically skilled members; a record of innovation and excessive risk-taking; and the possession of sufficient resources, whether financial, human or logistical, to enable long-term research and development into multiple

advanced weapons systems.²⁹ While none of the above motives will necessarily lead to a decision to use nuclear weapons, the existence of such a broad array of potential motives provides a prima facie theoretical case that the most extreme and violent of terrorists might find the destructive power of nuclear weapons strategically, tactically, or emotionally advantageous. Any group possessing several of the abovementioned attributes deserves close scrutiny in this regard. Moreover, many (though not all) of the motives listed could also be realized by lower-scale attacks, including using radioactive dispersal devices (RDDs) or attacking nuclear facilities. For instance, RDDs would likely result in a disproportionate psychological impact and area denial, but would not satisfy terrorists seeking mass fatalities.

Terror---A2: No Attacks---Yes Transportation

Once terrorist have nuclear material they could easily make a bomb and bring it into the US

Bunn 6(Matthew, Senior research associate at the Project on Managing the Atom in the Belfer Center for Science and International Affairs at Harvard University s John F Kennedy School of Government, "Terrorist Nuclear Weapon Construction: How Difficult?" September, <http://www.jstor.org.proxy1.cl.msu.edu/stable/pdfplus/25097844.pdf?acceptTC=true>)

An implosion-type bomb does not, however, require as extreme a level of sophistication as is sometimes imagined. Today, with the knowledge that it can be done and substantial unclassified literature on the underlying physics, materials properties, and explosives (explosive lenses and other shaped explosive charges are now in wide use for conventional military and even commercial applications), the challenge, though still significant, would be less than during the Manhattan Project. Plastic explosives, for example, could readily be molded into the required shapes. And as long as a substantial degree of compression is achieved, the timing of the explosive detonations and the resulting shape of the inward-traveling shock wave do not have to be absolutely perfect. A crude gun- or implosion-type weapon would be heavy perhaps in the range of a ton but not as heavy as even the first generation of military weapons, which required cases that enabled them to be dropped as gravity bombs (Mark et al. 1987). Such a bomb could easily be carried in a van or truck. Conceivably, the pieces of a bomb could even be put together at the target as the bomb for the Trinity test was in which case the nuclear-explosive materials and other components would be delivered separately. The number of possible pathways for smuggling a nuclear bomb or its ingredients into the United States is immense, and intelligent adversaries will choose whichever route remains undefended. All border controls can realistically hope to do is to make the easiest pathways more difficult, forcing terrorists to use riskier smuggling routes, increasing the chance of their interdiction. There is, in short, a very real possibility that a technically sophisticated terrorist group, given sufficient effort, could make a crude implosion-type bomb particularly if they got knowledgeable help, as al Qaeda has been attempting to do (Bunn, Wier, and Friedman 2005). While HEU poses a greater danger than plutonium, because of its potential use in a simpler gun type bomb, it seems likely that a significant fraction of the small segment of terrorist groups that would have the technical sophistication and determination to both acquire substantial amounts of nuclear material and make a gun-type bomb would also be able to acquire the capabilities needed to make a crude implosion bomb meaning that theft of separated plutonium would also pose a terrible danger.

Terror---A2: No Attacks---Trick***

Even if they win no nuclear terrorism, conventional attack triggers our retaliation impacts

Hoffman 1(Bruce, director of RANDs Washington Office, "Section V: Proliferation, Terrorism, Humanitarian Interventions," RAND, http://www.rand.org/content/dam/rand/pubs/monograph_reports/MR1306z1/MR1306.1.sec5.pdf)

In any event, the most likely range of terrorist threats will not include the ruthless use of some exotic weapon on a scale of mass destruction, toward which U.S. response efforts are currently focused, but the calculated terrorist use of some chemical, biological, nuclear, or radiological (CBNR) weapon to achieve far-reaching psychological effects. A limited terrorist attack involving not a weapon of mass destruction (WMD) per se, but an unconventional CBNR weapon employed on a deliberately small scale—either alone or as part of a series of smaller incidents occurring either simultaneously or sequentially in a given location—could also have disproportionately enormous consequences, generating unprecedented fear and alarm, and thus serving the terrorists' purpose just as well as a larger weapon or more ambitious attack with massive casualties could have. Hence, the most salient terrorist threat involving an unconventional weapon may likely not involve or even attempt the destruction of an entire city or some similar worst-case scenario, but the far more deliberate and delicately planned use of a CBNR agent for more discreet purposes.

Terror---A2: No Impact/Retaliation

Yes retaliation – causes nuclear war

Ayson 10 (Robert, Professor of Strategic Studies and Director of the Centre for Strategic Studies: New Zealand at the Victoria University of Wellington, "After a Terrorist Nuclear Attack: Envisaging Catalytic Effects," *Studies in Conflict & Terrorism*, Volume 33, Issue 7, July, Available Online to Subscribing Institutions via InformaWorld)

A terrorist nuclear attack, and even the use of nuclear weapons in response by the country attacked in the first place, would not necessarily represent the worst of the nuclear worlds imaginable. Indeed, there are reasons to wonder whether nuclear terrorism should ever be regarded as belonging in the category of truly existential threats. A contrast can be drawn here with the global catastrophe that would come from a massive nuclear exchange between two or more of the sovereign states that possess these weapons in significant numbers. Even the worst terrorism that the twenty-first century might bring would fade into insignificance alongside considerations of what a general nuclear war would have wrought in the Cold War period. And it must be admitted that as long as the major nuclear weapons states have hundreds and even thousands of nuclear weapons at their disposal, there is always the possibility of a truly awful nuclear exchange taking place precipitated entirely by state possessors themselves. But these two nuclear worlds—a non-state actor nuclear attack and a catastrophic interstate nuclear exchange—are not necessarily separable. It is just possible that some sort of terrorist attack, and especially an act of nuclear terrorism, could precipitate a chain of events leading to a massive exchange of nuclear weapons between two or more of the states that possess them. In this context, today's and tomorrow's terrorist groups might assume the place allotted during the early Cold War years to new state possessors of small nuclear arsenals who were seen as raising the risks of a catalytic nuclear war between the superpowers started by third parties. These risks were considered in the late 1950s and early 1960s as concerns grew about nuclear proliferation, the so-called n+1 problem. It may require a considerable amount of imagination to depict an especially plausible situation where an act of nuclear terrorism could lead to such a massive inter-state nuclear war. For example, in the event of a terrorist nuclear attack on the United States, it might well be wondered just how Russia and/or China could plausibly be brought into the picture, not least because they seem unlikely to be fingered as the most obvious state sponsors or encouragers of terrorist groups. They would seem far too responsible to be involved in supporting that sort of terrorist behavior that could just as easily threaten them as well. Some possibilities, however remote, do suggest themselves. For example, how might the United States react if it was thought or discovered that the fissile material used in the act of nuclear terrorism had come from Russian stocks,⁴⁰ and if for some reason Moscow denied any responsibility for nuclear laxity? The correct attribution of that nuclear material to a particular country might not be a case of science fiction given the observation by Michael May et al. that while the debris resulting from a nuclear explosion would be "spread over a wide area in tiny fragments, its radioactivity makes it detectable, identifiable and collectable, and a wealth of information can be obtained from its analysis: the efficiency of the explosion, the materials used and, most important ... some indication of where the nuclear material came from."⁴¹ Alternatively, if the act of nuclear terrorism came as a complete surprise, and American officials refused to believe that a terrorist group was fully responsible (or responsible at all) suspicion

would shift immediately to state possessors. Ruling out Western ally countries like the United Kingdom and France, and probably Israel and India as well, authorities in Washington would be left with a very short list consisting of North Korea, perhaps Iran if its program continues, and possibly Pakistan. But at what stage would Russia and China be definitely ruled out in this high stakes game of nuclear Cluedo? In particular, if the act of nuclear terrorism occurred against a backdrop of existing tension in Washington's relations with Russia and/or China, and at a time when threats had already been traded between these major powers, would officials and political leaders not be tempted to assume the worst? Of course, the chances of this occurring would only seem to increase if the United States was already involved in some sort of limited armed conflict with Russia and/or China, or if they were confronting each other from a distance in a proxy war, as unlikely as these developments may seem at the present time. The reverse might well apply too: should a nuclear terrorist attack occur in Russia or China during a period of heightened tension or even limited conflict with the United States, could Moscow and Beijing resist the pressures that might rise domestically to consider the United States as a possible perpetrator or encourager of the attack? Washington's early response to a terrorist nuclear attack on its own soil might also raise the possibility of an unwanted (and nuclear aided) confrontation with Russia and/or China. For example, in the noise and confusion during the immediate aftermath of the terrorist nuclear attack, the U.S. president might be expected to place the country's armed forces, including its nuclear arsenal, on a higher stage of alert. In such a tense environment, when careful planning runs up against the friction of reality, it is just possible that Moscow and/or China might mistakenly read this as a sign of U.S. intentions to use force (and possibly nuclear force) against them. In that situation, the temptations to preempt such actions might grow, although it must be admitted that any preemption would probably still meet with a devastating response. As part of its initial response to the act of nuclear terrorism (as discussed earlier) Washington might decide to order a significant conventional (or nuclear) retaliatory or disarming attack against the leadership of the terrorist group and/or states seen to support that group. Depending on the identity and especially the location of these targets, Russia and/or China might interpret such action as being far too close for their comfort, and potentially as an infringement on their spheres of influence and even on their sovereignty. One far-fetched but perhaps not impossible scenario might stem from a judgment in Washington that some of the main aiders and abettors of the terrorist action resided somewhere such as Chechnya, perhaps in connection with what Allison claims is the "Chechen insurgents' ... long-standing interest in all things nuclear."⁴² American pressure on that part of the world would almost certainly raise alarms in Moscow that might require a degree of advanced consultation from Washington that the latter found itself unable or unwilling to provide. There is also the question of how other nuclear-armed states respond to the act of nuclear terrorism on another member of that special club. It could reasonably be expected that following a nuclear terrorist attack on the United States, both Russia and China would extend immediate sympathy and support to Washington and would work alongside the United States in the Security Council. But there is just a chance, albeit a slim one, where the support of Russia and/or China is less automatic in some cases than in others. For example, what would happen if the United States wished to discuss its right to retaliate against groups based in their territory? If, for some reason, Washington found the responses of Russia and China deeply underwhelming, (neither "for us or against us") might it also suspect that they secretly were in cahoots with the group,

increasing (again perhaps ever so slightly) the chances of a major exchange. If the terrorist group had some connections to groups in Russia and China, or existed in areas of the world over which Russia and China held sway, and if Washington felt that Moscow or Beijing were placing a curiously modest level of pressure on them, what conclusions might it then draw about their culpability? If Washington decided to use, or decided to threaten the use of, nuclear weapons, the responses of Russia and China would be crucial to the chances of avoiding a more serious nuclear exchange. They might surmise, for example, that while the act of nuclear terrorism was especially heinous and demanded a strong response, the response simply had to remain below the nuclear threshold. It would be one thing for a non-state actor to have broken the nuclear use taboo, but an entirely different thing for a state actor, and indeed the leading state in the international system, to do so. If Russia and China felt sufficiently strongly about that prospect, there is then the question of what options would lie open to them to dissuade the United States from such action: and as has been seen over the last several decades, the central dissuader of the use of nuclear weapons by states has been the threat of nuclear retaliation. If some readers find this simply too fanciful, and perhaps even offensive to contemplate, it may be informative to reverse the tables. Russia, which possesses an arsenal of thousands of nuclear warheads and that has been one of the two most important trustees of the non-use taboo, is subjected to an attack of nuclear terrorism. In response, Moscow places its nuclear forces very visibly on a higher state of alert and declares that it is considering the use of nuclear retaliation against the group and any of its state supporters. How would Washington view such a possibility? Would it really be keen to support Russia's use of nuclear weapons, including outside Russia's traditional sphere of influence? And if not, which seems quite plausible, what options would Washington have to communicate that displeasure? If China had been the victim of the nuclear terrorism and seemed likely to retaliate in kind, would the United States and Russia be happy to sit back and let this occur? In the charged atmosphere immediately after a nuclear terrorist attack, how would the attacked country respond to pressure from other major nuclear powers not to respond in kind? The phrase "how dare they tell us what to do" immediately springs to mind. Some might even go so far as to interpret this concern as a tacit form of sympathy or support for the terrorists. This might not help the chances of nuclear restraint.

A successful nuclear terrorist attack results in massive proliferation and global nuclear war

Frank 13 (Forrest, research associate at Naval War College, "NUCLEAR TERRORISM AND THE ESCALATION OF INTERNATIONAL CONFLICT," May 9, www.usnwc.edu/2Fgetattachment%2F9508e128-a340-4760-8666-5192428cdb15%2FNuclear-Terrorism-and-the-Escalation-of-Internatio.aspx&ei=2b4gUuKbKerW2wWjiYDQCQ&usg=AFQjCNHSIZzsN_iiB7TT_75p0JG0xEMm6g&sig2=aZR2saw8qArkTWMD5Nwm1g&bvm=bv.51495398,d.b2l)

The use of military force in response to nuclear terrorism by the victim state cannot be overlooked. Military force could be deployed against the same wide variety of states noted above. The range of military actions that could be undertaken could vary greatly from minimum efforts to close the border between the victim state and its neighbors to more drastic actions.

These actions might include some or all of the following: interdiction of terrorist infiltration routes; attacks on terrorist base camps; embargo or blockade of states aiding terrorists or permitting terrorists to operate from their territories; attacks on the civilian population of other states roughly equaling the destruction caused by a nuclear terrorist act; destruction of other states' nuclear facilities; or even a full-scale invasion and occupation of other states in reprisal for nuclear terrorism. It is clear that acts undertaken by the victim state toward other states would have profound effects on international order. The military actions described above would be sufficient to unleash a major war, depending on the states directly involved and the strength of their respective alliance systems. Incidents of nuclear terrorism involving materials nominally under international safeguards would automatically raise very serious questions about the reliability of International Atomic Energy Agency (IAEA) safeguards on nuclear materials. IAEA inspection of national nuclear materials accounts, the primary safeguard against diversion of nuclear materials, that fail to detect the diversion of nuclear materials subsequently thought to have been used in the commission of a nuclear terrorist act may raise very grave questions about the entire safeguards system. Such questions once raised would be very hard to quiet, hence weakening the IAEA's ability to perform its critical function of verifying the Nuclear Nonproliferation Treaty.²⁹ Nuclear terrorism may also raise a number of problems relating to the obligations assumed by the nuclear weapon states in their adherence to the Nuclear Nonproliferation Treaty- Security Council Resolution 255, (19 June 1968).³⁰ The nuclear weapon states might find themselves in a position of direct confrontation with one another because of demands on the part of the government of the state attacked by nuclear terrorists for assistance. Furthermore, use of nuclear terrorism by a group claiming the status of a state, i.e., a liberation movement, might cause major political problems in relations among the nuclear weapon states, as well as between the nuclear weapon states and nonnuclear weapon states. Successful nuclear terrorism might also give rise to more general security states would become concerned about nuclear terrorism and might undertake actions that could easily be misinterpreted by other, potential adversaries. Successful nuclear terrorism in one part of the world might be an invitation to terrorists in other parts of the world to use nuclear explosive devices, radiological weapons, or attacks on nuclear facilities as an effective, spectacular means of achieving political and economic objectives. Government leaders might conceivably be faced with a new set of dominoes-nuclear facilities, sources of radioactive materials, or sources of fissionable materials. In surveying the political consequences of nuclear terrorism, it becomes clear that nuclear terrorism creates problems which, in turn, may be more destructive over the long term than the act of nuclear terrorism itself. Initiation of hostilities between two or more states as the result of a catalytic nuclear terrorist act ought to be an outcome over which great efforts would be expended in an effort to avoid it. Unfortunately, little attention has been paid to the problem of limiting the escalation of conflict arising from nuclear terrorism. We now turn to some possible steps that might be taken unilaterally, bilaterally, or multilaterally by nations of the world to avoid the "worst case" outcome of a nuclear terrorism incident.

AIDS---2NC Module

Normalized Cuban relations key to solve AIDS spread

Gibson 7/9 {Drew, case manager and social worker at the Northern Kentucky Independent District Health Department, former Research Assistant at the Office of National Drug Control Policy, Master of Social Work + Management & Community Organizing (University of Maryland Baltimore), "Doing More with Less: Cuba's Lessons on HIV Treatment and Prevention," The Body, 2015, <http://www.thebody.com/content/76088/doing-more-with-less-cubas-lessons-on-hiv-treatmen.html#THUR>}

Standing in the Rose Garden earlier this month, President Obama announced to the assembled press, the American people and the world that the U.S. would be opening its embassy in Havana for the first time in more than half a century. "The progress that we mark today is yet another demonstration that we don't have to be imprisoned by the past. When something isn't working, we can and will change," the President remarked. By and large, the American public agrees with President Obama's assessment of the situation, with 63% of the country openly in favor of re-establishing diplomatic relations with our Southern neighbor. For many of the 51% of Cuban Americans who are in favor of the normalization of relations with Cuba, support for opening the pathways of diplomacy and trade are rooted in their desire to reunify with family and rekindle relationships that have lain dormant for decades. For non-Cuban Americans, the opening of the U.S. embassy in Havana not only means the end of 54 years of failed isolationist policy, but also signals resurrected economic and travel opportunities in what was once the premier American tourist destination in the Caribbean. However, potential resource exchanges between the two nations extend to ideas as well as goods and services, and in the realm of intellectual capital there are few Cuban imports as valuable as public health policy. At the same time that President Obama was announcing Washington's diplomatic rapprochement with Havana, news outlets were reporting that Cuba had become the first country in the world to end mother-to-child transmission of HIV. In point of fact, the Cubans didn't eradicate mother-to-child HIV transmission as there were two babies born with the virus in 2013, but since the current preventative measures available for perinatal infection aren't foolproof, two is tantamount to zero from a public health standpoint. This is a huge breakthrough for preventative HIV practices across the globe, as it provides other nations with hope that they too can eliminate mother-to-child transmission of HIV. On the other hand, Cuban success in HIV prevention is old news. With an adult HIV prevalence rate of just 0.2%, Cuba has the lowest rate of HIV infection among Caribbean nations and has historically had one of the most comprehensive -- if controversial -- HIV/AIDS prevention programs in the world. In the early 1980s, at a time when President Ronald Reagan was refusing to publicly acknowledge the existence of AIDS and his press secretary was addressing the epidemic with derision and laughter, Cuba had already begun preparations for stopping the spread of the virus. In 1983, after seeing the virus explode in nations around it -- more than two years before the country's first documented case of the virus -- the Cuban government destroyed all foreign-derived blood products and set up a national AIDS commission. Such proactive actions have been characteristic of the Cuban response to the AIDS epidemic, especially in its early years. But Cuba's determined approach also opened up the

nation to allegations that it was abusing the human rights of its citizens, and garnered rebuke from the international community. Beginning in 1986, Cuba set up a network of sanatoria across the country for a state-mandated quarantine of HIV-positive citizens. For seven years, the HIV-positive population of Cuba was held at these 14 sanatoria, where they received medical care and were kept apart from the general population. Hearing this might conjure up images of oppressive, poorly maintained hospitals, but the sanatoria have been described by the World Health Organization (WHO) as "like suburban communities on several acres of land with modern one- and two-story apartment duplexes ... surrounded by lush vegetation and a small garden." While housed in these sanatoria, patients were treated by family physicians and monitored by public health officials seeking to learn more about the natural history of the epidemic. The medical monitoring of patients was paired with other measures, such as following up with and testing the sexual partners of HIV-positive persons; and the mandatory testing of certain groups, including blood donors, pregnant women and adults with sexually transmitted infections. Cuba has also placed a large emphasis on education, implementing a compulsory six-week "Living With HIV" program for all newly diagnosed Cubans, and providing children with sex education beginning in the fifth grade. Since the end of 1993, when residency at sanatoria became optional, the Cuban government has worked to integrate HIV-positive citizens back into the community through a host of measures ranging from inpatient job training programs to anti-discrimination laws that not only prohibit employers from firing people for being HIV positive, but also require them to pay salaries to HIV-positive employees taking part in educational programs or living in a sanatorium. It is easy for Americans who place the rights of the individual above those of the collective to look at the Cuban response to HIV and criticize the lack of autonomy Cuba has allowed its HIV-positive citizens. But to focus on this policy limitation and disregard Cuban successes would be to throw the baby out with the bathwater. The fact that the U.S. has nearly the same life expectancy and WHO health system ranking as Cuba when it has nearly an 8-to-1 advantage in GDP per capita should tell us that there are aspects of Cuba's approach to HIV and public health that we should be adopting. In 2011 in the U.S., only 37% of people living with HIV had been prescribed antiretroviral medications, while Cuba was one of only 12 nations to achieve universal access to antiretroviral treatment (defined by WHO as at least 80% of people eligible). I don't know about you, but I'm having a pretty hard time seeing the human rights violation in that.

AIDS causes extinction

Clark 95 (William R., Professor Emeritus and Chair of Immunology – UCLA, *At War Within: The Double-Edged Sword of Immunity*, p. 171-173)

But what if there is no breakthrough? It is estimated that at the present rate of increase 100 million—2 percent—of the world's inhabitants could be infected with HIV by the year 2000. What if we are left to our natural biological selves to deal with this modern plague, with not help from science or medicine? Is there a chance we will ultimately develop a natural resistance to HIV not dependent on the immune system, or on external drugs or vaccines? Theoretically, if HIV began seriously decimating the human population, this could happen. But the cost could be very high indeed. At present, HIV transmission from one individual to another can take place

only under highly restrictive conditions, mostly based on the direct mixing of bodily fluids. But what if a strain of HIV suddenly emerged that could transmit between individuals through the air? An HIV carrier who sneezed on an elevator could infect the next dozen people or so people getting on. In the course of a common cold, with all of the attendants coughing and sneezing, he or she might infect a hundred or thousand people. That is exactly how colds themselves are spread. Given the long period of time before the individuals infected would know they are HIV-positive, transmission could move outward to infect thousands more. This scenario is the worst possible nightmare with respect to AIDS, but unhappily it is not entirely beyond the realm of the possible. Under such conditions, individuals with, say spontaneous mutations in their CD4 molecules that deprived gp120 of a binding site could come to have a selective advantage. The same would be true of any other human mutation that interfered with HIV reproduction. Perhaps this is not an idle speculation. Evolutionists have focused in recent years on something called punctuated equilibrium. The greatest evolutionary changes seem not to, occur slowly, through the accumulation of minor mutations over time, but very rapidly, usually in response to some catastrophic environmental alternation. The extremely rapid replacement of dinosaurs by later forms of vertebrates, for example, appears to have occurred in the aftermath of a meteor reaching the earth's surface some sixty-five million years ago, at the end of the Cretaceous Period. In evolutionary terms, this all happened in the blink of an eye. It takes little imagination to picture the consequences wreaked by such enormous devastation in the biosphere. More than half the animal life forms existing on earth at the time—including most large land animals—are thought to have disappeared. Life-forms with characteristics that gave them even a small survival advantage at all came to dominance in a very short order in this new world. These changes took place over such a short period in geological time that there is virtually no fossil record of the enormous range early and intermediate mammalian life forms that emerged. Similarly, if the human population were reduced to a very small number by HIV, it is entirely possible that the earth could see another example of punctuated equilibrium. Humans could either be extinguished altogether from the earth, or a few individuals with chance mutations somehow protecting them from infection by HIV could reproduce and ultimately give rise to a new strain of Homo Sapiens. Whatever genetic changes that allowed them to evade infection by HIV would dominate the new strain completely. Even if HIV subsequently disappeared from the face of the earth, these changes would likely remain indefinitely as a sort of genetic fossil record of the HIV experience.

AIDS---A2: Impact Inevitable

AIDs spread reversible

Singer 2 [Peter W. Singer, director of the 21st Century Defense Initiative and a senior fellow in Foreign Policy at the Brookings Institution (not the bioethicist/philosopher Peter Singer), Spring 2002, "AIDS and International Security," *Survival*, Vol. 44, No.1 p. 145-158]

Prospects and Challenges This article represents an important endeavor in establishing the security dimensions of a nontraditional threat. Its finding is that the relationship between the disease of AIDS and increased threats of instability and war is a complex dynamic, but a very real one. If the present trend of infection continues, the disease will directly kill at a rate that is almost unimaginable. The disease, however, also threatens those even not at direct risk of infection. Its unique clustering in certain core social institutions threatens to set in motion a series of events with wider political implications. Militaries will crumble, states will fall, wars will be more deadly, more frequent, and harder to contain, and all because of a little virus that targets the human immune system. The prospects are dark, but not yet hopeless. The key phrase in the above assessment is "if the present trend of infection continues." AIDS is indeed a security threat and should be treated as such, with the incumbent high level attention and resources necessary to defend against it. A number of states, such as Senegal, Thailand, and Uganda have acted to reverse their rates of infection, illustrating that with a programmatic approach, success in battling AIDS is possible. That said, nearly every country has denied or minimized the threat of AIDS over the last decade.⁵⁵ This cannot continue if there is any hope of containing the disease and its wider implications. Successfully thwarting the disease's further spread requires a clarified and cohesive response. This extends from local states to global bodies.

AIDS---A2: No Extinction---General

Failure to control the spread of AIDS triggers mutations that cause extinction

Ehrlich's 90 (Paul and Anne, Professors of Population Studies – Stanford University, The Population Explosion, p. 147-148)

Whether or not AIDS can be contained will depend primarily on how rapidly the spread of HIV can be slowed through public education and other measures, on when and if the medical community can find satisfactory preventatives or treatments, and to a large extent on luck. The virus has already shown itself to be highly mutable, and laboratory strains resistant to the one drug, AZT, that seems to slow its lethal course have already been reported." A virus that infects many millions of novel hosts, in this case people, might evolve new transmission characteristics. To do so, however, would almost certainly involve changes in its lethality. If, for instance, the virus became more common in the blood (permitting insects to transmit it readily), the very process would almost certainly make it more lethal. Unlike the current version of AIDS, which can take ten years or more to kill its victims, the new strain might cause death in days or weeks. Infected individuals then would have less time to spread the virus to others, and there would be strong selection in favor of less lethal strains (as happened in the case of myxomatosis). What this would mean epidemiologically is not clear, but it could temporarily increase the transmission rate and reduce life expectancy of infected persons until the system once again equilibrated. If the ability of the AIDS virus to grow in the cells of the skin or the membranes of the mouth, the lungs, or the intestines were increased, the virus might be spread by casual contact or through eating contaminated food. But it is likely, as Temin points out, that acquiring those abilities would so change the virus that it no longer efficiently infected the kinds of cells it now does and so would no longer cause AIDS. In effect it would produce an entirely different disease. We hope Temin is correct but another Nobel laureate, Joshua Lederberg, is worried that a relatively minor mutation could lead to the virus infecting a type of white blood cell commonly present in the lungs. If so, it might be transmissible through coughs.

AIDS causes extinction

Tom Kerns 99, professor of philosophy, "AIDS and Apocalypics for Questioning Millennium Madness, <http://bioethicscourse.info/aidsite/lec-millemad.html>

The worst threat to humankind AIDS is "the number one health problem on this planet." (C. Everett Koop, former US Surgeon General) "AIDS is the single greatest threat to well-being facing the world's population today." (Marc Lappé) AIDS is "a messenger of apocalyptic change," as it is spread through "one of the most biologically urgent of human behaviors." - Dr June Osborn (former member of the US Presidential Commission on HIV/AIDS, & professor in U Mich SPH) Economic costs are high "Although it is less than a decade since the virus that causes AIDS was discovered, it has become increasingly evident that this pandemic will have profound economic and social implications for both developed and developing countries. The importance of health as an input to the economic development and growth of a country is well established - a healthier population is more productive and has an

increased capacity for learning. The adverse impacts of the HIV/AIDS pandemic will undermine improvements in health status and, in turn, reduce the potential for economic growth. AIDS is distinct from other diseases, and its impact can be expected to be quite severe.... Its most critical feature, distinguishing AIDS from other life-threatening and fatal illnesses, such as diarrhea (among children in developing countries) or cancer (among the elderly in developed countries), is that it selectively affects adults in their sexually most active ages, which coincide with their prime productive and reproductive years." - in AIDS in the World, 1992, p 195 (Jill Armstrong is an economist in the Eastern Africa Dept of the World Bank, Washington, DC. Eduard Bos is a demographer in the Population, Health, and Nutrition Division of the World Bank's Population and Human Resources Department.) E. "Whatever else AIDS is, it's not just another disease." (Dr June Osborne, former member of the US Presidential Commission on HIV/AIDS) Features that make AIDS unique: * High morbidity & mortality * Lifelong infectiousness * lengthy asymptomatic stage * highly mutable virus Joshua Lederberg considers the possibility of HIV "learning the tricks of airborne transmission:" "We know that HIV is still evolving. Its global spread has meant there is far more HIV on earth today than ever before in history. What are the odds of its learning the tricks of airborne transmission? The short answer is "No one can be sure." ... [A]s time passes, and HIV seems settled in a certain groove, that is momentary reassurance in itself. However, given its other ugly attributes, it is hard to imagine a worse threat to humanity than an airborne variant of AIDS. No rule of nature contradicts such a possibility; the proliferation of AIDS cases with secondary pneumonia [and TB] multiplies the odds of such a mutant, as an analog to the emergence of pneumonic plague." * effective modes of transmission * destroys the immune system * viral reservoir expanding Dr Barry D Schoub, Director of the National Institute of Virology at the University of Witwatersrand in Johannesburg, sums up thus: "[T]he ability of the virus to cause a slow, progressive and permanent infection with permanent infectivity makes it a unique cause of epidemic disease. Thus, with no recovery, no loss of infectivity, no development of either individual or herd immunity, there is no known biological mechanism which can stop the continuing expansion of the disease unless an effective vaccine were to come about, and at present there is no feasible design for such an effective vaccine. The progressive increase in the pool of HIV can, in theory, only lead to an exponential increase in the number of individuals who will become infected until eventually the majority of the sexually active population will be infected unless interventions are at least moderately successful."

AIDS---A2: No Extinction---Yes Mutations

AIDs mutations now

Times of India 15 [2-16, <http://timesofindia.indiatimes.com/home/science/New-aggressive-form-of-HIV-accelerates-AIDS/articleshow/46257776.cms>]

A new aggressive form of HIV can progress to AIDS in just three years - so rapidly that patients may not even realize they were infected, scientists say. Engaging in unprotected sex with multiple partners increases the risk of contracting multiple strains of HIV. Once inside a host, these strains can recombine into a new variant of the virus, researchers said. One such recombinant variant observed in patients in Cuba appears to be much more aggressive than other known forms of HIV, researchers said. Before it can enter human cells, HIV must first anchor itself to them. The virus does this via anchor points, or co-receptors, which are proteins on the cell membrane. In a normal infection, the virus first uses the anchor point CCR5. In many patients, after a number of healthy years, the virus then switches to the anchor point CXCR4. This co-receptor switch coincides with a faster progression to AIDS. Researchers at KU Leuven's Laboratory for Clinical and Epidemiological Virology in Belgium have described a recombinant form of HIV observed in patients in Cuba that makes this transition much faster. The virus targets the anchor point CXCR4 early after infection, shortening drastically the healthy phase and triggering rapid progression to AIDS. The transition from anchor point CCR5 to CXCR4 is normally very difficult. Researchers suspect that the rapid transition observed in this HIV recombinant occurs as a result of combining fragments from different HIV subtypes.

Mutations inevitable

Frieden 14 (Thomas R. – Director of the U.S. Centers for Disease Control and Prevention; Administrator of the Agency for Toxic Substances and Disease Registry; previously New York City health commissioner – “Why Global Health Security Is Imperative,” 2-13-14, <http://www.theatlantic.com/health/archive/2014/02/why-global-health-security-is-imperative/283765/>)

These threats come from three directions. Emerging diseases don't just happen in the movies. Every day the CDC starts a new investigation; on average we turn up one new disease-causing organism every year. In 2011 we found three. As I write, the second wave of the deadly H7N9 avian flu is hitting China. We've been lucky that this strain hasn't, yet, learned to pass easily from person to person. New diseases are inevitable, but new epidemics aren't.¶ Drug-resistant infections are the second and perhaps most pernicious threat we face. Already the nightmare bacteria called CRE (carbapenem-resistant enterobacteriaceae), resistant to most or all antibiotics, have gone from a single patient in one state in the U.S. to at least 47 states and thousands of patients. Extensively drug-resistant tuberculosis bacteria are another example of why the end of the antibiotic era is already close for some infections. When I was in charge of tuberculosis control in New York City in the early 1990s, I cared for a man with extensively drug-resistant tuberculosis. It took two years, surgery, extended periods of intravenous antibiotics,

and more than \$100,000 to cure him. A few years later, I helped his village in India set up a treatment program that would have prevented his resistant infection for less than \$10.¶

AIDS---A2: No Extinction---Trick***

AIDs sparks conflict and magnifies impacts

Singer 2 [Peter W. Singer, director of the 21st Century Defense Initiative and a senior fellow in Foreign Policy at the Brookings Institution (not the bioethicist/philosopher Peter Singer), Spring 2002, "AIDS and International Security," *Survival*, Vol. 44, No.1 p. 145-158]

A recurring theme at all these meetings was the growing danger presented by the epidemic, not just in terms of direct victims of the disease itself, but to international security. Speaking at the UN Security Council session, James Wolfensohn, head of the World Bank, stated, 'Many of us used to think of AIDS as a health issue. We were wrong ... nothing we have seen is a greater challenge to the peace and stability of African societies than the epidemic of AIDS ... we face a major development crisis, and more than that, a security crisis'.² Indeed, a significant continuity between Clinton and Bush administration worldviews is the perception of a link between AIDS and increased instability and war. Following a CIA report on how the disease increased the prospects of 'revolutionary wars, ethnic wars, genocide, and disruptive regime transitions', the Clinton administration declared HIV/AIDS a 'national security threat' in 2000. The administration was initially accused of pandering to certain activist groups, but by the time of his confirmation hearings in 2001, the new Secretary of State Colin Powell was also declaring the disease a 'national security problem'.³ Similarly, US Under-Secretary of State Paul Dobriansky stated that 'HIV/AIDS is a threat to security and global stability, plain and simple'.⁴ The looming security implications of AIDS, particularly within Africa, are now a baseline assumption. However, the mechanisms by which 'AIDS has changed the landscape of war' are barely understood.⁵ This essay seeks to explain those mechanisms. AIDS not only threatens to heighten the risks of war, but also multiplies its impact. The disease will hollow out military capabilities, as well as state capacities in general, weakening both to the point of failure and collapse. Moreover, at these times of increased vulnerability, the disease also creates new pools of militant recruits, who portend even greater violence, as well jeopardising certain pillars of international stability. In isolation, this increased risk of war around the globe is bad enough, but there are also certain types of cross-fertilisation between the disease and conflict, intensifying the threat. The ultimate dynamic of warfare and AIDS is that their combination makes both more likely and more devastating.

Economy---2NC Module

Revitalized relations key to Cuban economic growth – further congressional policy key

Gutierrez 6/23 {Carlos M, Chair of Albright Stonebridge Group, former President and Chief Executive Officer of Kellogg, former U.S. Secretary of Commerce, Visiting scholar at Miami University's Institute for Cuban and Cuban American Studies, "A Republican Case for Obama's Cuba Policy," New York Times, <http://www.nytimes.com/2015/06/23/opinion/a-republican-case-for-obamas-cuba-policy.html#THUR>}

Like many fellow Republicans and Cuban-Americans, I was critical when President Obama announced in December 2014 that his administration would begin to normalize ties between the United States and Cuba. After years of hostility and failed attempts at détente, I wondered: Did the Cuban government really want better ties with America, or was this simply another chess move in a tired game? After all, Mr. Obama is not the first president to try to change the relationship with Cuba — Mr. Castro's revolution has outlived 10 American administrations. Today, I am cautiously optimistic for the first time in 56 years. I see a glimmer of hope that, with Cuba allowing even a small amount of entrepreneurship and many American companies excited about entering a new market, we can actually help the Cuban people. My 30-year career at the Kellogg Company taught me that, at its best, business can have a transformational and uplifting impact on communities and whole societies. It is because of that belief that I have always been proud to call myself a Republican. As secretary of commerce in the administration of George W. Bush, I was a voice for American business abroad and saw firsthand that our private sector could be the best ambassador for American values, such as the power of free enterprise to raise living standards and the importance of being free to work where one chooses. I believe that it is now time for Republicans and the wider American business community to stop fixating on the past and embrace a new approach to Cuba. It has now been six months since Mr. Obama's policy shift was announced. Both governments have confirmed plans to open embassies, and negotiations have covered a variety of issues, including the extradition of American fugitives who fled to Cuba. Almost every week a new congressional delegation lands in Havana. From a government-to-government perspective, there has not been so much communication between the United States and Cuba in 50 years. I never expected negotiations to get this far. On the business side, scores of Americans have begun to travel to Cuba under expanded licenses. American credit card companies have been authorized to handle transactions in Cuba. Some of the most innovative companies in the world, like Airbnb and Netflix, have begun to offer their services in Cuba. The New York Cosmos soccer team has played exhibition matches on the island, and the National Basketball Association has sponsored a workshop in Havana. Some presidential candidates, including the Cuban-American senators Marco Rubio and Ted Cruz, have argued that Mr. Obama has conceded too much. The truth is that the changes so far have been incremental and this will be a long and gradual process. Contrary to popular belief, President Obama's executive actions do not allow for free and open commerce with Cuba, nor do they open the doors for Americans to visit the island as tourists; the Helms-Burton Act of 1996 codified the embargo that prohibits most American companies from undertaking

transactions with Cuba, and travel remains restricted. Rather, the reforms have allowed some American companies and individuals to engage in limited additional activities in Cuba. Perhaps most critical among these activities has been granting Americans the right to support a new generation of Cuban-born entrepreneurs and Cuban-run small businesses. This move is a logical response to a change allowed by the Castro regime in recent years. These small-business owners and their employees will need tools, supplies, building materials and training in accounting, logistics and other areas. The new reforms allow American citizens and businesses to address such needs, and I am hopeful the Cuban government will allow its citizens to take full advantage of their assistance. Cubans yearn not only for these interactions but also for a time when they can enjoy opportunities to chart their own course in life without having to leave their home, as I did 55 years ago. There are those who will always wish for the past, whether it is pre-Castro Cuba or the days before the current rapprochement. Some of my fellow Cuban-Americans insist that continuing to squeeze Cuba economically will help the Cuban people because it will lead to democracy. I wonder if the Cubans who have to stand in line for the most basic necessities for hours in the hot Havana sun feel that this approach is helpful to them. America must look to the future instead — and pursue this opportunity to assist Cubans in building a new economy. There is a lot of work to do, and progress will be slow. However, the business community and my fellow Cuban-Americans and Republicans should not ignore the possibilities ahead. The Cuban people need and deserve our help.

Cuban economic collapse and instability coming now – that creams global hotspot management and escalates GLOBAL conflict in Africa, Central Asia, Iran, Taiwan, and Korea

Gorrell 5 – Tim Gorrell, Lieutenant Colonel in the United States Army, “CUBA: THE NEXT UNANTICIPATED ANTICIPATED STRATEGIC CRISIS?” US Army War College Research Project, 3-18, <http://www.dtic.mil/cgi-bin/GetTRDoc?AD=ADA433074>)

**The gigantic shrunk section compares various policies towards Cuba – don’t bother reading it, the conclusion is neg (as the “Conclusion and Recommendation” section underlined explains)

Regardless of the succession, under the current U.S. policy, Cuba’s problems of a post Castro transformation only worsen. In addition to Cubans on the island, there will be those in exile who will return claiming authority. And there are remnants of the dissident community within Cuba who will attempt to exercise similar authority. A power vacuum or absence of order will create the conditions for instability and civil war. Whether Raul or another successor from within the current government can hold power is debatable. However, that individual will nonetheless extend the current policies for an indefinite period, which will only compound the Cuban situation. When Cuba finally collapses anarchy is a strong possibility if the U.S. maintains the “wait and see” approach. The U.S. then must deal with an unstable country 90 miles off its coast. In the midst of this chaos, thousands will flee the island. During the Mariel boatlift in 1980 125,000 fled the island.²⁶ Many were criminals; this time the number could be several hundred thousand fleeing to the U.S., creating a refugee crisis. Equally important, by adhering to a negative containment policy, the U.S. may be creating its next series of transnational criminal problems. Cuba is along the axis of the drug-trafficking flow into the U.S. from Columbia. The

Castro government as a matter of policy does not support the drug trade. In fact, Cuba's actions have shown that its stance on drugs is more than hollow rhetoric as indicated by its increasing seizure of drugs – 7.5 tons in 1995, 8.8 tons in 1999, and 13 tons in 2000.²⁷ While there may be individuals within the government and outside who engage in drug trafficking and a percentage of drugs entering the U.S. may pass through Cuba, the Cuban government is not the path of least resistance for the flow of drugs. If there were no Cuban restraints, the flow of drugs to the U.S. could be greatly facilitated by a Cuba base of operation and accelerate considerably. In the midst of an unstable Cuba, the opportunity for radical fundamentalist groups to operate in the region increases. If these groups can export terrorist activity from Cuba to the U.S. or throughout the hemisphere then the war against this extremism gets more complicated. Such activity could increase direct attacks and disrupt the economies, threatening the stability of the fragile democracies that are budding throughout the region. In light of a failed state in the region, the U.S. may be forced to deploy military forces to Cuba, creating the conditions for another insurgency. The ramifications of this action could very well fuel greater anti-American sentiment throughout the Americas. A proactive policy now can mitigate these potential future problems. U.S. domestic political support is also turning against the current negative policy. The Cuban American population in the U.S. totals 1,241,685 or 3.5% of the population.²⁸ Most of these exiles reside in Florida; their influence has been a factor in determining the margin of victory in the past two presidential elections. But this election strategy may be flawed, because recent polls of Cuban Americans reflect a decline for President Bush based on his policy crackdown. There is a clear softening in the Cuban-American community with regard to sanctions. Younger Cuban Americans do not necessarily subscribe to the hard-line approach. These changes signal an opportunity for a new approach to U.S.-Cuban relations. (Table 1) The time has come to look realistically at the Cuban issue. Castro will rule until he dies. The only issue is what happens then? The U.S. can little afford to be distracted by a failed state 90 miles off its coast. The administration, given the present state of world affairs, does not have the luxury or the resources to pursue the traditional American model of crisis management. The President and other government and military leaders have warned that the GWOT will be long and protracted. These warnings were sounded when the administration did not anticipate operations in Iraq consuming so many military, diplomatic and economic resources. There is justifiable concern that Africa and the Caucasus region are potential hot spots for terrorist activity, so these areas should be secure. North Korea will continue to be an unpredictable crisis in waiting. We also cannot ignore China. What if China resorts to aggression to resolve the Taiwan situation? Will the U.S. go to war over Taiwan? Additionally, Iran could conceivably be the next target for U.S. pre-emptive action. These are known and potential situations that could easily require all or many of the elements of national power to resolve. In view of such global issues, can the U.S. afford to sustain the status quo and simply let the Cuban situation play out? The U.S. is at a crossroads: should the policies of the past 40 years remain in effect with vigor? Or should the U.S. pursue a new approach to Cuba in an effort to facilitate a manageable transition to post-Castro Cuba? ANALYSIS OF POLICY ALTERNATIVES The U.S. can pursue three policy alternatives in dealing with Cuba: SUSTAIN THE CURRENT POLICY AND FULLY ENFORCE THE ECONOMIC EMBARGO The crux of the argument for this policy is that sanctions and other restrictions will exert tremendous pressure on the Castro regime, in hope that the regime will fall prior to Castro's death. There is little indication that this policy will succeed. The U.S. is

virtually the only country pursuing a policy to isolate Cuba. In the 1990s Castro was able to develop new trade and markets. While Cuba is not a prosperous country, it has nonetheless managed to endure. The loss of Soviet subsidies, which amounted to 25% of Cuba's national income, and the loss of the Eastern European bloc as trading partners, which amounted to 75% of Cuba's import/export trade, left Castro with no alternative but to implement economic changes both internally and externally.³⁰ These initiatives have stimulated steady, but modest, economic growth. Today in Cuba, 160,000 people (or 4% of the workforce) are self-employed.³¹ These entrepreneurial endeavors include small restaurants, taxi drivers, repairmen, and other service industries. If the present course of sanctions continues, the gains of these small reforms will be suppressed leading to significant deprivation for the people involved. Also, Cuba trades with over 100 countries worldwide, so while trade with the U.S. would certainly improve Cuba's economic well-being, it is debatable whether the lack of U.S. trade is bringing the regime to its knees. The point is that sanctions are not hurting Castro, but are hurting the Cuban population. Restricting trade and travel hurts the small businesses, the tourist industry and others whose livelihood depends on a service economy. It also degrades the quality of life of those Cubans whose financial support comes from family members in the U.S. Strategists who subscribe to current policy argue that these limitations/hardships will eventually promote an uprising among the populace to overthrow Castro. There is no substantial evidence that this will occur and much that argues against it. While Castro will not live forever, he has outlasted over 45 years of such U.S. policy. He is 78 years old and his father lived to be 80 under significantly less desirable conditions.³² If the present policy course is to wait Castro out this could potentially take another 5-10 years. The wait equates to 5-10 years of despair for the Cuban people, further decay of the country's infrastructure and more dire conditions that would make democratic reform all the more difficult and costly when Castro actually expires. Pursuing the present steady state policy will further alienate the Cuban people at home and abroad. The U.S. often has a myopic vision in regard to other cultures. In the case of Cuba, by focusing only on Castro and ignoring the Cuban peoples' culture and traditions, U.S. policy makers are blinded and have failed to see a future Cuba. **RETAIN SANCTIONS AGAINST CUBA, BUT ENFORCE THEM IN VARYING DEGREES DEPENDING ON THE POLITICAL CLIMATE AND THE CUBAN REGIME'S CONDUCT IN REGARD TO AMERICAN INTERESTS** Throughout the past 15 years, the U.S. has experimented with a variable enforcement option. During the Clinton administration, restrictions were occasionally eased. For example, in March 1998, President Clinton announced: 1) the resumption of licensing for direct humanitarian charter flights to Cuba; 2) the resumption of cash remittances up to \$300 per quarter for the support of close relatives in Cuba; 3) the development of licensing procedures to streamline and expedite licenses for the commercial sale of medicines and medical supplies and equipment; and 4) a decision to work on a bipartisan basis with Congress on the transfer of food to the Cuban people.³³ In January 1999, President Clinton ordered additional measures to assist the Cuban people, which included further easement of cash remittances, expansion of direct passenger charter flights to Cuba, reestablishment of direct mail service, authorization for the commercial sale of food to independent entities in Cuba, and an expansion of people-to-people exchanges (i.e. scientist, students, athletes, etc.)³⁴ This policy ended when the new administration failed to see any reciprocal progress from Castro. Fragmenting the policy process may do more harm than good. It does too little too late and causes hard feelings among Cubans and American businesses. The

carrot-stick diplomatic approach will not make Castro yield. Such policy breeds inconsistency as it can vary from administration to administration, as it has between the Clinton and Bush administrations. The rules constantly change and thus have a ripple effect on American businesses and the quality of life of Americans, Cuban-Americans and native Cubans. Cuban trade has already declined to a trickle since the Bush administration sought to further squeeze the Castro government. Prior to the Bush administration's trade crack down, 2004 was emerging as a record year for U.S. imports to Cuba. By the end of December 2004 U.S. suppliers and shippers were projected to have earned some \$450 million, a 20% increase over 2003 sales.³⁵ Imposing restrictions, as the Bush administration did in June 2004, perplexed American businesses with unpredicted problems. These businesses make adjustments, as do Cuban-American citizens, then must abruptly alter their business strategies because of a Congressional vote or an Executive order. This political tug-of-war does not move the U.S. any closer to realizing its security objectives. On the Cuban American front there is eroding support for this U.S. policy position. In the 2000 presidential election, President Bush won 81% of south Florida's Cuban-American vote. A recent poll by the William C. Veleasquez Institute-Miramir Global indicates that his support today has fallen to 66%.³⁶ This decline signals a negative response to policy that limits travel, restricts the amount of goods people can bring to their relatives, and places limitations on sending money to family in Cuba. Cuban-Americans believe that this only hurts their poor relatives in Cuba. According to Jose Basulto, head of Brothers to the Rescue, and Ramon Raul Sanchez, head of the anti-Castro Democracy Movement, the U.S. government is using the Cuban people to harass Castro.³⁷ Applying policy in a give-and-take manner, accomplishes little to facilitate the fall of Castro. The Cuban people enjoy brief periods of limited benefits, only to have these benefits withdrawn should the President or members of Congress wish to take another jab at Castro. American civilian businesses are also negatively affected. LIFT ALL SANCTIONS AND PURSUE NORMAL DIPLOMATIC RELATIONS WITH CUBA Normalcy is the only policy that the U.S. has not attempted. The present policy misses the security implications, alienates allies and others worldwide, harms U.S. businesses, and is losing support domestically. First, the U.S. must reassess the threat posed by Cuba. There is, in fact, virtually no security threat. Further, policies that were applicable in the past, when there was a threat, should not be applied to the current environment. The U.S. Cuban policy is perplexing because it appears to conflict with the ends, ways and means that the National Security Strategy is applied in other regions of the world. The U.S. has normalized relations with Vietnam and Libya and has certainly opted for an open dialogue with Communist China. Likewise, there is abundant evidence that a new policy toward Cuba could very well achieve the ends that 43 years of embargo have failed to accomplish. Secondly, Cuba currently trades and has diplomatic ties with much of the world. The goal of U.S. sanctions is to isolate the Cuban regime; however, they have only slowed, not deterred economic growth. On 4 November 2003 the United Nations voted, for the 12th straight year, 173 to 3 (with 4 abstentions) against the four-decade U.S. embargo against Cuba.³⁸ Voting with the U.S. were Israel and the Marshall Islands. The U.S.' staunchest allies, the 15 members of the European Union, along with Japan, Australia and New Zealand, all object to the "extra-territorial" effect of U.S. legislation that they feel violates their sovereignty. ³⁹ There are two schools of thought regarding trade and democracy. The first is that economic growth will promote democracy. The other questions this notion and argues that democracy must come first.⁴⁰ There is strong opinion, however, that in Cuba's case economic engagement will bring

about the desired results. Certainly many Cuban-Americans and perhaps some others in the world would not agree with this course of action. However, there is evidence that a significant number of people both within the U.S. and abroad favor a policy change. In 1992 a pastoral letter from Cuba's Bishops stated that the US embargo "directly affects the people who suffer the consequences in hunger and illness. If what is intended by this approach is to destabilize the government by using hunger and want to pressure civic society to revolt, then the strategy is also cruel."⁴¹ The third consideration is U.S. business. Under the current rules, U.S. businesses are permitted to sell agricultural produce to Cuba.⁴² Today 27 firms from 12 U.S. states are doing business with Cuba, making Cuba 22nd among U.S. agricultural markets.⁴³ These business activities are greatly influenced by Cuban-Americans and members of Congress. The economic power of the U.S. can be our most powerful weapon. The possibilities of economic engagement offer a myriad of branches and sequels that could promote a rapport between the American people and the Cubans. The aggressive pursuit of these endeavors would go far in ensuring an orderly transition to a post-Castro Cuba. It is an erroneous assumption to believe that Castro's demise will miraculously trigger reform and all the problems of the last 40 years will vanish. A visionary policy, albeit constrained within the parameters of the Castro regime, will go far in setting agreeable social-economic conditions in Cuba both now and in the future. Finally, public opinion in the U.S. favors a new policy direction. A 1997 Miami Herald poll found that a majority of Cubans under the age of 45 supported "establishing a national dialogue with Cuba," whereas for the most part their elders opposed such dialogue.⁴⁴ Former President Jimmy Carter, writing in the Washington Post after his May 2002 visit to Cuba, reported that he found an unexpected degree of economic freedom. Carter went on to say that if Americans could have maximum contact with Cuban, then Cubans would clearly see the advantages of a truly democratic society and thus be encouraged to bring about orderly changes in their society. ⁴⁵ Castro himself appears willing to consider greater reform. In 1998 he permitted Pope John Paul II to visit Cuba; Cubans are permitted to own property; he has opened trade; and in 2002 he broadcast former President Jimmy Carter's address at the University of Havana.⁴⁶ Additionally, he indicated that the Cuban government would return any of the Guantanamo detainees in the unlikely event that they would escape.⁴⁷

CONCLUSION AND RECOMMENDATION U.S. policy makers need to confront the real Cuba of today in order to build a "free" Cuba of tomorrow that is capable of taking its place in the world community as a responsible, democratic nation. Given the history of the past 100 years, and particularly our Castro centric policy, the U.S. needs to make a bold change toward Cuba. The U.S. has pursued a hard-line approach toward the Castro regime for over 40 years. While this policy was easily justified during the Cold War era and, to a certain degree, during the 1990s, it fails to address the present U.S. national security concerns. The globalization trends of the 21st century are irreversible, Fidel Castro is in the twilight of his life, and a new generation of Cuban-Americans is supportive of new strategies that will ease the transition to a post-Castro Cuba while buttressing economic and social opportunities in the near term. Furthermore, there is a new dimension that U.S. policy strategists must take into account in deciding the course of U.S.- Cuba relations – the GWOT. World-wide asymmetrical threats to U.S. interests, coupled with the Iraqi occupation and the potential for any one of the present hot spots (i.e. Iran, North Korea, Taiwan, etc.) to ignite, should prompt strategic leaders to work harder to mitigate a potential Caribbean crises. The prudent action would then be to develop

strategies that can defuse or neutralize these situations before they require the U.S. to divert resources from protecting its interests in the GWOT.

Economy---A2: No IL---Econ K2 Stability

Decline causes trafficking, smuggling, and instability

Evans 5 – Sara Evans, Research Associate at the Council on Hemispheric Affairs, “Callousness Redefined: How EU and US Economic Policies Spell a Bitter End for the Caribbean Sugar Industry”, SpecterZine, 6-27, <http://www.spectrezine.org/LatinAmerica/sugar.htm>

Caribbean nations have been heavily dependent on sugar exports since colonial times, and the commodity remains the backbone of many regional economies. An August 17, 2004 article featured in the Caribbean and Central America Report revealed that annual revenue from sugar exports totalled \$121 million for Guyana alone, \$70 million for Jamaica and \$34 million for Belize. In an interview with COHA, the Second Secretary of the Embassy of Guyana, Forbes July, stated that sugar is the country's chief export and that the sugar industry is Guyana's largest employer. In addition, according to a Caribbean Media Corporation interview of Guyana's foreign trade minister Clement Rohee, sugar accounts for 17 percent of Guyana's GDP. Sugar cane is the top agricultural export for both Jamaica and Belize. Washington's role in the evolution of the Caribbean sugar industry has historically been to discourage area exports to the US. The 1983 Caribbean Basin Initiative (CBI), which instituted a program of US tariff relief on many Caribbean products that remains in force today, resulted in increased US-Caribbean trade mainly as a result of the virtual elimination of US imposts on products from the region. Meanwhile, tariffs averaging 20 percent were maintained on US imports to the islands. Today such tariffs have fallen to approximately ten percent, according to WTO figures. Sugar was both excluded from duty-free treatment and restricted by quotas as Washington attempted to maintain its longstanding protection of domestic sugar cane and beet farmers. As a result, Caribbean sugar exports to the U.S. declined by 75 percent from 1981 to 1987, according to the Library of Congress. This trend was intensified by a decrease in the US's sugar quota prior to 1986. In fact, Caribbean exports as a whole declined by 24 percent from 1983 to 1985. However, the CBI mechanisms have contributed to a limited diversification of Caribbean exports, achieving some progress in attaining their primary goal of increasing stability among the CARICOM countries. At the same time, these initiatives originally were in large part aimed at counteracting the political influence of Cuba through strengthening the region's economic ties to Washington. The 1997 US-Caribbean Summit in Barbados facilitated trade dialogue and produced the Bridgetown Declaration of Principles, which asserted that there is an "inextricable link between trade, economic development, security and prosperity in our societies." Economic prosperity is essential to maintaining even minimal levels of law and order in Caribbean countries, as financial hardship is a main contributing factor to an increase in crimes like drug trafficking and gun running. It is crucial that the U.S. should manifest its concern for the support of sugar as an all-important staple crop for many Caribbean economies in order to preserve stability in the region.

Decline makes instability inevitable

Grant 5 – Cedric Grant, Professor of International and Caribbean Affairs at Clark Atlanta University, “U.S.-Caribbean Relations”, Institute for Policy Studies, 10-12, http://www.ips-dc.org/us-caribbean_relations/

But security issues do not follow a one-way street. Caribbean countries also have security concerns about relations with the United States. Caricom, for example, has voiced its concerns about gun smuggling from the U.S. and about the U.S. deportation of criminals of Caribbean origin back to the region. More fundamentally, Caribbean states contend that the security and stability problems in the region are rooted in economic development and thus cannot effectively be addressed in isolation from strategies to improve economic conditions. Accordingly, the Bridgetown Accord, the statement produced by the 1997 summit, “recognise[d] the inextricable links between trade, economic development, security and prosperity in [these] societies.”

Economy---A2: No War---Africa

Africa war escalates and goes nuclear

Lancaster 00

(Carol, Associate Professor and Director of the Master's of Science in Foreign Service Program – Georgetown University, “Redesigning Foreign Aid”, Foreign Affairs, September / October, Lexis)

THE MOST BASIC CHALLENGE facing the United States today is helping to preserve peace. The end of the Cold War eliminated a potential threat to American security, but it did not eliminate conflict. In 1998 alone there were 27 significant conflicts in the world, 25 of which involved violence within states. Nine of those intrastate conflicts were in sub-Saharan Africa, where poor governance has aggravated ethnic and social tensions. The ongoing war in the Democratic Republic of the Congo has been particularly nightmarish, combining intrastate and interstate conflict with another troubling element: military intervention driven by the commercial motives of several neighboring states. Such motives could fuel future conflicts in other weak states with valuable resources. Meanwhile, a number of other wars -- in Colombia, the former Yugoslavia, Cambodia, Angola, Sudan, Rwanda, and Burundi -- have reflected historic enmities or poorly resolved hostilities of the past. Intrastate conflicts are likely to continue in weakly integrated, poorly governed states, destroying lives and property, creating large numbers of refugees and displaced persons, and threatening regional security. The two interstate clashes in 1998 -- between India and Pakistan and Eritrea and Ethiopia -- involved disputes over land and other natural resources. Such contests show no sign of disappearing. Indeed, with the spread of weapons of mass destruction, these wars could prove more dangerous than ever.

Economy---A2: No War---Central Asia

Central Asian war causes global nuclear war

Blank 99 (Steven, Professor of Research – Strategic Studies Institute, US Army War College, Oil and Geopolitics in the Caspian Region)

Past experience suggests Moscow will even threaten a Third World War if there is Turkish intervention in the Transcaucasus and the 1997 Russo-Armenian Treaty of Friendship, Cooperation, and Mutual Assistance and the 1994 Turkish-Azerbaijani Treaty of Friendship and Cooperation suggest just such a possibility. Conceivably, the two larger states could then be dragged in to rescue their allies from defeat. The Russo-Armenian treaty is a virtual bilateral military alliance against Baku, in that it reaffirms Russia's lasting military presence in Armenia, commits Armenia not to join NATO, and could justify further fighting in Nagorno-Karabakh or further military pressure against Azerbaijan that will impede energy exploration and marketing. It also reconfirms Russia's determination to resist an expanded U.S. presence and remain the exclusive regional hegemon. Thus, many structural conditions for conventional war or protracted ethnic conflict where third parties intervene now exist in the Transcaucasus. Many Third World conflicts generated by local structural factors have great potential for unintended escalation. Big powers often fear obliged to rescue their proxies and protégés. One or another big power may fail to grasp the stakes for the other side since interests here are not as clear as in Europe. Hence, commitments involving the use of nuclear weapons or perhaps even conventional war to prevent defeat of a client are not well established or clear as in Europe. For instance, in 1993 Turkish noises about intervening in the Karabakh War on behalf of Azerbaijan induced Russian leaders to threaten a nuclear war in such a case. This confirms the observations of Jim Hoagland, the international correspondent of the Washington Post, that "future wars involving Europe and America as allies will be fought either over resources in chaotic Third World locations or in ethnic upheavals on the southern fringe of Europe and Russia." Unfortunately, many such causes for conflict prevail across the Transcaspians. Precisely because Turkey is a NATO ally but probably could not prevail in a long war against Russia, or if it could conceivably trigger a potential nuclear blow (not a small possibility given the erratic nature of Russia's declared nuclear strategies), the danger of major war is higher here than almost anywhere else in the CIS or the so-called arc of crisis from the Balkans to China.

Economy---A2: No War---East Asia

East Asia escalates---no checks

Adams 14 – Shar Adams, Reporter at the Epoch Times, “Asian Cold War: Escalating Conflict in North-East Asia Bigger Threat Than War on Terror”, Epoch Times, 10-13, <http://m.theepochtimes.com/n3/1014683-asian-cold-war-escalating-conflict-in-north-east-asia-bigger-threat-than-war-on-terror/>

The world may be focused on the “war on terror”, but the arms build up in North-East Asia poses a far greater threat to global stability, says Professor Desmond Ball, a senior defence and security expert at the Australian National University (ANU). A former head of ANU’s Strategic & Defence Studies Centre, Professor Ball is no lightweight when it comes to security concerns. It is Professor Ball’s expertise in command and control systems, particularly in relation to nuclear war, that underlies his concerns about North-East Asia. “North-East Asia has now become the most disturbing part of the globe,” Prof Ball told Epoch Times in an exclusive interview. China, Japan and South Korea – countries that are “economic engines of the global economy” – are embroiled in an arms race of unprecedented proportions, punctuated by “very dangerous military activities”, he says. Unlike the arms race seen during the Cold War, however, there are no mechanisms in place to constrain the military escalation in Asia. “Indeed, the escalation dynamic could move very rapidly and strongly to large scale conflict, including nuclear conflict,” said Prof Ball. “It is happening as we watch.” Arms Race Military spending in Asia has grown steadily over the last decade. According to a 2013 Stockholm International Peace Research Institute report, China is now the world’s second largest military spender behind the United States, spending an estimated \$188 billion in 2013. Japan and South Korea are also among the world’s top 10 military spenders. When North Korea and Taiwan are included, North-East Asian countries constitute around 85 per cent of military spending in Asia. But what is more disturbing, Prof Ball says, is the motivation for the acquisitions. “The primary reason now for the acquisitions, whether they are air warfare destroyers, missiles or defense submarines, is simply to match what the other [countries] are getting,” he said. While he believes it is likely that Japan would have embarked on military modernisation, he says it is China’s military provocation of countries across Asia that is fuelling the build-up. Since China lay claim to all of the South China Sea, it has escalated territorial disputes with Vietnam, the Philippines and Malaysia. What started with skirmishes between locals and Chinese fishing boats or navy vessels has now become territorial grabs – island building on contested rocky outcrops. In a sign of things to come, the South China Morning Post reported in June: “China is looking to expand its biggest installation in the Spratly Islands into a fully formed artificial island, complete with airstrip and sea port, to better project its military strength in the South China Sea.” According to Filipino media, the artificial island falls within the Philippines’ 200-mile Exclusive Economic Zone. Prof Ball says China’s behaviour in the South China Sea is provocative, but “in the scale of what we are talking about, that is nothing” compared with conflicts in North-East Asia, where China and Japan are contesting claims over the Tokyo-controlled Senkaku Islands (claimed as the Diaoyu by China). Of the Senkakus conflict, Prof Ball says: “We are talking about actual footsteps towards nuclear war – submarines and missiles.” Screen Shot 2014-10-13 at 4.50.48 pm Chinese

and Japanese activity in the Senkakus region has escalated to the point where sometimes there are “at least 40 aircraft jostling” over the contested area, he said. Alarm bells were set off near the Senkakus in January last year when a Chinese military vessel trained its fire-control radar on a Japanese naval destroyer. The incident spurred the Japanese Defense Ministry to go public about that event and reveal another incident from a few days prior, when a Chinese frigate directed fire-control radar at a Japanese military helicopter. Fire-control radars are not like surveillance or early warning radars – they have one purpose and that is to lock onto a target in order to fire a missile. “Someone does that to us, we fire back,” Prof Ball said. Counter Measures Needed Prof Ball is recognised for encouraging openness and transparency, and for his advocacy of multilateral institutions. He has been called one of the region’s “most energetic and activist leaders in establishing forums for security dialogue and measures for building confidence”. In his experience visiting China over the years, however, Prof Ball says gaining open dialogue and transparency with Chinese military leaders is difficult. He recounted a private meeting with a Chinese admiral shortly after the fire-control radar incident. Prof Ball had seen direct evidence of the encounter – “tapes of the radar frequencies, the pulse rates and the pulse repetition frequencies” – and wanted to know what had happened on the Chinese side and why it took place. “In a private meeting, I asked the admiral why ... and he denied it to my face,” Prof Ball said. The Chinese admiral would not even concede that an incident had happened. “I don’t see the point of this sort of dialogue,” he added. With so many players in the region and few barriers against conflict escalation, the North-East Asian nuclear arms race is now far more complex and dangerous than the Cold War, he says. In the Cold War, there were mechanisms at each level of potential confrontation, including a direct hotline between the US and Soviet leaders. “Once things get serious here, [there is] nothing to slow things down. On the contrary, you have all the incentives to go first,” he said. As a key ally to Japan and South Korea, the United States would ultimately be involved in any escalated conflict and could play a decisive role in the region. While Prof Ball believes it is too late for arms control mechanisms, he says it is critical that Washington ensures policy development and informed debate.

Senate, Hidalgo said.

EX-IM Bank

1nc Shell

Uniqueness and Internal Link – the Export-Import Bank will likely be reauthorized now, but Obama’s capital is vital

Rothkopf 6/11/15 (David, CEO/Editor @ Foreign Policy, "Are We About to See the High-Water Mark of Obama's Foreign Policy?" <https://foreignpolicy.com/2015/06/11/high-water-mark-of-obama-foreign-policy-trade-promotion-authority/>)

The result has been old-fashioned horse-trading and a refreshingly intensive effort by the White House to use the president’s power, prestige, and persuasive capabilities to eke out the votes they needed to win the day. Friday’s vote will be close. But with “fast-track” TPA assuring that there will be only an up or down vote on the ultimate TPP deal that is struck, the way will be clear for U.S. negotiators to hammer out the final details of the agreement with the Japanese and others who have open issues. The senior economic official cited above also said that with the TPA in place he expects the TPP deal itself to be done and approved “very quickly ... hopefully this summer.” The senior economic official cited above also said that with the TPA in place he expects the TPP deal itself to be done and approved “very quickly ... hopefully this summer.” The president has made passage of the deal, which he argues will both promote export-driven job creation and send a message to China — not a party to TPP — that it will have to rise up and meet international trade standards or risk getting left behind economically. The positive impact on both fronts is probably somewhat overstated by the White House, but that’s always the case in such campaigns for a new deal. Nevertheless, the deal strengthens economic ties with some of the world’s most dynamic economies, removes key barriers to exports, and represents the most important progress on global trade since the Uruguay Round and NAFTA in the early 1990s. (It should be noted that, like both of those deals, the process that led to the deal began in administrations preceding those that will ultimately get to close and celebrate them. Therefore, Bush administration U.S. Trade Representative (USTR) Susan Schwab deserves as much credit on this deal as current Obama USTR Michael Froman. Both have been among the most effective to occupy the trade rep’s office.) Speaking of which, first-class personnel are a key to the international economic team’s success. As noted here before, I was once a senior Commerce Department official who had the privilege to work with a great commerce secretary, the late Ron Brown. I have known every commerce secretary in my adult lifetime. And I can say without fear of contradiction that Penny Pritzker is among the smartest, most energetic, and capable people ever to hold the job. Her team is already making plans to follow up the approval of TPP with a series of trips to signatory countries to ensure U.S. companies can take advantage of the opportunities the deal presents. Another victory on this front to likely come this summer (and be even harder won) will be the reauthorization of the United States Eximbank. Whether that reauthorization occurs before or after the June 30 due date is still uncertain given the vagaries associated, resulting from the absolutely bizarre politics that have turned what should have been an automatic reauthorization into one of the most ridiculous displays of Congressional malpractice we have ever seen. And this Congress has given us a lot of instances to choose from. While slam-dunks have gotten a bad name in Washington ever since George Tenet abused the term in the days before the Iraq War, the reauthorization of the U.S. Export-Import Bank (or Exim) should have been one of them. The bank is led by another of the Obama team’s standouts, Fred Hochberg. Hochberg has overseen a vast expansion of its lending, major

pushes to extend its reach and support to small- and medium-sized enterprises, measures to ensure more lending on green projects, and active support for creating U.S. jobs through leveling the playing field against the super-aggressive tactics of other governments in the export financing space. Deals and lending have achieved all-time highs under his tenure and unlike most parts of the government, this one is actually profitable, returning over \$1 billion to U.S. government coffers. That's right, to shut down the bank, Congress would actually have to come up with new revenue to make up for that which the bank regularly produces. Think about that. Despite the fact that Exim is a profitable agency that creates much-needed jobs, supports businesses of every size from coast to coast, and also ensures fairer global competition, some in Congress have targeted the agency and tried to shut it down. Why? Because to some, it represents "corporate welfare." (Meaning that it is seen as a subsidy to big companies that don't need the help.) But not only does it finance many deals that couldn't get commercial financing and many for smaller businesses, it also ensures that U.S. companies don't lose out when other governments subsidize financing to their own companies. (Which virtually every other developed economy in the world and many smaller ones do.) Would the world be better off if every export-import financing agency were shut down? Sure. And when that happens we should revisit this discussion. Until then the idea of shutting down Exim is ridiculous — unilateral disarmament at precisely the wrong time penalizes an agency doing the best work it has ever done. And that's why, in the end, the bank will be reauthorized; and that will rightly be considered another victory. But there are still other promising developments in areas outside the national security mess that has commanded most of the attention directed toward Obama's foreign policy. One thing Exim does is help support some of the administration's worthy development efforts like Power Africa, programs that can help the neediest economies in the world grow and have the kind of steady economic growth that is the best defense against instability and extremism. That work has been led in this administration by an extremely effective partnership between the U.S. Agency for International Development (USAID) and the White House. Until recently, USAID has been led by Raj Shah, one of the most creative and impressive senior officials to enter the U.S. government in many years. Shah not only effectively managed the agency that plays such a key role in post-conflict reconstruction, stabilization, and development, but he also actively explored the use of new technologies and approaches in ways that triggered a much-needed rethink about how to make the most of the (too little) the United States spends in this area. Now that Shah has departed the government, President Obama has nominated Gayle Smith for the job. He could not have made a better choice. Smith, who worked with Shah as the quarterback of White House efforts on these issues, is someone who had devoted her life to development issues whether as a journalist, in the NGO community, or during productive stints in the Clinton and Obama White Houses. (She is the co-founder of the Modernizing Foreign Assistance Network and served on a bipartisan Congressional commission on foreign aid.) I know Smith well, having worked with her in the past, and while she is not someone you want to bump heads with, she is the best kind of public servant, one who deeply believes in the mission and knows how to get things done. Her confirmation would also be a significant win for the White House.

Impact – Reauthorization is key to US economic leadership globally – that solves global war

Jones 15 (James, served as national security adviser to President Barack Obama, supreme allied commander Europe, and commandant of the U.S. Marine Corps, 5/19, "Keep the Export-Import bank: Column," <http://webcache.googleusercontent.com/search?q=cache:p4aLZda8-CwJ:www.usatoday.com/story/opinion/2015/05/19/export-import-bank-charter-trad-column/27540639/+&cd=1&hl=en&ct=clnk&gl=us>)

Over two centuries ago John Adams observed that "facts are stubborn things." Whether they are resilient enough to prevail over ideological passions is being sorely tested in the current congressional debate whether to reauthorize the U.S. Export-Import Bank (Ex-Im), whose charter is set to expire on June 30. Despite the opposition's extreme rhetoric, the basic facts remain. Fact: America's prosperity and strength depends upon vigorous trade and market access abroad. Fact: 95% of the world's customers live outside our national borders, where massive middle classes with huge purchasing power are emerging. Fact: America must compete fiercely in these markets with other countries for sales, for investments, to develop supply chains, and to gain greater geopolitical influence. Fact: Export credit — the kind provided by the Ex-Im bank — remains a critical component of America's competitiveness toolkit. Since its founding during America's effort to emerge from the Great Depression, the Ex-Im bank has supported American jobs by financing our exports when credit is not commercially available or when U.S. companies face undue competition in foreign markets from competitors provided financing by their governments. It levels the playing field for American businesses so they can compete in foreign markets against foreign competitors. Many opponents of reauthorization base their arguments on a world that doesn't exist, where markets are untrammelled by state-supported export finance. The reality is that throughout the world approximately 60 export credit agencies are jockeying to offer enticing financing terms with a view to winning more and more sales for the companies domiciled in their respective nations, often at our expense. China, Europe, Russia and even Canada have expanded their state-backed export support even as Congress continues to deliberate on the future of Ex-Im. One of China's multiple export credit arms has authorized more financing in the last two years than Ex-Im has since its founding eight decades ago. Even some nations that are party to the OECD Arrangement on Officially Supported Export Credits that sets export financing limitations and guidelines for OECD member countries including the United States, often lend outside the framework, further disadvantaging American companies and our nation. Last year alone, Ex-Im backed U.S. exports valued at approximately \$27.5 billion and supported 164,000 export-related U.S. jobs. Using the accounting method required by law, Ex-Im has sent to the Treasury \$7 billion more than it has received in appropriations since 1990. Ex-Im's record of strengthening U.S. exports and competitiveness while generating revenue for the U.S. treasury explain its long history of bipartisan support from Republican and Democratic presidents and the U.S. Congress. It would be a bit naïve to suppose that foreign governments would suddenly about-face and dam their tidal waves of export credits if Congress were to shutter Ex-Im's doors. Competitors would welcome the United States unilaterally disarming and ending its export finance program. It would mean more business for their companies and a stronger geopolitical hand around the world for them. The reality is that if the United States leaves the field on export financing we place more at U.S. business abroad and jobs at home at

risk; we would undermine American influence and economic leadership at a time when it's needed more than ever. As a former NATO commander, service chief and national security adviser, I have witnessed firsthand the geostrategic importance of American economic engagement. Where the U.S. private sector is not present, America's interests and values suffer. The result is a less stable and secure world. After serving over 40 years in uniform, I have a trained aversion to whatever threatens our nation. The willful undermining of our national economic competitiveness counts among them. I would agree that a world without state-funded export credits is one to which we should aspire. However, unilaterally disarming by closing Ex-Im is not the answer. It would destroy the U.S. Treasury's leverage in negotiating reductions to state-backed export finance that would be observed by all — creating the level playing field we should all seek. As Americans, we hope and trust that despite the fractiousness of our political system, we can still overcome gridlock to do what's best for our nation. The stubborn fact is that reauthorizing the Ex-Im bank is good for America. It will help sell more American products abroad, support American jobs, expand U.S. global influence and do so without adding to our fiscal deficit. Whether slogans prove more stubborn than facts remains to be seen. For our country's sake, let's hope that John Adams was right and that the facts and our national interest prevail.

*****Insert specific impact scenario (great power war or Russia) if so desired**

Will Pass – 2nc

Ex-Im Bank reauthorization will pass

Johnsson 6/15/15 (Julie, Bloomberg, "Boeing CEO Is 'Confident' Ex-Im Bank Will Survive Funding Vote," <http://www.bloomberg.com/news/articles/2015-06-15/boeing-ceo-is-confident-ex-im-bank-will-survive-funding-vote>)

Boeing Co. Chief Executive Officer Jim McNerney said he's "confident" the U.S. Export-Import bank will survive conservative lawmakers' campaign to cut off funding at the end of the month. The odds for the bank, whose credits support aircraft sales for the largest U.S. exporter, appear better after two-thirds of the U.S. Senate signaled support for the export credit agency in a procedural vote last week, McNerney said. "That is a huge expression of interest in sustaining the viability of this bank," McNerney told Bloomberg TV in an interview at the Paris Air Show. "There's some gymnastics that have to happen to get that attached to another bill and voted on in both the Senate and House. That's my source of confidence that it's going to happen." Boeing benefits because the bank provides backstop financing of its aircraft to overseas customers, helping them make purchases, valuable support when credit is squeezed during a global financial crisis. Republicans, who control both houses of Congress, are divided on the bank's future. Democrats and Republicans from both chambers say there is enough support for the bank to reauthorize it. They just haven't figured out a way to get it to the floor before June 30.

Ex-Im Bank reauthorization will pass – Senate test vote proves strong support

Rogers 6/11/15 (Alex, National Journal, "Senate Democrats Are Confident They Can Save the Export-Import Bank," <http://www.nationaljournal.com/congress/senate-democrats-are-confident-they-can-save-the-export-import-bank-20150611>)

June 11, 2015 Senate Democrats and a substantial number of Republicans believe they can save an obscure, 81 year-old U.S. government bank, despite almost united opposition from GOP leadership in both chambers of Congress, after a key test vote Wednesday showed that they have near-filibuster proof support. One such advocate, Washington Democratic Sen. Maria Cantwell, pledged that it's not a question of if Congress will reauthorize the Export-Import Bank, but when. "It will get done," she said in a news conference Thursday. "Someday."

Will be reauthorized – insiders are confident

Cook 6/12/15 (David, Staff @ Christian Science Monitor, "Ex-Im Bank chief is 'confident' Congress will renew bank's charter," http://www.csmonitor.com/USA/Politics/monitor_breakfast/2015/0612/Ex-Im-Bank-chief-is-confident-Congress-will-renew-bank-s-charter)

WASHINGTON — US Export-Import Bank chairman and president Fred Hochberg says he is confident Congress will vote to renew the bank's charter before it expires June 30, despite opposition from conservative Republicans. "I am still confident that we are going to get reauthorized," Mr. Hochberg told a Monitor-hosted breakfast for reporters. The bank guarantees loans for US companies that sell products overseas. "The fact that we create jobs, we send money to the Treasury, and 90 percent of our customers are small business are compelling arguments," he said. Last year the bank returned \$675 million in profits. "We need

more trade agreements,” Hochberg said, referring to President Obama’s battle to win congressional approval of fast-track negotiating powers called trade promotion authority (TPA) and of a massive Trans-Pacific Partnership (TPP) trade agreement with a dozen Pacific Rim countries. But the bank’s chief executive said he thought Ex-Im would be reauthorized regardless of the outcome of those other trade battles.

A2 Not Top Priority/Thumpers

Obama spending capital on Ex-Im Bank reauthorization

Grunwald June 15 (Michael, Politico, Interviewing Ex-Im Bank CEO Fred Hochburg, "'Frankly, we're going to be reauthorized'," June, <http://www.politico.com/agenda/story/2015/06/frankly-were-going-to-be-reauthorized-000064>)

MG: You're starting to hear some conservatives saying they think they can kill this just by not bringing it up for a vote. How worried are you? — FH: Well, Speaker Boehner has made it very clear that the House has to take a vote in some fashion, and not just let it lapse on us. Mitch McConnell, the Senate Leader, also said there's going to be a vote in June. And President Obama has been very clear. Now, we've got only 30 days, but let's be clear, that's the President of the United States, the Speaker of the House and the majority leader of the Senate. MG: The Ex-Im has become a political football. I think a lot of people kind of know they're fighting about it in Washington, but don't know what it is. What is the Ex-Im? What do you do all day? FH: We start a lot of conversations saying we're not XM the radio station! We've been around for over 80 years. We're an export credit agency, one of about 70 around the world. All the developed countries of the world have them. And developing countries have them. So we exist to support US jobs, as do the others in their countries. And when there's a financial crisis—we just came through the worst crisis since the depression—we can fill in a gap in the financial markets when they're retreating or pulling back. So that's what we do, and as a result last year we supported 164,000 jobs.

Will be authorized and top administration priority BUT it's a fight

Altman 6/14/15 (Alex, Reporter @ TIME, "This Agency May Have Already Been Killed by the 2016 Campaign," <http://time.com/3919097/ex-im-bank-2016-campaign/>)

The chairman of the U.S. Export-Import Bank has spent a lot of time on Capitol Hill lately fighting to save his embattled institution. The bank, whose charter lapses June 30, has been the target of a coordinated campaign orchestrated by conservatives who call it a form of crony capitalism. Which means chairman Fred Hochberg has been shuttling between meetings with influential lawmakers, pleading with top House Republicans like Majority Leader Kevin McCarthy and Financial Services Chairman Jeb Hensarling to keep the credit export agency alive. "I'm still confident that we are going to get reauthorized," Hochberg told reporters Friday at a breakfast hosted by the Christian Science Monitor. But he acknowledged the possibility that it wouldn't happen before the deadline, which would force supporters to find a way to revive the multi-billion dollar institution later on. "We've got some headwinds," Hochberg conceded. "There is no plan B."

A2 Dem Unity Low Now

Dem unity high now – ESPECIALLY in support of Ex-Im Bank reauthorization

Grunwald June 15 (Michael, Politico, Interviewing Ex-Im Bank CEO Fred Hochburg, "'Frankly, we're going to be reauthorized'," June, <http://www.politico.com/agenda/story/2015/06/frankly-were-going-to-be-reauthorized-000064>)

MG: How about on the left? There have been a lot of complaints that you've backed coal projects in the past, doing business with dictators who don't like us so much. FH: Frankly, on the Democratic side of the House, we have over 190 co-sponsors, the entire congressional delegation is with us. In the Senate, we had 78 senators vote for us in 2012, and 330 in the House. In both cases, we had every single Democrat vote for the Ex-Im bank extension last time. MG: Why do you think suddenly this became a thing? What made suddenly Ex-Im became this sexy political topic?

Capital Key – 2nc

Capital key to winning reauthorization

Paletta 14 (Damian covers economic policy for The Wall Street Journal's Washington bureau. "Export-Import Bank 101" Jun 24, 2014 <http://blogs.wsj.com/washwire/2014/06/24/export-import-bank-101/>)

Q: Who are the people worth watching as this unfolds?¶ A: Start with incoming House Majority Leader Kevin McCarthy (R., Calif.). He lit some business leaders' hair on fire when he proclaimed this weekend that he wanted the bank to go out of business.¶ He voted to support the agency in 2012, and his pivot helps the conservative wing of the party gain momentum to shut the place down. Another key figure is Speaker of the House John Boehner (R., Ohio). A lot of business leaders who support the bank believe he's their best shot for a Hail Mary pass as October approaches. The roles of President Barack Obama and Senate Majority Leader Harry Reid (D., Nev.) will also be pivotal. Will they really expend political capital to fight for this agency?

Capital key to winning support for reauthorization

Madhani 1/13/12 (Aamer, USA Today, "Export-Import Bank reauthorization delayed," <http://www.usatoday.com/news/washington/story/2012-01-11/export-import-bank-republicans-airlines/52523426/1>)

WASHINGTON - U.S. exporters and major airline carriers are fighting over reauthorization of a federal trade bank that plays a key role in President Obama's jobs plan, according to industry insiders and congressional records. House Republican leaders, pushed by the major U.S. airlines, delayed a long-term reauthorization of the Export-Import Bank and a decision on whether to increase the bank's lending cap to \$135 billion from the current limit of \$100 billion before lawmakers headed home last month. The bank, which guarantees loans from U.S. banks to foreign businesses that then buy U.S.-made products, approved \$32.7 billion in loans last year but is quickly edging toward hitting its cap. The bank, which was founded in 1934 and returns a modest amount of revenue to the Treasury, has been praised by Obama as a vital tool to his goal of doubling U.S. exports by 2015. Officials from top exporting companies — including Boeing's James McNerney and General Electric's Jeffrey Immelt — warned House leaders in a letter last month that failure to increase the lending cap could lead to the loss of thousands of U.S. jobs. "The bank's work is at risk of grinding to a halt," said John Murphy, vice president of international affairs at the U.S. Chamber of Commerce, adding that the bank is on track to max out in April or May. Airlines for America (AFA), the trade association that represents the leading U.S. air carriers, insists that Congress make fundamental changes to how the bank operates as part of any increase in the lending cap. The group argues that the bank finances loans to foreign carriers at favorable terms unavailable to domestic carriers, putting U.S. airlines at a competitive disadvantage. Steve Lott, a spokesman for AFA, said the group wants Congress to make any increase in the bank's loan ceiling contingent on increasing transparency of aircraft financing transactions and a prohibition on loan guarantees for foreign airlines with investment grade credit ratings that would allow them to secure financing without the bank's help. "We're pro-Boeing; we're in support of the president's initiative to double exports ... but we're concerned with any market distortion that creates an unlevelled playing field," Lott said. In the past decade, the bank has provided more than \$52 billion in loan guarantees to buy Boeing aircraft, Airlines

for America says. Foreign airlines took delivery of 792 wide-body aircraft, compared with 189 for U.S. airlines, AFA says. AFA also recently sued to stop the bank from delivering \$1.3 billion in loan guarantees to Air India to buy Boeing aircraft. A federal judge in Washington is expected to rule today on a request to block the guarantees while he considers the legal challenge. Boeing's backers say that such rule changes would help foreign competitors, such as Airbus, the European aircraft manufacturer. "Our argument is that if you undermine the credibility and competitiveness of Ex-Im, you're not going to help the American carriers, you're going to help Airbus," said John Hardy, president of a Coalition for Employment through Exports, which counts Boeing as a member. The Obama administration supports expanding the cap. Last month, the president touted the bank for playing a critical role in a multibillion-dollar deal for Indonesia's Lion Air to buy 230 Boeing jets. And earlier this week at a White House conference on "insourcing" American jobs, the White House hailed a \$636 million direct loan from the Ex-Im Bank to finance the sale by Siemens Energy of gas and steam turbines to be installed in Saudi Arabia. The Siemens project will support 825 jobs in North Carolina. Reauthorizing the bank and expanding its lending cap is an administration priority, and "we will continue to work closely with Congress to get this done," White House spokeswoman Amy Brundage said. Both sides have put up big lobbying efforts to make their case to Congress.

Dem Unity Key – 2nc

Dem unity key to Ex-Im Bank reauthorization

Levy 6/11/15 (Gabrielle, US News and World Report, "Export-Import Bank Heading Toward Closure," <http://www.usnews.com/news/articles/2015/06/11/us-export-import-bank-heading-toward-closure>)

More than 80 years after it was founded in the midst of the Great Depression, the U.S. Export-Import Bank could be nearing its end. And it could come down to partisan politics. The charter authorizing the credit agency, which is charged with accepting credit risk to help spur the sale of American-made goods abroad, expires at the end of June. While for most of its history, the bank was so uncontroversial that its charter was renewed without so much as a recorded vote, a growing outcry from conservatives in the past few years has imperiled it. While most Democrats and many rank-and-file Republicans support reauthorization, opposition from the conservative wing of the GOP has become loud enough that Republican leadership is wary of bringing it up for a vote. Supporters say the bank, which primarily guarantees loans taken by U.S. businesses to sell products overseas, is hugely important to small- and medium-size businesses and is an engine for job creation and opening new markets overseas. In the 2014 fiscal year that ended in October, the bank provided \$20.5 billion in credit assistance. It did so at no cost to the taxpayer, and actually returned \$675 million to the U.S. Treasury from interest and fees. If the bank were to close, a large corporation like Boeing would have to take on more of its own risk, but not stop exporting planes. But smaller companies often rely on the bank to make loans to foreign buyers for their products, and could see significant hits to their sales and profits. "The [Export-Import Bank] supported \$27.5 billion in economic activity the last year alone," House Democratic Whip Steny Hoyer, D-Md., told reporters Tuesday. "1.3 million jobs are attributable to exports." But critics complain that the credit agency "picks winners and losers," a charge based on the overwhelming majority of the bank's loan guarantees – 87 percent – that go to just three companies: Boeing, Caterpillar and General Electric, earning it the nickname "Bank of Boeing" around Washington. And some of the losers, critics say, are small businesses that don't get the same treatment as the large companies. House Financial Services Committee Chairman Jeb Hensarling, R-Texas, has led the charge against renewal, arguing that the bank represents the worst of government cronyism. He has refused to move the charter renewal legislation through his committee, and on Tuesday, his Senate counterpart, Banking Committee Chairman Richard Shelby, R-Ala., said he would do the same. "If there's not going to be reform, we ought to let it die," Shelby told reporters. "I believe that if at the end of the day it expires, we really won't miss it." Those reforms, gathered into a bill sponsored by Rep. Stephen Fincher, R-Tenn., would extend the bank for five years, limit the bank's president to two four-year terms, increase financial disclosures for employees and contractors, and reverse guidelines opposed by the coal industry that block financing to foreign power plants that don't adopt green technology. U.S. Export-Import Bank Chairman and President Fred Hochberg pauses while speaking during the agency's annual conference on April 4, 2013, in Washington. Backers of reauthorization, including the U.S. Chamber of Commerce, say failing to renew the bank's charter would immediately leave businesses hanging. Sen. Maria Cantwell, D-Wash., whose state is home to Boeing, has spearheaded the push to renew the Ex-Im charter. "The Export-Import Bank in the state of Washington has helped generate \$102 billion in exports and helped over 230 exporters

in our state," she said at a roundtable supporting reauthorization. "The idea that we would let a tool of the American economy, which literally helps us grow our businesses, expire – when it actually generates money for our economy and costs us nothing – is something very hard for most people to believe." Boeing itself may have undercut arguments to reauthorize the bank last week when it announced it would use its internal financing arm to support foreign buyers in the event the Export-Import Bank goes away, which opponents could point to as proof the bank is unnecessary. "We do provide some customer financing, and if there's a short-term shutdown of Ex-Im, we will work with customers who are scheduled for deliveries to ensure they get the financing they need, even if we have to provide it ourselves," Tim Neale, a Boeing spokesman, told the Wall Street Journal. In the House, Majority Leader Kevin McCarthy, R-Calif., and Whip Steve Scalise, R-La., have both come out in opposition to the reauthorization, while Speaker John Boehner has refused to weigh in on either side. "He's in a very difficult position," says Dan Holler, the communications director for Heritage Action for America, which has pushed hard against reauthorization of Export-Import. "All the Republican presidential candidates have flipped around ... is the speaker willing to lead congressional Republicans in the wrong direction on this issue?" But Republican opposition, at least among the mainstream, is new, supporters like to point out. They quote the likes of Presidents George W. Bush, Ronald Reagan, Gerald Ford and Dwight Eisenhower as in favor of the bank. Hoyer on Tuesday said a unified Democratic caucus and about 60 Republicans who have publicly pledged their support for the bank would give the charter reauthorization enough support to pass.

Ex-Im Bank Key to Econ Heg – 2nc

Ex-Im Bank reauthorization is vital to US economic supremacy

Thompson 6/12/15 (Loren, Business and National Security contributor @ Forbes, "Crazy Crusade To Kill Ex-Im Bank Hurts America, Helps China,"

<http://www.forbes.com/sites/lorenthompson/2015/06/12/crazy-crusade-to-kill-ex-im-bank-hurts-america-helps-china/>)

With last year's non-petroleum trade deficit ranked as the worst ever recorded after adjusting for inflation, you'd think Congress would be moving decisively to help U.S. exporters. Well, guess again. Right-wing Republicans are actually trying to kill off the Export-Import Bank ("Ex-Im"), which would make America the only major trading nation in the world without an export credit agency. If that ill-conceived campaign succeeds, it will accelerate China's rise as a global economic power and hasten America's decline. When Ex-Im critics cite their bill of particulars for why abolishing America's only export credit agency makes sense, you get the feeling they've never heard of China. China is the biggest reason for America's yawning trade gap, and its use of state funds to push exports around the globe dwarfs anything Ex-Im is doing. At the moment, Ex-Im has a loan portfolio worth about \$110 billion. Over the last two years alone, China has passed out \$670 billion in loans and other financial assistance to its exporters. And unlike Ex-Im programs, Beijing's export assistance often takes the form of subsidies. Ex-Im is required by law to be self-sustaining, so it has to charge fees whenever it provides a loan guarantee or any other type of financial assistance. In fact, it generates a profit for taxpayers by charging foreign buyers for what amounts to insurance that their deals will be consummated. China's export credit agencies (it has several) supposedly are required to be self-sustaining too under World Trade Organization rules, but their operations are as opaque as everything else in official China. So it shouldn't come as a surprise that Beijing has provided export assistance to one favored telecom company — Huawei — greater in value than Ex-Im's entire loan portfolio. Huawei now routinely beats U.S. rivals for telecom contracts in places like Brazil, even though it is rumored to have used proprietary technology developed by those rivals in its own offerings. This is standard operating procedure for Chinese exporters in the developing world, where they typically show up with inferior products but irresistible financing courtesy of the Beijing government. Over the long haul, China's push to replace U.S. companies in foreign markets may prove more injurious to American power and prosperity than the huge gap in bilateral trade of goods between the two countries (the U.S. deficit in China trade was \$343 billion last year — nearly a billion dollars per day). An intelligence assessment produced early in the Obama Administration warned that the transfer in wealth from West to East currently under way is without precedent in modern history. But the distracted, divided U.S. political system is ill-equipped to cope with the challenge China's mercantilist trade policies present. The absurd effort to abolish Ex-Im Bank is emblematic of how intellectually unprepared some lawmakers are to respond to America's waning economic influence. The complaints of Ex-Im critics about "crony capitalism" and "corporate welfare" sound more like the rants of left-wing liberals in the pre-Reagan era than the reasoning of people who understand current economic realities. The critics contend that if Ex-Im disappeared, private lenders would fill the resulting vacuum — even though private lenders keep saying they can't or won't. Private lenders often don't like the risk profile of countries seeking export assistance, or they don't like to do business with small companies (who

account for 90% of Ex-Im transactions). Besides, it is usually commercial lenders who bring Ex-Im into transactions in the first place, because they want the kind of protections available to lenders who finance the exports of other countries. In fact, they're willing to pay a fee for that protection, and Ex-Im has proven it can provide assistance that levels the playing field without incurring significant risk. The default rate on its loans currently stands at less than one fifth of one-percent; Wells Fargo wishes its loan portfolio looked that good. No private lender has ever complained about competition from Ex-Im, because its services are crucial to making deals work. So when Ex-Im's authority to extend credit lapses at the end of this month, there probably will be a quiet celebration in Beijing that some lawmakers in America are so misguided. Washington is the only capital in the world where a debate is going on about whether an export credit agency is needed. The debate in Beijing, and Seoul, and New Delhi, is about how much more money should be spent on export financing, not whether to do it. The good news is that there are majorities in both chambers of Congress ready to reauthorize the Export-Import Bank; the bad news is that critics are working hard to prevent a floor vote that would permit the triumph of common sense over mindless ideology.

Shutting down Ex-Im Bank decks US economic leadership globally

Financial Times 15 ("America's wobbly economic leadership," 4/23, <http://webcache.googleusercontent.com/search?q=cache:YC4FnOa5or0J:www.ft.com/cms/s/0/35af0bbe-e8f5-11e4-87fe-00144feab7de.html+&cd=2&hl=en&ct=clnk&gl=us#axzz3cwW37Mtv>)

The underlying theme of last week's IMF/World Bank spring meetings was rising angst over retreating US leadership. The gathering took place shortly after America's closest allies, led by Britain, spurned a plea from Washington to boycott the China-led Asian Infrastructure Investment Bank. More than 50 countries have signed up. Now the US is in danger of inflicting more damage on itself by shutting down its Export-Import Bank. The bank's authorisation expires at the end of June and with it tens of billions of dollars in guarantees for US exporters. Detractors see the bank as a symbol of "crony capitalism" because of its support for companies such as Boeing. They badly misjudge what it does. It gives US companies a modicum of comfort against better subsidised competitors. Closing Exim would be the economic equivalent of unilateral disarmament in a world bristling with nuclear weapons. Capitol Hill's latest brinkmanship is ill-timed. In the past two years, Chinese development banks have lent \$670bn in subsidised credit to help domestic companies win bids all over the world. This exceeds the combined value of all Exim guarantees since it was set up in the 1930s Depression. Never before has Congress balked at its reauthorisation. Tea Party Republicans say Exim distorts market outcomes at the taxpayer's expense. In fact, it provides credit support where none exists. No private sector bank will finance 15-year emerging market projects. Other non-US official credit guarantee agencies will readily step into the breach. Exim also turns a small profit for the US taxpayer by charging user fees and maintaining a low default rate. Yet its critics seem impervious to the facts. Much like the scaremongering about the impact of vaccines on infants, Exim has become a victim of talk radio mythology. If anything, now would be a good time to expand its balance sheet. The world needs trillions of dollars in infrastructure finance, only a fraction of which will be provided by unsecured private lenders. That is why so many countries have rushed to join the AIIB and why the World Bank and the Asian Development Bank have welcomed the new arrival. There is more than enough demand to go around. The concern is

that the AIIB will not adhere to best practices. At a time when the US is reluctant to fulfil its obligations to Bretton Woods institutions, let alone join any new ones, US companies will find it tough to win a slice of the pie in Asia and elsewhere. Exim's standards are among the best in the world. It serves as a check on the crony capitalism practised by China and others. Closing it would sound another US retreat. The concern is that Congress is too polarised to reverse the trend. Most Republicans disdain global bodies and most Democrats revile trade deals. Congress continues to block the 2010 US-led reforms of the International Monetary Fund. That is one reason China is setting up its own institutions. There are signs Capitol Hill may be preparing to pass the fast track negotiating authority the Obama administration needs to wrap up trade deals in the Pacific and the Atlantic. That would be welcome. But Barack Obama will first need to take on sceptics in his own party. Hillary Clinton, his likely successor, has questioned the merits of another trade deal. Jeb Bush, her likely opponent, said he would close Exim. There was a time when US gridlock imposed a price on others. Now others are imposing a price on the US. The world is no longer waiting on Washington's prevarications.

Ex-Im Bank key to US economic leadership – ensures small US companies get the financing necessary to access growth markets

Snell 3/22/12 (Kelsey, National Journal, "Export-Import Bank on the Firing Line," lexis)

Yet the bank does serve one crucial purpose that no other organization can fulfill: It helps to deny China a hold on the world's developing markets. Ex-Im's top export targets include Brazil, Colombia, India, Indonesia, Mexico, Nigeria, South Africa, Turkey, and Vietnam. Today, none of those countries ranks among the top 10 markets for U.S. exports, but the Export-Import Bank devoted 40 percent of its loans to them. It funded 34 percent of all U.S. exports to Colombia in the months before the United States approved a free-trade agreement with that country. In an interview, Hochberg said that the bank focuses on pumping aid and attention to places with the hottest economic activity. The bank can also help American companies beat competitors that don't follow the same trade rules. In 2011, for instance, it stepped into a bidding war for a Pakistani locomotive contract between General Electric and a company in China, which does not abide by the rules against below-market pricing set by the Organization for Economic Cooperation and Development. Ex-Im ponied up \$477 million to discount the American trains, putting them on the same playing field as the Chinese ones. The deal required an OECD waiver that only Ex-Im or some other U.S. government entity could get. And although huge corporations won't quit their global businesses, smaller companies might face real trouble without Ex-Im. The bank can be crucial to getting new trade started for cash-strapped small businesses. It is often the only lender for companies that want to make deals where Wall Street-style financing doesn't exist growth markets, such as the booming metropolises in South Asia, that aren't considered safe or aren't members of the World Trade Organization. These are the spots where China is setting up shop. Hochberg and Commerce Undersecretary Francisco Sanchez tell National Journal that helping small companies to do business in small countries is part of an overall strategy. Those contracts can mean a foothold for American businesses. If the future of the U.S. economy depends on exports and the future of America's strategic advantage is in extending its economic might, then Congress will need to ensure that the American companies that truly need help get it.

Ex-Im Bank Key – Russia Specific

Ex-Im Bank likely to be reauthorized now - key to outcompeting Russia

Henry 6/2/15 (Devin, The Hill, "GOP Rep expects Ex-Im Bank to pass the House this month," <http://thehill.com/policy/energy-environment/243739-gop-rep-expects-ex-im-bank-to-pass-the-house-this-month>)

A leading Republican said Tuesday he expects the House to pass a bill reauthorizing the Export-Import Bank before it expires at the end of the month. Rep. Adam Kinzinger (R-Ill.), a deputy whip, said he thinks the Senate will take up the issue first and attach it to a broader, must-pass bill that most House Republicans will eventually vote for, teaming up with Democrats to reauthorize the program. "You're going to have a contingent of the folks on the far-right that don't want it," Kinzinger said at an event hosted by The Hill and sponsored by the Nuclear Energy Institute (NEI). "But I think if it comes to a vote on the floor, you're going to have a majority of Republicans, and I think you'll have, obviously a majority of Democrats. I think the numbers are there in the House." The politics of Ex-Im are sticky in the House, where Speaker John Boehner (R-Ohio) supports reauthorizing the program, but Majority Leader Kevin McCarthy (R-Calif.) and a handful of key committee chairmen oppose it. Tea Party groups have said the bank, which provides government-backed loans to companies so they can sell their products overseas, only benefits big corporations, giving them an unfair leg-up in their markets. McCarthy did not include an Ex-Im reauthorization measure on the House's June schedule, raising the possibility Congress might miss its end-of-the-month deadline to keep the program going. "One of my concerns about how Washington, D.C. works is we kind of wait until we're in an emergency scenario," Kinzinger said. "Everybody knows this is an issue that has to be addressed, but nobody wants to be the one to address it." Kinzinger was speaking at an event on nuclear power in the United States. The nuclear industry is one of many industries that have pushed Congress to reauthorize the program. Kinzinger pitched the bank as a national security issue, giving American companies the ability to sell their products in overseas markets that might otherwise partner with countries like Russia.

Econ Heg Impacts – 1nc Great Power War

US economic strength prevents great power war

Colby and Lettow 14 (Elbridge and Paul, Robert M. Gates fellow @ Center for a New American Security + senior director for strategic planning on the U.S. National Security Council staff from 2007 to 2009, 7/3, “Have We Hit Peak America?,”

http://www.foreignpolicy.com/articles/2014/07/03/have_we_hit_peak_america)

In other words, a greater number of Americans are worried about diminishing U.S. influence today than in the face of feared Soviet technological superiority in the late 1950s, the Vietnam quagmire of the late 1960s, the 1973 oil embargo, the apparent resurgence of Soviet power around the 1979 invasion of Afghanistan, and the economic concerns that plagued the late 1980s—the five waves of so-called declinist anxiety that political scientist Samuel Huntington famously identified. Many analysts have attributed Americans’ current anxiety to the aftershock of waging two long wars in Iraq and Afghanistan. But the polls actually reflect something deeper and more potent—a legitimate, increasingly tactile uncertainty in the minds of the American people created by changes in the world and in America’s competitive position, which they feel far more immediately than do the participants in Washington policy debates. Average Americans do not experience the world through the lens of great-power rivalry or U.S. leadership abroad, but rather through that of an increasingly competitive globalized labor market, stagnating income growth among the middle class, and deep and unresolved worries about their children’s future. A recent cnn poll, for instance, found that Americans think by a 2-to-1 margin that their children’s lives will be worse than their own. They are questioning the promise of growth and expanding opportunity—the very substance of the American dream. This anxiety is real and justified, and it lies behind much of the public’s support for withdrawing from the world, for retrenchment. Yet American leadership and engagement remain essential. The United States cannot hide from the world. Rather, it must compete. And if it competes well, it can restore not only its economic health, but also its strength for the long haul. That resilience will preserve Americans’ ability to determine their fate and the nation’s ability to lead in the way its interests require. Unfortunately, absent from current discussions about U.S. foreign policy has been a hardheaded assessment of what it will actually take to rejuvenate and compete. Policymakers and experts have not yet taken a clear-eyed look at the data and objectively analyzed the fundamental shifts under way globally and what they mean for America’s competitive position. Nor have they debated the steps necessary to sustain U.S. power over the long term. THE WORLD’S ECONOMIC CENTER OF GRAVITY The larger a country’s GDP, the greater its pull on the world’s economic center of gravity. So when the Industrial Revolution spurred massive growth in the United States, the center moved west, eventually out over the Atlantic Ocean. Today, it is moving back toward Asia. Many foreign-policy experts seem to believe that retaining American primacy is largely a matter of will—of how America chooses to exert its power abroad. Even President Obama, more often accused of being a prophet of decline than a booster of America’s future, recently asserted that the United States “has rarely been stronger relative to the rest of the world.” The question, he continued, is “not whether America will lead, but how we will lead.” But will is unavailing without strength. If the United States wants the international system to continue to reflect its interests and values—a system, for example, in which the global commons are protected, trade is broad-based and extensive,

and armed conflicts among great nations are curtailed—it needs to sustain not just resolve, but relative power. That, in turn, will require acknowledging the uncomfortable truth that global power and wealth are shifting at an unprecedented pace, with profound implications. Moreover, many of the challenges America faces are exacerbated by vulnerabilities that are largely self-created, chief among them fiscal policy. Much more quickly and comprehensively than is understood, those vulnerabilities are reducing America's freedom of action and its ability to influence others. Preserving America's international position will require it to restore its economic vitality and make policy choices now that pay dividends for decades to come. America has to prioritize and to act. Fortunately, the United States still enjoys greater freedom to determine its future than any other major power, in part because many of its problems are within its ability to address. But this process of renewal must begin with analyzing America's competitive position and understanding the gravity of the situation Americans face. FOR THE FIRST TIME IN 200 YEARS, MOST GROWTH IS OCCURRING IN THE DEVELOPING WORLD, and the speed with which that shift—a function of globalization—has occurred is hard to fathom. Whereas in 1990 just 14 percent of cross-border flows of goods, services, and finances originated in emerging economies, today nearly 40 percent do. As recently as 2000, the gdp of China was one-tenth that of the United States; just 14 years later, the two economies are equal (at least in terms of purchasing power parity). This shift reorders what was, in some sense, a historical anomaly: the transatlantic dominance of the past 150 years. As illustrated by the map below, it wasn't until the Industrial Revolution took hold in the 19th century that the world's "economic center of gravity" decisively moved toward Europe and the United States, which have since been the primary engines of growth. Today, however, the economic center of gravity is headed back toward Asia, and it is doing so with unique historical speed. This trend will persist even though emerging economies are hitting roadblocks to growth, such as pervasive corruption in India and demographic challenges and serious distortions in the banking system in China. For instance, according to the asset-management firm BlackRock and the Organization for Economic Cooperation and Development (oecd), consumption in emerging markets has already eclipsed that in the United States, and spending by the middle classes in Asia-Pacific nations is on track to exceed middle-class spending in North America by a factor of nearly six by 2030. U.S. wealth is not shrinking in absolute terms—and it continues to benefit from economic globalization—but the United States and its allies are losing might compared with potential rivals. Although Europe and Japan have been responsible for much of the developed world's lost relative economic power, the U.S. economy has also slowed from its traditional rates of expansion over the past several decades. Worsening productivity growth has played a particularly large role in the U.S. slowdown, dropping to around 0.5 percent annually, which the Financial Times has referred to as a "productivity crisis." A range of factors are responsible, including a decline in the skill level of the American workforce and a drop in resources allocated to research and development. U.S. REVENUE VS. SPENDING By 2043, federal spending on entitlements and net interest payments will exceed federal revenues, meaning funds for any discretionary programs will be borrowed. Overall, the U.S. economy has become less competitive. The McKinsey Global Institute, for instance, has measured the relative attractiveness of the United States across a range of metrics, such as national spending on research and development and foreign direct investment as a percentage of gdp. It found that U.S. business attractiveness relative to that of competitors fell across 14 of 20 key metrics from 2000 to 2010—and improved in none. And according to the

Harvard Business Review, U.S. exports' global market share dropped across the board from 1999 to 2009 and suffered particularly sharp falls in cutting-edge fields such as aerospace. This shift in economic growth toward the developing world is going to have strategic consequences. Military power ultimately derives from wealth. It is often noted that the United States spends more on defense than the next 10 countries combined. But growth in military spending correlates with gdp growth, so as other economies grow, those countries will likely spend more on defense, reducing the relative military power of the United States. Already, trends in global defense spending show a rapid and marked shift from the United States and its allies toward emerging economies, especially China. In 2011, the United States and its partners accounted for approximately 80 percent of the military spending by the 15 countries with the largest defense budgets. But, according to a McKinsey study, that share could fall significantly over the next eight years—perhaps to as low as 55 percent. The resulting deterioration in American military superiority has already begun, as the countries benefiting most rapidly from globalization are using their newfound wealth to build military capacity, especially in high-tech weaponry. As Robert Work and Shawn Brimley of the Center for a New American Security wrote this year: “[T]he dominance enjoyed by the United States in the late 1990s/early 2000s in the areas of high-end sensors, guided weaponry, battle networking, space and cyberspace systems, and stealth technology has started to erode. Moreover, this erosion is now occurring at an accelerated rate.” (Work has since been confirmed as deputy secretary of defense.)

Econ Heg Impacts – Great Power War

Perception of decline triggers lashout and global war

James 14 (Harold, Professor of history at Princeton University's Woodrow Wilson School who specializes in European economic history, 7/2/14, "Debate: Is 2014, like 1914, a prelude to world war?" <http://www.theglobeandmail.com/globe-debate/read-and-vote-is-2014-like-1914-a-prelude-to-world-war/article19325504/>)

As we get closer to the centenary of Gavrilo Princip's act of terrorism in Sarajevo, there is an ever more vivid fear: it could happen again. The approach of the hundredth anniversary of 1914 has put a spotlight on the fragility of the world's political and economic security systems. At the beginning of 2013, Luxembourg's Prime Minister Jean-Claude Juncker was widely ridiculed for evoking the shades of 1913. By now he is looking like a prophet. By 2014, as the security situation in the South China Sea deteriorated, Japanese Prime Minister Shinzo Abe cast China as the equivalent to Kaiser Wilhelm's Germany; and the fighting in Ukraine and in Iraq is a sharp reminder of the dangers of escalation. Lessons of 1914 are about more than simply the dangers of national and sectarian animosities. The main story of today as then is the precariousness of financial globalization, and the consequences that political leaders draw from it. In the influential view of Norman Angell in his 1910 book *The Great Illusion*, the interdependency of the increasingly complex global economy made war impossible. But a quite opposite conclusion was possible and equally plausible – and proved to be the case. Given the extent of fragility, a clever twist to the control levers might make war easily winnable by the economic hegemon. In the wake of an epochal financial crisis that almost brought a complete global collapse, in 1907, several countries started to think of finance as primarily an instrument of raw power, one that could and should be turned to national advantage. The 1907 panic emanated from the United States but affected the rest of the world and demonstrated the fragility of the whole international financial order. The aftermath of the 1907 crash drove the then hegemonic power – Great Britain - to reflect on how it could use its financial power. Between 1905 and 1908, the British Admiralty evolved the broad outlines of a plan for financial and economic warfare that would wreck the financial system of its major European rival, Germany, and destroy its fighting capacity. Britain used its extensive networks to gather information about opponents. London banks financed most of the world's trade. Lloyds provided insurance for the shipping not just of Britain, but of the world. Financial networks provided the information that allowed the British government to find the sensitive strategic vulnerabilities of the opposing alliance. What pre-1914 Britain did anticipated the private-public partnership that today links technology giants such as Google, Apple or Verizon to U.S. intelligence gathering. Since last year, the Edward Snowden leaks about the NSA have shed a light on the way that global networks are used as a source of intelligence and power. For Britain's rivals, the financial panic of 1907 showed the necessity of mobilizing financial powers themselves. The United States realized that it needed a central bank analogous to the Bank of England. American financiers thought that New York needed to develop its own commercial trading system that could handle bills of exchange in the same way as the London market. Some of the dynamics of the pre-1914 financial world are now re-emerging. Then an economically declining power, Britain, wanted to use finance as a weapon against its larger and faster growing competitors, Germany and the United States. Now America is in turn obsessed by being overtaken by China – according to some calculations, set to become

the world's largest economy in 2014. In the aftermath of the 2008 financial crisis, financial institutions appear both as dangerous weapons of mass destruction, but also as potential instruments for the application of national power. In managing the 2008 crisis, the dependence of foreign banks on U.S. dollar funding constituted a major weakness, and required the provision of large swap lines by the Federal Reserve. The United States provided that support to some countries, but not others, on the basis of an explicitly political logic, as Eswar Prasad demonstrates in his new book on the "Dollar Trap." Geo-politics is intruding into banking practice elsewhere. Before the Ukraine crisis, Russian banks were trying to acquire assets in Central and Eastern Europe. European and U.S. banks are playing a much reduced role in Asian trade finance. Chinese banks are being pushed to expand their role in global commerce. After the financial crisis, China started to build up the renminbi as a major international currency. Russia and China have just proposed to create a new credit rating agency to avoid what they regard as the political bias of the existing (American-based) agencies. The next stage in this logic is to think about how financial power can be directed to national advantage in the case of a diplomatic tussle. Sanctions are a routine (and not terribly successful) part of the pressure applied to rogue states such as Iran and North Korea. But financial pressure can be much more powerfully applied to countries that are deeply embedded in the world economy. The test is in the Western imposition of sanctions after the Russian annexation of Crimea. President Vladimir Putin's calculation in response is that the European Union and the United States cannot possibly be serious about the financial war. It would turn into a boomerang: Russia would be less affected than the more developed and complex financial markets of Europe and America. The threat of systemic disruption generates a new sort of uncertainty, one that mirrors the decisive feature of the crisis of the summer of 1914. At that time, no one could really know whether clashes would escalate or not. That feature contrasts remarkably with almost the entirety of the Cold War, especially since the 1960s, when the strategic doctrine of Mutually Assured Destruction left no doubt that any superpower conflict would inevitably escalate. The idea of network disruption relies on the ability to achieve advantage by surprise, and to win at no or low cost. But it is inevitably a gamble, and raises prospect that others might, but also might not be able to, mount the same sort of operation. Just as in 1914, there is an enhanced temptation to roll the dice, even though the game may be fatal.

Decline of relative economic power triggers great power war and undermines the international order

Khalilzad 11 (Zalmay, former consultant @ RAND and US Ambassador to the UN, 'The Economy and National Security,' 2/8, <http://www.nationalreview.com/node/259024/print>)

We face this domestic challenge while other major powers are experiencing rapid economic growth. Even though countries such as China, India, and Brazil have profound political, social, demographic, and economic problems, their economies are growing faster than ours, and this could alter the global distribution of power. These trends could in the long term produce a multi-polar world. If U.S. policymakers fail to act and other powers continue to grow, it is not a question of whether but when a new international order will emerge. The closing of the gap between the United States and its rivals could intensify geopolitical competition among major powers, increase incentives for local powers to play major powers against one another, and undercut our will to preclude or respond to international crises because of the higher risk of

escalation. The stakes are high. In modern history, the longest period of peace among the great powers has been the era of U.S. leadership. By contrast, multi-polar systems have been unstable, with their competitive dynamics resulting in frequent crises and major wars among the great powers. Failures of multi-polar international systems produced both world wars. American retrenchment could have devastating consequences. Without an American security blanket, regional powers could rearm in an attempt to balance against emerging threats. Under this scenario, there would be a heightened possibility of arms races, miscalculation, or other crises spiraling into all-out conflict. Alternatively, in seeking to accommodate the stronger powers, weaker powers may shift their geopolitical posture away from the United States. Either way, hostile states would be emboldened to make aggressive moves in their regions. As rival powers rise, Asia in particular is likely to emerge as a zone of great-power competition. Beijing's economic rise has enabled a dramatic military buildup focused on acquisitions of naval, cruise, and ballistic missiles, long-range stealth aircraft, and anti-satellite capabilities. China's strategic modernization is aimed, ultimately, at denying the United States access to the seas around China. Even as cooperative economic ties in the region have grown, China's expansive territorial claims — and provocative statements and actions following crises in Korea and incidents at sea — have roiled its relations with South Korea, Japan, India, and Southeast Asian states. Still, the United States is the most significant barrier facing Chinese hegemony and aggression. Given the risks, the United States must focus on restoring its economic and fiscal condition while checking and managing the rise of potential adversarial regional powers such as China. While we face significant challenges, the U.S. economy still accounts for over 20 percent of the world's GDP. American institutions — particularly those providing enforceable rule of law — set it apart from all the rising powers. Social cohesion underwrites political stability. U.S. demographic trends are healthier than those of any other developed country. A culture of innovation, excellent institutions of higher education, and a vital sector of small and medium-sized enterprises propel the U.S. economy in ways difficult to quantify. Historically, Americans have responded pragmatically, and sometimes through trial and error, to work our way through the kind of crisis that we face today. The policy question is how to enhance economic growth and employment while cutting discretionary spending in the near term and curbing the growth of entitlement spending in the out years. Republican members of Congress have outlined a plan. Several think tanks and commissions, including President Obama's debt commission, have done so as well. Some consensus exists on measures to pare back the recent increases in domestic spending, restrain future growth in defense spending, and reform the tax code (by reducing tax expenditures while lowering individual and corporate rates). These are promising options. The key remaining question is whether the president and leaders of both parties on Capitol Hill have the will to act and the skill to fashion bipartisan solutions. Whether we take the needed actions is a choice, however difficult it might be. It is clearly within our capacity to put our economy on a better trajectory. In garnering political support for cutbacks, the president and members of Congress should point not only to the domestic consequences of inaction — but also to the geopolitical implications. As the United States gets its economic and fiscal house in order, it should take steps to prevent a flare-up in Asia. The United States can do so by signaling that its domestic challenges will not impede its intentions to check Chinese expansionism. This can be done in cost-efficient ways. While China's economic rise enables its military modernization and international assertiveness, it also frightens rival powers. The Obama administration has wisely

moved to strengthen relations with allies and potential partners in the region but more can be done. Some Chinese policies encourage other parties to join with the United States, and the U.S. should not let these opportunities pass. China's military assertiveness should enable security cooperation with countries on China's periphery — particularly Japan, India, and Vietnam — in ways that complicate Beijing's strategic calculus. China's mercantilist policies and currency manipulation — which harm developing states both in East Asia and elsewhere — should be used to fashion a coalition in favor of a more balanced trade system. Since Beijing's over-the-top reaction to the awarding of the Nobel Peace Prize to a Chinese democracy activist alienated European leaders, highlighting human-rights questions would not only draw supporters from nearby countries but also embolden reformers within China. Since the end of the Cold War, a stable economic and financial condition at home has enabled America to have an expansive role in the world. Today we can no longer take this for granted. Unless we get our economic house in order, there is a risk that domestic stagnation in combination with the rise of rival powers will undermine our ability to deal with growing international problems. Regional hegemony in Asia could seize the moment, leading the world toward a new, dangerous era of multi-polarity.

Econ Heg Impacts – Data Confirms

Competitiveness ensures conflict prevention and suppression – data confirms

Hubbard 10 (Jesse, Program Assistant at Open Society Foundations Washington, District Of Columbia International Affairs Previous National Democratic Institute (NDI), National Defense University, Office of Congressman Jim Himes Education PPE at University of Oxford, “Hegemonic Stability Theory: An Empirical Analysis,” <http://isrj.wordpress.com/2010/05/28/hegemonic-stability-theory/>)

Regression analysis of this data shows that Pearson’s r -value is $-.836$. In the case of American hegemony, economic strength is a better predictor of violent conflict than even overall national power, which had an r -value of $-.819$. The data is also well within the realm of statistical significance, with a p -value of $.0014$. While the data for British hegemony was not as striking, the same overall pattern holds true in both cases. During both periods of hegemony, hegemonic strength was negatively related with violent conflict, and yet use of force by the hegemon was positively correlated with violent conflict in both cases. Finally, in both cases, economic power was more closely associated with conflict levels than military power. Statistical analysis created a more complicated picture of the hegemon’s role in fostering stability than initially anticipated.

VI. Conclusions and Implications for Theory and Policy To elucidate some answers regarding the complexities my analysis unearthed, I turned first to the existing theoretical literature on hegemonic stability theory. The existing literature provides some potential frameworks for understanding these results. Since economic strength proved to be of such crucial importance, reexamining the literature that focuses on hegemonic stability theory’s economic implications was the logical first step. As explained above, the literature on hegemonic stability theory can be broadly divided into two camps – that which focuses on the international economic system, and that which focuses on armed conflict and instability. This research falls squarely into the second camp, but insights from the first camp are still of relevance. Even Kindleberger’s early work on this question is of relevance. Kindleberger posited that the economic instability between the First and Second World Wars could be attributed to the lack of an economic hegemon (Kindleberger 1973). But economic instability obviously has spillover effects into the international political arena. Keynes, writing after WWI, warned in his seminal tract *The Economic Consequences of the Peace* that Germany’s economic humiliation could have a radicalizing effect on the nation’s political culture (Keynes 1919). Given later events, his warning seems prescient. In the years since the Second World War, however, the European continent has not relapsed into armed conflict. What was different after the second global conflagration? Crucially, the United States was in a far more powerful position than Britain was after WWI. As the tables above show, Britain’s economic strength after the First World War was about 13% of the total in strength in the international system. In contrast, the United States possessed about 53% of relative economic power in the international system in the years immediately following WWII. The U.S. helped rebuild Europe’s economic strength with billions of dollars in investment through the Marshall Plan, assistance that was never available to the defeated powers after the First World War (Kindleberger 1973). The interwar years were also marked by a series of debilitating trade wars that likely worsened the Great Depression (*Ibid.*). In contrast, when Britain was more powerful, it was able to facilitate greater free trade, and after World War II, the United States played a leading role in creating institutions like the GATT that had an

essential role in facilitating global trade (Organski 1958). The possibility that economic stability is an important factor in the overall security environment should not be discounted, especially given the results of my statistical analysis. Another theory that could provide insight into the patterns observed in this research is that of preponderance of power. Gilpin theorized that when a state has the preponderance of power in the international system, rivals are more likely to resolve their disagreements without resorting to armed conflict (Gilpin 1983). The logic behind this claim is simple – it makes more sense to challenge a weaker hegemon than a stronger one. This simple yet powerful theory can help explain the puzzlingly strong positive correlation between military conflicts engaged in by the hegemon and conflict overall. It is not necessarily that military involvement by the hegemon instigates further conflict in the international system. Rather, this military involvement could be a function of the hegemon's weaker position, which is the true cause of the higher levels of conflict in the international system. Additionally, it is important to note that military power is, in the long run, dependent on economic strength. Thus, it is possible that as hegemons lose relative economic power, other nations are tempted to challenge them even if their short-term military capabilities are still strong. This would help explain some of the variation found between the economic and military data. The results of this analysis are of clear importance beyond the realm of theory. As the debate rages over the role of the United States in the world, hegemonic stability theory has some useful insights to bring to the table. What this research makes clear is that a strong hegemon can exert a positive influence on stability in the international system. However, this should not give policymakers a justification to engage in conflict or escalate military budgets purely for the sake of international stability. If anything, this research points to the central importance of economic influence in fostering international stability. To misconstrue these findings to justify anything else would be a grave error indeed. Hegemons may play a stabilizing role in the international system, but this role is complicated. It is economic strength, not military dominance that is the true test of hegemony. A weak state with a strong military is a paper tiger – it may appear fearsome, but it is vulnerable to even a short blast of wind.

Economic strength prevents great power conflict — relative growth is KEY

Goldstein 7 (Avery, David M. Knott Professor of Global Politics and International Relations @ University of Pennsylvania, Associate Director of the Christopher H. Browne Center for International Politics, Senior Fellow at the Foreign Policy Research Institute, holds a Ph.D. from the University of California-Berkeley, "Power transitions, institutions, and China's rise in East Asia: Theoretical expectations and evidence," *Journal of Strategic Studies*, Volume 30, Number 4-5, August-October, p. 647-648)

Two closely related, though distinct, theoretical arguments focus explicitly on the consequences for international politics of a shift in power between a dominant state and a rising power. In *War and Change in World Politics*, Robert Gilpin suggested that peace prevails when a dominant state's capabilities enable it to 'govern' an international order that it has shaped. Over time, however, as economic and technological diffusion proceeds during eras of peace and development, other states are empowered. Moreover, the burdens of international governance drain and distract the reigning hegemon, and challengers eventually emerge who seek to rewrite the rules of governance. As the power advantage of the erstwhile hegemon ebbs, it may become desperate enough to resort to the ultima ratio of international politics, force, to

forestall the increasingly urgent demands of a rising challenger. Or as the power of the challenger rises, it may be tempted to press its case with threats to use force. It is the rise and fall of the great powers that creates the circumstances under which major wars, what Gilpin labels 'hegemonic wars', break out.¹³ Gilpin's argument logically encourages pessimism about the implications of a rising China. It leads to the expectation that international trade, investment, and technology transfer will result in a steady diffusion of American economic power, benefiting the rapidly developing states of the world, including China. As the US simultaneously scurries to put out the many brushfires that threaten its far-flung global interests (i.e., the classic problem of overextension), it will be unable to devote sufficient resources to maintain or restore its former advantage over emerging competitors like China. While the erosion of the once clear American advantage plays itself out, the US will find it ever more difficult to preserve the order in Asia that it created during its era of preponderance. The expectation is an increase in the likelihood for the use of force – either by a Chinese challenger able to field a stronger military in support of its demands for greater influence over international arrangements in Asia, or by a besieged American hegemon desperate to head off further decline. Among the trends that alarm [end page 647] those who would look at Asia through the lens of Gilpin's theory are China's expanding share of world trade and wealth (much of it resulting from the gains made possible by the international economic order a dominant US established); its acquisition of technology in key sectors that have both civilian and military applications (e.g., information, communications, and electronics linked with the 'revolution in military affairs'); and an expanding military burden for the US (as it copes with the challenges of its global war on terrorism and especially its struggle in Iraq) that limits the resources it can devote to preserving its interests in East Asia.¹⁴ Although similar to Gilpin's work insofar as it emphasizes the importance of shifts in the capabilities of a dominant state and a rising challenger, the power-transition theory A. F. K. Organski and Jacek Kugler present in *The War Ledger* focuses more closely on the allegedly dangerous phenomenon of 'crossover' – the point at which a dissatisfied challenger is about to overtake the established leading state.¹⁵ In such cases, when the power gap narrows, the dominant state becomes increasingly desperate to forestall, and the challenger becomes increasingly determined to realize the transition to a new international order whose contours it will define.

Competitiveness is vital to prevent great power conflict

Baru 9 (Sanjaya, Visiting Professor @ Lee Kuan Yew School of Public Policy and Institute of South Asian Studies (Singapore), "Year of the power shift?," Seminar, #593, January, http://www.india-seminar.com/2009/593/593_sanjaya_baru.htm)

There is no doubt that economics alone will not determine the balance of global power, but there is no doubt either that economics has come to matter for more. The management of the economy, and of the treasury, has been a vital aspect of statecraft from time immemorial. Kautilya's *Arthashastra* says, 'From the strength of the treasury the army is born. ...men without wealth do not attain their objectives even after hundreds of trials... Only through wealth can material gains be acquired, as elephants (wild) can be captured only by elephants (tamed)... A state with depleted resources, even if acquired, becomes only a liability.'⁴ Hence, economic policies and performance do have strategic consequences.⁵ In the modern era, the idea that strong economic performance is the foundation of power was argued most persuasively by

historian Paul Kennedy. 'Victory (in war),' Kennedy claimed, 'has repeatedly gone to the side with more flourishing productive base.'⁶ Drawing attention to the interrelationships between economic wealth, technological innovation, and the ability of states to efficiently mobilize economic and technological resources for power projection and national defence, Kennedy argued that nations that were able to better combine military and economic strength scored over others. 'The fact remains,' Kennedy argued, 'that all of the major shifts in the world's military-power balance have followed alterations in the productive balances; and further, that the rising and falling of the various empires and states in the international system has been confirmed by the outcomes of the major Great Power wars, where victory has always gone to the side with the greatest material resources.'⁷ In Kennedy's view the geopolitical consequences of an economic crisis or even decline would be transmitted through a nation's inability to find adequate financial resources to simultaneously sustain economic growth and military power – the classic 'guns vs butter' dilemma.

Econ Heg Impacts – Turns Every Impact

Perceived declines in relative economic weakness spark nuclear war AND complicate every global impact

Lieberthal and O'Hanlon 12 (Kenneth and Michael, Senior Fellows in Foreign Policy @ Brookings, "The Real National Security Threat: America's Debt," <http://www.brookings.edu/research/opinions/2012/07/10-economy-foreign-policy-lieberthal-ohanlon>)

Lastly, American economic weakness undercuts U.S. leadership abroad. Other countries sense our weakness and wonder about our purported decline. If this perception becomes more widespread, and the case that we are in decline becomes more persuasive, countries will begin to take actions that reflect their skepticism about America's future. Allies and friends will doubt our commitment and may pursue nuclear weapons for their own security, for example; adversaries will sense opportunity and be less restrained in throwing around their weight in their own neighborhoods. The crucial Persian Gulf and Western Pacific regions will likely become less stable. Major war will become more likely. When running for president last time, Obama eloquently articulated big foreign policy visions: healing America's breach with the Muslim world, controlling global climate change, dramatically curbing global poverty through development aid, moving toward a world free of nuclear weapons. These were, and remain, worthy if elusive goals. However, for Obama or his successor, there is now a much more urgent big-picture issue: restoring U.S. economic strength. Nothing else is really possible if that fundamental prerequisite to effective foreign policy is not reestablished.

Failure to affirmatively defend US relative economic power undermines our ability to solve climate change and other global, existential risks

Posen 9 (Adam, deputy director and senior fellow @ Peterson Institute for International Economics, "Economic leadership beyond the crisis," http://clients.squareeye.com/uploads/foresight/documents/PN%20USA_FINAL_LR_1.pdf)

If this assessment is correct, the policy challenge is to deal with relative US economic decline, but not outright hostility to the US model or displacement of the current international economic system. That is reassuring, for it leaves us in the realm of normal economic diplomacy, perhaps to be pursued more multilaterally and less high-handedly than the US has done over the past 20 years. It also suggests that adjustment of current international economic institutions is all that is required, rather than desperately defending economic globalisation itself. For all of that reassurance, however, the need to get buy-in from the rising new players to the current system is more pressing on the economic front than it ever has been before. Due to the crisis, the ability of the US and the other advanced industrial democracies to put up money and markets for rewards and side-payments to those new players is also more limited than it has been in the past, and will remain so for at least the next few years. The need for the US to avoid excessive domestic self-absorption is a real concern as well, given the combination of foreign policy fatigue from the Bush foreign policy agenda and economic insecurity from the financial crisis. Managing the post-crisis global economy Thus, the US faces a challenging but not truly threatening global economic situation as a result of the crisis and longer-term financial trends.

Failure to act affirmatively to manage the situation, however, bears two significant and related risks: first, that China and perhaps some other rising economic powers will opportunistically divert countries in US-oriented integrated relationships to their economic sphere(s); second, that a leadership vacuum will arise in international financial affairs and in multilateral trade efforts, which will over time erode support for a globally integrated economy. Both of these risks if realised would diminish US foreign policy influence, make the economic system less resilient in response to future shocks (to every country's detriment), reduce economic growth and thus the rate of reduction in global poverty, and conflict with other foreign policy goals like controlling climate change or managing migration and demographic shifts. If the US is to rise to the challenge, it should concentrate on the following priority measures.

US economic strength is key to managing all global problems – it's the lure and the whip of 21st century international affairs

Gelb 10 (Leslie, President Emeritus of the Council on Foreign Relations, "GDP Now Matters More than Force," Foreign Affairs, p. ebscohost)

No matter the decline in U.S. power, most nations do not doubt that the United States is the indispensable leader in solving major international problems. This problem-solving capacity creates opportunities for U.S. leadership in everything from trade talks to military-conflict resolution to international agreements on global warming. Only Washington can help the nations bordering the South China Sea forge a formula for sharing the region's resources. Only Washington has a chance of pushing the Israelis and the Palestinians toward peace. Only Washington can bargain to increase the low value of a Chinese currency exchange rate that disadvantages almost every nation's trade with China. But it is clear to Americans and non-Americans alike that Washington lacks the power to solve or manage difficult problems alone; the indispensable leader must work with indispensable partners. To attract the necessary partners, Washington must do the very thing that habitually afflicts U.S. leaders with political hives: compromise. This does not mean multilateralism for its own sake, nor does it mean abandoning vital national interests. The Obama administration has been criticized for softening UN economic sanctions against Iran in order to please China and Russia. Had the United States not compromised, however, it would have faced vetoes and enacted no new sanctions at all. U.S. presidents are often in a strong position to bargain while preserving essential U.S. interests, but they have to do a better job of selling such unavoidable compromises to the U.S. public. U.S. policymakers must also be patient. The weakest of nations today can resist and delay. Pressing prematurely for decisions--an unfortunate hallmark of U.S. style--results in failure, the prime enemy of power. Success breeds power, and failure breeds weakness. Even when various domestic constituencies shout for quick action, Washington's leaders must learn to buy time in order to allow for U.S. power--and the power of U.S.-led coalitions--to take effect abroad. Patience is especially valuable in the economic arena, where there are far more players than in the military and diplomatic realms. To corral all these players takes time. Military power can work quickly, like a storm; economic power grabs slowly, like the tide. It needs time to erode the shoreline, but it surely does nibble away. To be sure, U.S. presidents need to preserve the United States' core role as the world's military and diplomatic balancer--for its own sake; and because it strengthens U.S. interests in economic transactions. But economics has to be the main driver for current policy, as nations calculate power more in terms of GDP than military

might. U.S. GDP will be the lure and the whip in the international affairs of the twenty-first century. U.S. interests abroad cannot be adequately protected or advanced without an economic reawakening at home. U.S. leaders forever swear their allegiance to making the tough choices to restore the U.S. economy. But they never deliver. Equally often, they appear to grasp the need for a new foreign policy for the age of economic power. But that, too, they fail to deliver. President Barack Obama, in particular, has often struck just the right themes, only to let them fizzle in the din. In the meantime, Americans of nearly every political stripe are waiting and wondering whether their leaders are prepared to let the nation that saved the world in the twentieth century sink into history in the twenty-first.

Loss of US economic leadership turns EVERY hotspot

Freidberg 8 (Aaron, Professor of Politics and International Relations – Princeton University's Woodrow Wilson School, "The Dangers of a Diminished America", Wall Street Journal, 10-21, http://online.wsj.com/article/SB122455074012352571.html?mod=googlenews_wsj)

With the global financial system in serious trouble, is America's geostrategic dominance likely to diminish? If so, what would that mean? One immediate implication of the crisis that began on Wall Street and spread across the world is that the primary instruments of U.S. foreign policy will be cramped. The next president will face an entirely new and adverse fiscal position. Estimates of this year's federal budget deficit already show that it has jumped \$237 billion from last year, to \$407 billion. With families and businesses hurting, there will be calls for various and expensive domestic relief programs. In the face of this onrushing river of red ink, both Barack Obama and John McCain have been reluctant to lay out what portions of their programmatic wish list they might defer or delete. Only Joe Biden has suggested a possible reduction -- foreign aid. This would be one of the few popular cuts, but in budgetary terms it is a mere grain of sand. Still, Sen. Biden's comment hints at where **we may be headed: toward** a major reduction in America's world role, and perhaps even a new era of **financially-induced isolationism**. Pressures to cut defense spending, and to dodge the cost of waging two wars, already intense before this crisis, are likely to mount. Despite the success of the surge, the war in Iraq remains deeply unpopular. Precipitous withdrawal -- attractive to a sizable swath of the electorate before the financial implosion -- might well become even more popular with annual war bills running in the hundreds of billions. Protectionist sentiments are sure to grow stronger as jobs disappear in the coming slowdown. Even before our current woes, calls to save jobs by restricting imports had begun to gather support among many Democrats and some Republicans. In a prolonged recession, gale-force winds of protectionism will blow. Then **there are** the dolorous **consequences** of a potential collapse of the world's financial architecture. For decades now, Americans have enjoyed the advantages of being at the center of that system. The worldwide use of the dollar, and the stability of our economy, among other things, made it easier for us to run huge budget deficits, as we counted on foreigners to pick up the tab by buying dollar-denominated assets as a safe haven. Will this be possible in the future? Meanwhile, traditional foreign-policy challenges are multiplying. The threat from al Qaeda and Islamic terrorist affiliates has not been extinguished. **Iran and North Korea are continuing** on their **bellicose paths**, while **Pakistan and Afghanistan are progressing** smartly down the road **to chaos**. **Russia's** new **militancy and China's** seemingly relentless **rise** also **give cause for concern**. **If America** now **tries to pull back** from the world stage, **it will leave a dangerous power vacuum**. The **stabilizing effects**

of our presence in Asia, our continuing commitment to Europe, and our position as defender of last resort for Middle East energy sources and supply lines could all be placed at risk. In such a scenario there are shades of the 1930s, when global trade and finance ground nearly to a halt, the peaceful democracies failed to cooperate, and aggressive powers led by the remorseless fanatics who rose up on the crest of economic disaster exploited their divisions. Today we run the risk that rogue states may choose to become ever more reckless with their nuclear toys, just at our moment of maximum vulnerability. The aftershocks of the financial crisis will almost certainly rock our principal strategic competitors even harder than they will rock us. The dramatic free fall of the Russian stock market has demonstrated the fragility of a state whose economic performance hinges on high oil prices, now driven down by the global slowdown. China is perhaps even more fragile, its economic growth depending heavily on foreign investment and access to foreign markets. Both will now be constricted, inflicting economic pain and perhaps even sparking unrest in a country where political legitimacy rests on progress in the long march to prosperity. None of this is good news if the authoritarian leaders of these countries seek to divert attention from internal travails with external adventures. As for our democratic friends, the present crisis comes when many European nations are struggling to deal with decades of anemic growth, sclerotic governance and an impending demographic crisis. Despite its past dynamism, Japan faces similar challenges. India is still in the early stages of its emergence as a world economic and geopolitical power. What does this all mean? There is no substitute for America on the world stage. The choice we have before us is between the potentially disastrous effects of disengagement and the stiff price tag of continued American leadership.

Econ Heg Impacts – 1nc Russia Aggression

Economic weakness undercuts the global perception of US resolve - encourages Russian aggression

Kudlow 14 (Larry, former economist @ US Treasury under President Reagan and Editor @ National Review, "Obama is Crushing the Reagan Link, and Putin Knows It," 7/18, <http://www.nationalreview.com/node/383149/print>)

Across his remarkably successful presidency, Ronald Reagan repeatedly made the link between the U.S. economy and U.S. international security and defense. He consistently argued that weakness at home leads to weakness abroad. Reagan was aiming at the dismal Carter years. But he understood for all times that economic strength at home sends a powerful signal for international security overseas. When Reagan went to Reykjavik to meet with Gorbachev, he believed the resurgent American economy would hammer the nails on the coffin of Soviet communism. And he explained to Gorbachev that if the Soviets didn't come to the negotiating table with nuclear weapons, the U.S. would out-produce them on nukes and with technological superiority. Similarly, Reagan would not give up his vision for strategic missile defense. And in both cases — building nukes and SDI — Reagan knew the American economy had the resources capable of achieving these goals, while the sinking Soviet economy couldn't match us. In the end, the Soviet system imploded in one of the greatest reversals in world history. Freedom won. Communism lost. Now, circumstances are somewhat different today. But the horrible Malaysia Airlines crash in Ukraine highlights some worrisome facts about American-Russian relations. Mitt Romney was right. Russia is our biggest threat. We know that the Malaysian plane was brought down by a ground-to-air missile fired from Russian-made SA-11 weapons run by pro-Russian Ukrainian rebel terrorists. We also know that Russia is fighting a proxy war with the U.S. in Ukraine, and that Russian special forces are leading the terrorist movement in Ukraine. We can add to this the proxy war fought by Russia in the Middle East, with its main ally Iran, and the fact that Russia is engaging in state-sponsored terrorism. Whether President Obama understands all this, I don't know. His policies have been alternatively passive (Libya, Egypt), incoherent (Russian reset), and feckless (Syria). But the fact that the current U.S. economic recovery is the slowest in post-WWII history — spanning 70 years — is surely a key factor in Vladimir Putin's adventurism. This brings us back to Reagan's link. Putin may recognize that Russia's economy is a thin deck of cards. But he surely doesn't fear the weak American economic position. Ditto for the broken economic dictatorships in North Korea, Iran, and Venezuela, and the rising economic dictatorship in China. They don't fear us. In fact, America's economic weakness is so worrying, one suspects our friends are losing respect for us too. Whether in Europe, Asia, Latin America, or Israel, our allies know that America has been the backstop for freedom. If not us, who? But can they say that now? As I testified this week before the congressional Joint Economic Committee, at 2.1 percent average real growth, the U.S. is lagging far behind the 4.1 percent average recovery pace of the post-war business cycles. The Reagan recovery averaged 5 percent annual growth at the same point as the Obama recovery. Obama's stock market from the depth of the meltdown does beat Reagan's market and the post-war average for equities. But here's a very worrisome trend. Over the entire post-war period, average yearly growth has been 3.2 percent. And in the 1980s and '90s, growth was 3.7 percent. Since 2001, however, under Republican and Democratic presidents and congresses, as

the dollar lost over a third of its value growth has dropped to only 1.8 percent annually. Something has clearly gone very wrong.

Continued Russian aggression triggers global nuclear war – deterrence is key

Fisher 9/3/14 (Max, Political Analyst @ Vox, "Obama's Russia paradox: Why he just threatened WWII in order to prevent it," <http://www.vox.com/2014/9/3/6101507/obama-just-committed-the-us-to-war-against-russia-if-it-invades>)

President Obama gave a speech on Wednesday, in a city most Americans have never heard of, committing the United States to possible war against Russia. He said that the North Atlantic Treaty Organization, a Western military alliance better known as NATO, would fight to defend eastern European members like Estonia against any foreign aggression. In other words, if Russian President Vladimir Putin invades Estonia or Latvia as he invaded Ukraine, then Putin would trigger war with the US and most of Europe. Obama's speech from the Estonian capital of Tallinn, though just a speech, may well be America's most important and aggressive step yet against Russia for its invasion of Ukraine. While the speech will do nothing for Ukraine, it is meant to stop Russia from invading, or perhaps from sponsoring rebellions in, other European countries — so long as those European countries are part of NATO, as most are. "We'll be here for Estonia. We will be here for Latvia. We will be here for Lithuania," President Obama said from the capital of Estonia, one of the three Baltic states that were once part of the Soviet Union but now are members of NATO. "You lost your independence once before. With NATO, you will never lose it again." Obama was making a promise, and a very public one meant to reverberate not just in European capitals but in Moscow as well: If Russia invades any member of NATO, even these small Baltic states on the alliance's far periphery, then it will be at war with all of them — including the United States. "The defense of Tallinn and Riga and Vilnius is just as important as the defense of Berlin and Paris and London," Obama said. To be really clear: that defense means war with Russia, which has the world's second-largest military and second-largest nuclear arsenal, a prospect so dangerous that even during the angriest moments of the Cold War, the world managed to avoid it. The idea, though, is not that Obama wants to go to war with Russia, it's that he wants to avoid war with Russia — this is also why the US and Europe are not intervening militarily in Ukraine to push back the Russian tanks — but that avoiding war with Russia means deterring Russian President Vladimir Putin from invading these Baltic states in the first place by scaring him off. The risk of such an invasion, by the way, is real: these countries are about one-quarter ethnic Russian, and Ukraine's own Russian minority which was Putin's excuse for invading Crimea in March. Putin also clearly sees former Soviet states as fair game; he has invaded Ukraine and Georgia, both marked in red on the above map. So the Baltic states are rightly terrified that they are next. Here is Obama's dilemma, and Europe's: They want to prove to Putin that they will definitely defend Estonia and Latvia and other eastern European NATO members as if they were American or British or German soil, so that Putin will not invade those countries as he did in Ukraine. But the entire world, including Putin, is suspicious as to whether or not this threat is a bluff. And the worst possible thing that could happen, the thing that could legitimately lead to World War Three and global nuclear war, is for Putin to call Obama's bluff, invade Estonia, and have Obama's bluff turn out to not be a bluff.

Econ Heg Impacts - Russian Aggression

Russian aggression causes nuclear war AND collapses collective security

Blank 9 (Dr. Stephen, Research Professor of National Security Affairs at the Strategic Studies Institute of the U.S. Army War College, March 2009, "Russia And Arms Control: Are There Opportunities For The Obama Administration?"

<http://www.strategicstudiesinstitute.army.mil/pdffiles/pub908.pdf>)

Proliferators or nuclear states like China and Russia can then deter regional or intercontinental attacks either by denial or by threat of retaliation.¹⁶⁸ Given a multipolar world structure with little ideological rivalry among major powers, it is unlikely that they will go to war with each other. Rather, like Russia, they will strive for exclusive hegemony in their own "sphere of influence" and use nuclear instruments towards that end. However, wars may well break out between major powers and weaker "peripheral" states or between peripheral and semiperipheral states given their lack of domestic legitimacy, the absence of the means of crisis prevention, the visible absence of crisis management mechanisms, and their strategic calculation that asymmetric wars might give them the victory or respite they need.¹⁶⁹ Simultaneously,[¶] The states of periphery and semiperiphery have far more opportunities for political maneuvering. Since war remains a political option, these states may find it convenient to exercise their military power as a means for achieving political objectives. Thus international crises may increase in number. This has two important implications for the use of WMD. First, they may be used deliberately to offer a decisive victory (or in Russia's case, to achieve "intra-war escalation control"—author¹⁷⁰) to the striker, or for defensive purposes when imbalances in military capabilities are significant; and second, crises increase the possibilities of inadvertent or accidental wars involving WMD.¹⁷¹¶ Obviously nuclear proliferators or states that are expanding their nuclear arsenals like Russia can exercise a great influence upon world politics if they chose to defy the prevailing consensus and use their weapons not as defensive weapons, as has been commonly thought, but as offensive weapons to threaten other states and deter nuclear powers. Their decision to go either for cooperative security and strengthened international military-political norms of action, or for individual national "egotism" will critically affect world politics. For, as Roberts observes,[¶] But if they drift away from those efforts [to bring about more cooperative security], the consequences could be profound. At the very least, the effective functioning of inherited mechanisms of world order, such as the special responsibility of the "great powers" in the management of the interstate system, especially problems of armed aggression, under the aegis of collective security, could be significantly impaired. Armed with the ability to defeat an intervention, or impose substantial costs in blood or money on an intervening force or the populaces of the nations marshaling that force, the newly empowered tier could bring an end to collective security operations, undermine the credibility of alliance commitments by the great powers, [undermine guarantees of extended deterrence by them to threatened nations and states] extend alliances of their own, and perhaps make wars of aggression on their neighbors or their own people.¹⁷²

Extinction

Muller 00 (Dr. Harold, Director of the Peace Research Institute-Frankfurt and Professor of International Relations at Goethe University Compliance Politics: A Critical Analysis of Multilateral Arms Control Treaty Enforcement <http://cns.miis.edu/npr/pdfs/72muell.pdf>)

In this author's view,³ at least four distinct missions continue to make arms control, disarmament, and non-proliferation agreements useful, even indispensable parts of a stable and reliable world security structure: • As long as the risk of great power rivalry and competition exists—and it exists today—constructing barriers against a degeneration of this competition into major violence remains a pivotal task of global security policy. Things may be more complicated than during the bipolar age since asymmetries loom larger and more than one pair of competing major powers may exist. With overlapping rivalries among these powers, arms races are likely to be interconnected, and the stability of any one pair of rivals might be affected negatively by developments in other dyads. Because of this greater risk of instability, the increased political complexity of the post-bipolar world calls for more rather than less arms control. For these competitive relationships, stability or stabilization remains a key goal, and effectively verified agreements can contribute much to establish such stability. • Arms control also has a role to play in securing regional stability. At the regional level, arms control agreements can create balances of forces that reassure regional powers that their basic security is certain, and help build confidence in the basically non-aggressive policies of neighbors. Over time, a web of interlocking agreements may even create enough of a sense of security and confidence to overcome past confrontations and enable transitions towards more cooperative relationships. At the global level, arms limitation or prohibition agreements, notably in the field of weapons of mass destruction, are needed to ban existential dangers for global stability, ecological safety, and maybe the very survival of human life on earth. In an age of increasing interdependence and ensuing complex networks that support the satisfaction of basic needs, international cooperation is needed to secure the smooth working of these networks. Arms control can create underlying conditions of security and stability that reduce distrust and enable countries to commit themselves to far-reaching cooperation in other sectors without perceiving undesirable risks to their national security. Global agreements also affect regional balances and help, if successful, to reduce the chances that regional conflicts will escalate. Under opportune circumstances, the normative frameworks that they enshrine may engender a feeling of community and shared security interests that help reduce the general level of conflict and assist in ushering in new relations of global cooperation. • Finally, one aspect that is rarely discussed in the arms control context is arms control among friends and partners. It takes the innocent form of military cooperation; joint staffs, commands, and units; common procurement planning; and broad and far-reaching transparency. While these relations serve at the surface to enhance a country's military capability by linking it with others, they are conducive as well to creating a sense of irreversibility in current friendly relations, by making unthinkable a return to previous, possibly more conflictual times. European defense cooperation is a case in point.¹ Whatever the particular mission of a specific agreement, it will serve these worthwhile purposes only if it is implemented appropriately and, if not, means are available to ensure compliance.⁵ In other words, the enduring value of arms control rests very much on the ability to assure compliance.⁵ Despite the reasons given above for the continuing utility of arms control, the skeptics may still have the last word if agreements are made empty shells by repeated breaches and a lack of effective enforcement.

Russian aggression sets a precedent globally – sparks SCS conflict

Wash Post 8/28/14 ("The West must make Mr. Putin pay for his aggression," http://www.washingtonpost.com/opinions/the-west-must-make-mr-putin-pay-for-his-aggression/2014/08/28/0eaa39a0-2eea-11e4-994d-202962a9150c_story.html)

IF ANY international norm can still be called uncontroversial, it is the stricture against cross-border aggression by one sovereign state against another. Certainly any failure to enforce it in one place invites violations elsewhere. That is why Vladimir Putin's decision to send Russian forces openly into Ukraine in the past 48 hours is a watershed, not a mere "continuation of what's been taking place for months," as President Obama understated the case Thursday. If Mr. Putin does not pay a high price for this naked, if still cynically denied, attack on his neighbors, the precedent could sow instability far and wide — from the Baltic Sea, ringed by small, free states with large Russian minorities, to the South China Sea, dotted with islands that China covets but other countries claim. The reasons for Mr. Putin's escalation, after months of destabilizing Ukraine through more covert means, may be only guessed. Ukraine's military has made gains against Russian-instigated "separatists" in two key cities, Luhansk and Donetsk, and Mr. Putin may have felt that he could not abandon them without incurring political risk in Moscow. The Russian army's move on Novoazovsk, well to the south of these contested areas, relieved the pressure on them — and perhaps foreshadows seizing a land corridor to Crimea, which Mr. Putin absorbed through force and chicanery six months ago but has struggled to resupply by air and sea since. Mr. Putin's strategic goal could be even grander: the takeover of southeastern Ukraine, which he calls "New Russia," and its incorporation into his ballyhooed Eurasian Union. What is evident is that Mr. Putin cares little for diplomatic "off-ramps," as the West calls the various face-saving solutions it has dangled since Mr. Putin first began his squeeze on Crimea, and to which Mr. Obama alluded yet again Thursday. To the contrary: Sending his own regulars to seize Ukrainian territory suggests that he would rather risk further conflict with the West than see his minions go down to defeat in Donetsk, Luhansk and elsewhere. There may be some in Washington who conclude from this that Mr. Putin's interest in Ukraine will always be greater than that of the United States, so pressure or sanctions can't work — and might even be counterproductive, given the need for Russian cooperation on other matters such as Iran's nuclear program. If the issue were only Russia's neighborhood, we would still disagree, vehemently, but we would understand the logic. But given the global repercussions of this struggle, the United States and its allies cannot afford to let Mr. Putin break the rules. It is time to hit Russia with the full brunt of financial sanctions, to supply Ukraine with the arms and intelligence it needs to defend its territorial integrity (which Russia itself once pledged to respect), to halt all military sales to Russia by Western nations — and to bolster the neglected North Atlantic Treaty Organization. Mr. Obama made little effort Thursday to explain or defend the "broader principle" that he said is at stake in Europe. Nations around the world that rely on U.S. leadership and its commitment to the rule of law can only hope that he brings more passion to the cause at what deserves to be a historic NATO summit in Wales next week.

Extinction AND most probable scenario for war

Mead 10 (Walter Russell, Senior Fellow @ the Council on Foreign Relations, 11-9, "Obama in Asia", <http://blogs.the-american-interest.com/wrm/2010/11/09/obama-in-asia/>)

The decision to go to Asia is one that all thinking Americans can and should support regardless of either party or ideological affiliation. East and South Asia are the places where the 21st century, for better or for worse, will most likely be shaped; economic growth, environmental progress, the destiny of democracy and success against terror are all at stake here. American objectives in this region are clear. While convincing China that its best interests are not served by a rash, Kaiser Wilhelm-like dash for supremacy in the region, the US does not want either to isolate or contain China. We want a strong, rich, open and free China in an Asia that is also strong, rich, open and free. Our destiny is inextricably linked with Asia's; Asian success will make America stronger, richer and more secure. Asia's failures will reverberate over here, threatening our prosperity, our security and perhaps even our survival. The world's two most mutually hostile nuclear states, India and Pakistan, are in Asia. The two states most likely to threaten others with nukes, North Korea and aspiring rogue nuclear power Iran, are there. The two superpowers with a billion plus people are in Asia as well. This is where the world's fastest growing economies are. It is where the worst environmental problems exist. It is the home of the world's largest democracy, the world's most populous Islamic country (Indonesia — which is also among the most democratic and pluralistic of Islamic countries), and the world's most rapidly rising non-democratic power as well. Asia holds more oil resources than any other continent; the world's most important and most threatened trade routes lie off its shores. East Asia, South Asia, Central Asia (where American and NATO forces are fighting the Taliban) and West Asia (home among others to Saudi Arabia, Israel, Turkey and Iraq) are the theaters in the world today that most directly engage America's vital interests and where our armed forces are most directly involved. The world's most explosive territorial disputes are in Asia as well, with islands (and the surrounding mineral and fishery resources) bitterly disputed between countries like Russia, the two Koreas, Japan, China (both from Beijing and Taipei), and Vietnam. From the streets of Jerusalem to the beaches of Taiwan the world's most intractable political problems are found on the Asian landmass and its surrounding seas. Whether you view the world in terms of geopolitical security, environmental sustainability, economic growth or the march of democracy, Asia is at the center of your concerns. That is the overwhelming reality of world politics today, and that reality is what President Obama's trip is intended to address.

US/Russia War Outweighs – 2nc

US/Russia nuclear war outweighs – only existential risk

Bostrom 2 (Nick, Professor of Philosophy and Global Studies at Yale, "Existential Risks: Analyzing Human Extinction Scenarios and Related Hazards," 38, www.transhumanist.com/volume9/risks.html)

A much greater existential risk emerged with the build-up of nuclear arsenals in the US and the USSR. An all-out nuclear war was a possibility with both a substantial probability and with consequences that might have been persistent enough to qualify as global and terminal. There was a real worry among those best acquainted with the information available at the time that a nuclear Armageddon would occur and that it might annihilate our species or permanently destroy human civilization. Russia and the US retain large nuclear arsenals that could be used in a future confrontation, either accidentally or deliberately. There is also a risk that other states may one day build up large nuclear arsenals. Note however that a smaller nuclear exchange, between India and Pakistan for instance, is not an existential risk, since it would not destroy or thwart humankind's potential permanently.

US-Russia nuclear war risks extinction

Starr 14 (Steven, Senior Scientist for Physicians for Social Responsibility and Director of the Clinical Laboratory Science Program @ University of Missouri, "Ukraine + NATO = Nuclear War," Truthout, Tuesday, 11 March 2014 13:03 pg. <http://tinyurl.com/ohgfk5p>)

Furthermore, US/NATO naval forces should not be deployed in the Black Sea, where they would be in close proximity to Russian naval forces. In the event of a war in which Russian forces were actively engaged, the presence of US forces nearby would create a significant chance for a mistake in which US or Russian forces would fire upon each other. Supersonic fighters traveling at more than 1,000 mph can easily overfly national boundaries or "hostile" military forces. If NATO and Russian forces to come into direct military conflict, then the possibility of nuclear conflict increases exponentially. NATO cannot send in its 25,000 man Response Force and expect to defeat 150,000 Russian troops (or more) in a fight at the Russian border. In a NATO-Russian conventional conflict, in which Russian forces were prevailing, NATO would have the choice of withdrawing, calling for a ceasefire, or using its nuclear weapons against Russian forces. NATO has at least a couple hundred US B61 nuclear weapons forward deployed in Belgium, Germany, Italy, the Netherlands, and Turkey. The B61 is a "variable yield" weapon; the two models currently forward-based in Europe, the B61-3 and B61-4 both can be set to have an explosive yield of 300 tons of TNT (0.3 kilotons). In other words, the B61 is designed to be "useable" nuclear weapon, beginning with a "small" detonation that is roughly 20-30 times larger than our largest conventional weapon. However, the B61-4 can also be set to have an explosive power as much as 50,000 tons of TNT (50 kilotons), and the B61-3 as much as 170,000 tons of TNT (170 kilotons) – which is 70% greater than many of the strategic nuclear warheads carried by US nuclear subs. Even if NATO could manage to use its conventional forces to defeat Russian conventional forces, Russia would *not* allow such a defeat upon its very border. Russia would certainly use nuclear weapons to stop NATO. Russia has for some time adopted the policy of "nuclear de-escalation": "In order to maintain a credible nuclear deterrence effect under the conditions of a regional war, Russia believes it should not rely on strategic nuclear

forces, or on them only, but must maintain a range of options for the limited or selective use of nuclear weapons in order to be able to inflict a precisely set level of damage to the enemy sufficient to convince him to terminate military confrontation by exposing him to the danger of further nuclear escalation . . . When introducing the concept of "nuclear de-escalation" in the late 1990s, the Russian defence establishment was obsessed with the possibility of a Kosovo-type US/NATO intervention in the war ("armed conflict") in Chechnya, which resumed in 1999. It did not exclude the possibility that, in the event of such a case, Russia would be forced to resort to nuclear weapons." In a NATO-Russian conflict, in which Russia introduced nuclear weapons, NATO would be fully capable of responding in a tit-for-tat fashion. This would be the same pattern as was seen in the NATO war games of the Cold War. Once the nuclear "firebreak" is crossed, once nuclear weapons are introduced into a military conflict in which *both sides have nuclear weapons*, there would likely be an almost inevitable escalation of conflict, a progressive use of nuclear weapons by both sides, with progressively larger targets being taken out. Peer-reviewed scientific studies predict that a war fought with hundreds or thousands of US and Russian strategic nuclear weapons would ignite nuclear firestorms over tens of thousands of square miles. These mass fires would produce between 50 million to 150 million tons of smoke, which would quickly rise above cloud level in to the stratosphere, where winds would carry it around the Earth. In a matter of weeks or months, a global stratospheric smoke layer would form, which would block up to 70% of warming sunlight, quickly producing Ice Age weather conditions in the Northern Hemisphere. The scientists predict that temperatures in the central US and Eurasia would fall below freezing every day for about three years. The smoke, the darkness, and extreme cold weather would last for ten years or longer, eliminating growing seasons, making it impossible to grow food. Most people and animals would perish from nuclear famine. Nuclear war is suicide for the human race.

OR Bostrum

Yes Russian Aggression – 2nc

Your impact D doesn't apply - Thune says Russian aggression is a LEGITIMATE threat now AND Fisher says that continued aggression risks US-Russia MISCALC that escalates to global nuclear war

AND Russian aggression increasing now – firm signals of US deterrence are vital

Taylor and Ybarra 10/23/14 (Guy and Maggie, Wash Times, "U.S., allies scramble jets almost daily to repel Russian incursions,"

<http://www.washingtontimes.com/news/2014/oct/23/vladimir-putin-emboldened-by-weak-us-response-to-r/print/>)

Russian military provocations have increased so much over the seven months since Moscow annexed Crimea from Ukraine that Washington and its allies are scrambling defense assets on a nearly daily basis in response to air, sea and land incursions by Vladimir Putin's forces. Not only is Moscow continuing to foment unrest in Eastern Ukraine, U.S. officials and regional security experts say Russian fighter jets are testing U.S. reaction times over Alaska and Japan's ability to scramble planes over its northern islands — all while haunting Sweden's navy and antagonizing Estonia's tiny national security force. The White House months ago leveled economic sanctions on several Russian businesses and political players, and recent weeks have seen President Obama intensify his rhetoric toward Moscow. But many in Washington's national security community say the response is simply not firm enough and that, as a result, Mr. Putin actually feels emboldened to push the envelope — Cold War-style. "What's going on is a radical escalation of aggressive Russian muscle flexing and posturing designed to demonstrate that Russia is no longer a defeated power of the Cold War era," says Ariel Cohen, who heads the Center for Energy, National Resources and Geopolitics at the Institute for the Analysis of Global Security in Washington. "The more we retreat, the more we are encouraging Russia to behave in a more aggressive way," Mr. Cohen said. "We need to be engaging more deeply with our Central Asian allies, but instead we are in the process of abandoning turf to Russia, and it's wrong — it's against our interests geopolitically to let Russia feel that they all of a sudden have won all the turf without firing a shot."

Russian aggression increasing now – on the brink of a new Cold War

Taylor and Ybarra 10/23/14 (Guy and Maggie, Wash Times, "U.S., allies scramble jets almost daily to repel Russian incursions,"

<http://www.washingtontimes.com/news/2014/oct/23/vladimir-putin-emboldened-by-weak-us-response-to-r/print/>)

But Mr. Putin has appeared undeterred. NATO officials confirmed this week that the Russian air force flew an Ilyushin-20 spy plane into Estonian airspace Tuesday, triggering a swift reaction from NATO fighter jets patrolling the area. The incursion came just days after Sweden made international headlines by scrambling a fleet of naval vessels to search for a suspected submarine sighted about 30 miles off the coast of Stockholm in the Baltic Sea. Swedish authorities avoided pinning the incident directly on Russia, and Moscow denied involvement. But regional analysts like Mr. Cohen say they'd be surprised if the sub was not Russian. The

development, the analysts say, fits within a growing list of similar Russian actions, including some directly challenging U.S. territory. The North American Aerospace Defense Command scrambled jets to scare off two Russian strategic bombers that suddenly appeared to conduct practice runs in airspace just 65 miles off Alaska in June. A similar incident occurred in September, with U.S. and Canadian fighters scrambling to deter six Russian aircraft, including two nuclear bombers, two fighter jets and two refueling tankers, according to news reports. Around the same time, Russian ground forces were making the unprecedented move of arresting an Estonian security official at gunpoint near the Baltic nation's border with Russia. The official is reportedly now in Moscow facing espionage charges. More worrisome are reports that Japan has had to scramble fighter jets to ward off Russian bombers and spy planes twice as often as usual over the past six months. Japanese government figures released this week show flights dispatched to meet Russian aircraft in the latest six months soared to 324 from 136 over the preceding six months, according to a report by Reuters. Steve Ganyard, the president of Avascent International, a global security consulting firm in Washington, says Russia's moves reflect Mr. Putin's desire to bring about a new era of cat and mouse-style games that were "prevalent in the Cold War." Tuesday's Estonia incursion, for instance, was "quite deliberate," said Mr. Ganyard, a former Marine Corps fighter pilot who has also held past posts at the Pentagon and State Department. Mr. Putin is engaged in a ploy to garner international recognition as a way to reassure Russian citizens that their nation remains a formidable military power, he said. "Military has its own appeal to nationalism, and that is what helps him keep [his] power and keep his approval ratings so high," he said. "Putin knows how to play domestic politics," Mr. Ganyard added. "Right now, one of his platforms is to return Russia to its glory, and part of that means its military glory" by bolstering the "myth of the Red Army saving the motherland." In February, Mr. Putin's defense minister, Sergei Shoigu, made headlines by claiming the Russian military was engaged in talks with Algeria, Cyprus, Nicaragua, Venezuela, Cuba, Seychelles, Vietnam and Singapore — and that the Russian navy was seeking permission to use ports in Latin America and Asia. Such claims are in keeping with "a Russian narrative of a more assertive and powerful country," said William Pomeranz, a national security analyst at the Wilson International Center for Scholars and Russian law professor at Georgetown University. Mr. Pomeranz said that while the past decade saw Mr. Putin build a reputation as a "relatively conservative international player," the Ukraine crisis has pushed the Russian president into a kind of "corner," creating internal pressure on him to make a show of force to the world. The crisis began in early 2014 when, in the aftermath of a revolution that forced former Ukrainian President Viktor Yanukovich to flee the country, pro-Russian forces took control of the Crimean Peninsula. The takeover caused an uproar in Ukraine, and Mr. Putin responded by sending thousands of military troops to the Russian border with the nation. Mr. Pomeranz said the massing of troops and the "rubbing up" against U.S. and NATO airspace by Moscow are designed to show the Russian military has advanced since its last major international feud — with nearby Georgia in 2008.

A2 Can't Deter Russia

US-led pressure key to containing Russia and offsetting its rising power

Herman 10/7/14 (Arthur, Senior Fellow @ Hudson Institution, "Fighting Obamapolitik," <http://www.hudson.org/research/10693-fighting-obamapolitik>)

A second major step would be to downgrade Russia's influence in the world and, correspondingly, restore ours to its former strength. Putin has used the pretense of Russia's great-power status to win popularity at home — he has never ridden so high in domestic opinion polls as he does now — and to humiliate the United States in Iran, Syria, and Ukraine. In response, the United States should stop regarding Russia as a superpower and instead conduct foreign policy in ways that take advantage of its declining military capability, its shrinking population, and its crumbling economy (whose growth now depends on commodity prices). Reducing the international position of Russia and its authoritarian allies would neatly match the steps discussed above to strengthen U.S. allies. In the absence of any policy from President Obama, Congress should again take the lead.

Continued Russian aggression risks miscalc and war – US-led signals are key to deterring Putin

Ignatius 14 (David, an associate editor and columnist for the Washington Post, former Adjunct Lecturer at the Kennedy School of Government at Harvard University and currently Senior Fellow to the Future of Diplomacy Program, co-hosts PostGlobal, an online discussion of international issues at Washingtonpost.com, with Fareed Zakaria, "David Ignatius: Putin's error in Ukraine is the kind that leads to catastrophe,"

http://www.washingtonpost.com/opinions/david-ignatius-putins-error-in-ukraine-is-the-kind-that-leads-to-catastrophe/2014/03/02/d376603e-a249-11e3-a5fa-55f0c77bf39c_story.html)

The Russian leader's nostalgia for the past was on display at the Sochi Olympics. As David Remnick wrote last week in the New Yorker, Putin regards the fall of the Soviet Union as a "tragic error," and the Olympics celebrated his vision that a strong Russia is back. That attitude led Putin to what Secretary of State John Kerry described on Sunday as a "brazen act of aggression" and a "violation of international obligations." Kerry called on Putin to "undo this act of invasion." The Russian leader would save himself immense grief by following Kerry's advice, but that seems unlikely. His mistake in Sevastopol may lead to others elsewhere, though hopefully Putin will avoid reckless actions. But the more Putin seeks to assert Russia's strength, he will actually underline its weakness. Perhaps inevitably, given Washington's political monomania, the big subject over the weekend wasn't Putin's criminal attack on Crimea but whether Obama had encouraged it by being insufficiently muscular. There are many valid criticisms to be made of Obama's foreign policy, especially in Syria, but the notion that Putin's attack is somehow the United States' fault is perverse. For two months the Obama administration has been prodding the European Union to take the Ukraine crisis more seriously. I'm told that U.S. reporting showed that Putin was impatient with Ukraine's pro-Russian president, Viktor Yanukovich, and wanted him to crack down even harder on the protesters in Kiev's Maidan Square. Putin's distaste for Yanukovich has been obvious since he fled the capital a week ago. What Putin misunderstands most is that the center of gravity for the former Soviet

Union has shifted west. Former Soviet satellites such as Poland and the Czech Republic are prosperous members of the E.U. The nations that made up what was once Yugoslavia have survived their bloody breakup, and most have emerged as strong democracies. Ukraine was set to join this movement toward the European Union last November when Yanukovich suddenly suspended trade and financial talks with the E.U. and accepted what amounted to a \$15 billion bribe from Putin to stay in Russia's camp. To the tens of thousands of courageous Ukrainians who braved the cold and police brutality to protest, Yanukovich's submission to Moscow looked like an attempt to reverse history. The opportunity for Putin is almost precisely opposite his atavistic vision of restoration. It is only by moving west, toward Europe, that Russia itself can reverse its demographic and political trap. Year by year, the Russian political system becomes more of a corrupt Oriental despotism — with Moscow closer to Almaty than Berlin. The alternative is for Ukraine to pull Russia with it toward the West. As former national security adviser Zbigniew Brzezinski explained in a 2008 book, "If Ukraine moves to the West, first to the EU and eventually to NATO, the probability that Russia will move toward Europe is far greater. . . . Russians will eventually say, 'Our future will be safest, our control over the Far East territories most assured . . . if there is a kind of Atlantic community that stretches from Lisbon to Vladivostok.' " Putin's Russia may well make more mistakes: We may see a cascading chain of error that brings Russian troops deeper into Ukraine and sets the stage for civil war. Those are the kind of miscalculations that lead to catastrophic consequences, and Obama would be wise to seek to deter Russian aggression without specifying too clearly what the U.S. ladder of escalation might be. But Americans and Europeans should agree that this is a story about Putin's violation of the international order. I'd be happy if we could interrupt Russia's mistakes, but so far Putin insists on doing the wrong thing.

A2 Econ Heg Not Deter Russia

US economic strength key to deterring Russian aggression – failure sets a destabilizing precedent globally

Bilotti 14 (Michael, Contributor @ Fordham Political Review, "Halting Russia Begins With Economics," <http://fordhampoliticalreview.org/halting-russia-begins-with-economics/>)

Russian President Vladimir Putin's recent use of force in the Crimean Peninsula has pushed the West into a huddle to determine how best to show Russia that it will not tolerate this reckless land-grab. Analysts around the world have noticed a warmer relationship emerging between the United States and Europe as policymakers from both regions ensure they are not alone in pushing for a punishment for Russia. President Obama's relations with Europe have been strained in recent years due to his "pivot" to Asia and the NSA spying scandals, however the most recent series of events expose one the main reasons close ties between Europe and the US are needed. Putin convinced the now-ousted Ukrainian President Viktor Yanukovich to back out of an economic deal with the West in preference for one with Russia. This crisis began with the economy and should be handled with the economy. The US and the EU should begin looking into cooperative economic means to both bolster their own economies so as to look healthier relative to a corrupt Russian system and assist other Eastern European nations that might be affected by Russian intervention. The West has three main ways of doing this: push for energy independence in Eastern Europe by developing long-term strategies to wane natural gas needs off Russia; continue with the development and passage of the Transatlantic Trade and Investment Partnership (TTIP); and join in unison to subject biting sanctions on the Russian economy. If the West wants to put up a front to Russian aggression, it should be one of economic, rather than military, might. The European Union imports upwards of 35% of its natural gas from Russia, a statistic that weighs heavily over the heads of European policymakers. The situation is even more dire for countries in Eastern Europe (see figure 1 below). With some countries importing 100% of their natural gas needs from Russia, any price change could send their respective economies into turbulence with the only way to quell such volatility coming from Mr. Putin. Already, Russia has spiked the price of natural gas to Ukraine by 44%; other countries remain just as vulnerable to these fluctuations. The United States is in an extraordinary position regarding its ability to assist with the natural gas needs of Eastern Europe. The US produces more natural gas than any other country and its production has increased 20% between 2007 and 2011. Unfortunately, there is only one port in the United States built to transform natural gas into the liquid form for transport; however, there are nine more specially fitted ports set for construction and even more should receive swift investment. The ports would take a few more years before we see any significant changes in export levels but, if we want to change the exposure of Eastern European energy sources to Russian interference, then we must plan for the long-term. Many Americans against developing natural gas ports might argue that domestic prices will increase as we enter the global gas market. Natural gas producers can continue to offer competitive domestic prices by planning ahead with the expectation for increased exports in the next few years. If the government wanted to assist, it could open new lands up to natural gas exploration. To further bolster Western unification, the United States and the European Union should move forward with the TTIP. This agreement would lift the US and EU GDPs by \$124 billion and \$165 billion, respectively. This partnership

creates would show those in Eastern Europe interested in close ties to Russia that the West offers standards of living and wealth unlike any other nation in the world. The partnership would also make any collective sanctions all the more painful for Russian diplomats and oligarchs. The TTIP would combine the two largest economies in the world in the name of democracy, business, and diplomatic cooperation. The European Union and the United States already rely on each other militarily through NATO, making it only logical that the support should continue on the economic side of the relationship through the TTIP. One of the most immediate issues that need to be addressed that of financial assistance for Ukraine and Eastern Europe. Over the past few weeks, the United States, the International Monetary Fund, and other European nations have provided large financial aid packages to the Ukrainian government. Both the House and the Senate passed a \$1 billion aid bill that would provide loan guarantees as well as institute sanctions on a list of Russians closest to Putin. The IMF has pledged upwards of \$18 billion in a single aid package while also freeing up funds for another \$9 billion to be provided over the next two years, including large contributions from the UK and Japan. The West has been impressive in jumping to aid Ukraine, but unfortunately more must be done. The packages from the US and the IMF would total \$28 billion over the next two years, 20% short of the target the Ukrainian finance ministry believes would be needed to avoid default. Elsewhere in Eastern Europe, the IMF should be looking to deliver aid in other forms of loan guarantees that would reduce pressure to form economic partnerships with Russia. Until a substantive peace agreement has been negotiated, we should not underestimate the lengths Putin will go to in order to reestablish Russia's power, therefore we must financially protect our most vulnerable allies in the east. When Crimea fell into Russian hands on March 18th, the West was outraged at the most credible threat to world security since the end of the Cold War. The precedent Russia set by performing this illegal land-grab under the guise of protecting ethnic Russians is extraordinarily dangerous. If the West fails to protect its allies and show developing nations that it will not tolerate such activities, states could very easily begin aggressive behavior towards each other. The ramifications resulting from the failure of the West to substantively answer Russia's antagonism would be far-reaching and severely destabilizing. It is for this reason that the West should produce a unified economic front to show the world that it stands with its principles of a free economy, self-governance, and international cooperation.

Ex-Im Bank Key to Satellites – 2nc

Ex-Im Bank reauthorization key to future satellite projects

Communications Daily 3/26/12 ("Fight Over Ex-Im Bank Threatens Future Satellite Financing," lexis)

An ongoing standoff in Congress over reauthorizing the U.S. Export-Import Bank puts at risk an entity that has been increasingly important for satellite projects, say industry executives. The bank, which provides loan and loan guarantees for U.S.-made exports, is facing the expiration of its congressional authorization and possibly reaching the loan exposure limits of its charter, said Phil Cogan, vice president-communications. The bank has never lost its authorization and it remains unclear exactly what would happen if it did, he said. The bank, an independent agency that provided \$1.3 billion in satellite financing in 2011, is operating on an extension of its authorization. The 5-year reauthorization, passed by Congress in 2006, ended Dec. 31 and the most recent extension of the authorization is up May 31, Cogan said. Overall, the bank provided some \$33 billion in financing in 2011, he said. It has helped fund other telecom projects, including cell and radio services, though satellite has been the largest recipient within the telecom industry, he said. The bank has been especially important in recent years for big-ticket exports, such as planes, said a satellite industry lawyer. The inherent complexities of gaining financing approval through the bank often makes the process only worthwhile for larger projects, he said. Ex-Im agreed last year to provide \$700 million in financing for Inmarsat's purchase of its Ka-band constellation, Global Xpress, from Boeing.

Sats Key to Econ/Heg

That tanks the global economy and undermines US global hegemony

Dolman 6 (Everett C., Associate Professor of Comparative Military Studies at the U.S. Air Force's School of Advanced Air and Space Studies, "A Debate About Weapons in Space: For U.S. Military Transformation and Weapons in Space" SAIS Review vol. XXVI no. 1, Winter-Spring)

No nation relies on space more than the United States—none is even close—and its reliance grows daily. A widespread loss of space capabilities would prove disastrous for American military security and civilian welfare. America's economy would collapse, bringing the rest of the world down with it. Its military would be obliged to hunker down in a defensive crouch while it prepared to withdraw from dozens of then- untenable foreign deployments. To prevent such disasters from occurring, the United States military—in particular the United States Air Force—is charged with protect- ing space capabilities from harm and ensuring reliable space operations for the foreseeable future. As a martial organization, the Air Force naturally looks to military means to achieve these desired ends. And so it should.

Sats Solve Terrorism

US satellite supremacy key to winning the war on terrorism

Ruppersberger 11 (C.A. Dutch, Worldwide Threats Hearing Opening Statement American politician, has been a Democratic member of the United States House of Representatives since 2003, representing the 2nd District of Maryland. He was born in Baltimore, Maryland, was educated at University of Maryland and the University of Baltimore, and was a lawyer and member of the Baltimore City Council before entering the House.

<http://intelligence.house.gov/sites/intelligence.house.gov/files/documents/RMOpeningWorldwideThreatsHearing.pdf>

The last issue I would like to discuss is space. We have some of the best satellite systems. America is the most powerful country in the world, in part, because we control the skies. Satellites are important because they keep us safe. We use satellites and their images to track suspected terrorists around the world and stop future attacks. Satellites allow us to monitor important global developments and provide real-time data to our troops on the ground in Iraq and Afghanistan. When our troops climb a hill on the battlefield, they know what is on the other side of that hill because of our technology. We can find that needle in the haystack because we have the best satellites in the world. You may have heard the President of the United States mention our "Sputnik moment". Well, he stole my line. I have been talking about this for years. More than 50 years ago, the Soviet Union rocked our world by launching Sputnik into space. Just 12 years later, America answered the challenge and landed a man on the moon. The space industry was born. America made a massive investment in research and development, employed the best and brightest scientists, mathematicians and engineers, and put unprecedented emphasis on science education. America made worldwide headlines and just about every kid on Earth wanted to be Neil Armstrong. Today, America's dominance in space is fragile.

Sats Key to Environment/Solve Warming

Satellite developments key to effective global environmental monitoring

Pace 9 (House Science and Technology Subcommittee on Space and Aeronautics Hearing; Keeping the Space Environment Safe for Civil and Commercial Users; Testimony by Scott Pace, Director, Space Policy Institute, George Washington University Congressional Documents and Publications April 28, 2009 lexis)

Space activities contribute to the long-term well being of society through improved scientific understanding in every field of knowledge, most notably with respect to the global environment. The design, development, and operation of space systems constitute major technical and managerial challenges in systems engineering and thus help strengthen the engineering capacities of participating nations. China and India are but the latest examples of nations that see the value of space to their further development. Most immediately, space systems such as satellite communications, environmental monitoring, and global navigation satellite systems are crucial to the productivity of many types of national and international infrastructures such as air, sea, and highway transportation, oil and gas pipelines, financial networks, and global communications. Information services enabled by the unique capabilities and global reach of space systems are crucial to the functioning of the global economy. In a time of global economic crisis, the United States and other space-faring nations need to cooperate more closely to protect space systems from intentional or unintentional interference. The space environment today is a very different from what it was in 1957 when the first satellite was launched, or 1972 when the international convention on liability for damage caused by space objects was signed. In the past two years, a Chinese anti-satellite test and communications satellite collision have added thousands of orbital debris to the local space environment, much of which will be in orbit for many years to come. Today, the Joint Space Operations Center is tracking over 19,000 man-made objects and that number is growing. The space environment is not safe - it might be fairly characterized as an environment in which everything is trying to kill you and your spacecraft. It can however be made sustainable in that the vital functions we use space for today can be reliably maintained for generations to come.

Improving satellite capabilities are a necessary condition for solving climate change – accurate data, demonstration of climate leadership

Lewis et al., 2010 (James A., Director and Senior Fellow, Technology and Public Policy Program – CSIS, Sarah O. Ladislaw, Senior Fellow, Energy and National Security Program – CSIS, Denise E. Zheng, Congressional Staffer - Salary Data, “Earth Observation for Climate Change,” June, http://csis.org/files/publication/100608_Lewis_EarthObservation_WEB.pdf)

Climate change will have pervasive and unavoidable effects on economic and national security. Managing these consequences and mitigating them when possible are new and difficult tasks for governments. Progress in mitigating and adapting to climate change will require the world’s countries to agree to coordinate their actions. Reaching such agreement will be no easy task. That said, climate change offers a unique opportunity for the United States to engage other nations in pursuing common interests and addressing future challenges. Not only is the United States well positioned to lead on this issue because of its significant space and scientific

capacity, it also faces global expectations that it should shoulder the leadership burden for climate change. A commitment to building the space and information infrastructure needed to manage climate change could demonstrate the U.S. leadership, based on competence and advancing the global good, that the world respects and admires. Operationalization is the next step for dealing with climate change—to make the data and knowledge generation by satellites and science easier to use in policymaking. Operationalization requires a new approach. Climate change has largely been an issue of science. The existing vehicles for international cooperation and data sharing are aimed at the scientific community. Effective global management of climate requires a new approach with three integrated elements—space, networks, and collaboration. Our belief is that a concerted effort to analyze and share data from the many national efforts could significantly advance our understanding of the risks and causes of climate change, better measure the effects of mitigation policies, and guide planning on how to adapt to changes in the environment. Achieving such a concerted effort will require coordination must occur on several different levels if it is to have a meaningful effect. The first—the collection and measurement of relevant data—depends largely on satellites. Without the proper data, it would be very difficult to develop and aggregate a global picture of climate change and its nature and pace. It would be difficult to measure the effects of mitigation efforts, determine when or whether policies are effective, or predict when and how climate effects will affect local communities. The second level is to expand the analysis and sharing of information. In some ways, we are only in the early stages of developing a global enterprise for assessing climate change. Much of the research and analysis conducted thus far has been focused on understanding the nature and pace of climate change, forecasting future changes in Earth’s natural systems based on changes in different variables, and substantiating theories about how human efforts to reduce the effects of climate change might actually have some effect. More work is needed in each area to improve our understanding and update it as the natural environment continues to change. Finally, data must move from the scientific community to the policy community—to governments and policymakers—if data are to guide change. While the UN’s Intergovernmental Panel on Climate Change tailored analysis to meet policymakers’ needs in the hopes of reaching a global consensus for action, the challenge today is to extend and strengthen connections between the science and policy communities. A coordinated multinational effort to better inform the policy process can change this. Our belief is that a concerted effort to analyze and share data from the many national efforts could significantly advance our understanding of the risks and causes of climate change, better measure the effects of mitigation, and guide planning on adapting to changes in the environment. To this end, our recommendations follow: The U.S. approach to climate change policy needs to inform decisionmakers and planners in both government and the private sector by providing understandable metrics and analyses of the effectiveness of, and compliance with, mitigation programs and adaptation plans. The customers for this should include federal agencies, state and local governments, private sector users, and other nations. To better serve the national interest, the United States should increase its Earth observation capabilities—especially space-based sensors for carbon monitoring—to improve our ability to understand the carbon cycle and to inform any future international agreement. This means that until these capabilities are adequate for monitoring climate change, investment in Earth observation satellites should take precedence over other space programs. Increased spending on earth

observation satellites specifically designed for climate change should be maintained until the current capability shortfall is eliminated.

New Link Work

Surveillance Splits Dems

Ending metadata surveillance splits the Dems

Greenwald 13 (Glenn, investigative reporter @ The Guardian, "Democratic establishment unmasked: prime defenders of NSA bulk spying" 7/25, <http://www.theguardian.com/commentisfree/2013/jul/25/democratic-establishment-nsa>)

Even more notable than the Obama White House's defense of the NSA's bulk domestic spying was the behavior of the House Democratic leadership. Not only did they all vote against defunding the NSA bulk domestic spying program - that includes liberal icon House Democratic leader Nancy Pelosi, who voted to protect the NSA's program - but Pelosi's deputy, Steny Hoyer, whipped against the bill by channeling the warped language and mentality of Dick Cheney. This is the language the Democratic leadership circulated when telling their members to reject Amash/Conyers: "2) Amash/Conyers/Mulvaney/Polis/Massie Amendment – Bars the NSA and other agencies from using Section 215 of the Patriot Act (as codified by Section 501 of FISA) to collect records, including telephone call records, that pertain to persons who may be in communication with terrorist groups but are not already subject to an investigation under Section 215." Remember when Democrats used to object so earnestly when Dick Cheney would scream "The Terrorists!" every time someone tried to rein in the National Security State just a bit and so modestly protect basic civil liberties? How well they have learned: now, a bill to ban the government from collecting the telephone records of all Americans, while expressly allowing it to collect the records of anyone for whom there is evidence of wrongdoing, is - in the language of the House Democratic Leadership - a bill to Protect The Terrorists. None of this should be surprising. Remember: this is the same Nancy Pelosi who spent years during the Bush administration pretending to be a vehement opponent of the illegal Bush NSA warrantless eavesdropping program after it was revealed by the New York Times, even though (just as was true of the Bush torture program) she was secretly briefed on it many years earlier when it was first implemented. At the end of June, we published the top secret draft report by the Inspector General's office of the NSA that was required to provide a comprehensive history of the NSA warrantless eavesdropping program secretly ordered by Bush in late 2001. That report included this passage: "Within the first 30 days of the Program, over 190 people were cleared into the Program. This number included Senators Robert Graham and Richard Shelby, Congresswoman Nancy Pelosi, President George W. Bush, Vice President Richard Cheney, Counsel to the Vice President David Addington, and Presidential Assistant I. Lewis 'Scooter' Libby." So the history of Democratic leaders such as Nancy Pelosi isn't one of opposition to mass NSA spying when Bush was in office, only to change positions now that Obama is. The history is of pretend opposition - of deceiving their supporters by feigning opposition - while actually supporting it.

Metadata surveillance fights split the Democrats

Associated Press 14 ("NSA Surveillance Debate Exposes Divisions In Democratic, Republican Parties," http://www.huffingtonpost.com/2014/02/18/nsa-surveillance-debate_n_4807707.html)

WASHINGTON (AP) — While some leading Democrats are reluctant to condemn the dragnet surveillance of Americans' phone records, the Republican Party has begun to embrace a libertarian shift opposing the spy agency's broad powers. But the lines are not drawn in the

traditional way. The Republican National Committee and civil libertarians like Kentucky Sen. Rand Paul have joined liberals like Massachusetts Sen. Elizabeth Warren on one side of the debate — a striking departure from the aggressive national security policies that have defined the Republican Party for generations. On the other side, defending surveillance programs created under the Bush administration and continued under President Barack Obama, are Florida Republican Sen. Marco Rubio, Democratic former Secretary of State Hillary Rodham Clinton, and the House and Senate leadership of both parties. As a result, the debate about whether to continue the National Security Agency's sweeping surveillance tactics has highlighted intraparty divisions that could transform the politics of national security. The split in each party could have practical and political consequences ahead of the 2014 midterm elections. There are already signs that the debate is seeping into the next presidential contest. Speaking Tuesday to New Hampshire voters, Rep. Darrell Issa, R-Calif., cited the spy agency's surveillance methods as another example of broad overreach in what he called Obama's "imperial presidency." Issa called for reforms that would ensure American people are represented during secret court proceedings that decide the scope of the NSA surveillance. Obama has called for more oversight, too, and Issa stopped short of endorsing the plan to eliminate the bulk collection program. Congress may address government surveillance this spring in one of its last major moves before members head home to focus on the November elections. But if Congress punts the surveillance debate to next year, it would resurface just as the presidential primary campaigns are beginning. The bulk collection of Americans' phone records was authorized under Section 215 of the USA Patriot Act. Details of the program were secret until June when a former NSA systems analyst, Edward Snowden, leaked classified documents that spelled out the scope of the government's activities. The bulk collection provision in the law is set to expire June 1, 2015, unless Congress acts to renew it. More than a decade after the 9/11 terrorist attacks, Americans have become less willing to support invasive surveillance tactics in the name of national security. Recent polls show a sharp decline in public support for the NSA programs. The Obama administration justifies continuing the surveillance program, in part, by pointing to Congress' continued approval and support. In an effort to win back public trust, Obama has called for some changes that would provide more privacy protections and transparency but not end the program. Clinton, the overwhelming Democratic favorite should she seek the presidency, has been virtually silent on the NSA debate for months. Last fall she called for a "full, comprehensive discussion" about the practices but also defended the surveillance. "From my own experience, the information-gathering and analyzing has proven very important and useful in a number of instances," she said. A Clinton spokesman declined to offer further comment last week. Paul, a prospective Republican presidential hopeful and tea party favorite, contrasted Clinton's position with his own aggressive opposition to Bush-era intelligence programs, as polls suggest that a growing majority of Republicans — tea party supporters in particular — are deeply skeptical of the federal government. "I think in 2016 if you had a more libertarian-leaning Republican, and you had someone like Hillary Clinton, I think you could actually completely transform where people think they are and what party people think they have allegiance for," Paul said at a recent Washington conference. Last week, he filed a lawsuit against Obama and others in the administration over the so-called 215 program. The Republican National Committee in January approved a resolution "to immediately take action to halt current unconstitutional surveillance programs and provide a full public accounting of the

NSA's data collection programs." There was an immediate backlash from Bush-era Republican intelligence officials who described the resolution in a letter to RNC Chairman Reince Priebus as a dangerous "recipe for partisan oblivion." Other Republicans also pushed back against the intraparty shift. Rubio said this week that "we need to be careful about weakening" the nation's surveillance capabilities. Rubio said Americans' privacy expectations and rights need to be protected. "But we also need an effective surveillance capability," he told the Tampa Bay Times. "Every other country in the world, certainly those that are hostile to our interests, has robust intelligence programs." There was an unexpectedly close vote in the Republican-controlled House last July on a measure that would have ended the bulk collection of phone records. The amendment failed, but it was the first chance for lawmakers to take a stand on the secret surveillance program since the Snowden leaks. A Pew Research Center poll found last month found that Republicans, fueled by tea party supporters, now disapprove of the program by 56 percent to 37 percent. Democrats are almost evenly split on the program — 46 percent approve and 48 disapprove. Facing increasingly vocal activists at home, nine Republicans who didn't vote or voted against the amendment last year have signed onto bipartisan legislation that would end the bulk collection surveillance program. Lawmakers are expected to get another chance to weigh in this spring when Republican House leaders plan to allow a vote on an amendment to a Defense Department bill that would curtail some of the NSA's surveillance authority. If approved, the measure would give GOP members political cover with their party's most aggressive NSA critics. In the Democratic Party, progressive members are more likely to be aligned with tea party Republicans than Clinton and Obama on the issue. Warren, a liberal favorite, said that while Obama's proposed reforms were "a significant step forward," they didn't go far enough. She is among more than a dozen Democratic and three Republican senators who support legislation that would end the 215 program. "Congress must go further to protect the right to privacy, to end the NSA's dragnet surveillance of ordinary Americans, to make the intelligence community more transparent and accountable," Warren said in a statement to The Associated Press. The intraparty divisions are clear on both sides, but at least one Republican strategist sees a silver lining.

Surveillance reform splits the Dems - USA Freedom Act proves

Fleitz 15 (Fred, "senior vice president for policy and programs for the Center for Security Policy," 5/11, <http://www.nationalreview.com/article/418207/nsa-data-collection-necessary-or-unconstitutional-fred-fleitz>,

Congress also has struggled with NSA reform. Last May, the House passed the 2014 USA Freedom Act, which would put significant restrictions on the 215 program, including a mandate that metadata be retained by the phone companies, not the NSA. Although I viewed this as a bad bill, I endorsed it in a June 23, 2014, National Review article because I believed that, regardless of the merits and capabilities of the metadata program, it has been so damaged by fear-mongering attacks by the press and some politicians that it could not continue in its current form. Unfortunately, the House version of the USA Freedom Act was made substantially worse by Patrick Leahy, then-chairman of the Senate Judiciary Committee, who added restrictions that would effectively kill the metadata program and interfere with the operation of the Foreign Intelligence Surveillance Court. Because of Leahy's changes to the House version of the 2014 USA Freedom Act, it did not garner a filibuster-proof majority last November, and the Senate

failed to pass it. The top members of the Senate Intelligence Committee – then-chairman Feinstein and Saxby Chambliss — said Leahy’s bill went too far. Former CIA director Michael Hayden and former attorney general Michael Mukasey condemned the bill in a November 17, 2014, Wall Street Journal op-ed titled “NSA Reform That Only ISIS Could Love.” The challenge for Congress now is to pass legislation to extend the metadata program before it expires at the end of this month. Members of Congress and staff have been working over the past three months to devise a 2015 version of the USA Freedom Act. On April 30, the House Judiciary Committee approved this bill by a vote of 25 to 2. An identical version has been sponsored in the Senate by Senators Leahy and Lee. The House’s 2015 USA Freedom Act is slightly better than the 2014 Senate version. The metadata program would continue, although the data would be held by phone companies. NSA searches of metadata databases would be narrowed. The bill also would create a panel of experts to advise the Foreign Intelligence Surveillance Court on privacy, civil liberties, and technological matters. Significant FISC decisions would be declassified. The bill includes concessions to the House Intelligence Committee, such as allowing the NSA authority to conduct surveillance for 72 hours without obtaining a warrant on foreign targets who enter the United States, and to monitor domestic targets on whom it has a probable-cause warrant when they travel overseas. The NSA will also be allowed to use the Patriot Act to collect data domestically in an emergency. The Left and privacy groups are split over the 2015 version of the USA Freedom Act. Some have endorsed it, because they believe that it is the best they can get and that it will open the door to greater reform down the road. These groups are pressuring Congress to remove the concessions made to the House Intelligence Committee. Several of these groups have stepped up their efforts to amend the bill in the light of the May 7 New York Court of Appeals decision. Others on the left, such as the ACLU and the New York Times, do not support the 2015 USA Freedom Act, since they would prefer that the electronic-surveillance provisions of the Patriot Act be allowed to expire.

A2 Courts = Obama Avoids Blame

Liberal rulings cause massive backlash to the democrats and Obama's agenda – gets blamed due to Kagan and Sotomayor

Mirengoff 10 (Paul, attorney in Washington, D.C. A.B., Dartmouth College J.D., Stanford Law School, June 23 The Federalist Society Online Debate Series, <http://www.fed-soc.org/debates/dbtid.41/default.asp>)

The other thing I found interesting was the degree to which Democrats used the hearings to attack the "Roberts Court." I don't recall either party going this much on the offensive in this respect during the last three sets of hearings. What explains this development? My view is that liberal Democratic politicians (and members of their base) think they lost the argument during the last three confirmation battles. John Roberts and Samuel Alito "played" well, and Sonia Sotomayor sounded like a conservative. The resulting frustration probably induced the Democrats to be more aggressive in general and, in particular, to try to discredit Roberts and Alito by claiming they are not the jurists they appeared to be when they made such a good impression on the public. I'm pretty sure the strategy didn't work. First, as I said, these hearings seem not to have attracted much attention. Second, Senate Democrats are unpopular right now, so their attacks on members of a more popular institution are not likely to resonate. Third, those who watched until the bitter end saw Ed Whelan, Robert Alt and others persuasively counter the alleged examples of "judicial activism" by the Roberts Court relied upon by the Democrats -- e.g., the Ledbetter case, which the Democrats continue grossly to mischaracterize. There's a chance that the Democrats' latest partisan innovation will come back to haunt them. Justice Sotomayor and soon-to-be Justice Kagan are on record having articulated a traditional, fairly minimalist view of the role of judges. If a liberal majority were to emerge -- or even if the liberals prevail in a few high profile cases -- the charge of "deceptive testimony" could be turned against them. And if Barack Obama is still president at that time, he likely will receive some of the blame.

Democrats get the blame for liberal rulings like the plan

Tucker 95 (D.F.B., associate professor of political science at the University of Melbourne, The Rehnquist Court and Civil Rights, p. 40-41)

The point I have been illustrating is that the backlash generated by an activist Supreme Court is likely to influence the political process of other political actors; indeed, that it is likely to provide an enormous advantage to those politicians who are unscrupulous enough to oppose the Court. We see this in recent presidential contests in the United States for the strategies adopted by the major political parties when conducting election campaigns have been shaped by an on-going debate about liberal values, partly provoked by the activities of the Supreme Court.¶ This phenomenon has been very significant in the South because the Supreme Court was involved as a key institution when the federal government brought segregation to an end. But the Warren-Burger Court's role as an unwitting agent provocateur for the Republicans, encouraging conservative communities to shift political allegiance away from the Democrats by presenting as a symbol of unpopular liberal principles, has not been confined to the issue of racial justice. The Supreme Court expanded the liberal agenda enormously by bringing down unpopular and

controversial rulings relating to police powers, separation of Church and State, speech, and privacy. In a series of decisions, that stretch the legal imagination and ingenuity even of their defenders, it recognized a number of new rights that protected stigmatized groups that had little or no community support (for example, criminals, prisoners, atheists, pornographers, drug users); even more controversially, it acted aggressively to withdraw protection from traditionally protected communities (such as poorly educated rural whites and the religious communities) by refusing to uphold claims to state autonomy (made in the name of the federal agreement originally embodied in the Constitution). The Supreme Court justices acted in the name of liberal values and conditions of the federal division of powers that were widely recognized and accepted.¶ These interventions had the effect of placing progressive leaders in the Democratic Party in a very vulnerable position. Although they knew that they were unable to secure public support for the rights and liberties that the Court had decided to recognize, they felt obligated to defend the agenda the Court had foisted upon them. This was partly because of their own personal values. (How can someone who strongly believes that liberal ideals are worthy easily enter into a campaign to discredit the Court's imposition of those very values?)

Obama gets the electoral blame for liberal Court rulings

Loftin 10 (Britton, Political Strategist and Director of a Legislative & Government Affairs firm, "Is Obama To Blame for Decline in Supreme Court Approval Ratings," <http://webcache.googleusercontent.com/search?q=cache:CwTZ3gilzFQJ:politic365.com/2010/10/12/is-obama-to-blame-for-decline-in-supreme-court-approval-ratings/+&cd=10&hl=en&ct=clnk&gl=us>)

Although the 2010 percentage is low compared to the previous year, the approval ratings for 2007 and 2008 are near the current rate. Could it be that President Obama's declining approval ratings over the past year have resulted in guilt by association for the Supreme Court? Instead, is it possible that the Supreme Court's recent 5-4 decision to reverse a position it took in 2003 to uphold government restrictions on political expenditures by corporations has been perceived negatively in the public eye?¶ The Supreme Court had great public approval ratings in 2009, perhaps, in part, evidenced by the outpouring of support it received for then-appointee Justice Sonya Sotomayor. At the time, fervent support for a Latino woman to be appointed to the Court seemed to generate positive feelings about its general performance. During President Obama's 2010 appointment of now Justice Elena Kagan, however, the Court's job approval numbers declined, even in spite of overwhelming support by the Democratic base.¶ The President's first Supreme Court appointment was a sign of transition from the previous Republican era to a new Democratic administration. Further, America was engaged through wide media coverage of both of the President's Supreme Court nominations.¶ Sotomayor marked the first appointment of a Latino to the nation's highest court. And as Democratic excitement fueled President Obama's nomination, the Court's approval ratings remained high, according to Gallup, which polled American approval ratings at 53% satisfied versus 33% dissatisfied.¶ So what's changed? President Obama has now made two lifetime appointments to the Supreme Court, and yet, the Democratic leaning presence has yet to politically balance the bench. Ironically though, the view of most people polled by Gallup is that the bench has become more liberal. Thus, the Court's overall approval ratings have declined. It's also interesting to note that as President Obama's approval ratings declined throughout 2010, so too did overall satisfaction with the job

performance of the Supreme Court.¶ In the 2010-2011 Supreme Court Session, the cases coming before the justices involve emotion driven topics: undocumented immigrant rights, information privacy, and free speech, all issues that are sure to engage the American electorate.¶ Back in 2009, the Court's approval ratings were bolstered by an energized Democratic base consisting primarily of African Americans, Latinos and young people. Now, given a marked shift toward more conservative ideology in the wake of continued economic recession and unemployment, it seems that satisfaction with the Supreme Court is based less on actual job performance than it is on the perception that the Court has become too liberal under Obama's watch.

A2 Courts Not Perceived

Courts aren't insulated from politics—controversial, significant Court rulings generate national political controversy

Champagne 6 (Anthony, Professor of Political Science, University of Texas, Dallas, 39 Loy. L.A. L. Rev. 839, lexis)

Attacks on the judiciary are nothing new in the sense that judges have always been subject to criticism in American politics. n80 In another sense, however, a new development is emerging in the current criticisms of the judiciary. During the Roosevelt era, and for many years afterwards, most of the heated battles in American politics were over economic issues and foreign policy questions such as involvement in the Korean and Vietnam Wars. n81 Courts limited their involvement in these debates and, for the most part, deferred to the political branches. n82 However, courts steadily increased their involvement with controversial issues beginning with civil liberties [*849] questions during the Warren Court era and continuing with social issues such as abortion, the free exercise of religion, women's rights, and gay rights. n83 Resolution of these issues was in the judiciary, rather than the political process. n84¶ Ultimately, the involvement of the judiciary did have political consequences. Over a period of several decades, social con-servatives who viewed many of these court decisions as reflecting immoral or inappropriate values, reacted with a sense of moral urgency. n85 At the same time, people with less traditional or more secular values strongly supported these same decisions. n86 As the previously discussed data demonstrates, these two groups' competing views of judicial decisions materialized in the increasingly divergent views of the Democratic and Republican parties. The gulf between the perspectives of Democrats and Republicans regarding court decisions with significant social ramifications guaranteed that the courts, judges, and their decisions would become part of the national political debate.¶ It does not appear that the political controversy over the courts will diminish any time soon. The era of "umbrella" political parties where each party had numerous members reflecting a variety of views is gone. Today's parties increasingly reflect sharply divergent views. n87 This development, of course, explains the lack of cooperation and the proliferation of partisanship in Washington. There is no evidence that this pattern will change in the near future. Nor is it likely that the courts can now remove themselves from the political thicket. How, for example, could the courts avoid controversy over such questions as abortion? A reaffirmation of Roe v. Wade n88 would lead to intense criticism of the Court by Roe's opponents. Yet, to overturn the decision would lead to a similar response from Roe's supporters. What we now have, for good or ill, is a new era for the American judiciary - an era when battles over control of the judiciary and criticism of the bench reflect the underlying division in the country over its social values.¶ Long ago, Justice Felix Frankfurter warned against the Court entering the "political thicket" when commenting on the issue of reapportionment of legislatures. n89 The battle over the judiciary today with respect to social issues demonstrates that once the courts enter the "political thicket", it is impossible for them to escape. Yet, courts have survived political controversies in the past, even when, like the thicket of reapportionment, they pose longstanding and seemingly unsolvable problems. There is no reason to believe that the thicket of social issues will be any different. [*851]

There's only risk of the link—negative public reactions to Supreme Court decisions are more intense and longer-lasting than positive public reactions

Friedman 5 (Barry, Prof of Law @ NYU, 84 Tex. L. Rev. 257, lexis)

Although the Court's degree of freedom of movement around public opinion may not be certain, positive scholars are fairly confident that one major determinant is information. The dynamics here are complex, but some generalities may be possible . Both negative and positive reactions to the Court influence public opinion, but negative reactions seem to be more intense and have a shorter half-life . n395 Perhaps it is for this reason that the less people hear about the Court, the better for it. n396 As time passes, people develop a store of good feelings about the Supreme Court, reflected in the Court's relatively strong performance in public mood indicators. n397 Commentators who have studied public opinion and the Court regularly advise it to keep a low profile. n398

Politics Iran -MSDI

About MSDI & Missouri State U..

For twenty years, the Missouri State Debate Institute has offered an excellent educational experience in the middle of the high school topic. MSDI is distinct from other camps in six ways. First, our skills focus assures that a typical 2-week debater gets nearly 80 speeches, including over 20 debates. Second, we emphasize the largest cases on topic, with students getting both aff and neg rounds on each. Third, our senior faculty are comparable with top lab leaders in any camp. Fourth, MSDI students can earn highly transferable college credit in public speaking for a minimal cost. Fifth, we respect variance in home debate circuits – our goal is to improve line by line debating in ways that will help students no matter who judges in their home circuit. Finally, our price is below any comparable camp and far below most camps. Our 2016 information will be available shortly at: <http://debate.missouristate.edu/camp.htm>.

Missouri State University is a large comprehensive university (enrollment over 24k), with nearly any major you might want. The university has excellent academic scholarship support – most debaters combine academic “entitlement” scholarships (guaranteed based on GPA/test scores) with debate scholarships. The Spicer Debate Forum competes in two year-long policy debate formats: NDT and NFA-LD. We’ve national semis or finals in both in the last decade. Our debaters have an average GPA over 3.5, a 97% graduation rate, and 70% complete law/grad school afterward. Our program is a high-impact academic experience with an exceptional alumni network. Please contact Dr. Eric Morris for more information (EricMorris@MissouriState.edu).

PC key to block attempts to derail the Iran deal; key to the future of negotiations

Jordain Carney June 25, 2015, 07:01 pm Iran hardliners push sanctions ahead of nuke talks deadline

<http://thehill.com/blogs/floor-action/senate/246225-iran-hard-lines-push-sanctions-ahead-of-nyke-talks-deadline>

Sens. Mark Kirk (R-Ill.) and Bob Menendez (D-N.J.) are pushing a 10-year extension for an Iran sanctions bill days ahead of a deadline to finalize a long-term deal on the country's nuclear program. ¶ The two senators, who have been at the forefront of a push to increase sanctions against the Iranian government, want to extend the Iran Sanctions Act, currently set to expire at the end of next year, through 2026. ¶ ¶ The move comes as officials from the United States, Iran and five other countries face a June 30 deadline to lock down a final agreement that would limit Iran's nuclear program in exchange for sanctions relief. ¶ ¶ The legislation is the latest sign of increasing skepticism from lawmakers, particularly Republicans, who are lining up against a potential deal ahead of the deadline. ¶ ¶ The sanctions legislation targets Iran's nuclear and missile programs, as well as human rights violations and support for terrorism. The administration has argued that Iran's backing of terrorist groups or human rights abuses should be separate from the ongoing nuclear talks. ¶ ¶ Thursday's legislation is the second time the senators have pushed the measure. They also tried to get it in the National Defense Authorization Act. Including the Iran sanctions proposal would have complicated an already tricky path to passage for the annual policy bill that faces a veto threat from the White House. ¶ ¶ Menendez suggested the administration should back the legislation if it is serious about its pledge to snap back sanctions if Iran violates a final deal. ¶ ¶ "If a deal is reached with Iran, it is critical that should Iran violate the terms of an agreement, severe penalties will follow and a forceful snapback of sanctions will occur," the New Jersey Democrat said. "It stands to reason that if negotiators are serious about snapback, then they should support the immediate extension of the Iran Sanctions Act to ensure there is no question for Iran about the consequences of non-compliance." ¶ ¶ Kirk added the administration must support the legislation if it "is serious about maintaining terrorism sanctions against Iran no matter what." ¶ ¶ The proposal also requires the Obama administration to tell Congress whether any money received through sanctions relief has gone toward supporting terrorism, creating nuclear weapons or missiles, or into the personal bank accounts of Iranian officials. ¶ ¶ Supporters of an agreement have pushed back against the Kirk-Menendez effort, with the National Iranian American Council arguing the measure would "short-circuit Congressional consideration of sanctions relief in a final nuclear agreement and risk complicating ongoing nuclear negotiations with Iran and derailing negotiations as they reach their endgame."

Plan cost capital – FAA drone regulations are controversial

Troy Rule, Nov 19 2014 <http://www.latimes.com/opinion/op-ed/la-oe-rule-drone-regulation-faa-20141120-story.html>

This new ruling is particularly troubling because the FAA still hasn't found a federal regulatory scheme capable of effectively integrating drones into the nation's airspace. A June audit report revealed that the agency was "significantly behind schedule" in meeting congressionally imposed deadlines for its development of civilian drone regulations. Frustrated at the FAA's snail-like pace, companies such as Amazon and Google have begun exporting their drone research activities to other countries. Small drones are not built for lengthy interstate flights at altitudes where conventional airplanes fly, so why should a federal agency be the chief regulator of these devices? Rather than seeking to expand its regulatory jurisdiction all the way down to the ground, the FAA should advocate for itself a more limited role in a collaborative federal, state and local regulatory scheme tailored to the unique attributes of drone technologies

The alternative to the deal is Middle East conflict and Iranian nukes

Economist 4/2 (2015, "Is this a good deal?" <http://www.economist.com/news/middle-east-and-africa/21638915-better-alternativesand-long-way-good-deal?zid=308&ah=e21d923f9b263c5548d5615da3d30f4d>)

FOR years Iran has lied about its nuclear plans. The Islamic Republic insists that it wants peace, but it has built secret, bomb-proof facilities for enriching uranium and, most outsiders conclude, begun work on designs for nuclear weapons. At the same time, it has spouted anti-Semitism and sponsored terrorists and militias in Lebanon and the Gaza Strip. It is fighting directly or by proxy in Syria, Iraq and now Yemen, often supporting vicious sectarian clients. And yet, despite Iran's transgressions, this week's progress towards an agreement to limit its nuclear programme is still welcome. The declaration that emerged on April 2nd, after marathon negotiations between Iran and six world powers in Lausanne, was surprisingly comprehensive. Iran will curb its programme and open it to inspection in exchange for a gradual lifting of sanctions. Speaking at the White House, President Barack Obama called it a good deal that will make the United States, its allies and the world safer. However, the details remain to be thrashed out by the end of June. The president warned that this process could still fail—and hardliners in both Tehran and Washington will do their damndest to see that it does. Failure would be a grave loss. This agreement offers the best chance of containing Iran's nuclear ambitions. And it also offers the faint promise of leading the Middle East away from the violence that has been engulfing it. Must try harder The best reason for wanting the next three months to produce a deal is that the alternatives are so unattractive. Military action to destroy Iran's programme would have only a temporary effect. Air raids cannot annihilate know-how, but they would redouble the mullahs' determination to get hold of a weapon, further radicalise Muslims, and add to the mayhem in a part of the world that is already in flames. Then there are sanctions. Some people, such as Israel's prime minister, Binyamin Netanyahu, argue that Iran is too malign to be left with anything but a symbolic ability to enrich uranium. He recommends redoubling sanctions and holding out until Iran is forced to concede to the world's demands. But there is a contradiction here. On the one hand, Iran is so bent on destruction that it cannot be treated as a normal negotiating partner; on the other it is so pliant that more sanctions will make it give up a nuclear programme that it has defended, at great cost, for many years. Besides, waiting for Iran to make concessions does not have a good record. In 2003 the Bush administration ignored tentative Iranian signals that it was ready to talk. Since then, the mullahs have enhanced their expertise and increased their count of centrifuges from 164 to 19,000 or so. As Mr Obama

argues, this second option very quickly leads back to either war or negotiations—and on worse terms. By contrast the deal that has come out of Lausanne is at least attainable. Iran will cut its capacity to enrich by two-thirds compared with today for a minimum of ten years; it will radically shrink its stockpile of enriched uranium for a minimum of 15; and it will permanently cut off the route to a bomb placed on plutonium. Iran will also submit itself to intrusive inspections throughout the nuclear supply chain. In exchange, the outside world will lift economic sanctions and agree to Iran's right to enrich uranium. That compromise contains a prize worth having. Verification makes it easier to catch Iran cheating. And if the country is indeed caught working on a bomb, sanctions would snap back into place. Most important of all, the world would also have a year to muster a response—compared with a few months today.

The harder argument is whether the gains from a nuclear deal will come at the expense of regional stability. Israel and America's Sunni allies contend that the Obama administration is going easy on Iran. Some say that this is in order to secure a deal. Others think that the nuclear diplomacy is part of a grand plan to turn Iran into a strategic partner of America to help it manage the Middle East. That would count as an act of betrayal made all the worse by the threats that Iran habitually makes against them. The coming months may indeed deepen the hatreds that are raging from the Mediterranean to the Arabian Sea. You could imagine Iranian leaders stepping up their meddling in the region—to show, perhaps, that supping with the Great Satan has not made them soft. It is no accident that the Sunni monarchies have been turning away from America: backing an army coup against the Muslim Brotherhood in Egypt, attacking fighters in Libya without forewarning America and, rushing into Yemen to take on Iranian-funded Houthis. But before blaming this mess on Mr Obama's nuclear diplomacy, consider two arguments. First, the catastrophe in the Middle East has its own, murderous dynamic that is quite separate from the nuclear deal. Iran has set out ruthlessly to exert control over neighbouring Iraq, to protect its links to Hizbullah in Lebanon and to shore up Bashar Assad in Syria. Deal or no deal, this meddling is driven by a desire to support fellow Shias, to exert regional influence and to keep conflagrations far away from its own borders. There is no sign that, as yet, sanctions or the talks have made much of a difference. Second, the idea that America is being treacherous does not add up. Blame Mr Obama for standing back when the uprising in Syria was still peaceful, and again when Mr Assad gassed his own people. But **the time is long gone when America alone could manage the conflict devouring the Middle East.** Today regional mayhem is tugging the United States every which way. In the cross-currents of a sectarian war, America is working against Iranian-backed forces in Yemen and Syria, and with them in the war against Islamic State. That is not treachery, but pragmatism born out regional collapse. The fallout of a deal Amid the chaos, **a nuclear deal could actually help—by enabling America and Iran to develop a pragmatic relationship.** Overseeing an agreement would not be easy. Iran would chafe; there would be rows and disputes. But nuclear diplomacy could force America and Iran to work together after 35 years of enmity that thrust America firmly into the Sunni camp. At worst relations with Iran would remain dysfunctional; but at best **America would for the first time in decades find itself in a position to mediate between Sunni and Shia.** That matters, because Iran and its Sunni rivals must themselves rein in their proxies and militias so that local people can begin to put their communities back together. **Such a process would get a further boost if a deal brought change within Iran.** Most Iranians are young and disillusioned with their leaders. They want normal, prosperous lives. In non-stop wrangling between factions

in Tehran, a deal could strengthen Hassan Rohani, who has staked his presidency on it and who is thought to favour engagement with the world. In a deal's decade-long first phase, Iran is likely to see a new supreme leader. Nobody knows who will take over—it may even be Mr Rohani himself—but the new leader is more likely to work with the West if America and Iran are no longer riven by mutual hatred. A thaw between Iran and America is not guaranteed, obviously. The possibility of wholesale moderation within Iranian politics is even more remote. But neither does a nuclear deal depend on such things to be successful or to be worth having. On the contrary, success relies on the routine of inspections and the slow accumulation of confidence; and the deal will be measured chiefly on whether it puts a bomb out of reach. Everything else is a bonus. Some people think that any deal must be wrong because it turns Iran from an international pariah into a partner. But that world view leads inexorably toward war—and an Iranian bomb. Well-founded mistrust of Iran is a reason to be vigilant, but in the real world the most important diplomacy takes place between enemies. The exhausted negotiators in Lausanne took a valuable step this week. They must finish their work.

Impact is nuclear war

Hobson, professor of physics at University of Arkansas, 3/31/2015

(Art, "Commentary: Absent agreement, Iran, U.S., Israel on path to war,"

<http://www.nwaonline.com/news/2015/mar/31/commentary-absent-agreement-iran-u-s-is/?opinion>)

One of history's greatest tragedies was the nuclear bomb dropped on Hiroshima, Japan, in August 1945, a calamity compounded three days later by a second bomb exploded over Nagasaki. It was, like most tragedy, made virtually inevitable by foregoing blunders: revengeful treatment of Germany following World War I, U.S. failure to join World War II when it began in 1939, thoughtless responses to Japanese aggression in Asia during the 1930s, and the Japanese attack on Pearl Harbor in 1941. Since 1945, nuclear weapons have remained humankind's greatest single immediate threat.

If we don't want to repeat the mistakes that led to Hiroshima, we had better treat the Iranian nuclear question rationally, realistically, and without childish bravado. U.S. Sen. Tom Cotton's recent letter to Iran, and Prime Minister Netanyahu's recent speech to Congress, were not serious. Netanyahu argued that a nuclear agreement with Iran would be a bad deal and should be rejected. Cotton suggested to Iran that a future U.S. president could revoke the agreement.

None of the agreement's opponents appear to have thought through the consequences of following their leads. Iran, having no further reason for restraint and every incentive for aggression, will move quickly toward a bomb; Israel will urge action to prevent a bomb and will pressure the U.S. to join it in threatening Iran; and we could easily be drawn into war -- a blunder that would dwarf even our foolish adventure into Iraq beginning in 2003.

The realistic fact is that, absent an agreement, the United States, Iran and Israel are on the road to war, possibly a nuclear war

UQ / PC key

Iran deal key to peaceful curbs on Iran's nuclear program, Obama pc necessary for complete final compromise.

KRISTINA PETERSON and CAROL E. LEE ¶ June 26, 2015 8:16 p.m. ET ¶ 53 COMMENTS

<http://www.wsj.com/articles/congress-is-shaping-up-as-a-tough-sell-on-iran-deal-1435363781> ¶

WASHINGTON—President Barack Obama, who narrowly eked out congressional approval of his trade agenda this week, again faces a skeptical Congress as his administration attempts to reach a final agreement to curb Iran's nuclear program. ¶ Lawmakers are expressing concerns over lingering unresolved issues, such as how much access inspectors will have to Iran's facilities, as negotiators approach a month's end deadline for a final agreement. ¶ Mr. Obama is primarily focused on trying to gain as much congressional support for a deal as he can, since lawmakers last month passed legislation enabling them to review and vote on any final agreement. However, the administration would be able to implement its deal so long as a veto-proof majority in Congress isn't opposed to it. ¶ Both Democrats and Republicans said this week their support for a deal would hinge on how negotiators resolve remaining sticking points, particularly how international inspectors will be able to verify Iran's compliance with any new requirements. ¶ "There needs to be immediate access anywhere so that if the Iranians cheat, we can detect it," said Rep. Eliot Engel of New York, the top Democrat on the House Foreign Affairs Committee. "If that's not going to be the case—as we hear some rumors—then that's problematic for me." ¶ Earlier this week, Iran's Supreme Leader Ayatollah Ali Khamenei appeared to back away from commitments his negotiators made in April to restrain parts of Iran's nuclear program and to allow international inspections of the country's military sites. He also opposed Western demands that international sanctions be removed in stages, rather than all at once after a deal is reached. ¶ The cleric's words triggered alarm on Capitol Hill, though U.S. and European officials said they believed Mr. Khamenei's comments were intended to extract more concessions from the Obama administration and its negotiating partners. ¶ House Speaker John Boehner (R., Ohio) sharply criticized the White House. "The president has handed Iran concession after concession," Mr. Boehner said Thursday. "Giving Iran more flexibility will not lead to a good deal. It will only lead to more concessions for a regime that has no intention of giving up its desire for a nuclear weapon." ¶ Sen. Lindsey Graham (R., S.C.) said on the Senate floor Thursday that the U.S. should halt its negotiations until Iran agrees to a gradual lifting of sanctions and unfettered inspections at Iranian military sites, including an accounting of past activity. ¶ Reflecting a congressional desire to make sure the U.S. can apply pressure on Iran if it reneges on any deal, Sens. Mark Kirk (R., Ill.) and Bob Menendez (D., N.J.) introduced legislation Thursday extending for 10 more years sanctions on Iran set to expire next year. ¶ "If a deal is reached with Iran, it is critical that should Iran violate the terms of an agreement, severe penalties will follow and a forceful snapback of sanctions will occur," Mr. Menendez said in a statement. "For me, the trend lines of the Iran talks are deeply worrying." ¶ The White House has been regularly briefing lawmakers about the talks with Iran and five other world powers, and some on Capitol Hill said they were comfortable with their progress and wary of what the alternatives would be. ¶ "I've been very supportive of the direction the White House has been going," said Rep. Jan Schakowsky of Illinois, a Democrat. "Let's give diplomacy a chance." ¶ But many lawmakers noted the administration's outreach on Iran had ebbed recently, as the battle

over Mr. Obama's trade agenda dominated Capitol Hill. ¶ "This has been a real near-death experience with trade, and it finally looks like we're going to survive, and then we'll turn our attention to the next crisis," said Rep. Gerry Connolly (D., Va.), who said his primary concern is the strength of the inspections regime. ¶ At a security conference in Washington Friday, Deputy Secretary of State Antony Blinkensaid a deal with Iran would include "exceptional constraints" on Iran's nuclear program as well as intrusive transparency measures and inspections. ¶ The White House is anticipating lawmakers will ramp up criticism in coming days and has sought to try to minimize the political firestorm. But White House spokesman Eric Schultz disputed on Friday the notion that administration officials had scaled back updates to Congress because of the focus on passing trade legislation. officials have stressed in recent days that any lawmaker with questions about the talks would receive a briefing from an administration official. This week, Treasury officials briefed lawmakers on Capitol Hill on Iranian sanctions, and some House Democrats met with administration officials at the White House on Thursday, according to a lawmaker present at the meeting. ¶ "I don't know that there's any sort of regular meeting schedule that's been established, but I know it is not at all uncommon for members of Congress who are interested in this issue to get a phone call from somebody at the State Department or somebody in the intelligence community, or even somebody at the White House to give them an update on where things stand," White House press secretary Josh Earnest said Thursday. ¶ The legislation enacted last month prevents Mr. Obama from waiving sanctions for 30 days while they review a final deal and potentially vote to disapprove it. If lawmakers reject a deal, Mr. Obama would then narrowly focus on stopping an override of his veto authority. ¶ Senior administration officials say they expect the June 30 deadline to slip a few days, as did the March 31 deadline for a framework. Privately, administration officials don't rule out a longer extension, but Mr. Earnest said this week that "at this point, we're not planning any sort of longer-term extension."

PC key to hold off additional sanctions and pressure on Iran

Ari Yashar First Publish: 6/26/2015, 10:56 AM

<http://www.israelnationalnews.com/News/News.aspx/197312#.VY8UPPIVhBc>

In a bipartisan move Senators Mark Kirk (R-IL) and Robert Menendez (D-NJ) on Thursday revived legislation that has long been stalled by US President Barack Obama's administration, and which seeks to impose and extend sanctions on Iran for over ten more years. ¶ Iran has been demanding that sanctions against it be lifted immediately with the signing of a nuclear deal ahead of a June 30 deadline for talks, but the Washington Free Beacon reports Friday that the Obama administration has been fighting Congress's attempts to impose new sanctions and is even lobbying legislators to block the moves. ¶ In their effort Thursday, Mendendez and Kirk submitted a bill to renew the Iran Sanctions Act of 1996 which is due to expire next year. The move would harm Iran's ability to fund its nuclear program as well as global terrorism through groups such as Hezbollah and Hamas. ¶ It would allow stringent sanctions to "snap back" the minute Iran is caught breaching any nuclear agreement, and would require the Obama administration to file reports to Congress revealing whether the billions of dollars in sanctions relief already given to Iran have been used for terrorism, the country's nuclear and missile

programs, human rights violations, or went to the pockets of senior Iranian officials.¶ "Congress passed the Iran Sanctions Act of 1996 to drain Iran's financial support for Hezbollah, Hamas, and terrorist threats to the United States and Israel and block funds for building nuclear weapons and ballistic missiles," Kirk told the Washington Free Beacon.¶

PC key to sustaining the Iran deal and preventing veto override.

Richard Baehr 6-28 http://www.israelhayom.com/site/newsletter_opinion.php?id=12999

After a veto by the president, the numbers become more difficult for opponents. Opponents of the agreement will need to get to 67 votes in the Senate and 290 in the House, in each case 2/3 of members, to override the veto. In the Senate, this means 13 Democrats would have to join 54 Republicans (assuming they all vote to override the veto), or over one quarter of the Democratic members. In the House, the opponents would need to add at least 43 Democrats to the 247 Republicans (assuming they all vote to override the veto) or a bit less than one fourth. It is likely that the biggest obstacle that will be faced by opponents of the agreement will be in the House and not the Senate. Just before the Corker-Menendez bill was passed, the White House ended its opposition to it, which made the bill easier to pass, but also signaled that the administration was confident it could beat back opponents of the bill when the votes on the deal came before Congress. Supporters of the White House, better described as Obama loyalists who will follow his lead on pretty much everything, provided a signal of their own strength just as the Corker-Menendez legislation was passed. A letter sent around by Illinois Congresswoman Jan Schakowsky, one of the most left-wing members of the House and an ardent supporter of J Street, contained signatures of 146 Democratic voting members of the House applauding the administration's preliminary agreement with Iran and endorsing diplomacy going forward (meaning no new sanctions, no military action, and of course, whatever concessions the White House feels are necessary to bring a final deal home). The 146 number for signatures on the letter is significant. If 146 Democrats in the House in the end refused to vote to override a presidential veto of a rejection of the deal by the House and Senate, then opponents would be left short of the 2/3 vote of House members they need. There are 188 Democrats in the House, and this would leave 42 Democrats in the House who could vote to override a veto, which combined with 247 Republicans, would get opponents to 289, one vote short of the 290, or 2/3 level needed for an override. It is highly likely that the Schakowsky letter was designed to signal that the group in Congress that always has Obama's back will do so again -- Israel and our other former allies in the region be damned. Of course, this is not to say that the 42 Democrats who did not sign can all be counted on to be certain votes for a veto override of a president of their own party. Most of the votes by these Democrats will need to be secured by lobbying efforts (which the American Israel Public Affairs Committee, among others, now seems to be preparing to do). A review of the 146 names on the Schakowsky letter suggests a few of them could be picked off by opponents, especially those who are vulnerable in the 2016 election cycle, or are located in districts that are not dominated by Democrats. But most are either minority group members, and very loyal to the president, or from far-left districts where there is no real pressure from constituents to fight the president on the Iran deal. In many cases among Democrats in these districts, there is a fair amount of hostility to Israel and its supporters.

Obama will need to hold off increasing pressure for sanctions

Jennifer Rubin June 26 Iran sanctions back on the table

<http://www.washingtonpost.com/blogs/right-turn/wp/2015/06/26/iran-sanctions-back-on-the-table/>

In a joint statement Sens. Mark Kirk (R-Ill.) and Robert Menendez (D-N.J.) announced a bill to extend existing Iran sanctions (the Iran Sanctions Act of 1996) due to expire in 2016.¶ In extensive comments Menendez explained the need for the legislation and rebuked the administration's parade of concessions to Iran. "If a deal is reached with Iran, it is critical that should Iran violate the terms of an agreement, severe penalties will follow and a forceful snapback of sanctions will occur," he said. "For me, the trend lines of the Iran talks are deeply worrying, our red lines have turned into green lights, leaving snapback as one of the few tools available to demand Iranian compliance with an agreement. The Iran Sanctions Act, which authorizes a majority of the sanctions in place on Iran, expires next year. Absent renewal we would be unilaterally lifting sanctions on Iran and hence unilaterally disarming." He continued, "It stands to reason that if negotiators are serious about snapback, then they should support the immediate extension of the Iran Sanctions Act to ensure there is no question for Iran about the consequences of non-compliance."¶ In addition, the bill would require the administration to report to Congress on the extent to which sanctions relief facilitated the ability of Iran to support terrorism and the Syrian regime, contribute to nuclear bomb and missile proliferation as well as human rights violations, and/or enrich any senior Iranian official's finances. As Menendez said, because "Iran is the foremost sponsor of regional terrorism, any sanctions relief must be monitored closely, and this legislation ensures that regular reports will be provided to Congress to confirm that Iranian-backed terrorist organizations like Hamas, Hezbollah or the murderous Assad regime in Syria aren't the beneficiaries of newly accessed Iranian funds." (One wonders why we would do a nuclear deal with them at all, but that's a separate argument.) He deemed this a "clarifying action" and urged his colleagues to move ahead with legislation.¶¶ This measure is separate and about from new sanctions legislation, the Nuclear Weapons Free Iran Act of 2015, which passed 18-4 in the Senate Banking Committee in January. After that vote, 12 Democrats pledged to vote for the bill on the floor, but only after the March 30 deadline for a framework agreement. The framework has proved illusory as the Iranians publicly disputed agreement had been reached on key parts and criticism has erupted over concessions to Iran. The deadline for a final deal is Tuesday, meaning the new sanctions bill is likely to come back in play in the event a deal is not reached by the time Congress returns from its 4th of July recess on July 7.¶ The 2015 Kirk-Menendez bill would ramp up and enhance sanctions, according to a summary of the bill, to "close loopholes in existing petroleum sanctions, enhance sanctions on Iran's oil trade and financial transactions, and impose further sanctions on Iran's senior government officials, family members and other individuals for weapons of mass destruction proliferation, terrorism sponsorship and other illicit activities, and on Iran's shipbuilding, automotive, construction, engineering and mining sectors."¶ And then today Menendez sent a letter to Secretary of State John Kerry denouncing the possibility of more concessions: "Ayatollah Khamenei made a speech on Iranian state television in which he stated that 'All financial and economic sanctions imposed by the U.N. Security Council, the U.S. Congress or the U.S. government should be lifted immediately when we sign a nuclear agreement,' that 'inspection of our military sites is out of the question and is one of our red lines,' and that

freezing Iranian research and development “for a long time, like 10 or 12 years, is not acceptable. Only days before, the Iranian parliament voted to ban access to military sites, documents and scientists as part of any future deal with the P5+1 countries.” He told Kerry, “These demands are unacceptable – they presuppose that the government of Iran will act in good faith, when it has shown itself in the past to be an untrustworthy negotiating partner. If Iranian negotiators intend to adhere to the provisions demanded by Ayatollah Khamenei and Iran’s parliament, I urge you to suspend the current negotiations with Iran.” He added, “A deal that allows sanctions to be lifted before Iran’s government meets their obligations, without intrusive inspections to safeguard against a continued covert nuclear program, and that leaves Iran as a threshold nuclear state, is a bad deal that threatens the national security of America and our allies, and must be rejected.”

PC key

Obama PC key to closing Iran deal

Press TV, 6-27 <http://www.presstv.ir/Detail/2015/06/27/417778/Iran-Vienna-Zarif-Kerry-P51>

Bagherzadeh: I would think that both sides want this to close as rapidly as possible. I was thinking that Mr. Obama has had two very good news items this past few days, he wants to add this additional one as part of his success in foreign policy, probably the biggest success story of his presidency.

He wants this, his team want this, and I would think that they want to make sure that this closes as soon as possible before the US Congress starts drifting towards more sanctions or additional new laws against this case.

Obama focused on gaining Congressional support for Iran deal

JAY SOLOMON and LAURENCE NORMAN June 27, 2015 12:05 p.m. ET

<http://www.wsj.com/articles/iran-nuclear-talks-under-way-in-vienna-1435420911>

Mr. Obama is primarily focused on trying to gain as much congressional support for a deal as he can, since lawmakers last month passed legislation enabling them to review and vote on any final agreement. However, the administration would be able to implement its deal so long as a veto-proof majority in Congress isn't opposed to it. If no deal is completed by July 9, Congress would get an extra month to review the agreement before the U.S. could suspend any sanctions.

With the diplomacy is moving slowly, there are growing expectations that talks will drift past the June 30 deadline, although western officials have said a major extension of the negotiations is out of the question.

PC High

Obama is on a pc high – best week of his presidency

Brad Knickerbocker, Staff writer JUNE 27, 2015

<http://www.csmonitor.com/USA/Politics/2015/0627/Obama-s-best-week-likely-to-advance-his-legacy-video>

Years from now, as he thinks back over his presidency, Barack Obama is likely to remember this as one of his best weeks. Maybe the best week. ¶ A trade bill passed in a Republican-led Congress. ¶ Massively important Supreme Court decisions on the Affordable Care Act and same-sex marriage. A healing eulogy for slain black church members, toward the end of which – astonishingly, to many of the thousands who listened at the Emanuel African Methodist Episcopal Church in Charleston, South Carolina, and the millions who watched on live TV or later on YouTube – the president led those assembled in the singing of “Amazing Grace.” ¶ Much of Obama’s presidency has been a grind, during which he’s been criticized from both political directions. ¶ The right never liked him in the first place, and as Senate Majority Leader Mitch McConnell famously said during Obama’s first term, Republicans’ main priority was – not cooperating to fix a damaged economy the new president had inherited from a Republican administration – but working to see that Obama was not reelected. The left – enamored by Sen. Elizabeth Warren and other liberals – thought he hewed too much to the political center. The tea party (especially its racist element), the powerful National Rifle Association, “birthers,” and others mocked and reviled him. ¶ But by Friday night, at least, the impression – or at least the imagery – had changed as the White House was bathed in rainbow lighting, a celebration of Obama’s recent political wins as well as the US Supreme Court’s legalizing same-sex marriage for all Americans no matter where they lived.

New series of victories boosting Obama’s influence now

Carrie Dann, 6-27 <http://www.nbcnews.com/politics/white-house/obama-america-week-history-books-n382841>

Two weeks ago, after Democrats in the House appeared to have stopped the trade deal President Barack Obama has been pushing for months, it looked like the president was rapidly moving toward lame-duck status, with even his own party ignoring his wishes. ¶ Many expected the Supreme Court to gut his signature health care law. ¶ This week — not so much. ¶ Instead, the president won a series of huge victories that not only will boost him in the short term, but help cement his legacy as the driver of a series of changes that pushed the country in a more liberal direction. ¶ The Supreme Court ruled Obama's way in three landmark cases.

Obama pushing Iran deal

Obama shifting focus to Iran deal

David Jackson, 6-28 <http://www.usatoday.com/story/theoval/2015/06/28/obama-iran-nuclear-deal-health-care-gay-marriage-free-trade-charleston/29423255/>

Following perhaps the most momentous week of his tenure, President Obama looks to what could be another major event next month: The Iran nuclear deal. Obama -- coming off major victories on free trade, health care, and gay marriage, as well as a much-praised eulogy on the Charleston church killings -- has set a Tuesday deadline for completion of an Iran nuclear agreement, though there are definite signs that the deadline will slip. "Given the dates, and that we have some work to do ... the parties are planning to remain in Vienna beyond June 30 to continue working," a U.S. official told the Associated Press about the ongoing talks. The administration is putting out the word that July 9 is the "real" deadline for a deal in which the U.S. and allies would reduce sanctions on Iran if it agrees to give up the means to make nuclear weapons. The July 9 date would give Congress time to review the agreement before its August recess. Further evidence that Tuesday's deadline will slip came Sunday as Iran's foreign minister prepared to leave talks in Vienna for consultations back in Tehran. The Obama administration enters the final stages of the Iran talks following a string of remarkable victories within the past week. First, Congress cleared the way for a major free trade agreement with Asia, a deal that some thought dead in the water earlier in the month. Then the Supreme Court handed down landmark decisions on items of high importance to the Obama administration, its health care law and the right of gay marriage. The president capped the week with a moving eulogy on the Charleston church shootings, urging Americans to confront long-festered problems of gun control and racial prejudice. Now, on to Iran -- though the proposed agreement has fierce critics in Israel and the U.S. Congress who believe it will actually pave the way for Iran to secure nuclear weapons. It will be a busy few weeks.

A2: PC Theory False

Political capital theory is true – newest data proves that presidents have significant legislative influence

Beckman 10 – Professor of Political Science

(Matthew N. Beckman, Professor of Political Science @ UC-Irvine, 2010, “Pushing the Agenda: Presidential Leadership in U.S. Lawmaking, 1953-2004,” pg. 2-3)

Developing presidential coalition building as a generalizable class of strategies is itself instructive, a way of bringing clarity to presidential– congressional dynamics that have previously appeared idiosyncratic, if not irrational. However, the study’s biggest payoff comes not from identifying presidents’ legislative strategies but rather from discerning their substantive effects. In realizing how presidents target congressional processes upstream (how bills get to the floor, if they do) to influence downstream policy outcomes (what passes or does not), we see that standard tests of presidential influence have missed most of it. Using original data and new analyses that account for the interrelationship between pre-voting and voting stages of the legislative process, I find that presidents’ legislative influence is real, often substantial, and, to date, greatly underestimated.

Political capital theory is true – modern presidents have unique capabilities – it’s finite

Beckmann and Kumar 11

(Matt, Professor of Political Science, and Vimal, How presidents push, when presidents win: A model of positive presidential power in US lawmaking, Journal of Theoretical Politics 2011 23: 3)

Fortunately for contemporary presidents, today’s White House affords its occupants an unrivaled supply of persuasive carrots and sticks. Beyond the office’s unique visibility and prestige, among both citizens and their representatives in Congress, presidents may also sway lawmakers by using their discretion in budgeting and/or rulemaking, unique fundraising and campaigning capacity, control over executive and judicial nominations, veto power, or numerous other options under the chief executive’s control. Plainly, when it comes to the arm-twisting, brow-beating, and horse-trading that so often characterizes legislative battles, modern presidents are uniquely well equipped for the fight. In the following we employ the omnibus concept of ‘presidential political capital’ to capture this conception of presidents’ positive power as persuasive bargaining. 1 Specifically, we define presidents’ political capital as the class of tactics White House officials employ to induce changes in lawmakers’ behavior. 2 Importantly, this conception of presidents’ positive power as persuasive bargaining not only meshes with previous scholarship on lobbying (see, e.g., Austen-Smith and Wright (1994), Groseclose and Snyder (1996), Krehbiel (1998: ch. 7), and Snyder (1991)), but also presidential practice. 3 For example, Goodwin recounts how President Lyndon Johnson routinely allocated ‘rewards’ to ‘cooperative’ members: The rewards themselves (and the withholding of rewards) . . . might be something as unobtrusive as receiving an invitation to join the President in a walk around the White House grounds, knowing that pictures of the event would be sent to hometown newspapers . . . [or something as pointed as] public works projects, military bases, educational

research grants, poverty projects, appointments of local men to national commissions, the granting of pardons, and more. (Goodwin, 1991: 237) Of course, presidential political capital is a scarce commodity with a floating value. Even a favorably situated president enjoys only a finite supply of political capital; he can only promise or pressure so much. What is more, this capital ebbs and flows as realities and/or perceptions change. So, similarly to Edwards (1989), we believe presidents' bargaining resources cannot fundamentally alter legislators' predispositions, but rather operate 'at the margins' of US lawmaking, however important those margins may be (see also Bond and Fleisher (1990), Peterson (1990), Kingdon (1989), Jones (1994), and Rudalevige (2002)). Indeed, our aim is to explicate those margins and show how presidents may systematically influence them.

Even if pundits exaggerate the president's influence, it still is salient

Beckman 10 – Professor of Political Science

(Matthew N. Beckman, Professor of Political Science @ UC-Irvine, 2010, "Pushing the Agenda: Presidential Leadership in U.S. Lawmaking, 1953-2004," pg. 17)

Even though Washington correspondents surely overestimate a sitting president's potential sway in Congress, more than a kernel of truth remains. Modern presidents do enjoy tremendous persuasive assets: unmatched public visibility; unequaled professional staff, unrivaled historical prestige, unparalleled fundraising capacity. And buttressing these persuasive power sources are others, including a president's considerable discretion over federal appointments, bureaucratic rules, legislative vetoes, and presidential trinkets.⁹ So even with their limitations duly noted, presidents clearly still enjoy an impressive bounty in the grist of political persuasion - one they can (and do) draw on to help build winning coalitions on Capitol Hill.

A2 Winners win

Winners don't win – productivity and agenda success are INVERSELY related in polarized environments

Masket 12/19/14 (Seth, Assoc Prof of PoliSci @ University of Denver, "Unpopularity and Productivity are Related" <http://www.mischiefsoffaction.com/>)

But **policy accomplishments don't really help a president much in terms of popularity**. LBJ wasn't popular because he signed Medicare or the Civil Rights Act. **It works the other way around; he was able to pass those in part because he was popular** in 1964-65, thanks to a very strong economy and public goodwill in the wake of the Kennedy assassination. Notably, all his Great Society legislation didn't help him out once the public got annoyed by the Vietnam War; his party lost many seats in 1966 and he chose to resign rather than face the voters' wrath in 1968.¶ **Beyond that, to the extent productivity and popularity may be related today, they may run in the opposite direction**. In a polarized political environment, **a president's achievements are likely to generate as least as many enemies as friends**. Take health care reform, Obama's signature accomplishment. No Democrat could credibly run for president in 2008 (or for many years before that) without health care reform being a top priority. That was the nature of the Democratic coalition for decades. Conversely, the Republican coalition had been organized for decades around preventing Democrats from enacting health care reform. Obama's efforts were bound to produce substantial pushback, just as Clinton's did twenty years ago. The passage of health care reform indeed exacerbated Democratic congressional losses in 2010, and may well have handed Republicans the House of Representatives.¶ This doesn't mean that it was wrong for Democrats to pass health care reform or for Obama to do any of the things he's recently done. It just means that **actually being productive will engender resistance**. Obama is unpopular at least in part **because he's been effective**.

Not true for Obama

Klein 10/10/14 (Ezra, former political columnist @ Wash Post, "Obama ditched a key campaign promise. And it saved his presidency.," <http://www.vox.com/2014/10/10/6953889/paul-krugman-obama-historic-success>)

Obama spent his first two years keeping many of his policy promises by sacrificing his central political promise. That wasn't how it felt to the administration at the time. They **thought that success would build momentum; that change would beget change**. **Obama talked of the "muscle memory" Congress would rediscover as it passed big bills; he hoped that achievements would replenish his political capital rather than drain it**.¶ **In this, the Obama administration was wrong, and perhaps naive**. They **overestimated their ability to convert the raw exercise of political power into more political power**. It was a mistake, but not a very postpartisan one. And, as a theory, it was the one they needed to build their legacy — a legacy, at this point, that even their early critics admire.

A2 Winners win

Eberly 13 - assistant professor in the Department of Political Science at St. Mary's College of Maryland

Todd, "The presidential power trap," Baltimore Sun, 1/21/13, Lexis

Only by solving the problem of political capital is a president likely to avoid a power trap. Presidents in recent years from have been unable to prevent their political capital eroding. When it did, their power assertions often got them into further political trouble. Through leveraging public support, presidents have at times been able to overcome contemporary leadership challenges by adopting as their own issues that the public already supports. Bill Clinton's centrist "triangulation" and George W. Bush's careful issue selection early in his presidency allowed them to secure important policy changes — in Mr. Clinton's case, welfare reform and budget balance, in Mr. Bush's tax cuts and education reform — that at the time received popular approval.¶ However, short-term legislative strategies may win policy success for a president but do not serve as an antidote to declining political capital over time, as the difficult final years of both the Bill Clinton and George W. Bush presidencies demonstrate. None of Barack Obama's recent predecessors solved the political capital problem or avoided the power trap. It is the central political challenge confronted by modern presidents and one that will likely weigh heavily on the current president's mind today as he takes his second oath of office.

Sequencing – unpopular policies ruin the agenda– Obama's entire first term proves

Hirsh, 2/7 --- Chief correspondent (2/7/2013, Michael, "There's No Such Thing as Political Capital; The idea of political capital—or mandates, or momentum—is so poorly defined that presidents and pundits often get it wrong," <http://www.nationaljournal.com/magazine/there-s-no-such-thing-as-political-capital-20130207>)

.¶ THE REAL LIMITS ON POWER¶ Presidents are limited in what they can do by time and attention span, of course, just as much as they are by electoral balances in the House and Senate. But this, too, has nothing to do with political capital. Another well-worn meme of recent years was that Obama used up too much political capital passing the health care law in his first term. But the real problem was that the plan was unpopular, the economy was bad, and the president didn't realize that the national mood (yes, again, the national mood) was at a tipping point against big-government intervention, with the tea-party revolt about to burst on the scene. For Americans in 2009 and 2010—haunted by too many rounds of layoffs, appalled by the Wall Street bailout, aghast at the amount of federal spending that never seemed to find its way into their pockets—government-imposed health care coverage was simply an intervention too far. So was the idea of another economic stimulus. Cue the tea party and what ensued: two titanic fights over the debt ceiling. Obama, like Bush, had settled on pushing an issue that was out of sync with the country's mood.¶ Unlike Bush, Obama did ultimately get his idea passed. But the bigger political problem with health care reform was that it distracted the government's attention from other issues that people cared about more urgently, such as the need to jump-start the economy and financial reform. Various congressional staffers told me at the time that their bosses didn't really have the time to understand how the Wall Street lobby was riddling the Dodd-Frank financial-reform legislation with loopholes. Health care was sucking all the oxygen out of the room, the aides said.

Deal possible

Agreement possible – all major players are optimistic despite issues.

JAY SOLOMON and LAURENCE NORMAN June 27, 2015 12:05 p.m. ET

<http://www.wsj.com/articles/iran-nuclear-talks-under-way-in-vienna-1435420911>

VIENNA—The U.S., Iran and world powers began what is expected to be a final round of nuclear talks on Saturday in Austria's capital, with diplomats voicing optimism that a landmark agreement could be reached while recognizing serious issues still needed to be resolved.¶ The negotiating parties have cited a June 30 deadline for completing more than 18 months of diplomacy that is aimed at curbing Iran's nuclear capabilities in exchange for a lifting of economic sanctions.¶ But senior officials involved in the Vienna talks said on Saturday they anticipated the diplomatic process would likely need to be extended beyond next Tuesday, due to the complexity of issues involved in the negotiations.¶ U.S. Secretary of State John Kerry met with his Iranian counterpart, Javad Zarif, for 90 minutes Saturday morning, and the two diplomats held a second negotiating session in the afternoon of about an hour. French Foreign Minister Laurent Fabius also arrived in Vienna on Saturday and was scheduled to meet Mr. Kerry in the evening.¶ "I think that everybody would like to see an agreement, but we have to work through some difficult issues," Mr. Zarif said at the start of his meeting with the U.S. Secretary of State.¶ Mr. Kerry said: "We're determined to do everything we can in order to be able to make this important milestone, but that depends on a lot of things and we're going to work on them."¶ The chief American diplomat arrived in Vienna on crutches after breaking his leg in a biking accident earlier this month in Switzerland. He was joined on the U.S. side by Energy Secretary Ernest Moniz and Undersecretary of State Wendy Sherman.¶ The agreement is meant to block any smooth Iranian path to nuclear weapons by committing Tehran to tight inspections and concrete measures to wind back Iran's nuclear program for 10-15 years. In exchange, tight international sanctions on Iran's finance, energy and commercial sectors will be phased out over time. The Vienna talks build on a framework accord reached between Iran and six world powers in Lausanne on April 2.

Iran will allow access to its facilities and verification will be possible

Anastasia Levchenko Diehard' on Access to Non-Nuclear Facilities 6-27 Read more:

<http://sputniknews.com/politics/20150627/1023929444.html#ixzz3eljux21y>

Iran is likely to allow conventional access to its military facilities under the Additional Protocol with the International Atomic Energy Agency (IAEA), the director for nonproliferation policy at the nonpartisan Arms Control Association told Sputnik Saturday.¶ VIENNA (Sputnik), — Supreme Leader of Iran Ayatollah Ali Khamenei said last that international inspections of the country's military sites should be shunned, which appeared to contradict a framework agreement between Tehran and international mediators reached in April.¶ ¶ On Sunday, the Iranian parliament approved a draft legislation banning such inspections as part of the nuclear deal.¶ ¶ "I think it is important to look closely at what the supreme leader said: he said there should be no unconventional access to military sites. I think that access under the Additional Protocol is

very conventional. Many countries around the world have the Additional Protocol in place, and the IAEA has access to military sites in other countries," Kelsey Davenport told Sputnik. ¶ ¶ Tehran and the P5+1 group of world powers — Russia, the United States, China, France, Britain and Germany — have to agree on a final comprehensive deal that will secure the peaceful nature of Iran's nuclear program until Tuesday's deadline. ¶ ¶ French Foreign Minister Laurent Fabius arrives at Palais Coburg where closed-door nuclear talks with Iran take place in Vienna, Austria, Saturday, June 27, 2015 ¶ Under April's framework deal, Tehran agreed to implement the Additional Protocol with the IAEA, which would provide the watchdog with more access to Iran's nuclear sites. ¶ The so-called Additional Protocol to Tehran's agreement with the International Atomic Energy Agency (IAEA) provides for the best compromise in terms of international inspection of Iran's nuclear sites, the representative for the Arms Control Association advocacy group said. ¶ ¶ "I think that is a good compromise, no country would allow card-blanc access to their military sites or anywhere anytime inspections, like some critics of the deal are calling for," Kelsey Davenport said. ¶ ¶ She added that the cooperation between Iran and the IAEA was crucial and would help clear past concerns. ¶ ¶ "Resolving these concerns helps strengthen the non-proliferation regime at large," Davenport said.

Sanction concerns won't hold back deal – framework already exists to handle these overhyped concerns

Trita Parsi Finessing the Iran-Sanction Issue June 28, 2015

<https://consortiumnews.com/2015/06/28/finessing-the-iran-sanction-issue/>

Contrary to public posturing on the timing and pace of sanctions relief, a framework for handling this critical matter of the nuclear deal has been resolved, according to Iranian sources. Iranian officials have on numerous occasions insisted that sanctions relief must come immediately upon the signing of an agreement. This has been at direct odds with the position of the U.S. government and its allies, who insist that relief only can come after Iran has taken numerous steps limiting its nuclear activities. Iran's Supreme Leader Ali Khamenei sitting next to President Hassan Rouhani and addressing the cabinet. Iran's Supreme Leader Ali Khamenei sitting next to President Hassan Rouhani and addressing the cabinet. As oftentimes is the case in diplomacy, the solution was found in a combination of a play with words and practical measures. This is exactly what the diplomats did to reconcile the Iranian insistence on front-loaded sanctions relief and the Western position of relief being provided only after the International Atomic Energy Agency has verified Iranian steps to curtail its nuclear program. According to Iranian sources, the agreement is divided into three phases. The initial phase – called "adoption of agreement" – takes place as the two sides agree on a final deal. This phase will kick in over the next few days – if a deal is reached. The next phase – the operationalization of the agreement – will begin once the domestic political processes of various parties have conclusively approved the agreement. This phase has been added primarily as a result of the U.S. Congress passing the Corker bill, in which the American legislature gave itself the right to review and vote on the nuclear deal. The timing of the second phase is directly related to the duration of the Congressional review process. If the two sides come to an agreement prior to July 10, the review process is set at 30 calendar days, in addition to 22 calendar days for Congress to pass a

resolution to accept or reject the deal and for the President to use his veto, if need be. If the two sides fail to reach a deal by July 10, the Congressional review process increases to 60 calendar days. While other states in the negotiations may also initiate some form of internal review and approval process, none of them are expected to take as long as the Congressional review. As such, the U.S. Congress has significantly delayed the implementation of a presumptive deal. **Once the deal has survived the Congressional review** – whether through a resolution of affirmation or the failure to pass a resolution of rejection – **the Iranians will begin implementing the first steps of their commitments. This is phase III.**

New environment of optimism in US-Iran relations – deal will happen.

Associated Press Saturday - June 27, 2015 Effort under way to beat Tuesday deadline for nuclear agreement <http://triblive.com/usworld/world/8644791-74/nuclear-agreement-iran#axzz3eJTnX2AH>

VIENNA — **The top American and Iranian diplomats faced each other** across a square table in a 19th century Viennese palace, the room austere decorated **and the atmosphere calm as they started the final push for a generation-defining nuclear agreement** Saturday. ¶ Against a Tuesday deadline for a deal, their declarations of optimism and pledges of diligence sounded routine. ¶ Two years into high-pressure gatherings, **a sense of predictability has emerged in the negotiations** between Secretary of State John Kerry and Iranian Foreign Minister Mohammad Javad Zarif. ¶ **Neither is letting the pressure show even as they and other global powers are at the cusp of an agreement that could redefine security in the Middle East and beyond for decades to come.** ¶ A short while ago, a snapshot alone of the two enemies engaged in discussions on nuclear and other matters would have been a bombshell felt in capitals around the world. **Now it's hard to imagine the tentative U.S.-Iranian rapprochement ending anytime soon.** ¶ It's become the new normal.

Major players hopeful for deal that will overcome all the differences.

Irish Times, 6-27 <http://www.irishtimes.com/news/world/middle-east/john-kerry-hopeful-of-successful-outcome-to-iran-talks-1.2265518>

Senior US and Iranian officials said hard work was still needed as they met in Vienna on **Saturday** for what could be their final negotiations to bridge significant differences on an agreement to curb Iran's nuclear programme. ¶ With a self-imposed deadline approaching on Tuesday, **both sides emphasised that major obstacles remained** to finalising a deal under which Iran would cut back its nuclear programme in exchange for relief from economic sanctions. ¶ "We have a lot of hard work to do. We have some very tough issues," US Secretary of State John Kerry said, according to a state department draft transcript. ¶ I agree. Maybe not on the issues. But on the fact that we need to work really hard in order to be able to make progress and move forward," Iranian foreign minister Mohammad Javad Zarif was cited as saying in the transcript. ¶ **Nonetheless, Mr Kerry also said he was "hopeful" of a successful outcome.** His meeting with Mr

Zarif ended after 90 minutes.¶ The main differences are on the pace and timing of sanctions relief for Iran in return for its steps to restrain its nuclear programme and on the nature of monitoring mechanisms to ensure Tehran does not cheat on any agreement.

Agreement possible – focus necessary for compromise

Martin Matishak - 06/27/15 10:12 AM EDT <http://thehill.com/policy/defense/246365-kerry-very-tough-issues-to-face-as-clock-ticks-on-iran-deal>

Secretary of State John Kerry said “very tough issues” remain as international negotiators hold what could be their final round of talks to get a deal over Iran’s nuclear program.¶ Speaking to reporters in Vienna on Saturday, Kerry said both sides are “hopeful” to reach an agreement.¶ “We have a lot of hard work to do. We have some very tough issues, and I think we all look forward to getting down to the final effort here to see whether or not a deal is possible,” Kerry said. ¶ “I think that everybody would like to see an agreement, but we have to work through some difficult issues,” he added.¶ Kerry’s Iranian counterpart, Foreign Minister Mohammad Javad Zarif, struck a similar note.¶ “I agree maybe not on the issues, but on the fact that we need to work really hard in order to be able to make progress and move forward,” he said.¶ “We’re determined to do everything we can in order to be able to make this important milestone, but that depends on a lot of things and we’re going to work on them,” according to Zarif.¶ Iran and Western powers have given themselves until Tuesday to strike a bargain that would curb Tehran’s nuclear effort in exchange for sanctions relief.¶ Last month, the president signed into law a bill that gives Congress 30 days to disapprove any final deal, during which he could not lift congressional sanctions on Iran. If Congress votes to reject the deal, the administration would have 12 days to veto the resolution of disapproval. Congress would then have 10 extra days to try to override the veto.¶ Several GOP senators have voiced strong opposition to any potential long-term deal in recent weeks.¶ Senate Foreign Relations Committee chairman Bob Corker (R-Tenn.) recently sent letter to President Obama, calling the reported concessions that the administration has made to Iran as part of the talks “breathtaking.”¶ On Thursday, Sens. Robert Menendez (D-N.J.) and Mark Kirk (R-Ill.) introduced legislation that would extend an Iran sanctions bill, currently set to expire next year, through 2026.

Deal solves prolifer

Deal best chance to resolve proliferation – experts agree

REBECCA SHIMONI STOIL June 27, 2015, 4:01 am <http://www.timesofisrael.com/top-us-official-hails-unprecedented-possibility-of-reaching-iran-deal/>

Deputy Secretary of State Antony Blinken heralded the “unprecedented inspections” currently underway in Iran under the interim nuclear agreement, and challenged opponents of a nuclear deal to come up with a better alternative to any comprehensive agreement reached by the P5+1 member states during a Friday afternoon keynote speech. ¶ We have negotiated, of course, an interim agreement with Iran that froze and in some places rolled back its nuclear program with unprecedented inspections, with the possibility of a comprehensive solution now before us,” Blinken told the audience at the Center for New American Security’s annual conference. ¶ Blinken, who served as the administration’s point man for Iran talks before a number of Congressional hearings, gave a broad overview of the US’s positions and challenges worldwide, ranging from the world’s growing refugee population to the administration’s efforts to pivot foreign policy towards east Asia. ¶ Less than a week before the deadline to reach a comprehensive agreement, Blinken also sought to calm concerns regarding key aspects of the impending deal. ¶ Blinken reiterated administration assertions that “the deal we’re working towards will close each of Iran’s four pathways toward fissile material” – the uranium enrichment at Natanz and Fordo, the plutonium plant at Arak, and any covert path that Tehran could pursue toward acquiring fissile material. ¶ Arguing that “many [concerns about the deal] are based much more on myth than on fact,” Blinken said that the US demands that a deal “must include monitoring and intrusive transparency measures.” ¶ He dismissed warnings that the deal contains a sunset clause – that Iran will be free to pursue a full-scale industrial uranium enrichment program after a decade of intense monitoring. ¶ “The deal will not expire,” he said, reiterating a point he made in early June during the annual meeting of the American Jewish Committee. “There will not be a so-called sunset.” Blinken cited as proof the fact that even after the most stringent terms of a deal expire, Iran will still be required to meet the obligations of the NPT and other anti-proliferation regimes. ¶ The deal, he said, would allow for transparency, and the US will only agree to a deal that guarantees the International Atomic Energy Agency access to relevant sites. ¶ Blinken also delivered warnings against the idea that the US should walk away from a “bad deal” and leave in its stead the interim terms of the Joint Plan of Action. The idea was floated as recently as during a Thursday Senate hearing as a halfway point between signing on to a comprehensive deal and withdrawing completely from talks. ¶ Blinken said that if that happened, the Joint Plan of Action would “sunset immediately,” allowing Iran to “speed towards an industrial-scale program with tens of thousands of centrifuges with no inspections and no visibility into its program.” ¶ “Just like the Joint Plan of Action, any agreement will be subject to legitimate scrutiny,” Blinken assured the audience. “We will not agree to any deal that will not withstand that scrutiny.” At the same time, he challenged critics of the agreement with an obligation to propose a better alternative. ¶ “It is a fantasy to believe that Iran will simply capitulate to our demands if we just ratchet up the sanctions,” Blinken warned. He reiterated administration cautions that if the US followed the path suggested by Senators Robert Menendez and Mark Kirk in threatening Iran with additional sanctions should talks fail, America’s international partners in the sanctions regime would blame America for the talks’

failure. ¶ “The United States – not Iran – could be isolated and the sanctions regime could collapse,” he suggested.

Flietz is about old agreements – this has the most robust inspections ever – makes breakout so long – the risk of breakout is negligible

Jeffrey Lewis, Arms Control Wonk, Monterey Institute Nuclear Professor, 4/2/15, A Skeptic's Guide to the Iran Nuclear Deal, foreignpolicy.com/2015/04/02/a-skeptics-guide-to-the-iran-nuclear-deal-2/

K, I admit it. I thought this framework was going to suck. Actually, it's not bad. My main concern all along was that the P5+1 countries (technically the E3/EU+3; congratulations if you know the difference) were too focused on “breakout time” — imposing arbitrary limits on Iran's centrifuge program to ensure that if Iran used its known nuclear infrastructure, it would take at least a year to build a bomb. The bigger worry about Iran's nuke program, I always thought, was unknown nuclear infrastructure, such as any hidden centrifuge sites. To my surprise, the deal — at least as it is described in the fact sheet released by the White House — manages to impose measures to guard against breakout, while also providing for a number of measures that help substantially with the problem of covert facilities. All in all, it's a pretty comprehensive framework for managing the problem. It's certainly worth lifting some sanctions, though a crucial detail is how quickly that will happen and whether sanctions can be reimposed if things go pear-shaped. But there are still reasons to be cautious. First, all we have at the moment area White House-released fact sheet and a couple of ambiguous news conferences in Lausanne, Switzerland, and the White House Rose Garden. (Javad Zarif, Iran's foreign minister and lead negotiator, is already complaining about the White House's fact sheet.) There is, after all, a reason one writes these things down. The parties will need a few more months to work out the details of the actual agreement in order to implement the “framework” that was announced Thursday, April 2. Those negotiations will be crucial because the kind of language in the statements and fact sheet — which probably seem pretty detailed to a casual observer — doesn't provide the sort of clarity that a final agreement will need in order to work. (Ask me about long-range missiles of any kind sometime.) Second, getting a deal on paper is only the first step. The parties have agreed to do all sorts of things. This may shock you, but sometimes parties have trouble delivering on such promises. Agreements aren't self-implementing, so a major test will be how the parties deal with the inevitable challenges that human beings pose to implementing even a beautifully written final agreement. That's not a reason to reject agreements, just a caution about being realistic. Finally, please keep in mind that this deal makes it marginally less likely that Iran will build a nuclear weapon. That's great. But it doesn't solve the problem of Iran's missile program or Tehran's less-than-stabilizing role in the Middle East. Expectations for any written agreement should be modest. I wouldn't let myself get swept up in loose talk about a new relationship with Tehran. We're agreeing to not kill each other, for the moment, over this one thing. In my business, that's pretty good! Still, the details are pretty interesting. The big-ticket item for the U.S. national security community will be the “breakout” timeline. I am not going to do a calculation, but the important parameters are about 5,000 centrifuges enriching to less than 3.7 percent and a reduction in the existing stockpile of low-

enriched uranium to 300 kilograms. The fact sheet claims this extends the breakout timeline from two to three months to more than a year. I don't see any reason to doubt the administration's math, but I just don't think the breakout timeline matters. So I will just step aside and let other people who are invested in this argument fight it out. The provisions against covert sites — what my friend James Acton calls “sneak-out” and what I worry about most — look very strong. The fact sheet asserts that the International Atomic Energy Agency (IAEA) will have continuous access to the facilities that produce Iran's centrifuge rotors and bellows for 20 years. The agreement also provides access to Iran's uranium mines and mills, as well as a dedicated procurement channel for any goods destined for Iran's nuclear program. Iran will return to the Additional Protocol and modified Code 3.1 of the subsidiary arrangements — these are improvements to the safeguards agreement and subsidiary arrangements that Iran has with the IAEA. They are an important part of verifying any agreement. And it seems Iran has agreed to certain measures to address the so-called “possible military dimensions” of the nuclear program — all the intelligence, such as the infamous “laptop of death,” that suggests Iran had a covert bomb program until 2003. Iran also agreed to limit enrichment to a single site at Natanz. Again, the details will matter here. The E3/EU+3 would be well advised to make sure the agreement includes a nice map of the Natanz facility — lest we find secret centrifuge halls in a Natanz “annex” down the road. The advantage of limiting work to a single site is that, should the U.S. intelligence community catch Iran building a centrifuge site elsewhere (again), Tehran won't be able to make any tendentious legal excuses. Finally, there are reasonable limits on Tehran's program to develop new generations of centrifuges. These measures can't guarantee that Iran doesn't have a parallel, secret program. That's still going to depend on the capabilities of the U.S. intelligence community. But they do force Iran to ensure that any parallel program is fully parallel, from uranium mines through centrifuge workshops to the proverbial underground mountain lair. That's an imposition, and if secrecy breaks down at any point along that chain, the whole endeavor is compromised. The fact sheet really does assert what looks to be an impressive monitoring regime. Last but not least, the agreement seems to deal adequately with Iran's enrichment plant at Fordow and its heavy-water reactor at Arak. Fordow — the covert enrichment site under a mountain and revealed in 2009 — will be converted into non-nuclear isotope separation. An earlier story indicated that a small number of centrifuges at Fordow would separate “stable” isotopes — “stable” here means non-radioactive. The nuclear fuel company Urenco has a side business that sells stable isotopes, so it's not a crazy idea. It's a little hard to tell from the fact sheet, but that seems to be what has happened. The IAEA will still have access to the site to make sure that it's only used for non-nuclear purposes. The heavy-water reactor at Arak, meanwhile, will apparently be redesigned so that it “will not produce weapons grade plutonium.” There are real benefits to redesigning the reactor to produce less plutonium, though the fact sheet isn't clear about the nature of the redesign. Iran also committed to ship the spent fuel from the reactor out of the country and to refrain “indefinitely” from reprocessing or reprocessing-related research. The terms “reprocessing” and “reprocessing research” are not defined, but if the goal is to make Arak no scarier than, say, the light-water reactor at Bushehr, they've succeeded.

Very easy to snap back in sanctions – solves all their arguments

Fred Kaplan, Slate, 4/2/15, The Deal of a Lifetime,
www.slate.com/articles/news_and_politics/war_stories/2015/04/iranian_nuclear_deal_is_a_breakthrough_why_the_agreement_is_the_best_option.single.html

The Iranian nuclear deal reached in Switzerland on Thursday is a significant breakthrough. Uncertainties remain, inherently so, as it's merely a "political framework" for a formal deal to be completed and signed by June 30. But **this framework turns out to be far more detailed, quantitative, and restrictive than anyone had expected.** It might not lead to a deal as good as the outline suggests; it might not lead to a deal at all. But anyone who denounces this framework—anyone who argues that we should pull out of the talks, impose more sanctions, or bomb Iran because it's better to have no deal than to have this one—is not a serious person or is pursuing a parochial agenda. If this deal is fully implemented, Iran will be unable to build a nuclear bomb by enriching uranium or by reprocessing plutonium for at least 10 years. Some of the restrictions imposed by this deal would last 15 years. The international inspections of certain aspects of Iran's nuclear program would stay in place for 25 years. As for the economic sanctions against Iran, they would be lifted not upon the deal's signing, as the Iranians initially demanded, but only after the inspectors have verified that Iran has fulfilled all of its commitments in the deal. These commitments include reducing the number of Iran's installed centrifuges by two-thirds (from about 19,000 to 6,104, with only 5,060 allowed to enrich uranium); reducing its stockpile of enriched uranium by 97 percent (from 10,000 kilograms to 300 kilograms); to remove all advanced centrifuges (those that can enrich uranium at a much faster rate) and to place them in internationally monitored storage; to destroy the core of the Arak heavy-water reactor (which could produce a plutonium bomb), ship all its spent fuel out of the country, and forgo additional reprocessing; among other things. If the Iranians honor these terms, they will not be able to build a bomb for at least a decade, maybe longer. Still, there are two questions that a final deal would have to answer concretely. First, it's not clear when the sanctions would be lifted. An official summary of the framework states, at one point, "Iran will receive sanctions relief, if it verifiably abides by its commitments." Elsewhere, it says that all U.N. Security Council resolutions on Iran nuclear issues "will be lifted simultaneous with the completion, by Iran, of nuclear-related actions addressing all key concerns." But this leaves open the question of timing. Some of these "commitments" are to be carried out through the duration of the deal, yet certainly there's no suggestion that the sanctions will remain in place for a decade. Are the relevant commitments those that involve the reduction or dismantlement of nuclear equipment? If so, will the sanctions be lifted in phases or all at once when the cuts and shutdowns are complete? The framework also states that **sanctions can be "snapped back" into place if, at any point, Iran violates** any part of the deal. But as everyone knows, it's much harder to reimpose sanctions than it is to lift them, especially at the U.N. Security Council, where Russia and China (which signed on to the sanctions reluctantly and want to see them lifted as soon as possible) have veto power. So everything else about this deal has to be solid. (However, it's worth noting, the framework states that sanctions relating to Iran's ballistic missiles, violations of human rights, and support of terrorism will still be in place. So if the nuclear sanctions do need to be "snapped back," they could be piled on top of these sanctions; a mechanism for freezing funds would still exist.) Second, **the deal would have to let international inspectors not**

only monitor Iranian nuclear facilities continuously, but also to look inside any other “suspect” facilities—in other words, facilities not on the official list that the inspectors have reason to believe might be harboring prohibited activity. Verification has been the most nettlesome aspect of all arms control accords throughout history, for two reasons. First, no deal can be absolutely verifiable; this is why accords usually set a standard of “adequately verifiable” (a bit of a finesse, but there’s no honest alternative). Second, even in the most trusted relations (and relations with Iran are far from that), there is a fine line between authorized inspection and disingenuous espionage—which is to say that Iran (or any other military power) might have understandable, even legitimate reasons for wanting to keep foreigners out of certain areas. So why should the P5+1 nations—the five permanent members of the U.N. Security Council (the United States, Great Britain, France, Russia, and China) plus Germany—pursue this deal, despite the uncertainties? The main reason is that it is a profoundly good deal; there has never been a nuclear deal, with any country, that is so comprehensively restrictive. Israeli Prime Minister Benjamin Netanyahu urged the U.S. Congress to demand “a better deal,” but his definition of such a deal—one that bans uranium enrichment, dismantles all its facilities, and insists on a drastic change in Iran’s foreign policy—is unattainable, and, more to the point, he knows it.

Deal spurs stability and resolves Middle East proliferation and conflict.

Erin Poll, NIAC, June 10 Iran Deal Can Help Disentangle Regional Conflicts

<http://www.niacouncil.org/iran-deal-can-help-disentangle-regional-conflicts/>

One of the biggest concerns from the West is that a nuclear deal with Iran could “spark a proliferation cascade in the region,” Fitzpatrick noted, starting with Saudi Arabia. However, if Saudi Arabia does choose to seek nuclear weapons, he said, it will find it very difficult to procure the technology. Pakistan, the most likely supplier, “has no strategic interest in sharing weapons technology with the Saudis” as they would not want to be sanctioned for transferring nuclear technology. In fact, Fitzpatrick noted, a nuclear deal may convince the Saudi king of the need for rapprochement with Iran, as proxy conflicts become more costly and oil prices drop. King Salman told Obama that he was optimistic that the Iran deal would “reinforce the stability and security of the region and the world.” Fitzpatrick insisted that, contrary to popular assumptions, without restrictions on Iran’s nuclear program, Saudi Arabia would feel compelled to attain nuclear capabilities to counter Iran’s own. ¶ “For the last 20 years, the United States and Iran have done everything they could to either contain Iran or, in the case of the Iranians, undermine the United States in the region, and they have spent a tremendous amount of resources and political capital to do so,” according to Parsi. Easing the tensions between the US and Iran, will allow the US to invest more resources elsewhere. Additionally, the US will be able to have a more honest discussion with the Saudis if it has a counterbalance in Iran. These steps will facilitate the US’s plan to reorient itself towards East Asia, Fitzpatrick concluded.

Iran deal best chance, need to get it done -- experts

Fisher 4/2 -- content director @ Vox (Max, 2015, "This is an astonishingly good Iran deal," <http://www.vox.com/2015/4/2/8337347/iran-deal-good>)

When Aaron Stein was studying nuclear non-proliferation at Middlebury University's Monterey graduate program, the students would sometimes construct what they thought would be the best possible nuclear inspection and monitoring regimes. Years later, Stein is now a Middle East and nuclear proliferation expert with the Royal United Services Institute. And he says that the Iran nuclear framework agreement, announced on Thursday, look an awful lot like those ideal hypotheticals he'd put together in grad school. "When I was doing my non-proliferation training at Monterey, this is the type of inspection regime that we would dream up in our heads," he said. "We would hope that this would be the way to actually verify all enrichment programs, but thought that would never be feasible." "If these are the parameters by which the [final agreement] will be signed, then this is an excellent deal," Stein concluded. The framework nuclear deal establishes only the very basics; negotiators will continue to meet to try to turn them into a complete, detailed agreement by the end of June. Still, the terms in the framework, unveiled to the world after a series of late- and all-night sessions, are remarkably detailed, and almost astoundingly favorable to the United States. Like many observers, I doubted in recent months that Iran and world powers would ever reach this stage; the setbacks and delays had simply been too many. Now, here we are, and the terms are far better than expected. There are a number of details left to be worked out, including one very big unresolved issue that could potentially sink everything. This is not over. But if this framework does indeed become a full nuclear deal in July, it would be a huge success and a great deal. Iran gives up the bulk of its nuclear program in these terms. The framework deal requires Iran to surrender some crucial components of its nuclear program, in part or even in whole. Here are the highlights: Iran will give up about 14,000 of its 20,000 centrifuges. Iran will give up all but its most rudimentary, outdated centrifuges: its first-generation IR-1s, knock-offs of 1970s European models, are all it gets to keep. It will not be allowed to build or develop newer models. Iran will give up 97 percent of its enriched uranium: it will hold on to only 300 kilograms of its 10,000 kilogram stockpile in its current form. Iran will destroy or export the core of its plutonium plant at Arak, and replace it with a new core that cannot produce weapons-grade plutonium. It will ship out all spent nuclear fuel. Iran would simply not have much of its nuclear program left after all this. A shorthand that people sometimes use to evaluate the size of Iran's nuclear program is its "breakout time." If Supreme Leader Ayatollah Ali Khamenei woke up tomorrow morning and decided to kick out all of the inspectors and set his entire nuclear program toward building a nuclear warhead — to "break out" to a bomb — right now it would take him two or three months. Under the terms of the framework, his program would be so much smaller that it would take him an entire year to build a single nuclear warhead. These terms are not abject surrender. Iran is allowed to keep a small nuclear program, and it won some concessions of its own. For example, what little uranium enrichment is allowed will be done at Iran's facility at Natanz — a hardened, reinforced-concrete structure that was once used for covert enrichment and that the US had hoped to close. Iran will also be allowed to do some research at another hardened facility the US had wanted to close, at Fordow, though the research is restricted and will be barred from using fissile material. These are not big concessions, and they matter mostly for their symbolic value, but it's something. Still, when you look at many of the specifics laid out in the framework, the hard numbers and timetables and the detailed proscriptions, those all tend to be quite favorable to the United States. The core issue that the framework really nails. Even though the agreement is only a framework, the summary released on Thursday goes into

striking detail on an issue that was always going to be among the most crucial: inspections. Whatever number of centrifuges Iran has or doesn't have, whatever amount of uranium it's allowed to keep or forced to give up, none of it matters unless inspectors have enough authority to hold Tehran to its end of the deal — and to convince the Iranians that they could never get away with cheating. To say that the US got favorable terms here would be quite an understatement; the Iranians, when it comes to inspections, practically gave away the farm. "I would give it an A," Stein said of the framework. When I asked why: "Because of **the inspections and transparency.**" There are two reasons that inspections are so important. The first is that **super-stringent inspections are a deterrent:** if the **Iranians** know that any deviation is going to be quickly caught, they **have** much less incentive to try to cheat, and much more **incentive to uphold their side of the deal.** The second is that, if Iran were to try to build a nuclear weapon now, it likely wouldn't use the material that's already known to the world and being monitored. Rather, the Iranians would secretly manufacture some off-the-books centrifuges, secretly mine some off-the-books uranium, and squirrel it all away to a new, secret underground facility somewhere. That would be the only way for Iran to build up enough of an arsenal such that, by the time the world found out, it would be too late to do anything about it. Really **robust inspections** would be the best way to stop that from happening. They would **prevent Iran from sneaking off centrifuges or siphoning away uranium** that could be used to build an off-the-grid nuclear weapons program, without the world finding out. The inspections issue has not gotten much political attention. When I spoke to Jeffrey Lewis, the director of the East Asia Nonproliferation Program at Middlebury's Monterey Institute of International Studies, on Tuesday before the framework was announced, he seemed worried that negotiators would not focus on it much. Rather, overwhelming political focus in Washington and Tehran on issues like Iran's number of allowed centrifuges seemed likely to push inspections from the top priorities. Lewis suggested that a top item on his wish-list would be inspections so robust that inspectors don't just get to visit enrichment sites like Natanz and Fordow, but also centrifuge factories. That, he said, "would be a big achievement." Sure enough, come Thursday, Lewis got his wish, and then some: centrifuge factory inspections is one of the terms in the framework, and it's pretty robust. For the next 20 years, inspectors would have "continuous surveillance at Iran's centrifuge rotors and bellows production and storage facilities." "I was shocked to read that they got them to agree to let us walk around their centrifuge production facilities. That's amazing," Stein said. It's not just centrifuge factories. **Inspectors will have access to all parts of Iran's nuclear supply chain,** including its uranium mines and the mills where it processes uranium ore. Inspectors will also not just monitor but be required to pre-approve all sales to Iran of nuclear-related equipment. This provision also applies to something called "dual-use" materials, which means any equipment that could be used toward a nuclear program. "The inspections and transparency on the rotors, and the bellows, and the uranium mines is more than I ever thought would be in this agreement," Stein added. Other favorable items buried in the terms Stein pointed out two details in the framework that I'd missed, both of which appeared to be pretty significant concessions by the Iranians. First, **Iran** has finally **agreed to comply by** a rule known as **Modified Code 3.1** of the Subsidiary Arrangements General Part to Iran's Safeguards Agreement, shorthand as Modified Code 3.1. It says that Iran has to notify inspectors immediately on its decision to build any new facility where it plans to do nuclear work — long before construction starts. Iran in the past has either rejected this rule or stated

that it would only notify inspectors a few months before introducing nuclear material at a facility — a "cover your ass" move in case the world caught them building a new nuclear site. Tehran's promise to comply may signal that it intends to stop building such covert facilities.

Second, Stein reads the framework as including Iran's ballistic missile program — something that critics of the deal warned would be left out. Indeed, even many supporters of the negotiations have said that it would be unlikely that American negotiators could get the deal to cover ballistic missiles or other conventional weapons programs; it would simply be asking for too much in one agreement. "It looks like they were able to expand the scope beyond just nuclear issues," Stein said. He pointed to a line in the section that explains that the UN Security Council would replace its old resolutions imposing sanctions on the nuclear program with a new resolution that incorporated the finalized deal. The line reads, "Important restrictions on conventional arms and ballistic missiles, as well as provisions that allow for related cargo inspections and asset freezes, will also be incorporated by this new resolution." "The way I read that is that they address the ballistic missile issue, that that will remain in the new UN Security Council resolution," Stein said. "So you're going to keep the restrictions on ballistic missiles that are already present." The giant gaping hole in the framework terms still, this is just a framework deal on the basic terms; it covers a lot, but not everything. And there is one really important topic that is referenced only vaguely: how and when the world will lift its economic sanctions on Iran. This has been a major sticking point throughout negotiations. Iran demands that all sanctions be lifted right away; their country needs a functioning economy, they say, and if they're complying with all of the restrictions as of day-one then they shouldn't have to endure crippling sanctions on day-two. But the US and others worry, with good reason, that if they lift all sanctions immediately then Iran will have far less incentive to follow through on its commitments, as it would be very difficult to re-impose those sanctions. And Iran has cheated on such agreements before. This is a really difficult issue; each side has to trust, to some degree, that the other side will uphold its end of the deal. And someone has to go first. After decades of enmity, that's hard. The terms in the framework do not come near solving this issue. Iran and the world powers, apparently failing to find a solution, have largely punted. "I read the fact sheet as confirming that they are still far apart on scheduling sanctions relief," Lewis said in an email. "Still a very large devil — a Great Satan if you will — in the details." What the terms do say is that the US, Europe, and UN Security Council will remove their sanctions after Iran fulfills its end of the deal. But it is still very unclear how exactly that gets determined, when that happens, or whether it means the sanctions are lifted all at once, or over time. The terms do suggest that the IAEA will have "teeth," as Stein put it, in punishing Iran if they conclude that the Iranians are not upholding their commitments. And if Iran breaks its end of the bargain, the sanctions will in theory "snap back." Russia, though, opposes putting any sort of automatic enforcement mechanism into UN Security Council sanctions. So it's not clear if "snap back" means that sanctions will automatically trigger back into place (unlikely) or if the US would have to try to corral the necessary votes to bring them back manually (very difficult). This was always perhaps the hardest issue. It remains the hardest issue. That the negotiators could not find anything more detailed to say is concerning. This, so far, is about the best we could ask for "Really, it's a very strong framework," Jeffrey Lewis said when I asked him what he thought. "As a framework it's very good," tweeted Mark Fitzpatrick, the director of the Non-Proliferation and Disarmament Program at the International Institute for Strategic Studies. He added, "A sharp critic of Iran and

skeptic of the talks told me after the announcement that it seemed to be heavily tilted in favour of the West." The Arms Control Association issued a statement saying that the "historic" agreement "promises to lead to one of the most consequential and far-reaching nuclear nonproliferation achievements in recent decades." Everyone is very careful to note that this is a provisional framework. It could fall apart before it becomes a full, final deal. The negotiators, between now and the end-of-June deadline, could get bogged down in details like sanctions relief. It will be hard and it could fail. But we do have something substantial and important in this framework. The terms in the agreement are just about the best that we could hope for — even better, in some ways, than many had thought possible. The concessions from Iran are painful and many; the concessions by the US minor and few; the details surprisingly robust. President Obama is framing the deal, somewhat defensively, as the best alternative to war. Indeed it is that. But it is also the start of what could become a substantial and long-term curb to Iran's nuclear program, a major step toward reducing the hostility between Iran and the West, and thus a potentially transformative change for the region.

Deters acquisition, no future prolif

George Perkovich, Carnegie Endowment VP, 4/2/15, The Benefits of Mutual Distrust, www.politico.com/magazine/story/2015/04/iran-nuclear-deal-116635_Page2.html#.VR3i80b6lio

If this assessment is correct, it is possible to devise an arrangement that will satisfy Iran's needs for a peaceful nuclear energy program and the international community's requirement that Iran not acquire nuclear weapons. A sound deal, in short, would have to convince Iran that the risks of cheating and the cost of non-compliance are too high. Rather than "trust but verify," as Ronald Reagan defined his approach to nuclear arms control, the logic with Iran should be "distrust, verify, and deter." The benefits Iran hopes to accrue from sanctions relief can themselves augment deterrence of cheating. To the extent that Iranian businesses and citizens welcome the economic improvements that follow, they will hold their government responsible if it acts in ways that cause sanctions to be snapped back on. While the Iranian internal security apparatus remains repressive, it is sensitive to popular discord, which can be expressed even in constrained presidential elections. For all of the imperfections of the comprehensive deal whose details must now be completed, the compromises that are being made to persuade Iranian leaders to accept it augment their incentives to uphold it. These leaders distrust the United States at least as much as the United States distrusts them. They have struggled to retain leverage in the negotiated arrangements to deter the U.S. and its partners from renegeing on our side of the bargain. The underground research and development facility at Fordow, for example, is retained as insurance against military attack. The likely phasing of disclosure of past activities with possible military dimensions is meant to bide time to see if sanctions relief will be delivered as promised. Rather than being inherently bad for the U.S., the leverage Iran retains gives their leaders reason to think the U.S. will not renege on a deal. Recent history demonstrates that Iran is deterrable. Iran began its secret quest for enrichment capability in 1985 during the war with Iraq. Saddam Hussein's forces were attacking Iranian cities with ballistic missiles armed with

chemical weapons. The United States and France rebuffed Iranian efforts to mobilize the UN Security Council to make Iraq stop. Iranian leaders then began looking for a nuclear option to ensure that their country would “never again” face such a threat. Throughout the 1990s the United States and others reasonably sought to block most of Iran’s nuclear initiatives, as they also sought to verifiably eliminate all of Iraq’s weapons of mass destruction. While Iranians quietly welcomed the efforts in Iraq, they noticed the Bush Administration’s increasingly dire warnings that Iraq had WMDs and would use them. The invasion of Iraq in 2003 removed the perceived Iraqi threat. At the same time, intelligence exposed that Iran was secretly building facilities to enable it to enrich uranium and produce plutonium, for which there was no realistic civilian requirement. The International Atomic Energy Agency began investigating and uncovered a long list of Iranian violations of requirements to report sensitive nuclear activities. The threat of possible U.S. intervention from Iraq into Iran also loomed. At this point, according to the U.S. intelligence community, “Tehran halted its nuclear weapons program... primarily in response to increasing international scrutiny and pressure resulting from exposure of Iran’s previously undeclared nuclear work.” Negotiations ensued in 2003 and continued on and off until today. Since early 2014, the Joint Plan of Action that Iran implemented has essentially frozen its fuel-cycle program. Throughout, Iranian leaders have assiduously sought to preserve space for an ambitious nuclear energy program, relenting only where the terms of the Nuclear Nonproliferation Treaty clearly require and when international pressure, including economic sanctions, made it too painful to press for more. The NPT clearly proscribes acquiring nuclear weapons, but it does not define precisely which enabling activities and capabilities are forbidden. Iran’s performance since 2003 suggests, but does not prove, that its interests can be served without nuclear weapons. Saudi Arabia is a leading source of Sunni resistance to Iran, in terms of ideology and funding. But as long as Saudi Arabia does not have nuclear weapons, Iran will retain a significant power advantage over it. If making and keeping a nuclear deal reduces the likelihood of a Saudi bomb, Iran will be better off. And Iran does not need nuclear weapons to fight the Islamic State and other Sunni militias in Iraq. A robust nuclear arsenal might make Iran more secure vis a vis Israel and the United States, but the problem is that getting from today’s capability to a robust nuclear arsenal would risk a war with one or both. Implementing a nuclear deal – and retaining the leverage of the capabilities it allows – practically removes the threat of Israeli and American military attack. And, by relieving Iran’s international isolation and earning it kudos from many countries, a nuclear deal would enhance Iran’s standing for condemning Israel’s own nuclear arsenal and occupation policies. The latter possibilities will not be welcome in Israel and the U.S., but this only buttresses the assessment that Iran would have an interest in upholding a nuclear deal. To reinforce this Iranian calculation, the details of a comprehensive agreement should combine deterrence and positive incentives. On the deterrence side, verification is vital. Iranian leaders should conclude that efforts to cheat will be detected with enough time to allow military interdiction before Iran could acquire nuclear weapons. The primary risk is in the domain of uranium enrichment. Here, Iran’s activities must be monitored from mining of ore all the way through the enrichment process, as the U.S. fact sheet released April 2 says it will. All of Iran’s facilities and activities involved in producing centrifuges must be monitored, as well as all operations of centrifuges, from research and development to larger-scale production of low-enriched uranium for reactor fuel. A satisfactory agreement also should prohibit research and development activities whose purposes are closely

associated with nuclear weaponization. Even if Iran will not resolve the IAEA's ongoing questions about past activities with possible military dimensions until the later stages of an agreed arrangement, Iran should conduct no new activities of this sort. To verify this, Iran will have to agree to procedures for international inspections of any facilities reasonably suspected of conducting work related to nuclear weaponization. Such arrangements would correct a shortcoming of the 1968 NPT and serve as an important precedent to be applied to all non-nuclear-weapon states. Deterrence of cheating will be further enhanced by the process designed for relieving sanctions on Iran. In the initial years of an agreement, Iran's performance of its obligations should be reciprocated by waivers of U.S. and other sanctions, rather than the removal of the underlying legal authorities behind them. This way, if Iran fails to perform, sanctions can be "snapped-back" into place quickly by ending waivers. A final comprehensive nuclear agreement should be codified in a UN Security Council resolution, under Chapter VII, as it now appears has been agreed in Switzerland. The U.S. and other Security Council members can augment deterrence by explaining that violation of such a resolution may be punished by force. The U.S. Congress could affirm that it would support the use of force in the event Iran materially breached the agreement. None of this is to gainsay the violence Iran's protégés and its Revolutionary Guard forces perpetrate in neighboring countries. Nor is it to accept the theocratic repressiveness of Iranian politics and governance. The U.S., Israel and Iran's Arab neighbors will continue to contest Iranian assertiveness, as Iran will in reverse. Washington will continue to press for democratization and protection of human rights in Iran, just as Iran will denounce Israel's treatment of the Palestinians and Washington's complicity with it. A nuclear deal will limit the dangers of this competition by significantly reducing the risks of nuclear proliferation and war, and providing an opportunity to test whether diplomatic agreements can be maintained. If the proposed deal can be completed as now planned, at the end of its duration, near 2030, a major threat to international peace and security and the global nuclear order will have been abated. At that time, Iran will have been restored to good standing under the Nuclear Nonproliferation Treaty, bound by its now clarified terms. Iran's first-generation revolutionary leaders will have passed from the scene. Then, if new Iranian leaders somehow concluded that they wanted to try again to move towards nuclear weapons, as Prime Minister Netanyahu and others warn, they should expect an immediate and decisive international campaign to stop them.

Deal is best chance to resolve prolif – provisions solve most counter args

Lewis 4/2 -- director of the East Asia Nonproliferation Program at the James Martin Center for Nonproliferation Studies (Jeffrey, "A Skeptic's Guide to the Iran Nuclear Deal," http://foreignpolicy.com/2015/04/02/a-skeptics-guide-to-the-iran-nuclear-deal-2/?utm_content=bufferca754&utm_medium=social&utm_source=twitter.com&utm_campaign=buffer)

OK, I admit it. I thought this framework was going to suck. Actually, it's not bad. My main concern all along was that the P5+1 countries (technically the E3/EU+3; congratulations if you know the difference) were too focused on "breakout time" — imposing arbitrary limits on Iran's

centrifuge program to ensure that if Iran used its known nuclear infrastructure, it would take at least a year to build a bomb. The bigger worry about Iran's nuke program, I always thought, was unknown nuclear infrastructure, such as any hidden centrifuge sites. To my surprise, **the deal** — at least as it is described in the fact sheet released by the White House — **manages to impose measures** to guard **against breakout, while** also **providing** for a number of **measures that help** substantially **with** the problem of **covert facilities**. All in all, **it's a pretty comprehensive framework for managing the problem**. It's certainly worth lifting some sanctions, though a crucial detail is how quickly that will happen and whether sanctions can be reimposed if things go pear-shaped. But there are still reasons to be cautious. First, all we have at the moment area White House-released fact sheet and a couple of ambiguous news conferences in Lausanne, Switzerland, and the White House Rose Garden. (Javad Zarif, Iran's foreign minister and lead negotiator, is already complaining about the White House's fact sheet.) There is, after all, a reason one writes these things down. The parties will need a few more months to work out the details of the actual agreement in order to implement the "framework" that was announced Thursday, April 2. Those negotiations will be crucial because the kind of language in the statements and fact sheet — which probably seem pretty detailed to a casual observer — doesn't provide the sort of clarity that a final agreement will need in order to work. (Ask me about long-range missiles of any kind sometime.) Second, **getting a deal on paper is** only **the first step**. The parties have agreed to do all sorts of things. This may shock you, but sometimes parties have trouble delivering on such promises. Agreements aren't self-implementing, so a major test will be how the parties deal with the inevitable challenges that human beings pose to implementing even a beautifully written final agreement. **That's not a reason to reject agreements, just a caution about being realistic**. Finally, please keep in mind that this deal makes it marginally less likely that Iran will build a nuclear weapon. That's great. But it doesn't solve the problem of Iran's missile program or Tehran's less-than-stabilizing role in the Middle East. Expectations for any written agreement should be modest. I wouldn't let myself get swept up in loose talk about a new relationship with Tehran. We're agreeing to not kill each other, for the moment, over this one thing. In my business, that's pretty good! Still, the details are pretty interesting. The big-ticket item for the U.S. national security community will be the "breakout" timeline. I am not going to do a calculation, but the important parameters are about 5,000 centrifuges enriching to less than 3.7 percent and a reduction in the existing stockpile of low-enriched uranium to 300 kilograms. The fact sheet claims this extends the breakout timeline from two to three months to more than a year. I don't see any reason to doubt the administration's math, but I just don't think the breakout timeline matters. So I will just step aside and let other people who are invested in this argument fight it out. The **provisions against covert sites** — what my friend James Acton calls "sneak-out" and what I worry about most — **look very strong**. The fact sheet asserts that the International Atomic Energy Agency (IAEA) **will have continuous access to the facilities that produce Iran's centrifuge rotors and bellows** for 20 years. The **agreement** also **provides access to Iran's uranium mines and mills**, as well as a dedicated procurement channel for any goods destined for Iran's nuclear program. **Iran will return to the Additional Protocol** and modified Code 3.1 of the subsidiary arrangements — these are improvements to the safeguards agreement and subsidiary arrangements that Iran has with the IAEA. They are an important part of verifying any agreement. And it seems **Iran has agreed to** certain **measures to address** the so-called "possible **military dimensions**" of the nuclear

program — all the intelligence, such as the infamous “laptop of death,” that suggests Iran had a covert bomb program until 2003. Iran also agreed to limit enrichment to a single site at Natanz. Again, the details will matter here. The E3/EU+3 would be well advised to make sure the agreement includes a nice map of the Natanz facility — lest we find secret centrifuge halls in a Natanz “annex” down the road. The advantage of limiting work to a single site is that, should the U.S. intelligence community catch Iran building a centrifuge site elsewhere (again), **Tehran won't be able to make any tendentious legal excuses.** Finally, there are reasonable limits on Tehran's program to develop new generations of centrifuges. These measures can't guarantee that Iran doesn't have a parallel, secret program. That's still going to depend on the capabilities of the U.S. intelligence community. But they do force Iran to ensure that any parallel program is fully parallel, from uranium mines through centrifuge workshops to the proverbial underground mountain lair. That's an imposition, and if secrecy breaks down at any point along that chain, the whole endeavor is compromised. The fact sheet really does assert what looks to be an impressive monitoring regime. Last but not least, the agreement seems to deal adequately with Iran's enrichment plant at Fordow and its heavy-water reactor at Arak. Fordow — the covert enrichment site under a mountain and revealed in 2009 — will be converted into non-nuclear isotope separation. An earlier story indicated that a small number of centrifuges at Fordow would separate “stable” isotopes — “stable” here means non-radioactive. The nuclear fuel company Urenco has a side business that sells stable isotopes, so it's not a crazy idea. It's a little hard to tell from the fact sheet, but that seems to be what has happened. The IAEA will still have access to the site to make sure that it's only used for non-nuclear purposes. The heavy-water reactor at Arak, meanwhile, will apparently be redesigned so that it “will not produce weapons grade plutonium.” There are real benefits to redesigning the reactor to produce less plutonium, though the fact sheet isn't clear about the nature of the redesign. Iran also committed to ship the spent fuel from the reactor out of the country and to refrain “indefinitely” from reprocessing or reprocessing-related research. The terms “reprocessing” and “reprocessing research” are not defined, but if the goal is to make Arak no scarier than, say, the light-water reactor at Bushehr, they've succeeded. What Iran gets out of all this, of course, is sanctions relief. The fact sheet is vague about which U.S., EU, and U.N. sanctions will be removed by tying relief to certain “key” steps or the resolution of “key” concerns. The fact sheet also makes use of the term “snap back” to indicate that sanctions could be reimposed. Snap back? I'd like to know what sort of elastic we're dealing with here. This seems to still be an area of disagreement. Almost immediately, Zarif tweeted, “The solutions are good for all, as they stand. There is no need to spin using ‘fact sheets’ so early on.” Then Zarif followed with two more tweets indicating that sanctions relief would be immediate, even though the fact sheet says no such thing. This suggests to me that the two sides are still apart on the fundamental question of how quickly sanctions will get lifted. It seems there remains a devil — a Great Satan, even — in the details to be worked out. At the same time, **Zarif expressed his commitment to start drafting the agreement.** The **negotiators** clearly still have a lot of work ahead of them. But the purpose of a “framework” agreement is to establish that both the P5+1 and the Iranians are close enough to spend the next months hammering out the details. They **will spend the next few months trying to fashion the framework into a proper international agreement** that can be printed on nice paper and signed by the negotiators. I suspect the conditions for sanctions relief will prove to be

the most difficult aspect of these talks. Time will tell if they can succeed, but **the initial descriptions are** far more **promising** than I expected.

No spillover prolif

Edward-Isaac Doveve, Politico, 3/31/15, The price of Barack Obama's Iran muddle, www.politico.com/story/2015/03/barack-obamas-iran-muddle-116561.html

President Barack Obama needs a win in the Middle East. Instead, he's getting a muddle. International negotiators in Switzerland ran up against their deadline for the Iran nuclear talks — and then kept on running, insisting that there's enough reason to believe that maybe they'll get far enough on Wednesday, or maybe a couple of days after that. How many, they won't say. What happens if that's not enough, no one seems to fully know. Obama's been talking about getting an Iran deal since he first ran for president in 2008 and taking heat for it from the beginning. In year seven of his presidency, it has emerged as a key lingering piece of the transformational foreign policy he wants as his legacy and become central to dealings across a region where every week brings a new crumbling country, each with a new kaleidoscope of shifting alliances to deal with. Obama's decision to back down from the threat of strikes on Syria in 2013 is still seen as revealing Obama's unwillingness to fight by many of the same regional leaders who fear he's willing to give away too much to get an agreement now. **An Iran deal**, in the White House's view, simultaneously has no direct connection to the rest of the trouble in the Middle East and **is inextricably tied to everything the administration is facing. That includes a fractured relationship with the Israeli prime minister** who, along with the Saudis, is strongly opposed to the Iran talks; the United States and **Saudi Arabia backing the rebels in Syria while Iran backs Bashar Assad**; the Houthis in **Yemen against Al Qaeda** while the Saudis attack; all while Americans and Iranians align to fight off Islamic State in Iraq. **"If a deal happens**, even in overtime, **that is a meaningful contribution to Middle East security. Period.** There is uncertainty about Iran's long-term trajectory and its interests in places like Yemen, Syria and Iraq. The region as a whole is concerned about Iran, and rightfully so. But like it or not, Iran gets a vote in what happens," said former State Department spokesman P.J. Crowley. **"The negotiations have established a credible channel** for the U.S. and Iran **to manage** areas of **overlapping** interests and areas of **conflicting** interests."

Iran says yes and it solves prolif- most qualified experts agree- Iranian hardliners are in check

Robins-Early 4/2 (Nick Robins-Early, Interviewing Ariane Tabatabai, an assistant professor at Georgetown University and frequent writer on Iran's nuclear program, "Is The Iran Nuclear Framework Agreement A Good Deal?", http://www.huffingtonpost.com/2015/04/02/iran-nuclear-deal_n_6996244.html, April 2, 2015)

After months of exhausting negotiations, the five permanent members of the United Nations Security Council plus Germany agreed on Thursday to a framework deal with Iran that would limit its nuclear program in exchange for sanctions relief. The controversial deal had been the subject of international debate. Proponents of the negotiations declared the talks a rare opportunity to bolster nuclear non-proliferation and take Western powers off a course that would end in conflict with Iran. Critics of the deal, which include Israel's Prime Minister Benjamin Netanyahu and United States Republicans, were vocal that a bad deal would merely appease Iran while doing nothing to stop it from an end goal of nuclear armament. The WorldPost spoke with nuclear proliferation expert Ariane Tabatabai, an assistant professor of security studies at Georgetown University and a columnist for the Bulletin of Atomic Nuclear Sciences, for her take on the agreement. What is your general assessment of the framework deal? I think it's a really good deal for both sides. Both sides get what they've been pursuing this entire time, which for the P5 +1 means it will scale back Iran's enrichment program considerably — essentially by two-thirds. It also gives assurance Iran is not going to be building any new facilities for enrichment, and it's going to mean that the Arak heavy water reactor is going to be rebuilt to produce less plutonium. I think it's a really good deal for both sides. Iran is not going to build any more heavy water reactors for the next 15 years. It's not going to be doing any reprocessing, which means that plutonium wouldn't be usable for a nuclear weapon. One of the sites that the arms control community has been worried about is going to be converted and used for research purposes; no enrichment will be done there. That's at Fordo? That's Fordo, yes. Then in terms of monitoring, which is a very big part of this, there's going to be a lot more monitoring by the International Atomic Energy Agency (IAEA). All of this should give a breakout time of about one year, which would allow the international community to detect Iran trying to get a bomb. In exchange, Iran gets proliferation-related sanction relief, which it has been wanting, and it will get some assistance from the international community for research and development. Both sides are gaining a lot of what they've been wanting to gain, and both sides have made concessions. In my mind it's a very good deal for both sides. What potential spoilers are there that could derail a final deal being signed? The biggest spoiler here in Washington is Congress. I'm expecting any second now they will come out and say this is a terrible agreement and the world has given Iran a nuclear weapon. Certainly people in the region -- the Saudis, the Israelis -- will support those claims. The biggest spoiler here in Washington is Congress. My biggest concern in the next three months as the negotiating parties move forward is going to be how to make sure that critics don't interfere with the process, and don't derail it altogether. How might Iranian hardliners respond to the agreement? Iranian hardliners have been fairly quiet in the past few months. The reason behind this is that the Supreme Leader has been coming out periodically with resonating endorsements of the negotiations and the negotiating team, and has framed the entire effort in terms of national security. So the hardliners have lost a bit of ground, but that's possible in the context of Iranian politics where the Supreme Leader can come out and back a process. I think the hardliners might come out with some criticism in the next few months, but I don't think anything substantial enough to derail the process from the Iranian side. Is the IAEA a strong enough institution to successfully act as a monitor of this deal? Yes, but the problem is going to be financing. This is a really resource-intensive project. This is two decades of monitoring a number of facilities, and it's going to need a number of people and equipment. It's going to be a resource-intensive process, but that's something that

world powers are signing up for, as they'll need to. In terms of the capacity, though, I have no doubts the IAEA will be able to uphold its part in the process.

Diplomacy is comparatively more likely to avoid war even if imperfect

Johns, 1/22/15 - Johns serves on the Council for a Livable World Advisory Board and is a former deputy assistant defense secretary (John, "Avoid new sanctions now and keep Iran's nuclear program in check" The Hill, <http://thehill.com/blogs/congress-blog/homeland-security/230271-avoid-new-sanctions-now-and-keep-irans-nuclear-program>)

While the politics, slogans and sound bites usually rule the day in Washington, the president reminded Congress that he doesn't have to run for office again. Instead, his diplomatic efforts with six world powers and Iran are in pursuit of a historic opportunity to increase our national and global security without yet another war. In spite of steady diplomatic progress to deny Iran a nuclear weapon, some hardliners in Congress are seeking to scuttle any deal. Indeed, Republicans—and a few Democrats—have said they wish to pass a new sanctions bill in the coming weeks while the talks are ongoing – a risky move that experts say will most likely derail this delicate diplomatic process.

From the facts on the ground perspective, considerable progress has been made over the past year in rolling back Iran's nuclear program. To begin with, the interim agreement froze the program in place. Since then, Iran's nuclear stockpile has been sharply reduced. Iran has agreed to an internationally monitored cap on the enrichment of uranium. Nuclear sites that were previously off-limits are now subject to international inspections and the frequency of inspections have been increased overall.

The diplomatic record has similarly demonstrated results. In addition to the historic interim agreement, in September 2013, presidents Obama and Rouhani had the first direct conversation between US and Iranian heads of state in 35 years. And for almost an entire year, the US and its allies have remained united with Russia and China in pursuing a diplomatic outcome while enforcing strict economic sanctions on Iran – despite the fact that these countries often have differing perspectives and international agendas.

The bottom line is that Iran is significantly further away from a nuclear weapon today than it was one year ago. What's more, these results reflect a surprising turnaround from the preceding decade in which Iran's capabilities grew steadily while the major powers were divided on how to respond.

Granted, the election of Rouhani has made an enormous difference. His predecessor Mahmoud Ahmadinejad staked his political career on confrontation with the West, but Ahmadinejad's policies brought nothing but ruin to the Iranian economy. In response, Rouhani ran on a platform committed to improving relations with the West and won in a landslide.

Though these are all very positive developments, we still have a long way to go. Decades of hostility and mistrust won't change overnight. We'd be fools not to proceed with great caution and make sure that every aspect of any agreement is fully verifiable.

However, those who want to torpedo the critical progress that has been made are using tough talk that simply doesn't line up with the facts.

To begin with, there are those who are demanding another round of sanctions despite the fact that neither our allies, nor our own negotiating team, nor the Russians or Chinese, support such a move.

Indeed, another round of sanctions would most likely split the international coalition that has been critical to success and principally benefit the Iranian hardliners who are most vocally opposed to Rouhani's overtures to the West. Even more fancifully, some have argued that the US should be prepared to "force" China and Russia to support further sanctions. This may sound tough, but it is utterly implausible.

Even more unrealistic are those agitating for military strikes. Serious national security professionals understand that only a negotiated outcome is realistic. Michael Hayden, the former CIA director and NSA chief, noted that in the Bush administration, "The consensus was that [attacking Iran] would guarantee that which we are trying to prevent — an Iran that will spare nothing to build a nuclear weapon."

As the president said last night, "There are no guarantees that negotiations will succeed, and I keep all options on the table to prevent a nuclear Iran. But new sanctions passed by this Congress, at this moment in time, will all but guarantee that diplomacy fails—alienating America from its allies; and ensuring that Iran starts up its nuclear program again."

We must prevent Iran from obtaining nuclear weapons. The best chance at doing so is to support the president's challenging, but necessary, diplomatic talks that continue to make steady progress and yield verifiable results.

Having started negotiations, the United States should finish them. Reaching a deal will not only restrain the Iranian nuclear program, but could help restrain others in the future. As frustrating as it is, Congress is going to have to summon the patience to let diplomacy work. Applying additional sanctions may feel cathartic for congressmen like Sen. Rubio, but only a deal can end the Iranian nuclear program.

Negotiated solution key to solve Iran proliferation

Joel Rubin 10-24 Iran's diplomatic thaw with the West

http://thejewishchronicle.net/view/full_story/23914219/article-Iran-s-diplomatic-thaw-with-the-West--?instance=secondary_stories_right_column

Now that Iran has made a clear decision to engage seriously in diplomatic negotiations with the West over its nuclear program, its intentions should be tested. Members of Congress should be open to seizing this opportunity by making strategic decisions on sanctions policy. The economic sanctions against Iran that are in place have damaged the Iranian economy. A credible military threat — with more than 40,000 American troops in the Persian Gulf — stands on alert. International inspectors are closely monitoring Iran's every nuclear move. Iran has not yet made a decision to build a bomb, does not have enough medium-enriched uranium to convert to weapons grade material for one bomb and has neither a workable nuclear warhead nor a means to deliver it at long ranges. If Iran were to make a dash for a bomb, the U.S. intelligence

community estimates that it would take roughly one to two years to do so. Congress, with its power to authorize sanctions relief, plays a crucial role in deciding whether a deal will be achieved. This gives Congress the opportunity to be a partner in what could potentially be a stunning success in advancing our country's security interests without firing a shot. Consider the alternative: If the administration negotiates a deal that Congress blocks, then Congress becomes a spoiler and Iran will most likely continue to accelerate its nuclear program. Then lawmakers would be left with a stark choice: either acquiesce to an unconstrained Iranian nuclear program and a potential Iranian bomb or endorse the use of force to attempt to stop it. Most military experts rate the odds of a successful bombing campaign low and worry that failed strikes would push Iran to get the bomb outright. Iran and the United States need a political solution to this conflict. Now is the time to test the Iranians at the negotiating table, not push them away.

Deal stops prolif and iran strike

Stephens, 11/14/13 – columnist for the Financial Times (Phillip, Financial Times, “The four big truths that are shaping the Iran talks” <http://www.ft.com/intl/cms/s/0/af170df6-4d1c-11e3-bf32-00144feabdc0.html#axzz2kkvx15JT>)

The first of these is that Tehran's acquisition of a bomb would be more than dangerous for the Middle East and for wider international security. It would most likely set off a nuclear arms race that would see Saudi Arabia, Turkey and Egypt signing up to the nuclear club. The nuclear non-proliferation treaty would be shattered. A future regional conflict could draw Israel into launching a pre-emptive nuclear strike. This is not a region obviously susceptible to cold war disciplines of deterrence.

The second ineluctable reality is that Iran has mastered the nuclear cycle. How far it is from building a bomb remains a subject of debate. Different intelligence agencies give different answers. These depend in part on what the spooks actually know and in part on what their political masters want others to hear. The progress of an Iranian warhead programme is one of the known unknowns that have often wreaked havoc in this part of the world.

Israel points to an imminent threat. European agencies are more relaxed, suggesting Tehran is still two years or so away from a weapon. Western diplomats broadly agree that Ayatollah Ali Khamenei has not taken a definitive decision to step over the line. What Iran has been seeking is what diplomats call a breakout capability – the capacity to dash to a bomb before the international community could effectively mobilise against it.

The third fact – and this one is hard for many to swallow – is that neither a negotiated settlement nor the air strikes long favoured by Benjamin Netanyahu, Israel's prime minister, can offer the rest of the world a watertight insurance policy.

It should be possible to construct a deal that acts as a plausible restraint – and extends the timeframe for any breakout – but no amount of restrictions or intrusive monitoring can offer a certain guarantee against Tehran's future intentions.

By the same token, bombing Iran's nuclear sites could certainly delay the programme, perhaps for a couple of years. But, assuming that even the hawkish Mr Netanyahu is not proposing permanent war against Iran, air strikes would not end it.

You cannot bomb knowledge and technical expertise. To try would be to empower those in Tehran who say the regime will be safe only when, like North Korea, it has a weapon. So when Barack Obama says the US will never allow Iran to get the bomb he is indulging in, albeit understandable, wishful thinking.

The best the international community can hope for is that, in return for a relaxation of sanctions, Iran will make a judgment that it is better off sticking with a threshold capability. To put this another way, if Tehran does step back from the nuclear brink it will be because of its own calculation of the balance of advantage.

The fourth element in this dynamic is that Iran now has a leadership that, faced with the severe and growing pain inflicted by sanctions, is prepared to talk. There is nothing to say that Hassan Rouhani, the president, is any less hard-headed than previous Iranian leaders, but he does seem ready to weigh the options.

Seen from this vantage point – and in spite of the inconclusive outcome – Geneva can be counted a modest success. Iran and the US broke the habit of more than 30 years and sat down to talk to each other. Know your enemy is a first rule of diplomacy – and of intelligence. John Kerry has his detractors but, unlike his predecessor Hillary Clinton, the US secretary of state understands that serious diplomacy demands a willingness to take risks.

The Geneva talks illuminated the shape of an interim agreement. Iran will not surrender the right it asserts to uranium enrichment, but will lower the level of enrichment from 20 per cent to 3 or 4 per cent. It will suspend work on its heavy water reactor in Arak – a potential source of plutonium – negotiate about the disposal of some of its existing stocks of enriched uranium, and accept intrusive international inspections. A debate between the six powers about the strength and credibility of such pledges is inevitable, as is an argument with Tehran about the speed and scope of a run down of sanctions.

2NC / 1NR Impact Overview

Iran prolif = Extinction

Toon, chair – Department of Atmospheric and Oceanic Sciences – Colorado University, 4/19/7

(Owen B, climate.envsci.rutgers.edu/pdf/acp-7-1973-2007.pdf)

To an increasing extent, people are congregating in the world's great urban centers, creating megacities with populations exceeding 10 million individuals. At the same time, advanced technology has designed nuclear explosives of such small size they can be easily transported in a car, small plane or boat to the heart of a city. We demonstrate here that a single detonation in the 15 kiloton range can produce urban fatalities approaching one million in some cases, and casualties exceeding one million. Thousands of small weapons still exist in the arsenals of the U.S. and Russia, and there are at least six other countries with substantial nuclear weapons inventories. In all, thirty-three countries control sufficient amounts of highly enriched uranium or plutonium to assemble nuclear explosives. A conflict between any of these countries involving 50-100 weapons with yields of 15 kt has the potential to create fatalities rivaling those of the Second World War. Moreover, even a single surface nuclear explosion, or an air burst in rainy conditions, in a city center is likely to cause the entire metropolitan area to be abandoned at least for decades owing to infrastructure damage and radioactive contamination. As the aftermath of hurricane Katrina in Louisiana suggests, the economic consequences of even a localized nuclear catastrophe would most likely have severe national and international economic consequences. Striking effects result even from relatively small nuclear attacks because low yield detonations are most effective against city centers where business and social activity as well as population are concentrated. Rogue nations and terrorists would be most likely to strike there. Accordingly, an organized attack on the U.S. by a small nuclear state, or terrorists supported by such a state, could generate casualties comparable to those once predicted for a full-scale nuclear "counterforce" exchange in a superpower conflict. Remarkably, the estimated quantities of smoke generated by attacks totaling about one megaton of nuclear explosives could lead to significant global climate perturbations (Robock et al., 2007). While we did not extend our casualty and damage predictions to include potential medical, social or economic impacts following the initial explosions, such analyses have been performed in the past for large-scale nuclear war scenarios (Harwell and Hutchinson, 1985). Such a study should be carried out as well for the present scenarios and physical outcomes.

Most probable

James A. Russell, Senior Lecturer, National Security Affairs, Naval Postgraduate School, '9 (Spring) "Strategic Stability Reconsidered: Prospects for Escalation and Nuclear War in the Middle East" IFRI, Proliferation Papers, #26, http://www.ifri.org/downloads/PP26_Russell_2009.pdf

Strategic stability in the region is thus undermined by various factors: (1) asymmetric interests in the bargaining framework that can introduce unpredictable behavior from actors; (2) the presence of non-state actors that introduce unpredictability into relationships between the antagonists; (3) incompatible assumptions about the structure of the deterrent relationship that makes the bargaining framework strategically unstable; (4) perceptions by Israel and the United States that its window of opportunity for military action is closing, which could prompt a preventive attack; (5) the prospect that Iran's response to pre-emptive attacks could involve unconventional weapons, which could prompt escalation by Israel and/or the United States; (6) the lack of a communications framework to build trust and cooperation among framework participants. These systemic weaknesses in the coercive bargaining framework all suggest that escalation by any the parties could happen either on purpose or as a result of miscalculation or the pressures of wartime circumstance. Given these factors, it is disturbingly easy to imagine scenarios under which a conflict could quickly escalate in which the regional antagonists would consider the use of chemical, biological, or nuclear weapons. It would be a mistake to believe the nuclear taboo can somehow magically keep nuclear weapons from being used in the context of an unstable strategic framework. Systemic asymmetries between actors in fact suggest a certain increase in the probability of war – a war in which escalation could happen quickly and from a variety of participants. Once such a war starts, events would likely develop a momentum all their own and decision-making would consequently be shaped in unpredictable ways. The international community must take this possibility seriously, and muster every tool at its disposal to prevent such an outcome, which would be an unprecedented disaster for the peoples of the region, with substantial risk for the entire world.

Escalates - global nuclear war – proximity of players and regional conditions make it the worst war

Edelman, distinguished fellow – Center for Strategic and Budgetary Assessments, '11

(Eric S, "The Dangers of a Nuclear Iran," Foreign Affairs, January/February)

The reports of the Congressional Commission on the Strategic Posture of the United States and the Commission on the Prevention Of Weapons of Mass Destruction Proliferation and Terrorism, as well as other analyses, have highlighted the risk that a nuclear-armed Iran could trigger additional nuclear proliferation in the Middle East, even if Israel does not declare its own nuclear arsenal. Notably, Algeria, Bahrain, Egypt, Jordan, Saudi Arabia, Turkey, and the United Arab Emirates— all signatories to the Nuclear Nonproliferation Treaty (npt)—have recently announced or initiated nuclear energy programs. Although some of these states have legitimate economic rationales for pursuing nuclear power and although the low-enriched fuel used for power reactors cannot be used in nuclear weapons, these moves have been widely interpreted as hedges against a nuclear-armed Iran. The npt does not bar states from developing the sensitive technology required to produce nuclear fuel on their own, that is, the capability to enrich natural uranium and separate plutonium from spent nuclear fuel. Yet enrichment and reprocessing can also be used to accumulate weapons-grade enriched uranium and plutonium—

the very loophole that Iran has apparently exploited in pursuing a nuclear weapons capability. Developing nuclear weapons remains a slow, expensive, and difficult process, even for states with considerable economic resources, and especially if other nations try to constrain aspiring nuclear states' access to critical materials and technology. Without external support, it is unlikely that any of these aspirants could develop a nuclear weapons capability within a decade.¶ There is, however, at least one state that could receive significant outside support: Saudi Arabia. And if it did, proliferation could accelerate throughout the region. Iran and Saudi Arabia have long been geopolitical and ideological rivals. Riyadh would face tremendous pressure to respond in some form to a nuclear-armed Iran, not only to deter Iranian coercion and subversion but also to preserve its sense that Saudi Arabia is the leading nation in the Muslim world. The Saudi government is already pursuing a nuclear power capability, which could be the first step along a slow road to nuclear weapons development. And concerns persist that it might be able to accelerate its progress by exploiting its close ties to Pakistan. During the 1980s, in response to the use of missiles during the Iran-Iraq War and their growing proliferation throughout the region, Saudi Arabia acquired several dozen CSS-2 intermediate-range ballistic missiles from China. The Pakistani government reportedly brokered the deal, and it may have also offered to sell Saudi Arabia nuclear warheads for the CSS-2s, which are not accurate enough to deliver conventional warheads effectively. There are still rumors that Riyadh and Islamabad have had discussions involving nuclear weapons, nuclear technology, or security guarantees. This "Islamabad option" could develop in one of several different ways. Pakistan could sell operational nuclear weapons and delivery systems to Saudi Arabia, or it could provide the Saudis with the infrastructure, material, and technical support they need to produce nuclear weapons themselves within a matter of years, as opposed to a decade or longer. Not only has Pakistan provided such support in the past, but it is currently building two more heavy-water reactors for plutonium production and a second chemical reprocessing facility to extract plutonium from spent nuclear fuel. In other words, it might accumulate more fissile material than it needs to maintain even a substantially expanded arsenal of its own. Alternatively, Pakistan might offer an extended deterrent guarantee to Saudi Arabia and deploy nuclear weapons, delivery systems, and troops on Saudi territory, a practice that the United States has employed for decades with its allies. This arrangement could be particularly appealing to both Saudi Arabia and Pakistan. It would allow the Saudis to argue that they are not violating the NPT since they would not be acquiring their own nuclear weapons. And an extended deterrent from Pakistan might be preferable to one from the United States because stationing foreign Muslim forces on Saudi territory would not trigger the kind of popular opposition that would accompany the deployment of U.S. troops. Pakistan, for its part, would gain financial benefits and international clout by deploying nuclear weapons in Saudi Arabia, as well as strategic depth against its chief rival, India. The Islamabad option raises a host of difficult issues, perhaps the most worrisome being how India would respond. Would it target Pakistan's weapons in Saudi Arabia with its own conventional or nuclear weapons? How would this expanded nuclear competition influence stability during a crisis in either the Middle East or South Asia? Regardless of India's reaction, any decision by the Saudi government to seek out nuclear weapons, by whatever means, would be highly destabilizing. It would increase the incentives of other nations in the Middle East to pursue nuclear weapons of their own. And it could increase their ability to do so by eroding the remaining barriers to nuclear proliferation: each additional state that

acquires nuclear weapons weakens the nonproliferation regime, even if its particular method of acquisition only circumvents, rather than violates, the NPT.¶ n-player competition¶ Were Saudi Arabia to acquire nuclear weapons, the Middle East would count three nuclear-armed states, and perhaps more before long. It is unclear how such an n-player competition would unfold because most analyses of nuclear deterrence are based on the U.S.- Soviet rivalry during the Cold War. It seems likely, however, that the interaction among three or more nuclear-armed powers would be more prone to miscalculation and escalation than a bipolar competition. During the Cold War, the United States and the Soviet Union only needed to concern themselves with an attack from the other. Multipolar systems are generally considered to be less stable than bipolar systems because coalitions can shift quickly, upsetting the balance of power and creating incentives for an attack. More important, emerging nuclear powers in the Middle East might not take the costly steps necessary to preserve regional stability and avoid a nuclear exchange. For nuclear-armed states, the bedrock of deterrence is the knowledge that each side has a secure second-strike capability, so that no state can launch an attack with the expectation that it can wipe out its opponents' forces and avoid a devastating retaliation. However, emerging nuclear powers might not invest in expensive but survivable capabilities such as hardened missile silos or submarine-based nuclear forces. Given this likely vulnerability, the close proximity of states in the Middle East, and the very short flight times of ballistic missiles in the region, any new nuclear powers might be compelled to "launch on warning" of an attack or even, during a crisis, to use their nuclear forces preemptively. Their governments might also delegate launch authority to lower-level commanders, heightening the possibility of miscalculation and escalation. Moreover, if early warning systems were not integrated into robust command-and-control systems, the risk of an unauthorized or accidental launch would increase further still. And without sophisticated early warning systems, a nuclear attack might be unattributable or attributed incorrectly. That is, assuming that the leadership of a targeted state survived a first strike, it might not be able to accurately determine which nation was responsible. And this uncertainty, when combined with the pressure to respond quickly, would create a significant risk that it would retaliate against the wrong party, potentially triggering a regional nuclear war.

Impact Ext - Iran proliferation = nuclear war

War with Iran risks nuclear world war III.

Reuveny 10 - Professor of political economy @ Indiana University [Dr. Rafael Reuveny (PhD in Economics and Political Science from the University of Indiana), "Guest Opinion: Unilateral strike on Iran could trigger world depression," McClatchy Newspaper, Aug 9, 2010, pg. http://www.indiana.edu/~spea/news/speaking_out/reuveny_on_unilateral_strike_Iran.shtml

BLOOMINGTON, Ind. -- A unilateral Israeli **strike on Iran's** nuclear facilities **would** likely have dire consequences, **including a regional war, global economic collapse and a major power clash.**

For an Israeli campaign to succeed, it must be quick and decisive. This requires an attack that would be so overwhelming that Iran would not dare to respond in full force.

Such an outcome is extremely unlikely since the locations of some of Iran's nuclear facilities are not fully known and known facilities are buried deep underground.

All of these widely spread facilities are shielded by elaborate air defense systems constructed not only by the Iranians, but also the Chinese and, likely, the Russians as well. By now, Iran has also built redundant command and control systems and nuclear facilities, developed early-warning systems, acquired ballistic and cruise missiles and upgraded and enlarged its armed forces.

Because Iran is well-prepared, a single, conventional Israeli strike — or even numerous strikes — could not destroy all of its capabilities, giving Iran time to respond.

A regional war

Unlike Iraq, whose nuclear program Israel destroyed in 1981, **Iran has a second-strike capability comprised of** a coalition of Iranian, **Syrian, Lebanese, Hezbollah, Hamas, and**, perhaps, **Turkish forces.** Internal pressure might compel Jordan, Egypt, and the Palestinian Authority to join the assault, turning a bad situation into a regional war.

During the 1973 Arab-Israeli War, at the apex of its power, Israel was saved from defeat by President Nixon's shipment of weapons and planes. Today, Israel's numerical inferiority is greater, and it faces more determined and better-equipped opponents.

Despite Israel's touted defense systems, Iranian **coalition** missiles, armed forces, and terrorist **attacks would** likely wreak havoc on its enemy, **leading to a prolonged tit-for-tat.**

In the absence of massive U.S. assistance, Israel's military resources may quickly dwindle, forcing it to use its alleged nuclear weapons, as it had reportedly almost done in 1973.

An Israeli nuclear attack would likely destroy most of Iran's capabilities, but a crippled Iran and its **coalition could still attack** neighboring **oil facilities, unleash global terrorism,** plant mines in the Persian Gulf **and impair** maritime **trade** in the Mediterranean, Red Sea and Indian Ocean. Middle Eastern **oil shipments would** likely **slow to a trickle** as production declines due to the war and insurance companies decide to drop their risky Middle Eastern clients. **Iran** and Venezuela **would** likely **stop selling oil to the United States and Europe.**

The **world economy would** head into a **tailspin**; international acrimony would rise; and Iraqi and Afghani citizens might fully turn on the United States, immediately requiring the deployment of more American troops. **Russia, China, Venezuela,** and maybe **Brazil and Turkey** — all of which essentially support Iran — could be tempted to **form an alliance and** openly **challenge the U.S.**

hegemony.

Replaying Nixon's nightmare

Russia and China might rearm their injured Iranian protege overnight, just as Nixon rearmed Israel, and threaten to intervene, just as the U.S.S.R. threatened to join Egypt and Syria in 1973. President Obama's response would likely put U.S. forces on nuclear alert, replaying Nixon's nightmarish scenario.

Iran proliferation = cascading regional proliferation, terrorism, economic collapse and war. Greatest threat of extinction.

MICHAEL RAMIREZ Posted 11/15/2013 06:43 PM ET <http://news.investors.com/ibd-editorials-perspective/111513-679468-if-iran-gets-bomb-others-will-want-it-too.htm>

The danger that Iran poses is not just from developing a nuclear bomb. Let's set aside for a moment the belligerent behavior of Iran and their export of terrorism, extremism and destabilization. Let's forget about their three-stage rocket development and their funding and support of terrorists around the world. Let's put aside the proxy wars they've waged on the U.S. and the West that have already killed Americans and countless others. Let's even put aside their willingness to use a nuclear weapon and the direct threat it poses to the survival of our ally, Israel. If Iran has a nuclear bomb, Saudi Arabia will have a nuclear bomb. If the Saudis have a nuclear bomb, Egypt will have a nuclear bomb. Syria may be next, then Iraq. And so on. The real danger lies in an accelerated nuclear arms race in a region awash in oil money, where extremism is valued but life is not, where all things are bought and sold, where surrogates, terrorists, extremists and their apostles of death exist without the constraints of geographical borders or national affiliation and can be paid or brainwashed to do anything without a direct link to the real planners of mischief. The nuclear arms race and the proliferation of nuclear material that will result represent the largest threat to the world today. The next time you have a terrorist attack, it will not be thousands of dead and wounded, it will be millions. And its tentacles reach much further than the area directly attacked. Consider this: some estimates put the cost of 9/11 at over \$3 trillion. If there is a nuclear attack, that area — those houses, the buildings, the businesses — will be uninhabitable for 50 years. There will be a military response. And the economic consequences alone will be catastrophic. Just think: It's taken over 12 years just to rebuild the World Trade Center.

Accesses every impact

Avery, 13 --- Associate Professor, University of Copenhagen (11/6/2013, John Scales Avery, "An Attack On Iran Could Escalate Into Global Nuclear War," <http://www.countercurrents.org/avery061113.htm>)

Despite the willingness of Iran's new President, Hassan Rouhani to make all reasonable concessions to US demands, Israeli pressure groups in Washington continue to demand an attack on Iran. But such an attack might escalate into a global nuclear war, with catastrophic consequences. As we approach the 100th anniversary World War I, we should remember that this colossal disaster escalated uncontrollably from what was intended to be a minor conflict.

There is a danger that an attack on Iran would escalate into a large-scale war in the Middle East, entirely destabilizing a region that is already deep in problems. The unstable government of Pakistan might be overthrown, and the revolutionary Pakistani government might enter the war on the side of Iran, thus introducing nuclear weapons into the conflict. Russia and China, firm allies of Iran, might also be drawn into a general war in the Middle East. Since much of the world's oil comes from the region, such a war would certainly cause the price of oil to reach unheard-of heights, with catastrophic effects on the global economy. In the dangerous situation that could potentially result from an attack on Iran, there is a risk that nuclear weapons would be used, either intentionally, or by accident or miscalculation. Recent research has shown that besides making large areas of the world uninhabitable through long-lasting radioactive contamination, a nuclear war would damage global agriculture to such a extent that a global famine of previously unknown proportions would result. Thus, nuclear war is the ultimate ecological catastrophe. It could destroy human civilization and much of the biosphere. To risk such a war would be an unforgivable offense against the lives and future of all the peoples of the world, US citizens included.

Nuke war

Stevens 13 (Philip Stevens, associate editor and chief political commentator for the Financial Times, Nov 14 2013, "The four big truths that are shaping the Iran talks," <http://www.ft.com/cms/s/0/af170df6-4d1c-11e3-bf32-00144feabdc0.html>)

The who-said-what game about last weekend's talks in Geneva has become a distraction. The six-power negotiations with Tehran to curb Iran's nuclear programme may yet succeed or fail. But wrangling between the US and France on the terms of an acceptable deal should not allow the trees to obscure the forest. The organising facts shaping the negotiations have not changed.¶ The first of these is that Tehran's acquisition of a bomb would be more than dangerous for the Middle East and for wider international security. It would most likely set off a nuclear arms race that would see Saudi Arabia, Turkey and Egypt signing up to the nuclear club. The nuclear non-proliferation treaty would be shattered. A future regional conflict could draw Israel into launching a pre-emptive nuclear strike. This is not a region obviously susceptible to cold war disciplines of deterrence.¶ The second ineluctable reality is that Iran has mastered the nuclear cycle. How far it is from building a bomb remains a subject of debate. Different intelligence agencies give different answers. These depend in part on what the spooks actually know and in part on what their political masters want others to hear. The progress of an Iranian warhead programme is one of the known unknowns that have often wreaked havoc in this part of the world.¶ Israel points to an imminent threat. European agencies are more relaxed, suggesting Tehran is still two years or so away from a weapon. Western diplomats broadly agree that Ayatollah Ali Khamenei has not taken a definitive decision to step over the line. What Iran has been seeking is what diplomats call a breakout capability – the capacity to dash to a bomb before the international community could effectively mobilise against it.¶ The third fact – and this one is hard for many to swallow – is that neither a negotiated settlement nor the air strikes long favoured by Benjamin Netanyahu, Israel's prime minister, can offer the rest of the world a watertight insurance policy.¶ It should be possible to construct a deal that acts as a plausible restraint – and extends the timeframe for any breakout – but no amount of restrictions or intrusive monitoring can offer a certain guarantee against Tehran's future intentions.¶ By the

same token, bombing Iran's nuclear sites could certainly delay the programme, perhaps for a couple of years. But, assuming that even the hawkish Mr Netanyahu is not proposing permanent war against Iran, air strikes would not end it. ¶ You cannot bomb knowledge and technical expertise. To try would be to empower those in Tehran who say the regime will be safe only when, like North Korea, it has a weapon. So when Barack Obama says the US will never allow Iran to get the bomb he is indulging in, albeit understandable, wishful thinking. ¶ The best the international community can hope for is that, in return for a relaxation of sanctions, Iran will make a judgment that it is better off sticking with a threshold capability. To put this another way, if Tehran does step back from the nuclear brink it will be because of its own calculation of the balance of advantage. ¶ The fourth element in this dynamic is that Iran now has a leadership that, faced with the severe and growing pain inflicted by sanctions, is prepared to talk. There is nothing to say that Hassan Rouhani, the president, is any less hard-headed than previous Iranian leaders, but he does seem ready to weigh the options.

New rapid Middle East proliferation is the most likely scenario for escalation

Horowitz 2009, Michael, Department of Political Science at the University of Pennsylvania, "The Spread of Nuclear Weapons and International Conflict", Journal of Conflict Resolution, Vol. 53, No. 2, April

Learning as states gain ... preferences of the adopter.

Learning as states gain experience with nuclear weapons is complicated. While to some extent, nuclear acquisition might provide information about resolve or capabilities, it also generates uncertainty about the way an actual conflict would go—given the new risk of nuclear escalation—and uncertainty about relative capabilities. Rapid proliferation may especially heighten uncertainty given the potential for reasonable states to disagree at times about the quality of the capabilities each possesses.² What follows is an attempt to describe the implications of inexperience and incomplete information on the behavior of nuclear states and their potential opponents over time. Since it is impossible to detail all possible lines of argumentation and possible responses, the following discussion is necessarily incomplete. This is a first step. The acquisition of nuclear weapons increases the confidence of adopters in their ability to impose costs in the case of a conflict and the expectations of likely costs if war occurs by potential opponents. The key questions are whether nuclear states learn over time about how to leverage nuclear weapons and the implications of that learning, along with whether actions by nuclear states, over time, convey information that leads to changes in the expectations of their behavior—shifts in uncertainty—on the part of potential adversaries. Learning to Leverage? When a new state acquires nuclear weapons, how does it influence the way the state behaves and how might that change over time? Although nuclear acquisition might be orthogonal to a particular dispute, it might be related to a particular security challenge, might signal revisionist aims with regard to an enduring dispute, or might signal the desire to reinforce the status quo. This section focuses on how acquiring nuclear weapons influences both the new nuclear state and potential adversaries. In theory, systemwide perceptions of nuclear danger could allow new nuclear states to partially skip the early Cold War learning process concerning the risks of nuclear war and enter a proliferated world more cognizant of nuclear brinkmanship and bargaining than their predecessors. However, each new nuclear state has to

resolve its own particular civil–military issues surrounding operational control and plan its national strategy in light of its new capabilities. Empirical research by Sagan (1993), Feaver (1992), and Blair (1993) suggests that viewing the behavior of other states does not create the necessary tacit knowledge; there is no substitute for experience when it comes to handling a nuclear arsenal, even if experience itself cannot totally prevent accidents. Sagan contends that civil–military instability in many likely new proliferators and pressures generated by the requirements to handle the responsibility of dealing with nuclear weapons will skew decision-making toward more offensive strategies (Sagan 1995). The questions surrounding Pakistan’s nuclear command and control suggest there is no magic bullet when it comes to new nuclear powers’ making control and delegation decisions (Bowen and Wolvén 1999). Sagan and others focus on inexperience on the part of new nuclear states as a key behavioral driver. Inexperienced operators and the bureaucratic desire to “justify” the costs spent developing nuclear weapons, combined with organizational biases that may favor escalation to avoid decapitation—the “use it or lose it” mind-set—may cause new nuclear states to adopt riskier launch postures, such as launch on warning, or at least be perceived that way by other states (Blair 1993; Feaver 1992; Sagan 1995).³ Acquiring nuclear weapons could alter state preferences and make states more likely to escalate disputes once they start, given their new capabilities.⁴ But their general lack of experience at leveraging their nuclear arsenal and effectively communicating nuclear threats could mean new nuclear states will be more likely to select adversaries poorly and to find themselves in disputes with resolved adversaries that will reciprocate militarized challenges. The “nuclear experience” logic also suggests that more experienced nuclear states should gain knowledge over time from nuclearized interactions that helps leaders effectively identify the situations in which their nuclear arsenals are likely to make a difference. Experienced nuclear states learn to select into cases in which their comparative advantage, nuclear weapons, is more likely to be effective, increasing the probability that an adversary will not reciprocate. Coming from a slightly different perspective, uncertainty about the consequences of proliferation on the balance of power and the behavior of new nuclear states on the part of their potential adversaries could also shape behavior in similar ways (Schelling 1966; Blainey 1988). While a stable and credible nuclear arsenal communicates clear information about the likely costs of conflict, in the short term, nuclear proliferation is likely to increase uncertainty about the trajectory of a war, the balance of power, and the preferences of the adopter.

Iran war escalates

White, July/August 2011 (Jeffrey—defense fellow at the Washington Institute for Near East Policy, What Would War With Iran Look Like, National Interest, p. <http://www.the-american-interest.com/article-bd.cfm?piece=982>)

A U.S.-Iranian war would probably not be fought by the United States and Iran alone. Each would have partners or allies, both willing and not-so-willing. Pre-conflict commitments, longstanding relationships, the course of operations and other factors would place the United States and Iran at the center of more or less structured coalitions of the marginally willing. A Western coalition could consist of the United States and most of its traditional allies (but very

likely not Turkey, based on the evolution of Turkish politics) in addition to some Persian Gulf states, Jordan and perhaps Egypt, depending on where its revolution takes it. Much would depend on whether U.S. leaders could persuade others to go along, which would mean convincing them that U.S. forces could shield them from Iranian and Iranian-proxy retaliation, or at least substantially weaken its effects. Coalition warfare would present a number of challenges to the U.S. government. Overall, it would lend legitimacy to the action, but it would also constrict U.S. freedom of action, perhaps by limiting the scope and intensity of military operations. There would thus be tension between the desire for a small coalition of the capable for operational and security purposes and a broader coalition that would include marginally useful allies to maximize legitimacy. The U.S. administration would probably not welcome Israeli participation. But if Israel were directly attacked by Iran or its allies, Washington would find it difficult to keep Israel out—as it did during the 1991 Gulf War. That would complicate the U.S. ability to manage its coalition, although it would not necessarily break it apart. Iranian diplomacy and information operations would seek to exploit Israeli participation to the fullest. **Iran would have its own coalition. Hizballah** in particular **could** act at Iran's behest both by **attacking Israel** directly and by using its asymmetric and irregular warfare capabilities **to expand the conflict** and complicate the maintenance of the U.S. **coalition**. The escalation of the Hizballah-Israel conflict could draw in Syria and Hamas; **Hamas** in particular **could feel compelled to respond** to an Iranian request for assistance. Some or all of these satellite actors might choose to leave Iran to its fate, especially if initial U.S. strikes seemed devastating to the point of decisive. But **their involvement would spread the conflict to the entire eastern Mediterranean** and perhaps beyond, complicating both U.S. military operations and coalition diplomacy.

Continued Iran proliferates risks preemption and massive nuclear war

Brookes 9/24/04 (Peter, Senior Fellow for the Heritage Foundation, An Iran-Israeli War?)

To many nations, especially **Israel**, **it seems only a matter of time before Iran breaks out** as a nuclear power, ratcheting up tension across the Middle East. An **Israel-Iran showdown** over Tehran's outlaw nuclear-weapons program now **seems increasingly imminent**. Last week, for example, Israel charged that Iran was merely "buying time" and will never abandon plans to develop nuclear weapons. It called for the U.N. Security Council "to put an end to this nightmare." Addressing reporters at the U.N., Israeli Foreign Minister Silvan **Shalom kept all options on the table** by avoiding answering whether Israel would take military action against Iran if it continued to pursue nuclear weapons. Also last week, the administration informed Congress that it was selling Israel 5,000 precision-guided "smart bombs," including 500 satellite-guided, one-ton JDAM "bunker busters" of Baghdad fame. (JDAMs are capable of penetrating six feet of concrete.) In response to the arms sale, **Iran warned Israel against attacking its nuclear facilities**, saying **it would react "most severely"** to any Israeli military action against Iran. Then, over the weekend, Iran pointedly announced that its Shahab-3 ballistic missile was now operational. The missile can reach Israel, and Iran has 25 to 100 of them. Defense Minister Ali Shamkhani crowed that Iran was now

"ready to confront all regional [read: Israeli] and extra-regional [read: American] threats." OK, so you say, a little chest-beating isn't the same as the beating of war drums. True. But bear in mind, Israel takes the threat of nuclear weapons in its neighborhood quite seriously. Just ask Saddam Hussein. In 1981, Israeli fighters conducted a low-level, 700-mile, daylight raid through Saudi Arabian and Jordanian air space into Iraq. In a minute and a half, the fighters laid waste to the French-supplied Osiraq nuclear reactor - the centerpiece of Iraq's burgeoning nuclear-weapons program. So what would happen if Israel decided to conduct a pre-emptive surgical strike on Iran's nuclear facilities? Some say that an Israeli attack on a Muslim country would set the Middle East ablaze in an anti-Jewish frenzy. Possible, but not likely. Sure, all Muslim governments would vociferously condemn the Israeli strike. But most would breathe a quiet sigh of relief. No one in the Middle East (except maybe Syria) wants to see fundamentalist, hegemonic Iran go nuclear. This is especially true for Iran's cross-Gulf rival, Saudi Arabia. No Arab country would strike back at Israel, but Iran's Lebanese terrorist proxy, Hezbollah, would almost certainly target Israeli (and perhaps U.S.) interests in the region. Iran itself could decide to retaliate on Israeli cities with missile strikes. And while Israel has a limited missile defense system, missiles raining in on Tel Aviv, a city of 3 million, could be devastating. But Israel could threaten to respond to Iranian strikes on Israeli civilian targets with nuclear weapons.

Impact Ext – Israel Module

Nuclear Iran = Israel freak out - That escalates to full scale war

Adamsky 2011, Dima Adamsky is an Assistant Professor at the Lauder School of Government, Diplomacy, and Strategy at the Interdisciplinary Center Herzliya and the author of *The Culture of Military Innovation*. The scenarios discussed here are speculative and do not represent the views of any official in the Israeli government, Foreign affairs, march – april 2011, lexis

The insecurity generated by a nuclear Iran might dwarf previous peaks of existential fear in Israel. A nuclear Iran would likely undermine the foundations of Israeli self-confidence by crossing two "redlines" in the Israeli strategic psyche. First, the arsenal of a single country would pose an existential threat, conjuring memories of Nazi Germany. Focusing on Iran's ultimate destructive capability rather than its intentions, Israeli strategists might therefore view a nuclear Iran apocalyptically. Second, many Israelis might come to believe that the end of Israel's nuclear monopoly has terminated the country's ultimate insurance policy, fundamentally undermining Israel's general deterrence posture. These concerns, as Eric Edelman, Andrew Krepinevich, and Evan Montgomery assert, might lead Israeli strategists to reexamine nuclear policies and adjust their current deterrence models.

Extinction

Moore 2009, Carole, author, activist, leader of Libertarians for Peace, "Israeli Nuclear Threats and Blackmail", <http://www.carolmoore.net/nuclearwar/israelithreats.html>

The phrase the "Samson Option" is used to describe Israel's strategy of massive nuclear retaliation against "enemy" nations should its existence as a Jewish state be jeopardized through military attack. Israeli leaders created the term in the mid-1960s, inspired by the Biblical figure Samson, who destroyed a Philistine temple, killing himself and thousands of Philistine enemies.[1][2] Israel refuses to admit officially that it has nuclear weapons - a policy known as "nuclear ambiguity" or "nuclear opacity." [3] This despite government officials inferring repeatedly - and occasionally admitting - the fact. And despite Israeli nuclear whistle blower Mordechai Vanunu making public smuggled photographs of nuclear weapons and production equipment in the 1980s.[4] Israel now may have as many as 400 atomic and hydrogen nuclear weapons,[5][6] as well as the ability to launch them via long range missiles, submarines and aircraft.[7] It can use them in a second strike even if its military is devastated. Originally a strategy of last resort retaliation - even if it means Israel's annihilation - it has developed into being a nuclear bullying strategy to further Israel's territorial goals through threats and blackmail. Israel has bullied not only Arab and Muslim nations, but the United States and Russia with its Samson Option threats. Mordechai Vanunu has alleged that Israel uses for purposes of blackmail its ability to "bombard any city all over the world, and not only those in Europe but also those in the United States." [8] Official policy and threats During the 1960s Israel

concentrated on conventional military superiority to defend lands confiscated in the 1948 and 1967 wars - and to convince Palestinians in Israel and the occupied territories that they could not break free of it. However, in 1973's Yom Kippur War Israel was almost overwhelmed by Arab forces. Prime Minister Golda Meir authorized a nuclear alert, ordering 13 atomic bombs be prepared for missiles and aircraft. Israeli Ambassador to the U.S. Simha Dinitz threatened "very serious conclusions" if there was not an immediate airlift of supplies.[9] This forced U.S. President Richard Nixon to make emergency airlifts of state of the art military supplies to Israel.[10][11] Fearing intervention by the Soviet Union, U.S. forces went on Defense Condition (DEFCON) III alert status[12], something which could have led to full scale nuclear war in case of misinterpretation of signals or hardware or software failures. Additionally, as Seymour Hersh documents in detail in his book *The Samson Option*, from 1973 these weapons have been used to discourage the Soviet Union - now Russia - from intervening militarily on behalf of Arab nations.[13] Obviously an Israeli nuclear attack on Russia by the United States' great ally Israel would result in Russia sending thousands of nuclear weapons towards the U.S. and the U.S. responding in kind. Not surprisingly, no nation state has attempted to attack Israel since 1973. A former Israeli official justified Israel's threats. "You Americans screwed us" in not supporting Israel in its 1956 war with Egypt. "We can still remember the smell of Auschwitz and Treblinka. Next time we'll take all of you with us." [14] General Moshe Dayan, a leading promoter of Israel's nuclear program[15], has been quoted as saying "Israel must be like a mad dog, too dangerous to bother." [16] Amos Rubin, an economic adviser to former Prime Minister Yitzhak Shamir, said "If left to its own Israel will have no choice but to fall back on a riskier defense which will endanger itself and the world at large... To enable Israel to abstain from dependence on nuclear arms calls for \$2 to 3 billion per year in U.S. aid." [17] In 1977, after a right-wing coalition under Menachen Begin took power, the Israelis began to use the Samson Option not just to deter attack but to allow Israel to "redraw the political map of the Middle East" by expanding hundreds of thousands of Israeli settlers into the West Bank and Gaza.[18] Then-Minister of Defense Ariel Sharon said things like "We are much more important than (Americans) think. We can take the middle east with us whenever we go" [19] and "Arabs may have the oil, but we have the matches." [20] He proclaimed his - and many Likud Party members' - goals of transforming Jordan into a Palestinian state and "transferring" all Palestinian refugees there.[21][22] A practice known worldwide as "ethnic cleansing." To dissuade the Soviet Union from interfering with its plans, Prime Minister Begin immediately "gave orders to target more Soviet cities" for potential nuclear attack. Its American spy Jonathan Pollard was caught stealing such nuclear targeting information from the U.S. military in 1985.[23] During the next 25 years Israel became more militarily adventurous, bombing Iraq's under-construction Osirak nuclear reactor in 1981, invading Lebanon to destroy Palestinian refugee camps in 1982 and to fight Hezbollah in 2006, massively bombing civilian targets in the West Bank Jenin refugee camp in 2002 and throughout Gaza in 2008-2009. There are conflicting reports about whether Israel went on nuclear alert and armed missiles with nuclear weapons during the 1991 Gulf War after Iraq shot conventionally armed scud missiles into it.[24][25] In 2002, while the United States was building for the 2003 invasion of Iraq, then Prime Minister Ariel Sharon threatened that if Israel was attacked "Israel will react. Is it clear?" [26] Israeli defense analyst Zeev Schiff explained: "Israel could respond with a nuclear retaliation that would eradicate Iraq as a country." It is believed President Bush gave Sharon the green-light to attack Baghdad in retaliation, including with nuclear weapons,

but only if attacks came before the American military invasion.[27] Former Israeli Foreign Minister Shimon Peres has admitted that nuclear weapons are used by Israel for “compellent purposes” - i.e., forcing others to accept Israeli political demands.[28] In 1998 Peres was quoted as saying, “We have built a nuclear option, not in order to have a Hiroshima, but to have an Oslo,” referring to imposing a settlement on the Palestinians.[29] In her book *Israel’s Sacred Terrorism* Livia Rokach documented how Israelis have used religion to justify paramilitary and state terrorism to create and maintain a Jewish State.[30] Two other Israeli retaliation strategies are the popularized phrase “Wrath of God,” the alleged Israeli assassination of those it held responsible for the 1972 killings of Israeli athletes during the Munich Olympics[31], and the “Dahiya doctrine” of destruction of civilian areas to punish Palestinians for supporting their leaders.[32] Israeli Israel Shahak wrote in 1997: “Israel clearly prepares itself to seek overtly a hegemony over the entire Middle East...without hesitating to use for the purpose all means available, including nuclear ones.”[33] Zeev Schiff opined in 1998 that “Off-the-cuff Israeli nuclear threats have become a problem.”[34] In 2003 David Hirst noted that “The threatening of wild, irrational violence, in response to political pressure, has been an Israeli impulse from the very earliest days” and called Israel a candidate for “the role of 'nuclear-crazy' state.”[35] Noam Chomsky said of the Samson Option “the craziness of the state is not because the people are insane. Once you pick a policy of choosing expansion over security, that's what you end up getting stuck with.”[36] Efraim Karsh calls the Samson Option the “rationality of pretended irrationality,” but warns that seeming too irrational could encourage other nations to attack Israel in their own defense.[37] Samson Option Supporters Two Israel supporters are frequently quoted for their explicit support of the Samson Option. Martin Van Creveld, a professor of military history at the Hebrew University in Jerusalem, has been quoted as saying: “Most European capitals are targets for our air force....We have the capability to take the world down with us. And I can assure you that that will happen before Israel goes under.”[38] In 2002 the Los Angeles Times, published an opinion piece by Louisiana State University professor David Perlmutter in which he wrote: “What would serve the Jew-hating world better in repayment for thousands of years of massacres but a Nuclear Winter. Or invite all those tut-tutting European statesmen and peace activists to join us in the ovens? For the first time in history, a people facing extermination while the world either cackles or looks away--unlike the Armenians, Tibetans, World War II European Jews or Rwandans--have the power to destroy the world. The ultimate justice?”[39]

A2: Deal Causes Iran Strikes

It actually pushes them farther from their red line

Cirincione 11-25 [Joseph Cirincione is president of Ploughshares Fund, a global security foundation, and a member of Secretary of State John Kerry's International Security Advisory Board and the Council on Foreign Relations. He's also the author of "Bomb Scare: The History and Future of Nuclear Weapons." Interviewed by Ezra Klein 11-25-2013 "“If you don't like negotiating with Iran what you're really saying is you want to go to war”"
<http://www.washingtonpost.com/blogs/wonkblog/wp/2013/11/25/if-you-dont-like-negotiating-with-iran-what-youre-really-saying-is-you-want-to-go-to-war/>]

This addresses the major threat that Prime Minister Netanyahu warned the world about in September 2012. He went to the dais of the U.N. General Assembly and he held up a cartoon drawing of a bomb and drew a red line across the top. He warned the world that Iran would soon have enough uranium enriched to 20 percent and that they could quickly, in weeks or months, make a bomb.¶ His concerns were well-founded. Iran now has about 190 kilograms of this enriched uranium. If they got to 240 kilograms, they'd be very close to a bomb. This deal drains the uranium from Mr. Netanyahu's bomb. It drains the amount of 20 percent enriched uranium [Iran has]. It makes it much less likely Iran could break out and make a bomb. And it goes further: It stops the manufacturing of new centrifuges. It changes the inspection regime from weekly to daily. If Iran wanted to do anything suspicious, there's a high probability we'd know about it and could act instantly to stop them.¶ EK: What's the counterfactual here? Imagine this deal wasn't struck and things simply kept on trend. Where would this issue be going?¶ JC: If Iran hadn't paused, in a matter of months they would cross Israel's red line. In perhaps a year they could've constructed a crude nuclear device. In another year, they could construct a warhead to put on a missile. While we might think we had two years or so to act, Israel doesn't look at it that way. They wanted to kill the nuclear baby in the crib. So the alternative to this deal was war. We shouldn't kid ourselves. There's no sanction regime known to man that's been able to coerce a country into compliance. So if you don't like negotiating with Iran, what you're really saying is you want to go to war. We should be clear-eyed about this. We shouldn't think there's some better deal out there.

No Israel Strike now

Cirincione 11-25 [Joseph Cirincione is president of Ploughshares Fund, a global security foundation, and a member of Secretary of State John Kerry's International Security Advisory Board and the Council on Foreign Relations. He's also the author of "Bomb Scare: The History and Future of Nuclear Weapons." Interviewed by Ezra Klein 11-25-2013 "“If you don't like negotiating with Iran what you're really saying is you want to go to war”"
<http://www.washingtonpost.com/blogs/wonkblog/wp/2013/11/25/if-you-dont-like-negotiating-with-iran-what-youre-really-saying-is-you-want-to-go-to-war/>]

EK: One argument that Jeffrey Goldberg makes is that another objective of this deal was stopping Israel from making any sudden moves. Now that there's a deal in place, Israel can't simply blow up the international community's negotiations and launch an attack. Do you

agree?¶ JC: I think it's almost impossible for Israel to launch a military strike on Iran right now. They're isolated. The prime minister is issuing some very tough statements but as far as I can see, he's the only world leader issuing them. Even Saudi Arabia, which has serious qualms about the deal, is issuing positive statements at the start.

Sanctions kill deal

Sanctions legislaton destroy negotiations- causes Iran prolif and war

Kahl 12-31 [Colin Kahl is an associate professor in the Security Studies Program in the Edmund A. Walsh School of Foreign Service at Georgetown University, where he teaches courses on international relations, international security, the geopolitics of the Middle East, American foreign policy, and civil and ethnic conflict. He is also a senior fellow at the Center for a New American Security (CNAS), a Washington, DC-based think tank. 12-31-2013 "The Danger of New Iran Sanctions" National Interest <http://nationalinterest.org/commentary/the-danger-new-iran-sanctions-9651?page=1>]

The legislation defies a request by the Obama administration and ten Senate committee chairs to stand down on sanctions while negotiations continue. It also flies in the face of an unclassified intelligence assessment that new sanctions "would undermine the prospects for a successful comprehensive nuclear agreement with Iran." Proponents of the bill note that the proposed sanctions would only come into force if Iran violates the Geneva agreement or fails to move toward a final deal, and would not kick in for months. But the White House warns that enshrining new economic threats in law now runs counter to the spirit of the Geneva pledge of no new sanctions during negotiations, and risks empowering Iranian forces hoping to scuttle nuclear talks. The legislation also defines congressionally acceptable parameters for a final deal that Iran experts almost universally believe are unachievable, namely the requirement that Iran completely dismantle its uranium enrichment program. For these reasons, the administration believes the bill represents a poison pill that could kill diplomacy, making a nuclear-armed Iran or war more likely. Sanctions hawks disagree, arguing that the legislation will enable, not thwart, diplomatic progress. "Current sanctions brought Iran to the negotiating table," Senator Robert Menendez, the bill's leading champion, contends, "and a credible threat of future sanctions will require Iran to cooperate and act in good faith at the negotiating table."¶ But this logic badly misreads the historical effect of sanctions on Iranian behavior and under-appreciates the role played by Iran's fractious domestic politics. A careful look at Iranian actions over the past decade suggests that economic pressure has sometimes been effective, but only when it aligns with particular Iranian political dynamics and policy preferences. And once domestic Iranian politics are factored in, the lesson for today's sanctions debate is clear: the threat of additional sanctions, at this critical juncture, could derail negotiations toward a peaceful solution.

New sanctions prevent deal success. Failure will spur prolif and war with Iran.

Beauchamp, 11/6/14 --- B.A.s in Philosophy and Political Science from Brown University and an M.Sc in International Relations from the London School of Economics, former editor of TP Ideas and a reporter for ThinkProgress.org. He previously contributed to Andrew Sullivan's The Dish at Newsweek/Daily Beast, and has also written for Foreign Policy and Tablet magazines, now writes for Vox (Zack, "How the new GOP majority could destroy Obama's nuclear deal with Iran," <http://www.vox.com/2014/11/6/7164283/iran-nuclear-deal-congress>, JMP)

There is one foreign policy issue on which the GOP's takeover of the Senate could have huge ramifications, and beyond just the US: **Republicans are likely to try to torpedo** President Obama's ongoing efforts to reach **a nuclear deal** with Iran. And they just might pull it off.

November 24 is the latest deadline for a final agreement between the United States and Iran over the latter's nuclear program. That'll likely be extended, but it's a reminder that the negotiations could soon come to a head. Throughout his presidency, **Obama has prioritized these negotiations**; he likely doesn't want to leave office without having made a deal.

But **if Congress doesn't like the deal**, or just wants to see Obama lose, **it has the power to torpedo it** by imposing new sanctions on Iran. Previously, Senate Majority Leader Harry Reid used procedural powers to stop this from happening and save the nuclear talks. But Senate Majority Leader Mitch **McConnell** may not be so kind, and he **may have the votes** to destroy an Iran deal. If he tries, **we could see** one of **the** most important legislative **fight**s of **Obama's presidency**.

Why Congress can bully Obama on Iran sanctions

At their most basic level, the international negotiations over Iran's nuclear program (they include several other nations, but the US is the biggest player) are a tit-for-tat deal. If Iran agrees to place a series of verifiable limits on its nuclear development, then the United States and the world will relax their painful economic and diplomatic sanctions on Tehran.

"The regime of economic sanctions against Iran is arguably the most complex the United States and the international community have ever imposed on a rogue state," the Congressional Research Service's Dianne Rennack writes. To underscore the point, Rennack's four-page report is accompanied by a list of every US sanction on Iran that goes on for 23 full pages.

The US's sanctions are a joint Congressional-executive production. Congress puts strict limits on Iran's ability to export oil and do business with American companies, but it gives the president the power to waive sanctions if he thinks it's in the American national interest. "In the collection of laws that are the statutory basis for the U.S. economic sanctions regime on Iran," Rennack writes, "the President retains, in varying degrees, the authority to tighten and relax restrictions."

The key point here is that Congress gave Obama that power — which means they can take it back. "You could see a bill in place that makes it harder for the administration to suspend sanctions," Ken Sofer, the Associate Director for National Security and International Policy at the Center for American Progress (where I worked for a little under two years, though not with Sofer directly), says. "You could also see a bill that says the president can't agree to a deal unless it includes the following things or [a bill] forcing a congressional vote on any deal."

Imposing **new sanctions** on Iran wouldn't just stifle Obama's ability to remove existing sanctions, it **would undermine** Obama's **authority to negotiate** with Iran at all, **sending the message to Tehran that Obama** is not worth dealing with because he **can't control** his own **foreign policy**.

So **if Obama wants** to make **a deal** with Iran, **he needs Congress to play ball**. But it's not clear that Mitch McConnell's Senate wants to.

Congress could easily use its authority to kill an Iran deal

To understand why the new Senate is such a big deal for congressional action on sanctions, we have to jump back a year.

In November 2013, the Obama administration struck an interim deal with Iran called the Joint Plan of Action (JPOA). As part of the JPOA, the US agreed to limited, temporary sanctions relief in exchange for Iran limiting nuclear program components like uranium production.

Congressional Republicans, by and large, hate the JPOA deal. Arguing that the deal didn't place sufficiently serious limits on Iran's nuclear growth, the House passed new sanctions on Iran in December. (There is also a line of argument, though often less explicit, that the Iranian government cannot be trusted with any deal at all, and that US policy should focus on coercing Iran into submission or unseating the Iranian government entirely.) Senate Republicans, joined by more hawkish Democrats, had the votes to pass a similar bill. But in February, Senate Majority leader Harry Reid killed new Iran sanctions, using the Majority Leader's power to block consideration of the sanctions legislation to prevent a vote.

McConnell blasted Reid's move. "There is no excuse for muzzling the Congress on an issue of this importance to our own national security," he said. So now that McConnell holds the majority leader's gavel, it will remove that procedural roadblock that stood between Obama and new Iran sanctions.

To be clear, it's far from guaranteed that Obama will be able to reach a deal with Iran at all; negotiations could fall apart long before they reach the point of congressional involvement. But if he does reach a deal, and Congress doesn't like the terms, then they'll be able to kill it by passing new sanctions legislation, or preventing Obama from temporarily waiving the ones on the books.

And make no mistake — imposing new sanctions or limiting Obama's authority to waive the current ones would kill any deal. If Iran can't expect Obama to follow through on his promises to relax sanctions, it has zero incentive to limit its nuclear program. "If Congress adopts sanctions," Iranian Foreign Minister Javad Zarif told Time last December, "the entire deal is dead."

Moreover, it could fracture the international movement to sanction Iran. The United States is far from Iran's biggest trading partner, so it depends on international cooperation in order to ensure the sanctions bite. If it looks like the US won't abide by the terms of a deal, the broad-based international sanctions regime could collapse. Europe, particularly, might decide that going along with the sanctions is no longer worthwhile.

"Our ability to coerce Iran is largely based on whether or not the international community thinks that we are the ones that are being constructive and [Iranians] are the ones that being obstructive," Sofer says. "If they don't believe that, then the international sanctions regime falls apart."

This could be one of the biggest fights of Obama's last term

It's true that Obama could veto any Congressional efforts to blow up an Iran deal with sanctions. But a two-thirds vote could override any veto — and, according to Sofer, an override is entirely within the realm of possibility.

"There are plenty of Democrats that will probably side with Republicans if they try to push a harder line on Iran," Sofer says. For a variety of reasons, including deep skepticism of Iran's intentions and strong Democratic support for Israel, whose government opposes the negotiations, Congressional Democrats are not as open to making a deal with Iran as Obama is. Many will likely defect to the GOP side out of principle.

The real fight, Sofer says, will be among the Democrats — those who are willing to take the administration's side in theory, but don't necessarily think a deal with Iran is legislative priority number one, and maybe don't want to open themselves up to the political risk. These Democrats "can make it harder: you can filibuster, if you're Obama you can veto — you can make it impossible for a full bill to be passed out of Congress on Iran," Sofer says. But it'd be a really tough battle, one that would consume a lot of energy and lobbying effort that Democrats might prefer to spend pushing on other issues.

"I'm not really sure they're going to be willing to take on a fight about an Iran sanctions bill," Sofer concludes. "I'm not really sure that the Democrats who support [a deal] are really fully behind it enough that they'll be willing to give up leverage on, you know, unemployment insurance or immigration status — these bigger issues for most Democrats."

So if the new Republican Senate prioritizes destroying an Iran deal, Obama will have to fight very hard to keep it — without necessarily being able to count on his own party for support. And the stakes are enormous: if Iran's nuclear program isn't stopped peacefully, then the most likely outcomes are either Iran going nuclear, or war with Iran.

The administration believes a deal with Iran is their only way to avoid this horrible choice. That's why it's been one of the administration's top priorities since day one. It's also why this could become one of the biggest legislative fights of Obama's last two years.

A2 Won't meet the deadline

Tuesday's deadline is soft – real deadline is July 9

Jonah Shepp 6-27 In Vienna, Kerry Looks to Bring Iran Deal Home

http://www.slate.com/blogs/the_slatest/2015/06/27/kerry_in_vienna_for_final_iran_nuke_talks.html

Also, Tuesday's deadline for a comprehensive deal is softer than it looks. The parties have extended their deadlines before without the process collapsing, after all. As diplomats in Vienna explained to Reuters, the real deadline is July 9, because any deal made after that date will be subject to 60 days of review by the US Congress, rather than 30:

Negotiators involved in the talks fear that such a lengthy delay, which would also hold up the cancellation of United Nations nuclear-related sanctions by the U.N. Security Council, would be too long and would create the opportunity for any deal agreed in Vienna to unravel.

A2 Former advisor letter

Letter from former advisors not meant as argument to scuttle deal

JOHN HUDSON JUNE 25, 2015 No, Obama's Former Advisors Aren't Trashing the Iran Deal

- 6:07 PM <http://foreignpolicy.com/2015/06/25/ex-obama-adviser-defends-letter-drawing-red-lines-on-iran-deal/>

The White House insists that the five demands outlined by the group match the priorities that U.S. negotiators are seeking in Vienna. Yet **media coverage of the letter has led many to believe that Obama's former advisors have lost trust in the president's negotiating team. Two signers of the letter say that's patently false.** ¶ "That's not at all what the statement was about," said Einhorn, a nonproliferation expert and a co-signer of the letter. ¶ "The key thing is not that there were some former Obama officials raising questions," he added. "The key thing is you have this diverse group coming together on a set of reasonable and achievable recommendations." ¶ Unlike a recently circulated set of demands by the American Israel Public Affairs Committee, **Einhorn noted that the letter he signed doesn't include so-called "poison pills"** that Iran would never conceivably agree to. ¶ The bipartisan group demands that international monitors have "timely and effective access" to any military or nonmilitary sites needed to verify Iran's compliance with the nuclear deal being negotiated by Tehran and six world powers. It also calls for strict limits on the research and development of advanced centrifuges, the ability to quickly reimpose sanctions if Iran violates the terms of a deal, and gradual, not immediate, economic sanctions relief for Tehran. ¶ Included in those demands is a preamble noting that "[m]ost of us would have preferred a stronger agreement," suggesting growing discontent with the handling of the talks by Obama administration alumni. But another signer of the letter, speaking on condition of anonymity, said that's not the case. He said **the letter meant to bring Democrats and Republicans together around a simple set of "achievable goals" to demonstrate a bipartisan path to a deal.** "If the deal is a good one, the administration will benefit from the support of this bipartisan group," he said. "If the deal is not a good one, the administration will have to contend with the group. **But the president has made clear that he will only do a good deal, and I take him at his word.**" When asked about the letter, a State Department spokeswoman did not view it as an indictment of the ongoing negotiations, which face a June 30 deadline.

Turns Case: US Hegemony

Nuclear Iran kills U.S. hegemony – emboldens enemies and weakens alliances

Takeyh and Lindsay, 10

[James M. Lindsay, Senior Vice President, Director of Studies, and Maurice R. Greenberg Chair, Ray Takeyh, Senior Fellow for Middle Eastern Studies “After Iran Gets the Bomb Containment and Its Complications,” March/April 2010, http://www.cfr.org/publication/22182/after_iran_gets_the_bomb.html]

The dangers of Iran's entry into the nuclear club are well known: emboldened by this development, Tehran might multiply its attempts at subverting its neighbors and encouraging terrorism against the United States and Israel; the risk of both conventional and nuclear war in the Middle East would escalate; more states in the region might also want to become nuclear powers; the geopolitical balance in the Middle East would be reordered; and broader efforts to stop the spread of nuclear weapons would be undermined. The advent of a nuclear Iran—even one that is satisfied with having only the materials and infrastructure necessary to assemble a bomb on short notice rather than a nuclear arsenal—would be seen as a major diplomatic defeat for the United States. Friends and foes would openly question the U.S. government's power and resolve to shape events in the Middle East. Friends would respond by distancing themselves from Washington; foes would challenge U.S. policies more aggressively.

Such a scenario can be avoided, however. Even if Washington fails to prevent Iran from going nuclear, it can contain and mitigate the consequences of Iran's nuclear defiance. It should make clear to Tehran that acquiring the bomb will not produce the benefits it anticipates but isolate and weaken the regime. Washington will need to lay down clear "redlines" defining what it considers to be unacceptable behavior—and be willing to use military force if Tehran crosses them. It will also need to reassure its friends and allies in the Middle East that it remains firmly committed to preserving the balance of power in the region.

Containing a nuclear Iran would not be easy. It would require considerable diplomatic skill and political will on the part of the United States. And it could fail. A nuclear Iran may choose to flex its muscles and test U.S. resolve. Even under the best circumstances, the opaque nature of decision-making in Tehran could complicate Washington's efforts to deter it. Thus, it would be far preferable if Iran stopped—or were stopped—before it became a nuclear power. Current efforts to limit Iran's nuclear program must be pursued with vigor. Economic pressure on Tehran must be maintained. Military options to prevent Iran from going nuclear must not be taken off the table.

Turns the case – wrecks US hegemony because it means we can't exercise international leverage to negotiate with anyone and have no credibility on the international stage

Elwar, 9/19/2012 (Eliot, Op-Ed: The U.S. war against Iran could shift the balance of power, Digital Journal, p. <http://digitaljournal.com/article/333174>)

From The News: The head of Iran's powerful Revolutionary Guards warned about retaliation against the Gulf's strategic Strait of Hormuz, US bases in the Mideast, and Israel if his country is attacked. According to many analysts, **Iran will attack the US** and Israel **when the war begins**. The center of gravity will be the Strait of Hormuz. Iran will attempt to close this area to bring the global economy to its knees. The world economy will collapse rapidly if Iran is successful. **Iran may have** been supplied with Russian **SUNBURN** anti-ship cruise **missiles**. **These** missiles **can sink any aircraft carrier**. **The US Navy has no defense** against these missiles. Russia probably supplied Iran with these missiles to inflict severe damage on the US Navy when the war begins. From RENSE.COM: Tehran has an unknown number of advanced Russian designed SS-N-22 SUNBURN missiles. When the Iranian Defense Minister Ali Shamkhani visited Moscow in late 2001 he requested a SUNBURN missile test firing, which the Russians arranged. Ali Shamkhani was so impressed with this advanced weapon system that he placed an order for an undisclosed number of the SUNBURN missiles. The SUNBURN can deliver a 200-kiloton nuclear payload (a 750-pound conventional warhead) within a range of 161.0000 km, more than twice the EXOCET missile's range. The SUNBURN combines a Mach 2.1 speed with a flight pattern that hugs the deck and includes "violent end maneuvers" to elude enemy defenses. The SUNBURN missile was specifically designed to defeat the US Aegis radar defense system. Should a US Navy Phalanx point defense somehow manage to detect an incoming SUNBURN missile, the system has only seconds to calculate a fire solution, which is not enough time to take out the intruding missile. While the US Phalanx defense employs a six-barreled gun that fires 3,000 depleted-uranium rounds a minute, the gun must have precise coordinates to destroy any attacking intruder. From RENSE.COM: The SUNBURN's combined supersonic speed and payload size produce tremendous kinetic energy on impact, with devastating consequences for ship and crew. A single one of these missiles can sink a large warship, but costs considerably less than a fighter jet. Although the Navy has been phasing out the older Phalanx defense system, its replacement, known as the Rolling Action Missile (RAM) has never been tested against the weapon it seems destined to one day face in combat. The US Navy's only plausible defense against a robust weapon like the SUNBURN missile is to detect the enemy's approach well ahead of time, with its destroyers, submarines, or fighter-bombers, and defeat them long before they can get in range and launch their deadly cargo. From HAARETZ: Former U.S. ambassador to Israel Martin Indyk recently stated that he thinks the U.S. will go to war with Iran over its nuclear program in 2013. Speaking during a panel on the CBS program Face the Nation, Indyk said, 'I'm afraid that 2013 is going to be a year where we're going to have a military confrontation with Iran.' The former ambassador stated that 'Iran doesn't have a nuclear weapon,' but added that there's not a lot of time left until it does. Regarding the recent friction between U.S. President Barack Obama and Israel's Prime Minister Benjamin Netanyahu over 'red lines' on Iran, Indyk doesn't think 'the difference between Netanyahu and Obama on this is that great, in terms of the president's commitment not to allow Iran to acquire nuclear weapons.' He added, however, that Netanyahu's insistence

on public 'red lines' was unreasonable. Analysis **A US war against Iran comes at the wrong time** in American history. The US economy is collapsing, while food prices increase. Obama is turning against Israel, which has been America's only real friend in the Mideast. **While America will survive** this war, **it will emerge damaged** from this Mideast conflict. **This war could begin the end of America's supremacy** as a superpower nation **and facilitate the rise of China** as the new superpower in Asia.

Iran nuclearization kills U.S. hegemony and credibility EVEN IF their impact d is true

Darembaum 2011

Jaime, Hudson Institute Senior Fellow and directs the Center for Latin American Studies, Iran Dangerous Now, Imagine It Nuclear,
http://www.hudson.org/index.cfm?fuseaction=publication_details&id=8439

What would it mean if such a regime went nuclear? Let's **assume**, for the sake of argument, that a nuclear-armed **Iran would never use its atomic weapons or give them to terrorists. Even under that optimistic scenario, Tehran's acquisition of nukes would make the world an infinitely more dangerous place.** For one thing, **it would surely spark a wave of proliferation throughout the Greater Middle East, with the likes of Turkey, Egypt, and Saudi Arabia** - all Sunni-majority Muslim countries - going nuclear to counter the threat posed by Shiite Persian Iran. For another, **it would gravely weaken the credibility of U.S. security guarantees.** After all, Washington has repeatedly said that the Islamic Republic will not be permitted to get nukes. If Tehran demonstrated that these warnings were utterly hollow, **rival governments and rogue regimes would conclude that America is a paper tiger.** Once Tehran obtained nuclear weapons, it would have the ultimate trump card, the ultimate protection against outside attack. Feeling secure behind their nuclear shield, the Iranians would almost certainly increase their support for global terrorism and anti-American dictatorships. **They would no longer have to fear a U.S. or Israeli military strike.** Much like nuclear-armed North Korea today, Iran would be able to flout international law with virtual impunity. If America sought to curb Iranian misbehavior through economic sanctions, Tehran might well respond by flexing its muscles in the Strait of Hormuz. As political scientist Caitlin Talmadge explained in a 2008 analysis, "Iranian closure of the Strait of Hormuz tops the list of global energy security nightmares. Roughly 90 percent of all Persian Gulf oil leaves the region on tankers that must pass through this narrow waterway opposite the Iranian coast, and land pipelines do not provide sufficient alternative export routes. Extended closure of the strait would remove roughly a quarter of the world's oil from the market, causing a supply shock of the type not seen since the glory days of OPEC." Think about that: **The world's leading state sponsor of terrorism has the ability to paralyze the global economy, and, if not stopped, it may soon have nuclear weapons.** As a nuclear-armed Iran steadily expanded its international terror network, the Western Hemisphere would likely witness a significant jump in terrorist activity. Tehran has established a strategic alliance with Venezuelan leader Hugo

Chávez, and it has also developed warm relations with Chávez acolytes in Bolivia, Ecuador, and Nicaragua while pursuing new arrangements with Argentina as an additional beachhead in Latin America. Three years ago, the U.S. Treasury Department accused the Venezuelan government of "employing and providing safe harbor to Hezbollah facilitators and fundraisers." More recently, in July 2011, Peru's former military chief of staff, Gen. Francisco Contreras, told the Jerusalem Post that "Iranian organizations" are aiding and cooperating with other terrorist groups in South America. According to Israeli intelligence, the Islamic Republic has been getting uranium from both Venezuela and Bolivia. Remember: Tehran has engaged in this provocative behavior without nuclear weapons. Imagine how much more aggressive the Iranian dictatorship might be after crossing the nuclear Rubicon. It is an ideologically driven theocracy intent on spreading a radical Islamist revolution across the globe. As the Saudi plot demonstrates, no amount of conciliatory Western diplomacy can change the fundamental nature of a regime that is defined by anti-Western hatred and religious fanaticism.

Turns Case: Credibility

Iran prolif jacks US cred

Bolton, senior fellow – AEI, 4/15/'11

(John, <http://www.aei.org/article/103463>)

Inside Iran, we now have confirmation—thanks to disclosures this month by an Iranian opposition group, which have been confirmed by Iranian officials—that the regime has the capability to mass-produce critical components for centrifuges used to enrich uranium to weapons-grade levels. That news proves again the inefficacy of U.N. Security Council resolutions and sanctions against a determined adversary.

Thus Iran's weapons program proceeds full steam ahead, which only emphasizes to would-be proliferators that persistence pays. Moammar Gadhafi surrendered his nuclear weapons program in 2003-04 because he feared becoming the next Saddam Hussein, but he is now undoubtedly cursing his timidity. Had he made seven years of progress toward deliverable nuclear weapons, there would surely be no NATO bombing of his military today.

An Iranian nuclear capability would undoubtedly cause Saudi Arabia, Egypt, Turkey and perhaps others to seek their own deliverable nuclear weapons. We would therefore see a region substantially more in Iran's thrall and far more unstable and dangerous for Washington and its allies.

Moreover, America's failure to stop Iran's nuclear ambitions—which is certainly how it would be perceived worldwide—would be a substantial blow to U.S. influence in general. Terrorists and their state sponsors would see Iran's unchallenged role as terrorism's leading state sponsor and central banker, and would wonder what they have to lose.

Independently, the imposition of sanctions will destroy relationships with key allies and credibilty

Yochi Dreazen and John Hudson Friday, November 15, 2013 Obama Admin: More Iran Sanctions Will Fracture Anti-Nuke Alliance

http://thecable.foreignpolicy.com/posts/2013/11/15/obama_admin_more_iran_sanctions_will_fracture_anti_nuke_alliance

The Obama administration has spent weeks asking Congress to hold off on imposing new sanctions to avoid giving Tehran a reason to walk away from the current nuclear talks. On Friday, the administration rolled out a new rationale. They warned that the measures could harm Washington's relationships with its key foreign allies as well. The White House's

willingness to unfreeze billions of dollars in Iranian money in exchange for Iranian concessions on its nuclear program has sparked skepticism -- and in some cases outright anger -- on Capitol Hill. The White House has launched a full-on lobbying blitz to reassure wavering lawmakers, and the efforts began paying off Friday as key senators who had either raised skepticism about the wisdom of holding off new sanctions or kept silent came out in support of the administration position. Sen. John McCain, a leading Iran hawk, told the BBC that he's skeptical of talks with Iran but willing to give the administration a "couple of months" before supporting additional sanctions. Sen. Dianne Feinstein (D-CA), meanwhile, said she strongly opposed putting additional punitive measures in place against Tehran amid the delicate diplomatic negotiations. "The purpose of sanctions was to bring Iran to the negotiating table, and they have succeeded in doing so," she said. "Tacking new sanctions onto the defense authorization bill or any other legislation would not lead to a better deal. It would lead to no deal at all."

Turns case: Terrorism

Nuclear Iran leads to terrorist attacks and kills heg – increased leverage and risk of nuclear transfer

Brookes, 7

[Peter, Senior Fellow, National Security Affairs and Chung Ju-Yung Fellow for Policy Studies at the Heritage Foundation, April 2, 2007

Iran emboldened: Tehran seeks to dominate Middle East politics,”

<http://www.heritage.org/Research/Commentary/2007/04/Iran-emboldened-Tehran-seeks-to-dominate-Middle-East-politics>]

According to the U.S. State Department, **Iran continues to be the world's most active state sponsor of terrorism**. At the request of senior Iranian leadership, Iran's Ministry of Intelligence and Security (MOIS) and Islamic Revolutionary Guard Corps (IRGC) support Palestinian terrorist groups such as Hamas, Palestinian Islamic Jihad, the al Aqsa Martyrs Brigade and the Popular Front for the Liberation of Palestine-General Command with funding, training and weapons. Hezbollah - a Lebanese Shiite terrorist group - is a particular favorite. In fact, Iran established Hezbollah to parry Israel's 1982 invasion of Lebanon. Tehran may fund Hezbollah to the tune of \$100 million per year. Last summer, Tehran's military support for Hezbollah was evident. Iran likely gave Hezbollah the green light to ambush an Israeli patrol and kidnap soldiers, which ultimately kicked off the monthlong conflict. In the ensuing days, Hezbollah indiscriminately fired as many as 10,000 Iran-supplied rockets and missiles into Israel. In addition, many were stunned when a C-802 cruise missile struck an Israeli naval vessel off the coast of Lebanon. While the shooter was never identified, the Chinese C-802 is in Iran's inventory. It could have been fired by either Hezbollah or the IRGC. Today, **Hezbollah, with Iranian and Syrian support, is threatening to topple Lebanon's democratically elected government** unless it is given additional cabinet seats - potentially giving it veto power over Beirut's decisions. **Iran would love to add Lebanon to Syria as a client state** in its effort to form an arc of Iranian influence across the region. **Iran has made** a number of not-so-veiled **threats that it would deploy its** irregular forces and **terrorist allies against the U.S.** and American interests, if necessary. This is likely not an idle threat. American blood is already on the hands of Iran and its terrorist proxies as a result of the 1983 Beirut Marine barracks attack and the 1996 Khobar Towers bombing in Saudi Arabia, and in Iraq today. It is almost without question that Tehran sees its ability to hold U.S. interests at risk across the globe - including in the U.S. - as leverage against American military action over its nuclear program or meddling in Iraq. Perhaps the most frightening scenario is that **Iran might transfer weapons of mass destruction capability to a terrorist ally**. While this is risky behavior, it is a possibility. Iran could transfer nuclear capability to a Hezbollah-dominated government in Lebanon, or a Hamas-led Palestinian Authority, significantly increasing the threat to Israeli security. Osama **bin Laden has not been shy about his desire for WMD or al-Qaida's readiness to use them**. The insurgency's recent use of chlorine gas in Iraq is evidence of a terrorist group's willingness to employ WMD.

() Strikes end Muslim cooperation in the War on Terror

Larrabee '6

[Stephen, - Corporate Chair in European Security @ RAND 3-9 "Defusing the Iranian Crisis" <http://www.rand.org/commentary/030906OCR.html//MGW-JV>]. Moreover, the political costs would be very high. A military strike would unleash a wave of nationalism and unite the Iranian population behind the current regime, ending any prospect of internal change in the near future and ensuring decades of enmity from the Iranian middle class and youth, who are largely opposed to the current regime. It would also provoke outrage in the Muslim world, probably making any attempt to obtain the support of moderate Muslims in the war on terror impossible.

That's the key internal link to victory

AFP '5 [Agence France Presse. "Trust and Confidence of Muslims "Crucial" in Fight Against Terror" 2005. Lexis/MGW-JV]. The United States must use its "soft power" to gain the trust and confidence of Muslims worldwide if it is to prevail over terrorism", Singapore Prime Minister Lee Hsien Loong said Friday. Opening an international security conference, Lee said one reason why many moderate Muslims are reluctant to condemn and disown religious extremists was the "wide gap that separates the US from the Muslim world". He said the large-scale US assistance to Indonesia, the world's biggest Muslim nation, in the aftermath of the December 26 tsunami disaster had not completely erased the resentment many Muslims feel toward the United States. "The sources of this Muslim anger are historical and complex, but they have been accentuated in recent years by Muslim perceptions of American unilateralism and hostility to the faith," Lee told the audience, which included US Defense Secretary Donald Rumsfeld. Lee cited a survey that found that in 2000 three quarters of Indonesians said they were "attracted" to the United States but that by 2003 the number had fallen to just 15 percent. Lee said US help to bring relief assistance to the tsunami victims in Indonesia had touched the hearts of many Indonesians. "But this singular event has not eliminated the antipathy that many Muslims still feel towards the US," he said. He cited demonstrations worldwide, including in Jakarta and Kuala Lumpur, following a report by the US magazine Newsweek that US interrogators at the Guantanamo Bay detention centre had flushed a copy of the Koran down the toilet. Newsweek later withdrew the report, saying they could not confirm the story with their source. "The US needs to make more use of its 'soft power' to win over international opinion, correct misperceptions and build trust and credibility, especially in the Muslim world," Lee said. "In the long term this is vital if the US is to prevail over terrorism, and to maintain its position of global leadership."

Turns Case: Structural violence

War turns structural violence

Folk, 78 Professor of Religious and Peace Studies at Bethany College, 78 [Jerry, "Peace Educations – Peace Studies : Towards an Integrated Approach," Peace & Change, volume V, number 1, Spring, p. 58]

Those **proponents** of the positive peace approach **who reject** out of hand the work of researchers and educators coming to the field from the perspective of **negative peace** too easily **forget that the prevention of a nuclear confrontation** of global dimensions **is the prerequisite for all other** peace research, education, and **action**. Unless such a confrontation can be avoided there will be no world left in which to build positive peace. Moreover, **the blanket condemnation of** all such **negative peace oriented** research, education or **action as a** reactionary **attempt to support** and reinforce **the status quo is doctrinaire**. Conflict theory and resolution, disarmament studies, studies of the international system and of international organizations, and integration studies are in themselves neutral. They do not intrinsically support either the status quo or revolutionary efforts to change or overthrow it. Rather they offer a body of knowledge which can be used for either purpose or for some purpose in between. **It is much more logical for those who understand peace as positive** peace **to integrate this knowledge into their own framework** and to utilize it in achieving their own purposes. A balanced peace studies program should therefore offer the student exposure to the questions and concerns which occupy those who view the field essentially from the point of view of negative peace.

Turns case: Environment

Any nuclear war causes turns climate

Choi, writer for LiveScience, reprinted in Yahoo! News, 3/29/2014

(Charles Q., "Small' Nuclear War Could Trigger Catastrophic Cooling,"

<http://news.yahoo.com/small-nuclear-war-could-trigger-catastrophic-cooling-181056235.html>)

To see what effects such a **regional nuclear conflict** might have on climate, scientists modeled a war between India and Pakistan involving 100 Hiroshima-level bombs, each packing the equivalent of 15,000 tons of TNT — just **a small fraction of the world's** current **nuclear arsenal**. They simulated interactions within and between the atmosphere, ocean, land and sea ice components of the Earth's climate system.

Scientists found the effects of such a war **could be catastrophic**.

"Most people would be surprised to know that even **a very small regional nuclear war on the other side of the planet could disrupt global climate** for at least a decade **and wipe out the ozone layer** for a decade," study lead author Michael Mills, an atmospheric scientist at the **National Center for Atmospheric Research** in Colorado, **told** Live Science.

The researchers predicted the resulting **firestorms would kick up** about 5.5 million tons (5 million metric tons) of **black carbon** high into the atmosphere. This ash would absorb incoming solar heat, cooling the surface below.

Nuke War = Extinction

1.) Nuclear war causes extinction

a. George M Woodwell, PhD From Duke, Director of the Ecosystems center at the Marine Biological Laboratory at Woods Hole Mass. , Nuclear Winter, Deterrence, and the Prevention of Nuclear War, Edited by Sederberg, 1986 p. 20

The primary concern, I suppose, is the direct effects on people. Many of the same uncertainties that apply to the induction of climatic changes apply as well to inferences about human mortality. The size and characters of the war are important: Are cities the targets? The analyses from previous studies range widely up to the recent WHO analysis that suggests a total mortality of 1.1 billion for a 10,000 MT war. No estimates in this study dealt with the effects of a climatic crisis. Systematic efforts at estimating the additional mortality due to dark and prolonged cold in the weeks following such a war are beyond the limits of this discussion and, when developed, any estimates will prove as tenuous as virtually all other assumptions concerning the effects of a hypothetical war. Survivors of the immediate effects of the weapons will emerge into a radioactive environment that is likely to be perpetually dark and frozen with 10-20C or more of frost. On first analysis it would seem difficult to exaggerate the difficulties of accumulating the resources required for survival under those conditions. All supplies of fresh water would be frozen. Plants and animals, left unprotected, would be frozen and dead. Agriculture would be paralyzed transportation, normal communications of all types, sources of fuel, power supplies, and the normal machinery of government, including normal conventions established in law or in manners will have been destroyed or suspended: under those circumstances mere survival will be a major challenge and it is well within the realm of probability that few or none would survive in areas as large as continents, possibly in the northern hemisphere itself.

b. We don't need to win escalation -- five nuclear weapons destroy the planet

The Guardian, July 14, 1993

But we understand, or ought to understand, some things better now that the East-West confrontation is no more, and our knowledge of ecology and the fragility of planetary systems has advanced. One is that the nuclear war fighting scenarios were not just optimistic but totally ludicrous. We now know or ought to know – and that “we” includes Arabs, Iranians, South Asians, Chinese, and Koreans as well as Westerners that one nuclear weapon discharging might be enough to push an entire region, say a vulnerable region like the Middle East, into an irreversible ecological, economic, and political decline. Two or three could thrust the world into a long term crisis, compounded by the degradation of other dangerous facilities including nuclear power stations. Five or 10 could wreck the planet.

c. Even if some people survive, civilization will collapse, causing extinction

Nick Bostrom 2002 Prof of Philosophy at Yale university

<http://www.nickbostrom.com/existential/risks.html> - last updated April 15, 2k2

The US and Russia still have huge stockpiles of nuclear weapons. But would an all-out nuclear war really exterminate humankind? Note that: (i) For there to be an existential risk it suffices that we can't be sure that it wouldn't. (ii) The climatic effects of a large nuclear war are not well known (there is the possibility of a nuclear winter). (iii) Future arms races between other nations cannot be ruled out and these could lead to even greater arsenals than those present at the height of the Cold War. The world's supply of plutonium has been increasing steadily to about two thousand tons, some ten times as much as remains tied up in warheads ([9], p. 26). (iv) **Even if some humans survive the short-term effects of a nuclear war, it could lead to the collapse of civilization. A human race living under stone-age conditions may or may not be more resilient to extinction than other animal species.**

2.) Nuclear war will escalate -- high alert guarantees

DR Alan Phillips Oct. 2000. <http://www.peace.ca/nuclearwinterrevisitedhtm>

With thousands of rocket-launched weapons at launch-on-warning", any day there could be an all-out nuclear war by accident. The fact that there are only half as many nuclear bombs as there were in the 80's makes no significant difference. Deaths from world-wide starvation after the war would be several times the number from direct effects of the bombs, and the surviving fraction of the human race might then diminish and vanish after a few generations of hunger and disease, in a radioactive environment.

Nuclear war will escalate -- Russian Dead Hand

Pavel Feigenhauer, chief defense correspondent of Segodnya Moscow times 11-26-98

Russia also has a fully operational "dead hand" nuclear command machine. Using special communication rockets launched high into space, this "dead hand" can issue computer-produced attack orders to Russian nuclear submarines, bombers and surviving silo missiles if special sensors detect shock waves from nuclear explosions on Russian territory and all Russian commanding generals have been killed or are unavailable because all conventional command-and-control communication lines have been destroyed by surprise enemy attack. As one top Russian general at the time in charge of Russia's nuclear arsenal once told me: 'You and I could be sitting drinking vodka, Pavel. while this 'dead hand' machine fights a nuclear world war on ~s own.' If all these technical gadgets and Joint operational nuclear staffs already exist, why does Sergeyev need yet another? To economize? But, there is no talk of disbanding the general staff itself, for it is considered a sacred cow, the backbone of Russia's military machine. So Sergeyev's new united command will simply overlap existing joint operational departments, creating additional discord, If the strategic forces of the navy, the air force and SRF are merged, then Russian nuclear strategic and attack submarines will receive operational orders from different masters.

Links – Drones Aff

Drone regulations are controversial; new emerging tech issues, economic, and privacy concerns lead to mixed opinions. Plan costs capital.

HENRY C. JACKSON Posted: 05/17/2013 Congress Gets Mixed Advice On Drone Regulations
http://www.huffingtonpost.com/2013/05/17/congress-drone-regulations_n_3294098.html

WASHINGTON — The growing use of unmanned surveillance "eyes in the sky" aircraft raises a thicket of privacy concerns, but Congress is getting mixed advice on what, if anything, to do about it. A future with domestic drones may be inevitable. While civilian drone use is currently limited to government agencies and some public universities, a law passed by Congress last year requires the Federal Aviation Administration to allow widespread drone flights in the U.S. by 2015. According to FAA estimates, as many as 7,500 civilian drones could be in use within five years. "Technology is great – as long as it's used the right and proper way," Rep. Jason Chaffetz, R-Utah, said at a House Judiciary subcommittee hearing Friday on the issues surrounding drones – which can be as small as a bird and as large as a plane. Congress isn't alone in seeking to address the issues: Since January, drone-related legislation has been introduced in more than 30 states, largely in response to privacy concerns. Rep. James Sensenbrenner, R-Wis., said it was important for new standards to address the privacy issues associated with use of drones. With Rep. Zoe Lofgren, D-Calif., and Rep. Ted Poe, R-Texas, he is sponsoring legislation that would codify due process protections for Americans in cases involving drones and make flying armed drones in the U.S. sky illegal. "Every advancement in crime fighting technology, from wiretaps to DNA, has resulted in courts carving out the Constitutional limits within which the police operate," Sensenbrenner said. The subcommittee heard from experts who were divided on what actions Congress should take to address the new technology. But the four witnesses all agreed that drones raised new, often unprecedented questions about domestic surveillance. "Current law has yet to catch up to this new technology," said Chris Calabrese, legislative counsel for the American Civil Liberties Union. Calabrese said he supported immediate regulation of the drone industry and said his biggest concern was the overuse of drones by police and government officials for surveillance. But Calabrese said he doesn't want to hinder the growth of drones with the power to do good, including helping find missing persons, assisting firefighters and addressing other emergencies. Tracey Maclin, a professor with the Boston University School of Law, said the issues raised by drones haven't been addressed by courts before because the technology goes beyond what humans had been capable of through aerial surveillance. Past court rulings, "were premised on naked-eye observations – simple visual observations from a public place," he said. Rep. Cedric Richmond, D-La., said he wanted to know when drone technology will advance to the point where Congress will have to act on the issue. He said he was concerned about the effect on privacy. "At what point do you think it's going to get to a point where we have to say what a reasonable expectation of privacy is?" Richmond said. Republicans expressed similar concerns. "It seems to me that Congress needs to set the standard, rather than wait and let the courts set the standard," Poe said. Some experts urged caution. Gregory McNeal, an associate law professor at Pepperdine University, said writing laws to cover drones will be difficult because the technology continues to improve and Congress could think it's addressing key issues, only to have new ones emerge.

Plan is controversial – few restrictions viewed as important to keep us safe

Fox News, 2013 Post 9/11 terror fighting legislation under attack Published June 12, 2013FoxNews.com

<http://www.foxnews.com/politics/2013/06/12/post-11-terror-fighting-legislation-under-attack/>

Around the same time, Rep. Edward Markey introduced the Drone Aircraft Privacy and Transparency Act of 2013, which prohibits many domestic uses of drones. The topic was also on the mind of Texas Sen. Ted Cruz who introduced legislation that would prohibit the use of drones to kill U.S. citizens living inside the country. In May, Maine Sen. Angus King Jr., introduced the Targeted Strike Oversight Reform Act of 2013. The act would require an independent analysis of the consideration of the use of targeted lethal force against a particular U.S. person knowingly engaged in acts of international terrorism against the U.S. Despite the congressional push to reign in the programs, there are some who maintain they are important to keep the country safe and must be kept in place.

Plan costs capital – regulating drone use is a political minefield because of constitutional rights issues and federalism concerns

Margot E. Kaminski Executive Director of the Information Society Project, Research Scholar, and Lecturer in Law at Yale Law School Drone Federalism: Civilian Drones and the Things They Carry * May 2013 California Law Review,

<http://scholarship.law.berkeley.edu/cgi/viewcontent.cgi?article=1007&context=clrcircuit>

Regulating law enforcement drone use poses few countervailing dangers from legislating thoughtlessly or in haste; such legislation would implicate Fourth Amendment rights rather than First Amendment rights, so the worst case scenario is that such legislation might eventually be found by courts not to protect enough privacy.¹⁵ The more interesting and difficult privacy puzzle arises from drone use by private—not public—actors. Regulating civilian drone use will be treacherous, as such regulation potentially threatens First Amendment rights. Because of that threat, civilian drone regulation may get overturned, as courts sort out the scope of those First Amendment rights. Regulating civilian drone use on the federal level thus risks being unconstitutional or, barring that, unstable

Plan costs capital – disputes between civil liberties advocates and security hawks on drone restriction legislation

Wells Bennett, Sept 2014 <http://www.brookings.edu/research/reports2/2014/09/civilian-drones-and-privacy>

Remotely controlled flying robots are increasingly cheaper, and at times more capable of sustained flight, than some manned counterparts. Many can be outfitted with imaging or other recording equipment, itself increasingly more affordable and widely available nowadays. An airborne droid might take in more information over a much longer period of time than a human eye or ear; and it might also find its way to areas where other aerial platforms might not be able

to go. In this way drones pose real if manageable privacy risks. And policymakers have aimed to manage them following Congress's call to broaden drones' access to the skies by late 2015. The timing raises any number of big-ticket privacy questions. Two are recurring: which arm of the government (states or feds) ought to balance a proliferating technology's benefits against its privacy costs; and which drones (government or private) will present the greatest threats to privacy. On one side of the first question are certain members of Congress and civil liberties advocates, who have called for a robust federal approach to drones and privacy.² On the other are "drone federalists": scholars³ and policymakers⁴ who generally oppose enactment of a preemptive, federal drone statute, and who would in any event keep federal regulation to a minimum or reserve it for discrete subjects only. In recent years, only states have passed legislation meant to account for America's drone experiment and its implications for privacy. In that sense, momentum isn't with the feds: the FAA, for example, pointedly refused to regulate privacy in a broad fashion (though, as explained below, it nevertheless undertook some drone privacy work later). And unlike some state houses, the U.S. Congress hasn't seriously considered or passed a bill to set general privacy standards or to regulate drones and privacy specifically.

Plan cost capital – FAA drone regulations are controversial

Troy Rule, Nov 19 2014 <http://www.latimes.com/opinion/op-ed/la-oe-rule-drone-regulation-faa-20141120-story.html>

This new ruling is particularly troubling because the FAA still hasn't found a federal regulatory scheme capable of effectively integrating drones into the nation's airspace. A June audit report revealed that the agency was "significantly behind schedule" in meeting congressionally imposed deadlines for its development of civilian drone regulations. Frustrated at the FAA's snail-like pace, companies such as Amazon and Google have begun exporting their drone research activities to other countries. Small drones are not built for lengthy interstate flights at altitudes where conventional airplanes fly, so why should a federal agency be the chief regulator of these devices? Rather than seeking to expand its regulatory jurisdiction all the way down to the ground, the FAA should advocate for itself a more limited role in a collaborative federal, state and local regulatory scheme tailored to the unique attributes of drone technologies.

Large businesses oppose drone restrictions; which will spark Congressional battles

The Street, June 17 <http://www.thestreet.com/video/13190214/amazon-to-urge-congress-for-fewer-restrictions-on-us-drone-use.html>

Amazon (AMZN) is set to ask Congress Wednesday for fewer restrictions on U.S. drone usage in order to get its Prime Air service off the ground. Amazon Prime Air is designed to deliver packages up to five pounds to customers in 30 minutes or less using small drones. Paul Misener, Amazon's vice president for global public policy, will appear in front of the U.S. House Committee on Oversight and Government Reform to argue against current Federal Aviation Administration rules. According to his prepared testimony, Misener explains that he disagrees with the FAA's current opinion that extending see-and-avoid principles on small drones presents 'unique safety concerns' which warrant delayed consideration. Misener plans to urge the FAA to

act expeditiously, and ask that Congress provide legislative guidance and if necessary, additional legal authority.

Courts Link to Politics

Congress reacts to judicial decisions and cost political capital

Canon and Johnson- Professors of political science, 1999 p. 116-117

(Bradley Canon- professor of political science at the University of Kentucky and Charles Johnson- dept. head of political science at Texas A&M, judicial policies: implementation and impact)

More than any other public agency, Congress tends to be the focal point for public reaction to judicial policies. As a political body, Congress cannot ignore any sizable or prominent group of constituents. Some groups become especially agitated when they are unhappy with some judicial decision or doctrine, and they make their dissatisfaction known to members of Congress. If the pressure is great enough and is not counterbalanced by pressure from groups that support the judicial policy, Congress will, if feasible, take action. At the very least, numerous members of Congress will score political points by showing righteous indignation on behalf of the disaffected groups. Clashes between Congress and the courts are virtually as old as the two branches. Marbury v. Madison (1803) was a political finesse of a hostile Congress by the Supreme Court. Constitutional crises have been provoked by such decisions as Dred Scott (Scott v Sandford, 1857) and several anti-New Deal decisions in the 1930s. Strained relationships just short of crises have developed from numerous other decisions. Of course, not all differences between the courts and Congress are emotionally charged. Many of the differences arise over mundane issues such as pension or admiralty law. Either way, almost every year, Congress reacts to judicial decisions.

Implementation of court decisions ensures political involvement and influence.

Charles A. Johnson and Bradley C. Canon (professors political science @ Texas A&M and Univ. Kentucky) 1999 Judicial Policies: Implementation and Impact, p. 24

President Andrew Jackson, unhappy with a Supreme Court decision, is said to have retorted: "John Marshall has made his decision, now let him enforce it." His remark reminds us of a central fact of American democracy: judicial policies do not implement themselves. In virtually all instances, courts that formulate policies must rely on other courts or on nonjudicial actors to translate those policies into action. Inevitably, just as making judicial policies is a political process, so too is the implementation of the policies - the issues are essentially politics, and the actors are subject to political pressures.

President takes the blame for any decision made by a Federal Government branch***

Richard Ellis (Prof. politics @ Willamette Univ.) 1994 Presidential Lightning Rods, p. 2

An American president, Laski maintains, cannot deflect blame onto subordinates. A president's position as head of the executive branch, Laski insists, "makes him a target to be attacked by every person or interest at all critical of his purposes. He is there in all cases, to be blamed; and there is no one, in any real sense, who can help to bear the burden of the blame." In contrast to England, where we blame an anonymous entity 'the Government' if things go wrong, in the United States it is the president who is blamed. A decision of the Supreme Court is regarded as adverse to his policy; a defeat in Congress is a blow to his prestige; the mid-term congressional elections affect his policy, for good or ill. No one thinks of them in terms of their effect upon his cabinet.

Judicial decisions are subject to political pressures – fiating legal translation guarantees a link.

Charles A. Johnson and Bradley C. Canon (professors political science @ Texas A&M and Univ. Kentucky) 1999 Judicial Policies: Implementation and Impact, p. 3-4

Political actors and institutions who follow through on these decisions make the judicial policy. Certainly, the judges who enforced desegregation in southern school districts or busing decisions anywhere were subject to political pressures from a variety of sources. Similar pressures affected school board decisions regarding the role of religion in schools. Even presidential politics may become intertwined with judicial policies, as did Richard Nixon's 1968 "law and order" presidential campaign criticizing the Supreme Court's criminal justice decisions or the explosive issue of abortion in the 1980 presidential election. Like the Congress, the Supreme Court and lower courts must rely on others to translate policy into action. And like the processes of formulating legislative, executive, and judicial policies, the process of translating those decisions into action is often a political one subject to a variety of pressures from a variety of political actors in the system.

President embodies the government – all credit and blame will center on the president.

Bruce Miroff (prof. political science @ SUNY-Albany) 2000 Presidency and the Political System, ed. M. Nelson, p. 304

Spectacle has also been fostered by the president's rise to primacy in the American political system. A political order originally centered on institutions has given way, especially in the public mind, to a political order that centers on the person of the president. Theodore Lowi wrote, "Since the president has become the embodiment of government, it seems perfectly normal for millions upon millions of Americans to concentrate their hopes and fears directly and personally upon him."

Every significant Supreme Court action is perceived – court decisions are a part of a larger battle for political influence.

David M. O'Brien (prof. law @ Univ. Virginia) 2000 Storm Center: The Supreme Court in American Politics, p. xiii

The Supreme Court, Justice Oliver Wendell Holmes observed, is a "storm centre" of political controversy. The Court stands as a temple of law - an arbitrator of political disputes, an authoritative organ of law, and an expression of the American ideal of "a government of laws, not of men." But it remains a fundamentally political institution. Behind the marble fide, the justices compete for influence; the Court itself is locked in a larger struggle for power in society. This book is about the political struggles among the justices and between the Court and rival political forces in the country.

District court links – decisions cost Obama capital

District court links to politics

Ungar 1/25 (Rick Ungar, contributing writer for Forbes, “Court Slaps Down Obama On NLRB Appointments-Decision Could Invalidate Hundreds Of Labor Decision,”

<http://www.forbes.com/sites/rickungar/2013/01/25/court-slaps-down-obama-on-nlr-appointments-decision-could-invalidate-hundreds-of-labor-decisions/>)

The Washington DC Court of Appeals has dealt the Obama administration an embarrassing blow by ruling that the President’s appointment of three members to the National Labor Relations Board was an unconstitutional exercise of presidential power.¶ The matter stems back to January 4, 2012, when President Obama appointed the new NLRB members—along with the appointment of Richard Cordray to head up the Consumer Financial Protection Bureau—while the Senate was away on its Christmas holiday. In making the appointments, the administration took the position that the Senate was in recess—thereby making it proper for the President to exercise his right to make recess appointments that are not subject to Senate confirmation.¶ However, the Court agreed with the argument put forth by a Washington state family owned business seeking to invalidate an NLRB ruling that went against the company. The company argued that, as the Senate was not technically in recess at the time of the appointments, the board had not been legally constituted and that a quorum did not exist. As such, any decision the board reached would be invalid.¶ Here’s how it all went down—¶ Senate Republicans had been working for months to deny Obama the ability to make the three appointments to the NLRB, effectively shutting down the board which Republicans believe favors labor in the disagreements that come before the panel.¶ Knowing the President would take advantage of any Senate recess to appoint his choices to the board through his constitutional power to make recess appointments—thereby putting the NLRB back into action—Republican members of the Senate sought to technically keep the doors open by gaveling sessions in and out every few days, even though there were no senators around and no business was being transacted. By keeping the Senate in “pro forma” session, the result would be to block Obama’s opportunity to make any recess appointments.¶ The President took the view that any effort to ‘technically’ keep the Senate in session was superseded by the fact that the Senate was, in reality, in recess.¶ The three judge Court of Appeals panel, all appointed by Republican presidents, disagreed with the President, holding that “Either the Senate is in session, or it is in the recess. If it has broken for three days within an ongoing session, it is not in ‘the Recess.’”¶ The court additionally held that the president could only fill vacancies with the recess appointment procedure if the openings arise when the Senate is in an official recess, which the court defined as the once-a-year break between sessions of Congress.¶ While the Administration has promised to appeal the decision to the United States Supreme Court, should the ruling be upheld, all decisions reached by the labor board since January, 2012 would be held to be invalid, creating a serious mess for the administration. Additionally, with only one remaining member of the National Labor Relations Board duly appointed and confirmed, the panel’s work would come to a complete halt pending appointment of new board members—appointments that are sure to test the new Senate filibuster rules put into effect this week.¶ Needless to say, Senate Republicans are ecstatic as demonstrated by GOP Minority Leader Mitch McConnell who said in a statement, “The D.C. Circuit Court today reaffirmed that the Constitution is not an

inconvenience but the law of the land.” Additional Republican Senators have demanded that the Obama appointees on the NLRB resign at once, thus putting the board out of business.

Politics Iran -Michigan

1nc Iran Scenario

Obama is walking a fine line now to build support for Iran deal — Dems are on the fence and PC is key

Lillis 7/19, staff writer at The Hill, (Mike, 7/19/15, Iran deal tests Dems' loyalty to Obama, The Hill, <http://thehill.com/policy/international/248371-iran-nuclear-deal-tests-democrat-loyalty-to-obama>)//kap

President Obama's nuclear agreement with Iran is the latest test of the Democrats' loyalty toward their ally in the White House.

Off a contentious trade debate that highlighted Democratic divisions and infuriated Obama's liberal base, even the Democrats most critical of the Iran deal are walking a fine line.

Sen. Bob Menendez (D-N.J.), for instance, has emerged as the leading Democratic critic in the upper chamber, warning that the agreement "legitimizes" Iran's nuclear program and sets the stage for Iran to reap billions of dollars in financial relief it could use to bolster its stock of conventional weapons.

But Menendez has stopped short of saying he'll join Republicans in a vote to disapprove the deal, saying he wants first to examine the agreement more closely, both on the Foreign Relations panel and in briefings with administration officials.

"It's premature for some people to say they're definitely against it and for others to say they're definitely for it," he said. "Let's have the vetting."

The issue is tough for Democrats because it represents Obama's top foreign policy goal in his second term, but is strongly opposed by Israel's government.

The Republicans' near-unanimous objections have further complicated the politics — in that even Democrats wary of the deal might not want a role in helping the GOP kill it.

Rep. Brad Sherman (Calif.) is concerned that the deal sets the stage for Iran to have nuclear weapons capabilities a decade from now, but hasn't signed on to the Republicans' disapproval push.

He says he'd surely vote against a motion of approval if it were to hit the floor, but he remains undecided on the more likely consideration of both a disapproval measure and a vote to override Obama's promised veto of that disapproval.

"It's different," Sherman said.

"A motion of approval would, I think, morally bind this country to accept this deal not only short-term but long-term, and long-term it becomes unenforceable," he explained. "A resolution of disapproval, if it overrides a veto — and those are two separate votes — would create a short-term crisis in our policy toward Iran, with the executive branch pushing in one direction, the congressional branch pushing in the other direction, Europe going in a third

direction, and [it] might deprive us of the short-term benefits of the agreement — the stockpiles and the centrifuge mothballing.”

Republicans are not so indecisive. They wasted no time slamming the agreement with warnings that it will launch a Middle Eastern nuclear arms race while threatening the security of the United States and its allies, particularly Israel.

On Friday, House Republicans introduced their disapproval resolution, backed by more than 170 GOP lawmakers, which is expected to get a vote in September.

“This agreement fails on every level to ensure Iran never acquires a nuclear weapons capability,” Rep. Peter Roskam (R-Ill.), the head of the House Republican Israel Caucus and lead sponsor of the resolution, said in a statement. “The unprecedented outpouring of support for this resolution proves that Congress will not rubber-stamp a deal that severely threatens the United States and our allies by paving Iran’s path to a bomb.”

Still, the reluctance of the Democratic critics to endorse the resolution highlights the tough road ahead for the GOP.

In the Senate, Majority Leader Mitch McConnell (R-Ky.) will need Democratic backers to reach the 60 votes required to defeat a filibuster. And while the House Republicans are expected to pass the disapproval measure through the lower chamber, they’ll face a steep climb winning over the Democratic votes needed to override Obama’s promised veto.

Liberal Democrats, who make up a majority of the Caucus, are already lining up in favor of the agreement. And House Minority Leader Nancy Pelosi (D-Calif.) threw her considerable influence behind the deal Thursday, when she delivered her enthusiastic stamp of approval.

“[It’s] a good product — not only better than the status quo, not only the best possible option, but a strong, effective ... proposal for keeping the peace and stopping the proliferation of weapons of mass destruction,” she said.

Pelosi said she’s “not exactly lobbying” her troops behind the deal, but “made it very clear to them my own standing on this issue and why I think this is a good agreement.”

Rep. Steve Israel (N.Y.), yet another Democrat who’s voicing strong reservations with the deal but hasn’t committed a vote either way, said it’s “too early to say” if Obama would have the Democratic support to sustain a veto of the GOP’s disapproval measure.

“My sense is, based on my conversations with my colleagues on both sides of the aisle, it’s going to be very close in both the House and the Senate,” he told CNN Wednesday. “I believe in both chambers it’s going to come right on the cusp.”

Obama has shown signs that he’s taken a lesson from the trade debate — when many Democrats felt excluded — and is leaving nothing to chance. He sent Vice President Biden to Capitol Hill twice this week to meet privately with House and Senate Democrats to explain the deal and address lawmaker concerns.

There are early signals that the strategy is paying dividends.

“You make friends before you need them. I think the administration is doing it very wisely,” Rep. Bill Pascrell (D-N.J.) said after meeting with Biden. “I disagreed with them on trade. On this, I think they're heading in the right direction.”

Biden, for one, expressed confidence that the accord will survive the congressional gauntlet.

“I think we're going to be OK,” he said as he left the House meeting.

*****Insert appropriate link and internal link story*****

Obama’s political capital is key to sell Congress on the deal and prevent a veto override --- critical to U.S. global leadership

Leverett, 7/13/15 --- professor of International Affairs at Penn State, served for over a decade in the U.S. government as a senior analyst at the CIA, Middle East specialist for the State Department, and as senior director for Middle East affairs at the National Security Council (Larry, “With Historic Iran Nuclear Deal Expected, Can President Obama Sell It to Congress and the Public?” http://www.democracynow.org/2015/7/13/as_historic_iran_nuclear_deal_nears, JMP)

AMY GOODMAN: Speaking on Fox News Sunday, Senate Majority Leader Mitch McConnell suggested the Obama administration will have a difficult time convincing Congress to approve a deal with Iran.

MAJORITY LEADER MITCH McCONNELL: Well, look, we already know that it’s going to leave Iran as a threshold nuclear state. We know that. It appears as if the administration’s approach to this was to reach whatever agreement the Iranians are willing to enter into. So I think it’s going to be a very hard sell, if it’s completed, in Congress.

AMY GOODMAN: The Republican majority is expected to vote against the deal and to try to convince at least 12 Democrats to join their ranks in an attempt to defeat a presidential veto. Flynt Leverett, explain what has to happen in the United States for the U.S. to approve this. What is the voting that will take place?

FLYNT LEVERETT: Yes. Both houses of Congress will have 60 days to review the agreement once it’s finalized. I think it is quite possible, if not likely, that a simple majority of members in each house will vote a so-called resolution of disapproval in regard to the agreement. At that point, President Obama has said that he would veto those resolutions of disapproval. And at this point, the White House seems pretty confident that they have the votes, at least in the Senate, and perhaps in the House, as well, to sustain President Obama’s veto. So, they are confident that if you can get to an agreement here in Vienna, that it will ultimately get through the congressional review process and will go into effect.

But obviously, during the next—you know, the 60 days following a conclusion of an agreement, the Israelis, the Saudis, their friends and allies in the American political system, others who don’t want to see this agreement go forward are going to be working very hard, trying to turn public

opinion against the deal and trying to build congressional support to maximize the vote against the deal.

Public opinion polls would show that Americans are open to supporting this deal, but one of the things I really worry about is that President Obama himself has not really made the strategic case for why doing this deal and for why building a different kind of relationship with Iran is so strongly in America's interest. He either talks about this as a kind of narrow arms control agreement, but Iran is still this very bad actor, or he talks about it in terms of it being an opportunity for Iran to rejoin the international community, as he puts it. This is not the way to sell this deal to Americans. Americans understand that what the United States has been doing in the Middle East for the last decade and a half has actually been profoundly against American interests. It's also been very damaging to Middle Easterners. But it has been profoundly damaging to America's position in this critical part of the world and globally. President Obama has a chance here to begin to turn that around and put U.S. policy toward the Middle East on a more different and more productive trajectory, but he is going to have to make the strategic case—

AMY GOODMAN: Flynt Leverett, we're going to have to—

FLYNT LEVERETT: —spend the political capital necessary to make the strategic case.

AMY GOODMAN: We're going to have to leave it there, but we'll continue to follow this, of course.

Lack of credibility prevents effective multilateralism and causes global hotspot escalation

Coes 11, Visiting Fellow at Harvard University's John F. Kennedy School of Government, degree from Columbia University, received the prestigious Bennett Cerf Memorial Prize (Ben, "The disease of a weak president", The Daily Caller, 9-30-11, <http://dailycaller.com/2011/09/30/the-disease-of-a-weak-president/>)

The disease of a weak president usually begins with the Achilles' heel all politicians are born with — the desire to be popular. It leads to pandering to different audiences, people and countries and creates a sloppy, incoherent set of policies. Ironically, it ultimately results in that very politician losing the trust and respect of friends and foes alike. In the case of Israel, those of us who are strong supporters can at least take comfort in the knowledge that Tel Aviv will do whatever is necessary to protect itself from potential threats from its unfriendly neighbors. While it would be preferable for the Israelis to be able to count on the United States, in both word and deed, the fact is right now they stand alone. Obama and his foreign policy team have undercut the Israelis in a multitude of ways. Despite this, I wouldn't bet against the soldiers of Shin Bet, Shayetet 13 and the Israeli Defense Forces. But Obama's weakness could — in other places — have implications far, far worse than anything that might ultimately occur in Israel. The triangular plot of land that connects Pakistan, India and China is held together with much more fragility and is built upon a truly foreboding foundation of religious hatreds, radicalism, resource envy and nuclear weapons. If you can

only worry about preventing one foreign policy disaster, worry about this one. Here are a few unsettling facts to think about: First, Pakistan and India have fought three wars since the British de-colonized and left the region in 1947. All three wars occurred before the two countries had nuclear weapons. Both countries now possess hundreds of nuclear weapons, enough to wipe each other off the map many times over. Second, Pakistan is 97% Muslim. It is a question of when — not if — Pakistan elects a radical Islamist in the mold of Ayatollah Khomeini as its president. Make no mistake, it will happen, and when it does the world will have a far greater concern than Ali Khamenei or Mahmoud Ahmadinejad and a single nuclear device. Third, China sits at the northern border of both India and Pakistan. China is strategically aligned with Pakistan. Most concerning, China covets India's natural resources. Over the years, it has slowly inched its way into the northern tier of India-controlled Kashmir Territory, appropriating land and resources and drawing little notice from the outside world. In my book, *Coup D'Etat*, I consider this tinderbox of colliding forces in Pakistan, India and China as a thriller writer. But thriller writers have the luxury of solving problems by imagining solutions on the page. In my book, when Pakistan elects a radical Islamist who then starts a war with India and introduces nuclear weapons to the theater, America steps in and removes the Pakistani leader through a coup d'état. I wish it was that simple. The more complicated and difficult truth is that we, as Americans, must take sides. We must be willing to be unpopular in certain places. Most important, we must be ready and willing to threaten our military might on behalf of our allies. And our allies are Israel and India. There are many threats out there — Islamic radicalism, Chinese technology espionage, global debt and half a dozen other things that smarter people than me are no doubt worrying about. But the single greatest threat to America is none of these. The single greatest threat facing America and our allies is a weak U.S. president. It doesn't have to be this way. President Obama could — if he chose — develop a backbone and lead. Alternatively, America could elect a new president. It has to be one or the other. The status quo is simply not an option.

Uniqueness

2NC Uniqueness

Default negative --- our evidence assumes the likely endgame and shifting political momentum

Drew 7/17/15 – regular contributor to The New York Review (Elizabeth, The Iran Deal Goes to Washington, NYR Daily, <http://www.nybooks.com/blogs/nyrblog/2015/jul/17/congress-iran-deal-goes-to-washington/>)/JJ

The first thing to know about all the noise being made in Washington over the nuclear deal with Iran is that there's a lot of play-acting going on. A number of politicians, particularly Democrats, are striking positions to get them past this early period; several significant Democratic Senators simply aren't yet ready to say they're for the deal, though many of them are expected to be. The real question isn't where they are now but where they'll end up. Therefore some statements shouldn't be taken literally. When Ben Cardin of Maryland, the ranking Democrat on the Senate Foreign Relations Committee, said recently that he had questions about the coming deal, some journalists and other observers interpreted this as a sign of trouble; but his statement simply reflected political prudence. To be taken seriously on such a weighty issue, a politician needs to be seen as having carefully considered his or her position.

This may be where the Republicans are making a mistake. Lindsey Graham was caught out by reporters on Tuesday when he condemned the deal and then, in response to their challenges, admitted that he hadn't read the more than one-hundred-page agreement, nor did he know what was in it. House Speaker John Boehner also immediately denounced the deal. Boehner's tack, which others also employ, is to charge that the agreement isn't as tough on Iran as what the president said he would seek. Wisconsin Governor Scott Walker, who officially entered the 2016 presidential race the day before the Iran deal was formally announced, said that it should be abrogated by the next president on day one—which would free Iran to pursue a nuclear weapon and create an unholy mess with our allies. The Republicans' rush to judgment undermines their position.

In fact, knowledgeable analysts say that the final deal fulfills what was outlined in the interim framework agreement announced in April. Jim Walsh, a security and nuclear policy expert at MIT, describes it as "the most intrusive multilateral agreement in nuclear history." According to Walsh, the deal's inclusion of a "snapback" provision—the rapid restoration of sanctions if Iran is caught cheating—is "unprecedented."

Yet I can find no one on the side of the deal who thinks that it will have majority support in either chamber, which means that the president will veto what Congress sends him. Therefore, beneath all the rhetoric, the realists here are looking for one thing: whether there will be enough votes in the Senate or the House—one-third plus one of the members—to uphold that veto. (A veto can be overridden by a two-thirds vote in both chambers.) It's believed that there's a sufficient number of House Democrats who will vote to sustain it. But it's assumed that Senate Majority Leader Mitch McConnell and Boehner will arrange for the Senate to vote before the House does and the deal's supporters fear that if there's a strong vote against it in the Senate the votes in the House to sustain a veto might crumble. A strategist for the pro-deal side told

me, “A number of those House votes on our side are squishy.” So what happens in the Senate is the crucial question.

With a few possible exceptions, the Senate Republicans are being written off as against the deal. But it cannot be assumed that Democrats will feel obliged to vote in favor of what could be the president’s crowning achievement: in 2014 many of them showed themselves capable of keeping their distance from him in an effort to save their own skin. If they think the deal with Iran will make them vulnerable in the next election, they might well vote against it. Their ultimate decision could be no more worldly than that.

I asked a couple of well-informed vote-counters if they thought the president had the thirty-four Senate votes needed to block an override. They both agreed that they’re not yet there, but they expect to be by September. Supporters would of course like to end up with more than thirty-four votes so that it doesn’t look like they exhaustedly dragged a beat-up deal across the finish line.

The two figures to whom the most attention is being paid are Bob Corker, the Republican chairman of the Senate Foreign Relations Committee, and Chuck Schumer, odds on the next Democratic leader in the Senate. Schumer has a history of taking a pro-Israeli government point of view, and his going against the administration on the Iran deal would probably present it with an uphill climb. Corker is in a difficult position: a Tennessean with finely chiseled features, he seemingly wants to play the part of the responsible statesman, following in the footsteps of, say, Richard Lugar, the former Republican Senator from Indiana who was an influential leader on foreign policy. But Corker is consigned to working within a party that is now far more conservative and partisan—and unforgiving of apostates—than it was in Lugar’s day. Some observers believe that Corker might not come out flatly for or against the deal, but might propose some legislative wording or maneuver that would make him not seem a knee-jerk partisan. It’s quite possible that both Corker and Schumer will leave their ultimate positions on the deal unknown for some time.

When great issues are before Congress and the country, public opinion can take big swings. This is why August could be a critical month for the Iran agreement. Because the negotiators didn’t finish before July 9, and because of its month-long recess, Congress has sixty days (instead of thirty) to decide on the deal. With Congress gone and the President usually on vacation for some of the time, August is supposedly a slow news period, which leaves ample room for coverage of local uprisings against members, which can then become contagious. The Clintons’ health care plan took a battering in August of 1994; the Tea Party revolt against President Obama’s health care plan boiled up in August of 2010, and while the plan survived, so did the Tea Party as a force.

To the extent that one can tell at this point, the political winds have been blowing, if softly and unseen, in the direction of those who support an agreement. The mood and tone on Capitol Hill have changed considerably from last winter, when backers of the nuclear negotiations had to mount a major fight to keep Congress from passing a new sanctions bill that would have sunk them. Then the talks went on so long—twenty-two months—that we got used to the spectacle of senior US officials sitting across the table from high-level Iranians. Or the two countries’ respective foreign ministers taking a walk together. This was a long way from George W. Bush’s

putting Iran in the “axis of evil.” But the deal’s supporters are aware that opinion could swing back in the other direction.

As the negotiations went on, one of the opponents’ tactics was to say that Obama (or Kerry) “wants a deal too badly.” This got to the point where some talk show hosts and Republican pols described Obama as “desperate” for a deal. The Republicans are very good at the art of repetition: taking a talking point and saying it over and over and over again until it starts to pass as a fact. They’ve done so well with this that this spring my dentist told me in the strictest secrecy, off the record and all that, that his friend, a neocon Congressman, told him that Kerry wanted a deal too badly.

Obama only has a thin margin for error --- he is spending PC and avoiding any new surprises to ensure passage

French 7/16/15 – Congress reporter for POLITICO (Lauren, Nancy Pelosi voices ‘strong support’ for Iran deal, Politico, <http://www.politico.com/story/2015/07/iran-deal-nancy-pelosi-supports-120224.html>)/JJ

House Democratic leaders are increasingly confident they have the votes necessary to sustain any presidential veto of GOP-backed legislation that would effectively scuttle the Iran nuclear deal.

Despite some lingering skepticism in parts of the caucus, leadership sources pointed to the 152 Democrats already on the record supporting the earlier framework of the nuclear deal as evidence that House Democrats will likely do their part to keep President Barack Obama’s landmark nonproliferation deal alive.

House Minority Leader Nancy Pelosi, who wields significant influence in the caucus, on Thursday announced her “strong support” for the deal.

“A nuclear Iran is unacceptable to the United States, to the world and, in particular, to Israel,” the California Democrat said. The deal is “intensifying our vigilance over every aspect of the entire Iranian nuclear program.”

Keeping House Democrats on board could end up being the easiest sales pitch White House has to make when it comes to Iran.

Congressional Republicans are denouncing the deal — which would stop the growth of Iran’s nuclear facilities while lifting a series of sanctions — as inadequate. Republicans are planning to move ahead with disapproval legislation after a 60-day review period — a measure Obama has already pledged to veto as it would essentially stop the accord from going forward.

That means Obama would need Democrats in both chambers to sustain his veto — or the agreement dies. In the Senate, the White House can lose no more than 12 Democrats from the 46-member caucus.

The numbers in the House are harder to pin down exactly. Despite the support of high-profile members like Pelosi and Illinois Rep. Jan Schakowsky, the margins would be close — mostly because Democrats hold so few seats.

So the White House is doing its best to avoid any surprises this fall, when the disapproval resolution is expected to start moving. Obama has already started aggressively lobbying members — a process that started before the nuclear agreement was even publicly announced.

Obama and Pelosi spoke by phone Monday night and other top Obama administration officials called Democrats who have been active on Iran shortly after the final accord was made public.

The early effort paid off with Pelosi. The California Democrat announced Thursday her “strong support” for the deal — and said she would personally lobby her fellow House Democrats to back it. She’ll join an established pro-deal whip operation in the House that’s run by Schakowsky and Reps. Lloyd Doggett of Texas and David Price of North Carolina.

Schakowsky was among a group of nearly 15 Democratic lawmakers invited to the White House on Thursday for an early morning briefing on the deal. The Jewish lawmakers questioned administration officials about how much money Iran would have access to after sanctions were lifted, the timetables for inspections of Iranian nuclear sites and the details of an arms embargo.

“People felt that the administration was more than willing to spend whatever time is necessary to provide the assurances to the members and they understand that the Jewish members have a particular concern, which is a concern about the security of Israel,” Schakowsky said. “There were reassurances made there too. I think in general the feeling was that not only was that session satisfactory but there is a willingness of the administration to work with us to answer the concerns.”

Obama likely has the votes to sustain a veto – the next two months are uncertain and PC is critical

Bolton 7/19 – The Hill (Alexander, “Dems worry Iran deal may wilt in dog days of August”, The Hill, 7/19/15, <http://thehill.com/homenews/senate/248420-dems-worry-iran-deal-may-wilt-in-dog-days-of-august>, accessed 7/19/15)//RZ

Democratic lawmakers are holding back their support for President Obama’s controversial nuclear deal with Iran, knowing the political dynamic surrounding it could change dramatically in the coming months.

Political firestorms tend to erupt during the long, hot days of August, when lawmakers meet face-to-face with constituents in town-hall meetings that can quickly grow contentious.

Pro-Israel and other political advocacy groups know this and plan to spend tens of millions of dollars over the next two months to build a firestorm of opposition to the deal they believe preserves Iran’s ability to build a nuclear weapon.

A few Democrats, such as Sen. Dianne Feinstein (D-Calif.), have already said they'll vote for the deal when it comes to the Senate floor in September, but others are reserving judgment, knowing the politics of the issue could change dramatically.

"I want to first sit in my little chair in my house, take the agreement, the codicils, the annexes and read them and ponder them and study them. Then I intend to start talking to people and experts, but the first step is to do that," said Sen. Charles Schumer (D-N.Y.), a pivotal swing vote.

Twenty-eight Senate Democrats have not made clear their decisions, according to a whip list compiled by The Hill. Five Democrats have announced their support and 13 are leaning yes.

A senior Democratic aide said memories of recent August recesses turned bad still sting.

"There was ObamaCare in 2009 and the border surge in 2014," the aide said.

Democrats were stunned by the intensity of anger and opposition in response to healthcare negotiations leading up to the passage of the Affordable Care Act when they returned to their home states in August of 2009.

The issue of border security exploded into a political crisis last August when a surge of unaccompanied minors from Honduras, Guatemala and El Salvador dominated the news for weeks.

"I have two fears right now: the sixty-day window, which gives opponents plenty of time to crank up their opposition, and the issue of the lifting of the Iran arms embargo," said Jim Manley, a strategist and former senior aide to Senate Democratic Leader Harry Reid (D-Nev.).

"As someone who had a front-row seat in 2009 when I saw how quickly the Tea Party activists managed to turn debate on ObamaCare on its head, I'm very concerned about something similar happening this time around," he added.

Pro-Israel groups led by the American Israel Public Affairs Committee (AIPAC) plan to spend millions of dollars on a nationwide lobbying campaign.

Citizens for a Nuclear Free Iran, a new group backed by AIPAC, launched a multi-million-dollar nationwide campaign Friday to oppose the nuclear deal.

"We think Democrats should be concerned because the deal increases the chances of war, will spur a nuclear arms race and rewards an Iran with a horrific human rights record," spokesman Patrick Dorton told The Hill.

Opponents will argue the deal does not achieve "anytime, anywhere" inspection, fails to specify to what extent Iran must disclose past work on nuclear weapons and allows it to continue developing intercontinental ballistic missiles.

The battle for influence will focus on a group of about 15 Senate Democrats whom Republicans need to reach the 67-vote threshold to override a veto of a disapproval resolution.

"How's the verification going to work? How can we be assured that Iran sticks to what they've agreed to? How are the sanctions going to snap back into place if they don't?" asked Sen. Jeanne Shaheen (D-N.H.).

Senior congressional aides say there are enough votes this month to sustain President Obama's expected veto of a resolution overturning the deal, but warn the environment could change over the next two months.

"The fact that there's a vote in September makes me worry. If the votes were held now, we'd be fine," a Senate Democratic leadership aide told The Hill on Tuesday.

Democrats, however, say they are more prepared for the lobbying assault than they were six years ago when the vitriolic backlash against ObamaCare caught them flatfooted.

"I think that the opponents are motivated and well-funded and have a lot of passionate supporters to do grassroots type of lobbying. I think supporters of the deal are expecting that and prepared unlike ObamaCare summer, which took a lot of people by surprise," said a Senate Democratic aide.

The Senate Foreign Relations Committee will hold its first hearing on the accord July 23, when Secretary of State John Kerry, Energy Secretary Ernest Moniz and Treasury Secretary Jack Lew are scheduled to testify.

Sen. Ben Cardin (Md.), the senior Democrat on the panel, expects it to hold at least three public hearings over the next three weeks before the recess.

The administration has deployed an intense lobbying campaign led by Vice President Joe Biden in hopes of locking down votes before lawmakers leave town.

"I'm sure the administration is going to be applying pressure for people to support it early to build political momentum," said another Senate Democratic aide.

Deal will pass—rare era of bipartisanship in foreign policy ensures cooperation over passage

Nossel 7/16, executive director of the Pen American Center and a former deputy assistant secretary of state for international organizations at the U.S. State Department, (Suzanne, 7/16/15, The Do-Something Congress, The Hill, <https://foreignpolicy.com/2015/07/16/the-do-something-congress-iran-deal-bipartisanship-obama-republicans/>)/kap

In the hours after President Barack Obama announced that the long-running negotiations over Iran's nuclear program had finally reached an agreement, the Republican attacks landed fast and heavy. Sen. Lindsey Graham (R-S.C.) told Bloomberg that the deal is "akin to declaring war on Sunni Arabs and Israel." Republican presidential hopeful Gov. Scott Walker of Wisconsin said it "will be remembered as one of America's worst diplomatic failures." Jeb Bush lambasted it as "dangerous, deeply flawed, and short-sighted." And Sen. Tom Cotton, (R-Ark.) attacked it on MSNBC's Morning Joe as "a terrible, dangerous mistake" and promised, "The American people are going to repudiate this deal, and I believe Congress will kill the deal."

The hard-fought agreement, which Congress now has 60 days to review and vote on, seems poised to be a death battle in the long-running war between President Obama and his Republican nemeses over the direction of U.S. foreign policy.

Despite a sharp-elbowed China, a flailing counterterrorism strategy, and a Middle East in meltdown, one of the most potent challenges to Obama's foreign policy has originated right in Washington. Pervasive, entrenched, and ideologically grounded partisan polarization has stymied the projection of U.S. power around the world, delayed and thwarted critical decisions, weakened international alliances, and undercut the deterrent effect of U.S. military might. The abandonment of the ideal of a bipartisan foreign policy, the defeat and retirement of centrist Republicans, and the escalation of gamesmanship in the 24-hour online news cycle have diminished the will to compromise and led many policymakers to prioritize political point-scoring at the expense of American global leadership.

Only this time, despite the bombast and chagrin, there's reason to believe that things may play out differently, and that after the early rhetoric clears, Republicans and Democrats will join forces to pass the deal by a comfortable margin.

The last few months have witnessed a tentative, barely perceptible pattern of uncharacteristic compromise across the aisle on a series of high-profile issues of international concern. The granting of Trade Promotion Authority in June, the swift approval of this year's \$612 billion National Defense Authorization Act by a veto-proof majority in the U.S. Senate, passage of the USA Freedom Act mandating reforms to dragnet surveillance, and legislation governing congressional review of a potential nuclear deal with Iran all represent bipartisan breakthroughs on high-profile, contentious issues where common ground was previously elusive. The biggest test of whether the emerging bipartisanship can hold will come in the next 60 days as Congress reviews the president's nuclear agreement, the most controversial foreign-policy initiative of his presidency.

Rather than reflecting a philosophical shift on either side, the surprising emergence of solid bipartisan majorities on a series of contested issues reflect a calculation that is quietly taking hold and may persist through the presidential election on Nov. 8, 2016. Neither Democrats nor Republicans know who will control the White House and Congress 18 months hence. After six and a half years of obstructing the president, Republicans now need to prepare for the possibility that they may be in the Oval Office come January 2017. Overlaying their own personal viewpoints and constituency concerns, Democratic lawmakers face a three-fold imperative: vindicating President Obama's tenure as a success, enabling Hillary Clinton (or any other Democratic heir), and imposing checks on a potential President Bush, Walker, or Trump.

While some Democrats may trust President Obama not to misuse terabyte upon terabyte of Americans' metadata, for example, the prospect of putting that information in the hands of a Walker administration feels different. While the period ahead will be one of pitched partisanship on hot and crowded campaign buses, it may also open a window for bipartisan cooperation in Washington motivated by policymakers seeking to safeguard their interests amid an uncertain election outcome.

Few disagree with the idea of a bipartisan foreign policy in theory. The godfather of bipartisanship in international affairs, former Sen. Arthur Vandenberg (R-Mich.), famously intoned that "we must stop politics at the water's edge," so that "America speaks with maximum authority against those who would divide and conquer us and the free world." While continuing to champion robust debate, Vandenberg sidelined his own staunch isolationism to

join President Harry Truman in thwarting the rise of a remilitarized Germany and Japan, enacting the Marshall Plan, and creating NATO — some of the most enduring foreign-policy accomplishments of the 20th century.

Vandenberg's vision proved enduring but also elusive. While commentators often harken back to bipartisan unity in facing down the Soviet Union under Reagan, rolling back Saddam Hussein in the first Gulf War, stopping the Bosnian genocide, or waging war in Afghanistan after 9/11, the historical record reveals that considerable divisions and a strong doses of partisan invective accompanied all those efforts. Moreover, the flow of such examples has slowed to a trickle in recent years, and the consequences of the drought have been visible and damaging. The successive debt ceiling, government shutdown, and sequestration battles during the Obama administration distracted the White House from foreign-policy matters, spooked global markets, and bred worldwide doubts about whether the United States was capable of governing itself, never mind leading the rest of the world.

More recent examples of partisanship undermining policy interests are many. The recriminations over the attack of the American diplomatic compound in Benghazi in 2012 have demonstrated that, rather than inspiring fortitude, terrorist attacks can now sow domestic divisions. Obama's failed attempt to muster congressional support to defend his red line and punish Syrian President Bashar al-Assad's use of chemical weapons with airstrikes in the summer of 2013 marked a low for U.S. credibility in the Middle East. Two years later, Republican commentators tend to blame Obama's failure to go through with the strikes for almost every bad thing that has befallen the region since. Five years of congressional dithering over reforms negotiated by the Obama administration for the International Monetary Fund led China to circumvent the fund, uniting regional neighbors and key American allies in a new Asian Infrastructure Investment Bank that excludes the United States.

The Senate's own historians have judged the congressional leadership's direct dealings with foreign leaders and public repudiation of the president's foreign policy unprecedented. The Senate's own historians have judged the congressional leadership's direct dealings with foreign leaders and public repudiation of the president's foreign policy unprecedented. House Speaker John Boehner's invitation to Israeli Prime Minister Benjamin Netanyahu to appear before a joint session of Congress in March to assail a potential nuclear deal with Iran put the world on notice that the White House might not be able to deliver American support for a deal. Days later, 47 Republican senators signed an open letter to Iranian leaders proclaiming that they were unlikely to honor any agreement signed by Obama after the end of his term.

And then, tenuously, the tenor shifted. Not knowing who will win the next election, Washington is now operating under a political equivalent of the "veil of ignorance" that philosopher John Rawls first described in his 1971 book, *A Theory of Justice*. Rawls posited that the fairest way to set up rules in a society would be through debate in which participants would not know where they would be situated in a future system governed by the rules they were establishing. For example, if a society was to set precepts governing slavery, those deliberating the terms would do so without knowing whether they would end up slaves or masters in the order they created. Rawls's notion was that regulations established from behind such a veil of ignorance about rule-makers' own individual future roles and status would be fairer than those set by stakeholders

aiming to preserve positions and prerogatives that they know they will enjoy by virtue of their station.

The uncertain outcome of the 2016 election has cast a natural veil of ignorance over the Washington policymaking process: Lawmakers and executive branch officials don't know who will be implementing (or trying to reverse) the decisions they make. As Rawls's predicted, that uncertainty incentivizes a more balanced and, dare I say, enlightened approach to decision-making as policymakers strive to protect their interests under a range of scenarios.

Obama Pushing

Obama is all in to get the Iran deal passed

Carney 7/18, staff writer at The Hill, (Jordain, 7/18/15, Obama's five big arguments on Iran deal, The Hill, [//kap">http://thehill.com/homenews/administration/248387-obamas-five-big-arguments-on-iran-deal\)//kap](http://thehill.com/homenews/administration/248387-obamas-five-big-arguments-on-iran-deal)

The Iran nuclear agreement is complete, but the debate over the deal has just begun.

The White House has launched an aggressive lobbying campaign to sell the accord at home and abroad, where it faces deep skepticism from lawmakers and traditional U.S. allies.

Obama is looking to build enough support in Congress to sustain a veto of any resolution disapproving of the deal.

And he is seeking to reassure Israel and Arab states, who worry the agreement will embolden their top regional rival, Iran.

Obama's in a full-court press now – solves veto-override

AFP 7/16/15 – Agence France-Presse (White House courts Congress on Iran, Democrats skeptical, Global Post, [//JJ">http://www.globalpost.com/article/6617438/2015/07/16/white-house-courts-congress-iran-democrats-skeptical\)//JJ](http://www.globalpost.com/article/6617438/2015/07/16/white-house-courts-congress-iran-democrats-skeptical)

The White House dispatched Vice President Joe Biden to Congress for a second straight day Thursday in a bid to soothe skepticism about the historic nuclear deal with Iran, but Democrats remained wary.

The veteran former senator sought to assuage concerns expressed by some of his onetime colleagues with detailed explanations about the international inspections regime and other controversial elements of the accord.

"He made a good case. He did not launch into a major defense (of the deal), instead he answered questions," Senator Tim Kaine said after Biden met with Democrats on the Senate Foreign Relations Committee.

"He allayed some concerns," Kaine added, while declining to say whether he was committed to supporting the pact.

A day earlier Biden met with Democrats in the House of Representatives on a similar mission.

Republican House Speaker John Boehner reiterated his concerns about the agreement Thursday.

"Given everything I've seen so far, this is a bad deal. It paves the way for a nuclear Iran," he said.

"We're going to fight a bad deal that's wrong for our national security and wrong for the country."

The accord sees Iran's nuclear program curtailed in exchange for an easing of crippling economic sanctions.

Congress has 60 days to review the agreement, and can vote to approve or reject it.

Under legislation passed in May, President Barack Obama is barred from lifting congressional sanctions on Iran during the review period, unless Congress approves the deal during that time.

Many Republicans, including several running for president in 2016, have already expressed opposition to it.

Democrats, while admittedly unsure, are urging colleagues to study the agreement and consider experts' testimony before passing judgment.

Should Congress pass a resolution of disapproval, Obama would veto it.

Two-thirds of lawmakers would be needed to override a presidential veto, and top House Democrat Nancy Pelosi expressed confidence Thursday that her caucus would prevent such an override.

"I'm very optimistic about our ability to support the president," she said.

Another phase in Obama's full-court press begins next week, when Secretary of State John Kerry, who was instrumental in striking this week's agreement with America's historic foe, testifies in the first of several congressional hearings on Iran.

Energy Secretary Ernest Moniz and Treasury Secretary Jack Lew will also testify.

AT: UN Move Blocks Passage

No impact to UN move – it's consistent

Everett and French 7/16/15 – congressional reporters for POLITICO (Burgess and Lauren, Congress balks at Obama's UN move on Iran deal, POLITICO, [//JJ">http://www.politico.com/story/2015/07/congress-responds-to-obamas-un-move-on-iran-deal-120257.html?hp=b1_l2">//JJ](http://www.politico.com/story/2015/07/congress-responds-to-obamas-un-move-on-iran-deal-120257.html?hp=b1_l2)

Meanwhile, Sen. Ted Cruz of Texas, a conservative aspirant for the GOP presidential nomination, announced his intent to delay all State Department nominees and legislation to authorize the agency until Obama tells Cruz that he will block a UN vote.

"It seems your administration intended all along to circumvent this domestic review," Cruz wrote in a letter to the president. "That Samantha Power has already introduced a draft resolution to the Security Council portrays an offensive level of disrespect for the American people and their elected representatives in Congress."

It's unclear how widespread the ramifications of the administration's submission to the U.N. will be. But it doesn't appear to be doing the administration any favors with Cardin, a key swing Democrat that the administration is likely to need on its side, or Corker, the undecided chairman who will lead an aggressive hearing schedule over the next two weeks.

But the popular congressional review law crafted by Cardin and Corker includes no provisions that punish the administration for submitting the deal to the United Nations before Congress votes, leading Republicans like House Majority Leader Kevin McCarthy of California to accuse Obama of violating the "spirit" of the law rather than the law itself.

Other lawmakers shrugged off the dispute. Senate Majority Whip John Cornyn (R-Texas) called it "immaterial" to lawmakers' role in deciding whether or not to lift congressional sanctions, and Sen. Tim Kaine (D-Va.) said it was wholly consistent with the long-debated nuclear review law that states the UN and administration can lift "sanctions that Congress didn't have anything to do with."

"You could certainly argue with the tactic, but it was very plain," Kaine said.

AT: Uniqueness Overwhelms the Link/ AT: Pelosi = Passage

*****note when prepping file --- a version of this card is also in the 2nc uniqueness block**

Obama's margin for error is thin—only aggressive lobbying will ensure passage

French 7/16/15 – Congress reporter for POLITICO (Lauren, Nancy Pelosi voices 'strong support' for Iran deal, Politico, <http://www.politico.com/story/2015/07/iran-deal-nancy-pelosi-supports-120224.html>)/JJ

House Democratic leaders are increasingly confident they have the votes necessary to sustain any presidential veto of GOP-backed legislation that would effectively scuttle the Iran nuclear deal.

Despite some lingering skepticism in parts of the caucus, leadership sources pointed to the 152 Democrats already on the record supporting the earlier framework of the nuclear deal as evidence that House Democrats will likely do their part to keep President Barack Obama's landmark nonproliferation deal alive.

House Minority Leader Nancy Pelosi, who wields significant influence in the caucus, on Thursday announced her "strong support" for the deal.

"A nuclear Iran is unacceptable to the United States, to the world and, in particular, to Israel," the California Democrat said. The deal is "intensifying our vigilance over every aspect of the entire Iranian nuclear program."

Keeping House Democrats on board could end up being the easiest sales pitch White House has to make when it comes to Iran.

Congressional Republicans are denouncing the deal — which would stop the growth of Iran's nuclear facilities while lifting a series of sanctions — as inadequate. Republicans are planning to move ahead with disapproval legislation after a 60-day review period — a measure Obama has already pledged to veto as it would essentially stop the accord from going forward.

That means Obama would need Democrats in both chambers to sustain his veto — or the agreement dies. In the Senate, the White House can lose no more than 12 Democrats from the 46-member caucus.

The numbers in the House are harder to pin down exactly. Despite the support of high-profile members like Pelosi and Illinois Rep. Jan Schakowsky, the margins would be close — mostly because Democrats hold so few seats.

So the White House is doing its best to avoid any surprises this fall, when the disapproval resolution is expected to start moving. Obama has already started aggressively lobbying members — a process that started before the nuclear agreement was even publicly announced.

Obama and Pelosi spoke by phone Monday night and other top Obama administration officials called Democrats who have been active on Iran shortly after the final accord was made public.

The early effort paid off with Pelosi. The California Democrat announced Thursday her “strong support” for the deal — and said she would personally lobby her fellow House Democrats to back it. She’ll join an established pro-deal whip operation in the House that’s run by Schakowsky and Reps. Lloyd Doggett of Texas and David Price of North Carolina.

Schakowsky was among a group of nearly 15 Democratic lawmakers invited to the White House on Thursday for an early morning briefing on the deal. The Jewish lawmakers questioned administration officials about how much money Iran would have access to after sanctions were lifted, the timetables for inspections of Iranian nuclear sites and the details of an arms embargo.

“People felt that the administration was more than willing to spend whatever time is necessary to provide the assurances to the members and they understand that the Jewish members have a particular concern, which is a concern about the security of Israel,” Schakowsky said. “There were reassurances made there too. I think in general the feeling was that not only was that session satisfactory but there is a willingness of the administration to work with us to answer the concerns.”

AT: Thumpers --- Top Level

Nothing thumps—our 1NC Lillis evidence indicates that the Iran deal is Obama’s top priority and that he is pushing it over all other issues.

Iran deal is top of the docket

Byrnes and Kamisar 7/15, staff writer at The Hill, (Jesse and Ben, 7/15/15, Obama defends Iran deal, The Hill, [//kap](http://thehill.com/homenews/administration/248028-obama-defends-iran-deal)

President Obama on Wednesday sought to defend his administration’s nuclear deal with Iran, suggesting it was a historic opportunity that the United States should not pass up.

“It prevents the most serious threat — Iran obtaining a nuclear weapon, which would only make the other problems Iran may cause even worse,” Obama said during a press conference.

“If we don’t choose wisely, I believe future generations will judge us harshly for letting this moment slip away,” Obama said in brief opening remarks.

Obama outlined a litany of arguments for adopting the deal, saying it cuts off Iran’s pathways to a bomb, provides “unprecedented, around-the-clock” international inspections to known sites and the entire supply chain and deters the threat of a nuclear Iran.

Negotiators working for the past two years reached an accord early Tuesday providing sanctions relief for Iran in exchange for a rollback of its nuclear program.

The deal expands the breakout time for Iran to obtain enough material to build a nuclear weapon to one year by reducing the amount of centrifuges and uranium Iran can have, limiting the reactors it can build and adding further restrictions and inspection protocols.

But critics have blasted many parts of the accord, including the intensity of inspections, saying that Iran could have up to 24 days before inspectors are allowed access to undeclared sites.

Obama hit those concerns, pushing back on the idea that the 24-day window is insufficient. He noted that the international community could vote to overrule Iran if it tries to restrict access to undeclared sites, even without the support of Russia or China, countries that have been sympathetic to Iran in the past.

“The nature of nuclear programs and facilities is such — this is something you do not hide in a closet. This is not something that you put on a dolly and wheel off somewhere,” Obama said.

“We don’t need Russia or China in order for us to get that override,” he said. “If they continue to object, we’re in a position to snap back sanctions.”

The deal with Iran, a top priority for Obama in his second term, is being met with deep skepticism from members of Congress and others in the Middle East, particularly Israel.

A significant number of lawmakers have argued that anything short of a complete dismantling of Iran's nuclear program is a failure and question terms that lift arms and ballistic missile embargoes after five and eight years, respectively. That would allow Iran to possess those weapons, despite its stated hostility to Israel, as well as its support for terrorism and other destabilizing forces in the region.

Obama countered that international law has a "number of mechanisms" to prevent illicit arms shipments by Iran and that it will be easier to check Iran's "nefarious" actions if it doesn't have a bomb.

He said he told negotiators they should press for a longer extension of the arms embargo and of ballistic missile prohibitions given concerns Iran can't be trusted. "And we got that," he said.

Congress will have 60 days to review the deal and an additional 12 days to vote on it as part of a law passed earlier this year as a compromise between Congress and the White House.

If Congress can overcome the president's veto, he won't be able to lift all of the country's sanctions against Iran, which could jeopardize the deal. But if Congress fails to scuttle the deal, either through a "no" vote or a decision not to hold a vote, Obama is authorized to move forward and abide by the terms.

AT: Cuba Thumper

Restoration of embassies and relations ensures that Cuba is not a loss anyway

BBC 7/20, the public-service broadcaster of the United Kingdom, headquartered at Broadcasting House in London, (7/20/15, Cuban flag flies in Washington as relations restored, BBC, <http://www.bbc.com/news/world-latin-america-33590417>)/kap

Just after midnight local time, the diplomatic missions of each country became full embassies.

The Cuban flag was raised on Monday at the newly opened embassy in Washington.

"Nothing is more futile than trying to live in the past," said US Secretary of State John Kerry.

"We're taking a historic and long overdue step in the right direction."

Despite the historic shift, both sides admit to lingering difficulties.

There were still "issues that we don't see eye to eye on", a US state department spokesman said.

A flag will not be raised at the American Embassy in Havana until Mr Kerry pays a visit there on 14 August.

Bruno Rodriguez, Cuba's minister of foreign affairs, called for a removal of the 53-year-old US trade embargo and for the US to return Guantanamo Bay to Cuba.

"I will welcome Mr Kerry in a few weeks and continue talks," Mr Rodriguez said.

Outside of the embassy, crowds of people cheered as the Cuban national anthem played and three Cuban soldiers stood at attention while the flag was raised.

Protesters dotted the crowd, and one was removed from the area by police.

Mr Obama's efforts to engage Cuba were partly held back by the country's imprisonment of US Agency for International Development contractor Alan Gross, who was jailed for espionage charges. Secret negotiations led to Mr Gross's release last year.

Restrictions on Americans wanting to travel to Cuba remain in place, as does the wider US trade embargo banning most American companies from doing business in Cuba.

Cuba says the embargo - which it calls a blockade - is hugely damaging to its economy.

President Raul Castro has urged President Barack Obama to lift it, calling it the main stumbling block towards normalisations. But the US Congress would have to vote on the issue.

The two presidents announced the move towards diplomatic ties in December last year.

Conrad Tribble, deputy chief of mission for the US in Havana, tweeted: "Just made the first phone call to State Dept Ops Center from United States Embassy Havana ever. It didn't exist in Jan 1961."

He then shared the US Cuban embassy's new Twitter account, which already has more than 5,000 followers.

Political capital solves a veto-override

Lee et al 7/15/15 – The Wall Street Journal (Carol, Colleen Nelson, Kristina Peterson, Obama Girds for Battle With Congress on Iran Deal, Wall Street Journal, <http://www.wsj.com/articles/obama-girds-for-battle-with-congress-on-iran-deal-1437005023>)//JJ

WASHINGTON—President Barack Obama delivered an unusually animated and sometimes combative defense of the Iran nuclear deal the day after it was reached, girding for a complicated political challenge likely to force him to use his veto to save his crowning foreign-policy achievement.

Lawmakers have 60 days to review the agreement and an option to vote on approving or disapproving it, with opposition to the deal widespread among Republicans who control both houses of Congress. If they vote it down, the deal's survival will hinge on Mr. Obama's ability to secure enough support from his own Democratic Party to prevent a two-thirds majority in each chamber from overriding his promised veto.

Opponents of the deal ramped up their criticism and organization against it on Wednesday.

Mr. Obama, in a 67-minute news conference at the White House, accused opponents—from Israeli leader Benjamin Netanyahu to Republican lawmakers—of pushing political talking points to simply discredit the accord as a bad deal.

“For all the objections of Prime Minister Netanyahu or, for that matter, some of the Republican leadership that’s already spoken, none of them have presented to me or the American people a better alternative,” Mr. Obama said.

“Either the issue of Iran obtaining a nuclear weapon is resolved diplomatically through a negotiation or it’s resolved through force, through war,” he added. “Those are the options.”

The president's aggressive defense of the deal drew quick pushback from Republicans in Congress, where the criticism has largely been twofold: that the agreement won't stop Iran from acquiring a nuclear weapon and that it doesn't address broader concerns about Tehran's behavior in the region. Rep. Lee Zeldin (R., N.Y.) disputed the president's assertion that this is a choice between the accord or war.

“Here's an alternative other than war: A better deal,” Mr. Zeldin said. “For the security of America and the stability of the Middle East, we must pursue a better direction immediately.”

Sen. Marco Rubio, a Florida Republican and 2016 presidential candidate, started an online petition opposing the deal, and the powerful pro-Israel lobby Aipac is calling on lawmakers to vote against it. At the same time, J Street, a liberal pro-Israel group, said Wednesday it will launch a multimillion-dollar effort, including ads in print and broadcast media, to lobby lawmakers to support the deal.

The agreement reached Tuesday in Vienna puts strict limits on Iran's nuclear program for the next decade that are designed to keep Tehran from being at least 12 months away from amassing enough nuclear fuel for a bomb. In exchange, the U.S., the European Union and the United Nations will lift economic sanctions on Iran.

Mr. Obama said he is "not betting on the Republican Party rallying around this agreement," and Vice President Joe Biden met with Democrats on Capitol Hill. Mr. Biden told Democratic lawmakers he was initially skeptical of the deal but is now convinced the agreement, while not perfect, is worth supporting, according to participants.

But even some Democrats expressed concerns about the deal, particularly on the inspections provisions and the decision to lift United Nations embargoes on arms and ballistic missile sales to Iran.

"For most members, including myself, it comes down to verification," said Rep. Ron Kind of Wisconsin, chairman of the New Democrat Coalition, a group of centrist House Democrats. "It comes down to access to the sites, making sure they're not impeded in any way, that we've got unlimited access to where we need to go to make sure Iran is living up to their agreement."

The White House's effort to preserve the deal depends on cohesion among Democrats in the House and persuading wavering Democratic senators to stick with the president. That is because it became clear in the hours after the agreement's unveiling that few, if any, Republicans were likely to support it.

For Mr. Obama, the next best option would be for Democrats to block the Republican-controlled Congress from passing a resolution of disapproval. Such a resolution would likely prompt the agreement's collapse if Congress could override a veto from Mr. Obama.

The debate will apply particular pressure to Democrats with large Jewish constituencies and those who were early advocates of Congress getting the right to review and vote on any final deal. They include Sen. Charles Schumer, a Democrat from New York who is expected to succeed Sen. Harry Reid of Nevada as the Democratic leader, and others both on and off the Foreign Relations Committee.

Holding the line in the House will be a tough task, where legislation can pass on a majority vote. Mr. Obama has better prospects in the Senate, where Republicans hold 54 of the 100 seats and most bills need 60 votes to clear procedural hurdles.

Democrats said they were weighing the risks of spurning a deal painstakingly reached against embracing an agreement with an outcome that is ultimately unclear.

"The risk of voting for it is that if the Iranians cheat and somehow achieve a path to a bomb in spite of the agreement, then you look like you signed on to something that wasn't effective," said Sen. Angus King (I., Maine). Conversely, the risk of rejecting the deal is that it scuttles the international agreement, unraveling the sanctions and leaving Iran's nuclear ambitions unchecked, he said. "There are risks in both directions."

If both chambers were to pass a resolution disapproving the deal, Mr. Obama has said he would veto it. Democratic lawmakers and aides said they thought there would be enough support to sustain the president's veto. It takes a two-thirds majority in each chamber to override a veto.

The president's overarching message was for lawmakers to study and judge the deal on its merits.

"My hope is that everyone in Congress also evaluates this agreement based on the facts—not on politics, not on posturing, not on the fact this is a deal I bring to Congress as opposed to a Republican president," Mr. Obama said.

Some lawmakers called on their colleagues to take a thorough look at the deal before rushing to judgment.

"To denounce an agreement or a deal before the ink is even dry strikes me as an abdication of our responsibility," said Mr. King, a member of the Senate Armed Services and Intelligence committees.

GOP irrelevant – Obama's political capital is key to the necessary democrats on board

Everett 7/15/15 – congressional reporter for Politico (Burgess, White House woos Republicans on Iran, Politico, <http://www.politico.com/story/2015/07/white-house-woos-republicans-on-iran-120181.html>)/JJ

There's ample reason for the White House to engage in the hearing schedule before lawmakers head home for the August recess and begin hearing from constituents. Though President Barack Obama needs a group of centrist House and Senate Democrats to side with him to prevent Congress from blocking the agreement, there is a small number of Republicans who insist they're undecided and open to persuasion by top administration officials.

Congressional Democrats and Obama himself doubt that any Republicans will vote for the deal; their list of potential targets in the Senate is probably limited to the seven Republicans who didn't sign a controversial letter to Iranian leadership in March, criticizing a potential agreement. But the political value of picking up even a single GOP supporter and making the support for the deal "bipartisan" would be enormous for an administration used to partisan wins on health care — and partisan losses on matters like gun control and the minimum wage.

Moderate Republican Sen. Susan Collins said she has questions about lifting the arms embargo and the inspections regime, but she also indicated she could conceivably come around. But first, she's recommending the administration organize a briefing where senators can ask questions until they have no more.

"I have not reached a final decision because I think it's premature to do so prior to the administration giving us a thorough briefing," the senator from Maine said in an interview. "I've told them it should be next week."

Another undecided Republican is Sen. Jeff Flake of Arizona, who said a series of June briefings made him more confident of the international community's ability to monitor Iran's adherence to a deal. But he isn't there yet.

"We've got to do due diligence. I've supported the negotiations, I've always said I would support a good deal and I'm trying to decide if it is," Flake said. "It has to be judged not against the ideal but against the alternative. I'm not rejecting it out of hand, but I approach it skeptically like Chairman Corker."

Corker, Flake and Collins said that the hearing process will be paramount to their ultimate decision whether to support an Iran deal during a resolution of approval or disapproval vote in September. But as Capitol Hill prepares to kick off a 60-day review period ending with a vote on either a resolution of approval or disapproval in September, the White House outreach effort is already underway.

On Wednesday, Vice President Joe Biden met with the House Democratic Caucus for 70 minutes on the deal. Collins has spoken with two Cabinet-level officials and a top official at the White House. Corker has privately discussed the agreement with White House chief of staff Denis McDonough and planned to speak with Moniz, who was heavily involved in negotiations, on Wednesday evening.

Sen. Ron Johnson (R-Wis.), a member of Corker's committee who has been critical of the talks, received a call from U.S. Ambassador to the United Nations Samantha Power shortly after the deal was announced.

Not all senators have received high-level attention. McCain, who called the agreement a "bad deal," said he'd received a phone call from an official at the National Security Council but hadn't returned it.

"I think they had some undersecretary of something call my staff," said Senate Majority Whip John Cornyn (R-Texas), struggling to conjure a name.

Meanwhile, six Democratic senators were invited to the White House on Wednesday night to talk shop.

Though the administration will make some effort woo Republicans, when it comes down to cobbling together enough senators to protect the president from a veto-proof majority in opposition to the deal, it's clear where the White House's money is.

"I'm sure they are spending all their time on what they would perceive to be moderate Democrats," Corker said.

Obama's political capital is key to Iran

Toronto Star 7/14/15 – renowned Canadian newspaper (Obama warns skeptical Congress not to stand in way of landmark Iran nuclear deal, The Hamilton Spectator, Lexis)//JJ

WASHINGTON President Barack Obama heralded a historic nuclear agreement with Iran Tuesday as an opportunity for the longtime foes to move in a "new direction," while sharply warning the U.S. Congress that it would be irresponsible to block the accord.

"No deal means a greater chance of more war in the Middle East," Obama said in early morning remarks from the White House.

Obama, accompanied by Vice-President Joe Biden, spoke shortly after negotiators in Vienna announced the landmark deal aimed at curbing Iran's nuclear program for more than a decade in exchange for billions of dollars in international sanctions relief. The president said the agreement, hammered out through nearly two years of negotiations, would cut off all of Iran's pathways to a bomb and give the international community unprecedented access to the country's nuclear facilities.

"This deal is not built on trust," Obama said. "It is built on verification."

For Obama, the accord marks the fulfillment of one of his top foreign policy goals and will be cast by the White House as a validation of the president's focus on seeking resolutions through diplomacy. The president staked enormous political capital on the diplomatic pursuit with Iran, deeply straining relations with Israel and sparking outrage from some congressional lawmakers.

It will likely be well after Obama has left the White House before it is known whether the deal succeeds in preventing Iran from building a bomb. Critics say Iran cannot be trusted even with the lower levels of nuclear technology it will be allowed to retain under the terms of the agreement.

With the deal between the world powers now finalized, Congress has 60 days to assess the accord and decide whether to pursue legislation imposing new sanctions on Iran or prevent Obama from suspending existing ones. Obama called congressional leaders Monday night to alert them that a deal was at hand.

In his remarks Tuesday, the president renewed his vow to veto any such legislation and urged lawmakers to consider the repercussions of their actions. He painted a grim scenario in which the rest of the world struck its own nuclear deals with Iran, leaving the U.S. isolated. And without the limitations and verifications included in the deal announced Tuesday, Obama said he or a future U.S. president would be more likely to face a decision about using U.S. military action to prevent Iran from building a bomb.

In addition to his calls with congressional lawmakers, administration officials said Obama was likely to speak Tuesday with Israeli Prime Minister Benjamin Netanyahu, Saudi Arabia's King Salman, and European leaders.

Obama acknowledged Tuesday that the U.S. and Iran remain at odds over many issues, including Tehran's support for terrorism in the Middle East and its detention of several American citizens. Still, he suggested a breakthrough on the nuclear issue could pave the way for a broader shift in relations between the U.S. and Iran.

"This deal offers an opportunity to move in a new direction," Obama said. "We should seize it."

Political capital is key – there's an administration full-court press

Pecquet 7/19/15 – congressional reporter for Al Monitor (Julian, Kerry begins Iran deal sales push on Capitol Hill, Congressional Pulse, Al Monitor, <http://www.al-monitor.com/pulse/originals/2015/07/iran-nuclear-congress-kerry-zarif-putin-unsc.html>)//JJ

US Secretary of State John Kerry begins the sales push of his life this week as he tries to stop Congress from wrecking what supporters hail as his crowning diplomatic achievement.

America's top diplomat is expected to defend the Iran deal before both the House and Senate foreign affairs panels, although neither hearing has been publicly notified yet. Expect him to be flanked by Treasury Secretary Jack Lew and Energy Secretary Ernest Moniz, who has emerged as one of the most trusted administration sources on Capitol Hill, to provide the details.

Wendy Sherman, the undersecretary of state for political affairs who was a key player in the negotiations, will also be back on Capitol Hill selling the deal as soon as July 20, according to the State Department's daily schedule. The appearances are part of a full-court press by the administration that includes personal lobbying on Capitol Hill by Vice President Joe Biden and an upcoming visit to Israel and Saudi Arabia by Defense Secretary Ash Carter.

The administration has its work cut out as it tries to prevent the House and Senate from assembling a veto-proof majority over the next 60 days for legislation that would bar the White House from lifting statutory sanctions on Iran and potentially kill the deal before it even goes into effect. Already, more than 170 House members have signed on to a resolution of disapproval from the co-chairman of the House Republican Israel Caucus, Rep. Peter Roskam, R-Ill., while the pro-Israel lobby American Israel Public Affairs Committee is now officially urging lawmakers to reject the deal.

Impacts

Proliferation Impact

Deal's key to the overall credibility of the entire nonprolif regime

Jeffrey M. Kaplow 15, Fellow with the University of California's Institute on Global Conflict and Cooperation and a Ph.D. candidate in political science at the University of California, San Diego, 2015, "The Days After a Deal with Iran: Implications for the Nuclear Nonproliferation Regime," http://www.rand.org/content/dam/rand/pubs/perspectives/PE100/PE135/RAND_PE135.pdf

A nuclear **agreement** with Iran would represent a success for the nonproliferation regime in several ways. Most fundamentally, a deal **offers** at least the prospect of a sustainable **resolution of the Iranian nuclear issue**. **It is hard to overstate the importance of this result for the regime as a whole**. The **Iran** nuclear case has been the central preoccupation of U.S. nonproliferation policy—and that of multilateral bodies such as the IAEA Board of Governors—for more than a decade. The unyielding emphasis on Iran has been central to U.S. efforts to mobilize broad support, first for a finding of noncompliance with the NPT, and later for robust international sanctions. But this strategy **has sidelined** discussion of **other important nonproliferation issues, including** efforts to bolster **nuclear security**, promote universal adherence to the Additional Protocol, **and find a solution to** the loophole of **NPT withdrawal**. And it has complicated relations with some states, particularly those that have been active in the Non-Aligned Movement, as the United States exerted pressure on them to support its votes on Iran in the IAEA and the United Nations.⁴ **A deal with Iran could** thus lead to a welcome turning of the page in U.S. nonproliferation efforts. Of course, a deal does not make the Iran nuclear issue go away, but it may help to put it on a more stable and sustainable footing. If Iran's nuclear program is no longer seen as a crisis, it may **allow the United States and like-minded states to act more strategically on other** important **nonproliferation issues**.[¶] A nuclear **agreement** with Iran also **would increase the credibility of the regime as a whole**. A deal **sends an important message** to the international community: **The nonproliferation regime** may be messy, but it **works**. Some in the nonproliferation community have spent the last several years sounding the alarm about the decline of the regime.⁵ These analysts argue that the continued pursuit of nuclear weapons by state parties to the NPT makes others more likely to violate the regime in the future. Behind this argument is the idea that **dwindling confidence in the ability of the nonproliferation regime to constrain state behavior threatens to undermine** states' **collective commitment** to forswear nuclear weapons—the fundamental agreement underlying the NPT. If a country sees others cheating and getting away with it, that country may feel less secure and thus more likely to cheat as well. By limiting Iranian nuclear ambitions, then, a deal has the potential to eliminate—or at least make less salient—a prominent example of a country that appears to be cheating and getting away with it.[¶] This effect is amplified because there are other states in the region that have felt threatened by an unconstrained Iranian nuclear effort.⁶ A deal will not completely reassure Iran's neighbors, given that their concerns over Iran run much deeper than its nuclear program and even the best deal cannot eliminate the possibility of future noncompliance, but it is possible that a nuclear agreement will calm regional nerves somewhat. If Saudi Arabia, the United Arab Emirates (UAE), and others in the region come to see a diminished threat from Iran as a consequence of a deal, **this** potentially **affects the strength of the regime as a whole**.⁷ The international community may perceive Iran's neighbors as less likely to pursue their own nuclear

weapons programs or adopt nuclear hedging strategies, which makes other countries less likely to consider weapons themselves, and so on.⁸ The ripple effects of this signal extend well beyond Iran's neighbors, to reach potential proliferants globally.

Credible regime prevents global nuclear escalation involving every major power

The Economist 3-7, "The new nuclear age," 2015,

<http://www.economist.com/news/leaders/21645729-quarter-century-after-end-cold-war-world-faces-growing-threat-nuclear>

A quarter of a century after the end of the cold war, the world faces a growing threat of nuclear conflict. Within the next few weeks, after years of stalling and evasion, Iran may at last agree to curb its nuclear programme. In exchange for relief from sanctions it will accept, in principle, that it should allow intrusive inspections and limit how much uranium will cascade through its centrifuges. After 2025 Iran will gradually be allowed to expand its efforts. It insists these are peaceful, but the world is convinced they are designed to produce a nuclear weapon. In a barnstorming speech to America's Congress on March 3rd, Binyamin Netanyahu, Israel's prime minister, fulminated against the prospect of such a deal (see article). Because it is temporary and leaves much of the Iranian programme intact, he said, it merely "paves Iran's path to the bomb". Determined and malevolent, a nuclear Iran would put the world under the shadow of nuclear war. Mr Netanyahu is wrong about the deal. It is the best on offer and much better than no deal at all, which would lead to stalemate, cheating and, eventually, the dash to the very bomb he fears. But he is right to worry about nuclear war—and not just because of Iran. Twenty-five years after the Soviet collapse, the world is entering a new nuclear age. Nuclear strategy has become a cockpit of rogue regimes and regional foes jostling with the five original nuclear-weapons powers (America, Britain, France, China and Russia), whose own dealings are infected by suspicion and rivalry. Thanks in part to Mr Netanyahu's efforts, Iran commands worldwide attention. Unfortunately, the rest of the nuclear-weapons agenda is bedevilled by complacency and neglect. The fallout from Prague After the end of the cold war the world clutched at the idea that nuclear annihilation was off the table. When Barack Obama, speaking in Prague in 2009, backed the aim to rid the world of nuclear weapons, he was treated not as a peacenik but as a statesman. Today his ambition seems a fantasy. Although the world continues to comfort itself with the thought that mutually assured destruction is unlikely, the risk that somebody somewhere will use a nuclear weapon is growing apace. Every nuclear power is spending lavishly to upgrade its atomic arsenal (see article). Russia's defence budget has grown by over 50% since 2007, and fully a third of it is devoted to nuclear weapons: twice the share of, say, France. China, long a nuclear minnow, is adding to its stocks and investing heavily in submarines and mobile missile batteries. Pakistan is amassing dozens of battlefield nukes to make up for its inferiority to India in conventional forces. North Korea is thought to be capable of adding a warhead a year to its stock of around ten, and is working on missiles that can strike the west coast of the United States. Even the Nobel peace laureate in the White House has asked Congress for almost \$350 billion to undertake a decade-long programme of modernisation of America's arsenal. New actors with more versatile weapons have turned nuclear doctrine into guesswork. Even during the cold war, despite all that game theory and brainpower, the Soviet Union and America frequently misread what the other was up to. India and Pakistan, with little experience and less contact, have virtually nothing to guide them in a

crisis but mistrust and paranoia. If weapons proliferate in the Middle East, as Iran and then Saudi Arabia and possibly Egypt join Israel in the ranks of nuclear powers, each will have to manage a bewildering four-dimensional stand-off. ¶ Worst of all is the instability. During much of the cold war the two superpowers, anxious to avoid Armageddon, were willing to tolerate the status quo. Today the ground is shifting under everyone's feet. ¶ Some countries want nuclear weapons to prop up a tottering state. Pakistan insists its weapons are safe, but the outside world cannot shake the fear that they may fall into the hands of Islamist terrorists, or even religious zealots within its own armed forces. When history catches up with North Korea's Kim dynasty, as sooner or later it must, nobody knows what will happen to its nukes—whether they might be inherited, sold, eliminated or, in a last futile gesture, detonated. ¶ Others want nuclear weapons not to freeze the status quo, but to change it. Russia has started to wield nuclear threats as an offensive weapon in its strategy of intimidation. Its military exercises routinely stage dummy nuclear attacks on such capitals as Warsaw and Stockholm. Mr Putin's speeches contain veiled nuclear threats. Dmitry Kiselev, one of the Kremlin's mouthpieces, has declared with relish that Russian nuclear forces could turn America into "radioactive ash". ¶ Just rhetoric, you may say. But the murder of Boris Nemtsov, an opposition leader, on the Kremlin's doorstep on February 27th was only the latest sign that Mr Putin's Russia is heading into the geopolitical badlands (see article). Resentful, nationalistic and violent, it wants to rewrite the Western norms that underpin the status quo. First in Georgia and now in Ukraine, Russia has shown it will escalate to extremes to assert its hold over its neighbours and convince the West that intervention is pointless. Even if Mr Putin is bluffing about nuclear weapons (and there is no reason to think he is), any nationalist leader who comes after him could be even more dangerous. ¶ Towards midnight ¶ China poses a more distant threat, but an unignorable one. Although Sino-American relations hardly look like the cold war, China seems destined to challenge the United States for supremacy in large parts of Asia; its military spending is growing by 10% or more a year. Nuclear expansion is designed to give China a chance to retaliate using a "second strike", should America attempt to destroy its arsenal. Yet the two barely talk about nuclear contingencies—and a crisis over, say, Taiwan could escalate alarmingly. In addition Japan, seeing China's conventional military strength, may feel it can no longer rely on America for protection. If so, Japan and South Korea could go for the bomb—creating, with North Korea, another petrifying regional stand-off. ¶ What to do? The most urgent need is to revitalise nuclear diplomacy. One priority is to defend the nuclear Non-Proliferation Treaty, which slows the spread of weapons by reassuring countries that their neighbours are not developing nukes. It was essential that Iran stayed in the treaty (unlike North Korea, which left). The danger is that, like Iran, signatories will see enrichment and reprocessing as preparation for a bomb of their own—leading their neighbours to enrich in turn. That calls for a collective effort to discourage enrichment and reprocessing, and for America to shore up its allies' confidence. ¶ You don't have to like the other side to get things done. Arms control became a vital part of Soviet-American relations. So it could between China and America, and between America and Putin's Russia. Foes such as India and Pakistan can foster stability simply by talking. The worst time to get to know your adversary is during a stand-off. ¶ In 1960 Albert Wohlstetter, an American nuclear strategist, wrote that, "We must contemplate some extremely unpleasant possibilities, just because we want to avoid them." So too today, the essential first step in confronting the growing nuclear threat is to stare it full in the face.

--- XT: Rejection Collapse Deal

Deal makes it impossible for Iran to covertly engage in nuclear activity

Devaney 7/19, staff writer at The Hill, (Tim, 7/19/15, Obama aide: 'Virtually impossible' for Iran to hide nuclear activity, The Hill, <http://thehill.com/policy/international/248444-energy-secretary-virtually-impossible-for-iran-to-hide-nuclear-activity>)/kap

One of the Obama administration's top negotiators is defending the controversial Iranian nuclear agreement from critics who say it does not go far enough to protect the West.

Under the agreement, it will be “virtually impossible” for Iran to cover up nuclear activity, Energy Secretary Ernest Moniz says.

“We are better off forever in terms of Iranian nuclear activity under this agreement than we would be without it,” Moniz told “Fox News Sunday.”

Moniz made the rounds on the Sunday morning political talk shows.

Critics have suggested the nuclear agreement gives Iran too much leeway to secretly build a weapon. One of the chief concerns is that investigators could be forced to wait 24 days before inspecting covert sites suspected of nuclear activity. Some fear this will give Iran enough time to hide any traces of such activity.

“You wouldn’t tell a drug dealers, give them a 24-day notice,” Israeli Prime Minister Benjamin Netanyahu, one of the deal’s biggest critics, said. “They’d just flush the drugs down the toilet.”

But Moniz said three weeks is a “reasonable” amount of time to inspect for nuclear activity.

Flushing things down the toilet “is not so simple with nuclear materials,” he told ABC’s “This Week.” “We are very confident in our ability to detect the vestiges of any nuclear work beyond 24 days.”

Eventually, inspectors would collect environmental samples.

“When environmental samples are taken and nuclear activity has taken place, it is virtually impossible to clean up that place,” Moniz said on “Fox News Sunday.” You can paint the floors, you can do what you want. We feel very confident that we would find evidence of nuclear activity.”

The key for western negotiators was “getting a defined timeframe” so Iran couldn’t hold inspectors out for more than 24 days, Moniz said on CBS’s “Face the Nation.”

“The part of the agreement that is absolutely critical is the one that prevents them from having a weapon,” Moniz told CNN’s “State of the Union.”

“There’s a lot more you need for a nuclear explosive and if you look at the agreement you will see an indefinite commitment to not pursuing four major activities needed for a weapon,” he added on Fox.

Moniz said the Obama administration is simply trying to clean up a mess left by the Bush administration.

"The issue of Iran having a nuclear program was already established in the previous administration," Moniz said. "Clearly, what we have done is we have dramatically limited and constrained the program."

The deal solves Iranian nuclear buildup—sanctions were ineffective

Hensch 7/15, staff writer at The Hill, (Mark, 7/15/15, Energy secretary: Sanctions weren't stopping Iran, The Hill, [//kap">http://thehill.com/blogs/blog-briefing-room/news/247969-energy-secretary-sanctions-werent-stopping-iran\)//kap](http://thehill.com/blogs/blog-briefing-room/news/247969-energy-secretary-sanctions-werent-stopping-iran)

Secretary of Energy Ernest Moniz said on Wednesday that economic sanctions were not preventing Iran's nuclear arms research.

The Iran deal negotiator added that placing greater restrictions on Iran's atomic energy capabilities better prevents its acquisition of nuclear weapons instead.

"First of all, we all know that sanctions were effective in bringing Iran to the table," Moniz said on CNN's "New Day."

"It did not stop them from pursuing a nuclear weapons program quite aggressively," he added.

The Obama administration announced a landmark deal on Tuesday restricting Iran's nuclear capabilities in exchange for economic sanctions relief.

Moniz argued on Wednesday that the agreement's details will keep Tehran in check for years to come.

"This is a long-term deal that has various phases," he said.

"There are extremely serious constraints on what Iran can do in a nuclear capacity," Moniz said.

"Make no mistake about it – this agreement has stronger restrictions on Iran than would be in place without it," he added.

Moniz also rebuked criticisms that the sanctions relief Iran is receiving would help its military and terrorism sponsorship.

"It was clear from the beginning these were negotiations about the nuclear issue," he said of international talks started 20 months ago.

"Our deal is not based on an assumption about how they will spend these funds," Moniz said of money Iran received from the lifting of sanctions.

"Clearly, we all hope this could lead to different behavior," he added.

Moniz additionally said that Secretary of State John Kerry had repeatedly sought the release of four Americans currently languishing in Iranian custody.

“Secretary of Kerry never failed to raise the issue of the Americans unjustly held in Iran,” he said. “These issues – a whole range of them – were there.”

Instability Impact

Iran deal is key to de-escalate tensions in the Middle East

Toosi and Nather 4/6/15 - Nahal Toosi is a foreign affairs correspondent at POLITICO. She joined POLITICO from The Associated Press, where she reported from and/or served as an editor in New York, Islamabad, Kabul and London. She was one of the first foreign correspondents to reach Abbottabad, Pakistan, after the killing of Osama bin Laden. David Nather is an experienced congressional journalist and author, with two books on the new health care law. (Nahal and David, "The Iran deal's cheerleaders Outside groups applaud agreement after briefings by White House", Politico, April 6, 2015, <http://www.politico.com/story/2015/04/iran-nuclear-experts-endorse-iran-deal-116697.html//DM>)

The White House is getting a cheering section going for the Iran deal — thanks to a ramped-up series of briefings to allies who can make the case from the outside. Diplomats, scientists and other activists began making their own arguments Monday for the preliminary nuclear deal reached last week, releasing statements that praised the agreement and urged lawmakers to give negotiators a chance to pursue a comprehensive accord. Story Continued Below The words of support came as President Barack Obama and his aides are trying to sell the framework deal to members of Congress, especially senators from both parties who have said they want to have some oversight of the agreement. Activists in favor of the deal say they're hoping congressional leaders will hold off on legislation that they fear could scuttle future talks. White House aides say they're reaching out to allies and experts to explain the deal — not to tell them what to say, but to make sure they're fully informed about the agreement. "I think it's fair to say we are engaging all manner of outside experts and groups so that they understand the deal and our view of different legislation, and they make their own determinations about how to be heard," said one White House official. King Salman is shown. | Getty In one statement, a group of 30 U.S. specialists on nuclear security endorsed the framework as a "vitaly important step forward" that will "strengthen U.S. security and that of our partners in the region." "We urge policymakers in key capitals to support the deal and the steps necessary to ensure timely implementation and rigorous compliance with the agreement," wrote the signatories, who included Robert Einhorn, a former State Department official and past negotiator on the Iran talks and former U.S. Ambassador to the U.N. Thomas R. Pickering. Pickering and Einhorn also were among 50 former diplomats, defense officials and political leaders who signed a separate statement which, in more cautious language, urged Congress to stay patient and "to take no action that would impede further progress or undermine the American negotiators' efforts." The statement was released by The Iran Project, an independent organization that tries to improve U.S.-Iran ties. Rushed action by Congress could derail negotiations, "creating the perception that the U.S. is responsible for the collapse of the agreement; unraveling international cooperation on sanctions; and triggering the unfreezing of Iran's nuclear program and the rapid ramping up of Iranian nuclear capacity," declares the statement, which listed former Secretary of State Madeleine Albright and former GOP Sen. Richard Lugar, a foreign policy mentor to Obama when he was a senator, among its signers. "Such a situation could enhance the possibility of war." Benjamin Netanyahu is pictured. | AP Photo Daryl Kimball, executive director of the Arms Control Association, said "there is loose coordination going on

between organizations and experts who support the framework deal.” But he and others insisted they are not taking marching orders from the West Wing. “They don’t give us talking points. They do convey key messages,” said Jamal Abdi of the National Iranian American Council. Even with the low-pressure sales pitch, the White House engagement with such groups has intensified since the deal was announced Thursday. “There has been a pretty good amount of outreach in the last few days,” said one member of an outside group that has participated in the briefings. “There’s a big difference between inviting one person from each organization to the White House ... [and] going out and actually saying, ‘I want to brief everyone on your team. When’s the best time for you?’” The administration hasn’t tried to give these groups talking points, the person said, and there haven’t been any big secrets that have been revealed at the briefings, but they’ve served their purpose by getting the groups interested in speaking out. “It’s less about asking us to do anything and more that the discussion around the table turns to, ‘We need to really hammer home on this point.’”

Energy Secretary Dr. Ernest Moniz, right, accompanied by White House Press secretary Josh Earnest, speaks to the media during the daily briefing in the Brady Press Briefing Room of the White House in Washington, Monday, April 6, 2015. President Barack Obama is casting the Iran talks as part of a broader foreign policy doctrine that sees American power as a safeguard that gives him the ability to take calculated risks. (AP Photo/Pablo Martinez Monsivais)

The Obama administration kept up its own public sales efforts on Monday, with Energy Secretary Ernest Moniz giving a detailed presentation during the daily briefing at the White House and Deputy National Security Adviser Ben Rhodes making a round of TV appearances, from CNN to Israeli TV. Meanwhile, the advocacy group Win Without War posted a collection of endorsements from a wide variety of groups – including The Atlantic Council, the Ploughshares Fund, the National Security Network, the Center for a New American Security, and the United Methodist Church’s General Board of Church and Society. It also urged supporters to “Call Congress and Seal the Deal.” The group posted the Capitol switchboard telephone number and provided a script for would-be callers that describes the agreement as “the best way to cut off Iran’s pathways to a nuclear weapon.” It also suggests that they say they oppose a bill by Sens. Bob Corker and Bob Menendez that would require congressional approval for the deal. Also on Monday, NIAC, the Arab American Institute and J Street, a left-leaning Jewish organization, released a statement arguing that the preliminary deal “may provide an important first step towards deescalating regional tensions and pave the way for resolving the many conflicts that still persist.” And Samuel R. Berger, a former national security adviser to President Bill Clinton, wrote an opinion piece for POLITICO Magazine that dismissed the idea that there’s a stronger deal to be had: “There is no second bite at this apple. This is a good deal. We should not be distracted by talk of a better one.”

US Secretary of State John Kerry, centre watches on a tablet as the US President Barack Obama addresses the US, at the Swiss Federal Institute of Technology, or Ecole Polytechnique Federale De Lausanne, in Lausanne, Switzerland, Thursday, April 2, 2015, after Iran nuclear program talks finished with extended sessions. The United States, Iran and five other world powers on Thursday announced an understanding outlining limits on Iran's nuclear program so it cannot lead to atomic weapons, directing negotiators toward achieving a comprehensive agreement within three months. (AP Photo/Brendan Smialowski, Pool)

The framework has received heavy criticism from Israeli Prime Minister Benjamin Netanyahu, who views Iran as a mortal threat to his country and says the deal does not do enough to prevent Tehran from developing a nuclear weapon.

Organizations such as the American Israel Public Affairs Committee have blasted the framework agreement. According to media reports, Israeli officials have been circulating a list of questions aimed at U.S.-led negotiators involved in the talks with Iran. The queries reportedly include "What message does it send when it gives such far-reaching concessions to a regime that for years has defied [U.N. Security Council] resolutions?" and "Will the deal not encourage nuclear proliferation in the Middle East?" Kate Gould, a lobbyist with the Friends Committee on National Legislation, a Quaker organization, said she's been hearing more interest from faith-based groups who want to get involved in the wake of the announcement last week. She said the primary focus now was on preventing the Corker legislation from coming to a vote. "I'm sure there's going to be a much bigger push coming up," she said.

Impact is nuclear war

Hobson, professor of physics at University of Arkansas, 3/31/2015

(Art, "Commentary: Absent agreement, Iran, U.S., Israel on path to war,"

<http://www.nwaonline.com/news/2015/mar/31/commentary-absent-agreement-iran-u-s-is/?opinion>)

One of history's greatest tragedies was the nuclear bomb dropped on Hiroshima, Japan, in August 1945, a calamity compounded three days later by a second bomb exploded over Nagasaki. It was, like most tragedy, made virtually inevitable by foregoing blunders: revengeful treatment of Germany following World War I, U.S. failure to join World War II when it began in 1939, thoughtless responses to Japanese aggression in Asia during the 1930s, and the Japanese attack on Pearl Harbor in 1941. Since 1945, nuclear weapons have remained humankind's greatest single immediate threat.

If we don't want to repeat the mistakes that led to Hiroshima, we had better treat the Iranian nuclear question rationally, realistically, and without childish bravado. U.S. Sen. Tom Cotton's recent letter to Iran, and Prime Minister Netanyahu's recent speech to Congress, were not serious. Netanyahu argued that a nuclear agreement with Iran would be a bad deal and should be rejected. Cotton suggested to Iran that a future U.S. president could revoke the agreement.

None of the agreement's opponents appear to have thought through the consequences of following their leads. Iran, having no further reason for restraint and every incentive for aggression, will move quickly toward a bomb; Israel will urge action to prevent a bomb and will pressure the U.S. to join it in threatening Iran; and we could easily be drawn into war -- a blunder that would dwarf even our foolish adventure into Iraq beginning in 2003.

The realistic fact is that, absent an agreement, the United States, Iran and Israel are on the road to war, possibly a nuclear war.

Turns case – Terrorism

Iran deal solves middle-Eastern warfare, spreads democracy, and eliminates ISIS and radicalism in the middle east

Parsi 6/30/15 - Trita Parsi is the founder and current president of the National Iranian American Council, author of Treacherous Alliance and A Single Roll of the Dice. (Trita, "Iran's nuclear talks: Five reasons why a deal would be good for the U.S.", CNN, June 30, 2015, <http://www.cnn.com/2015/06/30/opinions/iran-nuclear-talks-parsi//DM>)

(CNN)The criticism of the pending nuclear deal between Iran and world powers is intensifying. Opponents of the deal will spend millions of dollars on ads pushing the U.S. public and Congress to kill the deal in the next few days. But while a fortune already has been spent on nit-picking the ongoing talks, virtually nothing has been invested in developing an alternative, viable solution to limit Iran's nuclear activities. The reality is that the opponents of the deal don't have a solution, they only have criticism. And for many, the real value of the nuclear deal has been lost amid the barrage of condemnation surrounding the talks. Americans doubt talks will prevent Iranian nuclear weapon It's worthwhile to remind ourselves why this deal is so important -- and why it would be a strategic mistake of Iraq War proportions to let this opportunity slip out of our hands. Preventing the bomb ... The two first objectives the deal would achieve are paramount: firstly, it will prevent an Iranian nuclear bomb; secondly, it will prevent a disastrous war with Iran. The limitations and inspections regime the deal would impose on the Iranian nuclear program will make it virtually impossible for Tehran to build a bomb. Were it to choose to go down that path, it would get caught almost instantaneously thanks to the new high-tech inspection instruments that will be installed at Iranian nuclear facilities. In addition, if evidence arises that Iran has begun nuclear activities at undeclared sites, then Iran will be obliged to provide access to those sites as well. No other option comes even close to this deal when it comes to closing off all of Iran's paths to a bomb. Military action in particular is far inferior -- and far more risky. ... And a disastrous war Moreover, the deal will prevent a war with Iran -- particularly important given that the absence of a solution to the nuclear standoff has caused the U.S. and Iran to gravitate towards a military confrontation. If the talks fail -- or are undermined -- Iran's nuclear program would unshackle, enabling Tehran to inch closer to a weapons option. That in turn, would increase the risk of an Israeli or American attack on Iranian targets, even though bombing the country's nuclear facilities would at best only slow the program a few years. The Iranians would hit back and soon enough, and the U.S. would be embroiled in yet another war in the Middle East with no end in sight. No wonder the Iran deal has broad support among the U.S. public. Unleashing Iran's moderates Third, the deal will help unleash Iran's vibrant, young (the median age is 28!) and moderate society, which is continuously pushing Iran in a democratic direction. The deal enjoys solid support among the Iranian public as well as among Iranian civil society leaders, partly because they believe the deal "would enable political and cultural reforms." America benefits if the democratic aspirations of the Iranian people are increasingly met, because a more democratic Iran is a more moderate Iran. What's the deal with the Iran nuclear negotiations? This is particularly important at a time when the violent winds of religious radicalism are ravaging the Middle East and beyond. America

is in desperate need of an injection of political moderation in the region. An Iran that moves towards democracy could provide that. A boost in the fight against ISIS Fourth, ISIS and other jihadist groups threaten both Iran and the U.S. Yet coordination and collaboration between the two against these violent terrorist organizations has been minimal because neither side has the political ability to expand coordination until the nuclear dispute has been settled first. A well-placed Iranian source told me recently that in a post-deal environment, Iran is ready to put in 40,000-60,000 ground troops to eliminate ISIS over the next three years. Ideally, the U.S. would provide air support, he explained. The source made clear the commitment would not be a quid pro quo to get a nuclear deal. Iran nuclear talks: 'Security of the world is at stake' If true, this would be the first commitment of ground troops by any state in the region to take on ISIS. But even short of this, Iran has already provided more support in the fight against ISIS than any of America's actual allies. There is near-consensus that airstrikes alone will not defeat ISIS. Ground troops are needed, but who will provide them? The American public is certainly not in the mood for putting more troops on the ground in Iraq. The Iraqi army has proven desperately inadequate. The nuclear deal may help square this circle. Deal gives America more options Last but not least, the nuclear deal can help provide America with more options in the region in the sense that it reduces America's reliance on authoritarian Arab states such as Saudi Arabia -- which, despite being a key U.S. ally, has played a central role in spreading Islamic radicalism and jihadism. As Jeremy Shapiro and Richard Sokolsky recently pointed out, the Iran deal is not about getting into bed with Tehran. But it can be used to get out of bed with the Saudis. And with that, America's hands will be freer to truly deal with and defeat the threat of Islamic radicalism fomented by the Salafists in the Saudi kingdom. U.S., allies and Iran plan to miss June 30th nuclear talks deadline Former Chairman of the Joint Chiefs of Staff Admiral Mike Mullen put it best: "We need to re-examine all of the relationships we enjoy in the region, relationships primarily with Sunni-dominated nations. Detente with Iran might better balance our efforts across the sectarian divide." In the coming weeks, emotions will run high in the debate over the Iran deal. It will be critical to distinguish between the minutia and the truly essential. At historic moments like this, it is the bigger picture that counts.

Turns Case – Democracy

Iran deal paves the way for democratization

Hashemi 6/28/15 - PhD, University of Toronto MA, Norman Paterson School of International Affairs, Carleton University BA (Honors), University of Western Ontario. (Nader, "HOW A NUCLEAR DEAL HELPS DEMOCRACY IN IRAN", The Cairo Review of Global Affairs, June 18, 2015, <http://www.aucegypt.edu/GAPP/Cairoreview/Pages/articleDetails.aspx?aid=835//DM>)

Most of the debate in the West on the Iran nuclear deal has focused on questions related to Western security interests in the Middle East. Will a deal ultimately prevent Iran from obtaining a nuclear weapon? Will it significantly inhibit a nuclear arms race in the region? How will Israel and the Gulf Cooperation Countries be affected, and to what extent will Iran be able to expand its regional influence after the lifting of sanctions? Almost ignored in this discussion, however, are the effects that a nuclear accord might have on internal Iranian politics and society. Specifically, how might a final nuclear agreement between Iran and the West influence the prospects for democracy and democratization within the Islamic Republic? June 2009 is a key reference point in the struggle for democracy within Iran. Fearing a return of the reformists to power, the Iranian regime falsified the presidential election results that would have removed Mahmoud Ahmadinejad from the presidency. As a result, a nonviolent mini-revolt known as the Green Movement demanded a vote recount, greater political transparency, and more broadly the democratization of Iran. Protests rocked the country for six months before they were violently suppressed. According to the Commander of the Islamic Revolutionary Guard Corps, the Green Movement posed a greater threat to the internal stability of the Islamic Republic than the eight-year Iran-Iraq war. As a result of this event, Iran's post-revolutionary social contract lay in tatters. Until this point, Iran's clerical leaders were able to carefully manage public demands for political change and factional rivalry via an electoral process that though never "free" was perceived to be "fair," in the sense that the integrity of the ballot box was guaranteed. After the stolen election of 2009 and the ensuing crackdown, this consensus no longer existed. The base of support of the Islamic Republic narrowed considerably as a deep crisis of political legitimacy set in. Six years have passed, however, since this critical moment in Iran's post-revolutionary history. While the legacy of the Green Movement continues to haunt the Islamic Republic, in recent years a set of political developments, at the international, regional, and domestic levels, have coalesced to limit the prospects for political change and to bolster authoritarianism in Iran. Collectively, these developments have closed the door for democratization in the short term. If the social and political conditions that produced them were to change, however, these doors to democratization could be reopened. At the international level, Iran's dispute with the Permanent Member of the United Nations Security Council and Germany (P5+1) has negatively affected the prospects for democracy in several ways. The broad sanctions placed on Iran have had a greater impact on ordinary Iranians than they have had on the regime. In particular, civil society and the middle class, which forms the core support base for the democratic opposition, have borne the brunt of Iran's collapsing economy. Rather than focus on political organizing, a focus on simple survival has taken priority. It is precisely for this reason that some of the most vociferous defenders of a nuclear deal with the West are Iranian civil society and human rights activists. Secondly, Iran's ruling oligarchy has successfully deployed a nationalist narrative to

justify its nuclear policy internally. Tensions with the West are portrayed through the long history of foreign intervention in Iran. Iranians have been told by their rulers that once again Western powers are bullying Iran, threatening to bomb them, and applying a double standard in attempting to dictate Iran's internal energy policy. These arguments have resonated across the ideological spectrum. Today many secular Iranians who wouldn't ordinarily support the Islamic Republic, make an exception when comes the nuclear impasse with the West for reasons of national pride. Thus, by casting itself as the defender of national sovereignty, Iran's leadership has benefited from the nuclear standoff with the West. In the aftermath of a nuclear agreement, the manipulation of this issue to boost the regime's legitimacy will be a far more difficult task. This point has been indirectly acknowledged by the editor of Shargh, a leading reformist newspaper, who has noted that if "there's less tension internationally, there'll be more stability internally," implying that a nuclear deal would help create better social conditions for democratization. A set of regional events has also indirectly bolstered authoritarianism in Iran. The post-Arab Spring regional chaos, marked by sectarianism, the rise of the Islamic State in Iraq and Syria, the spread of salafi-jihadism, and the collapse of Libya, Syria, Iraq, and now Yemen, have scared Iranians away from demanding political change. As one Iranian blogger has noted "people now think twice about taking action to change the system because they know change might result in a disaster." These regional events have reinforced a preexisting Iranian disdain for violence and revolutionary change. Iranian political culture has been deeply scarred by the upheavals of the 1979 revolution, the bloody Iran-Iraq war and the post-September 11 chaos that engulfed neighboring Iraq and Afghanistan in the aftermath of the American occupations. Prominent reformist journalist and Green Movement supporter Saeed Leylaz, who was sentenced to prison after the 2009 events, aptly summarizes how recent regional chaos has reduced demands for political change. Reflecting the new temper among Iranian democrats, he now takes the position that "if we want to emphasize our own points of view over those of our competitors within the system, the result will be another Syria." All of this has shaped domestic Iranian politics in negative ways for democratization. In 2015, several trends are now discernible. The first trend is unrelenting state repression. The crackdown that followed Green Movement protests has been ongoing and arguably the level of suppression is greater today that it was in 2009. The hardline-controlled Iranian judiciary continues to hand out heavy sentences to civil society activists, censorship and executions are at record levels, and women and minorities are subject to ongoing harassment, marginalization, and discrimination. In a recent press conference that coincided with the second anniversary of his election, President Rowhani admitted that since coming to power there has been "little opening" for advancing his campaign promise to increase social and political freedoms. He blamed right wing "pressure groups" for this, while reminding his supporters to be patient because "changes cannot take place overnight." The second trend pertains to the ongoing and deepening crisis of legitimacy facing the Islamic Republic. This is the Iranian regime's Achilles Heel. While foreign crises help direct attention away from it, this dominant feature of Iranian politics fundamentally shapes state-society relations today. Evidence of this legitimation crisis is abundant. For example, in February, the Iranian judiciary suddenly banned Iranian media from publishing comments by or images of former reformist President Mohammad Khatami. Why a two-time president, who occupied the second highest office in the country for eight years, suddenly posed a threat to political order is a revealing question. Part of the answer lies in the fact that as a reformist

politician and Green Movement supporter, Khatami remains a popular and influential figure. With parliamentary elections scheduled for 2016, Iran's clerical elite are starting to panic. There is great fear that the control of the parliament could be lost to reformist parties. In fact, Ali Saeedi, Supreme Leader Ali Khamenei's special representative to the Iranian Revolutionary Guard Corps, openly acknowledged this fear in a recent speech. Likewise, the head of the powerful Guardian Council, Ahmad Jannati, went a step further and announced that when it comes the ideological screening of candidates for parliament "those who have a (ideological) background that is unknown and after investigation this still remains unclear, the Guardian Council does not have the right to approve them." In other words, there is an assumption that every Iranian citizen is guilty (of regime disloyalty) until proven innocent. At the level of society, there is irrefutable evidence of Iranians displaying behaviors and pursuing lifestyles that explicitly reject that values and norms of the Islamic Republic. Widespread secularization exists, especially among young people and among the sizeable urban and middle classes. This is most visible in terms of avoiding the key Islamic rituals of prayer and fasting. The Ministry of Health recently announced that 150 alcohol treatment centers would be opening in Iran in response to a growing societal epidemic. This is noteworthy because the Islamic Republic officially bans the production, sale and consumption of alcohol. After the 1979 revolution, there was a major attempt to construct a new Iranian Muslim citizen that rejected Western and secular values. The colossal failure of this project is hard to miss. Even the supreme leader has publicly acknowledged that the Islamic Republic faces a crisis of legitimacy. During the last presidential election, fearing a low voter turnout, he appealed to Iranians to turn up at the ballot box including those who "for whatever reason [do] not support the regime of the Islamic Republic." He instead appealed to their sense of (secular) nationalism arguing that a high voter turnout would send a strong message to Iran's enemies. In a more recent speech on the anniversary of the death of Ayatollah Khomeini, the supreme leader expressed a fear of liberal values penetrating Iran. He specifically chastised those who were distorting Khomeini's legacy by claiming he was "liberal-minded, which under no conditions existed in his political, intellectual and cultural behavior." A nuclear deal could help put Iran back on the road to democratization. One of the most controversial aspects of the tentative agreement is the sunset clause. This is the provision that states that for fifteen years Iran will have a limited nuclear program under strict international inspection but after this time period, these restrictions will be lifted. Western critics have pointed to this clause to argue that this "paves Iran's path to the bomb"—all the country has to do is wait out the clock. Ignored in this debate, however, is that in the coming fifteen years, the Islamic Republic will face increasing challenges from within society that will affect its future political stability and possibly its political trajectory. The biggest challenge will be the likely death of the supreme leader, who turns 76 in July. Given the enormous power his office wields and the fact there is no senior cleric with sufficient political and religious authority that can replace him, the inevitable departure of Ali Khamenei will produce an enormous internal crisis for Islamic Republic. When this will happen and how it might play out is unknown, but Khamenei's passing will create a unique crisis of governance that democratic forces will be able to exploit. Thus, over the medium term, Iran's democratic prospects seem brighter. Not only is there a long tradition of democratic activism stretching back to over one hundred years, but the preconditions for democracy that social scientists generally agree upon, already exist in Iran. To wit: high levels of socio-economic modernization (literacy, mass communications, and a

modern economy), a suitable class structure (the existence of a sizeable middle class), and a proper political culture (norms, habits, and values that are democracy-enhancing). Equally important are the demographic numbers that are favorable to democratization. Specifically, young people now constitute the majority of Iran's population. They are highly educated, globally connected, politically secular and deeply alienated from Islamist rule, and what's more, they desire substantive gradual, non-violent political change.

Turns case – Heg

Turns case---tanks US foreign policy influence writ large

Bruno, 15 [Alessandro Bruno, Will Iran and the West get a Nowruz Nuclear Deal?, March 22, 2015, <http://www.geopoliticalmonitor.com/will-iran-and-the-west-get-a-nowruz-nuclear-deal/>]

Both Rouhani and Obama are at a crossroads and both are having to gamble in a challenge unlike any other in the past few decades. The challenge is as much a part of the negotiation process itself as in dealing with the many domestic and regional obstacles. Prime Minister Benjamin Netanyahu delivered a dramatic speech to convince a Republican and almost treasonous Congress, considering the affront on President Obama's authority, to prevent in any way an American understanding with the Iranians. In short, the head of a foreign government, just days ahead of an election at home – which he would win – has launched a new challenge to the American president on his home turf. Such an unprecedented event has proven to be very disruptive in relations between Washington and Tel Aviv. It may backfire on Netanyahu, who will now start his fourth term as prime minister with a decidedly unfriendly White House, which has nothing to lose. President Obama may well be tempted to secure an agreement with Iran even faster than before, conceding Iran what it wants most, which is an immediate halt to the sanctions.

Rouhani cannot sign anything without a clear commitment on this point. Such is the mandate he has from Supreme Leader Ali Khamenei, the regime hardliners, the Revolutionary Guards or Pasdaran, the conservative clergy but also, and more importantly, all moderate forces as well, especially those that led the 'green' revolt of 2009. Moderates and pragmatists agree on this point. The Iranian regime, while religious in inspiration, is also highly nationalistic, which is what has kept Iranians remarkably united in the face of severe hardships from war to embargo. No Iranian, whether he identifies with Khamenei or the greens or the left wing Tudeh, would accept a humiliating arrangement. For his part, President **Obama has staked his political and historical legacy on a deal** with Iran; **it is too late for him to withdraw without losing face and credibility** – **which would be very damaging to the United States and its ability to influence international events far beyond the Middle East from Bogota to Beijing.** Iran has much to lose as it is engaged addressing problems in Iraq and Syria, and in Iran itself it is balancing the internal economic situation with oil prices continuing to fall and world reserves increasing.

Turns Case – US-European Relations

The deal boosts US-European relations despite Israel's anger

Fabian 7/14, staff writer at The Hill, (Jordan, 7/14/15, Obama discusses Iran nuke deal with Netanyahu, Obama discusses Iran nuke deal with Netanyahu, The Hill, [//kap">http://thehill.com/homenews/administration/247852-obama-discusses-iran-nuke-deal-with-netanyahu\)//kap](http://thehill.com/homenews/administration/247852-obama-discusses-iran-nuke-deal-with-netanyahu)

President Obama on Tuesday phoned Israeli Prime Minister Benjamin Netanyahu to discuss the nuclear agreement with Iran.

Obama told Netanyahu that the deal “will verifiably prevent Iran from obtaining a nuclear weapon while ensuring the peaceful nature of Iran’s nuclear program going forward,” according to a White House statement.

He argued the deal would benefit Israel’s security by cutting of Teheran’s path to a nuclear bomb, but said the agreement “will not diminish our concerns regarding Iran's support for terrorism and threats toward Israel.”

The deal places limits on Teheran’s nuclear program for at least a decade in exchange for lifting billions of dollars worth of international sanctions.

Netanyahu has been one of Obama’s staunchest critics for brokering an agreement to curb Iran’s nuclear program.

On Thursday, the Israeli leader called the agreement “a historic mistake for the entire world.”

“In every area that was supposed to prevent Iran from gaining the capacity to arm itself with nuclear weapons, far-reaching concessions were made,” he added. “In addition, Iran will receive hundreds of billions of dollars which it can use as a means to fuel its terror machine, its aggression and its expansionism in the Middle East and around the world.”

Speaking in the East Room of the White House earlier Tuesday, Obama addressed concerns long held by Netanyahu and others in Israel.

He said he shares Israel’s concerns about Iran’s threats against the Jewish state and its sponsorship of groups, such as Hamas and Hezbollah, which have launched attacks against Israel.

“But that is precisely why we are taking this step -- because an Iran armed with a nuclear weapon would be far more destabilizing and far more dangerous to our friends and to the world,” Obama said.

Obama also phoned European heads of state involved in brokering the nuclear agreement with Iran.

Obama made separate calls to British Prime Minister David Cameron, French President Francois Hollande, German Chancellor Angela Merkel, and European foreign policy chief Federica Mogherini soon after the deal was finalized on Tuesday morning.

The leaders praised the deal as a “historic solution that will verifiably prevent Iran from obtaining a nuclear weapon by cutting off all of the potential pathways to a bomb while ensuring the peaceful nature of Iran’s nuclear program going forward,” the White House said in a statement.

The leaders pledged to maintain close coordination as the deal is implemented.

In addition to the European powers, the U.S. was joined in the negotiations by Russia and China. The White House has not yet said if Obama has spoken to Russian President Vladimir Putin or Chinese President Xi Jinping.

Deal is popular among European nations

Devaney 7/19, staff writer at The Hill, (Tim, 7/19/15, British PM: Threat of nuclear-armed Iran now off the table, The Hill, [//kap">http://thehill.com/policy/international/248452-british-pm-threat-of-nuclear-armed-iran-now-off-the-table">//kap](http://thehill.com/policy/international/248452-british-pm-threat-of-nuclear-armed-iran-now-off-the-table)

British Prime Minister David Cameron defended the Iranian nuclear agreement on Sunday as the “toughest” deal within reach and assured the public that western nations are safer now because of it.

“The threat of a nuclear-armed Iran that is now off the table, and that’s a success,” Cameron told NBC’s “Meet the Press.”

“Of course, there will be those who complain about details of the deal,” added Cameron, whose nation took part in the negotiations with Iran. “But fundamentally, this is the toughest set of proposals put in place, and verifications put in place, and inspections put in place that I think we’ve seen in any of these negotiations.”

Critics have suggested the agreement lets Iran off the hook and makes it easier for Tehran to develop a nuclear weapon.

But Cameron disputed these claims.

“This deal says it’s never acceptable for Iran to have a nuclear weapon,” Cameron said.

“It’s so much better than the alternative,” he added. “If there wasn’t a deal, I think we would face an Iran with a nuclear weapon. That would have given a terrible choice to the west of allow that to happen or taking military action.

AT: US not key to deal

U.S. compliance is key to overall effectiveness of the deal – backing out would prompt Iran to respond in kind.

CBS 7/17 ("Iran deal set to become international law", 7/17/2015, CBS news, <http://www.cbsnews.com/news/un-security-council-vote-iran-nuclear-deal-resolution-us-congress-objections/>, accessed 7/19/15)//RZ

With all five veto-wielding permanent members of the Security Council involved in the marathon Iran negotiations, the resolution's adoption Monday was almost certain.

The resolution implements an intricate deal that places restrictions on Iran's nuclear program while allowing relief from sanctions that the country's leaders say have hurt its economy.

Monday's vote will come despite calls from some U.S. lawmakers to delay Security Council approval until Congress reviews the deal.

CBS News foreign affairs analyst Pamela Falk says the resolution will make the Iran nuclear deal international law, but will delay its official implementation for 90 days, to allow for the U.S. Congress' consideration.

Falk explained that while Congress cannot block the implementation of the deal, if the legislative body votes against it and has enough votes to override a promised veto from President Obama, it is not clear what would happen next.

A U.S. official told CBS News that American law doesn't "trump" U.N. resolutions, but if Congress were to vote against the measure -- and garner enough votes to override a presidential veto -- lawmakers could stop U.S. sanctions being lifted, which could prompt Iran to declare the U.S. as non-compliant with the terms of the deal and to back out.

If U.S. lawmakers were to decide after Monday's vote that they wanted changes to the terms of the agreement, it would essentially be too late, because it would require the Security Council to propose a new resolution -- and there would likely be little appetite for such deliberations among the other negotiating partners.

The chairman of the Senate's foreign relations committee, Bob Corker, on Thursday wrote a letter to President Obama saying, "We urge you to postpone the vote at the United Nations until after Congress considers this agreement."

But the chief U.S. negotiator in the Iran talks, Wendy Sherman, rejected that idea Thursday.

She told reporters: "It would have been a little difficult when all of the (countries negotiating with Iran) wanted to go to the United Nations to get an endorsement of this, since it is a product of the United Nations process, for us to say, 'Well, excuse me, the world, you should wait for the United States Congress.'"

Sherman said the council resolution allows the "time and space" for a congressional review before the measure actually takes effect.

AT: Next President Rescinds Deal

Next prez can't rescind it – this card is awesome

Pace 7/18/15 – AP White House Correspondent (Julie, Scuttling Iran deal might not be easy for next president, Seattle PI, <http://www.seattlepi.com/news/texas/article/Scuttling-Iran-deal-might-not-be-easy-for-next-6392212.php>)//JJ

Unhappy with President Barack Obama's nuclear deal with Iran? Republicans running for the White House are vowing to rescind the agreement, some on their first day in office.

But it may not be that easy.

If Iran lives up to its obligations, a new president could face big obstacles in turning that campaign promise into U.S. policy. Among them: resistance from longtime American allies, an unraveling of the carefully crafted international sanctions, and damage to U.S. standing with the rest of the world, according to foreign policy experts.

"The president does not have infinite ability to get other countries to go along with them," said Jon Alterman, director of the Middle East program at the Center for Strategic and International Studies. "One of the consequences is the United States would be increasingly isolated at a time when Iran is increasingly integrated with the rest of the world."

Both Obama and Republicans know firsthand the difficulties of dismantling major policies, a task that only gets harder the longer a policy has been in place.

After more than six years in office, Obama has failed to achieve his promise to shutter the Guantanamo Bay prison, despite signing an executive order authorizing its closure on his first day in office. And more than five years after Obama's health care overhaul became law, Republicans have been unable to find a legal or legislative means for repealing the sweeping measure.

While some elements of the nuclear accord don't go into effect immediately, the centerpiece of the agreement is expected to be implemented quickly. If Iran curbs its nuclear program as promised, it will receive billions of dollars in relief from international sanctions.

To Republican presidential candidates, rolling back that quid pro quo would be a top priority if they were to win the White House.

Wisconsin Gov. Scott Walker says he would "terminate the bad deal with Iran on day one" and work to persuade allies to reinstate economic sanctions lifted under the deal. Former Texas Gov. Rick Perry concurred, saying one of his first actions in office would be to "invalidate the president's Iran agreement."

Jeb Bush, the former Florida governor, said that while he would consult with allies about the deal on his first day in office, he was inclined to "move toward the abrogation of it." Florida Sen. Marco Rubio told The Associated Press he would withdraw from a deal even if allies objected.

The next president has no legal obligation to implement the nuclear agreement, which is a political document, not a binding treaty.

But if there's no sign Iran is cheating, it's unlikely the European allies, who spent nearly two years negotiating alongside the U.S., would be compelled to walk away and reinstate sanctions. And it's nearly impossible to imagine Russia and China, which partnered with the U.S, Britain, France and Germany in the talks, following a GOP president's lead.

"Shattering something like this with the British and the French and the Germans — that has consequences," said Ilan Goldenberg, a senior fellow at the Center for a New American Security and former Obama State Department official. "A new president isn't going to want to lead off like that."

To be sure, a U.S. president with a friendly Congress could unilaterally reinstate American sanctions on Iran. But the economic impact would be far less if other countries didn't follow Washington's lead.

Beyond Europe's interests, the White House says U.S. partners in Asia, including Japan and South Korea, will also likely have boosted their financial ties and oil purchases with Iran by the time a new president takes office in January 2017.

AT: Iran Circumvents the Deal

Deal will successfully prevent Iran from building nukes—this evidence assumes every scenario for attempted circumvention

Acton 7/16, staff writer at Foreign Policy, (James, 7/16/15, Iran Ain't Gonna Sneak Out Under This Deal, Foreign Policy, <https://foreignpolicy.com/2015/07/16/iran-aint-gonna-sneak-out-under-this-deal-verification-inspections/>)//kap

About a decade ago, I started my nuclear policy career at a small British NGO that focuses on verification. My career choice turned out to be a mixed blessing for my social life. Saying that I worked on nuclear weapons was a great icebreaker at parties, but the ensuing conversations would go downhill rapidly after I mentioned the “V” word. For reasons inexplicable to me back then, my fellow partygoers just weren’t that interested in finding out how to determine whether states are abiding by their nuclear treaty commitments.

Over the next few months, I expect to have many conversations with officials, analysts, journalists about the Joint Comprehensive Plan of Action — better known as the JCPOA or the Iran deal. These conversations will be quite different from those at London parties 10 years ago; today, all my interlocutors will profess a deep and profound belief in the importance of verification. But, when I start to dig into the details of how the International Atomic Energy Agency will assess Iranian compliance, I’ll see that glazed look again ...

Nonetheless, where verification is concerned, the details do matter, and we really should be debating the finer points of the Iran deal’s verification provisions. (See: Annex I, Sections L, M, N, O, P, Q, and R — yes, it’s that detailed.) In assessing whether these arrangements are “good enough,” the best place to start is with the following question: If Iran decided to cheat, how would it go about doing so?

Iran’s leadership would have three options, and in deciding between them, it would presumably choose the pathway that maximized its chances of success.

First, Iran could overtly renounce all its nonproliferation commitments, chuck out international inspectors, and build the bomb loudly and proudly. The Nuclear Non-Proliferation Treaty contains a clause that allows states to withdraw under “extraordinary” circumstances, and even though the JCPOA doesn’t have any such provision, there can be no certainty that Iran won’t abrogate it anyway. No verification system can prevent this scenario, but what almost certainly can deter it is the threat of American weaponry hitting Iran before Ayatollah Ali Khamenei can say, “Death to.”

The second, more likely scenario would be for Iran to use its declared nuclear materials and facilities for bomb-building: the much-discussed “breakout scenario.” Many of the Iran deal’s limits are intended to make breakout much more time-consuming than it would currently be — and that’s a good thing. Ultimately, however, breakout still isn’t all that likely. Declared facilities are subject to International Atomic Energy Agency (IAEA) monitoring. As a result, Iran understands it would almost certainly be caught quickly if it attempted breakout.

Iran's third option would be to build a secret parallel nuclear program dedicated to military purposes — sneak-out. Detecting small clandestine enrichment plants is difficult, and Tehran might view sneak-out as its most attractive option. Indeed, Iran has tried to sneak out before. Repeatedly. It failed to declare three out of the four facilities in which it has enriched uranium (the Kalaye Electric Company, the Fordow Fuel Enrichment Plant near Qom, and the Pilot Fuel Enrichment Plant at Natanz) in accordance with IAEA rules.

“Anytime, anywhere” access is often advocated as the solution to detecting secret facilities — in fact, U.S. Secretary of Energy Ernest Moniz, an MIT physicist and one of the U.S. negotiators, said back in April that the United States expected it. The Iran deal doesn't provide for it, however, as critics, including Sen. Tom Cotton, have noted (rather gleefully, at that).

So, what access provisions does the deal contain?

It does allow the IAEA to go anywhere — including military sites — if there is evidence of undeclared facilities hosting nuclear activities. But, if Iran declined to grant access, a complicated dispute-resolution negotiation process would ensue under which Iran would have to negotiate first with the IAEA and then with the Joint Commission created to oversee implementation of the deal. This process could take up to 24 days. (On day 25, if Iran still refused access, it would be in noncompliance with the agreement, and sanctions could be reintroduced.)

Fortunately for the JCPOA, the refrain of an “anytime, anywhere” access may make for a great sound bite, but its utility is overstated by Cotton and other critics of the agreement. An access delay — even one of 24 days — wouldn't make any material difference to the IAEA's ability to detect undeclared nuclear activities.

When IAEA inspectors search for undeclared nuclear activities, they look for tiny traces of nuclear material on surfaces. Fortunately for them, nuclear material lingers. And, modern detection technology is so amazingly effective that minuscule traces of nuclear material can be detected years after nuclear activities took place. Countries have tried to sanitize facilities completely to remove every last trace of nuclear material. Iran did so at the Kalaye Electric Company after its secret nuclear program was revealed in 2002. Syria tried the same thing in 2007 after Israel bombed its plutonium-production reactor at al-Kibar. In both cases, the IAEA still managed to detect nuclear material. Those findings were critical to persuading the organization's governing body to make a formal finding of noncompliance against both Iran and Syria.

Perhaps Iran has learned from its past mistakes and could do a better job of cleaning up nuclear material in the future and keeping its program secret. But, what's clear is that perfect cleanup — if it were possible — would take many months. After just 24 days, the IAEA would have little difficulty detecting the residue from undeclared nuclear activities.

So, here's the bottom line: The Iran deal doesn't provide for anytime, anywhere access, but it does facilitate timely access anywhere — and that's what needed for effective verification.

But wait, as they say on QVC, there's more!

Not only is anytime, anywhere access not necessary, but it's also not sufficient. In other words, its inclusion might have placated (a few) critics, but it would not be enough, by itself, for effective verification. After all, it would be physically impossible for the IAEA to inspect every building where Iran could conceivably be hiding clandestine nuclear activities.

What the IAEA actually needs is some preliminary evidence about where a secret nuclear facility might be lurking. The much-discussed but little-understood Additional Protocol was developed precisely for that purpose, and the JCPOA obliges Iran to accept it, first voluntarily and subsequently on a legally binding basis. But, the JCPOA goes beyond the Additional Protocol in two innovative and important ways.

First, IAEA monitoring will be extended to declared yellowcake (the precursor material to the feedstock for enrichment) and to declared centrifuge components. This measure will deter Iran from diverting this material and equipment to a secret program. Iran could, of course, try to acquire yellowcake or centrifuge components secretly instead — but doing so would create more opportunities for detection.

Second, the deal also creates a “Procurement Working Group” to oversee the import of all equipment and material that either is used or could be used for nuclear purposes. The intelligence communities of the United States and its friends spend considerable resources monitoring Iranian imports. If they discover that Iran has obtained any items that should have been declared but weren't, they will have acquired clear evidence of secret nuclear activities in Iran. They could hand this evidence to the IAEA, which could conduct inspections to investigate further.

All in all, therefore, the JCPOA provides for some impressive verification provisions to guard against sneak-out. That said, no one should be under any illusions. Detecting small, undeclared centrifuge plants is difficult, and there is no guarantee of success. But, perfection is not the right metric against which to assess a nonproliferation agreement. The real question is whether sneak-out is more likely with a deal or without one. And here the answer is clear: Sneak-out would be much more likely without a deal, because the IAEA's powers to detect clandestine facilities would be much more limited.

I realize, of course, that all this talk of timely access, yellowcake monitoring, and procurement working groups isn't exactly headline-grabbing (though, fortunately, since I'm now happily married, I have ceased trying to use them in chat-up lines). But, ultimately, it's complex technical considerations that determine whether the JCPOA's verification regime will prove effective. And, in the final analysis, the JCPOA does significantly enhance the ability of the IAEA to guard against sneak-out, the most likely pathway for Iran to acquire the Bomb. That's not the only metric for assessing the deal — but it is a bloody important one.

AT: Deal bad – Prolif

Deal doesn't lead to proliferation – no incentive, NPT, 123 agreement, and the US nuclear umbrella

Indyk 6/11/15 - executive vice-president of the Brookings Institution in Washington D.C., and a former US ambassador to Israel. (Martin, "Why deal with Iran could be good for the Middle East", Khaleej Times, June 11, 2015, http://www.khaleejtimes.com/kt-article-display-1.asp?xfile=data/opinion/2015/June/opinion_June20.xml§ion=opinion//DM)

In the coming months, Congress is likely to have to make a choice: either endorse an agreement that removes sanctions but should ensure a nuclear weapons-free Iran for at least ten-to-fifteen years; or reject the agreement, which would leave Iran three months from a nuclear weapon under eroding sanctions. In making that choice, Congress will need to take into account that the Iranian nuclear deal will have profound ripple effects across the troubled Middle East region. The nuclear agreement was never intended to deal with the likely consequences of the sanctions relief—namely a monetary windfall for the government in Tehran. There is every reason to believe that at least some of this windfall will enhance the capacity of problematic Iranian forces such as the Iranian Revolutionary Guard Corps (IRGC) and problematic proxies like Hezbollah, the Assad regime and Shia militias in Iraq. But the possible regional implications of the deal are not sufficiently negative to justify opposing it. Indeed, given the turmoil now engulfing the Middle East, ensuring a nuclear weapons-free Iran for at least a decade—and tight monitoring of its nuclear programme for much longer than that—will help remove a primary source of tension and may foster greater cohesion in dealing with the other sources of conflict and instability there. In the end, the agreement buys a breathing space of at least 10 years. That's worth having as long as the inspection, monitoring and snap-back provisions are credible and the time is used effectively to contain and roll-back Iran's nefarious hegemonic ambitions. Moreover, whatever its other negative implications, the deal is not likely to trigger a nuclear arms race. It is unlikely that Saudi Arabia will actually embark on building an enrichment capability with its requirements for a significant scientific establishment. For 30 years, while Iran developed its ambitious nuclear programme unconstrained, its Saudi arch-rival did not feel any need to do the same. Why would it do so now when serious constraints will be placed on Iran's nuclear programme? Egypt and Jordan are certainly talking about starting nuclear programmes, but they are both signatories to the Non-Proliferation Treaty. All three Arab states would have to submit to the same intrusive inspections that Iran has accepted if they are to get the nuclear cooperation they will need. The UAE has signed a 123 agreement, in which it commits never to acquire enrichment capacity. And Turkey, as a Nato ally, already enjoys the cover of an American nuclear umbrella under Article 5 of the Treaty.

Reject their evidence – its hyperbolic media garbage

Cirincione 7/6/15 - President of the Ploughshares Fund, a public grant-making foundation focused on nuclear weapons policy and conflict resolution. (Joseph, "Overwhelming Expert Consensus Favors Agreement with Iran", Payvand, July 6, 2015, <http://www.payvand.com/news/15/jul/1034.html//DM>)

Media Blind Spot The media rarely portrays this expert consensus in the coverage of the Iran negotiations. This is not to say that the nuclear policy experts are uniform in their views. There are nuances and shades of agreement. And several genuine non-proliferation experts have strong, principled disagreements with the proposed Iran deal. Some outright oppose it. They, however, represent a minority faction in the field. The overwhelming majority of experts favor the deal. The media portrayal of expert opinion is driven partially by the custom to “balance” expert views in stories, so that pro and con are evenly represented—even if this gives a false depiction of the overall expert opinion. It is also driven by the desire to make news. Conflict grabs attention; agreement is boring. “If it bleeds, it leads” guides not just the local nightly news but often the front page of The New York Times. Some reporters, for instance, used a recent letter from a bipartisan group of experts to generate headlines that former top officials of the Obama administration were condemning the Iran deal. This, even though several of these former officials, including Bob Einhorn, Gary Samore, and Gen. James Cartwright, had already signed letters in support of the agreement. Einhorn felt compelled to write a rebuttal of this media misrepresentation, explaining that the signers, including several former Republican security officials such as Bush national security advisor Stephen Hadley, were not challenging the administration’s negotiating positions or asking them to adopt new and more demanding postures. Rather, he wrote, The significance of the statement is that this diverse, bipartisan group was able to come together on a number of reasonable and achievable recommendations for concluding an agreement that would serve U.S. interests and the interests of U.S. friends in the Middle East. Unlike some recommendations made by other groups and individuals, these contained no “poison pills” designed to complicate or even sabotage the negotiations.

Their claims are highly politicized – the groups who want to kill the deal are exceptionally well funded and relentless

Cirincione 7/6/15 - President of the Ploughshares Fund, a public grant-making foundation focused on nuclear weapons policy and conflict resolution. (Joseph, “Overwhelming Expert Consensus Favors Agreement with Iran”, Payvand, July 6, 2015, <http://www.payvand.com/news/15/jul/1034.html//DM>)

Aggressive Tactics from Deal Foes

The mistaken impression of where the experts stand also stems from the aggressive tactics of the opposition forces. Though light on nuclear policy experts, the groups working to kill a deal with Iran are exceptionally well funded, heavily staffed, and relentless in their bombardment of the media and the Congress with “fact sheets,” reports, letters, visits, and tweets. As several Senate staffers told me recently, “We feel under siege.” With a few exceptions, pro-deal experts are, to put it politely, more restrained in offering their opinion. Nor do liberals have the massive propaganda machine that conservatives enjoy. The distorted impression that nuclear policy experts are evenly divided or that most are critical of the deal also stems from the imbalance of witnesses on congressional panels. It is difficult to find an expert in favor of the Iran agreement on any witness list in the Republican-controlled Congress. In the past 18 months, Congress has staged 21 public hearings on the Iran agreement, calling 41 witnesses. Of these, four have been witnesses from the administration while 36 came from non-governmental organizations. Of the

outside witnesses, an overwhelming 28 were clear critics of the Iran agreement and only 7 could be called supportive. That is a ratio of four to one, critics to supporters. Moreover, several of the most critical witnesses testified multiple times, appearing in three, four, or even six different hearings. None of the supportive non-government witnesses testified more than once. This totals an astonishing 45 appearances from deal critics versus seven appearances from deal supporters outside the government. When a supportive witness is allowed to testify, he or she is usually outnumbered two to one at the witness table. They invariably speak last and are asked only a few questions. These hearings generate considerable media coverage, and the organizations involved often trumpet their testimonies in press releases, email blasts, and social media. Any reporter covering such hearings is left with a stacked deck of negative testimony, buttressed by the torrents of criticism that pour forth from the members themselves. These show hearings do not serve the congressional interest. During the more than nine years that I served on congressional staff, we always sought to present members with a healthy debate. This made for a more informed and more interesting hearing. But these staged Iran productions have likely left members with the view that the large majority of experts are skeptical of an agreement or oppose it outright. This could not be further from the truth.

Iran deal cuts off Iran's pathway to a bomb

Kimball 6/25/15 - Executive Director Arms Control Association Washington. (Daryl, "Benefits of a Nuclear Deal With Iran", The New York Times, June 26, 2015, <http://www.nytimes.com/2015/06/27/opinion/benefits-of-a-nuclear-deal-with-iran.html//DM>)

Alan J. Kuperman makes a number of flawed assumptions in asserting that the Iran nuclear deal would extend Iran's "breakout time" by only one month. A wide range of scientific experts, along with the technical teams of the Western governments, agree that a deal would increase the time it would take Iran to amass enough bomb-grade uranium for one bomb from the current two to three months to at least 12 months. The agreement will require Iran to disconnect and remove some 14,000 centrifuges and put them under the seal of the International Atomic Energy Agency. Only 5,060 first-generation machines would be allowed to enrich uranium to low levels. Mr. Kuperman assumes that Iran could immediately reassemble, reinstall and recalibrate the excess centrifuges — but it would take many months, if not years, to achieve such a feat. And inspectors would detect any such activity within days. Mr. Kuperman also assumes that the agreement would allow Iran to keep large amounts of its uranium stockpile in solid form. But under the agreement, Iran must verifiably reduce its current stockpile of 8,700 kilograms of low-enriched uranium gas to no more than 300 kilograms, in any form. The Iran deal should be judged based on the facts. And the facts are clear: This deal would verifiably cut off Iran's pathways to a bomb.

Politics Iran Supplement -MSDI

New 1NC UQ

Iran deal will be approved by Congress but Obama's political capital will be necessary to keep Senate Dems on his side.

ALEX ROGERS July 7 2015 <http://www.nationaljournal.com/congress/obama-s-iran-test-keeping-democrats-together-on-a-deal-20150707>

July 7, 2015 President Obama will have to work hard over the coming weeks to assuage skeptical Democrats that his potentially imminent, legacy-defining accord limiting Iran's ability to build a nuclear bomb meets their deep-seated concerns. While some outside observers don't expect that enough Democrats would stand with Republicans to vote against the deal and keep congressional sanctions intact, key Senate Democrats laid out before a White House meeting Tuesday night one requirement in particular—anywhere, anytime inspections—that could cause the administration trouble. The White House meeting touched on several subjects—including appropriations, the Affordable Care Act, and climate change—in addition to Iran. But it's clear the potential nuclear agreement is the most suspenseful issue this week, with the clock ticking down. Sen. Ben Cardin, the top Democrat on the Foreign Relations Committee, said that only a "very small part" of the 90-minute meeting was on Iran. Obama "indicated" that there must be all avenues of inspections, including military dimensions, Cardin said. Obama "doesn't know whether we'll get an agreement or not but [said] that he will not bring forward an agreement that does not accomplish those objectives" of preventing Iran from obtaining nuclear weapon, Cardin said. And Cardin added: "I think the president is justifiably concerned that some Americans might believe what the Supreme Leader is saying. He urged us that that should not be our source as to what's in the agreement." Senate Democrats, meanwhile, are making their own priorities clear. Inspections are "vital," said Sen. Christopher Coons, a Democratic member of the Foreign Relations Committee, which wrote the bill laying out how Congress would review the prospective accord. "That is a central point. Exactly what the mechanism is by which we have assurances that we can inspect sites reasonably quickly anywhere in the country is going to be a central piece of whether or not this is an agreement that we should sign, and whether or not this is an agreement that will enjoy broad congressional support." "There really has to be full access, anytime, to sites where there may be development or production of nuclear weapons," added Sen. Richard Blumenthal. "I think that the agreement has to be airtight, comprehensive, long-lasting, and maybe most important, verifiable." So far the administration has said little in public about whether the deal will meet that demand. But it's possible that the deal will be announced very soon. Under the law, after July 9, Congress will have 30 extra days to review the deal and act upon it. If Congress fails to act during that period, the deal will be considered approved. Some opponents, like Republican Sen. John McCain, believe that the additional time could help increase scrutiny and change some members' minds. "The longer there is to examine it, the more likely it is, in my view, for people to reject it because it's a bad deal," McCain said on Tuesday. "As George Shultz and Henry Kissinger wrote, it went from the purpose was to eliminate Iran's capacity for nuclear weapons to delaying it." Even Coons said it is a possibility—although in his mind not a likely one—that Congress will vote against it, "if it is a genuinely bad deal." Other senators, including Cardin, and some outside experts don't see the enhanced time frame making much of a difference. "If the substance of the deal is right (e.g. meeting the terms of the Washington Institute statement I signed), 30 vs. 60 day review doesn't matter," said Gary

Samore, a former Obama official and the president of the nonprofit United Against Nuclear Iran. That letter, signed by four other former Obama advisers, said that Iran cannot "deny or delay timely access to any site anywhere in the country," a demand rebuked recently by Ayatollah Ali Khamenei, who opposes international inspection of Iran's military sites. Democratic Sen. Chris Murphy, a progressive member of the Foreign Relations committee, said Tuesday that "anytime, anywhere" inspections weren't realistic. "There aren't going to be inspections anytime, anywhere," Murphy said. "There are going to be certain military sites in which you are going to have to have credible evidence in order to get access. I think it's not fair to set up a standard by which Iran is going to give inspectors access to anything, at any time, for any reason. There has to be a meaningful process to get access to military sites if we have information that compels an inspection. But frankly, we shouldn't have unfettered access to military sites. We should only be able to get onto those sites if we have evidence there's covert nuclear activity happening there." The negotiators announced a framework agreement in the beginning of April, limiting Iran's nuclear capabilities and extending the length it would take to build a bomb from a few months to about a year in exchange for reducing sanctions and increasing inspection capabilities. No member wants to see the strength of the negotiators—including the U.S., Russia, China, France, Germany, and Britain—go to waste after 18 months of talks and over a decade of dreaming to get to this point. "The imbalance here is dramatic," said Coons. "It is the allied powers of the modern world against one isolated extremist theocracy in the Middle East. And if they get a deal, they will get over \$100 billion with which to do mischief in the region and a pathway towards being a renewed participant in the global economy. That's huge for them, and we should hold out for the best deal we can get." "I am disheartened," added Senate Foreign Relations Chairman Bob Corker on Tuesday. "It is just amazing to me that Iran, with a boot on its neck, has ended up in this place with six important countries. From their standpoint, they've done just an incredible job of outmaneuvering. I don't know. I am sort of despondent over where we are. ... But I do want to read it and then figure out what direction to go."

Uniqueness

Iran deal coming; Congress will not secure enough votes to override a veto but its close- Obama's political capital is necessary for deal success.

Simon Carswell, July 7 2015 <http://www.irishtimes.com/news/world/us/obama-faces-cynical-congress-if-iran-deal-is-concluded-1.2275510>

The conclusion of a nuclear agreement with Iran, should it happen, will mark only the start of negotiations at home for the White House as it has begun the offensive to sell the deal to a cynical Congress. Negotiations between Iran and the US-led group of six international powers are approaching a critical moment in Vienna ahead of a self-imposed deadline of today for a final agreement to be reached. US secretary of state John Kerry voiced concern on Sunday, saying the negotiations "could go either way". The Americans must maintain the strict monitoring of Tehran's nuclear programme set out in the framework deal to ensure Iran uses the development of nuclear power only for energy purposes and not to build a bomb. The Iranians are pushing for an expedited lifting of economic sanctions. Opposition The precariousness of the talks and today's deadline have fanned opposition at home with Republicans voicing stronger warnings. And not even all Democrats are happy about the talks. If a deal is concluded today, Congress has 30 days to review it. If an agreement is not reached by Thursday, Congress would have 60 days to consider it. Republican senator Bob Corker, chairman of the Senate foreign relations committee, raised concerns with Mr Kerry on Saturday about the rush to conclude an agreement, fearing the administration might be too keen to agree a legacy-defining deal. "Right now, we have the issues of : are we going to have anytime-anywhere inspections, will we know what their past military dimensions were?" Corker told CBS programme Face The Nation. "I urged him [Kerry] to please take their time, try to make sure these remaining red lines that haven't been crossed do not get crossed and, qualitatively, they don't make it worse." Even if Republicans and some Democrats object to a deal, Congress will struggle to secure enough votes to override a presidential veto. "It is very easy to attack a deal that doesn't yet exist; people who oppose the deal or diplomacy per se are out there controlling the narrative," said James Acton, co-director of the nuclear policy programme at the Carnegie Endowment for International Peace. "Once there is a deal that can be defended it is easier for the administration to make the case, and I think the public does not want another war in the Middle East and is in favour of doing any deal." The talks have been tricky. The Iranians are said to have agreed to cooperate with an investigation into whether they have secretly tried to develop weapons in the past, but are refusing to allow inspectors to examine all nuclear facilities, including military sites.

Obama will likely be able to get the votes he needs to preserve the Iran deal – but it's a challenge. He will need political capital.

Sandy Fitzgerald | July 8 Wednesday, 08 Jul 2015 09:06 AM Republicans Face Uphill Fight in Blocking an Iran Deal Read Latest Breaking News from Newsmax.com
<http://www.newsmax.com/Newsfront/iran-nuclear-deal-gop/2015/07/08/id/653968/#ixzz3fJ6AnODi>

Republicans know they'll face an uphill fight in an effort to kill the upcoming nuclear containment deal with Iran, even with a law passed in May that allows Congress to weigh in on the agreement, because President Barack Obama will likely be able to get the 34 votes he needs in the Senate to sustain a veto. "Clearly, it's going to be challenging," New Hampshire Republican Sen. Kelly Ayotte told Politico. And Sen. Tom Cotton, R-Ark., the only senator to vote against the Iran review bill, said on Tuesday that he opposed the measure because it gives the "illusion of oversight without oversight." Special: The Danger of Investing in Dollars Exposed — Free eBook That is, Cotton said, the review law leaves it up to Congress to gather enough votes to prevent a veto, rather than requiring the administration to attract enough votes to approve the agreement, as would be normally done with a treaty. "It didn't give Congress much power that's beyond our inherent authority," Cotton said of the May law. "If that act was not law, we could still pass legislation with a veto-proof majority to block the deal from moving forward." Democrats, though, are saying that the very fact that the deal's deadline had been moved back repeatedly — from June 30 to July 7, and now to July 10 — means the administration is working to ensure the agreement will have some congressional support. "One of the reasons why we're seeing this going into overtime is because Secretary (of State John) Kerry and Secretary (of Energy Ernest) Moniz have a very firm grasp on what it's going to take to have a defensible deal. And they should," New Mexico Democratic Sen. Martin Heinrich told Politico. "If it's a solid deal, I think we will have adequate support to make sure that it stands." The review law means Congress can choose to vote on a resolution of approval or disapproval, and Senate Majority Leader Mitch McConnell has supported having an approval vote — something not likely to make it through the Republican-controlled House and Senate — so as to give an "unmistakable signal about congressional opposition to lifting sanctions." Special: New Probiotic Fat Burner Takes GNC by Storm Cotton, meanwhile, said "there is no graver threat to national security" than a bad deal, and that Congress should use all its powers to stop a poor agreement from going through. If the deal is reached on or by Thursday, Congress gets 30 days to review it. But if the agreement talks go past that date, the resolution will have a 60-day congressional review period. The approval or disapproval resolution will start with the Senate Foreign Relations Committee. On Tuesday, committee Chairman Sen. Bob Corker, R-Tenn., told MSNBC's Andrea Mitchell that he is looking forward to the deal, but urged negotiators to take their time, as he remains "very, very concerned about the trend, the direction, I've said this several times, the direction of these negotiations for some time. ... on these final points, you know, any time, anywhere inspections, please, yes, take your time and at least try to get these in the best place you possibly can." Corker told Politico he has spoken privately with McConnell, and "discussed every option known to man," but still doesn't know what direction will be taken Republicans are not yet conceding that 34 or more Democrats will stand with Obama. "I really think there's a better than 50-50 chance that we'll get enough 'no' votes," Sen. Lindsey Graham, R-S.C., said. "If the Arabs come out and say this is a bad deal, if AIPAC says this is a bad deal, if public opinion says we don't trust this deal, then our Democratic colleagues will hopefully come forward to say, 'We can do better.'

Obama is using all of his political capital to hold off criticism over the Iran deal; it will be a battle but he should be able to hold off opposition

YNet News, Published: 07.07.15, 23:55 / Israel Obama playing poker against a hostile Congress
Opinion<http://www.ynetnews.com/articles/0,7340,L-4677264,00.html>

Now Obama is playing the poker game of his presidential life: Not just against Iran, but mainly against a hostile Congress which has raised the volume of outcries and criticism over the agreement taking shape with Iran. The negotiations in Vienna are ongoing, and it's still unclear whether an agreement will indeed be achieved by the deadline, Thursday, but the Iranians are hoping it will happen. The Islamic Republic is living on the last drops of cash, and friends of mine there say that everyone is glued to the news websites, waiting for an announcement about an agreement in order to begin the celebrations. There is not a single house in Iran which has not been affected by the sanctions, and the leadership knows that in order to silence the masses it must reach an agreement which will lead to the sanctions' removal. The American administration also has an interest in reaching an agreement this week: The law states that if the agreement is submitted to the Congress by July 9, it will have 30 days to review its clauses. If the agreement is submitted after July 9, it will have 60 days. In other words, more time for digging in between the different sections, asking questions, raising objections and foot-dragging. That's why Iran wants to hurry up too: It knows that while the Congress reviews the agreement, the sanctions won't be lifted. Meanwhile in Vienna, US Secretary of State John Kerry and Iranian Foreign Minister Mohammad Zarif start the morning with a joint breakfast, off the record, to discuss life. That's the new normalization between the United States and Iran. It still doesn't mean that an agreement will be reached this week, but if it is reached – Obama will have to bring his poker secrets into the internal political field in order to deal with a theatrical Congress during an election year. The Republicans are preparing the show of a lifetime for him. They are convinced that their voters want them to hit Obama hard. Iran is just the trigger. So far, Obama's political rivals have claimed that he is a weak, naïve and spineless leader. Now they plan to launch a campaign against him – that he is selling out the American foreign policy, that he is lending a hand to an agreement which is dangerous to national security. This time it won't be easy for them, because his standing among the public has grown stronger following a series of impressive achievements: His health revolution became a solid and legal fact after being ratified by the Supreme Court, and that same Supreme Court voted in favor of same-sex marriage, an issue supported and promoted by Obama. Now, with high approval ratings, Obama is determined to reach an agreement with Iran in order to establish his heritage in the foreign relations area as well, after normalizing America's ties with Cuba. He seeks to be remembered in history as the president who stopped Iran's nuclearization, and according to his perception, that can only be achieved through an agreement. The republicans are also preparing for the battle of their lives. Election year has begun and the party's 14 candidates will compete over who can find harsher and more blatant words to reject the agreement with Iran and present it as an American surrender. The Republicans are sharpening their knives, Obama is preparing his cards, and after he wins, it's not at all certain that he will treat them to whiskey. His advisors like to mention that the president doesn't drink with just anyone.

Obama's political capital is likely to be able to hold off a veto override now; requires political capital.

The Hill, 14 Senate Democrats to watch on Iran nuclear bargain 7-6-15

<http://thehill.com/homenews/senate/246779-14-senate-democrats-to-watch-on-iran-nuclear-deal>

If President Obama can secure a final nuclear deal with Iran next week, attention will immediately turn to Congress — which can vote to disapprove of the agreement. The White House conceded to legislation earlier this year that gives Congress the power to review any deal with Iran. Lawmakers will have 30 days to carry it out if an agreement is sent to Capitol Hill by July 9. If it's later, the review timeframe will double. Obama agreed to the review under pressure from Democrats, who have been torn during the Iran talks between the White House and Israel, which strongly opposes the negotiations. A measure disapproving the deal could torpedo the pact, but would have to overcome a certain veto from the White House. That's unlikely — particularly in the House, where Republicans are likely to have a harder time winning the two-thirds majority needed to override Obama. In the Senate, the vote could be close. And Democratic opposition to the deal would be politically troublesome for the White House.

Obama using all of his political capital to control compromises on the Iran deal

Bloomberg, Jul 7, 2015 4:42 PM CDT Obama Convenes Senate Democrats to Plot Strategy, Discuss Iran <http://www.bloomberg.com/politics/articles/2015-07-07/obama-convenes-senate-democrats-to-plot-strategy-discuss-iran>

President Barack Obama is convening a group of Senate Democrats at the White House on Tuesday to discuss the Iranian nuclear negotiations and plot out a strategy for advancing his second-term agenda. Obama is looking to the Democrats, whose support he corralled earlier this year to win compromises on congressional review for any Iran deal and a trade bill, to back him if an agreement to curb Iran's nuclear program is reached. Negotiators in Vienna extended their deadline to July 10, after which Congress will have as many as 60 days to review -- and potentially reject -- an Iran agreement. Obama will take questions from the senators on the potential deal during the evening meeting, White House Press Secretary Josh Earnest told reporters Tuesday. Reauthorizing the Export-Import bank and passing a highway-funding measure are also on the agenda, he said. "I wouldn't be surprised if the status of the ongoing Iran negotiations is something that comes up in the context of that meeting," Earnest said. "The administration is doing the best we can to try to be responsive to that interest and help them understand exactly where things stand." The deadline for negotiations over Iran's nuclear program was pushed back a second time Tuesday as diplomats extended the talks to try to resolve differences over a United Nations arms embargo and sanctions. The original deadline was June 30. Congressional Review A bill passed by Congress and signed by Obama in May gives lawmakers 30 days to review and vote on the deal, a time period that doubles if the agreement is not completed by July 9. A number of Senate Democrats joined with Republicans to write the bill, initially over the objections of the White House. As Democrats and Republicans threatened to create a veto-proof majority that could upend a nuclear deal, the White House reversed course, working with lawmakers to craft a bill more palatable to Obama. If diplomats from the U.S. and five other world powers are able to reach an agreement this week in Vienna, the White

House's next lobbying campaign will be to persuade Congress to endorse the deal. Obama will also seek the Democrats' support on other issues he wants to address before Congress takes its August recess.

Congress will need to review a completed Iran deal and it could go either way; PC key

Niels Lesniewski Posted at 4:19 p.m. on July 5, 2015 Congress Could Face Rush to Review Iran Nuclear Deal <http://blogs.rollcall.com/wgdb/congress-could-face-rush-to-review-iran-nuclear-deal/?dcz=>

If everything goes according to Secretary of State John Kerry's timeline, Congress will face a rush to review and respond to a nuclear deal with Iran before leaving town again for August recess. Kerry said Sunday that while there are significant issues still to be resolved and it could go in either direction, the goal was to get a deal by Tuesday, which would be within the window that provides for 30 days of review and potential disapproval by lawmakers on Capitol Hill. "If there's absolute intransigence, if there's an unwillingness to move on the things that are important, President Obama has always said we'll be prepared to walk away," Kerry told reporters in Vienna. "It's not what anybody wants. We want to get an agreement, but I've said from the moment I became involved in this we want a good agreement, only a good agreement." Kerry's remarks came shortly after Republican senators took to the airwaves Sunday morning back in the United States to discourage the Obama administration from signing off on a bad agreement. Sen. Tom Cotton, R-Ark., for instance, only sounded more skeptical after watching the latest message from Iranian Foreign Minister Mohammad Javad Zarif expressed optimism about an agreement. "This is not like Russell Wilson and the Seattle Seahawks trying to reach a contract that makes everyone happy. Iran should have faced a simple choice: they dismantle their nuclear program entirely or they face economic devastation and military destruction of their nuclear facilities," Cotton said on ABC's "This Week." Earlier this year, Cotton led what came to be a highly contentious open letter from 47 GOP senators to Iranian leadership about the role of Congress in the nuclear talks. "I see hope because I see [the] emergence of reason over illusion. I sense that my negotiating partners have recognized that coercion and pressure never lead to lasting solutions, but to more conflict and further hostility," Zarif said on July 4. Foreign Relations Chairman Bob Corker told CQ Roll Call before the July Fourth recess that he has been leading his committee through a series of hearings and closed briefings so that members are ready to go if an agreement is reached between the P5+1 negotiating countries and Iran. The Tennessee Republican wanted to have his committee up to speed ahead of time, knowing that under the terms of the review legislation he developed with Sen. Benjamin L. Cardin, D-Md., there would be just 30 days for review if an agreement is reached by Thursday. "Right now we have issues of are we going to have anytime, anywhere inspections, will we know what their past military dimensions were. It's very important — every person who has come in to testify has talked about the importance of that. Will the IAEA ever be required to declare that Iran over time has a civil program and not a military program?" Corker said Sunday. "It's been going on a negative trend for some time." Speaking on the CBS program "Face the Nation," Corker emphasized that Congress was not behind the push to get an

agreement reached this week. Corker also said he spoke with Kerry on July 4. "It's amazing to me that as we come to the end of this deal, the biggest issue of concern to these countries right now is that Congress would only have 30 days, not 60 days, to review the deal," Corker said. As for Zarif's contention that "coercion and pressure" wouldn't bring a desirable outcome, Cotton said the military option should remain on the table at this point. "It's not the first choice. It's never the preferred choice, but military force does have to remain an option if our diplomacy is going to be credible," Cotton said. "We (have) unique capabilities and we can destroy Iran's nuclear facilities and their command-and-control facilities, and all of our allies in the region wish we would take a more forceful position and keep that military option on the table because it would result in a better deal."

PC key to passage of the Iran deal

Jordan Fabian July 06, 2015, 06:38 pm Obama to host Senate Dems

<http://thehill.com/blogs/blog-briefing-room/news/246998-obama-to-host-senate-dems>

President Obama will host Senate Democrats for a meeting and reception on Tuesday, a White House official said. The White House says the gathering will mostly be a social occasion. But it gives the president a chance to huddle with his allies in Congress who have a long to-do list this month, including a partisan standoff over government spending that could result in a shutdown. The White House is also expected to lean heavily on Senate Democrats to support a nuclear agreement with Iran if one is reached this week. Republicans in Congress have said they will vote against the deal so Obama will need to limit defections from Democrats to prevent the GOP from amassing a veto-proof majority. Obama has threatened to veto GOP spending bills because they do not lift sequestration spending caps and he is backed by Senate Democrats, who are threatening to block the proposals. But that has not stopped Republicans, who are advancing the bills and accusing Democrats of obstructionism. Congress faces a Sept. 30 deadline to fund the government, but lawmakers only have a few weeks to resolve the dispute because they will leave Washington for a month-long recess in August. Another top priority is highway funding, which is set to expire on July 31, and a renewal of the Export-Import Bank.

Obama pushing Iran deal success – political capital key

Alexander Bolton - 07/06/15 07:15 PM EDT <http://thehill.com/homenews/senate/247003-dems-raise-pressure-on-obama-over-iran-nuclear-deal>

The narrative is completely owned by the White House here," said Danielle Pletka, senior vice president for foreign and defense policy studies at the American Enterprise Institute. She says it will be difficult to assess how the deal will be interpreted on Capitol Hill because administration officials will dominate the narrative in the early days. "They've already got their people out there lobbying very aggressively and the president has an enormous amount of power in this country, frankly much more power than the Congress at this point," she added. "He has the power to affect the fortunes of individual members of Congress."

Obama using his political capital to corral votes on the Iran deal

Wall Street Journal, 7-8-15 <http://blogs.wsj.com/washwire/2015/07/08/obama-works-to-coral-support-from-senate-democrats-on-several-issues/>

President Barack Obama huddled with Senate Democrats Tuesday night at the White House for a social get-together that also served as an opportunity to hit the reset button after parting ways on trade legislation. With Iran nuclear negotiations nearing an end and time running short for the president's domestic to-do list, Mr. Obama turned to Democrats on the Hill for help advancing his policy objectives. The most immediate White House priorities include marshaling lawmakers' support for a possible deal to curb Iran's nuclear program, reauthorizing the U.S. Export-Import bank and passing a highway funding measure. Tuesday's meeting came two

weeks after the president partnered with Republican congressional leaders to pass a fast-track trade bill amid a messy battle that divided the Democratic Party. With the approval of the trade package, Mr. Obama notched his biggest win to date in this Republican-controlled Congress, but he clashed with many Democrats in the process. Administration officials have dismissed suggestions of any lingering hard feelings, saying that the president and Democratic lawmakers would quickly return to work on shared goals. Still, the gathering in the State Dining Room signaled a concerted outreach effort aimed at ensuring that the president has Senate Democrats in his corner on several key issues. Chief among them is a long-sought nuclear agreement with Iran. While the diplomatic process has extended into overtime and the outcome remains uncertain, any eventual deal will be vetted by Congress. White House Press Secretary Josh Earnest said lawmakers are closely following the nuclear talks, and “the administration is doing the best we can to try to be responsive to that interest and help them understand exactly where things stand.” Mr. Obama is working to corral Democratic support for a potential deal as many Republicans express deep reservations about an accord with Iran and some urge the White House to suspend negotiations.

Obama using political capital to assuage concerns about the Iran deal.

SARAH WHEATON 7/7/15 9:35 PM EDT Updated 7/7/15 11:42 PM EDT

<http://www.politico.com/story/2015/07/obama-serves-up-cocktails-and-reassurances-at-white-house-119830.html>

President Barack Obama sought to reassure Senate Democrats that he won't accept a bad deal with Iran during something of a working cocktail party at the White House on Tuesday evening. Over drinks and hors d'oeuvres in the State Dining Room, Obama discussed a range of Democratic priorities with his Senate colleagues, including an upcoming fight over spending bills, climate change and the latest court victory for Obamacare. The invitation came just weeks after a hard-fought legislative battle over trade policy that frayed relations between the president and his congressional allies. On a day when yet another self-imposed deadline slipped away from nuclear negotiators meeting with Iranian officials in Vienna, the president urged his party to ignore the naysayers. “He took us back to what the framework was when the initial agreement was announced in Lausanne,” said Sen. Chris Coons (D-Del.) as he prepared to board a bus parked in front of the White House's Northwest gate with other senators headed back to the Capitol. “He said, ‘Don't get nervous, don't get concerned about statements by the supreme leader, about statements in the press. I am not going to sign a deal where we can't assure that we've blocked all pathways to a bomb for Iran.’ I found that very reassuring.” While Obama “covered every hot topic there was,” said Sen. Chris Murphy (D-Conn.), when it came to Iran, “he wanted to make it clear to us that if it's a bad deal, there's no deal.” The Obama administration, especially Secretary of State John Kerry, has worked in recent days to dismiss suggestions that desperation will prompt the president to sign a deal — any deal — for the sake of a legacy. Officials shrugged off a July 7 deadline and are now downplaying the significance of July 9, even though that date has concrete consequences: Congress will have 60 days instead of just 30 to consider the pact if it doesn't receive it by midnight Thursday. But Sen. Ben Cardin of Maryland, the ranking Democrat on the Foreign Relations Committee, said the president seemed “not at all” concerned about the implications of giving Congress more time to scrutinize the deal. Cardin characterized the meeting as “somewhat social, somewhat businesslike.” Most

senators arrived just before 6 p.m. and stayed for about two hours, but a handful trickled out early, including Sens. Elizabeth Warren (D-Mass.) and Cory Booker (D-N.J.).

Obama is clearing schedule to focus on the Iran deal now; pc key. Obama is all in.

Steven Dennis Posted at 4:01 p.m. on July 6 Obama Clears Schedule for Iran Deal

<http://blogs.rollcall.com/white-house/obama-clears-schedule-iran-deal/?dcz=>

President Barack Obama's schedule this week has been largely cleared in hopes that negotiators will reach an Iran deal. Press Secretary Josh Earnest acknowledged that the president's schedule was freed up, given the potential of news "from Vienna" — where negotiators are racing to beat the clock on yet another deadline. Typically, Obama will schedule a trip or two or three — but this week is just slated to hold meetings at the White House. The latest talks have already blown a June 30 deadline, with negotiators setting up a new deadline of July 7 and also talk that the administration wants to wrap up work by Thursday to avoid a 60-day review period in Congress, which would potentially cause the whole issue to linger into September. That caused a bit of humor at today's briefing, when Earnest was asked how firm the June 30 deadline was. "July 7," he corrected the reporter, with a smile on his face. Earnest declined to say that was a drop-dead deadline, deferring to negotiators. The test would be whether negotiators felt Iran was ultimately willing to make the decisions they need to make to assure the world that they will never develop a nuclear weapon.

Deal possible

Experts are optimistic about an Iran deal

Sara Rajabova 7-7-15 <http://www.azernews.az/analysis/85130.html>

As the world powers and Iran seem to be very close to clinch a final deal, experts voice hope for the successful completion of the nuclear negotiations. Alex Vatanka, an expert on Iran and senior fellow of the Jamestown Foundation believes that both the Iranians and Barack Obama's administration have invested huge political capital in these negotiations. "I don't think either side will sign a "bad" deal but it is hard for me to see these talks break down. Some kind of a deal will be reached. The question is will it be sustainable after the Obama administration leaves office. This is the big question," Vatanka told AzerNews. Currently, the world powers and Iran continue marathon nuclear talks in the Austrian capital of Vienna into the extended July 7 deadline. After a long negotiations process, "serious differences" still exist between Iran and the P5+1 countries. Some experts are therefore skeptical over the successful resolution of the negotiations. The sides themselves also keep the option of returning home empty-handed in mind.

Deal likely – short extension will get it done.

Tasnim News Agency, July 8 <http://www.tasnimnews.com/english/Home/Single/793853>

The possibility of nuclear deal between Iran and (Group) 5+1 has increased," chairman of the Iranian parliament's national security and foreign policy commission told Tasnim. "If Americans are sincere in their claim about reaching a nuclear agreement with Iran, they should put aside excessive demands and respect the Iranian nation's rights," Boroujerdi added. Given another extension of the Vienna nuclear talks until Friday, the lawmaker said the parties seem to be more determined to clinch a deal.

Veto override kills deal

US vote against the deal and veto override will kill the Iran deal.

Mehr News Agency, 7-7-15 <http://en.mehrnews.com/news/108463/US-Congress-unlikely-to-override-Obama-s-veto-over-Iran-> US Congress unlikely to override Obama's veto over Iran deal

If the US Congress revokes the deal, what will be the future of deal? Congress is likely to vote against the deal, but Obama is likely to veto a Congressional disapproval. If opponents of the deal in Congress do not succeed in putting together the two-thirds majority needed to override the veto, the deal would go ahead as negotiated. If opponents of the deal did put together a two-thirds majority to override the veto, the United States would then not be able to participate in the deal, and it would be very difficult to avoid having the deal collapse.

Politics Iran Supplement –Michigan

1nc Iran DA

Iran will pass now – Obama’s political capital solves veto-override

Fabian 7/24/15 – The Hill (Jordan, Obama confident Iran deal will survive Congress, The Hill, [//JJ](http://thehill.com/homenews/administration/249072-obama-confident-iran-deal-will-survive-congress))

President Obama on Thursday expressed confidence he will be able to prevent Congress from sinking the Iran nuclear agreement.

“In Congress, I’m confident that we’re going to be able to make sure that the deal sticks,” Obama said in an interview with the BBC.

The White House has launched an aggressive lobbying blitz to ward off congressional opposition to the Iran nuclear deal. The agreement would lift economic sanctions on Iran in exchange for curbs on its nuclear program.

Criticism on the Republican side has grown in recent days, making it increasingly likely the GOP-controlled Congress will vote to oppose the deal. The White House has been determined to unify Democrats around the agreement, and perhaps win over some on the GOP side, in order to sustain an Obama veto.

Obama sought to rebut an argument against the deal from Republicans, and some Democrats, that Iran will use billions of dollars from sanctions relief to boost funding to terrorist organizations across the Middle East.

The president conceded that lifting sanctions will “probably” result in more funding for Iran’s military but said economic penalties did not stop Iran from funneling money to groups such as Hamas and Hezbollah in the past.

“Does the [Iran Revolutionary Guard Corps] or the Quds Force have more resources? Probably, as the economy in Iran improves,” Obama said. “But the challenge that we’ve had, when it comes to Hezbollah, for example, aiming rockets into Israel is not a shortage of resources.”

The president added that “Iran has shown itself to be willing, even in the midst of real hardship, to fund what they consider to be strategy priorities.”

Obama said the U.S. has sent a “clear” message to Iran, which has funded proxy wars in countries such as Yemen and Syria, that the U.S. is not afraid to step in with military force.

“We are settling the Iran deal, but we still have a big account that we’re going to have to work,” he said. “Hopefully some of it diplomatically, if necessary some of it militarily.”

Obama voiced confidence that Iran would pump a major portion of its frozen assets back into its economy, which has been crippled by international sanctions related to its nuclear program.

“A large portion of those funds are going to have to be used for them to rebuild their economy,” he said. “That was the mandate that elected [President Hassan] Rouhani. And the supreme leader is feeling pressure there.”

That argument has not convinced critics of the agreement in Congress. Some lawmakers, led by Sen. Bob Menendez (D-N.J.) are threatening to reauthorize expiring sanctions on Iran, even as lawmakers continue to review the terms of the deal.

****uniqueness**

2nc – will pass/pc key

Obama's spending massive amounts of pc to prevent override – their ev assumes the initial vote

Baehr 7/26/15 – chief political correspondent of American Thinker (Richard, The battle for Congress, Israel Hayom, [//JJ">http://www.israelhayom.com/site/newsletter_opinion.php?id=13305\)//JJ](http://www.israelhayom.com/site/newsletter_opinion.php?id=13305)

The 60-day clock for congressional consideration of the Iran deal, otherwise known as the Joint Comprehensive Plan of Action has barely begun to run, and the White House and its allies are already in full sell-and-destroy mode. As details of the agreement are revealed, including side agreements, the total collapse of our side's negotiating position in the last few weeks of the talks has become more apparent. This should be an easy deal to reject on the merits. The promise of "anytime, anywhere" inspections turned into 24-day advanced notice inspections. It was just rhetoric, claimed White House adviser Ben Rhodes. We never meant it. Inspections at the Parchin facility, where it is generally assumed military research and testing took place connected with Iran's nuclear program, will now consist of the International Atomic Energy Agency examining samples provided by the Iranians. The so-called snap-back sanctions to deal with Iranian violations of the agreement will require a vote by five of eight voting members, consisting of the P5+1, the EU and Iran, to certify noncompliance by Iran of the agreement, and the reinstatement of sanctions. Given the desperation demonstrated by the P5+1 to get the deal done, and the early schedules of commercial visits by European leaders and companies to stake their claims to Iran, the chances that the Europeans or the United States (at least one where Barack Obama or Hillary Clinton is president) will vote to unravel their "diplomatic achievement" and commercial deals, and restore international sanctions is zero. Relief on sanctions on ballistic missiles and conventional arms sales were never even discussed until the last week of the talks, and these sanctions will now expire in a few years. This last late concession is easy to explain -- Iran asked for it. When the Iranians understood there was no chance of America taking military action and zero chance of America walking away from the negotiations whatever their demands, it certainly made sense for the Iranians to demand more goodies before the deal was finally inked. For all we know, the reported shouting match between John Kerry and his Iranian counterpart in the final days was all for show (or hear). If there has been a poorer performance in international diplomacy in American history than Kerry's, it is hard to find, though the Nobel Committee's Neville Chamberlain peace prize may still be awaiting. The sell side by the administration is easy to see and probably necessary given the piñata-like quality of the deal. The president and his team have been reduced to arguing that all avenues to an Iranian bomb have been closed off for some time, and that the alternative is war if Congress rejects the deal. However, the war option is a fiction with this president, and the path to a bomb, if Iran chooses to break out, may be just a few months longer than it was before a deal was signed. So too, in an act of utter contempt of Congress, the president rushed to the U.N. Security Council to get the deal endorsed before Congress considered the agreement, angering even some Democrats in Congress, who do not see themselves as mere Obama puppets. The president and vice president have been meeting with Democrats in the

House and Senate to do the early lobbying before the American Israel Public Affairs Committee and other groups get to members. The testimony by administration defenders of the deal in the Foreign Affairs committees of Congress has been pitched almost exclusively to Democrats, under the assumption that Republicans in both the House and Senate are set to vote no with few if any deal supporters. The president has made his regular tour of duty on "The Daily Show with Jon Stewart" to attack opponents of the deal as in the thrall of lobbyists and special interests (meaning of course rich Jews and AIPAC). The president brought along 17 House Democrats (and one Republican) for his Air Force One trip to Kenya. The president has had his sit-down with the self-styled éminence grise of the establishment, Tom Friedman, to provide the talking points for Friedman to write his predictable column outlining pros and cons of the deal but winding up of course with an endorsement. Far uglier is the transparent attempt to portray opponents of the agreement as racist. A column in The Washington Post by Colbert King does exactly that, suggesting that pretty much all opposition to Obama on the Iran agreement and on anything else is due to his race, and that blacks have figured this out and now despise Israeli Prime Minister Benjamin Netanyahu for daring to challenge the White House yet again. The article basically calls on Jewish opponents of the deal to back off if they want to preserve harmonious relations with African-Americans. The exact same strategy played out before Netanyahu's address to a joint session of Congress, when Obama met with the Congressional Black Caucus and African-American congressmen, having received their talking points, then argued that Netanyahu was being disrespectful for showing up to speak at the invitation of House Speaker John Boehner. A large number of the roughly 60 Democrats who boycotted Netanyahu's talk were African-American. One might argue that when a quarter of the Democratic Party's members in Congress boycott a speech by the elected leader of an ally of the United States on an issue critical to that country's survival, that the boycott action is what is really disrespectful, and in fact unheard of in American history. But you might get called a racist for saying that. Predictably, House Minority Leader Nancy Pelosi declared herself very comfortable with the Iran agreement, and unlike with the health care bill she helped steward to the finish line, claimed to have read it. Skeptics abound, since her declaration of support seemed to be ready to go immediately upon the deal's announcement. While not a great thinker or analyst, Pelosi's role is more straightforward -- whip her members into shape to insure the agreement is not derailed in Congress. Other House Democrats were on board even before the deal was signed, with Illinois horror, Congresswoman Jan Schakowsky, assisting her convicted felon husband as he plotted media strategy to support the agreement with a collection of far-left groups who naturally like a deal that is good for Iran and dangerous for Israel. The focus of so much of the administration's effort so far on Democrats in the House is telling about the state of play in Congress at the moment. While the administration is still in a strong position, the deal is so visibly problematic that many members are uncomfortable with details of the agreement. There are potentially two stages to the vote in Congress. Republicans control 247 of the 435 House seats, and a simple majority is all that is required to take action in the House. On an initial consideration of the deal, even if some House Republicans break with the party, the deal is certain to be rejected. In the initial consideration in the Senate, 60 votes are needed to bring the resolution to the floor, meaning that at least six Democrats would have to join 54 Republicans (assuming they all stay in line) to bring a vote on the deal, where it would then be voted down. With the exception of New Jersey Senator Robert Menendez, who seems

certain to vote no, other Democratic Senate members, who would seem to be naturals to oppose the deal, such as New York Senator Chuck Schumer (who always claims to be the protector of Jews and Israel in Congress) have so far not committed either way. A large rally in New York City this week aimed a lot of its fire at Schumer for his indecisiveness. Opponents of the deal want a lot more from Schumer than announcing that he weighed and balanced everything and decided to vote no. They want him to lobby another 15 or so Senate members who may be on the fence on the deal -- to show some spine and leadership. A simple no vote by Schumer with no lobbying effort on his part might be the cautious path he chooses. He is in line to be the top Democrat in the Senate beginning in 2017 with Nevada Senator Harry Reid retiring, and as an ambitious careerist, would not want to be the one blamed for the defeat of the president's deal. That might lead to a challenger for the party leadership spot and a ceiling on Schumer's ambitions. The fact that the administration is concentrating its efforts on House Democrats suggests that they are anticipating an initial defeat for the agreement in both the House and Senate. That resolution of rejection would of course be vetoed by Obama, requiring opponents to then muster a two-thirds majority in both houses of Congress to override the veto. Assuming all Republicans stick together, that means 43 House Democrats and 13 Democratic senators would need to vote with Republicans. The president would of course prefer that the opponents of the deal are beaten back the first time Congress votes, which means that no more than five Democratic senators can vote with Republicans on the cloture bill to bring the vote to the Senate floor. The focus on the House means the White House may expect to lose the initial vote in both houses of Congress, and is already working to defeat the override vote, not the initial vote, and has chosen the easier branch of Congress to win -- since House Democrats are more partisan and left-leaning than those in the Senate. California Democratic Congressman Brad Sherman suggested that quite a few House Democrats may oppose the deal initially, but be more cautious of voting to override a presidential veto, which puts them at war with the president. Since the Republican House majority insures defeat for the deal the first time through, voting no on the initial consideration is a free ride for Democrats in the House. Sherman is one of 18 Jewish House Democrats, and only three are certain at this point to side with the White House -- Schakowsky, Steve Cohen of Tennessee and Jon Yarmuth of Kentucky. If opponents are to have any chance to successfully override a veto, the Jewish Democrats in both the House and Senate will be a key component of the coalition. With AIPAC taking on a rare public fight with a president, this will be a test for them as well as the White House. We will see whether party loyalty always trumps support for any issue or cause.

Default negative --- our evidence assumes the likely endgame and shifting political momentum

Drew 7/17/15 – regular contributor to The New York Review (Elizabeth, The Iran Deal Goes to Washington, NYR Daily, <http://www.nybooks.com/blogs/nyrblog/2015/jul/17/congress-iran-deal-goes-to-washington/>)/JJ

The first thing to know about all the noise being made in Washington over the nuclear deal with Iran is that there's a lot of play-acting going on. A number of politicians, particularly Democrats, are striking positions to get them past this early period; several significant Democratic Senators

simply aren't yet ready to say they're for the deal, though many of them are expected to be. The real question isn't where they are now but where they'll end up. Therefore some statements shouldn't be taken literally. When Ben Cardin of Maryland, the ranking Democrat on the Senate Foreign Relations Committee, said recently that he had questions about the coming deal, some journalists and other observers interpreted this as a sign of trouble; but his statement simply reflected political prudence. To be taken seriously on such a weighty issue, a politician needs to be seen as having carefully considered his or her position.

This may be where the Republicans are making a mistake. Lindsey Graham was caught out by reporters on Tuesday when he condemned the deal and then, in response to their challenges, admitted that he hadn't read the more than one-hundred-page agreement, nor did he know what was in it. House Speaker John Boehner also immediately denounced the deal. Boehner's tack, which others also employ, is to charge that the agreement isn't as tough on Iran as what the president said he would seek. Wisconsin Governor Scott Walker, who officially entered the 2016 presidential race the day before the Iran deal was formally announced, said that it should be abrogated by the next president on day one—which would free Iran to pursue a nuclear weapon and create an unholy mess with our allies. The Republicans' rush to judgment undermines their position.

In fact, knowledgeable analysts say that the final deal fulfills what was outlined in the interim framework agreement announced in April. Jim Walsh, a security and nuclear policy expert at MIT, describes it as "the most intrusive multilateral agreement in nuclear history." According to Walsh, the deal's inclusion of a "snapback" provision—the rapid restoration of sanctions if Iran is caught cheating—is "unprecedented."

Yet I can find no one on the side of the deal who thinks that it will have majority support in either chamber, which means that the president will veto what Congress sends him. Therefore, beneath all the rhetoric, the realists here are looking for one thing: whether there will be enough votes in the Senate or the House—one-third plus one of the members—to uphold that veto. (A veto can be overridden by a two-thirds vote in both chambers.) It's believed that there's a sufficient number of House Democrats who will vote to sustain it. But it's assumed that Senate Majority Leader Mitch McConnell and Boehner will arrange for the Senate to vote before the House does and the deal's supporters fear that if there's a strong vote against it in the Senate the votes in the House to sustain a veto might crumble. A strategist for the pro-deal side told me, "A number of those House votes on our side are squishy." So what happens in the Senate is the crucial question.

With a few possible exceptions, the Senate Republicans are being written off as against the deal. But it cannot be assumed that Democrats will feel obliged to vote in favor of what could be the president's crowning achievement: in 2014 many of them showed themselves capable of keeping their distance from him in an effort to save their own skin. If they think the deal with Iran will make them vulnerable in the next election, they might well vote against it. Their ultimate decision could be no more worldly than that.

I asked a couple of well-informed vote-counters if they thought the president had the thirty-four Senate votes needed to block an override. They both agreed that they're not yet there, but they expect to be by September. Supporters would of course like to end up with more than thirty-

four votes so that it doesn't look like they exhaustedly dragged a beat-up deal across the finish line.
